ECCLESIASTICAL—		
Return of Persons according to Religious Denominations		cccxxix

ADMINISTRATION OF THE BOMBAY PRESIDENCY, 1876-77.

S U M M A R Y ¹. THE FAMINE.

The chief event of the year has been the failure of the later south-west monsoon rains, the loss of crops, and the consequent wide-spread scarcity and distress in the Deccan and Southern Mārātha Country. Including Native States the area affected extended over 39,000 square miles, with a population of 5,867,000 souls.

Distress began to be felt in the early part of October 1876. For a short time, in the beginning of 1877, the large supplies of grain thrown by sea and rail into the affected tracts to some extent lowered prices. But with this exception, from October 1876 to the end of July 1877, the pressure of want continued to become intenser and more wide-spread.

In almost every branch of administration the effect of this calamity is apparent. But as a special detailed account of its progress and of the steps taken by Government to relieve the destitute is under preparation, all but incidental references are omitted from the ordinary General Administration Report.

CHANGES IN THE GOVERNMENT.

During the year several changes took place in the *personnel* of the Government. At the close of his term of office the late Governor, the Honourable Sir Philip Edmond Wodehouse, K.C.B., G.C.S.I., was, on the 1st May 1877, succeeded by the Honourable Sir Richard Temple, Baronet, K.C.S.I. The Honourable Alexander Rogers also retired

¹ In this summary population figures are those of 1872 together with a yearly addition of one per cent.

at the conclusion of his five years' tenure of office as a Member of Council, and was succeeded by the Honourable Lionel Robert Ashburner, C.S.I., who took his seat on the 1st August 1877.

SERVICES.

The block of promotion, and the knowledge that to obtain relief and prevent disappointment special measures were required, induced the Government of Bombay, in 1876, to lay before the Government of India certain proposals for the improvement of the position and prospects of the Bombay Civil Service. In reply, in a despatch dated the 14th June 1877, Her Majesty's Chief Secretary of State for India extended to the Bombay establishment the concessions as to proportionate pension and personal allowances recently granted to the Civil Service of the North-West Provinces.

Of other proposals made by the Bombay Government, Her Majesty's Secretary of State approved and sanctioned the amalgamation of the charge of the Panch Máhals and the Political Agency in Rewa Kánta under one officer, who would be a junior Collector as regards the Panch Máhals and Political Agent as regards Rewa Kánta. The appointment of a third Revenue and Police Commissioner was at the same time sanctioned. This appointment was made on the understanding that, with the exception of a few of the most important States, the three Commissioners should superintend the political agencies within or near the geographical limits of their charge. The Political Agents in Káttwár and Cutch in Gujarát, and of Kolhápúr in the Southern Márátha Country continue, as before, to address Government direct.

POLITICAL.

The states under the control of the Bombay Government cover, including Baroda, an area of 70,000 square miles, with a population of nearly nine million souls, that is in area and population about one-third of the whole Presidency.

Of these states, twenty-eight, with an area of 24,000 square miles, a population of 3,443,000 souls, and an estimated yearly revenue of £1,385,000, or about one-half of the whole state territory, are at present, on account of the minority or misrule of their chiefs, under the entire management of the political officers of the Bombay Government:—

Territory under Government Management, 1876-77.

	Grand Total ...	28,200	5,543,000	2,684,556

* Villages.

GUJARAT STATES.

The peninsula of Cutch (area 6,500, population 512,000, revenue £250,000), from its isolated and compact position, the special character of its people, their peculiar dialect, and their strong feeling of personal loyalty to their ruler, has more of the elements of a distinct nationality than any other of the tributaries of the Bombay Government. At the same time, though the province, exclusive of the tracts of salt marsh and shingle known as the Runn, has an area of 6,500 square miles, and a population of more than five hundred thousand souls, the country is poor. The total revenue is returned at about £250,000, and of this so much has, from time to time, been distributed among the younger branches of His Highness the Ráo's family that the yearly revenue of the head of the house is not at present more than £140,000. During the minority of His Highness the Ráo the administration of the state is conducted by a Council of Regency, composed of the Political Agent as President, the Minister Rána Jalimsing, and Jádeja Chandáji, a member of the Bhaiád.

The chief event connected with the ruling house was the marriage of the sister of the young Ráo to the Máharája of Bikánir in Rájputána. As this is the first occasion on which a lady of the Cutch family has been united to one of the ruling chiefs of Rájputána, it was considered a very brilliant match. His Highness the late Ráo had the matter very much at heart, and spent large sums of money in removing difficulties. When, therefore, it was finally settled that the ceremony was to take place on the 19th of January (1877), the Cutch authorities spared no effort to give the Máharája and his suite a brilliant reception. The marriage festivities passed off with the greatest success. The only matter of regret, connected with the occasion, was that it prevented His Highness the Ráo from being present at the Proclamation ceremony at Delhi. As His Highness the Ráo could not leave Cutch, a Darbár was on the first of January held at Bhuj in honour of the Proclamation.

The young Ráo, now eleven years of age, is under the superintendence of an European officer. His education makes good progress. Dr. Bühler, who examined him, was much pleased with his intelligence and brightness, finding him in English much more advanced than most boys of his age.

The chief interest in the management of Cutch is the settlement of the relations of His Highness the Ráo with the subordinate chiefs, his kindred or Bhaiád. These difficulties, inseparable from the change through which under the control of the British Government the state is passing, are intensified in Cutch by the special position of some members of the Bhaiád who, under the terms of the treaty of 1819, hold a guarantee of protection from the British Government. In 1868, among other measures to settle the disputes between the Ráo and the subordinate chiefs, an arrangement was made for associating four of their number, chosen by the guarantee-holders, with the Ráo in the settlement of questions relating to the territories of the subordinate chiefs. To several parts of the original scheme His Highness the Ráo was, in the first instance, opposed. Certain modifications were in consequence introduced, and during the past year the court was placed under the presidency of the State Minister.

In the matter of Police the Regency effected some reduction in the number of court retainers, nominally engaged in police duties, and some increase in the efficiency of the village watch. The number of offences and prisoners is somewhat greater than in the previous year, and there is a slight falling off in the total amount of civil litigation. Though the finances show some improvement, the expenditure (£150,106) is still in excess of the income (£143,267). But, as there was in connection with the marriage of His Highness the Ráo's sister a very heavy special outlay of about £40,000, or nearly one quarter of the whole year's expenditure, it may be hoped that, with a fairly prosperous season, the next year's returns will show a considerable credit balance.

In the Pálanpur Agency, to the east of Cutch (area 8,000 square miles, population 528,000 souls, revenue £120,000), little of interest occurred during the year. Of the whole area about one-third and more than one-half of the people are in the hands of chiefs, invested with full civil and criminal powers. Over the rest of the territory the work of maintaining order and punishing crime is, under the Political Superintendent, entrusted to officers, styled *thánádárs*, who exercise police, criminal, and civil functions. Both the first class chiefs, the Dewán of Pálanpur on account of his indebtedness, and the Nawáb of Rádhanpur because of heavy domestic sorrows, were exempted from attending the Proclamation ceremony at Delhi. At the head-quarters of these and of the other minor chiefs, Darbárs were held and rejoicings made to celebrate the event. The supply of a sufficient body of village police has now been introduced into all except three of the smaller states, and the *thánádár* system is said to work well and to give satisfaction. Financially these states are not prosperous. Pálanpur shows a deficit, and Tharád has an outstanding debt. Education makes progress, but is still backward.

Its position on the wild and unsettled frontier of Gujarát, Rájputána, and Central India, and the large number of its petty chieftains, are the two chief sources of difficulty in administering the Mahi Kánta Agency (area 4,000 square miles, population 469,000 souls, revenue £75,000). As regards frontier difficulties steady progress has been made with the settlement of disputes, and an arrangement concluded with the Governor-General's Agent in Rájputána for the mutual extradition of accused persons, whose guilt has *primá facie* been shown. By classifying fifty-two of its chiefs and grading their judicial powers in accordance with their position and wealth, a much higher degree of order and regularity in the management of the district has been secured. The functions and responsibilities of the chiefs and of the agency officers are now determined, and the hands of the Political Agent are strengthened in carrying out a uniform system of police and judicial administra-

tion. The season was unhealthy, the rainfall rather scanty, and prices high. The returns show more crime ; but the rise is entirely confined to slight offences. The work of the civil courts has also increased. There are more schools and a better attendance of pupils. Vaccination made good progress, and in a season of severe fever epidemics the dispensaries at Sádra and Edar proved of the greatest benefit.

Besides Edar, sixteen small estates, with a total yearly revenue of about £7,500, were under the entire control of the agency officers. Under a special assistant to the Political Agent, the general management of Edar is satisfactory. In 1875 the expense of the chief's visit to Bombay and of his own and his sister's weddings, and again, in the past year, the marriage of the chief to a second and a third wife, have added much to the burdens of the state. With, in 1875, a revenue of £24,846, and an expenditure of £39,072; and in 1876, a revenue of £26,226, and an expenditure of £34,545, that is in the two years a deficit of £22,545, a large sum of money had to be borrowed. At the close of the year the state debt amounted to about £25,000.

In the province of Káttywár (area about 21,000 square miles, population 2,428,000 souls, revenue £1,245,838), the year was one of short rainfall and rather scanty harvest, but of almost unbroken quiet and steady progress. For administrative purposes the whole area may be divided into two parts: lands whose internal management is entrusted to the ruling chiefs, and lands directly administered by political officers. During the past year about 14,000 square miles, or two-thirds of the total area of the province, were under the management of chiefs, and one-third under the management of the Political Agent. Of the 7,000 square miles, at present under the direct management of the Political Agent, about 5,000 are temporarily and 2,000 permanently in his charge. The lands for a time in his charge are estates whose chiefs are minors. Of these, besides some smaller estates, are four states of consequence, Bhaunagar, Gondal, Morvi, and Limri, with

a total area of 4,825 square miles, a population of 707,000 souls, and a total yearly revenue of nearly £500,000. Until the young chiefs attain their majority, the entire management of these states rests with the Political Agent.

The territory permanently administered by British officers covers an area of about 2,000 square miles, with a population of 271,000 souls. This area, though scattered over the entire province, lies more than one-half along its north-east boundary. It consists of the estates of proprietors so poor and petty as either to have forfeited, or resigned, their original functions of maintaining order and checking crime. These duties have been permanently transferred to a class of officials, styled *thánádárs*, or commandants of posts, invested with limited magisterial and civil powers. At the same time, except under unusual circumstances, the financial management of their estates is left entirely in the hands of their proprietors.

Of the four first class chiefs summoned to the Proclamation ceremony at Delhi, His Highness the Ráj Sáheb of Dhrángadra was, from serious illness, unable to attend. His Highness the Nawáb of Junágarh, His Highness the Jam of Nawánagar, His Highness the Thákor Sáheb of Bhaunagar, and the Thákor Sáheb of Morvi were present, and returned highly gratified with the assemblage. The following honours were accorded to Káttywár chiefs and officials: His Highness Jám Shri Vibháji of Nawánagar and His Highness Mánsingji of Dhrángadra were created Knights Commanders of the Star of India. Their Highnesses the Nawáb of Junágarh, the Jám of Nawánagar, the Thákor Sáheb of Bhaunagar, and the Ráj Sáheb of Dhrángadra, were granted, instead of eleven, personal salutes of fifteen guns. The Thákor Sáheb of Morvi, who previously had no salute, was granted a personal salute of eleven guns. A personal salute of nine guns was granted to the Ráj Sáheb of Wánkáner, and the Thákor Sáhebs of Pálitána, Dhrol, Limri, Rájkot, Gondal, and Wadhván. The old Minister and Joint Administrator of Bhaunagar, Gavrishankar Udesankar, was made a Companion of the

Star of India. The Diwán of Junágarh, Jhála Gokálji Sampatrám, received the title of Ráo Bahádur, and the Nawáb's Councillor, Jemadár Sáleh Hindi, that of Khán Bahádur; Makanji Dhanji, Kárbhári of Dhrángadra, and the Senior Native Deputy Assistant Political Agent, Keshavráo Bháskar, that of Ráo Bahádur.

Death or retirement has during the year caused no change among the Káttywár chiefs. And, except in Nawánagar, there is little to notice regarding the personal affairs of the rulers of the different states. In Nawánagar, Bhagwanji or Kálubha, the son of His Highness the Jám, who in 1873 was acknowledged his heir, has caused much trouble and anxiety. The show of harmony, maintained for a time, is no longer kept up. And during the past year the young chief's misconduct reached such a pitch that it was found necessary to transfer him to Poona, and to place him under the charge of a British officer.

Of the chiefs now passing through their minority the reports are favourable. At Bhaunagar the last year of Government administration has been reached, and the young Thákor has, since January, taken his place as Joint Administrator. In April 1878 he will assume sole charge of his state. So far he maintains his promise of becoming a liberal and just ruler. Bhagwatsingji, the young Thákor of Gondal, is making good progress at the Rájkumár College. Wághji, the Thákor of Morvi, now in his nineteenth year, left the Rájkumár college in October 1876, after an attendance of about six and a half years. Throughout his career, writes the Principal of the college, Wághji showed more aptness for physical than for intellectual exertion. At the same time he was persevering, and had gained a respectable knowledge of English. He is also said to have considerable natural capacity and personal character. After leaving the college the young chief travelled in Hindustán, under the charge of a British officer. In December he appeared at Delhi among the Káttywár chiefs. He has since been through Northern

India, and to Simla, Mátherán, and Poona. Jaswatsingji, the young chief of Limri, completed his eighteenth year in May 1877. He spent the summer and autumn of 1876 in England, under the care of Mr. Macnaghten, the Principal of the Rájkumár college. He is said to have gained by his visit both in health and in mental development. His mind, says the Political Agent, is well matured, and he can think and talk clearly about public affairs. Under these circumstances Government have been moved to admit him somewhat earlier than is usual to take part in the administration of his state.

As regards the maintenance of order, the condition of Káttwár shows a most satisfactory improvement. As late as 1864 the state of affairs was described as a system of sanguinary boundary disputes, murders, robbery, abduction, arson, and self-outlawry. So late as the year 1871-72 the annual crime returns recorded that thirty-four villages had been attacked and plundered, twenty-four persons killed, thirty-three wounded, and five hostages carried off. During the past year the public peace has been unbroken. The till lately chronic disorder arose from the circumstance that the petty territorial divisions were united by no system of co-operation, and often divided by traditional enmities, while, owing to the local custom of providing for the younger sons of chiefs by the assignment of villages, each separate state contained within itself the germs of discord. The want was a defined and recognised central authority, which should hold the chiefs to the faithful discharge of their responsibilities to the paramount power and to each other, and give effect to the wishes of Government for the common good of the province. In regard to the attainment of these objects the Political Agency was for many years little better than a makeshift. The first lines of improvement were, in 1863, laid by Colonel Keatinge, who divided the chiefs into seven classes, assigning to each class certain civil and criminal powers. It has fallen to Mr. Peile to complete the desired system. This he has done efficiently, and in the way most satisfactory both to Government

and to the chiefs. He has carried the chiefs with him, interfering as little as possible with their internal independence of jurisdiction.

The past year has shown that the need of the special police officer under the Political Agent has, at least for the present, ceased. There have only been four gang robberies against five in the year previous and nine in the year before. No villages were plundered, no persons killed, no hostages carried off, and only six persons wounded. Doubtless, all responsible for the peace of the province will understand that vigilance is necessary to preserve the quiet so happily established, and that attention should be paid to perfecting the system of village police.

The advance in education is satisfactory. Schools have increased by forty-nine and pupils by 2,151. There are high schools at Rájkot, Junágarh, and Bhaunagar. The co-operation of the chiefs with the Political Agent appears in their contributions for the support of a training college for vernacular teachers, and in their readiness to subscribe to meet the expenses of a special education inspector.

The opening of the main lines of traffic and other works of benefit to the whole province make good progress. The states of Junágarh, Bhaunagar, and Porbandar, are mentioned as directing their local works in harmony with the central system. The most striking instance of co-operation among the chiefs under the Agency is their support of the Rájasthánik court, a tribunal for the adjudication of *girás*, or hereditary sharehold claims, which, as they are brought against their own revenues and estates, the chiefs cannot in fairness settle. The court consists of a president and two assessors. The president is an officer appointed by Government; the assessors are chosen by Government from a list of names submitted by the chiefs. The Political Agent is satisfied that the decisions of the court have been well-weighed and unbiassed, and Colonel Law, the president of the court, testifies to the diligence and fairness of the assessors. He says "the

assessors are scrupulous as to admitting a claimant into the *girásia* class, and as to acknowledging anything like a political status to the *girásia*, but I have never found them backward in awarding a claimant a fair share of *girás* land or produce, nor in admitting the force of his actual enjoyment over a doubtful title. That they have no leaning towards court interests is shown by the many exceptionally severe decrees which they have not hesitated to join in giving." Since the establishment of the Rájasthánik court in 1872, 1,052 claims have been filed, of which 689, or about two-thirds, have been settled. In the year under report 343 were filed and 287 disposed of. The investigation of these claims is preceded by a survey of the claimants' estates with a view to the registration of their rights. At the end of the year this preliminary survey had been completed in 1,000 of the 1,258 villages under dispute.

In judicial matters, besides the sole charge of the 2,000 miles of territory belonging to the lowest class of chiefs, the Political Agent and his assistants exercise jurisdiction in such criminal and civil matters as are beyond the powers of chiefs of the third, fourth, and fifth classes. The total number of criminal cases decided by the Agency courts was 1,308, or 128 in excess of the number decided in the previous year. Of civil suits, including appeals, there were 2,424, or 370 less than in the previous year. Of these cases a very small proportion, nineteen original civil and sixty-five original criminal cases, were decided in exercise of the residuary jurisdiction.

The Rájakumár college has been carried on with its usual success. The most noteworthy circumstance in its history is the admission of two Márátha pupils, the Sir Desái of Sáwant Wári and the Rája of Mudhol. It is satisfactory to note that so far this experiment has every promise of working well.

Of the four states temporarily managed during the minority of their chiefs, two, Gondal and Limri, are administered by an Assistant to the Political Agent, and two, Bhaunagar and Morvi, by an officer of Government

in association with an officer of the state. The management of these states has been satisfactory. Bhaunagar, with a revenue of over £290,000, after spending £75,000 on public works and £15,000 in subscriptions to public objects, shows a surplus of nearly £30,000. During the term of management the savings of the state have been raised from £230,000 to over £560,000. Gondal shows a surplus of £13,800, savings having risen during the minority from nearly £140,000 to nearly £290,000. Morvi shows a surplus of £34,400, previous savings having risen during the minority from £75,900 to £200,000.

Little of consequence happened in the small state of Cambay (area 350 square miles, population 88,000 souls, revenue £40,000,) at the head of the Cambay Gulf. His Excellency the Nawáb, from his ill-health and straitened circumstances, was excused from attending the Proclamation ceremony at Delhi. Though suffering from want of funds, and unfortunate in the conduct of his eldest son, His Excellency the Nawáb would seem to be anxious to meet the wishes of the Political Agent and to have in several particulars made an effort to carry out his advice.

The Baroda territories (area 4,500 square miles, population 2,100,000 souls, revenue £1,300,000,) still remain under the management of the Government of India.

Of the whole area of the Rewa Kánta Agency (area 4,800 square miles, population 531,000 souls, revenue £150,000), about one-fifth, yielding a yearly revenue of about £30,000, is, on account of the minority of chiefs and other causes, under the entire management of the Political Agent. Though larger and richer, this territory has much in common with the Mahi Kánta group of states. In both cases frontier disputes, and the minute subdivision of the land among numbers of petty proprietors, are the chief administrative difficulties.

Among the Rewa Kánta chiefs, only one, the Rája of Rájpipla, is invested with first class powers. This

chief was present at the Proclamation ceremony at Delhi. The five chiefs of the second class, Chota Udepur, Bária, Lunáwára, Sunth, and Bálásinor, were invited, but were unable to attend. On the 1st of January, the chiefs of Chota Udepur, Bária, and Bálásinor, each in his chief town, held a Darbár in honour of Her Majesty's assumption of the title of Empress. The minor chiefs of Lunáwára and Sunth, who are at the Ráj Kumár college, attended a Darbár at Rájkot.

The only change of importance among the Rewa Kánta chiefs was the coming of age of the young Rája of Bária. This chief, whose territory has an area of 813 square miles, a population of 55,000 souls, and an estimated yearly revenue of £17,500, has, for eleven years, been under the direct management of Colonel Barton, the Political Agent. During this period, under the careful and judicious management of Colonel Barton, very much has been done for the improvement of the state. The whole territory has been surveyed, and the 439 villages measured, mapped, and defined by boundary marks. The land revenue assessment has been revised to the advantage both of the chief and of the cultivators. Roads have been opened, and, besides, all necessary revenue and police offices, thirteen school-houses, four rest-houses, fifty-five wells, and six reservoirs, have been either built or repaired. Deogad Bária, the head-quarters of the state, has been furnished with a jail, a dispensary, a school-house, and an ornamental clock-tower. At the same time the finances have been carefully attended to. The revenue has been raised from £15,232 to £17,210; and though over £70,000 have been spent in public improvements, the state has been handed over to the chief free from debt and with a credit balance of nearly £20,000.

A special difficulty in the management of the Rewa Kánta Agency are the relations between several of the chiefs and Baroda. The chiefs claim certain shares in the Baroda revenues; and their claims have for years been before the Baroda authorities. With the co-operation of the Agent to the Governor-General at Baroda, a scheme

of settlement has been prepared, which, it is hoped, will quickly and finally decide the various questions in dispute.

In matters of police the second class Rewa Kánta states are ahead of most of the Gujarát states, with a stipendiary force of twenty-six mounted and 249 foot police. The returns show an increase of crime, partly due to the high price of grain and partly only nominal, the result of more activity on the part of the police. The rainfall was sufficient but untimely, and, except for one outbreak of cholera, the season was healthy. The returns show an increase in the number of people vaccinated and in the attendance at school.

Besides thirteen small estates, with a total area of nearly 200 miles and a yearly revenue of about £8,500, there are, under the direct management of the Political Agent, two second class states, Lunáwára with an area of 388 square miles, a population of about 79,000 souls, and a yearly revenue of £12,500, and Sunth with an area of 394 square miles, a population of 52,000, and a yearly revenue of £8,000. In spite of much care in their management the finances of neither of these states are satisfactory. Lunáwára, though in the past year there was a surplus revenue, has an empty treasury and a debt of £6,784. Sunth is somewhat better off with, during the past year, a surplus of £566, and at its close a credit balance of over £200.

Nárukot (area 143 square miles, population 7,000 souls, revenue £770), to the west of Rewa Kánta, is administered by the Agent to the Governor, Panch Máhals. It is a wild, thinly-peopled tract, the inhabitants chiefly forest tribes, Kolis and Náikrás, a branch of the Bhil family. Public order was undisturbed, and there would seem to have been neither crime nor litigation. A slight movement of settlers from the neighbouring territories is a proof that the country bears a better name than it formerly bore.

Of the three states of Southern Gujarát, Sachin, Bánsda, and Dharampur, the two first are, owing to the minority of their chiefs, under the entire management of the Poli-

tical Agent, Surat. The Sachin villages (population 18,000 souls, revenue £15,000) are financially prosperous. The young chief, thirteen years of age, is now being educated at Sachin. Bándsa (area 240 square miles, population 34,000 souls, revenue £12,500) is well managed. The young chief, whose education, under the present arrangement, is not satisfactory, will be sent next year to the Ráj Kumár collegé. Good progress has been made with the construction of public works, with vaccination, and with education, and the year closed with a credit balance of £36,611. Little calling for notice happened in Dharampur (area 794 square miles, population 78,000 souls, revenue £25,000), of whose management, by its chief, the Political Agent speaks in terms of praise.

MA'RA'THA STATES.

The condition of the small estates, the Dángs, Surgána, Peint, and Jawár, that lie along the wild border land between the northern Deccan, Gujarát, and the Konkan, varies little from year to year. Order is maintained, and the amount of crime is small. But communication is too difficult, the climate too unhealthy, and the population too rude and poor to allow of any marked progress in their condition. The question of the pressure of forest restrictions on the inhabitants of these tracts is now under the consideration of Government. The people are, no doubt, miserably poor, and it is important that their increasing numbers should be allowed as large an area as possible for cultivation. At the same time the stripping of the hill sides of all their wood has of late years made most startling progress. It is due to the value of the timber as well as to its importance as regards the rainfall, that large tracts should be set apart for forest conservancy.

In Jawár the young Rája was allowed to assume charge of his affairs. Though, on the whole, well spoken of by the Political Agent, he would seem to have acted under bad advice in the choice of the manager of his state.

The management of the Habsan or Janjira territory (area 151 square miles, population 76,000, revenue

£30,000), on the coast, about 100 miles south of Bombay, was satisfactory. Owing to the prospect of scarcity in his territory the attendance of His Excellency the Nawáb at the Proclamation ceremony was excused. Timely measures, suited to the condition of the people, were taken to ensure that a sufficient supply of food-grains remained in the district; and by this means, as well as by ready remissions of revenue, any marked pressure of scarcity was avoided. The police worked well, and education made good progress. The great increase of self-supporting *pátshála*, or road-side schools, and the fact mentioned by the Assistant Agent, that, in proportion to their number, the attendance of Musalmáns, both boys and girls, is very much higher than that of Hindus, are worthy of notice.

In consequence of the fears of scarcity in Sáwant Wári (area 900 square miles, population 200,000, revenue £30,000) the attendance of the young chief at the Proclamation ceremony was excused. In honour of the occasion a Darbár was held at Wári. The young chief, now fifteen years of age, has, as mentioned above, been transferred from Kolhápur to the Ráj Kumár college in Káttywár. The account of his progress there has so far been satisfactory. His conduct has been good, and in the Principal's opinion the discipline of a regular class has had a wholesome effect upon him.

In the early part of the season the fall of rain was heavy. But it soon passed off, and from the want of the late rains the crops suffered, though not so severely as to make remissions necessary. Order was well maintained, and the police and the administration of justice were satisfactory. The lake at Wári, the head-quarters of the state, was repaired and other works of public usefulness carried out, and the arrangements for medical relief and education developed. The state finances are in good condition. During the past year the expenditure (£33,737) was slightly in excess of the income (£32,090). But the total charges include several items of a special nature, and there is a balance of £23,272 to the credit of the state.

The chiefs of the Sátára feudatory states (area 3,026 square miles, population 358,000 souls, revenue £78,547) attended at Sátára in honour of the Delhi Proclamation ceremony. Jath continues to be administered by the Political Agent. With the exception of the young chief of Bhor, who, led by bad advisers, seems to have failed to make any effort to carry out the Political Agent's advice, the chiefs would seem to have managed their affairs with credit. The year was one of scarcity and suffering, and especially in Jath advantage was taken of the need of employing the destitute to construct works of lasting usefulness. Considering the season there was little increase of crime, and education made fair progress.

Akalkot (area 498 square miles, population 85,000 souls, revenue £30,000), originally one of the Sátára feudatories, is, from its position, about twenty miles south-east of Sholápur, more conveniently controlled by the Government Agent in that district. The young chief, now nine years of age, is to be sent to Kolhápur to be trained with the other young Máraátha chiefs. He attended a Darbár held at Sholápur in honour of the Proclamation. The year was one of scarcity and distress. On account of the failure of revenue and the cost of relief works, it has been found necessary to apply to Government for a loan of £8,400. But it is hoped that the balance of outstanding revenue will be recovered and restore the finances to a sound state.

Kolhápur (area 3,184 square miles, population 843,000, revenue £300,000), the chief state of the Southern Division, has, at present, this special interest, that of its total area and population nearly nine-tenths are, on account of the minority of their chiefs, directly administered by political officers.

The territory under direct management includes, besides the principality itself, with an estimated population of 561,000 souls, and a gross revenue of nearly £200,000, four small tributary estates with a total area of 648 miles, a population of 192,000 souls, and a yearly revenue

of £56,052. The scarcity in parts of Kolhápúr made the presence of the Political Agent necessary, and for this reason the young chief was exempted from attending the Proclamation ceremony at Delhi. In honour of the event a Darbár was held at Kolhápúr, and the Proclamation read with much excitement and most loyal demonstration.

The young Máharája, now fourteen years of age, continued his studies under the supervision of the Assistant Political Agent. He is fond of active exercise, and is said to have shown himself anxious to improve and to bear himself in such a way as to gain praise. Of the four tributary chiefs, two, the chiefs of Kágál and Baura, are nearly of age, and two, the chiefs of Vishalgarh and Inchalkaranji, are boys. During the year the chief of Kágál, who is twenty years old, has been entrusted with the management of his personal affairs, and has had some training in the administration of his estate. The chief of Baura, eighteen years old, attends the Kolhápúr high school. His conduct has been good. But, except in English, his progress would seem to be slow. Of the two boys, the Vishalgarh chief, nine years of age, has had good health, and is learning to ride. He is said to have made fair progress in Máraþhi, and has begun English. The young chief of Inchalkaranji is a healthy and intelligent boy, who finds no difficulty in learning.

Though not visited by entire failure of crops, almost the whole of the Kolhápúr territory lay within the limits of the famine-affected area.

The rainfall was one-third below the average for the past twenty years; food-grains rose to three times their ordinary price, and before the close of July nearly £200,000 had been spent on relief employment and charity. Besides the distress from high prices and scarcity of food, Kolhápúr was visited by two outbreaks of cholera, in which, of 7,763 persons attacked, 3,655 died.

In Kolhápúr large sums are every year spent on public works. This was, in 1876-77, the chief charge on the

state, amounting to £24,218, or nearly a quarter of the whole expenditure. Much has been done by handsome public buildings to improve the appearance of Kolhápur; and during the past year water-works have been completed, which will add greatly to the healthiness of the town. The returns of the different branches of the administration contain little that calls for notice. The increase in petty crime, and the falling off in the school attendance, is not more than was to be looked for in a season of want and hardship.

Of the whole yearly revenue of £300,000, more than one-half has, at one time or another, been alienated from the head of the state. The actual revenue of the Kolhápur chief was £136,076, and the expenditure £104,293. The financial condition, both of the parent state and of its four feudatories, at present under direct management, is satisfactory. Kolhápur has a sum of £250,000 invested in Government securities, and each of the smaller states has a credit balance of from £2,485 to £25,000.

SOUTHERN MA'RA'THA STATES.

The isolated scraps and patches of territory known as the Southern Mára'tha states were once (1730) tributaries of the principality of Kolhápur, and, though no longer dependent on that state, are still superintended by the Political Agent at Kolhápur. The whole territory, scattered, from the Bhīma to the Tungabhadra, in fragments varying in size from one or two to ninety-seven villages, contains a total area of about 2,734 square miles, a population estimated at 641,000 souls, and yields a yearly revenue of £187,234. Of the whole territory the states of Sánгли, Miraj senior, and Mudhol, with a total area of about 1,600 square miles, a population of 383,000 souls, and a gross revenue of about £115,000, or more than one-half of the whole area, are under the direct management of political officers.

Except a small tract of land in the west, near Belgaum, and some villages watered from the Krishna and its

tributaries, the whole of this territory suffered severely from drought and dearness of grain.

The continued mismanagement and abuse of his power by the SÁNGLI chief forced Government in 1873 to appoint an officer, for a term of three years, to act with the chief as Joint Administrator of the state. The Joint Administrator's term of office came to an end at the close of 1876. During these three years the chief has failed to take any share in introducing the changes ordered by Government, and, quitting his capital, has spent the most of the time in travelling over India. Under these circumstances Government have decided that the office of Joint Administrator shall be continued, and that the chief shall not be restored to power until he has shown himself fit to manage his state. Though much has been done in discovering and checking abuses, the SÁNGLI finances are not satisfactory. During the past year the failure of revenue was so serious, and the expenditure on famine-relief works so large, that it became necessary to raise a loan of £90,000.

The remaining Southern MÁRÁTHA states are under the superintendence of an Assistant to the Political Agent of KOLHÁPUR. Two of them, the senior state of MIRAJ, with an area of 340 square miles, a population of 86,000 souls, and a yearly revenue of £27,194, and MUDHOL with an area of 362 square miles, a population of 62,000 souls, and a yearly revenue of £12,500, are, owing to the minority of their chiefs, under direct management. For the same reason Mhysál, an estate with a yearly revenue of about £1,000, is under the Political Agent's special charge. On account of the famine the chiefs of the Southern MÁRÁTHA states were excused from attending the Proclamation ceremony at Delhi. The chiefs of the junior Miraj state, of both Kurundwád states, of Jamkhandi and of Rámdurg, attended the Darbár held at Belgaum on the 1st January 1877, and the minor chiefs of the senior Miraj state and of Mudhol, with the young proprietor of Mhysál, were present at the reading of the Proclamation at Kolhápur.

Several changes took place in the families of the Southern Márátha chiefs. Harihar Ráo Dáda Sáheb, a young man of twenty-six, succeeded his father, Lakshamána Ráo Anna Sáheb, the head of the junior Miraj state. It was hoped that the young chief would exert himself to improve the condition of his property which, under his father's management, had been the most backward of the Southern Márátha states. But, though he did something to force his officers and servants to do their work better than they had done it under his father, the young chief himself led an idle and self-indulgent life. Suffering from ill-health throughout the year, he died shortly after its close. His succession is still under the consideration of Government.

In May 1876, in consequence of the death of Raghunáth Ráo Dáda Sáheb, his only son, Chintáman Ráo Balla Sáheb, a young man twenty-seven years of age, was placed in charge of the senior Kurundwád state. With short revenue and special famine expenditure, his first year of management has been difficult. But though much pressed for funds, the young chief's administration is well spoken of, and his efforts to redress grievances are praised.

The junior Kurundwád state sustained a loss in the death, on the 18th September 1876, of its chief, Venáyak Ráo Appa Sáheb. This chief, one of the most enlightened and liberal-minded of the Southern Márátha nobles, had, until forced to resign from ill-health, held a seat in the Legislative Council of His Excellency the Governor of Bombay. He has been succeeded by his only son, Harihar Ráo Dáji Sáheb, a young man twenty-six years of age. The young chief is said to be of a quiet and amiable disposition, and, although delicate-looking, to be fit for a fair amount of bodily exertion. Being on friendly terms with him, he allows the management of his share in the state to remain in the hands of his cousin, Ganpatráo Bápu Sáheb.

The minor chiefs of Mudhol, Miraj, and Mhysál, have, on the whole, made good progress. Venkat Ráo Balla Sáheb, the young chief of Mudhol, is now in his seven-

teenth year. During the past season he was, as mentioned above, transferred from Kolhápúr to the Ráj Kumár college in Káttywár. At Kolhápúr he bore a high character for manliness, good conduct, and progress in learning. His is the first case of a Máraáthá chief being sent to the Ráj Kumár college. By some members of his family objections were raised against sending the youth to so great a distance from his home. At first his health at Rájkot was not good, but he afterwards recovered his strength : and his progress in his studies has given him a high place in a class of pupils about his own age. Gangádhár Ráo Bálla Sáheb, the head of the senior Miraj state, is a boy of twelve years of age. During the year he has been at school at Kolhápúr. Though slightly made, he enjoys good health, and is spoken of as a bright, intelligent boy. He already knows enough Máraáthi to allow him to begin English. Kedar Ráo Sindé, the proprietor of Mhysál, is fourteen years of age. Till his adoption in 1872, his education was neglected. He is now making fair progress. Strong in body and fond of active games, his conduct is good, and, though not a quick pupil, he is hardworking and anxious to learn.

In all of the Agency-managed states much progress was made in the construction of public works. Before the close of the year more than £26,000 had been spent, and it is satisfactory to notice that, though some of the chiefs have severely felt the drain on their finances, it is expected that, after all the special famine charges are met, the senior Miraj state will still have a credit balance of £40,000, and the Mudhol state one of £60,000.

The small state of Sáwánur in Dhárwár (area 60 square miles, population 18,000 souls, revenue £8,167,) suffered a loss by the death of one of the chief's uncles, Abdul Kásam Khán Sáheb, who had shared in the management of affairs. The season was bad, the rain unseasonable and partial. A serious grain riot took place during the first great rise in the price of grain. But otherwise there was no marked increase of crime. The state of the finances is good. £1,402

were spent on public works, and at the close of the year there remained a credit balance of £4,593.

SIND.

Khairpur (area 6,109 square miles, population 137,000 souls, revenue £50,000). The season was a bad one in Khairpur. Excessive flooding from the Indus, joined to a heavy local rainfall, caused much damage to the crops. Two embankments of some importance were completed. But, with this exception, almost no details of the management of the state are available. His Highness Ali Murád is old, and little inclined to introduce any change.

ADEN.

The relations of Government with the chiefs near Aden were satisfactorily maintained. In the external trade of the settlement, compared with the previous year, there was in value a decrease of over £240,000. On the other hand, the land import trade, which amounted to £195,584, was slightly in excess of that of the year before. The returns show a marked decrease in crime the number of cases tried being 1,000 against 1,300 in 1875-76. A proportionate decrease of 413 is also observable in the number of offenders. These favourable results are mainly due to the fact that crime among the Somális was less prevalent during the year of report than in former years. The number, 2,796, of civil suits disposed of was 605 less than in 1875.

The financial results of the municipal administration are also favourable, showing a considerable rise in revenue and fall in charges.

LAND ADMINISTRATION.

According to the arrangement of the General Administration Report information is collected under the different branches of administration. The comparative condition and progress of the different administrative divisions of the Presidency is thus to some extent lost sight of. But for each of these districts the management

of its executive head, the Collector-Magistrate, and of his Assistants, passes each year in all its branches under the separate consideration and review of Government. Under these circumstances, for each district, a very short summary of its chief statistical facts for the past and preceding years has been prepared, and appears as the first part of the chapter on the Administration of the Land.

The Topographical Survey of the Presidency was continued during 1876-77 by the same parties as in the previous year. Their field of operation has been Káttwár, continental Gujarát, Khándesh, Násik, Ahmednagar, and Sátára. The return of the work done in the season shows 1,760 square miles topographically surveyed in Káttwár, 2,000 in Gujarát, 1,840 in Khándesh and the Bhopáwar states, 2,202 in Násik and Ahmednagar, and 1,855 in the western part of the Sátára district. The parties have, in addition, triangulated 2,040 square miles in Káttwár, 2,880 in Gujarát, 2,674 in Khándesh, and 2,000 in Násik and Ahmednagar.

Five branches of the Revenue Survey were at work during the year, in Gujarát, in Poona and Násik, in Ratná-giri, in the Southern Márátha Country, and in Sind. The widespread scarcity and distress interfered much with survey operations. In the Deccan the services of four assistants and of one assistant in the Southern Márátha Country were transferred for famine duty; and in some of the districts where survey operations were continued, progress was much delayed by the pressure of special famine duty on the time of the district revenue officers. The total outturn of work was 1,783,740 acres surveyed and 1,798,511 acres classed. The expenditure amounted to £72,386, and, including £1,040 in private, *inam*, villages and Native States, the settlements introduced resulted in the imposition of an assessment, £17,746, or twenty-three per cent in excess of past collections.

In Gujarát the Jambusar sub-division of Broach was settled and rates imposed, showing an increase of £5,656,

or thirteen per cent, on former collections. In Kolhápúr twenty villages were settled at rates sixteen per cent in excess of those formerly in force. In the old Patoda district, the chief part of Násik that was resettled, rates were introduced forty per cent in excess of those formerly paid. In Ahmednagar, on the other hand, the assessment was in three villages reduced from £533 to £618, or a decrease of fourteen per cent. In Dhárwár and in Kaládgi portions were ready for resettlement. But in consequence of the famine pressure the introduction of fresh rates was deferred.

Special city surveys are in progress in Kurrachee, Ahmedábád, Hubli, and Dhárwár. In Kurrachee all actual work is finished. In Ahmedábád a steady advance has been made, but the completion of the work is delayed by the number of claims and appeals from the decisions of the survey officers. In Hubli and Dhárwár the famine, by engrossing the time of the district officers, indirectly kept back the progress of the city survey.

Over the whole Presidency the work of settling claims to cash allowances and rent-free holdings of land is nearly complete. Of the districts of the Northern Division, in the Panch Máhals alone were there, at the beginning of the year, many cases of this kind to be settled; and by the close of the year almost all were disposed of. Of 8,029 claims 7,808 were for rent-free land and 221 for religious or charitable allowances. A few cases were also settled in Khándesh, Násik, and the Peint state. The financial result was that, of a total sum of about £2,354 inquired into, claims valued at £854 were disallowed, and the remainder confirmed.

During the year a special enactment, Act XIV. of 1877, was passed with the view of extending the provisions of the Broach Thákurs Act to meet the case of needy landlords in the Kaira district. In Ahmedábád and Broach, under the *tálukdári* settlement officer, the work of paying the debts of the embarrassed landlords made steady progress. Including these specially protect-

ed properties, there are, throughout the Presidency, under the management of the Collectors a total of 114 estates, with an area of 94,370 acres, and a yearly revenue of about £25,000.

LEGISLATION.

Three Acts became law during the year, an Act providing for the introduction of compulsory vaccination into the City of Bombay, an Act regulating the land revenue administration of the City of Bombay, and an Act relating to the powers and procedure of the courts of *mamlátdárs* or subdivisional revenue officers. Of these, the Act making vaccination compulsory was the enactment of most general interest. As far back as 1872 a Bill had been introduced to make vaccination compulsory. But it was at that time withdrawn, in the hope that the people would, of their own will, make free use of the facilities offered. In the early months of 1876 Bombay was visited by a severe epidemic of small-pox, and the question of making vaccination compulsory was again discussed. As far as could be learned, public opinion was strongly in favour of a compulsory measure, and as a very large proportion of the deaths were preventible, a Bill, with provisions founded on those of the English Vaccination Act of 1867, was introduced, and has passed into law, as Act I. of 1877.

The measure which excited the most public attention, together with a considerable amount of opposition, was the Bill to amend the existing Act for the suppression of fraudulent practices in the cotton trade. A large party in the council, headed by the mercantile member, were strongly opposed to the continuance of any measure of this kind, and the discussion excited considerable general interest.

POLICE.

Towards the close of the year 1876 the four southern districts of the Presidency, Kánára, Belgaum, Dhárwár, and Kaládgi, were constituted a distinct charge under a separate Revenue and Police Commissioner. Under this

new arrangement the police force of the entire Presidency, with a strength of 21,492 members and a yearly cost of £359,300, consists of six separate bodies. Of these the Northern Division police, with a strength of 7,567 members, is supported at a cost of £122,568; the Southern Division police, 4,097 strong, costs £63,118; the Kánárese Division police, 2,773 strong, costs £42,576; the Sind police, 4,676 strong, costs £76,371; the Bombay City police, 1,408 strong, costs £35,129; and the Railway police, 971 strong, costs £19,536.

Notwithstanding the scarcity prevalent through a large portion of the Presidency during the latter part of 1876, and the consequent inevitable increase of crime in several populous and important districts, there has been a decrease alike in the total number of offences of all classes, and in the number of cognizable and non-cognizable crimes taken separately. The proportion of investigated offences, whether cognizable or non-cognizable, that ended in conviction was higher in 1876 than in the previous year. Of the persons arrested, the proportion punished, was also somewhat larger than in 1875. The number of serious offences against the person was materially lower, while that of offences against property was but little higher than in the preceding twelve months. The value of property stolen was less than in 1875, and the amount recovered was proportionately smaller. Professional crime may be said to have been virtually non-existent. The conduct of the police is stated to have been, as a rule, satisfactory. The Superintendents and their Assistants appear to have, as a body, displayed zeal, energy, and discrimination in the discharge of their duties, always responsible, and often difficult; and the general supervision and control under Government of the police has been carefully and judiciously exercised by the Commissioners.

The number of crimes of all classes, cognizable and non-cognizable, reported to have been committed in the year under review was 67,490, or 1,591 less than in 1875. The fall occurred in Sind and the Northern Division. In

Sind the number of both cognizable and non-cognizable crimes reported was 14,980 in 1876 against 16,673 in 1875, and in the Northern Division 25,127 in 1876 compared with 26,251 in the previous year. In the Southern Division, on the other hand, the number rose from 16,311 in 1875 to 16,654 in 1876, and in the Kánárese Division 10,729 cases were reported in 1876 against 9,846 in 1875.

The general conduct of the police in 1876 would appear to have been very much the same as in the preceding year. The total number of men and officers punished was 2,678, compared with 2,671 in 1875. The number dismissed (379) was seventy-three less than in 1875; but 2,146, the number fined, degraded, and otherwise punished by the departmental officers, shows an increase of eighty-nine, contrasted with the corresponding total in 1875. Fourteen officers and 139 men were convicted of criminal offences in the judicial courts, the number so sentenced in 1875 being eight officers and 154 men. Judged by the test of the number of punishments awarded, the men composing the police force in the Southern Division would seem, on the whole, to have been alike better disciplined and better behaved than the police of any other division. In Ratnágiri, Ahmednagar, Poona, and Sátára, the proportion of men punished did not exceed six per cent of the total strength of the force, and in Sholápur it amounted to about thirteen per cent. In the Northern Division thirty per cent of the police in the Kaira and Násik districts were punished in the year; and Government fear that in those districts the system of fining the already too lowly paid rank and file of the police is carried to an excessive length by the superintendents. In Dhárwár and Shikárpur twenty-four per cent of the police were punished during the year. In the first-named district the condition of the police seems very unsatisfactory. For years past the Dhárwár police have been conspicuous for their inefficiency, and the best efforts of the Commissioner and the Superintendent should be directed to the improvement of the force. One of the first steps to be taken should apparently be gradually to get rid of the inferior class of men who, as stated by the

Commissioner, have been admitted into it. There is no reason why, under vigorous management, the Dhárwár police should not attain to, at least, the same standard of efficiency and success as has been reached by the police of the adjoining districts. The number of men punished for misconduct in Ahmedábád, Haidarábád, Kaládgi, and Belgaum, was comparatively high, ranging from, in Kaládgi, twenty-one per cent to, in Belgaum, sixteen per cent of the total strength. Of the police of the remaining districts those of the Panch Máhals and Khándesh appear to the greatest advantage, the proportion of men punished being only nine per cent of the entire number. During the year money rewards were given in 274 instances, principally in the Northern Division.

The number of the police able to read and write in 1876 was 5,744, or thirty-one per cent of the whole force. The proportion of police educated to this extent was largest in the Southern Division, where it amounted to thirty-seven per cent; in the Northern Division the proportion was thirty-five per cent; in the Kánárese Division thirty-two per cent; and in Sind only seventeen per cent. In Kaira and Surat education was most general amongst the police, fifty-five per cent of the police of those districts being able to read and write: next to them in order came Ahmednagar, Ratnágiri, Sholápur, Kánára, and Kolába, It appears somewhat remarkable that while in the Panch Máhals and Khándesh the proportion of the police able to read and write amounted to more than twenty-six per cent, in Poona, out of a force numbering 1,093 men, only 147, or about thirteen per cent, should be in any way educated. The most illiterate bodies of police were those employed in Thar and Párkar and in the Upper Sind Frontier. In the former district but ten per cent of the force knew how to read and write, while in the latter only nine out of 189 men and officers possessed this knowledge. During the year 193 officers and 1,612 constables were receiving instruction.

CRIME.

The criminal courts took cognizance of 66,156 offences of all sorts. They tried 113,719 offenders, of whom 62,290 were acquitted or discharged, 48,505 convicted, 1,121 died or escaped, and 1,803 remained under trial at the close of the year. In a season of such widespread distress, when an increase in crime was to be looked for, it is satisfactory to notice that the total number of offences is less by 605 than in the previous year. The decrease is chiefly under the heads of municipal (717) and special (597) offences. Deducting these items this leaves about 705 more ordinary crimes than in the previous year. Of this number, 608 are offences against the person and 97 against property. This increase is chiefly in the famine-affected districts, all of which, except Ahmednagar, Násik, and Kaládgi, show an advance in crime. In heinous crimes against the person, murder, culpable homicide, and kidnaping, there is a considerable and generally spread fall from 761 to 704. In the case of heinous offences against property there is a rise in gang robberies from 69 to 199 and in robberies from 352 to 407. This increase is most marked in Dhárwár and Kaládgi, which together furnished nearly one-half of the whole number of crimes of this class. Belgaum also had a heavy return. These crimes were, in many instances, robberies of grain, either stored or standing in the fields, perpetrated by Lambánis, Kaikaris, and other wandering tribes, under the pressure of want. Though in the Southern and Kánárese divisions the number of thefts has risen, there is a marked fall in the northern districts and in Sindh. The crime returns for Thána are specially heavy. But the success which has attended the efforts to capture the remaining members of the band of robbers known as Honia's gang will, it is hoped, have a marked effect in reducing the returns of serious crime from that district.

PRISONS.

Compared with the previous year the jail returns show an increase in the number of persons committed to prison

from 19,027 to 20,499 and a rise in the number of prisoners from 8,560 at the beginning of the year to 9,737 at its close. There is also a serious increase in the proportion of reconvictions. On the other hand, there is a marked improvement in the health of the prisoners, and a large reduction in the number of punishments awarded for breaches of jail discipline. The results are, therefore, on the whole, satisfactory, for the increase in the number of convicts was almost entirely confined to the close of the year, when prices of food-grains ruled so high, and to the parts of the Presidency chiefly affected by the scarcity. The yearly advance in the number of reconvicted prisoners would be matter of concern if it were not due rather to increased care in bringing to light former convictions than to any growth of professional crime. The total gross expenditure, connected with jails, amounted to £105,337, or £287 less than in 1875. Deducting cash receipts for labour and for jail-manufactured articles, the net expenditure was £81,118, or £155 in excess of the net expenditure in the preceding year.

Of the three institutions for boy offenders, the Juvenile Prison at Poona, the Sassoon Reformatory in Bombay, and the Juvenile Prison at Shikárpur in Sind, the accounts are good. At Poona the numbers slightly increased from forty-one to forty-five, or nearly the full complement of boys. Throughout the year the health of the boys was excellent, and their conduct good. Care is taken that, while undergoing their sentences, the boys learn to read and write, and are taught some useful craft. The best proof of the good done by this prison is, that after discharge no boy has yet been sentenced for a second offence.

In Bombay the number of boys at the David Sassoon Reformatory remains steadily at a strength only six short of the full complement. No special mention is made of the health of the boys. But their conduct is spoken of as uniformly good. Besides being trained in some useful craft, each of the boys is taught to read and write, and forty of them, to whom the knowledge is very necessary

for their work as compositors, are being taught English. The transfer of the Reformatory to some new situation has, on account of the want of room, and the unhealthiness of the present site, engaged the attention of Government. The question will form a part of a general scheme for the establishment of Reformatories throughout the Presidency. The considerations are chiefly financial. The action of Government must depend on the sale value of the present property and the cost of providing a new and larger building in a more healthy situation.

The average number of boys confined in the Juvenile Prison at Shikárpur in Sind was sixteen, or within four of the greatest number the building can accommodate. The behaviour of the boys was on the whole good, their health excellent, and the progress made in their literary and mechanical training satisfactory.

As in former years, the great obstacle in the way of the usefulness of subordinate jails was the difficulty of finding any suitable work for the prisoners. The number of inmates in many of these jails, especially in Sind, is extremely small, and proposals have been made for abolishing eight of them.

There was a slight increase from 3,260 to 3,415 in the number of prisoners confined for debt in civil jails. There was a large increase in Bombay and Poona, but in most of the famine affected districts, notably in Sholápur, the cost of feeding, and the hopelessness of recovering claims, would seem to have discouraged creditors from putting their debtors into confinement.

LITIGATION.

Compared with the returns for 1875, the total number of suits instituted in the Civil Courts of this Presidency shows a decrease from 178,334 to 177,584. This falling off occurs in nine of the sixteen judicial divisions. The seven judicial divisions, where there is an increase, are Ahmedábád, Ratnágiri, Poona, Dhárwár, Kánára, and in Sindh, Shikárpur, and Thar and Párkar. The scarcity

in so large a part of the Presidency, making, for the time, the recovery of debts hopeless, would seem a natural explanation of the decline in litigation. But this, by itself, is not sufficient to account for all the changes. There is a marked fall of 1,519 in Ahmednagar; of 1,232 in Belgaum including Kaládgi, and of 647 in Sátára. But, on the other hand, the Poona returns have increased by 986, and the Dhárwár returns by 878.

As regards the nature of the suits, the returns show that, as in previous years, more than ninety per cent are claims to recover money; and of these money-claims about 89 per cent relate to sums of less than £50. At the same time, though the average value of each suit is still very low, there is an increase compared with the previous year.

Except in the High Court, where the number of cases decided fell from 787 to 720, the returns show a larger amount of work done and some diminution in the mass of arrears. In the district judges' courts the number of decisions rose from 539 to 633, and arrears were reduced from 1,232 to 1,213; in small cause courts 20,965 cases were decided, instead of 20,251, and arrears reduced from 2,203 to 1,612; in subdivisional courts the decisions rose from 150,060 to 155,670, and the arrears fell from 41,100 to 34,031.

Applications for the execution of decrees continued to be almost as numerous as in the previous year. But the returns show a satisfactory fall in the coercive processes employed. Attachments of movable property have declined from 31,896 in 1874 to 17,551 in 1876, and of immovable from 32,677 to 30,522. Similarly sales of movable property have fallen from 8,835 to 7,298, and of immovable from 22,699 to 21,413. The reduction in the number of imprisonments for debt is still more marked, from 12,091 in 1874 to 4,550 in 1876.

Connected with the administration of civil justice, the efforts that have been made in different parts of the Presidency to organize private courts of award for the settle-

ment of civil disputes have received the attention of Government. This movement may be considered a revival, under a new form, of the old system of settlement by the village council, or *pancháiat*. It began in September 1875 in the Indápur sub-division of the Poona district. In December of the same year a second council or association of the same kind was started at Supa, also in the Poona district; and in the early months of 1876 six more were organized, one of them in the city of Poona. These associations, called by their founders *ekyawardak*, or promoters of unity, are generally known as the *lavád*, or award courts. Their object is, as the title *ekyawardak* implies, to foster a oneness of feeling between debtors and creditors. A set of rules has been framed, defining the constitution and functions of the courts. The members are drawn for the most part from the class of pleaders, traders, and retired government officials. They agree to serve as arbiters in turn for a week at a time. They receive no remuneration for their services. The arrangements of the court are in the hands of a secretary, who, in each week, chooses two members to act as umpires. Each court has a staff of clerks and messengers. To meet this expense fees are charged. But these are very moderate, amounting to not more than one-third of the cost imposed in the ordinary subordinate civil courts. The arbitrators are in no way hampered as to the kind of suits they may hear.

The legal position of these courts is based on section 327 of the Code of Civil Procedure, which enacts that an award made by arbitrators, without the intervention of a court of justice, may be filed in court, and, under certain circumstances, enforced as an award made after reference to arbitration in the ordinary way. As regards the amount of work done, it would seem that, at least in Poona, these courts, when first started, drew to themselves a very large share of the civil work of the district. Up to the end of May 1876, when on an average they had been open only about $3\frac{1}{2}$ months, in the eight courts 1,458

suits, or about nine per cent of the whole civil litigation of the district for the year 1876, had been filed. During the past year the popularity of the arbitration courts would seem greatly to have fallen. Compared with 11,092 in the ordinary civil courts, only 610 awards were given. Among the reasons for failure is the fact that, until they are filed in a civil court, these awards have no legal force. Another difficulty is the want of power to summon witnesses. The money-lenders, too, in some places are said to view the awards with disfavour, declaring that they are all in favour of the debtors.

While anxious that it should prove successful, Government feel that the movement must not be interfered with, and must be left to advance or decline according as it is, or is not, found to supply a want in the regular civil courts. Except in seeing that no avoidable delay or obstacle is set in the way of the filing of their awards, Government are unwilling to foster what in the end may prove to be other than a healthy growth.

REGISTRATION.

The increase in the number of deeds registered in 1875 has continued during the past year. In 1874-75 the number fell from 85,144 to 71,856, in 1875-76 it rose to 75,550, and in the past year there is a further rise to 76,381. At the same time the value of the property registered has fallen lower than it has been during the past five years. In 1873-74 it was £4,267,207, in 1874-75 £4,007,329, in 1875-76 £4,647,853, and £3,653,781 in the past year, or less than the previous year by nearly £1,000,000. In spite of the decline in the *ad valorem* stamp revenue resulting from this fall in the value of the property registered, the receipts from the higher rate of copying fees raised the revenue from £22,864 to £23,237. At the same time the cost of the Department is £859 greater than in the previous year, and the deficit has risen from £931 to £1,417. Under these circumstances Government have found it necessary to make some reductions in the supervising establishment. Of thirteen districts

which show a rise, the increase is most marked in Belgaum £479, in Dhárwár £367, and in Sátára £295. Of twelve districts with a decline, the decrease is greatest in Broach £415, in Khándesh £164, in Násik £146, and in Ahmednagar £124. The special influence at work during the year was the pressure of the scarcity. It is not easy to trace the effect of this influence. But it was to be expected that in the parts where the credit of the cultivating classes was lowest, that there special depression would reduce the number of their money transactions; and that where they were well-to-do the special demands for money would increase the number of transactions. This would explain the fall in Khándesh, Násik, and Ahmednagar, and the rise in Belgaum and Dhárwár. It is also worthy of notice that the districts where the largest amount of Government advances have been made to help the cultivating classes are the districts of decreased registration, and that in Belgaum and Dhárwár, where registration has risen, the necessity for Government advances was not felt.

MUNICIPAL.

The chief point of interest connected with the Bombay municipality is the progressive decline in the valuation of its house property. In the nine preceding years (1867—1875) the rateable valuation had declined from £1,630,000 to £1,150,000. In the past year it suffered a further diminution of about £50,000. In the past year the loss was, to some extent, met by increased valuations in some cases, and by the construction of a large number of new houses. The net loss under this head was from £1,155,506 in 1875 to £1,127,571 in 1876, a fall of about £27,500. This decline in the valuation of property reduced by about £1,400 the municipal revenue from direct taxation. In spite of a rise from £15,895 to £24,290 in the revenue from grain, the receipts from town duties also show a decrease, falling from £64,520 to £60,549. Still, in spite of the decline in these items, the total receipts were £22,084 more than the budget estimates; and, as the opening cash balance was about £15,000

more than the estimate, and nearly £20,000 of expenditure were saved, the municipality was, at the close of the year, richer than was expected by about £58,000. Steady progress has been made in carrying out the arrangements for the improvement of the water-supply. A large area of the low-lying land to the north of the city, known as the Byculla flats, has been covered by a deposit of town sweepings, about eight feet deep; and arrangements have been made for still further increasing the rate at which this useful work shall progress. A good system of drainage is now the most pressing want in Bombay. Different schemes laid before the Corporation have received earnest consideration and full discussion. The question is one of the first importance to the city. His Excellency in Council trusts that at an early date some definite decision as to the most suitable scheme may be arrived at, and arrangements set on foot for carrying it out.

Exclusive of the city of Bombay there are five city and 121 town municipalities in the Northern, Southern, and Kánárese Divisions, and four city and sixty-three town municipalities in Sind. During the year eight new municipalities have been started, two at Godhra and Dohad in the Panch Máhals, one at Mátherán in Thána, one at Lanauli in Poona, and four at Vingorla, Rájápur, Ratnágiri and Chiplun in Ratnágiri. Exclusive of opening balances the total municipal revenues show an increase from £255,291 in 1875-76 to £261,263 in the past year. Apart from miscellaneous receipts the average incidence of taxation per head of the municipal population has declined from 2s. 1½*d.* to 2s. ¼*d.* Of the whole revenue £2,61,085 compared with £2,33,806 in the previous year were spent on the actual working of the institutions. Of the rest £19,272 went to repay advances, leaving as deposits and balance a sum of £99,862.

MILITARY.

The strength of the Bombay army at the close of the year under review is returned at a total of 36,720 men, of

whom 11,298 were Europeans. The army consists, besides sappers, of one regiment of European and nine regiments of native cavalry; of eighteen batteries of European artillery with eighty-three guns and two of Native artillery with eight guns, and of nine regiments of European and thirty of Native infantry. The cost of the European portion of the army during 1876-77 amounted to £549,340 and of the Native portion to £728,143, that is, a total charge of £1,277,483. In addition there was an expenditure on effective services amounting to £1,010,499 and on non-effective services to £116,674, or a total of £1,127,172 under the heading 'Other Grants,' thus bringing up the whole cost of the army to £2,404,656.

The progress made in musketry was satisfactory, though, from a change in the system of marking, no comparison with the previous year can be made. In the cavalry the average is 29·39 against 32·36 in 1875-76, showing a decrease per man of 2·97 points. A supply of Martini-Henry rifles has arrived, and in lieu of the Snider will soon be issued to the British infantry regiments.

MARINE.

The vessels of the Bombay Marine were, as usual, employed on miscellaneous services. The *Amberwitch* in connection with the Indo-European telegraph department; the *Dalhousie* in the transport of troops; the *May Frere* and *Quangtung* at Aden; the *Comet* and *Hugh Rose* in the Persian Gulf; and the *Jhelum* and *Mooltan* in Sind. Except during a short cruise in April, the turret-ships *Abysinia* and *Magdala* lay throughout the year in the Bombay harbour. Besides building coasting craft for the salt and marine departments, the dockyard was made use of in docking thirty-seven vessels, three of the Royal Navy, one of the Port Trust, thirty of the Marine department, and three merchant ships. The total cash expenditure of the department amounted to £185,242, and the receipts to £69,616.

THE SEASON.

The season (June—October 1876) over almost the whole of the south and east of the Presidency was one of extremely short rainfall.

In Bombay only 50·04 inches, or less than the average by more than twenty inches, were registered. The Bombay rainy season consisted of three weeks of heavy rainfall, separated by dry intervals of about one month each. From June 14th to 20th were days of heavy rain; then came about a month of fair weather; then another week of rain followed from July 27th by a rainless interval, lasting over about a month. A few showers fell in the latter part of September; but by the 24th of that month the year's supply of rain was at an end. The temperature in Bombay was very near the average, and, except remarkable gales from the south on the 14th of March and the 13th April 1876, there were no abnormal winds.

At each of the four provincial meteorological stations, Poona, Belgaum, Deesa, and Kurrachee, the rainfall was deficient. At Poona less than half the usual quantity of rain was registered. In every month it was below the average, but in September and October the failure of rain was most marked. At Belgaum the total fall was about a quarter less than the average supply; July was wet, but August and October were unusually dry. At Deesa the fall in July was also a little over the average, but the total for the year was about a quarter less than the average fall. The rains commenced at the Deccan stations about the 7th or 8th of June, and the quantity which fell in this month, though generally less than usual, was well distributed. In July, also, the rain was steady, and fairly continuous at the two southern stations; but about the end of July a long break set in, and lasted till nearly the end of August. About a week of moderate rain then followed, and, after that, only a few light showers fell. The heavier rain, which usually falls at these stations towards the end of September and in October, was this year represented by only two moderately rainy days,

one towards the end of September, the other near the end of October. At Deesa there were only three rainy days in June ; but in July and August the distribution of the rain was, on the whole, similar to that at the Deccan stations, with the difference that the rain towards the end of August continued several days longer. At this station the 28th September was the last rainy day of the year. At Kurrachee rain seldom falls. There were a few light showers about the middle of July and towards the end of August. On the 20th July about $3\frac{1}{2}$ inches, or more than half the total for the year, fell.

A very full and interesting account of the unusual meteorological conditions that accompanied this want of rain, prepared by Mr. F. Chambers, the Government Meteorological Reporter, will be found below under the head of Weather and Crops (pages 182 to 194).

The result of the want of rain was a failure of crops over the Deccan and Southern Máraátha districts. Nine districts, with a total area of 54,355 square miles, and a population of 8,000,000 souls, were included in the affected area. Of these, in Khándesh and Násik in the north, and in Ratnágiri on the west, the failure of crops was only partial. But in the Deccan proper and the inland districts of the Southern Máraátha Country the harvest, both of early and of late crops, failed almost completely, and the scarcity and distress were very severe. Of unaffected districts, in the Northern Konkan the rainfall, insufficient in some parts and in others untimely, reduced the outturn of crops. But the rise in the price of grain made, for the agricultural population, the season one of, at least, average prosperity. In Gujarát the season was, on the whole, favourable ; the area under cultivation increased, and the high prices and export of grain made it a prosperous year. The Sind season was one of severe floods in the early months and want of water towards the close of the year. The force of the floods and the failure of the later inundation did much harm in certain places. But, on the whole, the season was prosperous.

CULTIVATION.

One satisfactory point in the year's agricultural statistics is the increase in the area under cultivation. During the four previous years the area held for cultivation had risen but very slightly—from 23,459,743 acres in 1872-73 to 23,885,097 in 1875-76. The past year shows a much more considerable increase of 516,237 acres. Of this 423,582 acres, or about four-fifths, are in Sind. The districts of the Northern Division show an advance of 92,636 acres, and the Kánárese districts of 18,303 acres. On the other hand, the Southern Division shows a reduction of 18,283 acres. As regards Sind, the increase, general over the whole province, was most marked in Shikárpur with 156,223, and in Upper Sind with 115,717 acres. In the Northern Division there was in Gujarát a marked rise, 4,148 acres in Surat, and a small decrease, 83 acres, in Broach. In the remaining Gujarát districts there was a fall of 3,746 acres in Ahmedábád, of 1,033 acres in Kaira, and in the Panch Máhals of 307 acres. In both the districts of the Northern Konkan there was an advance in Kolába of 2,359, and in Thána of 800 acres. In the Northern Deccan there was a marked increase, in Khándesh of 68,556, and in Násik of 21,776 acres. In the Southern Division the fall was in Poona 11,194 acres, in Ahmednagar 10,933 acres, and in Sátára 3,051 acres. In the remaining districts there was an increase in Sholápur of 4,185, and in Ratnágiri of 2,710 acres. In the Kánárese Division the increase was 14,511 acres in Kaládgi and 4,470 in Dhárwár. In Belgaum there was a slight fall of 678 acres. From Kánára, as the revenue survey is only partially introduced, no information is available.

These returns show the area taken up for cultivation in the early months of 1876. The increase in area was probably due to the rise in the price of agricultural produce that followed the somewhat short harvests of the previous season (June 1875 to March 1876). As, under the Bombay revenue system, land is taken up for cultivation before the beginning of the rainy season, the failure in the rain supply in 1876 had no effect on the totals given

above. But from the Statistical Return given below (p. xcvi) it will be seen that of the whole area taken up for cultivation only 15,235,239 acres were actually cropped. Taking cotton, for which special details are available (p. cvi); as an example of this decrease, it would seem that, in the area actually cropped, there was a reduction from 4,516,587 to 3,232,744 acres, or less by about 28·40 per cent than the area under cotton cultivation in 1875-76. The fall in the cotton area would seem to be confined to the districts that suffered from want of rain. Both in Sind and in Gujarát there is an advance. But in Khándesh there is a decline of 106,258 acres, and in the Southern Márátha districts, where the failure of rain was greatest, one million acres, or nine-tenths of the whole decrease, took place. The decline in the outturn of the crop is estimated at 539,736 cwts. of cleaned cotton, equal to 154,210 bales of 392 pounds each. Compared with the average of the last five years, the past year's returns show a decrease of 817,004 acres in area, and of 276,065 cwts. in outturn. In a few localities the cotton was stained with damp; but, on the whole, the supply came forward clean and in good order.

Under the Cotton Frauds Act twenty-three prosecutions were instituted; of these, six ended in conviction, twelve in acquittal, and five remained pending. The chief cause of failure was the difficulty of proving fraud or dishonesty in the offence of adulterating cotton for sale. The establishment for carrying out the provisions of the Act consists of one Inspector-in-Chief in Bombay, seven Inspectors, one in Bombay, two in Gujarát, one in Khándesh, one in Sholápur, one in the Southern Márátha Country, and one in Sind; one Assistant Inspector in Bombay, and twenty-seven Sub-Inspectors, eleven in Bombay, eight in Gujarát, two in Khándesh, two in Sholápur, three in the Southern Márátha Country, and one in Sind. The expenditure amounted to £14,795, or £395 in excess of the receipts. But at the close of the year the fund had still a credit balance amounting to £24,743.

The three Government experimental farms at Sáláru in Sind, at Bhargaum in Khándesh, and in Dhárwár, have during the year nearly succeeded in paying their way. But the season was against the success of experiments, and the Superintendents have little of special interest to record. In Sind the trial growths of tobacco and linseed were very successful ; but the result of the cotton experiments was, on the whole, disappointing. In Khándesh and Dhárwár the season was too unfavourable to permit of even a small measure of success.

The most interesting experiments carried on during the year were those conducted by Captain G. Coussmaker on the production of Tasar silk. Of these experiments a full account is given below (pages 172-178). From the extreme dryness of the season it was found almost impossible to keep the worms fully supplied with fresh green leaves, and great numbers died from want of proper nourishment. With this exception, Captain Coussmaker's efforts to collect cocoons, to breed, and to procure fertile eggs, were very successful. By far the greater number of the cocoons collected were found in the forests of the Konkan. The Khátkaris, Thákurs, and other forest tribes of those parts, seem ready to collect large quantities of forest cocoons; and as regards rearing worms there is, in the Máráthi districts, no lack of labourers willing to undertake the work and to prepare the silk for the mills. This year's experiments would, therefore, seem to show that in ordinary seasons a plentiful and cheap supply of the raw material can be relied on. The present difficulty is not one of supply, but of demand. Captain Coussmaker forwarded 112 pounds of cocoons to Mr. Tapidás Varjdás, the enterprising Secretary of the Bombay Alliance Silk Spinning and Weaving Company. These cocoons were cleaned as well as, without boiling them, Captain Coussmaker's labourers could clean them. After boiling and final cleaning at the silk factory, of the whole weight thirty per cent was lost; thirty per cent came out as refuse; leaving forty per cent of pure silk. Of the forty-five pounds of silk some was successfully woven into *Tasar*

cloth, and some into *Tasar* poplin ; but for the cloth there would seem to be at present no demand in Bombay.

With the present means of communication by rail and sea, so wide-spread a failure of crops was certain, over a very large area, to cause a marked rise in the price of food-grains. As the returns come down only to the end of March 1877, they fail to show the full effect of the scarcity on prices. Still, except in Sind, where there would seem to have been little change, there is a marked rise over almost the whole of the Presidency. In spite of a good local harvest, the price of forty pounds of millet rose in Ahmedábád from Rs. 1-14-3 to Rs. 2-3-11 ; and in Surat, with its cheap sea communication with the Ratnágiri and Kánára ports, from Rs. 2-10-4 to Rs. 3-0-3. Of the coast districts the rise in prices was most marked in Ratnágiri, where rice rose from Rs. 3-7-0 to Rs. 4-11-9, and in Kánára, where there was an increase, from Rs. 3-15-4 to Rs. 4-12-5. Of the affected districts the rise, least distinct in Khándesh (Rs. 1-11-2 to Rs. 2-5-6), becomes greater through Ahmednagar (Rs. 1-8-5 to Rs. 2-10-2), and Sholápur (Rs. 1-7-5 to Rs. 2-12-5), and is most marked in Dhárwár, where the price of forty pounds of millet rose from Rs. 1-12-2 to Rs. 3-1-2.

Wages, both skilled and unskilled, in Sind, in Gujarát, and along the coast districts, that is, over the whole area unaffected by the want of rain, were (April 1876 to April 1877) nearly constant, with, on the whole, a slight upward tendency. The returns would seem to show that the effect of the scarcity was, as regards the money payment of skilled labour, to raise it in one district, Násik ; to keep it constant in two districts, Khándesh and Sátára ; and to reduce it in the six most affected districts, Ahmednagar, Poona, Sholápur, Kaládgi, Dhárwár, and Belgaum. As regards unskilled labour, the effect of the scarcity would seem to have been to raise the rates in one district, Sátára, to keep them constant in two districts, Khándesh and Násik, and to lower them in the six most affected districts, Ahmednagar, Poona, Sholápur, Kaládgi, Dhárwár, and Belgaum.

The returns of agricultural stock bring down information only to the beginning of the famine, July 1876. Compared with the previous year, they show an increase of cattle from 7,169,731 to 7,277,595; of horses from 144,675 to 150,070; of sheep and goats from 3,221,051 to 3,295,231; and of carts from 303,739 to 306,787. Cattle-disease is supposed to have caused altogether the deaths of 36,380 head of cattle. Epidemics were most severe in Ratnágiri and Sátára. In Gujarát and Sind, on the other hand, the flocks and herds would seem to have been almost entirely free from any special form of disease. With the exception of Khándesh, in the distressed districts there was much loss of cattle; but, as noticed above, no details are yet available.

During the past year (April 1876 to April 1877) a total sum of £22,780, compared with £6,320 in the previous year, was advanced to cultivators by Government. Of the whole amount £9,395 were special advances for the purchase of cattle and seed, and £13,385 were advances to help in the construction of agricultural works of lasting usefulness. Of the whole sum £3,587 were spent in Gujarát; £82 in the Konkan; £3,991 in the Northern Deccan; £12,751 in the Deccan proper; £1,360 in the Kánárese districts; and £1,009 in Sind. Of £3,587, the amount advanced in Gujarát, £3,564 were for the purchase of cattle and seed, and £23 for permanent improvements; in the Konkan £82, the total amount, was for the purchase of cattle and seed; in the Northern Deccan £1,651 were for the purchase of cattle and seed, and £2,340 for permanent improvements; in the Deccan proper £2,291 were for the purchase of cattle and seed, and £10,459 for permanent improvements; in the Kárnátic districts, except Kánára and Kaládgi, for which the returns are not available, £797 were advanced for the purchase of cattle and seed, and £562 for permanent improvements. In Sind £1,008 were advanced for the purchase of cattle and seed: no advances were made for permanent improvements. Besides the special

grants on account of the scarcity; the large advance of £3,427 to the Talávia settlers in the Panch Máhals helped to swell, to an unusual degree, the total amount under this head. It will be observed that, while in the Deccan districts as much as £16,742 have been advanced, for the Kánárese districts the corresponding amount is only £1,360. This is satisfactory, as it would seem to show that in the richer districts of the Kárnátic, even in times of distress, the cultivating classes found private traders willing to advance them money, on the whole, on easier terms than those offered by Government.

FORESTS.

The work and revenue of the Forest Department have alike suffered from the want of rain. In the Northern Division the young plantations and nurseries were much injured, and in the Southern Division they were almost entirely destroyed. Over all the affected districts, but especially in Belgaum, Dhárwár, and Kaládgi, the straitened circumstances of the mass of the people, and the great difficulty of procuring carriage, depressed the sales of timber, and reduced the profits of the department by more than £5,000. On the other hand, it is satisfactory to note that in most parts of the Presidency it has been found possible to add considerably to the forest area; the work of marking out and isolating the forest reserves has made steady progress; and in the Deccan the system of broadcast sowings promises, in a few years, to convert tracts of bare waste into well-clothed plantations and forest reserves. The subject of forest legislation has not been neglected. The draft of an Imperial Forest Act was circulated for departmental consideration and report. In relieving the pressure of the scarcity the officers of the forest department were in many respects of great service. For a large number of the destitute, useful work was found in clearing forest lands of an over-growth of prickly-pear. Near the famine-stricken tracts the reserves, freely thrown open as grazing grounds, saved the lives of

large herds of cattle; and from the more distant forests the grass pressed and distributed along the main lines of communication aided much in preventing the collapse of the grain traffic.

MANUFACTURES.

The spread of the manufacture by steam of yarn and cloth from cotton, silk, and jute, steadily continues. The increase during the calendar year 1876 was six factories with a total of 143,161 spindles and 1,612 looms. At the close of the year (1876, December 31st), over the whole Presidency, there were at work forty-one mills, twenty-five for both spinning and weaving, and sixteen for spinning only, with a total of 961,672 spindles and 9,587 looms, and giving employment to a body of about 30,000 workmen. Of the whole number of factories thirty-eight were for the manufacture of cotton yarn and cloth, two for the manufacture of silk, and one for the manufacture of jute and hemp. As regards the distribution of the mills, twenty-nine were in Bombay and twelve in other parts of the Presidency. Of these two were at Coorla, eight miles north-east of Bombay, eight in Gujarát, one in Khándesh, and one in Sholápur.

As to the working of the silk and jute mills no information has been supplied. Nor before the beginning of 1877 were details to show the distribution over India of the produce of the Bombay cotton mills available. By sea the exports of Bombay-made cotton yarn and cloth show a steady increase both in quantity and value. Since 1872 the export of yarn and twist has risen in quantity from 1,802,863 pounds to 7,828,729 pounds, and in value from £97,162 to £363,233. During the same time the export of grey unbleached piece-goods, almost entirely the produce of Bombay mills, has risen in quantity from 4,780,834 yards to 7,914,324 yards, and in value from £75,494 to £120,510. The following statement shows the development of the trade during each of the five years from 1872-73 to 1876-77:—

Sea Exports of Bombay Cotton Yarn and Cloth, 1872-77.

Article.		1872-73.	1873-74.	1874-75.	1875-76.	1876-77.

	Value in £ ...	75,495	111,012	85,583	89,724	120,501

During the current year 1877, statements compiled from the railway and custom house returns, and issued by the Bombay Mill-owners' Association, give full monthly details of the movement of Bombay-made piece-goods and yarn. During the nine months ending with October 1877 the total exports by rail from Bombay were, of cloth 22,303 packages, weighing 4,524 tons, and of twist 21,010 packages, weighing 2,872 tons. Of the whole amount 2,108 packages of cloth and 5,039 packages of twist were sent along the North-east, or Calcutta branch of the Great Indian Peninsula Railway; 2,979 packages of cloth and 9,007 packages of twist were sent along the South-east, or Madras branch of the Great Indian Peninsula Railway; 138 packages of cloth and 155 packages of twist were sent along the Holkar State Railway; 3,170 packages of cloth and 1,315 packages of twist along the East Indian Railway; 43 packages of cloth and 44 packages of twist along the Madras Railway; 90 packages of cloth and 1,491 packages of twist went along the Nizam's State Railway; and 13,775 packages of cloth and 530 packages of twist along the Bombay, Baroda, and Central India Railway.

By sea the total exports were during the same nine months (1877, January to October) 14,662 packages of cloth and 51,799 packages of yarn. Of the whole of this cloth, 4,882 packages went to Sind; 3,320 to Calcutta; 2,133 to Aden; 1,316 to Persia and Arabia; 1,039 to Zanzibar and Mozambique; 794 to the Gujarát; and

645 to the British Konkan ports. Exports of country made cloth to Cutch, Káttwár, the Málábár coast, and Portuguese possessions in India, varied from 105 to 96, and showed a total of 398 packages; those to Madras and the native Konkan ports varied from 55 to 40 with a total of 95; while to the remaining ports of the Straits Settlements, Ceylon, Hongkong, the Chinese treaty ports, British Burmah, Suez, Melbourne, and Mauritius, only forty-one packages in all were sent, twelve going to the Straits Settlements and two to Mauritius. During the same period, the export of country-made twist was to Hongkong 20,193 packages; to Calcutta 11,578; to the Málábár coast 10,185; to Aden 3,470; to Madras 1,703; to British Konkan 1,163; to Persia and Arabia 910; to Cutch 671; and to Gujarát 601. Exports of country-made twist to Sind, British Burmah, the Straits Settlements, and Káttwár varied from 483 to 131, and showed a total of 1,205 packages; while those to Japan, Portuguese possessions in India, Zanzibar and Mozambique, and Suez, varied from sixty to five, and showed a total of 120 packages. Taking the export of cloth and twist together, Hongkong comes first with 20,198 packages; Calcutta second with 14,898; and the Madras coast third with 10,281. Then come Aden and Sind with totals of between 6,000 and 5,000; Persia and Arabia, British Konkan, Madras, Gujarát, and Zanzibar and Mozambique, between 2,500 and 1,000; Cutch, British Burmah, Káttwár, Straits Settlements, and Portuguese possessions, between 800 and 100; while the remaining ports showed a grand total of only 125 packages.

In spite of the increase in the quantity of the export both of twist and cloth, the year has not been a prosperous one for the local manufacturers. The fall in the price of coals from £2 at the close of 1876 to about £1 16s. during the current year has helped mill-owners. But this gain has been much more than met by the loss from the failure of crops and the general scarcity and distress. Kumpta cotton, the variety most largely used in the Bombay mills, was the variety that suffered most from last year's

want of rain. In 1876 the average price of good qualities of Kumpta cotton rose per candy from £14 to £18 18s., and during the present year a further rise to £20 10s. has taken place. Along with this rise in the price of cotton there has come a fall in the price of yarn. The reduced consumption in the famine-affected districts and a fall in the demand from China, together with, in some classes of goods, keener competition from English manufactures, have combined to force down the price of 30's twist from 1s. 2 $\frac{3}{4}$ d. to 1s. 0 $\frac{1}{2}$ d. per pound, and of 20's twist from 11 $\frac{1}{2}$ d. to 10 $\frac{1}{4}$ d. (7 $\frac{5}{8}$ a. to 6 $\frac{3}{4}$ a.). Under these circumstances profits are much reduced, and of four of the principal mills the dividends have declined from an average of 16 $\frac{1}{2}$ per cent per annum in the second half of 1876 to about 7 $\frac{3}{4}$ per cent per annum in the latter half of 1877.

The earnings of the workers, all of whom are paid by the piece, are high. Boys make in a month from 14s. to £1; women from 16s. to £1; and jobbers from £3 to £6 10s.; and in some cases as much as £8. Several members of one family often work together, earning among them not less than £10 a month. As these rates are high, and as there is now little lack of labour, unless the earnings of the mills improve, a general decline in the rate of payment is said to be probable. In one mill wages have already been reduced.

TRADE.

Exclusive of Sind, the sea-borne trade of the Bombay Presidency shows an advance, both in value and in weight. The rise in the value of the articles carried is estimated at £9,500,000. Of this increase £4,500,000 were in exports and £5,000,000 in imports. Of the rise in exports £2,900,000 were in foreign and £1,600,000 in coasting trade. Of the rise in imports about £4,000,000 were in foreign and £1,000,000 in coasting trade. Of the rise in exports £1,895,294 were in private trade, £44,951 in Government stores, £2,355,182 in private treasure, and £271,649 in Government treasure. Of

the rise in imports £121,476 were in Government stores, £4,714,939 in private treasure, and £3,54,744 in Government treasure. Under the head of private trade there was a fall of £231,030,

Among imports the rise is most marked in coal £239,455, cotton piece-goods £235,001, railway materials £106,563, spices £59,362, oils £54,661, and cotton twist £38,758. The chief items of decline are Mauritius sugar £493,321, machinery and mill works £260,927, China tea £1,243,080, China raw silk £215,993, and China silk goods £101,746.

Among exports the rise is most marked in opium £1,132,742, in grain and pulse £381,930, in cotton twist and yarn £334,493, and in cotton goods £103,662. The chief items of decline are in cotton £405,699, and in oil-seeds £130,645.

From the following table it appears that, exclusive of treasure, the weight of the chief articles of private trade shows, compared with the previous year, in units of 100,000, a decline in the weight of imports from 136 to 119, and in the weight of exports a rise from 4,307 to 4,311; that is, taking imports and exports together, a fall from 4,443 to 4,430:—

Weight of Bombay Trade, 1875-76 and 1876-77.

Year.	Imports							Exports										
	Twist.	Spirits.	Wines.	Metals.	Silk.	Sugar.	Tea.	Total.	Cotton.	Twist.	Grain.	Hides.	Opium.	Oil.	Seed.	Spices.	Wool.	Total.
1875-76 ...	72½	2½	1½	11	21½	5½	20½	136	4,030½	61	12½	17½	½	4½	31	½	162	4,307
1876-77 ..	81½	1½	1½	11½	11½	2½	8½	119	3,999½	78½	16½	20	½	1½	27½	½	170	4,311

Extracting from the table for the last twenty-five years, given below at page 220, it would seem that in units of 100,000 compared with 119 in the past year, the weight of imports was 83 in the five years ending with 1853-54; 96 in the five years ending with 1858-59; 106

in the five years ending with 1863-64; 106 in the five years ending with 1868-69; 125 in the five years ending with 1873-74; 134 in 1874-75; and 136 in 1875-76. During the same periods, compared with 4,311 in the past year, the weight of exports was 1,830 in the five years ending with 1853-54; 2,343 in the five years ending with 1858-59; 3,772 in the five years ending with 1833-64; 4,417 in the five years ending with 1868-69; 4,330 in the five years ending with 1873-74; 5,225 in 1874-75; and 4,307 in 1875-76.

As regards treasure, the chief point of interest is the extraordinary increase in the export of gold. The exports rose from £160,000 in 1875-76 to £1,170,000 in 1876-77, and were greater than the imports of gold by £780,000. The transactions in silver have more than doubled, rising from £3,999,646 to £9,869,127. Of this total, exports, chiefly to China and Ceylon, have risen from £1,338,214 to £2,599,186, and imports from £2,661,432 to £7,269,941.

Of £12,741,507, the total estimated value of the foreign import trade to Bombay, £10,287,637 came from Europe, £539,413 from Africa; £1,843,179 from Asia; £60,947 from America; and £10,331 from Australia. In Europe, the United Kingdom came first, sending £9,834,790; France second, with £205,406; and Italy third, with £158,409. Other ports sent £89,032. In Africa the ports of the east coast came first, with £250,123; Mauritius second, with £248,476. Other ports sent £40,813. In Asia, China came first, with £857,551; Persia second, with £339,074; the Arabian ports, except Aden, third, with £238,063; the Straits Settlements fourth, with £133,521; Aden fifth, with £113,129; Turkey sixth, with £104,106. Other ports sent £57,735.

Of £20,623,379, the total estimated value of the foreign export trade from Bombay, £12,860,973 went to Europe; £232,250 to Africa; £7,516,962 to Asia; £11,032 to America; and £2,160 to Australia. In Europe, the United Kingdom came first, taking £7,802,344; France

second, with £2,666,884; and Italy third, with £804,748. Other ports took £1,586,997. In Africa, the ports of the east coast came first, with £71,876; and Mauritius second, with £23,779. Other ports took £136,594. In Asia, China came first, with £6,854,129; Arabia, except Aden, second, with £193,336; Aden third, with £189,352; Persia fourth, with £123,299; the Straits Settlements fifth, with £54,615; and Turkey sixth, with £37,359. Other ports took £64,870.

In the port of Bombay there is, compared with 1875-76, a marked increase in the shipping returns. The arrivals rose in sailing ships from 39,568 to 49,961, and in steamers from 581 to 801, or a total increase in burden from 1,535,729 to 1,790,359 tons. The departures rose in sailing ships from 40,338 to 41,426, and in steamers from 594 to 797, or a total increase in burden from 1,575,923 to 1,671,019 tons.

Exclusive of Sind, of the harbour of Bombay, and of certain ports in Native States, there are within the limits of the Presidency eighty-three ports. These are, for statistical and administrative purposes, arranged into two divisions, the Northern including thirty-two ports from Gogo to the Bassein creek, and the Southern including fifty-one ports between Bassein and Bhatkal in North Kánára. Compared with the average of the four preceding years, the returns show for imports a rise of £521,433 and for exports a fall of £426,700, or an increase of £94,733. The unusual character of the trade is the result of the scarcity in the Deccan and Southern Máraþha Country. The failure of crops and the demand for food-grains adding for the ports of the Southern Division £501,698 to the value of the import and taking £528,634 from the value of the export trade. For the ports of the Northern Division the returns show a rise of over £120,000, £101,935 in exports and £19,735 in imports.

Exclusive of Government stores and treasure the Sind sea trade returns show a slight increase in value from

£4,637,406 to £4,657,935. This is due to the rise from £142,597 to £281,102 in the value of the grain and pulse shipped coastwise, chiefly to the southern ports of Bombay and to Madras. The total value of the export and import trade to foreign countries shows a fall from £2,065,548 to £1,988,197. The chief items of decrease are, among exports, £112,958 in cotton, £11,913 in dyes, and £163,997 in rape-seed; among imports £6,354 in cotton goods, and £38,016 in sugar. On the other hand, among exports, til, or gingelly seed, has risen in value from £113,899 to £352,755, and wheat from £132,683 to £210,688. The shipping returns show, compared with the previous year, an increase of four in the number and a fall of 9,550 in the tonnage of the steamers, and a fall of 664 in the number and of 2,475 tons in the burden of the sailing ships trading with Sind.

Compared with the previous year, the returns show a decline in the value of Aden trade. In imports the decline is from £2,008,207 to £1,880,358, and in exports from £1,447,856 to £1,334,798, or a total fall from £3,456,063 to £3,215,156. The total is still about £200,000 above the average value for the past five years. The chief influences that affected the Aden sea import trade were the disturbances in Abyssinia, which reduced by £78,266 the supply of ivory, and the consolidation of the Egyptian power on the Somali coast, which improved the imports of animals, coffee, gums, and skins. The decline in exports was chiefly due to the failure of the supplies of ivory and treasure from Abyssinia. Taking imports and exports together, the chief items of decline were ivory £155,000, coals £25,000, cotton piece-goods £22,500, shells £20,000, hides £15,000, and silk and sugar £10,000, each. The shipping returns show, compared with the previous year, a decrease of twenty-three in the number, but a rise of 17,689 in the tonnage of steamers, and a fall of six in the number, and of 1,290 tons in the burden of sailing vessels. An account of the main inland lines of caravan trade is given in the body of this report. In imports, compared with the previous year,

the number of camel loads shows a decline from 275,844 to 250,395. The trade into Aden from the land is almost entirely one of raw produce. During the past year, of the whole number, 86,944 were loads of wood, 79,970 of water, and 61,503 of fodder. The other chief articles were grain, fruits, and coffee. Compared with the previous year, the land import trade shows an increase in value from £194,555 to £195,584. In the land export trade there is, however, a considerable fall from £100,590 to £87,447. The chief articles of decrease are cotton, silk, and tobacco. One cause of this decline is said to be the levy, by the Turks, of an eight per cent duty on all goods leaving Aden by land.

COMMUNICATIONS.

During the year the road communication of the Presidency has been greatly developed. In Ahmednagar relief work was chiefly employed on the Dhond and Manmád Railway, and in Sholápur and Sátára the bulk of the destitute were engaged on large irrigation projects. But in the remaining parts of the affected tracts, especially in Belgaum, Dhárwár, and Kaládgi, the making and repairing of roads was the chief form of famine relief. Of districts not affected by the famine, the work of road-making is of most importance in Ratnágiri and in the Panch Máhals. In the Panch Máhals the construction of the forty-three miles of stone-metalled, drained, and bridged road from Godhra to Dohad has developed a great export trade from Málwa, and made possible the successful extension of a branch line of railway from Anand to Páli, and probably, before long, to Godhra.

Of the three lines of railway, that with a total length of 1,902½ miles centre in Bombay, one passes northwards to Ahmedábád, a second eastwards through Khándesh towards the Central Provinces and Calcutta, and the third towards the south-east across the Deccan on its way to Madras. For administrative purposes these three lines form two divisions. The northern group, main and branch lines together, is managed by the Bombay, Baroda,

and Central India Railway. The Eastern and South-eastern group, with their feeders extending over a total length of 1,438 $\frac{3}{4}$ miles, is under the control of the Great Indian Peninsula Railway. To improve the railway communications of the Presidency the three chief lines are: to the north a line extending the Bombay, Baroda, and Central India Railway from Ahmedábád through Pálanpur to Ajmir; in the east a cord line above the range of the Sahyádrí hills connecting the Calcutta and Madras Railways; and in the south a line running east and west to bring the Kárnátíc districts of Madras and Bombay into-communication with the western coast.

During the year some progress has been made in carrying out each of these three projects. With the northern extension, the line of most commercial importance to the city of Bombay, no actual beginning has yet been made. But its construction has been sanctioned by the Secretary of State, and the only point awaiting settlement is, whether the extension is to be on the broad or on the narrow gauge. This matter of gauge has aroused a very keen public interest in Bombay. Addresses have been moved by the Chamber of Commerce, and largely attended public meetings have been held. The general expression of opinion has been unanimous in favour of the broad gauge. On the 15th September 1877 a deputation of those most interested in the matter waited on His Excellency the Governor at Ganesh Khind near Poona. A statement of their arguments in favour of the broad gauge was made, and the hope expressed that the views of the speakers might have the support of the Bombay Government. In reply, His Excellency the Governor, while admitting the truth of most of the objections urged by the speakers against a break of gauge, reminded them that the present question was not one between a break and no break. It was a question as to the point at which the break of the gauge should occur. Under these circumstances His Excellency was unable to promise to give the views of the Bombay Committee his strong support.

The failure of the Great Indian Peninsula Railway to meet the demands of the export and famine traffic in food-grains showed how its usefulness is crippled by the present arrangement of carrying all traffic between Northern and Southern India twice over the passes of the Sahyádrí hills. At the same time the need for some large public work to employ the destitute in Ahmednagar was pressing. Under these circumstances, though at first averse from the proposal, the Government of India finally sanctioned a beginning of work on the Dhond and Manmád Railway. The survey of the whole line is completed, and as the necessity for relieving the pressure of the grain traffic to Madras continued to grow more and more urgent, the construction of the railway has been pressed on with all speed. At present it is hoped that the line will be open for traffic in March 1878.

Little progress has been made with the Kárwár and Belári Railway. In case employment on a large scale should be required for the destitute in the Belári district of Madras and in Dhárwár of this Presidency, it was deemed advisable to pick up and stake out the line of the Kárwár and Belári Railway surveyed in 1870-73. Under the orders of the Government of Madras the earth-work has been begun between Belári and the Madras frontier. But in Dhárwár employment on so large a scale has not been required.

Besides the advance made in the completion of fresh lines of communication several engineering works of importance were in progress. Of these the chief are on the Baroda Railway, the bridges over the rivers Sábarmati and Narbada which had been destroyed, the one entirely at the close of 1875, the other partly by the flood of the 6th of September 1876. These were, during the year, replaced, the Sábarmati bridge by a permanent and the Narbada bridge by a temporary structure. After consultation with English engineering authorities it has been determined to build a new Narbada bridge on a different and stronger plan than the present. It seems probable,

also, that before long a new structure of the same design as the proposed Narbada bridge will have to be built across the Máhi. No large engineering work was in hand on the Great Indian Peninsula Railway. The only work of importance, the building of the Bori Bandar terminus in Bombay, from some difficulty in connection with the transfer of land, made but little progress.

Of the working of the two main lines of railway, the Great Indian Peninsula and Bombay, Baroda, and Central India, the chief features are, on the Great Indian Peninsula, the great increase in traffic, both of passengers and of goods. The net loss to the State in the working of this railway has, during the past year, been reduced to £30,919. The total receipts have risen from £2,152,458 in 1875 to £2,453,541 in 1876, or an increase of £301,083. Of this whole amount £19,672 are due to an increase in passenger traffic and £273,796 to a rise in the carrying of goods. It is satisfactory to note that this increase has been accompanied by a very considerable reduction in the charges made for carrying both passengers and goods. The increased receipts from the carriage of goods were due chiefly to the scarcity of food-grains in the Deccan and in Madras. There was also a considerable development in the export of food-grains from Bombay. But the railway, in spite of every effort, failed to meet the demands on its carrying power, and in consequence the merchants and trade of Bombay have suffered serious delay and loss. The chief want was the insufficient supply of engine power. To remedy this defect forty new locomotives have been ordered from England, and a large number of drivers have been obtained.

In spite of an increase in its earnings from £638,678 to £677,229, or an advance of £38,551, there remained in the case of the Bombay, Baroda, and Central India Railway a deficit to be paid by the State of £115,724. The increase is entirely under the head of goods, the receipts from the carrying of passengers showing a fall of £15,075. The chief advance in the goods traffic is under the head

of grain, the high prices and keen demand in the famine districts changing Gujarát from an importing to a grain-exporting country. One point deserving notice is the increasing extent to which season tickets are made use of. These tickets are almost entirely taken for the Bombay suburban traffic, and it is satisfactory to notice that these returns show a marked increase in the number of third class season ticket-holders. The earnings under this head have, during the past two years, risen by £930.

Of none of the branch lines managed by the Great Indian Peninsula Railway are the accounts very favourable. After deducting all maintenance and other charges the Nizám's State Railway shows a profit of 0.62 per cent on the total capital expended. The Khámgaon and Amráoti lines in Berár show but little increase in traffic, and the Wardha Valley Railway has, during the year, been worked at a loss.

Under the management of the Baroda Railway, His Highness the Gáekwár's narrow gauge line to Dubhoi and Meagám shows an improvement on the previous year. The net receipts are estimated to yield 2.62 per cent of interest on the capital cost of the line. Of the other branch lines managed by the Baroda Railway separate details are not furnished. But, as in the previous year, the branch from Anand to Dákor has been found so successful that it has now been carried thirty-two-and-a-half miles on to Páli on the Mahi. The opening of a first class road from Godhra to Dohad, a distance of forty-three miles, has done much to develop the trade between Málwa and Gujarát. From careful traffic returns registered on this road there seems little reason to doubt that an extension of the Páli branch, eighteen miles further to Godhra, would be a financial success. The proposals of this Government have been forwarded for the approval and sanction of the Government of India.

The following table gives a summary of the financial results of the working of the railways during the past year :—

Railway Finances, 1876-77.

Receipts.	Revenue account.	Revenue advance account.	Capital advance account.	Railway capital account.
	£	£	£	£
G. I. Peninsula Railway	2,619,337	47,626	7,744	99,362
B. B. & C. India Railway	668,794	3,155	28,054	...

Expenditure.	Revenue advance account.	Capital advance account.	Guaranteed interest account.	Revenue account	Surplus profits.
	£	£	£	£	£
G. I. Peninsula Railway.	726,200	191,300	8,991	33,928	11,107
B. B. & C. India Railway.	220,550	117,550	234	...	68,626

IRRIGATION.

In 1874-75, under the orders of the Government of India, the large projects for irrigating the dry tracts comprising the eastern portions of the Poona district and the Malsiras sub-division of Sholapur, were placed in abeyance until further experience had been gained of the results of irrigation in the Deccan and the remunerative character of the completed works had been practically established.

The following table shows, during the past six years, the amount assigned for expenditure on new irrigation works in the Southern Deccan and Karnatic districts :—

Southern Deccan and Karnatic Irrigation, 1872—77.

Year.	Ordinary in £ sterling.	Extraordinary in £ sterling.	Total in £ sterling.
1872-73	22,619	70,096	92,715
1873-74	5,450	56,625	62,075
1874-75	17,383	68,717	86,100
1875-76	13,792	42,500	56,292
1876-77	15,284	46,297	61,581
1877-78	16,386	29,783	46,169

During the year under report the greater portion of this area has been visited with a severe drought, and the consequent destitution has involved Government in a large expenditure. The problem of protecting the country from similar droughts in the future has become

pressing. Nineteen new irrigation works, undertaken within the last few years, were pushed on or completed. These works command a total area of 162,137 acres, of which 16,000 acres, against 6,285 acres in the previous year, were irrigated. Of these works eight, drawing their supply from the Sahyádrí hills, may be trusted to last through seasons of extreme drought. The remaining eleven are small works, depending on the rainfall of the plains. When the need for famine relief works arose, a number of schemes, plans, and estimates, prepared in former years, were available; and some of them were undertaken as useful works for the employment of the destitute. These works are of two classes: storage projects, whose principal object is to supplement the supply to some of the eleven works depending on the rainfall of the plains; and entirely new schemes with or without storage and with separate distributing channels. The Nehr and Pingli reservoirs are of the former class. The Nira canal, the Mhaswád lake and canals, the Ashti, Pangaon, Motoba, and Shirsuphal lakes, and the Gokák and Ojhar canal extension belong to the latter class. The latter projects, when completed, will command a total area of 550,000 acres. Other sanctioned works in progress will provide for a further area of 104,000 acres, making, with the area now protected by completed or partially completed works, a total of 816,137 acres, or 1,275 square miles. Still this, large as it is, forms but a small proportion of 26,000 square miles, the total culturable area of the dry zone of territory that extends behind the Sahyádrí hills from Násik southwards. Over the whole of this belt of land the average rainfall is less than thirty inches, and irrigation is an absolute necessity.

The development of the postal service steadily continues. During the past year there has been in the Imperial post a rise of fifty-three in the number of offices; of eighty-two in the staff of rural messengers; and of 136 in the number of letter-boxes. In the district or subsidiary post there was an advance of one in the number of boxes, and of ten in the staff of rural messengers.

REVENUE AND FINANCE.

The receipts for the year amounted, under the four heads of Civil Imperial, Provincial, Municipal, and Local, to a total sum of £11,648,883, or less by £49,773 than the corresponding total for 1875-76. The expenditure under all heads was £7,075,483, or more than the previous year by £249,513.

Under the head of civil Imperial receipts amounted to £9,540,953, or £24,482 more than the Imperial receipts of 1875-76. Imperial expenditure also showed an increase from £4,543,555 to £4,815,516. The detailed statement of the chief heads of Imperial receipts and expenditure shows that under receipts a falling off in land revenue, customs, and stamps was more than met by the increase in opium, salt, and mint. Under expenditure the saving in refunds, minor departments, ecclesiastical allowances, and superannuation, was counterbalanced by increased charges under land revenue, forests, customs, and salt.

During the past year two influences were at work tending to increase the land revenue for collection. These were the larger area taken up for cultivation and the introduction of new revenue settlements at higher rates. Of the increase in revenue due to the first cause no details are available. But, as the additional area was more than 500,000 acres, the increase in revenue was probably not much less than £50,000. The increase of land revenue, due to the introduction of enhanced rates of assessment, was £16,706. Under these circumstances the total land revenue for collection rose from £3,651,349 in 1875-76 to £3,715,386. This increase is distributed over all the main divisions of the Presidency. It was most marked in Sind with £43,550, the Kánárese Division came next with £15,144, the Northern Division third with £3,865, and the Southern Division last with £1,479.

Though the want of rain and failure of crops did not affect the amount of revenue for collection, they interfered greatly with the work of collection. At the close of the

year (July 31st, 1877) the total realized was £2,672,301, or less by £274,034 than that collected in the previous year. Of the large outstanding balance of £319,341, it is expected that, if the next season (1877-78) proves favourable, the greater part will be recovered before its close. Of the rest, it is hoped that only a very small portion will have finally to be remitted.

In realizing the land revenue, caution was enjoined in ordering distrainments, and the number was only 3,481 against 3,369 in the previous year, 3,635 in 1874-75, and 8,950 in 1873-74. Nor is this low number of distrainments due to the fact that a marked increase in the famine-affected parts has been more than met by the special prosperity of the coast and Gujarát districts. There has been no rise in the famine districts. On the contrary, as the following figures show, there has been, compared with the average distrainments in the three preceding years, a fall of 40·23 per cent. The total number of distrainments in the ten affected districts in the past year was 2,224, The corresponding number was 2,204 in 1875-76, 2,587 in 1874-75, and 6,373 in 1873-74, or an average for the three years of 3,721.

The total opium revenue from all sources amounted to £2,977,992, or an increase of £400,526 over the corresponding returns in 1875-76, and of about £300,000 over the average of the preceding five years.

The following statement shows in tabular form the chief details of the opium trade of the past and previous years :—

Opium Revenue, 1875-76 and 1876-77.

	1876-77.	1875-76.	Increase.	Decrease.
	£.	£.	£.	£.
Pass fees... ..	2,948,646	2,549,436	399,211	...
Transshipment fees at Bombay and Aden	28	35	7
Retail revenue	29,318	27,995	1,322	...
Total...	2,977,992	2,577,466	400,526	7
	<i>Deduct—Decrease...</i>			7
	<i>Net Increase...</i>		4,00,526	

The increase in the revenue from pass fees is due to the larger number of chests exported to China. The increase in the revenue from the retail trade is chiefly due to the seizure, by the Bombay, Baroda, and Central India Railway police, of a large quantity of smuggled opium.

The most important event connected with the management of the opium revenue during the year was the passing of a new Opium Act (XXIII. of 1876). But, pending the passing of certain executive rules, the provisions of the Act have not yet been introduced.

The total cost of establishment and charges of every description amounted to £3,310 against £2,309 for the preceding year, showing an increase of £1,001.

The quantity of Government opium sold during the year in each collectorate, inclusive of Káttýwár, in which alone 54,080 pounds were sold, amounted to 79,040 pounds, or eighty pounds in excess of the quantity sold in the preceding year.

The actual receipts from the duty on salt during 1876-77 amounted to £945,995 against £1,042,559 in the previous year, or a decrease of £96,564. This apparent fall in revenue is due to the re-introduction, by order of the Government of India, of the system of exporting salt to Madras without paying the duty in advance. This change caused a nominal loss in revenue of nearly £120,000. But the order in question has since been rescinded, and, therefore, will not again affect the returns of the Bombay Salt Department. Apart from this special and temporary element of decline, the regular local income of the department from the yield of the excise duty on salt for home and inland consumption, has risen from £755,215 to £781,651, or an advance of £26,436. This increase which, in a year of so widespread scarcity and distress, is satisfactory, is chiefly due to the more general use of Bárágara salt in the Central Provinces; to the larger sales of salt at Balsár, owing to the stoppage of smuggling

at Daman, and the greater facilities provided for removing salt by rail from the works at Bassein and Ghorbandar.

Including miscellaneous receipts the gross customs revenue of the port of Bombay was £570,412, or less by £91,537 than last year's revenue of £661,949. There was also a decrease in the net revenue, which fell from £622,759 to £534,315.

The chief items of decrease are under imports, £75,000, and under exports, £25,000. The fall is almost entirely due to the reduction of import duty from $7\frac{1}{2}$ to five per cent and to the abolition of nearly all the duties on exports. These changes of tariff were introduced during the course of the previous season, and have been in force throughout the whole of the year under review. The chief item of increase is one of £6,508 in the receipts from imported spirits, an advance due to the working through the whole season of the enhanced duty of 8s. a gallon.

The state of the stamp revenue has, during the last nine years, been unsatisfactory. The result of the introduction of the present Stamp Act (VIII. of 1869) was in 1870-71 to raise the revenue from £466,848 to £560,285, an advance of £93,437. But in 1871-72 there was a serious fall of £60,044. In 1872-73 a rise of £27,797 brought back the total revenue to £528,037. But from this it again fell to £501,134 in 1873-74, and to £464,545 in 1874-75. In 1875-76 a slight rise brought up the total to £466,821, or within £36 of the revenue realized before the introduction of the Stamp Act of 1869. The past year shows a farther serious decline of £25,559, reducing the whole revenue to £441,262. Though this decline appears in both branches of the stamp revenue, the fall under the General Stamp Act is almost nominal, the receipts being £180,952, or only £153 less than in the previous year.

Under the Court Fees Act, on the other hand, the fall is considerable—from £285,716 to £260,310, or less by £25,406. Though not found in all the affected districts,

the decrease in litigation, of which this loss of revenue is a consequence, was probably to a great extent due to the widespread scarcity and distress.

The excise or *abkari* revenue has two divisions, Bombay and Provincial excise. Bombay excise is administered by the Collector of Salt Revenue; Provincial excise by the different District Collectors.

During the year the revenue from Bombay excise rose from £67,120 to £73,826, and the proceeds of provincial excise from £397,528 to £404,216, that is, total increase of £13,394. The question of the better protection of the excise revenue is still under the consideration of Government.

The result of Provincial Service transactions during the year was a diminution of nearly £20,000 in £138,296, the balance with which the year began. The expenses of the year amounted to nearly £1,141,800, while the receipts came to only £1,122,700. Excluding debt heads, the actual receipts under the different services fell short of 1875-76 by £28,566, and the expenditure by £15,442. But, in considering these figures, it must be remembered that the nominal adjustments of about £25,000, which it has hitherto been the practice to make on account of the pay of the police lent to public departments, railway companies, and others, have been done away during the year under report. The only very noticeable item of special expense, was a sum of over £20,000 incurred in relieving the distress caused by the floods of September 1876, which washed away a large portion of the city of Ahmedábád.

The local funds receipts for the year amounted to £459,754, or nearly £100,000 less than the expenditure, which came to £558,413. Compared with 1875-76, the receipts of the year were less by £64,327, and the expenditure by £23,826. This decrease is, as explained below at pages 340 to 342, in great part nominal, the result of the transfer of certain funds to the head "Deposits."

PUBLIC HEALTH.

The change noticed in last year's report, by which the Vaccination Department was placed under the control of the Sanitary Commissioner, and the various Superintendents of Vaccination became Deputy Sanitary Commissioners, has during the year worked well.

The registration returns of births and deaths are, for some parts of the Presidency, carelessly prepared and untrustworthy. Government have again drawn the attention of the Collectors to the necessity of enforcing greater care in their preparation. Some districts, no doubt, lie under special difficulties with a large proportion of hill tribes and depressed castes, the complete record of whose births and deaths would under any system be difficult to secure. In several districts the results show, on the other hand, that, under the present system, when its working is carefully supervised, a fair amount of accuracy can be attained. Thus, taking the City of Bombay as a standard, and its death-rate of 30·66 per mille as a fairly accurate return, Belgaum surpasses it with 31·75 and Dhárwár with 30·86; while Kánára with 30·65, Ahmedábád with 25·89, Ahmednagar with 25·62, and Surat with 25·12; all come close after it. Similarly, with births, the rate recorded for Bombay city is lower than that registered in nine, and very much lower than that registered in five, provincial towns. The registration of births and deaths is necessarily imperfect. But each year more attention is paid to this subject, and the results are so far satisfactory that since 1871 they show an increase of 92,875 in the number of registrations of births and of 88,534 in the registrations of deaths.

The cholera epidemic of 1875 continued during the whole of the past year. The disease was more or less prevalent in every district of the Northern Deccan; Gujarát and the Konkan suffered severely; and in the Southern Márátha Country its ravages were very great. In town circles it was severest at Athni in Belgaum, at Pandarpur in Sholápur, and at Viramgám in Ahmedábád.

Though, on the whole, the disease increased during the hot months and the early part of the rainy season, some districts, not attacked till the monsoon was well set in, showed, as the year drew to its close, an increased intensity in the power of the epidemic. In Kaládgi it is worthy of note that both in the hot weather and during the rains the disease marched steadily against the prevailing winds.

Small-pox caused 11,817 deaths or 8,356 more than in the previous year. The most fatal months were December with 2,437 deaths, March with 1,822, April with 1,429, and May with 1,124. The districts which suffered most were Khándesh with 1,466 deaths, Ratnágiri with 1,208, Poona with 886, and Násik with 872. In Bombay City alone there were 3,145 deaths.

Fever is said to have caused the death of 220,833 persons, of whom 117,938 were males and 102,895 females. The number recorded is the highest yet registered, and exceeds that of the previous year by 1,677. The three worst districts, according to ratio, were the Panch Máhals with 18·43 per mille, Surat with 17·27, and Ahmednagar with 16·78. The three worst towns, according to ratio, were Jacobabad with 32·86, Umarnkot with 29·55, and Ahmedábád with 29·21. As regards the actual number of fever deaths in the districts, 16,705 occurred in Sátára, 15,002 in Khándesh, 13,533 in Ahmedábád, 13,521 in Ahmednagar, 13,515 in Dhárwár, and 13,364 in Kaira. No less than 33,683 persons died of bowel complaints, which were most fatal in Dhárwár; the worst months throughout the Presidency, as a whole, being July, August, and September, when 3,337, 4,123, and 3,521 deaths, respectively, were recorded.

Accidents and violence were the cause of death in 5,928 cases against 6,217 in 1875. Of the 773 suicides, 459 were by drowning, fifty-eight by poison, 229 by hanging, and twenty-seven by wounds. In deaths from snake-bite there was a fall from 1,207 to 1,164; while wild beasts killed ninety-four persons against eighty in 1875.

Haidarábád with 199, Ratnágiri with 123, and Thána with 90, as last year, head the list of deaths by snake-bite. There were 1,892 deaths from accidental drowning, of which 839 were in wells, 374 in ponds, and 679 in rivers and streams.

The total vaccinations were 815,177 compared with 808,353 in the previous year. Of these, 725,178 were primary vaccinations and 80,110 re-vaccinations in civil life; while among the Army, 7,006 were primary operations, and 2,883 re-vaccinations. The largest increase was in the Baroda circle, where 15,308 more persons were operated on than in the previous year. The percentage of males to females vaccinated was 52·20 to 47·80, the respective numbers being 381,175 males and 349,036 females. Out of the 667,132 persons primarily vaccinated, exclusive of Cutch and Baroda, 3,556 were Christians, 514,012 Hindus, 101,108 Musalmáns, 1,434 Pársis, and 47,022 of other castes.

The number of civil hospitals is forty-six compared with forty-five in the previous year. The increase is due to the transfer of the Bhuj dispensary to the list of civil hospitals. The total number of in-door patients was 27,008 against 26,857 in the previous year and the number of out-patients 237,760 against 231,051, or under both heads a total increase of 6,860 patients. The general health of the patients is said to have been better than in the previous year.

The number of dispensaries rose from 122 to 129. Of the whole number, 106 are partly supported by local help and partly by Government grants, eight are endowed, nine are supported entirely by Government, and six by the rulers of Native States. The number of in-patients rose from 5,605 to 5,876 and of out-patients from 552,014 to 578,667, or a total increase of 26,924.

INSTRUCTION.

An unfortunate feature of the year has been the check in the progress of education. That progress had been pre-

viously so good, rising by rapid yearly increments from 3,676 schools and 198,870 pupils in 1871 to 4,644 schools and 248,962 pupils in 1876, that its temporary cessation need hardly excite surprise. Nor is there any reason to doubt that this pause has occurred mainly by reason of the famine. Still Government feel that its occurrence deserves the most serious consideration of the district officers, of the native public, and of the Education department, with a view to the speedy restoration of progress.

The education cess brought in £11,073 less than in 1875-76. The number of Government schools has decreased by seventy and of pupils by 2,779. The number of aided schools has decreased by eight and of pupils by 103. Many indigenous schools have been closed. The number of students on the rolls of the Elphinstone college has fallen from 226 to 203, and on the rolls of the Deccan college from ninety-six to seventy-five. The number of students in aided colleges has fallen by thirty-three, in the law school by twenty-six, and in the Grant medical college by twenty-eight. The candidates for matriculation fell from 1,269 to 1,154. The successful candidates who in the year previous were more than one in three, were this year less than one in five. The successful candidates, in the first examination in arts, who in the year previous were about one in three, were this year one in six.

The falling off in the receipts from the educational cess was due to the drought which afflicted the Deccan and the Southern Máraṭha Country. There was also a decrease of £385 in the amount of popular subscriptions. But in the other six items of local income there was an increase.

Two of those items deserve mention. The fees, owing to enhancement of rates charged for the higher standards, were increased by £1,553. The funds of Native States were increased by £2,044 owing to the extension of education in Káttwár. The hoped for increase in municipal assignments appears only in the small sum of £25.

The net result is that the local income of the department was less than in the previous year by £6,416.

The reduced number of candidates for matriculation, and the increased proportion of failures, as well as the reduced number of students on the rolls of the colleges, is attributed to increased severity in the matriculation examination. It is remembered that in 1874-75 the severity of this examination affected the number of successful candidates. In 1875-76 the examination was made easier. In the year under report the severity has been resumed. Thus, in the last five years, including the year under report, the numbers of successful candidates were as follows :—

1872-73...	378 out of	909
1873-74...	355 „	1,055
1874-75...	262 „	1,115
1875-76...	434 „	1,269
1876-77...	203 „	1,154

While Government agree with the Secretary of State that a gradual elevation of the matriculation standard is desirable, they are satisfied that a fluctuating standard cannot be otherwise than a disturbing element in the State system of education. The Director of Public Instruction has, therefore, been called upon to explain the causes of the changes in the standard of severity, and to suggest measures by which the risk of such changes can be avoided.

The Poona civil engineering college is an exception to the general decline of numbers in collegiate institutions. But even here the increase is only from 163 to 164. At the same time the special demand for trained subordinate engineers for the famine relief works has given a stimulus to this institution, the effect of which will probably be a more marked increase of attendance in future years. The success of the students at the university examinations is also exceptional. Of twenty-one candidates at the first examination in civil engineering nineteen passed, eleven of them in the first class. Of fourteen candidates for the

degree of licentiate of civil engineering ten passed, one in the first class.

The number of students in the Sir Jámsetji Jijibhái's school of art also shows an advance from 122 to 132. Under the head of high schools it is satisfactory to note that the schools at Sholápur and Thána have been promoted to that grade. The condition of the Elphinstone high school is also very satisfactory; the number on the rolls having risen from 606 to 673, and the fee receipts from £2,173 to £2,500.

In the education of girls there has been some progress. Though three Government schools have been closed, the number of pupils has risen by fifty-eight. An increase is also reported of one aided school and 425 pupils, and of five inspected schools and twenty-eight pupils.

It is also satisfactory to observe that the increase of Muhámmadans under instruction is maintained. In Government schools there were 23,197 against 23,077 in the year previous, and against 13,613 in the year 1869-70. In all schools connected with the department, the number of Muhámmadans has risen from 26,297 to 27,263.

The number of pupils learning English is now 18,657, or 324 more than in the previous year. A marked falling off in the numbers learning Latin, Sanskrit, and Persian, is due to the introduction of a rule under which boys are allowed to choose between their vernacular and a classic.

MIGRATION.

The strangest and most interesting event of the year was a large self-organized migration among a section of the aboriginal population of Gujarát. The following sketch of the movement is compiled from the reports of Mr. G. H. D. Wilson, the Acting Agent to the Governor, and of Mr. W. B. Prescott, the Superintendent of Police in the Panch Máhals.

The people who migrated were about 5,000 of the aboriginal tribe called Taláviás. Early in March 1877

they left their fields and houses in Baroda and Broach,¹ and came to settle in the tracts of waste and wood land that surround the great hill of Chámpánir or Pawághar, on whose summit is the most holy shrine of their chief goddess Kálka Devi, or Kálka Máta. According to common tradition the Taláviás are a mixed race, the offspring of Kolis and Bhils. They bear, however, a better character than either Bhils or Kolis, more intelligent than Bhils, and harder working than most of the Kolis. Hitherto the Taláviás have been settled chiefly in the Ahmedábád, Kaira, Broach, and Surat districts and in the rich territories about Baroda. Living in villages where the bulk of the people are cultivators of the better class, Kanbis, Bohoras, and others, the Taláviás have been gradually ousted from their holdings, and reduced to the level of sub-tenants and labourers. This position, being shrewd, hardworking, and by no means bad cultivators, the Taláviás have found irksome. They are said, for some time past, to have been anxious to leave the more thickly-peopled parts of Gujarát and settle where they might again find fields of their own to till.

Their choice of the lands round the Pawághar hill is so far fortunate that this is a part of the country of rich soil and once highly cultivated, which from want of hands to till it has now for long been waste and a by-word for unhealthiness. Several efforts have, under the British Government, been made to induce cultivators to settle in these lands, and colonies have before this been more than once established. But, on each occasion, the settlers have, after a few months, been stricken with fever; and losing heart have returned to their old homes.

Compared with former attempts to colonise, the present movement has two points in its favour. It is, in the first place, a movement of the people themselves, and therefore they are less likely to be disheartened by the great diffi-

¹ According to details furnished by the Agent to the Governor, No. 540, of 23rd March 1867, 1,256 families came from Baroda territory and 611 from Broach.

culties they have to face. In the second place, the settlers are aboriginals, and so are less likely to suffer from fever than the Kanbi and other higher caste cultivators.

Mr. Prescott gives the following description of the arrival of the Taláviás:—In the month of March 1877 the police officers of the Hálol sub-division reported that over a thousand Taláviás had unexpectedly arrived, and were camping close to mount Pawághar. That they had brought with them their wives, children, cattle, and some store of grain, and that they said they were come to settle. At first it was feared that quarrels might spring up between the Taláviás and the Náikrás, the rather unruly aborigines of the Chámpánir neighbourhood. So the new comers were searched. But clearly they had no thoughts of fighting, as fourteen swords were the only arms found among the whole company. After the first detachment had arrived, others continued to follow, pouring in daily by hundreds. From early morning until late at night bands of them kept tramping in from all sides to Pawághar. Each family came bringing its well-filled cart, or, if not a cart, a cot set legs-up on an inverted harrow served as a rough bullock-sledge. Numbers of these vehicles, highly piled with grindstones, bunches of leg-bound fowls, clothes, cooking pots, children, and other odds and ends, pushed up as they moved along stifling clouds of dust. Behind the cart, or sledge, came the father of the family loaded, and then the mother and elder children also carrying burdens and driving before them their small stock of goats and cows.

The travellers' answers were always the same. Who are you? Taláviás. Where are you going? To Mátá. What for? To cultivate. Where have you come from? There; with a lengthened drawl and a backward move of the hand. Why did you leave? There was no land, the people with money had turned us out of our fields. A few more questions, and they would give the name of the district and village they came from; all of them ending with the refrain "there are many more of us on the way"! On reaching the foot of Pawághar the

first care of each family was, without loss of time, to worship at the shrine of the *Máta*, or mother, on the top of the hill. For days, in an almost unbroken stream, the worshippers kept passing up and down the hill-side, bringing back with them on their foreheads the red mark set there by the priestess of the temple.

They camped in the brushwood and forest lands that lie thick round Pawághar. And these, for years past the favourite haunt of tigers and panthers, became in a few days one vast fair. Some of the old wells, relics of Chámpánir's greatness, were cleared out, and yielded good supplies of water. Camps were formed, each with its headman, or *Patel*; the people from the different districts choosing to camp by themselves. When their camp was fixed, each family raised a rough hut and cattle-shed, and buried their supplies of grain in the ground. The children, many of them brought up in the treeless plains of Broach, seemed to delight in their new forest life, playing amongst the trees, and all day long swinging on the hanging shoots of the Banian.

The pressure of population was, no doubt, the influence that inclined the Taláviás to leave their homes in Baroda and Broach. But this does not explain the strange feature in the movement that so large numbers had from great distances flocked together at the same time and with a common purpose. On inquiry it turned out that the originator of the general movement was a religious teacher, or *guru*, who, in a dream, had seen the goddess Kálka Máta and a Muhámmadan saint, and had been ordered by them to bring the people to Pawághar. The goddess and the saint, he said, declared that the Taláviás had originally belonged to Chámpánir. If they went back to their old home, they would find riches and plenty; if they refused to go, they would die. Further, he said, the goddess had, as a token of favour, promised that, on the night of the March full-moon, she would set fire to their offering of butter and rice, and that a Bráhman would come from the north, through whom she would tell them what they should do.

The fulfilment of this promise was most earnestly looked for. On the night of the full-moon (March 22) 7,000 of the Taláviás went up the hill, each carrying with him some contribution to the general offering. All was duly prepared and laid before the 'Mother,' and the worshippers waited, watching throughout almost the whole night to see the offering take fire. But no fire came, no Bráhmán, and no voice from the goddess. At last, tired out, with their own hands they set fire to their offerings and left.

Taking this as a proof that the work had not the favour of 'the Mother,' the greater number of the immigrants started for their old homes. Of the original 1,867 families, only 685, with among them ten carts, fifty-seven ploughs, 133 bullocks, and about 250 cows and goats, remained.

Except a few who chose sites a couple of miles off, all of these families persisted in settling close to Pawághar; for they said, to be near the hill was their only reason for coming. These settlements form twelve new hamlets, the houses built not apart like those of the Panch Máhál Bhils and Náikrás each in his own field; but, probably for the sake of protection, in groups usually in the form of a square. During the hot-weather months, as they were men of but small capital, they passed rather a pinched time, working through it chiefly by the help of sales of firewood in the villages near, and some special Government aid in the shape of road-making and clearing of wells and ponds. Mr. Wilson, the Acting Agent to the Governor, had from the first taken the most active interest in the settlers, and, on his recommendation, Government made them special advances. With this help the settlers were able to finish their houses, to buy about 900 head of cattle, to prepare for sowing about 2,350 acres (4,000 *bighás*), and to sow about 798 acres (1,359 *bighás*) of land.

But this rainy season (June-October 1877) has proved most unfriendly to the new settlers. Their first and

second sowings of early, or *kharif*, crops almost entirely failed ; and now (December) there is said to be great risk that their late, or *rabi*, crops will also be lost. Not much more than half the average supply of rain has fallen, and the hard fresh turned up soil wanted a specially full share of moisture.

At the same time, though so far disappointing, two considerations favour the hope that the Talávia colony at Chámpanir may still succeed. These are, first, that the colonists have been almost perfectly free from fever, a result due partly to the dryness of the season, but probably more to the care with which from the first they have been provided with a full supply of good drinking water ; second, that the land has shewn itself to be of excellent quality, a few of the first sown fields having yielded capital crops.

I.—POLITICAL.

Tributary States.

Within the limits of the Bombay Presidency are the territories of 361 chiefs and rulers, with a total area of 70,000 square miles, a population of about nine million souls, and an estimated total yearly revenue of nearly Rs. 4,00,00,000. Of these 146 hold positions of power and wealth, managing their internal affairs with more or less complete freedom from control. The rest, under ordinary circumstances, collect and spend their revenues as they please, but have little responsibility for the maintenance of order or the suppression of crime. The territories in the possession of these chiefs form four groups, one in each of the main divisions of the Presidency, Gujarát, Máhárashtra, the Kárnátic, and Sind. In the following chapter the members of each group are, as far as possible, treated in geographical order, beginning with the most northerly, and working southwards. In addition to the information given in this chapter, police, civil and criminal justice statistics, together with vaccination and education details, will be found in the tabular returns printed at the end of this volume. The chapter concludes with a brief notice of Aden.

GUJARA'T STATES.

Of the four groups the Gujarát states, including Cutch and Káttiwár, are the most important. They have a total area of 50,034 square miles, a population of 6,464,016 souls¹ and a yearly revenue of more than Rs. 3,00,00,000. The following statement shows their chief statistical details :—

¹ The population figures given in this chapter are those of the census of 1872.

Gujardt States, 1876-77.

Name.	By whom supervised.	Area in square miles.	Population.	Revenue in Rupees.
Cutch ...	Agent, Cutch ...	6,500	487,300	24,00,000
Pálanpur ...	Superintendent, Pálanpur...	8,000	502,586	12,23,908
Mahi Kánta ...	Agent, Mahi Kánta...	4,000	446,156	9,99,170

¹ At present under the Government of India.

CUTCH.

CUTCH.

Exclusive of its salt desert or Runn, Cutch has an area of about 6,500 square miles, a population of 487,305 souls, and a total yearly revenue estimated at Rs. 25,32,673, of which His Highness the Rao's share is said to amount to Rs. 14,32,673, and the share of his kindred, or *Bháýád* of the Jádeja tribe of Rájputs, to about Rs. 11,00,000.

Administra-
tion.

Until the latter part of October 1876 the affairs of the state were conducted provisionally by administrators nominated by the late Ráo. Then the Regency, sanctioned by Government, composed of the Political Agent as President, and three members, the Diwán, Rána Jálímsing; Jádeja Chandáji of Sultiri, a Bháyád; and Báwa Hirágar of Mándvi, a merchant, was formally installed. Soon after the installation, by the death of the mercantile member, this Regency was reduced to a council of three. A general scheme of reform and re-organization of the different departments, prepared and sanctioned during the year, has been in operation since the 12th July 1877.

Marriage.

The chief event of the year was the marriage of the Ráo's only sister to the Máharája of Bikáner, in Rájputána. This marriage, arranged by the late Ráo, was regarded as a very brilliant match. As it is the first instance of the union of a lady of the Cutch family with one of the ruling chiefs of Rájputána, the late Ráo determined to spare no expense to give splendour to the wedding festivities. He had already paid five lakhs of rupees to the bridegroom for his travelling expenses, and, if rumour may be believed, other large sums to the promoters of the match. It was arranged on both sides that the marriage should take place on or before the 19th January last. Unfortunately this interfered with His Highness the Ráo's presence at the Imperial Assemblage at Delhi on the 1st of that month. Up to a very late period it was hoped that the Máharája of Bikáner would postpone the event sufficiently to allow His Highness the Ráo to proceed to Delhi. With this hope, the camp

equipage and followers were despatched by way of Agra. But almost on the eve of the Ráo's departure, the Máhárája, who had been excused attendance at Delhi, announced that he was coming to fulfil his engagement on the day appointed. The Ráo was, therefore, reluctantly compelled to remain in Cutch. The preparations for the reception of the wedding-party were on the most extensive scale. The Máhárája came with about 6,000 followers, twenty-five elephants, and horses, camels, and bullocks in proportion. All this host had to be fed during the Rája's stay. Cisterns were dug and supplied with water. Roads were made, triumphal arches were raised, and a general illumination of the town prepared. The ceremony and all the festivities passed off with the greatest gaiety and without a mishap.

Throughout the year the dealings with the Sind and Pálanpur authorities have been satisfactory. But, as in previous years, the relations with Nawánagar and Morvi, on the southern shore of the Gulf of Cutch, have been strained and unfriendly. Relations.

At the end of the past official year three estates, Lakdia, Roha, and Vinjan, were, on account of their owners' minority, under the direct management of the Political Agent. The Vinjan estate, under attachment since 1860, was, on his attaining his majority, made over to the young chief. But as this property, with a yearly revenue of not more than Rs. 5,541, is still burdened with a debt of Rs. 80,850, an official has been appointed by the Council of Regency to aid the young chief in its management. The two other estates of Lakdia and Roha were transferred during the year to the supervision of the Council of Regency. Both of these properties are in debt, Lakdia to the amount of Rs. 48,688, and Roha in Rs. 82,541. The Lakdia revenue for 1876-77 is estimated at Rs. 35,495, and the expenditure at Rs. 25,106, leaving a balance of Rs. 10,389 to be applied to the clearing off of debts. The Roha succession case was finally settled during the year; the decision was in favour of the next-of-kin, Jádeja Versalji, a minor. On accession, the new chieftain received from the Ráo the usual dress of honour. With a yearly revenue of only Rs. 14,432, this estate has a debt of Rs. 82,551, a burden entailing for many years most careful and economic management. The Kántkot estate, also in the hands of a minor, continues under the supervision of the Council of Regency. Bháyád.

The field survey, began in 1870, has made progress. During the year 5,361 fields, containing 59,258 acres of land, have been measured at a total cost of Rs. 9,341-10-0. Up to date the area surveyed amounts to 224,339 acres. The object of the survey is simply by securing a record of lands to prevent encroachments. It will not, at least for the present, be followed by a revenue settlement. Surveys.

Freed by the presence of a detachment of Imperial troops from the fear of any foreign foe or unruly subject, His Highness the Ráo was almost entirely without a military force. The establishment consisted of a body of Muhammadan horse, nominally ninety-five in number, and an Arab militia, or *sibandí*, 500 strong. The Police.

CUTCH.

Musalmán horse, who receive in pay about Rs. 14,000 a year, are described as utterly unfit for active service. The Arabs, though useful as sentinels, are said to be unwilling to conform to rules, or adopt any semblance of discipline, and to be too lazy and proud to perform the ordinary duties of police. Under these circumstances, the Council of Regency has determined to reduce their number by one-half. The regular police in Cutch number 730 men, of whom 239 are mounted. The cost of the force is returned at Rs. 98,773. Something has been done to add to the efficiency of the rural police, by providing for additional village patels, and by redistributing over a greater number of villages the existing allotments of land for the support of village watchmen. During the past year the value of property stolen is returned at Rs. 55,168. But as the system of *waltar*, or compensation, tempts people to exaggerate their losses, this estimate is probably in excess of the actual amount stolen. Most of the offences reported were thefts of grain and other articles of small value. There has been no instance of gang robbery, and only sixteen cases of simple robbery. In twelve of these the offenders have been brought to justice. Two persons died by violence, forty-four by accident, and thirty-five by suicide. There were twenty-seven cases of fire, all due to accidental causes. The proportion of crime to population was 6·2 the thousand; of police to population one to 667; and to area one to every ten square miles. The cost of the police is Rs. 0-3-3 per head of the population.

Crime.

The criminal courts of the province are of three classes: courts with jurisdiction in the state domain only; courts with jurisdiction in the possessions of the petty chiefs only; and courts with jurisdiction both in the state domain and in the territories of subordinate chiefs. In the state domain there are twelve criminal courts. Of these, six are the courts of second class judges, or *nyáyádhesh*, with power to imprison for three months and fine to Rs. 50; five courts of first class judges, with power to imprison for six months and fine to Rs. 125; the twelfth is the High Court, or Sadar Adálat, with power to imprison for three years and fine to Rs. 1,250. Besides the regular courts, the five managers of zenána villages have power to imprison for eight days and fine to Rs. 135. The courts in the territory under subordinate chiefs are the landlords' courts. The landlords' courts belong to four classes: the first, with full civil jurisdiction and criminal powers of seven years' imprisonment and fine to Rs. 1,500; the second, civil suits to Rs. 2,500, and criminal cases involving sentences of imprisonment for two years and fine to Rs. 500; the third, civil suits to Rs. 500, and criminal cases involving sentences of imprisonment for three months and fine to Rs. 75; the fourth, civil suits to Rs. 50, and criminal cases involving punishment to fifteen days' imprisonment and fine to Rs. 12-8-0. Of these landlord courts there are altogether seventy-three, three of the first, five of the second, forty-one of the third, and twenty-four of the fourth class. There are three courts whose jurisdiction extends over the whole province. These are the guarantee-holders' or Jádeja court, the minister's court, and the court of the Political

Agent. The court of guarantee-holders, or chief members of the Jádeja tribe, has full original civil and criminal jurisdiction in cases in which a guarantee-holder is concerned, or to which His Highness the Ráo, or one of the Ráo's subjects is a party, against a resident on a guarantee-holder's estate, or which arise between residents of different estates; this court has also jurisdiction in cases arising in the smaller estates beyond the powers of the landlord; it has also appellate jurisdiction in certain cases decided by them. Sentences of death, transportation for life, and of fourteen years' imprisonment are passed, subject to the confirmation of His Highness the Ráo. The minister's court has full powers of supervision, revision, and appeal over the landlords' and the guarantee-holders' courts.

Jádeja court.

One of the most important events in the past year was the introduction of the new rules for the guidance of the Jádeja court. The controversies respecting the establishment of this court and the position of the holders of the guarantee of the treaty of 1819 extend over many years. His Highness the Ráo held that he had supreme jurisdiction over all subordinate chiefs. The chiefs contended that, within the limits of their estates, authority centred in them. The nature of their subjection to the head of their tribe was, they held, purely military, confined to service in time of war. In civil matters, they said, the Ráo's rights did not extend beyond the settlement of disputes between two estate-holders, the recovery of stolen property, and the power of billeting troops in cases of disobedience. In 1868, with the sanction of the Government of India, the Government of Bombay adopted certain measures for settling these disputes. The heads of the families who held the British protection guarantee of 1819 were arranged into five classes, with graded power and authority. To settle questions beyond their jurisdiction and matters in which guarantee-holders had opposing interests, a tribunal was established. This was called the Jádeja court. Under the presidency of His Highness the Ráo, the court was to consist of a bench of four members chosen from their own number by the holders of guarantees. From the decisions of this court, in all questions affecting the possessions or rights of the guarantee-holders, a special appeal lay to the Political Agent, and from him to the Government of Bombay. The court, as thus constituted, was to give advice to His Highness the Ráo in all matters of administration affecting the possessions and rights of the holders of the guarantee, and His Highness was not to act contrary to the advice thus tendered without the concurrence of the Political Agent. Against these rules His Highness protested. He urged that they were entirely subversive of his prerogative, and refused to consent to such an abrogation of his power. On this fresh discussion arose, and considerable modifications were made in the Ráo's favour. His Highness was to keep the list of the holders of the guarantee, to elect the members of the court, and, except those preferred by a guarantee-holder about his own estate, to decide all appeals. As these arrangements had the approval of the late Ráo, the presidency of the Jádeja court was, during the past year transferred from the Political Agent to the minister. At the same time the

courts of the minister and the assistant minister were amalgamated with the Jádeja court.

In the state courts 2,415 offences were tried, an increase of 257 over the previous year. The number of persons dealt with was 3,955, or an increase of 544. Of this total, 559 were discharged without trial, 1,583 acquitted, 1,598 convicted, eight died, escaped, or were transferred, and 207 remained for trial. The Jádeja court dealt with 1,253 persons against 1,513 in 1875-76. Of these fifty were convicted, 720 acquitted, and 293 remained for trial. Of the 2,098 persons convicted, sixty-five were sentenced to more than six months' imprisonment. No capital punishment was awarded. Fines to the amount of Rs. 8,783 were inflicted, of which Rs. 6,301 were recovered. The decisions of the courts were during the year the subject of 192 appeals. In forty of these the appeal was rejected; in forty-six the original sentences were confirmed; in thirty-eight they were modified; and in ten reversed. At the close of the year fifty-one applications remained pending.

Prisons. There are eleven prisons, in which 1,370 persons were confined against 1,553 in 1875-76. The daily average number of prisoners was 175.6 against 155.4 in the previous year. The total expenditure came to Rs. 9,471. There were six deaths among the prisoners.

Litigation. In civil justice there was a decrease of business. The total number of suits filed during 1876-77 in the eighteen state courts was 2,081, which, added to 1,090 suits already on the file, gave a total of 3,171 for disposal against 3,326 in 1875-76. Two thousand seven hundred and eighty-six were disposed of, leaving 385 in arrears. In the small cause courts there was a total of 2,342 suits for disposal against 2,771 in 1875-76. Two thousand one hundred and seventy-three suits were decided, and 169 remained in arrears. In the Jádeja court 1,933 suits were for disposal against 2,621 in 1875-76; of these 819 were decided. The total of civil suits in all the courts was 7,446 against 8,718 in 1875-76. In the appellate courts there were 1,129 appeals, of which 822 were disposed of, leaving 307 in arrears against 304 in 1875-76.

Registration. Though there is no regular system of registration in Cutch, certificates confirming conveyances of immovable property are, on payment of certain fees, issued by the revenue department. Under this system forty documents were registered against thirty-seven in the previous year. The fees collected in the two years have been Rs. 2,815 and Rs. 4,035 respectively.

Municipal. The following are the chief details of the administration of the municipalities of Bhuj and Mándvi:—

Cutch Municipalities, 1876-77.

Name.					Population.	Income in Rupees.	Expendi- ture in Rupees.	Percentage of taxation per head in Rupees.
Bhuj	23,818	9,718	9,892	0.39
Mándvi	35,988	8,245	8,056	0.23

Two new municipalities, at Mundra and Anjár, were established during the year.

The fall of rain, varying from 5.96 to fifteen inches in different parts of the province, averaged twelve inches over the whole area. This, nearly double of what fell in the previous year, is about the average annual supply. The crops were fair. Locusts made their appearance in Lukpat, but caused little damage. Public health was not good : both cholera and small-pox were prevalent.

Season.

The total revenue realized from sea customs amounted to Rs. 3,88,628. Of this, Rs. 2,09,580 were collected at Mándvi, and the remainder at subordinate ports. Compared with the previous year the customs revenue at Mándvi shows an advance from Rs. 1,87,000 to Rs. 2,09,580. During the year 1,069 shipping arrivals and 2,191 departures were registered, and at its close the trading craft belonging to Mándvi formed a fleet of 236 vessels, with an aggregate burden of 10,087½ tons. The chief imports are of vegetable produce, grain, butter, sugar, groceries, fruit, and timber; and of manufactured articles, iron, brass, and copper ware, cloth, furniture, stationery, and ivory. The exports are cotton, alum, Indian millet (*Holcus sorghum*), pulse and garlic, butter of inferior quality, and black-coloured cloth. The value of imports is usually much in excess of the value of exports.

Trade.

The expenditure on public works for the year is stated to have been Rs. 1,94,131. Of the whole amount, Rs. 1,06,445 were spent on His Highness the Ráo's new palace at Bhuj; Rs. 39,704 on roads and public buildings; Rs. 11,529 on water and irrigation projects; and Rs. 36,453 on harbour works. The new palace at Bhuj, designed by Colonel Wilkins, R.E., and under construction for the last ten years, will, it is expected, be finished by December 1877. The total cost will be nearly Rs. 20,00,000. Two new roads were made for the use of the public at Bhuj, and a portion of the road between Bhuj and Mándvi was repaired and metalled. The construction of a road between Bhuj and Thána has been sanctioned, and arrangements made for planting trees at convenient spots. Eighty-eight wells were sunk during the year. An earthen embankment was raised for increasing the supply of water to the Hamisar reservoir at Bhuj. The chief work under contemplation during the past year was the breakwater for the port of Mándvi. For this object His Highness the late Ráo had, before his death, set apart a sum of Rs. 2,00,000. Surveys were made, and the total cost of a complete scheme was estimated at Rs. 7,83,754. For so large an outlay as this sufficient funds are not at present available. But as the breakwater, the original feature in the plan, can be at a cost of Rs. 3,57,159 carried out separately, the Regency has decided, at least in the first instance, to proceed with this part of the scheme.

Works.

The estimated gross revenue of the province is stated to be Rs. 25,32,673. Of this, Rs. 14,32,673 are recovered from the possessions of His Highness the Ráo, and Rs. 11,00,000 from lands held by subordinate chieftains and landlords. The state of the Cutch finances is again rather unsatisfactory. In spite of an

Revenue.

POLITICAL.

CUTCH.

increase in revenue from Rs. 13,51,187 to Rs. 14,32,673, the expenditure, Rs. 15,01,062, is in excess of the income, and shows a deficit of Rs. 68,389. This is, however, an improvement over the previous year, when the expenditure exceeded the income by Rs. 1,13,172. It is also satisfactory to notice that while the increased revenue is due not to enhanced taxation or chance windfalls, but to the spread of tillage and irrigation, a sum of Rs. 4,02,375, or one-quarter of the whole expenditure, was special, connected with the marriage of His Highness the Ráo's sister. It may, therefore, be hoped that the accounts for next year will show a balance in favour of the state.

Health.

The following table gives the results of the working of the two state dispensaries, one at Bhuj and the other at Mándvi :—

Cutch Dispensaries, 1875-76 to 1876-77.

	Patients.		Average daily attendance.		Cost.	
	1876-77.	1875-76.	1876-77.	1875-76.	1876-77.	1875-76.
	No.	No.	No.	No.	Rs.	Rs.
Bhuj	11,148	10,058	208.29	186.39	11,052	11,186
Mándvi	15,740	14,484	312.69	302.72	4,507	4,242

The number of vaccinations was 9,200 against 5,242 in the previous year. Of the total number of operations 8,487 were successful. The average cost of each was Rs. 0-6-10 against Rs. 0-10-11 in 1875. During the year the staff of vaccinators has been raised from thirteen to fifteen.

Instruction.

It will be seen from the following statement that while schools have increased from forty-five to forty-eight, the total number of pupils has fallen from 2,944 to 2,756. The average attendance has also diminished from seventy-five to sixty-five per cent of the total number on the rolls. An unusually large number of weddings is said to be one cause of this decline :—

Cutch Schools, 1875-76 to 1876-77.

Grade.	1876-77.		1875-76.	
	Schools.	Pupils.	Schools.	Pupils.
High school	1	41	1	43
First grade Anglo-vernacular schools	2	109	2	117
Lower schools	39	2,371	36	2,593
Girls' schools	4	185	4	191
Night schools	2	50
Total	48	2,756	43	2,944

Less money was spent on building schools, and the education charges were reduced from Rs. 28,278 to Rs. 25,558.

Under the superintendence of a European officer, who also acts as assistant to the Political Agent, a tutor has been appointed to conduct the young Ráo's education. Though only eleven years of age, the young Ráo has made good progress in his studies. Dr. Bühler, who examined him in December last, reports:—"His Highness the Ráo had brought about two-thirds of the subjects required under the third Anglo-vernacular standard, and passed his examination with credit. In English he is much more advanced than the third standard boys, as he is able to converse on common topics. His arithmetic requires particular attention. I was much pleased with his intelligence and brightness, which showed that his mind had been developed very considerably since I saw him in 1874."

Chief.

PA'LANPUR.

The group of eleven states lying to the east of Cutch, under the superintendence of the Political Agent of Pálanpur, has a total area estimated at about 8,000 square miles, a population of about 500,000 souls, and yields a yearly revenue returned at Rs. 12,00,000. Of the eleven states, two, Pálanpur with an area of 2,384 square miles and a population of 215,972 souls, and Rádhanpur extending over 929 square miles and numbering 91,579 souls, rank as first class states. The remaining eleven estates, Tharád, Wao, Singam, Diodar, Terwára, Bhábhar, Sántalpur, Chádchat, Morwára, Wáráh, and Kánkrej, are small, with on an average a population of 20,000 souls and yearly revenues estimated at about Rs. 30,000. Of the smaller states, Tharád, with an area of about 650 square miles and a revenue of nearly Rs. 50,000, has, since February 1874, in consequence of the mismanagement of its chief, been under attachment. Besides the chiefs of Pálanpur and Rádhanpur, who within the limits of their states exercise full civil and criminal powers, and some of the smaller chiefs, who enjoy a limited jurisdiction, the maintenance of order and suppression of crime are, under the Political Agent, invested in six police and magisterial officers styled thánadárs, and stationed at the posts of Tharád, Wao, Diodar, Sántalpur, Wáráh, and Kánkrej.

PA'LANPUR.

Police duties are, under the supervision of the thánadárs, performed by a body of His Highness the Gáekwár's contingent of horse, numbering nominally 800 sabres. This mounted police is supplemented by the lately organized village police. Exclusive of Rádhanpur and Pálanpur, whose returns are not available, 1,214 offences were reported to the police against 1,186 in the previous year. The number of accused arrested rose from 1,545 to 1,664, of whom 999, or sixty per cent, were convicted, compared to 952, or sixty-two per cent, in 1875. The property stolen aggregated Rs. 41,313 in value. Of this nineteen per cent, compared with seventeen per cent in the previous year, were recovered.

Police.

The total number of trials held during the year was 818 compared with 1,436 in the previous year. The persons tried were 1,661 against 1,621, of whom 986 against 988 were convicted, and

Crime.

- PA'LANPUR.** 675 against 384 discharged. Of the above trials 250 were disposed of by the Political Superintendent and his two assistants, and 568 by the six thánadárs. Of the more serious offences committed and brought to trial during the year, there was one case of murder and one of culpable homicide.
- Prisons.** There is one prison in Pálanpur, in which 282 prisoners were confined against 312 in the previous year. At the end of the year seventy-three prisoners remained in jail.
- Litigation.** In the Agency and thánadars' courts there were 425 civil cases on the files at the beginning of the year; 1,167 were filed during the year, making a total of 1,592 against 1,627 in 1875-76; 1,122 suits were disposed of, leaving 470 in arrears. The civil suits decided involved property to the value of about Rs. 69,237. There were twenty-three appeals decided, involving property of the value of Rs. 3,114-1-6. Of political cases there was a balance of 1,118; 605 were filed during 1876-77, 715 were disposed of, and 1,008 remained in arrears. There is no regular system of registration. Rules for the districts more immediately under the supervision of the Political Agency were promulgated, but registration is entirely optional.
- Season.** The fall of rain at Pálanpur throughout the year was twenty-six inches. Of this amount all, except one inch, fell during the months of July, August, and September, the heaviest falls being in July and September. Rain-ganges are kept at Tharád and at Sántalpur in the Runn, and the quantity of rain diminished as it fell further from the hills; at Tharád the fall was nineteen inches and forty-four cents, and at Sántalpur seventeen inches and nineteen cents. But the fall was everywhere favourable for the crops, and the harvest was generally a good one.
- Health.** The number of patients treated during the year at the Pálanpur dispensary was 9,015, of whom 4,422 were males, 2,471 females, and 2,122 children. The races treated were 4,864 Hindus, 4,148 Musalmáns, two Pársis, and one Christian. Cholera was prevalent in Pálanpur and throughout the districts from the 26th May to the 21st September 1876, when it ceased. During the year 15,512 persons were vaccinated by the seven vaccinators against 14,528 in the previous year.
- Instruction.** Throughout the whole area there are in all twenty schools. The number of pupils attending in all the schools on the 31st March 1877 was 1,048 against 998 in the previous year.

MAHI KÁNTA.

MAHI KÁNTA. To the east of Pálanpur lies the Mahi Kánta. The lands of this Agency form the extreme north-east corner of the Presidency, extending from the Sábarmati on the north-west to the Mahi on the south-east, and westwards from the Dungarpur state in Central India to Ahmedábád. This tract, extending over an area of about 4,000 square miles, with a population of 450,000 souls and a gross yearly revenue returned at little over Rs. 7,50,000, is parcelled into fifty-nine estates. Of these properties one, Edar, is a state of first class local importance, with a population of 217,382 souls, and,

exclusive of its dependencies, a yearly revenue of Rs. 2,50,000. Of the rest eleven are states of some consequence, with an average population of over 8,000 souls and a yearly revenue of about Rs. 20,000; and forty-seven are small estates, with on an average a population of about 3,000 souls and a revenue of about Rs. 10,000.

The administrative staff consists of a Political Agent and two Assistants. At present the Edar chief is a minor, and his territory is directly managed by one of the Assistants to the Political Agent; but under ordinary circumstances the chief of this state, which includes little less than one-half of the whole population and revenue, administers his own affairs, subject only to the general supervision and advice of the Political Agent. In the other half of the agency territory, the management of the police and the administration of justice rest more or less entirely with the political officers. For some time past the work of classifying the chiefs and grading their judicial powers, a measure attended in Káttwár with such excellent results, has been in progress in the Mahi Kánta. During the past year a scheme submitted by the Political Agent received the sanction and approval of Government. Of the whole number of landlords, fifty-two have been allowed to exercise judicial powers, and, according to their position and wealth, have been arranged into seven classes, with varying civil and criminal jurisdiction. Chiefs of the first class have full civil and criminal powers, without, except under very special circumstances, any appeal or reference to the Political Agent; chiefs of the second class have full civil and criminal powers, subject, in the case of capital sentences and suits for more than Rs. 20,000, to the Political Agent's confirmation; chiefs of the third class have in criminal matters power to imprison for two years and fine up to Rs. 1,000, and in civil matters can try cases of Rs. 5,000 and under; chiefs of the fourth class can imprison for a year, fine up to Rs 500, and hear civil suits of less than Rs. 2,500 in value; chiefs of the fifth class can imprison for six months, fine up to Rs. 250, and hear civil suits of less than Rs. 1,000 in value; chiefs of the sixth class can imprison for three months, fine up to Rs. 100, and hear civil suits of less than Rs. 500 in value; chiefs of the seventh class can imprison for one month, fine up to Rs. 50, and hear civil suits of less than Rs. 250 in value. Of the whole number of fifty-two chiefs, one has been entrusted with first class powers, two with second, three with third, nine with fourth, nine with fifth, fourteen with sixth, and fourteen with seventh. The representatives of seven of the smallest estates have been considered unfit for the exercise of judicial powers. In the case of their lands the whole civil and criminal jurisdiction, and in the case of the other chiefs the jurisdiction in questions beyond their power, rests with the Political Agent and his Assistants.

Administra-
tion.

During the year the peace of the frontier has not been disturbed. The dispute between Edar and Siróhi about the hamlet of Bocha was finally settled. Fresh complications have arisen between Edar and the Rával of Jura in Meywár. Arrangements have been made with the Agent to the Governor General in Rájputána for the mutual extradition of criminals between the Rájputána and

Peace.

POLITICAL.

MAHI KÁNTA. Mahi Kánta chiefs on *prima facie* proof of guilt. During the year the Dangarpur (Meywár) and Mahi Kánta border commission disposed of fifty-four cases.

Survey.

The revenue survey of the Edar state progresses, but not so rapidly as could be wished. The Superintendent states that he hopes to complete the survey by the end of 1878. During the year, besides unfinished work in seventeen villages, three villages have been measured and thirty classed. The cost was Rs. 9,939-14-10, or Rs. 1,170-1-2 less than in the previous year.

States under management.

Including Edar seventeen states were under the direct management of the Political Agent. Their whole yearly revenue amounted to Rs. 3,35,866, of which Rs. 2,62,262 belonged to Edar, and Rs. 73,604 to the other estates, which are all small and of little consequence. Owing to the combination of several special causes of expenditure, the young chief's visit to Bombay and his own and his sister's weddings, the financial condition of Edar is not satisfactory. The revenue shows an increase from Rs. 2,48,464 to Rs. 2,62,262. But though slightly lower than in the previous year, the expenditure is Rs. 3,45,252, or Rs. 83,190 in excess of the income. The state is still largely in debt, the amount standing against it at the close of the year being about Rs. 2,50,000.

Police.

Of a total strength of 5,344 police, 440 are stipendiary and 4,904 belong to the village watch. All of the stipendiary police, of whom thirty are mounted, are supported by the Edar state at a yearly charge of Rs. 36,341. Of the 4,904 village watch, thirty-one are inspectors, 1,654 village headmen, and 3,219 watchmen and trackers. Returns of the working of the police are now being collected, but are not available for the past year. The value of the property stolen shows a marked fall from Rs. 54,328 in 1875 to Rs. 20,727 in the past year. There is also a fall in the proportion recovered from 19 to 15·5 per cent.

Crime.

In 1876-77 3,562 offences were reported and 3,802 persons dealt with compared with 3,074 offences and 2,880 persons in the previous year. Of persons before the courts in 1876-77, 715 were discharged, 808 acquitted, 2,050 convicted, seventy-nine committed, eleven died or were transferred, and 139 remained for trial at the close of the year. The increase in the number of offences is mainly in cases of theft and other petty misdemeanours. There has been a decrease in the number of heinous crimes. In the three criminal appellate courts of the Agent, the Assistant in charge of Edar, and the Rána of Dánta, fifty cases came on for hearing. In thirteen of these the original sentence was confirmed, in twenty-seven it was modified, and in seven it was reversed. Two cases were pending at the close of the year.

Prisons.

Including lock-ups there are twenty-four prisons. In these 598 persons were confined against 514 in the previous year. The jail expenditure amounted to Rs. 13,603.

Litigation.

Including the Agency courts there were 573 suits on the files of all courts at the beginning of the year; 1,739 suits were added during 1876-77, making a total of 2,312 against 1,765 for 1875-76.

There were 1,529 suits disposed of, leaving 783 in arrears. Of **MAHIKA'NTA.** seventeen appeals, nine were decided. Of political cases, there were 1,545 for decision, of which 759 were settled.

During the year the number of title deeds registered in the **Registration.** Edar state was eighty-five against 111 during the preceding year, and the amount of fees realized was Rs. 746-12-3 against Rs. 1,905-11-10. In the Sádra cantonment Rs. 7 were realized during the year for the registration of various deeds.

On the whole the season was unhealthy. Before the rains cholera was prevalent, when 1,095 persons were attacked, of whom **Season.** 628 recovered and 467 died. After the rains a bad type of intermittent fever prevailed. The cold weather began later than usual. The season was very mild with, at the end of January, unseasonable storms of wind and rain. The rainfall was short, 29.93 inches instead of forty-one, and, owing to the famine in the Deccan, grain rose to twice its ordinary price.

The only trade returns relate to the business done at the annual **Trade.** fairs of Samláji and Bramhakhed. At the former the value of goods sold was Rs. 9,06,933, and at the latter Rs. 79,239 against Rs. 8,79,333 and Rs. 73,424 in the preceding year. Both fairs were attended by about the same number of people as usual.

The financial returns show a gross revenue of Rs. 7,65,467 and **Revenue.** a gross expenditure of Rs. 10,82,888. As noticed above the Edar state exhibits a gross revenue of Rs. 2,62,262 and an expenditure of Rs. 3,45,452. Of the smaller states Dánta comes second to Edar, with a revenue of Rs. 51,000; Mansa third, with a revenue of Rs. 34,000; Mohanpur fourth, with a revenue of Rs. 27,000; Ghorásar and Katosan fifth and sixth, with a revenue of Rs. 25,000; Ambliála seventh, with a revenue of Rs. 24,666; and Pole eighth, with a revenue of Rs. 23,000. Of the rest, seven had incomes between Rs. 20,000 and Rs. 10,000; eleven between Rs. 10,000 and Rs. 5,000; and twenty-six between Rs. 5,000 and Rs. 1,000. The state with the smallest revenue is Bolundra, with Rs. 450.

There are two dispensaries, at Sádra the Agency head-quarters, and at Edar the capital of the Edar state. **Health.** During the year 4,908 patients were treated at the Sádra dispensary against 3,288 in the previous year, and at Edar 2,502 against 1,865; the average daily attendance was 48.26 at Sádra and 28.3 at Edar, and the annual cost Rs. 3,757-4-7 and Rs. 1,648-3-9. The increase in the number of patients shows that the year under report has not been a healthy one, and is accounted for by the prevalence of a severe type of intermittent fever during the months of October and November. There are five vaccinators, who operated upon 11,628 persons, or 1,408 more than in 1875-76; 11,377 operations were successful, and the cost amounted to Rs. 1,383-11-8.

There were forty-eight schools and 2,738 pupils against forty-five **Instruction.** schools and 2,574 pupils in the previous year. On the other hand, owing to a smaller expenditure on school buildings, the cost has fallen from Rs. 20,253 to Rs. 15,913.

MAHIKÁNTA.

The death of the Máharáni Chudáwatji, the bride of His Highness the Máharája of Edar, whom he had only married in the month of February 1876, occurred on the 23rd of August last. His Highness being thus left a widower, his mother, the Máharáni of Edar, deemed it advisable that he should be again married, and accordingly, with the sanction of Government, His Highness was married on the 16th February last to two ladies. One is of the house of Osia in the state of Joudpur in Rájputána, and the other the sister of the present chief of Mohanpur in the Mahi Kánta. His Highness the Máharája has made fair progress in his studies. His attainments were tested by the Political Agent in January last, when he passed a satisfactory examination in the second Anglo-vernacular standard. On the 1st of December and 23rd of August last, respectively, the deaths occurred of Harisinghji, the chief of Dánta, and Amarsinghji, the chief of Amlyára; the former has been succeeded by his son Jaswantsinghji, a man of twenty-seven years of age, and the latter by his son Jalumsinghji, a boy in his eighteenth year.

KÁTTYWÁR.

KÁTTYWÁR.

The peninsula of Káttýwár, or Suráshtra, lying between the Gulfs of Cambay and Cutch and the Arabian Sea, has an area of about 22,000 square miles, a population returned in 1872 at 2,321,833 souls, and an estimated yearly revenue of Rs. 1,24,58,380. This territory is distributed over no fewer than 186 territorial divisions. The proprietors of these estates vary in importance, from His Highness the Náwab of Junágarh, the lord of 3,800 square miles, with a population of 380,921 souls and a yearly revenue of Rs. 20,00,000, to the chief of Kulia, whose estate, with an area of one square mile, has a population of 388 souls and a yearly revenue of Rs. 2,000. The body of chieftains were in 1863 distributed among seven grades, with functions and privileges varying from full civil and criminal jurisdiction to powers little more than nominal. For administrative purposes their estates form three distinct classes. The first class, with a total area of 14,598 square miles, a population of 1,653,009 souls, and a yearly revenue of Rs. 97,55,056, includes the territories of thirteen chiefs, four of the first and nine of the second grade, who have full civil and criminal powers, and whose management is, under ordinary circumstances, neither supplemented nor directly controlled by the Political Agent; the second class, with a total area of 4,038 square miles, a population of 4,02,940 souls, and a yearly revenue of Rs. 21,18,909, includes the territories of twenty-three chiefs, seven of the third, six of the fourth, and ten of the fifth grade, invested with something less than full civil and criminal jurisdiction, whose powers are supplemented by those of the Political Agent; the third class, with a total area of 1,908 square miles, a population of 264,689 souls, and a yearly revenue of Rs. 13,06,400, includes the territories of fifty petty chiefs of the fifth, sixth, and seventh grades, whose powers of administering police and justice have almost entirely been transferred to political officers.

For purposes of general supervision and control the province is divided into four districts or *pránts*: Jháláwád to the north

Gohelwád to the east, Sorath to the south, and Hálár to the west. Each of these divisions is partly controlled and partly administered by a political assistant. Each assistant has under his charge one chief of first class local importance. In the north the Jháláwád Assistant has Dhrángadra, the head of the Jhála clan; in the east Bhaunagar, the leading representative of the Gohel Rajputs; in the south Junágarh, the chief remnant of Muhammadan supremacy; and in the west Nawánagar, the head-quarters of the Káttýwár branch of the Jhádeja tribe. The following statement shows the comparative size and importance of these main divisions, and, as far as they are available, the details of the distribution of the land :—

KA'TTYWA'R.

Peace.

During the year the public peace was almost unbroken. Two Waghers of Okha, flying from justice, made a feeble attempt to form a gang of outlaws, but no one joined them, and they surrendered. The affairs of the Chura estate were found to be in disorder, and were arranged with the assistance of the chief. A crisis took place at Nawánagar in the autumn of 1876, ending in the final expulsion of the old minister Bhagwánji and his adherents, and the appointment of a new minister, who appears to deserve the confidence of His Highness the Jám. A settlement of the difficulties between the chief of Mália and the Miánás was completed by Captain Salmon. The dispute between the chief of Pálitána and the Shráwaks as to the right of ownership in the sacred hill of Satranjaya was decided by Government in March 1877. Centuries before the Gohel chiefs established themselves in Suráshtra the Jains worshipped in Satranjaya. They produce an imposing array of deeds from Moghal emperors and viceroys, ending with one from prince Morad Baksh (1650), which confers the whole district of Pálitána on Sántidás, the jeweller and his heirs. Now the firm of Sántidás supplied Morad Baksh with the sinews of war when he went with Aurangzeb (1858) to fight Daráh at Agra and assume the throne. But the Mogal power has long passed away from Káttwár, and the jurisdiction of Pálitána fell into the hands of the Gohel chief, a tributary of the Gáekwár. While, therefore, the whole mountain is rightly regarded as a religious trust, it is under the jurisdiction of the chief, for whose protection the Shráwaks have long paid a yearly subsidy. The decision of Government, while it upholds the chief's legitimate authority, secures to the sect its long-established possessions, and maintains the sacred isolation of the hill.

In November 1876 the Secretary of State sanctioned the maintenance of the Rájasthánic court on its present footing for an additional term of five years, or for such shorter period as might be required for the completion of the work on which it is engaged. The Rájasthánic court is a sequel of the definition and settlement of Káttwár jurisdictions by Colonel Keatinge in 1863. After that date all suitors were referred for justice to their chiefs, and this principle of non-interference was applied to the subordinate landlords as well as to other suitors. Before the Rájasthánic court was established, the disagreements between the leading and the subordinate landlords constituted the most serious cause of civil discord in the province. Disputes of this class were peculiarly embarrassing to the Political Agent. He could neither listen to the claims of the subordinate landlords without invading the jurisdiction of the chiefs, nor refuse to listen without risk of consenting to injustice. These disputes assumed an especial importance from the asserted privileged position of the subordinate landlords, which, they believed, gave them a right to claim the interposition of the Agent of Government in all their differences with their superiors. This claim, though not founded on any engagements of the British Government, had received a colour from the long-continued practice of the Agency before a clearer definition of jurisdictional powers was introduced by Colonel Keatinge. At the same time it was natural

Landlords'
court.

काट्यवा'र.

that the subordinate landlords should be attached to a system which allowed them, without incurring any expense, indefinitely to prolong the agitation of a claim.

The business of the Rájasthánic court is to survey and map the estate of the subordinate landlord, to fix his miscellaneous dues, and to define his relations to his chief by declaring all his political and municipal rights and duties. Colonel Law was President, and Captain Hancock superintended the court's surveys throughout 1876-77. At the end of the year, out of 1,258 to be surveyed, the survey of 1,000 villages was completed. A report by Colonel Law on the work of the court up to the 31st March 1877, shows that 1,052 cases have been filed, 689 decided, and 363 remain unsettled.

States under management.

Of 21,000 square miles, the total area of the province, about 7,000, or one-third part, is at present under the entire management of the Political Agent. The territories directly administered belong to two classes, those for a time and those permanently under the management of Government officers. The territory temporarily administered are the estates of such of the higher class of chiefs as happen to be minors. The territory permanently administered consists of the lands of petty chiefs and landlords who, failing to preserve order and check crime, have either resigned or been deprived of their jurisdiction. Besides one or two small properties, the following statement shows that there are at present, on account of the minority of their chiefs, four states, one of the first and three of the second class, with a total area of 4,825 square miles, a population of 677,589 souls, and a revenue of Rs. 49,40,854, under the direct management of Agency officers:—

Káttýwár Lands under temporary management, 1876-77.

	Morvi ..	Hálár ...	Do. ...	1,062	90,616	8,00,362
	Limri ...	Jháláwád.	Do. ...	280	46,002	2,43,316
	Total...	4,825	677,589	49,40,854

Bhaunagar.

In this the last year of Government administration the young chief of Bhaunagar has since January taken his place as joint administrator. In April 1878 he will assume sole charge of his affairs, and will, it is hoped, fulfil his early promise by showing himself a liberal and just ruler. The year closed with a credit balance of Rs. 56,28,816. The revenue amounted to 29½ lakhs, and the expenditure to 26½ lakhs. The rainfall, though more than in the preceding year, was unseasonable and irregular. The land-revenue cash settlement alluded to in the last year's report has been concluded throughout the state. About 8,100

acres of waste land were brought under cultivation, yielding the state an increased yearly revenue of Rs. 13,447. The survey party measured 254,733 acres at a cost per acre of Rs. 0-1-11. There was an expenditure of about two lakhs of rupees on roads and bridges, and of about five and a half lakhs on public buildings and other works.

On the conduct and attainments of Bhagwatsingji, the young chief of Gondal, who is twelve years old, and is studying at the Rájkumár college, the Principal reports most favourably. Meanwhile the state has been managed by Captain Scott, and since the 1st of February by Major Reeves, Acting Assistant Political Agent. The short rainfall of 1875, followed by a scanty supply in 1876, has unfavourably affected the revenue. The year closed with a credit balance of Rs. 28,68,432. The gross revenue for 1875-76 was Rs. 9,87,273; and the expenditure Rs. 8,34,203; 181,674 acres were measured for survey purposes at a cost of Rs. 11,361. Gondal.

In Morvi Wághji, the young chief, is in his nineteenth year. At the end of the last year he left the Rájkumár college and went to travel in Northern India, residing afterwards at Poona for the rains. Morvi is managed by joint administrators. The survey of the state is in progress. Its finances are most prosperous, with a yearly revenue of about eight lakhs of rupees, an expenditure of about five, and a cash balance of Rs. 19,76,578. Morvi.

The young chief of Limri, Jaswatsingji, is now eighteen years old. He spent the summer and autumn of 1876 in England under the care of the Principal of the Rájkumár college. He is said to have greatly benefited in health and in mental development. Since his return from England he has been attending the Rájkumár college. His brother Umedsingji attends the college also, but has shown but little fondness for study. Limri has a cash balance of only Rs. 2,75,094. Its income was Rs. 2,74,371, and its expenditure Rs. 2,82,121. The work of the survey went on steadily during the year, 40,640 acres being measured against 14,735 acres in the former year. Limri.

Besides the above there are other states under supervision, of which Wadhwan is reported to be ably managed, though, owing to want of rain, the revenue shows a serious decrease. The young chief Dájiráj, who is sixteen years old, and his brother Kalubha were married in February 1877, but continue to be students in the Rájkumár college. Wála is reported to be at last out of debt, and able to expend a fair sum on works of improvement. The young chief Wakhatsingji, aged thirteen, is a pupil at Rájkot. Wadhwan.
Wála.

Jhinjhuwára, an estate in Jháláwád, owned by a number of poor and illiterate sharers, is incumbered to nearly twenty years' value of its rental. The revenue shows an increase from Rs. 83,611 to Rs. 89,097, or but little less than double the revenue returned fifteen years ago. Supervision has also been exercised over the administration of Chura and of the estate of Khachai Chomla of Poliyad. Jhinjhuwára.

KATTYWAR.
Circles.

The area of 2,000 square miles permanently administered by the political officers includes the lands of 148 small estates, grouped into fourteen circles or *thánás*. This section of the province administered by officers, styled *thánádárs*, with civil and magisterial powers, has enjoyed a year of public peace and freedom from serious crime. The following statement gives for each of the main divisions of the province details of the portions thus permanently administered:—

Káttývár Lands under permanent management, 1876-77.

Division.	Circle.	Number of Villages.	Area in square miles.	Population.
Jhaláwád }	Wadhwan	32	164.74	23,309

Police.

In Káttýwár, during 1873, the police of the different states was considerably improved. A system of village police was introduced, and a special officer called *Báherwatia*, or outlaw officer, was appointed for the suppression of gang robbery and the pursuit of outlaws. These arrangements have had a most marked effect. Since 1873 no villages have been plundered, and only four gang robberies, nine highway robberies, and thirty-eight robberies with violence occurred during 1876-77. The *Báherwatias* still retained on the list are only outlaws in name, and do no mischief. Even the Gir forest, for many years the weak spot in the management of Káttýwár, is under control, and is rapidly being cultivated. The state police are said to be too military and ill-suited for police work. But the village police and the new village

headmen are well spoken of. This state of things is most creditable alike to the Agency and to the chiefs. As a special police force seems to be no longer required Government have readily agreed to its reduction, feeling it more satisfactory that the peace of the country should be maintained by the independent good administration of the states in friendly co-operation with the Political Agency than by the direct interference of Government. Since the withdrawal of the special police force, the Political Agent has, for detective purposes, placed a small fund at the disposal of each political officer.

The total strength of the police is returned at 6,865, of whom 1,223 are mounted. During the year 12,959 offences were reported to the police against 12,046 in 1875-76, and 15,164 persons were arrested compared with 14,928 in the previous year. Of the total number arrested 13,883 were sent for trial, of whom 9,106 were convicted and 4,693 acquitted or discharged. There was thus an apparent increase both of offences and arrests. But the political officers do not consider there has been any real increase of crime. They are rather disposed to think that the increase is to be ascribed to the more regular organization of the courts, complaints being made of injuries which formerly it was the custom to endure as a matter of course, or to settle amicably. Property stolen in 1876-77 amounted to Rs. 2,69,081, of which about 26½ per cent was recovered, compared with Rs. 2,18,896 stolen and 25 per cent recovered in 1875-76. Police.

The criminal jurisdiction at present exercised by Government in Káttýwár has been recently defined. His Excellency the Governor in Council in the Political Department confirms, reserves, or modifies sentences of the Political Agent's chief court of criminal justice when the sentence is death, or imprisonment in excess of seven years; passes the sentences when a majority of votes of the members of the court dissents from the opinion of the president, and hears appeals from the findings of the court. This court sits for the trial of cases committed to it by the magistrates and the state courts empowered to commit, and is composed of the Political Agent or his Assistant as president, with three or more members selected by the president from among the landlords and principal officers of the states. The Political Agent or his Judicial Assistant further superintends all subordinate criminal courts, and hears appeals against convictions by divisional and other first class magistrates. All the courts are guided generally by the Penal and Criminal Procedure Codes of British India and by the Foreign Jurisdiction and Extradition Act. Assistant Political Agents in charge of divisions or states exercise the powers of magistrates of a district. There are also magistrates specially invested with first class powers; Deputy Assistant Political Agents, who are generally second class magistrates; and, lastly, the commandants of posts, or *thánádárs*, who have third class powers. The criminal courts dealt with 21,337 persons. Of this total, 12,253 were convicted, and 9,084 acquitted or discharged. In 1875-76 there were 18,279 persons to be dealt with. The year was particularly free from crimes of violence and from marauding parties. The returns of the criminal appellate work show that the Agency Crime.

POLITICAL.

KÁTTYWÁR.

courts disposed of forty-two appeals, the sentences were confirmed in twenty-six cases, were reversed in thirteen, and were altered in three. Besides these, the returns from the divisional courts and the courts of states with appellate powers show a total of 1,062 appeals. In sixteen of these the appeal was rejected, and twenty-five were referred for further information. In 417 of the remainder the original sentence was confirmed; in 236 it was modified, and in 270 reversed; in seventy-nine the proceedings were quashed, and nineteen were pending at the close of the year.

Prisons.

Including lock-ups, Káttwár has 118 prisons. In these 1,166 prisoners were in confinement at the beginning of the year, and 7,513 were admitted during the year, making a total of 8,679 compared with 6,226 for 1875-76. At the close of the year 1,176 remained in jail. The total cost of these prisoners is returned at Rs. 97,451.

Litigation.

The returns for civil justice show nearly, but not the whole of, the business done by the courts. In Káttwár the number of suits on the file rose from 22,366 to 23,902. The Agency courts decided during 1876-77 2,424 civil and political cases, involving property to the value of nearly forty lakhs of rupees, or 370 cases less than in the preceding year, and upwards of rupees eight lakhs in excess of the value of suits for that year. The chiefs decided 17,245 civil cases, involving 17½ lakhs of rupees against 14,212 cases in 1875-76 involving 15½ lakhs.

Registration.

Registration offices exist in Káttwár, but are not generally recognized by the Agency.

Season.

The rainfall of 1876 was again scanty, and the land revenue of the states was consequently reduced. But there was no scarcity; and the chiefs of Káttwár sent Rs. 24,240 to the relief of the suffering people of the Deccan.

The staple exports of Káttwár are cotton, wheat, millets, pulse, and wool. The wool is from the northern and western districts. The cotton is mostly exported from the north and east by the railway, and from Bháunagar and other ports of the Gohelwár group, which command a large area properly drained by the Sorath ports. The bulk of the trade of Káttwár is with the port of Bombay, Surat coming next, and Balsár third. Rice, gram, and dates are imported from Sind, and cocoanuts from the Madras ports. There is also a large import of rice at Veráwal, the Junágarh port, for the food of the higher classes. The following table, including transactions in treasure, shows the value of the total trade of Káttwár:—

Káttwár Trade, 1876-77.

Station.	Exports.	Imports.	Excess value of Exports.	Excess value of Imports.
	Rs.	Rs.	Rs.	Rs.
Bhaunagar ports ...	1,27,40,260	85,17,488	42,22,772
Sorath ports ...	39,77,215	50,03,628	10,26,413
Nawanagar and Morvi ...	26,59,538	28,69,485	2,09,947
Railway ...	64,46,976	29,94,264	34,52,712
Total ...	2,58,23,989	1,93,84,865	64,39,124

Of a total export trade, valued at Rs. 2,58,23,989, cotton, grain, and wool together absorb Rs. 2,40,79,596. To this cotton contributes Rs. 2,24,38,999, grain Rs. 9,30,630, and wool Rs. 7,09,967. The export trade is expanding with improved roads and harbours and the consequent attraction of capital. The goods traffic by the Bombay, Baroda, and Central India Railway from Wadhwan is rapidly increasing thus :—

Wadhwan Traffic, 1874-75 to 1876-77.

Year.	Imports.		Exports.	
	Tons.	Value.	Tons.	Value.
		Rs.		Rs.
1874	10,269	25,04,389	8,257	33,43,293
1875	13,122	29,88,771	12,989	52,64,137
1876	13,913	29,94,264	16,091	64,46,211

The amount of cotton sent through Wadhwan in the past three years was—

Cotton Export at Wadhwan, 1874-75 to 1876-77.

	1874.	1875.	1876.
Full-pressed bales	6,257	16,286	21,323
Half-pressed do.	24,392	35,120	31,416

All this cotton was exported through the cotton market at Wadhwan, where it is carefully inspected. The statements show that the exports of Kattywar greatly exceed the imports in value, and that a large amount of coin is annually imported.

The import trade, valued at 123 lakhs of rupees, includes the Imports. following principal articles :—

Rice...	Rs. 14,08,397
Gram...	15,71,831
Cloth...	18,31,241
Metals	7,95,078
Timber	8,41,221
Sugar and molasses	19,18,023
Bullion	39,42,587

The Political Agent reports that some experiments were made in 1876-77 with American, Egyptian, Hinghanghat, and Broach cotton seed. The Hinghanghat failed in Bhaunagar, and the American and Egyptian in Limri. There was a failure also at Morvi and in Gondal; the Berar and Broach seed yielded no crop. But these varieties of cotton require a heavy rainfall, so that the scanty supply of the past year was specially unfavourable to them. The best success attended the plan of sowing a little before the rain, and irrigating as required to supplement the rainfall. The cultivation of safflower, *kasumbi*, does not seem to prosper in Bhaunagar. The profit is less than that from indigenous cotton,

POLITICAL.

KA'TTYWA'R.

Manufactures

and the cultivators dislike the labour of gathering the leaves. But in Limri it is said to have done well.

Bhaunagar and Wadhwan are the chief industrial centres. As in the previous year the Bhaunagar mills worked 4,704 mule spindles and 7,360 throstle spindles; they increased their looms to one hundred. Two new steam cotton presses were established by European merchants. There were two full presses under European management in Wadhwan station, and eighteen half presses in various parts of Jhalawad. The little factory at Morvi was worked with success.

Breeding.

The usual horse show was held at Rajkot in February 1877, and the results were satisfactory. The number of animals exhibited was 120, or twenty-six more than last year, the poorer breeders being encouraged by money allowances. The number of Government stallions posted in Kattywar during 1876-77 was twelve, of which eleven were effective throughout the year. As usual, those horses were most useful which are in charge of British officers, as at Gondal. The only chief who shows a practical interest in horse-breeding is the Thakor of Palitana. Still, Captain Mayne thinks that the Arab and English stallions are becoming better appreciated. He observes that the native breeders cannot generally afford to keep their stock to maturity, and the three and four years old fillies are missed at the horse show.

Works.

The principal work on which the local fund engineer is engaged is the construction of roads, centering in Rajkot from the south and east, and joining Rajkot to Wadhwan. The latter section is now nearly complete; but the terminal bridges over the Aji at Rajkot and the Bhogawa at Wadhwan are still in progress. The large bridge over the Badar at Jetpur, opened on June 17th, is the principal work on the whole line. It has twelve spans of fifty feet, and eight of twenty feet, besides subsidiary bridges in the approaches, and the roadway is fifty-four feet above the river bed. The construction of the road from Limri to Wadhwan, with several bridges, was also advanced. His Highness the Nawab is now at work on the road from Verawal by Junagarh to his frontier, and the Rana of Porbandar has put the road from his port towards Jetpur into the hands of the Political Agent. The roads in Bhaunagar and Gondal are in a forward condition. The local fund engineer has also had under his care a court-house, offices and jail at Jetpur, office buildings at Bagasra, a dwelling and rest-house at Babhra, rest houses at Songarh and Manakwara, a gymnasium for the high school, a dwelling and other buildings at Bilkha, and additions to the Rajkumar college.

Telegraph.

A telegraph office has been opened at Gondal in addition to those mentioned last year.

Health.

Cholera died out towards the end of the rainy season. A fresh outbreak occurred at Verawal in May 1877, imported, it was believed, from Bombay; but the disease did not spread. Small-pox was also present in 1876, except in Jhalawad. There are thirty-five hospitals and dispensaries in Kattywar, in which upwards of 100,000 patients were treated. Dr. H. V. Carter has published

a pamphlet on Káttwár leprosy. His conclusion is that leprosy is communicated from the leper to those about him, and that isolation is necessary. In the Political Agent's opinion the Rájkot leper hospital is quite insufficient to meet the wants of the case. A leper hospital is needed in each of the large states, not only to check the spread of the disease, but also for the comfort of the leper and his relatives. The Political Agent addressed the Joint Administrators of Bhaunagar on this subject, and found the young chief and Major Watson most ready to establish a large hospital for Bhaunagar lepers. Plans have been prepared; and this example will, it is hoped, be followed by the other large states. Compared with 80,857 in 1875-76, the number of vaccinations was 82,163. Of the total number, 76,714 were successful, 3,119 unsuccessful or doubtful, and 2,330 unknown. There were also 1,282 revaccinations, of which 855 were successful. The cost of vaccination was Rs. 12,455-6-8. The work was done by one Government vaccinator, thirty-four state vaccinators, and nine dispensary doctors, making a total of forty-four operators.

Great progress has been made in education. The increase of schools is forty-nine, and of pupils 2,151; the total number of schools being 462, and of pupils 25,073. Details of the working of some of the higher institutions in Káttwár will be found in chapter VII. of this report. Instruction.

On the personal administration of the chiefs, the Political Agent remarks: His Highness the Ráj Saheb of Dhrángadra has engaged a trained engineer and a graduate of the Grant medical college, and has continued his liberal gifts to the head-quarters station by a contribution of Rs. 10,000 to improve the water-supply. The affairs of the Jám of Nawánagar have been much disturbed during the year 1876-77. The new minister appointed last year was in August 1876 abruptly dismissed without reason assigned, and the office entrusted to Azam Náráyanráo Wásudeo Khárkar, then in a high office under Baroda, but previously for five years in the service of the Jám. The Political Agent thinks it probable that under the new minister Nawánagar will be speedily cleared of debt and become one of the richest states in Káttwár. The young Thákor Sáheb of Rájkot, who assumed his full powers in January 1876, is reported to give great satisfaction. Chiefs.

CAMBAY.

East of Káttwár, and lying at the head of the gulf of the same name, is the small Musalmán state of Cambay, with an area of about 350 square miles, a population of 83,494 souls, and a revenue returned at Rs. 4,00,000. The management of the internal affairs of this small tributary state is left almost entirely to its ruler the Nawáb. No administrative details are available. But of late years, acting under the advice of the Political Agent, the Collector of Kaira, His Excellency the Nawáb has done something towards the spread of education, and the abolition of petty tolls and transit dues. His Excellency the Nawáb was asked to be present at the Delhi Proclamation ceremony. But, on the

CAMBAY.

CAMBAY.

ground of his weak health and poverty, his attendance was excused. In honour of the event a Darbár was held at Cambay, when the Nawáb did all in his power to show his loyalty. The behaviour of the chief's eldest son, who formerly took some share in the management of affairs, gave cause for anxiety. A municipality, under the control of the Nawáb's second son, has been started in Cambay. In consequence of the demand for grain in the Deccan and the imperfect state of the Narbada bridge, the sea trade from Cambay was much larger than usual. But, in spite of this help, the chief's finances are in an unsatisfactory state. A large share of the revenue never reaches the state treasury, and with a family of five sons, three of whom are grown up, the Nawáb's expenses, though himself not extravagant, are considerable. Education is making fair progress. The number of boys under instruction in the two primary schools has risen from 301 to 310; and fees have increased from Rs. 263 to Rs. 285. The Nawáb has again contributed a handsome donation of Rs. 500 towards the expenses of these schools.

BARODÁ.

BARODÁ.

The state of Baroda, with an area of 4,500 square miles, a population of 2,000,000 souls, and a revenue of Rs. 1,30,00,000, is still under the supervision of the Government of India.

REWA KÁNTA.

REWA
KÁNTA.

East of the central Baroda districts lies the Rewa Kánta, traversed, as its name implies, by the Rewa or Narbada river. This is an irregular belt of country throughout almost its whole length from the Máhi to the Tápti, lying along the Gujarát and Central India frontier. It has an area of about 4,800 square miles, a population estimated at nearly 500,000 souls, and a yearly revenue of about Rs. 15,00,000. This territory contains the estates of six large and fifty-five small tributary chiefs. Of the larger estates one, Rájpipla, with an area of about 1,200 square miles, a population of 120,036 souls, and a revenue of Rs. 8,00,000, is of the first class. The five second class states, Bária, Lunáwára, Sunth, Bálásinor, and Chota Udepur, have areas varying from 300 to 800 square miles, populations of from 42,000 to 74,000, and revenues of from Rs. 80,000 to Rs. 3,00,000. The remaining fifty-six estates, with an average area of about thirty miles, a population of about 1,800 souls, and a revenue of Rs. 5,500, form three groups, the Pándu and Dorka Mewás in the north near the Mahi, and the Sánkhera Mewás in the south on the right bank of the Narbada. Of the whole area about twenty per cent, yielding a yearly revenue of about Rs. 3,00,000, is, on account of the minority of its chiefs and from other causes, under the entire control of the Political Agent.

States under
management.

The territory under Agency management includes the lands of two large and thirteen small estates. Of the two large estates, Sunth has an area of 394 square miles and a revenue in 1876-77 of Rs. 98,847, and Lunáwára an area of 388 square miles and Rs. 1,28,330 revenue. The thirteen small estates have an area of nearly 200 square miles and a revenue of Rs. 85,288. Though the

number of estates, great and small, under the direct control of the Agency is the same as last year, the total area and revenue is, in consequence of the transfer of Bária to the management of its young chief, reduced by about Rs. 3,00,000.

On the 6th of November, Máharáwal Mánsingji, the chief of the Bária state, came of age. Under Government instructions he was formally installed by the Political Agent, and assumed administrative charge of his affairs. Except that he is to submit his state accounts at the close of each year for the Political Agent's scrutiny, the young chief has been entrusted with the entire management of the state. During the eleven years of Colonel Barton's administration Bária has made very great progress. The whole district has been surveyed, and of all its 439 villages the limits have been fixed and the lands measured and mapped; where traders were almost sure to be robbed, they can now pass without escort and without fear; roads have been opened, reservoirs and wells dug, and rest and school-houses built; the revenue has been raised from Rs. 1,52,318 to Rs. 1,72,097, and though more than Rs. 7,00,000 have been spent on works of public usefulness, a debt of Rs. 1,08,030 has been converted into a cash balance of Rs. 1,81,111. A dispensary has been opened; and about 4,000 children a year are vaccinated. The number of schools has risen from one to fourteen, and the pupils from 100 to 532. During the whole time of his minority Colonel Barton gave the greatest care to the education of the young chief. Since his accession he has shown every disposition to be guided by the advice of the Political Agent, and to introduce no changes in the system of administering his state. On the occasion of his investiture he allotted a sum of Rs. 25,000 to be expended on works of public improvement.

The young chiefs of Lunáwára and Sunth are at Rájkot, continuing their studies at the Rájkumár college. These are small states, crippled by excessive alienations of the public revenue, and they barely pay their way. In Lunáwára the revenue survey operations were completed and the department abolished. The cost of the survey during the year was Rs. 4,640-8-5.

In the Rewa Kánta a system of federal police has been introduced. This force was originally paid by the three states of Bária, Lunáwára, and Sunth, and the petty states of Karána and Sánjeli. During the year the force has been reduced by 170 men of all ranks transferred to the service of the Rája of Bária. The total strength is now twenty-six mounted and 249 foot constables, and the cost Rs. 37,973-8-0. As regards crime, 1,109 offences were brought to the notice of the police compared with 907 in 1875-76, and 1,317 accused were arrested compared with 1,057 the previous year. About sixty-nine per cent were convicted against sixty-eight per cent in 1875-76. Property was stolen to the value of Rs. 30,048, of which twenty-seven per cent was recovered.

The courts dealt with 1,631 offences and 2,390 accused, or 384 more offences and 247 more accused than in 1875-76. One hundred and sixty-eight persons were discharged, 455 acquitted, and 1,482 convicted. The Political Agent is inclined to regard the

REWA
KÁNTA.

increase rather as an indication of improvement in the police, and greater attention to complaints, than as evidence of a growth of crime. At the same time the increase in cases of house breaking and theft would seem, at least partly, to be due to the dearness of food-grains during 1876-77, in consequence of the scarcity in the Deccan and Southern Máraṭha country.

Prisons.

In the Rewa Kánta, including lock-ups, there are twenty-three prisons. In these, when the year began, 281 persons were confined, 896 were admitted during the year, and at its close 293 remained.

Litigation.

In the Agency and thánáðars' courts the civil work is said to be steadily on the increase. One thousand four hundred and forty-nine cases were disposed of, compared with 1,325 in 1875-76. The Political Agent received and disposed of fourteen civil appeals.

Season.

About thirty-seven inches of rain, an abundant supply, fell; but it came unseasonably, causing considerable injury to the early or *kharif* crops, which suffered at first from drought, and later on from excessive moisture. The cold weather, or *rabi* crop, was, as a rule, good. The rice benefited from the heavy rain in the latter part of the season, and cultivators were in great measure compensated for their losses by the rise in the price of cereals.

Health.

In July there was a rather sharp, though brief, outbreak of cholera. The disease spread over Lunáwára, Sunth, and the Dorka Mewás. Of the seizures about forty-nine per cent were fatal. With this exception, public health was good. A staff of twelve vaccinators was employed throughout the year. They operated altogether in 13,349 cases, or 1,069 more than last year. The total expenditure on account of the establishment was Rs. 2,641, and the average cost of each operation about three annas. Three dispensaries, Bária with an average daily attendance of twenty-six patients, and a yearly cost of Rs. 2,400; Lunáwára with an average daily attendance of 66.4 patients, and a yearly cost of Rs. 2,043; and Rámpur with forty-six patients, costing Rs. 1,703, are spoken of as useful and well managed. There is also a dispensary at Náñdod in Rájpipla, but no details of its working have been supplied.

Instruction.

Two new schools have been opened during the year, one in Chota Udepur, and the other in Bária. There are now altogether sixty-three boys' schools in the Rewa Kánta, with an average attendance of 3,189 pupils against 2,906 in the previous year, and three girls' schools with an average attendance of ninety pupils.

NA'RUKOT.

NA'RUKOT.

To the west of the Rewa Kánta, and nearly surrounded by the lands of Chota Udepur, lies Nárukot, with an area of 143 square miles, a population of 6,887 souls, and a revenue of Rs. 7,702. This small territory is administered by the Agent to the Governor, Panch Máháls. Nothing unusual or important took place. The Naikrás, who form the bulk of the population, and who by their risings have gained a notoriety for turbulence, continue quiet and orderly. Not a single offence of a serious nature was committed during the

year. No separate police force is entertained. A detachment from the Panch Máhál police, consisting of forty men, of whom three are mounted, and the rest foot constables, is placed under the control of the Máhálkari at Jámbughora, the head-quarters of the state. The Máhálkari exercises the powers of a second class magistrate, all cases beyond his jurisdiction being tried by the Political Agent, from whose decisions an appeal lies to Government. Ninety-five persons were brought for trial, of whom sixty-eight were convicted against seventy-four and sixty-three, respectively, in the previous year. There were no offences of a serious nature either against person or property. The value of the property stolen was estimated at Rs. 485, of which Rs. 361 was recovered. Three appeals were made against the decision of the second class magistrate: in two the sentences were confirmed, and in one the sentence was reversed. The lock-up at Jámbughora is made use of for the confinement of convicts sentenced to imprisonment for fifteen days and under, as well as for the custody of under-trial prisoners; criminals sentenced to longer terms of imprisonment are transferred to the subordinate or district jail of the Panch Máhals. During the whole year no civil suits were brought before the courts. Tillage, on great part of the Nárukot lands, consists of burning down patches of wood-land and sowing seed among the ashes. The land-tax is levied either by a fixed money charge on each of these clearings or by a plough-tax. Nothing has yet been done towards introducing a survey, but arrangements are now under consideration. The state contains a large area of waste land. During the past year a few Kolis came as settlers from the neighbouring territory of Chota Udepur. The gross revenue from all sources amounted to Rs. 12,198 against Rs. 9,900 in 1875-76. To this total amount the land-tax contributed Rs. 7,774. The season was on the whole a fair one. The rainfall was below the average, thirty-eight inches and seventy-three cents against forty-six inches and seventy-three cents in the preceding year. The vaccinator meets with no opposition, and operated on 498 children. The school at Jámbughora has made favourable progress; the average daily attendance 33.52 against 22.7 in the previous year.

SOUTHERN GUJARAT.

In the south of Gujarát are three small states under the supervision of the Political Agent of Surat. Of these Sachin, a group of nineteen villages, about ten miles to the south and south-west of the city of Surat, the property of a branch of the Sidhi family of Janjira, has an area of about thirty-five miles, a population of 18,000 souls, and a revenue of about Rs. 1,50,000. The others are Rajput states. Bándsa, east of the Chickhli sub-division of Surat, with an area of about 240 square miles, a population of 32,000 souls, and a yearly revenue of Rs. 1,25,000; and Dharrampor, east of the Balsár sub-division of Surat, with an area of 794 square miles, a population of 74,500 souls, and a yearly revenue of Rs. 2,50,000. Of these three states, Sachin and Bándsa are, on account of the minority of their chiefs, under the direct management of the Political Agent of Surat.

SOUTHERN
GUJARAT.

SACHIN.

SACHIN.

Under the charge of the Assistant Political Agent the management of the Sachin villages has been satisfactory. The revenue for 1876-77 was Rs. 1,64,847, or Rs. 1,672 in excess of the previous year's receipts. No balances were left outstanding, and cultivation increased. An effective breakwater was built at Dumas, and a dispensary opened at Sachin. The young chief and his brother are at present being taught at Sachin. If their health keeps good, it is intended next year to send them to the Rájkumár college at Rájkot.

BÁNSDA.

BÁNSDA.

The young chief of Bánsda spent some months of the year in Surat. Under the present arrangements his studies seem to make but little progress. It has been settled to send him to the Ráj-kumár college in Rájkot at the close of the present year. Nothing has yet been done towards defining the boundaries of the state or marking tracts specially suited for forest conservancy. In eleven villages the survey and assessment of the cultivated land have been finished. The rates of assessment would seem to be thought moderate, as the demand for culturable land has increased. No statistics of the working of the police or of the administration of justice have been received. The actual ordinary revenue of the past year amounted to Rs. 98,809-9-10 compared with Rs. 1,07,106 in the previous year. But recoveries from the previous year, interest, and other miscellaneous items brought the total receipts up to Rs. 1,58,479. The ordinary expenditure was Rs. 82,250, increased by extraordinary items to Rs. 1,69,207. The credit balance at the close of the year was Rs. 3,66,116. Of this Rs. 23,758 were in the Bánsda treasury; Rs. 38,057 in Surat; and Rs. 3,04,300 in Government loans. During the year Rs. 45,323 were spent on public works. The construction of a road two miles from Bánsda to the Dángs, the digging and repairing of four wells and four reservoirs, and the building of one dispensary and two school-houses, would seem to have been the chief works. The number of patients at the hospital was 2,557, and the number of vaccinations 1,318. During the past year the number of schools has increased from one to four, and a fifth will shortly be opened.

DHARAMPUR.

DHARAMPUR.

The Political Agent speaks favourably of the rája of Dharampur's management of his affairs. Under the charge of a tutor the education of his sons makes good progress. The town of Dharampur is kept clean and in good order; the school is well attended, and the chief shows himself very willing to spend a part of his revenues on works of public improvement.

MA'RA'THA STATES.

The states of the Mára'tha country, with a total area of 13,263 square miles, a population of 1,609,749 souls, and a yearly revenue of Rs. 48,21,600, form three groups, a cluster of small chiefships in the tract of hill and forest that separates the Northern Deccan

from Gujarát and the Konkan; two isolated territories along the sea line of the Konkan, relics of the power of the old Musalmán and Máraþa pirate chiefs; and in the Deccan proper feudatories of the Sátára branch of Shiváji's house and the principality and dependencies of Kolhápur.

The following statement shows the chief statistical details of the Máraþa states:—

Máraþa States, 1876-77.

Name.	By whom supervised.	Area in square miles.	Population.	Revenue in Rupees.
Dánga	Agent, Khándesh.. ..	3,840	36,542	69,610
Peint	Agent, Násik	960	47,033	56,450
Jawhár	Agent, Thana	534	37,406	53,100
Janjira, or Habsan	Agent, Kolába	324	71,996	2,89,000
Sáwant Wárl	Superintendent, Sáwant Wárl.	900	190,814	2,94,090
Sátára feudatories	Agent, Sátára	3,026	342,199	7,85,420
Akalkot	Agent, Sholápur	405	81,068	2,27,690
Kolhápur	Agent, Kholápur	8,184	802,691	30,47,240
		13,263	1,609,749	48,21,600

DA'NGS.

The most northerly of the groups of Máraþa states are a succession of small chiefships stretching nearly parallel to the Rewa Kánta, Bánsda, and Dharampur states along the heights and forests of the northern extremity of the Sahyádrí range from the Narbada south to the Vaitarna. This line of states may be divided into three parts. In the north the Akhráni district, the Mewás chiefships, the Dángs and the estate of Surgána under Khándesh; Peint under Násik; and Jahwár under Thana.

DANGS.

Of the Khándesh states the Akhráni district, though it nominally forms part of the Taloda sub-division of Khándesh, is actually distinct, cut off from the plain by a range of precipitous hills. South of Akhráni is a group of six properties known as the Mewás, lying on both sides of the Tápti, with a population of about 7,000 souls, and a yearly revenue of Rs. 41,781. These lands, exempted from the ordinary regulations, are under the management of the Political Agent, who tries all important cases. The people are very poor, the chief revenue being derived from the forests. South of the Mewás states are the Dángs, seven in number, a land of hills and forest, west of the main line of the Sahyádrí hills, with an area of about 1,000 square miles and a population of 19,000 souls. South of the Dángs is the estate of Surgána, with an area of about 350 square miles, a population of 8,023 souls, and a yearly revenue estimated at about Rs. 10,000.

During the past year these outlying tracts have received a greater share of attention than has for some time been given them. The Dháng chiefs were invited to Dhulia to be present at the Darbár in honour of the Imperial Proclamation, and efforts were made to entertain and amuse them. In the hot season the Political and Bhil Agents spent two months visiting every part of the

DÁNGS.

district. These tracts show few signs of any increase of wealth or comfort. A large part of the area is waste or forest land ; there are no regular police, and, except that some of the subordinate leaders are bound to attend their chief with a following of bowmen, there is no military force. The general mode of tillage is by burning wood, leaves, and grass, and sowing seed in the ashes. The chief cultivators are Konkanis, immigrants, as their name shows, from the western lowlands. The forests are the chief source of wealth. In the Mewás states they are managed by the chiefs ; but in the Dángs, except in Surgána, they are leased to Government. In so poor and backward a country education and medical relief have made almost no progress. The only school, at Surgána, is often closed from want of pupils ; there is no dispensary, and seldom a Government vaccinator.

Surgána has very seldom been visited by a European officer. Its present condition is unsatisfactory. The division of its revenues, between two families, gives rise to endless disputes. Most of the chiefs are addicted to drunkenness, and the body of their followers, as rájas or the descendants of rájas, are too proud to work.

PEINT.

PEINT.

South of Surgána, on the western slopes of the Sahyádrí hills, lies Peint, with an area of 850 square miles, a population of nearly 50,000 souls, and a yearly revenue of about Rs. 50,000. This territory, at present under the direct management of the Collector of Násik, is but little richer, or less wild, than Surgána. The season was on the whole a fair one; the crops average, and the rainfall 79 inches and 22 cents, or about six inches less than usual. 1,498 people attended the dispensary against 1,450 in the preceding year. 1,778 persons were vaccinated against 1,430 in the previous year. The waste land is less than last year, 9,046 acres (exclusive of reserves) remaining uncultivated. The land revenue is returned as Rs. 28,832-12-4, showing an increase of Rs. 915-6-2 over the previous year. The forest receipts represent Rs. 23,288-1-10 against Rs. 13,375-13-11 in the year 1875-76. Including this, the entire income of the state amounted to Rs. 57,698. No remissions were granted, nor were there outstanding balances. Crime has slightly increased, eighty-four offences being reported against seventy-two in the previous year. The number of civil suits has decreased from sixty to fifty-three. The total value of the suits was Rs. 6,103-15-6. Rs. 12,938-10-0 were spent on local works. There are eight schools, attended by 339 pupils.

JAWHÁ'R.

JAWHÁ'R.

South of Peint, and surrounded by the lands of the district of Thána, is Jawhár, with an area of 539 square miles, a population of 37,405 souls, and a yearly revenue of about Rs. 75,000. From the 1st April 1876 to the 19th December the management of the state was in the hands of the Political Agent of Thána, assisted by a manager, or *kárbhári*, appointed by Government. On the 20th December 1876 the entire government of the state was handed over to the young chief. He removed the former manager and appoint-

ed in his stead a young man who had taken service with him as his law teacher. The new manager is said to be inefficient. The working of the police, in spite of an addition to its strength from seven to fourteen men, is unsatisfactory. Crime has increased, and, while more property is stolen, less is recovered. There is a small prison, in which forty persons were confined against thirty in the preceding year. The season was fair and the harvest good. The receipts from all sources came to Rs. 70,131, and the expenditure to Rs. 41,492. There is no dispensary, but the chief has a native practitioner, and keeps a supply of European medicines: There is one vaccinator attached, who performed 796 successful operations. There are three schools attended by thirty-six pupils.

The two Konkan coast states that owe their existence to the prowess of their former chiefs, as naval commanders and pirates, are Janjira and Sáwant Wári.

JANJIRA.

JANJIRA.

At the northern extremity of the Ratnágiri collectorate is the Habsán or Janjira state, with an area of 151 square miles, a population of 72,000 souls, and a yearly revenue of nearly Rs. 3,00,000. This small territory is ruled by the Nawáb Sidhi Ibráhim Khán Yákut Khán, under the superintendence and advice of a Resident Assistant to the Political Agent, the Collector of Kolába. The terms of the agreement entered into by His Highness the Nawáb in 1870 have been satisfactorily observed, and a new code of rules for the guidance of revenue officers was brought into force. At the suggestion of the Political Agent, Government have ordered that the working of these rules should be carefully watched, as they by no means wish, without sufficient reason, to interfere in the matter of collecting the revenue. The Nawáb, by relinquishing his monopoly of the sale of tobacco, abolishing the tax on persons leaving his territory by sea, and arranging for a steamer to ply regularly between Bombay and the ports of Janjira and Shriwardhan, has shown an enlightened interest in his people's welfare. There is now an efficient body of sixty police, being one policeman to every 1,200 people. Offences increased from 507 in 1875-76 to 533 in 1876-77, and the number of accused arrested was 1,025, of whom twenty-nine per cent were convicted against twenty-five per cent in the previous year. Property was stolen to the value of Rs. 4,410, and ninety-four per cent was recovered. The only serious crime was a gang robbery committed at the end of the year, and disposed of in the present year 1877-78, by the conviction of seven men out of a party of nine, the two others not having been arrested. The Habsán courts acquitted or discharged 815 and convicted 210 accused persons. The new jail at Murád, the only prison in the state, has now been open for one year, and is reported to be in good order. Fifty-five persons were confined in it against seventy-nine in the previous year. Of 377 civil suits 311 were decided, and of ninety-four appeals seventeen were heard. The total revenue is returned at Rs. 2,95,809, or Rs. 25,000 less than in the last year. The chief loss was in land revenue, the Nawáb

JANJIRA.

having given liberal remissions on account of the bad harvest. Next to land revenue, his forests are the Nawáb's chief source of income, the total standing at Rs. 37,225 against Rs. 26,082 in the previous year. Large contracts for the supply of the Bombay firewood market are given every year. Customs also show an increase from Rs. 6,591 to Rs. 10,885. The expenditure is kept at a very small figure. During the year 525 out-door patients were admitted into the dispensary. The state vaccinator performed 1,569 successful operations. In spite of the attention paid to vaccination, Janjira, during the past year, suffered from several outbreaks of small-pox. At Shriwardhan, in June and July, there were fifty seizures, seven of them fatal, and again in February and March fifty persons were attacked, and sixteen died. The disease also appeared in the Mángaon district in February and March, when 182 persons were attacked, and twenty-one died. Education continues to make favourable progress with fourteen schools and 689 pupils against twelve schools and 535 pupils in the previous year. Besides the state provision there are 40 *páthshála*, or road-side schools, at which 358 pupils are being taught.

SAWANT WARI.

SAWANT
WARI.

About 120 miles south of Janjira, between Ratnágiri and Goa, and cut off from the sea by a narrow strip of Ratnágiri land, is the territory of Sáwant Wári, with an area of 900 square miles, a population of about 200,000 souls, and a revenue of Rs. 3,00,000. The British Government have conducted the administration of this state since 1838, and as the present chief, Ragunáth Sáwant Bhonslé, is only fifteen years old, this control will continue for some time longer. About the latter end of January the young Sir Desai, who had for some three years been receiving his education at Kolhápur, was sent to the Ráj Kumár college at Rájkot, in Káttýwár. The reports of his conduct and the progress made in his studies are satisfactory. During the year occurred the deaths of two leading members of this Bhonslé family, Jánki Bái Sáheb, the younger widow of the late Khem Sáwant Bhonslé (grandfather of the present chief), and her son Nároba Sáwant Bhonslé, known also as Báwa Sáheb, the uncle of the present chief.

Survey.

Instead of two, the revenue survey has had three establishments at work. The survey of the Kurál sub-division has been completed, and the revenue settlements proposed have received the approval and sanction of Government. The effect of this settlement will be to raise the yearly revenue by about twenty per cent. The Wári and Bándá sub-divisions are now under survey and classification. The total area measured during the season amounted to 71,396 acres, and the area classed to 75,388 acres. The measuring work is more this year than last by 2,926 acres, and the classing by 28,667 acres. The expenditure in 1875-76 amounted to Rs. 29,592; in the present year it has been Rs. 43,122, or Rs. 13,530 more. In the villages round the town of Wári considerable progress has been made in the demarcation and measurement of forest reserves. The survey of forest land will, it is hoped, be completed during the present field season.

Police duties are performed by a local corps, a body of 436 men, a proportion of one man to every 459 of the population and to every two square miles of territory. There are no mounted police. The working of the force appears to have been satisfactory. The number of offences reported was 938, or sixteen less than in the previous year; the number of accused arrested was proportionately less, being 384 against 425. Of 298 sent for trial, sixty-five per cent were convicted, compared with forty-five per cent in the previous year. It will be observed that the proportion of accused arrested this year to the number of offences reported is smaller than the proportion under the same heads last year; but this is explained by the Political Superintendent as due to a great number of the complaints having been of a vexatious nature, and dismissed after inquiry. The value of the property stolen was Rs. 2,924, of which thirty-eight per cent was recovered. There have been no cases of heinous crime; but salt-smuggling is on the increase, with ninety-six cases against seventy-three in the last year, and fifty-nine in 1874-75.

Exclusive of the court of the Political Superintendent, which exercises the powers of a court of sessions and of a district magistrate, there are five courts of criminal justice. Of the 794 accused who were tried by these courts, 533 were convicted, or 67.1 per cent, against fifty-five per cent in 1875-76. The prevailing crime is theft. The only jail is in the town of Sáwant Wári. In this, at the close of 1875-76, there were eighty-five prisoners; during the year 173 were admitted, raising the total number of prisoners to 258 against 217 in the previous year; seventy-four remained in jail at the close of the year.

The number of cases on the files of the two courts of original civil jurisdiction at the end of 1875-76 was 853; 2,779 cases were filed during the year, making a total of 3,632 against a total of 3,500 for the year before; 2,659 cases were disposed of against 2,647 in 1875-76, leaving 973 in arrears. In the appellate courts, of 305 appeals for hearing, 268 were decided. Of the total number decided, eighteen were disposed of by the Political Superintendent, twenty-one by the Assistant Political Superintendent, and 229 by the Special Judicial Assistant temporarily sanctioned to clear off these arrears. The system of registration which, under the sanction of Government, came into operation on the 15th February 1876, has worked well throughout the year. The amount realized from registration fees and fines was Rs. 19,784 against Rs. 9,374 in the preceding year.

The state suffered from a scarcity of crops, more particularly from the failure of its hill grains and its garden produce. This has been caused not by a deficiency in the fall of rain, for 143 inches seventy-eight cents instead of 130 inches, the average of the ten years ending with 1873-74, were registered at Wári; but because, instead of lasting till the middle of October, the rain abruptly ceased in September. The late setting in of the monsoon of this year was an additional aggravation of the evil; but the rice crops, which are the staple produce of the country, have yielded, on the whole, very little under the average. In no instance has the failure been so great

POLITICAL

SA'WANT
WA'RI.

as to necessitate remissions. In consequence of the irregular fall of rain, the coffee crops proved almost a complete failure.

Revenue.

The receipts were Rs. 3,53,442, or Rs. 37,822 in excess of the receipts of the previous year. But of this excess Rs. 32,539 were due to an alteration in the dates for the payment of revenue instalments, through which an instalment, properly belonging to the income of the next year, was anticipated. That is, the actual receipts of the year under report were Rs. 3,20,903. The expenditure of the year was Rs. 3,37,373, or Rs. 16,470 in excess of receipts, and Rs. 36,189 in excess of the expenditure in the year previous. This excess is explained by the exceptional causes of expenditure connected with preparations for the Sir Desai's visit to Delhi, and with birth and death occurrences in the Sir Desai's family. The state of the finances is satisfactory, as there is still a credit balance of Rs. 2,32,721.

Public works.

Of the total expenditure Rs. 28,696 went on public works. The chief improvement was the restoration and repair of the lake at Wári, known as the Moti Taláo. This work is now completed.

Health.

Public health, on the whole, was good. Correct vital statistics are not available; the figures returned show one birth to fifty of the population, and one death to eighty-six. The largest number of deaths was from fever. At the civil hospital 252 in-patients and 3,223 out-patients were treated, the attendance exceeding the figures returned for last year. The number of primary vaccinations decreased by 100 operations, but revaccinations increased by 233.

Instruction.

Six new vernacular schools have been opened during the year, two of them Hindustáni schools, and one Máraþhi school was closed, so that there are now thirty-six schools with 1,818 pupils. The Anglo-vernacular school at Wári has seventy-six pupils, and was found to be fairly efficient. Of thirty-three vernacular schools examined by the Deputy Educational Inspector and his assistant, seventeen were well spoken of. The total expenditure on education was Rs. 10,743, of which Rs. 8,833 were charged to the state revenue, and the rest was met from local contribution and school fees.

SA'TARA FEUDATORIES.

SA TA'RA
FEUDATORIES.

Of the third group of Máraþha states the northern cluster consists of five feudatories of the old Sátára domain :—

Sátára Feudatories, 1876-77.

Name.	Area in square miles.	Population.	Revenue in Rupees.
Pant Sachew of Bhor	1,491	136,075	4,42,889
Nimbalkar of Phaltan	397	59,536	1,27,578
Pant Pratinidhi of Aundh	213	68,335	1,25,000
Deshmukh of Jath... ..	885	70,665	83,640
Deshmukh of Dañépur	40	8,693	6,360
Total	3,026	343,304	7,85,467

Of these Bhor lies in the north-west, Phaltan in the north, the Pant Pratinidhi's estates in the centre, Jath in the east, and Dafflépur in the western corner of Jath. All are under the Political Agent of Sâtára. The Jath estate, on account of the mismanagement of its chief, is still under the entire control of the Political Agent of Sâtára. Except Bhor, the Sâtára states all suffered from the scarcity of the past year. Emigration to some extent relieved the pressure of distress, but much remained, and ordinary administrative progress was in many respects at a standstill. The Political Agent speaks in terms of praise of the management of his affairs by the Phaltan chief; the bad health of the Pant Pratinidhi would seem to have interfered with his intentions of improving his state; the lady at the head of the Dafflépur estate has shown herself willing to further works of public benefit; Jath is gradually recovering from the effect of disorder and misrule; in Bhor alone is there little real effort to improve or carry out the wishes of the Political Agent. The returns of the Sâtára estates are in many respects incomplete and inaccurate. Especially in Bhor the Political Agent has had cause to complain of a marked unwillingness to supply detailed information. Survey operations have been continued over almost all the Bhor territory, though they have not yet made much progress; in Phaltan they are completed, and they are well advanced in the Pant Pratinidhi's estates and in Jath. The Sâtára estates have a police force of 318 men, of whom twenty are mounted, supported at a cost of Rs. 18,880. The property stolen was valued at Rs. 6,738, against Rs. 9,849 in the previous year. The property recovered shows a decrease from forty-six to forty-two per cent. Offences were reported to the number of 1,710, or 216 more than in the previous year. The courts dealt with 2,800 accused, of whom 658 were discharged, 816 acquitted, and 1,154 convicted. There has been a slight increase of crime in each state, except Phaltan, where there is a slight decrease. During the year under report two dacoity cases from Jath were tried by the Political Agent. The accused were convicted and sentenced to one year's rigorous imprisonment. In the appellate courts twenty-six sentences were confirmed, twelve modified, and seven reversed. Of 3,676 civil suits for disposal, against 4,590 in 1876, 2,563 were decided. The arrears in the Pant Pratinidhi's and the Dafflépur courts are considerable. 693 documents were registered against 948 in the previous year.

During the year altogether about Rs. 62,040 were spent on works of public usefulness. Of this Rs. 34,989 belongs to Jath, where much was done, as famine relief works, in opening roads and improving the storage of water; Rs. 12,062 were spent in the Pant Pratinidhi's estates; Rs. 11,199 in Phaltan; Rs. 3,000 in Dafflépur; and Rs. 790 in Bhor.

The following table shows the gross revenue and expenditure of the different estates:—

Finances of the Sâtara Feudatories, 1876-77.

Name.	Land Revenue.	Excise.	Total.	Expenditure.
	Rs.	Rs.	Rs.	Rs.
Bhor	3,66,566	92,660	* 7,39,851	7,39,851
Phaltan	39,138	...	39,138	...
Aundh	84,028	28,577	1,12,606	1,28,111
Jath	82,249	8,163	90,413	...
Daflépur	7,477	1,315	8,793	8,188
Total	5,79,461	1,30,716	9,90,802	8,76,151

* Including the sum of Rs. 2,80,625 on account of realization of outstanding revenue for the past year, &c.

To a total of sixty-five schools and 2,359 pupils, the Bhor stat^o contributed twenty-two schools and 774 pupils; Phaltan, thirteen schools and 551 pupils; Pant Pratinidhi, fifteen schools and 457 pupils; Jath, thirteen schools and 539 pupils; and Daflépur, two schools and thirty-eight pupils. The severe scarcity and distress greatly affected the progress of education. Still, as compared with the previous year, although the number of schools remains the same, there is a rise from 2,341 to 2,359 in the number of pupils.

AKALKOT.

AKALKOT.

Akalkot, originally a feudatory of Sâtara, on the right bank of the Bhima about twenty miles to the south-east of Sholápur, with an area of 498 square miles, a population of 81,068 souls, and a yearly revenue of Rs. 3,00,000, is, in consequence of the minority of its chief, under the entire control of the Political Agent of Sholápur. The saving effected by the transfer of the management of the state from a Special Superintendent to an Assistant Collector was noticed in last year's report. The experience of the past year would seem to show that perhaps too much has been sacrificed to economy. The frequent changes among the Assistant Collectors in charge of the state are an evil, and the question is under consideration whether it would not be well to increase the state allowance to the Assistant Collector, so as to ensure the services of the same officer for a period of considerable length. During the year the young chief, now nine years old, was transferred for his education from Akalkot to Kolhápur.

Survey.

The season was one of scarcity and suffering. The land is administered according to the system in force in the neighbouring districts of the Bombay Presidency. The current rates of assessment were introduced in 1871-72 when the survey was completed.

Police.

The police number 256 men, of whom nine are mounted. Their cost is returned at Rs. 16,559. Five hundred and seventy-four accused persons were arrested by the police, of whom 407 were sent for trial and 321 convicted. Property stolen was valued at Rs. 10,279, of which twenty-seven per cent was recovered, compared with Rs. 6,247 stolen and twenty-eight per cent recovered in 1875-76. One thousand and eighty-four persons were dealt with by the courts against 1,007 in 1875-76; 316 were dis-

charged, 264 acquitted, 475 convicted, and fifteen committed. Of the last number twelve were convicted by the sessions court. Of twenty-seven appeals, twelve were rejected, two sentences were confirmed, two modified, five reversed, and six were pending. In the jail were 224 prisoners, of whom 161 were admitted during the year, and sixty-two remained at its close. Four hundred and nine civil suits were decided out of 473. The value of suits heard amounted to Rs. 31,620, or Rs. 5,647 less than in the previous year. Of forty-six civil appeals, six were decided. Three hundred and seventy-nine documents were registered, or 126 more than in 1875-76.

Though less complete than in the neighbouring districts, the failure of rain was very marked, the returns showing only 11.50 inches compared with 34.88 per cent, the average of the last seven years. Relief works had to be opened, and the collection of much of the land revenue postponed. The gross revenue of Akalkot was Rs. 3,00,000. The revenue for collection amounted to Rs. 2,61,657, the expenditure for the year was Rs. 1,90,652. The receipts (Rs. 50,193) and expenditure (Rs. 49,988) for former years almost exactly balanced each other. On account of the scarcity, revenue to the amount of Rs. 1,70,340 remained unrecovered, leaving as actual receipts only Rs. 91,317, or about Rs. 1,00,000 less than the actual expenditure. The financial result of the past year has, therefore, been to reduce the credit balance of the state from Rs. 1,16,842 to Rs. 17,712. To meet the expenses connected with relief works a sum of Rs. 84,000 was borrowed from Government. The whole of this will, it is expected, be spent. But if the outstanding balance is collected, this deficit will be more than covered. The cash balance on the 1st April 1877 was Rs. 17,712. In the dispensary 7,127 patients were treated against 5,097 in the preceding year, at a cost of Rs. 2,037. Twenty-one schools, thirteen Mārātha, seven Hindustāni, and one Kánārese, with 992 pupils, were maintained at a total cost of Rs. 6127. Among the Mārātha schools one, with an average attendance of about twenty-eight, is a girls' school. The report of the Deputy Educational Inspector was not, on the whole, favourable, and, at least in the matter of providing more facilities for the Kánārese-speaking population, some change seems necessary.

KOLHĀPUR.

The second division of the Deccan group of states consists of Kolhāpur and its feudatories. KOLHĀPUR.

The state of Kolhāpur, bounded on the north by the river Wārna, on the west by the Sahyādri mountains, and on the east and south by the district of Belgaum, has an estimated area of 3,184 square miles, a population of 802,691 souls, and a yearly revenue of about Rs. 30,00,000. Of the whole area, about one-fourth, containing about one-third of the total population, and yielding about one-third of the gross revenue, has been from time to time assigned by the state for the support of its nobles, or, in smaller quantities, made over in gift to private individuals. All of these smaller estates are tributary to the parent state, the whole payment amounting to a yearly sum of Rs. 19,489.

Among the feudatories, nine have estates of considerable size and wealth. These are the chief of Kápsi, the chief of Tergál, Narayanrao Ghatge of Kágál, the Sir Lashkar Bahádur, the Himmat Bahádur, the chief of Vishálgarh, the chief of Baura, Jeysing Ráo, chief of Kágál, and the chief of Inchalkaranji. Besides the principality of Kolhápur the four last-mentioned estates, with a total area of 648 miles, a population of 182,984 souls, and a yearly revenue of Rs. 5,60,523, or altogether nearly nine-tenths of the entire territory, are, in consequence of the minority of their chiefs, under the entire control of the Political Agent of Kolhápur.

Survey.

During the year revenue survey operations were continued in the Garh Hinglaz, Panhála, and Karvir sub-divisions. In Garh Hinglaz a measuring establishment, and between Panhála and Karvir a classifying establishment, were occupied during the whole season. Revised rates of land assessment were also introduced into sixty-five Panhála villages, containing an area of 69,398 acres, or 108 square miles. The financial result of the revision of assessment was a rise from Rs. 61,014-13-2 to Rs. 62,855-1-10, that is, an increased demand of Rs. 1,840-4-8. The cost of the survey establishment during the year amounted to Rs. 25,339-6-3. At the present slow rate of progress the survey and settlement of the lands of the state will not be completed during the minority of the present chief. Arrangements for increasing the strength of the present survey establishment are therefore under consideration. The Alienation Settlement department continued its work. The result is, from resumptions, quit-rents, and commutations, a net yearly saving of Rs. 11,743-13-3 against Rs. 15,519 in 1875-76.

States under management.

Of the four subordinate states under direct management, the following are the chief administrative details :—

Kolhápur Feudatories under Agency management, 1876-77.

	Area in square miles.	Population.	Revenue in Rupees.
Inchalkaranji	201	59,330	2,12,235
Vishálgarh	235	32,414	1,09,638
Baura	83	43,439	79,159
Kágál	129	47,801	1,59,491
	648	182,984	560,523

The adoption as chief of Inchalkaranji of Náráyanráo Govind, a boy seven years old, was sanctioned by Government. The special succession tribute, in addition to the ordinary yearly payment of Rs. 2,000 to the Kolhápur state, has been fixed at Rs. 1,70,000. Of this one-half was paid on the occasion of the young chief's adoption, the remainder will be paid when he comes of age. At the same time it was made a condition of adoption, that in future Inchalkaranji, whose position had hitherto been undefined, should stand in the same relation to the parent state of Kolhápur as the other feudatory states of Vishálgarh, Baura, and Kágál. The cash balance at the close of the year was about two lakhs of rupees. In October last the young chief was brought into Kolhápur for

his education, and was placed under the supervision of the Assistant Political Agent. The young chief of Vishálgarh, Abáji Krishna Pratinidhi, is in his tenth year. He was removed to Kolhápúr for his education, and placed under the Assistant Political Agent's charge. The state accounts show for the year 1875-76 a surplus balance of Rs. 2,30,560. The chief of Baura, Madhowráo Moreshwar Pant Amatya, is eighteen years old. Besides attending the Rájáram high school his studies are, under the supervision of the Assistant Political Agent, entrusted to a private tutor. The credit balance of this state at the close of the year 1875-76 was Rs. 24,849. The chief of Kágál, Jeysing Ráo Ghatge Sarjárao, is now in his twenty-first year. He has been making himself acquainted with the conduct of public business, and has recently been entrusted with the management of his private affairs. Financially this state is prosperous, closing the year with surplus funds amounting to Rs. 2,50,932.

The duties of mounted police are performed by the cavalry of the Kolhápúr state. The foot police are 519 strong, and cost Rs. 46,648. There were 3,148 accused arrested, of whom 2,728 were sent for trial, 1,379, or forty-three per cent of those arrested and fifty per cent of those sent for trial, were convicted. In 1875-76, 2,168 persons were arrested, and 906, or forty-one per cent, were convicted. Property was stolen to the value of Rs. 46,438, of which fifty-six per cent was recovered. In the previous year Rs. 71,582 were stolen, and Rs. 52,230 recovered. Police.

The following table shows the number of offences reported and of persons dealt with during 1875-76 and 1876-77, and also the disposal of persons dealt with in the latter year :— Crime.

Crime in Kolhápúr, 1876-77.

State.	Number of Offences reported during		Number of Persons dealt with in		Persons disposed of in 1876-77.					
	1875-76.	1876-77.	1875-76.	1876-77.	Discharged.	Acquitted.	Convicted.	Committed.	Died or transferred.	Remaining.
Kolhápúr ..	2,678	2,866	5,117	5,438	1,964	618	2,665	136	...	55

The number of offences in Kolhápúr was 2,866, or 188 more than in 1875-76; but there was a decrease in the more serious crimes, murder, culpable homicide, attempt to murder, rape, forgery, and adultery; whilst there was an increase in gang robbery, theft, misappropriation of property, extortion, and house-breaking. The number of cases tried by the sessions court was thirty-six against fifty-six in the preceding year. Comparing crime with population there was one crime to five hundred and thirty-three persons in Kolhápúr. Of 5,438 persons arrested, or 321 more than in 1875-76, 1,964 were discharged, 618 acquitted, and 2,665 convicted. The number of accidental deaths was much the same as in the previous year. In the number of fires there was an increase from 1,075 in 1875-76 to 1,113 in 1876-77. There were

POLITICAL.

KOLHĀ'PUR. 188 criminal appeals before the Nyáyádhish, the Political Agent, and Government. In 144 cases the sentences were confirmed, in twenty-nine they were modified, and in fifteen reversed.

Prisons.

Kolhápúr has a central jail and ten sub-divisional lock-ups. At the end of last year 222 prisoners remained in jail, and 851 were admitted during 1876-77, making a total of 1,073 against 716 in 1875-76. At the close of the year 303 remained in jail. In the central jail seven deaths occurred during the year; the cost of each prisoner averaged Rs. 81-2-11 against Rs. 79-11-2 in 1875-76.

Litigation.

The work of the courts of civil justice increased during the year. There were 4,272 suits for disposal during 1876-77 against 3,531 in 1875-76. Of the former number 2,729, or sixty-four per cent, were decided on their merits; 409, or nine per cent, were dismissed; 602, or fourteen per cent, were adjusted or withdrawn; and one was referred to another court, leaving a balance of 531, or thirteen per cent, for disposal at the end of the year. The value of the suits disposed of during the year was Rs. 2,81,345 against Rs. 2,27,304 in the previous year. The following statement shows that almost all the suits were connected with movable property:—

Litigation in Kolhápúr, 1876-77.

Claim.	Suits.
For possession of land	153
Otherwise connected with land	107
Connected with privileges	10
„ movable property	3,471
Total	3,741

The number of applications filed for the execution of decrees during the year was 2,643 against 2,697 in the preceding year. Of the former number 2,098 were disposed of, leaving a balance of 545 applications on hand. Besides appeals to the court of the Nyáyádhish, there were sixteen regular and 114 special appeals for disposal before the Political Agent. Of these sixty-two special and three regular appeals have been disposed of. There were 1,562 documents registered during 1876-77, and the fees realized amounted to Rs. 7,223. Of the whole number 1,490 were compulsory, and the rest optional.

Municipal.

The municipal income of the town of Kolhápúr during the year, including the surplus funds in hand, amounted to Rs. 61,445-5-6 against Rs. 53,342-6-11 in the preceding year, and the expenditure to Rs. 44,681-13-10, leaving a balance at the close of the year of Rs. 16,763-7-8. The population of the town of Kolhápúr is 37,662, and the percentage of gross taxation per head is nearly one rupee. The chief municipal works carried out during the year were the market building near the Ambabáir's temple, two new

roads, seven public latrines, a pavement of cut stones on two sides of the grain-market, a large shed at the night-soil depôt, the removal of certain portions of the fort walls, and making roads through the openings into the town, and improvement of the approaches at the Warun and the Ganga gateways.

There are two principal military establishments, the Kolhápúr infantry and the 'Red' cavalry. The sanctioned strength of the infantry is one second in command, one adjutant, six *subedárs*, six *jamadárs*, thirty-two *havildárs*, one bugle-major, ten buglers, thirty-two *naiks*, 443 privates, three water-carriers, and sixteen boys. The total cost of this corps in 1875-76 was Rs. 78,585-6-1. Exclusive of menials and camp followers, the strength of the cavalry consists of 154 horsemen of all ranks and grades, supported at a total cost of Rs. 48-371-13-3. Military.

In Kolhápúr there are 1,305,185 acres of culturable land, of which 1,147,781 were under tillage during 1875-76. Cotton bears a proportion of 2½ per cent to the total area under cultivation, sugar-cane one, rice 12½, Indian millet 25½, millet 5½, and gram 2½. Indian millet bears the highest, and wheat, with less than one per cent, the lowest proportion to the total area. Crops.

The season was very unfavourable. The fall of rain registered at Kolhápúr was twenty inches and sixty-six cents against fifty-four inches and ninety-eight cents, or less than half of the preceding year. A considerable portion of both early and late crops failed. Towards the close of the year (April 1877) produce prices rose from 100 to 150 per cent in excess of the rates in 1876. As might be expected in a season of scanty rainfall and dear food, public health suffered. In two outbreaks of cholera 7,763 persons were attacked, 3,655, or nearly fifty per cent, fatally. Season.

On public works the state of Kolhápúr expended in 1876-77 nearly four and a quarter lakhs of rupees. The principal works completed during the year were a band-room, *nagár khána*, a wall to the public gardens, a plant-house, elephant and camel stalls, and two school-houses at Báura; eleven reservoirs and twenty-two public wells were also deepened and cleared of silt. The Azra and Garh Hinglaz road; the Kolhápúr portion of the Nipáni and Kurundwád road, the branch road from the Kolhápúr cantonment to join the new Miraj road, and the extension of the Inchalkaranji road to the river Panchganga, were also completed. To give employment to the destitute, works were in progress on the following roads: the fifth section of the Kolhápúr and A'mbághát road, the Shirol and Udgaum road, with a branch to Chipri; the third section of the Kolhápúr and Bhudhargarh road, a road from Malkápúr to Kápsi, a road from Malkápúr to Anaskura, the Kolhápúr and Báura road, a road from Katkol to Chandargi and Yargatti, and the Torgal and Katkol road. The Panchganga bridge at the Brahmapuri hill, near the town of Kolhápúr, is under construction. The following bridges were completed: bridges across the five water-courses on the Kolhápúr and Miraj road; a bridge over the Jitti on the new Miraj line of road; and bridge over the Rankálla on Works.

KOLHÁPUR.

the Kolhápur and Báura road. A total allotment of Rs. 7,01,861 has been provided for public works in 1877-78.

Finance.

The total revenue in Kolhápur during 1875-76 amounted to about twenty-eight lakhs, and the expenditure to twenty-seven and a half lakhs of rupees. The year opened on the 6th June 1875 with a balance of Rs. 27,43,775, and closed on the 5th June following with a balance of Rs. 28,07,734. But more than one-half of this total revenue has, at one time or another, been alienated, and at present the Kolhápur state, exclusive of Rs. 86,335 of refunds, realized only Rs. 13,60,763. To this total sum land revenue contributed Rs. 8,95,558; customs and excise Rs. 1,27,166; local funds Rs. 1,26,053; tribute Rs. 35,466; law Rs. 14,923; revenue fines Rs. 12,622; education Rs. 10,169; and miscellaneous Rs. 1,41,376. There was a slight increase in the land revenue for 1875-76, the total demands amounting to Rs. 9,10,521, or Rs. 14,026 more than in 1874-75. The collections realized Rs. 8,69,773, or Rs. 1,446 more than in 1874-75, and the outstanding balances were Rs. 40,513, or more by Rs. 12,543 than in the previous year. The greater portion of this outstanding balance was due from the Panhála and Karvir districts, in which many landholders have long resisted the payment of an enhanced assessment put on their lands by a late Kárbhári. Till the survey of these districts is completed, there would seem to be little prospect of these balances being adjusted. Of other revenues, transit duties brought in Rs. 13,617, or Rs. 581 more than in 1874-75; liquor Rs. 42,128 against Rs. 41,023; and stamps Rs. 35,657, or less by Rs. 9,383; local funds supplied Rs. 90,778, or Rs. 714 less; and tolls gave Rs. 16,699, or Rs. 1,823 more. The expenditure of the year, exclusive of Rs. 35,328 of refunds, amounted to Rs. 10,42,934. Of this Rs. 2,42,178 were spent on public works; Rs. 1,82,825 on court charges; Rs. 1,57,684 on military; Rs. 95,060 on judicial; Rs. 93,871 on revenue; Rs. 80,144 on miscellaneous; Rs. 42,427 on education; Rs. 34,851 on agency; Rs. 28,193 on pensions; Rs. 28,698 on engineering; Rs. 25,339 on survey; and Rs. 15,741 on medical charges. The financial condition of the state is satisfactory. There is at present a balance of Rs. 25,00,971 in cash, or invested in Government security.

Health.

Compared with 1874-75 the number of births registered fell from 16,750 to 14,200, and the number of deaths rose from 14,184 to 15,340. The greater mortality is ascribed to the prevalence of cholera. The total number of sick treated at the civil hospital at Kolhápur during 1876-77, compared with 1875-76, is as follows:—

	1875-76.	1876-77.
In-patients	638	734
Out-patients	9,580	11,597
	10,218	12,331

Of the 734 in-patients 636 were cured and discharged, fifty-eight died, and forty remained under treatment at the close of the year. The number of lunatics in the Kolhápúr asylum was thirty-eight, the same as last year. Of these twenty-two were cured, six transferred to friends, six died, and four remained in the asylum. The total expenditure on account of medical establishment was Rs. 15,420 against Rs. 14,011 in 1874-75. In 1876-77 the number of primary vaccinations was 19,730 against 19,471 in 1875-76. Of the 19,730 operations 18,654 were successful, 332 unsuccessful or doubtful, and in 744 cases the result was unknown. There were also 332 revaccinations. In addition to the above, at the Kolhápúr dispensary, 888 persons were vaccinated primarily, and 341 were revaccinated.

The progress of education continues to be satisfactory. The Rájáram high school is the principal educational establishment. The Anglo-vernacular school is said to be the best in the Southern Division; village schools are scattered throughout the state, and the girls' and night schools at the town of Kolhápúr are better than most other schools of the same class. The expenditure was Rs. 42,426, exclusive of charges for building and repairs. There were 135 schools, or four less than in 1875-76, and 6,849 pupils, or 272 more. Instruction.

KÁNÁRESE STATES.

The states of the Kánárese speaking country have a total area of 2,800 square miles, a population of 627,722, and a revenue of nearly Rs. 20,00,000. They consist of the scattered territories known as the Southern Mára'tha states, and the small property of Sávánur, in Dhárwár. The following table shows the chief statistics of the Kánárese states:—

Kánárese States, 1876-77.

Name.	By whom supervised.	Area in sq. miles.	Popula- tion.	Revenue in Rupees.
Southern Mára'tha	Agent, Kolhápúr...	2,734	610,434	18,22,330
Sávánur... ..	Agent, Dhárwár ...	69	17,288	73,410
	Total...	2,803	627,722	18,95,740

SOUTHERN MA'RA'THA STATES.

The territories of Sánгли, the two branches of Miraj, the two branches of Kurundwád, Jamkhandi, Mudhol, and Rámdurg, collectively known as the Southern Mára'tha states, have a total area of 2,734 square miles, a population of 610,434, and a revenue amounting, during the year 1876-77, to Rs. 18,72,336. Though the head-quarters of these states and the greater part of their possessions lie within the limits of the Kánárese country, of the whole population of 610,434 souls the language of 228,853, or about thirty-seven per cent, is Mára'thi. Under the supervi-

SOUTHERN
MA'RA'THA
STATES.

SOUTHERN
MÁRÁTHA
STATES.

sion of the Political Agent of Kolhápúr these states are in the possession of eight chiefs. Of these, six—Sángli, the two chiefs of Miraj, the two chiefs of Kurundwád and Jamkhandi—are Bráhmans, representatives of the Patwardhan stock. The chief of Rámdurg is also a Bráhman of the Bhávé house, and the chief of Mudhol a Márátha of the Bhonslé Ghorpuré family. Geographically these lands are widely distributed. The head-quarters of all of them lie along the Krishna, and its tributaries the Ghatprabha and the Málprabha. But, except two compact clusters of villages, Mudhol on the Ghatprabha, about fifteen miles west of Kaládgi, and Rámdurg on the Málprabha, about thirty miles south of Mudhol, the lands of each of these states are scattered in groups and single villages over Sholápúr, Kaládgi, Dhárwár, Belgaum, Kolhápúr, and Sátára, from the Bhima in the north to the Tungabhadra in the south.

The following statement gives their main administrative details :—

Southern Márátha States, 1876-77.

Name.	Area in square miles.	Population in 1872.	Revenue in 1876.
			Rs.
Sángli	896	223,663	7,72,952
Miraj (Senior)	340	82,201	2,71,941
Miraj (Junior)	208	35,601	1,33,925
Kurundwád (Senior)	182	39,420	82,000
Kurundwád (Junior)	114	30,251	1,00,783
Jamkhandi... ..	492	102,346	3,00,000
Mudhol	362	58,921	1,25,000
Rámdurg	140	38,031	85,735
- Total	2,734	610,434	18,72,336

Of these states Miraj senior and Mudhol are, on account of the minority of their chiefs, and Sángli because of mismanagement, under the direct charge of political officers. Besides, there is a small estate, Mhysal, with a revenue of Rs. 10,500, under management for the benefit of its owner, a youth of fourteen years of age. During the past year the whole of the area of these states was more or less affected by the scarcity.

SÁNGLI.

Sángli, the largest of the Southern Márátha states, is also the most scattered. It is distributed over five divisions: Miraj, including the town of Sángli, the head-quarters of the state, on the Krishna about twenty miles north-east of Kolhápúr; Terdál on the south bank of the Krishna, about forty miles south-east of Sángli; Mangalvedha, in the Sátára district, along the south bank of the Bhima, about seventy miles north-east of Sángli; Shirhatti, in Dhárwár, on the north bank of the Tungabhadra, about 140 miles south-east of Sángli; Dudwár, a small group of villages to the south of the Málprabha, about fifty miles north-west of Shirhatti; and Sháhápúr, a considerable tract of country immedi-

ately north of the town of Belgaum, or about sixty-five miles to the south of Sângli.

In 1873, in consequence of the continued mismanagement of the state, a British officer was appointed joint administrator to aid the chief in putting his affairs in order. The appointment of joint administrator, originally made for three years, came to a close in December 1876. But, as the chief had absented himself from Sângli, and refused to take any share in the changes that were being introduced, Government determined that the office of joint administrator should be continued until the chief shall show himself fit to be restored to full power. Throughout the year the management of the state rested solely with the joint administrator. Except in the Sháhâpur division, near Belgaum, the famine pressed sorely in every part of the Sângli territory, and the year was one of difficulty and distress. The famine prevented survey operations from being carried on. A classing establishment was at work for a time, but had to give up. Considering its heterogeneous elements, the new police force worked well. To help in organizing the force, the services of some trained officials were obtained from the Sâtâra collectorate. Exclusive of the village watch, the strength of the state police is seven mounted and 562 foot; the cost was Rs. 35,670-2-0. The number of offences reported was 680 against 548 in the previous year; 999 persons were arrested, of whom 897 were sent to trial, and 595, or 66 per cent, convicted. The increase of crime was probably due to the dearness of food. The police figures are satisfactory, showing, as compared with 1875-76, an increase in the proportion of committals from fifty-three to sixty-six; of convictions from forty-nine to sixty-six, and of recoveries of stolen property from twenty-two to fifty per cent. Compared with 833 in the previous year, 1,579 accused persons were arrested. Of these 429 were discharged without trial, 296 were acquitted, and 704 convicted; forty-two were committed, thirty-nine died, escaped, or were transferred, and sixty-nine remained at the end of the year. The additional accommodation in the jail at Sângli proved most useful. At the end of last year 117 prisoners remained, and 278 were admitted during the year; the daily average was 128 against 121 in the previous year. In the remaining jails the numbers were as follows:—

Outlying Sângli Jails, 1876-77.

	Remain- ing from last year.	Admitted during the year.
Shirhatti jail	4	159
Sháhâpur	4	139
Mangalvedha	31	78
Terdâl	6

The total cost of all the jails was Rs. 6,888-13-6. The total number of original suits on the file was much smaller than in 1875-76, being 1,476 against 2,393. As 1,331 cases were disposed of during the year, the arrears on the 31st March were 145 against 359 in

SOUTHERN
MA'RA'THA
STATES.

the preceding year. The work of the appellate courts showed no corresponding decline, and the year ended with 165 cases still undecided:—

Sánгли Appellate Courts, 1876-77.

	In hands and filed.	Disposed of.	Arrears at end of year.
Joint administrator's court	122	67	55
Nyáyádhish's court	540	430	110
Total ...	662	497	165

Registration shows a marked falling off, in the number of documents from 7,673 to 836, and in receipts from Rs. 18,135 to Rs. 3,669-14-0. The municipal income and expenditure were as under:—

Sánгли Municipalities, 1876-77.

	Income.			Expenditure.		
	Rs.	a.	p.	Rs.	a.	p.
Sánгли	6,042	3	9	5,826	6	0
Sháhápúr	1,219	3	8	1,218	9	5

Except Sháhápúr, near Belgaum, all parts of the state were affected by the scanty rainfall. Details of the measures taken for the relief of distress will be given in the special famine report. Apart from relief operations, the only public work requiring mention is the building of five schools, completed at a cost of Rs. 9,461-7-10. Owing to the famine the revenue receipts were but small; so that, had it not been for loans raised to the amount of upwards of two and a half lakhs of rupees, the relief works could not have been carried on, or the establishments paid. The balance in hand at the beginning of the year, and the receipts from all sources up to the 5th June 1877, amounted altogether to Rs. 6,87,850-6-11. The expenditure up to the same date was Rs. 6,59,211-12-4, of which considerably more than one lakh was spent on famine works and charitable relief. Since the close of the year the loan of nine lakhs from the British Government has been sanctioned. At the Sánгли dispensary 7,695 patients were treated, or 1,596 more than in the preceding year. The average daily attendance was 44·49. During the year a dispensary was opened at Shirhatti, where 1,445 patients were treated. Of 4,746 primary vaccinations 4,216 were successful, 135 unsuccessful, and 395 doubtful. The closing of two schools during the year reduced the number to forty. Of these four had to be temporarily closed on account of the famine.

OTHER STATES.

The remaining seven states have been under the supervision of the Assistant Political Agent. Two of them, Miráj senior and

M In five towns, account of the minority of their chiefs, been under pur and Lokhá, and for the same reason Mhysál, an estate yield-clusive of Lokhá, 000 a year, has also been under direct manage-on a proper cessure of the famine prevented any of these chiefs expenditure of the Proclamation ceremony at Delhi. During the about Rs al changes took place in the families of the different . In Kurundwád Vináyakráo Appa Sáheb, one of the junior chiefs, died, and his son Hariharráo Dáji Sáheb was acknowledged as his successor. Sons were born to Hariharráo Dádá Saheb, junior chief of Miraj, and to Hariharráo Daji Sáheb, junior chief of Kurundwád. Of the chiefs who are minors, Gangádharráo Bálá Sáheb, senior chief of Miráj, and Kedárráo Scindé, of Mhysál, made creditable progress in their studies at Kolhápur; Venkátaráo Bálá Sáheb, chief of Mudhol, joined the Rájkmár college at Rájkot. He is the first Márátha chief who has been sent so far from home for his education. During the year the young chiefs of the junior Miraj state and the senior Kurundwád state had the administration of their states made over to them. In consequence of the famine, survey operations were stayed throughout the year. In Mhysál revised rates of assessment fixed by the Survey and Settlement Commissioner, southern division, were brought into operation. They are much the same as those introduced in the adjacent Miraj villages, and will yield a slightly increased revenue.

In Jamkhandi, in the senior Kurundwád state and in both the Miraj states, the efficiency of the police force has increased. On an average one policeman is now maintained to every 488 persons, and to every two square miles of territory. Compared with 1875 the returns show an increase in crime from 1,566 to 2,000. Except in Jamkhandi, where there is a marked fall, the increase is visible in all the states. In the senior Miraj state the total number of offences rose from 351 to 469, in the junior Kurundwád state from 173 to 357, and in Mudhol from 179 to 316. Of 2,687 persons arrested 2,442 were sent for trial, and of these 1,414, or 487 per cent, were convicted. Except in the senior Miraj state, where the percentage fell from 80 to 60·7, and in Mudhol, where it fell from 76·5 to 69·5, the proportion of commitments to convictions shows an increase. The value of stolen property rose from Rs. 30,795-11-0 to Rs. 47,893-1-0, and the proportion recovered from 28·2 to 36·1 per cent. The increase in recoveries was in Miraj senior from 24·9 to 30 per cent, in Miraj junior from 15·9 to 8,314, and in Kurundwád senior from 11·7 to 25·5. On the other hand, there was a fall from 35·9 to 13·9 in Kurundwád junior, and from 59·1 to 7·5 in Mudhol. Police.

Including the courts of the Political and the Assistant Political Agents there are altogether thirty-five criminal courts in the Southern Márátha states. Of these five are the courts of first class chiefs, and two of managers exercising the powers of district magistrates; two have the powers of first class magistrates, nine of second, and fifteen have powers somewhat inferior to those of a magistrate of the third class. The returns are said to have been kept more systematically than formerly, and the arrangement Crime.

under which chiefs managing their own estates furnish statistics of crime, and of the work done by courts and police, is said to work well. Still in the state, in the junior Kurundwád state, and in Rámdurg officers complain that the chiefs fail to pay sufficient attention to this branch of their duties.

Arrears
at end of
year.

Crime.

Compared with 1,542 in 1875 the total number of offences rose to 2,049. This increase was almost entirely in thefts due to the pressure of the famine. The amount of serious crime was not large. Eight cases of murder occurred, in two of which three offenders were capitally punished. In four of the six remaining, six persons were convicted and sentenced to terms of rigorous imprisonment, varying from one year to life, and in two the offenders remained for trial at the close of the year. There were eight gang robberies, of which three were committed in Jamkhandi, three in Mudhol, and two in the junior Miraj state. In most of them the perpetrators were apprehended and punished. The other offences were principally theft, hurt, misappropriation of property, mischief and house-trespass. There were 173 prisoners sentenced to more than six months' imprisonment, and 612 to lighter punishments. Fines to the amount of Rs. 14,996-2-0 were inflicted, and of this Rs. 9,171-14-4 were recovered. Of seventy appeals nine were rejected; in thirty-six the original sentence was confirmed; in eight it was modified, and in eleven it was reversed. At the close of the year six appeals remained for disposal.

Prisons.

There were altogether seventeen prisons. In the two Miraj and Kurundwád states three each, two in Jamkhandi, and one each in Mudhol and Rámdurg. Compared with 1875 the number of prisoners shows an increase in the average daily strength from 134 to 190, and in the total number from 482 to 949. The total cost rose from Rs. 11,691-12-8 to Rs. 18,657-9-8. At Mudhol a fine new jail was almost completed, and considerable progress was made with a similar jail at Miraj. At Rámdurg a suitable small jail was built. In both the Kurundwád states and in the junior Miraj state the accommodation for prisoners is still insufficient and unsuitable.

Litigation.

The states are furnished with twenty-five civil courts. Of these the senior Miraj state and Jamkhandi have each five; the junior Miraj and the Kurundwád states each four, and there is one each in Mudhol, Rámdurg, and Mhysál. As in other famine-affected districts the civil court returns show a marked falling off. The total decrease is 528 suits, from 3,049 to 2,521. The decrease is most marked in the senior Miraj state, from 791 to 531; in Jamkhandi from 839 to 746; and in Rámdurg from 282 to 151. In Jamkhandi all arrears were worked off, and in spite of small progress in the Kurundwád states, the total of undecided suits was reduced from 837 to 444.

Registration.

A new system of registration based on the rules in force in British districts was introduced into the senior Miraj, the Mudhol, and the Mhysál states. Altogether 4,738 documents were registered. The fees realized amounted to Rs. 11,394-1-2, and the expenditure to Rs. 2,567-13-1.

M In five towns, in Miraj, in Jamkhandi, and in Mudhol, Mahlingpur and Lokhápur, municipalities have been established. Exclusive of Lokhápur, where the municipality is hardly yet settled on a proper footing, the following statement shows that the total expenditure during the past year has exceeded the income by about Rs. 2,000 :—

Southern Márdtha States' Municipalities, 1876-77.

Name.	Popu- lation.	Balance in hand.	Income.	Expenditure.	Balance.
		Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Miraj	22,520	4,652 4 11	6,888 7 6	9,618 4 3	1,722 5 7
Mudhol	6,366	1,425 8 10	1,974 0 0	2,492 12 10	853 12 0
Mahlingpur	6,902	303 4 6	1,972 14 0	1,331 6 9	944 11 9
Jamkhandi	12,493	11,525 5 9	10,784 12 10	519 8 3
Total	48,281	6,381 2 3	22,155 11 3	24,223 4 8	4,040 5 7

At the close of the year a municipality was started in Lakshmeshwar, a town in the senior Miraj state, with a population of 10,819, and much in need of sanitary improvement. The town of Jamkhandi has been almost remodelled; Mudhol and Mahlingpur continue to improve; and Miraj still holds its place as the best kept and cleanest town in the Southern Márátha Country.

The season of 1876-77 was exceptionally unfavourable. The Season. rainfall was far below the average. The early crops, excepting those in a few villages near Belgaum and along the inundated banks of the rivers, failed, and almost no later crops were sown. Great distress prevailed, numbers of cattle died, and the people generally suffered severe privation. Details of the efforts made to relieve distress do not find a place in this report. But in the matter of public works alone the expenditure has risen from Rs. 87,086 in 1875 to Rs. 2,32,657, or more than threefold. The following statement shows for each state the share taken in this total expenditure.

Southern Márdtha States' Public Works, 1876-77.

Name.	Public Works.	Relief Works.	Total.
	Rs. a. p.	Rs. a. p.	Rs. a. p.
Miraj senior	40,537 13 10	44,862 13 1	85,400 10 11
Miraj junior	2,450 0 0	10,041 4 0	12,491 4 0
Kurundwád senior	6,770 0 0	6,770 0 0

Jamkhandi	25,345 4 6	35,000 0 0	60,345 4 6
Mudhol	41,402 9 0	22,412 3 1	63,814 12 1
Rámdurg	4,302 8 3	9,002 12 5	13,305 4 8
Mhysál	3,213 6 9	3,213 6 9
Total	1,18,074 4 1	1,44,281 9 1	2,62,356 13 2

The subjoined statement shows the income and expenditure of Finance. each of the states during the last revenue year. It does not include any of the period of special famine expenditure. Except in the junior Kurundwád state, where the expenditure exceeded

the income, disbursements have been generally kept well within receipts :—

Southern Mārātha States' Finances, 1876-77.

Name.	Income.			Expenditure.		
	Rs.	a.	p.	Rs.	a.	p.
Miraj senior	3,43,830	14	8	3,12,805	10	9
Miraj junior	1,47,000	0	0	1,00,000	0	0
Kurundwād senior	1,13,898	0	0	1,04,318	0	0
Kurundwād junior	1,08,425	7	0	1,39,496	13	4
Jamkhandi	3,74,486	0	0	3,63,788	0	0
Mudhol... ..	2,14,659	5	2	2,01,181	5	0
Rāmdurg	1,00,053	11	8	99,951	6	10
Mhysāl	20,032	11	7	19,337	0	5
Total	14,22,386	1	8	13,40,878	4	4

Notwithstanding the heavy outlay which has yet to be incurred before the famine is expected to end, it is estimated that the reserved capital of the directly managed states will, at the close of 1877-78, amount in the case of Miraj to about Rs. 4,00,000, and in the case of Mudhol to Rs. 6,00,000.

Excluding the education allotment, the local fund revenue in Miraj and Mudhol amounted to Rs. 15,033, and the expenditure to Rs. 20,549. The excess of expenditure was met from the cash balance of the previous year :—

Miraj and Mudhol Local Funds, 1876-77.

Name.	Income.			Expenditure.			Balance.		
	Rs.	a.	p.	Rs.	a.	p.	Rs.	a.	p.
Miraj	6,997	13	6	11,967	10	3	11,673	15	11
Mudhol	8,035	2	11	8,581	13	1	6,668	7	0
Total	15,033	0	5	20,549	7	4	18,342	6	11

Health.

The following table shows for all the states an excess of 1,719 in the number of deaths over births. Compared with 1875 births have fallen by twenty-six and deaths risen by 1,929. Enhanced mortality was to be expected in a year of so much ill health and scarcity :—

Southern Mārātha States' Births and Deaths, 1875-76 to 1876-77.

Name.	Births.		Deaths.	
	1875-76.	1876-77.	1875-76.	1876-77.
Miraj senior branch	1,169	1,346	1,209	1,776
Miraj junior branch	1,011	755	745	778
Kurundwād senior branch	566	659	613	818
Kurundwād junior branch	879	868	706	929
Mudhol	1,251	1,181	1,171	1,712
Rāmdurg	775	1,001	822	1,189
Mhysāl	68	77	70	81
Jamkhandi... ..	2,038	1,854	2,125	2,167
Total	7,757	7,731	7,521	9,450

The total number of patients attending the dispensaries at Miraj, Bhargaon in the junior Miraj state, Mudhol, and Jamkhandi, rose from 14,967 in 1875 to 19,842 in 1876, and the cost from Rs. 10,962 to Rs. 12,771. The details will be seen from the following statement:—

Southern Mārātha States' Dispensaries, 1875-76 to 1876-77.

	Patients.		Daily Average.		Cost.	
	1875-76.	1876-77.	1875-76.	1876-77.	1875-76.	1876-77.
					Rs. a p.	Rs. a p.
Miraj	6,667	6,509	52.42	64.5	3,914 2 6	2,420 1 8
Bhargaon	783	...	19	2,492 12 8
Mudhol	1,164	4,952	18.9	57	694 15 3	1,485 8 5
Jamkhandi	7,136	7,598	84.9	90.7	6,353 1 3	6,372 12 0
Total	14,967	19,842	156.2	231.2	10,962 3 0	12,771 8 9

The Miraj and Jamkhandi dispensaries, the latter of which is now called "The Prince of Wales Hospital," were most useful. But the dispensary at Bhargaon, from its nearness to Sāngli, proved a failure, and has been closed. Cholera prevailed more or less throughout the year. There were 3,344 attacks, 1,763 recoveries, and 1,581 deaths. Small-pox was also prevalent in Mudhol and Rāmdurg, and to a slight extent in Miraj. 1,259 persons were attacked, of whom 1,153 recovered and 106 died. Compared with 1875 the vaccination returns show an increase of 1,716 operations from 8,874 to 10,590:—

Southern Mārātha States' Vaccinations, 1875-76 to 1876-77.

Name.	Vaccinators.	Operations.					
		1875-76.			1876-77.		
		Successful.	Unsuccessful.	Total.	Successful.	Unsuccessful.	Total.
Miraj senior	2	1,761	223	1,984	2,482	308	2,790
Miraj junior	1	367	2	369	519	...	519
Kurundwād senior	1	637	16	653	750	45	795
Kurundwād junior	1	819	60	879	475	22	497
Jamkhandi	2	2,488	157	2,645	2,879	220	3,099
Mudhol	1	1,567	2	1,569	1,313	15	1,328
Rāmdurg	1	756	11	767	1,293	49	1,342
Mhysāl	Miraj Vaccinator.	8	...	8	206	14	220
Total	9	8,403	471	8,874	9,917	673	10,590

Four schools were opened during the year. Though many of the poorer classes had to take away their children and a few schools had to be closed, the attendance was, on the whole, satisfactory. There was a marked improvement in the Miraj Anglo-vernacular school. Instruction.

SAWA'NUR.

The estate of Sávánur in the Dhárwár collectorate, with an area of sixty-six square miles, a population of 17,817 souls, and a revenue of Rs. 81,672, belongs to a family of Pathán Muhammadans. The present Nawáb is a minor of sixteen, and his estate is managed by a minister, under the supervision of the Collector of Dhárwár. One of the uncles of the young Nawáb also shares in the administration. The revenue survey and settlement was introduced in the year 1869-70, and since then has worked well. A survey of the town of Sávánur has lately been completed, but the work of inquiry into titles is still in progress. The total strength of the police was thirty-eight, maintained at an annual cost of Rs. 4,880. The amount of property stolen was valued at Rs. 469, and of this Rs. 215 was recovered. There is a jail at Sávánur, in which 129 prisoners were confined. The supposed gross revenue of the year amounted to Rs. 66,755, while the expenditure amounted to Rs. 67,248, including Rs. 14,020 spent on public works. The balance at the end of the year stood at Rs. 45,934. The rainfall during the year, though not scanty at Sávánur itself, was unseasonable and partial. The crops in the eastern and northern villages were bad; the outturn, on the whole, was very poor. Cholera, ague, and fever were general.

SIND STATES.

KHAIRPUR.

KHAIRPUR.

The state of Khairpur in Sind, with an area of about 6,000 square miles, a population of 130,000 souls, and a revenue returned at over Rs. 5,00,000, is bounded on the north by the Rohri sub-division of the Shikárpur collectorate, on the east by the Jaisalmir desert, on the south by the Nausháhro sub-division of the Haidarábád collectorate and by the Thar and Párkar districts, and on the west by the river Indus. It contains within its boundary the lands of Kingri Bádsháhpur, belonging to the British Government. Of the 3,909,760 acres comprised in the state a large portion is sandy desert, and many thousand acres of good land, covered with forest, are reserved as hunting grounds for His Highness the Mir. The stream of the Eastern Nára divides the state into two. On its left bank the country is chiefly desert, on its right bank the soil improves as it stretches westward nearer the river Indus. Some of the land in this section is remarkable for its fertility and for its facilities as regards irrigation. But the Mir prefers to keep the greater portion as hunting grounds. Indigo, cotton, and sugarcane are grown on the lands irrigated by the Mirwah canal. The administration has been continued with the same want of system as in former years. There is a police force of 306 men, of whom 115 are mounted. Of 241 persons arrested on suspicion of crime, 144 were convicted; and of Rs. 5,713, the whole amount of property stolen, Rs. 2,514, or forty-four per cent, were recovered. There was one case of murder, six cases of house-breaking, 134 cases of theft, three deaths suspected to have been caused by violence, eight cases of suicide, and fifty cases of assault. In the two jails in Khairpur there were 208 prisoners,

the daily average being fifty-seven, and the total cost Rs. 2,311. There were forty-four civil suits for disposal, of which thirty-three were decided. Compared with past years the inundation was remarkable for the height to which the river rose, and for the length of time the flood lasted. This flood, together with a heavy local rainfall, damaged the crops, especially the indigo, from which His Highness draws the greater part of his revenue. The chief public work carried out during the year was the construction of an embankment from Alipur to Pir Sábra, and the restoration of another bank at the mouth of the Mirwah canal. Together these two works were estimated to cost Rs. 52,293-14-0. The gross income and expenditure of the state are returned at the same figure, Rs. 5,39,129. But, in the present system of administration, no great trust can be placed in the correctness of these returns. The number of primary vaccine operations was 2,526, of which 2,367 were successful. There were six schools, attended by 278 pupils.

ADEN.

Besides the states within the geographical limits of the Presidency, there is, under the supervision and control of the Bombay Government, the settlement of Aden, with an area of about eleven square miles, a population of 19,289 souls, and a yearly revenue of Rs. 62,501. There are also connected in subsidiary alliance with Aden the island of Socotra, with a population of 2,000 souls and an estimated yearly revenue of Rs. 1,000; and on the main land, beyond the limits of the Aden settlement, the territories of eight tribes, with a population estimated at 132,000 souls and a yearly revenue returned at Rs. 1,27,000. The relations of Government with the chiefs in the vicinity of Aden were satisfactorily maintained during the year.

Owing to the return of Abdalla Mohsin from Mocha, disturbances have taken place between the Abdali and Subaihi tribes. For the present these disturbances have passed over, and Ali bin Mana, the Hanshahi, has consented to allow Abdalla Mohsin, now very old and infirm, to reside at Ráhali in his territories, and, so long as he remains quiet, to receive his share of the stipend paid to his brothers, and the produce of his own fields in Láhej. Abdul Kureem Mohsin and Fadhil bin Abdalla have died. The truce between the Hanshahi chief and the Abdali has been renewed for one year, and a satisfactory truce has been concluded between the Fadhli and Yaffai chiefs. Shaikh Abdalla ba Haidard has entered into a mutual extradition engagement with the Abdali. Ali bin Mokhil has been reinstated at Zhali, but he is still troubled by Abdalla Muhammad Masaad, who occupies a fortified house in that town, and refuses submission. A truce for two years has been concluded by the Resident between the Makalla and Shehr chiefs, and it is expected they will submit their differences in the interval to the arbitration of the Resident. There has been no sensible diminution in trade between Aden and Berbara during the past year. The Egyptian despatch boats have kept the settlement supplied with live-stock. Bulhar remains virtually closed. Zaila

ADEN.

is at present said to be without an Egyptian garrison, and the improvements that were taking place are now at a stand-still. The slave trade continues to flourish at this port. There are about 2,000 troops at Harrar, but communication with the coast is very unsafe, and the country is much disturbed. Slaves continue to be exported from the port of Tajurra. No trustworthy information has been received regarding the Egyptian occupation of the Tigre and Bogos. The island of Socotra has been visited by the First Assistant Resident, and the sultan's stipend has been paid to him.

Compensation.

The compensation awarded to the owners of the ten trading vessels destroyed by Her Majesty's ship *Thetis* was paid in July 1876, the claimants having been sent to Aden by the Turkish authorities, after a delay of three years.

Aden troop.

The Aden troop visited the territory of the Yaffar Sultan in October and November 1876, and the commandant added further details to his survey of the country around the settlement.

Police.

There has been no change in the constitution and distribution of the Aden police. Exclusive of the harbour force paid from the port fund, the total cost of maintaining the police was Rs. 36,782 against Rs. 35,965 in 1875-76. The increase of Rs. 817 is due to the issue of new clothing. The Government contribution in 1875-76 was Rs. 32,897. In 1876-77 it came to Rs. 31,942. The difference was paid from the municipal fund. The convictions in cognizable cases were 80.9 per cent against 81.81 per cent in 1875-76. The number of persons apprehended in 1876-77 was 665 against 1,034 during 1875-76. The decrease is owing to the improved behaviour of the Somali tribes. The percentage of stolen property recovered has fallen from 20.09 to 16.54. But false reports are said to have been made respecting the value of property stolen, and, in some instances, alleged robberies are believed not to have taken place. The harbour police continues most useful.

Crime.

During the year 1876-77, 534 cases were disposed of in the criminal court within the crater, 170 cases at Steamer Point, and four cases at Khor Makser. The following statement gives the result of the administration of criminal justice :—

Aden Crime, 1876-77.

	Offences reported.		Remaining at end of last year.	Persons dealt with.						Persons disposed of.					
				Brought to trial during 1876.				Received by transfer.	Total.		Discharged without trial.	Acquitted.	Convicted.	Committed or referred.	
				Arrested by Police.	On Warrant.	On Summons.	Voluntary.		1875.	1876.					
Court of Resident	1,020	717	...	1,172				1,585	1,172	...	260	912	...
Cantonment Magistrate.	280	288
Total	1,300	1,000

Seventeen persons were sentenced to periods of more than six months' imprisonment and 186 to lighter punishments, fifty-three were whipped. The fines amounted to Rs. 10,877-12-11, and were abnormally increased owing to the heavy penalty inflicted, in the case of the master of the S.S. *Medina*, for breach of the Native Passenger-ship Act. The decrease in the number of offenders is said to be due to better behaviour on the part of the Somális. In one of two session cases, sentence of death was pronounced by the High Court, but on the plea of insanity the punishment was subsequently commuted to transportation for life.

Of five appeals, in two the sentence was upheld, in two a portion was remitted, and in one a new trial was ordered. Ten inquests, mostly on accidental deaths, were held, and three proceedings in lunacy.

The following statement supplies information regarding the Prisons. Aden Jail :—

Aden Jail, 1876-77.

Prisons.	Prisoners				Daily average.		Re- main- ing at end of year.	Cost.

Total ...	20	2,796	2,816	3,421	2,796	3,401	20	20

The value of suits filed aggregated Rs. 1,42,941 against Rs. 1,73,231. Several causes have operated to bring about this de-

ADEN.

crease, but it is chiefly owing to the introduction of the Court Fees Act. There were 760 applications for execution of decrees. There were no appeals. The number of documents registered was 199, compared with 252 in the preceding year.

Military.

The strength of the Aden garrison on the 31st March was as follows :—Of Europeans forty-one officers, nine medical officers, eleven warrant officers, sixty staff sergeants and sergeants, 662 rank and file, one boy, eight medical subordinates, six civil subordinates. Of natives twenty-two native officers, fifty-three *havaldárs*, 809 rank and file, twenty *tindáls*, 230 tent and store *laskárs*, twenty-four boys, seventeen medical subordinates, seventeen civil subordinates, 538 public followers, 439 private followers. The following statement shows the details of the troops of which the Aden garrison was composed on the 31st March 1877 :—

Municipal.

The municipal receipts amounted to Rs. 77,142, and the expenditure to Rs. 61,526. Compared with the previous year the returns show an increase of upwards of twenty-five per cent in the collections, and a decrease of upwards of twenty-two per cent in the disbursements. The chief causes of increased revenue were the transfer of the farming of Kaát to the municipality, an increase of Rs. 7,600; the cess on the export of pumice, a gain of Rs. 3,483; and a tax on brokers or dallals, an addition of Rs. 1,827. The decrease in expenditure is due to the fact that no large public works were undertaken; while in 1875-76 a new police

station was built at the point at a cost of Rs. 10,408. The credit balance at the end of the year was Rs. 34-253-7-2.

The following particulars show for the past six years the financial condition of the Aden municipality :—

Aden Municipality, 1872-76.

Year.				Receipts.			Disbursements.		
				Rs.	a.	p.	Rs.	a.	p.

Condensed water was sold by Government at the following prices :—

Isthmus	Rs. 3 0 9	} per 100 gallons.
Steamer point	" 2 14 1½	
Camp	" 3 8 8	

The total cost of working the condensers was Rs. 23,153. Rations were supplied at the following cost :—

British soldiers	Rs. 197 8 11	} per head per annum.
Native soldiers	" 85 14 8	
Public followers	" 57 1 5	

Nine hundred and fifty-nine vessels entered the port against Marine. 999 in 1875-76. These were classified as under :—Royal Navy, fourteen; Her Majesty's troop-ship, one; Indian Government vessels, twenty-one; foreign men-of-war, twenty-one; foreign troop-ships, forty-three; merchant steamers, 819; and sailing ships, forty. Upwards of seventy per cent of the trading vessels were British. Eleven casualties were reported to the Board of Trade. The S.S. *Galatea* was burned in port; but in the other cases little damage was done. Forty pilgrim-ships called against forty-seven in the previous year. One vessel, the S.S. *Dahlia*, was prosecuted under the Native Passenger-ship Act.

The average temperature, as recorded in the British hospitals, Season. has been as under :—

Aden Temperature, 1876-77.

Camp.			Isthmus.			Steamer Point.

POLITICAL.

ADEN.

In the crater rain fell in five months of the year, but in three only at Steamer Point; in the former position the fall was 2'49 inches, and in the latter 2'06.

Works.

The roads have been kept in fair order. The question of improving the distribution of water has been under consideration for the past four years, and with this object during 1876-77 Rs. 31,398 have been expended; the total expenditure in 1876-77 on original public works and repairs amounted to Rs. 1,89,531. The Eastern Telegraph Company laid a duplicate line of cable between Suez and Aden and Aden and Bombay during 1876-77. The cable-house has been transferred to Ras Boraidli, in military limits, where two fine ranges of houses are approaching completion for the accommodation of the superintendent and the clerks and signalers of the company.

Finance.

The receipts and disbursements of the Aden treasury during 1876-77 were as under :—

<i>Receipts.</i>					
Imperial revenue and receipts	Rs.	72,679
Provincial do.	"	10,964
Debt account	"	16,49,626
Remittance account	"	2,20,544
Total					Rs. 19,53,813

<i>Disbursements.</i>					
Imperial	Rs.	1,95,511
Provincial service	"	58,876
Debt account	"	2,88,381
Remittance account	"	16,40,646
Total					Rs. 21,83,414

The issues in currency notes amounted to Rs. 1,06,370, the receipts to Rs. 1,19,440. The receipts and issues are more than double of what they were during 1875-76. Opium licence fees realized Rs. 2,375, and sales Rs. 2,344, and Rs. 230 worth was transhipped. The sale of excise contracts gave Rs. 15,715, and the sale of stamps Rs. 17,124. The receipts and disbursements on account of local funds are given below :—

<i>Receipts.</i>					
Aden port fund	Rs.	86,724
Cantonment fund	"	1,217
Civil jail fund	"	20
Total					Rs. 87,961

<i>Disbursements.</i>					
Aden port fund	Rs.	71,725
Cantonment fund...	"	4,910
Total					Rs. 76,635

The pilotage fees amounted to Rs. 13,782 and the harbour dues to Rs. 55,956, showing, compared with the preceding year, a slight decrease in the pilotage and an increase in the harbour dues.

The profits to Government and to the Sultan of Láhej from the Shaik Othmán aqueduct amounted to Rs. 17,211-12-9 and Rs. 16,866-12-9 respectively.

In spite of efforts to obtain a more accurate record of births and deaths, the Resident admits that the returns are still far from correct. The failure is chiefly under the head of births, and is due to the Muhammadan dislike to make public the incidents of their family life. It is thought that the deaths are more fully reported. The returns show a total of 254 births, twenty-three of them of Europeans. Deaths are returned at 879, twenty-nine of them of Europeans. The returns for 1875-76 showed 277 births and 571 deaths. The number of sick treated at the civil hospital in 1876-77 was 1,795. Of these 630 were in-door and 1,165 out-door patients, against 760 and 1,429 in 1875-76. The prevalent diseases were small-pox, ague, scurvy, lung disease, and ulcers. Ninety-five in-door and 704 out-door patients were treated in the European general hospital. Of the former eighty-seven, and of the latter 150, were seamen. The pilgrim season of 1876-77 passed without any outbreak of infectious or contagious disease. The health of the garrison has been exceptionally good; 4,613 persons were treated in the Prince of Wales charitable dispensary, of whom 4,004 were discharged cured, 528 did not reappear for treatment, five died, and seventy-six were under treatment at the close of the year. The dispensary has proved a source of convenience to the native inhabitants, and great interest is taken in its welfare by all classes. It is nearly self-supporting. Compared with 2,214 in 1876 only 597 vaccinations are recorded, the decrease is said to be due to the freedom from small-pox.

There are two schools, one English, the other Arabic. In the English school the average daily attendance rose from fifty-two to fifty-seven, and in the Arabic from 144 to 150. Instruction.

II.—ADMINISTRATION OF THE LAND.

Civil Divisions.

Of the whole area of the Bombay Presidency, about 125,857 square miles, with a population of 16,259,224 souls, and an average revenue during the past ten years of Rs. 8,13,69,613, that is, in area, population, and revenue, about two-thirds of the whole Presidency, are under the entire control and management of Government. This territory is distributed among twenty-three districts. For each of these districts a report of the work of its executive head and of his assistants passes each year in all its branches under the separate consideration and review of Government. In the General Administration Report information is arranged under the different departments or branches of administration. The details of the administrative history of each district are, therefore, scattered over the whole volume, and no clear idea of the relative condition and progress of the different parts of the Presidency is conveyed. To supply this want, for each district, the following very brief summary of its chief statistical facts in the past and preceding years has been prepared.

NORTHERN DIVISION.

The following statement shows the chief statistical details of the districts under the charge of the Commissioner, Northern division :—

Northern Division, 1876-77.

Name.	Area in square miles.	Population.	Land Revenue in Rupees.
Ahmedábád	3,844	871,956	14,25,874
Kaira	1,561	814,513	19,30,085
Panch Máhals	1,644	253,023	2,69,473
Broach	1,363	367,837	22,53,302

Khándesh	10,162	1,081,112	30,37,064
Násik	7,155	721,718	12,07,014
Thána	4,052	881,832	14,17,683
Kolába	1,482	368,278	7,24,623
Total ...	32,893	5,967,356	1,45,26,128

AHMEDA'BA'D.

Except in proprietary villages, the revenue survey settlement is in force over all the district. The measurements of the city survey of Ahmedábád are completed. But the final settlement is much delayed by appeals against the decisions of the survey officers. Rates of land assessment were introduced into twenty-two unsettled, or *mehwási*, villages of the Parántij, and two proprietary, or *tálukdári*, villages of the Viramgám sub-division. Under the Collector are twenty-seven minors' estates, with a total area of 63,579 acres, yielding a yearly revenue of Rs. 62,251. At the close of the year, 30th June 1877, the district contained a total area of 101,430 acres of unoccupied arable land.

Land.

Among the twenty-three districts of the Presidency, the Ahmedábád police rank ninth in efficiency with fifty-eight per cent of convictions and fifty-two per cent of recoveries of stolen property. As regards freedom from serious crime, Ahmedábád holds the eleventh place with, against 1,092 in the previous year, a total of 895 offences, or 1.03 per thousand of the population. In addition to twenty-two original and nine appeal suits pending from July 1876, Government were engaged in seven original and four appeal suits; of these fifteen were decided for, and thirteen against Government. Against 4,373 registrations and a revenue of Rs. 15,032 in the previous year, there were 4,519 registrations and a revenue of Rs. 15,434. The district contains eight municipalities, with a total municipal population of 209,462 souls. Municipal receipts amounted to Rs. 3,01,538, and the incidence of taxation varied from Re. 0-3-8 to Rs. 1-7-11 per head of the total municipal population.

Protection.

Of a total area of 1,314,466 acres of culturable land, 1,213,058 compared with 1,216,804 in the previous year were under cultivation. Twenty-two inches of rain fell, or about seven inches less than the average for the last five years. Over the whole district the early or rainy season crops were good, and the late or cold weather crops very little short of the average. Against Rs. 735 in the previous year, a sum of Rs. 853 was advanced for agricultural improvements. The price of Indian millet, *jawár*, the staple grain, rose from fifty pounds the rupee in March 1876 to thirty-two pounds in March 1877. The daily wage of unskilled labour remained unchanged at three annas and three pies. Local public work funds receipts fell from Rs. 1,12,397 to Rs. 1,06,840, leaving at the end of the year a credit balance of Rs. 71,176 against Rs. 93,307 in the previous year. The chief decrease was Rs. 8,570 under the head of contributions. The main heads of expenditure were: under construction, roads Rs. 20,129, reservoirs Rs. 2,822, wells Rs. 8,878, and rest-houses Rs. 13,722, total Rs. 51,512; under repairs, roads Rs. 28,187, reservoirs and wells Rs. 16,853, rest-houses Rs. 4,277, total Rs. 52,722.

Production.

The land revenue for collection for the year ending 31st July 1877 was Rs. 14,25,874, of which, before the close of the year, Rs. 14,23,953 were realized and Rs. 1,921 remained outstanding. The excise revenue amounted to Rs. 70,181 against Rs. 57,364 in

Revenue.

ADMINISTRATION OF THE
LAND.
NORTHERN
DIVISION.

the previous year. The stamp revenue was Rs. 2,24,405 against Rs. 2,26,558. The forest revenue of the district was Rs. 45 against Rs. 108. To realize the Government revenue 157 distraints, against seventy-nine in the previous year, 178 in 1874-75, and 376 in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds and municipal, amounted to Rs. 22,72,906, or, on a population of 871,956, an incidence per head of Rs. 2-9-7.

Health. The returns show an increase in births from 15,504 to 16,623, and in deaths from 21,235 to 22,358. Of the total mortality 2,818 deaths were due to cholera, and 217 to small-pox. Ten dispensaries afforded relief to 84,635 patients, compared with 84,327 in the previous years. The number of vaccinations fell from 30,179 to 27,055.

Instruction. The local fund revenue assigned for education amounted to Rs. 73,375 against Rs. 1,15,599 in the previous year. The number of schools has increased from 180 to 185, and the attendance from 11,066 to 11,455.

KAIRA.

Land. Except in proprietary villages, the revenue survey settlement is in force over all the district. In the Thásra and Kapadwanj sub-divisions it has been found advisable to reduce the size of some of the larger survey numbers. During the year a party of the Topographical survey measured and mapped an area of 343 square miles. New land assessment rates have been introduced into recently lapsed villages of the Borsád sub-division. The village of Banpura, belonging to a minor, has also been surveyed during the past season. Under the Collector are three minors' estates, with a total area of 1,255 acres, yielding a yearly revenue of Rs. 2,253. At the close of the year, 30th June 1877, the district contained a total area of 112,837 acres of unoccupied arable land.

Protection. Among the twenty-three districts of the Presidency, the Kaira police rank sixth in efficiency, with sixty-five per cent of convictions and fifty-two per cent of recoveries of stolen property. As regards freedom from serious crime, Kaira holds the second place, with, against 551 in the previous year, a total of 476 offences, or 0.58 per thousand of the population. In addition to three original and one appeal suits pending from July 1876, Government were engaged in one original and one appeal suit; of these three were decided for, and one against Government. Against 3,646 registrations and a revenue of Rs. 11,085 in the previous year, there were 3,878 registrations and a revenue of Rs. 12,005. The district contains five municipalities with a total municipal population of 67,019 souls. Municipal receipts amounted to Rs. 42,327, and the incidence of taxation varied from Rs. 0-5-9 to Rs. 1-1-7 per head of the total municipal population.

Production. Of a total area of 482,347 acres of culturable land 362,223, compared with 363,256 in the previous year, were under cultivation. Thirty inches of rain fell, or about two inches more than the average for the last five years. With a sufficient and timely

rainfall the crops prospered. Against Rs. 368 in the previous year, a sum of Rs. 743 was advanced for agricultural improvements. The price of millet, *bājri*, the staple grain, rose from forty pounds the rupee in March 1876 to twenty-six pounds in March 1877.

The daily wage of unskilled labour varied from three to five annas. Internal trade was active, fostered by the high prices and great demand for food-grains, and by the extension of the railway to Páli in the extreme east of the district. The local public work funds receipts rose from Rs. 1,30,517 to Rs. 1,86,735, the year closing with a balance of Rs. 45,544 against Rs. 21,497 in the previous year. The main heads of expenditure were: under construction, roads Rs. 66,110, reservoirs Rs. 17,950, wells Rs. 15,167, rest-houses Rs. 1,065; dispensaries Rs. 3,297, and other miscellaneous works Rs. 6,845, total Rs. 1,10,434; under repairs: roads Rs. 11,473, reservoirs and wells 3,532, rest-houses Rs. 698, dispensaries Rs. 428, other miscellaneous works Rs. 3,044, total Rs. 19,175.

The land revenue for collection for the year ending 31st July 1877 was Rs. 19,30,085, of which, before the close of the year, Rs. 19,29,822 were realized, and Rs. 902 remained outstanding. The excise revenue amounted to Rs. 17,405 against Rs. 17,901 in the previous year. The stamp revenue was Rs. 2,13,399 against Rs. 2,31,003. The forest revenue was Rs. 12 against Rs. 1,148. To realize the Government revenue fifteen distraints, against twenty in the previous year, 200 in 1874-75, and 138 in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 24,93,140, or, on a population of 814,513, an incidence per head of Rs. 3-0-9.

Revenue.

The returns show an increase in births from 16,124 to 18,158, and a decrease in deaths from 20,380 to 18,151. Of the total mortality 1,315 deaths were due to cholera, and 109 to small-pox. Six dispensaries afforded relief to 49,318 patients, compared with 47,128 in the previous year. The number of vaccinations rose from 24,768 to 24,883.

Health.

The local funds revenue assigned for education amounted to Rs. 72,803 against Rs. 72,311 in the previous year. The number of schools fell from 193 to 188; while the attendance rose from 14,381 to 14,681.

Instruction.

PANCH MA'HÁLS.

By a party of the Bombay revenue survey the measurements of the three unsettled sub-divisions, Dohad, Jhálod, and Hálol, have been completed. During the year a party of the Topographical survey measured and mapped an area of eighty-four square miles. There are at present no minors' estates in the Panch Máhals. At the close of the year, 30th June 1877, the district contained a total area of 254,300 acres of unoccupied arable land.

Land.

Among the twenty-three districts of the Presidency the Panch Máhals police rank seventh in efficiency with seventy-one per

Protection.

ADMINISTRATION OF THE LAND.

NORTHERN DIVISION.

cent of convictions and forty per cent of recoveries of stolen property. As regards freedom from serious crime, the Panch Málhals holds the fifteenth place with, against 313 in the previous year, a total of 282 offences, or 1.12 per thousand of the population. There were no suits against Government in the year under report. Against 362 registrations and a revenue of Rs. 1,109 in the previous year, there were 416 registrations and a revenue of Rs. 1,209. The district contains two municipalities with a total municipal population of 22,809. Municipal receipts amounted to Rs. 8,061, and the incidence of taxation varied from Re. 0-1-8 to Re. 0-1-9 per head of the total municipal population.

Production.

Of a total area of 290,998 acres of culturable land 152,081, compared with 152,388 in the previous year, were under cultivation. Fifty inches of rain fell, or about seven inches more than the average for the last five years. The season was favourable. Too much rain did some harm to the early or rainy season crops. But the excess of moisture in the soil favoured the yield of the late or cold weather harvest. Special advances, amounting to Rs. 34,275, were made to Talávias, to help them in settling in the district round Chámpánir and Hálol. The price of millet, *bájri*, the staple grain, rose from forty-six pounds the rupee in March 1876 to thirty-six-and-a-half pounds in March 1877. During the same time the daily wage of unskilled labour was two annas and six pies, against two annas and nine pies in the previous year. The increase in trade between Málwa and Gujarát, which owes so much to the construction of roads through the Panch Málhals and the extension of the Dákor branch of the Bombay Baroda and Central India railway eastward to Páli, continued during the past year. The toll revenue rose from Rs. 16,864 to Rs. 17,890. The local public work funds receipts fell from Rs. 66,448 to Rs. 62,142, the year closing with a balance of Rs. 50,908 against Rs. 30,252 in the previous year. The main heads of expenditure were: under construction, roads Rs. 2,471, wells Rs. 2,266, total Rs. 4,737; under repairs: roads Rs. 9,543, reservoirs and wells Rs. 1,772, rest-houses Rs. 270, dispensaries Rs. 49, and other miscellaneous works Rs. 603, total Rs. 12,237.

Revenue.

The land revenue for collection for the year ending 31st July 1877 was Rs. 2,69,473, of which, before the close of the year, Rs. 2,68,733 were realized, and Rs. 740 remained outstanding. The excise revenue amounted to Rs. 19,093 against Rs. 20,899 in the previous year. The forest revenue was Rs. 25,181 against Rs. 10,838. To realize the Government revenue eighteen distraints, compared with seventeen in the previous year, thirty-nine in 1874-75, and forty-seven in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 4,42,639, or, on a population of 253,023, an incidence per head of Rs. 1-11-2.

Health.

The returns show a decrease in births from 4,623 to 4,615, and an increase in deaths from 4,465 to 5,183. Of the total mortality 263 deaths were due to cholera and fifty-three to small-pox. The year was marked by the immigration on a considerable scale of the aboriginal tribe known as Talávias. Large numbers of

these people, who hold a position between the Kolis and Bhils, bringing their families and all their goods, left Broach, Kaira, and the neighbouring Baroda territory, and came to settle in the waste lands near Champánir and Hálol. One dispensary afforded relief to 6,326 patients, compared with 4,527 in the previous year. The number of vaccinations fell from 10,200 to 9,592.

The local funds revenue assigned for education amounted to Rs. 13,916 against Rs. 13,909 in the previous year. The number of schools fell from thirty-four to thirty-three; while the attendance rose from 2,161 to 2,212. Instruction.

BROACH.

New rates of land assessment, involving a yearly increase of Rs. 56,570 to Government, were introduced into the Jambusar subdivision. During the year a party of the Topographical survey measured and mapped an area of ten square miles. Under the collector are twenty-five minor estates. At the close of the year, 30th June 1877, the district contained a total area of 20,943 acres of unoccupied arable land. Land.

Among the twenty-three districts of the Presidency the Broach police rank twentieth in efficiency with forty-three per cent of convictions and twenty-six per cent of recoveries of stolen property. As regards freedom from serious crime, Broach holds the fourteenth place with, against 412 in the previous year, a total of 390 offences, or 1.07 per thousand of the population. Besides three original and one appeal suit pending against Government at the beginning of the year, two fresh appeals were filed; of these, three original suits and one appeal were decided in favour of Government. Against 4,792 registrations and a revenue of Rs. 14,800 in the previous year, there were 4,377 registrations and a revenue of Rs. 12,683. The district contains three municipalities with a total municipal population of 63,368. Municipal receipts amounted to Rs. 93,229, and the incidence of taxation varied from Re. 0-6-3 to Rs. 1-4-0 per head of the total municipal population. Protection.

Of a total area of 488,960 acres of culturable land 466,894, compared with 466,811 in the previous year, were under cultivation. Thirty-two inches of rain fell, or about six inches less than the average for the last five years. The season was prosperous, and the crops good. No advances were made for agricultural improvements. The price of Indian millet, *jawár*, the staple grain, rose from forty-and-a-half pounds the rupee in March 1876 to thirty-four pounds in March 1877. During the same time the daily wage of unskilled labour rose from three annas ten pies to four annas. The local public work funds receipts rose from Rs. 1,34,778 to Rs. 1,45,715, the year closing with a balance of Rs. 53,735 against Rs. 1,08,332 in the previous year. The main heads of expenditure were: under construction, roads Rs. 44,012, bridges Rs. 36,294, reservoirs Rs. 34,219, wells Rs. 12,235, dispensaries Rs. 727, and other miscellaneous works Rs. 6,353, total Rs. 1,33,840; under repairs: roads Rs. 24,286, reservoirs and wells Rs. 3,239, rest-houses Rs. 3,526, and other miscellaneous works Rs. 3,831, total Rs. 34,882. Production.

ADMINISTRATION OF THE LAND.

NORTHERN DIVISION.

Revenue.

The land revenue for collection for the year ending 31st July 1877 was Rs. 22,53,302, of which Rs. 22,44,053 were realized before the close of the year, and Rs. 9,249 remained outstanding. The excise revenue amounted to Rs. 72,977 against Rs. 69,856 in the previous year. The stamp revenue was Rs. 1,96,590 against Rs. 2,12,331. The forest revenue was rupee one against rupees ten. To realize the Government revenue, 651 distraints, compared with twenty in the previous year, seventy-two in 1874-75, and 402 in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 28,42,203, or, on a population of 367,837, an incidence per head of Rs. 7-11-2.

Health.

The returns show a decrease in births from 5,749 to 5,688, and in deaths from 9,532 to 7,569. Of the total mortality 746 deaths were due to cholera and twenty-one to small-pox. Four dispensaries afforded relief to 17,260 patients, compared with 16,865 in the previous year. The number of vaccinations rose from 8,504 to 9,633.

Instruction.

The local funds revenue assigned for education amounted to Rs. 71,172 against Rs. 65,211 in the previous year. The number of schools fell from 215 to 210; while the attendance rose from 9,174 to 10,110.

SURAT.

Land.

The revenue survey and settlement of the whole of the lands of the district is complete. During the year a party of the trigonometrical survey measured and mapped an area of 204 square miles. Of the forest survey of the Dāngs particulars will be found in the account of Khāndesh. Under the collector are twelve minors' estates. At the close of the year, 30th June 1877, the district contained a total area of 33,911 acres of unoccupied arable land.

Protection.

Among the twenty-three districts of the Presidency the Surat police rank fourth in efficiency with sixty-four per cent of convictions and sixty per cent of recoveries of stolen property. As regards freedom from serious crime, Surat holds the third place with, against 740 in the previous year, a total of 426, or 0.67 offences per thousand of the population. In addition to nine original suits and nine appeals pending, six original and two appeal suits were filed against Government; of these five original suits and two appeals were decided in favour of, and the like number against Government. Against 3,068 registrations and a revenue of Rs. 10,256 in the previous year, there were 3,275 registrations and a revenue of Rs. 10,096. The district contains four municipalities with a total municipal population of 139,680 souls. The receipts amounted to Rs. 2,41,290, and the incidence of taxation varied from Rs. 1-0-2 to Rs. 1-9-11 per head of the total municipal population.

Production.

Of a total area of 723,330 acres of culturable land, 583,886, compared with 584,239 in the previous year, were under cultivation. Fifty inches of rain fell, or about seven inches more than the average for the last five years. The season was good with an outturn of crops slightly below the average. No advances were made for the purchase of grain or for agricultural improve-

ments. The price of Indian millet, *jawár*, the staple grain, rose from thirty-four pounds the rupee in March 1876 to twenty-six pounds in March 1877. During the same time the daily wage of unskilled labour rose from four annas to five. Local public work funds receipts rose from Rs. 1,49,495 to Rs. 1,58,942, the year closing with a balance of Rs. 34,588 against Rs. 38,150 in the previous year. Of the above receipts Rs. 1,65,989 were disbursed on new works and Rs. 67,156 on repairs. The new works and repairs were chiefly roads, bridges, reservoirs, and wells. On the 1st May the Hope bridge, over the Tápti, was opened. Of Rs. 7,29,121 the total cost, two lakhs were contributed by Government, three and a half by the Surat local funds, Rs. 80,000 by the Surat municipality, and Rs. 20,000 by the Ránder municipality. The proportion in which a further grant of Rs. 50,000 should be shared by Government and the Surat municipality is still under consideration.

The land revenue for collection for the year ending 31st July 1877 was Rs. 22,61,010, of which Rs. 22,38,550 were realized before the close of the year, and Rs. 22,460 remained outstanding. The excise revenue amounted to Rs. 3,93,969 against Rs. 3,77,073 in the previous year. The stamp revenue was Rs. 1,72,209 against Rs. 1,80,911. The forest revenue Rs. 83,979 against Rs. 1,00,903. To realize the Government revenue twenty-six distraints, compared with eleven in the previous year, seventy-three in 1874-75, and ninety-two in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 34,14,473, or, on a population of 607,087, an incidence per head of Rs. 5-9-7. Revenue.

The returns show a decrease in births from 15,342 to 13,583, and in deaths from 17,048 to 15,870. Of the total mortality 1,132 deaths were due to cholera, and 429 to small-pox. Nine dispensaries afforded relief to 49,950 patients, compared with 49,664 in the previous year. The number of vaccinations rose from 21,477 to 25,651. Health.

The local funds revenue assigned for education amounted to Rs. 79,677 against Rs. 74,444 in the previous year. The number of schools rose from 309 to 311, and the attendance from 15,833 to 16,405. Instruction.

KHA'NDESH.

The revenue survey and settlement is in force over the whole of the district. A topographical party surveyed portions of the north-west of the district, and in the west a revenue survey of the Dángs chiefly for forest purposes is in progress. There are at present no minors' estates under the charge of the collector. At the close of the year, 30th June 1877, the district contained a total area of 835,222 acres of unoccupied arable land. Land.

Among the twenty-three districts of the Presidency the Khándesh police rank seventeenth in efficiency with forty per cent of convictions and thirty-seven per cent of recoveries of stolen property. As regards freedom from serious crime, Khándesh holds the twelfth place with, against 961 in the previous year, a total of 1,119, or 1·04 offences per thousand of the population. No suits Protection.

ADMINISTRATION OF THE
LAND.
NORTHERN
DIVISION.

against Government were pending, and the only case filed during the year was rejected. Against 6,580 registrations and a revenue of Rs. 14,533 in the previous year, there were 6,416 registrations and a revenue of Rs. 14,717. The district contains eighteen municipalities with a total municipal population of 127,689 souls. The receipts amounted to Rs. 93,392, and the incidence of taxation varied from Re. 0-2-0 to Rs. 1-4-2 per head of the total municipal population.

Production.

Of a total area of 3,392,255 acres of culturable land 2,484,193 compared with 2,415,638 in the previous year, were under cultivation. Fifteen inches of rain fell, or about eight inches less than the average for the last five years. So scanty a rainfall caused much distress. But, with few exceptions, the people were able to pass through the trying time without being forced to seek the support of Government aid. Advances for the purchase of cattle and seed rose from Rs. 2,724 to Rs. 11,146, and for agricultural improvements from Rs. 1,400 to Rs. 12,475. The price of Indian millet, *jawar*, the staple grain, rose from fifty-eight pounds the rupee in March 1876 to thirty-four pounds in March 1877. During the same time the daily wage of unskilled labour remained unchanged at three annas seven pies. Local public work funds receipts fell from Rs. 1,96,485 to Rs. 1,82,089, the year closing with a balance of Rs. 19,542 against Rs. 52,055 in the previous year. The main heads of expenditure were: under construction, roads Rs. 75,078, bridges Rs. 1,220, reservoirs Rs. 1,938, wells Rs. 5,631, rest-houses Rs. 3,058, dispensaries Rs. 700, other miscellaneous works Rs. 7,811, total Rs. 95,436; under repairs: roads Rs. 41,895, rest-houses Rs. 2,803, other miscellaneous works Rs. 8,652, total Rs. 53,350.

Revenue.

The land revenue for collection for the year ending 31st July 1877 was Rs. 30,37,064, of which, before the close of the year, Rs. 30,17,308 were realized, and Rs. 19,756 remained outstanding. The excise revenue amounted to Rs. 3,25,107 against Rs. 3,07,122 in the previous year. The stamp revenue was Rs. 3,82,468 against Rs. 4,13,356. The forest revenue was Rs. 58,513 against Rs. 57,387. To realize the Government revenue 833 distraints against 511 in the previous year, 647 in 1874-75, and 1,004 in 1873-74; were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 42,22,914, or, on a population of 1,081,112, an incidence per head of Rs. 3-14-5.

Health.

The returns show an increase in births from 20,224 to 23,257, and a decrease in deaths from 31,051 to 20,511. Of the total mortality seventy-nine deaths were due to cholera, and 1,466 to small-pox. Seven dispensaries against four afforded relief to 14,322 patients, compared with 5,326 in the previous year. The number of vaccinations rose from 28,847 to 35,610.

Instruction.

The local funds revenue assigned for education amounted to Rs. 93,734 against Rs. 98,430 in the previous year. The number of schools fell from 287 to 265, and the attendance from 17,240 to 15,853.

NÁSÍK.

NORTHERN
DIVISION.

Land.

Revised rates of land assessment were introduced into thirteen villages of Niphád, twenty-eight of Chándor, eighty-four of Yeola, twenty-seven of Nándgaon, two of Sinnar, and fifteen of Násik. A topographical party surveyed a portion of the district. Under the collector are two minors' estates, with a total area of 5,315 acres, yielding a yearly revenue of Rs. 10,265. At the close of the year, 30th June 1877, the district contained a total area of 440,644 acres of unoccupied arable land.

Protection.

Among the twenty-three districts of the Presidency the Násik police rank eleventh in efficiency, with thirty-eight per cent of convictions and sixty-two per cent of recoveries of stolen property. As regards freedom from serious crime, Násik holds the sixth place with against 621 in the previous year, a total of 643, or 84 offences per thousand of the population. In addition to the seven original and one appeal suits against Government, pending from July 1876, three original and two appeal suits were filed in 1876-77. The decision in eight of the original suits was in favour of, and in one against, Government. One original suit and three appeals remained pending at the close of the year. Against 3,866 registrations and a revenue of Rs. 8,870 in the previous year, there were 3,720 registrations and a revenue of Rs. 8,887. The district contains seven municipalities, with a total municipal population of 73,595. The receipts amounted to Rs. 58,157, and the incidence of taxation varied from Re. 0-1-9 to Rs. 1-8-0 per head of the total municipal population.

Production.

Of a total area of 2,103,413 acres of culturable land 1,659,406 compared with 1,637,631 in the previous year were under cultivation. About seventeen inches of rain fell, or nearly ten inches less than the average for the last five years. Owing to the almost total absence of the later rains both the early or rainy season and the late or cold weather crops failed; the former to a great extent, the latter almost entirely. Advances for the purchase of cattle and seed rose from Rs. 1,590 to Rs. 5,361, and for agricultural improvements from Rs. 2,125 to Rs. 10,928. The price of Indian millet, *jawár*, the staple grain, rose from seventy-six pounds the rupee in March 1876 to thirty pounds in March 1877. The daily wage of unskilled labour remained unchanged at three annas nine pies. Owing to the works undertaken for the relief of distress, the local public work funds receipts show a probable debit balance, on the 31st March 1877, of Rs. 24,540. The main heads of expenditure were: under construction, roads Rs. 38,556, bridges Rs. 2,332, wells Rs. 8,207, rest-houses Rs. 1,843, dispensaries Rs. 401, other works Rs. 4,393, total Rs. 55,732; under repairs: roads Rs. 13,100, reservoirs and wells Rs. 4,937, rest-houses Rs. 1,441, dispensaries Rs. 98, other miscellaneous works Rs. 3,144, total Rs. 22,720.

Revenue.

The land revenue for collection for the year ending the 31st July 1877 was Rs. 12,07,014, of which Rs. 11,53,589 were realized before the close of the year, and Rs. 53,425 remained outstanding. The excise revenue amounted to Rs. 1,21,262 against Rs. 91,683 in the previous year. The stamp revenue was Rs. 1,91,563 against

ADMINISTRATION OF THE LAND.

NORTHERN DIVISION.

Rs. 2,18,063. The forest revenue was Rs. 27,067 against Rs. 17,995. To realize the Government revenue 533 distraints against 116 in the previous year, 178 in 1874-75, and 603 in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 18,04,615, or, on a population of 721,718, an incidence per head of Rs. 2-8-0.

Health.

The returns show a decrease in births from 19,933 to 19,097, and in deaths from 18,890 to 17,147. Of the total mortality 333 deaths were due to cholera, and 872 to small-pox. Five dispensaries against four afforded relief to 17,117 patients, compared with 13,696 in the previous year. The number of vaccinations rose from 19,465 to 24,026.

Instruction.

The local funds revenue assigned for education amounted to Rs. 47,808, against Rs. 47,675 in the previous year. The number of schools fell from 154 to 143, and the attendance from 8,016 to 7,867.

THÁNA.

Land.

The revenue survey and settlement is in force over the whole of the district. There were no minors' estates under the charge of the collector. At the close of the year, 30th June 1877, the district contained a total area of 65,764 acres of unoccupied arable land.

Protection.

Among the twenty-three districts of the Presidency the Thána police rank twenty-third in efficiency, with thirty-six per cent of convictions and twenty-one per cent of recoveries of stolen property. As regards freedom from serious crime, Thána holds the seventeenth place with, against 921 in the previous year, a total of 1,020 offences, or 1.15 per thousand of the population. In addition to thirty-three pending, seven fresh suits were instituted against Government; of these three original and eleven appeal suits were decided in favour of, and seven original and five appeal suits against, Government. Against 3,460 registrations and a revenue of Rs. 8,830 in the previous year, there were 3,636 registrations and a revenue of Rs. 9,565. The district contains nine municipalities, with a total municipal population of 89,016 souls. The receipts amounted to Rs. 71,163, and the incidence of taxation varied from Re. 0-3-1 to Rs. 1-2-0 per head of the total municipal population.

Production.

Of a total area of 1,078,067 acres of culturable land 1,012,190, compared with 1,011,391 in the previous year, were under cultivation. Eighty-three inches of rain fell, or about eleven inches less than the average for the last five years. Owing to the scanty rainfall, though there was no absolute failure of crops, the season was not favourable. Advances for agricultural improvements fell from Rs. 136 to Rs. 10. The price of common rice, the staple grain, fell from nineteen pounds the rupee in March 1876 to twenty-two pounds in March 1877. The daily wage of unskilled labour varied in different parts from two to seven annas, against two to six annas the previous year. Local public work funds receipts rose from Rs. 1,51,178 to Rs. 1,54,632, the year closing with a balance

of Rs. 1,67,775 against Rs. 3,14,774 in the previous year. The main heads of expenditure were: under construction, roads Rs. 25,581, bridges Rs. 1,31,802, reservoirs Rs. 1,347, wells Rs. 23,794, and rest-houses Rs. 4,853, dispensaries Rs. 2,782, and other works Rs. 1,877; under repairs: roads Rs. 40,099, reservoirs and wells Rs. 10,707, rest-houses Rs. 1,294, dispensaries Rs. 892, and other works Rs. 5,465, total Rs. 58,457.

The land revenue for collection for the year ending 31st July 1877 was Rs. 14,17,683, of which Rs. 14,15,134 were realized before the close of the year, and Rs. 2,551 remained outstanding. The excise revenue amounted to Rs. 4,48,362 against Rs. 4,46,268 in the previous year. The stamp revenue was Rs. 1,75,229. The forest revenue of the district was Rs. 1,19,741 against Rs. 1,24,960. To realize the Government revenue 129 distraints, against 185 in the previous year, 284 in 1874-75, and 290 in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 25,41,632, or, on a population of 881,832, an incidence per head of Rs. 2-12-9. Revenue.

The returns show a decrease in births from 18,803 to 16,773, and in deaths from 21,030 to 16,457. Of the total mortality 693 of deaths were due to cholera, and 708 to small-pox. Nine dispensaries afforded relief to 59,451 patients compared with 59,486 in the previous year. The number of vaccinations fell from 22,590 to 21,436. Health.

The local funds revenue assigned for education amounted to Rs. 59,304 against Rs. 51,516 in the previous year. The number of schools fell from 150 to 148, and the attendance from 7,720 to 7,236. Instruction.

KOLÁBA.

The revenue survey and settlement is in force throughout the districts. Under the collector is one minor's estate, with a total area of one and one-fourth square miles, yielding a yearly revenue of Rs. 509. At the close of the year, 30th June 1877, the district contained a total area of 8,308 acres of unoccupied arable land. Land.

Among the twenty-three districts of the Presidency, the Kolába police rank fifteenth in efficiency, with thirty-five per cent of convictions, and fifty-two per cent of recoveries of stolen property. As regards freedom from serious crime, Kolába holds the eighth place, with, against 426 in the previous year, a total of 345 offences, or 0.94 per thousand of the population. In addition to two original and four appeal suits pending, one original suit was instituted against Government; of these two appeal suits were decided in favour of, and one original suit against, Government. Against 2,175 registrations and a revenue of Rs. 5,497 in the previous year, there were 2,159 registrations and a revenue of Rs. 5,890. The district contains four municipalities, with a total municipal population of 24,963 souls. The receipts amounted to Rs. 56,444, and the incidence of taxation varied from Re. 0-9-0 to Rs. 1-1-5 per head of the total municipal population. Protection.

ADMINISTRATION OF THE LAND.

NORTHERN DIVISION.

Production.

Of a total area of 479,118 acres of culturable land 471,004, compared with 468,646 in the previous year, were under cultivation. About fifty-eight inches of rain fell, or about twenty-three inches less than the average for the last five years. The season was unfavourable, as, on account of the failure of the later rains, the crops suffered severely. No advances were made for agricultural improvements and seed. The price of rice, common, the staple grain, fell from pounds nineteen the rupee in March 1876 to twenty pounds in March 1877. The daily wage of unskilled labour remained unchanged at three annas. The local public work funds receipts rose from Rs. 55,051 to Rs. 67,367, the year closing with a balance of Rs. 43,017 against Rs. 30,339 in the previous year. Of Rs. 21,968 expended on construction, Rs. 11,671 were on repairs, Rs. 2,570 on medical charges, and Rs. 4,761 on miscellaneous works.

Revenue.

The land revenue for collection for the year ending 31st July 1877 was Rs. 7,24,623, of which Rs. 7,23,514 were realized before the close of the year, and Rs. 1,109 remained outstanding. The excise revenue amounted to Rs. 91,232 against Rs. 91,609 in the previous year. The stamp revenue was Rs. 70,338. The forest revenue was Rs. 26,728 against Rs. 35,981. To realize the Government revenue sixteen distraints, against eighteen in the previous year, twenty-one in 1874-75, and thirty-nine in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 10,68,928, or, on a population of 368,278, an incidence per head of Rs. 2-14-5.

Health.

The returns show a decrease in births from 5,518 to 5,339, and in deaths from 5,450 to 4,499. Of the total mortality seventy deaths were due to cholera, and 398 to small-pox. One dispensary afforded relief to 5,159 patients, compared with 4,359 in the previous year. The number of vaccinations rose from 9,141 to 10,716.

Instruction.

The local funds revenue assigned for education amounted to Rs. 25,297 against Rs. 24,755 in the previous year. The number of schools rose from sixty-two to sixty-five, while the attendance fell from 3,546 to 3,342.

AHMEDNAGAR.

SOUTHERN
DIVISION.

Land.

The revenue survey and assessment is in force over the whole of the district. Revised rates of land assessment were introduced into fifty-six villages of the Kopargaum sub-division, and the revision survey measurement operations were carried on in the sub-divisions of Akola and Sangamner. A topographical party surveyed portions of the Ráhuri, Newása, Sheogaum, Sangamner, and Akola sub-divisions. No minor's estates are at present under the charge of the collector. At the close of the year, 30th June 1877, the district contained a total area of 162,897 acres of unoccupied arable land.

Protection.

Among the twenty-three districts of the Presidency the Ahmednagar police rank fifth in efficiency, with fifty-nine per cent of convictions and sixty-seven per cent of recoveries of stolen property. As regards freedom from serious crime, Ahmednagar holds the fourth place with, against 544 in the previous year, a total of 610 offences, or 0.73 per thousand of the population. Of the three suits in which Government were engaged, two were decided for, and one against, them. Against 3,532 registrations and a revenue of Rs. 7,619 in 1875, there were 3,408 registrations and a revenue of Rs. 8,135. The district contains three municipalities, with a total municipal population of 47,448. The receipts amounted to Rs. 40,338, and the incidence of taxation varied from Re. 0-1-2 to Rs. 1-1-4 per head of the total municipal population.

Production.

Of a total area of 2,570,557 acres of culturable land 2,407,660, compared with 2,418,593 in the previous year, were under cultivation. About ten inches of rain fell, or about fifteen inches less than the average for the last five years. The season was one of scarcity and distress, with a failure of crops over nearly one-half of the district. The advances made for agricultural improvements amounted to Rs. 20,025 against Rs. 5,690 in the previous year. The price of Indian millet, *jawár*, the staple grain, rose from sixty-eight pounds the rupee in March 1876 to twenty-three pounds in March 1877. During the same time the daily wage of unskilled labour fell from four to three annas. Local public works funds receipts fell from Rs. 83,329 to Rs. 74,043. The disbursements were Rs. 73,548 compared with Rs. 79,371 in 1875-76; of this there were spent on construction: roads Rs. 28,477, wells Rs. 3,843, and rest-houses Rs. 3,010, total Rs. 39,608; on repairs: roads Rs. 13,254, tanks and wells Rs. 2,009, total Rs. 19,672.

Revenue.

The land revenue for collection for the year ending 31st July 1877 was Rs. 12,26,179, of which Rs. 8,72,485 were realized before the close of the year, and Rs. 3,53,694 remained outstanding. The excise revenue amounted to Rs. 31,937 against Rs. 32,529 in the previous year. The stamp revenue was Rs. 1,76,903 against Rs. 1,96,571. The forest revenue was Rs. 8,133 against Rs. 14,606. To realize the Government revenue sixty-five distraints, against 161 in the previous year, 130 in 1874-75, and forty-four in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 16,51,639, or, on a population of 812,635, an incidence per head of Rs. 2-0-6.

ADMINISTRATION OF THE LAND.

SOUTHERN DIVISION.

Health.

The returns show an increase in births from 24,294 to 24,427, and a decrease in deaths from 23,790 to 20,640. Of the total mortality 1,115 deaths were due to cholera, and 350 to small-pox. One dispensary afforded relief to 2,519 patients compared with 2,487 in the previous year. The number of vaccinations fell from 27,113 to 24,807.

Instruction.

The local funds revenue assigned for education amounted to Rs. 50,891 against Rs. 52,215 in the previous year. The number of schools fell from 197 to 187, and the attendance from 8,968 to 8,613.

POONA.

Land.

The revenue survey and settlement is in force over the whole of the district. No minor's estates are at present under the charge of the collector. There are no culturable waste lands in the Poona district.

Protection.

Among the twenty-three districts of the Presidency the Poona police rank twenty-second in efficiency, with twenty-eight per cent of convictions and thirty-one per cent of recoveries of stolen property. As regards freedom from serious crime, Poona holds the twenty-second place with, against 1,371 in the previous year, a total of 1,687 offences, or 1.77 per thousand of the population. In addition to twelve pending from the previous year, Government were concerned in seven original and eight appeal suits; of these the decisions in six original and eight appeal suits were for Government, and in two original and one appeal against them. Against 5,159 registrations and a revenue of Rs. 1,44,974 in the previous year, there were 5,315 registrations and a revenue of Rs. 15,598. The district contains twelve municipalities with a total municipal population of 145,554. The receipts amounted to Rs. 1,71,635, and the incidence of taxation varied from Re. 0-2-8 to Rs. 1-11-9 per head of the total municipal population.

Production.

Of a total area of 1,925,449 acres of culturable land, 1,864,475 compared with 1,875,670 in the previous year, were under cultivation. Fifteen inches of rain fell, or about fifteen inches less than the average for the last five years. The failure of rain caused very great distress. In the east of the district, except on irrigated land, the early or rainy weather crops withered. In the west the early crops yielded little more than one-third of an ordinary out-turn, and the late were almost a total failure. Drinking water was hard to get, and one-half of the cattle are believed to have died. Advances for agricultural improvements rose from Rs. 775 to Rs. 33,890; while a special advance of Rs. 725 was made for the purchase of cattle, seed, and fodder. The price of Indian millet, *jawár*, the staple grain, rose from forty-three pounds the rupee in March 1876 to twenty-three pounds in March 1877. During the same time the daily wage of unskilled labour fell from three to two annas. Local public work funds receipts fell from Rs. 2,00,805 to Rs. 1,88,310. Of an expenditure of Rs. 2,07,825, there were spent on construction: roads Rs. 4,144, reservoirs Rs. 58, wells Rs. 9,726, rest-houses Rs. 4,445, and other works Rs. 7,955, total

Rs. 26,328; on repairs: roads Rs. 38,324, reservoirs and wells Rs. 2,017, rest-houses Rs. 4,364, other works Rs. 12,001, total Rs. 56,707.

The land revenue for collection for the year ending 31st July 1877 was Rs. 11,67,871, of which Rs. 7,04,529 were realized before the close of the year, and Rs. 4,63,342 remained outstanding. The excise revenue amounted to Rs. 1,68,967 against Rs. 1,64,563 in the previous year. The stamp revenue was Rs. 2,83,929 against Rs. 2,95,567. The forest revenue of the district was Rs. 40,849 against Rs. 43,193. To realize the Government revenue, eighty-seven distraints, against 250 in the previous year, 318, in 1874-75, and 302 in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 21,36,675, or on a population of 952,597 an incidence per head of Rs. 2-3-10. Revenue.

The returns show a decrease in births from 21,214 to 19,617, and in deaths from 21,927 to 19,841. Of the total mortality 719 deaths were due to cholera, and 886 to small-pox. Ten dispensaries against nine afforded relief to 40,894 patients compared with 36,452 in the previous year. The number of vaccinations fell from 22,532 to 22,302. Health.

The local funds revenue assigned for education amounted to Rs. 53,694 against Rs. 79,063 in the previous year. The number of schools fell from 216 to 200, and the attendance from 10,698 to 9,059. Education.

SHOLAPUR.

The revenue survey and settlement is in force over the whole of the district. No minor's estates are at present under the charge of the collector. At the close of the year, 30th June 1877, the district contained a total area of 23,813 acres of unoccupied arable land. Land.

Among the twenty-three districts of the Presidency, the Sholapur police rank twelfth in efficiency, with forty per cent of convictions and fifty-seven per cent of recoveries of stolen property. As regards freedom from serious crime, Sholapur holds the fifth place among the twenty-three districts of the Presidency with, against 570 in the previous year, a total of 608 offences, or 0.80 per thousand of the population. Two civil suits were filed against Government. On the 30th June they were both still pending. Against 2,765 registrations and a revenue of Rs. 6,459 in the previous year, there were 2,735 registrations and a revenue of Rs. 6,714. The district contains eight municipalities, with a total municipal population of 109,675. The receipts amounted to Rs. 147,107, and the incidence of taxation varied from Re. 0-2-10 to Rs. 2-13-2 per head of the total municipal population. Protection.

Of a total area of 2,175,820 acres of culturable land 2,151,617, compared with 2,147,432 in the previous year, were under cultivation. About ten inches of rain fell, or about sixteen inches less than the average for the last five years. Even this scanty Production.

ADMINISTRATION OF THE
LAND.
SOUTHERN
DIVISION.

supply came untimely. So great was the scarcity of water that the early or rainy season crops were lost, the late ones never sown, and large numbers of cattle died. Advances for agricultural improvements amounted to Rs. 32,483 against Rs. 6,405 in the previous year. The price of Indian millet, *jawár*, the staple grain, rose from fifty-nine pounds the rupee in March 1876 to nineteen pounds in March 1877. During the same time the daily wage of unskilled labour fell from four to three annas. The local public work funds receipts fell from Rs. 76,751 to Rs. 18,997, while expenditure on new works and on repairs, almost entirely for the relief of distress, amounted to Rs. 4,75,607 and Rs. 1,37,447 respectively.

Revenue.

The land revenue for collection for the year ending 31st July 1877 was Rs. 10,72,951, of which Rs. 2,19,129 were realized before the close of the year, and Rs. 8,53,822 remained outstanding. The excise revenue amounted to Rs. 61,119 against Rs. 61,567 in the previous year. The stamp revenue was Rs. 1,15,274 against Rs. 1,38,395. The forest revenue of the district was Rs. 2,704 against Rs. 4,060. To realize the Government revenue seventy-nine distraints against 344 in the previous year, 225 in 1874-75, and 893 in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 14,77,318, or, on a population of 753,936, an incidence per head of Rs. 1-15-4.

Health.

The returns show an increase in births from 14,785 to 16,545, and in deaths from 17,066 to 18,339. Of the total mortality 2,235 deaths were due to cholera, and 122 to small-pox. Four dispensaries afforded relief to 22,332 patients, compared with 19,824 in the previous year. The number of vaccinations fell from 23,954 to 22,787.

Instruction.

The local funds revenue assigned for education amounted to Rs. 17,914 against Rs. 46,207 in the previous year. The number of schools has decreased from 145 to 131, and the attendance from 6,784 to 4,912.

SÁTÁRA.

Land.

The revenue survey and settlement is in force over the whole district. During the year the survey settlement was introduced into the proprietary, *inám*, villages of Mungaon, Dhom, and Nagewadi of the Wái sub-division. A party of the topographical survey was at work in the west of the district. Under the collector is one minor's estate, with a total area of 994 acres, yielding a yearly revenue of Rs. 123. At the close of the year, 30th June 1877, the district contained a total area of 32,015 acres of unoccupied arable land.

Protection.

Among the twenty-three districts of the Presidency the Sátára police rank eighteenth in efficiency, with thirty-four per cent of convictions and forty-two per cent of recoveries of stolen property. As regards freedom from serious crime, Sátára holds the eighteenth place with, against 1,079 in the previous year, a total of 1,365 offences, or 1.22 per thousand of the population. Two

original suits, pending from 1875-76, were decided in favour of Government ; but in both cases appeals were made to the High Court, where they are still pending. Against 6,116 registrations and a revenue of Rs. 13,557 in the previous year, there were 6,411 registrations and a revenue of Rs. 14,835. The district contains thirteen municipalities, with a total municipal population of 99,552 souls. The receipts amounted to Rs. 80,099, and the incidence of taxation varied from Re. 0-2-0 to Rs. 1-4-1 per head of the total municipal population.

Production.

Of a total area of 1,450,098 acres of culturable land 1,418,004, compared with 1,421,055 in the previous year, were under cultivation. Thirty-one inches of rain fell, or about fourteen inches less than the average for the last five years. The bad effects of the scanty rainfall were increased by the total want of the late rains. In the east the rainy season crops failed largely, and the cold weather crops almost entirely. In the west and along the valley of the Krishna fine crops of Indian millet, *jawár*, were reaped. Compared with Rs. 3,507 in 1875, Rs. 18,195 were advanced for agricultural improvements and Rs. 9,069 for the purchase of cattle and seed. With this small amount of state aid, almost every well in the district was cleared out and 1,000 new wells built. The price of Indian millet, *jawár*, the staple grain, rose from forty pounds the rupee in March 1876, to twenty-two pounds in March 1877. During the same time the daily wage of unskilled labour rose from four to five annas. Local public work funds receipts, including the opening balance of Rs. 98,376, amounted to Rs. 2,11,321 compared with Rs. 2,49,094 in 1875-76, disbursements amounted to Rs. 1,95,280 ; of this Rs. 1,36,698 were spent on new works, and Rs. 25,841 on repairs. The chief items, under construction were : roads Rs. 38,048, bridges Rs. 35,734, reservoirs Rs. 12,095, wells Rs. 29,297, rest-houses Rs. 1,927, and dispensaries Rs. 1,514 ; under repairs : roads Rs. 20,432, reservoirs and wells Rs. 1,249, rest-houses Rs. 1,743.

Revenue.

The land revenue for collection for the year ending the 31st July 1877 was Rs. 15,61,215, of which Rs. 13,08,315 were realized before the close of the year, and Rs. 2,52,900 remained outstanding. The excise revenue amounted to Rs. 34,716 against Rs. 29,000 in the previous year. The stamp revenue was Rs. 204,834 against Rs. 2,28,898. The forest revenue of the district was Rs. 38,361 against Rs. 35,672. To realize the Government revenue two distraints against fifteen in the previous year, eighteen in 1874-75, and seven in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 22,28,129, or, on a population of 1,061,002, an incidence per head of Rs. 2-1-7.

Health.

The returns show a decrease in births from 30,130 to 28,334, and an increase in deaths from 23,133 to 24,775. Of the total mortality 1,938 deaths were due to cholera, and 207 to small-pox. Seven dispensaries, against six, afforded relief to 22,521 patients, compared with 21,226 in the previous year. The number of vaccinations rose from 29,978 to 34,962.

The local funds revenue assigned for education amounted to Rs. 66,512 against Rs. 72,849 in the previous year. The number of schools fell from 222 to 214, and the attendance from 11,511 to 10,825.

RATNA'GIRI.

Land. The introduction of the revenue survey and settlement is in progress. Under the collector are twenty minors' estates. At the close of the year, 30th June 1877, the surveyed portions of the district contained a total of 8,251 acres of unoccupied arable land.

Protection. Among the twenty-three districts of the Presidency the Ratnágiri police rank tenth in efficiency, with thirty-eight per cent of convictions and sixty-six per cent of recoveries of stolen property. As regards freedom from serious crime, Ratnágiri holds the first place with, against 506 in the previous year, a total of 543 offences, or 0·51 per thousand of the population. Great progress has been made in settling suits against Government. Of eighty suits on the file, fifty-five have been amicably settled out of court. Of the twenty-five remaining, fifteen, it is said, are likely to be arranged out of court, and of the rest only one has been given against Government. Against 2,611 registrations and a revenue of Rs. 7,762 in the previous year, there were 2,715 registrations and a revenue of Rs. 8,424. The district contains four municipalities, with a total municipal population of 35,348. The receipts amounted to Rs. 22,862, and the incidence of taxation varied from Re. 0-2-9 to Rs. 1-8-6 per head of the total municipal population.

Production. Compared with 1,001,071 in the previous year, 1,003,781 acres of culturable land were under cultivation. Eighty-one inches of rain fell, or about twenty-four inches less than the average for the last five years. The want of rain caused much loss to crops and considerable distress. Advances for the purchase of cattle and seeds amounted to Rs. 815. The price of millet, the staple grain, rose from twenty-seven pounds the rupee in March 1876 to twenty pounds in March 1877. During the same time the daily wage of unskilled labour rose from three annas six pies to four annas. Instead of the ordinary export trade no less than 1,500,000 tons of grain passed through the district from the coast to the famine-affected tracts. Local public work funds receipts, including an opening balance of Rs. 17,043, amounted to Rs. 73,112 against Rs. 83,048 in 1875-76. The year closed with a balance of Rs. 7,602 against Rs. 17,098 in the previous year. Good progress was made in opening up internal communications; of these the chief was the Amba Ghât road, on which, it is estimated, Rs. 1,32,000 will be spent.

Revenue. The land revenue for collection for the year ending 31st July 1877 was Rs. 9,20,302, of which Rs. 8,95,678 were realized before the close of the year, and Rs. 24,625 remained outstanding. The excise revenue amounted to Rs. 71,753 against Rs. 62,325 in the previous year. The stamp revenue was Rs. 1,37,030 against Rs. 1,40,116. The forest revenue was Rs. 2,168 against Rs. 2,307.

To realize the Government revenue 573 distraints, compared with 775 in the previous year, 1,044 in 1874-75 and 3,484 in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 13,39,548, or, on a population of 1,071,122, an incidence per head of Rs. 1-3-7.

The returns show a decrease in births from 16,473 to 16,451, and an increase in deaths from 14,445 to 15,585. Of the total mortality 206 deaths were due to cholera, and 1,208 to small-pox. Three dispensaries afforded relief to 6,961 patients, compared with 8,466 in the previous year. The number of vaccinations rose from 32,934 to 29,684. Health.

The local funds revenue assigned for education amounted to Rs. 40,854 against Rs. 42,711 in the previous year. The number of schools fell from 143 to 137, and the attendance from 3,627 to 3,622. Instruction.

KANÁRESE DIVISION.

The following statement shows the chief statistical details of the districts under the charge of the Commissioner, Kanárese division :—

Kanárese Division, 1876-77.

Name.	Area.	Population.	Land Revenue.	Remarks.
			Rs.	
Kánára	4,235	418,326	8,94,201	
Belgaum	4,591	985,687	12,60,814	
Dhárwár... ..	4,532	1,028,155	20,89,239	
Kaládgi	5,695	856,839	12,94,814	
	19,053	3,289,007	55,39,068	

KANÁRA.

The revenue survey settlement was introduced during the year into thirty-six villages of the Kumpta and into one village of the Honáwar sub-division. Under the collector are fourteen minors' estates. At the close of the year, 30th June 1877, the surveyed portions of the district contained a total area of 31,199 acres of unoccupied arable land. Land.

Among the twenty-three districts of the Presidency, the Kanárese police rank thirteenth in efficiency, with fifty-one per cent of convictions and forty-one per cent of recoveries of stolen property. As regards freedom from serious crime, Kanárese holds the twenty-first place with, against 606 in the previous year, a total of 651 offences, or 1·57 per thousand of the population. In addition to the 985 original suits and the one appeal pending from the previous year, one appeal was filed against Government, and it remained undecided at the end of the year. One original suit was Protection,

given in favour of Government, the rest are pending. Should the Privy Council confirm the decision of the High Court in the representative Kánára land case, there is every probability that many of the original suits now pending will be withdrawn. Against 4,076 registrations and a revenue of Rs. 10,461 in the previous year, there were 4,309 registrations and a revenue of Rs. 11,040. The district contains five municipalities, with a total municipal population of 38,258 souls. The receipts amounted to Rs. 35,186, and the incidence of taxation varied from Re. 0-7-1 to Rs. 1-3-4 per head of the total municipal population.

Production.

Eighty-eight inches of rain fell, or about twenty-four inches less than the average for the last five years. There was almost no later rain, so that, except along the coast where the rice harvest was good, crops to some extent failed, and want of water caused much distress. No advances were made for agricultural improvements during the year under report. The price of rice, common, the staple grain, rose from twenty-eight pounds the rupee in March 1876 to twenty-two pounds in March 1877. During the same time the daily wage of unskilled labour fell from three to two annas. Local public work funds receipts, including an opening balance of Rs. 34,163, were Rs. 1,00,445 against Rs. 1,02,457 in the previous year; expenditure amounted to Rs. 77,870, Rs. 26,275 on original works and Rs. 26,492 on repairs. The chief items under construction were: roads Rs. 7,589, bridges Rs. 7,635, reservoirs Rs. 1,008, wells Rs. 4,041, rest-houses Rs. 1,804, and dispensaries Rs. 1,591; under repairs: Rs. 20,614 were spent on roads, Rs. 1,045 on reservoirs and wells, Rs. 1,585 on rest-houses, and Rs. 4,173 on dispensaries.

Revenue.

The land revenue for collection for the year ending 31st July 1877 was Rs. 8,94,201, of which, before the close of the year, Rs. 8,16,111 were realized, and Rs. 78,090 remained outstanding. The excise revenue amounted to Rs. 1,09,447 against Rs. 1,07,975 in the previous year. The stamp revenue was Rs. 80,436 against Rs. 88,679. The forest revenue of the district was Rs. 3,42,815 against Rs. 3,88,825. To realize the Government revenue, twenty-five distraints compared with eighty-one in the previous year, 185 in 1874-75, and 1,193 in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 16,55,576, or, on a population of 418,326, an incidence per head of Rs. 3-14-5.

Health.

The returns show an increase in births from 11,677 to 11,728, and in deaths from 11,338 to 12,708. Of the total mortality 929 deaths were due to cholera, and twenty-eight to small-pox. Eight dispensaries afforded relief to 29,295 patients, compared with 30,062 in the previous year. The number of vaccinations fell from 13,713 to 10,852.

Instruction.

The local funds revenue assigned for education amounted to Rs. 29,680 against Rs. 30,590 in the previous year. The number of schools fell from eighty-eight to eighty-one, and the attendance from 4,323 to 4,254.

BELGAUM.

The revenue survey and settlement are in force over the whole of the district. No minors' estates were under the charge of the collector. At the close of the year, 30th June 1877, the district contained a total area of 76,949 acres of unoccupied arable land.

KA'NA'RESE
DIVISION.

Land.

Among the twenty-three districts of the Presidency, the Belgaum police rank sixteenth in efficiency, with forty-three per cent of convictions and thirty-eight per cent of recoveries of stolen property. As regards freedom from serious crime, Belgaum holds the tenth place with, against 781 in the previous year, a total of 930 offences, or .94 per thousand of the population. One appeal against Government was pending, and one original suit and one appeal were filed. One appeal was decided in favour of Government, and no final orders were passed on the other two suits. Against 3,292 registrations and a revenue of Rs. 7,742 in the previous year, there were 3,771 registrations and a revenue of Rs. 8,557. The district contains six municipalities, with a total municipal population of 72,020. The receipts amounted to Rs. 47,435, and the incidence of taxation varied from Re. 0-1-10 to Re. 0-10-3 per head of the total municipal population.

Protection.

Of a total area of 1,191,285 acres of culturable land 1,113,906, compared with 1,114,583 in the previous year, were under cultivation. Thirty-three inches of rain fell, or about sixteen inches less than the average for the last five years. Though Belgaum suffered severely from the want of rain, the scarcity was not so general as in some of the other collectorates. Towards the south and west there was little distress, but in the northern and eastern sub-divisions of Athni, Gokák, and Parasagad, where the rainfall varied from about one-third to three-fourths of the annual average, both early and late crops were almost an entire failure. State advances were made to the amount of Rs. 13,600. Of this Rs. 7,975 were given for the purchase of cattle and seed, and Rs. 5,625 for agricultural improvements. The price of Indian millet, *jawár*, the staple grain, rose from forty pounds the rupee in March 1876 to twenty pounds in March 1877. During the same time the daily wage of unskilled labour fell from four to three annas. The demand for food-grains developed a large local traffic in grain. Local public work funds receipts, inclusive of opening balances, fell from Rs. 1,31,338 to Rs. 1,20,755, while expenditure was Rs. 1,35,508, leaving a debit balance of Rs. 14,753. On construction Rs. 83,195 were spent, comprising roads Rs. 48,111, reservoirs Rs. 11,223, wells and other water-works Rs. 13,369, and rest-houses Rs. 6,366. Of Rs. 33,520 spent on repairs, roads received Rs. 24,559, reservoirs and wells Rs. 2,051, rest-houses Rs. 1,221, and tree-planting Rs. 4,439.

Production.

The land revenue for collection for the year ending 31st July 1877 was Rs. 12,60,814, of which Rs. 11,41,778 were realized before the close of the year, and Rs. 1,19,036 remained outstanding. The excise revenue amounted to Rs. 1,34,521 against Rs. 1,29,910 in the previous year. The stamp revenue was Rs. 1,28,789 against Rs. 1,36,172. The forest revenue was Rs. 79,765 against Rs. 81,694. To realize the Government revenue, four districts, com-

Revenue.

pared with five in the previous year, seven in 1874-75 and three in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 18,44,338, or, on a population of 985,687, an incidence per head of Rs. 1-13-11.

Health.

The returns show a decrease in births from 30,257 to 27,563, and an increase in deaths from 30,064 to 31,021. Of the total mortality 4,950 deaths were due to cholera and 796 to small-pox. Four dispensaries afforded relief to 10,722 patients, compared with 11,509 in the previous year. The number of vaccinations fell from 23,641 to 22,861.

Instruction.

The local funds revenue assigned for education amounted to Rs. 41,599 against Rs. 49,191 in the previous year. The number of schools fell from 136 to 130, and the attendance rose from 7,753 to 7,804.

DHA'RWAR.

Land.

On account of the scarcity the introduction of revised revenue settlements into 215 villages of the Hángal, Bánkapur, Karajgi, Hubli, and Kalgatghi sub-divisions was postponed. The work of measurement in the city surveys of Dhárwár and Hubli advanced considerably, but the inquiry into titles was much delayed. Under the collector are four minors' estates, with a total area of 6,307 acres, yielding a yearly revenue of Rs. 35,143. At the close of the year, 30th June 1877, the district contained a total area of 83,453 acres of unoccupied arable land.

Protection.

Among the twenty-three districts of the Presidency, the Dhárwár police rank nineteenth in efficiency, with twenty-three per cent of convictions and forty-seven per cent of recoveries of stolen property. As regards freedom from serious crime Dhárwár holds the twentieth place with, against 1,083 in the previous year, a total of 1,434 offences, or 1.39 per thousand of the population. Twelve suits against Government, nine original and three appeals, were pending from the previous year, and five fresh appeals were filed in 1876-77. Of these eight original suits and three appeals were decided in favour of Government, and six suits remained undecided at the end of the year. Against 3,239 registrations and a revenue of Rs. 8,128 in the previous year, there were 3,606 registrations and a revenue of Rs. 8,492. The district contains six municipalities, with a total municipal population of 119,943 souls. The receipts amounted to Rs. 99,462, and the incidence of taxation varied from Re. 0-4-2 to Re. 0-9-3 per head of the total municipal population.

Production.

Of a total area of 1,627,016 acres of culturable land 1,543,567, compared with 1,539,097 in the previous year, were under cultivation. Sixteen inches of rain fell, or about sixteen inches less than the average for the last five years. The later rains were almost entirely wanting. Crops failed extensively, and distress was general. The fact that, though Rs. 25,000 were placed at the disposal of the collector for advances for the purchase of cattle and seed, no advances that were made would seem to show that the local capi-

tal was sufficient to meet all the demands of the district. The price of Indian millet, *jawár*, the staple grain, rose from forty-two pounds the rupee in March 1876 to fourteen pounds in March 1877. During the same time the daily wage of unskilled labour fell from four annas to two annas and six pies. The demand for food-grains developed a great import traffic. Local public work funds receipts, inclusive of an opening balance of Rs. 69,269, amounted to Rs. 1,69,991 against Rs. 2,24,537 in 1875-76, while expenditure rose from Rs. 1,57,497 to Rs. 1,97,678, thus leaving a debit balance of Rs. 27,687. The chief items were: under construction, roads Rs. 82,732, bridges Rs. 6,487, reservoirs Rs. 17,618, wells Rs. 6,226; under repairs: roads Rs. 33,977, reservoirs and wells Rs. 1,280, and road-side trees Rs. 6,247.

The land revenue for collection for the year ending 31st July 1877 was Rs. 20,89,239, of which Rs. 20,16,816 were realized before the close of the year, and Rs. 72,423 remained outstanding. The excise revenue amounted to Rs. 2,20,973 against Rs. 2,38,446 in the previous year. The stamp revenue was Rs. 1,42,047 against Rs. 1,55,639. The forest revenue was Rs. 31,032 against Rs. 42,998. To realize the Government revenue, thirty-eight distraints, compared with nineteen in the previous year, twelve in 1874-75, and twenty-eight in 1873-74, were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 28,24,015, or, on a population of 1,028,155, an incidence per head of Rs. 2-11-2. Revenue.

The returns show an increase in births from 27,794 to 28,568, and in deaths from 30,533 to 31,726. Of the total mortality 7,092 deaths were due to cholera and 408 to small-pox. Two dispensaries afforded relief to 8,669 patients, compared with 6,792 in the previous year. The number of vaccinations rose from 21,392 to 24,055. Health.

The local funds revenue assigned for education amounted to Rs. 74,011 against Rs. 74,610 in the previous year. The number of schools rose from 165 to 169, and the attendance from 8,925 to 9,690. Instruction.

KALÁDGI.

The land revenue survey and assessment are in force over the whole district. No minors' estates are at present under the charge of the collector. At the close of the year, 30th June 1877, the district contained a total area of 65,374 acres of unoccupied arable land. Land.

Among the twenty-three districts of the Presidency, the Kaládgi police rank twenty-first in efficiency, with thirty-seven per cent of convictions and thirty per cent of recoveries of stolen property. As regards freedom from serious crime, Kaládgi holds the ninth place with, against 761 in the previous year, a total of 797 offences, or .93 per thousand of the population. Though the number of criminal cases tried was fewer, yet there was a marked increase in offenders, while the number of prisoners brought before the session court rose from seventy-four to 200. In addition to the two suits Protection.

ADMINISTRATION OF THE
LAND.
KA'NA'RESE
DIVISION.

pending from 1875-76, Government were engaged in five fresh suits. Two original suits were decided, one for, and one against, Government, and five remained pending at the close of the year. Against 1,975 registrations and a revenue of Rs. 4,158 in the previous year, there were 2,111 registrations and revenue of Rs. 4,272. The district contains ten municipalities, with a total municipal population of 78,793 souls. The receipts amounted to Rs. 33,432, and the incidence of taxation varied from Re. 0-1-4 to Re. 0-9-6 per head of the total municipal population.

Production.

Of a total area of 2,164,639 acres of culturable land 2,099,232, compared with 2,084,721 in the previous year, were under cultivation. About fourteen inches of rain fell, or about eleven inches less than the average for the last five years, and this so unseasonably that throughout the district the early crops were a failure, and the late crops was generally unsown. No definite information is supplied as to the amount of advances for agricultural improvements, but it is gathered that they were not largely made. The price of Indian millet, *jawár*, the staple grain, rose from fifty-four pounds the rupee in March 1876 to sixteen pounds in March 1877. During the same time the daily wage of unskilled labour fell from three-and-a-half annas to two annas. Local public work funds receipts, inclusive of an opening balance of Rs. 1,10,018, amounted to Rs. 1,56,600 against Rs. 1,81,113 in 1875-76, and expenditure to Rs. 1,44,508, leaving a credit balance of Rs. 12,092. Exclusive of the expenditure on large famine works, Rs. 76,787 were spent on construction, and Rs. 42,050 on repairs. The chief items under construction were: roads Rs. 7,858, wells Rs. 54,127, and rest-houses Rs. 6,350; under repairs: roads Rs. 28,128, reservoirs and wells Rs. 10,116, and rest-houses Rs. 1,056.

Revenue.

The land revenue for collection for the year ending 31st July 1877 was Rs. 12,94,814, of which Rs. 5,46,432 were realized before the close of the year, and Rs. 7,48,382 remained outstanding. The excise revenue amounted to Rs. 1,10,743 against Rs. 1,19,698 in the previous year. The stamp revenue was Rs. 81,271 against Rs. 87,179. The forest revenue was Rs. 2,901 against Rs. 3,551. To realize the Government revenue ten distraints, compared with eight in the previous year, four in 1874-75 and five in 1873-74 were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 15,99,320 or, on a population of 856,839, an incidence per head of Rs. 1-13-9.

Health.

The returns show an increase in births from 16,156 to 18,581, and in deaths from 16,149 to 20,628. Of the total mortality 5,072 deaths were due to cholera and eighty-seven to small-pox. Three dispensaries afforded relief to 7,200 patients, compared with 7,339 in the previous year. The number of vaccinations fell from 21,931 to 21,737.

Instruction.

The local funds revenue assigned for education amounted to Rs. 25,683 against Rs. 46,750 in the previous year. The number of schools rose from 130 to 132, and the attendance fell from 6,126 to 6,028.

SIND DIVISION.

The following statement shows the chief statistical details of the districts under the charge of the Commissioner of Sind :—

Sind Division, 1876-77.

KURRA'CHEE.

A revised settlement has been introduced into the Shewán sub-division, but does not have effect until 1877-78. Kotri has, during the year, been brought under a new settlement, which so far promises well. The city survey has been completed in the town of Kurráchee. Under the collector are three minors' estates, with a total area of 9,699 acres, yielding a yearly revenue of Rs. 18,903. At the close of the year ending 30th June 1877, the district contained a total area of 156,733 acres of unoccupied arable land. Land.

Among the twenty-three districts of the Presidency, the Kurra- Protection. chee police rank second in efficiency, with sixty-two per cent of convictions and sixty-eight per cent of recoveries of stolen property. As regards freedom from serious crime, Kurráchee holds the nineteenth place with, against 1,338 in the previous year, a total of 1,008 offences, or 2·24 per thousand of the population. No suits were brought against Government. Against 1,644 registrations and a revenue of Rs. 5,527 in the previous year, there were 1,430 registrations and a revenue of Rs. 5,432. The district contains nineteen municipalities, with a total municipal population of 109,689 souls. The receipts amounted to Rs. 3,75,835, and the incidence of taxation varied from Re. 0-2-8 to Rs. 11-14-4 per head of the total municipal population.

Of a total area of 212,815 acres of culturable land 380,484, compared with 315,222 in the previous year, were under cultivation. About nine inches of rain fell, or nearly four inches more than the average for the last five years. The season was not, on the whole, favourable. An excessively high inundation at the beginning of the season, and a failure of the later floods, caused much damage to the rice crops. Advances for agricultural improvements amounted to Rs. 10,082 against Rs. 10,652 in the previous year. The price of Indian millet, *jawár*, the staple grain, rose from thirty-eight pounds the rupee in March 1876 to thirty-two pounds in March 1877. During the same time the daily wages of unskilled labour remained stationary at about five annas. Local Production.

public work funds receipts, inclusive of an opening balance of Rs. 26,800, amounted to Rs. 1,28,099 against Rs. 1,46,802 in the previous year. The main heads of expenditure were: under construction, roads Rs. 7,760, bridges Rs. 31,399, reservoirs Rs. 199, rest-houses Rs. 792, and other works Rs. 400; under repairs; roads Rs. 25,086, reservoirs and wells Rs. 188, rest-houses Rs. 3,517, road-side trees Rs. 6,643, and other works Rs. 2,893.

Revenue.

The land revenue for collection for the year ending 31st July 1877 was Rs. 6,76,714, of which Rs. 6,57,976 were realized before the close of the year, and Rs. 18,738 remained outstanding. The excise revenue amounted to Rs. 1,27,503 against Rs. 1,27,050 in the previous year. The stamp revenue was Rs. 1,17,342 against Rs. 1,10,795. The forest revenue was Rs. 2,18,605 against Rs. 1,85,869. To realize the Government revenue 115 distraints were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 20,87,492, or, on a population of 448,058, an incidence per head of Rs. 4-10-7.

Health.

The returns show a rise in births from 3,504 to 4,533, and in deaths from 4,768 to 6,317. Of the total mortality seventy-four deaths were due to small-pox. Eleven dispensaries, against ten, afforded relief to 38,742 patients, compared with 36,239 in the previous year. The number of vaccinations rose from 21,654 to 27,901.

There are no funds administered by the district local fund committee; but the committee pays a contribution of Rs. 15,100 to the educational inspector. The number of schools was, as in the previous year, forty; the attendance fell from 2,767 to 2,625.

THAR AND PÁRKAR.

Land.

No change was introduced in the settlement of the lands of the Thar and Párkár district. No minors' estates are at present under the superintendence. At the close of the year ending 30th June 1877, the district contained a total area of 371,789 acres of unoccupied arable land.

Protection.

Among the twenty-three districts of the Presidency, the Thar and Párkár police rank first in efficiency, with sixty per cent of convictions and seventy-one per cent of recoveries of stolen property. As regards freedom from serious crime, Thar and Párkár holds the seventh place with, against 158 in the previous year, a total of 159 offences, or 0.79 per thousand of the population. No suits were brought against Government. Against ninety-three registrations and a revenue of Rs. 272 in the previous year, there were 103 registrations and a revenue of Rs. 431. The district contains thirteen municipalities, with a total municipal population of 19,560. The receipts amounted to Rs. 25,569, and the incidence of taxation varied from Re. 0-5-6 to Rs. 1-1-3 per head of the total municipal population.

Production.

Of a total area of 701,822 acres of culturable land 320,199, compared with 292,707 in the previous year, were under cultivation

About thirteen inches of rain fell, or about three inches more than the average for the last five years. The large increase in the rainfall produced an extension of cultivation in the desert tracts, and afforded good pasturage. But the inundation, which promised so well up to the middle of August, ended by destroying the early crops in the Mithráu and Sind canals. No advances were made for agricultural improvements. The price of Indian millet, *jawár*, the staple grain, fell from forty-six-and-a-half pounds the rupee in March 1876 to sixty-one-and-a-half pounds in March 1877. During the same time the daily wage of unskilled labour remained stationary at three annas. There was a considerable export trade in butter to Cutch, Gujarát, and Sind proper. The cattle trade flourished, and considerable quantities of grain and oil-seeds were exported. The local public work funds receipts fell from Rs. 32,906 to Rs. 24,639. The main heads of expenditure were: under construction, rest-houses Rs. 2,077; under repairs, roads Rs. 1,529, reservoirs and wells Rs. 128, rest-houses Rs. 1,035, pounds Rs. 40, road-side trees 3,623, and other works Rs. 280.

The land revenue for collection for the year ending 31st July 1877 was Rs. 2,01,005, of which Rs. 2,00,929 were realized before the close of the year, and Rs. 76 remained outstanding. The excise revenue amounted to Rs. 7,528 against Rs. 6,444 in the previous year. The stamp revenue was Rs. 5,500 against Rs. 5,740. For the collection of the revenue no pressure was required. The total raised under all heads of revenue, Imperial, local funds and municipal, amounted to Rs. 2,68,690, or, on a population of 199,477, an incidence per head of Rs. 1-5-5. Revenue.

The returns show an increase in births from 734 to 1,298, and in deaths from 1,146 to 1,861. Of the total mortality, eighty-eight deaths were due to cholera, and one to small-pox. Four dispensaries afforded relief to 6,904 patients, compared with 7,607 in the previous year. The number of vaccinations fell from 20,861 to 8,806. Health.

The local funds revenue assigned for education is administered by the Educational Inspector in Sind. The grant for the maintenance of schools was Rs. 1,000 against Rs. 2,000 in the previous year. There is no change in the number of schools; the attendance rose from 749 to 753. Instruction.

Haidarábád.

Temporary settlements, preliminary to the revision of the settlement, have been introduced into the three northern sub-divisions of Kandian, Naushahro, and Moro, with effect from 1877-78. In Haidarábád city survey the inquiry work has been completed. Under the collector are two minors' estates, with a total area of 5,798 acres and 171,300 *bighás*, yielding a yearly revenue of Rs. 38,452. At the close of the year, 30th June 1877, the district contained a total area of 2,112,010 acres of unoccupied arable land. Land.

Among the twenty-three districts of the Presidency, the Haidarábád police rank third in efficiency, with sixty-two per cent Protection.

ADMINISTRATION OF THE
LAND.
SIND
DIVISION.

of convictions and sixty-five per cent of recoveries of stolen property. As regards freedom from serious crime, Haidarábád holds the thirteenth place with, against 1,146 in the previous year, a total of 808 offences, or 1.06 per thousand of the population. Government was not involved in any law suits during the year. Against 2,403 registrations and a revenue of Rs. 7,291 in the previous year, there were 2,182 registrations and a revenue of Rs. 7,630. The district contains twenty-two municipalities, with a total municipal population of 95,252. The receipts amounted to Rs. 1,63,544, and the incidence of taxation varied from Re. 0-5-3 to Rs. 2-1-3 per head of the total municipal population.

Production.

Of a total area of 1,669,949 acres of culturable land 584,012, compared with 525,125 in the previous year, were under cultivation. Nine inches of rain fell, or about two inches more than the average for the last five years. The season was a fair one. A sufficient inundation and timely rainfall produced a good outturn both of early and late crops. No advances were made for agricultural improvements or seed. The price of Indian millet, *jawár*, the staple grain, rose from forty-five-and-a-half pounds the rupee in March 1876 to forty pounds in March 1877. During the same time the daily wage of unskilled labour remained stationary at six annas. The local public work funds receipts, inclusive of an opening balance of Rs. 14,325, amounted to Rs. 1,39,092 against Rs. 1,27,637 in 1875-76. The main heads of expenditure were: under construction, roads Rs. 1,580, wells Rs. 4,097, rest-houses Rs. 2,900, and other works Rs. 9,014; under repairs: roads Rs. 27,912, reservoirs and wells Rs. 534, rest-houses Rs. 4,224, road-side trees Rs. 4,380, and other works Rs. 439.

Revenue.

The land revenue for collection for the year ending the 31st July 1877 was Rs. 11,42,389, of which Rs. 11,28,902 were realized before the close of the year, and Rs. 13,487 remained outstanding. The excise revenue amounted to Rs. 1,12,909 against Rs. 1,15,028 in the previous year. The stamp revenue was Rs. 1,02,679 against Rs. 1,12,640. The forest revenue was Rs. 57,064 against Rs. 51,716. To realize the Government revenue three distraints were necessary. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 18,30,808, or, on a population of 760,808, an incidence per head of Rs. 2-6-6.

Health.

The returns show a rise in births from 3,893 to 5,158, and in deaths from 6,180 to 7,358. Of the total mortality 176 deaths were due to small-pox. Seven dispensaries afforded relief to 34,747 patients, compared with 32,695 in the previous year. The number of vaccinations fell from 52,014 to 41,912.

Instruction.

The number of schools fell from fifty-nine to fifty-seven, and the attendance from 3,629 to 3,128.

SHIKARPUR.

Land.

The revised survey and settlement was introduced into the Sukkur sub-division during the year under report. The settlement of the Rohri sub-division expired last year, and a revised set-

tlement is being taken in hand. City survey operations in the town of Sukkur are fast approaching completion. No minors' estates are at present in charge of the collector. At the close of the year, 30th June 1877, the district contained a total area of 1,309,124 acres of unoccupied arable land.

Among the twenty-three districts of the Presidency, the Shikárpur police rank eighth in efficiency, with fifty-nine per cent of convictions and fifty-one per cent of recoveries of stolen property. As regards freedom from serious crime, Shikárpur holds the sixteenth place with, against 900 in the previous year, a total of 879 offences, or 1.12 per thousand of the population. In addition to one original suit pending from 1875-76, Government were engaged in one fresh suit. One suit was compromised in favour of Government, and one is pending. Against 3,202 registrations and a revenue of Rs. 9,255 in the previous year, there were 2,902 registrations and a revenue of Rs. 8,248. The district contains twelve municipalities, with a total municipal population of 97,588 souls. The receipts amounted to Rs. 1,73,374, and the incidence of taxation varied from Re. 0-7-1 to Rs. 7-6-1 per head of the total municipal population.

Protection.

Of a total area of 1,404,039 acres of culturable land 840,581, compared with 684,358 in the previous year, were under cultivation. About nine inches of rain fell, or about five inches more than the average for the last five years. A combination of heavy local rain and an unusually high flood in the river caused much loss of crops and damage to property. No advances were made for agricultural improvements. The price of Indian millet, *jawár*, the staple grain, fell from forty pounds the rupee in March 1876 to forty-two pounds in March 1877. During the same time the daily wage of unskilled labour remained stationary at five annas. The local public work funds receipts, inclusive of an opening balance of Rs. 99,942, amounted to Rs. 2,87,685 against Rs. 3,02,816 in 1875-76. The main heads of expenditure were: under construction, roads Rs. 1,105, bridges Rs. 908, reservoirs Rs. 102, wells Rs. 3,904, rest-houses Rs. 2,335, and other works Rs. 4,299; under repairs, roads Rs. 33,749, reservoirs and wells Rs. 1,365, rest-houses Rs. 7,467, dispensaries Rs. 90, road-side trees 10,303, and other works Rs. 3,606.

Production.

The land revenue for collection for the year ending 31st July 1877 was Rs. 16,04,368, of which Rs. 15,54,494 were realized before the close of the year and Rs. 49,874 remained outstanding. The excise revenue amounted to Rs. 90,726 against Rs. 88,870 in the previous year. The stamp revenue was Rs. 1,29,362 against Rs. 1,26,165. The forest revenue amounted to Rs. 59,516. To realize the Government revenue eighty-two distraints were necessary. The total raised under all heads of revenue, Imperial, local, funds, and municipal, amounted to Rs. 23,33,369, or, on a population of 807,743, an incidence per head of Rs. 2-14-2.

Revenue.

The returns show a rise in births from 4,210 to 5,354, and in deaths from 7,087 to 8,224. Of the total mortality sixty-six deaths were due to small-pox. There were no cases of cholera.

Health.

ADMINISTRATION OF THE
LAND,
—
SIND
DIVISION.

Five dispensaries afforded relief to 34,551 patients, compared with 33,067 in the previous year. The number of vaccinations fell from 50,999 to 46,708.

Instruction. The local funds revenue assigned for education amounted to Rs. 52,945. The number of schools rose from eighty-one to eighty-two, and the attendance fell from 5,867 to 5,803.

UPPER SIND FRONTIER.

Land. No change was introduced into the revenue settlement of the lands of the Upper Sind Frontier. No minor's estates are at present under the charge of the superintendent. At the close of the year, 30th June 1877, the district contained a total area of 50,000 acres of unoccupied arable land.

Protection. Among the twenty-three districts of the Presidency, the Upper Sind Frontier police rank fourteenth in efficiency, with thirty-four per cent of convictions and fifty-eight per cent of recoveries of stolen property. As regards freedom from serious crime, the Upper Sind Frontier holds the twenty-third place with, against 239 in the previous year, a total of 192 offences, or 1·82 per thousand of the population. During the year no civil suits were filed against Government. Against 203 registrations and a revenue of Rs. 818 in the previous year, there were 160 registrations and a revenue of Rs. 667. The district contains one municipality, with a total municipal population of 5,232 souls. The receipts amount to Rs. 24,607, and the incidence of taxation was Rs. 2·92 per head of the total municipal population.

Production. Of a total area of 319,525 acres of culturable land 264,374, compared with 148,657 in the previous year, were under cultivation. About seven inches of rain fell, or about three inches more than the average for the last five years. Severe floods bursting through many embankments almost destroyed the early crops. No advances were made for agricultural improvements. The price of Indian millet, *jawár*, the staple grain, rose from fifty-eight pounds the rupee in March 1876 to fifty-two pounds in March 1877. During the same time the daily wage of unskilled labour was stationary, from four to five annas. Horses, sheep, goats, bullocks, wool, dyes, and fruits formed the chief articles of import; whilst piece-goods, rice, salt, hides, leather, brass, and copper formed the chief exports, which find their way to Kelat, Cutch, and Afghanistan; wheat, oil-seeds, and wool were also exported. Wheat went in great quantities towards Kurrachee. Local public work funds receipts, inclusive of an opening balance of Rs. 18,383, amounted to Rs. 28,437 against Rs. 27,053. The main heads of expenditure were: under construction, wells Rs. 615, rest-houses Rs. 985, and other works Rs. 2,547; under repairs: roads Rs. 2,199, reservoirs and wells Rs. 163, rest-houses Rs. 22, road-side trees 546, and other works Rs. 365.

Revenue. The land revenue for collection for the year ending 31st July 1877 was Rs. 2,78,239, of which Rs. 2,44,784 were collected before the close of the year, and Rs. 33,455 remained outstanding. The

excise revenue amounted to Rs. 16,675 against Rs. 17,362 in the previous year. The stamp revenue was Rs. 8,334 against 12,524. The forest revenue was Rs. 1,475. No judicial processes were resorted to in the collection of the revenue demands. The total raised under all heads of revenue, Imperial, local funds, and municipal, amounted to Rs. 3,41,588, or, on a population of 105,483, an incidence per head of Rs. 3-3-8.

The returns show a rise in births from 645 to 728, and in deaths from 711 to 939. Of the total mortality no deaths were due to cholera and to small-pox. One dispensary afforded relief to 5,129 patients. The number of vaccinations rose from 4,295 to 6,231. Health.

The local funds revenue assigned for education amounted to Rs. 1,057. The number of schools was five, the same as in the previous year, but the attendance rose from 175 to 180. Instruction.

Surveys.

TOPOGRAPHICAL SURVEY.

Operations. The topographical survey of this Presidency was continued during 1876-77 by the same parties as in the previous year. Their field of operation has been Káttýwár, continental Gujarát, Khándesh, Násik, Ahmednagar, and Sátára. The returns of the work done in the season show 1,760 square miles topographically surveyed in Káttýwár, 2,000 in Gujarát, 1,840 in Khándesh and the Bhopáwar states, 2,202 in Násik and Ahmednagar, and 1,855 in the western part of the Sátára districts. The parties have in addition triangulated 2,040 square miles in Káttýwár, 2,880 in Gujarát, 2,674 in Khándesh, and 2,000 in Násik and Ahmednagar.

Káttýwár. The country surveyed by the Káttýwár party forms geographically part of Sorath and Hállár; politically it includes portions of Dhráfa, Gondal, Junágarh, Jetpur, Bántwa, and Porbandar. The most remarkable natural feature in the tract of country under review is the isolated basalt hill of Osham, which rises abruptly from the plain to a height of 1,032 feet above the sea. Large blocks of obsidian, singularly like coal, are strewn about, and crop up among the basalt rock. The hill is surmounted by a small fort, once a place of great strength.

Gujarát. The area surveyed by the Gujarát party consists of two portions. Of these one lies between meridians $73^{\circ} 0'$ and $73^{\circ} 30'$, and between parallels $22^{\circ} 0'$ and $22^{\circ} 45'$, the other between meridians $73^{\circ} 0'$ and the Gulf of Cambay, and between parallels $21^{\circ} 0'$ and $21^{\circ} 15'$. The large and more northern portion includes about 343 square miles of the Kaira collectorate, ten square miles of the Broach collectorate, and eighty-four square miles of the Panch Máhals; the remainder consists of about 1,089 square miles of Baroda territory, and 125 square miles in the Pándú Mewás under the Rewa Kánta political agency. The southern portion includes 204 square miles of the Surat collectorate, thirty-two and a half square miles of Sachin territory under the Collector of Surat as Political Agent, and 113 square miles of Baroda territory. The northern portion surveyed consists of plain country more or less wooded, with occasional small undulations and hillocks, and intersected by several rivers which cut deeply into the soft soil. Including the city and most of the remaining part of the collectorate of Ahmedábád, the part of the Kaira collectorate

remaining unsurveyed, and parts of the Panch Máhals, and of the Baroda, Rewa Kánta, and Mahi Kánta states are ready for final survey.

By the Khándesh party the detail survey was carried on in two sections in Khándesh between meridians $75^{\circ} 0'$ and $76^{\circ} 0'$, and parallels $21^{\circ} 0'$ and $21^{\circ} 15'$, on the scale of two inches to a mile, comprising parts of the Sauda, Chopra, Bhusáwal, Nasirábád, Brandol, and Amálnér; and in the native states between meridians $74^{\circ} 0'$ and $74^{\circ} 30'$, and parallels $22^{\circ} 0'$ and $22^{\circ} 30'$, in Ali Rájpur and Chota Udepur, Mathwár, and Káttywár in the Agencies of Bhopáwar and Rewa Kánta contiguous to country previously surveyed. The area completed up to date from the beginning of the survey amounts to 9,750 square miles, exclusive of overlaps into work of other parties. Of this area 1,394 square miles appertain to the two-inch, and the remainder to the one-inch scale. The greater part of the country under survey beyond the limit of Khándesh is mountain and forest, passing on the north into the slopes of the Vindhia hills. The highest point, Ruttan Mál, 2,146 feet above mean sea-level, forms the highest western extremity of the range. The Narbada flows along the southern boundary. It is deep and rapid, without a ford or ferry, running through a narrow gorge, overlooked by high and rugged hills covered with forest, and extremely difficult to traverse. The villages along the river-banks are few, and the Bhils, the only inhabitants, almost dispense with clothes; the women occasionally having, by way of an apron, merely two leaves of the dhák tree, *Butea frondosa*. The country between the Narbada and the Vindhias is very hilly, covered for the most part with dense forest. It is nevertheless thickly peopled, and every available spot is under cultivation, millet, *bájri*, being the principal produce and the staple food. Except to the north of Ali Rájpur, in the Bhábra and Chándpur divisions, where the Bhils are treacherous and murderous, the people are quiet and orderly. All go about armed with bows and arrows, with which, up to fifty yards, they are almost certain shots.

Khándesh.

The area surveyed by the tenth or first Deccan party included all that remained unfinished in Násik, a small portion of Báglán and Igatpuri. In Ahmednagar the season's operation embraced portions of Ráhuri, Newása, Sheogaon, Sangámner, and Akola.

Násik.

The eleventh or second Deccan party extended the work of previous seasons to the north-west and south-west, and in consequence of the scarcity prevailing in the eastern districts, confined itself to the country adjoining the Sayhádri range. Through the loss of all the ground prepared for survey, operations were a good deal cramped. As in the previous season, this party was able further to reduce the mileage rate of expenditure.

Sátára.

REVENUE SURVEY.

Of five branches of the revenue survey at work during the year under the general control of the Survey and Settlement Commissioners of the northern and southern divisions, four, the Poona and Násik, the Ratnágiri, the Gujarát, and the Sind Settlement

Survey, were in the northern division, and one, the Southern Máraþa survey, in the southern division.*

The effective strength of these five branches was thirty-four working parties; the outturn of work was 1,783,740 acres measured and 1,798,511 acres classed. Details are given in the following statement:—

Bombay Revenue Survey, 1876-77.

Branch.	Officer in Charge.	Parties employ- ed.	Operations.	
			Area surveyed.	Acres classed.
<i>Northern Division.</i>				
Poona and Násik survey	Colonel Taverner	5	299,112	189,021
Ratnágiri survey	Mr. Gibson	6	167,878	151,222
Gujarát survey	Mr. Beyts	4	147,007	81,269
Sind settlement department	Colonel Haig	6	865,187	409,203
<i>Southern Division.</i>				
Southern Máraþa Country survey ..	Mr. Beynon .. } Captain Godfrey .. }	18	804,556	967,796
Total ..		34	1,783,740	1,798,511

The establishments of the northern division were employed in carrying out the resurvey and reclassification of the lands of some of the early-settled portions of the Poona, Ahmednagar, and Násik collectorates; upon original survey work in Ratnágiri and in parts of Gujarát, and upon revision survey in the province of Sind. Two establishments were also detached for carrying out survey operations in each of the states of Sáwant Wári and Bhor, and one was placed under Major Haig's orders to assist in the operations for combining the revenue and topographical surveys of Gujarát. During the hot season a party, under an Assistant Superintendent of the Gujarát survey, was employed in the survey of the Dáng country between Surat and Khándesh. The object of this survey is chiefly to furnish information required for the use of the forest department. Four assistants of the Poona and Násik survey and three field establishments were, during the course of the year, transferred to the revenue department for employment on famine relief work. The Southern Máraþa Country survey was employed on the revision survey in the Dhárwár collectorate and on the original survey in Kánára. Fortunately the subdivision of Dhárwár, directly affected by the famine, had been very nearly completed before the commencement of the season under report. There was, however, some obstruction to the speedy progress of the work in the parts where work was carried on, in consequence of the time of the local officers being much

* The Survey Commissioner of the southern division has also the charge of the Mysore survey operations, the results of which are reported to the Government of that province.

taken up with wanderers and immigrants coming from the adjacent tracts affected by the famine. Still, on the whole, fair progress was made in the prosecution of the revision survey. To help in famine matters one assistant superintendent, with his field establishment, was transferred from the survey department and placed under the orders of the collector of Kaládgi. In Kánára an unusual amount of sickness occurred among the native establishments. It was expected that the dryness of the season would render this district more healthy than usual, but the contrary proved to be the case, probably in consequence of the decreased supply of good drinking water.

An attempt was made to prosecute the survey in the SÁNGLI territory, but the famine very soon stopped all work there. In KOLHÁPUR, which pays for its own survey, good progress was made, this state being happily exempt from the direct operation of the famine.

CITY SURVEY.

Ahmedábád is the only city in the northern division at present under survey. Considerable progress, both in the survey and in the inquiry branches, was made. But the number of fresh claims and appeals that are daily preferred greatly delay the work. The present law (Bombay Act IV. of 1868), according to the opinion of the Legal Remembrancer, fixes no limit to claims and appeals, or, in other words, gives no finality to the proceedings of the survey and inquiry officers; and, until this is remedied, it is impossible to say when the work will be completed. The amendment of the existing law, by prescribing a limit of the time for appeals, is under consideration. During the year under report cases involving 8,709 different properties were disposed of, and decisions passed in 800 miscellaneous questions. In seventy-nine instances appeals were preferred against the inquiry officer's decisions. Of these thirty-eight were upheld, twenty-eight reversed, and thirteen remained undisposed of.

The completion of the survey of the city of Kurráchee was noticed in last year's Administration Report. The inquiry work has since been brought to a close, and the preparation of the general map is well advanced. The total area within municipal limits, as obtained from the topographical survey in 1869-79, was 229,022,508 square yards, or 47,319 acres, of which the actual area surveyed by Colonel Laughton's party was 25,025,773 square yards, or 5,171 acres. Of this there have been set aside as Government reserves—

- (a).—The civil lines comprising 392,760 square yards, or eighty-one acres, not to be built upon.
- (b).—The Rámbág quarter, of 457,983 square yards, or ninety-five acres, reserved for the proposed citadel.
- (c).—Serai quarter, 42,637 square yards, or nine acres, reserved as the site of a new revenue office.

The financial aspect of the Kurráchee survey cannot be regarded as otherwise than most satisfactory. The total cost of the survey and inquiry is Rs. 85,608, and the sums already realized, and in the

course of realization from the sale of title deeds, and the rights of occupancy, amount to Rs. 69,761, while the annual increased revenue is Rs. 5,002, of which Government receive Rs. 1,981, and the municipality Rs. 3,021. This sum they have now received for two years, and there is consequently a balance of only Rs. 9,804 against the survey, which will very shortly be cleared off, as the sales of right of occupancy go on, and the city survey title deeds are issued and paid for.

In the southern division the surveys of the cities of Hubli and Dhárwár, the expense of which is met from municipal funds, were continued. In Hubli 716 and in Dhárwár 741 houses and precincts were examined.

Settlements.

LAND REVENUE.

Násik.

The following details show, as far as they are available for each of the districts settled, the advance in material wealth on which the increased revenue demand is based. For the eleven villages of the Kalwan sub-division of Násik and the twenty-three Dindori Dáng villages no comparative statistics are available. But in the case of the Dindori Dángs, where the demand has been increased by eleven per cent, prices in 1874-75 had, on an average, risen about sixty per cent compared with the first ten years of the former settlement (1846—1855). Exclusive of the town of Násik in the thirteen villages of the Násik sub-division, where the demand has been raised forty-nine per cent, the percentage increase was, since 1845, in population fifty-five, and in carts about forty. The average price of the chief varieties of grain was in 1874-75 about eighty per cent higher than in the twelve years (1832—1843) preceding the former settlement. In the seventeen Násik Dáng villages, where the demand has been raised by thirteen per cent, the percentage increase since 1849-50 is in population sixty-four, in carts 159, in bullocks thirteen, in cows seventy-two, and in ploughs forty-seven. The average price of the chief varieties of grain was in 1875-76 about seventy per cent higher than the prices ruling between 1832 and 1845. In the 189 villages of the old Pátoda district, where the rates have been raised forty per cent, the percentage of increase since 1846, the year of the last settlement, is in population fifty, in carts fifty-five, in bullocks 45.5, in cows sixty-seven, and in ploughs sixty-six. The average price of the chief varieties of grain in 1875-76 was nearly ninety per cent higher than the corresponding figure in 1846-47.

Thána.

In the case of the Thána and Kánára settlements materials for the purpose of comparison are not available. But in the Jambusar sub-division of the Broach district, where the demand has been raised by thirteen per cent, the percentage of increase since 1849-50, the year of the last settlement, has been in population 26.75, and in ploughs 2.50. There is a decrease in carts 1.25, in

bullocks 21·50, in cows 64 per cent. The average price of the chief varieties of grain in 1875-76 was nearly ninety-two per cent higher than the corresponding figures in 1849-50.

In regard to the increase of revenue to be looked for under the revised settlements in Kotri and Sukkur in Sind, the settlement officer states that, "at the introduction of the different settlements, nearly the whole of the assessed land, whether cultivated or waste, was taken up; but, as under the new system, the revenue depends on the extent of cultivated, not of occupied, land, it is impossible at present to give the actual results of revision as they affect the revenue. It is expected, however, that there will be a satisfactory increase of revenue in Sukkur, and a slight rise in Kotri." In the former sub-division the settlement officer estimates the probable increase of revenue at Rs. 10,000 above the average of the past ten years.

Besides the districts where they have actually been put in force revised rates are ready for introduction in several parts of the Presidency. In the Dhárwár collectorate a sub-division and a half, estimated to bring a yearly increase of revenue amounting to Rs. 58,000, was ready for revision settlement. But, in consequence of the prevailing scarcity and distress, all revision settlement was postponed till next year. Similarly the revision of the small portion of the Kaládgi collectorate, in which the original settlement has fallen in, was postponed. This small portion comprised thirty-nine villages, and it was estimated that an increase of revenue of Rs. 7,845 would result from the introduction of fresh rates. Dhárwár.

In Kolhápúr the revenue settlement was introduced into seventeen state and three private villages of the Panhállá sub-division. The result is an increase in the revenue demand from Rs. 19,805 to Rs. 22,973.

In Kánára the agitation against the survey and settlement has almost entirely died out. The decision of the High Court in relation to the right of Government to revise the assessment was, on every point, given in favour of Government on the 1st April 1875. The detailed judgment has since been published. It is now the subject of an appeal to the Privy Council. Kánára.

The total expenditure of the surveys of the two divisions amounted to Rs. 7,23,859. The settlements introduced during the year resulted in the imposition of a yearly assessment of Imperial revenue, Rs. 1,67,060 in excess of past collections, and of Rs. 10,405 in private, *inám*, villages and native states. To this increase of revenue would have been added a further sum of Rs. 65,800 had the introduction of the Dhárwár and Kaládgi settlements not been postponed. So far as the Survey and Settlement department is concerned, all the expense which these revisions will entail has been fully incurred. It will be seen from the statement (2 Part II.) given in the appendix, that the total cost of revision settlements in the sub-divisions where the settlement had come into operation, is Rs. 15,30,501. This expenditure has resulted in an annual increase of Rs. 10,46,798 of land revenue. Finance.

At the close of the year under report Colonel Francis, who had long filled the office of Survey Commissioner, Northern Division, applied for furlough to England, and during his absence Colonel Anderson, Survey Commissioner, Southern Division, was, in addition to his own duties, ordered to hold charge of the northern division.

ALIENATION SETTLEMENT DEPARTMENT.

Northern Division.

In the northern division the inquiry into the claims to land and cash alienations in the Panch Máhals has, with the exception of a few cases, been completed. The following statement shows the results of the inquiry into the claims of pátels to village lands :—

SETTLEMENT OF PATELS' CLAIMS IN THE PANCH MA'HA'LS.

Quantity of Land held by the Patels and their families.		Area set apart as Service Land.		Area continued free of Service, "Ját Inám."		Amount of Quit-rent from Lands held free of Service.
Area.	Assessment	Area.	Assessment.	Area.	Assessment.	
A. g.	Rs. s. p.	A. g.	Rs. s. p.	A. g.	Rs. s. p.	Rs. s. p.

Of 8,029 inquiries into claims to land, 2,587 were in Dohad, 1,578 in Jhálod, 3,070 in Hálol, and 794 in Godhra.

Upwards of 200 claims to religious and charitable allowances were also settled, with the following results :—

SETTLEMENT OF CLAIMS TO RELIGIOUS AND OTHER ALLOWANCES.

Description of Allowance.	Number of Claims.	Amount of Claims.	Amount to be continued.	Annual saving to Government.
		Rs. s. p.	Rs. s. p.	Rs. s. p.

Total ...	221	2,065 5 5	1,774 15 1	290 6 4

A few cases of cash allowances in Khándesh and Násik were also disposed of.

The results of the settlement of claims to compensation for the abolition of rights of various descriptions in the Panch Máhals, in Khándesh, in Násik, and in the Peint state, are shown in the following statement :—

DISPOSAL OF MISCELLANEOUS CLAIMS IN THE PANCH MA'HA'LS, KHANDESH, AND NÁSİK.

Number of Claims.	Amount of Claims.	Amount to be continued.	Annual saving to Government.
	Rs. s. p.	Rs. s. p.	Rs. s. p.
7	202 1 8	159 0 8	43 1 0

DISPOSAL OF MISCELLANEOUS CLAIMS IN THE PEINT STATE.			
Number of Claims.	Amount in Deposit.	Amount to be disbursed to the Claimants.	Balance to be credited to the Peint State.
	Rs. a. p.	Rs. a. p.	Rs. a. p.
37	16,061 5 3	11,564 4 8	4,497 0 7

The cash alienation list for the district of Násik was distributed in October last; that for the Panch Máhals is now being prepared. A comparison of the copies of the Salsette leases has also been effected. The financial results of the work in the northern division are that revenue on account of resumptions, claims disallowed, allowances struck off, purchased or commuted, and arrears struck off, amounting in all to Rs. 8,544-8-9, accrues to Government. On the other hand, the total sum of allowances confirmed comes to Rs. 14,996-8-7.

Southern Division.

By the officers of the alienation department in the southern division fifty-eight cases have been decided.

The work of preparing cash allowance lists was continued. Lists for Dhárwár and Ahmednagar are complete, and those for Poona and Ratnágiri are in a forward state.

Waste Lands.

Over the whole Presidency, except in Ratnágiri and Kánára, where the figures are not complete, and in Haidarábád and Kurrachee, where no information is available, the returns show at the beginning of the year, 30th June 1876, a total area of 4,590,996 acres of arable unoccupied land, and at its close a total area of 4,538,223 acres; that is, a reduction in the unoccupied area of 52,773 acres. Of this whole reduction 42,047 were in the northern division, 1,962 in the Kánárese division, and 16,604 in Sind. The southern division shows, on the other hand, an increase of 7,840 acres.

The districts with, at the close of the year, 30th June 1877, the largest area of unoccupied arable land are Shikárpur with 1,309,124 acres, Khándesh with 835,222, the Upper Sind Frontier with 500,000, Násik with 440,644, Thar and Párkar with 371,789, the Panch Máhals with 254,300, Ahmednagar with 162,897, Kaira with 112,837, and Ahmedábád with 101,430. The twelve remaining districts varying from Dhárwár with 83,453 acres to Poona with no arable waste land, have an average unoccupied area of 37,498 acres.

To the past year's reduction in the unoccupied area among the districts of the northern division, Khándesh contributed 40,000 acres, Thána 3,532, Kaira 1,926, the Panch Máhals 1,795, Broach eighty, and Surat fifty. On the other hand, the area of unoccupied arable land rose in Násik by 3,956 acres, in Ahmedábád by 3,071 acres, and in Kolába by ten acres, leaving a balance of decrease of 42,046 acres. In the southern division a decrease of 5,898 acres in Sholápur and 3,980 in Ratnágiri was more than met by an increase of 2,951 acres in Sátára and of 14,767 in Ahmednagar, leaving, on the whole, an increase of 7,840 acres in the arable unoccupied area. In the Kánárese division there was an increase of 712 acres in Belgaum and a decrease in Dhárwár of 1,780, in Kaládgi of 697 and in Kánára of 197 acres, leaving, on the whole, a decrease of 1,962 acres. In Sind the returns are available for only three of its five districts. In the Upper Sind Frontier there was an increase of 15,987 acres, and a decrease in Thar and Párkar of 27,326 acres, and of 5,265 in Shikárpur, leaving, on the whole, a decrease of 16,604 acres.

Government Estates.

None.

Wards' Estates.

During the past year the Revenue Commissioner, Northern Division, brought to the notice of Government that the Thákurs of Kaira had fallen into circumstances so embarrassed as to require special relief similar to that already granted to the Tálukdárs of Ahmedábád and the Thákurs of Broach. It was accordingly arranged that the Broach Thákurs' Act should be repealed, and its provisions, after suitable modifications, be re-enacted. This has been done in Act XIV. of 1877, which is intended to answer the requirements both of Kaira and Broach. During the year there were in Ahmedábád seventy-two estates under liquidation, and eleven were released; Rs. 12,737 being paid to creditors and Rs. 19,484 to Government in repayment of loans, or Rs. 32,221 in all, against Rs. 18,801 in the previous year. This large increase was on account of the receipt of a sum of Rs. 7,000 from the Gangád estate, which paid nothing last year, and an increase of about Rs. 3,000 in the contribution from the Gamph estate. The outstanding liabilities amounted to Rs. 2,07,242, or Rs. 12,118 less than they did last year. The difference between this sum and the total repayments, amounting to Rs. 32,221, was in consequence of the addition to the balance of liabilities outstanding last year of the scheduled debt of the Goría and Sumudiala estate, amounting to Rs. 17,479. The balance represents the interest accruing on Government loans still outstanding. Three more estates were brought under liquidation, but as the extent of their assets and liabilities has not been accurately ascertained, further remarks are unnecessary. In Broach the estates, as shown in the margin, paid Rs. 26,500 to Government on account of the principal and interest of advances made for the liquidation of their debts. As the new Act XIV. of 1877 came into operation only in June last, no progress was made in applying its provisions to the estates comprised in the Kaira collectorate. Advances, however, amounting to Rs. 9,959, were made to the Thákurs of Kherda, Napád, and Gajna.

Needy land-
lords.

The following table shows the amount of property belonging to minors in the Bombay Presidency, administered by the Tálukdári settlement officers and the collectors:—

Administered Minors' Estates, 1876-77.

	Number of Minors' Estates.	Receipts.	Disburse- ments.	Balance at close of 1876-77.	Area of Land.	Remarks.
		Rs.	Rs.	Rs.

III.—PROTECTION.

Course of Legislation.

The following Acts were passed and received the assent of His Excellency the Governor of Bombay and of His Excellency the Viceroy and Governor-General during the year 1876-77 :—

Act No. II. of 1876. An Act to amend the law relating to the land revenue administration of the City of Bombay.

Act No. III. of 1876. An Act to consolidate and amend the law relating to the powers and procedure of Mámlatdárs' courts.

The following Bills were pending at the close of the year :—

Bill No. 1 of 1875. A Bill to consolidate and amend the law relating to revenue officers and the land revenue in the Presidency of Bombay.

Bill No. 3 of 1876. A Bill to secure the payment to Government of certain sums of money by the municipal corporation of the City of Bombay.

Bill No. 4 of 1876. A Bill to amend Bombay Act IV. of 1868 (An Act to make further provision regarding the application of Bombay Act I. of 1865 to towns and cities), and to restrict the application of Bombay Acts II. and VII. of 1863 in towns and cities, and otherwise to amend Bombay Act I. of 1865.

Bill No. 5 of 1876. A Bill to prohibit the practice of inoculation, and to make the vaccination of children in the city of Bombay compulsory.

Bill No. 1 of 1877. A Bill to amend the law for the prevention of adulteration of cotton and for the suppression of fraudulent practices in the cotton trade.

The above two Acts, passed to amend the law relating to the land revenue administration of the city of Bombay, and to consolidate and amend the law relating to the powers and procedure of Mámlatdárs' courts, were noticed last year at page 74 of the General Administration Report, and are merely repeated here owing to the date on which they passed into law.

Bill No. 1 of 1875 was fully noticed last year at page 74 of the Administration Report, and it is still being considered by the Council.

Municipal.

Bill No. 3 of 1876. The municipal corporation of Bombay having applied to the Government of India for a fresh loan of forty-two lakhs of rupees, and for certain concessions in respect of the loans which have been already advanced to it under Bombay Act II. of 1872, this Bill was introduced for the purpose of giving effect to the terms to which the Government of India has agreed, and of providing proper security for the punctual payment of the moneys which will thus become due to the Government of India. The Bill was read a third time and passed on the 27th October 1876. It received the assent of His Excellency the Governor of Bombay on the same day, and was sent for the assent of His Excellency the Viceroy.

City survey.

Bill No. 4 of 1876. When Bombay Act IV. of 1868 was passed, it was intended that the expenses of city surveys should be partly met by the title-deeds fees. It was expected that a considerable income would be derived from this source, under the impression that clause 2 of section 5 of the Act would render it compulsory on owners and occupants who claimed total or partial exemption from land-revenue to take and pay for title deeds under section 10, in order to establish their claim. But the question whether the Act, as it was passed, is capable of this construction, has been made the subject of litigation, and, although Government was partially successful in the district court, the Law officers advised that the proper interpretation of section 5 clause 2 and of section 10 was opposed to the view for which Government was contending, and it was found necessary to yield the point in favour of the plaintiffs and to abandon the defence of the suits. It is essential, however, in the interest of the general revenues of the country, that city surveys should be partly self-paying; and it is also fair that owners and occupants, who derive considerable advantages from the application of Bombay Act IV. of 1868 to their lands in towns and cities, should be called upon to pay a small return for such advantages. This Bill was therefore introduced for the purpose of amending Bombay Act IV. of 1868, so as to render the payment of a certain moderate fee by every such owner or occupant compulsory, but enabling him to obtain title deeds in return therefor, without additional charge, if he applies for them within a certain reasonable period, and pays the fee promptly and of his own accord.

Vaccination.

Bill No. 5 of 1876. Very soon after the discovery of vaccination, most of the Governments of Europe made provision for affording its benefits to their respective populations. As early as 1803, an ordinance on the subject was promulgated in Sweden; and when Jenner died in 1823, there were few European states, except Great Britain, in which there were not in force laws and regulations relative to vaccination. By the laws of many of these states, the practice was, directly or indirectly, rendered compulsory. The first law regarding vaccination in England was enacted in 1840, and seldom has the legislature passed a measure of more obvious public

benefit. Although vaccination was not made compulsory by that Act, large numbers of persons availed themselves every year of the opportunities put within their reach of protecting their children against small-pox; and the impression consequently produced on the mortality from that disease was so great, that the average deaths were soon reduced from 770 to 300 per million of population per annum. In 1853 compulsory vaccination was made the law of England, and the result of the working of that Act during the subsequent fourteen years showed a further annual saving of 100 lives out of every million of the population. In 1867 an Act was passed "to consolidate and amend the statutes relating to vaccination in England," and that Act, the fruit of large experience and mature consideration, forms the basis of the present Bill. Vaccination was introduced in the Island of Bombay in 1802, and has been attended with very satisfactory results. But the victims of small-pox are still numerous. In the year 1870, 556 persons died of this disease, of whom 491 were children under nine years of age. In 1871 the deaths from small-pox numbered 919, and 813 of the victims were under nine years of age. In the year 1872 the deaths from small-pox at all ages numbered 1,854, and in the first four months of 1876 they reached 2,717. In 1872 a Bill was introduced into the Legislative Council to provide for compulsory vaccination in the city of Bombay, but it was not proceeded with, in the hope that the voluntary acceptance by the people of the benefits of vaccination would in time render legislation unnecessary. The very serious extent to which the contagion spread in the first part of this year, and the number of deaths which occurred, as above shown, induced Government, with the approval of the Government of India, to bring forward this measure, which was in most respects similar to the previous Bill, but more complete.

It may be added that out of twenty-seven of the principal native gentlemen of Bombay who had been asked for their opinions on the subject, twenty-four were in favour of legislation.

The Bill was read a third time and passed on the 22nd February 1877, and it received the assent of His Excellency the Governor of Bombay on the 2nd March 1877. It has since received the assent of His Excellency the Viceroy and become Act I. of 1877.

Bill No. 1 of 1877. As it had been determined that the existing law for the prevention of the adulteration of cotton was to continue in force, this Bill was introduced with the view of modifying such of the provisions of the existing Act as appear to be unnecessarily stringent, and of rendering it, in other respects, more efficient.

The Bill also proposed to enable Government (1) to levy the fee Cotton frauds. imposed only on cotton for export, more generally from all the persons who benefit by the operation of the Act; and (2) to expend the revenue realized from that fee and from the other sources recognized by the Bill, on the encouragement and improvement of the cultivation and manufacture of cotton as well as for the special purposes of the law.

The opportunity was also taken of entirely redrafting and re-arranging Bombay Act IX. of 1863, which was, therefore, repealed, and several minor amendments were also made in the substance of that Act. The Bill was read a third time and passed on the 3rd March 1877, and it received the assent of His Excellency the Governor of Bombay on the 10th March 1877. The Bill has since been submitted for the assent of His Excellency the Viceroy.

Bills pending. Besides the Bills pending at the end of the year, there was, under consideration in the Legislative Department, a Bill to amend the law relating to the control of the manufacture of spirituous liquors and for the realization of the excise revenue in the city of Bombay. This Bill has since been introduced into the Council of the Governor of Bombay for making Laws and Regulations.

Strength and Cost of Bombay Police, 1875-76 to 1876-77.

The strength and cost of the police in the Bombay Presidency are exhibited in the following table, contrasted with the totals for the previous year :—

Police.

District.	Sanctioned Strength.						Number of Commissioners, District and Assistant District Superintendents included in foregoing.		Number of Vacancies at close of 1875-76 and 1876-77.		Total Cost payable from				
	Paid wholly or in part from Provincial Revenue.		Paid wholly from other than Provincial Revenue.		Total.						Provincial sources.		Other sources.

* Exclusive of thirty-eight men employed in Sâwânur state.

† Exclusive of 100 men employed as Kurrachee frontier political police.

‡ Exclusive of forty-three men lent to traffic engineer and store departments at a cost of Rs. 5,881.

There was no change in the number of officers and men composing the Great Indian Peninsula railway police. The cost was less by Rs. 2,316 than it was in 1875. The force on the Bombay, Baroda, and Central India railway shows an increase of twelve men in consequence of the abolition of the carting agency. The cost exceeded that of last year by only Rs. 185, as the sum of Rs. 2,140 allotted for clothing was not spent.

Under the orders of the Government of India, this Government were pleased to contribute a sum of Rs. 90,000 to the cost of the Bombay city police.

Distribution. Details of the strength, cost, distribution, and employment of the police will be found from page xxx to xxxiii of the statistical returns. The proportion of police to population and area is given below for each division :—

Division.	Population per square mile.	One Policeman to	
Northern division ...	177	4.5 square miles.	803 persons.
Southern division ...	187	6.19 do.	1,162 "
Kánárese division ...	171	6.9 do.	1,181 "
Sind ...	48	11.33 do.	551 "
Bombay city ...	30,480	1/78th of a mile.	477 "

There are 971 railway police to 1,072 miles of railway.

In the northern division 5,081 officers and men are employed on general police duties, and, if the rest of the police be omitted from the effective strength, the proportion is one policeman to 6.7 square miles and to every 1,181 persons. In the southern division 2,784 officers and men are employed on general police duties, and, if the rest be omitted, the proportion is one policeman to 8.9 square miles and to every 1,676 persons. In the Kánárese division 2,023 officers and men are employed on general police duties, and, if the rest be omitted, the proportion is one policeman to nine square miles and to every 1,615 persons. Similarly in Sind, excluding the frontier political police, 1,906 officers and men are employed on general police duties, and, if the rest of the police be omitted from the effective strength, the proportion is one policeman to twenty-four square miles and to every 1,192 persons.

Discipline.

The conduct of the men, in a departmental point of view, does not show improvement except in the northern and southern divisions.

Division.	Dismissed.		Punished Departmentally.		Punished Judicially.		Total for		Percentage of Dismissals and Punishments on sanctioned Strength.	
	Officers.	Men.	Officers.	Men.	Officers.	Men.	1876.	1875.	1876.	1875.

* Excluding frontier political police.

† Including police of the engineer and traffic department.

In the Northern division the largest number of men dismissed was in Ahmedábád and Násik; in the former the dismissals were partly on account of debt and partly for misconduct. The largest number fined was in Ahmedábád, Kaira, Násik, and Khándesh. In the Southern division the Sholápur district shows the largest number of men punished departmentally. In the Kánárese division, as reported last year, the Dhárwár district shows the largest number of departmental punishments, no less than forty-two officers and 158 men having thus been fined or degraded. In Sind the number of officers and men dismissed, punished departmentally and judicially, rose from 612 in 1875 to 699 in the year under report. There was also an increase in the number of officers and men of the railway police dismissed, and punished departmentally and judicially.

District.	Armed with		
	Fire-arms.	Swords and Batons.	Batons only.
Northern division	3,388	4,067	...
Southern division	1,748	264	2,008
Kánárese division	1,480	122	1,186
Sind *	2,025	2,070	19
G. I. P. railway	3	875
B. B. and C. I. railway 26	58	350
Total for 1876..	8,667	6,574	4,118
Total for 1875..	8,692	6,518	4,099

The number of the district and railway police armed with fire-arms, swords, and batons are given in the margin; of these police 9,111 are of ten years' service and upwards, and 6,279 can read and write. Last year the numbers were 8,352 of ten years' service, and 5,745 educated.

Armament.

* Exclusive of 100 men of the Frontier Political Police

The death-rates are shown below:—

Division.	Percentage of Deaths to Strength.	
	1875.	1876.
Northern division	1.5	1.4
Southern division	1.11	1.3
Kánárese division		1.6
Sind... ..	1.62	1.11
G. I. P. railway	3.4	.69
B. B. & C. I. railway	1.19	1.15

In the Northern division no fresh punitive police posts were established; but the posts at Od in Kaira, Degám in Broach, and Gondegaon in Násik, were continued during the year. In the Southern division only four punitive police posts were established; of this number one was at Dingora, in the Poona district, for a period of six months, and the remaining three in the Sátára district for one year each. On the other hand, the twenty-two punitive police posts established in 1875 in the Poona and Ahmednagar districts

Special posts.

in consequence of the agrarian riots committed in that year, as well as all the other punitive police posts in these and other districts which were continued in the previous year, were withdrawn during the year under report. In the Kánárese division there were two punitive posts stationed in the Belgaum district, and one post in the Dhárwár district. In Sind punitive police posts were entertained at seven places.

Crime.

Passing to the review of the criminal returns, it will be convenient to follow the method adopted last year and to treat the Presidency proper apart from the Sind, the railway, and the Bombay city police.

In the Northern, Southern, and Kánárese divisions the amount of cognizable and non-cognizable crime is reported as follows:—

Division.	Cognizable Cases.		Non-cognizable Cases in 1876 where Police were				Total Cognizable and Non-cognizable.		Number of Cognizable Cases reported in previous years.		Grand Total.	
			Employed.		Not employed.							
	1875.	1876.	1875.	1876.	1875.	1876.	1875.	1876.	1875.	1876.	18 5.	1876.
Northern division.	18,471	18,186	1,514	422	6,266	6,519	26,351	25,137	337	378	26,488	26,506
Southern division.	12,870	13,650	2,405	330	1,036	2,674	16,311	16,654	196	314	16,507	16,968
Kánárese division.	7,898	9,860	883	377	1,063	1,492	9,846	10,729	215	193	10,061	10,923
Total..	39,239	41,696	4,802	1,129	8,367	10,685	52,408	52,510	649	885	53,056	53,395

The year 1876 shows an increase of 102 cases in the total amount of cognizable and non-cognizable crime reported from the Northern, Southern, and Kánárese divisions of the Presidency, when compared with the returns for the year 1875. In the Northern division there was a decrease of 1,124 crimes. In the Southern division there was an increase of 343 crimes, and in the Kánárese division there was an increase of 883 crimes.

The number of offences reported during the last five years is given below:—

	Northern division.	Southern division.	Kánárese division.
1872 ...	28,041 ...	17,553 ...	9,932 ...
1873 ...	25,619 ...	18,996 ...	9,707 ...
1874 ...	22,036 ...	16,349 ...	9,452 ...
1875 ...	19,977 ...	16,311 ...	9,846 ...
1876 ...	18,494 ...	16,654 ...	10,729 ...

In Sind there was a marked diminution of crime, which was most conspicuous in Haidarábád and least in Kurrachee; the general cause of this was the decrease in cattle-lifting, partly due to increased success in the action of the police and partly to the special care taken to distinguish between cases of real theft and cases of the mere loss of cattle from straying.

The following is a comparative statement of the total crime committed on the Great Indian Peninsula and Bombay, Baroda, and Central India lines of railway during the years 1875 and 1876 :—

Railway Crime, 1875 and 1876.

Railway.	Cognizable Cases reported during		Non-cognizable cases in which Police were used.		Total Cognizable and Non-cognizable Crimes.		Reported in previous years and brought under inquiry during		Grand Total.	
	1875.	1876.	1875.	1876.	1875.	1876.	1875.	1876.	1875.	1876.
Great Indian Peninsula ..	231	257	69	124	300	381	5	6	305	387
Bombay, Baroda, and Central India	167	168	114	134	281	302	2	..	283	302
	398	425	183	258	581	683	7	6	588	689
Increase or decrease during 1876	+27	..	+75	..	+102	..	-1	..	+101

It will be seen from the above that there was an increase of 102 cases of cognizable and non-cognizable crime on both railways in 1876.

Compared with last year there was in the Northern division a decided decrease in the number of cognizable crimes. The number of cognizable offences reported during the year 1876

District.	Proportion of cognizable Crime to Total Population.

in the five districts of the Southern division shows an increase of 780 cases. During the year under review there was an increase of 1,962 cases of cognizable crime in the Kánárese division. The increase in the Southern and Kanárese divisions is chiefly due to the pressure of want caused by the prevailing scarcity during the latter half of the year owing to the failure of the crops. A table in the margin gives the relative position of the various districts with respect to the amount of cognizable crime in each when compared with the population.

In Sind the total cognizable crime reported for the last five years, marginally noted, shows a decrease.

1872 ..	7,995	The late Commissioner in Sind considers the result obtained in Kurrachee specially satisfactory ; the ratio of convictions having risen nearly five per cent. In cattle-theft,
1873 ...	8,359	
1874 ...	9,873	
1875 ...	9,540	
1876 ...	7,959	

theft, and house-trespass, there were 386 fewer cases, but in hurts and criminal force there was an increase of forty-seven. A comparison of the number of persons brought to trial with the number

convicted gives 81·88 per cent of convictions. A comparison, however, between convictions and arrests may be misleading, as the number of persons arrested depends so much on the character of the crime. Thus in twelve cases of rioting nearly one hundred persons were apprehended, of whom but a small proportion was convicted. The falling off in the Thar and Párkar district is due to exceptional causes already adverted to, and in contrast with Kurrachee the results attained in Shikárpur appear at first sight the least satisfactory. Haidarábád calls for no particular remarks, except that the percentage of convictions, contrasted with the previous year, shows a marked improvement. The accompanying table shows, for the different parts of Sind, the relative proportion of crime to population :—

Crime in Sind, 1875 and 1876.

District.	Population per square mile.	Number of Cognisable Crimes in		Proportion of such Crime to Population.	
		1875.	1876.	1875.	1876.
		Crime. Persons.		Crime. Persons.

Haidarábád	83	2,843	2,259	1 „ 254	1 to 335
Frontier	45	344	296	1 „ 278	1 to 336
Thar and Párkar	14	310	275	1 „ 583	1 to 663
Total	48	9,540	7,959	1 to 230	1 to 285

On the Great Indian Peninsula railway twenty-six more cases were reported during the year against thirty-five in the year previous, and on the Bombay, Baroda, and Central India railway there was only one more case reported against sixty-two in 1875. On the former railway line six actual obstruction cases were reported. Of these two were struck off the register as being unfounded, in two convictions were obtained, and in two others the culprits were arrested, but released on account of their tender age. On the latter line the police were, on the whole, fairly successful in their detection of crime.

Convictions.

The results of the action of the police in detecting crime and bringing offenders to punishment are shown below :—

Division.	Number of Persons arrested during		Percentage of Persons convicted to Persons				Value of Property stolen in		Percentage recovered in	
	1875.	1876.	Brought to Trial.		Arrested.		1875.	1876.	1875.	1876.

Bombay, Baroda, and Central India railway	193	213	74	66	67	60	6,470	7,132	61	75

In the Northern division the total amount stolen in the year under report was Rs. 2,76,487, being less by Rs. 5,901 than in 1875; and also the percentage of recoveries declined from forty-seven to forty-three. The highest percentage of recoveries was in Násik, then follows Surat; in Ahmedábád, Kaira, and Kolába the percentages were alike; Khándesh and Broach declined from forty-five and thirty-eight to thirty-seven and twenty-six respectively; and Thána was the last, with a very low percentage of twenty-one against forty-six. In the Southern division the value of property stolen during the year under notice amounted to Rs. 2,45,766, or an increase of Rs. 38,496, compared with the previous year. There was a considerable falling off in the percentage of recoveries in the districts of Poona and Sholápur, and a slight fall in Ratná-giri; the remaining two districts of Ahmednagar and Sátára show a slight improvement. In the Kánárese division the value of the property stolen was Rs. 42,246 less than 1875. On the other hand, the percentage of recovery rose from thirty-seven to forty; Dhárwár stands first with the percentage of forty-seven; in Kaládgi the recoveries amounted to thirty per cent, or twelve per cent more than in 1875, and Belgaum and Kánára have fallen from forty-six and sixty-nine to thirty-eight and forty-one per cent respectively. In Sind the value of property stolen amounted to Rs. 1,24,154 in the year under report against Rs. 1,46,464 in the previous year.

On the Great Indian Peninsula railway property of the value of Rs. 17,647 was reported as stolen, out of which Rs. 7,087 was recovered. Of 198 cases in which property was stolen, recoveries were effected in 142, giving forty per cent of property recovered and seventy-one per cent in cases against sixty-three and eighty-five, respectively, in 1875. On the Bombay, Baroda, and Central India railway, in 123 cases, property of the value of Rs. 7,132 was stolen, and in 105 cases, property valued at Rs. 5,362 was recovered, which gives seventy-five per cent of property recovered and eighty-five per cent of cases against sixty-three and seventy-seven, respectively, in the year previous.

The following statement exhibits the more serious offences committed during 1876 compared with those of the previous year:—

Serious offences

Serious Crime.	Northern Division.		Southern Division.		Kánárese Division.		Sind.		Railway.		Total Increase or Decrease.	
	Reported 1876.	Increase or Decrease.	Reported 1876.	Increase or Decrease.	Reported 1876.	Increase or Decrease.	Reported 1876.	Increase or Decrease.	Reported 1876.	Increase or Decrease.	1876 compared with 1875.	1876 compared with 1875.

Receiving stolen property ..	400	-51	244	+36	189	+18	175	+47	22	-6	+100	+44

It will be observed that in the Northern division there was a slight increase in the offences of culpable homicide, gang robbery, and robbery, while there was an appreciable decrease under murder, attempt at murder, thefts, and receiving stolen property. In the Southern division the result was not satisfactory. The number of cases of murder for the whole division was thirty-six in the year under report against thirty-one in 1875; the largest increase appears in the Sholapur district, in which there were eleven cases against one in 1875. Poona shows an increase of only one case, the number being eleven in 1876 against ten in 1875. Ahmednagar shows the same number (three) as in the previous year; while the remaining two districts of Sátára and Ratnágiri exhibit a decrease of four and two cases respectively. Under culpable homicides there were eighteen cases during the year under report against five in the preceding year, showing an increase of thirteen cases. The number of cases of gang robbery, robbery, theft, and receiving stolen property also increased. In the Kánárese division there was a decrease in the cases of murder and attempts at murder; but there was an increase in the number of cases of gang robbery, robbery, theft, and receiving stolen property. In Sind the total number of murders was less by four than in the preceding year. The decrease was entirely in Shikárpur, where six fewer cases have been reported, Haidarábád accounting for the increase of two. The police were less successful in dealing with murders, and only sixteen convictions were secured. In Kurrachee only one conviction was secured against four in the previous year. In Haidarábád six cases were punished against three in 1875; and in Thar and Párkar no convictions were recorded. The cases were, for the most part, connected with women, and jealousy or revenge the general motive. There were two cases of gang robbery, one of which occurred in the Frontier district, the other on the Indus Valley state railway works in Kurrachee, which call for no comment.

Outlaws.

As reported last year, the notorious leader of the Koli robbers, Honia Kenglia, and five members of his gang were captured by the police acting under Major Daniell's orders, and were tried and transported for life. Honia's lieutenant, Dadu Daklya, who with a small gang of followers, for some months remained at large, has, since the opening of the present year, been caught and punished. In the Kánárese division a considerable number of gang robbery cases were reported to have been committed after the crops had failed in the districts above the gháts. Bands of men entered fields during the night and broke open the grain-pits, or forcibly reaped and carried off whatever crops had escaped the drought.

Non-cognizable crime.

The number of non-cognizable cases in which the police were used amounted in the Northern division to 422, in the Southern division to 330, and in the Kánárese division to 337; cases in which magisterial interference only was used amounted to 6,519, 2,674, and 1,492, respectively. In the Northern division, of 707 persons arrested by the police, 436 were convicted; in the Southern division, of 553 persons arrested by the police, 277 were convicted; and in the Kánárese division, of 534 so arrested, 307 were convicted. Before the magistrates in the Northern division 10,853

persons appeared, of whom 4,538 were convicted; in the Southern division 4,398 persons appeared, of whom 1,434 were convicted, and in the Kánárese division, of 2,347 so appearing, 1,023 were convicted.

In Sind 7,021 non-cognizable cases were reported against 7,133 in 1875, and 13,717 accused persons were concerned in these cases against 14,005 in 1876. Of 13,717 persons apprehended in 1876, 3,679 were convicted, or twenty-seven per cent, against 3,176 in the previous year.

On the Great Indian Peninsula railway the police were employed in 124 non-cognizable cases, in which 172 persons were concerned, of whom 135 were convicted. On the Bombay Baroda line there were 134 such cases, and of 189 persons arrested 176 were convicted.

The Bombay city police work under a system different from that prevailing in the rest of the Presidency. The report of the senior magistrate of police shows that there is an increase of 1,836 in the number of persons brought or summoned before the police courts in 1876. There were in all 22,231 persons charged with various offences in 1876 against 20,395 in 1875. The increase appears to have occurred mostly in the number of cases brought before the courts by the municipal officers and in the number of persons brought up by the police and by summons for assault or forcible entry. Bombay city.

Of the total 22,231, the high court convicted 139 and acquitted thirty-two; the petty sessions convicted twelve; and the magistrates convicted 13,708, and acquitted 8,328. Twelve persons were under remand at the close of the year. Of the whole number 22,231, 13,859 were convicted, or sixty-two per cent; and if the number of persons against whom the complaints made were withdrawn be deducted, the percentage of conviction rises to eighty-six. The percentages were the same in 1875. Omitting now all accused persons but those arrested by the police upon their own authority, and omitting also those whose cases were not disposed of by the magistrates within the year, and adding those so arrested in 1875, but whose cases were not disposed of till 1876, the number is 12,762, of whom 11,623 were either convicted by the magistrates or committed to higher courts. That is to say, in ninety-one out of every one hundred arrests made by the police, the magistrates adjudged the persons arrested to be really guilty, a result very creditable to the police. Four Government and twenty-nine municipal police were dismissed, whilst one Government and three municipal police resigned. Convictions.

The number of offences dealt with by the courts amounted to 18,881, or 4,817 more than in 1875. But 242 cases were reported, in which no persons were apprehended, against 503 in the previous year. The increase of crime was most marked in cases of offences against the state, public nuisances, offences relating to the public peace, annoyance, municipal offences, murders and hurt. A decrease, though nowhere conspicuous, occurred under offences Offences.

against public justice and under theft. There were four executions during the year, twenty-one persons transported, 172 flogged, 9,101 fined, 539 bound over to be of good behaviour, and 1,332 admonished and discharged. Property was stolen in 1876 to the computed value of Rs. 69,501, of which property to the value of Rs. 45,802 was recovered, or about sixty-six per cent.

Criminals.

Turning now to the conduct of the different race-divisions of the community, as evidenced by the numbers of each class charged with offences during the year, a marked improvement in the case of Europeans, Indo-Britons, and native Christians is noticeable, while the general increase is divided among other classes. This increase is out of proportion great in the case of women. Thus the number of Hindu men brought before the courts has risen, compared with the previous year, seven per cent; and the women, thirty-nine per cent; the number of Muhámmadan men has risen nine, and that of women thirty-two per cent; and the number of Pársi men has increased seventeen, and the women sixty-seven per cent. There was a decrease of twenty-five in the number of juvenile offenders before the courts in 1876, compared with the preceding year. There were 206 boys against 231. Of the 206, forty-nine were sent to the school of industry, seventeen were imprisoned, forty-two flogged, and sixty-two fined. The rest were discharged. Three-hundred and thirty-four inquests were held during the year 1875, or thirty-one less than in the year previous. The number included ten homicides, sixty-three suicides, sixty-two deaths from natural causes, and fourteen from excessive drinking. The number of deaths by accident was 185, or twenty-five less than in 1875.

Fires.

The number of fires occurred during the year under report was fifty-five, the same as in 1875; but the value of the property destroyed amounted to Rs. 2,10,369 against Rs. 1,21,406 in 1875. Only one life was lost in the fires of 1876.

Vagrants.

During the year seventy-three persons were arrested as vagrants in the city of Bombay, two in the district of Kurrachee, and two in Shikárpur and in Khándesh: one person voluntarily appeared before the magistrate. Of this total of seventy-eight, three persons were arrested for failing to return to the work-house on the expiration of leave granted to them, and were, after conviction and punishment, sent back to the work-house. Three others were dealt with and sent to employment; and the remaining seventy-two were sent direct to the work-house. At the close of 1875 there were twenty-two vagrants in the work-house, and seventy-five were sent there during 1876, making a total of ninety-seven inmates during the year. Of these forty were discharged on obtaining employment, eight were made over to their friends, seven were transferred to the strangers' home, and one to the sailors' home; two were sent to the lunatic asylum, two to the European general hospital, and one, a deserter from the army, was made over to the military authorities; eighteen were deported to England; ten deserted, and eight remained at the close of the year. The maintenance of the work-house cost Rs. 5,824, or Rs. 403 more than last year. The total cost to

Government on account of vagrants throughout the Presidency was Rs. 8,752. As this includes the cost of establishment, the average cost per head of average daily population was naturally rather higher than in 1875. Of the seventy-five vagrants received into the work-house during the year, fifty-nine were Europeans, two Americans, two Australians, and twelve Eurasians. Of the fifty-nine Europeans fifty-five were British-born subjects. As regards their previous occupation, the vagrants sent to the work-house during the year under report came in about the same number from the same classes as those of the previous year, except the number of sailors was only ten against twenty-three in 1875; and the number from railway employment was nineteen in place of twenty-five admitted in 1875.

Criminal Justice.

Tribunals.

The first of the judicial statistical returns (pages xxxvi to xxxix) exhibits the strength and cost of the various tribunals, original and appellate, civil and criminal, existing in the Bombay Presidency. Exclusive of 20,624 village headmen whose petty judicial powers are rarely used, there are 490 local and subordinate magistrates. Of these twenty are unpaid, and of the rest only 211 are solely employed on criminal work; 141 are district and first class magistrates, of whom three are sub-judges who have been invested with the first class magisterial powers, and twenty-five are district judges and sessions judges. Ninety-five covenanted civilians have criminal powers, twenty-three military, and thirty-four European uncovenanted officers. The rest of the magistrates and judges are natives. The subordinate magistrates cost Rs. 3,70,692, the district and first class magistrates Rs. 6,99,896, the district judges Rs. 3,93,001, and the high court Rs. 7,59,119. Including the high court, and taking all civil and criminal tribunals together, the total cost of justice during 1876-77 amounted to Rs. 35,74,951, and the net receipts from stamps in these courts to Rs. 22,99,162. These courts decided 237,147 cases, of which 60,292 were criminal, 161,919 civil, 6,831 revenue, and 8,105 appeals.

Offences.

The second judicial return (page xl to xlix) shows the number of offences reported during the year, and of persons tried, convicted, and acquitted. The totals appear below:—

Offences, 1875 and 1876.

Year.	Offences reported.	Persons under trial.	Acquitted or discharged.	Convicted.	Died, escaped, transferred.	Remaining under trial.
1875	66,761	113,937	63,969	48,073	630	1,256
1876	66,156	113,719	62,290	48,505	1,121	1,803
Less than in 1875.	605	218	1,679
			More than in 1875...	432	482	547

Crime.

There was a slight decrease in the crime in the year under report. Offences were less in 1875 than in 1874 by 1,868, and they were less in 1876 than in 1875 by 605. The decrease during

the year under review occurred chiefly in public nuisance prosecutions falling under Class I., where 717 fewer cases are returned. There was also a decrease of 597 offences under Class IV., breaches of special laws. There was an increase of 608 offences under Class II., offences against the person. There was also an increase of ninety-seven offences in Class III., of offences against property. Under Class I. there were 266 offences with respect to coin, stamps, or weights and measures, against 223 in 1875; 1,468 offences against public justice against 1,473; 179 offences by public servants against 203; 606 offences with respect to false evidence against 538; 6,554 offences with respect to public nuisance against 7,271; and 352 offences relating to public peace against 430. Under this class come cases of forgery, of which ninety-seven were tried during the year. Of 178 persons implicated in these crimes only twenty-eight were convicted. Forgery was, as in previous years, most common in the Poona, Belgaum, and Ahmednagar districts, where the cases numbered respectively, nineteen, thirteen, and twelve. Government regret to observe that in no single instance was a conviction obtained in Belgaum, whilst in Ahmednagar of the twenty-four persons apprehended but one was found guilty, and in Poona only three of the fifty persons arrested were convicted. Comparatively few cases of forgery were reported in the northern division and in Sind, and in Kolába, Násik, Kurra-
thee, and Thar and Párkar no persons were charged with this offence during the year. The returns show 314 cases of false evidence and false complaints. Of 398 persons brought to trial on charges of this nature, 157 were convicted in the Shikárpur district. Forty cases were investigated, and thirty-two of the fifty-three accused persons were punished. The other districts in which crimes of this class were apparently most prevalent were Poona, Kaira, Ahmednagar, and Kaláugi. Complaints of perjury and false complaints were comparatively few in Dhárwár, Ratnágiri, Haidarábád, Belgaum, and Kolába, and no cases of this description were reported in Thar and Párkar and the Upper Sind Frontier.

Class II. consists of offences against the person, of which there were 25,155, or 608 more than in 1875.

The following tabular statement shows the number of the principal serious offences against the person reported in 1876, as also, for the sake of comparison, the number reported in the previous year :—

Serious Offences against the Person, 1875-76.

Crime.	Northern Division.		Southern Division.		Kánárese Division.		Sind.		Total.	
	1875.	1876.	1875.	1876.	1875.	1876.	1875.	1876.	1875.	1876.
Murder	70	61	31	36	53	52	38	34	192	183
Attempt at murder ..	15	11	14	15	9	6	8	8	40	40
Culpable homicide ..	30	33	5	18	20	19	17	14	72	84
Grievous hurt	158	156	97	75	88	86	38	27	379	384
Kidnapping	40	21	11	22	16	8	5	2	72	53
Total	313	293	158	166	186	171	104	85	761	704

It is satisfactory to note the material decrease in the number of crimes of this nature. The falling off is proportionately most marked in Sind; but in the Northern division the reduction amounts to ten per cent, and in the Kánárese division to about eight per cent. In the Southern division only is there an increase in the aggregate, but even there it is to a very trifling extent. The number of murders reported in 1876 was 183, or nine less than in 1875, the diminution being mainly owing to the lesser number of crimes of this description committed in the Northern division. Attempts at murder were less frequent in the year under review than in the preceding year, but an increase of twelve is reported in the number (eighty-four) of cases of culpable homicide not amounting to murder. This increase is due to the number of cases of this nature in the Southern division having risen from five in 1875 to eighteen in the year under report.

There is a decrease of thirty-five in the number (344) of cases of grievous hurt, the reduction being chiefly in the Southern division and in Sind. This class of crime was most prevalent in Ahmedábád, Kaira, Belgaum, and Sátára.

Against pro-
perty.

As regards Class III., offences against property, the accompanying table gives the numbers of the chief crimes reported in 1876 and in 1875:—

Offences against Property, 1875-76.

Crime.	Northern Division.		Southern Division.		Kánárese Division.		Sind.		Total.	
	1875.	1876.	1875.	1876.	1875.	1876.	1875.	1876.	1875.	1876.
Gang robbery ..	38	38	17	54	19	105	..	2	69	199
Robbery... ..	135	150	79	107	123	136	15	14	852	407
Theft	5,108	4,727	3,608	4,174	2,732	3,211	3,494	2,797	14,942	14,909
Receiving stolen property ..	460	409	208	244	171	189	128	175	997	1,017
Total	5,736	5,324	3,912	4,579	3,045	3,641	3,637	2,988	16,330	16,532

Remembering the scarcity and dearness of food and the consequent destitution and partial famine which prevailed through a large portion of the Presidency, an increase in the number of offences of this description might have been expected; but it is gratifying to observe that the increment is not as great as might, with reason, have been anticipated. In fact, the number (16,532) is only higher by 202 than the number reported in 1875. In the Northern division there is a decrease of over 400 crimes, and in Sind of nearly 650; but this reduction is more than counterbalanced by the increase in the Southern and Kánárese divisions, where the greatest distress was experienced from the more or less complete failure of the crops, the numbers in those divisions having risen from 3,912 and 3,045, respectively, in 1875 to 4,579 and 3,641 in 1876, exhibiting an increase in the aggregate of 1,263 crimes. In each division gang robberies were more fre-

quent. In the Northern division thirty-eight were reported against thirty-three in 1875: of these nineteen were committed in the Thána district alone, being eleven more than in 1875. Since the date of the submission of the Police Report for the Northern Division, three of the chief-remaining members of Honya's gang have been captured, including his lieutenant Dádu, and one result of their apprehension will probably be the occurrence of fewer gang robberies in the Thána district during the current year. The number of gang robberies committed in Gujarát and the Panch Máháls in 1876 was fourteen compared with seventeen in 1875: three occurred in Násik, one in Kolába, and one in Khándesh. In the Southern division, Sholápur heads the list with twenty-one gang robberies against two in 1875. Sixteen gang robberies were committed in Poona, twelve in Ahmednagar, and five in Sátára. The Ratnágiri district was, as usual, free from crimes of this class. In the Kánárese division the number of gang robberies rose from nineteen in 1875 to 105 in 1876. Offences of this nature were most rife in Dhárwár and Kaládgi, where they numbered, respectively, fifty-one and thirty-four, constituting nearly one-half of the total number of gang robberies in the entire Presidency. In Belgaum eighteen were reported. Regarding the gang robberies in these three districts, the Police Commissioner states that most of them were robberies of grain, either stored or standing in the fields, and were in many instances perpetrated by Lambánis, Kaikaris, and other wandering tribes under the pressure of want.

In the number (14,909) of cases of theft there is a falling off of thirty-three, owing to the large reduction in the number of offences of this nature reported in the Northern division and in Sind, which the heavy increase of theft cases in the other two divisions has not completely neutralized. In the Northern division a large decrease is observable in Ahmedábád, Kaira, Surat, and Kolába; and in Khándesh and Thána only is there a noteworthy increase. In the Southern division the increase in the number of thefts was most marked in Poona and Sátára, and it seems somewhat strange that in Sholápur, notwithstanding the large increase for the year in the number of gang robberies and robberies, the number of theft cases was actually less by one than in 1875. In the Kánárese division the number of thefts rose largely in Dhárwár, moderately in Belgaum, and showed but slight increase in Kaládgi and Kánára. With the exception of the Northern division, the number of cases of receiving stolen property was larger in 1876 than in 1875 in every division, the increase somewhat remarkably being largest in Sind, where the number of thefts showed a material decrease.

Class IV., treating of miscellaneous offences, gives forty-one fewer vagrancy and forty-eight more bad habit and repute cases; there were 274 fewer cases of excise prosecutions, twenty-one of complaints by municipalities, thirty-nine under the Gambling Act, 107 under the Village Police Act, thirty-eight under the Cantonment Act, 320 under the Boundary Marks Act. On the other hand, opium, salt, customs, stamps, and postal cases were more by 197 cases; and ferry, railway, and toll cases by four; the District Police Act was used in sixty-three instances. Miscellaneous.

Punishment.

Looking at the sentences passed upon persons convicted, it appears there were 107 sentences of death, or two less than in 1875, the total for which year was ten more than in 1874. Sentences for transportation for life were more by thirty-three, and those for a term by sixty than in 1875. No sentence of penal servitude was passed in 1876. Rigorous imprisonment with solitary confinement was given in sixty cases, and without in 15,761 cases. Simple imprisonment sentences rose from 1,352 to 1,359. No forfeiture of property was decreed. Fine with imprisonment was given in 4,441 cases, and without in 27,415. Whipping was added to other punishments in 253 cases, or fifty-eight more, and given alone in 1,064 cases, or 138 more than 1875. The total amount of fines inflicted was Rs. 3,55,999, of which Rs. 2,27,139 were realized. In compensation Rs. 16,840 were paid out of fines realized. In 1875 fines were heavier by Rs. 220, and realizations smaller by Rs. 9,882. Imprisonment for six months and under was given in 15,469 cases, or in 1,000 fewer than in 1875.

Appeals.

There were 2,340 appellants in the magisterial courts. Their applications were rejected in 143 instances; 1,147 sentences were confirmed, 299 modified, and 575 reversed. Proceedings were quashed in respect of seventy-five; twenty-nine cases were ordered for further inquiry, and ninety-one were referred to the high court. The appeals of sixty persons were pending at the close of the year. There were before the sessions courts 1,631 appeals; 380 were rejected, and 762 failed to get any modification of the sentences passed; the sentences were reversed in 206 cases, and modified in 199; the proceedings were quashed in four cases, and referred to the high court in seventeen; further inquiry was directed in twenty-one cases, and sixty-nine appeals were pending when the year closed. In the high court there were 646 appeals; 272 applications were rejected, 192 were confirmed, eighty-four modified, and sixty-six reversed. The proceedings were quashed in thirty-two cases. Of 127 applications for revision of sentence, eighty-eight were rejected, eighteen confirmed, one modified, and eighteen reversed. In two cases the proceedings were quashed. In the sudder court in Sind there were ninety-six appeals; sixty-two sentences were confirmed, eighteen modified, and sixteen reversed.

Juries.

The number of cases tried by juries during the year under report was sixty-one, of which in fifty-six cases the judge approved of the verdict, and in five the verdict was not approved. The number of cases with assessors was 825, of which in 557 cases the judge approved of the verdict, and in 220 the verdict was not approved.

Prisons.

Including Aden, there are 102 jails in the Bombay Presidency. Of these one at Yerauda, near Poona, is a central jail; twenty-four, including the Common Jail and the House of Correction in the city of Bombay, are District jails, and seventy-seven are subordinate jails. There are, besides, four special institutions for punishing and reclaiming convicts, the Nára labour gang in Sind; and for young offenders the Sassoon Reformatory in Bombay and the juvenile prisons in Poona and Shikárpur. Compared with the previous year, the number of district jails has, by the abolition of the jail at Bukkur, been reduced by one. On the other hand, there are two more subordinate jails, two having been closed and four opened.

The number of prisoners in all the jails of the Presidency, Prisoners. central, district, and subordinate, on January 1st, 1876, was 8,560, or 578 less than the number on the corresponding date in the preceding year. The number of persons committed to jail in the year under review was 20,499, compared with 19,027 in 1875, or an increase of 1,472. The number remaining in confinement at the end of the year was 9,737. The daily average number of prisoners was in 1876 8,846 against 9,008 in 1875, thus showing a decrease of 162, notwithstanding the increase in the number of admissions. This circumstance would appear to be, in great measure, attributable to the fact that it was only in the last three months of 1876, when, owing to the deficient rainfall, the pressure of the scarcity of food began to be felt, and prices rose largely, that a heavy increase in the number of admissions occurred. The table furnished by the Inspector-General of Prisons shows that in the months of October, November, and December 1876, the number of persons sent to prison in the Poona, Ahmednagar, Khándesh, Sholápur, Sátára, Belgaum, Kaládgi, and Dhárwár districts amounted to 2,623, whilst in the corresponding three months of the preceding year it was only 1,438, thus displaying, in these eight districts alone, an increase of nearly 1,200. In the other portions of the Presidency, excluding from consideration prisoners received from other jails, the returns for 1876 show a slight decrease in the number of admissions into the Thána, Surat, Rájkot, and Haidarábád jails; while the admissions fell in the Kárwár jail from 341 in 1875 to 210 in 1876; in the Ahmedábád jail from 1,150 to 999; in the Kaira jail from 1,012 to 920; in the Kurrachee jail from 845 to 736, and in the Aden jail from 389 to 235. On the other hand, the number of prisoners admitted rose in the Ratnágiri

jail from 208 in 1875 to 229 in 1876; in the Dohad jail from 306 to 371; and in the Shikárpur jail from 823 to 864. The number of prisoners sent to the Bombay Common Jail and the House of Correction in 1876 was 2,232, or 183 in excess of the number in 1875.

During the year 207 convicts, compared with 189 in 1875, were transported to the Andaman islands. Eighteen prisoners were released by Government, five on ticket-of-leave, against fifty in 1875. A very large decrease in the number of persons transferred to lunatic asylums from jails, and a slight decrease in the number of prisoners removed from one jail to another to relieve overcrowding and for sanitary reasons, are satisfactory items. The number of murderers executed in 1876 was fifty against seventy-nine in 1875, eighty-two in 1874, sixty-five in 1873, and sixty-one in 1872. Twenty-one prisoners escaped during the year, ten from the Nára gang, four from the Dohad jail, two from the Belgaum jail, one each from the Dhárwár and Dhuliákot jails, and three from the subordinate jails; five of the twenty-one effected their escape from inside the jail. Six of the fugitives were recaptured and steps taken to punish the guards who, by their negligence, allowed the convicts to escape. In Sind nineteen convicts, who had in the past and previous years escaped from the Nára gang, were at the close of the year still at large. The attention of the Commissioner in Sind was drawn to this matter. He was directed to spare no pains in the endeavour to re-apprehend the men.

The returns submitted show, compared with 1875, a small increase in the proportion of Christian and Hindu prisoners, and a diminution in the relative proportion of Musalmán prisoners. In 1875 the Christian prisoners, Europeans, Eurasians, and natives constituted 3·1 per cent of the total number of prisoners; while in the year under review they formed 3·5 per cent. The proportion of Hindus rose from 64·4 per cent in 1875 to 66·4 per cent in 1876; while the Musalmáns, who in 1875 constituted thirty-one per cent of the total number, contributed in 1876 only 28·4 per cent of the aggregate. The serious increase, 375 to 568, in the number of Europeans committed to jail is a matter of regret. Four hundred and thirty-four, or 76·6 per cent of the Europeans admitted, were punished for offences under the Shipping Act, and of the remainder seventy-six were soldiers sentenced by courts-martial. The increase in the number of Europeans imprisoned was, as might, under the circumstances stated, be expected, largest at Bombay and Kurrachée. The only inland districts in which Europeans were committed to jail were Poona and Sholápur. Not a single European female was sent to jail during the year. The proportion of native female prisoners to native male prisoners showed a slight decrease from six per cent in 1875 to 5·7 per cent in 1876. It is satisfactory to find the number of juvenile prisoners less in 1876 than in any of the preceding four years. In Aden especially, where ordinarily the number proportionately is very high, the decrease is most marked. As regards the previous occupation of the prisoners, the number

of Government servants imprisoned shows a small increase, having risen from 766 in 1875 to 792 in 1876; but there is a reduction in the number of domestic servants convicted, the numbers for the two years respectively being 1,481 and 1,198. The number of persons of independent property convicted continues low, only seventeen prisoners of this class having been received during the year. As regards the terms and nature of the imprisonment awarded during the year, the returns show an increase in the number of persons subjected to transportation, either for life or for a term of years, from 463 in 1875 to 613 in 1876. They also show a marked decrease from 909 to 683 in the number of persons sentenced to simple imprisonment.

The number of persons reconvicted is annually increasing. From 2,797 in 1875 it rose to 3,307 in 1876: in the former year only 11·5 per cent of the males and 5·9 per cent of the females admitted into jail had been previously convicted, whilst in 1876 13·2 per cent of the males and 7·9 per cent of the females imprisoned had before been punished. It seems probable, as the Inspector-General of Prisons observes, that to some extent the increase is rather apparent than real, and is in a large measure due to increased care and attention on the part of the police and jail officials in the identification and registration of old offenders and professional criminals, and in the record of previous convictions. The Inspector-General of Prisons is of opinion that the strictness or laxity of the jail discipline does not materially affect the number of reconvictions in a district. If this be the case, it would appear to follow that habitual offenders cannot be deterred from pursuing their criminal career by imprisonment or prison discipline of any nature, however rigid and unpleasant. This may be the case with professional criminals of a certain class. But it is, at the same time, obvious that every means should be adopted to render the punishment of reconvicted criminals as severe and as deterrent as possible. After one term of punishment, should they return to their evil practices, the only remedy left is to award to them sentences of such duration as to render them harmless, if not for ever, at least for many years, and this, to judge from the returns now furnished, would seem of late to have been largely practised. It is also satisfactory to notice that in the jails habitual offenders are, as far as possible, treated as a separate class, employed upon the most arduous and unpleasant labour, and distinguished from their fellow-prisoners by special badges and clothing. The proportion of reconvicted prisoners in the various jails varied largely from 43·6 per cent in the case of the native prisoners in the house of correction to 1·8 per cent at Rájkot. In the Bombay Common Jail 26·3 per cent of the convicts had been reconvicted, and out of 1,571 as many as 228, or almost one in seven, had been previously imprisoned more than twice. At Dhuliákot, Kurrachee, Shikárpur, Ratnágiri, and Dhulia the percentage of reconvicted prisoners was materially above the average; whilst at Rájkot, Surat, Poona, Ahmednagar, and Kaládgi it was remarkably low.

The expenditure for guards, military and police (Rs. 1,58,855) Expenditure.
was almost the same in 1876 as in 1875. Of this sum Rs. 51,222,

or nearly one-third, represent the charge for the guard employed at the Thána jail alone. The Inspector-General of Prisons complains that the charges for military and police guards for jails are unduly heavy, citing, as the most conspicuous instances in support of his views, the Thána and Aden jails, and further holds that such guards are of little use in preventing escapes. This subject is receiving the separate consideration of Government. If, as stated by Dr. Cruickshank, the substitution for the present military and police guards of a distinct armed guard forming part of the regular jail establishment would effect a yearly saving of nearly a lakh of rupees, the question would appear to be one of great importance, although a considerable part of the saving would be merely nominal. Hospital charges and the cost of clothing show a decrease. Under the head of contingencies the expenditure (Rs. 59,427) was higher by Rs. 6,316 in the year under review than in 1875. In this sum, however, are included all charges connected with the removal from Thána to Calcutta of the transportation convicts sent to the Andamans, which in 1876 amounted to Rs. 7,377. The cost of the water supplied by the irrigation department to the Yeranda jail, which in the year under report came to Rs. 3,800, was in 1876, for the first time, debited to contingencies, and this, to a great extent, explains the increase in this item. The outlay on account of rations was, in 1876, Rs. 2,52,306, or more by Rs. 6,629 than the cost in 1875, notwithstanding the fact that in the latter year the daily average strength of prisoners to be fed was 162 higher than in the former. The scarcity of food, and the high prices which prevailed during the close of 1876 throughout a considerable portion of the Presidency fully account for the increased expenditure under this head. The average cost per head of food for the prisoners was, in 1876, Rs. 27-14-11; and although this cost was higher by Rs. 1-2-5 than the expenditure per head in 1875, it was lower than the charge for food in any year prior to 1875. A large reduction in the cost per head of rations in 1876, as compared with 1875, is noticeable in the two Bombay jails and the Dohad and Aden jails, and, as might be expected, the increase in cost is most marked in the case of Dhárwár, Kaládgi, Sholápur, and Sátára.

Health.

The vital statistics for the year under review are very satisfactory. The general health of the prisoners was much better in 1876 than in 1875. In 1875 95·3 per cent of the average number were admitted into hospital; in 1876 the percentage of admissions was only 78·3, and the death-rate fell from 3·3 per cent in 1875 to 2·1 per cent in 1876. One hundred and eighty-two deaths occurred during 1876 against 297 in 1875. Of the 182 deaths fifty-one were from diarrhoea and dysentery, thirty-six from respiratory diseases, and thirty-one from fever. Eight persons died of cholera, four of them in the Ahmedábád jail. There were eleven cases of small-pox, seven of them in the Haidarábád jail; but no deaths from this disease. The decrease in the number of cases of intermittent and remittent fever was very large, more especially in the Yeranda, Poona, Haidarábád, and Shikárpur jails. Fever was, however, unusually prevalent in the Kurrachee and Nára jails. The attention of the Inspector of Prisons has been drawn

to the serious increase at the Yerauda jail of disease of the respiratory organs, and suggestions have been made for rendering the barracks in that jail less draughty by affixing screens or shutters to the windows. Next to the Haidarábád jail where, as usual, the death-rate was higher than in any other jail, the two Bombay city jails and the district jails at Dohad and Nára would appear to have been those in which the health of the prisoners during the year was least satisfactory. The healthiest jails in 1876 were those at Rájkot, Dhárwár, Kaira, Poona, and Kárwár.

The number of subordinate jails in 1876 was seventy-seven against seventy-five in the previous year. Forty-eight of these jails are in Sind. In 1876 the total number of persons confined in jails of this class was 3,810, or 740 more than in 1875. The daily average strength of prisoners was 234, or about three per jail. The necessity for the continuance of some of these petty jails, notably of those at Kambar and Ratodero in the Shikárpur district, at Thul and Kashmor in the Upper Sind Frontier district, at Chachra Dipla and Sanghar in the Thar and Párkar districts, at Kohistan in the Kurrachee district (where apparently no prisoners were confined), and at Keti Bandar in the same district, seems very questionable, and the Commissioner in Sind and the Inspector-General of Prisons have been requested to favour Government with their opinion as to the expediency of their abolition. At Thul, Kambar, and Ratodero, for instance, the daily average strength of prisoners in each jail does not exceed .03, or, in other words, in every month only one prisoner is confined for one day; whilst in the subordinate jails of Chachra Dipla, Sanghar and Keti Bandar, in each month one prisoner is confined for from thirty-six to forty-eight hours, and for the rest of the month the jails are empty. The daily average strength of prisoners in the new subordinate jail at Sukkur in 1876 was sixty-one, and in the Násik subordinate jail thirty-eight: the next largest average daily population was at Sirsi, where it amounted to 9.5. The total cost of the maintenance of the subordinate jails for the year was Rs. 20,289, contrasted with Rs. 14,948 in 1875, the increase being mainly due to the establishment of the large subordinate jail at Sukkur in lieu, to a certain extent, of the abolished district jail at Bukkur. The receipts from the extramural labour of the convicts in the subordinate jails amounted to Rs. 3,138, thus bringing the net cost of these jails down to Rs. 17,151. In at least fifty-two of the seventy-seven subordinate jails there were no receipts whatever from convict labour, the receipts in the Gogo subordinate jail were Rs. 1-1-0, and the aggregate receipts of the three Kánárese subordinate jails were but Rs. 5-1-1, and of the four subordinate jails in the Ratnágiri district were but Rs. 1-14-7. These results are unsatisfactory, and it would appear only too probable that, in the great majority of the subordinate jails, the prisoners are entirely unemployed. The net cost per head of the prisoners in these jails was Rs. 73-4-8 in 1876, or Rs. 1-4-5 less than in 1875. As might be anticipated, the general health of the prisoners in the subordinate jails was better than that of the convicts in the district jails.

Civil jails.

There was no alteration during 1876 in the number of the civil jails. The civil prisoners admitted during the year numbered 3,415 compared with 3,260 in 1875; but the average daily number in confinement (240) was less by six than the number in 1875. There was a large increase in the number of prisoners sent to the civil side of the Bombay Common Jail and to the civil jails at Poona, Dohad, and Shikárpur; whilst the number admitted into the Sholápur, Kurrachee, and Ratnágiri civil jails was considerably less in 1876 than in the preceding year. In the other civil jails the number of admissions was about the same in the year under report as in 1875. The cost of the maintenance of the civil jails in 1876 was Rs. 10,317, showing a decrease, compared with 1875, of Rs. 323. This expenditure was mainly for establishments. The Inspector-General of Prisons reports that, in his opinion, the establishments of the civil jails at Sátára, Thána, Ahmedábád, Kurrachee, Haidarábád, and Shikárpur are too large in proportion to their average strength of prisoners. The judges of those districts have been asked to inquire whether any reductions can be effected in the strength and cost of the establishments. The charges in connection with the civil jail in Bombay also appear exceedingly high, and the sheriff has been requested to state whether they cannot be reduced.

Discipline.

Judged by the test of the number of punishments awarded, the conduct of the prisoners in 1876 would appear to have been considerably better than in the previous year; for, whilst in 1875 2,239, or 25·3 per cent of the average daily number of convicts, were punished, the number fell in 1876 to 1,386, or 18·4 per cent. Twenty-three prisoners were charged with the commission in jail of criminal offences, and nineteen were sentenced by the magisterial courts. The other faults were ordinary breaches of jail rules. The punishment most frequently awarded, it was given in 682 cases, was solitary imprisonment with reduced diet. Corporal punishment was inflicted in 522 instances compared with 704 in 1875. As regards the number and the nature of the punishments inflicted, the different jails vary in a marked degree. In the Poona and Haidarábád jails, every offence committed was punished with flogging; whilst corporal punishment was never inflicted at Nára, only one prisoner was flogged at Ratnágiri, and but six out of the 163 native prisoners punished in the house of correction. The inference is that in some jails the punishment of flogging is too seldom made use of. The conduct, in 1876, of the convicts in the Yeranda, Dhuliákot, Surat, Ahmedábád, Kaira, and Haidarábád jails and in the Nára gang seems to have been exceptionally good. On the other hand, 77·3 per cent of the average daily number of the European prisoners and 63·7 per cent of the natives in the House of Correction were punished; forty-three per cent of the daily average number in the Bombay Common Jail were punished, and the proportion punished at Sátára and Dhárwár was very high. At Aden no less than eighty-five per cent of the daily average number of prisoners in that jail were punished. This is attributed by the Inspector-General of Prisons to the circumstance that a large number of the prisoners are a

semi-civilized, unruly set, requiring strict discipline to keep them in order.

The number of convicts receiving instruction in reading and writing has risen from 191 in 1875 to 499 in the past year. A school has been established in the central jail at Yerauda; and as the daily average number of prisoners attending the school is reported to have been 255, the experiment would appear to have proved successful. At the same time care must be taken that education is kept entirely subordinate to jail discipline. Jail schools are apt to degenerate into an abuse, and become an excuse for shirking hard labour. The results of the attempt to teach prisoners reading and writing must be carefully watched, and any tendency to allow instruction to take the place of hard labour should at once be checked. Government have called upon the Inspector-General of Prisons to report on this subject, showing the system under which education is permitted, the hours of attendance, the classes taught, the degree of proficiency attained, and the branches of education in which instruction is imparted. The jails in which any considerable proportion of the convicts attended school classes were at Yerauda, Poona, Dhárwár, Kaira, and Shikárpur. Instruction.

The average daily number of convicts employed as prison officers in 1876 was 217, showing an increase of twenty-seven compared with the number in 1875. The proportion of convict prison officers was highest in the Náragang and in the Haidarábád jail, where it amounted to, respectively, six and 5·3 per cent of the daily average number of prisoners. In Yerauda, Dhárwár, and Shikárpur jails it was about 4½ per cent. In the Bombay Common Jail and in the Dhuliákot, Kaira, and Rájkot jails no convicts were employed in this capacity. It is satisfactory to learn that, though the system has only recently been introduced under definite rules, the convicts thus employed are found to be of great value in carrying on jail discipline, and are, as a rule, active and trustworthy. The number of prisoners employed as jail servants has decreased from 1,071 to 944, and the ratio of those so employed to the total daily number of convicts from 13·3 per cent in 1875 to 11·9 per cent in the year under report. This is satisfactory, though Government are now, as heretofore, of opinion that the proportion should not exceed ten per cent. Warders.

Against 1,311 in the preceding year 1,074 prisoners were, on an average, employed daily in 1876 on the work of building and repairing jails. This reduction in the number would appear to be mainly due to the circumstance that the new jail buildings at Yerauda and Thána are nearly completed, and to the closing of the district jail at Bukkur, where a large number of convicts was employed on work of this description. The earnings of the prisoners engaged in building were Rs. 10,340, or Rs. 5,655 less than in 1875; but this decrease would seem, to a material extent, only nominal, the result of a change in the system of assessing convict labour. The number of convicts employed on extramural labour has fallen from 1,051 in 1875 to 772, and their earnings fell from Rs. 30,037 to Rs. 27,100. An Employment.

average daily number of seventy men, or more than one-fourth of the full effective strength in the Nára gang, was unemployed, owing, it is reported, to the floods which rendered it impossible to keep the gang employed daily in canal clearing. This partially accounts for the diminution in the total number of prisoners employed extramurally and in the receipts for their labour. There is also a large decrease in the number of convicts engaged on extramural labour in the Dhuliákot and Shikárpur jails. The fall in the number of convicts employed on jail buildings and extramural work was accompanied by a rise in the numbers employed in jail gardens and factories. In 1876 occupation was found for 728 prisoners in jail gardens, and the garden profits are stated to have amounted to Rs. 15,239; whilst in 1875 the number of convicts so engaged was 617, and the garden profits were calculated at Rs. 13,600. The most productive jail gardens were at Yerauda, Sholápur, Ahmedábád, Thána, and Dhuliákot. The gross profits arising from the working of the jail factories in 1876 amounted to Rs. 51,123, or almost Rs. 1,400 less than in the previous year. The gross profit of the Yerauda factory amounted to Rs. 8,114, being nearly double the amount of the profits in the previous year. A large increase in profits is also to be noticed in the case of the Bombay House of Correction, and the Kárwár, Thána, and Haidarábád jails; whilst the profits have fallen off in the Ahmedábád jail from Rs. 5,619 in 1875 to Rs. 2,163 in 1876; in the Surat jail from Rs. 5,882 in 1875 to Rs. 4,702 in 1876, and in the Ahmednagar jail from Rs. 969 in 1875 to Rs. 403 in 1876. The working of the Dhulia, Sátára, Ratnágiri, and Dohad jail factories was also considerably less profitable in 1876 than in the previous year. The statement displaying the earnings per head of the convicts employed in the factories exhibits great variations, the sums earned varying from Rs. 29-10 at Aden, Rs. 24-12 at Surat, Rs. 17-4 in the Bombay House of Correction, Rs. 14-7½ in the Bombay Common Jail, Rs. 14-4 at Kurrachee, Rs. 1-4 at Ahmednagar, Rs. 1-3½ at Kaláđgi, Rs. 1-2½ at Thána, and Rs. 1-5 at Kaira. Many of these results cannot but be considered unsatisfactory.

Finance.

The total gross expenditure connected with criminal jails of all classes during the year amounted to Rs. 10,53,369, or Rs. 2,871 less than in 1875. Deducting cash receipts for labour and jail-manufactured articles sold during the year, the net expenditure was Rs. 8,11,188, being Rs. 1,550 in excess of the net expenditure in the preceding year. The only item in which a large decrease is perceptible in 1876, as compared with 1875, is the charge for the construction of jails. In 1875 this amounted to Rs. 1,72,759: in the year under report it had fallen to Rs. 1,51,583, the diminution being due to the fact that the works at the Yerauda and Thána jails and at the House of Correction have been almost completed, and that, consequently, the sums expended on those jails were materially less in 1876 than in 1875. The report of the Inspector-General of Prisons shows, however, that this reduction in the expenditure on the construction of jails can be but temporary: even in normal years the prison accommodation

is insufficient for the requirements of the Presidency : several of the existing jails are dilapidated, unsafe, and, in other respects, unsuited to the purpose for which they are used, and when the condition of the finances will permit, new jails will have to be built at Dhuliákot, Belgaum, Aden, Sátára, and in the Kaládgi district. The cost of establishments in 1876 was Rs. 2,11,861, or Rs. 1,348 in excess of the expenditure under this head in 1875; but the increase is stated by the Inspector-General of Prisons to be rather nominal than real, and to be due to various changes in the mode of account. The reductions recently proposed by the Inspector-General of Prisons in the strength and cost of the establishments of the two Bombay city jails will, when carried out, considerably diminish the disproportionate and unnecessarily high charges on account of the staff of those prisons.

For the punishment and reform of boy criminals the three institutions, the Poona Juvenile Prison, the Bombay Sassoon Reformatory, and the Shikárpur Juvenile Prison continue to work well. These institutions have now almost their full number of inmates, and, as the demands on their space steadily increase from year to year, some further provision will soon be necessary. A general scheme for the establishment of reformatories throughout the Presidency is now engaging the attention of Government.

Reformatories.

The Juvenile Prison in Poona is again favourably mentioned. The number of boys in confinement in 1876 was seventy, or five less than in the preceding year. The number of admissions during the year was, however, slightly larger than in 1875 or 1874, and the number remaining in the institution on the 31st December 1876 shows an increase of four, from forty-one the number of the inmates at the close of the previous year. At the end of the year the prison contained nearly its complement of boys. The daily average strength, forty-five, was a number, seven, in excess of the return for 1875, but lower than it was in 1874 and 1873. Of the twenty-nine juvenile offenders admitted during the year fifteen were sentenced to terms of confinement of two years and upwards. The sentences passed on the remainder varied from six to eighteen months each. The one boy sentenced to less than one year's imprisonment was removed from the Common Jail, Bombay, to the juvenile prison by order of the Inspector-General of Prisons. It is satisfactory to notice that more attention has been paid to the rule prohibiting magistrates from sending boys under sentences of less than one year's imprisonment. Complete information of the parts of the Presidency from which the boys have been sent has not been supplied. But it appears that of the twenty-nine boys admitted during the year eight were sent from Poona, four from Thána, four from Bombay, three from Gujarát, and three from Sátára. Of the boys admitted five were Musalmáns, one a native Christian, and one a Sikh : the rest were Hindus of various castes. The offence for which they were sentenced was, in eighteen instances, theft; in five cases house-trespass or house-breaking; and in two cases robbery. One boy was punished for kidnapping; one for mischief; one for coining; and one, aged only thirteen years, for rape. The conduct of the boys during the year

Poona.

is described as having been very good, and in only one instance was there a necessity for the infliction of corporal punishment. The general health of the inmates of the prison has also been satisfactory, and residence in the institution seems to improve the condition, mental and physical. Only one death from dysentery occurred during the year. The report of the results of the literary and mechanical education of the boys is favourable. The deputy educational inspector states that the school appears to be in good order, and that the master and the warder seem to take interest in their work. Considering that only one of the seventy boys in the prison had, prior to his admission, received any literary instruction, the progress appears fair. As regards manual labour, forty-one boys were learning smith's work, twenty-three carpentry, and six weaving.

Bombay.

The details of the management of the David Sassoon Industrial and Reformatory Institution are for two years, 1875-76 and 1876-77. They are in the main satisfactory. The number of boys in the institution on the 31st March 1875 was 139; on the 31st March 1876, 145; and on the 31st March 1877, 144, or within six of the full number the building is calculated to accommodate. The number of new admissions during the two years was 121, of whom eighty-two were received in 1875-76, and thirty-nine in 1876-77. In the former year the unusually large number of eighty-one boys was sent to the institution by the Presidency magistrates, whilst in 1876-77 only thirty-six boys were so sent. During the period under report but two boys, both of them in 1876-77, were forwarded by mofussil magistrates, one from Kaira; the other from Sâtára. Although the number of the inmates at the close of 1876-77 was less by one than it was on the 31st March 1876, the daily average strength for the year ending the 31st March last was 145, or ten higher than it was in the previous period of twelve months. It seems probable, therefore, that the full number which the institution can accommodate will soon be reached, and it will then be necessary to discontinue, at least for a time, fresh admissions. The proportion of Musalmáns in the institution seems very large. On the 31st March 1877 they numbered sixty, whilst Hindus were thirty, Pársis fifteen, Jews and Christians six each, and low-caste boys twenty-seven. The report gives no information regarding the general health of the boys. But it is gratifying to learn that their conduct has been uniformly good. The large number of boys who absconded, twenty-five in 1875-76 and eleven in 1876-77, or thirty-six in all, is matter of regret; and it seems strange that of the runaways only twelve were caught and brought back.

The portions of the report that treat of the education of the boys are satisfactory. Of the 144 boys in the institution on the 31st March 1877 fourteen, too young to learn any craft, were being taught to read and write. Of the remaining 130, forty-five were being brought up as compositors, folders, and bookbinders; sixteen were learning to work in brass; twenty-two were being taught blacksmith's work; twenty-seven were being trained as carpenters and turners, and twenty were employed as

painters. Government are glad to notice that the committee state that, from personal observation, they are satisfied that under the careful supervision of the superintendent, who is himself a mechanic, the boys are progressing favourably in the various useful crafts they are learning. Twenty boys, earning Rs. 66 a month, are daily employed at the Government Central Press. Judicious arrangements are made by the committee for the literary education of the boys, and their time seems well divided between book learning and mechanical training. The report of the educational inspector shows that fair progress has been made by the boys in reading, writing, and arithmetic, and, by some of the elder boys, in English. The total cost of the maintenance of the institution was in 1875-76 Rs. 19,988, and in 1876-77 Rs. 22,307. The increased expenditure in the latter year is chiefly noticeable in three items, in medicines and medical attendance, which cost Rs. 1,189 in 1876-77 against Rs. 639 in 1875-76; in the purchase of tools and materials, for which purpose Rs. 1,545 were expended in 1876-77 compared with Rs. 903 in the previous year, and in the feeding of the boys maintained by Government, the charge for which amounted to Rs. 13,665 in 1876-77, contrasted with Rs. 12,744 in 1875-76. The last-mentioned increase is due to the average daily strength of the boys in the institution having risen from 135 in 1875-76 to 145 in 1876-77. The expense to Government on account of the reformatory was, in the first of the two years under review, Rs. 16,344-8-1, and in the second Rs. 17,264-11-6: the increased expenditure is attributable to the larger daily average number of boys. Setting aside 'miscellaneous receipts,' which amounted in 1875-76 to Rs. 481-9-2, and in 1876-77 to Rs. 522-9-4, it appears that the sale of stores (by which term, presumably, are meant articles manufactured in the institution) and work done for cash produced in 1875-76 Rs. 855-9-4, and in 1876-77 Rs. 2,655-12-3, and that the boys employed on work outside the institution earned Rs. 425-3-9 in 1875-76, and Rs. 526-9-1 in 1876-77.

Into the juvenile prison attached to the district jail at Shikárpur Shikárpur. thirteen youths were admitted, seventeen were in confinement at the commencement of the year, and the number in the institution on 31st December last is stated to have been eighteen. The daily average number of juvenile offenders in the prison during the year under report was sixteen compared with seventeen in 1875. This is within four of the greatest number the building can accommodate. Of the thirteen boys admitted in 1876, nine were committed to prison by criminal courts in the Shikárpur district, three were sent from Haidarábád, and one from Kurrachee. In the majority of instances the offence of which they were convicted was theft. The ages of the boys admitted varied from twelve to fifteen years. Eight were Musalmáns and five Hindus. Two of the boys sent to the juvenile prison in 1876 had been previously convicted. One, a boy aged only twelve years, had been sentenced twice before. In seven cases the punishment awarded was two years' imprisonment; in one case it amounted to six and two-thirds years' imprisonment, whilst in the remaining five cases it ranged from twelve to four months. The conduct of the boys is described as, on the

whole, very good. There were few breaches of jail discipline, and those for the most part were of a trivial nature. The general health is reported to have been excellent. No death has occurred during the year, or, in fact, since the establishment of the prison. The progress made in literary and mechanical training is fairly satisfactory. All the boys are learning carpentry, and six of them can, without help, make common chairs and tables, and turn out other ordinary work as well as the average village carpenter.

Civil Justice.

The number of cases for disposal under the general jurisdiction of the High Court was 1,457 against 1,510 in 1875, showing a decrease of fifty-three. Of these 1,457 cases, 723 remained from last year, and 734 were instituted during 1876, or six more than in 1875. The number disposed of was 720, or sixty-seven less than the previous year, and the number pending was 737. Of the suits disposed of, 154 were contested, in forty-five of which judgment was given for the defendant. The average duration of contested suits was 307 days, and of uncontested 136 days. Under the equity jurisdiction there was one case, which was disposed of in favour of the plaintiff. Under the admiralty jurisdiction were three cases, of which one was disposed of and two remained undecided. Of twenty-two testamentary suits three were withdrawn, and seven were decided, and twelve were pending. Of seven matrimonial suits five were pending and two disposed of. There were also seven Pársi matrimonial cases, of which one was withdrawn, four were disposed of, and two were pending. In the insolvent court 1,046 petitions were on the file at the beginning of the year, and 622 were filed during the year, making a total of 1,668 for disposal against 1,589 in 1875. Of the whole number 564 were disposed of, leaving 1,104 in arrears. Of the 564, one hundred were contested, and of these twenty were decided in favour of the defendant.

The various descriptions of civil suits instituted during 1876 in all classes of civil courts, other than the courts of the town of Bombay, are given below. The figures for 1875 are added for purposes of comparison :—

Suits, 1875 and 1876.

Court.	For Money.		For Rent.		Other.		Total.	
	1875.	1876.	1875.	1876.	1875.	1876.	1875.	1876.
Mofussil <small>•</small> cause ...	20,320	20,247	20,320	20,247
Unpaid local ...	181	180	4	11	185	191
Sub-divisional ...	124,578	122,015	107	15	9,525	9,846	134,210	131,876
With small cause court powers ...	16,737	18,773	2	16,737	18,775
District judges' ...	163	246	115	108	278	354
Cantonment ...	1,731	1,801	1,731	1,801
Revenue	4,873	4,340	4,873	4,340
Total ...	163,710	163,262	107	15	14,517	14,307	178,334	177,584

As has been the case for the last two years, ninety-one per cent of the total number of suits were brought to recover money. There were 124 suits against Government in 1876 against 128 in 1875. Of these 124, sixty-six were from Surat, twenty-one from Ratnágiri, ten each from Ahmedábád, Thána, and Dhárwár, five from Belgaum, and one each from Khándesh and Shikárpur.

Disposal.

The subjoined table shows the number of cases for trial before the courts of the several grades shown below, the number disposed of, and the number pending :—

Disposal of Suits, 1875 and 1876.

Courts,	For disposal.		Disposed of.		Pending.	
	1875.	1876.	1875.	1876.	1875.	1876.
Mofussil small cause.. .. .	23,454	22,582	20,251	20,965	2,203	1,612
Unpaid local	231	289	167	223	34	66
Paid sub-divisional	191,094	189,349	150,060	155,670	41,100	34,031
Do. exercising small cause court jurisdiction	5,833	6,973	4,950	5,769	683	1,104
District judges'	1,770	1,846	539	633	1,232	1,213
Cantonment magistrates	2,040	2,204	1,637	1,680	403	524
Revenue	5,828	6,291	5,575	5,943	251	348
Total	229,238	229,434	183,199	190,833	46,106	38,898

There were 196 more cases for disposal in 1876 than in 1875, and the number disposed of shows an increase of 7,684. Arrears decreased by 7,208.

Value.

The total value of suits disposed of in 1876 by mofussil civil courts was Rs. 1,63,08,348, and by revenue courts Rs. 3,38,611. In 1875 the value of suits disposed of in civil courts amounted to Rs. 1,56,03,903, and in revenue courts to Rs. 3,01,403. The value of suits disposed of in civil courts in 1876, therefore, shows an increase over the value in 1875 by something more than seven lakhs of rupees, and in revenue courts by about Rs. 37,000. It will be remembered that the figures for 1875 were less than those for 1874 by something more than five lakhs for civil suits and by about Rs. 44,000 for revenue.

Duration.

For the whole Presidency the average duration of contested suits was 467 days, and for uncontested seventy-six against 177 and 138, respectively, in 1875; taking civil courts only, and excluding revenue, the average duration of contested suits was in 1875 205 days, and for uncontested 162, against 535 and eighty-seven in the year under report.

Small cause courts.

In the small cause courts, exclusive of the Bombay court, there were 2,203 suits remaining from 1875, and 20,379 were instituted in 1876, or a total, for disposal, of 22,582. In 1875 there were 20,338 suits instituted, and the total for disposal was 22,454. Business accordingly increased. The number of courts was the same as last year. The suits for disposal in 1876 were 5,845 in Ahmedábád and Nariád; 4,331 in Surat and Broach; 6,207 in Poona; 2,626 in Ahmednagar; and 3,573 in Kurrachee. In all the courts 20,965 suits, including those in which judgments were given by consent of parties, were disposed of, leaving 1,612 pending.

The returns of the Bombay small cause court show, compared with 1875, an increase of over a thousand in the number of suits instituted, and over a lakh of rupees in the amount litigated. This increase, as pointed out by the first judge, is chiefly nominal, and is due to an attempt to clear the files of a number of suits in which summonses were repeatedly granted, but never served. Such suits were struck off for want of service, and the plaintiffs allowed to file fresh suits without additional fees. Contrary to expectation fresh suits were filed in most of the cases, so the result was merely the apparent increase of litigation noticed above. The year 1876 may be taken, therefore, as showing no general increase or decrease in litigation in the Bombay court of small causes. What little change there may have been, is probably in the direction of increase, as the value of stamps filed is slightly greater than it was in 1875. The number of suits under the extended jurisdiction has again risen, though the increase in the preceding year was supposed to be abnormal. The number of suits under Rs. 10 which fell in 1874 and 1875, but had been gradually rising in the five years preceding, is now again rising. The number of distress warrants issued is greater by eighty-five than in 1875, but the amount of rent claimed is not greater in proportion. The number of warrants is still less than in 1874. The net amount credited to Government is slightly larger than it was in 1874, and the expenditure is slightly less than that of the previous year. The number of appearances of parties by barristers, attorneys, and pleaders continues to rise. The court was open 252 days during the year. Omitting cases decided *ex-parte*, struck off, or compromised, the number decided during the year was 20,297. Of these 17,704 were disposed of on the day the summons was returnable, and only 2,593 (against 3,087 in the previous year) were adjourned. Comparing the number of cases tried by each of the judges with the number of new trials ordered, it appears that of cases tried by the first judge in 5·6 per thousand new trials were ordered, of cases tried by the second judge in 4·8 per thousand, of those by the third judge in 2·3 per thousand, and of those by the fourth judge in 3·9 per thousand.

In unpaid local tribunals, of 289 suits for disposal, 223 were decided, leaving sixty-six in arrears. In 1875 there were 221 for disposal, and 187 were decided. Unpaid tribunals.

In the subordinate judges' courts the number of suits in arrears on 1st January 1876 was 40,373 Subordinate courts.
The number of suits instituted during 1876 was ... 145,123
and the number received by transfer was ... 3,853
making a total for disposal of ... 189,349
against a total of ... 191,094
for the year 1875. Of suits instituted there was a decrease of 3,456. Of the total number of 189,349 suits for disposal, 155,670 were disposed of against 150,060 in 1875, or 5,610 more than in that year. There were 34,031 suits pending on 31st December 1876 compared with 41,100 in arrears for the year before. The following table shows the number of suits for disposal during the years 1875 and 1876 in subordinate judges' courts, and the number of suits instituted there in each year :—

Subordinate Judges' Courts, 1875 and 1876.

Subordinate Judges' Courts.	Suits for disposal.		Suits instituted.		Less than in	More than in
	1875.	1876.	1875.	1876.	1875.	1875.

Haidarábád ...	7,960	7,850	7,811	7,562	249	...
Shikárpur ...	9,991	10,840	9,592	9,776	...	184
Thar and Párkar.	323	375	306	352	...	46
	21,431	21,851	20,772	20,330	442	...
	196,927	196,222	153,814	151,112	2,702	...

This statement, which includes suits coming before the subordinate judges of Khándesh, Poona, and Sátára in the exercise of their small cause court jurisdiction, shows a net decrease of 2,702 suits filed in the courts of the subordinate judges throughout the Presidency. A similar table in last year's report showed a net increase of 6,570. In the Presidency, excluding Sind, 2,260 fewer suits were instituted, the diminution having been most marked in Ahmednagar, and least in Surat and the Panch Máhals. In Ahmedábád, Poona, and Dhárwár there was a marked increase; there was also a trifling increase in Ratnágiri and Kánára. In Sind 442 fewer suits were instituted.

In the chief courts of districts there were 1,491 suits for disposal in 1876 against 1,492 in the year previous. In the courts of the cantonment magistrates at Poona and Belgaum there were 2,204 civil suits for disposal compared with 2,040 in 1875. At Thána there is an unpaid local revenue court where three suits were instituted and disposed of. In the mámlatdár's courts 6,021 cases were filed against 5,497 in the preceding year, and there were 6,288 cases for disposal against 5,821 in 1875, and 6,253 in 1874.

Disposal.

Of the suits for disposal in all courts of the Presidency, with the exception of the small cause court of Bombay, 192,186 were disposed of, including suits transferred to dormant files and otherwise settled. Of this total 33,360, or 17 per cent, were contested, and 48 per cent were decreed *ex-parte*.

The applications to execute decrees continue to be almost as numerous as before. At the end of 1875, 67,677 applications for execution were pending and 282,516 were filed, which, added to 224, gave a total of 350,417 for disposal. In 1875 276,681 applications were filed and 348,063 were for disposal, from which it appears that 1,165 fewer applications were filed in 1876 than in 1875, though suits for disposal were more by 2,354. Of the total for the year under report, 30,212 decrees were completely executed, or 1,752 more than in the previous year, and 80,352 were partially executed, or 2,219 more. At the end of 1876 56,103 decrees were pending, or a decrease of 6,878. The following table shows the nature and number of coercive processes issued in the Presidency of Bombay during 1876 and the two previous years:—

Coercive Processes, 1874 to 1876.

Year.	Imprisonment of persons.	Movable Property.		Immovable Property.		Orders under Section 343, Code of Civil Procedure.
		Attached.	Sold.	Attached.	Sold.	
1874	12,091	31,896	8,835	32,677	22,699	238
1875	7,106	16,228	7,384	31,977	22,641	287
1876	4,550	17,551	7,298	30,522	21,413	286

Turning from original to appellate business it appears that Appeals. throughout the Presidency there were 4,502 appeals instituted and 8,439 for hearing, or less than in 1875. There were 5,276 appeals disposed of against 5,192 in the previous year, and 3,055 remained on the files against 3,233. Of the total appeals instituted, 487 were filed in courts other than chief courts of districts, 3,436 were filed in the chief courts of districts, twenty-one were regular appeals in the high court from one judge or bench in original jurisdiction, 529 were appeals in the high court from district courts and special appeals, and twenty-nine were in the sadar court of Sind. Of appeals pending, 549 were in arrears in courts other than chief courts, 2,101 in chief courts, 390 in the high court, and fifteen in Sind.

Registration.

Registrations. There have during the past year been 76,381 registrations against 75,550 in the year 1875-76. The increase is one of 831 transactions, and in ratio is about 1.1 per cent. Compulsory registrations have increased from 60,194 in 1875-76 to 60,975 in the past year, and optional from 15,356 to 15,406; the first-named class exhibiting an increase of 781 transactions, the last-named one of fifty; the ratio of increase being in the former case about 1.30 per cent, and in the latter about thirty-three per cent. The number of wills registered has increased from 532 in 1875-76 to 586 in the past year, and in the latter period, of authorities to adopt thirteen have been registered against one in the previous year. Wills and authorities to adopt belong, as regards registration, the first to the optional, the last to the compulsory class. In the past year three wills were deposited, one was withdrawn from deposit, two were opened, and one removed to a civil court, against six deposits, two withdrawals, two cases of opening, and one removal, in the year 1875-76.

Property. The aggregate stated value of property affected by instruments registered during 1876-77 amounted to Rs. 3,65,37,813-10-4 against Rs. 4,64,78,529-7-9 in 1875-76. The average value per transaction,¹ taking all classes together, amounted in 1876-77 to Rs. 487-12-7 against Rs. 627 in the preceding year. The average value per transaction relating to real property was, in the period under report, Rs. 478-12-4 against Rs. 624-7-6 in the preceding year, and of movable property, Rs. 556-1-1 against Rs. 523-14-6. The average registration fee per document in the compulsory class was Rs. 2-1-2 in 1876-77 against Rs. 2-2-10 in the preceding year; in the optional immovable class it was Re. 0-7-10 against Re. 0-9-1; and in the optional miscellaneous class it has been the same as during the preceding year, namely, Rs. 2-1-7. Taking all classes together, the average registration fee per deed stands at Re. 1-13-4 for the past year against Re. 1-14-11 for 1875-76.

Results. The year under review opened favourably for the Registration department. In its early months there was a large increase in the number of transactions; in many offices, where the work had been steadily falling off for a considerable time, there were promising signs of a recovery, and everything appeared to point to a year in which the results, both as regarded the number of transactions recorded, and the amount of revenue

¹ Excluding wills and authorities to adopt, and 889 deeds in which no value or consideration was shown.

realized, would be satisfactory. The failure of the monsoon of 1876, however, occasioning, as it did in many districts, widespread distress, which, as time went on, deepened into famine, has had on the whole, as far as the past year is concerned, a very prejudicial effect on the fortunes of the Registration department, and the result is, that, notwithstanding the favourable manner in which the year opened, the number of transactions recorded in 1876-77 shows a very trivial increase on those for 1875-76. The effect of the famine has been, as alleged by some registrars, to cause an increase in the number of transactions in their districts; while others again urge that the above cause has produced the totally opposite effect of driving the numbers down. It is believed that in the main both ideas are sound. Thus the non-famine districts have many of them experienced the benefit of money being poured into them to pay for the grain which has been so largely exported to the districts in which there was a partial or total failure of crops, and this inflow of money, as it is believed, had a tendency to increase the operations of the department in some, at all events, of those districts. In the famine districts, too, it is believed that, as regards registration, the failure of last season's crops has had in some localities precisely the opposite effect to that which it has had in others. In the districts where the bulk of the population consists of peasants of the poorest class, the failure of last season's crops may be said to have, for a time at all events, destroyed what little credit remained to them, and the result has been that the operations of the department in those localities have experienced a severe check. Again, on the other hand, in those of the distressed districts, where the cultivating class are in somewhat better circumstances, and where in addition there are other classes of inhabitants more or less well-to-do, the distress of the year, wide-reaching as it has been in its effects, has driven many people, not ordinarily in the habit of resorting to the money-lender, to raise money either by way of sale or mortgage. Though the earlier months of the year showed a considerable increase in the number of registrations recorded, yet this was to a great extent nullified by the unfavourable results from September to March. What the ultimate effect of the famine will be as regards the operations of the department, as a whole, it is at the present time difficult to see, and useless to speculate upon. The approach of the past monsoon brought a revival of credit amongst the ryots in certain districts, and during the months of April, May, and June 1877 transactions were reported to have been more numerous than in the corresponding months of the previous year, but whether this activity will continue remains to be seen.

Of the twenty-five districts the following, thirteen in number, show an increase in the number of transactions recorded: Sátára, Poona, Ahmedábád, Kánára, Kaira, Belgaum, Thána, Dhárwár, Surat, Ratnágiri, Kaládgi, the Panch Máháls, and Thar and Párkar. The greatest increase, in point of numbers, is in the district of Belgaum, where 479 transactions, in excess of those for 1875-76, have been recorded. The highest ratio of increase, if the results of the previous year be kept in view, is in the Panch Máháls, where the increase of fifty-four transactions is equivalent to about

14·9 per cent of the total number for 1875-76. In the twelve districts of Khándesh, Broach, Násik, Ahmednagar, Sholápur, Bombay, Kolába, Aden, Shikárpur, Haidarábád, Kurrachee, and the Upper Sind Frontier, a decline in registration is observable. The heaviest decrease in point of numbers is in Broach, in which district there have been 415 less transactions recorded than in 1875-76. The heaviest ratio of decrease appears in the district of Aden, where a falling off of fifty-five registrations, equal to about 21·65 per cent of the total number of transactions for the preceding year, appears. The decrease in the province of Sind is very marked; the total number for 1875-76 having been 7,545, and for the past year 6,777. This decrease of 768 in numbers and of about 10·17 per cent in ratio, appears to be almost exclusively due to the introduction into Sind of the Encumbered Estates Act No. XIV. of 1876, as a large proportion of the borrowing classes of Sind were to be found amongst the Zamindárs, for whose especial behoof this Act has been passed.

Refusals to register.

There have been 229 cases of refusal to register against 225 in the preceding year. In fourteen cases on appeal to a registrar the order of refusal by a sub-registrar was reversed, and in eighteen cases such order was confirmed. In seventeen cases on appeal to a district court the original order of refusal was set aside.

Impounded documents.

There have, during the past year, been 245 cases against 235 in the preceding year of deeds impounded by registering officers, on the ground of insufficiency of stamp. In seventy-four of these cases the stamp authority declared that sufficient stamp duty had been paid; in 154 it was declared that the deeds were insufficiently stamped; and seventeen cases were pending at the close of the year.

Offices.

During the year under review one sub-registry office, that of Walod in the district of Surat, has been abolished. At the close of the past year there were twenty-five registry and 227 sub-registry offices in operation.

Inspection.

During the past year the Inspector-General examined the records of fifteen registry and twenty-nine sub-registry offices, and the Branch Inspector-General those of two registry and seven sub-registry offices. The inspectors of the 1st, 2nd, 3rd, and 4th divisions, respectively, examined twenty-six, thirty, twenty-four, and fifteen sub-registry offices, and the district indices in one registry office were examined by the second division inspector, and those in two registry offices by the inspector of the 3rd division.* There were 149 inspections of sub-registry offices carried out by registrars and sixty-seven by assistant and deputy collectors. The number of inspections by revenue officers is rather smaller

* In addition to the registration inspection work of the year performed by them, the Inspector-General and the four inspectors between them, in 1876-77, performed the following amount of stamp inspection :—

Number of stamp central depôts examined as to stamp stocks and accounts	12
Number of stamp sub-depôts examined as to stamp stocks and accounts	88
Number of vendors whose stamp stocks and accounts were examined	243
Number of judges and magistrates' courts in which the court-fee stamps on the records were examined	42

than usual, and this is due to the heavy duties in connection with the famine, which, during the past year, have fallen to the lot of many of these officers in the distressed districts. Of the 252 offices of the department only twenty-seven have remained unexamined during the year.

During the year under report there have been twelve prosecutions for offences against the registration law. Nine persons were convicted, one was acquitted, and two cases were undecided at the close of the year. One sub-registrar has, during the same period, been dismissed from his appointment on strong suspicion of his having tampered with the books of his office.

Sixty-four deeds relating to property, valued at Rs. 23,517-15-0, have been destroyed under the provisions of Section 83 of the Registration Act. Of these sixty-four deeds, forty-five had been registered, and of the remainder the registration had been refused.

The receipts of the department during the past year, under the various heads, are shown in the subjoined statement, which, to facilitate comparison, also exhibits the receipts for the previous year :—

Registration Income, 1875-77.

Items.	1875-76.	1876-77.	Increase.	Decrease.
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.

Deduct Decrease ..	2,28,640 9 10	2,32,373 10 5	10,153 6 7	6,420 6 0
	6,420 6 0
Net Increase	3,733 0 7

The net result of what appears above is represented by an increase of Rs. 3,733-0-7 on the receipts for 1875-76. The result is somewhat disappointing, as the enhanced rate of copying fee came into operation on September 1st, and it was estimated that though it would only be in operation for seven months of the year under review, it would cause an increase in the departmental receipts for the entire year to the extent of Rs. 8,500 over the receipts for 1875-76. The falling off in the number of registrations which, owing to the famine, became so marked in so many districts, almost contemporaneously with the introduction of the heavier rate of fee has, in the matter of the receipts, to a great extent,

neutralized the effect of the new fee; while, in addition, the greatly decreased average value of each transaction recorded during the year has brought down the fee realizations under the *ad-valorem* scale. As it is, however, it is satisfactory to observe that the increased fee has, during the seven months it was in operation, been more or less instrumental in adding something like Rs. 8,000 to the receipt side of the account.

Expenditure. The expenditure of the year is classified under the various heads of charge in the accompanying statement, and is therein contrasted with the expenditure for 1875-76 :—

Registration Expenses, 1875-77.

Items.	1875-76.		1876-77.		Increase.		Decrease.	
	Rs.	a. p.	Rs.	a. p.	Rs.	a. p.	Rs.	a. p.
Fixed salaries of officers	1,15,659	0 10	1,21,813	6 10	6,154	6 0
Percentage paid to the same ..	43,237	1 6	43,684	8 4	447	6 10
<i>Cost of Establishment.</i>								
Permanent	46,197	8 10	46,539	1 3	341	8 5
Temporary	15	0 0	118	11 0	101	11 0
Travelling allowance	11,938	9 6	11,489	7 4	449	2 2
Furniture and house-rent	1,531	8 1	4,773	0 3	3,241	8 2
Postage	2,703	4 6	2,476	7 0	226	13 6
Printing and stationery	9,340	5 7	7,598	7 10	1,743	18 9
Miscellaneous	7,336	4 4	8,060	0 0	723	11 6
	2,37,958	11 2	2,46,649	1 10	11,010	4 1	2,419	13 5
Deduct Decrease	2,419	13 5
Net Increase	8,590	6 8

From the above statement it appears that the expenditure has increased by Rs. 8,590-6-8. This is mainly due to two causes: *firstly*, to the heavy rent of Rs. 3,000 per annum, which has to be paid for the accommodation in Bombay of the offices of the Inspector-General and the Registrar of Bombay, offices which up February 1876 were accommodated rent-free in a building the property of Government; *secondly*, to the fact that a sum of Rs. 5,333-5-4, salary drawn by the Inspector-General on his return from privilege leave in April 1876, and which properly formed part of the expenditure of the preceding year, stands as a debit against the departmental funds for 1876-77. The charge, under the head of permanent establishment, exhibits an increase owing to a cause similar to that last mentioned, certain salaries for the closing months of the year 1875-76 having been drawn in the early months of 1876-77. The increase in the charge for temporary establishment is due to special arrangements for indexing old records in the central record rooms of Ratnágiri; while the increase in the miscellaneous expenditure is attributable to the larger number of refunds paid during the past year than in that which preceded it. Last year it was noted that in 1875-76 seventeen districts had proved self-supporting, and that in eight the expenditure had outrun the receipts. For the year under report nineteen districts exhibit a surplus, and in the remaining six a deficit is observable. These last-named are the districts

of the Panch Máhals, Ahmednagar, Kaládgi, Aden, Upper Sind Frontier, and Thar and Párkar. It may be observed, however, that this statement *per se* is somewhat misleading, inasmuch as no account is taken of the cost of the offices of the Inspector General, the four special Inspectors, and the Branch Inspector General in Sind. When those items are taken into consideration, it is found that they very considerably exceed the credit balances of the nineteen districts which were self-supporting. For the first time in the history of the registration department the financial result of the year in Sind shows a surplus of receipts over expenditure. The surplus in itself is small, only some Rs. 160, but it nevertheless forms a satisfactory feature in a year which has otherwise financially proved unsatisfactory.

The following is the departmental balance-sheet for the past year, as taken from the Inspector General's Annual Administration Report, but Government have pointed out in their Resolution No. 6889, dated 17th November 1877, that the deficit as shown by the Inspector-General has not been correctly estimated, and that the real loss of the department on the year's operations amounted to no less than Rs. 14,176, in consequence of which some reductions in establishment have had to be made, and the Inspector-General was informed that, unless he could indisputably show a respectable surplus in the report for the current year, further and large reductions would have to be effected immediately:—

Municipal Administration.

BOMBAY MUNICIPALITY.

During the year the corporation held twenty-three, and the town council sixty-one meetings.

Rates.

The number of properties assessed was 22,458, thirteen more than in 1875; but the gross valuation of rateable property again fell by a little more than 2½ lakhs of rupees, from Rs. 1,15,55,066 in 1875 to Rs. 1,12,75,710 in 1876. The gross falling off in valuation was Rs. 5,01,397, but new or increased valuations amounting to Rs. 2,22,041 on 299 new buildings, and 102 of which the valuation was raised, reduced it to Rs. 2,79,356. No alterations were made in the assessment rates during the year under report. The house-rate was at five per cent on net valuation. The police and lighting rates at two per cent; the halalcore-cess at three per cent; and the water-rate by meter at twelve annas per 1,000 gallons; and on house valuation, three-and-a-half per cent on the first Rs. 100, two per cent on the second Rs. 100, and one and one-fourth per cent on the third Rs. 100 and upwards of monthly rent.

The following statement shows the assessments for the year, and deductions from them, as compared with 1875:—

Bombay Municipality Assessments, 1875-76.

	Year.	Total Assessment.	Remis- sions.	Refunds.	Total Deduction.	Net Assess- ment for Collection.
		Rs.	Rs.	Rs.	Rs.	Rs.
House-rate	1875...	5,19,978	27,882	5,141	33,023	4,86,955
	1876...	5,07,407	30,099	4,530	34,629	4,72,778
Police-rate	1875...	2,08,899	10,733	420	11,153	1,97,746
	1876...	2,06,327	12,425	470	12,895	1,93,432
Lighting-rate	1875...	2,08,939	13,521	2,044	15,565	1,93,374
	1876...	2,06,367	16,071	1,795	17,866	1,88,501
Halalcore-cess	1875...	2,13,468	11,264	1,543	12,807	2,00,661
	1876...	2,12,162	16,377	1,347	17,724	1,94,438
Water-rate	1875...	3,01,121	5,635	2,541	8,176	2,92,945
	1876...	3,11,638	2,787	452	3,239	3,08,396
	1875...	14,52,405	69,035	11,689	80,724	13,71,681
	1876...	14,43,901	77,759	8,594	86,358	13,57,548

It will be seen from the above statement that, although compared with 1875 the gross assessment fell by only Rs. 8,564, the net assessment, owing to increased remissions and refunds, was

Rs. 14,133 less than in that year. House, police, lighting, and halalcore rates fell off, because of decreased valuation. On the other hand, owing chiefly to increase of water supplied to mills and presses, the water-rate yielded about Rs. 10,500 more than formerly. There has been a decrease of Rs. 6,720 on private horses and carriages, and of Rs. 7,378 on public conveyances. The decrease in the tax on private carriages probably will not amount to more than Rs. 1,200, as the schedules in many cases were not issued until the last quarter, and consequently were not received back in time to allow of the tax being collected before the close of the year. The decrease on public conveyances is ascribed to the evasion of the tax by the cart-men with the connivance of the messengers of the wheel-tax department, all of whom have been dismissed in consequence.

The municipality received Rs. 2,20,846 more than the budget Revenue estimate of receipts, and spent Rs. 1,89,492 less than the budget estimate of expenditure, and, as the opening cash balance was Rs. 1,48,537 more than estimated, they were, on the whole, Rs. 5,58,875 to the good. The principal excess items of receipt were the renewal of the Government contribution of Rs. 90,000 towards police expenses; town duties Rs. 73,000 due chiefly to the special importation of grain; market receipts Rs. 23,000; and miscellaneous receipts Rs. 21,000.

The income and expenditure of the year were as under—

Taxation, Proper.

	Rs.
House-rate five per cent (including Government and Port Trust contributions)	5,46,674
Police-rate two per cent (do. do. do.) ...	2,17,684

Total ...		31,60,437

The following works, begun during the year, remained unfinished at its close. The Marine street sewer, the Vehar water main at Mazagon for supplying the shipping, the Paidhoni cistern, and the Hindu and Muhammadan burial-grounds at Arthur road. The object of the Marine street sewer, which is 1,650 feet long, and will cost nearly Rs. 30,000, is to divert the sewage of the southern section of the fort from its original outfall in the dockyard into the main sewer, the outfall of which is close to the mint. The Paidhoni cistern, which is supplied with Vehar water, was constructed in consequence of a report from the Health Officer that, owing to the soaking through of sewage from a leaky drain, the water in the old dipping-well was unfit to drink. The new cistern will hold 25,000 gallons of water; its cost will be Rs. 7,500.

The following works, begun in 1875, were completed during 1876: the Pedder markets; the Currey road; the new office for the tobacco department; the DeLisle road; surface drainage near Jaggonnaht Sunkershett's house; a pumping station at Carnac wharf; and a pound-keeper's house.

The available grant for repairs to roads was Rs. 2,23,660. The area of roads repaired was 608,460 square yards, at five

annas eleven pies per square yard, being nine pies per yard more than last year on account of the higher rate of metal and sandstone. The experiment of repairing roads by filling the interstices of the metalling with coal-tar was not successful. The additional endurance of the road was found not in proportion to the extra cost. The tramway was extended from the Wellington fountain to Bazaar Gate street, a distance of 5,530 feet. Two hundred and ten streets, roads, and footways were regularly and satisfactorily watered during the year at a cost of Rs. 65,000. Road-scraping, which was done by contract, cost Rs. 11,340. Since the commencement of the current year, this work has been done departmentally at less cost.

The number of connections increased by 325 against 230 in 1875. **Water.** The only extension of water-supply was a three-inch main, 745 feet in length, in Portuguese Church street, Girgaum. There were no serious bursts in any of the large mains during the year. The largest burst was in the seven-inch main in Nesbit lane, supplying the Mazagon district. The maximum height of water in the Vehar lake during the year was fifty-nine feet. The total rainfall on the gathering-ground of the lake was only 65.68 inches. In 1875 it was 74.25 inches, and in 1874, 93.73 inches. An annual rainfall of eighty-five inches is necessary to recoup the yearly draw-off from the lake, and, therefore, without the assistance of the Tulsi gathering-ground, the water from which has for the last four years been diverted into Vehar, there would have been a comparative failure of the supply in 1876. The deterioration in the quality of Vehar water owing to the great increase of vegetable matter in the lake, is very serious. To meet this evil, arrangements have been made, before entering the reservoir, the water should be filtered through five feet of sand.

Drainage. The budget grant of Rs. 8,000, the amount expended during the year on the reconstruction and repair of a number of drains and sewers in different parts of the city was Rs. 7,982. The present state of drainage in Bombay is very defective, and the necessity of introducing a fresh system becomes every day more pressing.

The income of the health department was Rs. 2,56,673, while **Health.** the total expenditure was Rs. 5,91,557, leaving the net cost at Rs. 3,34,884. The average establishment employed daily in scavenging, drain-cleaning, and collecting and removing night-soil was 2,498. Recourse was had to the police court in 3,700 cases of offences against municipal laws. But in the exercise of a wise discretion the summonses in 2,880 were withdrawn, as the offenders had, in the meanwhile, complied with the orders given them, and thus rendered prosecution unnecessary. The total weight of garbage collected was 114,707 tons, of which about one-half was disposed of in the Kurla reclamation, and one-half in that of the Byculla flats. On the flats the reclamation by sweepings is actively progressing. The sweepings are laid down about eight feet deep, a few inches of earth put over them, and cultivation begins as soon as rain falls. Some portions of the

ground reclaimed years ago are irrigated with sewage and cultivated all the year round. Vegetable crops in abundance are gathered, and, with a never-failing stream of sewage containing rich stores of nutriment flowing through the land, the garden at present gives promise of becoming a source of great wealth to the municipality. One hundred and seventy-five miles of covered drains were opened and cleaned, and of night-soil no less than 69,699 tons were collected and removed, being at the rate of one hundred and ninety tons a day. The improvements in working the pumps for discharging into the harbour at the Carnac wharf have succeeded so far in abating the nuisance, that it is now comparatively but little felt. It is, however, clear that, till some general plan of sub-soil drainage is perfected and adopted, the nuisance will, to some extent, always exist.

As regards the health of Bombay there were 20,783 deaths in 1876 against 18,734 in 1875. Of the whole number, 10,825 were of males and 9,958 of females. The death-rate of infants under one year was 551·65 for males, and 530·99 for females per 1,000 of population, shows how unhealthy is the Bombay climate for young children. Remittent fever (5,515), small-pox (3,174), phthisis (2,804), dysentery (1,164), diarrhœa (815), and pneumonia (707) were the diseases which caused most deaths. Cholera was less prevalent than in the previous year, only 378 deaths being due to this cause. Small-pox, as an epidemic, prevailed from January to May, the greatest number of deaths being in February 646, March 1,218, and April 654; while in May there were but 298, and in June the deaths had fallen to ninety-two. The sudden decline may be attributed to the active measures taken both for the prevention and cure of the disease. As a proof of the former, it is mentioned that there were 25,200 vaccinations and revaccinations effected during the first quarter of the year, when the disease was widely prevalent. The Compulsory Vaccination Bill, which is now become law, will be of service in similar epidemics in the future. The general results indicated by the mortuary returns at Mazgaon, at Hindustani, and at the Asiatic Hospital, show that Europeans and Parsis enjoyed better health than in 1875, Hindustanis were much the same in both years, Musalmáns slightly, and Hindus much worse.

(2).—MUNICIPALITIES IN THE INTERIOR.

Municipalities No. B 2—Part V. of the statistical returns gives the income and expenditure of up-country municipalities grouped according to collectorates. It appears that, inclusive of Bombay, there are six city municipalities and 121 town municipalities in the Northern, Southern, and Kánárese divisions of the Presidency, and four city and sixty-three town municipalities in Sind.

Particulars of the various city municipalities, which enjoy considerable privileges in the way of self-government, are given below :—

70,440
31,60,45

City Municipalities, 1876-77.

Name.	Population.	Income.	Expenditure.	Incidence of Taxation per Head.
		Rs.	Rs.	Rs. a. p.

Total	23,81,138	

The marginal table shows Receipts. the total municipal income of all municipalities in each collectorate, with the highest rate of taxation in any town in the collectorate. The total receipts of the various municipalities during 1876 with the opening balance were as follows :—

	1876-77.	1875-76.
	Rs.	Rs.
Opening balance	11,89,563	11,12,995
Octroi	14,57,306	14,17,656
House-taxes	1,50,482	1,69,698
Assessed taxes	1,50,527	1,50,670
Tolls and wheel-taxes.	1,60,231	1,57,197
Miscellaneous	4,82,538	3,81,692
Loans	1,33,728	2,00,286
Debt. { Deposits	39,575	38,513
Advances repayable	38,242	37,203
Total	38,02,192	33,65,910

Taxation.

The general incidence per head of municipal taxation is given below, and is Rs. 1-0-2 of all taxes, omitting miscellaneous receipts; if these be included, it is Rs. 1-6-2. Last year the figures were Rs. 1-1-2 and Rs. 1-4-8 respectively:—

	Municipal Population.	Average Incidence of Taxation per Head.			
		Of Octrol.	Of House-tax.	Of assessed Taxes.	Of all Taxation.
		Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Northern division ...	817,601	0 8 5	0 1 7	0 1 10	0 14 8

Military.

Particulars will be found in the statistical returns [III. G.— The army. Military (1) and (2)] relative to the strength and cost of the army attached to the Presidency of Bombay. The total number of fighting officers and men remaining at the end of 1875-76 was 37,007, of which number 11,238 were Europeans and 25,769 natives. During 1876-77 1,481 Europeans and 1,857 natives were recruited, 137 Europeans and 354 natives died, 274 Europeans and 1,059 natives were invalided, and 1,010 Europeans and 791 natives were discharged or deserted. At the close of the year there remained 11,298 Europeans and 25,422 natives on the strength, or a total of 36,720. The army consists, besides sappers, of one regiment of European and nine regiments of native cavalry; of eighteen batteries of European artillery, with eighty-three guns, and two of native artillery, with eight guns; and of nine regiments of European and thirty of native infantry. The cost of the European portion of the army during 1876-77 amounted to Rs. 54,93,399, and of the native portion to Rs. 7,281,435; in all to Rs. 1,27,74,834, or about 127½ lakhs of rupees. In addition there was an expenditure on effective services amounting to Rs. 1,01,04,988, and on non-effective services to Rs. 11,66,736, or a total of Rs. 1,12,71,724, under the heading "other grants;" thus bringing up the whole cost of the army to Rs. 2,40,46,560, or about 240½ lakhs of rupees.

During the year a supply of seven-pounder muzzle-loading Artillery. rifles, 200 lbs. steel guns for the two mountain batteries and for the light battery at Aden have arrived. Both the mountain batteries have received the new equipment, and No. 2 at Jacobabad has, under the orders of the Government of India, been put on the same footing as the mountain batteries of the Panjáb frontier force. The recommendations of Brigadier-General Schneider at Aden, suggested to him by his experience in the campaign into the interior in 1873 to carry the field guns for Aden on camel back, have been acted on, and an equipment for the purpose has been devised and sent to Aden for trial. On report and approval this new arm will probably be introduced. All the nine-inch guns at Aden, lying dismounted for some years, have been mounted behind temporary cover, the Government of India having sanctioned the outlay of Rs. 40,000 for this purpose. Some of the nine-inch guns in Bombay also have, as a temporary expedient, been mounted at Kolába Point, Oyster rock, and middle ground. The only smooth-bore ordnance now in artillery charge in the Presidency is with the heavy battery at Mhow.

PROTECTION.

Cavalry.

As regards the constitution of the native cavalry, the question of introducing into this Presidency the Bengal one-horse silledar system came under review. Under that system none of the silledars (*i.e.*, men who ride their own horses) are allowed bargheers (or troopers mounted and equipped by the silledar), except the native commissioned officers, and the number allowed to these is limited to the following scale, *viz.*, *ressaldars*, *ressaidars*, and the *wordi-major* two each, and *jemedars* one each; whereas, in the native cavalry of the Bombay Presidency (which are also on the silledar system) bargheers are allowed to native commissioned and non-commissioned officers and rank and file as follows, *viz.*: *Ressaldars* and *ressaidars* five; *naib rressaldars* three; all other ranks two. Of the two systems, commanding officers of native cavalry were almost unanimous in preferring that obtaining in Bengal. The Commander-in-Chief considered that, as regards the purely military bearing of the question and for regimental convenience of organization, there was no doubt the Bengal system was the most perfect. At the same time all concurred that an essential condition of its introduction must be an increase to the pay of the troopers. The Government of India decided that if the change could not be carried out otherwise than by increased expenditure, or considerable advances, the reform must be held in abeyance.

Establishment.

The appointment of staff officer at Mount Abu has been abolished, and a staff officer allowed all the year round for the Kolába depôt, instead of for the trooping season only. The Purandhar sanitarium has been reduced from the first to the second class, with effect from the 1st April 1877.

Guards.

To relieve the police, native troops have been detailed to take charge of sub-divisional treasuries in the famine districts. Also to take jail guards in stations where the head-quarters of regiments are located.

Gymnastics.

During the year gymnastic instruction has been carried on at Ahmednagar, Bombay, Kurrachee, Deesa, Mhow, Poona, Kirkee, and Nusseerábád. A new gymnasium was opened at Belgaum on the 1st of April 1876, and one at Ahmedábád on the 1st January 1877. From 1st April to 31st December 1876 the voluntary attendance throughout the Presidency amounted to 146 officers, 3,830 non-commissioned officers, and 14,673 men, or a total of 18,649. From the returns submitted it appears that four officers, forty non-commissioned officers, and 1,020 men passed in gymnastics; and that eight officers, eleven non-commissioned officers, and 116 men in fencing. During three-quarters of the year, 123 men were taught to swim as compared with ninety in 1875. The numbers instructed in gymnastics and fencing up to the quarter ended 31st December 1876 show the large increase of 444 men over last year. A special class of men measuring thirty-three inches and under, round the chest, were put through a course of gymnastic exercise in the 56th Regiment. Their increase in chest measurement was 2 $\frac{3}{8}$ inches, and in weight 2 $\frac{1}{2}$ lbs. During the past year fourteen non-commissioned officers and men have been trained as instructors in the central gymnasium, Poona, and obtained certificates.

The result of the examination held on the 1st March 1876, which was not published when the report for that year was submitted, was as follows :—

<i>Number of Sub-Lieutenants.</i>				
Examined	19
Passed 1st class	14
2nd do.	3
3rd do.	1
Failed	1*

At Poona, in March 1876, of nineteen sub-lieutenants, eighteen passed the long-course examination. Of these fourteen were placed in the first, three in the second, and one in the third course. Only one officer failed to satisfy the examiners. The long course for sub-lieutenants began on the 15th June 1876, and lasted till the 28th February 1877, with a break from the 16th to the 31st October. The class numbered thirteen, of whom one officer had been remanded to his regiment from the previous course on account of ill health. Of the thirteen, two were invalided to England. Both at Poona and at Mhow two short courses were completed. At Mhow the first, conducted during the rains, comprised a class of six officers, one of whom belonged to the British, and the remaining five to the Indian army. Two officers of the 3rd Hussars also attended the class voluntarily, and one officer of the Madras staff corps attended the lectures for the last month. One officer was invalided during the course. The remaining eight presented themselves for examination. Of these, six succeeded in passing, and two failed to qualify. The second course, conducted during the cold weather, comprised four officers, three of the British and one of the Indian army. One officer of the 3rd Hussars attended voluntarily for two months to learn reconnoissance.

The subjects of instruction comprise, for both long and short course, field fortification, military topography, military law and tactics. In the long course the officers are also instructed in the interior economy of regiments, soldiers' accounts and correspondence, as well as in riding. The libraries of reference have been of considerable use both to the instructors and students.

The progress made in musketry by the European troops in the Presidency is satisfactory, although the figure of merit obtained is much lower than last year. The system of instruction has undergone considerable alteration, the principal being the adoption of circular bulls'-eyes and centres, and increasing the number of points requisite to pass out of the third class from thirty-six to forty, and to qualify as marksman from twenty-two to twenty-five. These alterations have so much added to the difficulty of making a good score, that it is impossible to make any comparison between the figures obtained this year and last. The average obtained by the infantry as a body is 62·64 against 80·43 in the previous year. In the cavalry the average is 29·39 against 32·36 in 1875-76, showing a decrease of 2·97 points per man. It

* This officer had failed at a former examination.

is a noteworthy fact that the 66th Foot, armed with old Snider rifles, is 2·03 points higher than the 2nd Battalion, 17th Foot, armed with the Martini-Henry rifle. The system of instruction in the native army has not been changed, and the instruction, on the whole, is making satisfactory progress. With the exception of the 66th and 83rd regiments, the arms of the European portion of the army are Sniders of the latest pattern. A supply of Martini-Henry rifles has arrived, and will soon be issued to the British infantry regiments in lieu of the Snider; with the exception of the havildárs of two regiments, the whole of the native infantry have been armed with Snider rifles.

In the month of August 1876, squads, consisting of one native officer and four non-commissioned officers from the regiments,

2nd Grenadier Native Infantry.
3rd Native Light Infantry.
5th do. do. do.
7th Native Infantry.
9th do. do.
10th Native Light Infantry.
13th Native Infantry.
14th do. do.
19th do. do.
20th do. do.
25th Native Light Infantry.
26th Native Infantry.
27th Native Light Infantry.
29th Native Infantry.

shown in the margin, were put through a course of musketry at Poona by the Chief Inspector of musketry, assisted by the two Deputy Assistant Adjutant Generals for musketry, with eight non-commissioned officers from the European regiments quartered in Poona, as drills. These parties were in each case, except the 7th Native Infantry, accompanied by a European officer. The interest taken in the matter by all the European officers

was marked; many very senior officers, colonels in the army, offered themselves for instruction; while all the native ranks, with a very few exceptions, displayed both zeal and intelligence.

Schools.

The Army education department has two distinct branches, one consisting of the school system among the British troops, and the other of that in the native army. In the British army schools during 1876 the total number under instruction was 4,729. Of these 2,504 were adults; grown children, 660; infants, 733; and industrial classes, 912. The average daily attendance of the children was very good, and that of the men was much better than in the previous year. Of 1,401 men examined for school certificate 823 were successful. The proportion of successful candidates was, for the first class, eighty-seven per cent; for the second fifty-seven per cent; for the third, fifty-nine per cent; and for the fourth, fifty-nine per cent. One hundred and fifty-seven men have attended the Hindustáni classes, as compared with thirty-four in 1875; seventy-eight men have passed examinations in Hindustáni. In the native army school the number of pupils under instruction at the close of 1876 was 5,021, or 500 in excess of the corresponding number in the former year. Of these fifty-three were non-commissioned officers, 1,042 privates, 1,202 recruits, 696 enlisted boys, and 2,028 unenlisted boys. Three languages are taught in the schools—English, Máráthi, and Hindustáni. Of the whole number, 3,041 were learning Máráthi; English 963, and Urdu 345. There are sixty-seven trained school-masters in employ, half of whom are qualified to teach English. Six students have passed out of the military normal school with certificates of qualification as English

masters, and there are now sixteen under training. Female education continues to spread, the return showing twenty-four schools and 715 pupils as compared with twenty-one schools and 622 pupils in 1875.

The health of the horses of the army has been generally good, and the casualties have not been above the average number. Two of the remounts purchased last year had glanders in a latent or suppressed form. One of them that joined at Belgaum, communicated the disease to two battery horses, which, with the remount, had to be destroyed. The supply of remounts this year has been better than for some years past, showing a decided revival in the trade. Very few Australian horses arrived, and none direct, all by rail from Madras. The supply of Persian horses has been good, and every one fit for the service has been bought for Government. The supply of Arabs has been large, chiefly young stock, and many fine colts have been bought for the Government of India, whose demand for 250 remounts from the Bombay market has been met to the extent of 213 horses. The remounts for the Bombay Presidency have been chiefly Persian horses of good stamp and promising. The army veterinary school was again attended by a large class of officers and European and native farriers. The course of instruction was much extended this year, and particularly as regards the officers, was made more thorough and practical. The officers were also for the first time subjected to an examination, and those who passed were awarded certificates.

Veterinary.

The usual soldiers' industrial exhibition was held at Poona in September last.

At Ahmedábád three new barracks have been completed. The hospital for the European sick was destroyed by the flood in September 1875. For a time the sick were removed to one of the native infantry hospitals, and subsequently one of the new Royal Artillery barracks was converted into a hospital.

Building.

Five of Her Majesty's Indian troop-ships employed for the conveyance of troops between England and India made during the season nine outward and nine homeward voyages. The total number of persons carried amounted to 22,164, of whom 10,302 were outward and 11,862 were homeward bound.

Troop-ships.

The details are shown in the following statement:—

Working of Troop-ships, 1876-77.

Number of Voyages.	Homeward and Outward bound Passengers by Troop-ships, 1876.								
	Officers.	Ladies.	Children.	Men in health.	Invalids.	Women.	Children.	Female Servants.	Total.
1	2	3	4	5	6	7	8	9	10
Outward, nine	613	102	75	8,139	...	591	753	29	10,302
HOMeward, NINE--									
From Bombay	862	106	170	5,435	2,006	939	2,344	18	11,275
From Aden	17	4	4	447	...	40	75	...	587
Total	379	110	174	5,882	2,006	979	2,319	18	11,862

It has been arranged that, in the event of any serious outbreak of infectious disease on board any of Her Majesty's troop-ships passing Suez *en route* to Bombay, sick cases should be landed at Aden. Orders have also been issued for the establishment of a small camp at Kolába for the reception of scarlet-fever patients. In the event of a serious outbreak, Government has approved of Butcher's island as a sanitarium.

Movements.

A rifle meeting was held at Poona, and it was intended that every corps in the service should be represented ; but, owing to the unsettled state of the weather, this proved impracticable.

3rd Queen's Own Light Cavalry.
16th Regiment Native Infantry.
24th do. do. do.

The corps noted in the margin were present at the Imperial assemblage at Delhi.

In consequence of extreme unhealthiness Government sanctioned the withdrawal of the detachment of native infantry from Burda Chowki. An outbreak of small-pox in Her Majesty's 56th Foot at Kurrachee, when on the point of embarkation for Aden, detained the head-quarters of the regiment. Two companies from Haidarábád, supplemented by two companies of the 66th from Bombay, were, as a temporary garrison, embarked for Aden in Her Majesty's Indian troop-ship *Crocodile* on the 13th February. To ensure a sufficient force of men for working the heavy guns lately placed in position at Aden, a third battery of artillery has been added to the garrison of that station.

Rifle ranges.

New ranges for practice with the Snider rifle have been sanctioned for the use of native troops at Ahmednagar, Dhárwár, and Baroda.

Gardens.

The indents preferred by the several European corps and batteries for seeds for soldiers' gardens to be supplied during 1876 amounted to Rs. 1,475 ; and the amount estimated to be awarded in prizes was Rs. 2,805. Gardens on the "company" system are very popular, and afford much healthy recreation to the men. The grant sanctioned by the Government of India for arboriculture in cantonments during 1876-77 was Rs. 8,083.

Hospitals.

The rules for the prevention of venereal disease continue in operation at twelve of the military cantonments in this Presidency. These are: Aden, Ahmednagar, Ahmedábád, Belgaum, Deesa, Deoláli, Kirkee, Kurrachee, Mhow, Neemuch, Nusseerábád, and Poona. The ratio of admissions into hospitals from venereal disease per 1,000 of European troops throughout the Presidency during the year ending 31st December 1876 was 75·37, or 20·42 in excess of the corresponding returns in the previous year. The cost of maintaining these institutions during 1876 was Rs. 33,620-4-1, of which Rs. 21,278-8-1 was paid by Government, and the balance by cantonment funds.

Signalling.

Six officers and forty non-commissioned officers and men were granted certificates of qualification in army signalling during the year.

At Aden a project for improving the water-supply in camp and at Steamer Point was commenced by the Public Works department during the year, and would have been completed but for the non-arrival of a large iron tank from England.

Water-supply.

At Kolába, on the recommendation of the Sanitary Commissioner, the Public Works department has been called upon to prepare an estimate of the cost of carrying out a system of surface and sub-soil drainage on the principle advocated by the Home Sanitary Commission. The sum of Rs. 600 was sanctioned by the Government of India as compensation to the municipal sweepers for the removal of their huts at Kolába as a sanitary measure. Arrangements are now being made for the accommodation of the sweepers on another site, and the clearance of the old huts. At Mhow the work of widening the streets, constructing drains, deepening wells, and removing dilapidated buildings, has been vigorously carried on by the cantonment committee during the past year. At Neemuch an estimate, amounting to Rs. 6,587, for draining the sudder bazaar was sanctioned by the Commander-in-Chief as a debit to the cantonment fund. The work is now in progress. At Nusseerábád the construction of a reservoir at Danta for the purpose of improving the water-supply was commenced in November 1875, and the work is still in progress. At Poona the whole of the existing drains of the sudder bazaar, foul and dangerous from long neglect, have been cleaned and put into working order, and a complete system of surface drainage has been prepared and partially carried out. These works will progress as funds become available. At Sholápur the expenditure of Rs. 5,000 from the cantonment fund for the purpose of cleaning out the Moti Bágh lake, as a famine work, was sanctioned by the Commander-in-Chief. At Thána, for the drainage of the northern portion of the native infantry lines, Government, in March last, sanctioned Rs. 2,500.

Cantonments.

Marine.

Building.

The works undertaken by the Master Builder's department during the year under report were chiefly connected with the repairs to the vessels of the Royal Navy, more especially those effected to Her Majesty's ship *Daphne*, which were completed at the end of January last. Progress has also been made in constructing. Six new boats of different sizes are being constructed for the Salt Revenue department and for the General Marine Service, which formerly were brought from England. The following heads represent the general charges for the year, based, as usual, on the first six months' expenditure during the period under report:—

Bombay Marine	Rs. 1,33,410
Royal Navy	" 1,52,082
Indian Transport Service	" 825
Civil, Military, Port Trust	" 35,000
Private works	" 1,852
Viceroy's reception..	" 3,890

Total Rs. 3,27,059

Engineering.

In the Engineer's department Rs. 1,44,311 were expended in repairs to vessels and in work for the several departments. Of this sum Rs. 4,190 were spent on private works.

Docking.

During the twelve months ending the 31st March 1877 thirty-seven vessels were docked, three of the Royal Navy, one of the Port Trust, thirty of the Marine department, and three merchant vessels. The docking charges for these vessels, together with charges for gear and labour supplied from the rigging-loft to other departments, amounted to Rs. 45,391. The total cost of hired labour employed in the sail loft during the year, exclusive of the master sail-maker's salary, amounted to Rs. 5,616.

Stores.

The value of stores received during the year was Rs. 3,48,286, and of stores issued Rs. 4,93,411; of coal received Rs. 1,73,542, and of coal issued Rs 1,51,245. By the sale of old and unserviceable stores Rs. 18,840 were realized. The transactions under the head of Indian Troop Service amounted in value to Rs. 1,216, making the total transactions in stores under the Marine service a little over Rs. 11,75,000. Adding the transactions with Royal Navy ships, Indian Troop Service, and private vessels, the total is raised to Rs. 12,14,916.

The Accountant General returns the total cash expenditure of the Marine department for the year under review at Rs. 18,52,420, and total receipts from the following sources at Rs. 6,96,163 :—

Dockyard services and supplies to private individuals...	Rs. 1,16,606
Sale proceeds of vessels and stores	„ 4,43,806
Registration and other fees	„ 28,306
Recoveries on account of capitalized pension	„ 13,847
Miscellaneous	„ 93,598
	<u>Rs. 6,96,163</u>

Stores and coal of the aggregate value of Rs. 5,36,956 were imported from England, purchased in India, and manufactured in the dockyard as under :—

Stores imported from England	Rs. 1,46,600
Stores purchased in India... ..	„ 84,447
Stores manufactured in the dockyard	„ 61,900
Stores returned by vessels and departments	„ 55,339
Coal imported from England	„ 1,57,323
Coal purchased in India	„ 3,500
Coal returned by vessels and departments	„ 26,042
Patent fuel manufactured in the dockyard	„ 1,805
	<u>Rs. 5,36,956</u>

The issue of stores was as under :—

Marine department	Rs. 2,45,790
Other public departments and governments	„ 43,718
Royal Navy vessels	„ 1,08,630
Local Funds and private individuals	„ 31,907
Manufacturing departments of the dockyard	„ 2,28,376
Stores condemned and recommended to be sold	„ 15,819
	<u>Rs. 6,69,240</u>

At the close of last official year, 1875-76, including coal, stores to the value of Rs. 19,68,922 were in stock. At the end of 1876-77 there remained a balance of stores and coal valued at Rs. 18,36,638.

The usual statements showing the number and description of the vessels of the Bombay Marine appear in Nos. 1 to 3—H.—Vessels. Marine Part III. of the statistical returns. The *Amberwitch* was employed in connection with the Telegraph department; the *Dalhousie* was engaged on transport service; the *May Frere* and the *Quangtung* were employed on the Aden station under the orders of the Resident; the *Comet* was employed on the rivers of Mesopotamia under the orders of the Political Resident in Turkish Arabia; the *Jhelum* and *Mooltan* were under the orders of the Commissioner in Sind; the *Hugh Rose* was employed in carrying out quarantine arrangements at Bushire. Except during a short trial trip in April, the turret-ships *Abyssinia* and *Magdala* lay throughout the year in the Bombay harbour.

IV.—PRODUCTION AND DISTRIBUTION.

Agriculture.

Returns showing the extent of culturable land under tillage during 1876-77, compared with 1875-76, and the proportion in which each description of crop was cultivated, will be found in the statistical returns (IV.—A—(1) and (2)).

Cotton.

The statistical returns also include a statement (IV.—A—(3)), from which will be seen the area taken up for cotton cultivation, and the estimated yield in 1876-77, compared with the average and produce of the preceding year. Of the details shown in that statement as regards the average, the following is a brief summary :—

Cotton Cultivation, 1875-77.

	Acres of land under Cotton cultivation.			
	1875-76.	1876-77.	Increase.	Decrease.
Northern division	1,164,906	1,061,502	...	103,404
Southern division	1,343,211	289,515	...	1,053,696
Sind	54,117	70,294	16,177	...
Native states	1,954,353	1,811,433	...	142,920
Total...	4,516,587	3,232,744	16,177	1,300,020

From the above it will be seen that there has been a decrease in the area under cotton cultivation in all parts of the Presidency except in Sind. This falling off amounted to no less than 1,283,843 acres, or about 28·40 per cent of the total area under cotton cultivation in 1875-76. The deficiency is chiefly due to the Southern division, where the decrease amounted to more than one million acres, or about nine-tenths of the whole. Of this the greater part, namely, 985,230 acres, represents the decrease in the famine-affected districts of the Southern Mārātha Country. In the Northern division the falling off was also almost entirely

confined to districts that had suffered from a scanty rainfall. In Khándesh alone there was a decrease of 106,258 acres. Pálanpur was the only state which showed an increase, amounting to 11,116 acres more than in the previous year. The very large reduction of the cotton area in the southern districts and in Khándesh and the Deccan collectorates is accounted for by the more or less complete failure of the usual supply of rains. In Khándesh, at the opening of the sowing season, a larger breadth was planted with cotton than in the preceding year; but, owing to the want of rain, much of this land had to be reploughed and devoted to cereals. The increased area under cotton in Sind is attributed to a more favourable inundation in the Haidarábád district, and to the seasonable rainfall in other parts of the province at the time of sowing.

In the outturn, as in the breadth sown with cotton, there has been, on the whole, a decrease, as will appear from the following table:—

Outturn.

Outturn of Cotton, 1875-77.

Division.	1875-76.	1876-77.	Increase.	Decrease.
	Cwts.	Cwts.	Cwts.	Cwts.
Northern division	582,248	419,680	...	162,568
Southern division	359,960	47,309	...	312,651
Sind	162,218	197,884	35,666	...
Native states	1,038,409	938,226	...	100,183
Total...	2,142,835	1,603,099	35,666	575,402

Except Sind, all divisions of the Presidency share in this decrease. The net decline from the previous year amounts for the whole Presidency to 539,736 cwts. of cleaned cotton, equal to 154,210 bales of 392 lbs. each.

In the following statement the cotton area and outturn of the last season are compared with those of the preceding five years:—

Cotton Area and Outturn, 1870-77.

Year.	Acres.	Cwts.
1871-72	3,379,937	1,548,014
1872-73	3,879,802	1,823,115
1873-74	4,242,821	2,045,374
1874-75	4,229,596	1,836,434
1875-76	4,516,587	2,142,835
Average for the five years	4,049,748	1,879,164
1876-77	3,232,744	1,603,099

Thus, it will be observed that although the area of cotton cultivation was less by more than one and a quarter million acres than in the preceding year 1875-76, and the yield of cleaned cotton less by more than half a million cwts., these amounts are reduced to 817,004 acres and 276,065 cwts., respectively, when compared with the five years' average.

PRODUCTION
AND DISTRI-
BUTION.

Indigenous
and exotic
cotton.

The extent to which the cultivation of indigenous cotton fell off during the year under report in proportion to the exotic is shown in the subjoined statement :—

Decrease of Indigenous Cotton, 1876-77.

Division.	Indigenous Cotton.				Exotic Cotton.			
	Increase.		Decrease.		Increase.		Decrease.	
	Acres.	Cwts.	Acres.	Cwts.	Acres.	Cwts.	Acres.	Cwts.
Northern division	154,122	145,876	50,718	16,692
Southern division	750,651	166,569	303,045	148,082
Sind ...	16,180	35,672	3	6
Native states	95,708	65,510	47,212	34,673
Total...	16,180	35,672	1,000,481	877,955	50,718	...	350,260	197,453

In the Northern division there were thus 50,718 acres of exotic cultivation more than in 1875-76; while, with this large increase, the yield was less by 16,692 cwts. These figures relate almost entirely to Khándeshi, where the exotic sown is American seed acclimatized in Dhárwár. The decrease of exotic cultivation and of the yield therefrom, shown in the Southern division and the native states, applies, in the same manner almost exclusively to the collectorates and native states in the Southern Márátha country, the exotic being here also the variety obtained from acclimatized New Orleans seed. The total area sown with indigenous cotton last season was 2,948,832 acres, and exotic 284,312 acres.

Yield.

The yield of cleaned cotton per acre in the different districts of the Presidency, according to the reports of the local officers, was as follows :—

Yield of Clean Cotton per Acre, 1875-77.

Akalkot	7·24	3·18	...	4·06
Kolhápúr and other Southern Mára- States	72·75	13·67	...	59·08

The district in which the greatest increase of yield per acre occurred was Surat, where nearly 69 lbs. per acre were realized more than in the preceding year, the total outturn per acre being about 201 lbs. There was also a large increase in yield in two divisions of Sind, namely, in Haidarábád and the frontier district, 38½ lbs. being the additional yield per acre in one case, and 31½ lbs. in the other. The largest deficiency is seen in the district of Thar and Párkar (Sind), where the yield per acre was only 49½ lbs. against 206½ lbs. in the previous year. There was also a considerable decline in Kaira, Khándesh, and Násik, in the Northern division, and in the whole of the Southern division, except Ahmednagar. The increase in the last-mentioned district, however, is only nominal, because the yield in the preceding year was unusually small. A comparison with the outturn in 1874-75 would show, on the contrary, a decrease last season of nearly 2½ lbs. per acre. In the collectorate of Poona, where the small area of 1,253 acres was sown with cotton, the crop failed entirely. In Sholápúr and Kaládgi also the crop may be said to have been lost. The outturn in Sholápúr was about three-quarters of a pound per acre, while in Kaládgi it was about one-third of a pound, a quantity hardly, perhaps, worth the labour of picking. With the exception of Baroda, where there was an increased yield of ten pounds per acre, and Káttýwár, where the excess over the preceding year was a little more than two pounds per acre, all the native states show a smaller yield than in 1875-76. The greatest decrease appears in Kolhápúr and other Southern Mára-átha states. In Akalkot, where the yield is usually very small, it was last year scarcely 3½ lbs. per acre.

The bulk of the last season's crop was of good quality, notwithstanding the adverse conditions under which much of it was grown. In the Gujarát collectorates, particularly in Surat and Broach, the staple compared most favourably with the produce of the preceding season. Where the rainfall was heaviest the cotton was much stained, but damage from this cause was confined to a small area. The Khándesh crop was very much better than in the previous season. The Káttýwár cotton was, on the whole, of fair quality. A considerable portion of the Sholápúr and Ahmednagar crop was stained. Supplies of the indigenous staple of the Southern Mára-átha Country came forward fairly free from seed. As regards its cleanliness, the American saw-ginned variety was found generally in a satisfactory condition ;

PRODUCTION
AND DISTRI-
BUTION.

but complaints of deterioration from the use of unsuitable seed continue to be made. In Sind the crop was uninjured by rain, but a part of it is reported to have been in a very leafy condition. This the cotton inspector attributes to the neglect of the cultivators to pick the cotton at the right time, or before the pods had dropped from the plants.

Cotton
Frauds Act.

In the administration of the Cotton Frauds Act the following establishment was employed for the town and port of Bombay :— an inspector-in-chief, one inspector, one assistant inspector, and eleven sub-inspectors, of whom one is employed as a clerk. For Gujarát, one inspector for the whole province ; one inspector and three sub-inspectors for Broach ; and five sub-inspectors for the other collectorates. For Khándesh, one inspector and two sub-inspectors. For Sholápur, one inspector and two sub-inspectors. For the Southern Máraþha Country, one inspector and three sub-inspectors. For Sind, one inspector and one sub-inspector. Twenty-three prosecutions were instituted under the Act, and twenty-seven persons charged. Of these cases fifteen occurred in Ahmedábád, three in Khándesh, one in Sholápur, and the remaining four in the Southern Máraþha Country. Of five of the Ahmedábád cases, the result has not yet been communicated. In six of the remaining cases the offenders were convicted and punished, while in twelve the accused were discharged. In nearly every instance in which the prosecution was not followed by a conviction, the charge had been laid under Section 3 of the Act, which applies to the offence of “ fraudulently or dishonestly selling or offering for sale adulterated cotton.”

Fund.

The receipts of the cotton improvement fund amounted to Rs. 1,43,999, and the expenditure on account of establishment to Rs. 1,47,954, or Rs. 3,955 in excess of the income. The cash balance to the credit of the fund on the 31st March last was Rs. 2,47,434.

EXPERI-
MENTAL
FARMS.

There are three Government farms in the Presidency : one at Saláru, in Sind ; one at Bhadgaon, in Khándesh ; and one near Dhárwár.

Sind.

At Saláru, in Sind, only thirty-six acres of the farm were cultivated, and of these sixteen-and-a-half were devoted to Sind native cotton, and fifteen to millet, *bájri*. The remaining area was divided into five small plots for experimental crops. Sind cotton sown on land, watered from wells, was inferior in yield to that of the previous season, but still much superior to any sown after the river water came into the canals. The total yield of seed cotton from the three-and-a-half acres was 5,496 pounds, equal to fully 527 pounds of clean staple per acre. The thirteen acres, sown after the water came into the canals, yielded in all 10,680 pounds seed cotton, or about 274 pounds of clean staple, per acre. The season was a bad one for cotton, with, as a rule, a much smaller outturn than in the previous year. The American cotton was a failure, the season was against it, and the same seed has been too long sown on the same soil. The half acre sown with the Nankin cotton gave a return of only 268 pounds seed cotton, or about seventy-four pounds clean cotton, per acre. Though unfavourable,

for cotton, it was an excellent season for grain. The millet, *bájrí*, field gave a return of 1,420 pounds of millet the acre. Half an acre of the land planted in 1875 was again planted with tobacco, and yielded the best crop ever produced, both in quantity and quality. One acre of land was sown with flax seed received from the Khándesh Government farm. The ground which had previously borne an early crop of Indian millet, *jawári*, was well ploughed, manured, and watered previous to sowing. After sowing it got no water. The outturn was 396 pounds of very fine, full seed. The following table gives the particulars of the year's operations:—

Sind (Saldru) Experimental Farm, 1876-77.

Description of Crop.	Acres cultivated.	Cost per Acre in Rupees.	Income per Acre in Rupees.	Profit per Acre in Rupees.	Loss per Acre in Rupees.	Total Yield.	Price realized in Rupees.
Sind native cotton on well land	3½	58 13 7	54 7 9	..	4 5 10	193 mds. 48 lbs. or 16,176 seed cotton.	899 0 9
Do. do. on canal land. ...	13						
American cotton	½	45 14 2	12 3 8	..	32 10 6	274 lbs. seed cotton.	6 1 10

Tobacco	½	91 1 3	13 10 11	16 mds. and 21 lbs. or 8 pirds.	40 10 0
Bájrí	15	36 11 11	43 15 0	7 3 1	..	253½ mds. or 21,294 lbs.	659 1 0
Sorgho, <i>jawári</i>	2	20 13 9	43 12 2	13 15 5	..	78,960 lbs. or 940 bundles of grass.	87 8 3
Flax	1	37 5 11	23 0 0	..	15 5 11	4 mds. 60 lbs.	22 0 0

Millet and Indian millet are the only crops which show any profit. On the entire cropping there is a deficit of annas eight and pies four, the expenditure having been Rs. 1,720-13-11, and the value of the produce sold Rs. 1,720-5-7.

At the Khándesh farm the area under cultivation was the same as in the preceding year. A few patches of waste are being made ready for experimental plantings. The rainfall was just about half that of the preceding year. The following table shows the details of some of the crops grown:—

Khándesh.

Khándesh Experimental Farm, 1876-77.

Crop.	Acres cultivated.	Total Yield.	Value.	Expenditure.	Profit.	Loss.

Hay	629 14 0	548 0 0	81 14 0	...

The total area under cotton was 138½ acres; of this about sixty-five acres were of the Hinganghát variety, and seventy acres of Dhárwár American. The profit on the entire crop was Rs. 587 against Rs. 575 in the previous year. The maximum

PRODUCTION
AND DISTRI-
BUTION.

EXPERI-
MENTAL
FARMS.

yield of Hinganghāt was 29.73 pounds, and of Dhārwar was 51.25 pounds. There were two small plantations of sugar-cane: the one watered from the canal, the other from the river bed. The former suffered severely from *alu*, a kind of rot caused by the punctures of a very minute caterpillar infesting the axils of the leaves during the rains. The latter produced a heavy crop, but fully one-half was broken down by pigs and jackals. The Indian millet was a disappointing crop, the seed having everywhere germinated badly. Six fields were sown. Of these one only came up sufficiently thick to be worth leaving. The others were resown with little better results. The total loss on Indian millet is Rs. 64. *Til*, or gingelly-oil plant, although only about a three-fourths crop, was, on account of the enormous rise in price, much more paying than in ordinary years. The whole crop shows a profit of Rs. 212. The seed was all clean and of good quality. The linseed, *Linum usitatissimum*, crop was a failure. Considering the season, the outturn of millet was good, showing a profit of Rs. 205. Except in a few favoured spots, the wheat crop was, on the whole, poor. About eight-and-a-half acres were sown with broad-leaved morinda, *al*, *Morinda citrifolia*. The plants came up thickly, but afterwards, owing to the scanty rainfall, died off, causing a loss of Rs. 88. With the view of cultivating it under canal irrigation, one field was sown with indigo. But so great was the demand of water for Indian millet that there was none to spare for indigo. A small crop of seed was gathered, and the superintendent reports that the plantation is in very good condition for cropping during this year.

The superintendent is satisfied with the progress made by his three agricultural apprentices. The amount disbursed during the year was Rs. 6,193, or Rs. 736 more than the receipts.

Dhārwar.

In Dhārwar the wheat crop, generally sown after the first burst of the easterly monsoon (October), was very hurriedly put in, as it was feared that, by delay, the scanty supply of moisture in the ground might be lost. In the neighbourhood of Navalur the seed came up well, but the easterly winds drying up the half moistened soil the wheat straw grew stunted and weak, and the grain very light, some fields barely yielding as much as the seed sown. Cotton sowing commenced about the middle of August, but the crop was never very promising. It is true the sowings of American cotton in three fields kept remarkably free of blight, but they were weak and stunted. The yield from two of the fields was remarkably light; in fact, the cotton crop of the village was almost a failure. The total income in the year under report amounted to Rs. 1,504, or Rs. 562 more than in 1875.

TASAR SILK
EXPERIMENTS.

At Poona, under the charge of Captain G. Coussmaker, interesting experiments have been in progress in the rearing of Tasar silk-worms. The first step taken by Captain Coussmaker was to have a group of moths, cocoons, and caterpillars photographed and circulated to the collectors and forest officers. The result of this and of the issue of circulars of instructions was that, at a cost of Rs. 164, 46,016 cocoons were received. Complete details of the districts from which supplies were received are not available; but it would seem that, roughly,

13,000 came from Ratnágiri, 10,870 from Thána, 8,600 from Kolába, 3,800 from Gujarát, 3,800 each from Poona and Sátára, and 2,300 from Khandesh. Of the whole number, 27,848, or about two-thirds, were forwarded by forest officers, and the remainder by mámlatdárs and other revenue officials.

Besides the cocoons mentioned above, men employed by Captain Coussmaker collected 7,300 near Poona and 8,900 in Ratnágiri, making a grand total of 62,216. The trees on which they were principally found were, in the Konkan, the *bher*, *Zizyphus jujuba*; the *guti*, *Zizyphus xylopyra*; the *ain*, *Pentaptera tomentosa*; the *kanchan*, *Bauhinia parviflora*; the *karanda*, *Carissa carandas*; and the *mál kangani*, *Celastrus montana*: in the districts of Poona, Sátára, Gujarát, and Khándesh, on these trees and also on the *nándruk*, *Ficus benjamina*; the *pimpri*, *Ficus tjiela*; the *daura*, *Conocarpus latifolia*; and the *lendeya*, *Lagerstræmia parviflora*. In the Panch Máhals they were also found on the *hálida*, *Chloroxylon swietenia*. In the Konkan the collectors were Mussalmáns, Mhárs, and Máraáthas, several of the forest tribes, especially Kátkáris, Kolis, Wárlis, and Thákurs.

Of the results of his observations and experiments Captain Coussmaker gives the following account:—Throughout the whole of the time, between the middle of August 1875 and the end of October 1876, I was hardly ever without moths; for the gathering of the cocoons from the trees, and the moving them about, shutting up in the baskets and bags, and generally disturbing them, had the effect of exciting them, and caused the moths to come out repeatedly during the months of February and March. I had upwards of 100 moths out a night, and whenever a fresh batch of seed cocoons arrived, whatever the temperature or the time of year, moths came out in large quantities. The first supplies from the district officials arrived in February, and consisted of both full and empty cocoons packed in baskets and bags. It was not easy to find out, on arrival, how many full cocoons had been sent, and how many burst; for, as I have already mentioned, the shaking had so disturbed them that the consignments were found to contain many moths more or less damaged. I, therefore, had them all moved out on to open trays, and put into a spare room. I kept a monthly record, as below, showing what moths came out, how many females paired, and after the 14th April the number of worms hatched:—

Rearing of Tasar Silk-Worms, 1876-77.

Month.	Males.	Females.	Paired.	Worms hatched.
February, from 10th to 20th...	355	419	48	No record kept.
March	1,126	1,217	399
April	578	636	289	20,770
May	539	557	115	14,781
June	504	523	424	38,579

August	423	320	309	45,854
September, from 1st to 10th...	142	120	89	7,553
	4,097	4,235	2,045	170,634

Before the supplies from the districts came in, my men had only gathered in the neighbourhood some 300 cocoons, and these

PRODUCTION
AND DISTRI-
BUTION.TASAR SILK
EXPERIMENTS.

and the moths that came out of them, as well as the caterpillars which were hatched, were mostly sacrificed in experiments. The result was, that I confirmed my former theory, that the males require more liberty than the females, that these latter rarely move away from their empty cocoons, or from the twigs on to which they crawl when their wings are stiffening, while the former fly away as soon as their wings are stiff enough; and as during the rainy season there are generally several male moths flying about the station, females, when tied out, are soon paired, their talc-like discs, shining like little moons at night, act like the light of the glowworm to attract the male. In this way I succeeded in getting nearly all the females, which came out during the monsoon of 1875, paired. But I failed in the rearing, my space was limited, and my cages were badly ventilated, and although I hatched several hundreds, I only gathered fifty cocoons during that season. I afterwards moved into a larger house, and gave up much more room. Working on a system, I joined chairs and tables together, with bamboos connecting them so as to form a succession of benches: on these I placed bamboo-mat trays, and above I hung twigs on strings, entirely giving up the indoors cage system. In some places I put rows of small pots with twigs in them, filling them with moist earth; but I did not find this answer, as the caterpillars were always more ready to crawl down the pots than up them, and the free circulation of air was much hindered; so I determined to trust to the strings alone. For a short time everything went on well; I had plenty of good fresh leaves; the worms were not crowded, and they grew considerably, but, long before the fifty days of their life were at an end, the leaves on the trees became hard or diseased, and although I had any amount in quantity at my disposal, I had none of a good quality. Caterpillar after caterpillar pined and withered away, and this has been the story the whole season. Although the trees have from time to time flushed and sent out quantities of beautiful fresh shoots, these efforts have only been spasmodic, and, owing to the great scarcity of rain throughout the neighbourhood, I found it impossible to ensure a steady supply of suitable food from the way-side trees, numerous though these are.

Although I failed in rearing, I succeeded in breeding and in procuring fertile eggs. During the hot weather there were no wild males flying about; so I found that it was not much use tying the females out, but during the rains I was quite successful. I, therefore, from February to May, turned all the moths, as they came out, into a bedstead covered with mosquito curtains, and a fair proportion paired there. After May I adopted the following system, which in future I shall always follow. I rigged up swinging trays as already described, and in the mat trays resting on them I placed the cocoons, covering the whole with bamboo chicks fastened up like a penthouse about three feet high. The moths, after they came out of the cocoons, crawled up the chicks, and there hung while their wings were expanding. I found that several pairs took place in these cages: each morning I looked at them, and leaving the pairs inside the cages undis-

turbed, I put all the rest of the moths into a large basket and covered them up. About four in the afternoon I looked at them, and found that some pairs had taken place; these were left undisturbed, and all the unpaired females tethered to a small frame of trellis-work. At dark this frame was hung up to a tree, and all the unpaired and free males liberated near it. I generally found in the morning that the majority of the tethered females were paired; the frame was then brought in-doors and hung up out of the way. Great care was always taken that no pairs should be separated by force; they were always allowed to free themselves, and, after they had done so, the females were put under inverted baskets to lay their eggs, while the males were put into a basket to be liberated at sunset. By systematically carrying out this method, the majority of females paired and their eggs proved fertile, but the average was less than I had formerly noticed, only 106 per moth. I did not have the eggs laid counted, only the number of worms hatched.

My head silk-worm tender was a Mārātha widow, who had been educated in the female normal school at Poona; and it is principally to her that I am indebted for the success I met with. She tried every device in the way of closing windows and doors, hanging up wet cloths, putting grass screens to the doors, sprinkling the twigs, dipping them in water; but it was of no avail. We had no disease, no epidemic, no bad smell, but simply starvation. We kept accounts of deaths in some instances and compared the proportions of deaths among the different sizes, and found that two-thirds of those which died were under a week in age; but of 170,634 hatched between the 1st April and the 10th September only 2,623 grew up and spun cocoons, and this we laid entirely to the difficulty of getting suitable food. Under this woman I had two other women and five lads at different times, some looking after the worms in my compound and some tending them on the slopes of the hills near, and at odd times they all cleaned the burst cocoons and prepared them for the manufacturer.

The majority of the cocoons sent to me were those of *Antheræa paphia*, and belonged to the common variety of that moth. In September 1875 Major Bowie, Deputy Commissioner at Sambulpor, sent me some belonging to another variety, called by the natives of the Central Provinces the Chatisgarh cocoon. These were larger but much thinner and softer, and the moths slightly darker. They paired readily with the small, hard cocoon kind, and I think that the difference between the two cocoons was simply owing to climate and feeding. The Chatisgarh moths were more delicate and limp-bodied. The remaining cocoons I received from the Bombay forests were of *Attacus edwardsii* and of *Cricula trifenestrata*. Several moths of both these species came out, but none paired, so I can make no report about their domestication. The former of these seems distributed over the whole Presidency, and I have also received some from Mysor; the latter came from the forests of north Kánára only; they are both described by the late Captain Thomas Hutton, and I can add nothing to his description.

The tree used for in-door rearing was the *nandruk*, *Ficus benjamina*, whose leaves stand travelling well. The *bher*, *Zizyphus jujuba*, withers very quickly. But on it, the *ain*, *Terminalia* or *Pentaptera tomentosa*, the *lendeya*, *Lagerstroemia parviflora*; and the *karanda*, *Carissa carandas*; a few caterpillars grew to maturity out of doors.

Captain Coussmaker thus sums up the results of his experiments:—

- (1.) Seed cocoons should be moved about as little as possible, for fear that the moths may come out when the weather is unsuitable.
- (2.) Feeding on twigs gathered from unpruned trees planted by the road-side is a mistake, as on twigs eighteen inches long there are only three or four leaves of a suitable quality.
- (3.) Plantations should be made of the kinds of trees and shrubs which thrive best in the selected localities, and these trees should be grown as pollards. When the worms are fed out of doors, the trees should be protected with cages or nets; when under shelter, either in coir-matting covered sheds, or in portable pens or cages; only the third, fourth, and fifth leaves from the end of the twig should be used, and these should be renewed three or four times a day.
- (4.) Fertile eggs can always be obtained. Only the eggs of the healthiest moths should be kept for distribution or for home rearing.
- (5.) Since the silk mill in Bombay can work up the burst cocoons, there is no need to kill a single chrysalis; all the moths should be allowed to come out of the cocoons.
- (6.) After the moths come out there are generally a few drops of excrement left in the cocoon: these should be shaken out, and the cocoons put on one side to dry; after four or five days these cocoons should be carefully cleaned, all pieces of leaf or twig cleared from the outside, and all exuviae, as cast skin of caterpillar and chrysalis, removed from the inside; there will then be nothing left to attract beetles, and the cocoons will be clean and ready for the market.
- (7.) The habits of the trees or shrubs used for feeding the worms should be carefully watched, with the view of finding out the best way to treat them, so as to ensure a steady supply of suitable food.

As regards the manufacture of Tasar cocoons into fabrics, Captain Coussmaker writes:—“When I began my experiments I was under the impression that it would be necessary to send the cocoons or the raw silk to Europe; for, although I knew that there were mills in Bombay, I did not think that there were any in which silk was manufactured. However, I was fortunate enough to get into correspondence with Messrs. Tapidass Vurjdass & Co., Secretaries and Treasurers of the Alliance Spinning and Weaving Company, Limited. This company has been manufacturing water-twists for the last thirteen years, and the weaving establishment

has been at work for a very little over a twelvemonth. In this mill, spun silk has been made from Bengal Chasm and from damaged cocoons of B. Mori. No reeling is as yet done on the premises, but raw silk is bought in China and also in the local market; both aniline and vegetable dyes are used for the raw and spun silk; 'Poplin,' 'Satin,' 'Japanese,' and 'Korah' silk-pieces are woven, and meet with a ready sale in the local market. This enterprising company has got out from the English silk-mills four superintendents to instruct the mill hands in weaving, spinning, and managing the machinery: over the whole mill there is a Bombay educated Pársi manager. The company has ample plant for carrying on the work in all its branches, and turns out some hundreds of pounds of spun and neat silk per week; they use up this themselves, and have disposed of a large quantity besides, having largely contracted for the delivery of much more. Under these circumstances it speaks much for their public-spiritedness that they were so ready to give up time and money to work out this experiment for me. I placed the whole matter unreservedly in Messrs. Tapidass Vurjdass' hands, and sent them 112 lbs. of cocoons cleaned as well as could be done by my labourers without boiling them. Messrs. Tapidass informed me that from these cocoons about 40 per cent pure silk and about 30 per cent noils, or refuse, were obtained, while about 30 per cent was lost in the boiling; this loss being, I suppose, the natural cement, the dirt, and foreign matters left in by the cleaners. The company, therefore, had about 45 lbs. to experimentalize upon. Some of this they wove into all Tasar cloth, some into Tasar poplin, a considerable quantity was used in experiments made with the view of bleaching it, and a small amount is still on their hands. Messrs. Tapidass regret that they can put no value upon this material in either the form of cocoons, of yarn, or of piece-goods; as hitherto they have not found that there is any demand for Tasar. If they could be supplied with the yarn as white, or as nearly white, and as capable of taking every dye, as the B. Mori silk is, they could then use it, but in its present condition they can make no use of it; still they are glad of having had the opportunity of experimentalising on the raw material, and feel confident that, if a demand for Tasar goods should arise in the local market, they would be able, from this indigenous product of the Presidency, to manufacture whatever may be called for."

During the year experiments were also carried out by Mr. Woodrow, Superintendent of the Botanical Gardens at Ganesh Khind, at Government expense; and by Mr. Lyle, one of the employés of the G. I. P. Railway Company, at his own charge. Mr. Woodrow laid down a great many cuttings of the *nándruk*, *Ficus benjamina*. He built a light, commodious shed, with the sides and top of coir-matting. As with Captain Coussmaker, Mr. Woodrow's caterpillars now and again thrive well, but when the leaves deteriorated, the caterpillars starved and died. At the close of his experiments 293 good cocoons remained. Mr. Lyle, an American by birth, tried a series of experiments in rearing these silk-worms at his house, near Dápuri: as he had no room or shed to keep them in, he constructed large pens, or cages, fixed to uprights driven into the

ground under some good shade-giving trees. The sides and tops of his cages were made of bamboo chicks closely fastened together, so that no caterpillars could escape, but plenty of air could get in, and none of the silk-worms' enemies could get at them; coating the uprights with tar and castor-oil mixed, he effectually prevented anything climbing up. Inside his cages Mr. Lyle stretched wires lengthways of the cages, and on these he hung the twigs; a good deal of light rain fell at Dápuri during the month of August, when he had his cages full, and the wind driving moisture through the interstices of the chicks kept his leaves fresh, and the worms thrived quite as well as on the trees. From some cocoons obtained from trees along the line Mr. Lyle gathered 1,509 cocoons, most of them as fine as any forest-reared specimens in this neighbourhood.

Horse-breed-
 ing.

The total number of mares covered by Government stallions shows a decrease, being this year 2,137, compared to 2,232 last year; while the cost of keep has increased from Rs. 24-6-8 to Rs. 27-6-7 each per mensem. The total number of working stallions was seventy, which gives an average of 30·53 mares per horse; but the new English horses were allowed only light work on account of their youth, and covered but eighteen mares between them; if these were deducted, the average of the remainder would be 32·1 against 32·43 last year. The only district showing any great increase is Ahmedábád, where 314 mares were covered against 223 last year, or an increase of ninety-one. It is, however, remarkable that, though the famine was severe in the Ahmednagar collectorate, it was not able to check the steady increase that has been going on there for the last five years. Thus, beginning with the year 1871-72, the number of mares covered annually has been respectively 41, 68, 139, 199, 246, and 269. Of the whole Government stud, nine were English, one Australian, fifty-two Arab, and two Pegu. Mr. Lamb was able only to inspect the horses at Ahmednagar, Sátára, Belgaum, Rájkot, Ahmedábád and Kairá, where he found them generally in good health and condition. The returns for the principal places are 298 mares in Káttywár, or 22·9 per horse; 253 in Sirur, or 31·6 per horse; and the lowest of all is Belgaum, with sixteen mares covered by one Arab horse.

Horse-shows.

There were four horse-shows held during the year, at Poona, Shikárpur, Rájkot and Ahmedábád. The usual shows at Sirur, Pingli, and Máheji were not held this year on account of the great scarcity in the neighbourhood of those places. There was a considerable increase in the number exhibited at the Poona show. A total of 377 horses, mares, and young stock was exhibited. Of foals and fillies 130 were shown, of which eighty were by the Government stallions; twelve geldings were also shown. There were 149 brood mares, and the special class for mares by a Government stallion, and in foal or with foal at foot by a Government stallion, was the best class in the whole show, containing fourteen really excellent mares. At Shikárpur 312 animals, including fifty-three mules, asses, cows, bullocks, and buffaloes, were exhibited against 373 in 1875. At Rájkot there were 120 animals against ninety-four the year before, and the quality of the young stock was, on the whole, good. At Ahmedábád 115 mares and fillies were exhibited

against 114 the year previous. Mention is made of two classes of brood mares as fair and very good respectively.

Details of agricultural stock, except for three of the five Sind districts, are given in statement 4 A, Part IV, of the statistical returns. The collection of these statistics is specially difficult, and in many cases it seems probable that no great accuracy is attained. As the returns come down only to July 31st, 1876, the totals are unaffected by last year's scarcity. For the whole Presidency the returns, on the whole, show an increase. Of cattle from 7,169,731 to 7,277,595; of horses from 144,675 to 150,070; of sheep and goats from 3,221,051 to 3,295,231; and of carts from 303,739 to 306,787.

Agricultural
Stock.

Under the head of bullocks the returns show, compared with the previous year, a total fall for the whole Presidency of 43,286, that is, decrease from 3,313,326 to 3,270,040. Except in the two districts of Sind, where there is a rise from 61,964 to 69,027, and in Gujarát where the total has risen from 462,855 to 479,734, the fall is found in all parts of the Presidency. In the Konkan the numbers are 404,304 and 389,821; in the northern Deccan, that is Khándesh and Násik, the fall is from 531,079 to 525,116; in the Deccan from 1,204,239 to 978,717; and in the Kánárese districts from 766,360 to 741,598:—

There were several serious outbreaks of cattle-disease. But, on the whole, the season would seem to have been freer from this

evil than the year before. The most fatal epidemic was in Ratnágiri, with 19,986 deaths; Sátára comes next, with 12,500; then Kánára, with 1,804; then Kolába, with 1,232. Of other districts 300 deaths are attributed to cattle-disease in Kaira; 282 in Thána, and 276 in Kaládgi. The disease also appeared in Belgaum, but no details of the loss it caused are available. Except in Thar and Párkar, where a mild form of sickness was prevalent, Sind was almost entirely free from cattle-disease.

Though the returns do not come down so late, the collectors notice generally how, in the famine-affected districts, the cattle passed through the time of scanty water and fodder. In Khándesh, though many died, the forests of the Sátúra and Sátmála hills yielded abundant grass, and, as these were thrown open, no great mortality ensued. In almost all the other affected districts, chiefly in Kaládgi and Sholápur, the collectors report a very serious loss of cattle.

Advances.

Of a total sum of Rs. 2,27,798 advanced to cultivators, Rs. 93,949 were for the purchase of seed and cattle, and Rs. 1,33,849 for the construction of agricultural works of lasting usefulness. The table given below shows these advances in detail. In Ahmedábád, where Rs. 853 were advanced, the collector attributes the backwardness of the people to avail themselves of the Government assistance, chiefly to the punctuality with which repayment is required. He remarks that in 1875-76, though in connection with the flood distress, a lakh of rupees was sanctioned for advance without interest, only Rs. 735 were taken.

The sum of Rs. 743 advanced in Kaira was granted to certain Kolis and Chámadias, who had suffered severe loss through the floods of September 1875.

In the Panch Máhals no advances were made for works of permanent improvement. The sum of Rs. 84,275 represents the advances made to the immigrant Tálavias, at the rate of Rs. 50 each, to 685 families, and Rs. 25 to one family. The repayment of the advance is to be made by five yearly instalments: one of rupees five, three of rupees ten each, and one of rupees fifteen. The immigrants' huts, fields, and cattle stand security for the loan.

No advances were made either in Broach or Surat.

In Thána Rs. 10 were advanced for the purchase of cattle and seed. No advances were made for works of lasting usefulness. The collector attributes the smallness of the advance partly to the fewness of applicants, and partly to the want of security for repayment.

In Kolába no advances were made.

In Násik Rs. 16,289 were advanced: Rs. 5,361 for the purchase of seed and cattle, and Rs. 10,928 for permanent improvements. The advances under the last head were entirely for building and restoring irrigation wells.

In Khándesh, of Rs. 23,620 advanced, Rs. 11,145 were for the purchase of seed and cattle, and Rs. 12,475 for permanent improvements. In ordinary years it has been customary in Khándesh to grant advances to Bhils only. During the past season the boon has been extended to all classes. There has been a greater demand than formerly for loans under the Land Improvement Act.

In Ahmednagar, of Rs. 33,149 advanced, Rs. 20,025 were for permanent improvements, and Rs. 13,124 for the purchase of fodder and seed. The special value of irrigation during the past year was the cause of the increase in applications for advances.

In Poona, of Rs. 34,615 advanced, Rs. 33,890 were for permanent improvements, and Rs. 725 for the purchase of cattle and seed. As in Poona, the Sholapur cultivators freely applied to Government for advances to help in building and repairing wells, and for this purpose Rs. 32,483 were advanced.

In Sátára, though the sum, Rs. 18,195, advanced was small, it was, with the help of private capital, the means of constructing 1,045 new and repairing 589 old wells. In this district Rs. 9,069 were also advanced for the purchase of seed and bullocks.

In Ratnágiri cattle disease caused a large mortality, and it was found necessary to advance Rs. 815 to help cultivators to buy bullocks. No advances for works of lasting usefulness were made.

For Kaládgi no details are available. Applicants for advances to buy cattle and seed were numerous; but in most cases they failed to furnish security for repayment.

In Belgaum, of Rs. 13,600 advanced Rs. 5,625 were for works of lasting usefulness, and Rs. 7,975 for the purchase of cattle and seed.

In Dhárwár, though a sum of Rs. 25,000 was sanctioned, no advances were made.

In Kánára, also, there were no advances. As the season was not unfavourable there was no special pressure, and the people of the district are said to be averse from borrowing from Government.

In Kurrachee Rs. 10,082 were advanced to cultivators whose crops were destroyed by floods. No advances were made in any other of the Sind districts.

Weather and Crops.

Bombay.

The total rainfall registered at the Kolába Observatory during the year 1876 amounted to 50·04 inches, or 20·26 inches less than the average of 70·30 inches. Every one of the monsoon months showed a deficiency. In June about $7\frac{1}{2}$ inches less than usual fell; the fall in July was deficient to the extent of only about half an inch; but in August, September, and October, it was four, five, and two inches, respectively, less than the average. The season in Bombay was characterized, too, not only by general deficiency, but also by unusually long periods of almost complete cessation of rain, with here and there but a day or two of moderate or excessive rain. With the exception of slight showers of one and three cents on the 30th May and 10th June, respectively, there was no rain from the 1st January until the 14th June, when the usual monsoon rain commenced auspiciously, though somewhat late. After the first burst, which lasted until the 20th and included three days,—the 16th, 17th, and 18th,—with falls of two, $3\frac{1}{2}$, and two inches, respectively, there was a long period of comparative cessation, lasting until the 14th July. Indeed, from the 21st June to the 14th July there was only one day of average rainfall, the 1st July, when a repetition took place on a small scale of the kind of atmospheric disturbance which usually introduces the monsoon. But from the 14th to the 26th there was a copious fall, especially on the 25th and 26th, when $3\frac{1}{2}$ and $7\frac{1}{2}$ inches, respectively, were registered, bringing up the total for July nearly to the average. Then followed a period of comparative drought, only about $2\frac{1}{2}$ inches having fallen from the 27th July to the 25th August, nearly a whole month, whereas the average fall for these days is more than fourteen inches. Six consecutive days of this period—August 6th to 11th—were absolutely rainless, not a cent having been registered. Rain fell at last, however, in more than average quantity on the 26th, 30th, and 31st of August; more than an inch having been recorded on each of the two former days, and a heavy fall of more than $3\frac{1}{2}$ inches on the last of these dates. After this there was but one more day with unusually heavy rain, the 17th September, when nearly $2\frac{1}{2}$ inches were registered; and the rainy season in Bombay may be said to have closed very early on the 23rd September, as only one cent fell on the 24th, and none whatever thereafter.

Temperature. The average temperature of the air for the whole year was $79^{\circ}\cdot 3$, which is only one-tenth of a degree above the average. Each month, from January to July, was somewhat warmer than usual; August had an average temperature, and the last four months,

September to December, were a little cooler than usual. The monthly excesses above the averages very singularly show a gradual decrease from $1^{\circ}4$ above the average in January to $1^{\circ}2$ below it in November. The first week of the year was one of average temperature; a rise to 5° above average occurred on the 10th and 11th January, followed by a gradual fall to about average on the 19th; a rise then took place till the 22nd to 3° above average, and this high temperature continued until the 26th; there was then a gradual fall to the end of the month. From the 5th to the 12th February the air temperature was continuously about 3° above average, but the remainder of the month (except the 21st, which had also a high temperature) had a normal temperature. In March the temperature, from the 12th to the 15th, was about 2° warmer than usual, and again from the 18th to the 22nd it was about 3° above average; on other days the temperature departed little from the average. In April the only noteworthy departure from the average occurred on the 19th and 20th, when the temperature was 3° and 2° , respectively, above what is usual on these days. In May the temperature was almost throughout very steadily, though slightly above the average temperature at this season, and continued rather high until the commencement of the rains on the 14th June. With the heavy rainfall on the 14th to 18th, there occurred the usual fall of temperature down to about 5° below average, but from the 21st June to the 14th of July, one of the periods of comparative drought above mentioned, the temperature was almost continuously high. On the 15th July the thermometer came down to 3° below average concurrently with the heavy rain which fell on that day, and the same occurred on the 26th; but, with this exception, the latter half of the month had an average temperature. The first half of August, although almost completely rainless, had a temperature only very slightly above average; when rain fell on the 20th, 26th, 30th, and 31st, the resulting depressions of the temperature were to 2° below normal on each of the first three dates, and to 3° on the last date. The first half of September had a temperature somewhat below average, although very little rain fell. The 17th, a wet day, had a temperature 3° below average, after which a slight rise occurred towards the end of the month. The rise, which usually takes place in October, on the cessation of the rainy season, was this year less than usual; indeed, about the middle of the month, the temperature was about 3° below average for six consecutive days; the first and last weeks of the month, however, were slightly above average. November was about 2° cooler than usual until the 10th; a rise then took place to 3° above average, succeeded by a fall on the two following days. During the latter half of the month and until the 13th December the temperature was continuously below the average, the days of greatest depression being the 25th November and 3rd, 4th, and 5th of December, each 3° cooler than usual. The last eight days of the year were not as cool as usual, the 24th being 3° , the 25th to 29th 2° , and the 30th and 31st 4° above average.

The wind was, on the whole, normal in direction and strength until the 13th March, when very unusual southerly winds sprung up, and continued for three days. On the 14th the abnormal

wind had a mean velocity of 20 miles per hour from south. During nearly the whole of the latter half of March the winds had nearly twice their average velocity, and were somewhat more northerly. On the 11th, 12th, and 13th April strong southerly winds again blew, reaching a maximum velocity of 42 miles per hour about noon of the 12th. These winds formed part of a well-marked cyclonic disturbance, which had its centre in the neighbourhood of Kurrachee and Deesa, and travelled eastward. No other considerable disturbance occurred until the 11th June, when the strong south-south-east winds, which usually introduce the monsoon, commenced. The wind continued strong, and from a southerly direction until the 14th, when it moderated, and rain began to fall. The highest velocity reached during this disturbance was 41 miles per hour from south at 10 A.M. on the 13th. Unsettled weather continued until the 18th, when the regular monsoon wind set in. Another storm of short duration occurred on the 1st July, during which the wind reached a maximum velocity of 43 miles per hour at 6 P.M., the direction being west-south-west. From the 14th to the 18th the winds were steadily stronger than usual, and had a more southerly direction. They were also considerably stronger than usual from the 24th to the 27th, but more northerly. Deflections of the usual monsoon wind, such as those mentioned, appear to depend on the position, for the time being, of an area of heavy rainfall, the wind showing a tendency to blow towards such area, and this, it may be remarked, is an observational result, which accords well with generally accepted cyclonic theory. From the 27th of August to the 1st September the strength of the monsoon wind largely exceeded the average, the velocity on three of these days being about 14 miles per hour greater than usual. Rain, in considerable quantity, was brought by these winds. The winds of the last four days of September and the first half of October were unusually strong from the north-north-west, but during the latter half of the month they were normal both in direction and velocity, and the winds of the remaining portion of the year were also seasonable.

The values of the meteorological elements for 1876, shown in the statistical tables, are the means of observations taken at the hours 6 A.M., 10 A.M., 2 P.M., 4 P.M., and 10 P.M., corrected for each month by the difference between the means for the typical year of the hours named and of the twenty-four hours. The extreme values of barometric pressure of vapour at the hours named are exhibited in a second table, as also the absolute extremes of temperature of the air, fall of rain, and velocity of wind.

WEATHER IN THE INTERIOR.

The deficiency throughout the Presidency of the south-west monsoon rains of 1876 and the consequent partial or total failure of the crops, entailing scarcity of food, amounting in some districts to actual famine, has invested the meteorology of the past year with more than ordinary interest. An attempt, however imperfect, to trace out the apparent meteorological causes of this disastrous

abnormality, will probably not be uninteresting, particularly as the variations of most of the observed meteorological phenomena during the past year have been unusually characteristic and suggestive.

Tables.

The appended five tables give, in a concise form, the mean barometric pressure, temperature, vapour pressure, total rainfall, and the relative frequency of different winds, for each month of the year 1876, at each of the stations, Kurrachee, Deesa, Poona, and Belgaum; and for Bombay a sixth table is added, giving similar results, which will serve as a standard of comparison for the other stations. In the first three tables, four columns of figures are given under the name of each station. The first columns give the mean barometric pressure, temperature, and vapour pressure for each month; the second columns show how much above or below the average of the year each of these meteorological elements stood in each month; the third columns show how these elements vary in an average year; and the difference between the second and third columns, given in the fourth columns, shows the abnormal variation of each element during the past year: thus, had the variations of the seasons in the year 1876 been in all respects such as are usual, the figures in the fourth columns would all have become noughts; but if the variations of any of these elements in any particular month was greater or less than is usual, the extent of the deviation is indicated by the numbers in the fourth columns, the positive sign (+) indicating high values, the negative sign (—) low ones. Table 7 B, Part IV., which gives the rainfall at each of the above-mentioned stations, contains three columns of figures under the name of each station. The first columns give the total rainfall in each month; the second the average rainfall; and the third, the excess or defect of the rainfall of 1876 above or below the average. Table 8 B, Part IV., gives roughly the relative frequency of the different winds calculated from the observed directions of the wind by a method given in Mr. Chas. Chambers's work on the Meteorology of the Bombay Presidency. The north and south winds are classed together, and the east and west winds together, the positive sign (+) indicating north or east winds, and the negative sign (—) south or west winds. In this way it is possible to compare roughly the winds of one year with those of another, or with the average year, as has been done in the table; the third columns under the head "difference" show the excess in the year 1876 of north or south, and east or west winds. These differences show, in the winds of the past year, very striking peculiarities, which will be referred to later.

Diagrams.

The numbers in most of the columns of the above tables headed "difference" are graphically reproduced in the diagrams No. 1 to 25, in all of which the months are marked off horizontally, as shown at the top of the diagram, and the numbers vertically, to the scales marked at the margin of each figure. In the case of the rain, the actual monthly fall at each station, in 1876, is contrasted by figures 26 to 30, with the average monthly fall represented by figures 31 to 35.

Remarks on the Abnormal Variations of the Barometric Pressure, Temperature, Vapour Pressure, Wind, and Rainfall of the Year 1876.

Barometer.

A glance at the figures 1 to 5 exhibits the general similarity of the abnormal barometric curves of all the stations; the character of all closely coinciding with that of Bombay, which may be described as consisting of three wave-like motions, each of which extends over a period of from three to four months, and is bodily raised above its predecessor. The general rise of the abnormal pressure from the beginning of the year to its close, freed from the effects of the wave-like motions, is shown by the following numbers and by figure 36 :—

January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.
+003	-012	-009	000	-003	-001	+014	+021	+014	+022	+026	+028

These numbers are obtained from the Bombay observations by taking the means of the barometric abnormal for the five months, having January in the middle, February in the middle, and so on successively. And the apparently periodic wave-like movements, freed from the effects of the general rising tendency, are shown by the following numbers and by figure 37 :—

January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.
-018	+007	+016	-041	+012	+031	-032	-005	+018	+024	-032	-004

These numbers are the differences of those represented by figure 36 and those curved in figure 3. The last of these wave-like movements combined with the general rise that appears to have been going on from the beginning of the year, produced the very barometer which culminated in October. Another peculiarity in the abnormal barometric curves 1 to 5 is the gradual increase in the amplitude of the movements from the most southerly station, Belgaum, to Kurrachee, the most northerly one. This peculiarity will be referred to again hereafter in considering the probable causes of the abnormal barometric movements.

Temperature.

The abnormal variations of temperature exhibited by figures 6 to 10 show few signs of the same regularity as that exhibited by the abnormal curves of barometric pressure. That for Bombay, figure 8, is the most regular. It shows a gradual decrease from about 1°·4 above average in January to 1°·2 below the average in November. The fall shown from the early months of the year to the monsoon months—July to September—at the two northern stations, and less markedly at the two southern ones, may perhaps be regarded as of the same character, and due to the same cause, as the downward movement at Bombay—a movement which finds counterparts in the general rise of the barometric abnormal, as shown by

figure 36, and the downward course of the vapour pressure curve figure 13. The hot months—April to June—were hotter than usual at all the stations, but it is a noteworthy fact that the monsoon months—July to September—were generally cooler than usual, although the general deficiency of rain would lead us to expect an opposite result. Some other cause, distinct from the cooling influence of rain, must, therefore, have been in operation to depress the temperature in these months. The same cause appears to have been influential in October and November also at the three northern stations; but if, as might possibly be inferred from the barometric curves, this cause was a general one, it must have been counteracted by another influence at the two southerly stations. For such a counteracting influence we have not far to seek, the almost total absence of the usual rain in these months at those stations affording a sufficient reason for the abnormal increase of temperature shown by figures 9 and 10 in the months of October and November. In December a return to about the average temperature is shown at most of the stations.

The curves 11 to 15, which show the abnormal variations of the vapour pressure, or, in other words, the abnormal condition of the air with regard to moisture, are very dissimilar at the different stations. The curve 13 for Bombay, the station which realizes most nearly the ideal character of a sea station, is the least irregular, showing a more moist condition of the air in the dry-weather months, January to May, and, with the exception of July, a dryer state of the air during the monsoon months, June to October, with a return to the normal condition in November and December. The most marked features in the curves for the outstations are the general and significant appearance of *opposition of character* in the curves for Kurrachee, the most northerly station; and Belgaum, the most southerly one. While Kurrachee and Deesa both show low abnormal vapour pressures in the hot dry months, Belgaum shows as decidedly high abnormal values; and this condition is reversed at Kurrachee and Belgaum in the last four months of the year, Kurrachee having high vapour pressures and Belgaum very low values of this element, the two stations still retaining opposition of character. Poona also exhibits a very low vapour pressure in October. The contrast thus shown between the northern and southern stations is very remarkable, and probably far from fortuitous, as will appear from a reference to the abnormal wind curves 16 to 25.

The abnormal variations of the wind are shown by figures 16 to 25. Those for Bombay (18 and 23) show the actual excess in the hourly velocity of the north or south, and east or west winds; but the curves for the four out-stations show, roughly, the excess of the relative frequency of these winds, from which the motion of the air can be only roughly inferred; yet the marked similarity in many cases, of the results from different stations, shows that they may be used with considerable confidence. They show very remarkably a general opposition of character in the abnormal winds of the northern and southern stations; thus at Kurrachee, southerly abnormal winds blew throughout the year gradually increasing

in frequency, and probably in strength also, from January to July, and then falling away again to December; at Belgaum, however, *north* winds were in excess, gradually increasing in frequency till July, and then (with one remarkable exception in October) falling away again towards the end of the year, and giving place to southerly winds in November and December. At the stations between Kurrachee and Belgaum the abnormal north or south winds were of an intermediate character. Bombay, Poona, and Belgaum all agree in showing that northerly winds were largely in excess in October. The east or west abnormal winds also show opposite characteristics at the northern and southern stations, for while east winds predominated at Belgaum and Poona in January, west winds were in excess at Kurrachee; and while the east winds at the two former stations gave place gradually to a predominance of west winds in April, the west abnormal winds at Kurrachee gradually died away, and gave place to light abnormal east winds in April and May. In the monsoon months, and to the end of the year, the east or west abnormal winds at the various stations show more resemblance than contrast. The abnormal east winds, shown by the upward movement in October of the curves for both Belgaum and Poona, form a very noteworthy feature, which was doubtless definitely connected with the general deficiency of rain on the Deccan in the same month.

Rain.

The total rainfall during the year was deficient at every station. At Poona less than half the usual quantity of rain was received, and in every month it was below average, September and October being the months when the deficiency was greatest. At Belgaum the total deficiency was about a quarter of the average quantity; August and October being unusually dry months, while July was unusually wet. At Deesa the fall in July was also a little over the average, but the total for the year was about a quarter of the average annual fall in defect. The rains commenced at the Deccan stations about the 7th or 8th of June, and the quantity which fell in this month, though generally less than usual, was well distributed. In July also the rain was steady, and fairly continuous at the two southern stations; but about the end of July a long break commenced and lasted till nearly the end of August. About a week of moderate rain then followed, after which only a few light showers fell. The heavier rain which usually falls at these stations towards the end of September and in October, was this year represented by only two moderately rainy days—one towards the end of September, and the other near the end of October. At Deesa there were only three rainy days in June; but in July and August the distribution of the rain was, on the whole, similar to that at the Deccan stations, with the difference that the rain towards the end of August continued several days longer. The 28th September was the last rainy day of the year at this station. At Kurrachee rain seldom falls. There were a few light showers about the middle of July and towards the end of August, and heavy rain fell on the 20th July; more than half the total for the year fell on this one day, when about $3\frac{1}{2}$ inches were registered.

Deductions.

Although variations of the temperature of the atmosphere are to be regarded as the primary causes of all meteorological action,

these in their turn being directly referable to the sun as their source, yet the variations of air temperature observed at any particular place, depend so much upon the geographical position of the station, and are to such an extent themselves the result of the meteorological actions (particularly winds and rainfall) that have been set on foot by the temperature conditions of surrounding areas, that it is generally exceedingly difficult to trace, except on a grand scale, any complete sequence of effects resulting directly from the observed temperature variations. Indeed, it would be surprising if this were otherwise, when we remember that, at best, our temperature observations refer only to that stratum of the air nearest the ground, leaving us in ignorance of the actual temperature of the higher strata. It is usual, therefore, for meteorologists to base their attempts to explain variations of weather chiefly on the indications of the barometer, an instrument which measures the pressure of the whole thickness of the superincumbent atmosphere, and which by pointing out the place where the pressure is least or greatest indicates the direction towards or from which the surrounding atmosphere, carrying with it the moisture or dryness of the region whence it flows, tends to move.

In India the barometer is subject to two regular periodic variations—the diurnal and annual, and to many other apparently irregular movements which have been called “non-periodic variations”. The cause of the diurnal variation is still a subject of controversy, but the annual variation is well known to be produced by the alternate excessive heating and cooling of the land, as compared with the surrounding sea, in the opposite summer and winter seasons, the barometer being always low in the summer and high in the winter, and the difference being greater at the northerly stations than at the southerly ones, since the former are nearer the seat of the greatest contrasts of temperature in the opposite seasons. The causes of the non-periodic variations are as yet involved in obscurity, but there is little doubt that a close connexion exists between these apparently irregular movements and the variations in the character of the rainy seasons of different years. It thus becomes a question of interest to inquire into the nature of the abnormal barometric movements of the past year—a year which has been so decidedly abnormal with respect to its rainfall. We may gain some information on this point by taking the sum of all the monthly abnormal barometric rises and falls at each station, and by noting whether the numerical relations that exist among them are similar to those existing among the ranges of the great annual fluctuations at these places. The comparison is made below:—

	Belgaum.	Poona.	Bombay.	Deesa.	Kurrachee.	Mean.
Sums of monthly abnormal rises and falls from January to December 1876	·225	·247	·287	·293	·423	·295
Percentage of mean	76	84	97	99	144	...
Normal annual fluctuation, July to December	·189	·280	·285	·461	·559	·355
Percentage of mean	53	79	80	130	158	...

PRODUCTION
AND DISTRI-
BUTION.

The percentages in each case show a similar gradual increase from the southerly to the northerly stations, but the extreme difference ($144 - 76 = 68$) in the first set of percentages is less than that ($158 - 53 = 105$) in the second set. From these results it may be inferred that *the abnormal barometric movements in 1876 were chiefly variations in the intensity of the usual seasonal movements*, but that they probably exerted an influence over a considerably wider area than that which constitutes the field of operation of the great annual fluctuation. This last conjecture is strengthened by confining our attention to the abnormal fluctuation which took place between July and November, when the disastrous deficiency of rain occurred. From this period we obtain the following sums and percentages :—

	Belgaum.	Poona.	Bombay.	Deesa.	Kurrachee.	Mean.
Sums of rises and falls July to November	·097	·142	·111	·152	·181	·137
Percentage of mean	71	104	81	111	132	...

The percentages in this case also show a similar progression, but the extreme difference ($132 - 71 = 61$) is less than before, implying a somewhat wider field of operation of this particular fluctuation.

We are thus led to seek for an explanation of these abnormal barometric movements, in some cause which is at least as widely influential as that which produces the annual fluctuation of the barometer. The cause of the great annual fluctuation is known to be the variation in the amount of heat received from the sun by reason of his annual variation in altitude, and it does not, therefore, appear unreasonable to suppose that the *abnormal* fluctuations are produced by variations in the absolute amount of heat emitted by the sun at different times,—in fact, to imagine the sun to be to some extent a variable star. If this be so (and the belief has of late been fast gaining ground amongst men of science) corresponding abnormal meteorological effects must of necessity follow. The more or less successful attempts that have been made to connect sun-spots and rainfall point in this direction, and it may well be that the abnormalities of different seasons are far more intimately connected with the state of the sun's surface than we can at present conceive. An abnormal diminution in the amount of heat emitted by the sun in September and October 1876, would be amply sufficient to account for the high barometric pressure which was then observed throughout India, and were the normal laws of the monsoons completely and accurately determined, their application to the then existing state of atmospheric pressure would, in all probability, account for the deficiency of rainfall in the Bombay and Madras presidencies in the later months of the rainy season.

Objection has been raised to the hypothesis that droughts in India are connected with the state of the sun's surface, on the

ground that droughts and consequent famines, when they do occur, affect different parts of India at different times, and that we cannot, therefore, reasonably expect to find the causes of such locally varying phenomena in any change going on in the sun, since such changes would affect the whole world alike. This objection would doubtless have much weight if the whole of India were, as a rule, similarly affected with regard to its rainfall by the ordinary seasonal changes; but, as a matter of fact, this is far from being the case, as will be seen from the following table, which shows that at Bombay the wettest months are June and July; at Jabálpur, July and August; while at the *intermediate* station, Sholápur, the heaviest rain falls towards the end of the monsoon season, and at Madras as late as October and November. This varying distribution of the rain in the different months depends chiefly on the varying geographical positions of the stations and on the direction of the wind in the successive months:—

Average Rainfall.

	Jan.	Feb.	Mar.	April.	May.	June.	July.	Augt.	Sept.	Oct.	Nov.	Dec.	Year.
Sholápur ...	0.00	0.00	0.00	0.00	0.59	3.91	4.52	5.33	6.13	5.78	0.37	0.00	28.63
Jabálpur ...	0.46	0.48	0.67	0.11	0.24	9.07	20.07	14.74	8.33	1.09	1.00	0.32	58.45
Bombay...	0.13	0.01	0.00	0.04	0.53	20.45	24.12	12.83	9.65	2.02	0.49	0.05	70.31
Madras ...	0.9	0.2	0.5	0.8	2.1	1.5	3.3	4.2	4.6	12.1	12.5	4.9	47.6

We see, then, that, even on the supposition of a general deficiency of rain throughout the country, some parts would be more affected than others, according as the deficiency occurred in the early or late months of the rainy season. Thus a deficiency in July would affect most considerably those districts which have a rainfall distribution in time like that of Bombay or Jabálpur; while a drought occurring in the later months of the season would affect most seriously districts which ordinarily receive the largest proportion of their total fall in those months. The drought of the past season affords a striking exemplification of the latter kind of deficiency, and it is instructive to notice how its severity gradually increased in the different districts according as they are ordinarily more dependent for their rain on that which falls in the later months of the season, and according as they are situated further from the edge of the Sahyádrí hills. This is shown very clearly by the following figures compiled from the published weekly famine statements. They show what percentage of its average rainfall each district received in 1876, and the table is arranged so as to indicate roughly the relative position of each district:—

Khándesh, 58.			
Násik	78	Ahmednágur 44
Poona	68	Sholápur 32
Sátára	47	Kaládgi... .. 27
Belgaum	...	70	
Dhárwár, 52.			

The gradual decrease of the percentages from north to south and from west to east is very striking, as is also the fact shown by the following figures, that generally the districts which have the lowest average rainfall show the lowest percentages, and *vice versa* :—

District.	Average Rain-fall.	Percentage in 1876.	District.	Average Rainfall.	Percentage in 1876.
Násik ...	35.29	78	Ahmednágár ...	24.3	44
Poona ...	30.6	68	Sholápur ...	25.21	32
Sátára ...	54.6	47	Kaládgi... ..	22.43	27
Belgaum ...	30.48	70			
Means ...	37.74	66	Means	23.98	34

The mean rainfall for the western districts bordering on the Sahyádrí hills is about 38 inches, and that for the eastern districts 42 inches. The percentage of the average rainfall received in 1876 by the former districts was 66 ; while the latter received only 34 per cent of their usual supply, from which facts we may conclude that *among the causes which produced the drought in 1876 were those which are, at ordinary times, in operation to produce a less average rainfall in the eastern districts than in the western* ; and that the primary conditions on which the action of these local causes of difference in rain-distribution depends, were during the past year disastrously conducive to the production of a much greater contrast than usual. The physical explanations of most of the differences in the *normal* distribution of rain in different parts of the Presidency, have been very fully worked out by Mr. Chas. Chambers in his work on the Meteorology of the Bombay Presidency. The eastern districts are those which usually receive little rain in the *early* monsoon months ; the southern and eastern districts those which are dependent for large fractions of their annual falls on that which is usually received in the later months of the season. The general deficiency of rain in the Bombay Presidency occurred mainly in September and October, but chiefly in the latter month ; and the southern and eastern districts were those which consequently suffered most. An adequate reason for the general deficiency in those months would, therefore, carry with it, at least, a partial explanation of the varying percentages above given. On looking for such a reason we are at once struck with the very high barometer in those months, particularly in October, at all the stations,—a phenomenon which appears to have affected the whole country. Before proceeding to inquire into the probable effects of this abnormally high atmospheric pressure, it will be well to consider briefly what are the usual relations that subsist between the atmospheric pressure, winds and rainfall in the winter and summer seasons and to

observe whether any similar relations can be traced between the abnormal variations of pressure and those of the other elements during the year.

In the summer India becomes, relatively to the adjacent seas, a region of high temperature and consequent low atmospheric pressure, the winds blow from the seas towards the interior, showing in their course a more or less decided tendency, in different parts of the country, to assume a *cyclonic* rotation¹ round the region of minimum pressure. These winds, coming from the neighbouring seas, are highly charged with vapour, which becomes condensed and falls as copious rain. In the winter season these conditions are almost exactly reversed, the country becomes, relatively to the surrounding seas, a region of low temperature and high atmospheric pressure; the winds blow from the land towards the sea, and show a tendency more or less marked to assume the *anti-cyclonic*² rotation round the region of highest pressure. These winds, coming from the land, are comparatively dry, and bring little or no rain.

Turning now to the abnormal variations of the meteorological elements in 1876, the following similar relations may be traced among them. The curve No. 18, showing the excess of north or south wind at Bombay, presents many inverted resemblances to the curve No. 6, which gives the excess or defect of temperature at Kurrachee in each month. To show this clearly, the curve No. 18 has been dotted over No. 6. It will be seen that generally No. 18 shows a maximum, when No. 6 shows a minimum, and *vice versa*. The meaning of this is that, when the temperature at Kurrachee was above average, the wind at Bombay was more southerly than usual; and when the temperature at Kurrachee was below average, the wind at Bombay was more northerly than usual; or, in other words, a decided tendency is shown by the *abnormal* as well as by the normal winds to blow towards a region of high temperature, and away from one of low temperature. Again, comparing figure 23 with any of the figures 1 to 5 (all of which are similar) we see that from June to November the maxima and minima of figure 23 occur in the same months as the maxima and minima of figures 1 to 5. This means that the winds at Bombay during 1876 had a tendency to be relatively more westerly when the barometer was unusually low, and more easterly when it was unusually high,—a fact which agrees with the observed tendency of the winds generally throughout India to assume a cyclonic rotation in the summer and an anti-cyclonic rotation in the winter. The cause of the general depression of figure 23 from July to November is, however, not very obvious.

Referring to the abnormal barometer curves, figures 1 to 5, we find the atmospheric pressure unusually *low* in April. In

¹ *i. e.*, in the direction opposite to that in which the hands of a watch move.

² In the same direction as the hands of a watch.

the same month all the stations north of Belgaum had a temperature *above* average; the abnormal winds showed a *cyclonic* tendency, those at Belgaum and Poona being north-westerly, while those at Deesa (and Kurrachee also, to some extent) were more northerly; and what is very significant, the air coming from the land was very unusually *dry* at the two northern stations and extremely *damp* at Belgaum, where the wind blew more strongly than usual from the sea. From these facts we see how a general cause (the general increase of temperature and consequent fall in the barometer) may operate to produce very different hygrometric conditions of the air in different localities, and, consequently, to increase the probability of rain in some quarters, while it decreases the probability in others.

The above example, in which all the abnormal meteorological conditions are almost exactly the reverse of those in October, will help to illustrate the manner in which the deficiency of rain in the later months of the monsoon season may, with probability, be explained. In September and October we find the barometer was very abnormally *high* at all the stations; the temperature was *below* average at all the stations in September, and, except at Poona and Belgaum, in October also. The great rise in temperature at the two southern stations in the latter month was, without doubt, a consequence of the absence of the usual rain. At Deesa and Kurrachee the winds did not show any unusual change in September and October; and at these stations no decided change in the hygrometric state of the air was observed, other than a rise of vapour pressure at Deesa in September, coincident with the heavy rainfall of that month. At the three southern stations, however, the winds in October, instead of being light and very variable as is usual in this month, were often abnormally strong from the north or north-east; and the dry hot winds of the day time, which usually do not make their appearance till November, blew with full force at Poona and Belgaum throughout October. The failure of the usual rains at these stations, and throughout the Deccan generally, in the later months of the monsoon season was probably produced by the general flow southward of cool dry air from the region of high atmospheric pressure in the interior; the high pressure in its turn having been produced by a general decrease of temperature, for which the only apparent adequate cause is the hypothesis of an abnormal diminution in the absolute quantity of heat emitted by the sun about this time.

From the relations that have been pointed out as existing among the abnormal meteorological features of the year 1876, we may probably draw the following general conclusion for the guidance of further inquiry, viz., that *the same principles which explain the usual alternation of the seasons will also, in a great measure, afford an explanation of the abnormalities of the rainy seasons of different years.*

CROPS.

The season in Gujarát was not altogether favourable. In Ahmedábád the rain was at first scanty, and the later fall to some

Ratnágiri; and from Rs. 3-15-4 to Rs. 4-12-5 in Kánára, was probably, almost entirely, due to the special export demand.

As regards the rise of price in the parts of the Presidency suffering from drought and failure of crops, the increase was least marked in Khándesh where millet rose from Rs. 1-11-2 to Rs. 2-5-6, and Indian millet from Rs. 1-5-3 to Rs. 2-0-6. The rise was greatest in Dhárwár, where millet rose from Rs. 1-12-2 to Rs. 3-1-2, and Indian millet from Rs. 1-13-2 to Rs. 3-4-6.

The failure of crops and consequent dearness of grain would affect the labour market in two opposite ways. The labourer would require a higher money-rate of wage to support him, and so wages would tend upwards. On the other hand, several influences would tend to depress the wage of unskilled labour. Large bodies of men, generally employed and supported on their own fields, would be out of work, and in many cases be forced to earn their living as labourers. In many of the affected districts, weavers and other skilled workmen, who in the general distress found no buyers for their wares, would also, when their savings became exhausted, be forced to turn their hands to any work they could find. Finally, the employment by Government of large bodies of workmen, at bare subsistence rates, must have tended to reduce the general wage standard. An examination of the wage statement which, however like the price return, comes no later than the end of March 1877, shows, for the unaffected parts of the Presidency, on the whole a slight upward tendency. Over the famine-affected tracts there is, on the whole, a fall, especially in the eastern Deccan and in the southern Máraþha districts. Wages.

As regards the wage returns, it seems doubtful how far the arrangement for filling them in is the same in the different districts. In one set of districts the extremes seem to have been given; in a second, an average has probably been struck; while in a third, the wages of some special craft appear to have been chosen as representative.

Comparing the different provinces of the Presidency as far as money-rates go, Sind comes first, with an average daily wage for skilled labour of Rs. 1-0-4; the Konkan districts and Kánára come next, with, on an average, 13 annas 3 pies; the Deccan third, with 10 annas 2 pies; the Southern Máraþha Country fourth, with 10 annas; and Gujarát last, with 9 annas 4 pies.

As they stand, the daily wage of skilled labour would seem to reach its highest point, Rs. 2 in Kolába, and its lowest, four annas, in Sholápur.

As regards unskilled labour, Thána stands first, with from 2 annas to 7 annas, and Sholápur last, with from 1 anna to 3 annas. Comparing the different provinces, and striking for each province the average of the rates in force in its districts, Sind comes first, with slightly more than 5 annas; the Konkan and Kánára second, with 4 annas; Gujarát third, with 3 annas 9 pies; the Deccan fourth, with 2 annas 8 pies; and the Southern Máraþha Country

last, with 2 annas 6 pies. Compared with the previous year, of the Gujarát districts the wages of skilled labour are unchanged in Ahmedábád and Kaira, higher in Surat and Broach, and lower in the Panch Máhals ; in the coast districts they are higher in Thána and Ratnágiri, and unchanged in Kolába and Kánára ; in the Deccan districts they are higher in Násik, constant in Khándesh and Sátára, and lower in Ahmednagar, Poona, and Sholápur; in all the districts of the Southern Máraátha Country there is a marked decline in the rates of skilled labour wage. In Sind, except in Shikárpur where there is a slight rise, the rate is unchanged.

Again, a comparison of the rates of unskilled labour shows in Gujarát a rise in Kaira, Broach, and Surat ; no change in Ahmedábád, and a fall in the Panch Máhals ; in the Konkan and Kánára districts a rise in Thána and Ratnágiri ; no change in Kolába, and a fall in Kánára ; in the Deccan a rise in Sátára ; no change in Khándesh and Násik ; and a fall in Ahmednagar, Poona, and Sholápur ; in the Southern Máraátha Country a marked fall in all districts, and in Sind no change.

Horticulture.

The income from the sale of the produce of the botanical gardens at Ganesh Khind, near Poona, during 1876 was Rs. 9,512-1-7 against Rs. 8,418 in the previous year. The total expenditure has been Rs. 12,848. Experiments with the *Wagatea spicata*, a climbing shrub, native to the Konkan, show that its seed-pods contain a high proportion, fifteen per cent, of tannic acid. A satisfactory feature in the working of the garden is the extent to which its drugs, chiefly *taraxacum* and *colocynth*, are in demand. Experiments in the production of Tasar silk were continued. The moths bred freely in confinement, and produced fertile eggs in abundance, and in due course the young caterpillars appeared. But of the number that entered on the worm stage only about five per cent lived to spin cocoons, and these cocoons were decidedly inferior to what may be gathered from trees all over the country. No light has yet been thrown on the cause of failure.

Ganesh Khind.

The expenditure on the Sáláru garden in Sind amounted to Rs. 3,716, and the receipts to Rs. 394. During the year 554 packets of imported, and 875 of acclimatised vegetable seeds; 211 packets of imported, and 2,216 acclimatised flower and tree seeds; 828 fruiting plants; 1,788 flowering plants, including roses, and 312 forest trees and shrubs were distributed. The attempts to introduce the finer varieties of foreign fruits are so far rather discouraging. English vines do not set freely, and the Muscat varieties are found to be shy and feeble growers. European peaches are equally hard to rear. The Royal George and Violette Hative sorts grow into fine trees, but their flowers are weak, and last too far into the hot season to be able to set any fruit. The plum and apricot grow well; but, like the peach, flower too late to give any hope of their yielding fruit.

SÁláru.

Within the limits of the Bombay municipality are four public gardens, the Northbrook garden, the Elphinstone Circle garden, the Falkland Road garden, and the Victoria garden. Of these the Victoria garden, restored during the past two years from disorder and decay, is now, with its gaily flowering shrubs and trees, its rich smooth lawns, its bright well-filled borders, and its carefully grouped masses of coloured leaf plants, the favourite resort in Bombay, and one of its chief ornaments. Besides this direct gain, the taste and skill shown in the management of the Victoria gardens have done good service to Bombay. Over the whole island, from the Colaba rocks to the Máhim sands, private industry, learning its lessons in the Victoria gardens, is fast free-

Bombay.

ing itself from the trammels of earthen pots and wooden tubs, and, laying down slopes and plots of turf, designing flower beds and borders, and massing groups of foliage plants, has already changed many a dusty and ragged enclosure into a fresh and trim garden.

Over the whole Presidency two agencies, soldiers' gardens and gardens at railway stations, help to keep alive a taste for flowers. At most military stations the troops are encouraged to spend part of their time in gardening, and during the past year seed to the amount of about Rs. 1,400 has with this object been supplied by Government free of cost. A pride in their charges, and the hope of gaining the prize presented yearly both by the Great Indian Peninsula and the Bombay, Baroda, and Central India Railway Companies, induce almost all station-masters to bestow pains on the ornamenting of their stations. This rivalry, now for many years at work, has left almost every railway station in the Presidency rich in well-tended flowers, shrubs, and climbing plants.

Forests.

The total area set apart for forests amounts over the whole Pre- Area.
sidency to 5,654 square miles. Of these 3,754½ square miles are in
the Northern, 1,520 square miles in the Southern, and 380 square
miles in the Sind division.

The following statement shows the financial results of forest Revenue.
operations during the past year :—

Forest Finances, 1876-77.

Division.	RECEIPTS.		EXPENDITURE.		PROFITS.	
	1876-77.	1875-76.	1876-77.	1875-76.	1876-77.	1875-76.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Northern	4,33,484	4,40,022	3,19,630	3,02,073	1,13,854	1,46,949
Southern	4,56,513	5,17,067	3,79,591	2,91,116	1,76,922	2,25,831
Sind	3,36,029	2,82,359	2,32,478	1,90,430	1,03,556	91,939
total ..	12,26,026	12,49,448	8,31,694	7,83,609	3,94,332	4,64,839

It will be observed that the revenue decreased in the Northern and Southern divisions, but increased in Sind. The large decrease in the Southern division, amounting to more than half-a-lakh of rupees, was due to the scarcity and distress in the Southern districts of the Presidency. Almost all classes were forced to economize in the matter of house-building, and, in addition to the decline in the demand, timber-dealers were hampered by the difficulty of obtaining carriage. In Sind the increase of revenue, Rs. 53,670, was due to a special demand for fuel in consequence of the impetus given to the traffic on the river Indus by the grain trade. The expenditure in the Northern division was somewhat greater than last year, while in the Southern it was somewhat less. In Sind, on account of the necessity of employing special establishment to meet the special demand, the expenditure rose by Rs. 42,053. The net profit realized in all the three divisions taken together was Rs. 3,94,332, compared with Rs. 4,64,839 in 1875-76, Rs. 4,13,719 in 1874-75, and Rs. 4,82,229 in 1873-74.

A revised scheme of establishments was introduced in Sind on Staff.
the 1st April 1876. Under the new system, instead of the three old divisions of Kurraohee, Haidarabad and Shikarpur, four new divisions, Sukkur with 24,059 acres, Naushero with 64,635 acres, Haidarabad with 83,238 acres, and Jerrak with 71,393 acres, have been created. A project for the revision of both controlling and subordinate forest establishments, submitted by the Conservator of Forests, Northern division, has been laid before the Government of India for consideration.

PRODUCTION
AND DISTRIBUTION,

Forest Act.

The year has passed without the introduction of the special forest legislation so much wanted in the interests of forest conservancy. The Government of India have drafted a Forest Act for general application throughout India. The draft has been circulated and reported on, but has not yet come before the Supreme Council for discussion.

Offences:

The following statement shows the number and the result of prosecutions for forest offences:—

Forest Offences, 1876-77.

Division.	Charges.	Convictions.	Acquittals.	Fines in Rupees.
Northern	1,264	970	294	6,297
Southern	215	176	39	2,441
Sind	41	40	1	554
Total ...	1,520	1,186	334	9,292

The success obtained in Sind is remarkable.

Fires.

The Conservator of Forests, Northern division, makes no mention of forest fires. In the Southern division, owing to special care taken in consequence of the extraordinary influx of people into the forests during the famine, forest fires were far less common than usual. Fires were, as usual, frequent and extensive in the Upper Sind forests, and it has been found so impossible to keep them out of the entire forest that for the future it is proposed to confine attention to specially selected blocks, and to protect these by an elaborate system of fire-paths. In the opinion of the Acting Conservator of Forests in Sind the damage done by the fires is so great, and natural reproduction has been so interfered with, that the forests are not capable of meeting the demand of the district for small timber for building purposes.

Demarcation.

In the Northern division, though the employment of so large a number of officers on famine duty has somewhat kept back the work of forest demarcation, considerable progress has been made, principally in the Surat, Khándesh, Thána, and Sátára collectorates. In Surat the survey of the Dáng forests by a party belonging to Gujarát revenue survey department has been extended over ninety square miles, giving 206½ square miles as the total area surveyed in these forests. The district forest officer of Surat was engaged in selecting second class reserves in the Mándvi subdivision; but as the work is still in progress, the area to be reserved has not been finally determined. In Khándesh the selection of forest areas in the Sátapura hills and in the Táloda subdivision was continued. The Borái, a reserve of 17,000 acres in the Nizám-pur subdivision, abandoned in the previous year, was reinstated as a first class reserve. In Thána a reserve, containing 7,075 acres of first class and 3,743 acres of second class forest, was selected in Kalyán, and in the Wára subdivision a large block containing 31,793 acres of first class and 6,322 acres of second class reserves. In the Sátára collectorate 93,025 acres of forest land in the spurs of the Sahyádrí range have been selected and sanctioned. In Násik Government have sanctioned 567½ square miles of re-

serves selected during the preceding year, thus bringing up the total area reserved in that collectorate to 816 square miles. In Ahmednagar 2,602 boundary marks were erected round the reserves sanctioned last year. The forest area of this district aggregates 248 square miles. For Poona 82½ square miles were sanctioned, bringing up the total demarcated area in that collectorate to 357½ square miles. Altogether 3,754½ square miles were under reservation in the Northern division on the 31st March 1877. In the Southern division 385 square miles of reserves were selected, which, added to the 1,135 square miles selected in previous years, brings up the total selected area to 1,520 square miles; 495 new boundary marks were also put up during the year, raising to 1,514 the total number of such marks in the division. These marks are built of rough stone, and cost from Rs. 2-10-0 to Rs. 4 and even Rs. 5 each. In Sind the action of the Indus caused a loss of 5,524 acres and a gain of 3,730 acres; that is, a net loss of 1,794 acres. The efforts to save the timber on the eroding banks have been fairly successful. At a cost of Rs. 1,661, timber of an aggregate value of Rs. 6,101 was saved.

In the Northern division the scanty rainfall was unfavourable to plantation works. Seeds did not germinate freely, and of the plants that did come up, many died from want of moisture. Seeds were sown broadcast over more or less extensive areas in the forest reserves of Khándesh, Násik, Thána, Kolába, Poona, Sholápur, and Gujarát. Besides the broadcast sowings, the following plantations were ploughed and sown successfully. In the Thána collectorate thirty acres, in Poona 302½ acres, in Sholápur 87½ acres; in Gujarát *bábul* seed was sown on the strips of land running parallel to the B. B. and C. I. railway line, and in Khándesh 10,825 seedlings of teak, nim, and other trees were planted out on the Pátna reserve. In Kolába the Rájewádi teak plantation near Máhád is fully stocked and is doing well, and in Ahmednagar the Hamidpur reserve begun four years ago, and the Shendi reserve begun five years ago, are in a promising condition. The result of broadcast sowings in the Poona forest reserves may now be seen in thousands of teak and other seedlings. In the Southern division a sum of Rs. 10,164 was spent on nurseries and plantations. But so unfavourable was the season that in the Belgaum, Dhárwár, and Kaládgi plantations the year ended with a smaller stock than it began, and in Kánára there was an increase of only 68,000 plants and 21,000 seedlings.

Plantation Results, Southern Division, 1876-77.

District.	Plants on 31st March 1876.	Transplant- ed during 1876-77.	Total.	Died during 1876-77.	Alive at the end of March 1877.	Casuarina- nas in nur- series.
Kánára	1,018,485	85,348	1,108,831	25,641	1,081,190	21,000
Belgaum	102,848	11,816	114,744	30,705	83,979	60,000
Dhárwár	118,963	3,529	117,482	14,923	102,549	1,950
Kaládgi	18,000	None.	18,000	10,600	8,000	33,000
Total ..	1,258,296	103,791	1,357,057	81,329	1,275,728	1,15,350

Though the general results were so unsatisfactory, in a few cases the planting operations in the Southern division were attended with tolerable and even good success. Of 89,300 seedlings transplanted into the Kádra and Murdy teak plantations in Kánára, some 5,500 failed. Thirteen acres of new land were added to the Kárwár casuarina plantation, and successfully stocked with 9,000 plants, while 21,000 seedlings were reared in the nurseries for future use. In the Barchi plantation, in Kánára, 7,254 Australian gum-trees were planted out. Of these all but 141 were, at the close of the year, doing and looking extremely well. In Belgaum bamboos were successfully planted in the Deshmur Gad reserve and along the sides of the Belgaum and Dhárwár road. On the Sulkinkop reserve, in Dhárwár, of 1,991 young mangoes planted out only sixteen failed. In Sind the area under artificial reproduction was 4,267½ acres compared with 3,510 acres in 1875-76. As regards natural reproduction, the system of closed blocks introduced into the three lower divisions of Naushero, Haidarábád, and Jerrak, by which about a third of the entire forest area for a certain term of years enjoys rest from fellings and cattle-grazing, has worked very successfully. In Haidarábád the success was most marked, and large tracts of open land have been converted into dense thickets of promising young growth. In Sukkur or Upper Sind, on account of frost, floods, and fires, natural reproduction is almost impossible.

In Ahmednagar, Poona and Sholápur, to provide work for the destitute and at the same time improve the forest reserves, a sum of Rs. 1,620 was spent in clearing out overgrowths of prickly-pear. In the Southern division Rs. 19,219 were spent on bridges and roads useful for forest purposes, and in the Poona collectorate two miles of the Lanauli and Borkas forest road were made.

Private rights.

The following table shows that the free grants of wood were of considerably greater value than in the previous year :—

Free Grants of Timber, 1876-77.

Division.	TIMBER GRANTS.		Increase.
	1876-76.	1876-77.	
	Rs.	Rs.	Rs.
Northern	10,918	20,686	9,768
Southern	7,292	11,365	4,073
Total ...	18,210	32,051	13,841

Famine work.

Under the orders of Government the forest reserves in all famine-affected districts were freely thrown open as grazing grounds. In Kánára 41,698 and in Belgaum 68,253 head of cattle were admitted into the forests. In both these districts almost all the cattle that arrived in a weak state perished during the cold foggy nights of November and December, but of the stronger thousands were saved. Though allowed to cut and use inferior kinds

of wood for hutting, the people in charge of these animals suffered severely from the cold damp forest air, many died, and but few escaped fever. The officers of the forest department also did good service in collecting and forwarding large stocks of fodder to the famine-affected districts. The Conservator, Northern division, organized a system of pressing hay at the railway stations in the Thána district. Thirteen presses were erected and upwards of 1,700,000 lbs. of hay pressed and despatched to Sholápur. In the Southern division, of about 2,000,000 pounds of fodder collected, more than half was pressed into bales and forwarded to distant parts of the famine area.

The Kánára saw-mill worked without hitch or accident under the native foreman in charge. The mills had to be stopped for a few days in March (1877) from failure of the water-supply. Altogether they were open 294 days in the year, compared with 301 in 1875-76. Logs with a rough measurement of 37,577 cubic feet compared with 42,812 cubic feet were converted into clean timber. The fall in out-turn was due to the decreased demand on account of the famine. The financial results of the year's operations show, compared with the previous year, a decrease in profits of about Rs. 12,000 :—

Kánára Saw Mills, 1875-77.

	1875-76.	1876-77.	Difference.
	Rs.	Rs.	Rs.
Value of the year's outturn	71,090	56,163	—14,927
<i>Deduct—</i>			
Total cost of the mills	12,628	12,956	+ 328
Estimated value of the wood	39,652	36,551	—3,101
Profit	18,810	6,656	—12,154

At the same time the stock of clean timber on hand at the close of the year is valued at Rs. 47,390 compared with Rs. 24,990 at its beginning.

The result of the second year's departmental collection of myrabolans, *hirida*, *Terminalia chebula*, in the Kánára district, has been satisfactory. The experiment was made in the same forest as in the previous year, with a net profit of Rs. 1,648 compared with Rs. 1,372 in 1875-76. The system adopted is said to be popular among the forest tribes, who find the Government officers more trustworthy paymasters than the contractors.

The Conservator of Forests, Southern division, notices with great regret the death in January 1877 of Mr. R. B. Oliphant, Assistant Conservator of Forests in Belgaum.

Mines and Quarries.

There is nothing to report upon under this head.

Manufactures.

Mills.

The progress of the cotton manufacturing industry during the first half of the past season will be seen from the following table:—

Cotton Mills, 1875-76 and 1876-77.

	In working order.		Increase (col. 3—col. 2).	Setting up.		Total number in working order or setting up.		Total increase (col. 9—col. 7).	REMARKS.
	1875-76.	At the close of 1876.		1875-76.	At the close of 1876.	1875-76.	At the close of 1876.		
1	2	3	4	5	6	7	8	9	10
Mills ..	32	38	6	7	3	39	41	2	*Of these six were completed during the latter half of 1876 and appear in col. 4.
Spindles ..	615,103	958,264	143,161	142,880	85,680	963,983	1,043,944	79,961	
Looms ..	7,879	9,291	1,012	1,003	..	8,661	9,291	610	

Thus it will be observed that the advance made in the course of the six months was not inconsiderable. Details regarding the mills working or under erection at the close of 1876 will be found in the Appendix, Part IV., E. 2. No information of a later date is available, except that, during the course of the year 1877, two out of the three mills shown above in column 6 of the table have begun work with 37,200 spindles.

Mills worked by steam for the manufacture of other descriptions of fibre besides cotton are springing up. During the year 1875-76 two silk mills with 200 looms and 1,600 spindles, and a hemp and jute mill were opened in Bombay. The hemp mill began work with 1,808 spindles and ninety-six looms.

The following statement shows that during the last two years the number of steam cotton gins has increased by 110 :—

Cotton gins.

Steam Cotton Gins, 1874-77.

District.	1874-75.	1875-76.	Increase in 1875-76.	1876-77.	Increase or decrease in 1876-77.
Bombay	9	9	11	+ 2
Ahmedábád	352	352	...	383	+31
Surat	477	477	...	477	...
Broach	1,476	1,533	77	1,536	—17
Khándesh	85	85	...	69	—16
Dhárwár	6	10	4	30	+20
Total	2,396	2,486	90	2,506	+ 20

The wants of the Broach district appear for the present to have been fully supplied by the large increase of gins in 1875-76. Seventeen gins that became unfit for use during 1876-77 have, from want of ordinary repairs, been allowed to remain idle. In Khándesh only sixty-nine gins were available for work against eighty-five in the preceding year; and even the sixty-nine were not all used, because of the small quantity of cotton offered to be cleaned. In native states some twenty-two steam ginning factories are reported to be at work. Of these fifteen are in the territories of H. H. the Gáekwár, two are at Rájpipla in the Rewa Kánta, and the rest are in different parts of Káttwár.

The fluctuation during the last two years in the number of cotton presses, licensed and worked in the districts of this Presidency may thus be shown :—

Presses.

	1874-75.	1875-76.	1876-77.
Half-presses, worked by manual power...	199	172	183
Full-presses, worked by steam power ...	141	134	130

The increase in 1876-77 in the number of half presses was due to an addition of nine in the Ahmedábád and two in the Kaira collectorates. In Bombay the decrease of two in the number of full-presses is probably due to the gradual spread of full-presses in the provinces. In Khándesh the decrease of three was due to the small cotton crop. On the other hand, one new full-press was started at Gadag in the Dhárwár collectorate: that is, for the whole Presidency a net decrease of four in the number of full-presses.

To all but one of the twenty-two ginning factories in native states, cotton presses are attached. Four of these, worked by steam, belong to the factory at Kandla in Bhaunagar. The other twenty factories have half-presses worked by hand. In Cutch, where there are no ginning factories, there are nine full-presses and one half-press all used for pressing hand-ginned cotton.

During the year, in the Presidency town and Kurla, 212 boilers and 179 engines were inspected. Of these four boilers and

Boilers.

eight engines were condemned, and thirty-three boilers and three engines were repaired or altered at the inspector's request. Two serious cases of engines breaking down are reported to have occurred. The inspector's decision was appealed against in one instance only, when the appellants were successful.

The board of examiners for passing engineers held examinations once a month. There were altogether seventy-eight candidates, of whom twelve were applicants for first class, nineteen for second class, forty for third class, and three for service certificates, besides four for certificates under section 19 of the Steam Boiler Inspection Act V. of 1873. A fair number of candidates, fifty-nine in all, were successful.

The financial condition of the steam boiler inspection fund continues, as will be seen from the following figures, to be unsatisfactory :—

Boiler Inspection-Fund, 1875-77.

	1875-76.	1876-77.
	Rs.	Rs.
Opening balance	5,525	2,416
<i>Receipts—</i>		
Inspection (fees)	6,040	5,470
Examination (fees)	738	671
Special advance from Government	5,000
<i>Expenditure—</i>		
Inspection	8,713	10,247
Examination	1,173	900
Total	12,303	13,557
Closing balance..	2,416	2,410

Thus in both years there was a deficit under each of the heads of inspection and examination. The receipts under these heads taken together fell short of the expenditure by Rs. 3,108 in 1875-76, and by a still larger sum, Rs. 5,006, in 1876-77 : so that, had it not been for the large balance with which the former year started and the loan which Government found it necessary to make during the course of the latter year, the fund would have been insolvent. Such a state of things is obviously undesirable, and Government are considering the means to remedy it.

Trade.

EXTERNAL TRADE.

(1).—PORT OF BOMBAY.

The total value of the trade of the year is fifty-five crores and eighty-two lakhs of rupees, or 55½ million pounds sterling. This is in excess by eight crores and thirty-eight lakhs of rupees, or nearly 8½ million pounds sterling of the corresponding total in 1875-76. It is also greater than that of 1874-75 by seven crores and forty-one lakhs of rupees, or 7½ million pounds sterling.

The following table shows the value of the trade in Government stores and treasure, and of private treasure and merchandise for the past three years :—

Bombay Trade, 1874-77.

Imports, Exports, and Re-exports.	1874-75.	1875-76.	1876-77.
1	2	3	4
	Rs.	Rs.	Rs.
Government stores	43,22,635	51,12,935	61,81,260
Do. treasure	81,62,977	15,12,500	24,30,517
Private treasure	5,79,14,378	5,20,33,342	12,14,25,305
Private merchandise	41,37,06,324	41,57,37,252	42,81,90,119
Total ...	48,41,06,314	47,43,96,029	55,82,27,201

The value of the private trade may be classified as follows :—

Private Trade, 1874-77.

Year.	Imports.	Exports.	Re-exports.	Total.
1	2	3	4	5
	Rs.	Rs.	Rs.	Rs.
1874-75 ...	15,14,92,281	22,76,55,024	3,45,59,019	41,37,06,324
1875-76 ...	17,09,64,244	20,74,03,215	8,73,69,793	41,57,37,252
1876-77 ...	16,80,80,009	22,38,84,906	3,82,25,204	42,81,90,119

PRODUCTION
AND DISTRI-
BUTION.

It will thus be seen that the value of the private trade has increased by one crore and twenty-four-and-a-half lakhs during the year under report, compared with the previous year, and one crore and 44½ lakhs, compared with 1874-75.

The following table shows the distribution of the trade of Bombay in 1875-76 and 1876-77 between foreign ports, native Indian ports, and ports in other Presidencies :—

Distribution of Bombay Trade, 1875-77.

	Foreign Ports.		British Ports in other Presidencies.		Native Indian Ports.		Total.
	1		2		3		4
	Merchandise.	Treasure.	Merchandise.	Treasure.	Merchandise.	Treasure.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Imports ..	12,74,15,075	8,29,61,582	2,62,87,377	14,232	1,23,77,537	2,15,788	24,92,71,611
Exports ..	20,62,33,791	1,46,75,334	29,75,781	22,33,84,906
Re-exports ..	1,79,15,807	3,25,06,758	1,69,04,014	42,97,004	34,05,383	14,29,041	7,64,68,907
1875-76.							
Imports ..	13,47,24,382	3,59,90,678	2,45,87,277	23,760	1,18,52,585	4,19,693	26,73,98,263
Exports ..	19,71,47,477	75,51,818	27,03,025	20,74,03,215

Imports.

Private imports other than treasure show, compared with the preceding year 1875-76, a decrease of rupees 48½ lakhs. This decrease is chiefly owing to the decline of nearly fifty lakhs in the imports of sugar from Mauritius; of more than thirty-one lakhs in the imports of silk, and of nearly twelve lakhs in the imports of tea from China, and of about 7½ lakhs in the imports of woollen piece-goods from Europe. Decrease in other less important items has swelled this amount to one crore-and-a-half, against which there is, however, a considerable set-off in increased importations of cotton twist, piece-goods, and coal from Europe, and oils and spices from the Madras Presidency. Railway plant and rolling stock have increased this year by upwards of ten lakhs, so that the net decrease remains at about forty-nine lakhs. Considering the famine-stricken state of so large a part of the area generally supplied from the Bombay market, it would not have been wonderful had the decrease in foreign trade been much larger. This would probably have been the case but for a sudden fall in prices of Manchester goods, during the second quarter of the year, which induced larger indents from this market. Exchange, just about this time, luckily turned a little in favour of buyers, so that a margin of profit was left, which tempted to further and larger indents, resulting, it is said, in losses.

Decreased Imports.—The decrease is principally perceptible in the following articles :—

Apparel.—This item shows a decrease of Rs. 4,97,331, and is chiefly in the importation from the United Kingdom, which last year was exceptionally large.

1874-75 ...	Rs. 21,47,693
1875-76 ...	23,11,688
1876-77 ...	18,14,357

1874-75 ...	Rs. 1,62,430
1875-76 ...	„ 1,82,028
1876-77 ...	„ 1,79,574

Clocks and Watches.—Show a decrease in value of Rs. 2,454 with an increase in number, showing that cheap watches are largely imported.

Chemical Products and Drugs and Medicines.—Both these items together show a decrease of Rs. 60,666. This is owing principally to the less importation of salammonia and quinine from the United Kingdom.

1874-75 ...	Rs. 16,66,066
1875-76 „	„ 17,61,391
1876-77 ...	„ 17,00,725

Dyeing and Colouring Materials.—In cochineal alone there is a decrease of Rs. 3,75,133. The imports of sapanwood and gallnuts have also fallen off. Aniline dyes, however, exhibit an increase.

1874-75 ...	Rs. 17,06,221
1875-76 ...	„ 17,44,529
1876-77 ...	„ 13,91,720

Fireworks.—Large imports during the last year have diminished the imports this year, and hence a decrease of Rs. 1,99,185.

Glass.—The decrease in this item of Rs. 3,99,142 is chiefly in the importation of beads and bangles, which is attributable to less consumption owing to the famine.

1874-75 ...	Rs. 15,63,918
1875-76 ...	„ 16,05,407
1876-77 ...	„ 12,06,265

Gums and Resins.—Collectively show a decrease of Rs. 61,510. The chief decrease is in the importation of resin—upwards of Rs. 40,000 from the United States—and in gum arabic about Rs. 58,000 from Arabia. On the other hand, gum, copal, and olibanum show an increase of upwards of Rs. 66,000.

1874-75 ...	Rs. 7,93,016
1875-76 ...	„ 6,82,604
1876-77 ...	„ 6,21,094

Hardware and Outlery.—The trade this year was nearly the same as that of last year, the difference being only Rs. 15,898 on a total importations of upwards of eighteen lakhs.

1874-75 ...	Rs. 12,70,089
1875-76 ...	„ 18,62,381
1876-77 ...	„ 18,46,483

Hides and Skins.—The decrease is wholly in raw skins from the Arabian states.

1874-75 ...	Rs. 3,49,797
1875-76 ...	„ 5,31,187
1876-77 ...	„ 4,62,051

Leather.—The importation this year, although it shows a decrease of Rs. 37,278, compared with that of the last year, is still above the average of the past five years.

1874-75 ...	Rs. 3,30,118
1875-76 ...	„ 4,14,102
1876-77 ...	„ 3,76,824

Liquors: Ale, Beer, Porter, Spirits and Wines.—Spirits and wines show a falling off of 32,617 and 29,154 gallons, respectively; whilst ale, beer, and porter show an increase of 18,359 gallons.

1874-75 ...	Rs. 32,61,452
1875-76 ...	„ 41,77,343
1876-77 ...	„ 38,23,077

Machinery and Millworks.—This item, which showed a continued increase from 1871-72 to 1875-76, has this year fallen off by Rs. 26,09,277, indicating a decline in local requirements.

1874-75 ...	Rs. 51,97,025
1875-76 ...	„ 74,21,652
1876-77 ...	„ 48,12,375

Metals.—With the exception of copper, steel, and spelter, show a considerable falling off. In copper there has been an increase of Rs. 9,36,436, which may be attributed to the fall in prices in

1874-75 ...	Rs. 86,17,746
1875-76 ...	„ 1,36,95,639
1876-77 ...	„ 1,33,77,444

the English market during the second quarter of the official year. The re-exports have also been greater than last year. The increase in steel, which amounts to Rs. 1,83,634, is chiefly in German steel, and the imports having exceeded the demand, the market is said to be glutted. Spelter, the price of which gradually fell in the home market throughout the year, shows an increase of Rs. 43,543, which is caused by the fall of prices in England. Yellow metal shows a decrease of Rs. 5,69,187, which is owing to less demand on account of the famine in the interior. Iron shows an increase of 9,117 cwts. with a decrease in value of Rs. 2,81,154, which is attributable to fall of prices both here and in the English market. Quicksilver, the imports of which had last year very much exceeded the demand, shows this year a decrease of Rs. 4,00,948. The fall of prices in England, from £15 to £10, noted last year, have further fallen off from £10 at the commencement to £7½ at the close of the year. Tin also shows a decrease of Rs. 97,305.

1874-75 ... Rs.	5,48,257	<i>Paints and Colours.</i> —This item shows a decrease of Rs. 3,84,715, as compared with the imports of last year, which were exceptionally large.
1875-76 ... "	8,76,741	
1876-77 ... "	4,92,026	

Paper and Paste-board.—In the importation of this article there has been a decrease of Rs. 1,04,651 over that of the last year, which is wholly in the importation of inferior kinds of paper and paste-board. Local manufactures are interfering in this respect, especially as regards packing paper and boards for twist.

1874-75 ... Rs.	77,23,606	<i>Silk: Raw.</i> —Shows a decrease of Rs. 21,59,936 with a decrease in quantity of 903,282 pounds. The decrease is chiefly in the Punjum and other kinds of superior China silk. Prices rose considerably, owing to a brisk demand in China from the European markets consequent on the failure of the crop in Italy. Chaharam and Cochin China, however, show an increase, upwards of Rs. 1½ lakhs being brought into this market to replace other kinds of the high-priced China silk, which, owing to their heavy cost, proved unremunerative.
1875-76 ... "	59,98,858	
1876-77 ... "	38,38,922	

Silk: Piece Goods.—Show a decrease of Rs. 10,17,465 with a decrease in quantity of 2,265,607 yards. This is chiefly in the imports from China, where the high ruling prices of silk caused a corresponding rise in the manufactures. In the year 1875-76, 4,441,083 yards represented a value of Rs. 32,09,890; while this year 2,175,476 yards are valued at Rs. 21,92,425. The imports this year would probably have still further fallen off, had it not been for some Chinese merchants having established themselves here this year and imported goods on their own account. As previously reported during the past two years, the trade in manufactured silk has been forced, and the market thereby overstocked, and this, coupled with the fact that the local mills produced large quantities of inferior kinds, accounts for the decrease.

Sugar and Sugar-candy, including other Saccharine Produce.—The decrease of Rs. 49,33,211 is chiefly in the imports of sugar from Mauritius, where the crop is said to have been more favourable than the preceding year. The heavy demand, however, in that market from the United Kingdom raised prices so high as to check importations here. Bombay received only about 8,000 tons against 24,000 tons last year, though the outturn of the crop of 1875-76 was only 87,000 to 92,000 for 1876-77. The United Kingdom took this year 41,950 tons against 28,132 tons last year.

1874-75 ...	Rs. 10,69,396
1875-76 ...	„ 21,15,930
1876-77 ...	„ 8,72,847

Tea.—The glut in the market, owing to large imports during the preceding year, is the cause of the decrease of this year.

1874-75 ...	Rs. 3,01,558
1875-76 ...	„ 4,81,620
1876-77 ...	„ 4,06,175

Umbrellas.—The decrease of Rs. 75,445 is owing to the overstocked state of the market during the preceding year.

Woollen Piece-Goods.—The imports this year show a decrease of Rs. 7,24,985 compared with the preceding year, but they are nearly the same with the average of the past five years.

1874-75 ...	Rs. 20,48,731
1875-76 ...	„ 29,73,030
1876-77 ...	„ 22,48,045

Against these items of decrease the following articles show an increase :—

Arms and Ammunition.—Though this item shows an increase, on the whole, of Rs. 23,818, there is a decrease in the importation of fire-arms to the extent of more than Rs. 3,000, and in that of common gunpowder upwards of Rs. 13,000. Gunpowder (sporting), bird shot and other articles, comprising this head, show an increase.

1874-75 ...	Rs. 3,13,635
1875-76 ...	„ 2,72,935
1876-77 ...	„ 2,06,753

Rs. 23,818, there is a decrease in the importation of fire-arms to the extent of more than Rs. 3,000, and

Building and Engineering Materials.—Show an increase of Rs. 79,454, which is mostly in the importation of asphalt, cement, and bricks from the United Kingdom.

1874-75 ...	Rs. 2,68,062
1875-76 ...	„ 1,66,436
1876-77 ...	„ 2,45,890

Rs. 79,454, which is mostly in the importation of asphalt, cement, and bricks from the United Kingdom.

Coal.—There is an enormous increase of Rs. 23,94,557 in the importation of this article, being over fifty per cent in excess of the last year, which is attributable to the fact of increased consumption on the railways to meet famine demands, increased use of machinery, and to speculations resulting from apprehensions of war and consequent rise in freight.

1874-75 ...	Rs. 45,34,821
1875-76 ...	„ 42,66,038
1876-77 ...	„ 66,60,595

Rs. 23,94,557 in the importation of this article, being over fifty per cent in excess of the last year, which is attributable to the fact of increased consumption on the railways to meet famine demands, increased use of machinery, and to speculations resulting from apprehensions of war and consequent rise in freight.

Cotton: Twist and Yarn.—The net increase in this item is Rs. 3,87,584. In water No. 30 alone there is an increase of upwards of seven lakhs, the low prices at which it was laid down driving local production out of the market. The higher numbers of mule twist also show an increase, there being as yet no local competition, which, on the other hand, accounts for the decrease in the lower numbers. Turkey red shows an increase of upwards of 1½ lakhs, while orange and other colours have fallen off.

1874-75 ...	Rs. 78,02,755
1875-76 ...	„ 61,27,531
1876-77 ...	„ 65,15,115

Rs. 3,87,584. In water No. 30 alone there is an increase of upwards of seven lakhs, the low prices at which it was laid

PRODUCTION
AND DISTRI-
BUTION.

Cotton Piece-Goods.—There has been a considerable increase of Rs. 23,50,008. In grey piece-goods 1874-75. Rs. 4,29,04,676 of Rs. 23,50,008. In grey piece-goods 1875-76. ,, 4,63,24,227 there is an increase of nearly rupees 1876-77. ,, 4,88,74,235 eighteen lakhs, chiefly in shirtings and the finer descriptions of T-cloth, and in white or bleached upwards of rupees five lakhs, almost wholly in shirtings and jaconets. Handkerchiefs also show an increase of about one-lakh-and-a-half. The low rates in the Manchester market during the second quarter of the official year led, as already explained, to large indents from Bombay. The markets of Delhi, Cawnpoor, Agra, and Amritsar were supplied this year to a large extent with piece-goods and twist from Bombay.

Earthen-ware and Porcelain.—There is an increase of Rs. 94,010. 1874-75 ... Rs. 2,77,500 The market became overstocked, and there 1875-76 ... ,, 3,13,753 have been large re-exports, particularly to 1876-77 ... ,, 4,07,763 Persia.

Ivory and Ivory-ware.—This item shows an increase of 1874-75 ... Rs. 12,71,525 Rs. 1,43,341 in value, with a decrease 1875-76 ... ,, 23,96,776 in quantity of 25,185 pounds. The im- 1876-77 ... ,, 25,40,117 ports from the eastern coast of Africa and Aden have fallen off considerably, owing to a brisk demand in the English market, to which direct shipments were made. The imports from the United Kingdom have increased. The increase in value is also attributable to high rates ruling in the market during the year.

Jewellery.—Shows an increase of 1874-75 ... Rs. 17,44,153 Rs. 2,51,220, which is chiefly in the 1875-76 ... ,, 14,53,158 importation of pearls from Muscat and 1876-77 ... ,, 17,04,378 Persia.

Matches, Lucifer and other.—This article continues in great demand, there being an increase of 1874-75 ... Rs. 2,28,456 Rs. 35,226 over and above the importation 1875-76 ... ,, 3,07,000 of the last year. 1876-77 ... ,, 3,42,226

Oils.—There is an increase of 208,791 gallons, with an increase 1874-75 ... Rs. 14,95,811 of Rs. 5,46,616. The increase is due 1875-76 ... ,, 12,74,295 to greater importations of vegetable oil. 1876-77 ... ,, 13,20,911 There has, however, been a decrease in the importations of kerosine oil, the price of which rose over seventy-five per cent.

Provisions.—The net increase is of Rs. 1,59,452. Almonds 1874-75 ... Rs. 50,03,753 and raisins from Persia have increased by 1875-76 ... ,, 57,12,709 nearly 2½ lakhs, whilst wet dates from 1876-77 ... ,, 58,72,161 Bassorah have fallen off to the extent of upwards of two lakhs.

Railway Plant and Rolling Stock.— 1874-75 ... Rs. 5,90,972 Shows an increase of Rs. 10,65,629. 1875-76 ... ,, 2,58,752 This item is subject year by year to great 1876-77 ... ,, 13,24,381 fluctuations.

Spices.—This item, which comprises a number of articles, shows an increase, on the whole, of Rs. 5,93,620, chiefly in pepper, cloves, and betel-nuts.

1874-75 ... Rs.	19,83,579
1875-76	35,79,520
1876-77	41,73,140

Tobacco.—Shows an increase of Rs. 78,803 over last year. The market is now overstocked. It is said the manufacture of Gujarát tobacco, which is of superior quality, is likely to be tried shortly.

1874-75 ... Rs.	2,42,835
1875-76	2,69,094
1876-77	3,47,897

1874-75 ... Rs.	33,46,765
1875-76	41,71,124
1876-77	42,90,703

Wool: Raw.—The whole increase of Rs. 1,19,579 is from Kurrachee.

Exports.

Private export trade shows an increase of rupees one crore and 64½ lakhs, compared with the preceding year 1875-76.

The increase in the exports of Indian produce is in almost all the principal items, but is mainly due to the increased exports of opium, cotton twist and yarn, grain and pulse. In cotton, the chief article of export, there is however a decrease of Rs. 40,56,990.

The increase is perceptible in the following items:—

Coffee.—The increase of Rs. 3,67,981 over the preceding year is chiefly in exports to France and the United Kingdom, where the market was favourable. Persia has also taken nearly double the quantity of last year.

1874-75 ... Rs.	4,00,047
1875-76	5,65,922
1876-77	9,33,903

Cotton Twist and Yarn.—The increase of Rs. 33,44,934, with an increase in quantity of 68,227,857 lbs. over and above that of the last year, is chiefly in exports to Hongkong and Japan, which seem to have been overdone. The steady increase in this trade shows how widely the cotton goods of the Bombay mills have spread. The mills are nevertheless said to have large stocks in hand, partly at least due to the pressure of the famine.

1874-75 ... Rs.	36,76,789
1875-76	51,03,428
1876-77	84,48,362

Cotton Piece-Goods.—The increase of Rs. 10,36,626 is in the exports of grey piece-goods to Aden and the eastern coast of Africa.

1874-75 ... Rs.	24,77,955
1875-76	31,58,327
1876-77	41,94,953

Grain and Pulse.—The increase of 862,409 cwts. is almost wholly in the exports of wheat to the United Kingdom and France. It is scarcely possible to reconcile such a state of things with the prevalence of a serious famine and consequent high prices ruling on the spot. But the demand for bread stuffs in the United Kingdom, owing to short crop on the Continent and to the anticipation of war, which would stop the supplies from the Black Sea, has been so great as to add seventy-five per cent to the export of grain in spite of the high prices here caused by the

1874-75 ... Rs.	65,09,909
1875-76	68,77,999
1876-77	1,06,97,300

famine. Had it not been for the block on the railways, which prevented wheat from getting to Bombay, shipments would have been much larger.

Hides and Skins.—The increase of Rs. 5,11,647 over last year is to be attributed to the loss of cattle in the famine-affected districts and to the favourable prices in the English market.

1874-75 ... Rs.	10,66,957
1875-76	23,43,449
1876-77	28,55,099

Opium.—Shows an increase of 7,966½ chests, with an increase in value of Rs. 1,13,27,428, compared with the past year, and is considerably above the average of the last five years. The year under report has recovered the decrease of the previous one, being of about the same value as 1874-75. It is difficult to understand how the trade is carried on, considering that prices, it is said, are not, and for some years past have not, been remunerative, except it is, as a means of payment, for the value of imports.

Wool: Raw.—Has an increase of 812,053 lbs. in quantity and Rs. 3,42,835 in value, which is wholly to the United Kingdom.

1874-75 ... Rs.	61,58,127
1875-76	69,76,874
1876-77	73,19,709

Wool, Manufactures of: Shawls.—Show an increase of Rs. 3,79,993, which is chiefly in the exports to the United Kingdom, France, and Persia. There was an excess of Cashmere and Delhi shawls of inferior qualities at the half-yearly public sales at London in June 1876. At the sales in December the Cashmere shawls were in limited quantities, but other descriptions of shawls were greatly in excess. These large supplies have tended to a decline in prices generally.

As a set-off against these items of increase, the following articles show a decrease:—

Cotton, Raw.—The trade in this staple was nearly the same as last year, there being only an increase in quantity of 23,713 cwts., but a decrease in value of Rs. 40,56,990, which is due to a slight decline in prices. The values registered during the preceding year give an average of Rs. 27½ per cwt.; while that of the year under report was Rs. 26½. The increase in quantity is entirely in exports to the other Presidencies. There has been a decrease, however, in the exports to foreign ports, owing to the unfavourable crop. The consumption of the local mills is increasing, and is estimated to be about 150,000 to 200,000 bales annually.

Seeds.—There is a decrease of 316,549 cwts., representing a fall in value of Rs. 18,06,456. The exports of linseed to the United Kingdom alone show a falling off of 730,268 cwts., with a value of Rs. 40,57,509, as also to the United

1874-75... Rs.	60,41,771
1875-76... ..	1,75,98,326
1876-77... ..	1,62,91,870

States to the extent of 160,729 cwts., of the value of Rs. 8,86,630 ; whereas the exports to Belgium and France have exceeded those of last year by 207,592 cwts., value Rs. 11,57,227, and 509,179 cwts., value Rs. 29,05,977, respectively. Egypt and Italy show also an increase. Rape-seed shows a falling off to the United Kingdom, but a rise to Belgium and France. Teel-seed shows a falling off to all the ports to which it is usually sent. Other sorts also show a decrease.

Re-exports.

The value of the re-export trade of the year under review shows an increase of Rs. 8½ lakhs over the preceding year. The increase is principally apparent in the value of re-exports of cotton piece-goods, ivory, gums, jewellery, metals, provisions, raw silk, raw wool, and woollen piece-goods. As a set-off there is, however, a decrease in sugar, sugar-candy, and tea.

General.

Statement D. 8—Part IV. of the statistical returns shows Cotton the exports of raw cotton from the whole of India in the year under report. The quantity exported is 45½ lakhs of cwts., or 510 millions of pounds weight. The export of cotton from the chief port of Bombay in 1876-77 is detailed in statement D. 9 of the statistical returns. It will be seen that the export was 35½ lakhs cwts., or nearly 400 millions pounds, which is less by two millions pounds than that of the preceding year. The exports to principal places from Bombay were as mentioned below :—

United Kingdom	2,057,846 cwts.
Austria	377,091 "
France	666,438 "
Italy	286,084 "
Russia	28,094 "
Other countries	155,367 "

The cotton exports to Austria, France and Italy are greater, and to the United Kingdom, Russia, and other countries are less than in 1875-76.

The transactions in treasure are shown in the following statement :—

Treasure Transactions, 1874-77.

	1874-75.			1875-76.			1876-77.

PRODUCTION
AND DISTRI-
BUTION.

There has been, on the whole, compared with the previous year, an increase, as per margin, in imports both of gold and silver. In the exports there has been an extraordinary increase.

In gold the exports exceeded the imports by Rs. 17,49,651, a reversal of the flow of trade which has hitherto been to India, and not from it.

In 1875-76 the exports of gold to the United Kingdom, which exceeded the imports by eleven lakhs, amounted only to sixteen lakhs; while this year the imports being thirty-nine lakhs, the exports have reached the large sum of 117 lakhs. The whole of this large exportation, with the exception of the trifling amount of three lakhs to France and other countries, was to the United Kingdom, to which it found its way in the form of exchange remittances. One curious feature of the transactions of the year is the keenness with which the Natives sold their gold in August, September, and October, at the time when exchange reached its lowest point, and their eagerness to rebuy gold immediately exchange rose, as was the case in the beginning of this year. As regards silver, the total exports for 1875-76 were 133 lakhs against total imports of 266 lakhs. In this year the exports amounted to 2½ crores against 7¼ crores of import. The exports to China and Ceylon greatly exceeded those of last year. It may be noted that of the imports of this year the United Kingdom has contributed nearly 5½ crores and Italy upwards of one crore. The difference of the amount of the imports in the year 1876-77, compared with that of 1875-76, is apparently accounted for by the fluctuations in England of sterling exchange.

Balance.

Exports of Government stores and private merchandise exhibit an excess value of nine crores and eight lakhs of rupees, or 9½ millions pounds sterling over the value of imports of Government stores and private merchandise during the year under report. The following table shows for the last seven years the excess in value of exports, together with the excess in the imports over exports of treasure as a set-off, and the net result:—

Exports and Imports, 1870-76.

Year.	Excess Value of Exports and Re-exports over Imports, Treasure excepted.	Excess Value of Imports over Re-exports for Treasure only.	Net excess Value of Exports over Imports.
	£	£	£
1870-71 ...	11½ millions.	2 millions.	9½ millions.
1871-72 ...	11½ "	5½ "	6½ "
1872-73 ...	8 "	1½ "	6½ "
1873-74 ...	8 "	2½ "	5½ "
1874-75 ...	10½ "	3½ "	7 "
1875-76 ...	6½ "	2½ "	4½ "
1876-77 ...	9½ "	4½ "	4½ "

The following table shows, for the different countries trading with Bombay, the value of exports and imports :—

Distribution of Export and Import Trade, 1876-77.

Country.	Exports.	Imports.
	Rs.	Rs.
United Kingdom	7,80,23,443	9,83,47,903
France	2,66,68,844	20,54,057
Italy	80,47,484	15,84,095
Other countries in Europe	1,58,69,968	8,90,320
Eastern coast of Africa	7,18,767	25,01,233
Mauritius	2,37,793	24,84,757
Other countries in Africa	13,65,943	4,08,133
United States	1,10,322	6,09,474
Aden	18,93,525	11,31,290
Arabia	19,33,357	23,80,629
China	6,85,41,297	85,75,515
Persia	12,32,988	33,90,736
Straits Settlements	5,46,166	13,35,206
Turkey in Asia	3,73,594	10,41,064
Other countries in Asia	6,48,702	5,77,351
Australia	21,608	1,03,312
Total ...	20,62,33,791	12,74,15,075
British ports in other Presidencies	1,46,75,334	2,62,87,377
Native Indian ports	29,75,781	1,23,77,557
Grand Total ...	22,38,84,906	16,60,80,009

It will be seen that the exports to France, Italy, Aden, China, and other countries in Europe, Africa, and Asia, exceed in value the imports from those places; whereas the imports from the United Kingdom, the Eastern Coast of Africa, Mauritius, United States, Arabia, Persia, Straits Settlements, Turkey in Asia, and Australia, exceed the exports. In regard to Native Indian ports and British ports in other Presidencies, imports are quadruple and double the exports respectively.

The imports and exports, exclusive of Value. treasure, during the year under report, were as noted in the margin. The value of exports is in the ratio of rupees 6½ to rupees five of imports :—

Imports... Rs.	16,60,80,009
Exports... ..	22,38,84,906
Total... Ra.	38,99,64,915

Value of Trade, 1849-50, 1876-77.

5th " " 1869-70 to 1873-74	41½ "
In 1874-75	41½ "
In 1875-76	37½ "
In 1876-77	39 "

PRODUCTION AND DISTRIBUTION.

It will be noticed from the above statement that the total value of the imports and exports, exclusive of treasure, shows an augmentation in the trade, compared with the results of 1875-76, and the average of the third quinquennial period from 1859-60 to 1863-64, though it is less than the results of 1874-75 and the averages of the fourth and fifth quinquennial periods, and double and treble of the averages of the second and first quinquennial periods, respectively.

Quantity. The following table shows in 100,000 pounds the fluctuations in the quantity of the principal items of import and export :—

Quantity of Trade, 1849-50, 1876-77.

1	Imports from Foreign External Ports.							Exports of Indian Produce to Foreign External Ports.

1874-75	87 $\frac{1}{2}$	1 $\frac{1}{2}$	1 $\frac{1}{2}$	8 $\frac{1}{16}$	21 $\frac{1}{2}$	3 $\frac{1}{2}$	10 $\frac{1}{2}$	5,014 $\frac{1}{2}$	27 $\frac{1}{16}$	10 $\frac{1}{2}$	10 $\frac{1}{2}$	$\frac{1}{2}$	2 $\frac{1}{16}$	10 $\frac{1}{2}$	$\frac{1}{2}$	149 $\frac{1}{2}$
1875-76	72 $\frac{1}{16}$	2 $\frac{1}{2}$	1 $\frac{1}{16}$	11	21 $\frac{1}{2}$	5 $\frac{1}{16}$	20 $\frac{1}{16}$	4,020 $\frac{1}{2}$	61	12 $\frac{1}{16}$	17 $\frac{1}{2}$	$\frac{1}{2}$	4 $\frac{1}{2}$	81	$\frac{1}{2}$	163
1876-77	81 $\frac{1}{2}$	1 $\frac{1}{2}$	1 $\frac{1}{2}$	11 $\frac{1}{2}$	11 $\frac{1}{2}$	2 $\frac{1}{2}$	8 $\frac{1}{16}$	3,999 $\frac{1}{2}$	78 $\frac{1}{2}$	15 $\frac{1}{16}$	20	$\frac{1}{2}$	1 $\frac{1}{2}$	27 $\frac{1}{2}$	$\frac{1}{2}$	170

It will be seen from the foregoing statement that during the year under report the quantity imported and exported of all the principal articles therein mentioned, except spirits, wines, silk, sugar, and tea under imports, and cotton, oils, and seeds under exports, is in excess of the previous year. Imports of twist and metals, and exports of all articles, except cotton, wool, and oils, in 1876-77 exceed those of the past five quinquennial periods. They are also, with the exception of twist under imports, in excess of 1874-75.

There has been a marked decrease in the imports of silk, sugar, and tea. The quantity of silk imported in 1876-77 is less than the averages of the 2nd, 3rd, 4th, and 5th periods, though a little in excess of the average of the 1st period. It is nearly one-half less as compared with 1874-75 and 1875-76. Imports of sugar this year, though larger than the averages of the 2nd and 3rd periods, are equal to the average of the 1st period. They are, however, less than the averages of the 4th and 5th periods, and 1874-75

and 1875-76. The quantity of tea imported in the year under review is less than in 1874-75 and the averages of all the periods, except the 1st, and shows a falling off by $2\frac{1}{2}$ times as compared with 1875-76. Spirits and wines show an improvement in 1876-77, compared with the average results of the 1st, 2nd, and 3rd periods, though a decline when contrasted with the results of the 4th and 5th periods, and of 1874-75 and 1875-76. Cotton exports in the year under report are less than the averages of the 4th and 5th periods, and exports of oils are in excess of the averages of the 1st and 4th periods.

The aggregate value of the trade of the whole Presidency, exclusive of Sind, under import, export including re-exports, and coasting, is summarised in the following table:—

Grand Total Rs. ...	61,81,08,575	71,38,80,649	9,52,72,074		

It will be seen from the above table that, inclusive of Government stores and private and Government treasure, the total value of the import and export trade is in excess of that of 1875-76 by nine-and-a-half crores of rupees. Private trade shows, chiefly in exports, an increase of $1\frac{3}{4}$ crores. Imports from foreign ports exhibit a decrease of Rs. 73 $\frac{3}{4}$ lakhs. There has been, however, an increase in the imports from British ports in other Presidencies, from British ports within the Presidency, and from native Indian ports of 26 $\frac{1}{2}$, 13 $\frac{1}{10}$, and 10 $\frac{2}{8}$ lakhs, respectively, so that the net decrease in the imports of foreign and coasting trade together amounts to Rs. 23 $\frac{1}{10}$ lakhs. The exports, including re-exports to foreign ports, are in excess of those of 1875-76 by 75 $\frac{1}{4}$ lakhs, and those to British ports in other Presidencies, British ports within the Presidency, and native Indian ports show a rise of 70 $\frac{1}{4}$, 43 $\frac{1}{4}$, and one lakh, respectively. That is, the value of the total exports of foreign and coasting trade together shows an improvement over those of the last year by 1 $\frac{2}{10}$ crores of rupees.

There has been an increase in the total value of imports and exports of Government stores of 16½ lakhs, 12 lakhs in imports and 4½ lakhs in exports. An increase is also apparent in the imports from, and exports to, foreign ports of private treasure of 4½ and 2½ crores, respectively. Private treasure imported coastwise from British ports within the Presidency exhibits a small increase of four lakhs only. There has also been an increase in private treasure exported coastwise from British ports in other Presidencies, British ports within the Presidency, and Indian ports not British, of Rs. 8½, 8½, and 1½ lakhs, respectively. The increase of 62½ lakhs in the total imports and exports of Government treasure is nominal, as the registry under this head for the year 1875-76 was imperfect.

The customs duty under imports and exports, as per trade statistics in the year under review, realized at the port of Bombay and the continental ports, is as noted in the margin, and shows, compared with last year, a decrease of Rs. 9,16,637. The fall is, of imports, under the heads of apparel, hardware, wine, metal, silk, sugar, manufactures of wool, and "all other articles," and of exports, husked rice "and all other articles".

Import duty	Rs. 55,77,075
Export " "	1,12,034
Total	Rs. 56,89,109

statistics in the year under review, realized at the port of Bombay and the continental ports, is as noted in the margin, and shows, compared with last year, a decrease of Rs. 9,16,637. The fall is, of

Shipping.

The following table compares with those of 1875-76 the arrivals and departures of the vessels which carried the trade of the port of Bombay during 1876-77:—

Shipping in Bombay, 1875-76 and 1876-77.

			1875-76.		1876-77.

	Steam	...	594	551,711	797	578,180

This shows, compared with the previous year, a general increase under every head in the number of vessels entered at and cleared from the port of Bombay. On the other hand, there is a fall in the number of steam vessels trading from and to native Indian ports and to foreign ports. Decrease is also apparent in the sailing vessels to British ports in other Presidencies. An increase of 236 sailing vessels to native Indian ports is visible, but their burden shows a decrease of 3,811 tons. There has also been an increase in the number and tonnage of sailing vessels and steamers entered and cleared from the port of Bombay to the extent shown below:—

	Sailing Vessels.		Steamers.	
	No.	Tonnage.	No.	Tonnage.
Arrivals	10,393	210,012	220	44,618
Departures	1,088	68,627	203	26,469

The number of sailing vessels entered at Bombay shows a marked increase, chiefly in the vessels from British ports within the Presidency (9,564).

At Bombay and the continental ports, under vessels entered, there is, in steamers, a rise of eighteen in number and of 30,287 in tonnage; and in sailing ships a rise of thirty-five in number and of 39,172 in tonnage. Under vessels cleared there is, in steamers, a fall of twenty-five in number and of 24,009 in tonnage; and in sailing ships a rise of eleven in number and 8,586 in tonnage.

At the same ports there has been a decrease of four in the number and of 7,002 in the tonnage of steam vessels entering in ballast, and an increase of nine in the number and of 3,876 in the tonnage of sailing vessels on the same account. The departures of steam and sailing vessels in ballast, though the same in number as last year, show a difference in their tonnage of 415 tons decrease and nine tons increase, respectively. An increase is apparent to the extent mentioned below in the vessels, and their tonnage entered and cleared coastwise with cargoes:—

	Arrivals.		Departures.	
	No.	Tonnage.	No.	Tonnage.
From and to British ports in other Presidencies ...	669	49,658	190	6,417
Do do. within the Presidency	13,449	1,94,128	3,980	1,01,594
Do. Native Indian ports ...	1,091	16,654

The vessels cleared to native Indian ports show, however, a decrease in number by 115 and in burden by 9,022 tons. The marked increase in the arrivals and departures of vessels from and to British ports within the Presidency is principally due to greater importations of grain to meet the demands of the famine districts.

	Vessels	Tonnage.
Entered...	65	18,953
Cleared ...	339	83,598
Entered...	772	71,460
Cleared ...	574	15,318

The number of vessels entered and cleared in ballast from and to British Indian ports in other Presidencies exhibits an increase, while those from and to British ports within the Presidency shows a decrease.

Compared with last year in the number of vessels entered from native Indian ports there has been a decrease by 211 and in burden an increase of 4,863 tons. The vessels cleared to the same ports show an increase, both in the number by 649 and in the burden by 1,154 tons.

(2).—CONTINENTAL PORTS.

The continental ports are divided into two groups : the Northern, including the thirty-two ports between Gogo and the Bassein creek, and the Southern, embracing the fifty-one ports between Bassein and Bhatkal in north Kánára. The port dues of 1876-77 amounted to Rs. 73,985, or more than in 1875-76 by Rs. 2,392. The total expenditure from the port fund amounted to Rs. 45,734, or less by Rs. 591 than in the previous year. Owing chiefly to the heavy expenses of the port of Kárwár and of maintaining the Imperial light-houses of Vingorla and Kárwár, the financial position of these funds is not altogether satisfactory. A report has been submitted to Government on the subject. The matter is still under consideration. The light-houses, buoys, and beacons in the charge of the department have been efficiently maintained during the year under report.

About 95,854 vessels were entered inwards at the different ports during the year, and about 95,765 cleared outwards from them. The declared value of the trade carried by these vessels was Rs. 8,31,64,711. The following table shows the total value of the export and import, trade for each division, for the years 1872-73, 1873-74, 1874-75, 1875-76, and 1876-77 :—

Continental Ports, 1872-77.

Year.	Northern Division.		Southern Division.		Total

Increase	1,97,348	10,19,348	50,16,983	52,14,330

(3).—SIND PORTS.

Private trade.

The rise which took place in 1875-76 in the total value of the private sea-borne trade of the province of Sind, and which was noticed in the last report, has, on the whole, been maintained. Exclusive of Government stores and treasure, the total imports and exports were valued at Rs. 4,65,79,352 in 1876-77, compared with Rs. 4,63,74,063 in 1875-76 and Rs. 3,63,35,491 in 1874-75. The proportion of foreign and coasting trade, respectively, to these total values is shown by the figures marginally noted, from which a slight fall in the foreign, and a corresponding rise in the coasting, trade is this year perceptible. Including the imports and exports of Government stores and treasure, the total value of the trade of the province for the two years 1875-77 is shown in the following statement:—

Sind Sea-borne Trade, 1875-77.

It will be observed that the Government imports during 1876-77 were greater than in the preceding year by some thirty-two lakhs of rupees. This was due partly to larger imports of materials for the Indus valley state railway from the United Kingdom, but mainly to an increase in the amount of treasure received from Bombay; on the other hand, the exports on behalf of Government show a decrease of 2½ lakhs, which is accounted for by the fact that in 1875-76 state railway stores and machinery of the value of Rs. 2,55,987 were re-exported to Bombay, Madras, and Rangoon, whereas none were re-exported in 1876-77.

Turning to private trade, it will be seen that, on the whole, the value of the imports fell by Rs. 6,77,866. Distinguishing merchandise from treasure, the details of this figure are thus shown:—

Private Merchandise and Treasure imported into Sind, 1876-77.

Wherefrom.	1875-76.		1876-77.		Difference.	
	Merchan- dise.	Treasure.	Merchan- dise.	Treasure.	Merchan- dise.	Treasure.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Foreign ports	34,30,674	25,926	32,04,621	28,610	- 2,26,053	+ 2,684
British Indian ports except Sind	1,40,35,925	4,34,780	1,46,29,587	6,48,373	- 3,06,339	+ 2,13,593
Indian ports not British ...	70,275	31,131	1,03,256	33,134	+ 32,981	+ 2,003
Total imports from ports without the province...	1,84,36,874	4,91,837	1,79,37,464	7,10,117	- 4,99,410	+ 2,18,280
British ports in Sind ...	11,80,608	4,300	6,81,282	1,06,950	- 4,99,388	+ 1,02,650
Total imports ...	1,96,17,542	4,96,137	1,86,18,746	8,17,067	- 9,98,796	+ 3,20,930
					- 6,77,866	

The imports of merchandise therefore decreased by nearly ten lakhs. One-half of the decrease was in diminished imports from British ports within the province, explained by the circumstance that, to meet an unusual demand from foreign countries and from the famine districts of the Bombay and Madras Presidencies, larger quantities of seeds and grain were brought into Kurrachee by rail than by boats from Keti Bandar. The fall of 2½ lakhs in the value of the merchandise imported from foreign ports was mainly due to diminished receipts of cotton goods from the United Kingdom, and of dates from Persian Gulf ports, round about which the yield of this commodity was not so plentiful in 1876-77 as in the preceding year. The imports from British Indian ports other than Sind come chiefly from Bombay. These imports, mostly of foreign produce, show a diminution in value of more than three lakhs of rupees, chiefly under the head of sugar. Less imports from Mauritius to Bombay is the reason assigned for this decrease. Among minor fluctuations in the imports from British Indian ports is a decrease of nearly a lakh of rupees in grain, noticeable chiefly because it was due to no rice at all having been imported from Calcutta during the year under report, owing to the great demand for that article in the famine districts of Bombay and Madras.

An import trade, chiefly in paper, glass, and toys, has, for the first time, been opened with Belgium. The imports of cotton piece-goods of country manufacture are now on the increase, as will be seen from the figures subjoined :—

Cotton Piece-goods imported into Sind, 1872-77.

Years.	Foreign manufacture.	Country manufacture.
1872-73	70,80,233	9,07,826
1873-74	62,80,062	8,86,337
1874-75	64,46,847	8,06,253
1875-76	75,32,543	10,97,135
1876-77	70,87,290	15,20,076

The imports in malt liquor have been very rapidly declining since 1873-74, though no such tendency is discoverable with regard to wines and spirits. This is probably due to the increasing appreciation in which the breweries of Northern India are coming to be held. The import trade in raw wool, carried on mostly with Persia and the Mekran coast, is becoming brisker every year, as appears from the following figures :—

	Raw wool imported in lbs.	Value, Rs.
1872-73... ..	310,382	80,861
1873-74... ..	439,311	85,411
1874-75... ..	668,544	1,35,871
1875-76... ..	728,238	1,42,238
1876-77... ..	1,093,580	2,55,101

The wool imported is for re-export to Europe.

Export.

The private exports of the year exceeded those of 1875-76 by Rs. 8,83,155. Of this amount, as the following table shows, Rs. 7,08,231 represent the increase in merchandise, and Rs. 1,74,924 the increase in treasure.

Private Merchandise and Treasure exported from Sind, 1875-77.

Whereto.	1875-76.		1876-77.		Difference.	
	Merchan- dise.	Treasure.	Merchan- dise.	Treasure.	Merchan- dise.	Treasure.

Total exports to ports without the province	2,49,77,429	1,40,326	2,61,98,126	2,16,150	+12,30,697	+ 75,824
British Sind ports	11,30,429	3,200	6,26,968	1,02,300	- 5,13,466	+ 99,100
Total Exports.. ..	2,61,16,858	1,43,526	2,68,25,094	3,18,450	+ 7,08,231	+ 1,74,924
					+ 8,83,155	

The decrease of six lakhs in the value of the merchandise exported to foreign countries may roughly be explained by saying that the increase in the exports of teel or gingelly seeds to France

and of wheat to France and other parts of Europe was more than counterbalanced by diminished exports of rape seed to France and the United Kingdom, of raw cotton to Europe and China, and of raw wool to the United Kingdom. The very large increase of over twenty-one lakhs in the exports to British Indian ports other than Sind was due to the transmission of great quantities of rice and millet to the famine districts of Bombay and Madras. The decrease of more than 2½ lakhs in the exports to Indian ports not British is chiefly traceable to smaller quantities of grain having been sent to Cutch and Káttýwár. It is evident that the extraordinary demand in the famine districts diverted the course of grain, especially that of the cheaper sorts, from its usual channels; for the quantities exported to the Mauritius, Reunion, Arabia, and Persia diminished, as well as those to Cutch and Káttýwár. The fall in the exports to British Sind ports corresponds, as nearly as can be expected, with the decrease in the imports into these ports, and is explainable on the same grounds as the other.

The result of the impetus given to the grain trade by the increased demand from Europe for wheat, and to a still greater extent by the famine in Southern India, is seen in the fact that the exports under grain and pulse are the largest on record during the last ten years in quantity, though not in value:—

Export of Grain and Pulse from Sind, 1867-77.

Year.	Wheat.		Other sorts of Grain and Pulse.		Total.	
	Cwt.	Rs.	Cwt.	Rs.	Cwt.	Rs.
1867-68 ...	106,390	4,37,144	1,007,005	35,51,416	1,113,395	39,88,560

				5,847	7,49,091
				4,693	6,29,959

PRODUCTION AND DISTRIBUTION.

On the other hand, the export trade in raw wool has decidedly improved during the last ten years, though not so much in quantity as in value, the total quantity exported in 1876-77 having been 19,686,890 lbs., value Rs. 71,99,245, against 11,377,771 lbs. in 1867-68, value Rs. 35,26,033.

Suez Canal.

The trade through the Suez Canal shows, on the whole, a small increase in value:—

		Imports.	Exports.	Total.	Grand Total.

Total ...	3,076	284,917	2,734	275,127	3,082	278,356	2,764	276,121
Difference	342	9,790	-318	-2,235

The number and tonnage of vessels, entered and cleared, *via* the Suez Canal, has continued steadily to increase since 1871-72. The increase during the year under report will be seen from the sub-joined figures:—

		Entered.		Cleared.	
		No.	Tons.	No.	Tons.
1875-76.	18	17,495	45	46,009
1876-77.	28	29,413	49	51,888

Further particulars regarding Sind trade and shipping will be found in the Statements [Nos. 1 to 7-D—Trade—Part IV] at the end of the report.

ADEN.

The following is a summary of the total value of the external trade of the port of Aden, excluding Government stores and treasure :—

<i>Imports.</i>			
Imports by sea	Rs.	1,47,43,133
" by land	"	19,55,845
" treasure	"	21,04,601
			Rs. 1,88,03,579
<i>Exports.</i>			
Exports by sea	Rs.	1,01,58,312
" by land	"	8,74,476
" treasure	"	23,15,196
			Rs. 1,33,47,984
<i>Transshipments.</i>			
Merchandise	Rs.	1,21,14,017
Treasure	"	47,97,270
			Rs. 1,69,11,287
			Grand Total ... 4,90,62,850

That is a total value of nearly five millions sterling. The following statement shows the entire trade of the settlement for the past five years, exclusive of Government stores and treasure, and of the transshipment trade :—

Aden Trade, 1872-77.

Year.	Imports by Sea and Land.	Exports by Sea and Land.	Total.
	Rs.	Rs.	Rs.
1872-73	1,40,71,024	83,40,876	2,24,11,900
1873-74	1,75,93,187	1,08,49,571	2,84,42,758
1874-75	2,05,03,381	1,27,83,655	3,32,92,036
1875-76	2,00,82,070	1,44,78,565	3,45,60,635
1876-77	1,88,03,579	1,33,47,984	3,21,51,563
Total average for five years...	1,82,11,648	1,19,60,130	3,01,71,778

This table shows that, though, compared with the previous year, there is a decline in the value, both of imports and exports, the totals are still in excess of the average for the last five years.

Excluding Government stores and treasure, but including private treasure, the value of the sea import trade during the year amounted to Rs. 1,68,47,734, exhibiting a decrease of Rs. 12,88,781. The following statement shows the total value of merchandise and treasure imported from some of the principal countries trading with Aden during the years 1875-76 and 1876-77 :—

Treasure, private

The total value of the sea export trade, exclusive of Government stores and treasure, but inclusive of private treasure, was Rs. 1,24,73,508 during 1876-77, showing a decrease of Rs. 9,79,150 compared with the preceding year. The following comparative statement shows the value of the export trade to different countries in both years :—

Aden Export Trade, 1875-77.

Tobacco, manufactured and unmanufactured	Lbs.	1,763,370	2,305,694	547,324
Treasure

The principal articles of merchandise transhipped are arms and ammunition, cotton piece-goods, twist, beads, wines, provisions, fruits, drugs, ivory, gum, metals, hides, tobacco, sugar, machinery, matches, soap, grain, watches, spices, silk piece-goods, seeds, earthen-ware, shells, dyeing materials, and treasure. From the detailed returns it appears that goods to the value of about Rs. 1,21,14,017, and treasure estimated at nearly Rs. 50,00,000, have been transhipped. It is believed that, were the actual value of the transshipment trade accurately known, it would be found to fall but little short of Rs. 2,00,00,000.

Shipping.

Shipping.

The total number and tonnage of merchant vessels entering and leaving the port of Aden during 1875-76 and 1876-77 was as follows:—

Aden Shipping, 1875-77.

		1875-76.		1876-77.		Increase or Decrease, 1876-77	
		No.	Tons.	No.	Tons.	No.	Tons.
Entered	{ Steam	839	1,084,756	818	1,102,445	-23	+ 17,689
	{ Sailing	46	38,424	40	37,134	- 6	- 1,290
	{ Country craft ..	1,066	63,340	1,040	46,470	-26	- 6,870
	Total	1,951	1,176,520	1,898	1,186,049	-55	+ 9,529
Cleared	{ Steam	838	1,063,818	816	1,102,199	-22	+ 18,386
	{ Sailing	44	36,178	39	37,255	- 5	+ 1,077
	{ Country craft ..	1,004	62,338	962	43,294	-42	- 8,944
	Total	1,886	1,172,229	1,817	1,182,748	-69	+ 10,915

Of the 816 steamers fifty-two brought coals, 412 brought or took either cargo or passengers and also coals, 314 called for coals only, twenty-seven put in for telegrams and letters, one arrived to wait orders, two came in for bills of health, one put in to land a pilot, and one came to repair damages. Of the forty sailing-vessels seventeen brought coals, nineteen arrived with other cargo, and four called for bills of health. Comparing 1875-76 with 1876-77, it appears that there has been a decrease of twenty-three in the number, but an increase of 17,689 in the tonnage of steamers, and a decrease of six in the number and 1,290 in the tonnage of the sailing vessels. Twenty-six fewer native craft entered the port.

Subjoined is a statement showing the number and nationality of trading steam and sailing vessels that called at Aden during the past five years:—

Aden Shipping, 1872-77.

The produce of the highlands of Yemen is brought into Aden Inland trade. by camels, large caravans of which arrive daily from the interior, and after a few days' rest again take their way home with return loads of suitable commodities. During 1876-77, 256,305 camels entered Aden against 275,844 in 1875-76. The following statement shows what they brought:—

Aden Inland Trade, 1875-77.

Besides the fruit, vegetables, wood, fodder, and water which Routes. arrive from the Akrahi, Abdali, and Fadhli districts, articles of commerce reach Aden by several other routes through the territories of tribes more or less subsidized by the British Government. Starting from the westward there is, first, the Mafalis route, by which the produce of the districts near Mocha and Hagariya is carried eastward through the territories of the Athwari, Dubaini, Rajai, Akrahi, and Abdali tribes into Aden. Coffee berries, grain and pulse, fruit, vegetables, and kat, are the principal articles imported by this route. The next, the Amoor route, takes its name from a

sub-tribe of the Haushabi, who levy dues independently of those collected by the chief of that tribe. Caravans start from the neighbourhood of Taizz, pass into the territories of the Amri, and thence to Al-Ghail, where they join the Madrajah or Mawriya routes hereafter described. Coffee berries, coffee clean, wax, ghee, bastard saffron, grain, fruit, and kat, are the principal articles carried. Branching off from the last-mentioned route, at the borders of the Haushabi district, caravans occasionally turn southward through the Subaihi country. But the Madrajah route, as this track is called from a town of that name in the Makhdumi territory, is not much used, owing to the risk of attack from the predatory Subaihi tribes, whom no subsidizing seems to tempt into peaceful habits. The Mawiyah route, so called from a town of that name in Turkish territory, passes through the Haushabi and Abdali districts into Aden. The produce of Udain, Iibla, and Ibb, consisting of coffee clean, coffee berries, wax, ghee, bastard saffron, grain, fruit, kat, and hides, is carried by this route. The Zhali route, named after a town in the Amiri country, passes southward through the territories of the Amir, Alawi, Haushabi, and Abdali, tribes. Coffee berries, coffee clean, mats, ghee, bastard saffron, grain, fruit, and madder, from the districts round Sanna and the north, are brought by this road. The last route is called Abyian, from the portion of the Fadhli district through which it passes. The produce of the Yaffai country, coffee berries, madder, wax, honey, and grain, arrive by this route.

Among imports the only articles which show a decrease are grain, water, and wood. The first is due to the large imports by sea; the second may be attributed to the fact that a considerable quantity of water, equal to at least fifty camel-loads, is now brought over daily in boats from the opposite side of the harbour for sale at Steamer Point; and the falling off in the quantity of wood imported is accounted for by the restriction recently placed on the import of green wood for fuel. The value of the land import trade was estimated at Rs. 19,55,845, exhibiting an increase of upwards of Rs. 1,000 over that of the preceding year. The land export trade was declared to value Rs. 8,74,476, showing a decrease of Rs. 1,31,431, compared with 1875-76. Raw cotton and twist, raw silk and tobacco, are the articles which exhibit a decrease in export.

The following statement shows the value of the land import and export trade during the past five years:—

Aden Land Trade, 1872-73-1876-77.

Year.	Import.	Export.	Remarks.
	Rs.	Rs.

1873-74	14,37,697	8,14,241	
1874-75	17,60,393	9,63,201	
1875-76	19,45,555	10,05,907	
1876-77	19,55,845	8,74,476	
Average of five years...	16,72,313	8,50,474	

Public Works.

Exclusive of establishment the grant for the public works of the Bombay Presidency amounted in round numbers to nearly Rs. 101 lakhs, against which an outlay of Rs. 90½ lakhs was incurred, showing a saving of 10¾ lakhs, of which more than 1¾ lakhs lapsed from Imperial Ordinary, one lakh from Agricultural, a similar amount from Provincial, over 1¼ lakhs from Contributions, and nearly 5½ lakhs from Local Funds. The lapse of over 1¾ lakhs under the head of Imperial Ordinary is chiefly due to restrictions on expenditure ordered by the Government of India, and also to certain works at Aden, Ahmednagar, Bombay, Jacobabad, Kirkee, Pona, and Sátára not having been executed to the extent of the provision sanctioned for them. Of the saving of a lakh under irrigation, nearly half-a-lakh is on repairs, and the remainder on works and tools and plant. There is also a saving of half-a-lakh under establishment, which is due to the charge under this head having been distributed over works undertaken for famine relief, debited, under orders of the Government of India, to a suspense head. The lapse of one lakh, under the head of Provincial, is due to short outlay on works, nearly one-quarter lakh on civil buildings, and nearly half-a-lakh on communications. The saving of Rs. 2,67,585 under establishment is due to a charge of twenty-five per cent having been made on outlay on works and repairs incurred by officers of the public works department on account of famine relief, which, as stated above, has been debited to a suspense account until its final adjustment. The expenditure on works executed from contributions has been over 2½ lakhs; the greater part of which has been included under Provincial. The principal items are the university library and clock tower, Rs. 48,016; Bombay Fort Christian school, Rs. 17,890; additions to Girgaum church, Rs. 9,758; bridge at Udna Khári, Surat collectorate, Rs. 11,409; and masonry bridges at Udgaon and Kolhápúr, Rs 1,05,531.

Accounts.

Of the saving of 5¾ lakhs from local funds, three-quarters of a lakh is under civil buildings and school houses; Rs. 1,98,544 under communications; a similar amount under miscellaneous public improvements; and a lakh under repairs. The short outlay has resulted in a saving of one-quarter lakh on establishment.

The expenditure debitable to local loans and forest department has been as under:—

Local loans...	Works	Rs. 1,76,071
	Establishment	„ 128
		Rs. 1,76,199
	Deduct—Establishment over- charged in 1875-76.	„ 22,172
	Forest department	Rs. 1,54,027 „ 19,145
		Rs. 1,73,172

The total expenditure, inclusive of establishment, during the year has been as follows:—

Imperial	Rs. 40,28,096
Provincial	„ 31,55,126
Contributions	„ 8,93,985
Local funds	„ 28,44,635
Local loans	„ 1,73,172
	Rs. 1,10,95,014

The cost of establishment has been Rs. 18,72,882, which gives a percentage of 20·30 on the outlay in India of Rs. 92,22,132; but if Rs. 10,791, the expenditure in England on account of Imperial Ordinary, be added to the outlay in India, it gives a percentage of 20·28. In addition to the above, the expenditure incurred by the public works department during the year, on account of famine relief, and debited to the new suspense account, “famine relief,” amounted to Rs. 33,97,204, as under:—

	Accounted for in the Buildings and Roads Branches.	Accounted for in the Irrigation Branch.	Total
	Rs.	Rs.	Rs.

Total	28,76,745	5,20,459	33,97,204

MILITARY BUILDINGS.

The chief military and marine works completed during the past year were:—In Bombay, pending the decision of Government as to the action to be taken on Colonel Sir W. Jervois's recommendations, the works connected with the permanent defences have been at a standstill. The six seven-inch breech-loading rifled guns, which were dismounted in 1870, were remounted at Cross Island at a cost of Rs. 1,839. The Kolába Point battery has been adapted for the reception of three nine-inch rifled muzzle-loading guns at a cost of Rs. 969. Iron racers for eight nine-inch rifled muzzle-loading guns have been laid at the Oyster Rock battery at a cost of Rs. 1,404, and at the Middle Ground battery

for two nine-inch rifled muzzle-loading guns for Rs. 270. Lightning conductors have been provided at the several batteries at a cost of Rs. 830. At Kolába, quarters for twenty-eight married men of the Royal Artillery have been completed at a cost of Rs. 78,685. The six semi-permanent barracks and their subsidiary buildings, also for the Royal Artillery, have been finished at a cost of Rs. 2,07,598; additions and alterations have been effected at the town barracks and a new stable built. A new pumping engine boiler-house and store-room are in process of construction at Her Majesty's dock-yard.

At Poona the military prison has been completed, the roads near the Ghorpuri barracks repaired, and the drainage of the Sadar Bazaar improved.

At Kirkee additions have been made to the small arms factory, and a second set of retorts and other improvements introduced into the gunpowder factory.

At Ahmedábád three barracks, two for Royal Artillery and one for Infantry, have been completed, and progress made with two additional barracks and three blocks of family quarters for Royal Artillery. An artillery barrack has been converted into a temporary hospital and a lock hospital constructed.

At Ahmednagar the Sháhápur reservoir has been renewed and a rifle range constructed.

At Belgaum, parts of the scarp wall of the fort have been rebuilt, and a plunge-bath completed.

In Sind the Kurrachee FitzClarence barracks were added to and improved, and at Jacobábád a guard-room was built, accommodation provided for a battery of Native Artillery, and a new ward added to the hospital.

At Aden ten nine-inch guns were placed in position; a hospital built for the Aden Troop, and the water-supply at Camp and Steamer Point improved.

CIVIL BUILDINGS.

Mámlatdár's offices have been completed at Jhálod in the Panch Máhals; at Bárdoli in Surat; at Sháhápur and Máhim in Thána; at Máhád in Kolába; at Pachora and Síndkhera in Khándesh; at Yeola in Násik; at Athni and Gokák in Belgaum; and at Siddápur in Kánára. These buildings vary in expenditure from Rs. 43,365 to Rs. 11,708; their average cost is about Rs. 22,000.

A substantial stone post office has been built at Kolhápur for Rs. 3,388. At Bombay and Bhusáwal in Khándesh progress was made with the telegraph signallers' quarters.

In Bombay, with the exception of the roof, the new High and small cause court were nearly completed; subordinate judges' courts have been finished at Dholka in Ahmedábád; at Godhra in the Panch Máhals; at Panwel in Thána; at Deogarh in Ratnágiri; at Bhusáwal in Khándesh; at Muddebihál in Kaládgi; and at Kumpta in Kánára. In Sind, court-houses have been completed

at Kotri and Mehar in the Shikárpur district. Police lines have been completed in the following districts:—Ahmedábád, Kaira, Surat, Thána, Ratnágiri, and Sátára. At Bhusáwal, in Khándesh, a subsidiary jail has been nearly completed, and at Thána and the central jail at Yeroda, near Poona, steady progress has been made.

Medical.

At Bombay the work of adapting the large barrack and other buildings in Fort George for a general hospital for Europeans has been begun. The changes include alterations and additions to the barrack and officers' quarters to adapt them for male and female wards and for offices, erection of infectious diseases and delirium tremens wards; servants' quarters; raising the low ground and adapting the mess-house as quarters for the resident surgeon. The estimated cost is Rs. 1,59,866. Dispensaries are in progress at Borsad in Kaira, at Sháhápur in Thána, and at Muddebihál in Kaládgi.

Ecclesiastical.

In Bombay the additions to the Girgaum church were completed, furniture was provided for the Roman Catholic chapel at Kirkee, and progress made with a church at Sukkur in Sind. In

Educational.

Bombay progress has been made with the new Elphinstone high school, the school of art, the university library and clock tower, the Fort Christian school, and the Scottish orphanage at Máhim. School-houses have been built at Náriad, Sársá, Rás, Surusamal, Wásad, Khanibolaj, Shera, Heranj and Mehraj, in Kaira; at Bhadeli in Surat, at Goregaon, Thána, Nárel, and Panwel, in Thána; at Bhosa and Supa, in Sholápur; at Vittah, in Sátára; at Ilkál, Bágewári, Guledgud, Almella, Kakháandi, Jalwad, Mutgi, Tumbgi, Yergál, and Sarwar, in Kaládgi; and at Nargund, Kundvah, Hibsúr, Yergapur, Kalkiri, and Sirur in Dhárwár.

Miscellaneous.

At Bombay the annealing furnace and chimney in Her Majesty's mint was rebuilt; some out-buildings connected with the new Secretariat completed, and additions and alterations made to the old Secretariat buildings. In Bombay a ride and foot-path along the sea-face of the Back-bay reclamation were completed, and a main drain dug to the south of the Marine Lines. Exclusive of relief-works, most of which at the close of the year were still under construction, in Kaira eight wells and five reservoirs; in Thána a dam at Mátherán; in Násik water-works for the town of Yeola; in Sátára a well at Shirála; in Koláhpur water-works at Inchalkaranji, Kágál, and Jámkhandi; in Belgaum two wells and one reservoir, and two wells in Kaládgi were completed out of local and municipal funds.

Harbour.

In Bombay progress was made with the work of reclaiming the ground for rounding off the angle near the Sonápur drain in Back-bay. In Surat a masonry wall was built in front of the Dutch wharf. In Ratnágiri a boat, with red light, has been moored at the entrance of the Málwán harbour, and the position of the light on the beach altered. At Kurrachee a new light and light-tower were begun. The break-water suffered but little damage from the stormy season, and required almost no repairs. The dredging of the entrance channel was continued throughout the year, and no accumulation of silt took place. At Aden an ornamental iron shed was built over the saluting battery.

RAILWAYS.

A survey of the line from Dhond to Ahmednagar and Manmád, begun in the monsoon of 1876, was stopped in December of that year. In January 1877 it was decided to put the earthwork between Dhond and Ahmednagar in hand for the employment of famine labour, and the Government of India having during that and the following months placed a number of engineers at the disposal of the Bombay Government, the surveys were begun with vigour, and, at the same time, the earthwork was started on the Dhond and Ahmednagar section. Since the close of the year the earthwork has also been begun between Ahmednagar and Manmád. The surveys of the entire line will be completed before the monsoon, and it is hoped that the line will be open for goods traffic before the close of March 1878. Projected.

As work was wanted for the employment of famine labour in the Belári district, and as it was deemed desirable to be prepared with work for labour gangs in the Dhárwár district also, a staff of engineers was placed by the Government of India at the disposal of the Bombay Government for the purpose of picking up and staking the line from Hubli to Belári, surveyed by Mr. Shaw's party in 1870-73. Under the orders of the Government of Madras the earthwork has been begun between Belári and the Madras frontier at the Tungabaddra, but it has not been found necessary to employ labour on the Dhárwár section.

The Bombay Baroda and Central India railway company surveyed a line from Páli to Godhra in extension of the Dákor branch, and the project is before the Government of India for consideration.

The Western Rájputána railway from Ahmedábád through Pálanpur to Ajmir has been sanctioned by the Secretary of State, but has not yet been begun.

The only addition during the year to the length of open line under the control of the Bombay Government, was the extension of the Dákor branch to Páli on the Mahi, a distance of fourteen miles. Completed.

The total length of line now open is 1,748½ miles. Of these 1,728½ miles, 1,273 of the Great Indian Peninsula railway, and 12½ of the Mopáni branch, 389 of the Bombay Baroda and Central India railway, 32½ of the Dákor branch in eastern Gujarát, and twenty-two of the Pátri state railway, in the north-west of the same province, are on the broad gauge. The remaining twenty miles, His Highness the Gáekwár's Miagám and Dabhoi branch of the Bombay Baroda and Central India railway, are on the narrow gauge 2' 6".

The state lines worked by the Great Indian Peninsula railway had a total length of 153½ miles. Of this 121 miles belonged to the Nizám's state railway, nineteen from the Wárdha to Hinganghát, eight from Jalamb to Rangaon, and five-and-a-half from Budnera to Amráoti.

The Wardha valley line will be opened to the town of Hinganghát on the further side of the river Warna about the middle of June, and to Warora most likely early in 1878.

The Narbada bridge over the Holkar state railway was tested and passed on the 26th September 1876, and was opened by His Highness Holkar, with much ceremony, on the 5th October following. The hilly section will, if a troublesome tunnel in basalt formation can be got through, be ready before the close of 1877, and there will then be uninterrupted communication between Khandwa and Ujein.

Engineering.

The following are the principal engineering works on the Great Indian Peninsula railway :—

The platform walls of the Bori Bandar passenger terminus were got in. But, as the plot of ground occupied by the washermen's quarters is not yet available, the progress made with the other works has been inconsiderable.

A design for the terminal buildings and general offices, prepared by Mr. Stevens, C.E., Acting Executive Engineer, Presidency, has been approved by the Board of Directors, and the estimate for carrying it out will shortly be submitted for sanction. The work of lowering the line between the Mazagon overbridge and Byculla, the necessity for which has long been recognized, was carried out. The new workshops at Parell made considerable progress, and two blocks of mechanics' quarters were nearly completed, as well as walls, lodges, and other minor works.

Owing to the great and unexpected rush of traffic which set in in the month of November and continued throughout the rest of the year, it was found necessary to open several additional crossing stations on the single line between Lanauli and Raichur, between Bhusáwal and Jabalpur, and on the Nágpur branch, and also extra stations for block-working on the double line in the Konkan and between Igatpuri and Bhusáwal. For the same reason it was arranged to bring into use the third or block-signalling wire, the erection of which was completed by the Government Telegraph department during the year between Bhusáwal and Jabalpur and Lanauli and Raichur, and to utilize it for train signalling. During the monsoon of 1876 the recurrence of a slip on the Bhor Ghát along the side-cutting between Nos. 24 and 25 tunnels led to its being decided to flatten away the entire slope between these tunnels, and the work, estimated to cost Rs. 3,80,955, was let by contract in January 1877.

On the Bombay Baroda and Central India railway the new bridge over the Sábarmati was completed. In consequence of the destruction, by the flood of the 5th September, of twenty-five spans at the south end of the Narbada crossing, a temporary low-level bridge, with inclines at either end, connecting it with the uninjured portions of the main bridge on the north and with the top of the embanked approach on the south, was constructed across the gap on the up-stream side of the site of the fallen piers, and was opened for traffic on the 30th October. The first two piers of the temporary bridge, in length about 1,600 feet, reckoning from the

southern bank, were formed of cribs of sleepers filled with stone; the rest of teak piles 16" square driven from 10' to 12' into the bed of the river. The gradient of the north incline was one in twenty-three, and its length about 600 feet. It started from No. 32 pier of the main bridge, and was formed of the ordinary 60' girders laid to the requisite slope; being carried on the two up-stream piles of the line forming the original piers, which were cut down to the required height. The south incline, which was formed along the side of the embankment, had a gradient of one in fifty, and was about 1,200 feet in length. A traffic heavier than that of any previous season was worked with safety over these inclines and temporary bridge until the month of April 1877, on which date a temporary high-level bridge, on the site of the twenty-six spans washed away, was ready for traffic. This second temporary bridge was erected on iron pile piers on the standard design.

It was finally decided by the London board, with the sanction of the Secretary of State and after consulting Sir J. Hawkshaw, to build a new bridge across the Narbada river about 100 feet above the site of the existing bridge. This bridge, designed by Sir J. Hawkshaw, is to consist of twenty-five spans measuring 187½ feet from centre to centre of piers, which latter consist of two iron cylinders. The cylinders are to be fourteen feet diameter below and ten feet above ground, having an intermediate tapering joint. The cylinders, 115 feet in depth, are to be built in sections, and the lowest section is to be of wrought, and the upper sections of one inch cast-iron; the whole to be filled with Portland cement concrete. The girders are to be of a lattice pattern. The supply of the iron work on contract has been arranged for, and the work of erection is to be undertaken departmentally, or by contract let in India.

Several piles of the Mahi bridge, which were supposed not to be securely grounded, were screwed deeper. The final design for this bridge is still under consideration. Sir J. Hawkshaw has recommended the erection of a new bridge on the same design as that to be followed at the Narbada. The new wharf and siding at Bhaindar were commenced. An overbridge was constructed at Bandora station, and several minor works and improvements carried out at other points along the line. The extension of the Dákor branch from Dabhoi to Páli over the bridge in the direction of Godhra, was opened for traffic as far as Hangari on the 9th December 1876, and to Páli on the 29th January 1877.

The Bombay Baroda and Central India railway telegraph has been finally transferred to Government, and the block system was introduced on the single line between Andári and Ahmedábád, a distance of 295 miles. A modified block system was also introduced along fifteen miles of the double line between Andári and Kolába. The extra wire for the block system on the Great Indian Peninsula railway between Bhusáwal and Jabalpur and Lanauli and Raichur was made over to the company by the Government Telegraph department, and brought into temporary use for line messages during press of traffic.

Miscellaneous.

PRODUCTION
AND DISTRI-
BUTION.

RAILWAYS.

Coal supply.

The supply of coal from the Mopáni mines considerably decreased during the year, and only amounted to 10,218 tons. This was partly due to changes in the management. A good deal of Bengal coal, 11,896 tons, was used at Jabalpur, and was found satisfactory. About 3,651 tons were also obtained from Warora; but a new arrangement has now been made, by which the Great Indian Peninsula railway agree to take, to the close of the current official year, 2,000 tons a month at the rate of Rs. 10 per ton. These mines are unfortunately situated as regards the run of the traffic, so that empty wagons have to be sent up-country to fetch the coal, whereas empty wagons are always available in Bombay to carry English coal inland. This, coupled with the fact that the results are inferior to those obtained from English coal, must considerably circumscribe the extent to which Warora coal can be used on the Great Indian Peninsula railway. The subject is one of great importance, as the consumption of English coal in 1876-77 was 120,487, and of country coal 23,841 tons.

Accidents.

The only serious accident to passenger trains was the down Jabalpur mail train running into a light engine standing on the line between Bori Bandar and Byculla. Owing to press of work, employment of new drivers, and to breaking of wagon-axles due to the heavy grain traffic, accidents to goods trains have been frequent. The following were the most noticeable. Two goods trains met between Pamalwári and Jeur, but, owing to the prompt action of a native overseer who saw the two trains approaching each other in opposite directions, fortunately without any serious consequence. A collision between two goods trains at Karjat, in which a driver and native fireman were killed and two firemen injured. A goods train at Kalyán ran past the danger signal and into another goods train standing in the station; a guard was killed; the engine and much rolling stock were damaged. A collision at Kurla between two goods trains, in which a Pársi guard was killed. It is hoped that the introduction of the absolute block system of working will prevent a recurrence of any accidents of this class. On the Bombay Baroda and Central India railway the axle of a carriage in the down mail train broke, and threw part of the train off the line.

Floods.

The principal flood damages on the Great Indian Peninsula railway during the monsoon of 1876 were at mile 348 between Khandwa and Dongargaon, at mile 450 on the Nágpur branch, and in the Konkan in several places, especially just beyond the Thána viaduct. A heavy rainfall, a flush in the river, and a high tide and storm from the west, flooded the Bombay Baroda and Central India railway line near Verár. Unprecedented heavy rain fell about Surat on the 29th August, and damaged the line in several places. Between Amroli and Sion a goods train got off the line, but, except to rolling stock, no damage occurred. On the 6th September twenty-five spans at the south end of the Narbada bridge were swept away and a bridge inspector drowned by a heavy flood, thirty-three feet in height.

State railways.

New agreements have been entered into with the Great Indian Peninsula railway for working the Nizám's line and the Berar branches. For working the Nizám's line the Great Indian Penin-

sula railway receive sixty-two per cent of the gross revenue. For the Berar branch the company's share is on a sliding scale, the proportion varying with the gross receipts. A new agreement for the Wardha valley line is under consideration.

In February 1877 Mr. H. LeMesurier, who had been agent to the Great Indian Peninsula railway since 1869, resigned in order to take up an appointment on the board of administration of public works in Egypt. In July Mr. G. A. Barnett, the auditor of the company's accounts, was appointed his successor.

In spite of the strain thrown by the famine on the Great Indian Peninsula railway, the service of the special trains for distinguished visitors to the Delhi Assemblage was satisfactorily performed.

The enormous grain traffic for the famine districts, coupled with the large and increasing export of seeds and wheat from Bombay overtaxed the carrying power of the Great Indian Peninsula railway. The chief want was the insufficient supply of engines. To remedy this, forty new locomotives have been ordered from England, and a large number of drivers have been obtained. Additional crossing stations have been put in, and additional telegraph facilities for ensuring safe working provided. But in spite of this, and of the most strenuous efforts on the part of the railway staff, the railway has, from the causes above mentioned, proved unequal to the demands that have been made upon it, and traders and the public have in consequence been exposed to much inconvenience.

Great Indian Peninsula Railway, 1876-77.

The gross receipts for the official year were Rs. 2,67,95,112 and the expenditure Rs. 1,23,57,974, leaving profits amounting to Rs. 1,44,37,138.

For purposes of comparison the figures for the calendar year will, as usual, be taken. A comparison of the returns for the last two calendar years shows an increase from Rs. 2,15,24,577 to Rs. 2,45,35,418 in receipts; and in expenditure from Rs. 1,01,75,860 to Rs. 1,16,77,891, or an advance in net earnings from Rs. 1,13,48,717 to Rs. 1,28,57,522, or as shown, with some slight deductions in the final statement of profits, from Rs. 1,12,85,617 to Rs. 1,26,52,538.

The receipts and expenditure of the second half of 1876 are not, as in previous periods, due to the Great Indian Peninsula line proper. The accounts for this period included, under an arrangement pressed for by the company and sanctioned by Government, the transactions of the state railways worked by the company. Again, the net profits shown in the above statement are those arrived at by the method prescribed by the Government of India, but are not the actual profits claimed by the railway company, and admitted by Her Majesty's Secretary of State. The actual profits claimed by the company are less than those shown above in 1875 by Rs. 2,071, and in 1876 by Rs. 65,834. The difference is due to certain sums which the company objected to receive; because, although actually paid into the treasury in the period, they were the outstandings of previous half-years, and unduly enhanced surplus profits. The rules for arriving at the

Establishment.

Delhi Assemblage.

Famine traffic.

Receipts.

half-yearly profits have thus been considerably altered, and the profits are calculated upon the earnings of the half year, and not upon the payments into the treasury.

The gross receipts of 1876 show an increase over those of 1875 of Rs. 30,10,836; of this, not quite two lakhs is due to coaching traffic, about 27½ lakhs to goods, and the remainder to miscellaneous earnings.

Coaching.

The following statement shows that the increase in coaching traffic is almost entirely due to the great advance in the fourth class returns:—

Great Indian Peninsula Railway Coaching Traffic, 1875 and 1876.

Class.		1875.	1876.
		Rs.	Rs.
First class	4,07,425	4,24,847
Second "	5,77,947	6,22,890
Third "	16,72,164	12,33,683
Fourth "	16,83,772	23,04,666
Season tickets	11,444	11,441
Miscellaneous	8,67,584	8,19,532
Total...		52,20,336	54,17,059

The coaching earnings of 1875 were favourably affected by the visit of His Royal Highness the Prince of Wales. Those of 1876 owe about three-and-a-half lakhs of rupees to the Imperial Assemblage at Delhi.

Several important changes in the rates of fares were introduced during the past year. The special *ghât* charge was abolished, and the mileage charge for personal luggage reduced from three to two pies per head. First and second class passengers return tickets were made available for two months, and passengers were allowed to break a journey one day for every one hundred miles. For third class passengers the local mileage rates were reduced from three to two-and-a-half pies.

The coaching traffic interchanged with other lines showed an increase for each line, as appears from the following table:—

Coaching Traffic between the Great Indian Peninsula Railway and other Lines, 1875 and 1876.

Railway.	1875.		1876.		Remarks.
	G. I. P. Proportion of Receipts.				
	From	To	From	To	Increase.
	Rs.	Rs.	Rs.	Rs.	Rs.
Bombay, Baroda and Central					
India	3,601	2,633	4,579	2,436	781
Madras	73,748	45,824	1,28,966	48,052	57,446
East India and others	2,37,516	2,11,739	2,18,234	4,38,829	2,07,808
Holkar state	19,326	17,432	19,041	20,195	2,478
Total...	3,34,191	2,77,628	3,70,820	5,09,512	2,68,513
Rs....	6,11,819		8,80,332		

The saving to Government in 1876 in the carriage of troops, military baggage, and horses at reduced rates amounted to over 3½ lakhs of rupees, besides which nearly Rs. 20,000 were saved in the carriage of stores, and all mails were carried free, except when a special train was run with the inward overland mail to overtake the ordinary mail train. For this a charge of Rs. 3 per mile is paid by the Postal department.

The goods traffic may be sub-divided and compared as under :— Goods.

	1875.	1876.
	Rs.	Rs.
General merchandise	1,55,45,417	1,82,48,855
Military stores and railway materials ...	2,43,355	2,41,690
Live-stock and miscellaneous	1,13,048	1,49,241
	1,59,01,820	1,86,39,786

The principal articles from the carriage of which increased earnings resulted in 1876 are as follows :—

Increase in the Great Indian Peninsula Railway Goods Traffic, 1875-76.

Articles.	1875.	1876.
	Rs.	Rs.
Bagging	1,58,612	2,02,506
Commissariat stores	1,90,436	2,00,843
Dye woods and roots	1,29,098	1,29,924
Food-grains	23,89,689	58,28,695
Ghee	1,32,918	1,53,779
Green fruits and vegetables	1,84,649	1,86,105
Ground-nuts	48,495	1,05,637
Hides and horns	1,80,146	3,01,761
Linseed	16,38,138	19,36,596
Opium	3,21,824	3,79,267
Salt	10,52,670	11,61,143
Spice	62,080	1,30,395
Sugar and molasses	4,23,446	4,66,628

Much of the increase in food-grains is the result of the scarcity in the Deccan and Madras Presidency ; but a considerable share is due to increased exports to Europe. These would have been far larger, had the railway company possessed the means of bringing from up-country, with less delay, all the grain that was offered. Exports will probably increase considerably in the future. The rates for grain were reduced on the 1st September 1875 to 5½ pies per ton-mile from the Jabalpur line and six pies from the Nāgpur branch. Hides and horns, linseed and spice seeds, all show an increase.

PRODUCTION
AND DISTRI-
BUTION.

RAILWAYS.

The following is a list of the principal articles on which the earnings fell in 1876 :—

Decrease in the G. I. P. Railway's Goods Traffic, 1875-77.

Articles.	1875.	1876.
	Rs.	Rs.
Cocoanuts... ..	3,05,749	2,64,488
Cotton	36,36,249	28,76,840
Dry fruits... ..	3,88,994	3,56,292
Firewood	80,536	68,262
Grocery	3,25,992	3,24,552
Metals and hardware... ..	4,24,258	3,43,212
Oil	2,35,065	1,79,647
Piece-goods	7,23,114	7,07,223
Railway materials	3,81,318	2,23,723
Silk	38,446	27,537
Spices	74,338	72,805
Stones	30,294	15,118
Teel seed	3,93,784	2,54,110
Timber	3,70,165	1,23,989
Tobacco	62,704	49,878
Wine, spirits, and beer	1,33,768	1,10,896

The fall in the receipts from cotton was due to failure of the 1875-76 crop, and occurred in the early part of 1876. There was an improvement in the latter part of the year. The fall in *til*, *Sesamum Indicum*, seed is very marked, and arose from the same cause. Although the rate for its conveyance was reduced in the second half of 1875, not half the quantity carried in that period was carried in the second half of 1876. Some items of decrease are caused by the famine, which has, in many ways, affected the ordinary traffic. The goods traffic, interchanged with other lines, increased considerably, as shown below :—

Railway.	Increase.
	Rs.
With East India railway	18,31,832
" Madras	3,16,902
" Bombay Baroda and Central India railway	67,040
" Holkar state railway	1,30,091
Total Increase...	23,45,865

There was a reduction in the receipts from the conveyance of military stores and railway materials, but fluctuations in these items are caused by circumstances not connected with the railway. The receipts from the conveyance of live stock increased. This was greatly due to the removal of cattle from the famine districts to places where fodder was less scarce; a special rate of 2½ annas per truck per mile was charged for this traffic from stations between Gulbarga and Poona in the direction of Bombay.

The miscellaneous earnings were somewhat increased by the charges for haulage from Raichur to Jabalpur of some engines and wagons sold by the South Indian railway to Government

The expenditure chargeable to revenue, including that due to working (less maintaining) the state railway during the second half of 1876, exceeded that of 1875 by fifteen lakhs of rupees. The following show the details under the chief heads of increase:—

G. I. P. Railway's Increased Expenditure, 1875-77.

Expenses.	1875.	1876.
	Rs.	Rs.
Maintenance of way works and stations ...	17,31,739	18,31,145
Locomotive expenses ...	40,44,402	47,49,679
Carrriage and wagon expenses ...	14,45,077	18,36,331
Traffic expenses ...	19,38,561	17,01,606
General charges ...	9,74,053	9,81,375
Special and miscellaneous expenditure ...	42,028	5,77,755
Total ...	1,01,75,860	1,16,77,891

From the above the maintenance expenditure appears to have increased by about a lakh of rupees. Against this it is to be noted that the debits to the reserve funds were about $\frac{1}{4}$ of a lakh less in 1876 than in 1875. The expenditure of 1876 also included the cost (about Rs. 45,000) of some work undertaken in anticipation of actual requirements to afford relief to the famine-stricken. The expenditure of 1875 included a sum of Rs. 1,30,000, adjusted in that period, but on account of old expenditure; and it was also increased by the renewals carried out in connection with the insertion of the eighth sleeper under each twenty-four feet rail. This latter disturbing cause has also added to the expenditure of 1876, which has been further unduly increased by expenditure on repairs and alterations to the Dápoli, Bhima, and Kála Márchan viaducts; replanking certain bridges, and adding wing-walls to others, flattening the slopes on the Bhor incline at places where slips have at different times occurred; rebuilding locomotive and engineers' houses at Bhosáwal, and permanent way inspectors' houses at Jeur and Dádné. Including the Mopáni and Kámpuli branches, the expenditure per mile of open line maintained by revenue was Rs. 2,174 in 1876 against Rs. 2,156 in 1875.

Maintenance.

Compared with 1875, locomotive expenses increased by seven lakhs of rupees. These and the following expenses were all more or less affected by changes in the company's mode of accounting. In the second half of 1876 the state railway expenses were included in full, and in the first half, the charges for supervision of these lines were credited as miscellaneous receipts, instead of being deducted from these charges as before. The locomotive expenses of 1876 include the cost of three new passenger engines drawn out of stores during the year to replace others which were broken up; also the cost of two boilers, and an amount of duplicate gear. There was a considerable saving in fuel, the prices of English coal falling from Rs. 23-8-0 to Rs. 19-14-0 a ton. The increase in carriage expenses is chiefly due to the renewals of vehicles.

Locomotive.

The decrease in traffic expenses is only nominal, as more than two lakhs of rupees have been transferred from traffic expenses to "special and miscellaneous expenditure."

Traffic.

PRODUCTION AND DISTRIBUTION.

RAILWAYS.

The large increase of special and miscellaneous expenditure is nearly wholly accounted for by changes in the book-keeping arrangements.

Profits.

The net earnings of 1876 exceeded those of 1875 by over fifteen lakhs of rupees, and were also in excess of the amount required for the payment of the guaranteed interest, had such been payable on the year. Under the rules for its half-yearly payment, however, there was a surplus of Rs. 13,72,535 in the first half of the year, and a deficiency of Rs. 9,95,462 in the second half. Deducting from this latter the moiety of the former received by Government, the net loss to the state on the year's working became Rs. 3,09,195. This may be considered more than covered by the saving in state work done by the railway.

Capital.

The capital expenditure during the official year 1876-77 rose to Rs. 26,59,085. The following are the principal works on which capital expenditure was incurred:—

	Rs.
Parel locomotive shops	2,90,626
Erection of extra telegraph wire	84,982
Bori Bandar passenger station	83,654
Additional sleeper under each twenty-four feet rail	28,275
Igatpuri running shed and carriage accommodation	25,241
Reconstruction of bridges and viaducts	24,012
Khandwa locomotive and traffic accommodation	16,110
Lanauli reservoir	8,254

The capital expenditure will continue to be heavy in the current and next few years owing to the carrying out of works, many of which are already sanctioned, necessary for the completion of the line, and to enable it the better to cope with the growing traffic.

Nizám's State Railway.

This railway was worked throughout the year by the Great Indian Peninsula railway company. Under the new agreement the company receive 62 per cent of the gross earnings, the line, as heretofore, being maintained at the expense of His Highness the Nizám, by the public works department, Haidarábád. The Government of India have pressed for the maintenance, at least experimentally for one year, being undertaken by the Great Indian Peninsula railway.

Results.

The new working agreement had effect from the 1st January 1876 ; and the result to His Highness the Nizám for the year 1876 will be apparent from the following statement:—

Nizám's State Railway, 1876-77.

Expenses.	Amount.			Earnings.	Amount.		
	Rs.	a.	p.		Rs.	a.	p.
For first half of 1876 ...	1,41,842	12	8	By net traffic earnings for the first half-year of 1876 ...	2,28,778	11	1
„ second do. ...	2,18,622	14	6	By traffic earnings for second half of 1876 ...	3,52,632	9	6
To balance, being profits.	2,20,945	9	5				
	5,81,411	4	7		5,81,411	4	7

From this nominal profit of Rs. 2,20,945-9-5 a further sum of Rs. 1,49,140-12-1, for the maintenance charges, has to be deducted, leaving as net profit to the Nizám Rs. 71,804-13-4, or about 0.62 per cent on the total capital expended.

The following statement shows the actual cost of working the Nizám's state line for the calendar year 1876, and the payment received by the company :—

Work done by G. I. P. Company.	Amount.	Payment to G. I. P. Company.	Amount.
	Rs.		Rs.
To locomotive expenses ...	1,54,061	By 62 per cent of total receipts	3,60,466
„ carriage and wagon ex- penses	72,853		
„ traffic expenses	75,908		
„ general charges	40,171		
„ balance, being profit ac- knowledged by the company	17,473		
	3,60,466		3,60,466

The total profit to the Great Indian Peninsula railway company on the year's working is here shown at Rs. 17,473. But this does not represent their whole profits, for the preceding figures include under expenses an allowance for percentage for supervision and accounts due to this state railway, calculated on the open mileage of the total length worked by the Great Indian Peninsula railway. This estimated charge amounts to some Rs. 30,000 per half-year, and is much in excess of the amount by which the company's fixed charges for supervising establishments have actually been increased by their undertaking to work the Nizám's state railway.

The average weekly earnings for the year were Rs. 11,187, being an increase of Rs. 337 per week all round on those for 1875. The earnings for 1875 were abnormally swelled by the visit to India of His Royal Highness the Prince of Wales. The average weekly receipts ranged from Rs. 7,185 in May 1876 to Rs. 26,287 in December 1876; the latter being about the time that the movements to the Imperial Assemblage at Delhi affected the passenger traffic, while the famine was having its effect upon the goods earnings.

The coaching returns show, compared with 1875, a falling off in the number of passengers from 265,460 to 215,803, and in receipts from Rs. 2,74,208 to Rs. 2,53,282. The goods returns, on the other hand, show an increase from 37,464 tons yielding Rs. 2,20,407 to 59,440 tons yielding Rs. 3,27,043. The fall in coaching was almost entirely in the carrying of third class passengers. The rise in goods is due to the famine demand for food-grains.

Berár Railways.

A change has taken place in the arrangement under which the Berar short branch railways are worked by the Great Indian Peninsula company: Beginning with the second half of 1876,

agreements came into effect based on the annual receipts of the calendar year. The amount to be received by the Great Indian Peninsula railway for working is fixed on a sliding scale of percentages to be determined on the annual earnings up to 30th June. But, however low the receipts may fall, the company are not to receive less than Rs. 15,000 a year in the case of the Khámgaon, and Rs. 20,000 in the case of the Amráoti state railways.

It may be roughly estimated, on the information at present available, that payments to be finally made to the Great Indian Peninsula railway for the year ending 30th June 1877 will be for the Khámgaon state railway Rs. 18,822, and for the Amráoti state railway Rs. 29,740.

Khámgaon State Railway.

The Khámgaon state railway was open for traffic throughout the first half of the year, and for thirty-two days in the second half, from 1st to 15th July, and 15th to 31st December 1876. The period during which this branch was worked in 1876 exceeds by ten days that for 1875; but, for purposes of comparison, they are taken as the same. The following table compares the receipts of the two last years:—

Khámgaon Railway Receipts, 1875-77.

Receipts..	1875.	1876.	1876.	
			Moro.	Less.
	Rs.	Rs.	Rs.	Rs.
Coaching traffic	1,646	1,473	...	173
Goods	38,442	30,656	...	7,786
Sundries... ..	125	92	...	33
Total ...	40,213	32,221	...	7,992

The revenue of the past year compares poorly with that of 1875; but it must be borne in mind that the train-mileage run for traffic in 1876 was less by 320 miles than that for 1875, and that two special goods trains were run during the close season of 1875. At the average receipt per train mile for 1876, 320 train miles would earn Rs. 2,880; a set-off against this would be the earnings for ten days' extra traffic in 1876 as compared with 1875, but the total amount was only Rs. 225.

Amráoti State Railway.

Compared with 1875 the returns for the Amráoti state railway show an advance from Rs. 57,968 to Rs. 69,080, or an increase of Rs. 11,112. The whole of the advance is under the head of goods.

Goods.

The weight of the principal commodities carried over the Khámgaon and Amráoti state railways during the year are given below. Comparison cannot be made with 1875, as the statistical

tables, from which the information has been gathered, were not prepared for the whole of that year :—

Khamgaon and Amrdoti Railways Goods Traffic, 1876.

Goods.	1876.	
	Khamgaon Railway.	Amrdoti Railway.
	Tons.	Tons.
Bagging	207	534

Metals	302	385
Salt	1,376	3,768
Sugar and molasses	198	593
Sesamum, <i>til</i> seed	104
Dried fruits...	1,426
Cocoanuts	866
Grocery	664
Timber	328

Wardha Valley State Railway.

The Wardha valley state railway continued to be worked by the Great Indian Peninsula railway company during the year 1876. It was open for traffic from the 1st January to 3rd June inclusive, and from the 5th to the 31st December. The agreement under which this branch was worked by the Great Indian Peninsula railway remained unaltered. But the Government of India desire that it should be changed, and a new agreement is now under consideration. This will probably take much the shape of the arrangements recently sanctioned for working the Berár lines. Since Warora coal has been supplied for the working of this branch, the company's charge per train mile run has been reduced five annas. The open mileage remained the same, and the way and works were maintained by the public works department Central Provinces.

A comparison of the result of the two years' working shows a fall in earnings of Rs. 5,737, and in working the line a loss to the state of Rs. 3,699 against Rs. 2,108 in 1875. The diminished earnings were almost entirely in the goods traffic. This decline was due to the general dullness of trade. At the same time, the want of improvement in the coal traffic was disappointing. At the beginning of the present year (1877) the examiner of public works accounts considered it doubtful whether any great improvement from this source would be apparent before the opening of the entire line on the completion of the large bridges now in progress. Since then the prospects of the railway in respect of the carriage of coal have been greatly improved. Definite arrangements have now been made, under which the Great Indian Peninsula railway company are to receive coal up to a limit of 2,000 tons monthly; and the Government of India accepted the company's offer of Rs. 5 a ton, provided that, after the end of 1877, the company take annually not

less than 40,000 tons. If this arrangement be carried out in its integrity, it secures to this line an annual special traffic amounting to 40,000 tons, or more than double the weight of the whole goods traffic of 1876. Already the earnings of the current half-year exhibit an increase of over sixty-five per cent, compared with the first half of 1876 :—

Wardha Valley State Railway, 1876-77.

Expenses.	1876.	1876.	Earnings.	1876.	1876.
	Rs.	Rs.		Rs.	Rs.
Maintenance ...	8,974	6,910	Coaching ...	4,313	3,478
Working charges ...	18,660	15,442	Goods ...	24,436	17,313
Interest ...	3,639	3,184	Telegraph ...	230	60
Balance	Sundries ...	336	986
			Balance ...	1,958	3,699
Total ...	31,273	25,536	Total ...	31,273	25,536

The balance at the debit of stock fell from Rs. 92,35,136 on the 1st April 1876 to Rs. 69,65,707 on the 31st March 1877, which reduction was again in large measure due to sales to Government.

Bombay, Baroda and Central India Railway.

	Rs.
The gross earnings for the official year were ...	70,47,476
And the working expenses ...	36,63,801
Leaving the net receipts at ...	33,83,675

Taking for comparison the calendar years, the results for the two past seasons are as follows :—

Baroda Railway, 1875-76 and 1876-77.

Head.	1875.	1876.	Increase in 1876.
	Rs.	Rs.	Rs.
Gross earnings ...	67,72,292	63,86,784	3,85,508
„ expenses ...	37,11,564	34,75,021	2,36,543
Net earnings ...	30,60,728	29,11,763	1,48,965

Earnings.

During the year 1876 Government paid as guaranteed interest a sum of Rs. 42,17,973. Against this the company has earned Rs. 30,60,728, leaving a deficit for the year of Rs. 11,57,245, compared with Rs. 13,18,420 in 1875. The increase of Rs. 3,85,508 in earnings is due to advances of Rs. 4,71,572 and Rs. 64,691 in the receipts from goods traffic and sundries respectively, against a decrease of Rs. 1,50,755 in coaching traffic. As regards coaching traffic the receipts from first and second class passengers and from miscellaneous sources, such as passengers' luggage, carriages, horses, dogs, and parcels, have declined. On the other hand, there have been slight improvements in the third class passenger traffic, and in the receipts on account of season tickets of all classes.

The fluctuations will be seen from the following comparison :—

Baroda Railway Passenger Traffic, 1875 and 1876.

	1876.	1875.	Increase in 1876.	Decrease in 1876.
	* Rs.	Rs.	Rs.	Rs.
First class passengers ...	57,039	84,025	26,986
Second „ „ ...	1,25,922	1,50,948	25,026
Third „ „ ...	19,46,975	19,29,384	17,591
Season tickets ...	43,183	36,908	6,275
Miscellaneous ...	1,67,204	2,89,813	1,22,609
Total ...	23,40,323	24,91,078	23,866	1,74,621
			Net decrease in 1876...
				1,50,755

The fall in receipts from first and second class passengers is due to the special movement in 1875 in connection with His Royal Highness the Prince of Wales' visit. Compared with 1874 the returns show little variety. First class passengers have risen from 54,400 to 57,039, and second class fallen from 128,891 to 125,922. The improvement, Rs. 17,591, in the earnings from third class passengers may be set down chiefly to the opening of the Dákor branch. It should also be noted, in connection with these figures, that the ordinary local third class mileage fare on the Wadhwan extension was, during the last four months of 1876, reduced from 3 to 2½ pies. As in past years the receipts from season tickets are due almost exclusively to Bombay suburban traffic. The returns for 1876 show an advance of Rs. 6,275 over those of 1875, and of Rs. 9,299 over those of 1874. The number of season tickets of all classes issued during 1876 was 6,208, against 5,270 in 1875, and 4,669 in 1874. These numbers, calculated in the way prescribed by the Government of India, may be taken to represent 653,360 single journey passengers in 1876, against 550,560 in 1875 and 573,480 in 1874. The chief improvement in the season ticket traffic has occurred in the third class, in which the number of tickets issued rose from 3,137 in 1874 to 3,722 in 1875 and 4,510 in 1876. The second class also shows a small improvement from year to year. But the traffic in the first has remained nearly stationary during the past three years.

Exclusive of season ticket-holders the Bombay suburban passenger traffic shows, compared with that of 1875, a small decrease, 7,706 passengers less having been carried, resulting in a loss of Rs. 1,250. Compared with 1874 the numbers still show an increase of 251,923, and the earnings of Rs. 18,640. The benefits conferred by the company's local passenger train service are so great that no permanent decline in this class of traffic need be feared. The decrease in 1876 is probably entirely due to the exceptionally large number of passengers who used the line in 1875 to witness the festivities in honour of the Prince's visit. The decrease in miscellaneous coaching earnings during 1876 occurs

PRODUCTION
AND DISTRIBUTION.

RAILWAYS.

Goods.

principally in the receipts for passengers' luggage, and for carriages, horses, and dogs.

The following figures show that the increase of Rs. 4,71,572 in the goods traffic is made up from all the main heads:—

Baroda Railway Goods Traffic, 1875 and 1876.

	1876. *	1875.	Increase in 1876.
	Rs.	Rs.	Rs.
General merchandize	39,72,861	35,71,501	4,01,360
Military stores and railway materials ...	1,14,278	46,198	68,080
Miscellaneous	1,30,422	1,28,289	2,133
Total ...	42,17,561	37,45,988	4,71,573

The actual increase is, however, considerably greater, as the total for 1875 included a sum of Rs. 1,39,834 on account of carting agency receipts. Deducting this sum, the actual increase amounts to Rs. 6,04,181, or nearly seventeen per cent. It is noteworthy that for the first time during the second halves of several years past, the up, or Bombay-wards, goods traffic of the second half of 1876 exceeded the down. This is ascribed to a falling off generally in the down traffic, and to increase in the quantity of grain brought to Bombay for delivery at the Great Indian Peninsula railway stations in the famine districts.

The following statements show the principal variations in the earnings from the goods traffic of the two years:—

Baroda Railway Increase in 1876.

Article.	1876.	1875.	Increase in 1876.
	Rs.	Rs.	Rs.
Bagging	34,204	29,642	4,562
Cocoanuts	40,775	36,286	4,489
Colour	42,386	40,609	1,777
Commissariat stores	48,708	36,698	12,010
Cotton	9,62,795	9,13,672	49,123
Cotton seeds	35,873	33,052	2,821
Food-grains... ..	4,04,346	2,46,321	1,58,025
Grass	21,243	18,260	2,983
Green fruits and vegetables	73,647	63,907	9,740
Molasses, <i>jāgri</i>	2,82,422	2,37,145	45,277
Metals	1,24,650	1,09,780	14,870
Oil	26,252	14,997	11,255
Salt	2,44,167	2,19,508	24,659
Seeds	3,56,527	3,02,275	54,252
Timber	1,72,846	66,716	1,06,130
Wool	69,261	59,800	9,461

The principal items of increase are food-grains, molasses, seeds, and timber. The improvement in food-grains, molasses, and seeds is to be attributed entirely to the special famine demand. The increase in timber is due to the damage to Ahmedábád house pro-

perty caused by the September (1876) floods in the Sábarmati river. The improvement in cotton, salt, and other articles, is the result of general development of trade. As regards salt, the increase of Rs. 24,659 occurs in the transactions of the two half-years combined.

Baroda Railway Decrease in 1876.

Article.	1875.	1876.	Decrease in 1876.
	Rs.	Rs.	Rs.
Dry fruits	70,268	67,950	2,318
Furniture and luggage	74,454	65,723	8,731
Ghee	24,909	13,421	11,488
Maurah flowers	1,06,881	78,561	28,320
Opium	80,081	62,369	17,712
Piece-goods	2,22,710	2,10,670	12,040
Stone	20,683	15,698	4,985
Sugar	1,43,226	1,17,630	25,596
Tobacco	80,523	63,394	17,129

No explanation of the decrease under these heads is offered. But, as they are almost all articles of luxury, the fall in the Bombay demand may, at least partly, be traced to the less amount of money available for their purchase, owing to the increased cost of the necessaries of life.

The goods traffic interchanged with the Great Indian Peninsula railway and other lines shows a larger increase than usual. This advance is due mainly to the export of grain from Gujarát to the famine-affected districts. In ordinary seasons Gujarát imports grain, but in the second half of 1876 the Baroda railway received Rs. 64,334 more than in 1875 on grain handed over to the Great Indian Peninsula railway, while they received Rs. 16,527 less than in 1875 on grain received from that line. There were also large demands for salt, not only along that line, but at stations on the East Indian and other railways. The increase in this branch of traffic will be seen from the following figures, showing the quantities interchanged for the three past years :—

Interchanged Traffic, 1874-76.

[Article.	1874.	1875.	1876.
	Tons.	Tons.	Tons.
Cocoanuts	386	370	1,229
Colours	321	546	677
Grain	6,874	6,897	11,474
Molasses	718	2,310	3,945
Salt	20,408	19,937	23,868
Sundries	2,257	2,390	2,541

The increase of Rs. 68,080 in the receipts during 1876 over those of 1875 for the conveyance of railway materials is mainly due to the construction of the Rukhyal and Páli extensions of the

PRODUCTION
AND DISTRI-
BUTION.
RAILWAYS.

Dákor branch. These were in full progress, and were nearly completed during 1876.

Charges.

The gross working expenses for the years 1875 and 1876 show a total increase of Rs. 2,36,543. The following are the details under each of the main heads:—

Baroda Railway Expenditure, 1875 and 1876.

Heads.	1876.	1875.	Increase in 1876.	Decrease in 1876.
	Rs.	Rs.	Rs.	Rs.
Maintenance	12,52,512	8,87,761	3,64,751
Locomotive expenses	10,26,259	11,11,105	84,846
Carriage and wagon expenses	3,08,861	2,63,064	45,797
Traffic do.	5,77,988	6,68,366	88,378
General charges	4,84,721	5,07,454	22,733
Steam boat service	4,558	5,458
Miscellaneous	56,665	39,271	17,394
Total	37,11,664	34,75,021	4,32,600	1,65,957
			Net increase in 1876..	2,36,543
			

The increase of Rs. 3,64,751 in the outlay on account of engineering maintenance is chiefly due to the restoration of the Sábar-mati and Narbada bridges; the former of these was entirely destroyed at the end of 1875, and the latter partially in September 1876. Deducting these special charges, there remains an increase of Rs. 55,777 due to ordinary maintenance outlay. The saving of Rs. 84,846, under locomotive charges, is entirely due to a saving in the price of fuel. The increase of Rs. 45,797, under carriage and wagon expenses, is caused mainly by special debits on account of wagons actually condemned and written off the rolling stock lists. The saving of Rs. 88,378, under the head of traffic, has been effected mainly by the abolition of the carting agency arrangements. The net saving of Rs. 22,733, under general charges, represents a decrease of Rs. 29,029 under rents of buildings and land, Rs. 7,684 in agent's office, and Rs. 4,900 in home board expenditure, aggregating Rs. 41,613, against an increase of Rs. 19,062 in the amount paid to Government for rent, maintenance, and inspection of the telegraph line, which was purchased from the company in April 1876.

The declared net profits of the year 1876, based on the Government principle of calculation, amounted to Rs. 29,82,484 against Rs. 29,16,956 in 1875, showing an increase in 1876 of Rs. 65,528 after deducting certain items, amounting to Rs. 70,320, disallowed by the examiner. These are larger than the net profits in any previous year. The surplus profits divisible equally between Government and the company for the first halves of the preceding three years have been Rs. 2,21,918 in 1876, Rs. 64,738 in 1875, and Rs. 51,527 in 1874. Surplus profits were earned only once previously, in the first half of 1872, and amounted to Rs. 63,965. The total amount earned on this account is, therefore, Rs. 4,02,148, of which a moiety, or Rs. 2,01,074, has been paid to the company.

The total capital expenditure of all kinds, incurred from advances received from Government during the official year 1876-77, amounted to Rs. 15,64,540, of which Rs. 4,17,686 were spent on engineering, construction, and establishments; Rs. 10,30,837 on the purchase of stores; and Rs. 1,16,017 on law charges and miscellaneous payments; the latter sum included Rs. 18,671, cash balance in hand on 31st March 1877. The principal works on which the engineering outlay was incurred were the following:—

	Rs.
Páli extension	2,04,737
Sábarmati bridge	1,04,834
Cotton sheds, Kolába	14,471
Bassein bridge... ..	19,515
Cooperage over-bridge	10,379
Store shed, Parell	9,716
Rukhyal extension	9,906
Fencing Dákor branch	9,657

Of the amount expended on the purchase of stores, Rs. 3,42,084 were for fuel, Rs. 1,32,706 for teak timber, and Rs. 1,85,896 and Rs. 1,37,728 for engineering and locomotive stores, respectively. The balance of stock in hand fell from Rs. 41,32,859 on 31st March 1876 to Rs. 36,24,562 on 31st March 1877. The balance on the same date in 1875 was Rs. 47,11,576, so that, in the two years ended with March 1877, a reduction of nearly Rs. eleven lakhs has been effected.

Dhabhoi and Meagám Railway.

Compared with 1875, the working of the Dhabhoi and Meagám branch shows in 1876 an increased revenue of Rs. 2,469.

The general results are as follows:—

Dhabhoi Railway, 1875 and 1876.

	1876.	1875.	Increase in 1876.
	Rs.	Rs.	Rs.
Gross earnings	39,776	34,302	5,474
Gross expenses	29,970	26,965	3,005
Net earnings	9,806	7,337	2,469

The capital cost of the present line, excluding expenditure on the previously existing tramway, was Rs. 3,73,400. The net return per annum, according to the above figures, has, therefore, been 2.62 per cent in 1876 against 1.97 per cent in 1875. Judging from the working of the line for the current year (1877), as far as returns have been received, this improvement may be expected to continue.

The total number of passengers carried during 1876 was 86,451, and in 1875 it was 68,308; there has thus been an improvement of 18,143, or at the rate of 26 per cent. The earnings under this head show a corresponding advance of 25 per cent, from Rs. 15,912 in 1875 to Rs. 19,905 in 1876.

PRODUCTION
AND DISTRI-
BUTION.
RAILWAYS.

The following table shows the earnings from the principal commodities carried during the last two years :—

Dhabhoi Railway Goods Traffic, 1875 and 1876.

	1876.	1875.	Increase in 1876.	Decrease in 1876.
	Rs.	Rs.	Rs.	Rs.
Cotton	3,477	2,230	1,247	...
Cotton-seeds	515	81	434	...
Firewood	548	932	...	384
Grain	4,697	2,701	1,996	...
Metals	345	327	18	...
Maurah flowers	4,448	5,733	...	1,285
Piece-goods	272	319	...	47
Salt	1,306	1,221	85	...
Seeds	1,029	993	36	...
Sundries... ..	463	206	257	...
Timber	314	389	...	75

One of the principal objects for which the line was constructed was the development of the trade in maurah flowers, on which, it was thought, the line would have mainly to depend for its goods traffic. It is to be regretted, therefore, that the receipts from this article show a falling off, compared with 1875, in which year there was also a serious decrease compared with 1874. On the other hand, the increase in grain and cotton is noteworthy; the former, independently of special famine demands in 1876, having steadily improved since the line was opened. The increase in cotton is caused by the construction, at small cost, of a station and siding at Naláh, intended specially for its accommodation. This item of traffic is likely to give favourable returns in future.

Charges.

The working expenses show an increase from Rs. 26,965 to Rs. 29,971. The variations under each main head will be seen from the following figures :—

Dhabhoi Railway Charges, 1875 and 1876.

Heads.	1876.	1875.	Increase in 1876.
	Rs.	Rs.	Rs.
Maintenance of way and works	6,435	6,030	405
Locomotive expenses	8,640	8,526	114
Carriage and wagon expenses	3,287	2,213	1,074
Traffic expenses	7,191	6,271	920
General charges	4,418	3,925	493
Total	29,971	26,965	3,006
	Increase, 1876		3,006

The increase in way and works is the result of the construction of the station and siding at Naláh. The comparatively large outlay for 1876, under carriage and wagon expenses, may be set

down to increased age of the stock, and to the fact that the outlay under this head in 1875 was abnormally low in consequence of the stock having been put into efficient repair just previously. Traffic expenses for 1876, as in the case of engineering maintenance, contain a special debit on account of the equipment of the station, which was more legitimately a charge against capital. The prospects of this line have been improving steadily since its opening to traffic; and, on completion of the contemplated extensions from Dhabhoi to Chándod and Bahadhpur, there are good grounds for hoping that still more favourable results will be attained.

CANALS.

Indus.

There are no navigable canals in the Presidency; but, following the practice of former years, an account may here be given of the departments under the conservator and registrar, river Indus. The financial results of these departments are thus shown:—

River Indus Navigation, 1875-77.

Department.	RECEIPTS.			EXPENDITURE.			PROFIT (p) OR LOSS (l).	
	1875-76.	1876-77.	Differ- ence.	1875-76.	1876-77.	Differ- ence.	1875-76.	1876-77.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Conservancy and registry ..	29,700	37,335	+7,635	39,073	38,253	-1,420	9,973p	913l
Sea pilotage	1,167	966	- 201	2,376	2,224	- 152	1,209p	1,258l
River pilotage	10,294	11,846	+1,552	10,432	10,273	-159	138l	1,573p
Ferry	18,000	22,920	+4,920	11,945	15,098	+3,153	6,055p	7,822p
Total ..	59,161	73,087	+13,926	64,426	65,848	+1,422	5,265l	7,219p

The large increase in the receipts of the conservancy and registry department is mainly due to increased collections of fees for the registration of boats. During the year 4,655 boats, with a burden of 1,733,687 maunds, were registered against 4,110 boats, with a burden of 1,358,300 maunds, in 1875-76. This increase was due to two causes: large quantities of grain were brought down the river for exportation, and a great amount of Government railway plant was sent up the river in native boats by the Sind Panjáb and Delhi railway company. The increase in the receipts of the river pilotage department was chiefly on account of the grant from the Indus steam flotilla having been raised from Rs. 10,000 to Rs. 12,000 from 1st July 1876. The right of collecting the receipts on account of the ferry boat is always farmed, and fetched this year Rs. 4,920 more than in 1875-76. The increase in the expenditure against the conservancy and ferry departments is due principally to the cost of certain fuel used in 1875-76 not having been adjusted in that year's accounts, but in those of 1876-77. On the whole the operations of the year resulted in a small surplus of Rs. 7,219 against, in 1875-76, a deficit of Rs. 5,265

The engines of the ferry boat were overhauled during the year, and the boat itself repaired. The steam-ship *Assyria*, which is employed on conservancy duties, also underwent large repairs, and was employed from the middle of October 1876 till the close of the official year (31st March 1877) in removing obstructions from the navigable channels of the river. During this time sixty-three snags, five wrecks, and other smaller obstructions were removed at an expenditure of 678 lbs. of gunpowder. Several changes have been introduced during the year in the working of the river pilotage department, of which the most important is the employment of hired, instead of Government, boats for the pilots. The old system of keeping Government boats was a continual source of expense, as it entailed heavy charges on account of repairs, oiling, equipments, and the like. Now each boat, ready equipped and manned, costs only Rs. 12 a month.

TELEGRAPH.

The length of the telegraph lines, that is, the number of miles of posts in the Bombay Presidency, was, on the 31st March 1876, 2,455·14 miles, of which 1,760·35 were departmental and 694·79 were railway. The length of the wires was 8,104·56 miles, of which 6,172·54 were departmental and 1,932·02 were railway.

The following offices were opened or closed during the year :—

Office opened.	Date.	Office closed.	Date.
Junágarh	22nd August 1876	Wadhván. ...	12th November 1876.

There are twenty-six offices in the division, which are classified as follows :—

Bombay Telegraph Offices, 1876-77.

1st Class.	2nd Class.	3rd Class.
Bombay. Deoláli (during the trooping season). Ganeshkhind. Málábár Point. Parel.	Ahmedábád. Bhaunagar. Broach (during cotton season). Byculla. Dholera. Haidarábád. Secunderabad. Shahabad. Surat.	Ahmednagar. Baroda. Bolarum. Broach (except during the cotton season). Deoláli (during the non-trooping season). Dhoraji. Dhulia. Junághar. Limri. Máhábleshwar. Málligaum. Mátherán. Násik. Rájkot. Sátára.

During the year under report a telegraph line was constructed along the Bombay Baroda and Central India railway from Anand to Páli, a distance of thirty-two miles; also from Dhoraji to Junághar in Káttywár, a distance of fifteen miles.

The telegraph line extends from Kurrachee to Bunnoo, from Haidarábád to Umerkot and from Kotri to Multán. During the year an entirely new line was completed from Kotri to Multán (507 miles) along the Indus Valley state railway, and a diversion of seventy-eight miles, to the south, made between Haidarábád and Umerkot to clear the country inundated by floods from the Nára river. The total length of line is now 1,465 miles with 3,429 miles of wire and ten signal offices, exclusive of those used only for railway purposes. Last year the totals were 915 miles of line with 1,749 miles of wire and nine offices; improvements have also been made to the spans across the Indus at Kotri and Sukkur to en-

PRODUCTION
AND DISTRI-
BUTION.
—
TELEGRAPH.

able the largest boats to pass under the wires at the highest floods. The only new office in the department, opened during the year, is Bháwalpur, and that is guaranteed by the Bháwalpur state. There were several interruptions during the year caused by floods and by the breaking of the Indus and Nára spans, but repairs were made in good time, and Kurrachee was never entirely cut off from Calcutta or Bombay. A line of 200 miles from Jacobabad to Queta was also constructed during the year, and opened to the public in May 1877; but this is not included in the Sind division.

Indo-Euro-
pean Tele-
graph.

The traffic operations of the Indo-European telegraph department show, for the past year, 45,205 messages despatched and 883,913 words transmitted. The receipts to the Government of India for the transit of messages between Kurrachee, Bushire, and Fao, amounted to Rs. 5,83,185. The total value of messages computed from Kurrachee to destinations westward, and from Fao and Bushire eastward, amounted to Rs. 14,68,916-8-0. Financially, the above bears an unfavourable comparison with the traffic transactions of the previous year; but when the extraordinary increase received in 1875-76 from the total interruption of the Suez route, from 16th November 1875 to the 2nd February 1876, has been allowed for, the result will be approximately the same, and in comparing the traffic of the past year with that of 1874-75 it will be seen that the word tariff produced Rs. 5,83,185 from 45,205 messages; whereas in the latter year Rs. 5,89,035 were realized from 36,931 messages at the ten-word message rate. It is evident that the system of telegraphing in code words, or in an abbreviated form, has become more general under the word tariff, as, up to this date, the net value of the traffic has not increased in the same proportion as the number of messages despatched, and messages containing from three to ten words are now 35 per cent of the total traffic. Nor has the year under review been favourable to the development of traffic. The disturbed state of politics, the general depression of trade, and the depreciation of silver, have all acted as a check to commercial transactions, and consequently to telegraphic correspondence; and as these difficulties have had to be contended with during the first complete year of the introduction of the word tariff, they have, to a very great extent, prevented the realization of the beneficial results which were anticipated from the change. Of the total number of messages despatched, 1,496 were Government messages and 1,806 passed to and from India and the far east *via* the Amor route. Of the total communications conveyed by the Indo-European route, the Persian line carried 91.51 per cent, and the Turkish 8.19 per cent. Again, the total business passing to and from Europe, America, India, China, and Australia, was divided between the Indo-European route and the eastern route by the Suez canal as follows:—

	Via.	Via.
	Indo- European.	Suez.
Messages to and from India, Europe, and America ...	32.77	45.12
Do. do. China, Australia, and Europe ...	3.09	19.02
Total percentage carried...	<u>35.86</u>	<u>64.14</u>

that is, the Suez line carried 12·35 per cent of the Indian traffic and 15·93 per cent of the far east traffic, or a total of 28·28 per cent above that conveyed by the Indo-European route. Of the traffic passing *viâ* Suez, thirty per cent is to and from the far east; and by this route it is only eleven per cent. The proportion of the Indian traffic conveyed by the two routes is forty per cent by the Indo-European and sixty per cent by the Suez line. So great a difference in favour of the latter as twenty per cent shows remarkably the increased working speed of this line *viâ* Teheran, and its comparative freedom from interruptions. Considerable improvement will be found in the general thorough working and in the speed with which messages have been conveyed over this section during the year. The average rate from England to Kurrachee *viâ* Teheran is only fifty-five minutes; whilst that to Calcutta is ninety-five minutes as compared with 103 minutes the speed *viâ* Suez. Again the average rate over the section from Fao and Bushire to Kurrachee is twenty-two minutes against fifty of the previous year. The following comparative tables for the past five years will show how very satisfactory this progress has been:—

Yearly average mean rate of transmission of messages between the United Kingdom and India (Kurrachee) viâ Teheran—

	To India.	To Europe.
1872-73 ...	3 hours 30 mins.	7 hours 49 mins.
1873-74 ...	3 " 53 "	4 " 15 "
1874-75 ...	2 " 8 "	2 " 32 "
1875-76 ...	4 " 8 "	2 " 30 "
1876-77 ...	0 " 55 "	1 " 29 "

} Including time of transmission during break of Suez route.

The average rate of transmission of messages from the United Kingdom to Calcutta—

	<i>Viâ</i> Teheran.	<i>Viâ</i> Suez.
1872-73 ...	5 hours 10 minutes.	4 hours 38 minutes.
1873-74 ...	4 " 36 "	4 " 33 "
1874-75 ...	2 " 50 "	2 " 53 "
1875-76 ...	2 " 24 "	2 " 17 "
1876-77 ...	1 " 35 "	1 " 43 "

The average rate messages were carried over the lines of this section at Kurrachee—

	From Fao.	From Bushire.
1872-73 ...	46 mins.	41 mins.
1873-74 ...	40 "	44 "
1874-75 ...	31 "	29 "
1875-76 ...	49 "	52 "
1876-77 ...	27 "	22 "

} Pressure of work from November to February caused high mean. Section from Jask to Bushire was interrupted for twelve days in January for repairs.

Through communication with Europe was reported interrupted during the year for a total period of twelve days thirteen hours *viâ* Teheran, and thirty days, seven hours *viâ* Turkey. The former shows a slight decrease, and the latter an increase of five days, compared with the previous year.

The cable and land-line sections of the department have worked well, and, with the exception of total stoppages to the extent of thirty days on the former and fourteen days on the latter, they have been constantly available for the despatch of traffic. The

two sections have never been simultaneously interrupted, and through communication has always been maintained. The progress made during the past year, in the more accurate transmission of the traffic over the section, is also satisfactory, and, compared with that of the previous year, is as follows:—

	1876-77.	1875-76.
Percentage of messages containing errors of a serious or of a trivial character. ...	13.02	23.81
Percentage of messages transmitted correctly and free from error ...	86.98	76.19

During the past year eighty-eight complaints of delay, errors, and non-delivery of messages were received from the adjoining administrations. Of thirty-eight forwarded from India, twenty-nine referred to Europe, and nine to the Amoor route; of fifty received from Europe, twenty-three were transferred to India, and twenty-seven to the far east.

POST OFFICE.

The proposals made during the year for modifications of the Finance. postal establishments in the Bombay Presidency had the following financial results :—

Postal Charges, 1876-77.

	Increase.			Decrease.			Net Increase.			Net Decrease.			
	Rs.	a.	p.	Rs.	a.	p.	Rs.	a.	p.	Rs.	a.	p.

	Net Increase ...						959	6	0			

Next to seeing that offices work properly and to endeavouring to prevent or trace the thefts of articles passing through the post, the principal subject of interest is the extension of postal facilities to the public and the development of correspondence. The results of the attempts to extend postal facilities have been almost uniformly satisfactory. It is from rural districts, where the numerous village schools are turning out hosts of lads able to read and write, that the principal improvement is now to be looked for. Almost through the whole Presidency postal facilities are eagerly taken advantage of. In several cases where the value of the correspondence to and from a village was below Rs. 2 a month, by employing a special messenger the correspondence has at once risen to Rs. 8 or Rs. 10. The people themselves often petition to have their villages better and more frequently served, and show

how improvements can be made. The attempt to make use of school-masters as deputy post-masters has answered well. The work is light, and, while cheaper than any other arrangement, the addition of Rs. 4 or Rs. 5 is an important help to a village school-master's pay. During the year fifty-eight fresh post offices were opened and five were closed, leaving a balance of increase of fifty-three offices, and raising the total number of post offices in the Presidency to 541 against 448 in the preceding year and 469 in the year before. Of these post offices forty were under school-masters, of which eighteen were new ones, and two were transferred from deputy post-masters to school-masters.

Messengers.

Concurrently with the increase of post offices the number of rural messengers has been largely added to. The number of new ones entertained on the Imperial list was no less than 120, against which must be set a reduction of forty-eight, consequent on the opening of post offices and the like. The net increase was, therefore, seventy-two. Of these twenty-one were formerly district rural messengers, and their places were filled by other district rural messengers, whose numbers were augmented by an addition of ten to their strength during the year. Thus the total increase of rural messengers was eighty-two, bringing up the total number of rural messengers, Imperial and district, in the Presidency to 858.

Two hundred and two new letter boxes were placed in, and sixty-six removed from, the division named below during the year under report, or a balance of increase of 136 boxes.

Mails.

The following abstract shows the modes of conveying the mail along the different Imperial post lines :—

Conveyance of Mails, 1876-77.

Year.	Railway total mileage.	Mail cart horse or camel post total mileage.	Bunners or boat line total mileage.	Sea total mileage.	Total mileage.
1875-76 ...	1,719½	952	5,337½	3,234	11,242½
1876-77 ...	1,738	945	5,701½	3,234	11,613½
Increase ...	13½	364½	371
Decrease	7

The district post in this Presidency is almost entirely confined to rural messengers and the supervising establishments of the sub-inspectors. During the year one district post office at Talewadi, and two district post lines, one between Khánápur and Talewadi in the Belgaum collectorate, and the other between Mundgod and Pala in the Kánára collectorate, were opened. The total number of district post offices and lines in existence at the close of the year were as follows :—

Post Offices.

Talewadi, in the Belgaum collectorate.
 Jámbughora, in the Rewa Kánta.

had the addition of the earthen embankment, referred to above, made to it. The canal on the right bank has been completed to the twenty-eighth mile. The excavation and the masonry works, as far as the thirty-eighth mile, were nearly completed. The water had been passed down the canal as far as the thirtieth mile. The excavation, as far as the fifty-seventh mile, was in progress, and afforded employment for famine relief labour. The line, as far as the sixty-fourth mile, had been laid out and lock-spitted. Eighteen new outlets for irrigation, as far as the thirtieth mile, were constructed. The Left Bank Canal earthwork, as far as the barracks at Kirkee, was completed, and that of the tail branch to Awand nearly half completed. The masonry works on the canal, as far as Kirkee, were nearly completed. Some further progress was made with the distribution arrangements in Poona. The completion of the high service distribution awaits that of the pumping arrangements, which were in progress. At the commencement of the year the water in the reservoir stood at reduced level 226, or eleven feet above the sill of the canal sluices. Before the first replenishment the water had fallen to reduced level 220. On the 17th of June the water commenced to rise, and on the 2nd of July it rose to above level of waste-weir crest. From the 1st of October it commenced to fall, and on the 31st of March 1877 it stood at reduced level 225.85, or 10.78 feet above sluices, *i.e.*, at almost precisely the same level as on the same date in the previous year. The area of land under command of the open portion of the canal was 15,000 acres, of which 2,024 were irrigated. The canal had not been extended as far as the districts which suffered most from distress. The maintenance of the work, including that of distribution in Poona, cost Rs. 18,744. This work, when complete, will protect an area of 147,000 acres. The total expenditure has been Rs. 42,07,650. The Kasurdi tank was maintained at a cost of Rs. 134. It irrigated 123 acres of land. The Pashan tank and Kikree water-supply works were maintained at a cost of Rs. 1,285. The Supa tank was commenced as a famine relief-work in November, and was completed in February. It consists of an earthen dam across a gap in an old embankment, thrown up from the excavation for a small pond executed very many years ago. The site for the Matoba tank was originally selected and surveyed in 1864, when the investigation as to the best and most economical means of irrigating the Deccan, whether by small isolated works, or by large canals drawing their supply from the main streams, was in progress. Complete revised plans and estimates were drawn up as soon as the necessity for relief-works became known, and the work was commenced in December. This tank is situated about twenty-eight miles east of Poona, in a district where the rainfall is always light and often uncertain. The design is for an earthen dam 6,095 feet in length, with a maximum height of 48.41 feet. The total capacity of the tank is 229,000,000 of cubic feet, and the area of contour of full supply is 477 acres. The tank is under the Mutha canal, and will be supplied partly from its own catchment, which is ten square miles in area, and partly from surplus monsoon water of the canal. The work protects an area of 12,412 acres. About one-third of the earthwork of the dam

has been completed, and the puddle trench has been excavated and filled in. Stone for pitching is being collected. Estimate, Rs. 1,61,143 ; expenditure, Rs. 24,438.

The Shirsuphal tank was first proposed as subsidiary to the original high level Mutha canal in 1864—66. Complete plans and estimates for this work were prepared during the year for execution as a famine relief-work. The site is situated fifty miles east of Poona, where the rainfall, as at Yewat, is capricious and uncertain, and irrigation works are a great want. The design is for an earthen dam, 2,188 feet in length and 51.38 feet in maximum height. The contents of the tank are estimated at 369,000,000 of cubic feet, and the area of contour of full supply level at 834 acres. The drainage area is twenty-two square miles. Provision for a distributary is included, and it is estimated that the work will protect an area of 9,000 acres. Work was commenced in February, and about one-fourth of the earthwork has been finished. The Patus tank was commenced in January as a relief-work, and the earthwork was about one-fourth completed before the end of the year. The tank is a very small one. The catchment area is 4.13 square miles, and the design is for an earthen dam, 2,900 feet long and twenty-nine feet in maximum height, impounding 15,000,000 of cubic feet. A waste-weir, 170 feet long, and an outlet are provided for. Estimate, Rs. 31,558 ; expenditure, Rs. 5,658. The Bhadalwadi tank is, in character and circumstances, very similar to that at Shirsuphal. The site is in the Indápur subdivision, sixty miles east of Poona, and was surveyed, and complete plans and estimates were prepared during the year with a view to the work being required for famine relief. The design is for an earthen dam 2,725 feet long, with a maximum height of fifty-four feet. The tank, when full, will have an area of 336 acres, and will contain 223 millions of cubic feet. The drainage area is thirty square miles. The average monsoon rainfall of the district is 12.86 inches, and average total fall 19.28. The tank would, it is calculated, just fill with the average monsoon rainfall. The work will protect an area of 2,900 acres between the tails of the Mutha and Nira canals.

The project for the Nira canal has been under investigation for several years. Complete plans and estimates were drawn up in 1871. A first section of the work has now been undertaken as a relief-work. It consists of a canal with a carrying capacity of 455 cubic feet per second at the head, 129 miles long, commanding 279,680 acres. The head-works are at Vir, on the Nira, and the canal terminates above the town of Indápur, commanding the whole area between the Bhima and Nira at that point. The annual rainfall in this tract is so uncertain and capricious that there is frequently a failure of crops for several years in succession, and it is, with reason, termed a drought-stricken district. In the Settlement reports it is stated that owing to want of rain a good average crop every other year is too liberal an allowance as an average of the general run of seasons. From the revenue reports it would appear that the cultivators get a good crop about once in three years ; of the other two, one is a year of almost complete failure, and one of middling crops only. The work presents no

extraordinary difficulties; the country is rough, and in some places the canal is expensive, and the course tortuous. The head-works consist of a weir 2,290 feet long, with maximum height above the river-bed of forty-three feet. The foundations are on solid rock. The largest cross-drainage work is that on the Kurra river, an aqueduct of twenty spans of thirty feet each. Work was commenced in February, and the excavation of the canal was in progress for a length of fourteen miles from the head.

In Sholápur the terminal portions of two of the canals leading from the Ekruk tank were in progress. With the exception of masonry heads to distributing channels this work is entirely complete. The area under command during 1876-77 was 11,520 acres. At the commencement of the year the water in the tank stood at 32.60 feet above the sill of sluice of the low-level canal. There was practically no replenishment, and on the 31st of March 1877 the water stood at 19.52 feet above the sill of sluice. The rainfall of the year was 9.92 inches, and it was distributed in such a way as to cause, practically, no run-off. The work irrigated an area of 1,643 acres. This is largely in excess of areas in previous years. It would have been much larger but for the poverty of the peasants and their inexperience of irrigation. The work was instrumental in preventing severe distress for drinking-water in the large town of Sholápur. It is not stating too much to say that, had it not been for this water, it would have been necessary for the majority of the population to have deserted the town. The population is about 50,000, and there was no other source of supply. The low-level canal flows close past the town. The maintenance of the work cost Rs. 7,175. The Ashti tank, though smaller, is similar in character to that at Ekruk. Plans and estimates were first prepared in 1869. The work is situated on the left bank of the Bhima. The design is for an earthen dam 12,709 feet long, with a maximum height of 57.75 feet, thrown across the valley of the Ashti river and forming a reservoir, which, when full, will have an area of rather more than four square miles, and will contain nearly 1,500,000,000 of cubic feet. The escape of flood-water is provided for by a waste-weir, 800 feet long, on the right bank. From the reservoir two canals are to be led off, one on the left bank eighteen and a-quarter miles long, and the other on the right bank eleven miles long. The area of catchment basin is ninety-two square miles. The scheme will protect an area of 13,324 acres. It has made considerable progress. The puddle trench has been excavated, and, with exception of pitching, the dam, for a length of 2,650 feet, has been completed. The remaining portion of the dam and the excavation of the waste-weir are in progress. The Pangaon tank scheme was originally investigated in 1869-71, but was not at that time matured, on account of part of the land under command belonging to His Highness the Nizám. The drainage area of the river above the tank site is nearly 300 square miles. The tank is designed to be formed by an earthen dam, 15,100 feet long and seventy-seven feet in maximum height. The flood-waters are to be allowed to escape over a weir, 1,500 feet long, on the right bank. The tank, when full, will have an area of nine square miles, and will contain

4,391,000,000 of cubic feet. Two canals are to be led from it, which will command together an area of 60,000 acres. The entire scheme is estimated to cost Rs. 17,27,419. The work was under further survey during the year, with a view to its commencement for relief purposes. In this collectorate water-supply works for the towns of Bársi and Karmala were in progress. The Pandhar-pur water-works were maintained, and a diversion of a stream, designed to increase the catchment basin of the new tank from five to ten square miles, was undertaken. The expenditure was Rs. 17,984. The Bársi works consist of a reservoir designed to contain nearly 19,000,000 cubic feet, in the immediate vicinity of the town, with a masonry outlet. The population to be supplied is estimated at 23,560. The drainage area is one and one-third square mile. Estimate, Rs. 28,360; the expenditure was Rs. 20,666. On the Karmala water-works Rs. 2,346 were expended in the repair of the well from which the supply is drawn, and the laying of a line of earthen-ware pipes from the fort to the town.

Sátára.

The operations of the year in the Sátára collectorate comprised the beginning of three new important irrigation works, besides the maintenance and management of works already completed. The works in connection with the Mayni tank were described as virtually complete in last year's report. At the commencement of 1876-77 the water stood at a level of twenty-five feet above the sill of the sluice, or seven feet below full supply. The first replenishment was in June, when the water rose from twenty to twenty-five feet above the sill of the sluice. From the middle of July, with the exception of slight replenishment in September, when the water rose one-and-a-half foot, the supply steadily diminished, and at the end of the year it fell to less than one foot above the sluice level. The rainfall of the year was only 8.35 inches. The work protects an area of 4,459 acres, of which 682 were irrigated. The Krishna canal, which protects an area of 20,823 acres, was maintained at a cost of Rs. 5,513. In October, the time for sowing the late, or rabi-crops, fears were entertained that owing to the scant rainfall the supply would fall short of the requirements. Happily these fears proved groundless, a proof of the extreme value of drawing the supply for canals from rivers which rise, as the Krishna does, in the Sahyádrí hills. The area irrigated by this work was 4,285 acres, or more than double that irrigated in any previous year. An expenditure of Rs. 127 was incurred on the survey of an extension of this canal to its originally designed terminus. The extension is twelve miles in length, and will protect an area of 14,080 acres, for which water for cold weather and monsoon irrigation is available. The Yerla canals were maintained at a cost of Rs. 546. They command an area of 5,848 acres. The Yerla river, from which the canals take off, rises in a range of hills contiguous to, but not forming part of, the line of the Sahyádrí hills. The catchment is sufficiently westerly to ensure a certain monsoon supply, though the discharge is irregular; but the dry-weather discharge generally falls very low, and during the year under report was barely sufficient for the small area irrigated, which, including early crops, was 196 acres. The

Nher tank is designed to store the monsoon waters of the upper portion of the Yerla river, to supplement the cold and dry-weather supply both to the Yerla canals and the numerous small channels leading from the river. The work was begun at the end of May, but was suspended for want of funds, owing to the financial pressure caused by the exchange difficulty. It was actively resumed in October as a famine relief-work, and at the end of the year considerable progress had been made. The dam, including puddle trenches, was in progress on both banks of the river, and on the left bank a considerable portion had been completed. The Rewari canal was maintained at a cost of Rs. 590. It protects an area of 5,341 acres, of which 567 acres were irrigated. The Gondauli canal is situated on the Mán river, in the eastern districts. The supply to this canal is always uncertain. The canal was commenced as a famine relief-work in 1866-67, and completed at a cost of Rs. 64,668. During the year 1876 the rainfall was only 8.42 inches, and the supply of water in the river entirely failed in October. The work irrigated an area of sixty-one acres in the rainy season. It commands 2,761 acres. The Pingli tank, designed to supplement by storage the uncertain supply to the Gondauli canal, will protect an area of 4,100 acres. The work was commenced in November as a famine relief-work, and, besides the excavation of the puddle trench and foundations for waste-weir, a considerable portion of the earthen dam has been completed. The Chikhli canal is situated on a tributary of the lower Yerla. This canal commands an area of 1,652 acres, of which, owing to the failure of the water-supply, only 169 were irrigated. The rainfall was 15.28 inches. Like the Gondauli canal this work was commenced as a famine relief-work in 1866-67. It cost Rs. 39,847. The Mhaswad tank, for which complete plans and estimates had been prepared, was commenced during the year as a famine relief-work. It consists of a large reservoir on the Mán river, in the Sátára collectorate, with a canal leading therefrom at a high level. In a distance of thirteen miles this canal attains the water-shed, and commands the whole area lying between the Mán and Bhima rivers, comprising fifty-six villages of the Pandharpur and Súngola sub-divisions of the Sholápur collectorate, the total area of which is 252,402 acres, or 394 square miles. The reservoir has a catchment area of 480 square miles, and is formed by an earthen dam 9,000 feet long. The maximum height of full supply is sixty-seven feet. The waste-weir for the escape of floods is of masonry, and is 3,000 feet in length. The level at which the canal is to take off is fixed at twenty-three feet below full supply level. The contents of the reservoir above that level are 2,585 millions of cubic feet, and the area of the top surface of the reservoir, when full, will be 4,014 acres, or 6.3 square miles. The distribution of the water is provided for by means of a main canal, fourteen-and-a-half miles long, running down the water-shed from the point at which the high level canal, above referred to, passes through the water-shed, with numerous branch canals. The area for which the water-supply will suffice in an average year is 30,000 acres in regular rotation. The work may thus be said to protect an area of 90,000 acres, one-third of

which will be irrigated annually. The district to be irrigated is one that stands in as great a need of irrigation as any part of India. The rainfall is uncertain and capricious. The average for fifteen years at Pandharpur, which is in the centre of the irrigable area, has been 24.13 inches, of which 18.23 fell in the monsoon. The rainfall in 1876 was 8.09 inches only. In 1867 the monsoon fall was only 9.27, and again in 1871 it was 8.92 inches only. The soil is lightly assessed, the average for an area of 131,170 acres being Rs. 0-2-8 per acre. In this area only 642 acres are at present irrigated from wells. Work on the dam was commenced in January. The ground has been cleared, and the puddle trench excavated. About three-quarters of the length of the dam was in progress. The first four miles of the high level canal, leading from the reservoir to the water-shed, had been commenced.

Sátára.

The Newri scheme is for a large storage reservoir on the lower Yerla river, with a canal on the left bank extending to the town of Tásgaon. The scheme is a promising one, and will protect an area of 100 square miles. Plans and estimates were under preparation with a view to the necessity for providing another large relief work for Sátára. The reservoir is very similar in character and size to that at Mhaswad. The dam, as designed, is of earth, 8,700 feet long, and has a maximum height of 82.50 feet; the maximum depth of full supply will be 72.50. The drainage area is 590 square miles, and contents of reservoir 2,379 millions of cubic feet. Work has not been commenced, but the plans and estimates are nearly ready. An outlay of Rs. 750 was incurred in preliminary expenses. The Wawarweehira tank is very similar in character to that at Pingli. The site for this scheme is situated in the upper Mán valley, about ten miles from Pingli, in the eastern districts of the Sátára collectorate. Plans and estimates were prepared for submission in case of the work being required for relief. They provide for an earthen dam 2,270 feet long, with maximum height of 64.67 feet, with a masonry waste weir 900 feet long. The drainage area is forty square miles. The total contents of the lake will be 310 millions of cubic feet, and its area, when full, will be 473 acres. Its cost, with canals to command 4,451 irrigable acres, is estimated at Rs. 3,21,176. The establishment in Sátára was also engaged in the preparation of three water-supply schemes. That for the town of Islámpur, in the Wálwa sub-division, which has a population of 5,000 persons, had been previously investigated, and was undertaken as a relief work. It consists of a reservoir capable of containing twenty-five millions of cubic feet, formed by an earthen dam 2,892 feet long and 30.97 feet maximum height, situated a mile south of the town of Islámpur. The water is to be conveyed to the town in an open channel. No distribution is provided, and the intention of the scheme is merely to keep the existing ponds and wells in the town well supplied. The area of the catchment basin is two-and-a-half square miles, and the minimum rainfall is twenty inches. A waste weir, 200 feet long, is provided for the escape of floods. The work had made good progress by the end of the year, and will be finished before the rains set in. The estimated cost is Rs. 43,227. A site for the Mullal tank was also selected above

the town of Jath for the water-supply of that place, which has a population of 3,100. The drainage area is 2.2 square miles. The tank will contain nineteen millions of cubic feet. The dam is of earth, 1,500 feet long, and with a maximum height of 38.70 feet. The estimated cost is Rs. 31,822. Projects for the water-supply of Sâtára were under investigation at the beginning of the year, but the pressure of relief works prevented the scheme approved of being matured.

In Belgaum the Gadikeri tank has an area of 126 acres, and its greatest depth is about five feet. Three hundred and sixty-seven acres of land are assessed under it as irrigated, the assessment being Rs. 2,252. The catchment basin measures 4.62 square miles, and the average rainfall is 26.33 inches. It is intended to raise the water-surface 2.38 feet, thereby increasing the gross storage from fourteen-and-a-half to twenty-seven-and-a-half millions of cubic feet, and to build two waste weirs, each 100 feet long, one at each end of the dam. The improved scheme will furnish a supply sufficient for 450 acres of land. The earthwork has been commenced as a relief work. The estimated cost is Rs. 16,163. The earthworks of the Gokák canal scheme were undertaken during the year for purposes of relief. The project has been under investigation for many years. The work will protect an area of 66,835 acres. It consists of a canal forty miles long, with head-works on the Ghatprabha river, immediately above the falls of Gokák, with one principal branch, twelve miles long. The canal will discharge 430 cubic feet per second at the head. The great natural elevation of the canal leading off above the falls gives it a considerable command of country, and the facilities for the work are unusually great. The district is a very dry one, and works of irrigation are very much required. The canal will be completely regulated, and the estimates comprise some heavy cross-drainage works, besides complete distribution arrangements. Four miles of the canal were in progress, and ten miles were laid out ready for commencement before the close of the year. The estimated cost is Rs. 9,62,307.

Belgaum.

A large proportion of the irrigation operations in Dhárwár consist of the improvement and repair of old works, principally small tanks irrigating rice and a few patches of garden land. There is a large number of works of this class in Dhárwár, and such improvements as are feasible—generally the raising of the water-surface from one to six feet to compensate for silting, or to ensure full utilization of the run off from the catchment basin, and the provision of proper waste weirs for the escape of floods—are being executed by the establishment, who look after the repair and maintenance of the works. At the close of the year the head-works of the Madag tank, which, besides making the natural supply in the Choardy river available at the level at which canals take off, store a quantity of water equal to fifty-three-and-a-half millions of cubic feet, were complete. Two canals, one on each bank, had also been finished, for lengths of six and eight miles respectively. The works, as they at present stand, protect an area of 2,467 acres. During the year bed levels of two of the masonry works were adjusted, the wing walls of an aqueduct

Dhárwár.

rebuilt, and the right bank canal dug out. The estimated cost is Rs. 1,82,885. The maintenance of the works cost Rs. 1,311, including expenditure on plantations. The area irrigated was 446 acres, which is larger than in any previous year. No progress was made with the Doni scheme owing to want of funds. The works will, when complete, protect an area of 3,744 acres of land. The estimated cost is Rs. 89,114. At the Mavinkop tank the work of raising the water-surface 5.18 feet, thereby increasing the storage capacity from 11,750,000 to 45,750,000 cubic feet, was in progress. The earthworks were very nearly completed, when further progress was stopped by a severe outbreak of cholera. The estimated cost is Rs. 9,990. The improvement of the Dambal tank comprises the raising of the water-surface six feet, thereby increasing the storage capacity from 14,750,000 to 108,000,000 of cubic feet, or more than seven-fold, and very much more effective arrangements for the escape of flood waters, in respect of which the old work was very deficient. The area of the catchment basin is twenty-two square miles. The channels leading from the tank are to be improved and extended. Besides furnishing a better supply to the 140 acres at present irrigated under it, the improved tank will irrigate an area of 425 acres of fresh land. The estimated cost is Rs. 57,846. The surveys of the Medleri tank were completed during the year, and plans and estimates were submitted for sanction. The work is an entirely new one. The dam is of earth, 2,300 feet in length, with a maximum height of forty-one feet; the maximum depth of water with full supply being thirty-four feet. The tank will contain 57,600,000 cubic feet above the level of the outlet for irrigation, which is fifteen feet below the level of full supply. The drainage area is ten square miles, and average available rainfall 19.44 inches. The escape of floods is provided for by a waste weir 700 feet long, on which floods are calculated to rise two feet. The crest is seven feet below the top of the dam. Irrigation channels are provided. The water will irrigate an area of 600 acres. The estimated cost is Rs. 48,185. The Ranibennur tank has a catchment area of five-and-a-half square miles, and an average rainfall of 20.53 inches. The supply of water available is calculated at 65,500,000 cubic feet. The dam is 6,320 feet long, and the tank has a capacity of 41,750,000 cubic feet. The work now in progress consists in raising the dam to an uniform level of eight feet above the waste weir. It was further proposed to construct two waste weirs, aggregating 250 feet in length, and by a short catch-water channel to enlarge the catchment basin to 6.75 square miles. The available supply will thus be increased to 80,500,000 cubic feet. The water can irrigate 174 acres. The estimated cost is Rs. 13,512. The restoration of the Chyankinkeri tank was completed at a cost of Rs. 4,506. The improvement and repair of the Yelwigi tank was undertaken during the year. It at present holds 17,666,666 $\frac{2}{3}$ cubic feet, and irrigates sixty acres. The catchment area is eight square miles. The improvement consists in raising the water surface two feet, which increases the gross storage capacity to 26,400,000 cubic feet. The net increase, after deducting for evaporation, is from 1,690,000 cubic feet to 11,445,450 cubic feet. The repairs comprise the

reconstruction of the waste weir, which had fallen into disrepair, and the raising of the dam, which had worn away from effects of weather. The improved reservoir will supply 190 acres of land, and the increase in revenue is estimated at Rs. 839. The estimated cost is Rs. 9,190.

In the parts of the Presidency which did not suffer from the want of rain but few works were in progress. In Ahmedábád the Háthmati canal, with twenty-one miles of distributing channel, is complete. Of a total area of 34,068 acres commanded, 1,386 acres were irrigated. There is a considerable percolation from the canal, but this, it is hoped, will gradually cease; meanwhile, the leakage is not lost, as, to the extent of 503 acres, it helps the people to grow cold-weather crops, and over an area of 2,657 acres of low-lying land to raise crops of a higher class than those formerly grown. The estimated cost is Rs. 3,84,705. Across the Khári river, or its branches, three new sluices have been built, and a new channel, about a mile long, has been excavated. The cost has been Rs. 22,574. A scheme for the water-supply of Dholera is in preparation. Ahmedábád.

In Surat the Tápti canal scheme is still in abeyance.

Surat.

Owing to the suspension of work little could be done to the Desert canal. The excavation of the desert portion of the canal was completed early in the inundation, and the canal was opened on the 12th of June. It worked well, and the result of the season was favourable. The mouth of the canal silted very little, and no change in its position has taken place; but the condition of the Dhund is critical, and, unless the river comes back, it will silt up, so that probably a fresh cut must be made to the river at a considerable expense. Measures, on a small scale, are being now adopted to induce the river to maintain a channel through the Dhund, but the result cannot be known till the close of the inundation. The floods, land and river, did no damage to the works. The estimated cost is Rs. 8,34,811. The Sind Dhora sluice of the Kashmor and Begári embankment was completed by clearing away an obstruction in the channel leading up to it, and providing wales and needles, or baulks, to the boat passage, so as to enable it to be closed during high floods. The Mora Mari embankment was raised and strengthened. To prevent the lap of water on its face, trees were planted all along the foot of the slope. During the floods the embankment was seriously breached in four places. These have been repaired, and a groin and cut formed at Tori to turn the run of water away from the face of the work. The estimated cost is Rs. 7,48,145. Seven miles at the mouth of the Begári canal have been widened down to the sill level; the twenty-nine miles of the bank on the south side of the canal, and twelve on the north side, are now completed. Sind.

The Sukkur canal, despite the effects of the floods, has worked well, and, although want of funds prevents much activity in construction, the benefit derived from the work is great. The Rahuja mouth answered its purpose to the end of the inundation, and the scouring channel proved useful in reducing the silt bank

in front of the low-level sluices. These sluices were opened for the first time during His Excellency the Viceroy's visit to Sukkur, and the result in giving a good cold-weather supply of water was most satisfactory. The Kassimpur embankment, intended to prevent the spill of the Indus floods on the left bank of the river, begins just above the mouth of the Eastern Nára supply channel, and runs north for sixteen miles towards Ghotki. The earthwork was completed before last inundation. Its top width is six feet, slopes two to one, crest four feet over ordinary floods. The sluices at the heads of the six canals passing across the line of embankment are now in progress, and, it is hoped, will be completed before this inundation. The Nowlucky surveys have made great progress. The Sonmiani regulator was completed in time to admit water, and the Nurwah widened all along to the last mile; its bed, however, requires to be deepened to the proper level. Material for the commencement of the Nurwah tail regulator has been collected, but funds were not available for further work.

V.—REVENUE AND FINANCE.¹

The following comparative abstract of actual receipts and expenditure shows for the last two years the general results of revenue and financial transactions :—

Comparative Statement of General Financial Results, 1875-76 and 1876-77.

Receipts.	Actuals for 1875-76.	Actuals for 1876-77.	Increase in 1876-77.	Decrease in 1876-77.	Net Increase.

Total ...	9,97,90,922	9,99,42,025			

The surplus income of the year under report, compared with that of the previous year, 1875-76, exhibits a decrease of Rs. 25,70,668. When the outlay incurred during the year 1876-77, in connection with famine relief operations, is correctly ascertained and adjusted, this falling off will rise to a much larger amount.

¹ The difference between the actuals of 1875-76, as shown in last year's report, and the figures now entered in this chapter, are due to adjustments made subsequent to the close of the accounts of 1875-76.

IMPERIAL REVENUE AND FINANCE.

The following statements compare the actual Imperial receipts and expenditure for 1876-77 with the actuals for 1875-76 and with the budget estimates for the year under report:—

Statement contrasting Imperial Receipts and Estimates, 1875-76 and 1876-77.

Increase.

Increase.

Tribute, Rs. 41,997.—In 1876-77 Rs. 1,22,661 were recovered from the Káttýwár and Cutch states and the chieftains of the Southern Máraþha Country, in excess of the amount realized from them in 1875-76. On the other hand, tribute receipts and succession fees from the petty states in Gujarát fell short by Rs. 80,664.

Excise, Rs. 66,885.—Increase under distillery fees and still-head duty and transfer from land revenue of toddy-tree fees in the Ratnágiri collectorate.

Salt, Rs. 3,24,549.—Increase mainly due to non-refundable duty on salt exported to Madras, being credited to this head instead of to the Government of Madras.

Opium, Rs. 39,87,931.—Increase in the amount shipped to China.

Law and Justice, Rs. 23,984.—Increase chiefly on account of magisterial fines.

Interest, Rs. 35,725.—Increase of Rs. 72,309 in the interest paid by the Bombay Port Trust against this Rs. 36,584, less

interest on municipal loans and Government shares in the Bank of Bombay.

Pensions, Rs. 27,911.—Increase due to transfer from deposit accounts.

Gain by Exchange, Rs. 35,509.—Owing to higher rates of exchange for money orders and other remittances to the United Kingdom.

Decrease.

Land Revenue, Rs. 34,76,012.—Decrease due to (a) failure of crops in the Deccan and Southern Mārātha Country ; (b) exclusion of the book credit on account of the Māndvi tribute, due by the Baroda State ; (c) transfer to excise of Ratnāgiri toddy-tree fees. Decrease.

Forest, Rs. 22,015.—Decrease of Rs. 76,316 in Deccan and Southern Mārātha districts owing to famine, against this increase of Rs. 54,301 in Sind.

Customs, Rs. 10,49,185.—Due to dulness of trade and to the effect of the new Tariff Act.

Stamps, Rs. 2,69,197.—Owing to dull trade and scarcity.

Marine, Rs. 3,224.—Due to general slackness of work and diminished receipts from shipping and towage fees.

Miscellaneous, Rs. 4,89,155.—Falling off due to (a) the absence of any receipts on account of sale of Government shares in the Bombay Bank similar to that item of receipt in 1875-76 ; (b) transfer of the income of the Dhrawār cotton ginning factory to provincial services ; (c) small receipts from the sale proceeds of Darbār presents.

Statement of Actual and Estimated Imperial Expenditure, 1875-76 and 1876-77.

Increase.

Land Revenue, Rs. 15,227.—Increase under revenue survey and allowances to district and village officers.

Forest, Rs. 54,051.—Due to extensive forest operations in Sind and to the forest fraud cases in the Kolába district.

Excise, Rs. 13,165.—Increased establishment and larger rewards.

Customs, Rs. 19,922.—Higher payments to officers of other Presidencies and re-organization of the Daman frontier establishments.

Salt, Rs. 8,877.—Due to comparatively small savings.

Stamps, Rs. 2,460.—On account of commissions paid to vendors of general stamps.

Administration, Rs. 49,792.—Increase in audit charges and allowances to Presidency banks, against decrease in currency, stationery charges, and changes from the contract allowance for the household expenses of His Excellency the Governor.

Law and Justice, Rs. 67,751.—Increase in civil and sessions courts against decrease in High and criminal courts.

Marine, Rs. 2,38,135.—Increase in marine pay and allowances against decrease in the purchase and building of ships.

Medical, Rs. 4,830.—Owing to the promotion of certain medical officers to higher grades.

Political Agencies, Rs. 1,06,000.—Chiefly owing to charges incurred at the late Imperial assemblage at Delhi.

Exchange, Rs. 30,13,576.—Due to heavy drawings of the Right Honourable the Secretary of State at very unfavourable rates of exchange.

Famine, Rs. 39,984.—Expenditure ascertained and brought to final account up to the close of March last.

Decrease.

Interest, Rs. 2,474.—Decrease due to less payment on account of interest on compensation for lands taken up for public purposes and to deposits in Government savings banks.

Refunds, Rs. 4,55,730.—Decrease due to transfer entries regarding the Mándvi tribute from the Baroda State, and refunds of saving banks' deposits.

Minor Departments, Rs. 16,995.—Decrease chiefly under the heads of experimental factories, public observatory, and miscellaneous.

Ecclesiastical, Rs. 22,672.—Due to the absence of several chaplains on leave to Europe.

Allowances, Rs. 1,36,374.—Due chiefly to the death of political pensioners.

Civil Allowances, Rs. 6,404.—Due to the payment of allowances from provincial services.

Superannuation, Rs. 2,02,682.—Due to the transfer to the home treasury of the pensions of a large number of retired civil servants, and to smaller payments on account of the military fund.

Miscellaneous, Rs. 87,184.—Due chiefly to savings in the estimated charges for the visit of His Royal Highness the Prince of Wales and the special commission of inquiry relating to the late agrarian disturbances in the Deccan.

Provincial Services, Rs. 7,582.—Due to the subjoined deductions and additions made from and to the original allotment:—

DEDUCTIONS.

Explanations.

The following explanations are given of the variations between the actuals and budget estimate for 1876-77:—

Tribute, Rs. 81,120.—Arrears of tribute realized from Káttywár and Cutch.

Excise, Rs. 92,166.—Due to increased still-head duty and distillery fees, and to the transfer from land revenue of the collection of Ratnágiri toddy-tree fees.

Salt, Rs. 2,28,955.—Chiefly due to the credit to Bombay of the non-refundable duty on salt exported to Madras.

Opium, Rs. 33,82,899.—Due to a large unexpected demand for opium in the China market.

Justice, Rs. 26,866.—Owing to an increase in the receipts from magisterial fines.

Marine, Rs. 66,163.—Chiefly attributable to a large collection of registration and other fees, more refunds on account of the capitalized pensions of Indian Navy Officers re-employed under Government, the adjustment to the credit of "Marine" of the

amount recovered in England on account of subscriptions to the Indian Navy Fund from 1866-67 to 1868-69, and the write back of the value to the Anglo-Chinese steamers *Quangtung* and *Thule* credited to Her Majesty's Imperial Government of London in March 1876.

Interest, Rs. 1,28,779.—Chiefly due to the receipt in excess of the estimate of interest on the loan to the Bombay Port Trust.

Superannuation, Rs. 28,350.—Chiefly due to transfers from the deposit account.

Exchange, Rs. 1,03,595.—Due to the higher rate of exchange at which money orders were issued on England.

Miscellaneous, Rs. 8,804.—Due to ordinary fluctuations.

Decrease.

Land Revenue, Rs. 36,72,475.—Due to the failure of crops in the Deccan and Southern Máraṭha Country, to the omission of a book credit on account of the Mándvi tribute, and the transfer to excise of the Ratnágiri toddy-tree fees.

Customs, Rs. 5,92,278.—Owing to an over-estimate by the Collector of Customs at Kurrachee and to the dulness of trade.

Stamps, Rs. 2,79,338.—Due to the famine and the dulness.

Expenditure,
Increase.

Refund, Rs. 3,175.—Excess refunds due to political payments and loss on account of salt wastage amounted to Rs. 1,05,777. Against this Rs. 33,886 were saved on account of smaller refunds for suits, and Rs. 68,716, diminished drawback, on account of the dulness of trade.

Land Revenue, Rs. 1,84,865.—The net increase resulted from the following variations :—

<i>Increase.</i>		Rs.
Revenue surveys	...	9,767
Allowances to district and village officers	...	2,55,657
		2,65,424

<i>Decrease.</i>		Rs,
Collector and establishment	...	73,279
Land settlement	7,280
		80,559
Net Increase	...	1,84,865

The above excesses are attributable to (a) the entertainment of temporary survey establishment irrespective of budget provision ; (b) the introduction of the revised scale of remuneration to subdivisional and village officers ; (c) arrear payments to village officers ; (d) the increased survey rates at which adjustments of alienated lands were effected by some of the revenue officers. The decrease, on the other hand, is due (a) to savings caused chiefly in the grant for extra supernumerary assistant collectors and magistrates ; (b) the transfer of the cost of certain establishment employed on

magisterial duties to law and justice, (c) the special grant for the revision of the Sind subordinate establishment having remained unappropriated; and, fourthly, large savings from the grant for miscellaneous charges in connection with land settlement in Sind.

Forest, Rs. 14,096.—Due to an excess expenditure of Rs. 28,550 in Sind against Rs 14,454 saved in the Northern and Southern divisions.

Excise on Spirits and Drugs, Rs. 18,676.—Due to additional establishment sanctioned for the distillery at Uran, and of Government contribution to the arrear charges for the collection of transit duty on opium in the Panch Mâhâls.

Customs, Rs. 16,404.—Due (a) to the entertainment of establishment for the registration of sea-borne trade; (b) to additional expenditure on the Daman frontier force; (c) and arrear payment for the Kurrachee harbour police establishment.

Salt, Rs. 19,891.—Chiefly on account of the increased salary of the collector.

Stamps, Rs. 1,630.—No special explanation is given of this excess of actuals over estimates.

Administration, Rs. 8,528.—Due to the difference between the following increase and decrease under minor heads:—

<i>Increase,</i>				Rs.
Salary of Governor	258
Staff and household of Governor and contract allowance	16,112
Council	1,251
Commissioners	11,227
Office of audit and accounts	17,963
Allowances to Presidency bank	33,667
Stationery department	592
				80,470
<i>Decrease.</i>				
Commissioner in Sind	2,121
Tour expenses	9,054
Secretariat	8,499
Currency office	4,468
Money order	58
Stationery purchased in the country	48,042
				72,242
Net Increase...				8,228

Law and Justice, Rs. 17,963.—Due to (a) the payment of allowances to acting judges of the High court, civil and sessions courts, and small cause courts, and to the Presidency magistrates; (b) entertainment of temporary establishment in the High court, original side; and (c) large payments on account of judges and magisterial officers of other Presidencies and provinces.

Marine, Rs. 2,84,420.—Due to an adjustment of Rs. 4,52,562 chiefly on account of the working expenses of the Indian troop

service flotilla, and of the disbursements made in England on account of the late Indian Navy Fund in previous years, against which there were savings in the dockyard and other establishment charges.

Political Agencies, Rs. 1,33,742.—Owing partly to payments made in the absence of budget grants on account of (a) the greater portion of the salary of the resident at Aden; (b) increased salary to the assistant resident; (c) additional judicial establishment at Aden; (d) an unexpected outlay in connection with the late Imperial assemblage at Delhi.

Allowances and Assignments, Rs. 24,708.—Mainly owing to arrear payments to district and village hereditary officers and to a large number of them having accepted non-service settlements.

Loss by Exchange, Rs. 2,194.—Due to the excess of the actuals over the grant.

Miscellaneous, Rs. 49,651.—Chiefly due to the Deccan Riots Commission, His Royal Highness the Prince of Wales' visit and certain account adjustments with London.

Alotment for Provincial Services, Rs. 53,753.—The result of the following additions to, and deductions from, the original grant :—

<i>Additions.</i>	Rs.
Fees and fines levied by the Presidency magistrates	25,100
Village police lands in the Dhárwár collectorate in consequence of increased survey rates ...	30,215
Civil jail guards.—(Vide Government of India, Financial No. 2625, dated 2nd September 1876.)	640
	55,955

<i>Deductions.</i>	Rs.
Retransfer of charges connected with the Perim light-house to Imperial services ...	2,202
	2,202
Net Increase Rs...	53,753

Expenditure
Decrease.

Famine Charges, Rs. 39,984.—This outlay was not anticipated when the budget estimate for last year was prepared.

Interest on Service Funds and other Accounts, Rs. 70,090.—Due to a re-adjustment of the payment of interest on the balances of net railway traffic receipts.

Minor Departments, Rs. 24,185.—Due (a) to savings caused by the absence of the Superintendent of the Kolába Observatory; (b) reduction in and non-payment of the Government contribution to the Dhárwár cotton ginning factory; (c) small expenditure on account of bull and stallion charges; (d) non-appropriation of the grant on account of the Ajanta caves.

Ecclesiastical, Rs. 42,804.—Due to the vacancy in the office of Bishop and the absence of a large number of chaplains on leave to Europe.

Superannuation, Rs. 1,17,831.—Owing to fewer payments made on account of military funds and to the transfer for payment in England of the pensions of a large number of civil servants.

Debt and Remittances.—The subjoined abstracts exhibited the receipts and expenditure under the different debt and remittance heads :—

Debt and Remittance Account.	Receipts, 1876-77.	Expenditure, 1876-77.

Miscellaneous Loans Receipts.—Recoveries amounting to Rs. 5,79,339 were made from the following sources on account of loans previously granted :—

	Rs.
Bombay Port Trust	1,05,000
Bombay Municipality	2,48,444
District Municipalities and Local Funds	1,06,040
Native States and private individuals	1,19,855
	5,79,339

Expenditure.—The following new loans were made during the year 1876-77 :—

	Rs.
Bombay Municipality	5,50,000
Bombay Port Trust in connection with the Prince's Dock	21,12,854
District Municipalities and Local Funds	4,01,032
Native States and private individuals	1,63,218
	32,27,104

Service Funds.—The subjoined table shows the transactions connected with the service funds under the Presidency. They are of an ordinary nature and call for no remark :—

Service Funds, 1876.

	Receipts.	Payments.
	Rs.	Rs.
Civil Fund Provident Branch	6,68,743	3,67,397
Uncovenanted Service Family Pension Fund	51,304	9,159
Bombay Police Superannuation Fund	33,902	15,891
Total Rs. ...	7,53,949	3,92,447

Remittances to and from other Governments.—The total gross payments on account of the drawings of the Right Honourable the Secretary of State amounted to Rs. 5,29,12,944, or, deducting Rs. 79,64,803, the amount of loss by exchange, a total net payment of Rs. 4,49,48,140.

Other Governments and Provinces.—Cash remittances aggregating Rs. 2,73,20,676, as shown below, were received during the year 1876-77 from other Governments and provinces :—

Remittances received.

	Rs.
India through the Currency Department	1,25,66,889
Do. in Currency Notes from Calcutta.	21,28,765
Do. do. Berars	5,49,295
Do. by bills of private banks	14,00,000
Do. copper coin from the Calcutta mint	3,10,850
Loan from Máharája Sindhia	17,62,900
Do. Holkar... ..	11,00,562
Mauritius	2,00,000
	2,00,19,261
Central Provinces	5,53,720
Bengal	50,000
Madras	37,30,000
Punjab	29,67,695
	Rs. 2,73,20,676

Remittances aggregating Rs. 1,58,16,294 were made to the following Governments and administrations during the year :—

Remittances made.

				Rs.
Remittances through Currency Department	30,00,000
Specie	26,60,000
Currency Notes	10,06,860
Supply Bills	34,22,434
				1,00,89,294
Central Provinces	4,27,000
Madras	53,00,000
				Rs. ... 158,16,294

The amount of aid received from other governments and administrations exceeded the amount of supply made to them by Rs. 1,15,04,382.

Balances.—The opening and closing balances for 1876-77, including those of the Public Works and Military Departments, were as follows :—

On the 1st April 1876	Rs. 3,51,38,853
Do. 31st March 1877	,, 3,11,08,790

The distribution and the amounts of balances at the close of the last five years are shown in the subjoined table :—

	Cash.					Military.	Public Works.		Grand Total.
	General Treasury.	Revenue Treasury.	General and Political Treasuries.	Mint.	Total.		Cash in the hands of P. W. Offices.	Drawing account.	
1871-72	4,35,44,120	1,63,97,919	11,99,039	10,70,447	6,22,11,525	7,01,685	3,687	79,470	6,29,96,867
1872-73	2,20,12,977	1,84,09,202	11,26,709	3,64,481	4,19,03,429	7,81,835	1,07,283	3,45,342	4,31,37,839
1873-74	87,38,554	1,39,63,590	9,22,465	25,27,313	2,61,51,931	4,44,906	24,274	6,64,191	2,72,85,302
1874-75	82,33,725	1,49,25,366	12,19,344	3,91,686	2,47,70,121	5,14,816	63,097	5,95,076	2,59,43,110
1875-76	1,42,97,302	1,32,41,595	16,74,003	44,01,630	3,36,14,539	5,48,417	99,659	8,76,317	3,51,38,853
1876-77	84,69,661	1,43,87,690	12,43,677	36,03,032	2,67,24,080	9,45,856	3,62,988	10,75,886	3,11,08,790

MINT.

The actual receipts and expenditure of the mint during the last two years were as follows :—

Mint Receipts and Expenditure, 1876-76 and 1876-77.

Heads.	Actuals.		Estimate.	a compared with b.		b compared with c.	
	a	b		Increase in 1876-77.	Decrease in 1876-77.	Increase over estimate.	Decrease below estimate.
	1875-76.	1876-77.	c				
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	
<i>Receipts.</i>							
Mint	5,17,091	14,15,668	4,70,000	8,98,677	...	9,45,668	...
<i>Expenditure.</i>							
Mint	3,63,611	3,47,297	3,30,000	...	16,314	17,297	...

The mint receipts for the year under review exceeded the actuals for the previous year and the budget estimate, in consequence of the unusually large silver coinage and of the adjustment of Rs. 3,20,622 of copper coinage struck off from stock. The increase in the expenditure, compared with the budget estimate, is owing to (a) arrear payments on account of establishment, (b) increased salaries of assay officers, (c) insufficiency of the budget grant to cover the payment of freight on European stores and loss on coinage of the year 1875-76. The increase would have been still higher, but for a smaller loss than was anticipated on the withdrawal from circulation of uncurrent copper. In 1876-77 the loss from the withdrawal of uncurrent coin and cost of stores purchased in the country amounted to Rs. 33,987 against Rs. 92,554. The expenditure, on the other hand, on account of extra labour employed to work up the large quantity of silver tendered for coinage, increased salaries to the mint officers, freight on stores imported, and copper used for alloy exceeded the actuals for the previous year by Rs. 42,251, that is, as compared with the actuals for 1875-76 a net decrease of Rs. 16,316.

Mint operations.—The subjoined table shows the amount of mint certificates paid from, and new coins received into the Bombay general treasury during the year under review, as contrasted with the transactions of the preceding five years :—

Years.	Mint Certificate issued.	New Coins received.
	Rs.	Rs.
1872-73	1,53,21,211	1,67,81,417
1873-74	1,65,63,778	1,48,17,973
1874-75	3,09,07,416	3,04,27,216
1875-76	1,54,11,570	1,39,40,800
1876-77	4,58,19,200	4,28,18,313

Silver.

On the 1st April 1876 the bullion balance in the mint aggregated Rs. 45,72,556. During the year under report an unusually large quantity of silver bullion to the amount of Rs. 6,02,41,375 was tendered for coinage, of which silver worth Rs. 19,677 was received from Government departments, Rs. 4,68,15,461 from merchants under the Indian Coinage Act of 1870, and Rs. 1,34,06,237 under the Indian Currency Act, 1871. This extraordinary influx of bullion is attributed mainly to the fact that last year an unusually large quantity of gold had been purchased in this country, and exported to meet the increased demand for the metal in the European markets, and, to pay for this, many of the local banks imported silver at the very low prices prevailing in the home market. The subjoined table exhibits the quantity of silver bullion belonging to Government and merchants and uncurrent coins, together with the amount of standard silver melted, and the percentage loss on each description during the last five years.

Bullion melted at the Mint, 1872-73 to 1876-77.

Years.	Government Bullion and uncurrent Coins melted.		Merchants' Bullion and uncurrent Coins melted.		Standard melting.	
	Tolas.	Percentage loss.	Tolas.	Percentage loss.	Tolas.	Percentage loss.

Silver from private assays... ..	6	8	8
Sale proceeds of 1875-76 recovered in 1876-77	71	0	0
	1,01,364	6	1

The gain on the coinage of silver in 1876-77 aggregated Rs. 1,01,364 as detailed in the margin; on the other hand the loss in melting and coining amounted to Rs. 32,750 and Rs. 19,078 respectively.

Copper, of the value of Rs. 30,140, was expended in alloying silver. The bulk of the silver tendered to the mint was of high touch, requiring a large quantity of copper to reduce it to the mint standard.

Half anna... ..	Rs. 1,07,942
Quarter „	52,500
	<u>1,60,442</u>

Copper coins worth Rs. 1,60,442 were coined and issued to the general treasury during last year.

PAPER CURRENCY.

Bombay Circle.

Compared with the previous year the returns of the Bombay paper currency office show an increase from 11,49,598 to 11,86,389 in the number of notes issued, and from Rs. 11,82,46,855 to Rs. 17,35,87,985 in their value. There was also an increase in the number of notes received, the total rising from 11,25,472 to 11,68,526, and their value from Rs. 12,04,13,585 to Rs. 15,84,90,975.

Circulation.

On the other hand the number of notes cancelled has fallen from 7,31,651, worth Rs. 5,62,08,250 to 6,47,144 worth Rs. 6,36,10,575.

The circulation of this office at the commencement of the year 1876-77 amounted to Rs. 2,92,03,775, and at its close to Rs. 4,42,01,175, showing a net increase of Rs. 1,49,97,400, or 51.354 per cent above that of the preceding year. The circulation exhibited the usual variations observable in monetary circles. It fell to its minimum (Rs. 2,78,83,330) on the 9th May 1876, rose thence on the partial cessation of the shipping business during the monsoon with occasional fluctuations dependent mainly on adjustments, until it attained its maximum (Rs. 4,88,19,915) on the 16th February last.

The minimum circulation during the past five years has been as under—

1872-73	Rs. 4,12,12,795
1873-74	„ 2,37,54,185
1874-75	„ 2,40,91,000
1875-76	„ 2,80,06,450
1876-77	„ 2,78,83,330

which would yield an average of Rs. 2,89,89,552, or Rs. 99,89,552 in

1867-68	Rs. 3,67,11,410	excess of the fixed minimum for the
1868-69	„ 3,74,80,410	Bombay office. The corresponding
1869-70	„ 4,18,16,800	figures for the past ten years give
1870-71	„ 3,15,61,950	still higher average minimum circula-
1871-72	„ 4,40,30,640	tion. Under these circumstances
Add subsequent 5		the Commissioner of Paper Currency
years as above	... 14,49,47,760	is of opinion that the fixed mini-
	<u>33,65,43,970</u>	imum of the Bombay office might be

raised from Rs. 1,90,00,000 to two or two-and-a-quarter crores, a change which would set free from ten to thirty-five lakhs for the encashment of foreign circle notes.

Coin reserve.

The reserve stock of coin has been subject to some fluctuation during the year. The balance in hand on the 1st April 1876 amounted to Rs. 1,54,23,305-15-5, and on the 31st March 1877 it stood at Rs. 1,61,17,073-10-2, showing a slight increase of Rs. 6,93,767-10-9. During the first half year, notwithstanding some heavy payments to local banks, the stock increased by nearly ninety lakhs. In October the reserve was further strengthened by receipts on account of Calcutta, and although reduced during the following month by nearly one-half, owing to heavy payments to the treasury and banks, it afterwards recovered rapidly. The coin reserve was operated upon during the year to the following extent, excluding the ordinary transactions across the counter, receipts from local banks on account of Calcutta, and

Drafts	Rs. 1,40,00,000
Payment to	Drafts—the Treasury and	
Specie Remittances	„ 2,76,25,000

At the beginning of, and during the first eight months of the year, except one quarter and one-eighth rupees, no portion of the reserves of the office was held in bullion. But in December seventy lakhs were received from the mint, and in addition, under the provisions of Act III. of 1871, silver bullion, of a total value of

Rs. 2,76,86,365, was purchased from the public. Of the total amount—

Rs. 30,63,052 8 10 were bought in December 1876.
 „ 1,13,60,721 13 5 in January 1877.
 „ 70,25,220 10 3 in February 1877,
 „ 61,87,370 2 7 in March 1877.

At the desire of the sellers, almost the whole of the bullion was paid for in notes, the coin disbursed being restricted to the fractional sums necessary to complete each transaction. No difficulty whatever was experienced in the office pending the realization of the Assay Master's drafts, twenty-one days after date.

At the beginning of the year Rs. 1,55,85,209-0-7 of the currency office reserves were invested in Government securities. At the close of the year the amount was Rs. 1,58,00,000, or Rs. 2,14,790-15-5 less. The balance had, during the year, been transferred to the Head Commissioner, Government securities.

Note Operations.

The following table contrasts the Home note issues, receipts, and cancellations during the past two years :— Home note transactions.

Note Issues and Receipts, 1875-76 and 1876-77.

Years	Issues.		Receipts.		Cancellations.	
	No.	Value.	No.	Value.	No.	Value.
1875-76 ...	1,149,598	Rs. 11,82,46,855	1,125,472	Rs. 12,04,13,585	731,651	Rs. 5,62,08,250
1876-77... ..	1,186,389	17,35,87,985	1,168,526	15,84,90,975	647,144	6,36,10,575
+	36,791	5,53,41,130	43,054	3,80,77,390	...	74,02,325
—	84,507	...

The issues and receipts largely exceed those of the previous year both in number and value. The ratio of value to pieces is greater in the issues than in the receipts, showing that, proportionately, more notes of the higher values were issued than received.

The average number of notes issued and received across the counter during each working day of the past two years is shown below :—

	1875-76.	1876-77
Issued	4,136	4,237
Received	4,107	4,267

Besides exhibiting a slight increase in the transactions of the past year, the table discloses this fact that, whilst the note issues of the previous year exceeded the receipts by twenty-nine daily, almost the exact contrary took place last year, the receipts having exceeded the issues by thirty per diem. This latter fact, however, is not in accord with Table No. 1 (para. 11), wherein the issues of the past year considerably exceed the receipts, and the solution of the apparent discrepancy must be sought for, and will be found in

the circumstances that foreign circle notes are not now re-issued. Hence, whilst the average home note issues exceed the receipts, the average of home and foreign taken together reverses the scale.

Foreign circle notes.

Notes of foreign circles, including three sub-circles of this Presidency, were cashed in the subjoined ratio to an aggregate extent of Rs. 80,95,845 at this office during the past year:—

	Per cent.
Calcutta	15.14
Madras	33.2
Trichinopoli006
Vizagapatam002
Calicut	7.78
Coconada... ..	.59
Allahabad	5.39
Lahore	9.07
Nágpur	10.5
Kurrachee	9.8
Ákola	8.522

Madras notes, it will be observed, largely preponderate, the proximate cause being payments made for grain sent to the distressed districts of the Southern Presidency.

Margin for encashment.

During the greater part of the past year ample funds were available for cashing foreign circle notes, the margin at one time having risen to over 110 lakhs; but towards the end of November 1876 the circulation having been suddenly increased by forty lakhs, held on account of Calcutta, the margin became exhausted. A fall in the circulation shortly afterwards restored a margin for a brief period, but it disappeared altogether on the 22nd December 1876, from which date to the end of the year no margin existed for cashing foreign circle notes.

Lost notes.

During 1876-77 notes classified below, of the aggregate value of Rs. 5,095, were paid upon indemnity bonds:—

	No.	Value.
Half notes	137	Rs. 3,690
Whole "	20	" 845
Mismatched	33	" 560
	<hr/> 190	<hr/> 5,095

More than three-fourths of the half notes were said to have been lost by post, and one only, for Rs. 5, was mutilated.

The whole notes were all mutilated.

Forged notes.

Four instances of forged notes were brought to notice during the past year; in each case the note purported to be of the value of Rs. 100.

Coin.

The amount of coin received and issued across the counter, during the past two years, is as follows:—

	Receipts.	Issues.
1875-76	3,38,94,990	3,60,15,330
1876-77	5,08,53,720	5,07,12,180
	<hr/> Increase... 1,69,58,730	<hr/> 1,46,96,850

It will thus be seen that while a larger increase has taken place in both receipts and issues, the greater increase has been in the receipts, which is obviously satisfactory.

There were no receipts of small silver and copper coins from the public during the past year, the stock in the office being obtained by exchange from the Bank of Bombay; but the undermentioned amounts were issued:—

Small silver
and copper
coins.

	Value.
Half Rúpees	Rs. 2,19,905
Quarter "	" 2,88,850
Two-Anna pieces	" 2,26,065
	<u>7,34,760</u>
which compared with 1875-76	18,84,135
shows a reduction of	<u>11,49,375</u>

This decrease, however, may be said to be purely nominal, inasmuch as the mill-owners and other large consumers obtained their supplies direct from the bank.

No gold was received or paid at this office during the past year. Gold.

During the last quarter of the year, specie was remitted to Nágpur, Kurrachee, Calcutta, and Allahabad to an aggregate amount of sixty-one lakhs.

The financial position of the circle, at the close of the year, may be summarized as under:— Summary.

Receipts, including interest on Government securities, forming a portion of the reserve of this office ...	Rs. 6,66,207 13 8
Expenditure, including book adjustments on account of stationery, printing, note forms, freight, repairs to building	83,038 0 7
Balance Cr....	<u>5,83,169 13 1</u>

Sind Circle.

The maximum and minimum value of notes in circulation during the past year, as contrasted with the year previous, is shown in the following table:— Circulation.

Maximum and Minimum Circulations, 1876-77.

Year.	Maximum.	Month.	Minimum.	Month.
1875-76 ...	23,41,490	February 1876...	17,52,850	November 1875.
1876-77 ...	23,87,270	February 1877...	18,11,880	April 1876.

Compared with 1875-76 the average circulation of the year shows a slight increase from Rs. 17,87,612 to Rs. 18,40,531.

The total value of notes in active circulation on the 31st March 1877, as contrasted with the same period for the previous year, shows an increase from Rs. 18,10,140 to Rs. 20,21,365.

At the close of the year there remained at the several offices of issue and the Government treasuries in the province Rs. 3,80,295, which, deducted from the notes in active circulation on that date, left in the hands of the general public an issue of Kurrachee circle notes to the amount of Rs. 16,41,070.

Transactions. The accompanying table shows the total value of notes of this circle issued to and received from the public in the year under report and preceding year :—

Notes Issued and Received, 1875-76 and 1876-77.

Circle.	NOTES ISSUED.		NOTES RECEIVED.	
	1875-76.	1876-77.	1875-76.	1876-77.
Kurrachee ...	38,77,430	44,29,935	41,87,880	42,18,710
Increase	5,52,505	30,830

A large increase is apparent in the number of notes issued, and a small increase in the number received. The returns show a falling off in the circulation of five-rupee notes, and a slight decline in the number of Rs. 1,000 notes. Under other denominations there is an increase. Looking at the number and value of the notes passed over the counter during the year under report, it appears that the transactions of the Sind circle were 685 less in number, but Rs. 5,83,335 more in value. In other circle notes there was an increase of 3,991 in the number and Rs. 20,72,320 in the value of the transactions; the whole shows an increase of 3,406 in the number and of Rs. 26,55,655 in the value of the notes.

The value of foreign circle notes received in 1875-76 was Rs. 10,49,095, so that the receipts of the year under report very nearly doubled those of the preceding year, and consisted almost wholly of Bombay circle notes.

Notes of the Bombay and other circles of issue have for some years passed freely at Kurrachee. As there was always a balance available for cashing foreign circle notes, they were received at the currency office. They were cashed and received by the public in the same manner as Sind circle notes. But in January 1877 the balance available for cashing foreign circle notes became exhausted, and Bombay notes were refused encashment. To pay for produce bought in Upper Sind, large sums of money had to be sent from Kurrachee. The failure to get Bombay notes cashed was severely felt; and to relieve the pressure two exchanges, each of four or five lakhs of notes, were effected with Bombay.

From the 24th January to the end of February, the time of greatest pressure, Rs. 4,63,000 were issued in exchange for notes; of this Rs. 1,15,000 were sent to the subordinate treasuries, and Rs. 3,48,000 issued in Kurrachee.

Reserve.

The coin reserve of the Sind circle on the 1st April 1876 was Rs. 2,76,000. It was strengthened on the 6th of the same month by a specie remittance of three lakhs, and continued to increase till it reached on the 26th June Rs. 7,96,000. It then gradually decreased, and on the 22nd August went down to Rs. 5,24,000, after which date it commenced to increase again, and on the 6th November stood at Rs. 9,20,000. It went down gradually from that date till the 25th January, when it stood at Rs. 2,50,000; but on the following day went down to Rs. 1,18,000, when the pressure for coin and notes reached its highest point. On the 27th of the same month the reserve was strengthened by a remittance of three lakhs from Bombay, and went down again to Rs. 1,90,000 on the 15th of February, when another remittance of five lakhs was received. The reserve continued to decrease, and at the close of the official year stood at Rs. 4,00,000. The great demand for coin was for remittances into the interior for produce and for payments on account of the Indus Valley state railway. The coin remittances to the branch treasuries, on account of the railway alone, amounted to Rs. 6,91,050.

The value of Government securities was reduced during the year (on the 24th August) by Rs. 106, leaving a total amount of Rs. 12,00,000.

The value of notes outstanding of all denominations was, on the 31st December 1876, Rs. 21,79,895. Outstanding notes.

Thirty-five notes of the aggregate value of Rs. 570 were paid under indemnity, compared with forty notes of the value of Rs. 1,510 of the previous year. Of the notes for which value was paid during the year, three were wrongly joined, of the value of Rs. 35, and four of the value of Rs. 35 mutilated; while of the half-notes six of the value of Rs. 50 were lost accidentally, and twenty-two of the value of Rs. 450 were lost in the post. Lost notes.

No forged notes or notes of a doubtful nature were presented for payment during the year. Forged notes.

There were no transactions in gold during the year. The issues and receipts of small silver coins were— Coin.

	Receipts.	Issues.
Of Half Rupees	796	924
Of Quarter ,,	751	1,138
Of Two-Anna pieces	459	847
	2,006	2,909

making a total of Rs. 4,015 against Rs. 6,534 of the previous year. The transactions in copper coin were five only during the year.

The receipts and issues of coin during the year were—

Receipts... ..	A. ...Rs.	20,51,040
Issues	19,27,230
	Total ...Rs.	39,78,270

against Rs. 28,25,445 of the year preceding. Three remittances of specie were received during the year from Bombay—

On the 6th April 1876 Rs. 3,00,000
 „ 27th January 1877 „ 3,00,000
 „ 15th February 1877 „ 5,00,000

or a total of eleven lakhs against three in the previous year.

Treasury notes.

The note transactions at the several Government treasuries in the province during the past three years were as follows:—

Note Transactions at Sind Government Treasuries, 1874-76.

Receipts.	Kurrachee.			Haidarabād.			Shikārpur.		
	1874-75.	1875-76.	1876-77.	1874-75.	1875-76.	1876-77.	1874-75.	1875-76.	1876-77.
From public in payment of Government dues ..	11,85,985	4,68,995	4,10,615	4,725	45,445	1,57,320	3,005	9,335	26,970
Do. in exchange for silver ..	12,77,795	3,08,725	2,32,670	1,66,120	2,52,100	2,26,820	25,640	56,655	97,085
Do. for other notes ..	4,39,676	4,870	12,885	..	2,960	36,705	290	310	2,000
Total Receipts..	29,03,455	7,82,590	6,56,180	1,70,845	3,00,505	4,20,845	28,935	66,300	1,26,055
<i>Issues.</i>									
To public in payment of Government dues ..	14,56,130	1,78,090	4,04,115	43,030	78,215	1,96,450	14,430	48,690	61,280
Do. in exchange for silver ..	38,44,720	6,72,620	4,83,520	2,33,640	3,63,245	4,61,760	1,54,400	2,40,755	2,48,450

Total Issues ..	47,42,975	8,50,880	9,20,140	2,76,670	4,49,420	7,14,915	1,69,120	2,84,755	3,11,730

Facilities have been given, as will be seen from the above, for cashing notes at the revenue treasuries whenever it could be done without inconvenience.

The balances of notes held by the Government treasuries in the province on the 31st March 1877 were—

Kurrachee, taluka and customs	Rs. 44,275
Haidarabād	„ 58,615
Shikārpur	„ 15,440
Total Rs. ...	1,18,330

The expenditure of the department during the year was Rs. 6,696-14-7 against Rs. 5,987-0-7 of the year preceding.

Nāgpur Circle.

The circulation of the year, compared with those of the last three years, is—

	1874-75.	1875-76.	1876-77.
Issues	62,31,370	71,69,100	53,84,590
Receipts	67,84,215	72,56,840	52,64,035

The average circulation, calculated on that at the end of each month, was about eighteen-and-a-half lakhs against about twenty-four lakhs in 1875-76, and eighteen lakhs in 1874-75. The value

of notes in circulation at the beginning of the year was twelve lakhs. The amount rose gradually, and even with some regularity, until the months of August and September 1876, when it reached a maximum of about twenty-five lakhs. The succeeding months, until January 1877, showed a gradual fall to Rs. 8,88,000, the lowest point touched during the last ten years. There was a slight expansion in February, followed by a fall, and the 31st of March shows a circulation of thirteen-and-a-half lakhs. The following table shows the circulation, nominal and real:—

Nágpur Currency Circulation, 1876-77.

At the end of		Balance of Circulation Account.	Held by other Offices.	Held in Government Treasuries.	Balance.
March	1876	12·1	1·7	1·4	9·0
April	"	12·1	1·7	1·5	8·9
May	"	14·3	3·1	2·0	9·2
June	"	19·4	3·5	3·1	12·8
July	"	22·2	7·4	1·6	13·2
August	"	24·1	7·7	1·6	14·8
September	"	24·0	5·6	1·4	17·0
October	"	21·7	3·3	1·9	16·5
November	"	19·0	3·4	3·8	11·8
December	"	14·6	1·1	2·5	11·0
January	1877	9·1	1·6	2·0	5·5
February	"	16·3	2·1	2·2	12·0
March	"	13·6	3·3	2·1	8·2

The first point, shown by a comparison of the figures of past years, is that the circulation rises and falls by a regular law. It is low in April, the opening of the financial year, rises steadily until August, remains stationary in August, September, and October, and then falls again till the close of the year. The cause is probably this. The greater part of the trade transactions of Nágpur are with Bombay. In the spring of the year, when the trade in grains and oil seeds is brisk, money is required in Nágpur, and is sent chiefly from Bombay. The amounts to be remitted from Nágpur are small, and there is no demand for notes of this circle. The season may be said to close in June, as in many districts traffic is suspended during the rains. The amounts advanced in the spring have to be repaid in Bombay; and as Nágpur notes are payable on demand there, no cheaper means of remittance can offer itself to merchants. There is an additional reason in the fact that the treasury balances in July and the months following are always large; and as the bank of Bengal is unable to use the money in the dull season, it is more convenient to hold the amount in notes than in silver. The busy season opens in October and November, and, as it proceeds, the demand for notes diminishes.

The year opened with a reserve in silver of Rs. 4,40,000. The Silver. highest point reached was about fourteen-and-a-half lakhs in August, while in January the reserve was as low as one-and-a-quarter lakh. The following table shows the position held by the re-

serve with respect to the circulation, and also the margin available for cashing foreign circle notes :—

Nagpur Silver Reserves, 1876-77.

Month.				Circulation.	Reserve.	Margin for Cashing Foreign Circle Notes.
April	1876	12·1	4·3	·0
May	"	14·3	5·8	·3
June	"	19·4	11·7	1·8
July	"	22·2	14·2	4·7
August	"	24·1	13·8	3·4
September	"	24·0	12·7	2·3
October	"	21·7	9·3	...
November	"	19·0	7·1	...
December	"	14·6	4·9	...
January	1877	9·1	3·8	·6
February	"	16·3	8·8	·8
March	"	13·6	4·8	·6

By orders of the Head Commissioner the fixed minimum was raised in September from six to eight lakhs. This should have increased the margin relatively to last year; but in the year under review the cash reserve was smaller in proportion to the circulation than it was in the previous year. The month of September may be taken as a fair time to make the comparison, the figures being very steady at that time of year. The figures stand thus :—

	Circulation.	Reserve.	Margin.
September 1875 ...	33·6	22·9	2·1
September 1876 ...	24·0	12·7	2·3

Government securities.

The reserve held under this head was raised in August from Rs. 7,41,901-10-4 to Rs. 8,00,000; but it was found necessary to reduce the amount in January. It now stands at Rs. 6,00,000.

Foreign circle notes.

Transactions of foreign circle notes are given below: it will be seen that, as was to be expected, the bulk of the dealings are in Bombay notes. The issues are, as usual, small, and since January last have, under orders of the Head Commissioner, ceased altogether :—

Nagpur Foreign Circle Notes, 1876-77.

Circle.	Receipts.	Issues.
	Rs.	Rs.
Calcutta circle ...	16,600	685
Lahore sub-circle ..	7,115	400
Allahabad do. ...	45,920	800
Bombay circle ...	10,75,950	16,300
Kurrachee sub-circle ...	2,225
Akola do. ...	87,275	5,490
Madras circle ...	17,080	1,700
Calicut sub-circle ...	735	80
Coconada do. ...	1,160	60
Total ...	12,54,060	25,515

Akola Circle.

The maximum, minimum, and average value of notes in circulation for the last two years have been as follows:—

Circulations of Notes in the Akola Circle, 1875-76 and 1876-77.

Year.	Maximum.	Month.	Minimum.	Month.
	Rs.		Rs.	
1875-76 ...	45,47,350	July 1875 ...	8,60,605	March 1876.
1876-77 ...	23,60,850	September 1876 .	7,11,195	December 1876.

Average of 1875-76, Rs. 21,60,362.

Average of 1876-77, Rs. 13,78,300.

showing a decrease in the average during the year under review of Rs. 7,82,062, or 156.74 per cent. The maximum was attained in September 1876, and the minimum in December 1876.

The average circulation, dating from the commencement of currency operations in Berar, has been as follows:—

In 1868-69	Rs. 1,71,227
„ 1869-70	„ 10,17,857
„ 1870-71	„ 22,27,071
„ 1871-72	„ 37,85,062
„ 1872-73	„ 19,29,057
„ 1873-74	„ 34,50,105
„ 1874-75	„ 15,38,122
„ 1875-76	„ 21,60,362
„ 1876-77	„ 13,78,300

The decrease this year is due to the great demand that existed in Berar for coin owing to the large export of grain to the famine districts of the Bombay Presidency. The absorption of coin in this new undertaking had the effect of decreasing the demand for notes.

The circulation, Rs. 8,60,605, at the beginning of the official year rose to Rs. 23,60,850 in the month of September 1876. It then, as usual, fell rapidly during the subsequent months of the cotton and grain trade season to Rs. 9,14,060, the value of notes in circulation at the close of the year.

Notes of foreign circles were not cashed in this office to a large extent.

The value of notes issued to the public for cash or other notes was Rs. 20,45,945 compared with Rs. 45,95,795 in the previous year. The value of notes received was Rs. 19,92,491, or Rs. 27,71,890 less than the value received in 1875-76. During the year 22,915 notes were received and 20,055 cancelled. The percentage of notes cancelled is eighty-eight. The average number of notes passed over the counter in any day was eighty-three issued and ninety-three cashed, or a decrease of one note issued and an increase of twelve notes cashed.

The amount of coin paid to the public during the year was Rs. 19,92,490, or a decrease of Rs. 27,70,890 compared with the previous year.

Reserve.

The coin reserves at the beginning of the year stood at Rs. 5,41,730 and at the close of the year at Rs. 5,82,250. The value of Government securities purchased on behalf of this circle was three lakhs. No forged notes were presented for payment. No transactions in gold took place during the year.

The number of notes paid on bond during the year was seventeen, of the aggregate value of Rs. 610; of these, sixteen were half-notes, and one was mutilated.

Savings bank.

There have been no savings banks transactions calling for special notice.

Deposits.

The amounts paid during the year 1876-77 into the Government treasuries of this Presidency, on account of savings banks, exceeded the amounts of withdrawals by Rs. 2,16,535, whereas in the previous year the excess amounted to Rs. 5,25,338. The comparison of the amounts deposited into and withdrawn from Government treasuries in the last two years exhibits a considerable decrease in the former and an increase in the latter. This result may, in some measure, be attributed to the prevailing high prices of grain in the greater part of the Presidency.

Money orders.

The subjoined table gives a comparative view of the Overland and Inland Money Order transactions for the last two years:—

Money Order Transactions, 1875-76 and 1876-77.

Year.	Issues.		Commission.	Payments.	
	Nos.	Amount.		Nos.	Amounts.
		Rs.			Rs.
Overland Money Orders—					
1875-76	9,323	5,74,361	11,821	898	32,055
1876-77	8,682	5,69,503	11,038	1,027	41,408
Result	-641	-4,858	-783	+129	+8,353
Inland Money Orders—					
1875-76	25,798	11,90,846	13,411	22,575	10,39,918
1876-77	24,415	11,30,667	12,739	23,527	10,58,853
	-1,383	-60,179	-672	+952	+18,935

The figures given in the above table on account of the Overland Money Orders represent the transactions connected with all the India's treasuries.

Land Revenue.

The gross land revenue for the year 1876-77 for the Northern, Southern, Kánárese, and Sind divisions of the Presidency amounted to Rs. 3,71,53,863, compared with Rs. 3,65,13,492 in 1875-76. In the Northern division Rs. 1,78,01,271 are returned as the gross land revenue, or Rs. 38,647 more than in 1875-76; in the Southern division Rs. 76,79,637, or Rs. 14,786 more than in the previous year; in the Kánárese division Rs. 70,14,385, or Rs. 1,51,437 more; and in Sind Rs. 46,58,570, or Rs. 4,35,501 more than in 1875-76. Realizations.

The revenue for collection on account of the current year is returned at Rs. 2,96,76,210, or Rs. 1,91,825 in excess of that for the previous year. Including former years' balances of Rs. 2,40,219, the total sum realizable came to Rs. 2,99,16,429, or Rs. 1,73,846 more than in 1875-76. Of this revenue Rs. 2,67,23,014 were collected up to 31st July 1877, compared with Rs. 2,94,63,354 collected up to a similar date in 1875. The actual collections fell off heavily in Khándesh, Násik, Thána, Kolába, Ahmednagar, Poona, Sholápur, Sátára, Kánára, Belgaum, Dhárwár, Kaládgi, and Shikárpur. The outstanding balances amounted to Rs. 31,93,415 or Rs. 29,14,186 more than in 1875-76.

In realizing the land revenue caution was enjoined in ordering distraints, and the number was only 3,481 against 3,369 in the previous year, 3,635 in 1874-75, and 8,950 in 1873-74. Nor is this low number of distraints due to the fact that a marked increase in the famine-affected parts was more than met by the special prosperity of the coast and Gujarát districts. There was no rise in the famine districts. On the contrary, as the following figures show, there has been, compared with the average distraints in the three preceding years, a fall of 40.23 per cent. The total number of distraints in the ten affected districts was, in the past year, 2,224. The corresponding number was 2,204 in 1875-76, 2,587 in 1874-75, and 6,373 in 1873-74, or an average, for the three years, of 3,721. Processes.

Canal Revenue.

A statement of revenue from irrigation works is given in No. 2—Canals—Part V. of the statistical returns. It comprises direct receipts from water-rates and miscellaneous sources during the official year 1876-77 credited to, and accounted for, in the Public Works Department, and revenue due or dependent on the works realized during the year 1875-76 credited and accounted for under land revenue. The works have, as before, been divided into two classes: the first, works entirely constructed or extensively improved by the British Government, and for which capital as well as revenue accounts are kept; and the second, old works existing at the time the country was taken possession of by the British Government, and on which no large sums have been expended for improvements, but which are maintained and kept in order by the State. The figures for the two years compare as follows:—

	1875-76.	1876-77.		1874-75.	1875-76.
	Rs.	Rs.		Rs.	Rs.
Direct revenue due to water-rate, &c., credited and accounted for in the Public Works Department	1,05,367	1,23,866	Revenue due or dependent on the works credited and accounted for under land revenue	24,86,158	29,45,327

The increase in direct receipts is due to the increase in irrigation on works recently brought into operation. That under revenue due or dependent on the works is due principally to the statement for 1875-76 being more complete than that for 1874-75.

The information regarding capital outlay as compared with the receipts and the revenue charges cannot be given this year, as the revenue report is not yet ready.

Sources of Imperial Revenue other than the Land.

CUSTOMS.

SEA CUSTOMS.

Port of Bombay.

The customs revenue of the port of Bombay for 1876-77 exhibits, as shown in the following statement, a decrease of Rs. 9,28,172 over the preceding year 1875-76, and of Rs. 11,49,721 over the year 1874-75. The falling off is due partly to the decline in trade, and partly to the reduction of import duties from seven-and-a-half to five per cent and the abolition of nearly all the duties on export:—

Bombay Sea Customs Revenue, 1874-76.

	1874-75.	1875-76.	1876-77.
<i>Imports.</i>	Rs.	Rs.	Rs.
On general trade ...	56,81,480	56,07,011	48,62,598
On spirits	5,67,818	5,89,316	6,54,400
On tobacco	14,655	13,783	11,505
Total ...	62,63,953	62,10,110	55,28,503
Exports	5,11,328	3,43,622	97,057
Total ...	67,75,281	65,53,732	56,25,560

The import duties on general trade show a decrease of Rs. 7,44,413. The decrease is chiefly perceptible in the articles mentioned below:—

Decreased Imports, 1876.

Articles of Import.	Decrease in Customs Duty.
1	2
	Rs.
Apparel	38,128
Dyeing and colouring materials	32,533
Fruits and vegetables	11,618
Glass	32,367
Hardware and cutlery	13,222
Wines and liqueurs	17,837
Metals	21,239
Paints and colours and painter's materials... ..	23,165
Silk, raw	2,08,447
Do. manufactured	48,022
Sugar and sugar-candy	2,57,086
Tea	69,745
Wool, manufactured	34,162

On the other hand there has been an increase in the duty collected on cotton twist and yarn, piece-goods, spirits, railway plant and rolling stock, and spices.

The following statement shows the declared value of the liquor imported in each of the three years, and the duty collected:—

Liquor imported, 1874-76.

1	1874-75.		1875-76.		1876-77.	
	Declared Value.	Duty.	Declared Value.	Duty.	Declared Value.	Duty.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Ale, beer, and porter	6,17,061	16,022	6,54,163	16,534	6,90,083	18,143
Spirits	13,26,326	5,71,111	20,02,333	5,95,474	19,19,203	6,51,870
Wines... ..	13,17,465	1,75,194	15,15,677	2,10,251	12,23,791	1,99,414
Total	32,61,452	7,62,327	41,72,173	8,28,259	38,23,077	8,68,426

The collections on account of export duties during the year, 1875-76 Rs. 3,43,622 contrasted with those of 1875-76, 1876-77 " 97,057 show a falling off of two lakhs and forty-six thousand rupees. The realizations of the year under report are less than one-fifth of the collections of 1874-75. The decrease is due to the abolition of export duty in 1875-76 on cotton goods, oil seeds, spices, and hides, which formed the bulk of the export trade.

Decrease in 1876-77. Rs. 2,46,565

The following table, from which treasure and Government stores have been excluded, shows the percentage of duty on the value of the trade during the last five years:—

Percentage of Duty on the Value of Trade, 1872-77.

Year.	Value of Imports.	Import Duty collected.	Percentage of Duty on Value.	Value of Exports.	Export Duty collected.	Percentage of Duty on Value.
1	2	3	4	5	6	7
	Lakhs.	Lakhs.		Lakhs.	Lakhs.	
1872-73	1,418	56½	3.99	1,911	8½	.173
1873-74	1,496	62½	4.20	1,987	34	.166
1874-75	1,514	62½	4.14	2,276	5½	.224
1875-76	1,709	62½	3.63	2,074	8½	.164
1876-77	1,661	56½	3.33	2,239	1	.045

There has been a decrease in the value of goods bonded and Bonded. cleared from bond, but an increase in the value of goods remaining in bond:—

Details of Bonded Warehouses, 1874-76.

	1874-75.	1875-76.	1876-77.
1	2	3	4
	Rs.	Rs.	Rs.
Balance of last year	4,56,519	2,83,503	5,44,713
Goods bonded during the year	8,21,149	13,70,086	11,17,780
Goods cleared from bondg durin the year	9,94,165	11,08,876	9,72,154
Goods remaining in bond at the end of the year	2,83,503	5,44,713	6,90,339

The amount of drawback paid during the year was nearly equal Drawback. to the average of the last three years, but is less by Rs. 32,369 than that of 1875-76:—

Drawbacks, 1874-76.

Year.	Amount.
1	2
	Rs.
1874-75	4,09,442
1875-76	3,77,545
1876-77	3,45,176
Total	11,32,163
Average	3,77,388

The following statement shows the principal articles on which a drawback is claimed on re-export and the amount of drawback paid :—

Articles on which a Drawback is granted.

Description of Goods.	Amount.
1	2
	Rs.
Cotton twist and yarn...	13,469

Tariff Act.

No new Acts relating to customs have been passed during the year, but a modification has been made in the Customs Tariff Act XVI. of 1875 in respect to the following items :—

- (1). The duty on wines produced in Greece, Austria, and Hungary and imported into British India has been fixed at one rupee for the imperial gallon or six quart bottles.
- (2). Coffee imported in small quantities with other stores is liable to an *ad-valorem* duty of five per cent.
- (3). Jute twine, which was regarded as dutiable, was ruled to be free of duty.
- (4). Tinned plates, which were charged duty at five per cent, were decided to be liable only to one per cent.
- (5). The value of raw silk, the produce of the Tasar or other wild worms, when such silk is imported from China, has been fixed at rupees four per pound.
- (6). Gunny bags and gunny cloth are declared free from duty on import into British India.

Establishment.

In the fixed establishment the only change during the year under report has been the remodelling of the appraising staff, involving an additional monthly cost of Rs. 1,400. The establishment kept up at the expense of the Frere land and pier company, limited, was reduced by Rs. 119, at the company's request, from 1st October 1876, and an additional establishment, at a cost of Rs. 59-8-0, was entertained at the company's bandar from 1st February 1877, to allow port clearance and manifests to boats. The percentage cost on the revenue collected during the year is Rs. 8-6-0 against Rs. 7-2-0 for 1875-76.

There were during the year 198 cases of seizure and detention of goods. Of these ninety-one cases were brought to light by the preventive department, two by the police, and 105 by other departments of the custom house. Confiscation was adjudged in forty cases, and fines and penalties, including double duty, were imposed in 125 cases. Twenty-one cases were discharged on payment of fee for amendment of documents, and twelve cases were let off altogether. The proceeds of confiscation and penalties, under section 229 of the Consolidated Customs Act VI. of 1863, amounted to Rs. 4,574, out of which Rs. 2,298 were disbursed as rewards. Four cases were prosecuted under Act XIX. of 1838, and four under the Passengers' Act XII. of 1870 and 1872. The parties concerned in seven out of eight cases were severally convicted and fined, and one case was discharged for want of sufficient proof. One case was successfully prosecuted of a false declaration of country spirits, and a penalty was adjudged of Rs. 500. There has been no case of undervaluation of goods for duty during the year under report.

The realization from fees for working on Sundays and holidays and for extra work during the year amounted to Rs. 15,572-8-0.

Continental Ports.

Excluding salt, the customs revenue collected by the Salt Department is made up of the items shown in the following table. Particulars are given for the last three years, and for purposes of comparison the average of the last five years is also shown:—

Continental Ports, 1874-77.

	1876-77.	1875-76.	1874-75.	Average of five years ending 1875-76.
	Rs.	Rs.	Rs.	Rs.
Import sea customs	49,271	36,382	18,413	33,205
Export do.	16,008	27,866	38,144	33,351
Anchorage fees	343	344	321	365
Registry fees	4,270	4,352	4,858	4,406
Warehouse rent and wharfage fees ...	637	730	569	708
Document fees	491	477	573	561
Sale proceeds of derelict articles ...	420	524	73	169
Miscellaneous	1,075	435	1,042	572
	72,515	71,110	63,993	72,337

The total sea customs collections in 1876-77 are more than those of 1875-76 by Rs. 1,405, more than those of 1874-75 by Rs. 8,522, and more than the average realizations of the past five years by Rs. 178.

Imports show an increase of Rs. 12,889, which is due to the levy, during the whole of the year under report, of the duty on salted fish imposed by the Tariff Act.

Export customs show a decrease of Rs. 11,858. The falling off may be attributed in part to the operations of the Tariff Act, which exempted from duty several articles previously subject to it, and was in force throughout the entire year; partly to a diminution in the quantity of rice exported owing to the dearth prevail-

ing above the ghâts, and partly to there having been less demand at Arabian ports for carnellians and dyed piece-goods from Cambay.

Sind Ports.

The total gross receipts on account of import and export duty during the year 1876-77 amounted to Rs. 2,63,293 against Rs. 3,73,103 realized in the preceding year, showing a decrease of Rs. 1,09,810 in the year under review. In addition to the above, Rs. 12,301 were realized against Rs. 9,076 in the previous year on account of miscellaneous customs receipts; and from sources not subordinate to customs—such as of port dues, cotton fees, fishing licences, fees for swinging and mooring, pearl fisheries, judicial fines, and sale of stamped bonds—Rs. 54,095 against Rs. 52,465 in the preceding year, making the whole collections from all sources Rs. 3,29,688 against Rs. 4,34,644 in the preceding year, as exhibited in the following statement:—

Sind Customs, 1876-77.

Total after deductions	4,21,017 13 9	3,28,174 12 10

Compared with the results of the preceding year there was in the year 1876-77 a decrease of Rs. 23,226 in the duty on imports, as also a decrease of Rs. 86,584 in the duty on exports, amounting to a total decrease of Rs. 1,09,810. The decrease under imports is owing partly to the reduction of the rate of import duty generally from 7½ to 5 per cent under the Indian Tariff Act of 1875, which came into force on the 5th August of that year, and affected the revenue for 1875-76 for eight months only against the full twelve months of the official year under review, and partly to diminished imports of dates from Bassora and of provisions, oilman's stores, cotton piece-goods, and metal from the United Kingdom. The decrease under exports is chiefly the result of the remission of export duty on every article except indigo, lac, and rice, under the Tariff Act, as explained above. It is reported that the loss to the customs revenue from the remission of export duty for the year under review was to the extent of Rs. 2,98,950 against Rs. 2,32,496 in the previous year. If this nominal duty be added to the actual collections of 1876-77,

a net decrease of export duty of only Rs. 20,130 over the returns for 1875-76 appears, instead of the large decrease above noticed.

Land Customs.

The land customs revenue collected by the Salt Department is shown in the following table:—

	1876-77.	1875-76.	1874-75.	Average of five years ending 1875-76.
	Rs.	Rs.	Rs.	Rs.
Land frontier duties in imports and exports	50,512	74,737	63,036	61,726
Government share of land customs and transit duties levied in the native states of Cambay, Bānsda, and Dharampur	12,848	13,233	13,118	13,162
Proceeds of confiscations under Act XXIX. of 1857	212	159	241	154
	63,572	88,129	76,395	75,042

The land customs collections in 1876-77 show a decrease, on those of 1875-76, of Rs. 24,557; on those of 1874-75 of Rs. 12,823, and on the average collections of the preceding five years of Rs. 11,470.

	1876-77.	1875-76.
	Rs.	Rs.
Goa frontier	41,404	65,995
Habsan or Rājpurī frontier	661	319
Daman or Bagwāra frontier	8,797	8,613
	50,862	74,927

Details of each frontier line, as given in the margin, show, on the whole, a decrease. The decrease is almost entirely due to a great falling off in the exportations of rice, owing to the scarcity prevailing above the ghāts. There is an increase of Rs. 13,949 in the importations of salt across the frontier lines. The total length of the customs line on these frontiers was 284 miles with thirteen posts and 549 men on duty. The collections, including salt, amounted to Rs. 2,96,934 against Rs. 3,07,228 in the previous year. Total charges came to Rs. 70,577, or Rs. 9,518 more than in 1875-76.

The revised establishment sanctioned for guarding the Daman frontier has been entertained during the most part of the year.

Sales from the neighbouring British works at Balsār have increased by about 43,600 maunds, yielding Rs. 79,025 of duty. Much of this, at any rate, has been taken to supply districts which formerly consumed salt smuggled from Daman. The re-organization of the northern frontier line beyond Suigam still remains in abeyance, pending issue of the orders of Government on the subject of the opium question in Gujarāt. A claim put forward by the proprietor of Bajāna, to the site of the salt works at Kārāghora, has been rejected by Government. A second claim by the same proprietor, to the right of opening new salt works, has also been finally negatived, the Government of India upholding, on appeal, the decision of the Government of Bombay.

OPIUM.

Revenue.

Compared with 1875 the opium revenue shows an increase of nearly forty lakhs of rupees, and although a little below the figures of the year 1874-75, in which the shipments were unusually large, it is still above the average of the past four years. The trade is subject to great fluctuations, not always easily accounted for. For years past it is known to have been barely remunerative, and yet, taking one year with another, there is no apparent decline. It may be that it is in the hands of a few, capitalists who must hold on waiting for a favourable time in the market. But as the trade has to bear a severe competition with the Bengal opium and with the development of the indigenous growth in China itself, the prospects for the future are scarcely encouraging.

Opium shipped from Bombay, 1873-77.

Year.	CHESTS.		Total.	Pass Fee.	Pass Fee on Opium brought for use in Ahmed-ábáá.	Total Pass Fee.
	Málwa.	Ahmed-ábáá.				
1	2	3	4	5	6	7
				Rs.	Rs.	Rs.
1873-74 ...	42,653	2,998	45,651	2,73,90,600	17,071	2,74,07,671
1874-75 ...	47,609	1,579	49,188	2,95,12,800	14,230	2,95,27,030
1875-76 ...	39,420	3,051	42,471	2,54,82,600	11,753	2,54,94,353
1876-77 ...	47,308	1,768	49,076	2,94,45,600	14,120	2,94,59,720

In addition to the above, a sum of Rs. 26,743 was credited to the head, pass fee, on account of opium originally purchased for transmission to His Highness the Rao of Cutch and afterwards sold. In all, therefore, the proceeds of the opium pass fee amounted in 1876-77 to Rs. 2,94,86,463.

Exported.

The exportation to China has been as follows:—

Opium Exports to China, 1876-77.

Month.	CHESTS.		Total
	Málwa.	Gujarít.	
1	2	3	4
April 1876 ...	3,490	108	3,598
May " ...	3,734	204½	3,938½
June " ...	3,232½	212	3,444½
July " ...	3,824½	167½	3,992
August " ...	3,706½	260	3,966½
September " ...	4,013½	252	4,265½
October " ...	6,036	220½	6,256½
November " ...	4,066	44½	4,110½
December " ...	4,521	46	4,567
January 1877 ...	3,909½	149½	4,059
February " ...	3,818	94½	3,912½
March " ...	3,291½	28½	3,320
Total ...	47,643	1,787½	49,430½

Besides the above, the chests noted in the margin were shipped to places set forth against them, and eighty-five chests were purchased for the supply of licensed dealers throughout the Bombay Presidency. These details show that the number of chests exported are about 500 in excess of the number brought into Bombay. The balance is drawn from the stocks in hand in Bombay.

	1876-76.	1876-77.
Bombay...	150	50
Aden ...	200	230
	<u>350</u>	<u>280</u>
1875-76...	Rs. 11,753	
1876-77...	" 14,120	
Increase in 1876-77 ...	" 2,367	

The collections on account of transshipment fees were Rs. 280, or less by seventy rupees than in the year preceding. Twenty-three and half chests of opium were, on payment of the usual pass fee of Rs. 600 a chest, imported from the Gáekwár's territory into the city of Ahmedábád for consumption there. There is, as shown in the margin, an increase of Rs. 2,367 in the total pass fees realized on this account.

The revenue derived from the fees for selling opium through- Internal trade out the Presidency amounted to Rs. 1,46,731. Exclusive of transit duty, Rs. 15,096, levied on opium in the Panch Máhals, where the license system is not in force, the license fees exhibit a decrease of Rs. 2,049.

The following table shows the fluctuations in the revenue from license fees during the last five years:—

Opium License Fee Receipts, 1872-77.

Changes.

In Bombay there has been a decrease of Rs. 1,130 during the year, which is due to the closing of seven opium-smoking shops. The decrease in the Northern division, on the whole, has been very trifling, being only Rs. 373. The decrease in the Thána collectorate is nominal; the figures for Kolába, which were hitherto included under Thána, having been shown separately this year for the first time, owing to the establishment of a separate account office in the Kolába collectorate. The falling off in the Ahmedábád collectorate is attributable to lower bids in the Ahmedábád and Deesa cantonments. There is, on the other hand, a slight increase in Kaira. Of Rs. 1,318, the total amount, Rs. 1,116 are due to transit dues levied in the Panch-Máháls on increased quantities of opium. The remaining Rs. 202 are due to higher bids for the right to sell opium in Nariád. Except in the three collectorates of Poona, Kaládgi, and Kánára, there has in the districts of the Southern division been a general, though slight, falling off. The net decrease is only Rs. 425. In Sind there has been a decrease of Rs. 2,439 in the Kurráchee collectorate and an increase of Rs. 2,193 in Haidarábád. The increase in Haidarábád is due to favourable auction sales. In Kurráchee there has been a steady decline for the last five years.

That opium-smuggling is carried on to a very large extent, is proved by the following statement :—

Excess Payments of Opium Dealers over their Receipts, 1872-77.

Profits.

Year.	Opium Licenses.	Opium purchased.	Price paid by Government.	Price charged to the Licensed Dealers.
1	2	3	4	5
	Rs.	Mds. s.	Rs.	Rs.
1872-73	1,03,340	166 30	1,31,781	1,44,634
1873-74	93,339	202 2	1,61,693	1,82,758
1874-75	87,945	134 17	1,03,837	1,14,693
1875-76	92,036	102 3	78,458	88,536
1876-77	90,325	144 25	1,10,424	1,23,997
Total	4,66,985	749 37	5,86,093	6,54,618
Average of five years ...	93,397	150 0	1,17,219	1,30,924

From this statement it appears that during the past year the opium license-holders paid for their license fees and for the price of Government opium a total sum of Rs. 2,14,322. At the average selling rate of 2½ tolas for a rupee, their receipts would be Rs. 1,85,120; that is, a loss of Rs. 29,202. Unsatisfactory as this result is, it is an improvement on the returns for 1875, which showed a nominal loss of Rs. 49,916.

Sixteen cases of opium-smuggling were brought to notice in the town and island of Bombay against seven last year. Of these two were prosecuted successfully before the High Court, and heavy penalties, of Rs. 6,251 in the one case and Rs. 2,575 in the other, were inflicted. The remaining fourteen were tried before the court of petty sessions and the police magistrates. Convictions were obtained in all cases except two. Of these sixteen cases two were discovered by the opium establishment and the rest by the town and railway police. The quantity of opium confiscated was three *mans* and twenty-five *sirs*. This realized on sale by public auction Rs. 2,397, or Rs. 16½ per Indian *sir*. Fifteen *mans* and twenty-seven *sirs* of unclaimed opium, brought to notice by the Bombay Baroda and Central India Railway police and the assistant opium inspector, realized Rs. 10,241 or Rs. 16½ per Indian *sir*. The larger portion of this unclaimed opium, together with all the opium confiscated in connection with the cases tried by the High Court as above mentioned, was, with the approval of Government, allowed to be sold for export to China. From the magisterial returns from the collectorates noted in the margin it appears that seventy-three cases of opium-smuggling were brought to notice. In fifty-nine of these the parties were convicted and fined, and in fourteen they were acquitted for want of proof. The quantity of opium confiscated was ten *mans* and twenty-eight *sirs*. The confiscated opium received from the several collectorates for sale in Bombay, eight *mans* and one and half *sirs* in weight, realized Rs. 4,869, or about Rs. 15 per Indian *sir*.

Káttýwár.

The following table shows the opium transactions with the province of Káttýwár during the year under report, contrasted with those of the five preceding years. The opium is issued to the province of Káttýwár free of pass-fee charges. The accompanying statement shows that, compared with the average of the five preceding years, the sales during 1876 show an advance of fifty *mans*, and the profits an increase from Rs. 55,397 to Rs. 61,823:—

Opium Transactions with Káttýwár, 1871-76.

During the year no requisition for opium was received on the Málwa agency from the Administration of the Central Provinces.

SALT.

Three salt works at Umbargám and one in Tárápúr have been closed during the year. No new works have been opened. An error has been discovered in Statement II. for previous years, whereby Málwan was shown as containing fifty salt works instead of forty-nine, and Honáwar seventy-four instead of sixty-seven. The statement has now been corrected, and shows the total number of salt works in operation to be 554. In other respects the charge of the department remains unaltered. Works.

The revenue collected during the year 1876-77, the fifth year during which the department has been under the control of the Collector of Salt Revenue, amounts to Rs. 1,04,14,303. It falls short of that of 1875-76 by Rs. 9,24,278-9-7, but exceeds that of the previous year by Rs. 6,04,811-5-0, and the average collections of the five years ending 1875-76 by Rs. 16,12,182-7-7. The following statement shows, arranged under the principal heads, the receipts of the salt department for 1876-77 in contrast with those of the preceding year :— Revenue.

										<i>Net decrease ..</i>			9,24,278	9	7

Decrease.

The decrease of Rs. 11,99,776 on exports to Madras is due to the re-introduction, by order of the Government of India, of the system of exportation without prepayment of duty. The decrease of Rs. 46,799 in exports to Calcutta is due to the difficulty of obtaining freight owing to the great demand for vessels to carry grain to the famine districts. There was a good demand in the Calcutta market, and the price of salt in Bombay was low. Towards the end of the season some salt was sent to Calcutta by steamers, a most unusual circumstance. If these items be put on one side, the net increase in the revenue on salt for home and inland consumption amounts to Rs. 3,05,714-6-11, a result which, under the unfavourable circumstances of a serious famine during half the year and deficiency of carriage owing to the pressure of the grain traffic, is not unsatisfactory.

Strength.

The following table shows the strength of the department, the quantities of salt imported by sea and land and removed from salt works, the quantities excised, the quantities issued duty free, and the gross realizations on all accounts during 1876-77, compared with the previous year:—

Year.	Number of super-carrying officers.	Number of subordinate officers and men.	Number of maunds of Salt dealt with by the department.		Number of maunds of Salt excised or imported by sea and land on payment of duty.		Number of maunds delivered free of duty.		Gross realizations, including Salt Excise, Sea and Land Customs collections, Still-head Duty.

The percentage of charges on receipts is higher this year in consequence of the reduction of the realizations of the department, owing to the re-introduction of the system of exportation to Madras without prepayment of duty. The salt department continues to pay for the whole coast-guard and frontier preventive service, which helps to protect the Bombay customs and opium revenues as well as those proper to the department. .

The gross expenditure in 1876-77 amounted to Rs. 9,23,331-12-6 against Rs. 9,40,809-14-5 in 1875-76, showing a decrease of Rs. 17,478-1-11. Charges.

The chief event of the year has been the temporary re-introduction of the system of exportation to Madras without prepayment of duty. The system remained in force from the 21st August 1876 to the 16th March 1877. During this brief period it did not work well. It caused a rise in the price of salt supplied to the Government depôts on the western coast of Madras, and occasioned considerable complication of accounts; but as the question has at length been finally settled in accordance with the views of the Government of Bombay, it seems unnecessary to dwell longer on the subject. It is worthy of note that a good deal of salt, on which full duty had been prepaid, was exported to Madras districts, *on private account*, during the period in question. Free export.

The wide-spread scarcity of food-grains in the Deccan and Southern Mārātha districts unfavourably affected the salt revenue by engrossing for the grain traffic the means of conveyance ordinarily available for the transport of salt. As already remarked, the deliveries for home and inland consumption have again increased, the fall being confined to the sea-borne trade. The increase in the deliveries for home and inland consumption is due (1) to greater demand for Barāgara salt from Khārāghora for the Central Provinces and for local use; (2) to large sales from the Balsār salt works to replace salt formerly smuggled from Daman, the supply of which has been cut off by the preventive establishment recently sanctioned for guarding the frontier; and (3) to a very marked increase, amounting altogether to 156,653 Indian maunds, in the removals from Bassein and Ghorbandar, which may, in part at any rate, be attributed to the additional facilities afforded to merchants in the provision of a commodious wharf at Bhynder, and the extension of the railway siding to within a few yards of the landing place. The famine.

His Highness the Māhārāja Holkar has availed himself of the privilege, sanctioned by the Government of India and referred to in last year's report, of being supplied with Barāgara at the rate of Rs. 2-4-0 per maund, delivered at the terminus of the Indor state railway, to the extent of 17,500 maunds only. The cause of this small demand probably is that His Highness has fixed too high a selling price, and so lost the advantage he might have obtained by selling large quantities at a low margin of profit. This seems the more likely from the circumstance that an appreciable quantity of salt has this year been exported from Khārāghora to Choral Chowky on payment of full duty.

The gross salt revenue collections of the year under report amount to Rs. 94,59,953-10-1, falling short of those of the previous year by Rs. 9,65,638-15-8, exceeding those of 1874-75 by Rs. 4,69,421-4-8, and the average of the four years ending 1875-76 by Rs. 22,70,633-8-6.

The following table shows the details of salt revenue collections for the last five years :--

Salt Revenue Collections, 1875-76 and 1876-77.

	1876-77.	1875-76.	Average of four years, ending 1875-76.

Total ..	94,59,953 10 1	1,04,25,592 9 0	71,89,320 1 7

The increase in the first item is due to larger licit removals of salt chiefly for home consumption. The causes of the decrease in the realizations on exports to Calcutta and the Malabar coast have been already explained. With the re-establishment of the prepayment system and the introduction of the Excise Act into the districts of Malabar and South Kánára, as now ordered, an improvement in the exports to that part of the country may be looked for.

The decrease in differential duty on excess deficiencies on shipments of salt free and at nominal rates is due to the fact that no collections were made on this account in 1876-77, as the duty leviable on deficiencies found in cargoes of salt for the Malabar coast was recovered by the Madras Government.

The decrease in the item of duty on importations by sea occurred in the Honáwar and Ankola sub-divisions. It is due to the

demand for freight for cargoes of grain for the famine districts, and has been accompanied by larger removals from the salt works in Honáwar as well as by increased importations by land across the Goa frontier.

The increase in importations by land is due partly to the cause referred to in the preceding paragraph and partly to larger licit importations across the Daman frontier.

The following table shows the gross totals of the stock account for the last five years, and the average total for the five years ending 1875-76 :—

Produce.

Year.	Stock on hand at the commencement of the year.	Manufactured during the year.	REMOVED DURING THE YEAR.		Loss and wastage.	Percentage of loss on stock.	Stock on hand at the close of the year.
			On payment of full duty.	Duty free or on payment of nominal duty.			
	Mds. s.	Mds. s.	Mds. s.	Mds. s.	Mds. s.		Mds. s.

The quantity of salt manufactured during 1876-77 exceeds the produce of 1875-76 by 2,783,063 maunds, and the average of the preceding five years by 1,128,923 maunds. Stocks have now been fully brought up to the average maintained previous to the strike among the Konkan salt-makers, by which they were temporarily reduced, and the price of salt continues very low. The quantity of salt written off on account of loss and wastage during 1876-77 amounts to 618,252 Indian maunds, or about 6.04 per cent of the stock. This rate of wastage is below the average, and may be attributed to the lightness of the monsoon, and in part also to greater exertions on the part of sir-kárkuns in charge of salt works for the proper thatching and protection of the salt during the rains.

Loss and
wastage.

The sales of Bárágara in 1876-77 amounted to Indian maunds 830,793 against Indian maunds 805,199 in 1875-76 and 668,815 in 1874-75.

Development.

The following table shows the total issues at the Run salt works for six years. There is an increase in every year, notwithstanding that exports to Málwa have dwindled down from over a lakh of maunds annually to a very small quantity. It will also be noted that issues in 1876-77, the first year of complete concentration of the Run salt works at Khárághora, have been about double those of 1871-72, the last year of the old system :—

Khárághora Outturn, 1871-72 to 1876-77.

Years.	Full duty.	Nominal duty.	Free.	Reduced rate to H. H. Holkar.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.
1871-72	3,96,721	50,828	681	..	4,48,230
1872-73	4,94,694	73,758	1,031	..	5,69,483
1873-74	5,38,026	70,684	1,382	..	6,10,092
1874-75	5,99,550	68,915	350	..	6,68,815
1875-76	7,43,792	60,335	1,072	..	8,05,199
1876-77	7,32,734	79,177	1,382	17,500	8,30,793

The increase in sales for home consumption has occurred chiefly in Ahmedábád, the Gáekwár's districts, and the districts under the Pálanpur agency, and is due to diminished smuggling. The increase would have been more marked but for a large falling off in removals for the Panch Máháls, which is explained partly by over-trading in the previous year, whereby large stocks had accumulated at the principal marts, but principally by a failure of cereals and lateness in the crops generally. The carriage which conveys maura, oil-seeds, and grain from the Panch Máháls to the railway, brings return loads of salt. Since the close of the financial year there has been a marked improvement in the trade to this district. The Central Provinces account for the largest part of the increase, having drawn 44,585 Indian maunds more than in the previous year. Of the 317,475 Indian maunds sent this year to

those provinces, 283,665 went east of Ráver and 33,810 east of Nárgaon. The development of the demand for Bárágara in Nágpur is noticeable. In 1873-74 only 150 maunds went to Nágpur. In 1874-75 that district took 7,500 Indian maunds, in 1875-76, 22,590 Indian maunds, and in 1876-77, 33,810 Indian maunds. The sales for Málwa have increased by no more than 2,626 maunds, notwithstanding that 17,500 were supplied to the Máhárája Holkar at Choral Chowky at a reduced rate of duty. The projected railway extension to Godhra is likely, if carried out, to benefit this trade.

The sales at the Ahmedábád depôt are less this year by nearly 12,000 Indian maunds. The decrease has occurred in removals for Málwa and the Panch Máháls, as already noticed, and has been only partially made up by larger sales for the Ahmedábád collectorate and the adjacent Gáekwár territory. The sales at the Broach and Surat depôts have decreased this year by 15,646 Indian maunds. The falling off is due partly to the continued unpopularity of Bárágara, and partly to the failure of the mango crop in 1876. Much salt is used in the preparation of the mango pickles, which form an important part of the food of these districts. The contractors' sales show a decrease of 30,810 Indian maunds, of which no less than 26,628 are attributable to less removals for the Panch Máháls, a falling off which has already been referred to.

Ahmedábád
depôt sales.

At the Khárághora works manufacture commenced on the 1st October 1876 and ended on the 31st March following. The salt is of very good quality, and, having been under brine for a period of five months, it is more than ordinarily compact and hard, and bears travelling well. Storage from the Agur began on the 24th March and finished on the 25th April, an unusually short time, which shows that the establishment worked hard, and deserves credit. The total crop was 893,997 Indian maunds, of which 402,450 were stored in the shed, 406,555 were heaped outside the shed, 39,766 were sold direct from the Agur, and 45,226 Indian maunds were forwarded direct from the Agur to the depôt at Ahmedábád. It will be noticed that the year's sales (830,793 Indian maunds) fall very little short of the year's produce (893,997 Indian maunds,) and, in view of the continued rise in the demand for Bárágara, it seems probable that a second large work in the Run may have to be opened at no distant date. The crop this year wholly escaped damage from both dust-storms and 'raich'; the precautions of draining and drying the pans after two months' working, as referred to in last year's report, having again been resorted to with complete success.

The season.

There is not much to notice in connection with the new village. The season has, on the whole, been a healthy one; there has been no crime, and the Agrias have continued to behave well. The bad water-supply is still the great difficulty. Government are aware of the vital importance to the prosperity of the place of good drinking-water, and it is hoped that before long some satisfactory measure may be adopted for improving the supply. No fewer than 47,000 head of cattle visited the main stores for salt in the course of the year, all of which had to be driven some miles to be watered during each

New village.

day of their stay. The advances made to Agrias for the maintenance of themselves and their families during the manufacturing season amounted to Rs. 6,242-10-8.

Smuggling.

The following table contrasts the results of the last three years' administration in respect to salt-smuggling cases:—

Salt-smuggling, 1873-74 to 1876-77.

Year.	Number of Cases.	NUMBER OF PERSONS.					Percentage of Convictions on Number of Persons sent up for trial.	Total estimated Value of confiscations.
		Arrested.	Released by the Department.	Sent up for trial before a Magistrate.	Convicted by the Magistrate.	Acquitted by the Magistrate.

1875-76	511	761	20	731	558	173	76	2,526
1876-77	482	669	33	636	490	148	77	1,678
Total.								
1873-74	1,301	955	39	916	775	141	84	7,653
1874-75	1,214	1,250	47	1,203	966	239	80	16,395
1875-76	1,118	1,310	29	1,281	1,051	230	82	12,424
1876-77	909	1,085	42	1,043	860	183	82.45	6,009

The number of cases is again considerably smaller, while the proportion of arrests to cases remains about the same as in last year. The percentage of convictions on the total number of persons sent up to the Magistrates is 82.27, almost exactly the same as last year. No serious affrays with smugglers took place.

EXCISE.

The following table shows the number of gallons excised and the duty realized at the distilleries managed by the Salt Department during each of the last five years:—

Names of Distilleries.	1876-77.		1875-76.		1874-75.	
	Gallons.	Amount of Duty.	Gallons.	Amount of Duty.	Gallons.	Amount of Duty.
		Rs. a. p.		Rs. a. p.		Rs. a. p.
Uran	459,426 4	7,16,144 8 9	618,708	6,60,804 5 2	585,503	5,96,109 6 10

Total	545,778 2	5,72,394 4 7	577,693 2	5,77,693 8 0

The realizations on this item, therefore, show an increase of Rs. 67,067-12-1 over those of the preceding year. This is owing to the still-head duty having been raised from one rupee to one rupee and twelve annas per gallon, in accordance with the desire of the Government of India that the duty on home-made and foreign imported spirits should, as far as possible, be assimilated. The tree tax was at the same time raised from Rs. 7 to Rs. 9. These measures were followed by a strike both of the Bombay toddy drawers and of the Uran distillers; and no liquor was exported from Uran from the 1st August to the 22nd October last. Five distilleries have been closed, owing to heavy losses sustained by the proprietors. As the subject of equally taxing the spirits made at Uran and Bombay is an extremely complicated and difficult one, a committee

Increased collections.

was appointed by Government to consider and report on certain questions connected with it. The matter is still under the consideration of Government, and it is unnecessary to refer further to it here. The number of gallons which paid still-head duty is 149,609 less than last year. It may also be added that part of the increase of revenue is owing to greater care in gauging on the part of the Uran establishment, as duty for excess strength has been recovered on more liquor proportionately than in former years.

Excise.

The question of the better protection of the *abkári* revenue in the Presidency is still under the consideration of Government. Eight statistical returns prescribed by the Government of India, regarding the incidence of the duty levied upon the consumption of spirit, fermented liquors, and drugs, filled up so far as the circumstances permit, are attached to this report. From the Accountant General's figures it appears that the actual excise revenue collected in 1876-77 amounted to Rs. 40,42,166, compared with Rs. 39,75,281 in 1875-76.

STAMPS.

The returns show a fall of Rs. 2,55,589 in the receipts from Receipts. stamps :—

Stamp Revenue, 1875-77..

	1875-76.	1876-77.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Income under General Stamp Act ...	18,11,052	18,09,527	...	1,525
Income under Court Fees Act ...	28,57,163	26,03,099	...	2,54,064
Total ...	46,68,215	44,12,626	...	2,55,589
Charges	5,31,449	2,20,170	...	3,11,279
Net Income ...	41,36,766	41,92,456	55,690	...

An examination of this statement would seem to show that on account of a saving in charges, in spite of the fall in receipts, the net revenue shows an increase. But this fall in charges from Rs. 5,31,449 to Rs. 2,20,170, or more than fifty per cent., is nominal, the result of the transfer to a separate account of charges on account of the process-serving establishment.

The decrease in foreign bill stamp receipts rises to 21·6 per cent. The fall was most marked in the city of Bombay. In Ahmednagar and Násik, probably, owing to the brisk trade in grain, there was an increase. India revenue and share stamps also fell, the decrease being equal to 5·9 per cent. In Bombay it was 21·7 per cent, and in Aden eighteen per cent. The decline in Bombay was probably due to smaller transfers of mill and other shares. In Aden the cause was the introduction of special stamps. Stamp receipts for *hundis*, or native bills of exchange, also decreased, but to a small extent, the average percentage being but 0·5. In other general stamps there was a decrease of 5·6 per cent. The gross receipts from bi-colour and denoted stamps were Rs. 13,88,128, and from court-fee stamps Rs. 25,96,346 against Rs. 13,69,918 and Rs. 28,51,511, respectively, in 1875-76. The reduction in court-fee stamps was due to diminished litigation.

The value of stamps sold for cash throughout the Presidency is as follows :—

General Stamps	Rs. 17,86,888
Court Fee Stamps	25,96,346
Total	43,83,234

thus showing that a little less than three-fifths of the stamps sold are court-fee stamps, and a little over two-fifths general stamps.

The realizations of stamp duty and penalties by civil courts and collectors on unstamped and insufficiently stamped documents were Rs. 19,404 against Rs. 19,079, or an increase of Rs. 325. Realizations from stamp duty and adjudication fees, under Section 39 of the General Stamp Act, were Rs. 2,878, contrasted with Rs. 3,026 in 1875-76 ; of this sum Rs. 2,702 were realized in the Presidency town alone. Realizations of stamp duty in pauper suits amounted to Rs. 6,753, compared with Rs. 5,651 in the previous year, Rs. 29-8-6 were obtained as cost of the new stamped paper granted in lieu of spoiled stamps. Other miscellaneous receipts amounted to Rs. 326.

Charges.

The charges show a very considerable decrease, being this year Rs. 2,20,170, compared to Rs. 5,31,448 in 1875-76, or 5 per cent, against 11·3 in 1875-76 on gross income. The causes of this have been already stated. Under the different heads there has been a decrease of Rs. 3,815 on account of discount ; but refunds amounted to Rs. 7,219, more than in the previous year ; while under miscellaneous charges, process-serving establishments, and one-third salary of the Registrar-General and Inspector of Stamps, there was a decrease of Rs. 3,14,681.

Stamp vendors are again more numerous than they were last year, being 1,123 compared with 1,104.

REVENUE AND FINANCE OTHER THAN IMPERIAL.

PROVINCIAL SERVICES.

The result of the Provincial Services transactions for the year 1876-77 is as shown in the margin, a surplus of Rs. 11,92,141 at the close of the year. But the whole of the public works expenditure incurred in the public works department, on account of the famine, remains to be adjusted.

The following are the explanations of the increase and decrease on comparing the actuals for 1876-77 with those for 1875-76:—

Allotment from General Revenues. Decrease Rs. 7,582.—This decrease is due to several additions and deductions sanctioned by the Government of India.

Jails. Decrease Rs. 11,382.—There is an increase of Rs. 4,824 on account of jail manufactures, and of Rs. 3,069 on account of recovery of transportation and jail charges from native states and colonial governments. The revenue under this head has also increased by Rs. 1,358 the amount of the receipts of the jail press during the year under report, the accounts of the press having been transferred from "Printing," under which they appeared in 1875-76, to "Jails." On the other hand, there is a decrease of Rs. 12,661 on account of hire of convicts, and of Rs. 7,972 on account of miscellaneous receipts for extra-mural convict labour. The result, therefore, is a net decrease of nearly 11½ thousand rupees.

Registration. Increase Rs. 26,152.—Of this amount Rs. 3,441 represent an increase in the realizations of registration fees, and Rs. 3,654 an increase in the miscellaneous receipts of the registration department, including penalties. The remaining Rs. 19,057 are the receipts during the year of the revenue record-room, the accounts of which have been transferred to this head from "Miscellaneous," under which they appeared in 1875-76.

Police. Decrease Rs. 2,80,272.—This decrease is due principally to the abolition of the practice which had hitherto prevailed of making nominal adjustments in the books on account of the pay of the police supplied to public departments, municipalities, railway, and other companies. The pay of these men is not, it may be mentioned, disbursed by the treasury officers, but by the superintendents of police, who receive it direct from the persons under whom the men happen to be employed.

Education. Increase Rs. 7,618.—There is a decrease of Rs. 5,962 due to certificate fees having been transferred to "Miscellaneous," and of Rs. 85 due to the sale proceeds of the book depôt in Sind having been transferred to a separate banking account. Again, popular contributions have decreased to the extent of Rs. 3,887. On the other hand, school fees have increased by Rs. 7,589, college fees by Rs. 268, the interest of funded capital by Rs. 580, municipal contributions by Rs. 1,558, and fines by Rs. 101; miscellaneous educational receipts have also increased by Rs. 7,456, the increase being due to a debit of Rs. 8,057, which was erroneously made against the provincial services in former years, having been written back to the Haidarâbâd local funds. The result of the fluctuations is a net increase of Rs. 7,618, as already stated.

Medical. Increase Rs. 2,189.—There is an increase of Rs. 1,650 on account of contributions, of Rs. 746 on account of fees from paying patients in lunatic asylums, of Rs. 1,259 on account of miscellaneous medical receipts, of Rs. 267 on account of the value of stores returned to the military department, and of Rs. 598 on account of realizations from garden produce and from articles manufactured in lunatic asylums, or a total increase of Rs. 4,520. From this, however, must be deducted a decrease of Rs. 290 on account of medical college fees, of Rs. 962 on account of interest on funded capital, of Rs. 513 on account of fees from paying patients in Government hospitals, and of Rs. 566 on account of the value of medicines sold by civil surgeons: total Rs. 2,331. The result is a net increase of Rs. 2,189.

Printing. Increase Rs. 1,835.—There is a decrease of Rs. 1,929 due to the transfer of the jail press receipts to "Jails." The sale proceeds of acts and regulations not being shown in the books under a separate head in 1876-77, as heretofore, but classified under each press under the minor heads "Sales of Gazettes and other Publications" and "Other Press Receipts," there is a nominal decrease on this account of Rs. 5,988. The receipts of the Commissioner in Sind's press have fallen short of last year by Rs. 1,044, and miscellaneous printing receipts by Rs. 709. There is thus a total decrease of Rs. 9,670, against which must be placed an increase of Rs. 515 on account of the High Court printing press, and of Rs. 10,990 on account of a large adjustment of the sale proceeds of law reports, and the arrears of printing work executed by the Government Central Press for the military department.

Miscellaneous. Decrease Rs. 14,175.—Certificate fees having been transferred from "Education" to this head, there is an increase of Rs. 7,479 on that account. On the other hand, the rent of civil buildings having been transferred to "Public Works," there is a decrease on that account of Rs. 533, and the revenue record-room receipts having been transferred to "Registration," there is another decrease of Rs. 10,753. Again the receipts on the following accounts show a decrease: fees for masonry graves and monuments (Rs. 1,006), fees for stamping weights and measures (Rs. 107), botanical gardens (Rs. 304), model farms (Rs.

1,174), sale proceeds of old records (Rs. 3,817), other heads (Rs. 1,255). The receipts under fees for inspecting and copying accounts also show a decrease of Rs. 2,705, mainly due to the adjustment of an old error.

Allotment from Local Funds. Decrease Rs. 2,000.—This decrease is due to the contribution from the local funds to the leper hospital at Ratnágiri having been transferred to "Medical," under which head the expenses of the hospital are debited in the accounts.

Public Works. Decrease Rs. 8,042.—There is a decrease under rents of buildings and lands (Rs. 1,553), fines, refunds, and sales of materials (Rs. 2,583), sales of buildings and land (Rs. 3,870), and miscellaneous (Rs. 4,722); total Rs. 12,728. On the other hand, there is an increase of Rs. 120 on account of sale of produce, and of Rs. 4,566 on account of sale of tools and plant, so that, on the whole, there is a net decrease of some eight thousand rupees, as already stated.

Expenditure. Explanations of the differences between the actuals of 1876-77 and those of the preceding year are as follows :—

Refunds. Increase Rs. 3,669.—There is a decrease on the following accounts : jails, Rs. 2,153; police, Rs. 131; education, Rs. 116; and public works, Rs. 642: total Rs. 3,042. Against this there is an increase of Rs. 2,455 on account of the registration department, of Rs. 2,002 on account of the medical department, of Rs. 461 on account of printing, and of Rs. 1,793 on account of miscellaneous refunds. This last increase is chiefly due to an adjustment of Rs. 2,089, the profits of the Lahej garden for 1875-76, to the credit of the military department. The increase in the refunds on account of the medical department was due principally to a refund to the Bombay municipality of Rs. 2,106, the difference between the municipal contribution towards the expenses of the Gokaldás Tejpál hospital and the actual expenditure on that institution during 1874-75.

Jails. Increase Rs. 17,769.—There is a decrease on the following accounts :—Common jail, Bombay, chiefly under rations and jail manufactures, Rs. 2,158; Yeroda central jail, Rs. 18,674; charges for prisoners under trial at the Presidency town, Rs. 567; charges for transportation of convicts, Rs. 3,220; total Rs. 24,619. The large decrease on account of the central jail is chiefly due to the circumstance that in 1875-76 the central jail expenses were greatly swelled by the adjustment of the military pay, from December 1872 to January 1875, of Dr. Wiehe, the officer in medical charge of the jail. The items of increase, Rs. 7,785, under district jails, and Rs. 9,672 under lock-ups are chiefly on account of rations; Rs. 1,848 under inspection and general superintendence, and Rs. 345 under civil jails, chiefly on account of establishments; Rs. 1,765 under house of correction, chiefly on account of jail manufactures; Rs. 6,549 under subordinate district jails, chiefly on account of establishment and rations. Besides the maintenance charges of the boys in the Sassoon reformatory institution

having been transferred to this head from "Education," and the jail press charges from "Printing," Rs. 13,665 on account of the former, and Rs. 759 on account of the latter, have been debited under jails in 1876-77. Altogether, therefore, the increase amounts to Rs. 42,388; and, if we deduct from this sum the decrease of Rs. 24,619 shown above, we find that there is a net decrease under jails of Rs. 17,769.

Registration. Increase Rs. 15,378.—The revenue record-room accounts having been transferred to this head from miscellaneous, the expenses of the room during 1876-77, Rs. 7,460 go to form a part of the increase. The rest of the increase is due principally to the payment of arrears of salary.

Police. Decrease Rs. 1,43,217.—The practice of making a nominal adjustment in the books, on account of the pay of the police supplied to public departments, having been abandoned, as already stated, the police expenditure shows a decrease on this account of Rs. 2,52,988. The expenses of the village police maintained under Act VII. of 1867 are less this year by Rs. 6,439, and those of the Bombay city police by Rs. 465. There is, thus, a total decrease of Rs. 2,59,892, from which must be deducted Rs. 1,16,675 on account of increase under other items, chiefly the following: allowances to heads of village police and watchmen, increase Rs. 21,076; grants in land and villages to heads of village police, increase Rs. 18,721; grain compensation to village police in the famine districts, increase Rs. 18,334; and salaries, accoutrements of the district executive force, increase Rs. 54,713.

Education. Decrease Rs. 38,537.—There is an increase of Rs. 18,752 on various accounts, as follows:—Elphinstone college, Rs. 3,669; Deccan college, Rs. 5,974; normal schools and training colleges, Rs. 1,038; grants-in-aid to schools under the system of payment by results, Rs. 6,936; other heads, Rs. 1,135. On the other hand, there is a decrease of Rs. 57,289, which is thus accounted for: Rs. 5,656 under inspection, chiefly on account of salaries of inspectors; Rs. 7,878 under middle class schools, due to a revision of establishments; Rs. 1,131 under scholarships and prizes; Rs. 780 under book depôts, chiefly on account of revision of establishments; Rs. 20,247 under grants-in-aid for school buildings; Rs. 1,200 under allowances to educational institutions, due to the discontinuance of the contribution to the Alexandra institution, Bombay; Rs. 12,930 under maintenance charges of boys of the Sassoon reformatory institution, the charges in question having, as already stated, been transferred to jails; and Rs. 7,467 under various other heads. On the whole, therefore, there is a net decrease of about Rs. 38,500.

Medical. Increase Rs. 15,179.—There is a decrease of Rs. 9,352 on account of the sanitation and vaccination departments, due to these two departments having been amalgamated; a decrease of Rs. 1,426 on account of the Gokaldás Tejpál hospital, chiefly under diet and clothing; and a decrease of Rs. 1,519 on other accounts—total Rs. 12,297. On the other hand there is an increase of Rs. 27,476, made up of Rs. 3,005 on account of the Grant medical college, chiefly due to increased expenditure

under scholarships, stipends, chemicals and instruments ; Rs. 8,169 on account of the Sir Jamsetji Jijibhai hospital ; Rs. 2,961 on account of the European general hospital at Bombay ; and Rs. 4,326 on account of lunatic asylums, chiefly due to increased expenses on diet and clothing ; Rs. 7,159 on account of hospitals and dispensaries in the mofussil ; and Rs. 1,856 on other accounts. On the whole, therefore, there is a net increase of nearly Rs. 15,200.

Printing. Increase Rs. 24,083.—There is a decrease of Rs. 1,563 due to the jail press accounts having been transferred to jails ; while, on the other hand, there is an increase of Rs. 23,644 on account of the Government Central Press at Bombay, and of Rs. 2,002 on other accounts ; so that the result is a net increase of about Rs. 24,000.

Marine. Increase Rs. 804.—This increase is on account of the establishment and other charges of the marine branch of the office of the Deputy Surgeon-General, Presidency division, which have been transferred from minor establishments to this head.

Minor Establishments. Decrease Rs. 272.—This is a trifling decrease which calls for no special remark.

Office Rent, Rates and Taxes. Decrease Rs. 14,191.—This decrease is due to the fact that the expenses of 1875-76 were greatly swelled by the payment of certain arrears of water-rate.

Miscellaneous. Increase Rs. 1,23,748.—In the accounts of 1875-76 an adjustment of Rs. 50,000 was made against provincial revenues (subsequently to the publication of the last report) on account of the expenditure incurred in connection with the Ahmedabad floods, and in 1876-77 a further adjustment of Rs. 2,03,540 was made on the same account ; so that there is an increase this year of Rs. 1,53,540 under adjustments on account of the floods. On the other hand there is a decrease of Rs. 29,792. There is no sum in the accounts of 1876-77 to correspond to the Rs. 12,500 paid to the officers and men of the Bombay police on account of their praiseworthy conduct during the visit of His Royal Highness the Prince of Wales to Bombay. The revenue record-room accounts having been transferred to registration, no charges for the improvements of revenue records appear under miscellaneous in 1876-77 as they did in the preceding year, so that there is a decrease on this account of Rs. 4,250. There are also various other items of decrease, amounting altogether to Rs. 13,042. The result of all these fluctuations is a net increase of nearly Rs. 1½ lakh.

Allotment of Local Funds. Decrease Rs. 1,846.—This decrease is chiefly due to a smaller allotment having been made to district educational funds.

Public Works. Decrease Rs. 1,56,987.—There is a decrease of Rs. 1,48,219 on account of the expenditure by public works officers ; also a decrease of Rs. 8,768 on account of the expenditure by civil officers on petty construction and repairs. The total decrease, therefore, amounts to more than 1½ lakh of rupees, as already stated.

LOCAL FUNDS.

The receipts and expenditure in connection with the several Result. classes of local funds are shown in the following statements:—

Local Funds Receipts, 1876-77.

Head.	Receipts.		Increase.	Decrease.

LOCAL FUNDS.

As the Káttýwár local funds have been transferred to deposits, no receipts or disbursements for 1876-77 are shown in the tables. This explains the large decrease shown against them. The other principal items of increase and decrease are thus accounted for:—

Receipts.

Indus Conservancy Funds. Increase Rs. 9,403.—There is an increase in the collections of fees recoverable from vessels plying on the river.

Cantonment Funds. Increase Rs. 15,418.—The increase is due to some of the cantonment committees having received the Government grant for 1875-76 in 1876-77.

Public Works Tolls Fund. Increase Rs. 25,238.—The increase is due to an improvement in the toll collections on provincial lines of road.

District Road Fund. Decrease Rs. 3,17,439.—There is a fall in the receipts under the following heads:—

	Decrease.
Taxes, rates, and cesses	Rs. 2,23,100
Miscellaneous fees and fines	" 25,500
Contributions... ..	" 49,100
Advances recovered	" 84,980
Total	<u>Rs. 3,82,680</u>

On the other hand there is an increase of Rs. 57,000 under sundry receipts, and of Rs. 8,250 under other heads; so that, on the whole, there is a decrease of nearly 3½ lakhs of rupees.

Bária Tribute Fund. Decrease Rs. 24,806.—The decrease is due to the contributions on account of works in the Bária state having fallen off.

Esplanade Fee Fund. Decrease Rs. 62,399.—There is an increase of Rs. 17,750 under miscellaneous fees and fines; while, on the other hand, there is a decrease of Rs. 60,400 on account of sale proceeds of stores, and a further decrease of Rs. 19,750 on account of rent of land for storing cotton; so that, on the whole, there is a decrease of nearly two-thirds of a lakh.

Station Improvement Fund. Decrease Rs. 60,240.—The decrease is due to the transfer of the Rájkot station fund to deposits.

Dispensary Funds. Decrease Rs. 3,919.—The decrease is mainly due to the transfer of the Káttýwár district dispensary fund to deposits.

Minor Funds. Decrease Rs. 4,074.—This decrease is due to the transfer of the Mahi Kánta local funds to deposits.

District Educational Fund. Decrease Rs. 1,91,974.—There is an improvement under some of the minor heads to the extent of Rs. 5,900; but, on the other hand, there is a large decrease under the following heads:—

	Decrease.
Educational cess	Rs. 91,500
Contributions	" 35,100
Miscellaneous receipts	" 59,400
Advances recovered	" 11,900
Total	<u>Rs. 1,97,900</u>

Charges.

District Road Fund. Increase Rs. 63,094.—There is an increase of Rs. 2,30,800 under public works, and of Rs. 17,000 under loans; on the other hand, the disbursements have decreased under the following heads:—

	Decrease.
Refunds	Rs. 1,00,900
Medical	" 6,700
Cattle-pounds	" 6,200
Advances	" 71,000
	<hr/>
Total Rs.	1,84,800

Cotton Improvement Fund. Increase Rs. 15,092.—The figures for 1875-76 were very low, principally because the Inspector-in-Chief of the cotton department having gone to Europe on furlough, his appointment was not filled up until some months after his departure.

Port Funds. Increase Rs. 1,86,427.—The increase is for the most part thus made up—

Refund, under the orders of the Government of India, of the port dues levied at Bombay, Kurrachee, and Aden on transports of the Abyssinian Expedition]	Rs. 74,975
Law charges in connection with the pilots' claims against the late Bombay port fund and amount paid to the pilots under decree of the High Court... ..	" 1,03,231
Increase in the cost of stores purchased and on other accounts	8,000
	<hr/>
Total Rs.	1,86,207

Cantonment Funds. Increase Rs. 26,895.—There is an increase in the expenditure on public works. Besides certain Government grants for 1875-76 not having been drawn in that year, but in 1876-77, as already stated, the expenditure against those grants was adjusted in the accounts of the latter year.

Public Works Tolls Fund. Increase Rs. 22,347.—An increased amount had to be transferred to the public works department in consequence of the improvement in the toll collections on provincial lines of road.

School Funds. Increase Rs. 6,048.—There is an increase in the charges of the Ahmedábád *tálukdári* and female schools.

Scholarship and Prize Funds. Increase Rs. 15,082.—The increase is due to the investment in 1876-77 of the balances of some of the funds.

Bária Tribute Fund. Decrease Rs. 17,290.—The contributions on account of works in the Bária state having fallen off, the expenditure on the works was also less.

LOCAL FUNDS.

Infanticide Fund. Decrease Rs. 6,283.—There is an increase in the donations for marriage expenses, amounting to Rs. 4,000; the amount invested in Government securities has also increased by Rs. 7,000. On the other hand, the Káttýwár infanticide fund having been transferred to deposits, there is a decrease of Rs. 17,200.

Station Improvement Funds. Decrease Rs. 1,59,454.—This decrease is due to the transfer of the Rájkot civil station fund to deposits.

Dispensary Funds. Decrease Rs. 18,285.—The decrease is due to the Káttýwár district dispensary fund having been transferred to deposits.

District Educational Funds. Decrease Rs. 1,20,422.—There is an increase under several headings of Rs. 1,750. On the other hand there is a decrease of Rs. 7,000 under advances, and of Rs. 1,15,200 under refunds.

Minor funds. Decrease Rs. 95,357.—The accounts of 1875-76 were greatly increased by various large debits, and principally those on account of the balances of the Káttýwár local funds transferred to deposits.

Particulars regarding the collections and expenditure in the different collectorates of the Presidency on account of that portion of the local funds which is known as public works local funds, will be found in B (1)—Part V. of the statistical returns.

ROAD CESS—EDUCATION CESS.

There is no separate road-cess in this Presidency. The construction and repair of roads is met from the local funds. The expenditure of the one-third of the one-anna-cess on the land revenue devoted to education will be found explained in the chapter on instruction, where such revenue is included in the general receipts of the education department.

MUNICIPAL REVENUES.

Municipal matters having been commented on earlier in this report, nothing need be added here, except to call attention to the statement of receipts and expenditure of municipal revenue contained in the statements B (2)—Part V. at the end of the report.

Diarrhœa accounts for 7,978 cases compared with 7,445 in the previous year. The number recorded for the Poona division is 2,189, or only six more than in the preceding year. Of dysentery 4,832 cases were treated, nearly the same number as in 1875-76. In the Poona division there was an increase of 191 over the previous year. The above figures would seem to show that, at least up to the end of March so far as civil-hospital patients are concerned, the scarcity in the Deccan had caused but little rise in bowel complaints.

There were 25,662 in-door patients admitted, who, with 1,346 that remained in hospital from the previous year, make a total treated of 27,008. Of these 21,258 were discharged cured; of the rest some absconded, some were removed by their friends, and some were discharged for misconduct. The deaths numbered 2,252, and at the close of the year 1,457 patients still remained under treatment. The daily average sick was 1,379·9, while the death-rate was 8·3 per cent. Of the total number of in-door patients 21,652 were males, 3,541 females, and 1,815 children, of both sexes; or a percentage, respectively, of 80·2, 13·1, and 6·7. Seven per cent of the total treated were Europeans, 51·4 Hindus, 28·7 Muhammadans, and 2·6 per cent Pársis.

The out-door patients admitted during the year numbered 233,874, making with 3,886 who remained from the previous year, a total of 237,760. Of these 212,816 were discharged cured, 20,845 ceased to attend before the results of treatment were known, 452 are ascertained to have died, and 3,647 remained at the end of the year. Of the total out-door patients 123,684 were males, 50,688 females, and 63,388 were children of both sexes. The rate per cent of each to total treated was 52·0, 21·3 and 26·7, respectively. The percentage of Europeans was 1·4, of Hindus 59·3, of Muhammadans 31·8, and of Pársis 3·7, almost the same figures as for the previous twelve months.

A comparison of the numbers treated during the last two years shows for 1876-77 an increase of 151 in-door and 6,709 out-door patients. But this rise is only a nominal one; there has been really no change. Exclusive of Bhuj civil hospital returns, in-patients are increased by 1,576, out-patients by 4,131. Taking the two classes of patients together, there has been a fall in the Presidency division of 1,264 and in Poona of 1,264; in the Northern division the total is increased by 3,077. In Sind, on the other hand, there is a rise of 5,234.

Amongst the more important surgical operations were 300 cases of abdominalotomy, with nineteen deaths, a mortality equal to 6·3 per cent in the Presidency division thirty-eight of the cases occurred, the death-rate being 7·8 per cent. There were 70 operations in the Northern division, but no deaths; in the Northern division 98 and in Sind 94 stone cases were operated on, with percentages of mortality of 9·1 and 7·4, respectively. Vesical calculus, as shown by the returns, occurs most frequently, or rather is endemic at Aden; at Dhulia, Poona, and Sátára, in the Deccan; at Rájkot and Bhuj in the Northern division; and at Haiderábád and Sukkur in Sind. Of six cases of amputation at the shoulder-joint, four died. There

were twenty-six amputations of the arm and forearm, with one death. Seven of the thigh were performed, also with a single death; while there were sixty-two of the leg, with fatal results in eight cases.

Expenditure.

The total expenditure for the year under report was Rs. 7,51,149-10-8 compared with Rs. 7,27,461-1-7 in the previous year, or an increase of Rs. 23,688-9-1. This increase was confined to the Presidency and Poona divisions. In the Northern division and Sind the total cost was less by Rs. 2,023-2-5 and Rs. 388-2-9, respectively. In the first-named division the increase amounted to Rs. 18,204-9-3, and was due principally to a greater expenditure on the diets, wines and spirits, medicines, and miscellaneous items for the Presidency hospitals. The average cost of each diet for in-door patients was As. 3-7, contrasted with As. 3-4 for the year previous. Taken according to divisions, the cost per diet was for the Presidency As. 5-1, for Poona As. 3-4, for the Northern division As. 2-3, and for Sind As. 3-8. The corresponding figures for 1875-76 were As. 4-8, As. 2-11, As. 2-2, and As. 3-8. The average cost per patient was Rs. 3-1-9 against Rs. 2-14-9 in the previous year.

Receipts.

Receipts from paying patients came to Rs. 13,652-9-2, or less by Rs. 2,373-0-3 than in the previous year. The contributions from local funds amounted to Rs. 1,143-1-8 and the grants from municipalities and railways to Rs. 44,228-9-8, or an increase of Rs. 51-1-8, and a reduction of Rs. 848-14-6, respectively. Of the municipal grants, Rs. 36,000 are received from the Bombay municipality towards the maintenance of the Gokaldás Tejpal hospital.

DISPENSARIES.**Number.**

The 129 dispensaries in the Bombay Presidency are classified into grant-in aid, endowed, Government, and native state dispensaries. Of these the first class are supported partly by a Government grant, and partly from local or municipal funds; the second are maintained by the interest derived from permanent endowments; the third are entirely kept up by Government; and the whole cost of the fourth class is borne by the native states in which they are located. One or two of the grant-in-aid dispensaries also possess some invested capital. The total number of all classes, open at the beginning of the year, was 122, consisting of ninety-nine grant-in-aid, eight endowed, nine Government, and six native state dispensaries. These were increased during the year by the opening of seven new grant-in-aid institutions, six of which are in Poona and one in the Presidency division, and one native state dispensary at Bānsda near Surat. Besides those enumerated above, there are several dispensaries in Káttýwár and one at Pálanpur, over which no control, save that of the political officers and state authorities, is exercised.

Patients.

The total in-door sick numbered 5,876 compared with 5,605 in the preceding year. Of these 5,024 were discharged cured, seventy-five were relieved, 142 absconded were removed by friends or discharged for misconduct, and 439 died. The ratio of deaths

per cent to total treated was 7·3 ; in the previous year it was 6·7, and the total mortality 378. The highest death-rate 10·8 occurred in the Poona division, and the lowest 5·9 in Sind. The numbers treated, taken by divisions, are for the Presidency 693, for Poona 1,231, for the Northern division 1,747, and for Sind 2,205. The figures for the year previous were 648, 986, 1,923, and 2,048, respectively. The daily average number of in-patients under treatment was 241·3 against 251·5 in the previous year ; of this daily average 202·1 were men, 28·6 women, and 10·6 children. The total number of out-door patients treated was 578,667 with an average daily attendance of 6,379·9. The figures for the previous year were 552,014 and 6,072·4, respectively. Of the total out-door treated 558,090 attended personally, while 20,577 are returned as having been represented by friends. The total number of patients treated, in-door and out-door, collectively, was 584,543, compared with a total of 557,619 in the preceding year.

The chief diseases are malarious fevers. The number treated for these maladies was 121,354, or 20·7 per cent of the whole number of patients. In the preceding year the treated and percentage were 112,144 and 20·1, respectively. According to divisions the number treated for malarious fevers was highest in the Presidency, being 36,287, while the percentage to total treated was 23·0. Poona gives 30,481 with a percentage of 17·4, the Northern division 22,109 and a percentage of 15·3, and Sind 32,477, the percentage to total treated being 29·7. The percentages for the previous year were for the Presidency 23·6, Poona 18·9, for the Northern division 15·3, and for Sind 24·0. In the latter division the increased prevalence of malarious affections is attributed to the annual inundations having been more extensive than usual. As regards eruptive fevers, only sixty-nine cases of small-pox are recorded, forty-four of them in Sind. Of cholera, 2,797 cases were treated at dispensaries, compared with 5,687 cases in the preceding year. Though the disease visited Sind no mention, of it is made in the dispensary returns from that province. There would seem to be a general concurrence of opinion as to the great and increasing prevalence of venereal diseases among the natives of this country. The dispensary returns in no way indicate the extent to which these diseases exist. The total treated for the whole Presidency is only 7,030, a few less than in the previous year, and the percentage to total treated for all diseases is 1·2 ; that for Sind, where syphilis appears to be most common, is 1·5. Many cases of disease entered under other headings are, doubtless, attributable, either directly or indirectly, to syphilis. The number of lepers treated does not differ much from that of other years. The total was only 516. As far as dispensary figures are a guide, the disease would appear to be met with oftenest in the Konkan and Gujarát. Only 502 cases of phthisis were treated, the percentage to total treated being 0·08. Of these 246 are returned from the Presidency division, where the percentage to total treated was 0·15. In the Deccan the disease is comparatively seldom seen in dispensary practice. Ophthalmia accounts for a large number of cases, no less than 33,886, a percentage to total treated

of 5·7. It is probable, however, that these figures are not quite correct, many other eye-diseases having, no doubt, been included under this heading. The affection is commonest in Sind, where 11,023 cases were treated, a percentage on the total for all diseases of 10·0. In the Poona division the percentage was 6·0, and in the Presidency only 2·7. Sixty-seven cases of goitre presented themselves for treatment; of these seven occurred at Ránder near Surat, and three at Balsár. In the Poona division twenty-four were seen at Belgaum, ten at Athni, and five at Sátána. Only one case was observed in the Northern division, at Ahmedábád. In Lower Sind the returns show seven cases. Dysentery cases numbered 10,771, and diarrhœa cases 17,183, compared with 10,431 and 16,546, respectively, for the year before. The enormous number of cases treated for intestinal worms in the Presidency and Poona divisions is worthy of notice—10,854 and 17,174, respectively, out of a total of 30,712. The parasites are generally round worms, and their frequency is, doubtless, due to the dirty habits of the people and to the common practice of eating unwashed vegetables. It is probable that many of the cases entered as diarrhœa are cases of worms, and there is good reason to believe that the symptoms in numerous cases returned as cholera are also due to intestinal parasites. In some parts of the Deccan the belief is entertained by the people that cholera is caused by a species of round worms.

Operations.

The number of minor surgical operations was 27,858 and of major operations 783. Compared with the percentage of major operations among the in-door patients of civil hospitals, that for dispensaries is more than twice as great. Taken according to divisions, the proportion of major operations to total treated is, in the Presidency 0·08, Poona 0·1, the Northern division 0·15, and Sind 0·2 per cent. The number of major operations would seem to depend, to a very considerable extent, on the amount of in-door accommodation available; in proportion to the number of patients this is greater in Sind than in the other divisions. In Sind, too, consequent on the prevalence of calculus, it is probable that a relatively large percentage of patients requiring operations apply for treatment at the dispensaries. There is no doubt that, were the in-door dispensary accommodation everywhere increased, the numbers applying for relief in surgical cases would rise considerably.

Of eight amputations of the arm and fore-arm all recovered. In five amputations of the thigh one case proved fatal, and in eight of the leg there was also one death. Fifteen obstetric operations were performed, seven of which were craniotomy. The only other operations of importance were those for the removal of vesical calculus. Lithotomy was performed in 102 instances, and lithofrity in one. The total number of cases treated, including eight which remained from the previous year, was 110. The death-rate for lithotomy was nine per cent. About one-half of the patients operated on, were below the age of twenty, many of these being children from four to ten.

The amount of trust put in dispensaries is fairly shown by the number of female patients: the proportion of women amongst the

total average daily attendance is 20·0 per cent for the year under report; that for the previous year was slightly less. The ratio of female attendance is highest, 23·2, in the Presidency division, and lowest, 16·2, in Sind.

Excluding endowments and floating balance, the total actual income amounted to Rs. 2,86,013-12-0 compared with Rs. 2,53,270-9-1 in the preceding year. The total sum contributed by Government was Rs. 1,50,811-6-11, the grant for the previous year having been Rs. 1,40,954-4-9; the amount received from municipal and local funds and from a few miscellaneous sources was Rs. 1,21,572-11-11, and that accruing as interest on endowments or invested capital Rs. 11,318-4-8. The subscriptions from Europeans came to Rs. 1,320-8-0, and from natives to Rs. 990-12-6; of the former sum Rs. 1,298-8-0 were collected at Mhow for the Dorabji Pestonji dispensary. The total invested capital amounted to Rs. 2,47,718-3-0 compared with an aggregate of Rs. 2,28,196-14-9 for 1875-76. The increase is due to the handsome donation of Rs. 20,000 contributed by the Pársi community at Aden towards the establishment of the Prince of Wales' dispensary. A small decrease occurred in the invested capital belonging to the Bándora dispensary, and an increase of Rs. 459-0-7 in the capital fund of the Dorabji Pestonji dispensary at Mhow. The floating balance, on the 1st of January 1876, amounted to Rs. 29,687-10-7.

Receipts.

The total expenditure for the year reached Rs. 2,72,039-7-11, or an increase on that for the preceding year of Rs. 30,319-14-9. The following are the chief items of increase. Seven new grant-in-aid dispensaries were opened; the cost of establishment was greater by Rs. 9,053-15-2, partly in consequence of the new dispensaries and partly on account of increase of salaries on promotion; European medicines cost more by Rs. 4,254-4-10; the expenditure on miscellaneous charges increased by Rs. 6,619-4-5, and that on building and repairs by Rs. 8,870-15-8. The excess on the latter is mainly due to Rs. 2,786-7-0, the cost of a new dispensary building at Gadag, and of a new building and repairs at Sukkur, the total cost in the latter case having been Rs. 6,788-4-8. The balance in hand on the 31st of December, excluding endowments, was Rs. 43,661-14-8.

Expenditure.

The average cost of each diet for in-door patients was As. 2-5, one pie more than last year; the highest, As. 2-10, occurred in the northern division, and the lowest, As. 1-10, in Sind. The average cost per patient of total treated was As. 7-11, that for the Presidency division being As. 9-3, Poona As. 8-2, the Northern division As. 5, and for Sind As. 9. The figures, according to divisions in the preceding year, were As. 8-8, As. 7-5, As. 4-11, and As. 7-5, respectively, and the average was As. 7-5.

LUNATIC ASYLUMS.

During the year 1876 there was a decrease in the total number of insanes from 874 to 846, of whom 697 were males and 149 females. The number discharged was the same, 228, as last year,

Insanes.

and of these ninety were cured compared to ninety-one in 1875, 125 transferred to friends, and thirteen escaped, or were transferred to other asylums. The total mortality was thirty-six, compared with seventy-eight last year; while there was an increase of the number of inmates remaining from 568 to 582, of whom 469 were males and thirteen females. The total admissions of all classes and castes were 278, of whom eighty-four were Europeans, four being females, sixty-seven soldiers, and four sailors.

Criminal.

Criminal lunatics numbered 109 during 1876, or eight less than in 1875. At the end of the year eighty male and four female criminal lunatics remained in the asylums. The rest were cured, transferred to the non-criminal class, removed by friends, or dead.

Causes of insanity.

So far as ascertainable, the chief physical causes of insanity were *gánja* (147), alcohol (forty), hereditary (thirty-six), epilepsy (twenty-seven), starvation (eighteen), and opium (ten); while grief (fifty-two) and religious excitement (ten) were the two principal moral causes. Ague, dysentery, and diarrhoea were, as last year, the main sources of bodily sickness, by far the greatest percentage of admissions to hospital being at the Kolaba asylum.

Cost.

The total amount received from the treasury was Rs. 92,110, from which has to be deducted Rs. 8,315, made up of sums paid into the treasury on account of lunatic labour, and stoppages of pay of European soldiers, thus leaving the net cost to the state at Rs. 83,795, or about Rs. 2,541 more than in 1875. The average cost of each lunatic was Rs. 143, compared with Rs. 148 in the previous year, the greatest reductions being in Poona and Ahmedábád.

Occupation.

The total credit and profit on employment and manufactures has somewhat increased, but Government do not look to the money-gain so much as to the great benefit derived by the lunatics from employment. The occupations provided were much the same at all asylums as last year, except in Haidarábád, where the inmates have built two good walls, and constructed four latrines.

Sanitation.

The reasons which led to the amalgamation of the Sanitary and Vaccination Departments were stated in last year's Administration Report. The actual transfer did not take place till November 1876.

The following is a short summary of the general history of Cholera. the chief diseases during the year 1876. In 1876, among the civil population of this Presidency, 17,559 males and 14,558 females, or a total of 32,117 persons, are recorded to have died from cholera. This number, large as it is, is still 15,438 less than in the preceding year, when 47,555 deaths were registered. The mean annual ratio during the preceding ten years was 15,896; so that the epidemic of 1876 was an extremely severe one. The ratio of recorded deaths to assumed population was 1·90 per mille, the ratio of male recorded deaths to assumed male population being 1·99, and that for females 1·81. In the Násik, Ratnágiri, Kolába, and Surat collectorates, and in the city of Bombay, the female death-rate exceeded that of the male, but in all the other districts the heaviest death-rate is found among males. Sind almost entirely escaped; but cholera was more or less prevalent in every district of the Northern Deccan, while the Konkan and Gujarát suffered severely, and in the Southern Márátha Country, and especially in the Kánárese-speaking districts, the disease committed great ravages.

The cholera during the year under report must be considered to form a portion of a great epidemic which, starting at Násik in March 1875, continued to the end of that year, when it somewhat subsided on the setting in of the cold weather. In the hot and rainy months of 1876 the disease broke out afresh, and although hopes were once more entertained that it was dying out on the approach of the cold season, at the close of 1876 it was again becoming rapidly more fatal. The town circles, as a rule, suffered most severely. At Athni, a large town in the Belgaum collectorate, with an assumed population of about 12,000 persons, the rate was the very high one of 18·74 per mille. Pandharpur follows with a rate of 14·65 per 1,000, and Viramgám, out of an assumed population of 20,461, lost 11·58 per 1,000 from this disease. The following table shows the towns, in order of prevalence, where the deaths exceeded one per 1,000 of population:—

Cholera in Towns, 1876.

District.	Town.	CHOLERA.		Ratio per 1,000 of Population.
		Population.	Deaths.	
Belgaum	Athni	12,059	226	18.74
Sholápur	Pandharpur	16,935	243	14.65
Ahmedábád	Viramgám	20,461	237	11.58
Thána	Kalyán	13,324	92	6.90
Sátára	Wai	11,510	79	6.86
Dhárwár	Gadag-Betigeri	19,807	120	6.06
Belgaum	Gokák	13,125	69	5.26
Kolába	Alibág	5,695	28	4.92
Dhárwár	Hubli	39,504	159	4.02
Dhárwár	Ranibennur	12,095	39	3.22
Belgaum	Belgaum	28,041	79	2.82
Ahmedábád	Ahmedábád	121,620	310	2.55
Kaira	Kapadwanj	14,549	36	2.48
Thána	Thána	14,879	33	2.22
Sholápur	Sholápur	55,571	145	2.06
Dhárwár	Dhárwár	28,238	57	2.00
Sholápur	Bársi	19,316	34	1.76
Surat	Surat	111,500	153	1.37

The highest number of deaths was recorded in the month of May, when 5,312 were registered, and the lowest in November, when 833 took place. During January its ravages were confined to the following nine registration circles: Belgaum, Dhárwár, Kaládgi, Kánára, Ratnágiri, Bombay, Thána Surat, and Ahmedábád. In February a general increase took place, except in Bombay, where there was not a single case, and in Thána where the disease was dying out. In March the epidemic still further increased, 3,519 deaths being reported against 1,453 in February. In Belgaum 454 deaths were reported against 193 in the previous month; in Dhárwár they were more than doubled, 1,797 against 834; in Kaládgi 459 deaths were reported against 80 in the previous month. Two deaths occurred in Bombay, but not one at Thána. In Surat the number of deaths increased from fifty to 112, and in Ahmedábád from seventy-nine to 427. The disease made its first appearance in Kaira, where one death was reported. In April the increase continued, 3,773 deaths being recorded. A rise is observed in Belgaum, but it began to decrease in Dhárwár, 1,081 deaths being reported against 1,797 of the previous month. A serious increase, however, took place in Kaládgi, 889 deaths being registered against 459 in the previous month; in Kánára also an increase is noticed; but in Ratnágiri a satisfactory decrease is shown, as only twelve deaths are reported against seventy-nine in March. No deaths took place in Thána, but a large increase occurred in Ahmedábád, and in Kaira from one during the previous month 176 deaths are recorded. In May the disease attained its maximum intensity for the year, 5,312 deaths having been registered in the Presidency. It attained its maximum in Belgaum, 1,077; in Kaládgi, 1,575; in Surat, 390; but it was on the decline in Dhárwár, where it fell to 643, in Kánára to 100, in Ratnágiri to two, and in Ahmedábád to 632. It re-appeared during May in Thána, two deaths having been reported, and appeared

for the first time in four fresh registration areas in Sholápur, where twenty-five deaths were reported; in Broach 135, Panch Máhals 109, and in Thar and Párkar eight fatal cases occurred. In June there was a decrease of 1,144 deaths. The totals fell in Belgaum to 794, in Dhárwár to 486, in Kaládgi to 968, in Kánára to eighty-eight, in Surat to 151, in Ahmedábád to 387, in Kaira to 388, in Panch Máhals to seventy-six; they slightly increased in Ratnágiri and Bombay, and to a serious extent in Thána, where 196 deaths were reported. In Broach the increase was 190, and in Thar and Párkar fifty; whilst the diseases appeared for the first time in Poona and Sátára, twenty-one and 259 deaths being, respectively, registered in these collectorates. In July the general total shows an increase of 255. The disease was gradually dying out in the Kánárese-speaking districts, 385 deaths being reported in Belgaum, 160 in Dhárwár, 612 in Kaládgi; in Kánára also only twelve deaths occurred. But in Bombay it had increased to 119, and in Sholápur it attained its maximum intensity, 1,094 deaths being reported from that collectorate, and also in Broach, where 313 deaths were registered. In Poona it had increased to 157, and in Sátára to 816, the highest number in the year. In three collectorates, Násik, Ahmednagar, and Kolába, it appeared for the first time, the number of deaths being, respectively, sixty-one, 111, and eleven. In August the deaths in the aggregate were 3,371, or 1,052 less than in the preceding month. A still further fall is observed in all the Kánárese-speaking districts. In Ratnágiri it increased to thirty, in Thána to 256, and in Bombay to 141, the maximum for the year. In Ahmedábád it rose from ninety-three in the previous month to 415; but only twelve deaths were reported in Kánára, and in Sholápur a satisfactory fall to 503 is noticed; in Broach only 105 deaths were reported. The disease was on the increase in Poona, Násik, Ahmednagar, and Kolába collectorates, but had fallen in Sátára to 503, and it appeared for the first time in Khándesh, where three deaths were reported. In September a further fall was noticed, 1,421 deaths having occurred against 3,371 of the previous month. In Belgaum the minimum of the year, forty-two deaths, was reached. A large increase took place in Dhárwár, the deaths having risen from sixty-one to 155; but in Kaládgi only twenty-nine deaths were recorded. It disappeared from Ratnágiri and Kánára, and in Bombay fell to sixty-four; in Thána to ninety-seven; Surat to twenty-six; Ahmedábád to sixty-four; Kaira to two; Sholápur to 154; Broach to three. The Panch Máhals and Thar and Párkar were entirely free, and in all the remaining collectorates, except Ahmednagar, where it rose to 442, a decided and satisfactory fall is observed. In October a still further fall took place, only 858 deaths being registered in the Presidency; but a decided increase was observed to be taking place in the Kánárese-speaking collectorates above the Gháts, though in all the remaining districts it appeared to be gradually dying out, and was entirely absent in Kánára, Kaira, Broach, Panch Máhals, Thar and Párkar, and Kolába. In November cholera reached its minimum for the year, only 833 deaths having been reported throughout the Presidency. A slight decrease took place in Belgaum and Kaládgi, though 280 deaths were re-

gistered in Dhárwár against 162 of the previous month. It re-appeared again in Kánára, 30 deaths having been reported. A large increase also took in Sholápur, 170 deaths having been registered against ninety-eight of the previous month, and in Poona eighty-eight deaths were recorded against forty-six in October. Its ravages were confined to ten collectorates, in five of which it was speedily decreasing. The hopes that had been entertained, that the disease would die out, were not realized. During December it became manifest that the poison had again become active, and was in movement in the Kánárese-speaking districts. The number of deaths amounted to 2,087 against 833 of the previous month; 943 of these occurred in Belgaum, 791 in Dhárwár, whilst 105 occurred in Kaládgi, and fifty-three in Kánára. It re-appeared in Ratnágiri, two deaths having been recorded there; whilst in Thána thirteen deaths were registered. In the remaining collectorates a notable decrease is observed.

Small-pox.

In 1876, 5,961 males and 5,856 females, or a total of 11,817 persons, died from small-pox in the Bombay Presidency. This number is 8,356 more than the preceding year, when only 3,461 deaths were recorded. The ratio of deaths from this disease per 1,000 of population was 0·70, being 0·68 for males and 0·72 for females.

The following table shows the registration circles in which the death-rate from small-pox exceeded the quinquennial average of 0·66 :—

Deaths from Small-pox, 1876.

The following table shows the number of deaths from small-pox recorded in each month of the year, and the ratio of deaths per 1,000 of population :—

Months.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Year.
Number of deaths ..	344	924	1,822	1,429	1,124	859	677	458	329	394	1,020	2,437	11,817
Ratio of death per 1,000 of population ..	0·02	0·05	0·11	0·08	0·07	0·05	0·04	0·03	0·02	0·02	0·06	0·14	0·70

The disease increased from the beginning of the year until the month of March, when 1,822 deaths were recorded. It then gradually fell, until it reached its minimum in September, when only 329 deaths occurred; but it again acquired activity, and in December the very large number of 2,437 deaths took place.

In 1876, in the Bombay Presidency, 220,833 persons are said to have died from fever. All diseases accompanied by increased temperature are classed by natives under the generic term *táp*, so that cases of pneumonia, pleurisy, and other affections are returned under this heading. The number of deaths from fever recorded in 1876 is the highest number yet registered, and it exceeds that of the previous year by 1,677. 117,938 of these deaths took place among males and 102,895 among females, the proportion being eighty-seven females to 100 males. In 1875 it was eighty-nine females to 100 males.

The following statement shows the number of deaths from fever, the ratio to assumed population, and the percentage to total deaths in each year of the decade ending December 31st, 1876 :—

Deaths from Fever, 1867-76.

Year.	Number of Deaths from Fever.	Ratio per 1,000 of assumed Population.	Percentage to Total Deaths.
1867	89,841	6·78	55·12
1868	97,665	7·63	52·73
1869	129,117	9·29	45·33
1870	131,036	9·69	59·63
1871	167,677	11·85	59·94
1872	206,747	12·74	56·33
1873	188,201	11·48	64·67
1874	183,717	11·10	65·93
1875	219,156	13·11	58·33
1876	220,833	13·08	59·67

VITAL STATISTICS AND MEDICAL SERVICES.

It will be thus seen that the greatest number of deaths ever recorded from fever took place in 1876; though the death-rate per 1,000 of assumed population in that year is less than in 1875, yet 1875 and 1876 show a decided increase over the two previous years. In twenty-three out of the 285 registration circles, the annual death-rate from fever exceeded twenty per 1,000. The highest death-rate from this cause was in the town of Umarkot, where it attained the very high rate of 29.55 per 1,000, and, as also noticed by Mr. Lumsdaine in his report for 1875, the city of Ahmedábád maintains its unenviable notoriety for its extremely high rate of mortality from fever. In 1875 the rate was 30.92, and in 1876 29.21 per mille. There were 19,338 deaths in January; but after that month a steady decline took place until the minimum (15,043) was reached in June. In July and August the number of deaths rose; and though a slight fall took place in September and October, a further rise in each of the two last months occurred, and in December the maximum for the year was recorded, 21,620.

Bowel complaints.

From bowel complaints, that is, chiefly from diarrhoea and dysentery, 18,927 males and 14,756 females, or a total of 33,683 persons, are recorded to have died. The number of deaths is slightly higher, thirty-three, than that recorded in 1875; but, as will be seen from the following table, the annual rate for the year is lower on account of the assumed increase in population:—

Deaths from Bowel Complaints, 1867-76.

Year.	Deaths from Bowel Complaints.	Ratio of Deaths per 1,000 of Population.
1867	17,373	1.31
1868	19,361	1.51
1869	30,128	2.15
1870	25,836	1.91
1871	30,422	2.15
1872	33,664	2.07
1873	26,259	1.60
1874	26,990	1.63
1875	33,650	2.01
1876	33,683	1.99

These diseases, as in 1875, were most prevalent in Dhárwár, where 4,718 deaths were recorded; in the Upper Sind Frontier only sixteen deaths are reported. The monthly distribution of the deaths during each of the last five years will be seen from the following table:—

Years.	DEATHS FROM BOWEL COMPLAINTS.												
	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total
1872 ..	2,365	2,078	2,123	2,075	2,805	2,656	3,696	4,881	3,898	3,045	2,523	2,027	33,664
1873 ..	2,241	1,645	1,685	1,786	2,140	1,920	2,428	2,814	2,543	2,549	2,265	2,143	26,259
1874 ..	2,002	1,639	1,892	1,860	2,011	2,296	2,701	3,054	2,476	2,457	2,235	2,308	26,990
1875 ..	2,378	1,897	2,147	2,390	2,456	2,802	3,761	4,071	3,584	2,860	3,844	2,610	33,650
1876 ..	2,370	2,132	2,331	2,613	2,662	2,680	3,337	4,123	2,521	2,655	2,681	2,698	33,683

Among the circles very high ratios of mortality have been recorded, for the towns of Sātāra 7·04, Pandharpur 13·34, and Nariād 9·50, and for the cantonment of Ahmedábād 10·21. At Pandharpur a marked increase is observed during the last half of the year.

Under this heading are shown all deaths resulting from other Accidents. than natural causes. In 1876 they amounted to 5,928 against 6,217 in 1875. The total includes 3,542 deaths of males and 2,386 of females, a proportion of 67·35 females to 100 males. Of the total 5,928 deaths, 773 were suicidal, 434 from wounding, 1,258 died from snake-bite or were killed by wild beasts, and the remaining 3,463 died from accidental causes.

The majority of persons (773) who committed suicide during the year drowned themselves, as 459 persons elected this method of destroying their lives, fifty-eight took poison, 229 hanged themselves, and twenty-seven inflicted mortal wounds on their persons.

1,164 persons died from the effects of snake-bite, and ninety-four persons are said to have lost their lives from attacks of wild beasts. The following table shows the monthly distribution of deaths from snake-bite during the last four years. The marked increase during the months of June, July, August, September, and October in each year will at once attract attention, and shows that, as might have been expected, the period of the year, when the grass is high, is the one in which the largest number of deaths from this cause takes place :—

Deaths from Snake-bites, 1873-76.

Months.	Years.			
	1873.	1874.	1875.	1876.
January	32	33	23	43
February	24	24	19	32
March	47	34	56	47
April	49	61	68	57

June	137	159	169	148
July	150	181	166	193
August	177	166	184	160
September	154	147	164	156
October	125	121	153	164
November	62	47	80	58
December	31	43	42	34
Total	1,072	1,111	1,207	1,164

The next table shows the number of deaths from snake-bites, according to localities, during each of the five years ending December 31st, 1876. The high mortality in the districts of Haidarábád, Ratnágiri, and Thána will attract attention :—

Deaths from Snake-bites by Districts, 1872-76.

	1872.	1873.	1874.	1875.	1876.
Khándesh	23	42	39	40	34
Násik	18	13	6	32	22

Haidarábád	173	141	155	183	199
Thar and Párkar	20	32	36	49	50
Shikárpur	75	64	66	60
Upper Sind Frontier	4	16	9	9	10
Total ...	897	1,072	1,111	1,207	1,164

1,892 persons were recorded to have been accidentally drowned, whilst twenty-seven are said to have been poisoned by accident; fifteen deaths from hanging are registered as accidental, and 197 persons are said to have lost their lives from the effects of accidental wounding; while 1,332 persons met their deaths from various other accidents. Of the 1,892 cases of accidental drowning, 839 deaths took place in wells, 374 were said to have occurred in ponds, and the remaining 679 were registered as having taken place in localities other than wells and ponds; 127 of the 374 deaths of persons accidentally drowned in ponds are registered in Haidarábád, and a very large number of persons who were drowned in wells are returned from the Sátára (111), Poona (80), and Dhárwár (70) districts.

It is probable that a considerable number of the deaths returned under the head of accidental drowning, which are recorded to have taken place in localities other than in wells and ponds, represent the number of the people washed away in trying to cross rivers during the rainy months. The rise during this season of the year will be seen in the following table:—

Deaths from Drowning, 1873-76.

Years.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total.
1873	34	25	38	44	59	76	119	96	118	53	38	25	725
1874	34	17	43	62	105	106	107	108	129	80	35	23	849
1875	45	35	50	54	54	104	120	103	161	55	40	25	846
1876	19	35	48	46	52	68	105	112	94	51	21	28	679

Vaccination.

The vaccination department was brought under the direct control of the Sanitary Commissioner on the amalgamation of the two departments in November 1876. No change has taken place in the system of vaccination. But the late vaccination circles have, since January 1877, been redistributed. The present arrangement is as follows:—

Distribution.

The Northern Deccan registration district, comprising the collectorates of Khándesh, Násik, Ahmednagar, Poona, and Sholápur, and the native states of Akáلكot, Modnimb, and the Dáng territory, is in charge of a Deputy Sanitary Commissioner. The Southern Deccan registration district, comprising the collectorates of Sátára, Belgaum, Dhárwár, and Kaládgi, as well as the Southern Márátha and Sátára feudatories and the Sávánur state, is in charge of a Deputy Sanitary Commissioner. The Konkan registration district, comprising the collectorates of Kánára, Ratnágiri, Kolába, and Thána, and the states of Sávant Wári, Janjira, and Jawhár, is in charge of a Deputy Sanitary Commissioner. The Presidency circle, comprising the island of Bombay, is in charge of a Superintendent of Vaccination. The Eastern Gujarát registration district, comprising the collectorates of Surat, Broach, Kaira, Ahmedábád, and the Panch Máháls, as well as the Rewa and Mahi Kánta, Cambay, Dharampur, Bándsa, Sachin, and Jambughora states, is in charge of a Deputy Sanitary Commissioner. The Western Gujarát circle, comprising the province of Káttywár and the Pálanpur states, is in charge of a Superintendent of Vaccination. The Sind registration district, comprising the collectorates of Kurrachee, Haidarábád, Shikárpur, the Thar and Párkar, the Upper Sind Frontier, and the Khairpur state, is in charge of a Deputy Sanitary Commissioner. Besides the above, which are directly under the control of the department, is the Baroda circle, including all the territory subject to His Highness the Gáekwár, which is in charge of the chief medical officer at Baroda. The Kutch circle, comprising the territory subject to His Highness the Rao, is in charge of the medical officer attached to the Dárbár. The Aden circle is under the charge of the civil surgeon at Aden. The vaccination statistics have been compiled according to the revised forms ordered by the Government of India, and the results of the year are shown according to the new circles of superintendence. The period included in the returns is, as ordered by the Government of India, for the official year ending the 31st March 1877, and not for the calendar year 1876.

The following statement shows the number of persons vaccinated and revaccinated in 1876-77 among the civil population and in the army, as compared with that of 1875-76 :—

1876-77.		1875-76.	
Primary Vaccinations.	Revaccinations.	Primary Vaccinations.	Revaccinations.
705,182	77,111	665,048	112,330
19,996	2,999	19,954	3,790
<u>725,178</u>	<u>80,110</u>	<u>685,002</u>	<u>116,120</u>
805,828		801,122	
9,889		7,231	
<u>7,006</u>	<u>2,883</u>	<u>5,637</u>	<u>1,594</u>
<u>815,177</u>		<u>808,353</u>	
	Civil Life, Total.		
	Army Total.		
	Total vaccinations in Bombay Presidency.		

The total number of persons primarily vaccinated in 1876-77 was 732,184, being an increase among the civil population of 40,176, and in the army of 1,369, or a total of 41,545 over the year 1875-76. During the last ten years the annual increase in the number of persons primarily vaccinated is as follows :—

Vaccinations, 1866-77.

Persons primarily vaccinated.	Years ending 31st December			Years ending 31st March							
	1866.	1867.	1868.	1870.	1871.	1872.	1873.	1874.	1875.	1876.	1877.
Number	379,497	391,415	4,32,184	464,667	496,583	527,153	570,035	625,818	671,817	690,639	732,184
Increase	11,918	40,769	32,433	31,015	30,571	42,872	55,793	45,999	18,822	41,545

Showing an increase during the past year more than double the increase in 1876.

There were 4,219 operations more than persons among those primarily vaccinated. This, of course, is the result of failure following the primary operation, which renders its repetition necessary. Of the total of 732,184 persons primarily vaccinated, success followed in 698,148 persons; or, in other words, in 95.35 per cent of the persons primarily operated on, a successful result was attained. It will be observed that this is a lower standard of success than what has hitherto been annually shown; but it is to be noticed that this falling off is only an apparent one, for of late years the standard forms have shown the percentage of success attending operations, not persons. The revised forms by the Government of India alter this, and now the results are shown by persons and not by operations. Another point to be remembered is, that hitherto it has been the custom to deduct from the total operations those in which the result was unknown. This course is now rendered unnecessary by the fact above alluded to. If, therefore, we wish to compare the results of this year with those of past years, we must only consider the number of persons and not that of operations.

The following table shows the number of persons primarily vaccinated during each of the last ten years, and the percentage of success among them, contrasted with the results of 1876-77 :—

	Years ending 31st December		Years ending 31st March							
	1867.	1868.	1870.	1871.	1872.	1873.	1874.	1875.	1876.	1877.
Number of persons primarily vaccinated.	391,415	432,184	464,667	496,582	527,153	570,025	625,818	671,817	690,639	732,184
Do. successfully.	371,695	404,800	427,391	452,661	486,018	516,726	568,275	635,982	660,556	698,148
Percentage of success	94.94	93.68	91.98	91.16	92.20	90.65	90.81	94.67	95.64	95.35

The total number of revaccinations amounted to only 82,993, showing a net decrease below the totals of the preceding year of 34,721. The percentage of persons successfully revaccinated was 80.45. Last year the percentage of success among operations was stated to be 85.2; but, according to the mode of calculation now adopted, the percentage of success among persons who were revaccinated was during the last seven years as follows :—

	Years ending 31st March.						
	1871.	1872.	1873.	1874.	1875.	1876.	1877.
Number of persons revaccinated.	30,119	21,965	18,332	26,405	60,807	117,714	82,993
Do. successfully.	18,950	13,038	10,362	14,894	45,618	94,468	66,770
Percentage of success	62.92	59.35	56.52	56.41	75.02	80.25	80.45

The following table shows the number of primary vaccinations, revaccinations, and operations in each district, compared with the preceding year :—

District and Circle.	Persons primarily vaccinated.				Persons revaccinated.				Total Number of Persons operated on.			
	1876-77.	1875-76.	In-crease	De-crease	1876-77.	1875-76.	In-crease	De-crease	1876-77.	1875-76.	In-crease	De-crease.

Native Army.	5,033	4,812	221	..	2,683	1,594	1,289	..	7,916	6,406	1,510	..
Total.	732,184	690,639	50,217	8,672	82,993	117,714	4,890	39,611	815,177	808,363	51,963	45,159

As regards primary vaccinations a very satisfactory increase (50,217) is observed in all the districts and circles except the Konkan registration district, Presidency circle, and Aden. The largest increase by numbers is observed in the Baroda circle, where 15,308 more persons were operated upon than during the previous year. The increase per cent in each district is as follows :—

Districts and Circles.	Northern Deccan Registration District.	Southern Deccan Registration District.	Eastern Gujarát Registration District.	Western Gujarát Circle.	Sind Registration District.	Baroda Circle.	Kutch Circle.	British Army.	Native Army.	Total for the whole Presidency.
Percentage of increase.	8.73	3.87	6.99	3.73	3.26	39.64	77.50	139.15	4.59	7.03

The decrease in the Konkan registration district is partly due to the fact that the collectorates of Khándesh and Násik, which, until the 1st January 1877, were included in this district, have been transferred to the Northern Deccan registration district. The greatest falling off in this district, however, took place in the Kánára collectorate. This was occasioned by the prevalence of sickness among the vaccinators, some of whom have been laid up with fever for many months at a time; but it is also, to a great degree, due to neglect on the part of the inspector of sanitation and vaccination, who has since been dismissed the service. In the Presidency a falling off is seen, which has been attributed to the comparative absence of small-pox. In Aden a serious interruption to vaccination was occasioned by loss of lymph. The net increase in primary vaccinations in all districts and circles was 41,545.

A total increase of 4,890 persons who were revaccinated is observed in all districts and circles, with the exception of the Presidency circle, Sind registration district, Kutch, and Aden. The principal increase took place in the native army, where 1,289 more persons were revaccinated; in the Eastern Gujarát registration district, where it amounted to 970. In the Konkan registration district, too, a satisfactory increase of 869 is observed, as also in the Northern Deccan registration district. Taking primary and secondary vaccinations together, it will be seen that the total number of persons operated upon by officers of the vaccination branch amounted to 815,177 individuals against 808,353 of the preceding year, the increase being 6,824 persons.

In districts there were 27.36 per 1,000 of population successfully vaccinated during this year against 27.1 in 1875-76, and in states there were 25.67 per mille vaccinated with success against 24.4 in the preceding year.

The following table shows the percentage of success attained in each district and circle in both primary vaccinations and in revaccinations, compared with the preceding year :—

No.	Districts and Circles.	Result in Primary Vaccinations.		Result in Revaccinations.	
		1876-77.	1875-76.	1876-77.	1875-76.
1	Eastern Gujarát registration district...	97·67	97·32	72·04	73·29
2	Northern Deccan do. ...	97·21	96·84	66·20	68·61
3	Sind do. ...	96·38	97·59	85·99	85·29
4	Southern Deccan do. ...	95·71	95·95	61·15	50·34
5	Konkan do. ...	95·57	97·07	65·91	77·06
6	Presidency circle ...	92·89	92·14	62·41	65·60
7	Western Gujarát circle ..	92·89	93·84	61·12	69·28
8	Native Army ...	92·57	94·44	76·69	66·83
9.	Dispensaries ...	92·46	90·99	61·72	69·87
10	Kutch circle ...	92·36	91·37	67·44	67·47
11	Baroda circle ...	90·66	90·04	57·76	76·00
12	Aden ...	76·02	81·33	80·00	66·67
Average for the whole Presidency...		95·35	95·64	80·45	80·25

In primary successful vaccinations Eastern Gujarát has gone up from the second place to the first, and shows a slight increase over the results attained in the previous year. It is closely followed by the Northern Deccan, in which also an increase is observed. Sind, from being first, now occupies the third place. But the difference in the first five districts is not much. The percentage of success in Aden is the lowest in all the circles. In revaccinations the percentage of success for the whole Presidency is a little higher than it was in 1875-76.

The particulars relating to the individuals operated upon next claim attention; but as the revaccinations are not returned by age or caste, no information on these heads can be given. There were 381,175 males and 349,036 females primarily vaccinated, or a percentage of 52·20 males to 47·80 females. The greatest disparity is found among the returns from Aden, where the number of males exceeded that of females by 29·78 per cent. In the Presidency circle the excess of females, amounting to 16·82 per cent in the previous year, was during 1876-77 reduced to 13·46.

Arranged according to castes, it will be seen that, excluding Baroda and Kutch, for each of which provinces no details of caste have been received, there have been primarily vaccinated 3,556 Christians, or 538 less than last year; 514,012 Hindus, or 21,218 less than the preceding year; 101,108 Musalmáns, or 998 more than in 1875-76; 1,434 Pársis against 2,848 in the previous year; and 47,022 persons of other castes against 47,532 in 1875-76. The percentages of each caste are as follows: Christians 0·53, Hindus 77·05, Musalmáns 15·16, Pársis 0·21, and other castes 7·05.

308,831 infants under one year of age, 342,069 children between one and six years of age, and 40,616 persons above six years of age, were primarily vaccinated with success during the year. In each 100 cases of successful primary vaccinations 44·66 were infants, 49·47 were children under six, and 5·87 persons of older age. The army returns are not included in the above, as they do not give the required information.

VITAL STATISTICS AND MEDICAL SERVICES.

Lymph.

Two supplies, each consisting of forty-five tubes of lymph, were received from England in the months of November and January. The lymph from all the circles, except Sind and Aden, has been pronounced by the officers of the department to be good.

Vaccination from the heifer has been continued in Bombay during the year, and is reported by Mr. Ananta Chandroba to give entire satisfaction. He says: "Of the 293 heifers inoculated during the year, in 287 the operation was successful, and in six it failed."

Cost.

The total expenditure was Rs. 2,05,184-3-3, or a decrease of Rs. 17,617-14-5 from the previous year. The following table shows the expenditure incurred by each establishment:—

Establishment.	Total Expenditure.				Compared with the preceding Year.			
	1876-77.		1875-76.		Increase.		Decrease.	
	Rs.	a. p.	Rs.	a. p.	Rs.	a. p.	Rs.	a. p.
Imperial	83,608	4 0	1,05,570	5 7	21,962	1 7
Municipal	15,931	15 8	16,123	2 5	191	2 9
Cantonment	286	8 0	286	8 0
Local funds	63,296	1 10	60,685	10 11	2,610	6 11
Native states... ..	42,061	5 9	40,422	14 9	1,638	7 0
Total	2,05,184	3 3	2,22,802	1 8	4,535	5 11	22,153	4 4
					Deduct Increase...		4,535	5 11
					Net Decrease...		17,617	14 5

For the whole Presidency the average cost of each successful vaccination, deducting the cost of the supervising establishment, was annas 3-8, the same as the previous year. The highest rate occurs in the Presidency circle, where each successful vaccination cost on the average 7 annas. Last year it only cost 4 annas 4 pies; but this was owing to the very large number of persons vaccinated during the epidemic of small-pox which took place in that year. In the Northern Deccan the cost has gone up from annas 3-1 to annas 3-7. In the Southern Deccan it has decreased from 4 annas to annas 3-6. Comparing the Konkan registration district with the Western circle the decrease is 4 pies. In the Eastern Gujarát registration district the cost has decreased from annas 4-1 to annas 3-7. In the Western Gujarát circle an increase of 1 pie is observed. In Sind it has gone up from annas 2-10 to annas 3-4. In Baroda it has decreased from annas 3-4 to annas 2-11. In Kutch it has decreased from annas 10-11 to annas 6-10, and in Aden it has increased from annas 1-11 to annas 6-11. The average cost of each successful vaccination, including all charges, was annas 4-6 against annas 4-11 during 1875-76.

Inspection.

The number of vaccinated children inspected by the Deputy Sanitary Commissioners, Superintendents of Vaccination, Inspectors of Sanitation and vaccination, and Assistant Superintendents of Vaccination, amounted to 271,997 in 10,721 villages. So that, in every hundred children vaccinated, the officers of the department tested the result in thirty-seven.

VII.—INSTRUCTION.

Education.

The total sum (exclusive of balances), which formed the income of the Education Department in 1875-76 and 1876-77, was—

	1875-76.	1876-77.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Cess	7,18,334	6,07,599	...	1,10,735
Fees... { Provincial	*1,34,622	+1,44,468	9,846	...
{ Local	1,05,318	1,11,001	5,683	...
Funds of native states	1,37,971	1,58,416	20,445	...
Popular subscriptions	17,999	14,148	...	3,851
Municipal assignments	53,443	53,695	252	...
Interest on endowments	45,570	52,166	6,596	...
Miscellaneous	5,773	13,380	7,607	...
	12,19,030	11,54,873	50,429	1,14,586

The decrease under cess is due to the famine prevailing in portions of the Central, North-east, and Southern divisions. Figures showing the balance of the local fund for each collectorate will be found in No. B (1)—Part V. of the statistical returns.

Under "Provincial fees" the colleges show an increase of nearly Rs. 1,000, English schools an increase of Rs. 8,000, and the public service examination an increase of Rs. 1,000. The increase under colleges is due to the progress shown by the law school and by the Elphinstone and civil engineering colleges, which more than makes up for a falling off in the Deccan and medical colleges. The increase under the public service examination is due to an increase in the number of candidates. The increase under English schools is due to the restriction on free admissions, which was noticed in the report for 1875-76.

The increase under "Local fees" is owing to the gradual introduction of the new rates mentioned in the report for 1875-76. These new rates leave the fee for the first three standards unaltered, but raise the fee for the three higher standards which

* Inclusive of Rs. 7,715, the fees of the Medical College.

+ Do. ,, 7,425, do. do.

are chiefly taught in town schools. The increase under "funds of native states" is due to the extension of education in Káttwár. The decrease in popular contributions is due to a falling off in contributions for new buildings and to delay in the collection of subscriptions for the Belgaum Sirdárs' high school. The increase under "interest on endowment funds" is owing to the recovery of arrears. The increase under "miscellaneous" is owing to the inclusion of the receipts of the Dhárwár industrial school.

Expenditure.

No. A 1—Part VII. of the statistical tables gives the details of the year's expenditure. The grand total comes to Rs. 30,40,916, or Rs. 42,000 in excess of the expenditure of the previous year. But the tenth column includes expenditure from the private funds of aided institutions, and the cost of education in those states which consult the Government inspector and place their schools under inspection, but administer their own funds. The total of the tenth column comes to Rs. 6,90,920; and, if this sum be deducted from the grand total already given, the actual expenditure from funds administered by Government officers will be Rs. 23,49,996. Grants from provincial revenues, amounting to Rs. 11,12,843, show a decrease of Rs. 23,483; and the local funds enumerated in the previous paragraph bore an expenditure of Rs. 12,37,153, or Rs. 23,066 less than in the previous year. The net decrease was, therefore, Rs. 46,549, distributed as under:—

	Rs.
University	1,347
Inspection	2,522
Instruction	43,446
Total ...	47,315
Deduct Increase on Direction ...	766
Net Decrease ...	46,549

Roughly divided, the total expenditure of Rs. 23,49,996 from funds controlled by Government officers, gives the following percentages as the approximate shares of the establishments entered in the table:—

$1\frac{1}{2}$ University. $1\frac{1}{2}$ Direction. $1\frac{1}{2}$ Inspection. $9\frac{1}{2}$ Colleges. $2\frac{1}{10}$ Normal schools. $1\frac{1}{2}$ Technical schools. $11\frac{1}{2}$ High schools.		$8\frac{1}{10}$ Middle class schools. $39\frac{9}{10}$ Primary schools. $2\frac{1}{2}$ Girls' schools (including Mixed schools.) $3\frac{1}{2}$ Scholarships. $5\frac{1}{2}$ Buildings. 3 Miscellaneous.
--	--	---

These figures, compared with those given for 1875-76, show a large decrease under buildings.

Schools.

No. A 3—Part VII. of the statistical tables gives the number of Government, aided, and inspected schools open at the end of the year under report. The same table shows the number of pupils on the rolls, the average daily attendance, and the caste or race of the pupils. The figures show a decrease for the year of fourteen schools and 1,271 pupils, the number of schools having fallen from 4,478 to 4,464, and that of pupils from 250,712 to 249,441. On the other hand, the average monthly number on the

rolls has risen from 243,032 to 248,983 ; and the average daily attendance from 186,834 to 188,591. The ratio of the average daily attendance to the average monthly number on the rolls has fallen from seventy-six to seventy-five. The decrease of the year occurs in Government and aided institutions, schools under inspection showing an increase as under :—

	Schools.		Pupils.	
	Increase.	Decrease.	Increase	Decrease.
Government institutions	70	...	2,770
Aided institutions	8	...	103
Inspected institutions	52	...	929	...
Police and jail schools	12	...	682	...
	64	78	1,611	2,862
<i>Deduct Increase</i>	64		1,611
<i>Net Decrease</i>	14		1,271

Classified according to the quality of instruction, the schools of the Presidency give the following return :—

	Number of Schools,				Number of Pupils at the end of the year.			
	1875-76.	1876-77.	Increase.	Decrease.	1875-76.	1876-76.	Increase.	Decrease.

<i>Deduct Decrease..</i>			5		<i>Deduct Decrease..</i>			1,311
<i>Net Decrease..</i>			14		<i>Net Decrease..</i>			1,271

The decrease under colleges is due to the small number of successful candidates in the matriculation examination, and the decrease under technical schools is owing to the closing of the class at Surat, which is to be re-opened hereafter on a different plan. The increase under high schools is chiefly due to the transfer to this head of prosperous middle class schools. Part of the decrease under middle class schools and the decrease under primary schools is due to the famine, and the same cause has made it necessary to admit a smaller number of pupils into the normal schools. Under girls' schools there is a real increase.

INSTRUCTION.

Divisional details.

The net decrease of the year was divided between the different educational divisions as under :—

		DECREASE.	
		Schools.	Pupils.
Central division	26	4,689
North-East division	41	1,645
Sind	9	676
	Total	76	7,010
<i>Deduct Increase—</i>			
Northern division	54	4,679
Southern	8	1,060
		62	5,739
	Net decrease...	14	1,271

Distribution of schools.

No. A 5—Part VII. of the statistical tables shows the distribution, throughout the Presidency, of the colleges and schools connected with Government. But no returns have been received for Baroda, Janjira, and Kurandwád.

Pupils.

The number of children in schools connected with Government is divided between the different races or castes as under :—

Classification of Pupils by Caste, 1875-76 and 1876-77.

		1875-76.	1876-77.
Christians	4,982	5,208
Hindus...	{ Bráhmans	60,439	60,358
	{ Others	148,379	146,852
Muhámmadans	26,277	27,263
Pársis	8,209	8,275
Jews	408	346
Aboriginal and hill tribes	1,212	1,117
Others	806	22
	Total	250,712	249,441

The University.

The senate of the University have made important alterations in the regulations for the examinations in arts, medicine, and civil engineering. The oral examination of the candidates for matriculation in the second language has been discontinued. The question papers in English will in future be transmitted to centres of examination to be established in each educational division; and those candidates only who may obtain the prescribed number of marks in English will be further examined in Bombay. The list of passed matriculation candidates will be published in the order of merit (and not in alphabetical order as heretofore) with the total number of marks obtained by each candidate, and the name of his school. At the M.A. examination in languages, original composition in English verse has been made optional, instead of compulsory, as heretofore. The

title of the degree of licentiate of medicine has been changed into 'licentiate of medicine and surgery.' Dental surgery has ceased to be a part of the course of study required for the examination for the degree of L.M., and the course of lectures in comparative anatomy, hitherto required for the first examination in medicine, has been removed to the examination for the degree of M.D. The senate have also decided that in future the names of the successful candidates in the first examination in arts, the B.A., and M.A. examinations, the first examination in civil engineering and the L.C.E. examination, will be published in two classes and pass.

During the year under report Professor Rámkrishna Gopál Bhandárkar delivered the first series of lectures in connection with the Wilson philological lectureship. The subject of the lectures was "Sanskrit and Prákrit languages derived from it." Lectures.

The senate have accepted four new endowments during the year. In March the honorary secretary to the Bhau Dáji memorial fund offered Rs. 5,000 for the purpose of founding an annual prize in memory of the late Dr. Bhau Dáji, G.G.M.C., Hon. M.R.A.S., one of the fellows mentioned in the Act of Incorporation, and for many years syndic in the faculty of arts. In April the honorary secretary to the Vinayekráo Jagannáthji Sankerset memorial fund offered Rs. 4,500 for the purpose of founding an annual prize in memory of the late Mr. Vinayekráo Jagannáthji Sankerset. In August the president of the oriental spinning and weaving company offered, on behalf of the company, Rs. 6,000 for the purpose of founding a scholarship in memory of the late Mr. Merwánji Frámji Pánday, and in August the widow of the late Mr. Kahandás Mancharám offered Rs. 6,000 for the purpose of founding a scholarship according to the will made by Mr. Kahandás Mancharám. With these four fresh gifts the University now possesses twenty-eight endowments. Endowments.

No. A 4—Part VII of the statistical tables shows the results obtained by high schools and affiliated colleges during the year under report. The results of the matriculation examination will be noticed under high schools. In the other or higher university examinations, 183 out of 383 passed against 173 out of 400 in the previous year. The results obtained by the colleges under the three special faculties will be noticed later on. Under the arts faculty there was a failure in the first examination, only twenty-nine passing against sixty-nine in the previous year. But, on the other hand, the number of candidates who passed the B.A. examination rose from eighteen to forty. In the F.A. examination there were 154 candidates from Government and twenty-two from aided colleges. The Government colleges passed twenty-seven and St. Xavier's college two candidates. Nineteen of the successful candidates took up Sanskrit, four Latin, and six Persian; and in the selected subjects of the examinations, fifteen were examined in Butler's sermons, twelve in analytical geometry, and two in chemical physics. For the B.A. degree there were eighty-two candidates from Government and ten from aided colleges. Of the forty successful candidates, thirteen passed in the first class. Of Examinations.

these forty candidates, thirty-five came from Government colleges, three from the General Assembly's institution, and two from St. Xavier's. Twenty-one selected Sanskrit as their language, nine Latin, nine Persian, and one Arabic. In the selected subjects nineteen passed in history, nineteen in logic and moral philosophy, twenty-eight in political economy, twelve in dynamics and hydrostatics, nine in analytical geometry, eleven in differential and integral calculus, thirteen in chemical physics, seven in inorganic chemistry, and two in physiology. For the M.A. degree there were four candidates from Government colleges. Of the two who passed, one, a Pársi, obtained a first class in mathematics and natural philosophy, and the other, a Hindu, a first class in natural science.

Arts Colleges.

Elphinstone college.

In the Elphinstone college the number of students on the rolls has fallen from 226 to 203. The results of the University examinations were generally satisfactory. In the F.A. examination the college passed twenty candidates, and for the degree of B.A. twenty-seven. The number passed in the B.A. examination is the highest for many years; and those who passed took high places in the lists, nine being placed in the first class. The college teaching appears to have been very efficient in mathematics and English, as seven of the students in the first class took up mathematical subjects, while seventeen out of the whole number passed, obtained unusually high marks in English. In the M.A. examination the college obtained two first classes, one in mathematics and natural philosophy, and the other in natural sciences. Students of the college won the chancellor's medal, given to the candidate who passes the M.A. examination with the highest marks in the first class; the Duke of Edinburgh fellowship, given to the candidate who passes the B.A. examination with the highest marks in the first class; the Karsandás Mulji prize, for an English essay; the Hughlings prize, given to the candidate who passes the F.A. examination with the highest marks in English; the James Taylor Prize, given to the candidate who passes the B.A. examination in the first class, with the highest marks in political economy and history; and the Bháu Dáji prize, given to the candidate who passes the B.A. examination with the highest marks in Sanskrit.

Deccan college.

In the Deccan college the number of students on the rolls has fallen from ninety-six to seventy-five. In the B.A. examination eight passed, three in the first class. In the F.A. examination seven passed. The Bhagvandás Parshotamdás Sanskrit scholarship was awarded by the University to a graduate of the college. The college buildings have been much improved, and additional quarters for resident students have been built. The number of resident students is now fifty-nine.

Aided colleges.

The attendance at aided colleges has decreased by thirty-three pupils. The results obtained in the University examinations have been noticed above, with the exception of the Ellis scholarship,

which was awarded to a Pársi from St. Xavier's college who passed the B.A. examination with the highest marks in English.

Special Colleges.

The number of students on the rolls of the Law school in the previous year and the year under report was :—

	March 1876.	March 1877.
Seniors	15	21
Juniors	30	32
Candidate class	90	53
Candidates for pleaders' examinations ...	4	7
	<u>139</u>	<u>113</u>

In November the Perry professor examined forty-seven candidates in jurisprudence, and passed forty. The Government prize of Rs. 100 was gained by a student of St. Xavier's college. For the LL.B. examination fourteen students presented themselves, of whom ten were students of past years. Eleven failed, and one present and two passed students were successful.

The Grant medical college has suffered a loss by the promotion of Dr. Hunter to the post of Deputy Surgeon General. Dr. Hunter was appointed a professor in 1862, and promoted to be principal in 1866. During the time Dr. Hunter has been connected with the college, the institution has passed through many difficulties, and the position it has now attained is largely due to his zeal and care. The number of students for the year under report and for the previous year were :—

	1876-76.	1876-77.
Graduates and under-graduates	194	182
Hospital apprentices	30	25
Hospital assistant	1	0
Vernacular classes—		
Maráthi	55	51
Gujaráti	24	22
Midwives—		
Maráthi	6	6
Gujaráti	4	0
Total	<u>314</u>	<u>286</u>

The progress made in the University classes has been satisfactory. Of twenty students who went up for the degree of L.M., eleven passed, three being placed in the first class; and of forty students who appeared for the first L.M. and S. examination, nineteen passed, one being placed in the first class. The principal reports that ten students, including four licentiates of medicine, have gone to England with the view of completing their education in the English schools of medicine, or of competing for the covenanted medical service of India. During the year under report two more students who had qualified in England obtained commissions in the service.

Special col-
leges.

In the hospital assistant class there was one candidate who passed the examination. Of the hospital apprentices six passed, and four resigned. In the examination for the superior grade of hospital assistants there were three candidates, one of whom was successful. In the examination of assistant surgeons two candidates presented themselves, both of whom were found qualified for promotion to the second class. In the Mārāthi vernacular class there were fifty-five pupils. Of these twenty-five were native medical pupils, of whom thirteen passed, three resigned, two were discharged, and seven transferred. Of the thirty vernacular pupils seven passed their final examination, eight were discharged, and five left. In the new Gujarāti class there were twenty-four pupils. Of these two were discharged. No fresh admissions to the Gujarāti class have been allowed, as Government has decided to abolish the class in September 1878. The examination for admission to the Mārāthi class was held in October, the test being the IV. Anglo-vernacular standard. At this examination there were forty-three candidates for the vernacular class, and thirty-six for the native medical class. Of the former twenty-four passed with one-half the total marks of the standard; and of these, eleven were admitted on stipends, and the remaining thirteen were permitted to attend the classes, if they wished to do so, without any stipend. Of the native medical pupils nineteen, who attained to one-third of the total marks, were admitted, in accordance with the wish of the Surgeon-General. Text books for the Mārāthi classes were published some years ago, and similar books for the Gujarāti classes have now been printed by Mr. Dhirajrām Dulpatrām, G.G.M.C., and Assistant Surgeon Kuikhusru Viccaji, L.M., the teachers of anatomy and chemistry to the Gujarāti classes. On the Mārāthi midwife class Dr. Cooke reports favourably; but he has not been able to re-establish the Gujarāti class which, as reported on the last annual occasion, was broken up during the year, no suitable candidates having come forward. The funds for the support of this class provided by the bounty of Sir Cowāsji Jehangier Readymoney have, therefore, during the year, not been disbursed.

Engineering
college.

The Poona civil engineering college has been full throughout the year, the number of students being:—

	1876-76.	1876-77.
University department	72	86
Second department	41	41
Third department (including apprentices) .	50	37
Total ...	<u>163</u>	<u>164</u>

On the work of the college Dr. Cooke reports as follows:—“The college has had a most successful year at the University examinations. At the first examination in civil engineering twenty-one candidates presented themselves, of whom nineteen passed, eleven in the first class; while out of fourteen candidates for the degree of L.C.E. ten passed, one in the first class. Owing to the famine in the Deccan and elsewhere, the demand for passed students of the college has been great. Every passed student, whether L.C.E.

“ or F.C.E., could obtain employment. Though I supplied to the
 “ public works and irrigation departments, during the year, no fewer
 “ than seventeen passed students, the demand exceeded the supply ;
 “ and, as it was right that the wants of this Presidency should be
 “ first considered, I have been unable to send subordinates to other
 “ provinces, from which I have had several applications. Six of the
 “ lately passed licentiates of civil engineering have been employed
 “ on the Dhond and Manmád railway, and the others have obtained
 “ equally remunerative employment, which, even if temporary, will
 “ supply the men with practical experience on actual works, and
 “ render it more easy for them to obtain employment when the pre-
 “ sent famine works have been completed. Forty-three candidates
 “ presented themselves for entrance to the second department, of
 “ whom thirty passed, and of these seven subsequently matriculated.
 “ The men who pass the F.C.E. test are readily taken on as tem-
 “ porary overseers in the public works and irrigation departments,
 “ and they appear to be thought much more of than the second
 “ department students. At the final examination of the second de-
 “ partment, twenty-two candidates presented themselves, of whom
 “ thirteen passed, one in the first and twelve in the second division.
 “ For the final examination of the third department thirty-two can-
 “ didates presented themselves, all of whom were declared by the
 “ examiners to have passed. Next year the new class of students in
 “ this department will have had two-and-a-half years of workshop
 “ training, and will, therefore, after a year’s instruction in surveying
 “ and drawing, be a highly useful set of men. The amount received
 “ for work executed in the workshops during the year has been
 “ Rs. 4,880-7-11. All the work has been executed by the apprentices.
 “ Whenever outside work is slack, the hands are set to improve and
 “ repair the workshop machinery, and construct additional machines
 “ for our own work. I am glad to say that Eurasian lads are tak-
 “ ing advantage of the practical instruction given them. These, for
 “ the most part, look to pass under the Boiler Inspection Act, and
 “ subsequently to obtain charge of engines at some of the factories.
 “ Two have passed this year, and the lad who passed last year is now
 “ in charge of the engine at the Government steam bakery.

Technical Schools.

During a large portion of the working year Mr. Griffiths was School of art.
 engaged on special duty with the Government of India in prepar-
 ing heraldic banners for the Delhi Assemblage. Mr. Griffiths
 reports that the students of the decorative department were of
 great use in aiding him with his cartoons, in making tracings for
 the embroiderers, and seeing that the embroiderers copied the
 drawings faithfully. The studies of the students under Mr.
 Griffiths have been mainly directed with a view to making the
 students good draughtsmen, and to train them for future employ-
 ment on the Ajanta expedition. Latterly a few of the students
 assisted in preparing stencil plates for the decoration of a summer-
 house for the chief of Bhaunagar. But some of the best students
 have been drawn off for other employment. One accompanied
 Mr. Prinsep as assistant; another has gone with Mr. Burgess; one
 is on duty with Major Gill at Ajanta; and one is in the North-

Technical schools.

west Provinces, making sketches of plants to illustrate a report for the department of agriculture and commerce. The architectural sculpture department has supplied a few models for cops for the new school of art building, and two models of sea-lions for the sailors' home and the port trust. One of the students has obtained employment as carver on one of the public buildings in Bombay. Lately a new class has been formed, of seven lads, the sons of Cutch and Káttýwár stone-cutters, who may be said to be born carvers. Of the wood-engraving department, Mr. Terry reports that the work done has been similar to that executed in the previous year, regular employment being found in the reproduction of wood-cuts for vernacular works. One of the pupils obtained employment as engraver in a private establishment. Of the pottery department Mr. Terry reports that difficulty is experienced with regard to a supply of the right kind of clays; but that the ware, such as it is, commands a ready sale on account of its original and artistic qualities.

The number of students on the rolls in March was as under :—

Drawing school	111
Decorative department	9
Architectural sculpture department	9
Wood-engraving department	3
						132
				Total	...	132

In March 1876 there were in all 122 students.

The annual examination of the school was held by Colonel Waddington and Mr. T. W. Stevens, A.I.C.E. The examiners made unfavourable comments on the condition of the elementary drawing school, and remarked that no great progress appeared to have been made in the pottery department. In other respects the report of the examiners was favourable.

Sind school.

The engineering school at Haidarábád was examined in July by a committee of engineers; and of seven students examined, one passed fully. This successful candidate has been employed in the public works department: and it appears that the six who failed have also obtained employment under Government.

Dhárwár school.

No report on the Dhárwár school has been received; but the annual returns show a decrease of ten pupils.

Sassoon reformatory.

At the David Sassoon reformatory thirty-four boys were examined in English, and a satisfactory report was made by the inspector. Of these boys thirty-one were employed, three days a week, at the central press. The rest of the boys were examined in the vernacular with fair results. In all there are 123 boys under instruction. The trades taught are the same as reported last year.

High Schools.

The figures for the University matriculation in the year under report and in the previous year are as under :—

University Matriculation Examinations, 1875-76.

High schools.

Year.	Number of Institutions sending up Candidates.			Number of Candidates sent up.				Number of Candidates passed.				Religious or National Classification of passed Candidates.					
	Government or Native states.	Aided or private.	Total.	From Government or Native state institutions.	From aided or private institutions.	From private tutors.	Total.	From Government or Native state institutions.	From aided or private institutions.	From private tutors.	Total.	Natives of India.					
												Christians.	Hindus.	Muhammadans.	Parsis.	Others.	Europeans.
1875-76.	29	33	62	494	549	236	1,269	224	183	27	434	14	292	2	111	1	13
1876-77.	28	28	56	472	443	239	1,164	121	74	8	203	12	134	2	49	..	6

Of the 203 who passed sixty-one took up Sanskrit, twenty-six Latin, three Portuguese, twenty-six Mārāthi, fifty-five Gujarāti, six Kánārese, twenty-four Persian, and two Sindhi. The examination was more difficult than in the previous year, the decrease in the number of successful candidates being 103. This decrease is shared by all classes of schools, the proportion of successful to unsuccessful candidates having fallen from a half to a fourth for Government and native state schools, and from a third to a sixth for private schools. For students under private tuition the figure has fallen from one in eight to one in thirty. Most of the successful candidates appear to have joined one or other of the affiliated colleges, as the Elphinstone college admitted sixty, the Deccan college twenty-seven, the Grant college twenty-eight, the Engineering college twenty-six, St. Xavier's seventeen, and the Free General Assembly seventeen.

The high schools, returned as Government or native state

	1875.	1876.
1. Elphinstone	42	31
2. Surat	22	13
3. Poona	29	12
4. Dhárwār	15	8
5. Ratnágiri	13	7
6. Rájárām, Kolhápúr	20	5
7. Ahmednagar	7	5
8. Nariád, Kaira	4	5
9. Rájkot, Káttýwār	4	4
10. Akola, Berár	6	3
11. Dhulia, Kánādes̄h	2	3
12. Broach	3	3
13. Haidarābād, Sind	5	3
14. Shikárpur	5	3
15. Bhaunagar, Káttýwār	2	3
16. Sirdárs' school, Belgaum	7	3
17. Sátára	8	2
18. Ahmedābād	10	2
19. Baroda	2
20. Umrāvati, Berár	2	2
21. Kurrachee, Sind	3	1
22. Sholápur	1	1
23. Násik	5	..
24. Holkar's, Indor	4	..
25. Bahádúr Khánjí's school, Junágarh, Káttýwār	2	..
26. Alfred, Cutch	1	..
27. Rájkumár college, Rájkot	1	..
28. Deva's English school, Indor	1	..
Total ..	224	121

schools, passed the numbers shown in the margin. The Berár and Indor schools are outside the Presidency, and the Baroda school is not under the department. The Elphinstone maintains its place at the top of the list, but Poona has given place to Surat, and Kolhápúr to Dhárwār and Ratnágiri. Of the rest, Ahmednagar, Nariád, Rájkot, Dhulia, Broach, Haidarābād, Shikárpur, Bhaunagar, and Sholápur have improved their positions at the expense of the others. At the matriculation, the two Jagonnáth Sankarset Sanskrit scholarships were carried off by the Ratnágiri and Poona schools; the Jámshri Vibháji scholarship,

INSTRUCTION.

High schools.

given to the Káttwár boy who obtains the highest marks in English, was won by a boy from the Junágarh school; the Ellis prize, given for proficiency in Gujaráti, was won by the Surat high school; the Hebbert and La Touche scholarship, given for the highest marks obtained among Káttwár boys, was won by the Rájkot school; the two Ráo Sir Pragmalji scholarships, awarded for the highest number of marks among native candidates, were won by the Ratnágiri and Elphinstone schools; and the Kahan-dás Mancharám scholarship, given for the highest number of marks among Gujaráti Hindus, was won by the Nariád school.

The schools for Europeans and Eurasians, which passed candidates for matriculation,

	1875.	1876.
St. Mary's institution, Bombay...	25	22
Scottish high school, Byculla ...	2	1
Bishop's high school, Poona ...	3	1
St. Vincent's high school, Poona ...	6	1
Bombay Scottish orphanage	1
Diocesan high school, Bombay ...	2	...
John Cannon high school, Bombay.	2	...
Total ...	40	26

are shown in the margin. St. Mary's and St. Vincent's schools are for Roman Catholics, and the other five schools for Protestants. The Bishop's high school obtained the Cawásji Ja-

hángir prize for Latin in the matriculation examination.

The mission schools, represented at the University examination,

	1875.	1876.
Surat mission	4	5
Robert Money, Bombay	3	4
Free General Assembly, Bombay ..	4	2
Belgaum mission	5	2
General Assembly, Bombay	10	1
Poona free church mission	1	1
Ahmedábád mission.....	8	...
Haidarábád mission	1	...
Total ..	36	15

are given in the margin. All these schools are aided by Government. The severity of the matriculation examination appears to have affected the mission schools more than the schools for Europeans; but the figures for private schools main-

tained by natives show a still greater falling off.

The private schools, which passed candidates for matriculation,

	1875.	1876.
Bombay proprietary school	19	10
Pársi high school, Fort	23	7
Bombay private English school ...	7	4
Sir J. J. Pársi benevolent institu- tion, Bombay	19	4
Pársi boarding school, Bandora ...	3	4
Chandanwádi high school, Bombay	6	2
Bombay high school	5	1
Alfred and Pársi high school, Bombay	7	1
Bába Gokhale's school, Poona ...	6	...
Prabhu seminary, Bombay.....	4	...
Sir Cawasji Johangir Nausári	2	...
Zoroastrian madressa
Gopipura private English school.	2	...
Thána private high school	2	...
Poona Native institution.....	1	...
Framji Mothabhái's private Eng- lish, Surat	1	...
Total ...	107	33

are shown in the margin. Of these schools the Pársi high school, the Bombay private English school, the Chandanwádi high school, Bába Gokhale's school, and the private school at Surat are on the register for grants-in-aid according to results: the Pársi benevolent institution receives a fixed grant, and the Bombay proprietary school, the Bombay high school, and the Nausári and Gopipura schools have not asked for aid.

because they are intended for the children of wealthy people, or are supported by the liberality of private individuals. Of the five remaining schools the Prabhu seminary, the Thána school, and the Poona Native institution have been judged to be inefficient; and aid has been refused to the Bandora school, which is intended for the children of wealthy Pársis, and to the Alfred school, which has been opened in a locality amply provided with English schools. In the matriculation examination a pupil of the Pársi boarding school, Bandora, carried off the Bái Manekbái prize, for proficiency in general knowledge. The returns for all high schools connected with Government show an increase of two schools and 790 pupils; Government schools showing an increase of two schools and 696 pupils; aided schools an increase of 107 pupils; and inspected schools a decrease of thirteen pupils. The increase in the number of schools, and part of the increase of pupils shown under Government schools, is due to the promotion of middle class schools teaching up to the matriculation standard.

Middle Class Schools.

The returns for the whole Presidency show a decrease of fifteen middle class schools with 935 boys, but about half of this decrease is due to the promotion of middle class schools or to the amalgamation of Anglo-vernacular schools with high schools. The Central division shows a net decrease of four middle-class schools and 250 pupils. Under Government first grade schools there is a decrease, as the Thána and Sholápur schools have been shown under high schools, while the Poona city school has been amalgamated with the high school, and the Alibág school has been closed for want of pupils. Of the other first grade schools, the five in the town of Bombay are in a flourishing state, and the principal of the Elphinstone high school is well satisfied with the pupils they send him. The schools at Kalyán and Poona show a slight falling off in numbers, and the attendance in the Bársi and Pandharpur schools has been largely reduced owing to the famine. The second grade schools in the Central division show an increase of one school, Karád, and forty-nine pupils. Of these schools two are in Poona, three in Sátára, four in Thána, and six in Bombay. The number of aided middle-class schools at the end of the year was twenty against twenty-one in the previous year, and the total number on the rolls in all schools was 2,508, or ten less than in the previous year. Eight were boys' schools with 1,523 on the rolls, two mixed schools with fifty-seven on the rolls, and ten girls' schools with 928 on the rolls. The North-east division shows an increase of fifty-four pupils under middle class schools. Now that the Dhulia school has been incorporated with the high school, the only first grade Government school in the North-east division is that at Ahmednagar. Of second grade schools Khándesh has four, Ahmednagar two, and Násik one. Under middle class schools the Northern division shows a decrease of five schools and 172 pupils. For Government schools there is a decrease of thirty pupils under first grade, and a decrease of three schools with seventy-six pupils under second grade schools. The three schools that were closed were those at Rándér, Godhra, and Umreth. The

INSTRUCTION.

Middle class schools.

Ránder school was closed, as the new bridge over the Tápí enables the boys to attend in the Surat schools. The Godhra school was closed on account of small attendance, and the Umreth school for want of funds. Aided schools show a decrease of three schools and eighty-one pupils, owing to the closing of weak institutions at Surat and Ankleswar. Inspected schools show an increase of one school and fifteen pupils, a small Pársi school at Udwára, in southern Surat, having been placed on the register for inspection. The Southern division shows a decrease of four schools and 422 pupils. Government schools show a decrease of thirty-one pupils (first grade) and one school, with 223 pupils (second grade). Aided schools show a decrease of one school with 241 pupils, owing to the transfer of the Belgaum mission school to the head of high schools; and inspected schools show a decrease of two schools, but an increase of eleven pupils. Of the second grade schools one is in Dhárwár, one in Kaládgi, eleven in Belgaum, six in Kánára, six in Kollhápúr, and two in SÁNGLI. There are also schools at Miraj and Mudhol, which are said to be nearly fit for classification in a higher grade. In Sind there is a decrease of three schools and 249 pupils. The decrease is chiefly due to Government schools, the Naraian Jaganáth and Haidarábád schools having been amalgamated with the high schools, and one second grade school having been closed. Aided schools show a decrease of one school, but an increase of ninety-two pupils. The Government school at Tatta has been raised to the rank of a first grade school; and the inspector reports favourably of the Sukkur school and of the two aided schools (European) at Kurrachee.

The chief tests of the efficiency of middle class schools are the local examinations for certificates qualifying for public employment. These examinations are held once a year by district committees, and the numbers of pupils presented and passed at the examination for the year under report were :—

Public service certificate examination, 1876-77.

Division.	First Class Certificates, 5th English Standard.		Second Class Certificates, 6th Vernacular Standard.	
	Number examined.	Number passed.	Number examined.	Number passed.
Central division ...	638	81	1,692	340
North-East division ...	130	39	938	313
Northern do. ...	80	47	503	161
Southern do. ...	231	92	1,075	386
Sind do. ...	42	33	94	54
	1,121	292	4,302	1,254

The number of successful candidates has decreased from 430 to 292 for the first class, and risen from 1,239 to 1,254 for the second class certificate. Like the matriculation examination, the examinations for first class certificates were more difficult than in previous years.

The study of English and Classical Languages.

The figures for institutions connected with Government show an increase in the number of students learning English :—

Study of English, 1875-76 and 1876-77.

Number of Institutions.		Grade of School.	Number learning English.		Increase.	Decrease.
1875-76.	1876-77.		1875-76.	1876-77.		
7	7	Colleges ...	896	843	...	53
45	47	High schools ...	7,737	8,527	790	...
77	69	1st Grade Anglo-ver- nacular schools.	6,635	6,422	...	213
84	83	2nd Grade Anglo-ver- nacular schools.	2,065	1,859	...	206
11	11	Female schools ...	938	964	26	...
2	1	Female normal school	22	6	...	16
1	1	Special school ...	40	36	...	4
227	219	Total ...	18,333	18,657	816	492

Under high schools the increase is largely due to a transfer from Anglo-vernacular schools.

The number of pupils learning a classical language, or a European continental language, is as under :—

Study of Classical Languages, 1875-76 and 1876-77.

Language.	Number Studying.		Increase.	Decrease.
	1875-76.	1876-77.		
Latin ...	1,074	850	...	224
Sanskrit ...	3,324	2,901	...	423
Persian ...	1,112	909	...	203

Boys' Vernacular Schools.

The number of vernacular schools for boys now amounts to 4,008, with 210,370 scholars, the decrease of the year being three schools and 1,415 scholars. These figures may be divided a under :—

Boys' Vernacular Schools, 1875-76 and 1876-77.

	Number of Schools.	Number of Pupils.	INCREASE.		DECREASE.	
			Schools.	Pupils.	Schools.	Pupils.
			Government†	3,336	1,81,515	...
Aided ...	164	8,848	4	343
Inspected ...	488	19,000	48	785
Police and jail schools ...	20	1,007	12	682

The falling off in the cess receipts during the past year made it necessary to reduce expenditure as much as possible, and the cess expenditure was Rs. 7,04,876 only, or Rs. 68,738 less than in the previous year. Fees showed an increase of Rs. 5,683, larger collections in towns more than making up for loss in rural districts. From municipalities, except in Sind and in the towns of Bombay, Ahmedabad, and Surat, little real aid for vernacular education is received. Such aid as the municipalities elsewhere give is generally set apart for English schools.

* Exclusive of Pupils of the Vernacular Department in the Grant medical college.
† Particulars of the variations in the Government schools in British districts and supported by local funds will be found in No. A (1)—Part VII. of the statistical returns. But the figures in that return include second grade Anglo-vernacular and girls' schools as well as vernacular schools for boys.

The decrease under vernacular schools is divided between the several divisions as under :—

Vernacular Schools, 1876-77.

	Schools.		Pupils.	
	Increase.	Decrease.	Increase.	Decrease.
Central division	27	...	4,950
North-east division	41	...	1,884
Northern division ...	62	...	4,773	...
Southern division ...	8	...	1,217	...
Sind...	5	...	571
Total ...	70	73	5,990	7,405
<i>Deduct</i> Increase	70	...	5,990
Net Decrease ...		3	...	1,415

The decrease in the Central and North-east divisions is due to the famine prevailing in most of the districts. About a third of the increase shown for the Southern division is due to the inclusion of police and jail schools, which were omitted from the returns of the previous year. The decrease shown for Sind is attributed to an unhealthy season.

The number of pupils in the cess schools, with the proportion which children of cess-payers bear to the whole number on the rolls, is shown below :—

Cess Schools, 1876-77.

	Second Grade Anglo-vernacular schools, or vernacular with English classes.			Vernacular Schools.		
	Total Number on Rolls.	Cess-payers.	Proportion per cent.	Total Number on Rolls.	Cess-payers.	Proportion per cent.
Central division ...	1,517	728	48	34,843	22,499	64
North-east division ...	1,362	706	51	30,788	19,204	62
Northern division	50,467	33,445	66
Southern division ...	1,207	727	60	24,179	16,963	70
Sind	945	122	12	10,968	2,020	18
Total ...	5,031	2,283	45	151,245	94,131	62

The figures for the previous year were, for cess-payers in Anglo-vernacular schools, 2,407, and for cess-payers in vernacular schools 103,424. This year there is an increase in the Northern division, the Southern division, and in Sind; but the net decrease in cess-payers in the Central division is 10,432, and in the North-east division 702.

Under primary boys' schools the central division shows a decrease of forty-three Government schools and 5,265 pupils, an increase of four aided schools with a decrease of forty-three pupils, and an increase of twelve inspected schools and 358 pupils

Central Division.

INSTRUCTION.

Boys' vernacular schools.

The inspector reports that all his districts show a decrease in pupils: "The decrease in the Poona and Sholápur collectorates is mainly due to the famine and the attending migration of the people; in the former district fifteen schools, and in the latter no less than nineteen schools had to be closed towards the end of the year for want of attendance, and there was a serious falling off in attendance at many of the remaining schools. Of eight schools closed in Sátára, one was amalgamated with another school, two had been declining for years past, and five were temporarily closed for want of attendance in parts affected by scarcity. In Ratnágiri the decrease in pupils was partly owing to the closing, for want of funds, of eight schools, and partly to the scarcity of the necessaries of life. The decrease of pupils in Thána and Kolába is ascribed chiefly to the increased rate of fees. The small decrease of attendance in Bombay is owing to the closing of one Máráthi and three Gujaráti schools. The average daily attendance in all schools throughout the year was 34,755. The ratio of average daily attendance to the average monthly number on roll varied from seventy-one to eighty-five. It was highest in the Bombay schools; lower, and about equal, in Poona, Sátára, and Ratnágiri; still lower in Sholápur and Kolába, and lowest in the district of Thána."

The number of aided primary boys' schools at the end of the year was nine, with a total of 933 on the rolls.

North-East Division.

The North-east division shows a decrease of forty-three Government schools and 1,955 pupils, and an increase of sixteen aided pupils. In Khándesh the decrease in schools is six. "The decrease in pupils is 721, which is considerable, and is to be accounted for partly by the prevailing scarcity which had led to people leaving their villages and to boys being removed from school to assist their parents in various kinds of labour." In Ahmednagar there is a decrease of twelve schools, "one branch school, two inferior schools, and four night schools have been closed permanently, while five other schools have been closed temporarily." The number of pupils is 7,926, as opposed to 8,309 during 1875-76, showing a decrease of 383. In Násik there is a decrease of ten schools, and the number of scholars is 7,709, against 7,807 at the end of 1875-76. The schools in the Peint state are eight in number as in 1875-76. The number of pupils has increased by twelve, being 339 this year against 327 last year.

Northern Division.

In the Northern division the great increase made during the year, both in schools and pupils, is highly satisfactory. It is noticeable also that the increase is general, both in districts and states. Even the most backward districts show a considerable increase. The schools in native states are noticed later on; of the efficiency of schools in British districts the inspector reports that in Kaira and the two Surat sub-divisions a largely increased number of boys have passed under the standards as compared with the year 1875-76; while in Broach and Ahmedábád, where the increase is not so large, it is yet considerable.

The Southern division shows a decrease of seven Government schools, but an increase of 860 pupils; a decrease of one aided school with fifty-three scholars, and an increase of seven inspected schools with a decrease of twelve pupils. There is also a large increase shown for police and jail schools. The Inspector remarks that though a few schools were closed, attendance improved generally during the first harvest months on account of the leisure to attend school caused by the want of field work and failure of crops in the famine districts; a further reason for the increase is found in the reduction of the fee in distressed districts from two annas to half-an-anna for boys not able to pay the higher rates. The decrease of schools is due to Belgaum and to the parts of Kánára above the Gháts. As to the efficiency of the schools, the Inspector puts those in Dhárwár first. Some improvement under the higher standards was shown by the Belgaum schools, and the coast schools in Kánára are well reported of. Of the state schools those in Sávánur, Laxmeshwar, Kolhápur, Miraj, and Mudhol are favourably noticed. In Miraj and Mudhol the schools are said to be provided with excellent buildings. Of the grant-in-aid schools, four in Belgaum and one in Kaládgi are efficient, and six in Dhárwár are less favourably noticed. The inspector reports that his subordinates have rendered such assistance as they could give to the officers in charge of relief works. He says: "I am glad to learn from collectors and their assistants that schoolmasters have done good service in various kinds of relief works, in circle inspection and mustering work. They have often been thus employed to aid in meeting sudden requirements of large numbers flocking for relief. Some few have been taken away from their school work entirely and paid from relief funds, their places being supplied and schools kept as usual. Most have assisted in relief works, doing their school work, at the same time, and on their usual pay. Of course, next year's examination results, in the most distressed districts, may be worse than usual, but that is all. From the first assistant of the Belgaum high school to the lowest vernacular schoolmaster, the subordinates of the department have, I hear, done good work, and been most useful to the district authorities during the trying times of the past year and up to the present moment."

Sind shows an increase of two Government schools, but a decrease of 308 boys, and a decrease of eight aided schools and 179 boys. The falling off in Government schools is attributable to the fact that small-pox and fever raged most violently in almost all parts of the province during the year under report. It is also, though in a minor degree, owing to the competition of the private schools. In Haidarábád, especially, private schools have attained a great development, partly from the local reputation of a few teachers, and partly from the elasticity in collecting fees in those institutions. They, in common with all the schools, suffered this year from fever and physical causes, but the numbers, on the whole, were tolerably maintained. The decrease in the number of aided schools is chiefly due to the circumstance that seven indigenous schools withdrew their names from the register. The

Southern Di-
vision.

Sind.

Boys' vernacular schools.

diminution in the number of pupils is partly attributable to the closing of seven indigenous schools, and partly to the sickness which prevailed. The closing of the schools was caused by the fact that during the previous year the private masters had taught only the lowest standard, and were unable to give their pupils any more advanced instruction. They were, in consequence, unable to present any pupils for examination under the higher standards, and were consequently withdrawn from the register. The inspector remarks on the scarcity of funds for vernacular schools:—
“If it were not for the want of funds, many new schools might have been opened. Haidarábád is peculiarly badly off in this respect, as, owing to a mistake in the educational accounts which took place in the year 1869, it is found necessary to pay Rs 1,000 a year in order to remedy it. The local funds are never in a flourishing condition, and this additional strain is most serious. This year, however, I intend to close some schools which are not doing well, and hope, by that means, to provide for some villages where they would be appreciated. In many village schools it is observed that the Hindu-Sindhi character, as it now exists, is still unpopular, and probably these schools may be closed without much detriment to the general cause of education.” Of the progress made during the year the inspector reports favourably:—
“The year 1876-77 shows 6,209 pupils, against 5,478, who appeared for examination in the year previous to it. Private institutions also show an advance in efficiency. In private institutions the number of pupils presented for examination during the year under review was 1,969 against 1,523 in 1875-76.”

Night Schools.

The figures for night schools are included in the figures given under boys' vernacular schools. The separate returns for the whole Presidency give seventy night schools and 1,813 pupils, or a decrease of twenty-seven schools and 837 pupils. In the Central division there is a decrease of three Government schools and eighty-four pupils, a decrease of fifty aided pupils, and an increase of one inspected school and forty-five pupils. Three schools in the Sâtára collectorate and one at Kurla, in Thána, are doing fairly, but the other two Government and the two aided schools are less successful. In the North-east division twenty-five night schools were closed for want of funds. Of the two that are left, one at Jalgaon is supported by the municipality. In Ahmedábád the number of pupils attending night schools has slightly fallen off owing to the withdrawal of a grant to the Khadia school. In Kaira four schools have been closed, and the remaining two contain only forty-five pupils. In Broach the closing of the town schools has been recommended. In northern Surat there are three schools attended by ninety pupils. These schools are said to be useful, being attended by grown-up persons of the artizan and agricultural classes. In southern Surat, till now, or night schools existed. One has now been opened at Balsán. Under night schools the Southern division shows a decrease of three Government schools with sixteen pupils, and of one inspected school with thirteen pupils. The Government schools were

Night
Schools.

closed in Belgaum and Dhárwár. The night schools in Miraj and Kolhápur did well, but the three remaining in Dhárwár and Belgaum are less efficient. Of the night schools in Sind the inspector remarks :—" There is hardly any change worth noticing under this class of schools, though I imagine that the system is capable of being developed. In Shikárpur the night schools flourish, owing to the energy of the master of the vernacular school ; and in some villages they are in a healthy condition."

The figures already given show that the number of Muhámmádans in schools connected with Government has risen from 26,277 to 27,263. Besides this increase in pupils, the report of the Elphinstone college shows that a Muhammadan, the first Muhammadan who has obtained the distinction, was placed in the first class at the B.A. examination : and the principal of the Elphinstone high school and other head-masters of English schools report favourably of the progress made by the Muhámmádan boys of the better class who are beginning to attend school. In the Central division the number of Muhámmádans attending Government vernacular schools was 2,745. Out of these, 935 attended twenty-three Hindustáni schools specially provided for them. These schools are distributed over the several districts as follows :— Poona one, Sholápur two, Sátára four, Ratnágiri two, Thána seven, Kolába four, and Bombay three. There is an increase of one school each in Sholápur and Kolába ; on the other hand, one school had to be closed in Ratnágiri for want of attendance, and one in Thána for the same reason. In Násik one Hindustáni school has been closed ; but the four schools still open are doing well, and the number of boys under instruction has been increased from 179 to 187. In Khándesh two schools have been closed, but the number of pupils has risen from 704 to 790. Of two schools in Ahmednagar one is doing well, but the other has been closed. No great improvement is observable in the condition of the Urdu schools in the Northern division. In Ahmedábád a slight increase in the number of pupils has taken place ; while a corresponding decrease has occurred in Kaira. In Broach, where there are ten schools, the educational inspector reports that town schools have improved ; village schools declined. In northern Surat, where there are eleven schools, some are reported to have done well with the aid of the head-master of the Gujaráti schools. In southern Surat there is one school, which is tolerably efficient. The Hindustáni schools in the Southern division are divided between Belgaum four, Dhárwár four, Kaládgi five, and Kánára nine. Of these, three in Belgaum, four in Dhárwár, four in Kaládgi, and some in Kánára, appear to be doing well.

Muhamma-
dan educa-
tion.

The jail and police school returns call for no special notice.

Girls' Schools.

Girls' schools show a decrease of three Government schools, but an increase of fifty-eight pupils, an increase of one aided school and of 425 pupils, and an increase of five inspected schools, and twenty-eight pupils.

Girls' Schools.

In the Central division the number of girls' schools at the end of the year was twenty-six, being one more than at the end of the preceding year, and the total of girls attending 1,298, or seventy-three less than last year. The town of Bombay shows an increase of one school and forty-five girls, but there is a decrease in each district except Kolába and Ratnágiri. In Poona the practising school attached to the normal school has been provided with a good mistress, and one of the mistresses previously employed, the mistress of the Vetal peth school, is said to have taught her pupils well. The school at Sátára, which last year ranked second to the Karád school, has surpassed that school this year, and shows a small increase in numbers. In point of efficiency also the Sátára school, which for the greater part of the year was taught by an old and experienced master, is superior to the school at Karád, which is in charge of a trained mistress, from whom better work was expected. In Ratnágiri the schools at Vingorla and Kelshi are under trained mistresses, while those at Ratnágiri and Málwan are under experienced masters. The schools at Ratnágiri, Vingorla, and Málwan are in a satisfactory condition, but the one at Kelshi is in a declining state. In Thána, the schools at Bhiwandi, Kalyán, Panwel, and Uran are, on the whole, well conducted, particularly the one at Bhiwandi. The only school in Kolába is in a good condition. Of the seven schools in both districts only two, those at Bhiwandi and Kalyán, are under trained mistresses. In Bombay the girls' school at Kámáthipura, which was formerly managed by the Telugu people and has now been made a Government school, is expected gradually to improve under the management of the trained mistress who has been appointed. The Churney road girls' school is in a very satisfactory condition. The other Government schools in the division call for no special remark.

The number of aided primary girls' schools at the end of the year was ten, with a total number on the rolls of 1,508, showing an increase of three schools and 332 pupils.

The two girls' schools in Násik and the four in Khándesh are all in a satisfactory state, the Khándesh school showing an increase of seventy-two girls. In Ahmednagar, too, the girls' schools show an increase of thirty-eight children.

In northern Surat the number of schools has decreased by one and the pupils by three. Their efficiency is not equal, apparently, to what it was last year, only eleven passing in the first three standards, against twenty-four passed last year. The aided girls' schools are the same in number as last year, and have an increase of ten scholars. Their efficiency has largely increased, twenty-seven passing under the standards, against seven in 1875-76. In southern Surat there is a decrease of one school, but an increase of eight scholars. The efficiency of the schools is much the same, twenty-eight passing in various standards, against thirty-three last year. One inspected girls' school shows a decrease of twelve pupils; but its efficiency is good, thirty-four passing this year against fifteen last. In Broach there is a decrease of one school, but an increase of thirty-six pupils, sixty-

three passed under the first three standards against fifty passed in 1875-76. The educational inspector speaks hopefully of the pupils, and a trained mistress has been sent to Ankleswar, which may lead to the improvement of the school there. In Kaira the number of schools is the same, but there are 101 more pupils, and 116 passed under the standards, compared to 107 last year. The Mehmádábád school staff has been further strengthened by a female assistant, unpassed, from the Ahmedábád training college. The schools generally are doing well. In Ahmedábád the number of Government schools is the same, but there are thirty more pupils. One hundred and twelve passed under the standards, against ninety-two last year. The aided schools were partially examined this year. They, however, show an increase of fifty-two pupils, compared with 1875-76. There is one inspected school in which the numbers have fallen from sixty-seven to thirty-six, and its efficiency is poor, only one child passing in standard II. On the whole, female education in Ahmedábád is prospering. In the Panch Máhals the schools have fallen from three to one, and the number of girls from 119 to sixty-seven; the efficiency of the existing school is fairly good. Under girls' schools the Southern division shows an increase of one school with fifty-four girls (Government), an increase of eight girls' (aided), and an increase of two schools with fifty-eight girls (inspected). The inspector speaks highly of the success of the Kolhápúr school, where the numbers have risen from eighty-seven to 100. The school has the advantage of being under the superintendence of a European lady. Mention is also made of some of the schools in Dhárwár, Kánára, Kolhápúr, Sáwánur, Laxmeshwar, Miraj, and Mudhol; and some improvement is noted in the Sánгли and Kaládgi schools. The schools in Belgaum are not successful, except a private school in the town of Belgaum; and the aided schools, except one in the Kaládgi district, are of little importance. Under girls' schools in Sind there is a decrease of one school and of ninety-two pupils (Government), and of twenty-eight pupils (aided). This is accounted for in the same manner as the decrease in boys' schools. Of the progress made in the girls' schools in Sind there is little to be said, except that the inspector gives much praise to the Lárkána school, which prepared pupils for the highest standard.

Of 446 candidates for the entrance examination of the Poona college thirty-four passed, of these twenty-three joined the college. Besides fifty-two men holding second class certificates, nine stipendiary and two free students appeared for the second year's certificate examination, and passed, with the exception of one free student; one obtained a first class and the rest second class certificates. Of six masters examined with the second year's men, one obtained a second class certificate, and one was allowed to have a special third class certificate of Rs. 15. Seventy-four stipendiary and eight free students were examined for the first year's certificates; three obtained first class and seventy-four second class certificates. The first ten of the passed men have been retained in the college for further study, and the rest were sent out as masters or assistant masters. Of twelve masters

Training
college.

examined with the first year's men, nine obtained certificates of Rs. 10 : they returned to their former appointments.

Training
schools.

The training school at Dhulia for the Khándesh district has been closed from March 1st, 1877. As regards the last examination of the training school the result was not satisfactory. In the first year's class sixteen students were presented, of whom only two passed and have been provided with places. One man of long service, who had been sent to the school for training, failed, though not badly, but he was given a new place on account of his long service and good character. The unpassed students will be provided with assistants' places, if occasion offers. Twenty-three teachers were allowed to come up for the examination, of whom four passed, one obtaining a certificate of Rs. 15 ; the other three passing in the second class and obtaining certificates of Rs. 12. The teacher who obtained a first class certificate displayed great intelligence, and had evidently studied hard. In the preparatory class of the training school thirteen students appeared, of whom six passed. In future, men for the North-east division are to be trained at Poona. In Ahmedábád the inspector reports that the results of the examination were very satisfactory. In the second year class, out of six presented, five passed ; of these three were men from Káttwár. The two, however, who passed with most marks out of the five, were from provincial Gujarát. In the first year class, out of thirty-eight presented, four passed with more than seventy per cent of full marks, and have been allowed by the inspector to continue their studies in the second year's class. Twenty-three more obtained over fifty per cent, and passed in all subjects ; eleven failed. In the preparatory class fifty were examined, of whom thirty-eight passed. Two of these were from the Rewa Kánta and four from Cutch ; two others from Rewa Kánta, failing. In the first year's class two men from Mahi Kánta passed in all heads. All the Cutch men, sent up and examined in the preparatory class, passed, which speaks well for the intelligence of the Cutch people. In the Urdu class six were examined, of whom four passed in all subjects.

The examinations at Rájkot were, on the whole, satisfactory. In the first year class twenty-four pupils were presented, of whom nineteen passed. None of these got over seventy per cent marks, and so none were allowed to enter on the second year's course. All nineteen were appointed masters of schools in Káttwár. In the preparatory class thirty-three were presented, and twenty-four passed. Five of the men who failed were sent to schools as assistants, and the rest were dismissed.

At Dhárwár the inspector reports that fifty-three men passed for certificates, forty-seven from British districts, and six from native states.

In the Haidarábád school, out of fifteen candidates who appeared for the final examination, fourteen passed fully, and one failed in two subjects. In class II. ten candidates appeared for the examination, out of whom nine passed fully, and one failed in more than two heads. The entrance examination of the nor-

mal school was held about the end of February last. There were only ten candidates who appeared for the examination during 1876-77, against fifty-seven in the year preceding it. Out of the former only two boys passed. This decrease in the number of the scholars presented and passed is attributable to the fact that the VI. Standard had recently been introduced as the test for this examination.

Training
schools.

In Poona the number of pupils at the close of the preceding year was nineteen; of these three were sent out as mistresses. During the year under report a very promising pupil died, and one had to be dismissed. On the other hand seven were admitted as stipendiary and six as non-stipendiary pupils, raising the number at the close of the year to twenty-seven. The school was examined by the inspector, and the result of the examination considered very satisfactory. Mrs. Mitchell reports that more time has been devoted to needle-work than in previous years, but that otherwise no change has been made in the school course. It has been our endeavour, she writes, more than ever to have the women thoroughly grounded; our object is to have them able to teach in their own language, and only in special cases do we do anything in English; we cannot afford space for it on our time-table, though some of the women study it at home, and we give them help.

The inspector's report on the Ahmedábád female training college is hopeful: "I had every reason to be satisfied with the progress of the institution, and I am glad to be able to show that it has been, during 1876-77, practically useful, having sent out five teachers in all to various schools. Three of these have gone as mistresses to the Harkuvarbái, Ahmedábád, Viramgám, and Ankleswar schools, respectively. One woman has gone as assistant in the Nariád girls' school, where her husband was appointed master, and one has been appointed as assistant in the Harkuvarbái school, of which another trained woman is mistress. Up to the present time I have had no kind of complaint against any of them, and I have every hope that they will do well."

The female normal school at Haidarábád was examined in November 1876. There were nine women for examination, all of whom, with the exception of one, did well.

Aided Schools.

Awards on the system of payment by results are not always paid within the year for which they are made, and the actual disbursements from the budget-grant for 1876-77 were as follows:—

Awards of 1875-76 paid in 1876-77	Rs.	a.	p.
Awards of 1876-77 paid in that year	7,021	14	0
	60,133	4	0
Grants to private colleges and schools, for pupils passing university examination:—	Rs.	a.	p.
For 1875-76 paid in 1876-77	8,151	0	0
For 1876-77 paid in that year	2,370	0	0
	10,521	0	0
Total Rs.	77,676	2	0

Grants-in-aid.

At the end of the year there remained claims for settlement amounting to Rs. 13,974-8-0, so that the total award for 1876-77 was Rs. 76,477-12-0 against Rs. 84,351-6-0 for the previous year. The decrease in the award for 1876-77 is due to the small number of candidates successful in the matriculation examination, and to the withdrawal of salary grants owing to want of funds.

The grants paid during the year under report were divided between institutions as under :—

Schools under recognized management.		Number of Schools.	Amount of Grant.
			Rs. a. p.
For Europeans and Eurasians	{ High schools ...	6	8,611 8 0
	{ Middle class schools ...	2	660 0 0
	{ Lower do.
	{ Girls' schools ...	8	8,280 8 0
	{ Mixed do. ...	11	6,756 0 0
Total ...		27	24,308 0 0
For Natives	{ Colleges ...	2	2,150 0 0
	{ High schools ...	10	21,337 0 0
	{ Middle class schools ...	8	9,568 8 0
	{ Lower do. ...	28	4,515 10 0
	{ Girls' schools ...	17	5,353 8 0
{ Mixed do. ...	4	940 0 0	
Total ...		69	43,864 10 0
<i>Private Schools.</i>			
For Natives	{ High schools ...	5	6,343 0 0
	{ Middle class schools ...	6	1,842 0 0
	{ Lower do. ...	10	709 8 0
	{ Girls' schools ...	2	263 0 0
	{ Mixed do. ...	1	346 0 0
Total ...		24	9,503 8 0
Grand Total ...		120	77,676 2 0

In addition to grants paid by results, Government made allowances to private institutions as under :—

	Rs.
Bombay Education Society's Byculla schools (for Europeans)...	5,280
Sir J. J. Párai Benevolent institution ...	6,000
Rastamji Jamsetji Gujaráti schools ...	2,260
David Sassoon's reformatory ...	3,600
Indigenous schools in the island of Bombay ...	274
Sanskrit class at Násik ...	100
Total Rs. 17,514	

The first three of these are charitable institutions under Government inspection, and receive fixed grants, according to promises made before the system of grants by results came in. The fourth is an industrial school for boys belonging to the criminal classes. The payments to indigenous schools in Bombay and

Násik were made as rewards for improvement in method and discipline. Grants from local funds, amounting to Rs. 1,738-13-3, were also made to indigenous schools in the Mofussil. The total cost to Government of all aided schools was therefore Rs. 96,928,* while the returns from managers show an expenditure of Rs. 3, 74,900 from private funds.

Under the liberal grant-in-aid rules published in 1872 the number of aided schools has, in six years, risen from eighty-five to 255, and the number of pupils from 9,147 to 20,099; but provincial funds being no longer able to meet the growing demands of aided schools, revision of the rules was ordered by Government during the year under report. For the purpose of this revision the managers of the most important of the schools under recognized management were invited to a conference, and His Excellency the Governor in Council, after considering the recommendations made at this conference, was pleased to issue new rules which withdrew grants for passing matriculation and grants for salaries, and reduced by one-half the grants for passing the F.A. and B.A. examinations. The grants for the school examinations have been left as before, but the attendance qualification has been raised from seventy-five to 100 days; a form of school register has been prescribed, and a day of attendance has been defined as meaning not less than four hours of instruction given in the same day.

Indigenous Schools.

Indigenous schools have suffered severely from the scarcity prevailing in the Deccan, and many of the schools have been closed for want of attendance. In the Central division the number of registered indigenous schools at the end of the year was 65, with an attendance of 3,496 pupils. Grants varying from Rs. 5 to Rs. 50 were made to twenty-five of these schools, amounting in the total to Rs. 528 against Rs. 729 disbursed to forty-two schools in the preceding year. In Surat two aided schools are said to be well managed, and there is a good Pársi school in Broach. Of the rest only one in Ahmedábád has shown any improvement during the year. Of the two aided schools in the Southern division, one was closed on account of the famine. The indigenous schools in Sind have been noticed under the head vernacular schools.

SCHOOLS IN NATIVE STATES.

The expenditure from the funds of Native states is divided as follows:—

a.—Expenditure from funds administered by officers of Government—

	Rs.	a.	p.
<i>Northern Division</i> ... Rewa Kánta	1,462	3	8
Káttýwár	1,51,967	13	0
Mahi Kánta	1,359	12	11
Pálanpur	1,359	12	10
<i>North-East do.</i> ... Peint	2,400	0	0
Total ...	1,53,549	10	5

* Exclusive of Rs. 46,793 for buildings.

Remarks on education in native states have been already made in Chapter I., and further particulars will be found in the statistical tables.

In Akalkot the number of schools is twenty-two, being one more than in the previous year. One of these is a second grade Anglo-vernacular school, one a girls' school, and the rest are vernacular schools. The total number of pupils attending all schools at the close of the year was 942, being seventy-six less than in the preceding year. In the Modnimb sub-division of the Miraj state the number of schools was seven as in the preceding year. All are vernacular schools. The total number of pupils at the end of the year was 178, being forty-nine less than in the previous year. In Bhor the number of schools has been twenty-two, the same as in the previous year; the number on the rolls fell from 753 to 738. One school is a second grade Anglo-vernacular school, and the rest are vernacular schools. In Aund there are fifteen schools with 457 pupils. These schools, like most of the schools in the Deccan, have suffered severely from the effects of the famine. In Phaltan the number of schools was thirteen as in the preceding year; but the number on the rolls at all schools has fallen from 705 to 551. One of the schools is a second grade Anglo-vernacular school with 129 pupils; the rest are vernacular schools. In Jath the number of schools has risen from twelve to thirteen, but the attendance at all schools has fallen from 510 to 467. In Jawár the number of schools has risen from two to three, and the number on the rolls at all schools from forty-nine

Native
States.

to eighty-six; all are vernacular schools. In S^áwant W^ári the number of schools has risen from thirty-one to thirty-six, and the number on the rolls at all schools from 1,566 to 1,819; the average daily attendance at all schools throughout the year was 1,371. One school is a first grade Anglo-vernacular school with seventy-six pupils on the rolls, two are girls' schools, and the rest vernacular schools.

Vernacular education in K^átt^yw^ár continues to make rapid progress. The total number of schools has increased from 413 in 1875-76 to 462 in 1876-77, the number of English teaching schools remaining the same. The number of pupils in all schools has increased from 22,922 to 25,073. Of these 462 schools 335 are now Government or fund schools, 126 are private schools under inspection only, and one is an aided school. In Government or fund schools there is a net increase of twenty boys' schools. Four new schools have been opened in the Jh^ál^áw^ád division; two new schools have been opened in the Sorath division; and one, formerly an inspected school, has been taken on to the fund. In Gohelw^ád four new schools have been opened and two closed, showing a net increase of two schools. In H^áll^ár five new schools have been established in the state of His Highness the Jam of Naw^ánagar, and six in other parts of the division; while two, formerly under inspection, have been brought under the management of the educational committee and department. The girls' school at Wadw^án, formerly under inspection only, has also been brought under the control of the department. Inspected schools show an increase of twenty-three. This increase is distributed as follows:—Jh^ál^áw^ád twelve, Gohelw^ád nine, and H^áll^ár three; while Sorath shows a decrease of one school. The increase has thus been steady and general. It would have been more marked but for the large number of marriages which took place towards the close of the year. With regard to the efficiency of the teaching in the schools, the following percentages of those passed to those presented in 1875-76 and 1876-77 show what progress has been made:—

K^átt^yw^ár.

Fund Schools—Lower Class Schools.

					1875-76.	1876-77.
Boys	48 per cent.	55·3

Inspected Schools.

					1875-76.	1876-77.
Lower class, boys	30 per cent.	50·6

The percentage of efficiency in fund girls' schools has slightly fallen off, the figures being 47·2 in 1876-77 as opposed to forty-nine in 1875-76. In inspected schools the percentage has improved, being 25·3 per cent opposed to nineteen last year. Nearly all the girls examined and passed were studying the first and second standards, only two girls were reading up to the fourth standard. Among states which have sanctioned increases to their education grants, Wadh^wán, Bhaunagar, and Naw^ánagar deserve prominent notice.

Native
States.
Cutch.

Proposals for the re-organization of educational institutions in Cutch have been submitted by the inspector. English schools appear to be in the same unsatisfactory state as they were in 1874-75 and in 1875-76. Lower class schools show an increase of three state schools, one private school, and one private school in Bháyád towns; the number of pupils has, however, decreased considerably. Girls' schools are the same in number, but the attendance has decreased slightly. Two night schools have been opened, and are attended by fifty pupils. One Urdu private school exists, which shows a decrease of sixteen pupils.

Mahi Kánta
and Pálanpur.

The second grade Anglo-vernacular school at Pálanpur appears to be doing tolerably well. Vernacular schools show an increase of five schools and 336 scholars. Three new schools were opened in Mahi Kánta; while in Pálanpur two indigenous schools have been converted into Government schools. The girls' schools are four in number, the attendance having declined slightly. There is one Persian school at Pálanpur, where Gujaráti also is taught.

Rewa Kánta.

There is an Anglo-vernacular class at Nándod, which is in a very poor condition, as reported last year. Lower class schools show an increase of two schools and twenty-seven scholars. One Urdu school has been opened at Lunáwára, and is doing well; the Urdu school at Deogarh Bária has been closed. The three girls' schools in the division are reported to be in a bad condition. There is one night school, which is in a fair condition.

Remarks on the native state schools in the Southern division have been given under Government schools.

The Education of Chiefs and Minors.

The young Rájá of Akalkot, Sholápur, is reported to go on well with his studies, and will probably commence learning English this year. The eldest son of the chief of Aund, Sátára, has abandoned his studies owing to some disease of his eyes; the second son attends the high school at Sátára; the third son of the chief, a boy of nine years, attends the vernacular school at Aund, and is reported to know most of the subjects of the second vernacular standard. The son of the chief of Phaltan, Sátára, is still under his private tutor, and learns under the fifth Anglo-vernacular standard; he will probably soon be sent to the Sátára high school. The son of the Sumant of Sátára attends the Sátára high school. The three sons of the Mantri of Islámpur, Sátára, attend the Government schools in the town; the eldest passed very creditably under the third vernacular standard, and the two younger ones learn under the second vernacular standard.

In Ahmednagar a landed proprietor attends the high school, and is studying under the fifth standard; and a boy of the family of a third class Sirdár of Akolner, named Krishnaráo Rámráo, attends the Anglo-vernacular school, and is studying the first Anglo-vernacular standard. In Násik two boys, sons of landed proprietors, attend the high school, and are studying Anglo-vernacular standard III.

The Tálukdári school at Ahmedábád was at the close of the year examined by the head master of the Ahmedábád high school; seven boys only were present, only three of whom learnt any English; no boy had got further than the third English reading book. In the vernacular one boy reads part of the seventh book, and nearly all have a tolerable knowledge of Gujaráti reading. Arithmetic was generally well done. In the Tálukdári school, Sádra, Máhi Kánta, the attendance has fallen from twenty-two to fourteen, owing to grown-up lads having been removed. Of the fourteen boys attending the school, eleven were present when the school was examined in January. Of these, one Sursinghji Sirdár Singhji, of Kharál, was reading the seventh Gujaráti book and the second English book, and generally did well. Four others read the sixth Gujaráti book and the English primer; of the rest two read the fifth book, and were beginning English; the others generally knowing very little. The young Máharája of Edar is still under the same tutor. He is reported to be doing well. In the states of Dharampur and Bánsda the young chiefs are under tutors. A tutor has been given to the young Nawáb of Sachin. In Broach, of young chiefs under the Tálukdári settlement officer, the three younger sons of the Thakor of Amod have been removed from the Tálukdári school, and have a Gujaráti tutor. The young Thakor of Khairwára seems to have discontinued his studies. The Thakors of Jánor and Karod have done little or nothing during the year. The young Thakor of Dehej attends the school there, and passed the second standard at the annual examination. In Ahmedábád, besides those attending the Tálukdári school, several sons of minor chiefs attend their village schools. In Kaira the second son of the Thakor of Umeta has given up his studies; his two other sons and his grandson attend the vernacular school. The eldest son of the Thakor of Dehwán is learning the second standard; his second son passed in standard four, and the third son is commencing his education. In the Rewa Kánta the sons of the Rája of Chota Udepur, Nándod, and Karána are under private tuition. The sons of twelve minor chiefs and some of their relations are attending the Government schools in their respective localities, and are generally doing well.

The inspector reports that the Pant Amatya of Baura attends the Kollhápur high school, and that three sirdárs, relatives of the Nawáb of Sáwanur, attend the Dhárwár high school. The Nawáb of Sáwanur studies with a private tutor. The young Desái of Annigeri attends a vernacular school at Dhárwár. At Kollhápur the total number of boys and girls belonging to the families of sirdárs, inámdárs, and other persons of the better class, attending school at the end of the year, was forty-three. The young chief of Miraj is being educated at Kollhápur, and fifteen children of sirdárs and inámdárs are attending schools in the Miraj state. There are also three young inámdárs in the Sánгли vernacular school.

In Sind the three sons of Mir Fattehkhán of Mirpur are still under training; but the inspector does not speak in very high terms of their progress.

Rájkumár College.

Jaswant Singji, the Thákór of Limri, accompanied Mr. Macnaghten to England, and another of the older pupils, Wághji, the Thákór of Morvi, has left the college to travel in India under the care of Captain Humfrey. The only other boy who has left is Hari Singh of Bhaunagar, who, like the Thákors of Limri and Morvi, has been frequently praised for his conduct in the college. The new admissions to the college have been—

Edal Khánji of Junágarh.
Raghunáth Ráo Baba Sáheb, Sir Desái of Sáwant Wári.
Venkat Ráo Bába Sáheb, Rája of Mudhol.

The last two of these are the first Máraáthas admitted to the college.

The list of those now on the rolls is as under :—

1st Class.

1. Jaswant Singhji, Thákór of Limri.
2. Harbhunji of Morvi.
3. Hari Singhji of Sihor.
4. Dáji Ráj, Thákór of Wadwán.
5. Wakhat Singhji, Rája of Lunáwára.
6. Hussen Mia } of Mángrol.
7. Jehángir Mia }
8. Venkat Ráo, Rája of Mudhol.

2nd Class.

9. Kalubha of Wadwán.
10. Bhuput Singhji of Bhimrád.
11. Ladhobha of Rájkot.
12. Jawan Singhji of Bhaunagar.
13. Pertáp Singhji, Rája of Sunth.
14. Zulficar Ali Mir of Surat.
15. Raghunáth Rao Sir Desái of Sáwant Wári.

3rd Class.

16. Bhagwat Singhji, Thákór of Gondal.
17. Wakhat Singhji, Thákór of Wála.
18. Wakhat Singhji, Thákór of Elol.
19. Amra Wala of Bilkba.
20. Himmat Singhji of Dhrángadra.
21. Ummed Singhji of Limri.

4th Class.

22. Madhav Singhji of Chura.
23. Kesri Singhji of Gondal.
24. Doulat Singhji of Dhrol.
25. Ghajefar Khán of Manawadder.
26. Rai Singhji of Bhimrod.
27. Abhay Singhji of Tharád.

5th Class.

28. Hari Singhji of Lakadga.
29. Nathubháí of Kah Talá.
30. Chandra Singhji of Nawanager.
31. Man Singhji of Gondal.
32. Jethibháí of Gondal.
33. Edalkhán of Junágarh.

The Principal's remarks on this list are : " Of the boys in the first class, Harbhunji, Huri Singhji of Sihor, and the two brothers of Mángrol, are to be specially commended, and Kalubha and Bhuput Singhji in the second. Zulficar Ali has not much ability ; but,

having resided for some time in England, has a fair knowledge of English. The Sir Desái of Sáwant Wári is a clever boy; but I do not as yet know enough to speak positively of his general disposition. Of the younger boys, Bhagwat Singhji of Gondal and Wakhat Singhji of Wála have continued to make good progress, and both are likely to turn out well." The Principal reports that the work of the year has been satisfactory, with the exception of certain interruptions on account of marriage ceremonies. The results of the annual examination were good.

Rájkumár
college.

Miscellaneous.

The Government expenditure on buildings and repairs shown in the following statement amounts to Rs. 1,27,646-3-5. This sum was distributed as under :—

Buildings.

Expenditure on Education Buildings, 1876-77.

	Provincial Funds.			Local Funds.			Total.		
	Rs.	a.	p.	Rs.	a.	p.	Rs.	a.	p.
Fifty-four new buildings ...	1,842	13	3	47,575	0	0	49,417	13	3
Do. grants-in-aid ...	46,793	0	0			46,793	0	0
Repairs	1,050	4	11	30,385	1	3	31,435	6	2
Total ...	49,686	2	2	77,960	1	3	1,27,646	3	5

Out of the total expenditure Rs. 270-8-3 were spent on Government high schools, Rs. 20-4-11 on Government first grade schools, Rs. 45,200 on aided high schools, Rs. 1,593 on aided first grade schools, Rs. 401 on normal schools, and Rs. 80,161-6-3 on vernacular schools. In addition to the sum of Rs. 1,27,646-3-5 expended from educational budgets, there was expenditure from the Public Works budget (Provincial) as under :—

	Rs.
Repairs	13,036
Minor works up to Rs. 1,000	2,378
Large works above Rs. 1,000	*1,50,951
Total ...	1,66,365

The cost to Government of the book depôt was Rs. 10,588, or Rs. 243 more than in the previous year. Government publications,

Books.

* The following are the items of the expenditure for larger works in the budget for the Public Works Department :—

	Rs.
New Elphinstone high school, Bombay	95,000
New school of art, Bombay	53,400
Substituting stone pavement in place of chunam floor of library and north verandah of Deccan college	2,551
Total Rs. ..	1,50,951

of the value of more than Rs. 10,000, were sold or distributed gratis; and school books were sold of the value of Rs. 1,70,000.

INSTRUCTION.

Dakshina
fund.

The expenditure from the Dakshina fund amounted to Rs. 20,680-13-11, and included the following charges:—

	Rs.	a.	p.
Allowance to Bráhmans	2,572	7	0
Allowance to teachers and students	12,193	2	0
Rewards to authors	3,641	4	0
Prize committee examiner and accountant	2,274	0	6
	<hr/>		
Total Rs.	20,680	13	11

The Committee suffered a great loss by the death of the venerable president, Major T. Candy, C.S.I. In October Major Candy had resigned his office of Máraáthi translator, and it was hoped that rest would enable him to recover his strength which was impaired by years of laborious study. But this hope of his many friends, both European and Native, was not to be fulfilled, and Major Candy died at Máhábaleshwar on the 26th February 1877. A short time previous to his death Her Majesty's Government had conferred on Major Candy the distinction of the Star of India.

In Máraáthi several useful works have been prepared, including "A Collection of Idiomatic Sentences, English and Máraáthi," "A Manual for Teachers," an "Anglo-Máraáthi Primer," and a new edition of the "Navánita." In Gujaráti the most important event of the year has been the publication of an Anglo-Gujaráti dictionary. Useful books have also been prepared on "Arithmetic," "School Management," "Astronomy," and "Natural Philosophy"; and a "Garbavali," or poetry book for girls' schools, has been compiled.

Literature and the Press.

LITERATURE.

The charges on account of the keeper of the catalogue and the reporter on the native press were Rs. 6,181-12-6 against Rs. 7,040-12-3 in 1875-76. The decrease is due to arrears of pay for 1874-75 having been drawn in 1875-76, and to decreased expenditure on account of subscription to newspapers.

This year again shows an increase of ninety-six in the number of publications registered and catalogued as under :—

	1875.	1876.
Books	539	592
Pamphlets	15	11
Periodicals	147	191
Miscellaneous	34	37

The increase being almost entirely in books and periodicals.

Of the 831 publications 106 were in English, eight in Portuguese, one in Latin, and 716 either wholly or partially in Oriental languages. Of the works published in European languages eighty-four were original works, one was a translation, and thirty were republications. Of those published in Oriental languages, 375 were original, forty were translations, and 301 were republications. They may further be classified as 151 educational and 680 non-educational. Of the 115 European works, sixty-six, or more than half, come under the head of miscellaneous; thirteen are religious works, including the eight Portuguese; twelve are works of fiction, six are poetical works, five treat of law, and five of science. Of the 716 Oriental publications, 218 are classified as miscellaneous, 130 are poetical works, forty-seven come under languages, thirty-eight under fiction, fifty under science, twenty under religion, and fifteen under history.

The European publications comprise but few works of a literary character or of general interest. Pandurang Hari, a reprint of a work of fiction descriptive of native life in the Deccan at the time when the British were struggling to establish their supremacy, is an interesting work, as is also a work by Dr. da Cunha, entitled "Notes on the History and Antiquities of Chaul and Bassein." A pamphlet entitled "Poverty of India," being a paper read before the Bombay branch of the East Indian Associa-

INSTRUCTION

LITERATURE.

tion, by Mr. Dadabhái Nauroji, has excited much discussion in the native newspaper press. Of the Oriental publications the following statement shows the number and percentage in each language :—

	Number.	Percentage.
Maráthi	237	33
Gujaráti	230	32
Kanárese	85	12
Sindi		
Hindustáni		
Classical languages	55	8
In more than one language ...	109	15

Amongst the publications of the year are a Sanskrit drama of Bháwábhuti, ably edited and annotated by Professor Bhandárkar; an historical novel in Gujaráti, called Wanrájcháwado; a Maráthi translation of the "Manhu Sanita" (Institutes of Manhu), published in monthly parts; a Sanskrit work on the art of Government, entitled "Shukra Nite, or a System of Kingcraft," the authorship of which is attributed to the ancient sage Shukra. The philosophical works comprise several editions of the Bhagvat Gita, one of which is accompanied by a commentary in Sanskrit, and a reprint of the Panchadashi, a treatise on the Vedant philosophy, accompanied with a translation in Hindi. It also contains a small treatise in Arabic Sindi on Logic, as understood by the Arabs. Amongst religious works may be noticed "Wedartha Yatna," an attempt to explain the Rigveda, which is in course of publication in monthly parts, and a translation of the Korán in Urdu. There is also a work, by a Bráhman, on the most sacred ceremonies of the Hindus, a work which, thirty years ago, no Hindu could have ventured to publish.

Printing presses.

The number of presses in the Presidency has increased from eighty-seven to ninety-four. Of these forty-seven in Bombay issued 508 works; twenty in the Deccan issued 174 works; sixteen in Gujarát issued ninety-nine works; six in the Southern Marátha Country issued twenty-eight works; and five in Sind issued twenty-two works. The increase has been in Gujarát and the Southern Marátha Country. Altogether 570 publications were printed and 261 lithographed.

Encouragement of literature.

Rs. 8,799 were expended during the year in the encouragement of literature, or Rs. 723 less than in 1876.

Three new libraries have been registered, and the totals for 1876 and 1877 are as follows :—

	1876.	1877.
Central division	26	26
North-east division	6	6
Northern do.	24	27
Southern do.	10	10
Sind do.	6	6
Total	72	75

Sanskrit manuscripts.

Dr. Bühler did not continue his search for Sanskrit manuscripts during the year under report, confining his attention to obtaining those manuscripts for which he had already contracted.

Dr. Keilhorn reports that the only work of the Sanskrit series actually published during the year was Professor Bhandárkar's edition of the *Mâlâti Mâdhava*, the completion of which was reported last year.

The Bombay Branch of the Royal Asiatic Society numbers 171 members, besides twenty-four members on its geographical section. 297 works, in 396 volumes, have been purchased for the library, and 100 works, in 149 volumes, and pamphlets have been presented to the society by the India Office, by Government, by the Smithsonian Institute, and by the authors. Various additions have been made to the museum by purchase or presentation, consisting chiefly of gold, silver, and copper coins. Some sixteen papers were read before the Society during the year. Of these papers the most remarkable was one by Pandit Bhagvanlal Indrají, on ancient Nágari numeration from an inscription at Náneghât. The Pandit showed figures used to represent 1000, 100, and other numbers, different to those used in other inscriptions.

THE PRESS.

The reporter's list for 1876 gives sixty-five newspapers instead of sixty-one in the previous year. Four of those published last year have ceased to exist, but eight new ones have appeared. Of the whole number forty are Mârâthi, twenty-three Gujarâti, one Hindustâni, and one Persian. Of the Mârâthi papers eight, and of the Gujarâti three, contain original English articles, or extracts from English papers; and six of the Mârâthi papers published at Dhârwâr, Hubli, Belgaum, and Kalâdgi, open their columns to articles in Kánârese. Thirty-six papers are printed and twenty-nine are lithographed. Of the forty Mârâthi papers one is a daily paper, a small and insignificant publication in Mârâthi only; one is published three times a week; one twice a week; thirty-five weekly; and two fortnightly. Of the Gujarâti papers three are daily, and twenty are weekly papers. The Urdu and Persian papers are published weekly. The forty Mârâthi papers are distributed as follows:—Bombay, eight; Poona, five; Sâtâra and Thána, three each; Dhârwâr, Ratnâgiri, Belgaum, Ahmednagar, Dhulia, and Alibâg, two each; Mudhol (Sâtâra collectorate), Hubli (Dhârwâr collectorate), Málwan (Ratnâgiri collectorate), Pandharpur (Sholâpur collectorate), Jamkhandi, Násik, Kalâdgi, Kolhâpur, and Sholâpur, one each. Of the twenty-three Gujarâti papers, ten are published in Bombay. Ahmedâbâd and Surat have three each; Kaira, two; Broach, Râjkot, Kurrachee, and Nariâd and Mahuda (both in the Kaira collectorate) have one each. Nórth Kánâra and all the districts in Sind, except Kurrachee, still continue to have no paper. One paper, a small fortnightly one, published at Bombay, only costs one pie per copy, or two annas per annum. Another, published at Alibâg, costs nine annas yearly, and twelve others do not exceed Rs. 2 per annum. Of the sixty-five papers nine have been from twenty-three to fifty-eight years in existence. Of the different papers one is devoted to the advocacy of Christian doctrines; one is an organ of the Bombay Theistic Association, though much of its space is devoted to the

discussion of secular subjects; one devotes itself in a great measure to the dissemination of the principles of the Zoroastrian religion; and two, one Mārāthi and one Gujarāti, are humorous publications. The remainder have no special object.

Among the political subjects treated by the native press, the most prominent was the Imperial Assemblage held at Delhi. General satisfaction was expressed at the urbanity of disposition and suavity of manner displayed by the Viceroy, Lord Lytton, especially towards the native princes and chiefs, though his speech in the Darbār did not realize the sanguine expectations formed beforehand. The hospitable reception given to representatives of the native press, and the freedom allowed to them to visit all parts of the Imperial camp, appear to have given great satisfaction. The lamentable famine in Southern India has excited a large share of attention and comment. The press of this Presidency has, for the most part, confined itself to observations on the state of affairs in the Deccan. Some dissatisfaction was at first evinced at the apparent apathy of the Bombay Government. But when it was found that from the very first every precaution had been taken to obtain trustworthy information as to the real state of affairs, and to take measures to afford the necessary relief, the press has, with some exceptions, not been backward in its praise of the local Government. The appointment of Sir R. Temple as famine delegate was, however, hailed with great delight, and his advent looked for with impatience, in the hope that he would at once recommend an increase in the rate of wages on relief works. When his recommendations to reduce these rates were sanctioned by the supreme Government, much anger was excited, and loud complaints of their insufficiency were made. Deaths from cholera and other epidemics reported by the district officers were stated by the press to be really due to slow starvation, and the authority of Dr. Cornish, the Sanitary Commissioner of Madras, was freely quoted in support of this statement. Constant appeals were made to Government to increase the rates of wages, and to extend more liberal aid to the famine-stricken people. The resignation of Lord Northbrook, and the accession of Lord Lytton, received considerable notice. The later acts of Lord Northbrook did not meet with the approval of the native press, and his departure excited no regret. Lord Lytton's proceedings in the Fuller case have been referred to constantly, and have met with hearty and unanimous approval. Amongst legislative measures the Bombay Revenue Jurisdiction Act has been unanimously condemned. The Presidency Magistrates Bill was also declared by the Presidency papers to be uncalled-for, and likely to lead to injustice. The rejection by the Bombay Legislature of the Steam Ferries Act gave general satisfaction, as did also the passing of the Compulsory Vaccination Act. But the Cotton Frauds Act caused great dissatisfaction, and has led to some very strong remarks. A charge of libel brought by Mr. Moylan, Inspector of Factory Steam Engines, excited much attention at the Presidency, but the decision of the High Court did not command general approval. The decision of His Grace the Duke of Buckingham in the Weld case was much praised by several papers. Complaints against municipal cor-

porations have been frequent, their unsatisfactory work being generally attributed to defects in their constitution. Frequent complaints continue to be made with regard to the overcrowding of third class passengers by railway, and general want of attention to their comfort and convenience. The reception of Sir Sálár Jang in England gave great satisfaction. Several of the Máráthi papers, notably those published at Sátára, complain of the removal from his ancestral palace of the adopted son of the last Ráni of Sátára. The civil war in Turkey engaged considerable attention, much sympathy being expressed for Turkey, and the interference of other powers being deprecated. Much distrust of the honesty of Russia is expressed, and the British Government is warned against her secret designs. The opening of an Agricultural College at Sydapet, in the Madras Presidency, was favourably noticed. The untimely death of Mr. Havelock, Revenue Commissioner, Southern division, excited many expressions of regret.

Art and Science.

Museum.

The work of arranging and labelling the horns, skulls, hides, and stuffed specimens of mammalian animals has been completed. The agricultural implements in use in Western India have been labelled and arranged side by side with those received from the German Government. Specimens of cocoons, skeins of silk, and silk manufactured at Bombay, have been arranged and placed in juxtaposition with specimens of raw cotton. Further experiments in the cultivation of jute were carried out, and with better success than in the previous year. But the scarcity of rain interfered with the full growth of the plants. The jute produced was reported by the Bombay Hemp and Jute company's manager to be "clean in appearance, and suitable for weft." Jute seed was supplied to the Collectors of Ahmedábád, Kaira, and Broach for experimental purposes. Additions have been made to the dried plants, and a collection of dried fruits and seed-pods has been exposed to public view, information being given as to the scientific, popular, and vernacular names of the trees from which they were obtained. The portraits of the Queen and Prince Consort, referred to last year, have been hung up in the entrance hall. The average daily attendance of visitors was 725.

Mechanics' institute.

One hundred and thirty works, in 215 volumes, were bought by the Sassoon mechanics' institute during the year. Thirty miscellaneous works and 120 pamphlets and papers were presented to it, chiefly by the different local Governments. The library now contains 7,518 volumes. The number of bound volumes of specifications of patents in the library is 2,669, as follows:—

Specifications of patents	2,524
Indices	67
Abridgments	73
Commissioner of patents...	5
					2,669

The number of books, periodicals, and newspapers issued during the year was as follows:—

Books or volumes	14,519
Periodicals	5,289
Newspapers	4,250

Lectures were delivered during the Session of 1876-77 on "The Mechanism of the Heavens," "Free Trade and Protection from an Indian point of view," "The Anatomy and Physiology of Man compared with that of the lower animals," "Tempered Glass,"

and the "Utilization of Solar Heat." The prize circular was revised and made more attractive by the offer of Rs. 250 and Rs. 150, respectively, in addition to the usual gold and silver medals, and the prizes were made open to public competition, instead of being restricted to members as heretofore. Only one essay "On Indian Industries" was, however, received, and this was not held to be deserving of a prize or medal.

VIII.—ARCHÆOLOGY.

Paintings.

In consequence of the general scarcity Mr. Griffiths was unable to continue the work of copying the paintings in the Ajanta caves.

In the last Administration Report the work of Mr. Burgess, the Government Archæological Surveyor, during the season 1875-76 was left unnoticed. In this report some notice of it may be combined with the work done by him in 1876-77.

Survey.

The Surveyor and his assistants left Sholápur in November 1875, and visited Tuljápúr on the way to Dhárasinva. At the latter place there is a series of Jaina cave temples hitherto undescribed, besides several Bráhmanical ones. These occupied the survey for some time, as they had to be partly excavated before the survey could be completed. Karusa, to the east of Awsa, was next visited, and the large series of caves in the laterite rock near that village were thoroughly explored and delineated. At Nilanga, an old Hemarpanti temple was surveyed, and drawings made of the plan and details of columns and sculpture. At Kalyáni no local information could be obtained as to the many caves said to exist for many miles around it, and difficulties prevented taking photographs or plans of the mosques and other Muhámmadan remains. On the way to Tiprád and to Naráyanpur, however, the surveyor and his assistants found more than a dozen caves, and had local information been afforded, probably others might have been discovered. At Naráyanpur are two fine old temples in ruins, apparently of the 11th or 12th century, and many sculptures lie about. Some of these were obligingly sent to Bombay by His Highness the Nizám's government. Some others of great beauty, probably through some misunderstanding of the person sent for them, were not obtained. Plans, drawings, and photographs were made of the temples. Umnábád was next visited on the way to Bedar, and a photograph taken of the large Hindu temple there. At Bedar a plan was made of the great *madrássáh*, and of one of the tombs of the Barid Sháhi kings. A march from Bedar to Mominábád, visiting all the places on the way where remains were said to exist, led to but few results. There have been ancient and interesting temples at several places, but they have been so de-

stroyed by the Muhámmadans of bygone generations, that but little is left to reward a search. At Amba—the curious caves and other remains were examined and surveyed.

Paithán; the ancient Pralishthán on the Godávari, said to have been the capital of Salivahán, was next visited. Here the Hindu remains have been appropriated to build mosques and tombs, and it would have been only waste of labour to attempt excavations under the heaps of ruin that surround it. At Sankhed, a few miles up the Godávari; are some remains of old temples, and some drawings and photographs were taken, after which the party moved to Aurangábád, where the Buddha caves, a little to the north of the city, occupied the party about a month. These caves have hitherto been but little known. They consist of two groups and several scattered caves in the hills to the north of the town. The first or western group consists of five caves: the first, a long verandah with doors and windows into a large cave which has been only partly excavated; the second, a small shrine with a good deal of carving about it, but the pillars in front of the verandah have been destroyed by the falling of the superincumbent rock; the third cave is one of the finest Buddha *Vihára*, or monastery caves in India, quite rivalling any at Ajanta, not in size, but in the elegance and richness of its sculptured pillars. In the shrine is a large image of Buddha, and a group of figures, life-size, in the front corners of it, worshipping him. The fourth cave is a small Chaitya, much destroyed by the falling of the rock and choked up with earth. And the fifth is the shrine of a cave, of which the whole front has fallen: this has been appropriated by the Shrávaks of the locality, and the image of Buddha is worshipped as a Jain Tirthankar.

The second group of Aurangábád caves is fully half-a-mile further to the east, and consists of four caves: cave VI., a small cave similar to cave II.; but more elaborately sculptured; cave VII., a little lower down, is one of the most elaborately carved *viháras* (if it was a *vihára*) in India. The back wall of the verandah is covered with sculptures, among which is a series of eight groups round a central figure, evidently portraying people praying for deliverance from—1, fire; 2, sword; 3, captivity; 4, shipwreck; 5, wild beasts; 6, snakes; 7, enraged domestic animals; and 8, death. The front wall of the shrine is carved with large female figures in high relief, and with most elaborate head dresses; and again, inside the shrine, besides the gigantic Buddha, there are other sculptures. Cave VIII. has to be entered by a ladder, but is not specially interesting; and cave IX. is much ruined, but contains a representation of the dying Buddha, and, what is unusual, of a Bodhisatwa with *four* arms. There are also many female figures in this cave. Excavations immediately beyond would probably lead to the discovery of another cave quite covered up. The party made a large collection of drawings from these caves, which will appear in the Surveyor's forthcoming report.

The survey then took up Elora, where fortunately His Highness the Nizám's government had carried out large excavations, clearing these interesting caves (with five or six exceptions) of the accumulated silt and *débris* of ages. The season, however, was

near a close, and only a few of the Buddha caves were completely surveyed, with drawings of several of the most striking columns from Kailás and the Sudra Sabha.

In November 1876 the surveyor visited the caves at Mandapés-war and Magathana, in Salsette, and then those at Kuda, in the Janjira creek, of which plans were made, and copies taken of the inscriptions. The party then visited Sonád near Kalyán, and Kondáne near Karjat, surveying the little known caves at both places. From Talegaon the party went by Junnar, taking additional plans and photographs there, to Dhokéswar, where is a Bráhmá-nical rock temple; and from thence by Ahmednagar and Aurangábád to Elora, where the remainder of the season was spent in the survey of its extensive series of caves. Among other drawings made are: a ground plan and plan of the upper floor of the great Kailas temple, to a scale of five feet one inch; an elevation of the south side to the same scale; a transverse section through the central and side rock temples—an area of more than 250 feet, length by 100 in height; besides plans of most of the other caves, with sections of several, and a very large collection of pillars (all drawn to scale) and details of sculpture. From Elora the party visited Ajanta. They afterwards finished the survey of the Pándu Sena caves in Násik, and made some progress in the examination of the Kanhari caves in Salsette.

IX.—MISCELLANEOUS.

Ecclesiastical.

During the past year the Right Reverend Louis George Mylne, M.A., D.D., was appointed Lord Bishop of Bombay. He arrived on the evening of the 4th July 1876, and assumed charge of his diocese on the same day. The number of clergy at present attached to this diocese is sixty-one, of whom forty-seven are resident. Their numbers and position are shown by the following table:—

Bombay Clergy, 1876-77.

	Resident.	Not yet joined.	On leave.	Total.
Chaplains	22	2	6	30
Society for the Propagation of the Gospel	8	...	1	9
Church Missionary Society	13	...	6	19
Additional Clergy Society	1	...	1	2
Society of St. John the Evangelist	2	2
Bishop's Domestic Chaplain	1	1
	47	2	14	63

All the thirty chaplaincies allowed for this diocese are filled up; but the two chaplains recently appointed in the room of the Rev. W. H. Cummins and the Rev. A. Miller have not yet joined.

No station where British troops are quartered is without a resident chaplain, and the two most important civil churches, Christ church, Byculla, and St. Paul's, Poona, are also filled by resident chaplains. All the important military sanitarium are visited by chaplains. St. Peter's church, Mazagon, is served by Mr. Page, of the Society of St. John the Evangelist. In Trinity and St. Paul's churches, Bombay, and in the Camp church at Kolhápúr, English services are regularly held by clergymen of the Society for the Propagation of the Gospel; and in Girgaum, Kurrachee, Násik, and Málgaum by clergy of the Church Missionary Society. Bandora, which forms part of the charge of the

Cathedral clergy, is served on their behalf by the Rev. T. Carss, of the Church Missionary Society. The Rev. T. Corfield, of the Additional Clergy Society, ministers to the railway employés at Igatpura and Bhusáwal. Mr. Mackey, of the same Society, is Chaplain of the Harbour, and holds services in the Library of the Bombay Baroda and Central India Railway Company at Parel. Sholápur is visited by the Chaplain of Ghorepuri, and Lanauli by the Joint Chaplain of Poona.

Since taking over charge in July 1876, the Bishop has visited Sind, Poona, Ahmednagar, Sátára, Kolhápur, Lanauli, Igatpura, Bhusáwal, and Násik.

Stationery.

The value of the stationery stock in hand at the beginning of 1876-77 was Rs. 4,50,681, while receipts from all sources during the year amounted to Rs. 3,67,448, or Rs. 8,18,129 in all. Out of these the issues amounted to Rs. 3,96,970, leaving the value of stock at the close of the year at Rs. 4,21,159. As compared with the previous year the issues were:—

Issues of Stationery, 1876-77.

Year.	English Stores.	Indian Stores.	Total.
	Rs.	Rs.	Rs.
1876-77 	3,72,753	24,217	3,96,970
1875-76 	2,77,292	24,218	3,01,510
More	95,461	95,460
Less	1

Of the total increase of Rs. 95,460 under "Issues," Rs. 65,120, or about two-thirds, are due to a very large demand from the Central Press.

General Miscellaneous.

CENTRAL PRESS.

The gross earnings of the press for the year under review were Rs. 3,38,753-11-7 (including Rs. 21,152-1-0 cash receipts and adjustments), and the expenditure, including wear and tear of plant, Rs. 2,11,776-7-10. The stock of the press is valued at Rs. 1,27,920-14-5.

The following table shows the earnings and expenditure of the press for the past four years, allowing for the reduction made in the rates charged during the last two years :—

Central Press, 1873-76.

	1873-74.	1874-75.	1875-76.	1876-77.
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Earnings of the press including foundry	2,59,466 9 6	3,39,465 8 3	2,73,048 4 2	3,38,753 11 7
Add—Loss by reduced rates	31,449 8 0	52,169 8 0
			3,04,497 7 2	3,90,913 3 7
Expenditure of press and foundry... ..	1,78,703 3 2	1,94,847 0 4	1,99,347 1 9	2,11,776 7 10
Balance in favour of press ...	80,763 6 4	1,44,638 7 11	1,05,150 5 5	1,79,136 11 9

Compared with 1873-74 the percentage of increase for each succeeding year was as follows :—

Years.	Compared with 1873-74.	
	Increase in Earnings.	Increase in Expenditure.
	Per cent.	Per cent.
1874-75	31 nearly.	9
1875-76	17½	11½
1876-77	50½	18½

The percentage of increased earnings being much in excess of that of increased expenditure.

The value of the work done for the various departments and offices is shown below :—

	Rs.	a.	p.
Secretariat departments	1,36,067	15	0
Officers at Presidency town	58,471	7	6
Revenue and magisterial officers	20,857	7	0
Judicial officers	37,821	0	6
Police officers	3,481	9	8
Educational officers	9,805	3	10
Forest officers	2,388	8	3
Survey and settlement officers	5,884	9	0
Medical officers	4,127	15	6
Controller of public works accounts and superintending and executive engineers	20,746	4	0
Chaplains	145	8	0
Miscellaneous officers	414	13	0
	<u>2,99,712</u>	<u>5</u>	<u>0</u>
Value of forms in stock, less charged previous year, cancelled forms, and work done by foundry	17,889	5	7
	<u>3,17,601</u>	<u>10</u>	<u>7</u>

COMMISSIONER'S PRINTING PRESS IN SIND.

The returns of the Sind printing press show, as compared with the previous year, a falling off of Rs. 6,011-10-7. The details are as follows :—

	Rs.	a.	p.	Rs.	a.	p.
For 1876-77....English branch ...	14,758	7	7			
Vernacular branch .	14,413	3	10			
				<u>29,171</u>	<u>11</u>	<u>5</u>
For 1875-76....English branch ...	15,232	12	8			
Vernacular branch .	19,950	9	4			
				<u>35,183</u>	<u>6</u>	<u>0</u>
Decrease for 1876-77 ...	<u>Ra.</u>	<u>6,011</u>	<u>10</u>	<u>7</u>		

This apparent decrease is owing to a revision and the introduction of lower rates for printing authorized by Government and brought into force at this press during the present year. The actual cash receipts for work done for the educational, conservancy, port, and local funds, all of which have been credited to Government, are as follows :—

	Rs.	a.	p.
For 1876-77	6,419	3	5
For 1875-76	5,991	5	6
Increase for 1876-77 ...	<u>Ra.</u>	<u>427</u>	<u>13</u>

On account of the *Sind Official Gazette* the profits realized from subscriptions and advertisements amounted to :—

	Rs.	a.	p.
For 1876-77	483	7	0
For 1875-76	561	15	0
Decrease in 1876-77 ...	<u>Ra.</u>	<u>78</u>	<u>8</u>

and the annual expenditure incurred for the purchase of service stamps and other monthly contingencies amounted to :—

				Rs.	s.	p.
For 1876-77	2,341	1	0
For 1875-76	1,836	15	2
Increase for 1876-77				Rs.	504	1 10

This increase is due to the purchase of certain articles of dead stock, including the erection of wooden fixtures. The subjoined table shows the expenditure of stationery for the past year :—

PHOTOZINCOGRAPHIC OFFICE, POONA.

In the absence of Mr. Light, the Photozincographic office at Poona has been in the charge of Captain Coussmaker. During the year 75,582 copies of 1,254 maps and plans were printed against 72,938 copies of 1,738 maps and plans in the preceding year. The estimated value of the work done in the present year is Rs. 34,324-8-6 against Rs. 41,216-4-11 in the preceding year. Thus there is a considerable decrease in the value of the work done, though a considerable increase in the number of copies struck off. Captain Coussmaker ascribes the decrease in the value of the work to the lower class of work asked for.

Of Rs. 34,324-8-6, the total value of work done, Rs. 19,453-6-2 was for Imperial offices, and was therefore not paid for, except by receipt. The amount of work done for private parties or for departments other than Imperial, and therefore payable in cash, was Rs. 14,871-2-4. Of this sum Rs. 4,773-15-10 was paid within the year, and Rs. 10,099 remained due at its close. With the exception of a small sum, this amount is due from municipalities on account of city survey maps. The large and increasing extent to which the office is resorted to by individuals and public bodies, who pay in hard cash, is a strong proof of its usefulness.

PART III.—STATISTICS OF PROTECTION. A.—LEGISLATIVE (ACTS).

(1).—Statement of Acts passed by the Legislature of the Presidency of Bombay in 1876-77 (between 1st April 1876 and 31st March 1877), and sanctioned as required by Law.

Title of Act.	By whom proposed.	Object and Character of Act.	Date of Sanction.
Act No. II. of 1876.—An Act to amend the Law relating to the Land Revenue Administration of the City of Bombay.	The Honourable E. W. Ravenscroft, C.S.I.	The object and character of this Act have been fully described at page xx. of the Appendices to the Administration Report for 1875-76.	His Excellency the Governor of Bombay's assent, 15th September 1876. His Excellency the Viceroy and Governor-General's assent, 14th October 1876.
Act No. III. of 1876.—An Act to consolidate and amend the Law relating to the Powers and Procedure of Māmlatdār's Courts.	The Honourable A. Rogers.	The object and character of this Act have been fully described at page xxi. of the Appendices to the Administration Report for 1875-76.	His Excellency the Governor of Bombay's assent, 9th December 1876. His Excellency the Viceroy and Governor-General's assent, 22nd February 1877.

A.—LEGISLATIVE (BILLS).

(2).—Statement of Bills proposed or pending in the Legislature of the Presidency of Bombay in 1876-77.

Title of Bill.	By whom proposed.	Object and Character of the Bill.	When introduced.	When rejected or withdrawn.	If pending, why, and in what stage.
Bill No. 1 of 1875.—A Bill to consolidate and amend the Law relating to Revenue Officers and the Land Revenue in the Presidency of Bombay.	The Honourable F. S. Chapman.	The object and character of this Bill have been fully described at pages iv. and v. of the Appendices to the Administration Report for 1874-75.	18th January 1875.		The Select Committee to whom the Bill had been referred, have since submitted their final Report on the Bill.
Bill No. 3 of 1876.—A Bill to secure the payment to Government of certain sums of money by the Municipal Corporation of the City of Bombay.	The Honourable A. Rogers.	The Municipal Corporation of Bombay having applied to the Government of India for a fresh loan of forty-two lakhs of rupees, and for certain concessions in respect of the loans which have been already advanced to it under Bombay Act II. of 1872, this Bill is introduced for the purpose of giving effect to the terms to which the Government of India has agreed, and of providing proper security for the punctual payment of the moneys which will thus become due to the Government of India.	18th October 1876.		The Bill was read a third time and passed on the 27th October 1876. It received the assent of His Excellency the Governor of Bombay on the same day, and has been sent for the assent of His Excellency the Viceroy.
Bill No. 4 of 1876.—A Bill to amend Bombay Act IV. of 1868 (An Act to make further provision regarding the application of Bombay Act I. of 1865 to Towns and Cities, and to restrict the application of Bombay Acts II. and VII. of 1863 in Towns	The Honourable A. Rogers.	When Bombay Act IV. of 1868 was passed, it was intended that the expenses of city-surveys should be partly met by the sanad-fees. It was expected that a considerable income would be derived from this source, under the impression that Clause 2 of Section 5 of the Act would render it compulsory on owners and occupants who claimed total or partial exemption from land-revenue to take and pay for sanads under Section 10, in order to establish their claim. But the question whether the Act, as it was passed, is capable of this construction, has been made the subject of litigation ;	8th Novem-ber 1876.	The Bill has since been withdrawn, as the provisions therein contained have been incorporated in Bill No. 1 of 1875 (The Bombay Revenue Officers and Land Revenue Code Bill).	

and Cities, and otherwise to amend Bombay Act of 1865).

Bill No. 5 of 1876.—A Bill to prohibit the practice of Inoculation, and to make the Vaccination of Children in the City of Bombay compulsory.

The Honourable
J. Gibbs.

and although Government was partially successful in the District Court, the Law Officers advised that the proper interpretation of Section 5 Clause 2 and of Section 10 was opposed to the view for which Government was contending, and it was found necessary to yield the point in favour of the plaintiffs and to abandon the defence of the suits.

It is essential, however, in the interest of the general revenues of the country, that city surveys should be partly self-paying; and it is also fair that owners and occupants, who derive considerable advantages from the application of Bombay Act IV. of 1868 to their lands in towns and cities, should be called upon to pay a small return for such advantages.

This Bill is, therefore, introduced for the purpose of amending Bombay Act IV. of 1868, so as to render the payment of a certain moderate fee by every such owner or occupant compulsory, but enabling him to obtain a sanad in return without additional charge, if he applies for it within a certain reasonable period, and pays the fee promptly and of his own accord.

Very soon after the discovery of vaccination most of the Governments of Europe made provision for affording its benefits to their respective populations. As early as 1803 an ordinance on the subject was promulgated in Sweden; and when Jenner died, in 1823, there were few European States, except Great Britain, in which there were not in force laws and regulations relative to vaccination. By the laws of many of these States the practice was, directly or indirectly, rendered compulsory.

The first law regarding vaccination in England was enacted in 1840; and seldom has the Legislature passed a measure of more obvious public benefit. Although vaccination was not made compulsory by that Act, large numbers of persons availed themselves every year of the opportunities put within their reach of protecting their children against small-pox; and the impression consequently produced on the mortality from that disease was so great that the average deaths were soon reduced from 770 to 300 per million of population per annum.

In 1853 compulsory vaccination was made the law of England, and the result of the working of that Act during the subsequent fourteen years showed a further annual saving of 100 lives out of every million of the population.

In 1867 an Act was passed "to consolidate and amend the Statutes relating to Vaccination in England;" and that Act, the fruit of large experience and mature consideration, forms the basis of the present Bill.

Vaccination was introduced in the Island of Bombay in 1802, and has been attended with very satisfactory results. But the victims of small-pox are still numerous. In the year

23rd November 1876.

The Bill was read a third time, and passed on the 22nd February 1877, and it received the assent of His Excellency the Governor of Bombay on the 2nd March 1877. It has since received the assent of His Excellency the Viceroy and become law, Act I. of 1877.

A.—LEGISLATIVE (BILLS)—*continued.*

Title of Bill.	By whom proposed.	Object and Character of the Bill.	When introduced.	When rejected or withdrawn.	If pending, why, and in what stage.
Bill No. 1 of 1877.—A Bill to amend the Law for the prevention of Adulteration of Cotton and for the suppression of fraudulent practices in the Cotton Trade.	The Honourable E. W. Ravenscroft, C.S.I.	<p>1870, 556 persons died of this disease, of whom 491 were children under nine years of age. In 1871 the deaths from small-pox numbered 919, and 813 of the victims were under nine years of age.</p> <p>In the year 1872 the deaths from small-pox at all ages numbered 1,854, and in the first four months of 1876 they reached 2,717.</p> <p>There can be no doubt that a great deal of this mortality is preventible by vaccination, and the Bombay Association some time ago communicated to Government their opinion that it is desirable to make vaccination compulsory in the Town and Island of Bombay; but they recommended that, "in framing a Bill for carrying out this object, due care should be taken to protect the people against annoyance or extortion, and against the infliction of hardship or oppression."</p> <p>In 1872 a Bill was therefore introduced into the Legislative Council to provide for compulsory vaccination in the City of Bombay, but it was not proceeded with, in the hope that the voluntary acceptance by the people of the benefits of vaccination would in time render legislation unnecessary. The very serious extent to which the contagion spread in the first part of this year, and the number of deaths which occurred as above shown, have induced Government, with the approval of the Government of India, to bring forward this present measure, which is in most respects similar to the previous Bill, but is more complete.</p> <p>It may be added that out of twenty-seven of the principal native gentlemen of Bombay who have in the meantime been asked for their opinions of the subject, twenty-four are in favour of legislation.</p> <p>It having been determined that the existing law for the prevention of adulteration of cotton, and for the suppression of fraudulent practices in the cotton trade, is to continue in force for the present, this Bill is introduced with the view of modifying such of its provisions as appear to be unnecessarily stringent, and of rendering it in other respects more efficient.</p>	1st February 1877.		The Bill was read a third time and passed on the 3rd March 1877, and it received the assent of His Excellency

The Bill also proposes to enable Government (1) to levy the fee, which is at present imposed only on cotton for export, more generally from all the persons who benefit by the operation of the Act; and (2) to expend the revenue that will be realized from that fee and from the other sources recognized by the Bill, on the encouragement and improvement of the cultivation and manufacture of cotton, as well as for the special purposes of the law.

The opportunity has been taken of entirely re-drafting and re-arranging Bombay Act IX. of 1863, which it is, therefore, proposed to repeal, and several minor amendments have also been made in the substance of that Act.

the Governor of Bombay on the 10th March 1877. The Bill has since been submitted for the assent of His Excellency the Viceroy.

Besides the above, there is the Bombay Abkari Bill under consideration in the Legislative Department, as stated at page xxii. of the Appendices to the Administration Report for 1875-76. This Bill has been submitted to the Government of India for their sanction to its introduction into the Bombay Legislative Council.

* In the Shikarpur District.

† These are Subordinate Judges who have been invested with magisterial powers.

C.—JUDICIAL

(1).—(Criminal)—Statement showing the various Judicial and
Bombay on the last Day of

Class of Tribunal, distinguishing those which exercise powers in one Department from those exercising powers in two or three Departments, and those consisting of paid from unpaid Judges.	Number of Judicial Divisions.	Average Area of each Division in Square Miles.	Average Population of each Division.	Number of Tribunals.	Constitution of Tribunals, stating number of Judges in each, and Jury or Assessors, if any.	Judicial powers of each Tribunal, Original and Appellate.	Prescribed Qualification of Judges previous to Appointment.
1	2	3	4	5	6	7	8
District Judges and Session Judges, inclusive of Joint Judges and Assistant Judges, and Agent to the Governor, Panch Máhals. *	15	7,019	960,982	25	One Judge	Powers as prescribed by Law.	Prescribed examination.
High Court, Bombay (Original Side).	1	No data in Prothonotary's Office.	Ditto.	Four Civil Courts, one Appellate Court, a Criminal Court during Sessions, an Insolvent Debtors' Court, and a Chief Panch Maritimonial Court.	One Judge in all Original Courts only, except on rare occasions; two Judges in appeal; one Judge in Criminal Court and Juries.	See Supreme and High Court Charters.	The Chief Justice and three Judges are Barristers. One Judge is a Covenanted Civilian.—(See Charter.)
High Court (Appellate Side) ..	1	78,493	12,778,750	1	Two Division Courts generally sit for hearing regular and special appeals from decrees and orders in civil cases where such are allowed by law, and for considering civil matters belonging to the Extraordinary Jurisdiction. Also in appeals, revision, and reference in criminal cases, according to the Criminal Procedure Code, and other special and local laws. In each Division Court two Judges usually sit. In Full Bench cases three or more. Juries and Assessors are never employed.	According to 24 and 25 Victoria, Chapter 104, the Letters Patent and the several Statutes conferring and regulating Jurisdiction.	According to 24 and 25 Victoria, Chapter 104, Section 2.

NOTE.—The Agent to the Governor, Panch Máhals, is also District Magistrate and Extra First Assistant Collector and Magistrate.

STATEMENTS—continued.

(3).—Statement showing the various Government Ships and Vessels employed under the Government of Bombay in the Year 1876-77.

Detail of Vessels.	Tonnage.	Horse-power.	Number of Officers.	Number of Men.	Total Annual Cost (including pay, contingencies, provisions, stores, coal, repairs, &c.)	Total Annual Earnings of the Vessel.	Nature of Duties on which employed, and Remarks.
1	2	3	4	5	6	7	8
<i>Sea-going Vessels.</i>					Ra. a. p.	Rs. a. p.	
Amberwitch... ..	597½	70	4	65	88,212 0 0	5,506 0 0	Principally employed in connection with the inspection and repairs of the telegraph cable. On the 2nd August she was despatched to the assistance of the ship "John Starr" wrecked off the port. Also she was employed in bringing about 20 tons Government telegraph stores and Native Government passengers, on which occasion she was hauled into dock and underwent necessary repairs.
Dalhousie	1,060	160	4	102	1,50,950 0 0	Employed in connection with the transport service during the trooping season. She brought down to Bombay from Kurrachee His Excellency the Viceroy and Governor General of India and Suite, and was in dock undergoing repairs.
Hugh Rose	300	80	3	62	31,480 0 0	Employed variously as detailed in the report, and was put out of commission on 30th November 1876, and allowed a harbour crew pending her disposal.
Quangtung	531½	150	4	83	1,07,882 0 0	In dock undergoing repairs between the 3rd June and 4th October 1876, 2nd October 1876 to 10th March 1877 employed under the orders of the Political Resident in Aden.
May Frere	308½	100	3	60	59,533 0 0	Employed variously as detailed in the report. She assisted the "Dalhousie" in bringing down to Bombay from Kurrachee His Excellency the Viceroy and Governor General of India, Staff, and Suite. Took viceregal party and guests to Elephanta and back. Also took His Excellency the Governor General of Portuguese India to Elephanta, and subsequently to Goa, and returned with the relieved Governor-General of Portuguese India and Suite to the Presidency.
Pay to the Interpreter employed for the vessels in the Persian Gulf	1	1,263 0 0	Employed for Harbour Defences, Bombay.
Abyssinia	1,854½	200	4	49	44,700 0 0	Do. do.
Magdala	2,107½	250	3	49	35,820 0 0	
Dagmar	472½	200	1	26	69,146 0 0	The establishment of the Police Hulk "Elphinstone" hulked on board while that vessel was in dock; between 9th May and 3rd July vessel in dock undergoing repairs and putting in new boilers. On 5th July taken out for a trial trip. On the 19th October 1876 attached as tender to turret ships.
<i>River-going Vessels.</i>							
Comet	204½	40	2	40	37,542 0 0	Employed as requisite on the rivers of Mesopotamia under the orders of the Political Resident in Turkish Arabia. Employed between the 5th and 10th October 1876 assisting in raising the wreck of the steamer "Digleh" belonging to Messrs. Lynch & Co., which had foundered and sunk across the river at Bagdaddeyah.
Carried over	6,20,539 0 0	5,506 0 0	

H.—MARINE—concluded.

(3).—Statement showing the various Government Ships and Vessels—continued.

Detail of Vessels.	Ton- nage.	Horse- power.	Number of Officers.	Number of Men.	Total Annual Cost (including pay, contingen- cies, provisions, stores, coal, repairs, &c.)		Total Annual Earnings of the Vessel.	Nature of Duties on which employed, and Remarks.

* This item includes Rs. 4,281 on account of duty levied on liquor 21° below proof, exported to Bombay under orders of Government.

† This amount includes revenue from juice of shindi trees—vide Note A in Statement No. 1.
 ‡ This is the approximate number of persons who drink liquor, &c.
 § Excludes Brahmins, Kshatrias, Valahas and Lingayats.

¶ Licenses for the sale of tarl are not separately granted in this district. Those persons who are licensed to sell country spirits are also licensed to sell tarl.
 ¶ This is not ascertainable, as no record of the number of persons supplied is kept.

** Not known. For the total population in the District see Column 4.
 †† Not known. The total of Kotri and Kurachee where such licenses are given is 90,328.

†† Revenue from licenses and fixed duty cannot be separately shown. The amount shown in the total column is the amount realized from the sale of the contract to distill and vend country liquor for one year.

§§ Represents the number of persons to whom licenses were granted.

Liquor in this district is distilled from gur or jagri, babul bark, cardamoms, kawal-pat, and other articles.
