No. P. 11 of 1929.

From

DR. W. BURNS, D.Sc.,  
Acting Director of Agriculture,  
Bombay Presidency, Poona ;

To

THE SECRETARY TO GOVERNMENT,  
Revenue Department, Bombay.

Poona, 7th November 1929.

Sir,

I have the honour to submit herewith the Annual Season and Crop Report of the Bombay Presidency for the year ending 31st July 1929.

I have the honour to be,

Sir,

Your most obedient servant,

W. BURNS,  
Ag. Director of Agriculture.

# SEASON AND CROP REPORT OF THE BOMBAY PRESIDENCY FOR 1928-29.

## CHAPTER I—CHARACTER OF THE SEASON.

1. **General.**—The agricultural season of 1928-29 though not as satisfactory as its predecessor was fairly good, on the whole, at least in a large part of the Bombay Presidency. The most characteristic feature of the season was the frost wave which swept over Sind and the northern half of the Presidency proper at the end of January and the beginning of February. This caused considerable damage chiefly to fruit trees in Sind, to *rabi* crops in general and cotton and early sown wheat in particular in Gujarat and to sugarcane on the Pravara and Godavari Canals in the Deccan. A large portion of the grape crop in the Nasik District and of fruits and vegetables in the North Deccan was also lost as a result of the frost.

Details regarding the season in its various aspects, *viz.*, the amount and distribution of rainfall and the general nature of the season in the different Divisions, are contained in the following sections.

2. **Distribution of Rainfall.**—Statement I (pages 29-31) compares the rainfall during the year under review with the average fall of rain at each representative station in the Bombay Presidency and Sind. The average rainfall figures for each station are, as during the last year, those supplied by the Indian Meteorological Department, based on the rainfall statistics available up to and including the year 1920.

**Kharif Rains.**—In Gujarat, the *kharif* rains were appreciably above the average at Ahmedabad and Godhra (Panch Mahals) but much below the average elsewhere. In the Deccan, excepting Dhulia' (West Khandesh), Ahmednagar and Sholapur where they exceeded the average, the rains fell short of the standard at the other places including the hilly tracts in the Division. In the Karnatak, except at Bijapur where they exceeded the normal, these rains were below the average even in the hilly tracts. In the Konkan, on the other hand, the *kharif* rains exceeded the average, the excess being specially marked in the south. In Sind, these rains were very deficient in all districts and especially in the north where they varied from nothing at Larkana to a little over one inch at Sukkur against an average of from two to six inches.

**Rabi Rains.**—These were above the average at Ahmedabad, Godhra (Panch Mahals) and Broach but were below the average at the two remaining stations, *viz.*, Kaira and Surat. In the Deccan, they were from two to three times the average in Khandesh and about the average at Sholapur and Ahmednagar but at the remaining stations in the Division, *viz.*, Nasik, Satara and Poona they were far short of the standard. Thus, at Nasik and Satara they were only half the average while Poona received a rainfall of one and a half inches only in the *rabi* period against an average of about five and a half inches. In the Karnatak, the *rabi* rains were generally about the average while in the hilly tracts they even showed an appreciable rise. In the Konkan, these

rains were double the standard at Karwar (Kanara) and also appreciably higher at Ratnagiri. In the two northern districts of the Division, however, *viz.*, Thana and Alibag (Kolaba) these rains fell far below the usual amount. Thus, Alibag recorded a rain all of only one inch in the *rabi* season against an average of about three inches while at Thana these rains did not exceed half an inch against an average of nearly four inches. In Sind, these rains were above the average at all the district headquarters stations in the Province the only exception being Jacobabad (Upper Sind Frontier) which recorded only about half the normal.

**Hot Weather Rains.**—These presented no features of special importance during the season under review.

**3. Nature of the Season in different Divisions.**—The following remarks will show in detail the nature of the Season in each Division of the Bombay Presidency including Sind.

**Konkan.**—The regular monsoon commenced in the south Konkan in the first week and in the north Konkan in the second week of June. The rainfall in June, in the south Konkan, was seasonable except in parts of the Kanara District where it was rather heavy and caused floods in places. In the north Konkan, the rainfall during this month was rather below the standard and in consequence field operations were delayed. From July onwards to the end of September the rains were generally good both as regards amount and distribution and everything went on smoothly during this period. In October, some stormy showers occurred which delayed harvesting of rice while some untimely rain was also received in places in November. On the whole, however, the *kharif* rainfall in the Division may be said to be favourable for all crops except the deficiency experienced in the north Konkan in the beginning of the season. The season for the late crops was, however, not equally favourable. This was due to the fact that the rains that were received in October and November kept the rice fields moist till late in the season, delayed the sowing and caused reduction of yield.

As regards insect pests and crop diseases, there was rather a serious attack of *Kanne* pest on rice in the Honavar and Kumpta talukas of the Kanara District. The mango crop also suffered seriously by a virulent attack of hoppers. In consequence, in many gardens the high expectations of a mango season were frustrated.

**Gujarat.**—The ante monsoon showers were practically absent. The rainfall in June was definitely inadequate for all practical purposes almost throughout the Division. Sufficient and general rain, however, being received in July, sowings of *bajri* and other crops were vigorously undertaken and completed by about the end of the month. The rains during the next two months, *viz.*, August and September were generally satisfactory and all crops proceeded well except rice which needed still more rain. The rainfall in October was generally much below the average but the standing crops progressed well on the strength of sufficient previous moisture. In fact, the fair weather of the month gave a chance for completing the *kharif* harvesting and *rabi* sowing. With light rains in November the monsoon practically closed. The *rabi*

crops generally proceeded well on the moisture left by previous rains and the agriculture out-look in the Division appeared quite promising about the end of January. Unfortunately, however, a wave of frost unprecedented in its intensity and extent swept over the north of the Division from the thirtieth of January to the second of February, affecting crops in all areas lying north of the Nerbuda. Cotton was seriously damaged. Irrigated tobacco was very hard hit both in Kaira and Ahmedabad Districts. Dry wheat suffered severely, while the early sown irrigated wheat suffered even more, being in grain formation stage at the time of the frost. The frost calamity thus took a heavy toll of the crops and reduced the cultivators' resources.

With regard to crop diseases, borer appeared on garden crops and wilt on cotton in Surat District, while the tobacco crop in the Kaira District suffered rather seriously due to "*Wakumba*" (*Orobanche*).

**North Deccan.**—The rainfall in June was neither general nor sufficient with the result that sowings were confined to the more favourable situations. The rainfall in July was generally sufficient, and enabled completion of *kharif* sowings by the end of the month. The rainfall in August was deficient or absent in many places during the first three weeks of the month and considerable anxiety was felt regarding the young crops. Good and general rainfall in the last week of the month, however, proved very timely and considerably brightened the outlook. The rainfall in the second half of September and in the month of October was also copious and timely and proved useful for the standing *kharif* crops and for starting *rabi* sowings. In November, the rainfall was generally light but the *rabi* crops managed well on the strength of previous moisture and the situation at the end of the month was generally satisfactory. Unusually heavy rain varying from two to five inches accompanied by a hail storm occurred during the first week of December in many places in Khandesh and in a few places in the Nasik District, damaging the young *rabi* crops and also the *kharif* crops not yet removed from the fields. To add to this, a wave of very severe frost passed over the Division on the last two days of January and the first two days of February causing serious damage to sugarcane on the Godavari and Pravara Canals, to grape vines in the Nasik District and to fruits and vegetables almost throughout the Division. As a result, the high expectations of crop yields entertained about the end of November were not realised in many cases, as the outturn was reduced due to the hail storm in December and the cold wave in January.

Fortunately, the season under report was generally free from crop pests and diseases of a serious nature although the trouble from pigs continued as usual in the sugarcane and groundnut areas.

**South Deccan.**—In this Division which comprises the four districts of Ahmednagar, Poona, Sholapur and Satara, fairly good rain was received in June and the first half of July. This enabled timely completion of the *kharif* sowings while the germination of the seed was also good. From the second fortnight of July to the fourth week of August the rainfall received was generally deficient. Hence, *kharif* crops and especially

cotton and *bajri* were checked in their development and although the good rains received from the fourth week of August to about the end of September considerably improved matters, the yield of *kharif* crops generally fell short of the normal owing to the drought in July and August. The rainfall in the *rabi* season was deficient in parts and the winter also being irregular *rabi jowar* and wheat crops did not progress well. On the 31st January and the 2nd of February, there was abnormal lowering of the temperature. The effect of this was the scorching of sugarcane and drying up of wheat and gram. *Tur*, tobacco and other crops were also badly hit. As a result of all these adverse factors, *viz.*, the long drought in the *kharif* season, the severe cold and deficiency in parts of rains in the *rabi* season the *kharif* and *rabi* crops yielded less than normal.

A happy feature of the season was its freedom from crop pests or diseases of a serious nature.

**Karnatak.**—The season under review in this Division was good on the whole in *Mallad* (west) and *Gadinad* (transition) while it was better than last year in the east where excellent crops of wheat and *rabi jowar* could be secured in many places. The season started well generally, the sowings were done in time and all went well till the middle of August. A drought for about a month from this time, however, caused much anxiety and although the situation was much relieved by the excellent rains in the second half of September, the *kharif* crops were somewhat reduced in yield by the drought in places. Further on, untimely rains occurred in December and spoiled cotton in many areas while the severe cold at the end of January was responsible for some damage to *rabi* crops. In spite of these adverse factors, however, the year was a good one as noted above.

As regards crop pests and diseases, rust appeared on wheat in many places while grasshoppers appeared throughout the Division and affected yields of *jowar* and *bajri* especially in the east.

**Sind.**—The season, from the inundation point of view, was one of the best experienced within the last decade. The river rose early and kept up its level up to October which is beyond the normal inundation season. In spite of the excellent inundation, however, the season was not one of bumper harvests, as the following adverse factors considerably marred the prospects: (1) Deficiency of the *kharif* rains; (2) A rather serious and wide-spread attack of boll-worm on cotton; (3) The severe frost at the end of January and the beginning of February, which was unprecedented in its severity and extent and took a heavy toll of the *rabi* crops.

As regards crop diseases, except the boll-worm attack on cotton noted above, no crop disease or pest of a severe nature was reported from the Province.

## CHAPTER II—AREA CULTIVATED AND UNCULTIVATED.

(Statement II, pages 32-37.)

4. Number of villages.—The total number of villages in the Bombay Presidency proper decreased by two from 22,900½ in 1927-28 to 22,898½

during the year under report. The decrease was due to three villages in the Prantij Taluka of the Ahmedabad District being amalgamated with neighbouring villages. Against this there was an increase of one village in the Panch Mahals due to correction of a mistake in survey records.

In Sind, there was an increase of seven villages, all in the district of Thar Parkar where some *dehs* were split into more suitable units.

#### Total Area and Reporting and Non-reporting Area in the Bombay Presidency proper.

5. **Total Area.**—This remained stationary in the Presidency proper.

6. **Reporting Area.**—The total area for which statistics are regularly collected and reported in the Bombay Presidency proper showed an expansion of 111,000 acres. The most noticeable increase occurred in the East Khandesh District (+76,000 acres) due to this area being now correctly classified as “surveyed” instead of “unsurveyed” as shown previously through mistake. Similarly, there was also an appreciable increase in West Khandesh District (+22,000 acres) due to more survey operations in the district. A third case of increase occurred in the Belgaum District (+17,000 acres) due to correction of a mistake in the survey records of the Athni taluka in the district. The variations in other districts are small and call for no remarks.

7. **Non-reporting Area.**—The variations under this head generally correspond with those under the “Reporting Area” which have been noticed above.

#### Total Area and Reporting and Non-reporting Area in Sind.

8. **Total Area.**—The total area showed a slight increase of 5,000 acres in the Province mostly in the Sukkur District owing to the formation of new *kacha* land by the action of the river.

9. **Reporting Area.**—This also shows an increase of 5,000 acres mostly in the Sukkur District due to the cause mentioned under “Total Area” above, *viz.*, the formation of new *kacha* lands by the action of the river.

10. **Non-reporting Area.**—This remained generally stationary during the year under report.

11. **Estimates for Non-reporting Area.**—Estimates of the probable cropping of the areas for which statistics were not forthcoming were, as usual, received from all the District Officers.

12. **Cultivated (i.e., occupied) and Uncultivated Area.**—Details regarding these, as compared with the last year, are shown in Appendix A (page 23).

#### Cropped Areas in the Bombay Presidency proper.

13. **Gross Cropped Area.**—In the Bombay Presidency proper, the gross cropped area decreased by 48,000 acres. The most noticeable decrease occurred in the Ahmedabad District (—43,000 acres) due to deficiency of rains in June and October. The other districts where

the gross cropped area showed a substantial decline were Bijapur (—14,000 acres), Thana (—11,000 acres), East Khandesh (—9,000 acres) and Ahmednagar (—6,000 acres) and here the decrease was due to either the deficiency or the unsuitability of the sowing rains. Against this, Dharwar (+18,000 acres), Poona (+12,000 acres) and Kolaba (+10,000 acres) showed an appreciable increase due to the good September rains in the two former districts, *viz.*, Dharwar and Poona, and the good rains in July in the last named district, *viz.*, Kolaba.

**14. Twice Cropped Area.**—This showed a decrease of 42,000 acres in the Bombay Presidency proper. In Gujarat, the decrease amounted to 24,000 acres, in the Deccan, to 41,000 acres and in the Karnatak, to 10,000 acres, being in all cases due to general deficiency of the late rains. Against this, the Konkan showed a rise of 33,000 acres; mostly the Thana District due to the good rains that were received in the Division in October, followed by some fair rain even in November.

**15. Net Cropped Area.**—This showed a slight decline of 6,000 acres in the Bombay Presidency proper due to deficiency or unsuitability of the sowing rains, in some parts.

**16. Cropped Areas in Sind.**—In Sind, the gross cropped area and the net cropped area showed a slight decline of 99,000 acres and 153,000 acres or 2·2 and 3·7 per cent. respectively owing to absence or deficiency of rains in the *khari* season which caused a decrease in the cropped area in the desert portions of the Karachi and Thar Parkar Districts. The area cropped more than once, however, showed an increase of 63,000 acres due to the good inundation of the season which lasted up to October.

**17. Assessed and Unassessed Area.**—In the Bombay Presidency proper, the assessed area curtailed by 15,000 acres although the unassessed area remained practically the same as during the previous year. In Sind, the assessed area rose by 157,000 acres mostly in the Karachi district while the unassessed area fell by 255,000 acres, also chiefly in the Karachi District.

**18. Temporary Cultivation in Forest Lands and Culturable Waste.**—In the Bombay Presidency proper, about 95,000 acres of Forest lands were given out for temporary cultivation mainly in West Khandesh (36,000 acres), Sholapur (21,000 acres), Poona (20,000 acres), Thana (10,000 acres), Ahmednagar (5,000 acres) and Belgaum (1,000 acres) districts; while about 77,000 acres of Culturable Waste mainly in West Khandesh (34,000 acres), Nasik (16,000 acres), Poona (8,000 acres), Thana (5,000 acres), Belgaum and Ahmednagar (2,500 acres each) and Satara, Kolaba and Bombay Suburban Districts (1,000 acres each) were similarly dealt with.

### CHAPTER III—CROPPED AREA.

(Statement III, pages 38-59.)

**19. Variations in Cropped Area.**—The main features of the season and of the harvest have been described elsewhere in the Report.

Appendix B (pages 24-25) shows the effect of the season under review on the areas sown as compared with the average and with the preceding year's area under the principal crops.

**20. Food Crops.**—In the Bombay Presidency proper, the area under food crops, *i.e.*, cereals, pulses, sugarcane and fruits and vegetables decreased by 555 thousand acres or 2·8 per cent. below the previous year and by 61 thousand acres or 0·3 per cent. as compared with the average.\* Among the *kharif* crops, *bajri* showed a decline of 545 thousand acres or 11·9 per cent., rice of 60 thousand acres or 3·0 per cent. and *kharif jowar* of 34 thousand acres or 0·5 per cent. below the preceding year due to the deficiency of the June rains in North Konkan, North Deccan and almost the whole of Gujarat. The *rabi* crops, on the other hand, showed a general rise over the previous year due to the good rains received in September and October almost throughout the *rabi* area of the Presidency. Thus, wheat showed an increase of 170 thousand acres or 11·5 per cent., and gram of 21 thousand acres or 3·7 per cent. over the areas occupied by these respective crops in the preceding year, *viz.*, 1927-28.

**21. Non-food Crops.**—The area under non-food crops which comprise tobacco, cotton and oil seeds, increased by 507 thousand acres or 5·6 per cent. over the previous year and by 2,100 thousand acres or 28·2 per cent. as compared with the average. The most noticeable increase was under groundnut (+ 259,000 acres) among oil seeds and under cotton (+ 191,000 acres) due to the popularity of these crops and the suitability of the sowing rains. Tobacco also showed a rise of 31 thousand acres over the previous year owing to the good rains in Gujarat from July onwards.

The net result of these variations in the food and non-food crops, as noticed above, was a decrease of 48 thousand acres or 0·2 per cent. below the total cropped area of the previous year although there was still a rise of 2,039 thousand acres or 7·6 per cent. as compared with the average.

**22. Cropped Area in Sind.**—In Sind, with the exception of *jowar* and *bajri* the area under which was curtailed to the extent of 16 and 156 thousand acres or 2·7 and 13·7 per cent. respectively below the previous year, in favour of better paying crops like cotton, rice and wheat, the area under almost all the crops rose over the previous year. Thus, rice showed a rise of 40 thousand acres or 3·5 per cent., wheat of 13 thousand acres or 3·5 per cent., gram of 13 thousand acres or 8·0 per cent. and cotton of 123 thousand acres or 46·5 per cent. above the last year partly due to the incentive of high prices fetched by these crops and partly due to the good inundation of the season.

---

\* Average of the five years 1916-17 to 1922-23 excluding the two abnormal years 1918-19 and 1920-21.

23. **Kharif and Rabi Seasons.**—The following table compares, as usual, the *kharif* and *rabi* seasons of the year, in the Bombay Presidency proper, with those of the preceding two years :—

(Area in thousands of acres.)

Details	1926-27			1927-28			1928-29		
	Cereals	Pulses	Total Cereals and Pulses	Cereals	Pulses	Total Cereals and Pulses	Cereals	Pulses	Total Cereals and Pulses
	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres
Kharif ..	10,519	1,860	12,379	10,575	2,016	12,591	9,788	1,934	11,717
Rabi ..	6,383	705	7,088	6,326	800	7,126	6,596	807	7,406
Total ..	16,902	2,565	19,467	16,901	2,816	19,717	16,382	2,741	19,123

It will be seen from the above table that the *kharif* area, during the year under report, showed a decrease of 874 and 662 thousand acres respectively below the *kharif* area last year (1927-28) and the year previous to the last (1926-27). The *rabi* area, on the other hand, exhibited an increase of 280 and 318 thousand acres respectively over the last year (1927-28) and the year before the last (1926-27). The net result of these variations was that the total area under cereals and pulses decreased by 594 and 344 thousand acres respectively below the area under these crops during the last year (1927-28) and the year preceding the last (1926-27).

24. **Variations under Principal Crops.**—The detailed remarks below explain the variations under the principal crops.

**Jowar and Bajri.**—The subjoined table compares the extent of cultivation of these staple grains in the different Divisions of the Bombay Presidency.

(Area in thousands of acres.)

Division	Jowar			Bajri		
	Normal*	1927-28	1928-29	Normal*	1927-28	1928-29
	Acres	Acres	Acres	Acres	Acres	Acres
Gujarat ..	610	565	540	426	305	287
Deccan ..	4,595	4,294	4,319	3,419	3,667	3,312
Karnatak ..	2,697	2,360	2,325	394	618	446
Total, Bombay Presidency ..	7,902	7,219	7,184	4,239	4,590	4,045
Sind ..	598	602	586	1,029	1,135	979
Grand Total ..	8,500	7,821	7,770	5,268	5,725	5,024

\*Average of the five years 1916-17 to 1922-23 excluding the two abnormal years 1918-19 and 1920-21.

It will be seen from the above table that the area under *jowar* and *bajri* in the Bombay Presidency proper fell below the last year as well as below the normal due to the absence or deficiency or rainfall in June in Gujarat and the North Deccan and in August in South Deccan and the Karnatak.

In Sind, the decline in area under both the crops below the last year and the average, in spite of the good inundation of the season, was due partly to the failure of *kharif* rains which were responsible for the decrease in area under these crops in the desert portion of the Karachi and Thar Parkar Districts and partly to the cultivators being induced to utilise the good inundation to the cultivation of more profitable crops like rice and cotton.

**Rice.**—The area under rice in the Bombay Presidency proper fell by 60 thousand acres or 3 per cent. below the previous year, almost the whole of this decrease occurring in the Gujarat Division due to the absence of rains there in June.

In Sind, on the other hand, the area rose by 40 thousand acres or 3·5 per cent. due to the good inundation coupled with the incentive of high price fetched by the grain.

**Wheat.**—The area under this crop rose over the previous year both in the Presidency proper and in Sind (by 170 thousand and 13 thousand acres respectively). The good *rabi* rains which occurred in a large part of the Presidency were responsible for a rise in area here, while in the case of Sind the increase was due to the ample moisture which the inundation of the season had left in the fields at the time of sowing the crop.

**Oil-seeds.**—The area under oil-seeds, in the Bombay Presidency proper, expanded by 184 thousand acres or 12·7 per cent. over the previous year and by 741 thousand acres or 84·5 per cent. when compared with the average.

In Sind, on the other hand, the area under oil-seeds diminished by 6 thousand acres or 2·0 per cent. below the previous year and by 51 thousand acres or 14·3 per cent. as compared with the average.

The following table and the succeeding remarks explain the variations under the principal oil-seeds as compared with the previous year :—

(Increase or decrease in thousands of acres as compared with the last year)

Oil-seed	Bombay Presidency proper	Sind
Linseed .. .. .	+ 17	..
Sesamum .. .. .	— 49	— 6
Rapeseed and Mustard .. .. .	— 3	+59
Groundnut .. .. .	+259	..
Castorseed .. .. .	— 28	— 2

**Groundnut.**—When during 1927-28 the area under the crop rose to  $7\frac{1}{2}$  lakhs of acres from 6 lakhs of acres in 1926-27 and 1925-26 and  $3\frac{1}{2}$  lakhs of acres in 1924-25 and 1923-24, it was thought that the maximum limit of cultivation had probably been reached. The very great advance during the year under review of over  $2\frac{1}{2}$  lakhs of acres since the preceding year (1927-28) shows that this is not the case. How far the area under the crop will go on increasing will of course depend on the market prices and the character of the seasons during the next few years. One thing, however, is quite evident, namely, that the popularity gained by the crop in recent years was fully maintained during the year under review as is evinced from the rise in area. Thus, in the Deccan, the area under groundnut rose from 550 thousand acres in 1927-28 to 756 thousand acres during the year under report. This increase was shared by all the districts in the Division without exception. The most noticeable increase occurred in East Khandesh which showed a rise of as much as 115 thousand acres over the previous year. This was followed by a rise of 27, 25 and 22 thousand acres respectively in the districts of Satara, West Khandesh and Sholapur. Similarly, in the Karnatak the area rose over the preceding year in all the three districts of the Division the share of increase being 29, 14 and 4 thousand acres in Belgaum, Bijapur and Dharwar Districts respectively. In fact, except a slight decline of about 5 thousand acres in the Panch Mahals in Gujarat, brought about by a deficiency of the sowing rains, the area under this crop rose in each and every district wherever the crop is grown in the Presidency. The increased cultivation under groundnut is, in fact, one of the most striking agricultural changes in recent years.

**Sesamum.**—The area under sesamum, which is principally a *khari* crop fell by 49 thousand acres below the previous year, the decrease being almost wholly shared by the districts of Bijapur (—23,000 acres). Ahmedabad (—18,000 acres) and West Khandesh (—9,000 acres) due to deficiency of rains in August (when the late variety of sesamum is sown) in the Bijapur District and in June in the Ahmedabad and West Khandesh Districts.

**Linseed.**—The area under this oil-seed which is almost exclusively a *rabi* crop showed an expansion of 17 thousand acres in the Bombay Presidency proper over the last year. The most noticeable increase occurred in the districts of Bijapur (+12,000 acres) and Ahmednagar (+4,000 acres) due to the good rains received in September-October in these districts. The variations in the case of other districts are small and call for no remarks.

**Rapeseed and Mustard.**—These are oil-seeds of minor importance in the Bombay Presidency proper. The total decrease of 3 thousand acres below the previous year is insignificant and was, besides, distributed in various districts. It thus calls for no explanation.

**Oil-seeds in Sind.**—As regards oil-seeds in Sind, the only oil-seeds of any importance are rapeseed and mustard (which are by far the most important) and sesamum; the area under other oil-seeds such as

linseed, groundnut, castorseed, cocoanut, etc., being quite negligible in the Province. The area under rapeseed and mustard increased by 59 thousand acres over the last year and the increase was shared by almost all the districts in the Province, due to the favourable inundation of the season. Sesamum on the other hand, showed a slight decline of 6 thousand acres in the Province and this was due to the failure of the kharif rains which curtailed the area under the crop in the desert portion of the Karachi District.

**Cotton.**—The cultivation of cotton showed an extension of 191 thousand acres or 4·1 per cent. over the previous year and 1,942 thousand acres or 67·9 per cent. when compared with the average, as more area was brought under cultivation of this crop on account of high prices fetched by cotton in recent years and also owing to the favourable rains in June in the South Deccan and in September in Gujarat and the Karnatak. The increase in area was general except in the North Deccan where the area receded due to the deficiency of the rains in June.

In Sind, as may be expected from the favourable nature of the inundation, the area under this crop extended in all the three cotton growing districts of the Province, *viz.* Hyderabad, Thar Parkar and Nawabshah, the total increase amounting to 123 thousand acres or 46·5 per cent. over the previous year and to 144 thousand acres or 59·0 per cent. when compared with the average.

**Sugarcane.**—The area under this crop fell by 4 thousand acres from 65 thousand acres in 1927-28 to 61 thousand acres during the year under report. The decrease mostly occurred in the Ahmednagar District of the Deccan partly owing to the deficiency of water supply at planting time and partly due to the slump in the price of *gul*.

In Sind, the area under sugarcane remained almost the same as during the previous year.

**Tobacco.**—The area under the crop increased by 31 thousand acres or 26·7 per cent. over the previous year in the Bombay Presidency proper, most of the increase occurring in Kaira (+17,000 acres) and Belgaum (+11,000 acres) due to the suitability of the rains at the time of planting the crop.

In Sind, tobacco occupies an insignificant position and does not deserve special treatment.

**Fruits and Vegetables.**—These show an increase of 43 thousand acres over the previous year in the case of the Bombay Presidency proper and of 4 thousand acres in the case of Sind. The rise in the case of the Presidency is attributable to the favourable nature of the late rains and in Sind to the satisfactory character of the inundation.

25. Appendix C (pages 26-27) shows as usual the distribution in each district of the Bombay Presidency proper and in Sind, of the principal food and non-food crops in percentage of the gross area cropped.

## CHAPTER IV—IRRIGATED AREA.

(Statement IV, pages 60-69.)

**26. Variations in Irrigated Area and Crops.**—Appendix D (page 28) exhibits variations under the several heads of irrigation and crops irrigated as compared with similar details of the previous year.

**27. Area Irrigated.**—In the Bombay Presidency proper, the area irrigated showed a rise of 35 thousand acres or 3·6 per cent. over the previous year, having risen from 965 thousand acres during the previous year (1927-28) to 1,000 acres during the year under report.

In Sind, similarly, the irrigated area increased by 140 thousand acres or 4·7 per cent. over the preceding year having increased from 2,983 thousand acres in the last year (1927-28) to 3,123 thousand acres in the year under consideration (1928-29). In Sind, the rise in the irrigated area was general and was due to the good inundation of the season.

**28. Area Irrigated from Different Sources of Irrigation in the Bombay Presidency proper.**—

**Government Canals.**—The area under Government Canals rose by 30 thousand acres or 14·3 per cent. over the preceding year. There was an increase both in the Deccan (+22,000 acres) and Karnatak (+18,000 acres) Divisions due to good water supply in the Canals although Gujarat showed a decline of 9 thousand acres mostly in the Ahmedabad District owing to the cultivators having not felt any great necessity to irrigate their crops as the *rabi* rains were generally good.

**Private Canals.**—Irrigation from private canals fell by 12 thousand acres below the last year and the decline was general in both the Deccan and Karnatak Divisions of the Presidency proper due to a corresponding rise under Government Canals in these Divisions. In Konkan, irrigation by private canals remained practically stationary while in Gujarat irrigation from this source is practically absent.

**Wells.**—Well irrigation extended by 27 thousand acres or 5·3 per cent. over the previous year mostly in the Sholapur (+22,000 acres) and Ahmednagar (+10,000 acres) Districts in the Deccan, as the cultivators in these districts had to resort to irrigating their more valuable crops, in the absence of rains from the end of October onwards. On the other hand, Ahmedabad District in Gujarat showed a decline of 6,000 acres, due to the good late rains in the district which did away with the necessity of resorting to irrigation to the extent of the last year.

**Tanks.**—The area irrigated by tanks rose by 16 thousand acres or by 15·1 per cent. from 105 thousand acres in the previous year to 121 thousand acres during the year under report. The most noticeable increase occurred in the Dharwar District (+29,000 acres) in the Karnatak, due to good water supply in tanks. On the other hand, Ahmedabad District showed a decline (—12,000 acres) due to the good *rabi* rains in the district in consequence of which the cultivators felt no necessity to resort to irrigation sources.

**Other Sources.**—Irrigation from "Other Sources" declined by 26 thousand acres or by 49·1 per cent. below the previous year mostly in the Dharwar District (—22,000 acres in the Karnatak, owing to a corresponding rise in irrigation from 'Tanks' in this district.

### 29. Area Irrigated from Different Sources of Irrigation in Sind.—

**Government Canals.**—In Sind which is mainly dependent for cultivation on irrigation, the area irrigated by Government Canals showed a considerable expansion (of 158 thousand acres or 5·6 per cent.) over the previous year, due to the favourable character of the inundation of the year. The increase was general except in the Karachi District which showed a slight set back.

**Private Canals.**—There is hardly any cultivation worth the name under private canals in Sind except perhaps in the district of Sukkur. In this district, the area rose from 9 thousand acres in the previous year to 11 thousand acres during the year under report, in consequence of the good water supply in these canals.

**Wells.**—Irrigation by wells showed a fall of 7 thousand acres or 12·7 per cent. below the previous year and the fall was shared by all the districts. This was due to the fact that the inundation of the river being good, cultivators did not feel any great necessity to resort to this kind of irrigation (by wells).

**Tanks.**—The area irrigated by tanks is quite insignificant in the Province not amounting even to a total of one thousand acres and does not justify any special treatment.

**Other Sources.**—Irrigation from 'Other Sources' fell by 11 thousand acres due to the good inundation of the river which did away with the necessity of resorting to miscellaneous sources of irrigation.

30. **Ratio of the Irrigated Area to the Net Cropped Area.**—This was 3·6 per cent. in the Bombay Presidency proper and 77·5 per cent. in Sind.

### 31. Crops Irrigated in the Bombay Presidency Proper.

**Jowar.**—The area under irrigated *jowar* rose by 11 thousand acres or 5·4 per cent. over the preceding year mostly in the Deccan (+10,000 acres) due to the necessity of helping this crop with irrigation in parts of the South Deccan owing to deficiency of the late rains.

**Bajri.**—Irrigated *bajri* remained practically stationary in its area, the total variation being only a fall of 4 thousand acres distributed over a number of *bajri* growing districts.

**Rice.**—The area under irrigated rice showed an expansion of 8 thousand acres over the previous year. The most noticeable increase occurred in the Dharwar District in the Karnatak where the area rose by 24,000 acres, due to the cultivators being induced to utilise the ample water supply in tanks to irrigate this crop. On the other hand, Ahmedabad District in Gujarat showed a decline of 17,000 acres due to the fact that

in this district there did not arise a necessity to help the crop with irrigation as the rains from July onwards were generally good in the districts.

**Wheat.**—Irrigated wheat showed a very slight decline (of 8,000 acres) below the previous year mostly in the district of Ahmedabad (—5,000 acres) and the Panch Mahals (—1,000 acres) in Gujarat, where owing to the good *rabi* rains, the crop did not require to be irrigated to the extent of the preceding year.

**Cotton.**—The area under irrigated cotton rose by 10 thousand acres or 41.7 per cent. over the previous year. Almost all the increase occurred in the Deccan (+9,000 acres) where it was found necessary to help this valuable crop with irrigation owing to deficiency of *rabi* rains in parts of the South Deccan.

**Sugarcane.**—As already noted in the treatment of the crop in chapter III, the area under this crop fell by 3,000 acres chiefly in the Ahmednagar District in the Deccan partly owing to deficiency of water supply at planting time and partly due to the slump in the price of *gul*.

**32. Crops Irrigated in Sind.**—With the exception of minor crops like *barley* and *bajri* which showed a decline in area, the area under all the other crops advanced due to the excellent inundation of the season. The actual variations in the areas under the different crops since last year have been shown in Appendix D (page 28) of the Report and need not be repeated here.

## CHAPTER V—OUTTURN OF CROPS.

(Statements V and V-A, pages 70-86.)

**33. Yield of Principal Crops.**—Statement V (pages 70-71) shows the estimated yield of the principal *kharif* and *rabi* crops, taking 100 as representing the normal. It is prepared from the district estimates which are returned in annas, with twelve annas as representing a normal crop. The figures are, therefore, only approximate. The character of the season has already been described elsewhere.

### 34. Outturn of Crops in the Bombay Presidency Proper in Parts of the Normal.

#### A—Kharif Crops—

**Jowar.**—Excepting the Broach and Belgaum Districts where *jowar* returned about two-thirds of the normal, and in Dharwar and Kanara Districts where it gave three-fourths of the normal yield, the outturn of *kharif jowar* ranged between eighty and ninety per cent. of the normal in the remaining districts of the Bombay Presidency Proper. In the Surat District, however, it gave a poor outturn only about half the normal owing to uneven distribution of early rains.

**Bajri.**—*Bajri* yielded only between one-half and two-thirds of the normal in Kaira and Broach Districts in Gujarat, in West Khandesh, Poona and Sholapur Districts in the Deccan and in all the three Karnatak

Districts. In the remaining districts of the Presidency, the outturn of the crop was better, ranging from three-fourths to four-fifths of the normal.

**Rice.**—Rice returned from four-fifths of the normal to a full normal in the Konkan, in the Panch Mahals and Surat Districts in Gujarat, in all the districts except Khandesh and Sholapur in the Deccan and in Belgaum and Bijapur Districts in the Karnatak. In the remaining districts of the Presidency the outturn was not equally good but came to between two-thirds and three-fourths of the normal.

**Cotton.**—As a result of severe frost in January, cotton returned a poor outturn throughout Gujarat and, in this division, the yield ranged between one-third and two-fifths of the normal generally. In the Deccan, the outturn of cotton was about sixty per cent. of the normal in the Poona District, about two-thirds of the normal in West Khandesh and Ahmednagar and from three-fourths to four-fifths of the normal in Sholapur, East Khandesh and Nasik Districts. In the Satara District, the yield was even better being ninety per cent. of the normal. In the Karnatak, while in the districts of Belgaum and Dharwar three-fourths of the normal yield was obtained, the outturn in Bijapur District was better still, being a little over ninety per cent. of the normal.

As a result of the good sowing rains, and of the stimulus of high prices, the area under cotton extended nearly everywhere in the Presidency and the total area under the crop in the Bombay Presidency including Sind, Western India States Agency and the other Indian States stood at 8,044 thousand acres, thus showing a rise of 281 thousand acres or 3·6 per cent. over the previous year. The outturn, however, decreased from 1,800 thousand bales during the previous year to 1,476 thousand bales or by 18·0 per cent., during the year under report. Of this total outturn of 1,476 thousand bales, 377 thousand bales or 25·6 per cent. represented the yield of long stapled Broach, Dharwar and Kumpta varieties while the remaining 1,099 thousand bales or 74·4 per cent. belonged to the short stapled varieties of Khandesh, Gujarat and Sind. As compared with the previous year the outturn of the long stapled cotton fell by 10·6 per cent. and that of the short stapled cotton by 20·3 per cent.

**Sesamum.**—This oil seed yielded about half the normal, in the Kaira, Broach and Sholapur Districts. In the remaining districts of the Presidency, the yield varied from two-thirds to three-fourths of the normal except in Nasik District in the Deccan and in Kolaba and Ratnagiri Districts in the Konkan where the yield was higher still, being about ninety per cent. of the normal.

#### B—Rabi Crops.

**Jowar (Rabi).**—*Rabi jowar* yielded a little over half the normal in Broach and Surat Districts and about two-thirds of the normal in Poona and Belgaum Districts, while in the remaining districts the yield ranged from three-fourths to four-fifths of the normal except in the Satara District where a full normal could be secured.

**Wheat.**—As a result of the frost, wheat yielded only about half the normal in North Gujarat but in the two districts in South Gujarat, *viz.*, Broach and Surat, it yielded from eighty to eighty-five per cent. of the normal. In the Deccan, wheat returned from seventy to eighty-five per cent. of the normal generally except in the Satara District where a nearly normal yield was obtained. In the Karnatak, wheat yielded about three-fourths of the normal in the Belgaum and Dharwar Districts and a full normal in the Bijapur District.

**Gram.**—The bad effects of January frost were reflected in the poor outturn of this crop in North Gujarat where the crop returned only between thirty-five to forty-five per cent. of the normal. In Broach and Surat Districts, the yield came to about fifty to sixty per cent. of the normal. In the Deccan, while the crop returned about three-fourths of the normal in East Khandesh, Ahmednagar, and Poona Districts, the yield was much better in the other districts of the Division, *viz.*, West Khandesh, Nasik and Satara, being about eighty-five to ninety per cent. of the normal. In the Sholapur District, however, the yield was comparatively small being about two-thirds of the normal. In the Karnatak, the yield of gram was about two-thirds of the normal in the Belgaum and Dharwar Districts and four-fifths of the normal in the Bijapur District. In the Konkan, gram yielded about two-thirds of the normal in the Kanara District, about three-fourths of the normal in the Ratnagiri District and from four-fifths to about a full normal in the remaining two districts, *viz.* Kolaba and Thana.

**Tobacco.**—In consequence of the severe frost which dealt a severe blow to the tobacco crop, tobacco yielded about two-fifths of the normal in Broach District and from one-half to three-fifths of the normal in the remaining districts of Gujarat. In the Deccan, the crop came very poor in the Poona District, where it yielded only about two-fifths of the normal. In Sholapur and West Khandesh Districts, the yield also was not very satisfactory being about two-thirds of the normal. In the remaining districts of the Deccan, however, the yield was much better being about four-fifths of the normal or even more. In the Karnatak, tobacco returned about two-thirds of the normal in the Dharwar District, four-fifths of the normal in the Bijapur District and nearly a normal yield in the district of Belgaum.

**Linseed.**—Like the other *rabi* crops in Gujarat, this crop also suffered owing to the frost and in consequence its yield came to only one-third of the normal in the Panch Mahals, and two-thirds of the normal in the Ahmedabad District. In the other districts of Gujarat there is practically no cultivation under this oil seed. In the Deccan, excepting Poona and Sholapur Districts where the yield ranged between fifty and sixty per cent. of the normal, linseed returned from two-thirds to three-fourths of the normal in the other districts of the Division except the Nasik District where the yield was better still, being about eighty-five per cent. of the normal. In the Belgaum and Dharwar Districts in the Karnatak and Kanara Districts in the Konkan, the crop returned about two-thirds of the normal while in the Bijapur District the yield was a little over four-fifths of the normal.

**Rape seed and Mustard.**—The injury to this crop from frost was on the aggregate serious and as a result, it yielded only one-third to two-fifths of the normal almost throughout Gujarat except the Surat District where the yield was slightly better, *viz.*, three-fifths of the normal. In the remaining areas of the Presidency, this oil seed yielded a little over four-fifths of the normal in Nasik and Poona Districts in the Deccan and about two-thirds of the normal elsewhere.

### 35. Outturn of Crops in Sind in Parts of the Normal.

#### A—Kharif Crops.

**Jowar and Bajri.**—These two crops returned about half the normal in Thar Parkar and Larkana Districts and about two-thirds of the normal in the other districts of the Province.

**Rice.**—Rice yielded about three-fifths of the normal in Thar Parkar and Sukkur Districts, about two-thirds of the normal in Karachi, Nawabshah and Upper Sind Frontier Districts, three-fourths of the normal in Larkana District and a little over four-fifths of the normal in the district of Hyderabad.

**Cotton.**—Owing to a severe attack of boll-worm in places, cotton returned about two-fifths of the normal in Larkana District, from one-half to three-fifths of the normal in Thar Parkar, Nawabshah, Sukkur and Karachi Districts. In the Upper Sind Frontier and Hyderabad Districts, however, the yield was somewhat better, being two-thirds and three-fourths of the normal, respectively.

#### B—Rabi Crops.

**Wheat.**—Except in the Larkana District where wheat yielded about three-fourths of the normal, its outturn ranged from two-fifths to three-fifths of the normal elsewhere in the Province.

**Gram.**—As a result of the severe frost in January, gram returned a very poor yield in Sind generally. Thus, its yield was less than twenty per cent. of the normal in Sukkur District and about one-fourth of the normal in the districts of Karachi, Thar Parkar and Nawabshah. In the remaining districts of the Province, *viz.*, Hyderabad, Larkana and Upper Sind Frontier, the outturn varied from one-third to one-half the normal.

**Tobacco.**—Except in Upper Sind Frontier District where tobacco yielded about four-fifths of the normal and in the Larkana District where it returned only about two-fifths of the normal, the range of the outturn of the crop lay between one-half to two-thirds of the normal elsewhere in the Province.

**Rape Seed and Mustard.**—This staple oil seed of the Province suffered very heavily owing to the severe January frost and in consequence its outturn was very poor, ranging from one-sixth to one-third of the normal in the various districts of the Province.

**36. Outturn of Sugarcane in the Bombay Presidency including Sind.**—In Gujarat, sugarcane returned only one-half the normal in the

Ahmedabad district but about three-fourths of the normal elsewhere. In the Deccan, except in the Sholapur District where sugarcane returned about two-thirds of the normal the outturn of the crop ranged from four-fifths of the normal to a little over full normal, in the remaining district of the Division, and if it had not been for the severe frost of January the outturn in the Canal Areas of the Deccan would have been better still. In the Dharwar District in the Karnatak and Ratnagiri and Kanara Districts in the Konkan, sugarcane yielded about three-fourths of the normal while in the remaining districts of the Presidency the yield ranged from four-fifths to nine-tenths of the normal.

In Sind, sugarcane yielded about four-fifths of the normal in the Hyderabad District and three-fourths of the normal in the Upper Sind Frontier District. In the other districts of the Province, however, the outturn was not equally good. Thus; in the districts of Larkana and Sukkur it was about three-fifths of the normal, in Karachi and Nawabshah Districts about one-half of the normal, while in Thar Parkar District it was even lower, being about two-fifths of the normal.

**37. Outturn in Tons of Food-Grain Crops.**—Statement V-A (pages 72-86) compares the acreage under food-grain crops (cereals and pulses) in the various Divisions of the Bombay Presidency and their approximate outturn in tons, during the year under report, with similar statistics for the two preceding years. The following table sums up the result :—

Division	Area in thousands of acres			Outturn in thousands of tons		
	1926-27	1927-28	1928-29	1926-27	1927-28	1928-29
	Acres	Acres	Acres	Tons	Tons	Tons
Gujarat ..	2,549	2,486	2,325	759	674	734
Deccan ..	10,748	10,980	10,713	1,956	2,366	2,103
Karnatak ..	4,619	4,643	4,488	720	889	993
Konkan ..	1,551	1,607	1,598	663	710	686
<b>Total, Bombay Presidency Proper.</b>	<b>19,467</b>	<b>19,716</b>	<b>19,124</b>	<b>4,098</b>	<b>4,639</b>	<b>4,516</b>
Sind ..	3,782	3,754	3,616	904	811	905
<b>Grand Total ..</b>	<b>23,249</b>	<b>23,470</b>	<b>22,740</b>	<b>5,002</b>	<b>5,450</b>	<b>5,421</b>

From the above table it will be seen that both the area and outturn of food grains in the Presidency proper fell below that of the last year. The area receded by 3·0 per cent. and the outturn by 2·7 per cent. thus showing that the season under review was slightly less favourable than its predecessor.

In Sind, on the other hand, while the area fell somewhat (by 138 thousand acres or 3·7 per cent.) below the previous year, the outturn rose

appreciably, from 811 thousand tons to 905 thousand tons or by 11·6 per cent., thus depicting the favourable nature of the season due to the excellent inundation of the year.

### 38. CHAPTER VI—PRICES, TRADE AND STOCK.

**Prices of Principal Articles.**—Statement VI (pages 88-89) shows in detail the retail prices of the principal staples and of fodder ruling at harvest time at each district head-quarter station in the Bombay Presidency and in Sind. The detailed remarks below explain the variations in the prices of the principal articles.

**Jowar.**—In the Bombay Presidency proper, *jowar* ruled cheaper by about two-thirds of a seer per rupee to three-fourths of a seer per rupee at Broach, Surat and Dhulia (West Khandesh) and by a little over one seer per rupee to about two seers per rupee at Karwar (Kanara), Dharwar, Ahmednagar and Kaira, while at Belgaum, Bijapur and Satara it ruled appreciably easier than last year, being cheaper by two and two-thirds, three and two-thirds and three and a half seers, respectively, per rupee. At Godhra (Panch Mahals), however the grain sold much higher than last year, *viz.*, by three seers per rupee. At the other stations in the Presidency, the price of *jowar* was either stationary or showed but a small variation in price as compared with last year.

In Sind, the price of *jowar* was almost stationary at Sukkur and Hyderabad, and easier by a little over one seer per rupee at Larkana. At the remaining stations of the Province the grain sold dearer by about a seer per rupee.

**Bajri.**—*Bajri* was appreciably cheaper at Bijapur, Belgaum and Satara where the price was easier by two, two and one-third, and two and a half seers per rupee, respectively. On the other hand, it was appreciably higher at Jalgaon (East Khandesh), Godhra (Panch Mahals) and Ahmedabad where its rate was dearer by one, one and a quarter, and one and a half seers per rupee, respectively. At the other stations of the Presidency, the price of the article may be said to be generally stationary, the variation in price from last year's not exceeding one seer per rupee either way.

In Sind, except at Nawabshah and Hyderabad, where the price of *bajri* was the same as last year it ruled higher by from one and one-third to little over two seers per rupee elsewhere.

**Rice.**—The price of rice was generally stationary except at Belgaum, Alibag (Kolaba) and Larkana where it was cheaper by about a seer per rupee.

**Wheat.**—Except at Surat where it was stationary, the price of wheat was dearer by from a little over one seer per rupee to two and a half seers per rupee at the other stations in Gujarat. In the Deccan, wheat sold dearer by about a little over two seers per rupee at Nasik, but was almost stationary in price elsewhere in the Division. In the Karnatak the price of wheat was cheaper at Dharwar, Belgaum and Bijapur by two-thirds of a seer, one and one-third and one and a half seers per rupee,

respectively, while in the Konkan it was stationary everywhere except Alibag (Kolaba) where it ruled easier by about a seer per rupee.

In Sind, wheat sold dearer throughout the Province, the dearness ranging by from about one to three seers per rupee.

**Gram.**—In the Presidency proper gram was stationary in price almost throughout the Konkan except Alibag (Kolaba) where it sold dearer by one and a half seers per rupee. At the other stations in the Presidency, it ruled higher by from one to three and a half seers per rupee than last year except at Kaira in Gujarat where it was dearer by as much as five and a quarter seers per rupee.

In Sind, similarly, gram sold dearer by from a little over one seer to three seers per rupee throughout the Province.

**Turdal.**—The price of *turdal* was cheaper by two seers per rupee at Bijapur and dearer by one and a half seers per rupee at Satara; elsewhere, the price did not vary largely from last year, the variations ranging from a quarter seer to three-fourths of a seer per rupee.

In Sind, *mugdāl* is generally used in place of *turdal* and the price of the article (*mugdāl*) was cheaper by about a seer per rupee at Karachi, but nearly stationary elsewhere in the Province.

**Gul or Raw Sugar.**—The price of the article was higher by about a seer per rupee at Surat and Sholapur and by one and a half seers per rupee at Godhra (Panch Mahals), Ahmednagar and Poona; elsewhere the price was almost the same as during the last year.

In Sind, except at Karachi, Mirpurkhas (Thar and Parkar) and Nawabshah, where the price of *gul* was nearly the same as last year, it ruled higher by from a little over one seer to one and two-third seers per rupee at the other stations in the Province.

**Tobacco.**—The price of this article was almost stationary throughout the Presidency, although in Sind it was dearer at Nawabshah and Sukkur by one half and one and a half seers per rupee, respectively.

**Jowari Kadbi.**—In consequence of the good outturn of *jowar*, the price of *jowari kadbi* was appreciably cheaper at Kaira, Surat, Ahmednagar, Sholapur and Bijapur. Elsewhere the price of the article was generally the same as last year except at Karwar (Kanara) where it was much dearer.

In Sind, *jowar kadbi* sold dearer at Hyderabad, Nawabshah, Larkana, but its price was stationary at the other stations of the Province.

**Dry grass.**—This was appreciably cheaper at Kaira and Surat and much dearer at Dhulia (West Khandesh). Elsewhere in the Presidency the price of the article was nearly the same as last year.

In Sind the price of dry grass ruled much higher at Karachi, Mirpurkhas (Thar and Parkar) and Nawabshah, but was nearly stationary elsewhere.

**Cotton.**—The variations in the area and outturn of this crop as compared with the last year have already been noted under the respective chapters and need not be repeated here. The following table compares

the prices of the article during the year under report with those of the previous year and the average of the preceding five years :—

Variety	Price per bale of 400 lbs.			Variations	
	Average of five years ending 1927	Average of the seven months ending 31st July		Compared with the average	Compared with the prices in 1928
		1928	1929		
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Per cent	Per cent.
Broach .. ..	256	204	179	-30.1	-12.3
Khandesh .. ..	216	168	139	-35.7	-17.3
Dharwar .. ..	253	201	172	-32.0	-14.0

It will be seen from the above table that the prices of all the three varieties of cotton fell below those of the previous year as well as below the average prices during the preceding five years. The drop in price may be attributed to the quality of cotton being prejudicially affected by the untimely December rains in the North Deccan and the Karnatak and also to good outturn being secured in the latter Division (Karnatak).

### 39. CHAPTER VII—AGRICULTURAL STOCK.

Information under this head is collected only once in five years. The result of the last enumeration has been published in the Season and Crop Report for the year 1924-25.

### 40. CHAPTERS VIII AND IX—CONDITION OF THE AGRICULTURAL POPULATION.

As already noted in Chapter I of the Report, the season under review was fairly good both in the Presidency proper and in Sind and there was no actual scarcity of food and fodder in any area.

The prices of agricultural produce did not show any considerable variation from last year except in the case of cotton and tobacco for which the prices ruled lower than last year due to deterioration in the quality of the produce as a result of untimely rains and the severe frost of January-February. The price of *gul* fell steadily from October 1928 to February 1929 when it again rose gradually till it reached its former level in June 1929.

Wages remained generally same as last year except in the Deccan Canal Area where they rose considerably at the time of crushing sugar-cane as here, owing to frost, it was essential to harvest and crush the cane as speedily as possible.

41. As the combined result of the peculiarities of the season and of the variations in prices and wages, the cultivator of *rabi* crops in general and of cotton and tobacco in particular suffered rather heavily in Gujarat owing to these crops having been reduced in quantity as well as quality, as a result of the frost. Similarly, the Deccan Canal irrigator on the Godavari and Pravara Canals sustained a serious loss on his sugarcane crop as a result of the frost. Except for these special cases, however, the condition of the agriculturist was, on the whole, fairly satisfactory almost everywhere in the Presidency inclusive of Sind.

W. BURNS,

Acting Director of Agriculture.
