TABLE OF CONTENTS FOR THE RAINFALL
VOLUME FOR 1900.
PREFACE.

1. TABLE OF RAINFALL FOR DECEMBER 1900
2. TABLE SHOWING RAINFALL FOR 1900
3. LIST OF STATIONS which contains the monthly statements of rainfall published by the Provincial Governments for the year 1900, and gives practically the complete rainfall data for that year of the Indian Empire. Symons's use at the great majority of stations during the whole of the year, the only important exception being the Mysore rain-gauge stations, which are of local construction. The rainfall is measured daily at 8 A.M., and the entries for each day in the tables give the hours preceding 8 A.M. of the date in question.
4. TABLE SHOWING RAINFALL ARRANGED ACCORDING TO PROVINCES, AND NOT ACCORDING TO STATIONS IN EACH PROVINCE. The rainfall data of each province is given together, and the figures are arranged, so far as possible, in the order adopted in the various publications of the Department.
5. LIST OF STATIONS IN BENGAL
6. TABLE SHOWING RAINFALL IN BENGAL
7. TABLE SHOWING RAINFALL IN BENGAL
8. TABLE SHOWING RAINFALL IN BENGAL
9. TABLE SHOWING RAINFALL IN BENGAL
10. TABLE SHOWING RAINFALL IN BENGAL
11. COMPARISON OF RAINFALL WITH THE NORMAL
12. TABLE OF RAINFALL FOR EACH MONTH

The tables are drawn up in a form that, it is hoped, will explain themselves. It should be carefully noted that, although the rainfall is measured to hundredths of an inch, a rainy day is assumed to be that on which a tenth of an inch or upwards has fallen, and the figures in the column "Total number of rainy days" and "Normal total number of rainy days" are calculated on this supposition.

It may be noted that the whole of the available rainfall data of the Empire was recently collected and tabulated in the India Meteorological Office, and that the average monthly rainfall and number of rainy days in each month were calculated from this tabulated information for all stations for which at least five years' rainfall statistics were available. In the great majority of cases the rainfall data extend back to 20 or 30 years. The averages thus obtained are utilized for the columns of normal data and for the comparison of normal with actual data.
