P R E F A C E .

MOST of the material for this volume was collected by Mr. T. S. Macpherson in the years 1909—1912 and much of it was written by him. It was completed by Mr. M. G. Hallett.

The authors are indebted to Rai Bahadur Sharat Chandra Ray from whose interesting works on the Mundas and Oryons much information has been taken.

For the portions of the volume which deals with land revenue questions, Mr. Reid's report on the settlement operations in Chota Nagpur has been of great value.

T. S. MACPHERSON.

M. G. HALLETT.

PREFACE.

The preparation of this volume has been greatly facilitated by the use of material which was collected and compiled during the years 1909 to 1912 by Mr. T. S. Macpherson, I.C.S., who was unfortunately not able to complete the work.

I am also greatly indebted to Babu Sharat Chandra Ray from whose interesting works on the Mundas and the Oraons much information has been taken.

For the portions of the volume which deal with land revenue questions, Mr. Reid's report on the settlement operations in Chota Nagpur has been of great use.

M. G. HALLETT.

OF THE
RANCHI DISTRICT.

CHAPTER I.

PHYSICAL ASPECTS.

THE district of Ranchi, which forms the west-central portion of the Chota Nagpur Division, is situated between 22° 21' and 23° 43' north latitude and between 84° 0' and 85° 54' east longitude. It extends over 7103·55 square miles and is the largest district in the Province. The population as ascertained by the census of 1911 is 1,387,516. It is bounded on the north by the districts of Palāmau and Hazāribāgh; on the east by the district of Mānbhūm, the northern half of the boundary coinciding with the Subarnarekhā river; on the south by the district of Singbhūm, and by the Tributary State of Gāngpur; and on the west by the Tributary States of Surgujā and Jashpur and by the district of Palāmau. Ranchi, the chief town, is situated in 23° 23' north latitude and 85° 20' east longitude at a height of 2,128 feet above sea-level, and is the administrative headquarters of the district and of the Chotā Nāgpur Division. It is also at present the temporary capital of the Province of Bihar and Orissa.

GENERAL
DESCRIPTION:

In ancient times the tract which corresponds to the district of Ranchi and the neighbouring parganas was in the undisturbed possession of the Mundā and Orāon races and was known to the Aryans as Jhārkand or the "forest tract". In historical times, when the aboriginal village communities had come under the subjection of the chiefs of the Nāgbansi family, it formed part

Changes in
name and
area.

of the Subah of Bihar and is mentioned in the *Ain-i-Akbari* as the realm of the Rājā of Kokrah, a name which still survives as the name of the most important pargana of the district. The region was also known to the Mughals as Nāgpur or Coira Orissa. The name Nāgpur probably dates back to the 15th or 16th century and is said in Hamilton's *Gazetteer of Hindustan* (1815) to indicate that the territory contained diamonds. It was by this name that the district was known to the early British administrators when it was ceded to them in 1765, and in covenants granted to the Rājā settlement was given of the Nāgpur pargana. The name Chutia or Chuta Nāgpur is found in Rennel's map (1792) and in Hamilton's *Gazetteer* (1815) and the latter explains the name by saying that "the district is distinguished by the term Chuta (little) to distinguish it from the other Nāgpur possessed by the Bhonslah Marāthā family," but this interpretation is almost certainly incorrect and the name is probably derived from Chutiā, a village close to Rānchi, which is reputed to be the original home of the Nāgbansi chiefs.

During the early period of British rule the country, with other adjoining territories, of a total area of 12,004 square miles, was placed under the charge of the Magistrate of Rāmgarh in the Hazāribāgh district, but the control from Rāmgarh which was situated outside the Rānchi plateau proved ineffective, and in 1833 the present district, with the adjacent parganas of Palāmau and Dhalbhūm, was formed into a separate Province known as the South-west Frontier Agency. The headquarters of the principal Assistant of the Agent to the Governor-General, who administered the area, were at first at Lohardagā but were removed in 1843 to Kishunpur, a village which forms part of the present town of Rānchi. On the abolition of the South-west Frontier Agency in 1854, Chotā Nāgpur became a non-regulation Province under a Commissioner, and the district, which was still called by the name of the former headquarters of Lohardagā, consisted at that time of two subdivisions, pargana Palāmau forming the Palāmau subdivision and the present district with pargana Tori forming the Sadar subdivision. In 1892 Palāmau and Tori, with three parganas which had been transferred from Gaya to Lohardagā in 1871, were formed into the district of Palāmau, and from that date

the area of the district has remained unaltered. The name of the district was changed in 1899 from Lohardagā to Rānchi, the name of a small village comprised in the headquarters station.

The district of Rānchi consists of three plateaux. The first and highest plateau is in the north-west of the district and comprises roughly the area included in thanas Chainpur and Bishunpur and the western part of thana Lohardagā. It is shut off from the rest of the district by the line of jungle-covered hills which runs from the west of Pākot and Gumlā to the boundary of the district north-west of Lohardagā, and forms such a striking feature of the landscape from the subdivisional headquarters at Gumlā. From the distance these hills give the impression of a magnificent natural wall stretching from north to south in an unbroken line, but a near view shows them to consist of rocky spurs of various heights with deep valleys radiating from the central mass. The average height of this area exceeds 2,500 feet above the sea-level, and the only level portions are the valleys of the Sankh and the North Koel, the former flowing in a southerly direction through the broad cultivated plain of Bhitār Barwe (Chainpur thana) and the latter rising in the hills between Kurumgarh and Jori and flowing through the narrow valley of Bahār Barwe (Bishunpur thana) towards Palāmau. A distinctive feature of this tract, and in particular of the north-western corner, are the level cultivated hill-tops locally called *pāts*. Of these the largest and best known are Rājāderā or Bānsphār in the north of Chainpur thana, and Onegara to the north-west of Lohardagā. In the latter tableland is the highest hill of the district, Sāru Pahār, which rises to a height of 3,615 feet above sea-level. The country is sparsely populated and the forests which have suffered little from the axes of the aboriginals are still of considerable value.

Configuration
and
Scenery.

The second and central plateau includes the eastern portion of the Gumlā subdivision, the whole of the headquarters subdivision, and the western part of the Khunti subdivision. The average level is about 2,000 feet; the country is undulating, intersected with numerous streams and rivers, and studded with low rocky hills and isolated peaks of igneous origin, generally of gneissic formation. These hills form a conspicuous feature of

the landscape in any portion of the plateau. They rise abrupt and black, their summits sometimes bare and dome-like, sometimes rugged and irregular. The highest portion of the central plateau is a ridge eight to ten miles south-west of Ranchi, which contains the sources of the chief rivers of the district, the Subarnarekhā and the South Koel. Between the hills the land is for the most part under cultivation, the uplands producing crops of the hardier rice and millet, while in the lowlands, which are banked up and terraced to retain the water, good crops of fine rice are obtained. The plateau was formerly covered with forests, but the forests have gradually receded more and more before the axes of the inhabitants and commercial exploitation, and the region east of the meridian of Palkot fully deserves the name given to it by the inhabitants of *Tānr Rāj* or "land of cultivated upland", in contradistinction to the *Ban Rāj* or "land of jungle", the name given to the western parganas and the Feudatory States. In the south-western thanas there is still a large expanse of forest, and from the summit of a hill the country appears covered with a waving sheet of low forest with little or no sign of human habitation, but a nearer view shows numerous small villages, each with their plots of cultivated *tānr* round the homesteads and the terraced *don* tucked away in the narrow beds of the streams. The fringes of the plateau are mountainous, and the traveller ascends by tortuous hill passes known as *ghāts*. Along the north boundary, from Silli on the east to Bairagi on the west, a tract of mountain and jungle extends almost without a break and divides off the district from Hazāribāgh and Palāmau. The high road from Ranchi to Hazāribāgh finds its way through these hills and, winding down from Chutapala on the border of the district to the Dāmodar river at Rāmgarh, descends 700 feet in three miles. The scenery is extremely beautiful and in clear weather, from the top of the *ghāt*, a magnificent view is obtained of the steep wooded slopes of the hills and over the plains of Hazāribāgh to Pārasnāth in the far distance. The *ghāt* by which both road and railway ascend from Purūlia presents equally beautiful views, though the hill-slopes are not so steep and the distant view is not so extensive.

The third plateau consists of the extreme southern and eastern portions of the district and in few places exceeds a height of 1,000 feet above sea-level. This region is known as the Five

Parganas and is well watered by the tributaries of the Subarnarekhā. A lofty range of hills divides the main portion of this plateau from the secluded valley of Sonapet in the south-eastern corner of the district.

The general lines of the hills have been described in the preceding paragraphs. The loftiest summits in the range of hills in the extreme west, which stretches south from Birpokhar (3,621 feet above sea-level) within the Palāmau border, are Oriā (3,498 feet), Bardag (3,216 feet), Udni (3,419 feet), Hutār (3,209 feet) and the Koiāpat in Barwe (3,107 feet). To the north and north-west of Lohardagā are Salgipāt (3,511 feet), Dudhia (3,571 feet), Bulbul (3,351 feet) and Jalakdia, on the Palāmau border. In the range which stretches south from Dudhia and Bulbul is Sāru Pahār (3,615 feet), the highest point in the district. Bluff isolated hills form conspicuous land marks in the central plateau; the most remarkable are Marang Buru (2,434 feet), the sacred hill of the Mundās, ten miles south of Rānchi, Bariātu (2,607 feet), four miles north of Rānchi, and the curious pyramid-shaped Rānchi hill (2,423 feet) crowned with a Hindu temple. In the hills which fringe the ~~north-eastern side of the central~~ plateau the highest points are Paina (2,700 feet) and Kutam (2,402 feet), to the east and north-east of Rānchi, respectively. In the south-east where the plateau falls away to Singhbhūm, the range shutting off the Sonapet valley rises at one point to a height of nearly 3,000 feet. In the intricate hills of Biru the highest peaks are Bhāonr Pahār (2,492 feet) and the isolated peak of Alu Pahār in the valley of the Sankh (2,172 feet).

HILLS.

The chief rivers of the district have their source either in the long ridge of high country which runs, at an elevation of nearly 2,500 feet, from south-east to north-west 8 to 10 miles south-west of Rānchi, or in the hills which shut off the Barwe plateau. The former contains the source of the Subarnarekhā and the South Koel, and in the latter rise the Sankh and the North Koel.

RIVER
SYSTEM.

The streams which unite to form the Subarnarekhā rise in the country 10 miles west and south-west of Rānchi town, between the villages of Nāgri and Hatia, and the river pursues a winding course to the east till it descends from the plateau by the falls of Hundrugāgh at the point where the three districts of Hazāribāgh, Rānchi and Mānbhūm meet; it then turns south and forms the

The Subarna-
rekhā.

boundary between the two latter districts for a distance of 35 miles ; turning east again, it traverses Singhbhūm, Māyūrbhanj and Midnapore, and flows into the Bay of Bengal after a course of 296 miles. The Subarnarekhā has three chief tributaries, the Kokro, the Kānchī and the Kārkari, which, flowing in an easterly direction, drain the Khunti subdivision. The name Subarnarekhā means "the thread of gold" and the sands of the river and of some of its tributaries are auriferous.

The South
Koel.

The South Koel rises on the northern slopes of the same ridge as the Subarnarekhā and flows in a north-westerly direction, almost parallel to the Lohardagā-Rānchi road ; it turns south at a point 8 miles north-east of Lohardagā and follows a southerly and south-easterly course till it passes into Singhbhūm in the south of Bano thana. In Singhbhūm it again changes its course westward till it unites with the Sankh in Gāngpur, after an independent course of 185 miles. The two rivers united form the Brāhmani which flows through the district of Cuttack into the Bay of Bengal. The chief tributaries of the Koel are the Kāro, the Chata and the Bonai, which drain the western portion of the Khunti subdivision, and the Paras which drains Sisai thana. The name "Koel" is a common one for river in Chotā Nāgpur ; its meaning is uncertain.

~~The Sankh.~~

The Sankh rises in the north-west of the district. It flows in a northerly direction through the centre of the Rājāderā plateau, and then turns abruptly south and descends to the plains of Barwe by a beautiful waterfall known as Sadnighāgh. After crossing the plains of Barwe in a south-westerly direction, it flows almost due south, forming for some distance the boundary between Rānchi and Jashpur, then passing through the hills which separate Barwe from Biru it flows in a westerly direction and, passing into Gāngpur near the village of Samserā in the extreme south of the district, unites with the Koel. Its chief affluents are the Palamanda and Bompai rivers which drain Biru. Tradition says that diamonds are found in the Sankh. Ptolemy states that diamonds were found in Kokkomaji, a region which probably included Chotā Nāgpur, and the reference in Mphammadan writings and the possession of diamonds by the local chiefs go to substantiate the tradition that the river did yield a number of more or less valuable gems.

A spot, 10 miles north of Kochedegī, near the Peruāghāgh, is locally reported to have contained diamonds and is still known as the *dangadhā dab*, or *hira dab*, the "diamond pool".

The North Koel, though rising within a very short distance of the Sankh, flows northward through the narrow valley of Bishunpur into Palāmau, where, after a course of 186 miles, it joins the Son under the plateau of Rohtās.

The North
Koel.

These four rivers, fed by numerous small streams from the hills near which they pass, effectively drain the whole district, and are sufficient to carry off even the heaviest rainfall. No part of the district is liable to flood. The South Koel alone has a drainage area of 3,600 square miles and the Sankh and Subarnarekhā of 1,100 square miles each within the district. For the greater part of the year they are easily fordable, but in the rains they frequently come down in violent and sudden freshets which for a few hours, or it may be for days, render them impassable even for the primitive *dongas* which, formed of hollowed-out trunks of trees, serve as ferries.

A description of the river system of the Rānchi district would be incomplete without mention of the waterfalls, any of which would in a western country be regarded as worthy of a visit even from a distance. Of these the most picturesque is the Hundrugāgh, 2½ miles east-north-east of the town of Rānchi, where the Subarnarekhā descends from the edge of the plateau over a cliff with a sheer drop of 320 feet. In the rains, when the river is in flood, the falls present a most impressive spectacle, as the waters, red with the soil through which they flow, fall thundering over the cliff in a cloud of spray. From the top of the falls there is magnificent view of the river winding through a narrow gorge in the forest-clad hills to the plains of Hazāribāgh. The Dāsomghāgh (22 miles south-east of Rānchi near Taimāra) is formed by the Kānchi river falling over a ledge of rock in a sheer descent of 114 feet, amid rocky and sylvan scenery. There are also two Peruāghāghs in the Gumlā subdivison, one in Basiā thana and the other in Kochedegā thana, so named because wild pigeons in hundreds nest in the crevices of the rocks. The Sadnighāgh by which the Sankh river drops from the Rājaderā plateau into the plains of Barwe is also extremely beautiful.

Waterfalls.

Lakes.

Lakes are conspicuous by their absence, the explanation being that the granite which forms the chief geological feature of the district is soft and soon worn away. Artificial lakes and tanks have been formed at some places by erecting embankments across the beds of rivers. The largest of these are the Rānchi Lake in the centre of the town, the tank near the Mahārājā's palace at Rātu, and that near Toto in Gumlā thana.

GEOLOGY.

Excluding from consideration materials of such recent age as alluvium and soil, the geological formations observed in the Rānchi district are the Lower Gondwāna and the Archæan. The Karanpurā and South Karanpurā coal-fields, which lie almost entirely in the Hazāribāgh district to the north, encroach on the northern boundary of the district, and in these occur outcrops of the Panchet and Raniganj iron-stone shales and the Barakhar and Talcher divisions of the Gondwāna rocks.* With this exception, the whole of the district is occupied by ancient crystalline rocks-schists, quartzites, epidiorites, gneisses, and granites of Archæan age. They may be grouped into two divisions, one of which, comprising the schists and quartzites, with the epidiorites known as the Dalmā trap, was formerly termed submetamorphic, and is now considered to correspond to the Dhārwar of South India. The gneisses and granites may be conveniently grouped together to form the other division of Archæan rocks.

The geology of the district has not in most parts been worked out in detail, but enough is known to show that almost the whole of it is occupied by gneisses and granites. In the south-east corner of the district, north of the Dhārwar boundary, these rocks comprise fine quartzitic gneisses, alternating with felspathic and ordinary granitic gneisses; a few bands of hornblende gneiss also occur but trap is rare, if it is not altogether wanting. Elsewhere, on the Kāro river, the existence of coarse granitic and porphyritic gneisses has been recorded. It is probable that the gneisses and granites mentioned are typical of the whole area, but it is not unlikely that a close search would reveal the existence of occasional small areas or bands of schists in the gneiss and granite areas. The Dhārwar rocks occupy practically the whole southern fringe of the district, being really the northern

* An account of them and of their associated coal will be found in the Memoirs of the Geological Survey of India, Volume VII, pages 285-342.

edge of a large and roughly elliptical area of Dhārwär, occupying by far the larger portions of Gāngpur and Singhbhūm and the south-east corner of Mānbhūm. They are separated from the gneiss-granite area to the north by a well-marked boundary fault, delineated by runs of pseudomorphic quartz and of red hematite, often giving rise to small hills. The fault has been traced for over 100 miles in an easterly direction from near Jati and Bandgāon to near Bhelaidiha in Bankura district. The Dhārwär of this part of India consist mainly of quartzites, mica-quartz-schists, mica-schists, chlorite-schists, hornblendic schists, and their less metamorphosed phyllitic forms, and to a smaller extent, of staurolite-schists, alusite-schists, garnet-schists, kyanite-schists, and tourmaline-schists, the whole much traversed by epidioritic dykes; and any of these rocks might be found in the exposures in the Rānchi district. In addition, there is a great range of hills culminating in the peak of Dalmā in Mānbhūm, whence the name Dalmā trap is derived. To the south of Tamār, owing to a northward bend, this range of epidiorite hills, which constitutes a considerable part of the boundary between Rānchi and Singhbhūm, lies wholly in the Rānchi district, and the district boundary runs south of it so as to include the upper portion of the valley of the Sona Nadi, long famous as a source of alluvial gold. The valley of the Sona Nadi is occupied by schistose rocks of Dhārwär age.

Probably on account of the large area covered by gravels and gneisses, the district is, so far as is known, singularly barren of valuable minerals. The auriferous quartz veins which traverse the Dhārwär schists were the object of the disastrous gold boom of 1889-90, and there are gold-bearing sands in the Kānchi and other rivers, but an investigation by the Geological Survey tended to show that no occurrence is at present known of either vein or alluvial gold worthy of exploitation on European lines.* Specimens of galena have been obtained in the Subararekhā near Silli, and doubtless, when the two Karanpura coal-fields come to be worked, some of the coal production may come from this district.

The greater portion of the district was at one time covered with dense forests. At the present day the central and eastern

BOTANY.

* The gold-bearing rocks of Chotā Nāgpur have been described by S. M. MacLaren in *Records, Geological Survey of India*, Volume XXXI, Part II.

plateaux are for the most part denuded of forests, and only small scrub jungle, with few big trees, is found on the hills, while patches of jungle, known as *paṭra*, still remain dotted among the cultivated lands and are the only traces of the forest which once covered the whole of this area. In the west and north-west of the district there are still large areas of unbroken forest, but even in these parts cultivation is rapidly being extended at the expense of the forest and the large trees are being cut out and sold for commercial purposes. A more detailed description of the forests of the district is given in a later Chapter.

Character of
the Forest.

The Rānchi district is the centre of the second, or South Gangetic, tract in which *sāl* (*Shorea robusta*) is gregarious. The best *sāl* forests are invariably found in the valleys, where in good soil straight trees, 100 to 120 feet in height, with a girth of ten to fifteen feet, used to be found; in the hills and on the slopes of the *ghāts*, the trees are short and stunted, and on the driest southern slopes *sāl* is supplanted by other trees of the so-called "Mixed Forest" type. In the valleys, especially in sheltered situations, the principal companions of *sāl* are the *Asan* (*Terminalia tomentosa*), *Gambhar* (*Gmelina arborea*), *Kend* (*Diospyros tomentosa* or *melanoxylon*, ebony) and *Simal* (*Bombax malabaricum*, the cotton tree). The *Mahuā* (*Bassia latifolia*) is common throughout Chotā Nāgpur, but in the forests is chiefly confined to the hills. *Tun* (*Cedrela Toona*) and *Sisu* (*Dalbergia Sissoo*), both valuable timber-yielding trees, are not native of Chotā Nāgpur, but are frequently planted. *Hara* (*Terminalia ehebula*), *Karam* (*Adina cardifolia*), *Kusum* (*Schleichera trijuga*), *Paisar* (*Pterocarpus Marsupium*) are also important species of trees. In the inferior *sāl* forests in the hills are found *Dhaura* (*Anogeissus latifolia*), *Piar* (*Buchania latifolia*), *Sidha* (*Lagerstrœmia parviflora*), *Khair* (*Acacia catechu*), *Amaltas* (*Cassia fistula*) and *Bamboo* (*Dendro-calamus strictus*). The undergrowth in the *sāl* forests consists principally of *Woodfordia floribunda*, *Kurchi* (*Holarrhena antidysenterica*), *Croton oblongifolius* and species of *Gardenia* and *Randia*. Mixed with the *sāl* are also a number of characteristically Central India trees, which do not cross the Gangetic plain, such as *Cochlospermum*, *Soymida*, *Boswellia*, *Hardwickia* and *Bassia*. In the villages there are groves of mangoes (*Mangifera Indica*), but few of the better fruit-bearing

varieties are found. *Jāmun* (*Eugenia Jambolona*), *Karanj* (*Ponamia Glabra*), *Tetar* (*Tamarindus indica*), *Bael* (*Aegle Marmegos*), *Jack-fruit* (*Artocarpus integrifolia*), *Pipal* (*Ficus religiosa*) and *Bar* (*Ficus Bengalensis*) are common round village sites. The *Palās* (*Butea frondosa* and *Butea Superba*) is often gregarious in cultivated and waste lands, and its wealth of scarlet blossom in the hot season is a striking sight. The convolvulaceous creeper. (*Porana Paniculata*), the well-known bridal creeper, displays a mass of white flowers along the *ghāts* in November, and a large variety of tree and ground-orchids are to be found in the jungle. Palms are seldom found but the dwarf palm (*Phoenix Acaulis* or *Khajūr*) is found on the upper edge of the *ghāts*.

Of the timber-yielding trees the most important are the *sāl*, *gambhar*, *tun*, *sisu*, *kend*, *asan* and *simal*. The principal fruit trees are the mango, *jāmun*, jack-fruit, and *mahuā*; but many other forest shrubs and trees yield fruit which affords a valuable food-supply to the aboriginal inhabitants in years of scarcity. Mr. Slacke, in his report on the Settlement operations of the Chotā Nāgpur estate, enumerates twenty-one species of seeds and the fruits of forty-five uncultivated trees which are used as food, in addition to thirty-four trees, the leaves of which are used as *sāg* (vegetables), and eighteen species of edible roots. Even this long list is probably not exhaustive. Mr. Slacke also gives the names of ninety-seven forest products used as medicines, twenty-eight used as oils and gums, seventeen used as dyes, and thirty-three creepers or bark of trees used as rope-fibres. The length of these lists shows the economic value of the jungles to the aboriginal inhabitants. Various trees, such as the *kusum* (*Schleichera trijuga*), *palās* (*Butea frondosa*), *dumar* (*Ficus hispida*), *bair* (*Zizaphus jujuba*) and *karam* (*Adina Cordifolia*) are used for the cultivation of lac, but the best lac is obtained from the *kusum* and *palās*.

Economic
uses.

In former times Rānchi was a happy hunting-ground for the sportsman, but this reputation is no longer deserved, and, though returns show that wild animals and game of all descriptions are to be found in the district, yet Rānchi now compares very unfavourably with the adjoining districts of Singhbhūm and Palāmau, and the enthusiastic sportsman or naturalist may spend many months scouring the jungle without finding anything worth preservation. Various causes have contributed

FAUNA.

to this result. Cultivation, and the clearing of jungles for this purpose, has been widely extended during the last twenty years, and even from the few strongholds, such as Bāns Pahār in the extreme north-west corner of the district, or the jungles of Samsera and Malsarā on the border of Gāngpur in the south of the Simdegā subdivision, the game is rapidly being driven by the exploitations of timber-contractors and the unrestricted depredations of native *shikāris*. The aboriginal *shikāri* has no respect for age or sex, and with his bow and arrow or muzzle-loading gun will shoot any animal, large or small, that comes within range, and the wholesale destruction of smaller game which has gone on unchecked for years has driven the larger carnivorous animals to more favoured parts. For the preservation of the fauna of the district the establishment of sanctuaries for game is very necessary, or, failing this, the strict enforcement of the game laws, prohibiting the slaughter of females and immature males throughout the year, and of all game during the hot weather. A reduction in the number of gun licenses might assist game-preservation, but even if gun licenses were considerably reduced, the slaughter of deer and small game would go on unchecked, as the bow in the hand of the aboriginal is as useful a weapon as the gun. Gun licenses have been freely given in the past, to protect the inhabitants against the larger carnivora, and the total number of licenses at present in force is over 1,800. The destruction of wild animals has also been encouraged by the grant of rewards. The ordinary rewards are Rs. 25 for a tiger, Rs. 5 for a leopard or wolf, Rs. 2-8 for a bear or a hyæna.

Tigers.

Bordered as it is by Singhbhūm, Jashpur and Palamau, all containing reserve forests and large uncultivated tracts, the district is naturally visited by tigers who are stragglers or excursionists from those more favoured parts. Owing to the death of deer and small game, tigers are ordinarily cattle-destroyers and frequently man-eaters. In the thanas in the south and west of the district hardly a month passes in which half a dozen to a score of cattle are not reported to have been killed by tigers and in the three years 1911, 1912 and 1913 the average number of cattle killed by tigers in the district was 1,122. In these three years also 177 persons were killed by tigers, and at the beginning of 1913 there were six known man-eaters at

large. To rid the district of these pests, rewards of Rs. 500 were offered for every tiger killed in thanas Torpa, Bano, Kolebira, Kochedegā and Chainapur. The offer of these rewards had the desired effect, no less than five man-eaters being killed soon after they were proclaimed. In the year 1915 no less than four tigers were killed in Biru, and rewards of Rs. 500 were paid for each of them. During the three years 1911 to 1913 thirty-four tigers were said to have been killed in the district, but, though the majority of these were no doubt killed within its borders, there is good reason to believe that native *shikāris* are induced, even by the ordinary rewards of Rs. 25, to bring into the subdivisional headquarters at Gumlā the skins of tigers killed in the adjacent native States. Though the aboriginal is fearless in attacking even a tiger, the most common way of destroying a man-eater or cattle-destroyer is by means of a trap set with a poisoned arrow. A six-foot bamboo bow is fixed flat on, or a foot above, the ground, with a poisoned arrow on the bow string, aimed so as to command the path by which the tiger is expected to approach. Across the path, about eighteen inches above the ground, a string is drawn and is attached to the stick which keeps the bow taut, in such a way that the least touch will release the arrow. To protect men and cattle from walking into the trap, two strings are fastened breast high across the path but, in spite of this device, cases occur in which men are fatally injured by the poisoned arrow.

Leopards or panthers (*Felis Pardus*) are very common. Leopards. and show the same phenomenon as the woodcock. Certain places always hold leopards and no sooner is one killed than another takes his beat. Biru Pahār and Pālkot are typical rocky hills where leopards are to be found, and from the former no less than eight leopards have been killed in one year. The distinction between the rock and the wood panther, though admitted by few naturalists, is very clear in this district. The former is smaller, the spots closer and without any resemblance to a finger print; the head bullet-shaped and the ears small and pricked. This animal is rarely dangerous and confines its depredations to goats, pigs, and even fowls. The larger species is frequently a cattle-destroyer, and in the years 1911 to 1913 leopards were reported to have killed 1,720 head of cattle. During this period also 207 leopards were killed for rewards.

Bears.

Bears are also common. The rocky bolder-strewn hills which are a distinctive feature of the district provide luxurious covert for the *Ursus Melursus*, and in April the falling *mahnā* flowers and other fruit attract him to the neighbourhood of the villages. The bear is held in greater dread by the Kol than the tiger himself, and especially in November and December shows a savage and vindictive temper. Cases of mauling and scalping are common, and the wounds, though not very dangerous, are liable to set up blood-poisoning or tetanus, if not properly cleansed.

Wolves.

Wolves are occasionally found, but are not nearly as common as in the neighbouring district of Hazāribāgh, where a pack proved so destructive of children and cattle that a special reward of Rs. 50 a head had to be offered for their extermination. Only ten wolves have been produced for rewards in the last three years.

Hyænas, etc.

Hyænas and jackals are common, and the killing of the former, for which a small reward is paid, forms a regular source of income to some raiyats. The Bengal fox is found throughout the district. Wild cats are fairly common, but the tiger and leopard cats, if they exist, have not been brought to notice. Wild dogs, the worst destroyer of game in any jungle, are not common. The lynx, if it ever is found, is a wandering specimen from the south. Wild pig are plentiful throughout the forest tracts of the district, especially in Biru and Bāns Pahār. Badgers and porcupines are also found.

Ungulata.

The district formerly held a fair number of bison (*Bos gaurus*), but they are now very rare and only visitors from the reserve forests of Palāmau or Surgujā are to be found in the jungle in the north-west of the district. One old bull was shot in March 1913, so exhausted that its last charge left it unable to rise. Its condition and the fact that it was accompanied by three calves clearly showed that it was a fugitive from some distant jungle. Were the jungles of Bāns Pahār and the neighbourhood to be preserved for a few years, there is no doubt that bison would soon fill the coverts, for the bison multiplies freely when undisturbed. The bison is considerably smaller than the Assam variety (*Bos frontalis*), being little over fourteen hands in height. *Sāmbār* (*Cervus unicolor*) are also rapidly diminishing in number, and their

extinction is due to the shooting of hinds by aboriginal *shikāris*, whether raiyats or zamindars. They are still fairly common in some parts, such as Konpāla, Udni, Onigara and Samsera. The Chital or spotted deer (*Cervus axis*) is found in small bands or pairs in most of the lighter jungles. Its scarcity is probably due to tigers who have a special liking for this species. The Chinkara or ravine deer, common in Hazāribāgh, does not appear to be found at all in Rānchi. His fatal curiosity has no doubt made him an easy prey to the hunter. The little four-horned antelope, or *koṭra* (*Tetracerus quadricornis*) and the barking deer (*Cervulus muntjac*) occur in all jungles. Hog deer are not found, but the smallest of the deer tribe, the mouse deer (*Tragulus Meminua*) has been found in jungles inhabited by *sāmbār*. The *nilgai* or blue bull (*Boselaphus tragocamelus*) was formerly very common, and is still found in a good many jungles, such as those of Onigara in the north-west of Lohardagā thana. The blue bull is very destructive to crops and his extermination is hardly a matter of surprise or regret. Hares are common, and in every beat two or three fall victims to the axes or arrows of the beaters.

The most noticeable game bird in the district is the pea fowl Game birds. which is found everywhere, especially on the sides of the rocky hills on the outskirts of villages. Jungle fowl and the painted spur fowl are less frequent but cling to certain jungles, such as those of Jamgāin on the borders of Ghaghṛā and Lohardagā thanas. The grey partridge is to be found in the *patras* and small *nullahs*, and quail are found occasionally. The lower *don* lands usually contain a good number of snipe, and, though the lands are not large enough to give big bags, there are few places in which three or four couple cannot be got in a good year. Snipe are popularly supposed not to breed in this part of India, but an egg of an ordinary snipe has been found in Biru at the end of February. Ducks are not as plentiful as in districts where tanks and jhils abound, but the larger tanks and *bāndhs*, such as those at Rātu in Rānchi thana or at Toto in Gumlā thana usually hold some birds. The most common varieties are the gadwall, widgeon, white-eyed pochard, and cotton teal. The brahminy duck is found on some of the larger rivers, and on the Sankh wild geese are occasionally seen. Pigeon, both rock and green, are abundant and two species of sand grouse occur, though not in large numbers.

Reptiles.

Snakes are not very common in the district, but are most numerous in the lower plateau. The statistics show that 76 persons and 9 cattle died of snake-bite in 1913, but such statistics are of little value. The cobra and the *karait* are the most common species; *dhamans* of considerable size are occasionally found and python are sometimes seen in the hilly tracts. Various species of harmless grass-snakes occur.

Fish.

There are no fisheries in the district and it is only in the tanks and *bāndhs* in and near the town of Rānchi, where there is a large demand for fish both for the European and the Bengali community, that species such as the *rohu*, *katla* and *mirgel* are reared. The larger rivers of the district are said to contain mahseer, while the *bachuā* is found in the deep pools of the River Sānkh. The aboriginal inhabitants of the district amuse themselves at some seasons of the year by catching fish in the water-logged *don* fields and streams (with a bamboo trap known as a *kum* or *jhimri*, and on the occasion of the Sarhul festival the youth of an Oraon village make a fishing expedition to a tank or stream.

CLIMATE.

The climate of the Rānchi plateau is unsurpassed in the Province. The elevation of over 2,000 feet above sea-level gives it a uniformly lower range of temperature than the districts of Bihar. It is only during the months of April or May that the temperature rises to any great height, and for a few weeks a day temperature of more than 100°, which occasionally rises to 104° or 107°, makes one sceptical of Rānchi's claim to be considered a hill station. But in spite of the high day temperature, the nights are cool and the atmosphere is so dry that the heat is by no means so oppressive as that of Bihar or Bengal, even though the thermometer stands many degrees higher. During this period of the year occasional thunderstorms and nor' westers cause a refreshing fall in the temperature. The rains break usually before the end of June and the climate during this period of the year compares very favourably with that of many hill stations. Thanks to the excellent natural drainage, the rain flows away quickly and, unlike the Himalayan slopes, the plateau does not remain for days or weeks enveloped in fog and mist. Occasional breaks in the rains make life unpleasant, but they do not usually last for many days, and even during a long break the air is neither so saturated with moisture nor so

enervating as in the plains of Bihar or Orissa. The end of the rains is irregular; they sometimes end in the last week of September, but there is often a heavy fall of rain during the first fortnight of October. The cold weather may be said to begin with the first week of November. In December and January the temperature on the grass sometimes falls to freezing point, and in the early morning hoar-frost covers the grass in the higher and more exposed parts of the district and does damage to the upland crops and young trees. A strong cold wind blows throughout January and the climate during this period of the year is extremely bracing and is not inferior to that of many health resorts in European countries. At the end of February the day-temperature rises considerably and continues to rise till it reaches its maximum in April or May. In the lower plateau the temperature is considerably higher than in the rest of the district and the moist enervating climate is the same as that of Mānbhūm.

The mean maximum temperature falls as low as 73° in December and January and rises to 96° in April and 99° in May. During the four months of the rainy season the mean maximum is 83° or 84°. The mean minimum temperature never rises higher than 75·5° in May and June. In July, August and September it falls to 73° and 72° and during the next six months it averages about 57·5°, falling to 51° in December and January. The mean daily range of temperature varies from 24° in April to 10° or 11° in July and August. The humidity is at the lowest point in April when it is 42. It rises to 51 in May, 72 in June, and reaches its maximum of 89 in August. During the cold-weather months it averages about 63.

Temperature
and Humidity.

The following table, which is based on statistics since 1878, shows the average rainfall recorded in the town of Ranchi, month by month :—

Rainfall.

Month.	Rainfall.	
	Inches.	Days on which rain falls.
January	0·78	15
February	1·55	29
March	1·30	27

Month.	Rainfall.	
	Inches.	Days on which rain falls.
April	1·09	2·8
May	2·29	4·3
June	9·13	11·6
July	15·23	18·1
August	12·88	18·9
September	9·52	12·2
October	2·48	3·9
November	0·22	0·3
December	0·22	0·6

Though the rainfall varies from year to year at the different recording stations, these figures may be taken as typical of the district. During the four cold-weather months the rainfall is very slight, and frequently one or two rainless months are experienced, though it is said that formerly the district never enjoyed a rainless month. Rain during November and December causes considerable damage to the harvested crops, but a fall of rain in January or February soften the fields for ploughing. In March thunderstorms and showers give a normal rainfall of over an inch, but April is comparatively dry. During May the cyclonic storms, which come up from the Bay of Bengal in advance of the monsoon, give nearly $2\frac{1}{2}$ inches, and in June when the monsoon breaks, there are, on the average, eleven rainy days. During July and August the rainfall is heaviest and there are, on the average, eighteen wet days in each of these two months. The rainfall in September averages over nine inches and is the most important of the year, as, if the monsoon fails early in the month, the rice crops on the higher lands wither and there is scarcity or famine.

The following table shows the average annual rainfall at ten recording stations in the district. It will be seen that the rainfall is heaviest in Kurdeg, in the south-west, and in Chainpur, in the west, and lowest at Tamār, Bano and Lohardagā :—

Average Annual Rainfall.

Stations.	Average.
Lohardaga	47.15
Ranchi	58.39
Silli	51.55
Pallot	56.17
Bano	45.07
Tamār	40.26
Kurdeg	66.30
Gumla	52.51
Chainpur	60.60
Khunti	50.33

CHAPTER II.

HISTORY.

EARLY
HISTORY.

EXCEPT for the hazy legends of the aboriginal races, there is little material even for conjecture as to the early history of Chotā Nāgpur, previous to the settlement of the Mundās and Orāons. The Mundā legend of Sing Bōngā refers to the race of the Asurs, and perhaps celebrates the triumph of that race over the original inhabitants of the country, possibly the ancestors of the small iron-smelting tribe of that name, which still speaks a language akin to Mundāri. In various parts of the district there are tumuli which are known by the Mundās as “the burial-grounds of the Asurs”. Some of them have been found to contain relics of an earlier civilisation. Traces of the Stone Age have been found in the modern districts of Mānbhūm and Singhbhūm and in parts of Rānchi district, quartzite axes and spear-heads have been discovered in the Jheria coal-fields, and a number of chert flakes and knives at Chaibassa and Chakradharpur ; in this district a beautifully made celt was discovered in 1867 at Buradih in Tamār and in recent years many stone celts, including some very fine specimens, have been found in various parts. Copper celts have also been found, but in many instances their archæological value was not appreciated and they have not been preserved. Recently, however, twenty-one celts were found in a village in Basīā thana. They are the common, Indian, flat, battle-axe type and in fashion and design appear to be of a primitive type. There are also other traces of the copper age, and cinerary urns are occasionally found, in the shape of large earthenware *gharas*, containing pieces of brass and bits of copper, the remains apparently of ornaments. The pottery is of an entirely different type from that now made among the Mundās, being stronger and more ornate. All these remains go to corroborate the Mundā legend of an earlier race and to prove that a

civilised race dwelt in the country long before the immigration of Kolarian tribes.

References to the country, now called Chotā Nāgpur, are to be found in the earliest historians. Thus Pliny mentions that in the interior, south of Palibothra (Patna), dwelt the Monedes and the Sauri. These tribes have been identified, solely on the ground of similarity of name, with the Mundās and the Savaras, who, though they no longer speak a dialect of Mundāri, are probably Mundāri by race. Ptolemy also refers to these two tribes, under the names of the Mandalai and the Sutrarai, Cunningham's interpretation of Hwen Thsang, the Chinese pilgrim of the 7th century A. D., places the district of Rānchī within the kingdom of Kie-lo-na Su-fa-la-na or Karna Suvarna, ordinarily identified with the Subarnarekhā river.

The origin of the Mundās and of the Dravidian Orāons is a problem that has often been discussed. Some ethnologists have evolved the theory that the Mundā speakers entered India from the north-east and the Dravidian speakers from the north-west. There is, however, little solid foundation for it, and further ethnological investigations go to show a connection between the so-called Dravidian races and the races to the south and east of the Indian Peninsula. At a later date these races appear in north-western India and the legends of the Mundās and the Hindus point to a struggle between these races and the Aryan invaders, in which the former were gradually driven eastward.

Though there is no evidence which enables us to fix the date at which the Mundās and Orāons settled in Chotā Nāgpur, there is little or no doubt that the Mundās were the first to come and, entering the district from the west and north-west, gradually passed into the country which they now occupy in the east and south-east of the district.

Settlement
of the Mun-
dās and the
Orāons.

The ancestors of the Mundās and the Santāls crossed the Son and advanced along the borderland that separates the present district of Hazārībāgh from the districts of Rānchī and Palāman. The Santāls crossed the Dāmodar, and first resided in the district of Hazārībāgh and then, following the course of the river, settled in Mānbhūm and the Santāl Parganas. The Mundās preferred to make their way into the higher forest plateau of Nāgpur and found their way to it, according to one tradition, through the pass of Omedanda in Burmu

thana. The Orāons, according to their own tradition, came from the stronghold of Rohtās which had probably also at an earlier age been a resting-place of the Mundā race. Driven from this stronghold by some more powerful tribe, of which the identity is uncertain but which may have been the Cheros or Kharwārs, the Orāon race split into two parts. One branch, the ancestors of the present Māle tribe, proceeded down the Ganges and settled in the Rājmahāl hills. The second division, by far the larger of the two, proceeded up the North Koel river and, passing through Palāmau, emerged in the north-west of the Rānchi district. Here they found the forest country already opened up for them by their precursors, the Mundās, and, according to their own tradition, were received in friendly fashion by them. Traces of the Mundā occupation of the west and north-west of the district, now occupied almost solely by Orāons, may be found in the Mundāri *śasān diris*, or burial-grounds, which occur in many places, in the Mundāri names of the villages, and in the organization of the Orāon villages, which in many particulars resembles that of a Mundā village. In Orāon villages at the present day the priest, or *pāhān*, is occasionally a Mundā, and the reason given is that this descendant of the original settlers is better qualified to appease the local gods and spirits. The Mundās have the following tradition of their migration within the district. A compact body of twenty-one thousand under the leadership of Risa Mundā moved eastwards and settled in the village of Murima; a follower of Risa, Korumba by name, settled in the village, now known as Korāmbē after its founder, while another follower, Sutia, founded the village which came to be called Sutiāmbē. These two villages, Sutiāmbē and Korāmbē, are still mentioned by the Mundās of the central plateau as the cradle of the "Konkpat" Mundās. This tradition clearly reflects the gradual eastward movement of the Mundās, who gave way before the more prolific Orāon race and sought refuge once more in distant jungles. A portion of the race probably also split off and, following the course of the South Koel, settled in Singhbhūm and became the ancestors of the Hos of the Kolhān.

Organization
of the Mundās

The Mundās who first reclaimed the virgin jungle of Nāgpur had no idea of individual ownership of landed property. All land was in the joint ownership of a family, or a group of agnate families. Each family made its own clearances, which came to be called

katu, village, and later *khuntkatti-katu*, or village of the family of the original settlers. The original village family gradually branched off into a number of separate families belonging to the same *kili*, or sept. Their organization was patriarchal, the founder of the village, or the oldest representative of the founder, being the chief both in secular and religious matters. As religious head of the village community, he was known as the *Pāhān* and was required to offer the public sacrifices in the *sarnā*, or sacred grove, to propitiate the gods and spirits of the village and so protect the community from the ravages of wild animals and secure for them satisfactory harvests. As the head in secular matters, he presided over *pañchāyats* for the settlement of disputes, inflicted punishment for offences against established custom, and represented the community in its dealings with outsiders. Gradually the secular and religious functions became distinct, and the next most prominent and influential man in the village became responsible for secular affairs and was known as the *Mundā*, a term which eventually gave its name to the tribe. The two offices were hereditary and neither the *Mundā* nor the *Pāhān* had any rights superior to those of the other *bhūinhārs*, or descendants of the original founders of the village.

Over and above this village organization, the *Mundās* in course of time came to have a tribal organization. The descendants of the original settlers increased in number, the jungles and fields of the original settlement no longer afforded adequate subsistence for all, fresh hamlets were opened up and the inhabitants of the new villages, who had at the outset maintained their connection with the parent villages in respect of public worship in the *sarnā* and burial in the common *sasān*, eventually established their own burial-grounds and public sacrifices, and formed an independent village community. With the parent village, however, they continued to constitute, for social and political purposes, the group of allied villages, known as the *pārkhā* or *patti*. The *pārkhā* was in ancient times simply a wider brotherhood than the village, designed so as to afford greater protection to the communities against the aggression of other village units that surrounded them. A leader being required, the *Mundā* of the parent village, or the strongest and most influential of the headmen, became the *Mānki* of the *patti* and presided over the *pañchāyat* composed of the *Mundās* and *Pāhāns* from the villages

which formed the group. † A similar organization was adopted by the Orāons, the head of the *parhā* being known as the Rājā, a title remembered by them from the days when they lived among the Hindus in Rohtās.

Election of a
Feudal Chief.

According to the tradition of the two races, this organization was found to be defective and the Mānkis and Pārḥā-Rājās about the 6th century A.D. selected one of their number to be the Chief Mānki or Rājā. The Mānki so selected was the Mānki of Sūtiāmbe, from whom is descended the present family of the Nāgbansi Rājās of Chotā Nāgpur. The family legend of the Mahārāja of Chotā Nāgpur, which is given in detail in the Gazetteer under the description of the village Sūtiāmbe, agrees in many respects with the Mundā and Orāon tradition. The first Rājā is said to have been the son of the great snake-god, Pundarīka Nāg, by Pārvati, the daughter of a Benares Brāhman, and to have been born at the village of Sūtiāmbe near Pithauriā, while his parents were on a pilgrimage to Puri. Pundarīka Nāg, being forced to reveal his identity to his wife, forthwith disappeared in his proper form in a pool of water, and Pārvati, in great agony of mind over the result of her womanly inquisitiveness, immolated herself on a funeral pyre. The child, whose name was announced to be Phani Mukut Rai, was brought up by Madra, the Mānki of Sūtiāmbe, with his own son. When both the boys were about twelve years of age, Madra found the adopted son to be so much cleverer than his own son that he named him as his successor, and the other Mānkis and Pārḥā-Rājās unanimously elected Phani Mukut Rai to be their Chief. This event is said to have taken place in Sambat 121 or 64 A. D., but this date is undoubtedly too early, and it may safely be put some five centuries later. It was certainly subsequent to the migration of the Hos into Singhbhūm, as they have no such tradition among their legends.

The Chief Mānki, or Rājā, in whatever manner he may have been appointed, had originally exactly the same position in the group of *pattis* that the Mānki had in the group of villages. By degrees he came to acquire the position of a feudal overlord. It is not difficult to picture the stages by which this position was reached. During the military expeditions, in which the Rājā was the national leader, services were rendered, and contributions paid, by the Mānkis; on ceremonial occasions and at

festivals, presents, or *salāmi*, were given; gradually the contributions were increased and, instead of being given occasionally, came to be given regularly. The Rājās also became Hinduized, and formed marital alliances with families long recognized as Hindu; Rājputs and Brahmans from Hindustan were invited to settle in the country and to assist the Rājā in his expeditions against neighbouring States or in controlling his own vassals. They were rewarded with grants of land or villages, and began to dispossess the village communities of their rights. Thus began the struggle between the aboriginal cultivators and the alien landlords which has continued unceasingly till the present day.

To the Aryans and to the Muhammadan historians the whole of Chotā Nāgpur and the adjoining hill States was known as Jhārkand, or the forest tract. It was an inaccessible frontier country and was probably one of the last conquests of the Mughals in Hindustan.

MUHAMMADAN RULE.

The first mention of the district is found in the Chronicles of Ahmad Yadgar* who relates that the Emperor Sher Shah sent an expedition against the Rājā of Jhārkand, in order to secure possession of a famous white elephant, named "Syām Chandrat", which had the peculiarity of never throwing dust upon its head. The expedition achieved its object and Sher Shah regarded his capture of the elephant as an omen that he would one day be Emperor at Delhi. It was not till three-quarters of a century later that an attempt was made to bring the country into subjection. In 1585, the 30th year of Akbar's reign, Shabbāz Khān sent a detachment to "Kokrah, the well-cultivated district between Orissa and the Dakhin ruled over by Madhu Singh". The result of the expedition is thus described in the *Ain-i-Akbari*: "As the country is inaccessible, the Rājā thought he was safe and assumed an independent attitude. Our men, however, entered the district and carried off much plunder. The Rājā became tributary (Mālguzār) and was thus fortunate to get under the shadow of the Imperial Government

The Muhammadans were no doubt attracted to the country by its reputation for diamonds, and, in the early years after their conquest, the Governors of Bihar sent frequent detachments

* *Mss.* Pages 170—175.

† The Bengali name "Syām Chandra" goes to show that this expedition was only against that part of Jhārkand which now forms the district of Māmbhām and did not penetrate to Chotā Nāgpur proper.

into the country and were satisfied with a tribute of two or three diamonds. The Chiefs also rendered service to the Emperor, and in 1591 Madhu and Lakhmi Rai of Kokrah served in the detachment commanded by Yusuf Chak Kashmiri, which marched over Jharkand to Midnapore and joined the imperial army under Man Singh in the conquest of Orissa.

The Emperor Jahāngīr sought to bring into more complete subjection this country in which diamonds were said to be found of the value of a lakh of rupēes each, and he directed Ibrāhīm Khān, on his appointment as governor of Bihar, to "invade the district and drive away the unknown petty Rājā". Ibrāhīm Khān invaded Chotā Nāgpur in 1616, refused to be satisfied with the few diamonds and elephants which the Rājā sent him, overran the country and took possession of its diamond washings. The Rājā was captured and sent to Delhi, with his diamonds and twenty-three elephants. According to the tradition of the Chotā Nāgpur Rāj, the defeated Rājā was the 45th Chief, Durjan Sāl. He was removed from Delhi to Gwalior, where he was kept in confinement for twelve years, but secured his release owing to his skill in testing diamonds. He is said to have pointed out the flaw in a diamond, over which the Court jewellers were at variance, and, to prove that he was right, to have tied it to the horns of a fighting ram and set it to fight with another ram on whose horns an unblemished diamond was fastened, with the result that the former split while the true diamond was uninjured. The Emperor was so pleased at this that he not only gave him his release but granted his prayer that the other Chiefs imprisoned with him might be set at liberty. Durjan Sāl was restored to his former rank and ordered to pay an annual tribute of Rs. 6,000. During the next century and a half, the Rājā's relations with the Muhammadans appear to have been peaceful, except for occasional expeditions to enforce payment of the tribute. Thus, in 1724 the Subadār of Patna marched to the foot of the hills, but stopped his advance on receiving from the Rājā's agent a *nazarana* of a lakh of rupees, of which Rs. 4,500 were in cash and the rest in diamonds. An expedition in 1731 was arrested in a similar way, the Subadār meeting with considerable resistance and being glad to compromise his claim by receiving Rs. 12,000 from the Ghātwal of Rāmgarh

on account of the Nāgpur Rājā. The Rājās of this time claimed to be the overlords of the Ghātvals of Rāmgārh and Palāmau, but the overlordship was probably only nominal, as the Chiefs of Nāgpur were fully occupied in keeping in subjection their own immediate vassals.

During this period there must have been a considerable immigration of Muhammadans into the country, as villages composed entirely of Muhammadans are found scattered over the district. The Rājās also succeeded in consolidating their power over the aboriginal inhabitants by the introduction of Hindu settlers, who were given grants of villages on easy conditions. Many of the settlers, either of this, or an earlier, period, were required to render military service and to keep a standing militia for the assistance of the Rājā in his expeditions against external enemies or against his own subjects. That the Rājās of this time did much to spread the Hindu religion is shown by the temples in various parts of the district. The palace and temples at Doisā were built between the years 1683 and 1711; the temple at Chutiā bears the date 1685 and that at Jagannāthpur 1691. At Borea there is an inscription on the temple to the effect that it was begun in 1665 and completed in 1682, at a cost of Rs. 14,001, and at Tilmi a well in the fortress of the Nāgbansī Thākurs of that village bears the date 1737. The Brāhmans who flocked to the Rājā's court had to be supported and received *brīṣ* grants of lands or villages. These holders of service tenures were only entitled to the supplies and services formerly given to the Rājā, but they did not rest content with this small share of the produce. They enhanced their demands for supplies and services, they collected a certain portion of the rent payable by the raiyats, or *parjas*, to the members of the *khuntkāttī* family, and gradually acquired a proprietary right to the lands which they called by name of *rajhas* or "the Rājā's share". A more detailed account of the manner in which the village communities were gradually spoiled of their rights will be found in another chapter, but it is necessary to mention it in this place, as the gradual growth of the power of the Rājā and his jāgīrdārs accounts for many of the agrarian troubles of the 19th century.

In 1765 on the grant of the Diwāni of Bengal, Pīhar, and Orissa to the East India Company, Chotā Nāgpur, as part of the

of Hindu
Settlers.

British Rule.

Subah of Bihar, passed to the British, but it was not till some years later that they made any effort to occupy the country. In 1769 Captain Camac entered Palāmau, in order to reinstate the local Rājā and bring that part of the country under British subjection. The Rājā of Nāgpur at this time was in difficulties, not only from the petty Rājās who had made themselves independent of his authority but also from the Hōs or Larkā Kōls of Singhbhūm who were ravaging the southern parganas, in revenge for the attempts which he had made to subjugate them. He also had a long-standing feud with the Rājā of Rāmgarh, Māchchān Singh, who, he asserted, had acquired power by being employed for the Nizamāt and had usurped authority over him. Rājā Dripnāth Sahi, accordingly, went to Captain Camac in 1772 and, after exchange of turbans with the Company's representative, duly acknowledged himself a vassal of that power, gave a *nazarāna* of Rs. 3,000 and agreed to do service against the Marāthās. In return for this Captain Camac recommended that he should be allowed to pay his revenue direct to Government instead of through the Rājā of Rāmgarh, and represented to the Council at Patna the importance of securing in their interests the Rājā of Chotā Nāgpur "whose country would form an effective barrier to the incursions of the Marāthās, thus covering Bihar and Birbhūm and at the same time giving them the command of the passes into the Deccan". The Rājā also offered to pay Rs. 12,000 in lieu of Rs. 6,000 which had been previously extracted. The Council at Patna accepted the offer and made a settlement for three years (1772-1775). The Rājā assisted the British troops in subduing Rāmgarh, but subsequently fell into arrears over the payment of his revenue owing to the incursions of the Marāthās and the refusal of the petty Rājās of Silli, Tamār, Bundu, and Barwe to pay their tribute, and in 1773 Captain Camac was forced to send troops into the country to make him fulfil his obligations. In 1774 the settlement was renewed for a further period of three years, but the Rājā stipulated to pay an enhanced amount, *viz.*, Rs. 15,001.

The Rājā was, however, a constant defaulter in the payment of revenue and refused to meet the officers of Government who were sent to induce him to pay

his dues.* Mr. Ramus, who succeeded Captain Camac in charge of the military collectorship of Rāngarh, reported to the Board of Revenue, in 1778, that "many of the zamindars have paid no attention when summoned to attend. The Rājā never hears. Whenever any force is sent into his country, he immediately flies into the Marāthā country. He is very capable of paying his revenue but always evades and can never be compelled to obedience, save by force". To assist the Rāngarh Collector in his dealings with these recalcitrant zamindars, a force of five companies of sepoys had been established at Chatrā in 1778, and it was only the presence of these troops who were operating in Barwe under Captain Camac that induced the Rājā in that year to execute his agreements.

The Rājā was allowed a free hand in the internal administration of the country, though it was nominally included in the military collectorship of the district of Rāngarh, which was formed in 1780, with headquarters at Shergati, in the Gaya district, and at Chatrā, in the Hazārībāgh district. The district embraced the whole of the present districts of Hazārībāgh and Palāmau and parts of the districts of Gaya, Mānbhūm and Monghyr, as well as Chotā Nagpur proper. The district officer combined the functions of Judge, Magistrate and Collector, but paid little attention to matters other than the collection of revenue.

Military
Collectorship,
Rāngarh.

Under the terms of his *kaḅuliyat*, the Rājā agreed to be responsible for the safety of travellers and to arrest thieves and dakaits and bring them to justice. There were no police thanas and matters were left pretty much to his discretion. "He administered," says Colonel Dalton, "justice and the police under the feudal system that had previously prevailed, working through his vassals, some of whom were Rājās like himself of the old race, holding extensive estates, some of whom were brethren of his own in possession of maintenance grants and some persons on whom he had conferred *jāgīrs* on condition of their supporting him". His administration was hardly successful. In 1793 the Collector invited him to Chatrā with the object of making some arrangements for the punctual payment

Administra-
tion of the
Rājā.

* The traditional reason for this conduct is as follows :—On the occasion of the meeting of Captain Camac and the Rājā, the latter was wearing a jewelled turban of great value. Captain Camac persuaded him to exchange head-dresses and the Rājā was so wrath at being deprived of his jewels in this way that he vowed not to meet the British Representative again.

of his revenue and also of persuading him "to adopt some scheme for checking the excesses which had been and are practised in his zamindari, which has been for a long time past the receptacle for murderers, thieves, vagabonds and all disturbers of the public peace". Signs of unrest among the aboriginal population of the country were also in evidence and occasionally attracted the notice of the authorities. In 1789, there was an insurrection in Tamār, which was only put down by an expedition, and disturbances in this part continued till 1795. A lurid picture is painted of the disorders prevailing in the district by Captain Roughsedge, Commandant of the Rāmgarh Battalion, in a letter dated 27th October 1806, and his description of the murder of the Rājā of Barwe by the agents of the Rājā of Nāgpur throws a flood of light on the state of the country. "I cannot avoid mentioning, however, the treacherous and cruel murder of Harirām Singh, the Rājā of Barwe, in the year 1801. This person's pargana was overrun and conquered by the neighbouring Rājā of Sirguja, and being unsupported by his immediate superior, the Rājā of Chotā Nāgpur, he was obliged to submit to the invader, whose troops kept possession for some years but retreated on the intelligence of Colonel Jones' approach. The Rājā of Chotā Nāgpur availed himself of these circumstances to attempt the recapture of Barwe; but his troops would have had no chance of success, had not Captain Jones and Mr. Smith (at that time Magistrate of Rāmgarh) addressed letters to the Rājā of Barwe, inviting him to submit on an assurance of personal safety. On the faith of these letters and the solemn promises of his captors, he was induced to place himself in the hands of the Rājā of Chotā Nāgpur, whose officer sent him two days afterwards under an escort to Pākot. Within one mile of this place, he was taken out of his palanquin and put to death in cold blood by the party who attended him and who had been sent by the Rājā for this particular purpose. I do not believe that any judicial enquiry was ever made or complaint instituted on account of this atrocious act, and, as the present Rājā of Chotā Nāgpur is not concerned, I should not have thought it applicable to my subject, did it not seem to prove that the want of proper authority in the district is of no recent date, and that the protection accorded to this person by the chief local officers of Government was thus contemptuously rendered ineffectual by

an individual calling himself a British subject and in a district declared to be amenable to British laws”.

The Rājā was in fact thoroughly disloyal, and Captain Roughsedge in another letter wrote of him as follows:—“ I hope I have not unsuccessfully shown the necessity for reforms, and to these facts and arguments brought forward I will only add that the slightest mark of attachment or loyalty to the Government shown by any individual in Chotā Nāgpur at the present day is sufficient to bring down upon him the undisguised and serious displeasure of the Rājā and his officers”. An attempt was made to remedy this state of affairs and in 1806 Mr. Blunt, the Magistrate of Rāngarh, obtained the sanction of Government to the introduction of a system of police under Regulation XVIII of 1805, but the measure was never carried into effect, the Rājā being evidently opposed to the proposal.

Further disturbances occurred in 1807 and 1808. Owing to the disputes of the Rājā with his brothers, Captain Roughsedge again marched into the country. The Rājā's Diwān, Din Dyal Nāth, who had established a complete ascendancy over him and was primarily responsible for the disputes, fled the country with his followers and was arrested in Calcūta and brought to Chatrā. The Rājā met the British officer, paid up his arrears of revenue and settled his quarrels with his brothers. To secure better administration in future, he was ordered to keep up police thanas, six of which were established in 1809. The year 1809 is thus a noteworthy one in the history of the district, for it marks the beginning of the disappearance of the feudal authority of the Rājā.

Disturbances
of 1807 and
1808.

The police system then originated was, however, at first no more successful than the feudal system which it had superseded. The Rājā was not unnaturally opposed to a measure which diminished his authority and increased his expenditure and did all he could to nullify its effects. In 1819 he was deprived of his control over the police, in consequence of his failure to render any assistance to the Magistrate in the detection of a case in which a woman was murdered for having practised magical arts against the Rājā's son and daughter. Another cause of the failure of this system of government was that the new police officers were foreigners from Bihar or the North-West, who joined with the alien *jāgirdārs* in oppressing the

Introduction
of Police.

people. The aboriginals had no hope of obtaining justice. "The Rājā by no means satisfied at his own loss of dignity and authority gave but surly answers to complainants who came before him. The darogas, or native police officers, the highest resident officials under the British Government, declared that it was not competent for them to decide on the grievances which most harassed the Kols, who complained that they had been dispossessed by foreigners, Muhammadans, Sikhs and others. It often happened that the unfortunate Kol who with difficulty made his way to the far off station of Chatrā or Sbergāti found the tables turned on him when he got there. A host of witnesses in the pay of the opposite party were already on the spot, prepared to prove that he had not only no rights in the land but was a turbulent rebel besides". Typical of the state of country were the disturbances which broke out in Tamār in 1820. Major Roughsedge, who had been appointed in 1819 to be the first "Political Agent to Government in South Bihar and the recently ceded districts adjacent to that Province" and was responsible for the tranquillity of the country, reported that the disturbance was due to the oppression practised by the Rājā of Tamār upon one of his vassals, Raghunāth Singh. Raghunāth Singh in the hope of redress went to the court at Chatrā, but the evidence kept in readiness for him by the Tamār zamindar caused his committal to the Court of Circuit and his condemnation to transportation or imprisonment for life. Tamār had been in a disturbed state for some years and in 1820 two Mundās, Rudu and Kantu, at the head of three hundred followers, attacked a Mānjhi whom they regarded as responsible for a drought in the previous year, murdered his son, burnt his village, and then proceeded to vent their wrath upon other landlords. For a long time they defied the authorities and were not reduced till military operations on a large scale had been taken against them.

The
Insurrection
of the Kols,
1831-32.

After the suppression of this disturbance, the country was temporarily tranquil, but the smouldering discontent of the aboriginals at last broke out in the great Kol Insurrection of 1831-32. The immediate occasion of the rising was an incident which occurred in pargana Sonpur. The Maharājā's brother, Kuar Harnāth Sāhi, had received the pargana as a maintenance grant and gave out the villages in farm to Sikhs, Muhammadans and others, over the heads of the Mānkis and Mundās. Twelve

villages belonging to Singhrai Mānki were leased to a Sikh who, not content with taking away his lands, carried off his sisters as concubines. A graphic description of their grievances is given in the statement of Bindra Mānki, Singhrai's brother, taken at the time by the Magistrate of Chatrā. He narrates that a *bania* of Sonpur carried off all their cattle in return for two old buffaloes which they had borrowed from him; that they took the law into their own hands and recovered two bullocks with the aid of some men lent by the Rājā of Bandgāon, that a complaint was lodged against them at Shergāti and that they were seized by the Munshi and Jamadār of Chakradharpur, but after being kept in the stocks for fifteen days they effected their escape; that in revenge for their escape, the Munshi and Jamadār carried off and ravished their wives; that they told their grievances to the Rājā of Porāhāt who merely told them to do as they pleased, but to be careful not to get him into trouble. The end of the statement is pathetic: "We returned home, invited all the Kols, our brethren and caste, to assemble at the village Lankha in Tamār, where we had a consultation. The Pathāns had taken our honour and the Sikhs our sisters and the Kuar had forcibly deprived us of our estate of twelve villages. Our lives we considered of no value and being of one caste and brethren, it was agreed upon that we should commence to cut, plunder, murder, and eat. We said if any were hanged, it would be we four; if any put in irons, we should be the four. It is with this resolution that we have been murdering and plundering those who have deprived us of both honour and homes, conceiving that committing such outrages our grievances would come to light and if we had any master, notice would be taken of them and justice rendered".

The principal leaders of the revolt came from Porāhāt in the district of Singhbhūm, and these joined with the Sonpur Mundās to carry into effect the resolution made at Lankha. On December 20th a number of villages, held in farm by the Sikhs, Hari Singh and Diyal Singh, were plundered and burned by a body of seven hundred Kols under Sūrja, the aggrieved Mundā of Singhbhūm and Singhrai. A few days later the villages of two Muhammadan *thikādārs* were also burnt, the servant of one of them being thrown into the fire. Jafār Ali Khān, the farmer of village Gingria, had incurred the special hostility of the Mundās by refusing to pay fair prices to the Mundā women who

came to sell iron; his village was destroyed and ten inmates of his house, including some Mundā women whom he had seduced, were burnt alive. It was probably the intention of the insurgents to confine the plundering and looting to Sonpur and its immediate neighbourhood. In January 1832 the number of insurgents was estimated to be 1,000 or 1,200, but the arrows of war were circulated through the whole country and by the middle of January the Orāons had joined the Hos and Mundās. The Nazir of the Shergāti court, who was sent to tranquillize the country, only succeeded in aggravating the situation by arresting one of the leaders; to his proclamation that they would recover their lands if they desisted from their campaign of rapine and bloodshed, the Kols indignantly replied that they would obey none but the Mahārājā and leave not a foreigner alive in Nāgpur. In every village the *Sads*, or Hindus, and the *Dikus*, or foreign landlords, were murdered or, receiving warning in time, fled the country. Even the petty Rājās of Rahe, Bundu, Tamār, and Barwe, though neither *Sads* nor *Dikus*, narrowly escaped with their lives, when those places were sacked and destroyed. The British authorities were entirely unprepared for an outbreak of such magnitude. Captain Wilkinson, with a few troops, reached the outskirts of the plateau in the middle of January and compelled Pithauriā and the neighbouring villages to submit and had some hard fighting round Nagri. By the middle of February sufficient troops were collected to form three flying columns which swept the country in parallel lines, as they advanced from south to north. The columns met with little resistance, save in Sonpur where the insurgents had abandoned their villages and taken to the hills. All the columns concentrated in this country and secured the surrender of the leaders on March 19th, 1832. To Captain Wilkinson belongs the credit for bringing the operations to such a successful issue. He cultivated the acquaintance and the friendship of the Mundās of Tamār, persuaded them and their Mānkis to dissociate themselves from the Larka Kols and to keep them out of the dominions of the Rājā, and also made friends with the *Sardārs* of the Larkas in Porāhāt. Many are the stories which the Mundās relate about "Alkinsun Sahib", the name by which they remember Captain Wilkinson, the first Agent to the Governor General in the South-West Frontier Agency.

Though the occasion of the insurrection was the treatment of the Sonpur and Porahat Mundās by the Sikh and Muhammadan *thikādārs*, the causes were more deep-seated, as the following extracts from the report of the Joint Commissioners, Mr. Dent and Captain Wilkinson, will show :—

“The Kols throughout Nāgpur had within the last few years had their rents increased by their *slūkādārs*, zamindars and *thikādars* by 35 per cent. They had made roads through the pargana without payment, as *begarries* (forced labour). The Mahājans, who advanced money and grain, managed within a twelve month to get from them 70 per cent., and sometimes more. They disliked the tax upon liquor, which was fixed at four annas a house, but more than that amount was levied very generally, besides a rupee *salāmi* on almost every village and a *khāsi* or goat. The thana establishments were also complained of, and a *dāk* establishment was kept up, the expense of which fell upon the Kols of those villages which were situated on the lines of road traversed by the *dāk*. The raiyats of the Rāj's *bhandar* (*khās*) villages complain that the present Diwān had within the last five years taken from them double the quantity of *sak* grain (produce-rent) which he did formerly. The peons collecting rents in the *bhandar* villages formerly received one *paṭa* of rice or one anna per diem. They now take four since the present Diwān came into power. The *dhāngārs*, who go as labourers into Bengal and other parts of India, are on their return forced to pay one rupee to the owner or farmer of the village. Many people from below the ghāt have settled in Nāgpur and it was one of the subjects of complaint among the Kols that within the last five years several of these settlers, to whom they had become deeply indebted, had pressed so hard for payment that many of the Kols had executed *sewak pāṭas*, that is, had sold their services till the debt was discharged, which was in fact binding themselves to give their whole earnings to their creditor, receiving from him food and clothing, or to work for him exclusively, thus becoming his bondsman for life. The complaints against the thana *amīā* were loud in our progress through the country, but the number of instances of exaction are by no means as numerous as we anticipated.” The Commissioners did not consider that there was any truth in the allegation that the Rājā had stirred up insurrection, though there were many reasons why he

should wish to be rid of British interference. He had been deprived of his influence and authority over the *jāgīrdārs*, who now merely paid him rent, but formerly, before the country became subject to the Regulations, had been liable to forfeit their estates if they failed in rendering him services. He had also been a pecuniary loser, as he had been prohibited, in 1783, from collecting *madad* in addition to the rent, and also the *panchpownea*, or tax on certain castes and trades, and contributions on occasions of mourning and rejoicing in the royal family.

Administra-
tive reforms.

The suppression of the revolt was followed by a number of administrative reforms. In Sonpur, the Mānkis and Mundās were all reinstated in their villages on reduced rentals, and the *thikādārs* were referred to the Kuar for the adjustment of their claims. The proposal to introduce opium cultivation was dropped, and collections on account of excise and the *dāk* cess were temporarily suspended. But the chief lesson learnt by the insurrection was the necessity for a closer administration and more effective control by British officers on the spot. Accordingly, the whole system was changed, and the South-West Frontier Agency was established in 1834, with headquarters at Kishanpur (Rānchi). The Agency included all Chotā Nāgpur proper as well as Palāmau, Kharakdiha, Rāngarh, Kundu, the Jungle mahals (except Bishenpur, Sainpahari, and Sherghar), pargana Dhālbhūm and the dependent Tributary Mahals. Within the territory so constituted, the operation of the Regulations and of the rules for the administration of civil and criminal justice and the collection of revenue was suspended. By the rules framed under the Regulation, the Agent was given very wide powers. He was vested with the same powers as were exercised by Commissioners of Revenue and by Civil and Sessions Judges, but was enjoined to conform to all orders from the Sadar Dewani and Nizamāt Adalat, the Sadar Board of Revenue, and the Board of Customs, Salt and Opium. Subordinate to the Agent were the officers styled "Principal Assistants to the Agent to the Governor General", who were in charge of the divisions known as the Mānbhūm, Lohardagā, and Hazāribāgh Divisions. Captain Thomas Wilkinson was appointed the first Agent, and one of his Principal Assistants, Lieutenant Ouseley, was placed in charge of the Lohardagā Division, which corresponded

roughly to the present districts of Palāmāu and Rānchi, with headquarters at Lohardagā.

The most important result of the establishment of the Agency was that, for the first time since the cession of the Dīwānī, a regular system of Police and Courts for the administration of justice by British officers was instituted. For the administration of Criminal Justice, the Assistants had powers similar to those exercised at the present time by the Deputy Commissioners. In addition to ordinary magisterial powers, they were able to pass sentence of imprisonment for a period of seven years. Their proceedings were subject to revision by the Agent, who had power to confirm, annul, or modify them at his discretion. For the administration of Civil Justice, there were two Munsifs, one at Lohardagā, and one at Rānchi, while the Principal Sadar Aminat Gola also appears to have exercised jurisdiction. The Principal Assistants tried some original civil suits and heard appeals from the decisions of the Munsifs. For the guidance of the Courts, a simple Code of rules was drawn up by Captain Wilkinson, which, though not sanctioned by Government, appears to have been followed till the introduction of the Code of Civil Procedure (Act VIII of 1859). Two salutary rules, drafted by Captain Wilkinson, may be mentioned. One, with the object of discouraging vexatious litigation, prohibited vakils from practising in any courts and allowed suits to be conducted only through the agency of Muktears, or authorized agents; the other, declaring that no sale, mortgage or transfer of landed property was valid without the consent of the Agent, was intended to prevent disputes over transferred property and to discourage the old landlords from running into debt. An interesting side light is thrown on the distrust with which the Courts were regarded by the aborigines by the existence of a rule which prohibited the Munsifs from granting *ex-parte* decrees against Mundās, Mānkis, Kols, and "other such ignorant people". The Principal Assistant, Dr. Davidson, first issued and enforced this rule in 1838, and its wisdom is shown by the fact that when this rule was superseded by the Code of Civil Procedure, numerous fraudulent *ex-parte* decrees were passed against the Mundās and were one of the causes of the subsequent agrarian discontent.

The system of zamindāri Police was introduced. A thana was maintained at Government expense at Lohardagā, and zamin-

administration

dāri thanas were set up at Pālkot, where the Rājā resided, and on the estates of the zamindārs of Barwe, Bundu, Tamār, Silli, and Bantahajām. The cost of the latter was at first defrayed by the Rājā, but in 1838 the zamindārs agreed to pay an additional four per cent. to meet this charge, and by a subsequent arrangement the Rājā and his subordinate zamindārs were authorized to collect a police cess of Rs. 2 or 3 from each village from their under-tenure holders and raiyats. The Rājā exercised the powers of a *darogā* within the jurisdiction of Pālkot thana, and the zamindārs similar powers within their own estates.

Though this system was intended to vest an authority in the Chiefs to whom the people had been accustomed to look for its exercise, it did not prove a success. Mr. Ricketts, Member of the Board of Revenue, reporting in 1855, wrote as follows :—

Failure of the system of zamindari Police.

“ The Principal Assistant represents that the zamindari police is inefficient, that the zamindārs are generally ignorant and either unwilling or unable to perform their duties, and that the establishments employed under them are so underpaid that it is impossible to expect any good service from them. The Muharrirs receive Rs. 6 a month and many of the barkandazes Re. 1-8, which is a quarter less than is paid to a coolie for the commonest manual labour. No information is procurable as to the terms on which the police were originally left in the hands of the zamindārs. Whether they are bound to keep them in a state of efficiency, whether the expenses were limited cannot be ascertained. The Principal Assistant is of opinion that for the sum paid by the zamindārs a more efficient establishment could be kept up, were the police directly under the Assistant. There is no doubt that an honest, able and active zamindār with the power of a *darogā*, might afford most efficient assistance to good government, while the powers of a zamindār of opposite character to do mischief is measureably increased by leaving the police in his hands ”.

The system continued till the introduction of the new constabulary in 1863 when, according to the terms of Act V of 1861, the police powers of the zamindārs were abolished.

Defects of the administration.

Nor did the new system of government succeed in improving the condition of the aboriginals in other ways. The *jāgīrdārs* still continued to oppress the cultivators and extort from them illegal contributions and *abwābs*. Dr. Davidson, writing in 1839, says :—

"In point of fact there was no regular Police or Administration of Justice till the present Agency was established in 1834. That the Kols are frequently imposed on by their landlords is not for want of comprehension, but that they have been so long completely left to their mercies, and so entirely deprived of any protection from them, that it is difficult for them to make up their minds to resist". Mr. Ricketts, in the report already quoted, refers to this opinion and adds:—"Though there was no complaint preferred to me, there seems reason to apprehend that the people of the district suffer much from the foreign middlemen introduced by the Rājā. Major Hannyngton tells me that, 'In Chotā Nāgpur the *bhūinhāri* lands which exist in every village have been exposed to the rapacity of the middlemen, aliens who are hated by the people, and who, to obtain these lands, spare no species of force or fraud. Against these our Courts do not afford any facile remedy and the day may be not far distant when the people goaded beyond endurance may take the law into their own hands".

To improve the administration of justice, the Agent was relieved of his duties as Civil and Sessions Judge, and in 1843 an officer was appointed, under the title of Deputy Commissioner, to carry out these functions. The Deputy Commissioner corresponded to the present Judicial Commissioner and received that title in 1861. In 1854 a further change in the administration was made. By Act XX of that year the Agency was abolished, and the duties and powers conferred by Regulation XX of 1833 were vested in an officer appointed by the Local Government, and Chotā Nāgpur was administered as a non-regulation Province under a Commissioner. The officer in charge of the Lohardagā district was first styled Deputy Commissioner in 1861. The headquarters of the Principal Assistant to the Agent had previously, in 1842, been transferred from Lohardagā to Rānchi.

The year 1845 is a memorable one in the history of the district, for it witnessed the arrival of the first Christian Missionaries. In November 1845 four German pastors, sent out by Pastor John Gossner of Berlin, pitched their tents in Rānchi. For a few years their work met with little success, and it was not till 1850 that any converts were obtained. After that year the number of converts rose rapidly, and by 1857 there were 900 baptised members of the Lutheran Church and 2,000 enquirers. The education and

Arrival of
Christian
Missionaries.

teaching given by the missionaries had a great effect on the oppressed aborigines. Captain Davies, the Senior Assistant Commissioner, writing in 1859, says :— “ With Christianity has naturally come an appreciation of their rights as original clearers of the soil, which rights in many instances they have asserted and established ; this, independent of other causes which induce the higher castes of natives to view with displeasure the spread of Christianity, caused great alarm among the landholders”.

The Mutiny of 1857 caused a temporary set-back to the spread of Christianity and the departure of the British authorities gave the landlords an opportunity of oppressing their Christian raiyats.

THE MUTINY

At the time of the Mutiny, Rānchi was the headquarters of the Rāmgarh battalion, which consisted of a full infantry battalion, with cavalry and artillery attached. About one-third of the battalion were men of Chotā Nāgpur but of the higher castes, and the remainder were recruited from Bihar and other parts of India. A number of aboriginal Kols had at one time been recruited, but, though good and courageous soldiers in some respects, were found to be led by their intemperate habits into many derelictions of duty, and the commandant of the battalion anxious to have it as much like a line regiment as possible had discontinued recruiting them. At Hazāribāgh there were companies of the 7th and 8th Native infantry, which had been possessed with a spirit of unrest ever since the first news of the revolt had reached them from the North. News of their disloyalty reached Rānchi, and it was decided to send two companies of the Rāmgarh infantry, thirty horsemen and two guns, under Lieutenant Graham, to disarm them. The force left Rānchi on August 1st but had not proceeded far on its march, when news was received that the Hazāribāgh troops had actually mutinied and were marching towards Rānchi. On receipt of this news, the Rāmgarh infantry, who were with Lieutenant Graham, mutinied, seized the guns, ammunition and four elephants, belonging to Colonel Dalton, the Commissioner, and made preparations to march back to Rānchi. The cavalry alone remained loyal and went on with Lieutenant Graham to Hazāribāgh. News of the mutiny of this detachment reached Rānchi early on August 2nd. At first Colonel Dalton and the

military officers continued their preparations for meeting the men of the 8th Native Infantry, who were said to be at Burmu, 20 miles north of Rānchi, in spite of the fact that the loyalty of the troops at Dorānda was by no means certain. On the afternoon of the 2nd, some of the mutinous sepoy of Lieutenant Graham's detachment arrived at Dorānda, and the Commissioner and the Commandant of the Corps, seeing that it was now hopeless to rely on the loyalty of the troops, decided to vacate Rānchi and march to Hazāribāgh by the direct route *via* Pithauriā. The decision was not made a moment too soon; about an hour after departure, the mutineers of the Rāngarh infantry arrived, burnt the court of the Deputy Commissioner and some of the officers' bungalows, released the prisoners from the jail, fired their guns at the German Mission Church, and looted the treasury. Colonel Dalton, with the troops who still remained loyal, arrived at Hazāribāgh without meeting any opposition; for this they were indebted to the Parganāit, Jaggat Pal Singh, of Pithauriā, who had set up earthworks across the road by which the Hazāribāgh troops were marching on Rānchi. The troops, thinking the entrenchments were held by men of the Rāngarh battalion and that Rānchi would be found to be well-defended, turned off in the direction of Lohardagā, and ultimately joined the rebels in the Tributary Mahals, taking no further part in the mutiny in Chotā Nāgpur.

Colonel Dalton, with the few troops under his command and with the men supplied by the Rājā of Rāngarh, succeeded in restoring order in Hazāribāgh, recovered a large quantity of plundered property and a number of prisoners, re-opened the courts and caused business to be resumed in the bazar. Reinforcements, however, did not arrive and, thinking that the small force, even if it remained loyal, was insufficient to withstand an attack, Colonel Dalton reluctantly decided to fall back on the Grand Trunk Road at Barhi and Bagodar, though well aware that the abandonment of Hazāribāgh would encourage the mutineers. Barhi was reached on August 13th, and here the Commissioner was forced to remain inactive till reinforcements were available. At last, on September 1st, 150 men of Rattray's Sikhs arrived, and with their help he again occupied Hazāribāgh.

During this time the mutinous troops had remained at Dorānda, uncertain what movement to make. Disappointed at

the failure of the Hazāribāgh troops to cross the Pithauriā Ghāt and join them, they set about trying to win the zamindārs on to their side; but in this they met with little success. The Mahārājā and most of the leading zamindārs remained loyal. Thākur Bisnāth Sāhī, of Barkagarh, who had long been regarded as disaffected, openly joined the mutineers and was reported to sit daily in one of the Cantonment bungalows administering justice. He also assisted the mutineers by cutting several breaches in the road over Rāmgarh Ghāt, with the obvious intention of making it difficult for troops advancing against Dorānda. Another dis'oyal zamindār was Ganpat Rai, of Bhaunro, an ex-Diwān of the Mahārājā, who, it is said, was formally installed by the mutineers as their Commander in-Chief. The prime mover of the Rānchi mutiny was, however, Jamadār Madho Singh, of the Rāmgarh battalion. It was not till the first week of September that the mutineers decided to leave Dorandā, taking with them four six-pounder guns, a large quantity of ammunition, the treasure and heaps of plunder, and to proceed, if possible, *viā* the Tika Ghāt, through Palāmau so as to effect a junction at Rohtāogarh with Kuñwar Singh, to whom the guns and treasure would have proved acceptable. Before leaving Rānchi, they plundered the townspeople, attempted to burn the jail and the kachāhri, and flung the records into a well; they also beheaded an old native doctor, named Budu, who was attached to the jail. The progress of the mutineers was slow, as the transport of the guns, treasure, and plunder was no easy matter at that season of the year. The zamindārs did much to hinder their march, and, in particular, Hari Singh, Barāik of Charya, entrenched the ghāts against them and only abandoned his position when the guns were brought against it.

A few days after the departure of the mutineers, on September 22nd, Colonel Dalton, with 150 Sikhs and 150 men of the 53rd Regiment under Major English, reached Rānchi. He was anxious to start off in pursuit of the mutineers, who had by this time reached Balumath (in Palāmau district) and were reported to be uncertain whether to advance through Palāmau or towards Chatrā, but was unable to carry this plan into effect, as the 53rd Regiment were orderēd to go back to the Grand Trunk Road. When Major English with the troops under his command reached Hazāribāgh, he received orders to march against the

rebels at Chatrā. On the 2nd of October he came up with the rebels, who now numbered over 3,000, and completely defeated them, capturing the guns and ammunition and recovering a large amount of the treasure and plunder. Colonel Dalton thus describes the effects of this victory :—

“Nothing could have been more favourable to the thorough re-establishment of the authority of Government and the speedy restoration of order than the circumstance under which the mutineers were signally defeated. Chatrā is one of the largest and wealthiest towns in the division, where there is always a collection of people from all parts of the country. Moreover, the mutineers had pressed into their service hundreds of the working classes of Chotā Nāgpur. All these were present during the engagement and many witnessed the complete extinction of the force, that had for a month occupied the headquarters of the Province in a manner that will be long recollected as a reign of terror, and whose progress through the villages had been marked by devastation and ruin. They then hastened back to their homes, and long before I received even the first brief news by express from Major Simpson, the news had spread and was known to every one in the neighbourhood”.

Although the courts had been re-opened after Colonel Dalton's return to Rānchi on the 23rd of September, desultory warfare continued for some time, as the local rebels were still at large. Thākur Bisnāth Sāhi and Pānde Ganpat Rai had been taken with the mutineers on their march from Dorandā to Chatrā, in order to ensure the safe passage of the ghāts, but both they and Jamar-dār Madho Singh, the insurgent leader, escaped after the battle. Madho Singh was not heard of again, but in December the Thākur and Pānde were reported to be on the border of Palāmanu, intriguing with the Bhogtā insurgents, who had been giving considerable trouble in that part of the country. In March 1858 depredations were committed by local insurgents on some villages in pargana Nawāgarh, and the Barwe police-station was looted. To operate against these local insurgents, Colonel Dalton assembled an escort of the Rāmgarh Irregular Cavalry and 200 men of the new Kol Levy, which was raised and trained soon after the return to Rānchi. Thākur Bisnāth Sāhi and Ganpat Rai were captured and hanged, in April 1858, their estates being confiscated to Government.

Spread of
Christianity
and conflicts
between rai-
yats and
landlords.

During the fifty years which have elapsed since the Mutiny, the history of the Ranchi district is one of agrarian discontent, culminating in the *Sardāri Larāi* and the Birsā rising. It is also the history of the spread of Christianity. During the Mutiny the Christian community was broken up but their dispersion over the district seems to have given a considerable impulse to Christianity, as the number of converts largely increased after the restoration of order. An impression rapidly gained ground that to become Christian was the best way of shaking off the oppression of the landlord. "The result of this", says Colonel Dalton, "has been a great accession of strength to the ranks of nominal Christians. A reasonable desire to be reinstated in *bhūinhāri* lands actuated some, a dishonest idea to become one of this favoured family of *bhūinhārs* seized others. The next step was to profess Christianity, and coming to the Mission at Ranchi they returned' with their hair, puritanically, cropped and ready to assert their rights and defy their landlords. Conflicts between the Christian aboriginals and their landlords were of frequent occurrence; the Christians sought to take forcible possession of the lands, of which they considered themselves to have been dispossessed by the landlords, while the latter retaliated by bringing false charges of *dakāiti* and robbery against the tenants and subjecting them to illegal confinement and duress. Towards the end of 1858 the conflict assumed a serious aspect, and troops had to be sent from Ranchi to Gobindpur to preserve order in Basia and Sonpur. The authorities, however, realized that the only effectual method of preventing a repetition of such outbreaks was to remove the grievances that had caused them. Accordingly, in 1858, Lālā Lokhnāth Sāhi, a Nāgbansi zamindār, was deputed to prepare a register of all *bhūinhāri* lands. He continued to work till his death in 1862, and made enquiries in 572, and completed the register of *bhūinhāri* lands in 429, villages. The knowledge that an attempt was being made to restore them to their lands temporarily pacified the Mandās, and parganas Lodhma and Sonpur, where the greater part of the work was carried out, and which had previously been the most troubled, were reported to have become, since the completion of the register, the least disturbed of all the parganas in which such tenures existed. The decisions of the Lāla were on the whole more favourable to the landlords than to the *bhūinhārs*,

bhūinhāri
lands.

but were to some extent a settlement of the question and placed a limit on further encroachments. When the survey was discontinued, disputes again broke out, and in 1867 a petition was presented to the Local Government, purporting to be signed by 14,000 Christians. Though this petition was grossly exaggerated and contained many unfounded complaints against the Mahārājā and even against the Commissioner, Colonel Dalton, it served the purpose of impressing Government with the necessity of completing the survey begun by Lāla Lokhnāth Sāhi. Accordingly, the Chotā Nāgpur Tenures Act (Act II B. C. of 1869) was passed. Under this Act, special Commissioners were appointed who had power to survey and demarcate the privileged lands of the tenants (*bhūinhāri*) and of the landlords (*mānjhihas*). The operations, which were begun on April 1st, 1869, and were not completed till 31st March 1880, extended to 2,482 villages.

The operations undertaken under the Act, though successful to some extent in the areas in which they were carried out, were a mere palliation of the grievances which prevailed throughout the country. Government in their Resolution on the final report of the Commissioners admitted that "the success of the Act has fallen short of the expectations generally entertained on its introduction. The operations have not removed every cause of disagreement, and disputes are still of frequent occurrence. This partial failure appears to be due to two causes; first, to the fact that *rājhas* tenures were not included in the scope of the Act, and, secondly, to the extravagant claims and expectations of a section of the *bhūinhāris*, which rendered it impossible to satisfy them by any settlement which aimed at preserving the just rights of both parties". A third cause was that some landlords persuaded the *bhūinhāris* to conceal their status by representing that Government intended to impose a special tax upon them. The Special Commissioner, Babu Rākhāl Dās Haldār, had shown in his final report how the exclusion of *rājhas* had opened a door for further disputes involving expensive litigation both in the criminal, revenue, and civil courts. The landlords, seeing that the exorbitant claims of *bhūinhāris* had been disallowed, sought either to dispossess them of all lands other than the demarcated *bhūinhāri* land, or to increase the rent payable for such lands. Further, small advantage was taken of the provisions of the Act permitting the commutation of prædial

Result of the
Bhūinhāri
Survey.

conditions and services for cash payment. Only 1,161 applications were received. "The Mundās and headmen showed great indifference on the subject and the landlords resorted to all means in their power to render this portion of the Act nugatory; while the landlords, however, valued the services more highly than money payments, the raiyats also seemed to prefer giving the accustomed amount of labour to paying additional rent, especially when no remunerative employment was available". The Government of Bengal, however, did not consider it necessary to undertake a thorough survey and settlement of the whole district, though this was recommended by the Commissioner. They considered that the settlement of the Chotā Nāgpur estate which was being undertaken would be a further step in the solution of the disputes over a large portion of the district, and that in the remaining villages, which were held by *jāgīrdārs*, maintenanceholders, and farmers, the provisions of the Chotā Nāgpur Landlord and Tenants Procedure Act of 1879, which had recently been passed, were sufficient for the protection of the raiyats against illegal enhancement, while securing to the zamindārs their fair rental. The new Act provided that the rent of *bhūinhāri*, *khunkātti* or *korkar* lands was not liable to enhancement, except under certain conditions and circumstances, and that the rent of other occupancy raiyats should not be enhanced, except on application to the Deputy Commissioner. The Act also repeated the provisions of the previous Act for the voluntary commutation of services. Like the Act of 1869, it disappointed the hopes of its framers. The landlords contrived to evade its provisions; rents were enhanced, and prædial services increased, frequently by the device of bringing a suit for arrears of rent at rates greatly in excess of what was actually paid, often by forcing or cheating the raiyats into agreeing to higher rates. The landlords, however, were not invariably successful; in many cases the raiyats succeeded in improving their position at the expense of the less wealthy and less powerful landlords. In villages where the majority of the inhabitants were Christians, *begāri* (or prædial service) was not rendered, and in some cases the landlords were forcibly deprived of their *khās* lands.

Agitation of
the Sardārs.

The main grievances underlying the Sardāri agitation and the agrarian discontent during the last fifteen years of the 19th century were the system of *beth begāri*, or compulsory labour,

the exaction of prædial conditions (*rākumāts*), the illegal enhancement of rents of *rājhas* lands, and the question of the status of the Mundā proprietors of *khuntkātti* villages, which had not been included in the *bhūinhāri* survey. With these very real grievances in the minds of the aboriginals, the Sardārs, who have been rightly described as an unscrupulous and dishonest band of cheats, found little difficulty in stirring up an agitation, and collecting money, ostensibly for the purpose of bringing their complaints to the notice of the authorities. They began to bombard Government with petitions in which the most extravagant claims were put forward. Their principal prayer, that of being allowed to form themselves into village communities directly under Government, was found to be unreasonable and extravagant, and the petitions were all necessarily rejected, "as their entertainment would subvert the progress which has been made during a lengthened period in the Chotā Nāgpur division". The missionaries sought in vain to convince the Sardārs of the futility of these petitions, with the result that they left the Church and set up a violent opposition to the mission work. During all the time that the earlier memorials were under discussion, the aboriginals did not do anything that was punishable under the law. In 1881 an incident occurred, which foreshadowed the Birsā rising fifteen years later. A party calling themselves the children of "Mæl" and headed by "John the Baptist" set up a "Rāj" at Doisā, a former seat of the Rājās of Chotā Nāgpur. The ringleaders, who were promptly punished, were not proved to have any connection with the Sardārs. By the beginning of 1887 the movement had assumed considerable dimensions. Many of the Mundās and Orāons refused to pay rent to their landlords, on the ground that they had got a decree declaring them to be the owners of the soil and only bound to pay rent direct to the "Sarkār". Meetings were held in various places with the object of collecting subscriptions and inciting the people to take possession of the *mānjhihas* lands and to dispute the authority of the local officers, but the actual outbreaks were few in number and were easily suppressed by the civil authorities. At Tilma the Christians opposed the cultivation of the *mānjhihas* lands, and in Tamār they seized and cultivated the *mānjhihas* land of the Rāni, but the prompt arrest and imprisonment of the principals had the

effect of stopping further trouble, and when the harvest of 1887 was reaped, no breaches of the peace occurred.

Disturbances
of 1889 over
both begāri.

The Sardāri agitation of 1887 was followed by disturbances in the west of the district in 1889. These were due to the spread of Christianity among the Orāons of these parts, who had hitherto been beyond the field of the work of the Lutheran and Anglican Missions. The Roman Catholic Mission had established stations at Burudi in the Khunti thana in 1874 and at Dorandā in 1883, but no great progress was made till the Rev. Father Lievens began to preach among the Mundās, Orāons, and Khariās in the south-western and western parts of the district. Within three or four years over forty thousand nominally joined the Church and the movement was, as before, viewed with fear and suspicion by the landlords. In the year 1889 a number of landlords sent up a petition to the Commissioner, alleging that the Roman Catholic Missionaries were unsettling the minds of their raiyats and converting them by thousands to Christianity. They complained that the Jesuits held out hopes to the aboriginals which were incapable of fulfilment and thereby induced them to join the Church; though this complaint was exaggerated, there is no doubt that the sympathy with which the missionaries listened to the complaints of the aboriginals about the burden of their prædial services, encouraged them to believe that the only way of escaping from oppression was to become a convert. The claim of the landlords to exact unlimited services from the raiyats was preposterous, and the missionaries very properly advised the raiyats only to render those services which had received the sanction of custom. The immediate result of such advice was that a spirit of resistance filled both Christians and non-Christians. The landlords refused to abate their demands, and the raiyats refused to pay their ordinary rent or render their customary services. The disturbances were not very serious; and the officials, though apprehensive of disturbances on a large scale, had little difficulty in maintaining the peace of the district as a whole. The Christians in some villages tried to coerce their unconverted brethren into accepting the new religion, and forcibly cut off their top knots; in other villages they forcibly cut and carried off the crops from the *mānjhihas* lands. In 1890 the Lieutenant-Governor, Sir Stewart Bayley, visited Ranchi and held a Conference, at which several missionaries, representative landlords, and officials were present

and it was generally agreed that a wholesale commutation of services and prædial dues was the only true solution of the problem of agrarian discontent, but this measure was not undertaken. A proclamation issued by Mr. Grimley, the Commissioner, with the authority of Government, prescribed a scale of service renderable for each holding, according to the custom of the district. The total amount of labour amounted to fourteen days in the year. These orders were in no way binding on the landlords or the tenants, and, though partially successful, their effect was transient as a solution of the problem. During the next four or five years, while Government was engaged in considering the question of the amendment of the Tenancy Act, the country was comparatively free from disturbances, but the Sardārs still continued to collect subscriptions, in some cases extorting them by threats or violence, and between the years 1893 and 1895 several Sardārs were prosecuted on charges of extortion and assault. Their operations extended throughout the whole of the Mundā country and the northern portion of the Porāhāt estate of Singhbhūm. The total collections are estimated to have amounted to over a lakh of rupees, the greater portion of which was paid over to certain lawyers of Calcutta for drafting a memorial to Parliament, and the rest was misappropriated by the Sardārs themselves.

In 1895 the ferment in the Mundā country again broke out, when a leader was found in the person of Birsā, a Mundā of the village Chalkad in Tamār thana. Birsā was a convert of the German Mission and had received a little education and a smattering of English at the Mission School at Chaibāsa. His influence over the Mundās and Oraons was extraordinary. He quickly won for himself the reputation of a worker of miracles, and both Mundās and Oraons flocked to the village of Chalkad to see the new prophet and to be cured of their ills by his miraculous powers. Birsā soon gave himself out to be the prophet of a new religion, which, he said, he had received from Sing Bongā himself. The new religion was a mixture of Hinduism and Christianity. The Mundās were to give up worshipping, and sacrificing to a number of *bongās* or subordinate deities and to worship only one God, Sing Bongā; they were to lead good lives, abstain from eating animal food, and wear the sacred thread of the twice-born Hindu castes. Later, Birsā

The Birsā
rising of
1895.

began to regard himself, and to be regarded by his followers, as the incarnation of the deity, and announced that on a given day fire and brimstone would descend from heaven and destroy all men on earth except those who had the good sense to repair to his village of Chalkad and stay near him on that occasion. Chalkad and the neighbouring hills and villages became a large camp; stores of rice were collected and temporary huts erected, and crowds of armed Mundās, especially from the Sardāri villages, assembled there. Birsā's teaching now began to assume a political aspect; he advised his followers to defy the authorities, informing them that the *rāj* of the Mahārāni (Queen-Empress) was over and that the Mundā *rāj* had commenced. He prophesied that if Government opposed him, the rifles of its soldiers would be turned to wood and their bullets to water, and he issued an injunction to the raiyats that they were to pay no rents in future but hold their lands rent-free. These proceedings naturally alarmed the authorities, and the Superintendent of Police was sent out to arrest him. Mr. Meares, the Superintendent, reached Chalkad on the night of August 24th and succeeded in penetrating to the place where Birsā was sleeping without the knowledge of the multitudes who surrounded him. The police overpowered the guard, and Birsā was well on the way to Rānchi under arrest before the crowds of his followers even knew that he had been arrested. He and fifteen of his followers were tried and convicted under section 505 of the Indian Penal Code and sentenced to two years' imprisonment. Illustrative of the faith which the Mundās had in Birsā was the rumour which went round the country that the jail walls fell down when he entered the jail gates. The only foundation for the rumour was that the mud-wall of a small grain-store collapsed.

Release of
Birsā and
second rising.

During Birsā's confinement the excitement in the Mundā country subsided. He was released before the expiry of his sentence, on the occasion of the Diamond Jubilee of Queen Victoria, and soon gathered a band of his followers round him. His first move was to visit and desecrate the old Hindu Temple at Chutiā, probably with the object of asserting his claim to the Chotā Nāgpur Rāj, of which Chutiā was an ancient seat. Some of his followers were arrested on the spot, but Birsā himself escaped and vanished for a period of two years. Towards the end of 1899 he reappeared, and he and his chief followers began to tour round the coun-

try and stir up the people to attack the landlords and the authorities. The day fixed for the outbreak was Christmas Day, 1899. A large number of preconcerted murderous attacks and acts of incendiarism occurred in various places in thanas Khunti, Tāmar, Basīā, and Rānchi. A German merchant, Mr. Caesar, was shot dead in a village in the depth of the jungles of pargana Sonpur, and attacks were made on the Anglican Missionary at Murhu and the Roman Catholic Missionaries at Sarwadā. At Burju a police constable and four chankidars were put to death, and at Khunti the police-station was attacked, one of the constables killed, and some of the houses burnt down. The Commissioner, Mr. Forbes, and the Deputy Commissioner, Mr. Streatfeild, hastened to Khunti with 150 men of the Native infantry stationed at Dorandā, and on the 9th of January came upon the main body of the Mundās at Dumari Hill. The insurgents refused to surrender, and the troops were compelled to use their rifles and storm the hill. A number of the insurgents were killed or wounded, and the rest dispersed. Birsā himself was arrested in Singhbhūm on the 3rd February, and he and his chief followers were placed on their trial. Birsā died of cholera in Rānchi Jail during the course of the trial in June 1900; of his followers two were hanged for murders committed during the rising, while others were sentenced to various terms of transportation or imprisonment.

The Birsā insurrection, following the Sardāri agitation which has lasted for so many years, impressed upon Government the necessity for removing once and for all the grievances which had been the cause of all the agrarian discontent in the district. Before the Birsā outbreak, a fresh attempt had been made to remove the grievances about *rakumāts* and *begāri* by passing the Commutation Act of 1897. The Act reproduced the provisions of Act I of 1879, under which the Courts had power to commute prādia conditions and services into cash payments, on the application of one of the parties, and power was also taken in it by the Local Government to order a compulsory commutation when it was considered expedient to do so. But this Act, like its predecessors, disappointed the expectations of its framers. No commutation was ever ordered by Government, and, though a number of applications for commutation were received from both landlords and raiyats, they amounted to a very small percentage of the whole. The raiyats, especially those who became nominal

Lessons of
the Birsā
rising.

Christians, preferred to cease to render services rather than enter upon expensive litigation, which usually resulted in a substantial increase of their rent, while the landlords were unable to prove to the satisfaction of the Courts that their demands were authorized by custom and hence were reluctant to apply.

Settlement
operations,
1902-1910.

It was at last recognized that the preparation of a complete record-of-rights for the whole district, and particularly for the Mundā country, was absolutely necessary, and also that the compulsory abolition of the *beth begāri* system must be taken in hand. Accordingly, it was decided, in 1901, to effect a survey and settlement of the Mundā country. The work was taken up in 1902, and, after the Mundā country had been dealt with, the operations were extended to the rest of the district. All prædial services were commuted throughout the district, and with them the prædial conditions (*abwābs* and *rukāmuts*) which were a secondary cause of dispute; and thus both questions were finally set at rest. The law relating to landlords and tenants was amended and improved in the light of the experience gained in the course of the Settlement operations by Act V of 1903, which dealt principally with the *Mundāri khuntkālli* tenancies and, finally by the present Chotā Nāgpur Tenancy Act (Act VI of 1905) which re-arranged and consolidated the enactments previously in force and embodied certain provisions of the Bengal Tenancy Act and some additional provisions which confirm local customary rights and usages. Of the immense benefit conferred on the district by the Settlement operations there can be no doubt. Apart from the advantages resulting from the abolition of *beth begāri* and *rukāmuts*, the raiyats have now a final and conclusive record of their lands, their rent, and their miscellaneous rights in jungle and waste lands, and there is a general consensus of opinion that the settlement records have definitely put a stop to the harassing litigation which has ruined so many landlords and tenants. Criminal cases have decreased in number, for many of the criminal cases of the district were paddy-theft cases and cases of trespass on land in assertion of a supposed or real right. Civil suits, which were usually filed by parties who had failed in the criminal courts, show a similar decrease. In the Munsif's courts at Gumlā and Khunti the number of title suits fell from 137 and 244 in 1907 to 62 and 70 in 1910, respectively, and the average number of suits filed annually during the last four

years is only 72 at Gumlā and 74 at Khunti. Suits for arrears of rent, which formerly involved protracted disputes as to the amount of rent and *rukumāts*, are now easily disposed of at a single hearing, the only question to be decided being whether the rent has been actually paid or not, and, as most of the landlords are now in the habit of granting receipts, this question is easily settled. Litigation is in fact no longer the gamble which it formerly was. Both landlords and tenants are, on the whole, satisfied with the result of the operations, though some landlords no doubt consider that they have been deprived of their prescriptive rights while some missionaries and other friends of the raiyats consider that more might have been done to restore the ancient status of the cultivators. The raiyats, appreciating the security of their tenure, are taking steps to improve their lands, and there is reason to hope that the next half century will see a great improvement in the methods of agriculture.

Apart from the Settlement operations, other important steps were taken to improve the administration of the district. It was realized that the outlying parts of the district were so far distant from the headquarters at Rānchi that the people preferred to submit to any compromise rather than undertake the trouble and expense of making a long journey to the courts. The result was that the zamindārs and police were omnipotent in such out-of-the-way tracts as Barwe and Biru, and deeds of lawlessness were committed which were a disgrace to the administration. Murder cases and other very serious offences were usually brought before the courts, but offences of lesser magnitude went unpunished. Even murders were frequently concealed. The control over the police was so ineffective that they were the real rulers of the country. The Chankidāri force was equally corrupt and was responsible for many of the cases of *dalaiti*, theft, or burglary. In order to bring the administration of justice nearer to the homes of the people, the Gumlā subdivision was opened in November 1902, and the Khunti subdivision three years later, in December 1905. The areas included in these subdivisions which were formerly hotbeds of lawlessness may now be said to be among the most peaceable and law-abiding parts of the Province.

Recently a further step has been taken to improve the administration of the district. The Gumlā subdivision proved too large for efficient administration and the southern portion

of the district has been formed into a subdivision with headquarters at Simdega, a few miles south of Biru.

Removal of
German
Missionaries.

The outbreak of war between England and Germany in 1914 rendered it necessary to take precautionary measures against the missionaries of the Lutheran Mission who were resident of the district. Soon after the outbreak of war, those missionaries who were of military age were recalled to the head quarters of the Mission at Ranchi and not permitted to take any part in the missionary work. The older missionaries, many of whom had spent the greater part of their lives in Chotā Nāgpur, were allowed to remain in their mission stations and were placed on parole. In 1915, in accordance with the decision of the Government of India to intern or repatriate all German subjects, the missionaries were removed from the district, those of military age were sent to the concentration camp at Ahmadnagar, with the older missionaries with the women and children were detained for a few months at Dinapore, and later repatriated to Germany. Though the missionaries have been removed the work of the Mission still continues ; the educational side of the work being supervised by the Bishop of Chotā Nāgpur and by members of the S. P. G. Mission, while the parochial work is carried on by the Indian pastors and catechists.

CHAPTER.

THE PEOPLE.

THE first attempt at an enumeration of the people was made by Captain Depree at the time of the Topographical Survey of Chotā Nāgpur in 1868. The population of 128 houses, selected at random, was found to be 811, yielding an average of 6·34 persons a house. The number of houses, ascertained by the survey to be 139,116, was multiplied by this factor, and the total population of Chotā Nāgpur, with an area of 7,120 square miles, was estimated to be 881,995 persons. In 1872 a careful census was made by a special salaried agency under the supervision of the regular police. Owing to the sparseness of the population no attempt was made to effect a simultaneous census but a gradual enumeration was carried out. The total population of that part of the Lohardagā district which now forms the district of Rānchi was found to be 813,328, or 115 persons to the square mile. The average number of persons per house was found to be 5·1, a fact which accounts for the higher figure obtained at the rough census of 1868. In 1881 the first regular simultaneous census was carried out and the total population was found to be 1,058,169. At the subsequent censuses of 1891, 1901 and 1911 the population was 1,128,885, 1,187,925 and 1,387,516.

The density of the population at the census of 1911 was 195 to the square mile, as against 166 in 1901, 158 in 1891, and 148 in 1881. It diminishes from the north-east to the south, south-west and west, the Rānchi subdivision having 256, the Khunti subdivision 226, and the Gumlā subdivision only 146 persons to the square mile. The population is most dense in thanas Rānchi (367), Silli (324), and Bundu (321), and least dense in thanas Bishunpur (77), Kolebirā (115) and Kurdeg (116). In spite of the drain caused by increasing emigration, the population of

Census.

Density and growth of population.

Ranchi grew steadily between 1881 and 1901, the increase being 6·7 per cent. during the first decade and 5·2 per cent. during the second. The growth during the ten years ending in 1901 was retarded by several years of bad harvests and general depression, actual famine prevailing in some parts in 1897 and 1900, when the flood of emigration was greatly increased. After allowing for the effects of emigration, it was estimated that the true increase of population was about 13 per cent. The decade ending in 1910 was a period of agricultural prosperity broken only by one bad year. In the first five years good crops enabled the people to recover from the effects of the famine of 1900. A bumper harvest followed 1906 in leading to heavy exports, but the people, with the improvidence characteristic of aboriginals, squandered their gains and were left with little to tide over the scarcity of 1907-08. Famine was declared in the west of the district, but elsewhere the people managed to hold out with the assistance of loans. In 1908 the crop was fair, but the mortality was very heavy, for distress lowered the general vitality of the people and diminished their power of resistance to disease. Cholera and small-pox broke out in epidemic form and caused nearly 10,000 deaths between them, and the death-roll from fever was also heavy. The birth-rate was high throughout the period and was in excess of the death-rate in every year except 1908 and the net result was an excess of births over deaths amounting to 196,000. The total addition to the population was 193,591 or 16·8 per cent., a large increase which must be attributed to the increased prosperity of the people, the high birth-rate natural to prolific aboriginal races, and improved enumeration in tracts previously difficult of access.

Emigration.

The opening of the Purulia-Ranchi Railway has greatly facilitated emigration, and emigrants at the census of 1911 outnumbered immigrants by 271,666, while the number of persons born in the district but resident elsewhere was in 1911 30,053 more than in 1901. No less than 99,000 persons born in the district were engaged in clearing land and cultivating tea in Jalpaiguri, while there were 92,000 emigrants from Ranchi to Assam. The readiness of the people of the district to emigrate is explained by three factors, *viz.*, that the aboriginal inhabitants are multiplying rapidly, they pursue an uneconomic system of cultivation, and they have thriftless habits. The Mundā or the Orāon is not industrious and takes little thought for the morrow; what savings

he makes in a good year are spent at the local liquor shop, and when a period of stress occurs he has little to fall back upon and is forced to seek for remunerative employment outside the district. The soil of the district is generally poor and unfertile and, though new areas are being constantly opened up, the increase in cultivation does not keep pace with the increase in population. Often too the aboriginal who has been deprived of his ancestral land by a rapacious landlord wishes to earn money to enable him to bring a law suit, to repurchase his farm, or to acquire new land in the vicinity. Formerly, too, there was considerable migration across the border into the adjacent Feudatory States, the aboriginals being anxious to take up new land in these undeveloped parts and escape from the oppression of their landlords. The Settlement operations, however, have given the raiyats greater security of tenure and stopped this cause of migration.

The only three towns in the district are Rānchi, Lohardagā, and Bundu. The population of Lohardagā is practically stationary, though the opening of the railway may lead to an increase in the next decade. The population of Rānchi has risen from 18,443 in 1881 to 32,994 in 1911 and has increased still further since it became the temporary headquarters of the Government of Bihar and Orissa. The population is almost entirely immigrant, and consists for the most part of the persons who have been attracted by the work of the courts and Government offices or by trade. Bundu, which is a large market and the centre of the lac industry, has a growing population which has risen from 5,469 in 1901 to 6,950 in 1911. The remainder of the population lives in 3,925 villages, of which 3,152 have a population of less than 500, but even this figure does not give a correct idea of the nature of the village. For census purposes the *mausa*, or settlement village, was taken as the unit, and the *mausa* often comprises a very large area and consists of numerous scattered *tolas* which contain only two or three houses apiece. The villages are generally built on a ridge or near the crest of a slope. They consist of a cluster of mud-huts huddled together in the most perfect disorder. Winding alleys and pathways, often leading to an infinite series of *cul-de-sacs*, form the only thoroughfares. In the rains they become extraordinarily filthy, manure pits surround the houses, and every pit and ditch, filled with stagnant water, forms a fine wallowing ground for the pigs which abound in every aboriginal

Towns and
villages.

village. In the centre of the village there is usually a large tree and near it the *akhrā* or dancing ground. Immediately outside the village is the *sarnā*, or grove sacred to the village deity. In many villages the *sarnā* consists of only one or two large *sāl* trees, the sole survivors of the primeval forest. Ancient custom forbids anyone, even the Bhuinhārs of the village, to cut the wood, and even if a branch falls, it can only be taken on payment of the price to the Pāhān or Māhto of the village. In Mundā villages a conspicuous object on the outskirts of the village is the group of monoliths, which form the *sasān* or burial-ground of the Bhuinhārs.

The houses are built of mud with a roof of tiles or thatch. In the central plateau, where the people are more prosperous and jungle products less easily obtainable, tiles have displaced thatch, but in the more jungly parts of the district thatched houses are common, and often a wall of saplings plastered over with mud or cowdung replaces the mud-wall. The average house consists of three buildings, one of which is the sleeping apartment, one a kitchen and the third a cattle shed. In the houses of the Mundās, the *māndi ōra*, or eating-room, includes also the *ṛding* or shrine where the spirits of deceased ancestors are worshipped. The rooms are arranged on three sides of a quadrangle, and on the fourth side there is the *bāri* or garden, used for the cultivation of vegetables and spices. Before building a house, the site has to be carefully selected, and it is the custom of the Orāons and of some other tribes to put a few grains of rice on the intended site; next morning the householder returns, and if he finds that the rice has disappeared, having been eaten by white-ants or birds, he abandons the site as ill-omened; if it is untouched, he begins to build. In the villages inhabited by Hindus, more elaborate houses are found, built of sun-dried bricks and decorated with crude drawings of animals or gods.

The furniture of a cultivator's house is scanty. A few mats woven from palm leaves by the women form the only beds; in the houses of well-to-do raiyats a *khātiā*, or string bedstead, and a *mānchi*, or string stool may be found. Brass utensils, such as *tharis* and *chīpnis* (plates), *dubhās* (cups) and *lōtās* (jugs) are purchased by those who can afford to do so. The poorer classes have to be content with the earthen pots made by the local Kūmhār, such as the *gharā*, a large vessel used for

drawing and storing water and the *chūkā*, used for the same purposes as the *lotā*. Bamboo baskets of various sizes and shapes are used for storing grain, and *pitīs*, or boxes of split bamboo, for storing the precious records of law suits and other cherished possessions.*

Over nearly the whole of the Rānchi district the language of the settled Aryans is a corrupt form of the Bhojpuri dialect of Bihārī, which has undergone modifications partly by the influence of the Magahī dialect, which surrounds it on three sides, and of the Chhattisgarhī spoken to its west, and partly owing to the influx of words into its vocabulary which belong to the languages of the non-Aryan population. The dialect is generally known as Nāgpuriā, or the language of Chotā Nāgpur proper.† It is locally known as Sadān or Sadri and is called by the non-Aryan Mundās "Dikkū Kāji," or the language of the Dikkū or Aryans. On the east of the district, in the sub-plateau area of the Five Parganas, the language is not Nāgpuriā but is a form of Magahī, known as Pānch Parganiā. In the south-east corner of the district a colony of Jains speak the variety of western Bengali known as Sarāki. Finally in the north of the district a colony of 26,000 immigrants from Hazārībāgh still speak Magahī, the language of their mother-country. The following table taken from the Linguistic Survey of India shows the languages of the Rānchi district and the number of persons speaking them at the time that the Survey was made :—

Name of language.				Spoken by
Bengali—				
Sarāki	48,127
Bihārī—				
Standard Magahī	20,141
Pānch Parganiā Magahī	8,000
Nāgpuriā Bhojpuri	297,585
Mundā Languages	406,086
Dravidian Languages	325,860
Other Languages	28,086

* A detailed account of the houses of the Mundās and of the household utensils and agricultural instruments used by them will be found in "The Mundās and their Country" by Mr. Sarat Chandra Roy. Mr. Roy has also published a similar book about the Oraons. A collection of articles in common use among the Mundās and Oraons has been made by Mr. Roy for Government and will be placed in the Patna Museum.

† Nāgpuriā has the advantage of being well illustrated by the Rev. E. H. Whitley whose "Notes on Nāgpuriā Hindu" has recently been republished. The gospels have been translated into Nāgpuriā by the Rev. P. Eidness.

The languages of the aboriginal tribes of the district may be divided into two classes, those which belong to the Mundā family of language and those which belong to the Dravidian family. The late Professor Max Muller was the first to distinguish between these two families and to designate the languages spoken by the Mundās, Santāls, Hos, Bhumijs, etc., as the Mundā family. Various other suggestions have been made for the designation of these languages and they have been called by other authorities Kolarian or Kharwarian. Sir George Grierson in the Linguistic Survey of India has adopted the denomination introduced by Max Muller and places in the Kharwārī group of the Mundā family the following languages spoken in the Rānchi district:— Mundārī, Birhōr, Tūri, and Asurī.

Mundārī.

Mundārī is spoken by rather more than half a million people, of whom 350,000 are in the Rānchi district. It is spoken by 9½ per cent. of the Mundā race and also by the inferior artisan castes living in the Mundā villages, such as the Pāns and Lohrās. The most idiomatic Mundārī is spoken in the Mānkipatti, south-east of the town of Rānchi. The Orāons in the neighbourhood of Rānchi town also speak a form of Mundārī which is known as the *Horo-liā-jhagar*.*

Tūri.

The Tūri language agrees with Mundārī in most essential points, though in a few characteristics it follows Santālī. At the census of 1911 it was spoken by 2,300 persons.

Asurī.

Asurī, the dialect of the Asurs, according to information collected for the Linguistic Survey, was spoken by 8,000 persons, but according to the figures of the recent census only by 3,100. This language, with the kindred dialect of Agāriā which was spoken only by 40 persons in 1911, appears to be rapidly dying out. Closely akin to Asurī is Korwā, the language of the Korwās, who are found principally in the west of the district and in the bordering district of Palāman and the states of Jashpur and Surguja. According to the census of 1891 it was spoken by 5,000 persons in Rānchi district alone, but by 1911 the number had fallen to 1,200. In all the Kharwārī group of the Mundā

* The most important grammar of the Mundārī language is by the Rev. J. Hoffman, S.J., who has also published a Mundārī First Reader. The Bible has been translated into Mundārī by the Rev. Dr. Nottrott, formerly Head of the G. E. L. Mission.

family, the whole character of the language has been preserved with great fidelity, though Aryan principles have of late begun to influence the grammar.

Included also in the Mundā family is the Khariā language, Khariā. which has been largely influenced by Aryan languages and has been described as like a palimpsest, the original writing on which can only be recognized with difficulty. At the time of the Linguistic Survey, Khariā was spoken by about 80,000 persons, of whom 68,000 were inhabitants of this district. At the census of 1911 it was returned as the language of 57,000 persons in the district.

Kürūkh, the language of the Orāons, belongs to the Dravidian Kürūkh. family which includes all the languages of Southern India. At the census of 1901 the language was found to be spoken by 585,000 persons in the districts now included in Bengal, Bihar and Orissa and Assam, of whom 315,000 were inhabitants of the Ranchi district. At the census of 1911 the numbers had risen to 677,000 and 358,000, respectively, the increase being probably due to the greater accuracy of the returns and not to any actual increase in the number of speakers. The Orāons, especially the men, usually know Nāgpurīā though they speak Kürūkh in their own homes.*

The population of the district may be subdivided into pure TRIBES AND
CASTES. Hindus and Muhammadans, semi-aboriginal castes claiming to be Hindus, and aboriginal tribes. The Hindus, who number 550,715, represent the settlers from Northern India, Bihar, and Bengal, who were introduced by the early Rajās of Chotā Nāgpur, or who migrated in large numbers to the country during the early years of the last century. The principal Hindu castes are Brāhman (10,146), Rājputs (23,318), Kāyasth (3,569), Teli (28,662), Kurmi (56,335), Koiri (8,101), Goālā (Ahir) (41,617), Sunri (6,431), Baniya (2,387), Chamār (4,256), Dhobi (5,536), Dosādih (4,269), Hajjam (9,038), Rauniar (Noniār) (9,095). The Brāhmans include a large number of Brāhmans from Orissa. The Kurmis include not only the Hindu cultivating caste but also the aboriginal tribe of Kurmi Mahtos, whose residence is chiefly in the Mānbhūm district, and also in Silli thana on the eastern border of the Ranchi district. Of the Muhammadans 22,832

* Rev. Ferd Hahn has published the following books on the Kürūkh language; Kürūkh Grammar, Calcutta, 1900; Kürūkh-English Dictionary, Part I, Calcutta, 1903; Kürūkh Folk-lore, collected and transliterated, Calcutta, 1905.

are Jolāhās, many of whom are no doubt descendants of persons who settled in the country at the time of the Mughal conquest; 5,111 are Pathāns, mostly itinerant traders and money-lenders, and 15,069 are Sheikhs. Of the semi-aboriginal tribes the most important are the Chik Barāiks, of whom 25,509 were classified as Hindus and 3,428 as Animists; the Ghāsis (14,523 Hindus and 6,185 Animists); Gonds (8,258 Hindus and 259 Animists); Mahlis (16,897 Hindus and 5,114 Animists); Pāns (14,051 Hindus and 649 Animists); and the Lohārs (30,317 Hindus and 16,055 Animists). Separate figures have not been given in the census statistics of 1911 for the Bhogtās, Jhorās, Rautiās and Gorāits who, though probably non-Aryan, claim to be, and are recognized as, Hindus. At the census of 1901, there were 17,294 Bhogtās, of whom only 12 were classified as Animists, 2,208 Jhorās, 20,301 Rautiās, and 6,277 Gorāits, all of whom were classified as Hindus. The principal aboriginal tribes are the Mundās, Orāons, Khariās, Tūris, Asūrs, Korwās, Birhors and Nāgesias; the three first mentioned tribes alone numbering over 800,000.

ABORIGINAL
TRIBES.
The Mundās.

The Mundās are the most numerous of the Kolarian tribes inhabiting the Chotā Nāgpur Division. In the census of 1911 the total number of Mundās in the Rānchi district was 343,721, of whom 66,992 were returned as Christians, 56,720 as Hindus and 220,009 as Animists. Although less numerous than the Dravidian Orāons, the Mundās have a universally admitted precedence over the other aboriginals in virtue of their older occupation of the country, their traditions of rule in it, and their establishment of the Nāgbansi Mahārājās. The great bulk of the Mundās occupy the southern, south-western, and eastern parts of the district. They are most numerous in Khunti and Tamār ṭhanas, where they form nearly 75 per cent. of the total population.

Name.

The Mundās call themselves *Horo-ko* (men) and their race the *Horo* (man), and the word *Mundā* is the title of the temporal headman of the village or, if used as an adjective, means rich or influential. As the *Mundā* was the official who represented the tribe in their dealings with their Hindu neighbours, the title came to be used by them to designate the tribe. The name *Kol* was, and is, often used to designate the Mundās and other allied tribes but, whatever the origin of the word may be, it has

acquired an opprobrious suggestion and is strongly resented by the Mundās themselves.

The Mundās are one of the darkest races in India, the colour of the skin being a black-brown, often of a shade approaching black. The head is long, the nose is thick and broad and sometimes depressed at the root, the lips thick and the cheek bones prominent. In build they are stout and muscular and in stature somewhat below medium height.* Both men and women when young may be described as comely, and their cheerful laughing countenances are far from displeasing. The dress of the Mundās is very simple and scanty; the men ordinarily wear a loin-cloth, with a coloured border at the two ends, called *botoi*, and use a piece of cloth as a wrapper for the upper portion of the body, known as *barkhi* or *pichowri*. The women wear a long piece of cloth, called *pāriā*, round the waist allowing a portion of it to pass diagonally over the upper part of the body. Shoes are seldom worn, and the head is usually uncovered, though well-to-do Mundās wear *pāgris*. In the rains they often carry bamboo-umbrellas (*chātōm*) or wear circular rain-hats, called *chūkūri* and made of leaves of a creeper found in the jungles. Both the young men and young women are very fond of personal decoration. A young man wears round the waist a sort of belt made of cocoon-silk or plaited thread (*kārdhāni*) and his long hair, well-oiled and combed, is tied up at the side in a knot, with a wooden hair-comb (*nāki*) stuck into it. Strings of coral or china beads or of silver four-anna pieces adorn his neck, and in times of festival flowers are used to decorate the hair or as garlands. The Mundā girls greatly appreciate jewellery and deck themselves out with ear-rings, necklets, bracelets and anklets of brass, or of some more precious metal, or of lac and coloured glass. The poorer Mundā women wear a peculiar ornament in the ear, called *tār-sākōm*, which consists of a roll of palm-leaf, dyed red and set off with tinsel and lac. The Mundās tattoo their girls by way of ornamentation; three parallel lines are pricked on the forehead and two lines on each of the temples; a few marks are made on the chin; the back, arms and hands are also tattooed. In former times Mundā boys were subjected

Appearance,
Dress and
Character.

* Of the one hundred Mundā specimens measured by Sir Herbert Risley, the average head measurements are as follows:—Length, 185·9. Breadth, 138·6 and cephalic index, 74·5. The average dimensions of the nose were, height, 44·7; breadth, 40·2; nasal index, 89·9. The average stature was 158·9 centimetres.

to the Spartan treatment of having their arms burnt with a red-hot iron rod, the circular marks being regarded as a decoration, but this custom is now falling into disuse. The chief characteristics of the Mundā race may be said to be their conservatism and their instinctive antipathy to aliens. The best qualities of a Mundā are his keen sense of self-respect, his love of truth and honesty, and his courage; his worst qualities are his inordinate love of drink and his improvidence. Intercourse with foreigners, and in particular the evil surroundings of the law courts, have done much to contaminate him, and the Mundā has often been driven by injustice and oppression to use the methods of his adversaries against them. He is impetuous and sensitive, but repents a rash action committed on the spur of a moment. A Mundā who has killed a man in sudden anger often voluntarily gives himself up to justice and appears before the Magistrate with his blood-stained weapon still in his hand.

Tribal organi-
zation.

The Mundā tribe is divided into a number of exogamous clans, or septs, known as *kilis*. Though exogamous as regards the *kilis*, the Mundās are endogamous as regards other tribes, and marriage with members of other Kolarian tribes, such as the Santāls, Khariās, Asūrs, etc., is not permitted. The only exception to this rule is that the Mundās of Tamār still intermarry with the Bhumijis of Mānbhūm, who are in origin probably of the same race. The *kilis* are totemistic and derive their names from some natural object, such as an animal, bird, fish, reptile, or plant, and the members of the *kili* are forbidden to eat the totem after which it is named. When the Mundās first migrated into Chotā Nāgpur, the number of *kilis* was no doubt comparatively small, but as they multiplied, the existence of a small number of large *kilis* became inconvenient, and new septs were formed. A few *kili* names are shared by the Mundās and Santāls and may be held to date back to the days when the two races were united, but the majority of the names are peculiar to the Mundās. Various legends are given by the Mundās themselves as to the origin of the totems of the different clans, thus the *Horo* or *Kachuā kili* owes its origin to the fact that the ancestor of the clan was assisted to cross a swollen stream by a giant *kāchua* or tortoise; the ancestor of the *Nāg Kili* was a snake-charmer and, when he died while returning from a distant village, the snake coiled itself round his body and carried it back to his

family, who out of gratitude kept the snake in their house and gave it plenty to eat and drink.

According to Mundā tradition, all the members of a *kili* are descended from a common ancestor; descent is counted through the father, and the children belong to the paternal *kili*. The possession of the same *kili* name is, therefore, the first proof of membership in a given clan or family. There is also a religious bond between members of a *kili*, consisting of a communion in the same sacrificial offerings. Members of one *kili* may on no account partake of the offerings made by members of a different *kili*. As during life members of a *kili* are united by a common name and by common sacrifices, so after death they are united in a common burial ground. Every *kili* has its own burial ground, or *sasān*, and the bones of every member of the family, even if he may happen to die away from the village, are, on the occasion of the annual festival, called the *jāng-tōpā*, placed beneath the stone slab, or *sāsāndīri*, of his clan. The well-known saying "*Sāsāndīriko-Horonkoōpatā*" (their burial stones are the title-deeds of the Mundās) owes its origin to this custom, and a Mundā can only prove that he is a member of a particular clan or of a particular village community by proving that the bones of his ancestors were buried under the *sāsāndīri* of the clan.

The social system of the Mundās being of the patriarchal type, the head of the family is at the same time the priest of the family, who, in case of illness or distress, has to offer sacrifices to propitiate the domestic and other *bōngās* (spirits). But the village community being composed of families descended from common ancestors looks on it itself as a family, and hence requires a special representative to exercise over the whole village functions similar to those exercised by the head of the family in the household. This representative is called the *Pālān*, and his functions were originally both religious and civil. His religious functions, which were the more important, consisted in offering the public sacrifices to propitiate the local spirits, and so to preserve the village from the ravages of wild animals, to obtain good harvests and to ensure successful hunts. As the civil head of the village, he had to preside over the *panchāyats* for the settlement of disputes, inflict punishment for breaches of tribal custom and collect and transmit the quit-rent due to the proper authorities. In these civil functions he was assisted by

the next most prominent member of the community, the Mundā. The functions of the Mundā and Pāhān gradually became distinct, the Pāhān devoted himself to the religious duties, while the Mundā undertook the more distasteful civil duties which involved intercourse with aliens and foreign landlords.

In course of time, as the number of members of each *kili* increased and one village proved insufficient for the residence and cultivation of all, some members were forced to move away and form new villages in the neighbourhood of the parent village. At first they shared the *sasān* of the parent village and joined in the public sacrifices at the *sarnā*, or sacred grove, but later instituted their own sacrifices and made their own *sasān*. Though separate in these respects, the daughter and parent villages still continued to act together in social and administrative matters and the group of allied and associated villages was constituted into a *parhā* or *patti*, the latter being the name given to the organization by the Nāg-bansi Rājās. The head of the *parhā* was the *Mānki*, whose functions in respect of the group were similar to those of the Mundā in respect of the village. This organization exists to the present day, but in two different forms, according to the area in which it is found. East of thāna Khunti is the Khuntkātti area and west the Bhūinhāri area. The Bhūinhāri area may be said to show the social organization of the *parhā* in its purest form, while the Khuntkātti area shows the clearest examples of the political organization of the *patti*. In the former each *parhā* consists of eight to twelve villages; all the *bhūinhārs*, or descendants of the original settlers, in these villages being members of the same *kili*. All trace of the Mānki has disappeared, doubtless owing to the length of time since the Hindu landlords destroyed their independence, arrogated to themselves the functions of the Mānki, and discontinued the use of the title. In each *parhā* there is a standing committee, or *pañchāyat*, with permanent officers, whose titles, such as Rājā, Dīwān, Thākūr, Lal Pānde, and Kartā, have been borrowed from their Hindu neighbours. Complaints are lodged to the Rājā or Dīwān by the Mundā or Pāhān of the village in which the offence has been committed, and orders are given to the Pānde to convoke the assembly. All members of the *kili* are entitled to attend. The proceedings are opened with a feast and there are certain officers to whom special duties are assigned, thus the "*Sākām-hēṅṅi*"

gathers the *sāl* leaves which serve as plates, the *Chārichātāni* makes the leaf-cups for drinking, the *pān khāwās* distributes the lime and tobacco and *pān*. The Rājā, as president, explains the complaint or cause of dispute to the assembly and, after evidence and statements have been taken, pronounces their decision. The most common causes of complaint are offences against the marriage laws; if the offender is repentant and promises to leave the woman, he is let off after having drunk the blood of a white he-goat or a white cock. Otherwise, he is fined, the fine being realised by the Diwān and his *sipāhis*; if he refuses to pay, he is beaten and out-casted. Apart from complaints of this kind, the *panchāyat* is often convened to discuss questions of social custom, such as the abolition of *jatras* and dances, in view of the immorality to which they lead, or matters of political importance, such as the *Sārdari Lārai*, a movement which aimed at the expulsion of all Hindu zamindārs.

In the Khuntkātti area the title of Mānki still survives and the *pattis* of which the area was composed consist of ten to twelve villages. The *pattis* are for the most part broken up, except in the locality known as the *Mānkipatti*. Unlike the Bhūinhāri area, the *patti* is not composed exclusively of members of the same *kili*. There is no standing committee and there are no permanent officials, and the *panchāyat* is composed, when occasion requires, of the two headmen of the villages included in the *patti*, under the presidency of the Pat Mundā, or occasionally of the Mānki. The proceedings differ little from those of the *parhā panchāyat* in the Bhūinhāri area which have been already described.

In the case of minor disputes, a private *panchāyat*, consisting generally of members of the same *kili*, is convened by the aggrieved persons. A president, or *sir panch*, is elected, and he, with the aid of two assessors selected by each party, decides the question at issue. In former times the decision of a *panchāyat* was regarded by the Mundās as inspired and not to be disregarded, but now a party dissatisfied with the decision seeks his remedy in the courts. As at the *parhā panchāyat* a feast is a necessary preliminary and is provided by the parties. Oaths and ordeals are sometimes used to detect guilty persons. In the *lolo-dā*, or hot-water ordeal, the suspected persons are required to pick a coin out of a vessel of boiling water, the Mundā believ-

ing that the hand of the innocent man will be unscathed, while that of the guilty will be scalded. In boundary disputes a curious ordeal is sometimes practised ; a hole is dug on each of the boundary lines claimed by the two parties and is filled with powdered rice ; a representative of each party then has one leg buried in the hole, and the false claimant is the one who is first compelled by exhaustion or the biting of ants and other insects to cry out to be released.

Marriage
Customs.

In the old days a Mundā youth was not considered old enough to marry till he could fashion a plough with his own hands, and a Mundā maiden till she could weave a palm-leaf mat and spin cotton, and in those days the young men were left free to select their brides. In modern days the marriage is generally arranged by the parents or guardians, though the consent of the boy is frequently sought for and obtained. A go-between (*dūtām*) is sent to the guardians of the girl, and if the answer is favourable, the *dūtām* and the boy's guardian and friends, and sometimes the boy himself, start for the girl's village, and on their way keep a sharp look-out for good or bad omens. This observation of omens is known as *chenre-uri*, which etymologically has the same meaning as "augury". If they meet unfavourable omens, such as a person-carrying an axe, spade, or shovel ; a cow lowing, but not in response to her calf ; sweepings being thrown away from a house ; rice being carried ; clothes being washed with ashes, etc., the whole matter is at an end ; but if the omens are good and they hear a cow and calf lowing in response to each other, or see a person carrying paddy, clean clothes, or a pitcher of water, or making a plough or yokes, or meet a tiger, they proceed to their destination, where they are hospitably entertained, and in return invite the girl's guardians to their village. During the journey of the girl's relatives, a similar observation of omens is made, and if all is favourable, the *joāni*, or spokesman for the bride's party, makes a set speech beginning : "Now for this boy and this girl, in the presence of Sing Bōngā in heaven and the Panch on earth, the omens have been all right", and ending : "To-day the boy's father and the girl's father will thatch two roofs with one bundle of straw (*i.e.*, become members of one family). May the roofs ever remain thatched like this". The next ceremony is the *bālā* or betrothal, at which after the usual feast the bride-price is settled, not by naming the demand, but

by symbols. Thus the number of clay marbles and *sāl* leaves given to the bridegroom's father represent the number of rupees and *sāris* which the bride's father requires, and the number sent back represent the amount which the former is willing to give. The terms being agreed upon, the ceremony is completed by the Mundā or Pāhān of the bride's village clasping the hand of the Mundā or Pāhān of the bridegroom's village and both agreeing to pay a fine if the betrothal is broken. The bridegroom now sits on the knees of the bride's maternal uncle or of the Mundā or Pāhān of her village and receives a new piece of cloth and a necklace from the bride's father. The ceremony of presenting the bride-price (*Gōnongtākā Iditākā*) and of selecting the day (*lōgōntōl*) usually take place at the same time. The betrothed girl sits on the knee of the boy's maternal uncle, while a girl friend sits on the knee of the Mundā or Pāhān of the boy's village, and "gives *lōgōn*" by handing some rice, turmeric, and betel-nut spread on a new cloth to him. Last comes the *ārāndī* or marriage ceremony proper. For three days before the marriage, the bride and bridegroom sit for a short time on the *māndōā*, a rectangular mud platform, with *sāl* saplings at the four corners and saplings of *sāl*, *bhelōā* and bamboo in the centre, erected in their respective homes, and are anointed with mustard-oil mixed with turmeric juice by a female relative. On the evening before the wedding comes the *chūmān* ceremony, at which the bridegroom clad in a cloth dyed with turmeric juice, is touched on the feet, thighs, shoulder-joints, and cheeks by his female relatives who hold some rice in their folded hands. A similar benediction ceremony takes place at the bride's house. The marriage procession next starts from the bridegroom's house and the bridegroom, if he can afford it, is carried in a *pāiki* or, failing that, on the arms of his relatives till the limits of the village are reached. At the first mango tree the procession halts for the *ālī-sākhi* ceremony, at which the bridegroom receives the blessing of his mother. At the confines of the bride's village, her relatives meet the procession with music and dancing, and the parties join, walk round the boundary of the village, and proceed to the bride's house. In the courtyard the bride's mother and her female relatives sprinkle the boy with water and again perform the *chūmān* ceremony. The bride

is brought out in a bamboo basket and carried three times round the bridegroom's *pālki*. Bride and bridegroom then throw three handfuls of rice at each other's foreheads and are conducted into the house. Next the bride has an *ūli-sākhi*, in which she makes the mango tree a witness to the marriage by marking it with flour and tying a thread round it. In the morning the preliminary ceremony of *sasāng-goso*, or anointing with oil and turmeric, is performed, both bride and bridegroom being anointed by the female relatives of the other, and each in turn having a little blood drawn from the finger. The blood is put on a rag, called *sināi*. In the forenoon, having been carried by their relatives three times round the *māndoā*, they are made to stand upon a large plate of *sāl* leaves, the bridegroom facing west and the bride facing east. He presses the toes of her left foot with the toes of his right foot, and three times touches his neck and that of the bride with the blood-stained rag. They change positions, and the bride does the same with her rag. Reverting to their positions, they exchange garlands of flowers, and each places three vermilion marks first on his, or her own forehead, and then on the forehead of the other. This is the binding part of the ceremony. Their garments are then knotted together and they are conducted into the house, the bride walking behind her lord, who has to pay toll to the bride's elder sister before he obtains entry. Four maidens, two from each party accompanied by Ghāsi musicians, now proceed to the nearest spring followed by the other women. The maidens fill their *gharās* with water, and place them on their heads. Two elderly women, one carrying a sword, and the other a bow and arrow, stand with their backs to the water-carriers, and pass the sword and arrow back over the neck so as to touch the jars of water. The procession then returns to the house, the woman with the sword brandishing and whirling her weapon, and the other women imitating her. The maidens next pour the water over the bride and bridegroom, who in fresh array are seated on a straw-covered plough-yoke in the courtyard. Having again assumed their yellow garments and daubed one another's forehead with *sindūr*, the young couple sit down upon a mat in the courtyard. Ceremonial water is given to the bridegroom and a sword is put into his hand, with which he kills a goat. Amidst much ceremony and consumption of rice-beer, the fathers

of the bridegroom and bride drink from the same cup and embrace one another; the mothers do likewise, and there is mutual felicitation. Bride and bridegroom then wash the feet of the guests who place on a brass plate their wedding gifts, usually in cash, each paying from two pice to a rupee. At the bridal feast, the bridegroom places a *sāl* leaf beside each guest, and the bride puts a pinch of salt on it. Both sit beside the *Mānki*, or senior village official wash his hands and serve salt to him. The men having dined, the women sit down to their meal. Before the departure of the bridegroom, the bride performs a curious ceremony. Seated with her back to her mother, who is seated on the threshold of her house, she throws three double handfuls of paddy over her shoulder to her mother, who catches it in her cloth. She is then made over to the bridegroom by the *Mundā* or *Pāhān* of the village in presence of the *Panch* or assembled elders. The bridegroom is next compelled to pay toll to the bride's girl friends, and after a demonstrative leave-taking, he carries away his bride by the mode of conveyance in which he arrived. At his house the *chūmān* ceremony is again performed, and a dinner follows at which the bridal pair distribute salt to the guests. Next day a party of the bride's relatives come to be entertained, and a week or two later, when the bride's parents come to take the married couple to their village, their son-in-law uproots the saplings from the middle of the *māndōā*, and a sumptuous feast again takes place.

Family life is happy in the aboriginal tribes, the wife usually making herself a comrade to her husband. But divorce is not attended with many difficulties. If the husband will not maintain his wife, or if she refuses to live with him, a *panchāyat* of the relatives is held, and the person desiring the divorce, who selects three out of the five members, snaps a *sāl* leaf in token of the dissolution of the marriage. If the wife is the unwilling party, the bride-price is returned. Divorced persons and widows marry in the *sagāi* form which simply consists of a feast at the bride's house; and the issue of such marriage is legitimate. The same applies to most of the lower Hindu castes. The funeral ceremonies of the *Mundās* are described in the subsequent paragraph on their religion.

THE ORAONS.

The Orāons are the most numerous tribe in the district, and at the census of 1911 numbered 388,768, of whom 7,343 were classified as Hindus, 88,647 as Christians and 302,778 as Animists. They dwell principally in the west, north-west, and centre of the district, and also in Palāmau and the Feudatory States of Jashpur and Surguja, the total Orāon population of the province being over 640,000. Large numbers have migrated to the tea gardens of Assam and the Duars, and 90,000 were enumerated at the last census in Jalpaiguri district. Small colonies of the race are also found all over Bengal, and in parts of Tirhut where they work as labourers, and are known by the name of *dhāngars*, a Kūrūkh word signifying a "youth" and then "a youth who labours for another". *

Name.

Extremely little is known of the early history of this Dravidian tribe. They call themselves Kūrūkh, a name which is sometimes traced to one of their mythical kings called Karakh. It is more probable that it is derived from some obsolete Dravidian root, meaning "man," or it may possibly be connected with the Dravidian word *Karugu*, an eagle, and be totemistic in origin. Colonel Dalton was inclined to think that the name is derived from Konkan, which is supposed to have been the cradle of the race, Konkan having been converted into Kūrūkh owing to the Orāon partiality for gutturals. Another interpretation given by some literate Orāons themselves is that Kūrūkh is a variant of Coorg, where they formerly lived. The name "Orāon" is said by Colonel Dalton to have been given them as a nickname, perhaps because of their many migrations and partiality to roam, and, according to Sir George Grierson, the Hindus say that the word "Orāon" is simply the Indo-Aryan "Uran," a spendthrift, the name being an allusion to the alleged thriftless character of the people. Dr. Hahn agrees that the name was coined by the Hindus, but considers that it is based on *orgora*, a Kūrūkh word for "hawk," the totem of one of the septa.

Early History.

It is probable that the Orāons originally came from Southern India, as philologists have traced in the language of the Kanarese and other Tamulian languages a close resemblance to the Kūrūkh tongue. Another theory that has been put forward is that the Orāons accompanied the Mundās in their migrations from the

* Colonel Dalton interpreted the name as "hillman" and derived it from "Dang" or "Dhang," a hill.

north-west of India before the Aryan invaders; but this does not appear to be supported by either Mundā or Orāon tradition. Though the Orāon tradition agrees with the Mundā tradition in naming Azimgarh, Hardinagar, Pipragarh and finally Rohtāgarh as homes of their race, it is possible that the tradition was merely borrowed from their neighbours. The most certain legend of the Orāons is that they dwelt in Rohtās, but were driven from the stronghold by a treacherous attack of their enemies, who took advantage of the drunken revelry in which they were engaged at the Sarhul festival. Who the enemy were is uncertain. According to an explanation of some Orāons themselves, it was the Muhammadans, but as the Muhammadans did not conquer Bihar before 1193 A. D. and Rohtās before 1539 A. D., this is inconsistent with their own tradition that they were settled in Chotā Nāgpur long before the days of Phani Mukut Rai, the first Rājā. In other accounts they refer to the enemy as Mlechchhas, an appellation given by the Hindus to all impure tribes; and, according to one theory, Mlechchhas were the Kharwārs or Cheros who at one time occupied the Rohtās plateau. There is, however, no doubt that Rohtās was once their home, as Orāons are still found in these hills. Dislodged from Rohtās, the tribe split up into two branches, one branch proceeded down the Ganges, settled in the Rājmahāl hills, and became the ancestors of the present Mālā tribe; another, and larger section, proceeded up the Son and then along the valley of the North Koel into Palāmau till they reached the highlands of Chotā Nāgpur, which they found already sparsely populated by Mundās. There is no tradition of war between the two tribes and, according to Mundā tradition, they allowed the Orāons to settle, on condition that they ate meat and discarded the sacred thread which they wore. According to Orāon tradition, they were the more civilized race and introduced the use of the plough and the construction of the terraced *don* lands. The Mundās gradually retreated before the more prolific and numerous Orāons and left them in undisputed possession of the north-west of the district. Like the Mundās, the Orāons formed their village communities into groups, known as *pārḥās*, under the presidency of the headman of one of the villages, who was known as the *pārḥā Rājā*, and the Orāon and Mundā

pārkhās, when the tribes were living together in the central plateau, elected one of their chiefs to be the Rājā of the country.

Appearance
and charac-
teristics.

The colour of most Orāons is the darkest brown, approaching to black; the hair is jet black, coarse, and rather inclined to be frizzy. Projecting jaws and teeth, thick lips, low narrow foreheads, broad flat noses, are features which strike a careful observer as characteristic of the tribe.* The eyes are often bright and full, and no obliquity is traceable in the opening of the eyelids. The Orāons are of good physique, capable of carrying heavy burdens and travelling long distances. An Orāon can carry a load of two maunds thirty to thirty-five miles in a day and continue to do so for several days in succession. In character, the Orāons are cheerful and light-hearted; when young, they delight in physical exercise, especially dancing. On the occasion of their festivals the young men and maidens of an Orāon village spend two, three or more nights in dancing, with but short intervals for sleep. The worst vice of the Orāons is their improvidence and inordinate love of drink. They are not so conservative as the Mundās, and Colonel Dalton remarks on their adaptability to the ways and customs of the persons among whom they live. This adaptability is said even to change their outward appearance. Orāons who have lived long in the Duārs become tawny in complexion, while the Orāons themselves say that those who have lived long among Muhammadans grow beards and whiskers.

Dress.

The clothing of the Orāons is similar to that of the Mundās. Both sexes are extremely fond of ornaments. The young men adorn themselves with a girdle (*kārdhāni*) of twisted black cotton-thread, or silk, which also serves the useful purpose of carrying his keys, purse, lime box, and small iron pincers, or *chinta*, which are used for extracting thorns from the feet. Necklaces of coloured beads are often worn. The most noticeable ornaments of the women are the heavy brass bracelets on the arms, and the ornaments of various kinds which are thrust through the lobe of the ear. At their dances their head-dresses are often adorned with plumes of heron feathers.

* Of the one hundred Orāon specimens measured by Sir Herbert Risley the average head measurements are as follows:—Length, 184.6; breadth, 139.3; cephalic index, 75.4. The average dimensions of the nose, height, 46.2; breadth, 39.8; nasal index, 86.1. The average stature is 162.1 centimetres.

A peculiar feature of Orāon villages is the *dhūmkūriā* Dhūmkūria. (*ḡānk-erpā* in Kūrūkh) or bachelors' hall, an interesting survival which is still found in the older villages. The Orāons are very reticent about this institution, but Mr. S. C. Roy of Rānchi has recently collected much information about this institution and its counterpart, the *pel-erpā* or maiden's dormitory. These institutions cannot be said to conduce to the morality of an Orāon village; they are gradually falling into disuse and are not countenanced in villages of which the inhabitants have become Christians. The inmates of the *dhūmkūriā* form a fraternity into which boys are admitted after curious ceremonies, and take a prominent part in many of the religious and social customs of the tribe. Its object appears to be to "make men" of the boys, to make them successful hunters and to train them in their social and other duties. It is undoubtedly a survival from the primitive days, when the tribe was dependent on hunting.

Like the Mundās, the Orāons are divided into numerous exo- Organization. gamous septs, known as *gotras*, which take their names from some bird, fish, animal, plant or mineral. These totems are regarded as sacred by the sept named after them and are respected by them as ancestors: thus a *Panna* will not touch iron with his tongue or lip; a *Kujar* will not use oil made from the creepers of that name, a *Kispota* will not eat pigs' entrails; septs whose totem is an animal will not eat flesh of that animal, e.g., *larka* (tiger), *kaya* (wild dog), *tiga* (field-mouse), *tirki* (young mouse), *orgora* (hawk), *toppo* (woodpecker), *minj* (eel). The sept name descends in the male line. There is no objection to a man marrying a woman belonging to the same sept as his mother, but generally marriage with a maternal aunt or first cousin on the mother's side is disallowed. Marriage with members of other tribes is entirely prohibited. At the head of the village community is the *Pāhān* or *Baigā* and the *Māhto*. The difference in the functions of these two officials is expressed by the Orāons in their saying *Pāhān gāon banāta hai, Māhto gāon chālāta hai*, i.e., the *Pāhān* appeases the deities and demons of the village while the *Māhto* looks after its secular affairs. In some villages the *Pāhān* is a Mundā by caste and occasionally a member of some other aboriginal tribe, it being held by the Orāons that the descendant of the first settlers in a village is

better qualified to deal with the village gods. The duties of the Pāhān are the same as those of the Pāhān in a Mundā village, but whereas among the Mundās the office is hereditary and is held for life, among the Orāons the Pāhān is selected triennially from among the members of the Pāhān family or by means of the magic *sūp* or winnowing basket. The selection of the religious head of the village rests on the knees of the gods, and the *sūp* is used as a divining-rod to conduct the person holding it to the house of the man most fitted for the office. In some cases, after the proper ceremonies, a stone is rolled through the village, and he at whose door it stops is the fit person. The Pāhān has special lands assigned to him and is assisted in his religious functions by the *Pujār* or *Pānbhara*, whose duties are to carry water and cook on the occasion of village sacrifices.

The Māhto is also elected, usually triennially, from among the members of the Māhto khunt. In some villages where the Orāons have been driven by their zamindārs to abandon their customs, his election has to be approved by the zamindar and in new villages he is almost a servant of the zamindar.

As with the Mundās, groups of villages are united into *pārhās*, which must have been of considerable political and social importance in old days.

Panchāyats.

The *Parhā panchāyat* still survives; it consists of the leading men from a group of villages, e.g., the Pāhān, Māhto, and the leading *bhūinhārs* and *jeth* raiyats. It meets only once a year and deals with matters affecting whole villages and not merely individuals, such as matters of religion, dates of festivals, and also with disputes about the flags which each village has as its distinctive emblem. It also punishes villages which take an unfair advantage over their neighbours and do not observe the customary rules of sport on the occasion of the annual hunt. The *Panchora panchāyat* resembles more closely the *Parhā panchāyat* of the Mundās: it is presided over either by a *Kartahā* or a *Mukhiā*. The office of the former is hereditary, that of the latter is only held as long as the holder is considered fit to perform the duties. It deals with grave offences against caste rules and tribal custom and also is a sort of court of appeal against the decisions of village *panchāyats*. An important function of the *panchora panchāyat* is to re-admit an out-caste into caste. After it has been decided to re-admit the out-caste

and the fine which he is to pay has been fixed, the actual ceremony of re-admission takes place. The out-caste goes round and tells the members of the date of the assembly. He then fasts for a certain period, during which he is guarded by two *śipāhis*, who are specially deputed to see that he takes no food or drink except turmeric water. When the assembly meets, the *Kartahā* sacrifices a white cock or white goat, and the out-caste has to drink the blood. He then serves the *Kartahā* and each member of the assembly with food and pays the former his fee (*patritāri*), which varies from Rs. 5 to Rs. 15. The *Kartahā* is the first to touch the food prepared by the out-caste, and the moment he raises it to his lips is the signal for all present to hurl their rice at his head. The *Kartahā* is thus a scape-goat who, on his return home, atones for having eaten the food of an out-caste by a feast to his caste men, paid for out of the fee which he has received.

The marriage ceremonies of the *Orāons* are generally similar to those of the *Mundās* which have already been described in detail. During the preliminary negotiations there is the same observation of omens, and, if the omens are inauspicious, the proposal is dropped. If all goes well, there comes the settling of the price or *pānbandhi*. At the actual marriage ceremony, the bride and bridegroom stand on a curry-stone under a bower, the boy touching the heels of the girl with his toes. A long piece of cloth is put round them to shield them from the public gaze, and the boy dips his finger into a cup of *śindūr* and makes three lines on the bride's forehead and the bride does, or attempts to do, the same to the bridegroom. Water is thrown over the couple, who retire into the house. A little later a special ceremony takes place to invoke the protection of the ancestors. The final ceremony is the *khiritengua handia*, at which the oldest member of the assembly as representing the *pañchāyat*, solemnly addresses both bride and bridegroom and exhorts them to remain true to each other in sickness and in health.

Marriage
Ceremonies.

The *Khariās* are a Dravidian tribe, classed on linguistic grounds as *Mundā*. They are found scattered over a wide tract of country from the district of Bankura to the *Chhattisgarh* States, but their chief stronghold is in the south-western parganas of *Rānchi* district. The total *Khariā* population of the district

KHARIAS.

is 50,710, of whom 19,273 are Christians; about 1,000 returned themselves as Hindus at the recent census.

Appearance
and character.

In appearance the Khariās resemble the Mundās, but have rather coarser features and are not so well proportioned. In Singhbhūm and other districts, they are found in a very wild state, dwelling on the hills and in the jungles, but in Rānchi they have settled down to become cultivators. Though the settled Khariās of Rānchi are considerably in advance of the wild Khariās of the hills of Mānbhūm and Singhbhūm and are, on the whole, industrious cultivators, yet they have a bad reputation for intemperance and immorality, their dances on the occasions of their marriage ceremonies and festivals frequently degenerating into vicious orgies. Though not over-fastidious feeders, they are said to profess to be very exclusive in regard to cooking and eating, and Colonel Dalton writes of them as follows:—"This characteristic, I found, most developed in villages of Chotā Nāgpur, where Khariās are associated with Orāons under Brāhman proprietors. It is a common saying that every Khariā must have his own *kānria* or cooking pot. He may not even allow his own wife to cook for him, and, if a stranger enters a house in which he keeps his cooking pots, every vessel is polluted and the whole are destroyed or thrown away. This class of Khariās are specially filthy in their habits, and it is not improbable that Hindus may have been more than ordinarily harsh in excluding them from their kitchens and inner apartments and that the Khariās retaliated by out-casting everybody".

Origin.

According to one tradition, their ancestors were originally settled between Rohtās and Patna, but they quarrelled with their relations and fled into the jungles and wandered till they came to the Koel River, where, finding unoccupied lands to suit them, they settled first at a place called Pora on the river, whence they were driven into Biru and Kesalpur by the aliens who were granted farms of their villages. Another tradition is that they came from Mayurbhanj in the south and ascended the valley of the South Koel till they came to their present location. Colonel Dalton endeavoured to reconcile these traditions by the theory that they may have fallen back from the Gangetic province, passed through the Vindhya range and come gradually round to the south-east water-shed of Chotā Nāgpur, but

legends of this kind, which often refer to comparatively recent migrations of a small portion of the race, are of doubtful value in giving any clue to their ancient history.

The Khariās are divided into four sub-tribes, Dhilki-Khariā, Dudh-Khariā, Erengā Khariā and Mundā Khariā. The Dudh Khariās affect a leaning towards Hinduism and will not touch beef but will eat the flesh of the buffalo. They are also subdivided into numerous exogamous septs, all of which are totemistic, but the rule making the totem taboo is not universally observed. The Khariās have a *panchāyat* system similar to that of the Orāons. The chief functions of the *panchāyat*, which is not a permanent body, are to decide questions of caste custom, to re-admit persons who have been outcasted for a breach of caste custom, such as killing a cow or bullock among the Dudh-Khariā class, and to settle questions of inheritance.

Organization.

Girls are usually married after the age of puberty, but infant marriage has been adopted by a few of the richer members of the tribes in imitation of the Hindu custom. The chief characteristic of the marriage ceremony is the revelry and dancing which takes place and which bears "more directly than delicately on what is evidently considered the main object of the festivities, the public recognition of the consummation of the marriage". After the preliminary negotiations by the parents, the bride is escorted to the bridegroom's house and is met by the bridegroom's party on the outskirts of the village. A revel takes place, and large quantities of *kānriā* are drunk. Early next morning the bride and bridegroom are anointed with oil and taken to bathe. Five bundles of straw are placed on the ground, and the yoke of a plough is placed upon them. The bride and bridegroom stand facing each other on the yoke, and the bridegroom smears vermilion on the bride's forehead and the parting of her hair, while she makes a small round spot of the same colour on his forehead. This completes the marriage ceremony, and the parties sit down to feast at the bridegroom's expense. While the feast is going on, the bride is brought before the company and washes a cloth in hot water, in token, apparently, of her willingness to do any form of household work.

Marriage customs.

The religion of the Khariās may be defined as a mixture of animism and nature worship. In many respects they have borrowed from the Orāons or Mundās and it is difficult to say

Religion.

what was the original belief of the tribe. The head of the religious system is Bar Pahāri, who appears to correspond to the Mundā Sing Bōngā or the Oraon Dharmes. Colonel Dalton also mentions the sun-god, under the name of Bero, to whom every head of a family must offer five sacrifices in his lifetime, the sacrifices being always made in front of an ant-hill as an altar. Other gods are those attached to certain places, such as Dorho Dubo, the god of the springs, Pat Dubo, the god who resides in rocky hills, Gumi, the god of the *sarnā* or sacred grove; while others have power to spread disease among persons or cattle, or to give good crops, and have to be appeased with sacrifices. For such sacrifices the Khariās employ the service of the Pāhān of the village, of whatever caste he may be. Like other tribes, they believe in the power of the spirits of deceased persons, especially those who have died a violent or unnatural death, to do harm and have recourse to the *soḥā* or exorcist in the case of illness or trouble. Like other animistic tribes, the Khariās delight in dancing, and their festivals, like their marriage ceremonies, often degenerate into orgies.

Funerals.

The Khariās observe a curious distinction in their funeral rites; the bodies of married people are burned while persons who die unmarried are buried. The ashes of the dead are put into an earthen vessel with some parched rice and thrown into a pool or tank, if possible, in the *ḍhūinhāri* village of the deceased.

ASURS.

The Asurs, a small non-Aryan tribe, are found in the north-west of the district and live almost entirely by iron-smelting. They also practise a form of cultivation akin to *jhuming* on the *pāts*, or level hill-tops. Extremely little is known about the origin of this tribe. Colonel Dalton was inclined to connect these with the Asurs who, according to Mundā tradition, were destroyed by Sing Bōngā, and it has been conjectured that they are the descendants of the original inhabitants of the plateau, who were driven out by the Mundās and of whom the only traces now to be found are a few scattered *tumuli* and occasional stone or copper celts. Another conjecture is that they are a branch of the Mundās, who, like the Turis, split off from the rest of the tribe on account of their profession. Whichever theory is correct, it is certain that the Asurs resemble the Mundās both in appearance and language, and, like them, are divided into exogamous totemistic septs. Of their religion

little is known; according to Colonel Dalton, they worship Sing Bōngā, and also the great hills, in which they dwell, under various names. At the census of 1911 there were 3,383 Asurs in the district, of whom 284 were classified as Hindus. The Agarias, who number only 250 persons, are probably akin to, and perhaps a sub-caste of, the Asurs.

The Turis are a non-Aryan caste of cultivators and bamboo-workers who, from their physical type, language and religion, appear to be an offshoot of the Mundās, and like the Mahlis and Lohrās, may have separated from the parent tribe owing to the profession which they follow. Sir Herbert Risley in the "Tribes and Castes of Bengal" says there are four sub-castes of Turis, *viz.*, Turis or Kisān Turi, Or, Dom, and Domrā, distinguished by the particular modes of basket and bamboo-work which they practise, but the two latter classes usually speak Hindi, are socially inferior to the Turis and Ors, have little resemblance, either in appearance or customs, to the Mundās and appear to be more akin to the Doms of Bihar. The Turis are divided into exogamous septs, which are for the most part totemistic and correspond closely with those in force among the Mundās. In religion they are becoming Hinduized, and at the census of 1911, 3,937 were classified as Hindus and 2,592 as Animists. The veneration of Hinduism, however, is slight and in many villages Turis are found holding the office of Pāhān, a fact which goes to show that they entered the district along with the Mundās. Large numbers of Turis have embraced the tenets of the deistic sect known as Sri-Nārāyani, but, though professing this religion, have not broken with their old belief and in cases of illness have recourse to the regular aboriginal methods of propitiating the spirit who is believed to be afflicting them. Turis will eat cooked food with Mundās and Orāons and are as lax as these tribes in the matter of diet.

The Birhors are a jungly tribe with no fixed habitation, who roam from forest to forest, living on game and monkeys and by the manufacture of drums and the sale of jungle products. They speak almost pure Mundāri, and the fact that their name Birhor = jungle-men in Mundāri) includes the word *horo*, which the Mundās apply exclusively to themselves, points to their being an offshoot of that tribe that has preferred a wandering life in the jungles to the settled life of a cultivator. At the census of 1911,

927 members of the tribe were found in the district, of whom 500 were classified as Animists and the rest as Hindus. In Risley's "Tribes and Castes of Bengal", their religion is said to be a mixture of Animism and Hinduism, and they are said to seek to harmonize the two systems by assigning to Devi the chief place in their Pantheon, and making out the animistic godlings to be her daughters and grand-daughters.

NĀGESIĀS.

The Nāgesiās are a small tribe consisting of some 4,700 members, all of whom were classified as Hindus in the census of 1911. They are described by Colonel Dalton as of dark complexion, short stature and very ugly features, and are probably Dravidian in origin. They are found in remote jungly villages, and their sections bear totemistic names, such as are found among the Mundās and among many other Dravidian tribes. There are two subtribes, one of which uses vermilion in its marriage ceremonies and is known as Sindarā, while the other uses oil and is known as Telīā.

KORWĀS.

The Korwās in Ranchi district number less than 2,000, their principal habitat being Palāman and the Feudatory States of Jashpur and Surguja. They are less wandering than the Birhors and do a certain amount of cultivation in a spasmodic way, but their occasional lapses into predatory savagery mark them out as one of the lowest of the aboriginal tribes.

Of the castes which are probably non-Aryan in origin but which have become recognized as Hindus, the most important are the Rautiās, Bhogtās, Binjhiās, Bhuiyās, Jhorās and Gonds.

RAUTIĀS.

The Rautiās are a well-to-do land-owning and cultivating caste, probably Dravidian in its original affinities but since refined in features and complexion by a large infusion of Aryan blood. The name Rautiā suggests some connexion with Rajpūts, and the cognate term Raut is used in some districts to denote an inferior Rajpūt. Their traditions say that they formerly dwelt in Sinhal-dwip (Ceylon) whence they migrated to Barhan in Mirzapur. Some Rautiās were serving as sentinels in Gwalior, when Rājā Durjan Sal was imprisoned there, and, in return for their good offices, the Rājā on his release rewarded them by grants of lands and villages. The tradition appears to contain a substratum of truth, and there is no doubt that the Rautiās were the feudal militia introduced by the Chiefs. The leaders of the caste were

granted *jāgirs* and given the titles of Barāik, Gonjhu and Kotwār, and, in return, kept up a standing militia for the assistance of the Rājā against his external and internal enemies, and their descendants now hold tenures for which a quit-rent is payable to the Maharājā. The rank and file of the caste became raiyats, paying light rents and possessing occupancy rights.

The Rautiās are divided into two endogamous sub-castes, Bargohri and Chhot-gohri. The origin of the two sub-castes is obscure, but it may be that the Chhot-gohri were the first settlers who were out-casted for some breach of tribal custom, or that they are the offspring of alliances between the Bargorhi and women of inferior caste. The Chhot-gohri at the present day eat fowls and wild pig and drink spirits, all of which things are forbidden to the Bargorhi. Each sub-caste is divided into sections (*jaris* or *got*) with totemistic, territorial, and eponymous names, a fact which goes to prove their mixed descent. The Chhot-gohri Rautiās have a representative assembly for groups of from five to fifteen villages, called *mandli*, which decides caste questions. It is presided over by a hereditary official known as the *mahant*. The Bargohri have no standing assembly but summon a *panchāyat* as occasion requires.

Organizational.

Their marriage customs contain several features of a primitive and non-Aryan character. In the first instance both parties go through the form of marriage to a mango tree. The essential and binding portions of the ritual are the knotting together of the clothes of the bride and the bridegroom and *sindūrdān*, which is effected by smearing on the bride's forehead a drop of blood drawn from the little finger of the bridegroom, and *vice versa*. Sākadwipi Brāhmins officiate at the ceremony. As with other similar castes in Chota Nāgpur, the custom of succession among the Rautiās is that the whole property goes to the eldest son, subject to the condition that he creates maintenance grants in favour of his younger brothers, each younger brother gets a smaller share than his immediate elders, and sons by a *sagai*, or second, wife less than sons by a *b. Nāi*, or first, wife.

Marriage customs.

The dead are usually disposed of by burning, and a regular *śraddh* ceremony is performed with the assistance of a Kanaujā, or, failing him, of a Sākadwipi Brāhman.

The religion of the Rautiās is a mixture of the animism prevalent among the aboriginal tribes and the debased form of

Religion.

Hinduism disseminated by the Brāhmans of Chotā Nēgpur, who are markedly inferior in point of learning and ceremonial purity to the Brāhmans of the great centres of Hinduism. Rama, Ganesa, Mahadeva and Gauri are the favourite deities whose worship is conducted by Brāhmans, in more or less orthodox fashion, but besides these there are spirits which, in the imagination of the aboriginals, inhabit the hills, rivers, rocks, and trees, and cause disease and distress to man and beast, such as Bar-patār (the Marang Buru or mountain of the Mundās), Burhā-Burbī, the ancestors of mankind; the seven sisters who scatter cholera, small-pox and cattle-plague abroad, and Goraiā, the village god. Like the aboriginals, the Rautiās believe that the ghosts of women who die in child-birth, of persons killed by a tiger, and of all *ojhas*, or exorcists, are liable to re-appear and trouble the living, and they employ the exorcist (*ojha* or *mati*) to identify the spirit at work and appease it with gifts of money, goats, fowls, or pigs. They also believe in witchcraft and employ the services of the *ojha* to detect the witch or wizard who has caused a particular illness.

Socially the caste ranks fairly high, and Brāhmans will take water and sweetmeats from their hands. The Bargohri are more particular in matters of food than the Chhot-gohri, and will not eat cooked food, smoke, or drink, except with members of their own sub-caste. The Chhot-gohris are equally particular about cooked food, but will smoke with, and take water from Bhogtās, Ahirs and Jhorās. They also drink spirits and fermented liquors, and eat wild pigs and fowls.

BHOGTĀS.

The Bhogtās of the Rānchi district claim to be entirely distinct from the Kharwār Bhogtās of Palāmau. In appearance and customs they closely resemble the Rautiās; they claim to be, and are recognized as, Hindus and frequently call themselves Singh. According to their own tradition, they were introduced into Rānchi from Brindaban by one of the Mahārājas, and it is probable that, like the Rautiās, they were a feudal militia.

BINJHIĀS.

The Binjhiās are an agricultural and landholding tribe found in the south of the district. At the census of 1911, 3,785 were recorded as Hindus and 40 as Animists. They are divided into two sub-tribes, the Pahāriya Binjhiās and Dānd Binjhiās, so called from living, respectively, in the hills and the plains. The latter are divided into four exogamous septs. They claim to

have come from the Vindhya Hills from which they derive their name, and the fact that they often talk Oriya points to their having come from the district of Sambalpur and the Feudatory States of Gāngpur and Patna. Though they eat fowls and wild pig, the Binjhias, especially the Dānd Binjhias of the south, are recognized as Hindus and enjoy much the same social rank as Rautias. Brāhmins are employed in the worship of the greater gods, including Devi, who under the name of Vindhu-basini is regarded as the patron goddess of the caste, and Jagannath. Their minor deities are Chadri Devi and Gian-sri, the goddesses who preside over the village. The gods of the Pahāriya Binjhias are Debi, Sing Bōngā, Nind Bōngā, or the moon, and Mahadeo, who are worshipped by a Binjhā priest, called the Baigā Pahān, and his assistant, the Dīwān, who offers the sacrifices, while the Pujāri, or consulting priest, determines what the sacrifice should be. For the decision of questions of caste usage, the Binjhias, like other tribes, have a representative assembly consisting of delegates from every household, presided over by the Kārtahā, whose office is hereditary. As with similar tribes the more wealthy members have become Hinduized.

The Bhuiyās who are found in the south of the district call themselves Khandāit Paiks and claim that they and the members of their caste in Gāngpur, Bonai, and Orissa, are entirely distinct from the degraded Bhuiyās of Gaya, Hazāribāgh, and Palāman. Sir Herbert Risley, in "The Tribes and Castes of Bengal," puts forward the plausible theory that the Bhuiyās had their original settlements in the Feudatory States to the south of the Chotā Nāgpur plateau. Radiating out from there, their social fortunes were determined by the character of the people with whom they came in contact. The stronger non-Aryan tribes, the Mundās, Hos, and Santāls, cut like a wedge through the line of the Bhuiyā advance to the north; a few successfully established themselves in Hazāribāgh and Gaya, while those who travelled furthest north fell under the domination of the Hindus and were reduced to the servile position which they now occupy. Those who went southward to Orissa rose rather than declined in the social scale, and some of the leading families have come to be chiefs of the petty Orissa States, and have established their claim to be Rājputs. The Bhuiyās of Rānchi district stand half-way

BHUYAS.

between these two groups, they have not degenerated to the position of serfs, like the Musahar Bhuiyās of Bihar, nor have they risen to the status of landlords. They are a respectable class of cultivators, who, as the name Khandait or swordsman suggests, may have been employed as a militia to guard the southern frontier of the Rājā's country.

The Bhuiyās of Rānchi have advanced somewhat on the path of orthodox Hinduism. They do not regularly employ Brāhmins, except for their marriage ceremonies, but sometimes call them in to recite *mantras*. They believe in a host of communal ghosts and spirits, who have ill-defined functions and a capacity for mischief and malevolence and must be appeased by offerings of goats and fowls, and practise exorcism. At the census of 1911, 16,700 were returned as Hindus and rather more than 300 as Animists.

JAVAS.

The Jhorās are a small caste, found principally in Biru pargana, who were believed by Colonel Dalton to be a sub-tribe of Gonds. The zamindār of Biru, who is a Jhorā, claims to be a Gangabansi Rājput and is generally acknowledged as such, and other members of the tribe, both landholders and cultivators, claim similar rank. The caste profession of the Jhorās was originally gold-washing in the auriferous sands of the Sānkh River. Colonel Haughton was told in 1854 that a man could ~~earn as much as~~ ten to twelve annas a day, a sum greatly in excess of the wages of an ordinary labourer, which at that time could not have been more than one anna. A recent experiment showed that only two or three annas worth of gold could be extracted in a day. As gold washing with their primitive appliances is a very poor business, the majority of the members of the tribe have become ordinary cultivators. The Jhorās employ Brāhmins as their priests and burn their dead in the usual way by the side of a river, but they contribute also to the sacrifices of the village *pāhān*, of whatever caste he may be, and also follow the custom of the Mundās and Orāons in bringing the spirit of a deceased person back to his home.

GONDS.

The Gonds number over 8,000, of whom all but 250 were classified as Hindus. Those who belong to the sub-caste of Raj Gonds claim precedence over other members of the tribe and have undoubtedly become more Hinduized.

Certain other castes are probably non-Aryan in origin, but have remained low in the social scale and have not become Hinduized to the same extent as the Rautias and other castes described above.

The Ghāsis are a Dravidian fishing and cultivating caste found in the Chotā Nāgpur Division, the district of Sambalpur and the Feudatory states. Of the total number of 70,000 nearly 21,000 are inhabitants of the Rānchi district, of whom 14,500 were returned as Hindus and 6,200 as Animists. The caste profession is to act as musicians at weddings and festivals and to perform menial offices of all kinds. Ghāsi women act as midwives and nurses. Their marriage ceremony is a debased form of that in ordinary use among orthodox Hindus. Widow marriage and divorce are freely practised and polygamy is permitted. The Ghāsis eat beef and pork and are greatly addicted to drink. Colonel Dalton regarded them as Aryan helots and says :—

GHASIS.

“ Far viler than the weavers are the extraordinary tribe called Ghāsis, foul parasites of the Central Indian Hill tribes and submitting to be degraded even by them. If, as I surmise, they were Aryan helots, their offices in the household or communities must have been of the lowest and most degrading kinds. It is to be observed that the institution of caste necessitated the organization of a class to whom such offices could be assigned and when formed, stringent measure would be requisite to keep the servitors in position. We might thence expect that they would avail themselves of every opportunity to escape and no safer asylums could be found than the retreats of the forest tribes. Wherever there are Kols, there are Ghāsis, and though evidently of entirely different origin, they have been so long associated that they are a recognised class in the Kol tradition of Creation which appropriately assigns to them a thriftless career and describes them as living on the leavings or charity of the more industrious members of society”.

The Gōraits are a non-Aryan caste of musicians, comb-makers and cotton-carders. They are also village watchmen and messengers, and in fact their functions may be aptly described as those of the village drudge. One family of Gōraita is usually found in every village. They profess to be Hindus, but have not yet attained to the dignity of

GORAITIS.

employing Brāhmans. They worship Devi Mai and a tribal spirit called Purubia, to whom a goat is sacrificed once a year. On occasions of illness an exorcist is called in to detect the spirit or witch who is giving trouble. If the exorcist attributes the visitation to the wrath of the tribal god, the Pāhān is called upon to offer a sacrifice. The Gōraits observe few restrictions in the matter of food or drink and in social status rank with Lohrās and Ghāsis.

LOHĀRS.

According to the Census figures for 1911 the total number of Lohārs in the district was 46,946, of whom 30,317 were Hindus, 16,055 Animists and 574 Christians. The Lohārs consist partly of immigrants from Bihar who are known as Kanaujīā Lobārs and partly of indigenous blacksmiths who are known as Nāgpuriā Lohārs or Lohrās. The latter are a recent accretion from the ranks of the aboriginals and are often called Kol. Lohārs. They are divided into two sub-castes, *viz.*, Sad Kamār and Lohrā proper. The former have abandoned their caste occupation and are engaged in agriculture. They still speak Mundāri and in some villages follow the Mundā custom of burial in a *sasāndiri*. They do not take meat other than of fowls or goats, do not drink *pachwai*, do not take cooked food from Mundās and will take water only from those who observe the same distinctions in the matter of food as themselves. On the other hand, they admit into caste the children of Mundā women though the woman herself is regarded as a concubine. The Lohrās are much lower in the social scale than the Sad Kamārs; they observe very few restrictions about food and drink, for they take cooked food from both Mundās and Orāons, and even eat the carcasses of dead animals. Inter-marriage between Sad Kamārs and Lohrās is unknown. The religion of the Lohrās is mainly animistic; they worship their gods without the intervention of any priest, and resort to exorcism in case of illness or trouble.

MAHLIS.

The Māhlis are a Dravidian caste of labourers, palanquin-bearers, and workers in bamboo. Sir Herbert Risley conjectures that the group comprising the Bānsphor, the Sulānkhī, and the Tāntu Māhlis, is a branch of the Santāls, separated at a comparatively recent date from the parent caste; and bases his conjecture on the ground that the totemistic sections of the Māhlis correspond with those of the Santāls. It is

equally probable that the outlying sub-caste of Mahli Mundās, found in the Rānchi district, parted from the Mundās because they followed a profession held to be degrading by the tribe. The Māhlis occur in very old Mundā traditions, and even in their mythology, and are said to have been out-casted for unclean eating. They eat beef, fowls, and pork, and, though the latter is the totem of the race, they avert the consequences of breaking of the taboo by throwing away the head. They are also much addicted to spirituous liquor. The religion is a mixture of half-forgotten Animism and Hinduism imperfectly understood. They worship Bar Pabāri (the mountain god of the Mundās), Manasa, the snake goddess and other godlings of the animistic tribes. They have not yet risen to the dignity of employing Brāhmans. The Māhlis have a bad reputation as thieves, and have a sort of thieves' jargon of their own.

In Risley's "Tribes and Castes of Bengal" the Chik Barāiks are said to be a sub-caste of Pāns, but, apart from the fact that the profession of each caste is weaving, their connection with the degraded tribe of Pāns found in Orissa is doubtful. The Chik Barāiks claim to be Aryans and Hindus, and are certainly fairer and more Aryan in appearance than the Pāns or Pāns who are found in Mundā villages, often speaking Mundāri and following many of the Mundā customs. The latter are most probably Dravidian, though Colonel Dalton suggests that they are "in all probability the remnants of the Aryan colonies which the Hos subjugated". This theory is doubtful, for there is little evidence to prove that there was an Aryan civilization in Chotā Nāgpur before the incursion of the Dravidian races, but it may be that the Chik Barāiks, who are considered locally to be the social superiors of the Pāns, are the descendants of some Aryan weaving caste which settled in Chotā Nāgpur at an early date. Both castes now claim to be Hindus, and at the census of 1911 out of 29,000 Chik Barāiks and 14,600 Pāns, only 3,400 and 600, respectively, were classified as Animists.

PANS AND
CHIK
BARAIKS.

According to the census statistics of 1911, of the total population of 1,387,516, 550,715 were Hindus, 51,158 Musalmans, 177,473 Christians and 607,820 Animists. "Animism is the term used to cover the miscellany of superstitions which

RELIGIONS.

prevail among primitive tribes in all parts of the world. These tribes are very vague in their religious conceptions, but they all agree in the presence on earth of a shadowy crowd of powerful and malevolent beings who usually have a local habitation in a hill, stream or patch of primeval forest, and who interest themselves in the affairs of men. There is also a general belief in magic and witchcraft. From the point of view of the Census Animism is used as the name of the category to which are relegated all the pre-Hindu religions of India.* The practical difficulty is to draw the dividing line between Hinduism and Animism. Many semi-aboriginals lay claim to be Hindus, though Hindus scorn their pretensions, and in the Ranchi district the entries in the Census schedules depended largely on the caste of the enumerator. In the case of the purely aboriginal tribes, such as Mundās, Oraons, Khariās, Asurs, nearly all who were not converts to Christianity were recorded as Animists, but members of the semi-aboriginal tribes, such as Ghāsi, Turi, Lohār, Dom, Gond, who worship some Hindu gods and have adopted some Hindu customs, were entered as Animists if the enumerator was a Hindu, but as Hindus if the enumerator was a Christian or an educated aboriginal. The description of the various castes and tribes given above shows the extent to which Hindu customs have been adopted. The number of Christians has increased largely in the district during the last forty years and has risen from 343 per 10,000 of the population in 1881 to 1,283 in 1911. The conversions have been wholly from the aboriginal races, and the number of Animists has fallen from 5,471 per 10,000 in 1881 to 4,381 in 1911. This remarkable spread of Christianity has had a great effect on the district and the story of Missionary work in Chotā Nāgpur has been described at length in another chapter.

Birsaites.

A small number of persons in the district were enumerated in the recent census as Birsaites, or followers of Birsā Mundā. Birsā's religion was a mixture of Hinduism and Christianity. The central doctrines are that there is one God, that Birsā is his incarnation on earth, and that

* Census of India, 1911, Volume I, Part 1, by Sir E. A. Gait, K.C.S.I., C.I.E., I.C.S.

purity of character and habits are the essential things demanded of man by God. A Birsaiter must wear the sacred thread, must abstain from animal food, must not work on Thursdays (the day of Birsā's birth) and must not cut down *sāl* trees on Tuesdays. Many Mundās had, and still have, a belief in his supernatural powers. When he was in jail, no Mundās believed that he was really confined. They alleged that he had gone up to heaven and that the authorities had only a clay figure in jail which they pretended was Birsā. After his death from cholera during his trial, his body was shown to certain Mundās but they refused to be convinced that it was his corpse, and some Mundās even now believe that he will come again. There is said to be a movement to induce his younger brother to revive the cult, but the latter has not the enterprise or enthusiasm of Birsā and the religion seems doomed to die of inanition. Only fifteen persons were classified as Birsaites in the recent census.

In the account given above of many of the smaller tribes, their religious beliefs have been briefly described. The beliefs and superstitious of the Orāons and Mundās are not only better known, but also may be regarded as typical of the animistic religion of the aboriginal races and thus merit a more detailed account.

The cult of Sing Bōngā and ancestor worship are characteristic features of the Mundā religion. Subordinate deities and spirits have also to be worshipped, or rather propitiated, and the word *Bōngā* now is used to denote all spirits which exert an influence for good or evil, and, when used alone, those spirits or subordinate deities who cause sickness and other evils, if not appeased with sacrifices. Sing Bōngā is the sun-spirit or god of light, he is the invisible supreme being who created all the other *bōngās* and is essentially and wholly good. All men's lives are in his hands, though power to do mischief is given to the inferior deities. There is no specific worship of Sing Bōngā, but he has to be saluted every morning and in times of special calamity receives a sacrifice of a white goat or white fowl. The sacrifices are not offered either to Sing Bōngā or to any of the inferior spirits because they stand in need of food or drink, and the Mundās explicitly maintain that they take only the honour of the sacrifice.

Religion of
the Mundās.

The spirits of the ancestors are known as *Ora-bōngāko*, or gods of the household. Some two or three days after the death of any person, except infants or women dying in child-birth, the ceremony known as *Umbū!-adar*, or bringing in of the shade, is performed. The procedure is as follows:— In the evening two persons enter the deceased's house, bolt the doors, place some food in a cup and sprinkle ashes over the whole floor. Meanwhile the villagers or relatives of the deceased go to the place where his body lies buried or was burnt, and one man addresses the deceased as follows:—"Here now we have come to recall thee home. Thou hast been long enough out in the field in the chill and cold". A procession is formed to the house of the deceased and, arriving at the door, the speaker asks in the name of the shade that the door may be opened. A short dialogue ensues, and the persons inside the house express misgivings as to the intentions of him who seeks admission. When the replies of the shade have satisfied them, the door is opened, and the floor and leaf-cups are examined. If there is any real or apparent foot-print in the ashes and any real or apparent disturbance of the food, all are satisfied that the spirit has taken up its abode in the *ading*, a side room used for the storing of rice. If no traces are found, the ceremony is repeated. After three unsuccessful attempts, the spirit is held to have taken up his abode in some tree or rock. The bones of the deceased or a portion of them are buried under the common tombstone of the *kili* on the occasion of the *jāng-tōpā* and the tomb is anointed in honour of the dead with any oil that the members of the family have with them.

The *Ora-bōngāko* receive daily worship, and before every meal a *Mundā* drops a few grains of rice on the floor as an offering to them; similarly a few drops of rice-beer are given to them before drinking. There is also a special feast every year in their honour, which is known as the *Sarhū!* or *Bā-Parob* (flower feast), and they are also worshipped along with other deities on other occasions. An *Ora-bōngā* is regarded as having power to afflict the living with the disease of which he died, and hence sacrifices have to be offered to them; as a preventive of evil the shade is propitiated by a gift of some stimulant, such as rice-beer or tobacco, of which the deceased was in his lifetime particularly fond; and in time of illness a sacrifice, either of urid, cooked rice, cooked fish,

a black fowl, red goat, or sometimes a bullock, is offered. If a newly-married woman gets frequently ill, her illness is held to be caused by one of the *Ora-bōngās* of her father's house who has followed her to her new home. Such spirits are known as *Horatenkoa bōngā* or traveller's *bōngā*, and must be appeased by a sacrifice offered by the woman and her husband on the road leading to her home.

The other deities of the Mundās are those which are associated with certain natural features of the country, such as hills, rivers, pools, woods, trees, etc. Thus *Buru Bōngā* is the god who resides in the hills and is associated with any high or conspicuous hill, especially the remarkable hill Marang Buru near the village of Lodhmā, to which not only Mundās and other aborigines but also Hindus and Muhammadans resort to offer sacrifice. The *Pangrua bōngā* is associated with a waterfall near the village of that name in Khunti thana. The *Ikir Bonga* rule over, and have their abode in, tanks and lakes while the *Nage Era* haunt low swampy places. The *Deswali Bōngā* with his wife, *Jaker Burhia*, is found in every village and has his abode in a particular *sāl* tree in the *sarnā*, or sacred grove, a patch of the forest primeval left intact to afford a refuge for the forest gods. Each god has his peculiar powers of doing evil and has to be propitiated with appropriate sacrifices. To account for the origin of these gods the Mundās tell the Asur legend, which is recited yearly at some festivals.

The Asurs, says the legend, were famous iron-smelters who prided themselves on their strength and numbers and defied even Sing Bōngā. Sing Bōngā became angry at the smoke of their furnaces which ascended up to his seat in heaven and sent various birds as messengers to tell the Asurs to stop their work. But the messengers were treated with contumely; the king-crow, which was formerly white, was covered with coal dust, the tail of another bird was pulled out to an abnormal length, the king-vulture was hit on the head with a hammer, and the treatment given to the bird-messengers permanently changed their appearance. At last Sing Bōngā determined to visit earth himself and stop the practices of the Asurs. He adopted the disguise of a leprous boy and being rejected with horror by the Asurs, was taken in by a childless old couple of Mundās named *Lutkum Haram* and *Lutkum Burhia*. By some miraculous

deeds, such as smashing balls [of iron with eggs and causing the paddy of the old couple to multiply, he won the respect of the Asurs. He also caused their iron-ore to fail and their furnaces to fall in. In distress they came to him for help, and he advised a human sacrifice: As they were unable to obtain a victim, he agreed to be sacrificed by being burnt alive in one of their furnaces. The Asurs accordingly shut him up in a furnace, but when the furnace was opened, Sing Bōngā appeared, bright as the sun and laden with gold, silver, and precious stones, and persuaded the greedy Asurs that, if they too entered the furnace, they would find a large store of the precious metals. The men believed him and entered the furnace, while their wives blew the bellows. Thus all the male members of the tribe were destroyed. The Asur women, in distress at the loss of their husbands, entreated Sing Bōngā to give them sustenance. He agreed to do so if they promised obedience and respect. On their making the promise, Sing Bōngā rose to heaven with the Asur women holding on to his garments. When they had risen to a certain height, he threw them over the country and they became the *bōngās* of the spots on which they fell. Sing Bōngā promised that henceforth the Pāhān would sacrifice to them, and thus they would get sustenance.

These deities are not generally malevolent, but must be appeased occasionally with sacrifices. A more malevolent class of spirit are the spirits of persons who have died unnatural or violent deaths, such as *Churins*, *Muās*, *Apsans*, etc. These evil spirits are distinguished from the spirits of the ancestors and the gods of the village, and are termed *banīta bōngās* or spirits which have to be propitiated in contradistinction to the *manīta bōngās* who have to be adored. The detection and propitiation of these spirits as well as the detection of the witches or wizards who have the power to stir them up to do evil is the special function of the ghost-finders, the *Najos*, *Matis*, *Deonras* and *Sokhas*, whose methods are described in a subsequent paragraph.

Hinduism
among
Mundās.

A large number of Hinduized Mundās are to be found, especially in the Five Parganas, who no longer join in the old national worship. In most cases, however, they still make use of the services of the Pāhān to offer sacrifice to the village gods whose influence over the affairs of the village is never questioned.

Maḥādeo is a favourite god with these Mundās, and Devi-Mai (Sakti) also receives homage and worship.

The Orāon religion resembles that of the Mundās in many respects, especially in its recognition of an omnipotent benevolent deity and in the worship of ancestors. Religion of
the Orāons.

The supreme Being is called Dharmes, whose abode is in the Sun, but who is not identified with the sun and is regarded as almost immaterial. Dharmes is not malevolent but has given the management of the affairs of the world into the hands of spirits who have to be appeased. It is only as a last resource that an Orāon who has failed to get rid of disease by propitiation of the evil spirits will turn to Dharmes with the words "*Akkum ninim ra-ada!*". "Now art even thou," meaning "now the case rests with thee". Vows are made to Dharmes and sacrifices are promised if a recovery is obtained. The sacrifice to Dharmes, as to Sing Bōngā, consists only of a cock or a goat which must be white in colour. Dharmes is also called by the Hindu name of Bhagwān.

According to the belief of the Orāons every man has two shades ; the heavier goes to *markha*, the heaven of the Orāons ; the lighter remains on earth. On the day of the burial of a corpse, the ceremony known as *Chhain Bhitrāna* takes place. A miniature hut of straw is built near the home of the deceased, and one of the men of the village sets fire to it and, striking together a plough-share and sickle, calls the name of the deceased and summons him to come back, as his house is on fire. The shade promptly returns and on his return his nearest relative sacrifices a cock and pours the blood into a corner of the house, to induce him to remain there. A later ceremony is the *Koha Benja*, or great marriage, when the ashes of the corpse are deposited in the ancient burial place or *kuadi*. This may be either in a field, covered with a huge stone, or in the bed of a river. The relics of the deceased are carried round the village and the ceremony is believed to cause his spirit to be admitted to the circle of the departed spirits in the other world. Sacrifices are offered to the spirits of departed ancestors, partly to ensure their repose and partly to obtain help from them. At the festivals, and in particular at the *Naya Khani* or eating of new rice, some morsels of food and drops of liquor are thrown on the ground for the benefit of the ancestors. In times of great distress, the spirits of the ancestors are invoked and they are also asked to Ancestor
Worship.

protect a new-born child or newly-married couple. It has been suggested by Father Dehon that this was the original form of worship of the Orāon tribe and that the worship of other deities through the agency of the Pāhān or Ojha was borrowed from the Kolarian tribes among whom they dwelt. He considers this to be proved by three facts, first that members of the tribe themselves believe it, secondly, that in these ceremonies a pure form of the language unmixed with Hindi is used, and thirdly, that Orāons prefer, if possible, to have as their Pāhān a member of a Kolarian tribe.

To explain the origin of the minor deities and spirits, most of whom are malevolent and have frequently to be propitiated, the Orāons tell the legend of the destruction of the Asurs which differs only in details from the Mundā legend already given. Thus, one of the minor deities, *Baranda*, is said to be the son of an Asur woman who was pregnant at the time of the destruction of the Asur men. He was kept by Dharmes and given his post to reward the labour of his mother. He is regarded as the cause of misfortune and poverty, if he takes up his abode in a house. As Father Dehon puts it, the Orāons look upon God as a big zamindār who does nothing by himself but keeps a *chaprassi* or *tahsidār*. *Baranda* is the *chaprāssi* who has all the defects common to the profession, and complicated ceremonies have to be performed, which probably represent the payment to *Baranda* of his *dasturi*, without which he cannot be induced to leave the house.

The minor gods and spirits may be divided into those of the household and those of the village. *Baranda* belongs to the former class. The *Erpa-nad* or house demon is represented in the house by a wooden peg, and sacrifices of fowls and goats have to be made to her in cases of illness. The village spirits are *Khunt*, *Bhula* and *Churil*, which are really generic names. Thus *Khunt* is the generic name for all the *bhūts* who have taken up their abode in the village, of whom the fiercest are *Darha* and *Dakhin* his wife. To *Darha* only must human sacrifices be paid at least once in each generation, the victim, usually a boy or girl, being known as *Olonga*. Such sacrifices may perhaps still be made, as it is easy for a village to unite in a conspiracy of silence. *Churil* is the generic name for the spirits of women who have died in pregnancy. They appear in

the form of women, but with their feet turned backwards, and are especially dangerous to new-born children and women who are confined. Various means are taken to prevent such spirits haunting a village, and, if a woman dies in childbirth, her ankles are broken and stakes driven through her feet before she is buried in a lonely place far away from the village. *Bhūla* are the spirits of all persons who have died violent deaths; the word literally means "wanderers" and the spirits are supposed to wander about, still bearing the scars of the wounds from which they died. The chief of the village deities are *Pat* with his chaprassi *Duharia* and *Chola Pachō* or *Sarnā Būhi*. The former dwells in a hill near the village and the latter in the sacred *sāl* grove, while her sisters dwell in other trees. She is credited with giving good crops. *Deswali*, her servant, is said to cause mortal disease among men and cattle. *Chandi* is the goddess of hunting to whom sacrifices must be made to ensure a plentiful supply of game. All the village *devtas* and *bhūts* must be appeased by the sacrifices of the *Pahāns*.

The above account is based chiefly on the interesting account of the "Religion and Customs of the Orāons" contributed by the late Father P. Dehon, S.J., to the Asiatic Society of Bengal,* which refers principally to the Orāons of Barwe and Chhechhari among whom he worked. The religious beliefs of the Orāons, as of other Animists, are very amorphous and vague; new gods are invented, new customs are adopted, new festivals are introduced, and in other parts of the district no doubt many variations in detail would be found. But the account applies equally to all Orāons in that it shows how they believe themselves to be surrounded by a crowd of deities and spirits most of whom are malevolent and who are on the look-out for any opportunity to do them harm.

The belief in malevolent spirits is the origin of the belief in witchcraft. To detect the malevolent *bhūts* or the witch or wizard who is stirring him up to do mischief is the function of the witch-doctor or augur. The witch or *dain bisāhi* is usually an ugly old woman who is supposed to have acquired the power of commanding the *bhūts*. The *bhūts* sometimes of their own accord attack people but are often stirred up to do so by the

Exorcism and
witchcraft.

* Published in the *Memoirs of the Asiatic Society of Bengal*, Volume I, No. 2, pages 121—181, 1906.

witch. When sickness attacks a villager, the first thing to be done is to find out who is the malevolent spirit or the witch, and the only person competent to do this is the *ojha*, *deowra*, *sokha*, or *mati*. The person who believes himself to be the victim of the wrath of the *bhūt* goes to the ghost-finder. The latter takes some rice and oil, lights a small earthen lamp, and places the rice on a *sūp* (winnowing fan). He then concentrates his gaze on the lamp, chants numerous *mantras* or incantations, in which the names of all the spirits are mentioned. As each name is mentioned some rice is thrown into the flame, and the presence of the guilty *bhūt* is revealed either by the flame flaring up when his name is mentioned or by the winnowing fan moving in a mysterious manner. The next step is to propitiate the *bhūt* by sacrifices and the *ojha* tells the victim what sacrifices are appropriate. Father Dehon gives an interesting account of the ceremony whereby the *ojha* among the Orāons imprisons the *bhūt* and thereby prevents him causing further trouble. The *bhūt* is present in the lamp, for the *ojha* has seen him. To make him captive, he places a cone of *sāl* leaves over the lamp-wick, buries the cone in an ant-hill, and offers sacrifices to his patron *deota* to persuade him to guard the *bhūt* carefully in his feeble prison. Next comes the *niksāri* ceremony whereby the *bhūt* is confined in a stronger prison. When the man has collected the victim for sacrifices, the *ojha* gets an iron cone prepared by the village blacksmith and after the usual incantations places the lamp-wick in the iron cone (or *singhi*), closes it securely and buries it in the ant-hill. Sacrifices are then offered to Dharmes and other gods, and the *bhūt* is thus effectually prevented from doing further mischief. The method of detecting a witch is similar to that of detecting a *bhūt*. A visit is paid to the *ojha* or *sokha*, the latter being generally a Hindu or low caste Muhammadan or even an Orāon Bhagat. The *sokha* selected is usually one living 15 or 20 miles from the village, so that the people may be sure that there is no imposture. The witch doctor lights his lamp and falling into a sort of trance begins to describe the appearance of the witch. The people soon fix his description on to some unfortunate old woman of the village and returning home proceed to vent their wrath on the witch, calling on her to produce the sacrifices with which to appease the *bhūts*, and, if she fails to do so,

beating her and driving her from the village and in many cases putting her to death. Cases of the murder of witches even now occasionally come before the courts, and there is little doubt that cases also occur which are never reported and that the *sokhas* are dangerous members of the community.

Another curious custom whereby Orāons seek to protect their village from the attacks of disease is the *Rog Khedna*. In one form of this ceremony all the inhabitants of the village carry out old earthen cooking-pots, pieces of mat, etc., and place them outside the boundary of the village, to show the evil spirit who caused the mischief the way out of the village. Another form is to take the herdsman of the village, tie a cow-bell round his neck and drive him beyond the boundaries. A fowl is then sacrificed and the head buried. A string is then fastened to the head and drawn across the road, and any person who passes by and touches the string with his right foot will get the disease and free the patient from it. According to Father Dehon, the sacrifice is to *Duharia* who is regarded as the *Chaukidar deota*, whose special function is to keep the *Bhulas* in order, the string being set so that, if the *Bhulas* try to re-enter the village he will be awakened.

The festival of the Orāons and Mundās differ only in detail and may conveniently be described together.

Festivals of
the Orāons
and Mandās

The Māgē festival takes place in the month of *Pous* (January) after the crops have been harvested. The spirits of the deceased ancestors and other minor deities are worshipped, in order that good crops may be obtained in the coming year and that the village may not be visited by any calamity or disease. The festival is a great occasion of rejoicing and often degenerates into an orgy; *Māgē Kaji* or words used at the festival being a synonym for obscene language. At this time labourers are released from their contracts and engaged for the new year.

The Phaguā festival corresponds to the Holi of the Hindus and is observed in order to ensure a successful hunt. Sacrifices are offered by the Pāhān to the deities of the hills and forests.

The Sarhūl festival, known by the Orāons as *Khaddi*, takes place in May when the *sāl* trees are in bloom. *Sāl* flowers are gathered and taken to the *sarnā* and sacrifices offered to various

gods. During this festival no Mundā or Orāon will touch his plough. According to Father Dehon the festival celebrates the marriage of the Sun-god (Bhagwan) with the earth goddess (Dharti Mai).

The Batauli festival, called by the Orāons *Kedletta*, is celebrated in June before the reploughing of the low-lying rice fields and the transplantation of paddy. Sacrifices are made by the Pāhān to various deities to ensure a good crop.

The Kolom Sing festival, also known as the *Khalihān puja*, takes place in Agahan (November), before the harvest is threshed. No villager may thresh his corn before the Pāhān has prepared his threshing-floor (*Kolom*) and offered sacrifices of fowls.

The Jom Nawa or Naya Khāni is celebrated when the *gora* paddy is harvested before the new rice is eaten. When the *gora* paddy is ripe, the Pāhān sticks an arrow in a field and proclaims that harvesting may begin. As each household begins to reap, they make a private feast of the occasion, and the Pāhān and other villagers offer sacrifices of fowls. The festival is not universal among the Mundās, and in the localities where it is practised it is probably borrowed from the Hindus.

The *Karam* festival is also probably borrowed from the Hindus by the Mundās and Orāons. On the eve of the day fixed the boys and girls fast and go together to the nearest jungle and bring back a branch of the *Karam* tree, dancing and singing in triumph. The branch is planted in the middle of the *akhrā* and the whole night is spent in dancing and singing round it. Next morning the branch is thrown into the river.

The Sohrai festival takes place in Kartik (October-November) and is properly the feast of the cattle to whom the people wish to show their gratitude. A lamp is hung in the cowshed and kept burning all night and sacrifices are offered to Goreā, the deity presiding over cattle. The cattle are anointed with oil, garlanded with flowers, given a good feed of corn and turned out to pasture.

The Ind Parab is celebrated by the Mundās in a few villages only, generally in those of which the landlord is a Nāghānsi. Two large umbrellas are raised in honour of the first Nāghānsi chief, and, at the village of Sutiāmbē, in honour of Madra Mundā, the foster-father of the first Chief.

The aboriginal tribes have borrowed other festivals from

the Hindus, such as the Dasahara, and in fact miss no opportunity for feasting, dancing and merriment. At all these festivals large quantities of rice-beer are drunk, and the young men and maidens spend the nights in dancing. An excellent account of the dances and songs will be found in Mr. S. C. Roy's books on the Mundās and Oraons. The *Jātras* of old were, as Mr. Roy points out, the great social congress of the Oraons; here the young men of one clan selected brides from the maidens of a clan other than their own; while the tribal dances were supposed to ensure success in hunting and good crops. At the present time the *Jātras* have not the same importance; they undoubtedly conduce to intemperance and immorality, and the Missions have sternly set their face against them. Immorality is to be deplored, but it would be a great matter for regret if these festivals, survivals from a primitive age, were entirely abandoned.

CHAPTER IV.

PUBLIC HEALTH.

Vital
statistics.

A COMPARISON of vital statistics before 1892 is of little value. The registration of deaths was introduced in 1869, the duty of reporting them being imposed on the village chaukidar, and, though it has been continuously carried on, there have been many changes of system and in the area of the district since that date. In the Ranchi Municipality births were first registered in October 1873 and Act IV (B. C.) of 1873, which makes compulsory the registration of births and deaths, was extended to that area in 1887, and to the Lohardagā Municipality in 1890. Registration of births was begun in rural areas in 1877, and the system now in vogue, whereby the chaukidars report deaths and births at the weekly parade at the thāna, was introduced in 1892.

The agency for reporting births and deaths is not more reliable than in other districts, while the size of the areas within the jurisdiction of each police station and the long distances from headquarters render it more difficult for police and medical officers to check the chaukidars' reports. The statistics of births and deaths, however, are probably more accurate than in the plains, as the aboriginal population have no prejudice against reporting the deaths and births of females, but the causes of death are hopelessly confused. Cholera and small-pox may be diagnosed, but all other diseases are classified by the chaukidar under the general head of "fever."

The decade ending in 1902 was generally considered an unhealthy one, probably because of the mortality in the famine year of 1897, but the average birth-rate was 37·14 per thousand, and the death-rate only 25·56. In the famine year of 1897, the death-rate rose to 46·48, but in the following year it dropped to 18·51, the lowest rate found in any district of the province. In

the ten years 1901-10, the birth-rate averaged 44.54, but the death-rate (28) was slightly higher than in the preceding period. In 1908, a famine year, the death-rate rose to 46.05, but in the two years of good harvest which succeeded the famine the birth-rate rose to 44 and 52, while the death-rate fell to 26 and 29. The average birth-rate during the five years ending 1915 was 41.14 while the death-rate for this period was 24.93.

The birth-rate is, as might be expected, highest among the aboriginal population in the less developed parts of the district, especially in Chainpur, Lohardagā and Gumlā thānas. Even allowing for the inaccuracy of the statistics, it is not surprising to find that with this high birth-rate the population of the district rose by over half a million between the years 1872 and 1911 and that between the two last censuses of 1901 and 1911, in which great accuracy was obtained, the population increased from 1,137,000 to 1,387,000.

The term "fever" used in the published statistics must be held not merely to mean malaria, but to include all kinds of febrile complaints, such as respiratory diseases and measles, as the reporting chaukīlar classifies all such diseases indiscriminately under the one name.

Principa
diseases,
Fever.

There is no doubt, however, that the inhabitants of, and immigrants to, the district do suffer severely from malaria, and it is probable that many of the true fevers are malarial in origin. Malaria is not an uncommon cause of attendance at the dispensaries at all times of year, but particularly during August and September and at the end of the rains. Major Fry, I.M.S., who has made a special study of the subject, states that all three varieties are met with: Malignant tertian, benign tertian and quartan, the latter being particularly common in the sub-plateau areas which are associated with high spleen rates. Major Fry's observations show that the Rānchi plateau is not an endemic area, though the edges of it are hyperendemic, perhaps because the residents descend frequently to the lower plateau. The largest number of cases and the worst type of fever occur in the lower plateau, in Tamār and the south-west of the district, and though slight enlargement of the spleen is not uncommon throughout the district, the splenic index is only high in those areas. The resident population of the district have established relative immunity from the disease, but new settlers or casual visitors are

very susceptible. A notable fact is that the police stations are usually highly malarious, apparently because of the aggregation of visitors from infected areas. The villages compare unfavourably as regards sanitation with Bengal, every hollow near the houses is used as a receptacle for manure, with the result that the water-supply is polluted, and the pools round the villages form most favourable breeding grounds for anopheline mosquitoes. The mosquitoes most numerous are *Myzomyia Rossi*, *Myzomyia Culcifacies*, *Nyssorhynchus Fuliginosus* and *Pyretophorus Jeyporensis*. Of these, the second and fourth are common in the hyperendemic regions, and as they are well known to be the most prominent carriers in India, are most probably the cause of the distribution of the disease.

For the ten years ending 1902 the death-rate from fever was reported to be 14.13 per mille and for the ten years ending 1910, 17.83, the total mortality during these periods being 25.56 and 28.006, respectively. In 1908, a famine year, there was abnormally high mortality, the death-rate for fever alone being as high as 25.06 per mille. In the year 1915, when the total mortality was 26.53, the mortality from fever was reported to be 18.93 per mille.

Cholera.

In normal years the number of deaths from cholera is small. The natural drainage of the district is excellent and it is only after a very defective monsoon that the wells and the *dāris*, or springs in the terraced rice-lands, fail to give a supply of water, which with care is potable. The conditions favouring a spread of the disease are present only in abnormal years when the failure or early cessation of the monsoon causes a shortage of good drinking water, and the epidemics which have occurred in famine years have been severe. During the years 1893 to 1902, the average mortality from cholera was only .80 per mille, while in the following period, 1901-10, it was slightly lower. In 1908 the disease broke out in epidemic form, both in the famine area to the west of the district and in the town of Ranchi, and the death-rate in this area rose to 7.01 per mille. In 1911 only 17 deaths from cholera were reported in the whole district, but in 1912 there were 347 deaths in all or .25 per mille. There was a virulent outbreak in the village of Hatmā Karamtoli, near Ranchi, which caused 27 deaths out of 40 cases in a period of three weeks. The

infection was also conveyed through milk to Rānchi Bazar, where several deaths occurred. In the Khunti thana there was also a severe outbreak and, in spite of the devoted efforts of the English Mission doctors at Murhu, the mortality was above 60 per cent. A similar outbreak occurred in 1915, when the death-rate rose to '56. These epidemics occurred at the close of the hot weather, and a copious rainfall in July and August stopped the further spread of the disease, by replenishing the water-supply and destroying flies and other germ-carriers. Outbreaks such as these may be said to be typical of the disease in normal years.

Serious epidemics of small-pox are not common, and as a rule the death-rate is low, the average mortality for 20 years being only '20 per mille. In the epidemics of 1892, 1908 and 1909, the mortality was 1·97, 1·28 and 1·14, respectively, but in no other year did the death-rate exceed '50. Small-pox.

Plague is practically unknown at present in the district; only ~~four or five~~ deaths have occurred in the last ten years, and these were of persons who were already infected with the disease, before they entered the district. Plague.

Dysentery and diarrhœa are more common than in the neighbouring districts and cause considerable mortality during the hot and rainy seasons. Bad drinking water is a principal cause of these diseases and little care is taken to keep the tanks and *dāris*, which form the water-supply of a village, free from pollution. A contributory cause is the large extent to which the aboriginal population feed on jungle fruits and roots, and coarse grain, such as *gondli*, and it is for this reason that the mortality from bowel diseases is highest in, and after, years of scarcity. In such years the *gondli*, which ripens in August and is eaten unmixed with rice, creates the disease in constitutions already enfeebled by a sparse diet of jungle fruits and roots. In 1897 the mortality was exceptionally high (4·97), and in 1907 and 1908 it was over 3 per mille, but these figures are certainly considerably underestimated. It is difficult to believe that in a normal year, such as 1912, there would be only 1,650 deaths from this cause. Bowel complaints.

Tubercle of the lungs, joints and abdominal viscera is becoming more common in the town of Rānchi. The over-crowding of buildings and the multiplication of schools and boarding-houses must be held responsible for this unfortunate development. Healthy boys from country villages are brought into close contact with phth'sical town-children, and in many cases either become Tuberculous diseases.

victims of the disease themselves or, on settling permanently in the town, raise up families, whose powers of resistance to the disease appear to be very feeble.

Rabies.

As in other parts of India, rabid jackals and dogs are frequently found in the towns and bazars, and, though accurate returns of the deaths they cause are not procurable, there is no doubt that a considerable mortality must occur in the remote parts of the district, where there is no possibility of sending the patient to Kasauli. In the town of Ranchi alone, in 1912, five patients went to Kasauli, while two persons who were bitten by a mad jackal refused to undergo the treatment and died in a few weeks.

Other diseases.

Throat affections, such as quinsy, are common, especially towards the end of the rains. Pneumonia is prevalent in the cold weather and rains. The aboriginals are generally supposed to be racially immune from goitre but several cases have been known. The glare of the laterite soil and the dust of the uplands are contributory causes of diseases of the eye, especially conjunctivitis, but cataract is rare as compared with other parts of India. Rheumatic affections often cripple permanently the persons whom they attack, and skin-diseases and several species of intestinal worms are common. Cancer of the lips occurs among elderly males and is attributed to the habit of chewing tobacco mixed with lime. Venereal diseases are very rare in the district and are practically confined to the non-aboriginals of the towns.

Infirmities.

In the census of 1911 the record which was made of infirmities included insanity, deaf mutism, blindness and leprosy. The total number of persons afflicted in Ranchi district was 2,541 or .18 per cent. of the total population. Leprosy is uncommon as compared with the neighbouring district of Manbhūm, and only 160 cases were recorded. There is an Asylum for Lepers at Lohardagā, which is maintained by the Mission to Lepers in India and the East, and was started in 1884 at the instance of the Rev. F. Hahn of the Lutheran Mission; it contains accommodation for twenty-seven patients. Total blindness is also not very common, and only 1,454 persons were returned as suffering from this affliction. In 1895 a Blind School was started at Ranchi, in connection with the English Mission, by Mrs. O'Connor. The male inmates of the school are taught to

do cane and bamboo work, and the women are taught mat-making. Reading and writing are also taught on the Braille system.

Ranchi has been selected by Government as the site of a large Central Lunatic Asylum for European lunatics from Northern India and of an Asylum for Indian lunatics from the provinces of Bengal and Bihar and Orissa. For these two large institutions land has been acquired in the village of Kanke, about five miles north of Ranchi: the construction of the European Asylum, at a cost of over thirteen lakhs, has been almost completed, while plans are being prepared for the Indian Asylum which will accommodate 1,500 patients.

Lunatic
Asylums.

Till 1902, the only dispensaries in the district were those maintained by the municipalities of Ranchi and Lohardaga. The Ranchi dispensary was established in 1855, and was for a long time in charge of an Indian doctor, paid from local funds. A new building to accommodate eighteen in-patients was opened in 1872, and in that year the in-patients numbered 146 and the out-patients 1,789. During the last twelve years the hospital has been entirely rebuilt and considerably enlarged. In 1902 it consisted of one *kutchā* building, which contained both the in-patient and out-patient departments, and was stigmatised by the Commissioner as the dirtiest and most dilapidated dispensary he had ever seen. In 1902, from subscriptions raised for the Queen Victoria Memorial Fund, a new operation room and male surgical ward were erected, and in the following year the hospital was enlarged by the erection of a male medical ward and a new female ward. In 1916 four cottage wards were opened for patients willing to pay a small sum for their occupation; in 1913 two wards for infectious diseases were constructed, and, finally in 1914, a new out-patient building was completed at a cost of Rs. 20,000, as a memorial to King Edward VII. The hospital now contains sixty beds and is well equipped. It will not be out of place to mention that the hospital owes much to the liberality of Rāj Sahib Thakur Das of Ranchi, who bore the whole of the erection of the female ward, was a liberal subscriber to the King Edward Memorial Ward, and has recently met a considerable portion of the cost of an X-Ray installation to complete the equipment of the hospital. The hospital is under the Civil Surgeon, and in the year 1915, 17,466 patients were treated.

Hospitals and
dispensaries.

The Lohardagā dispensary was opened in 1881 and has recently been rebuilt and enlarged at a cost of Rs. 15,000. In 1915 the total number of patients was 6,751. Since 1902, the District Board has done much to bring medical relief within reach of the inhabitants; dispensaries were opened at Bundu and Chainpur in 1902, at Gumlā in 1903, Silli in 1906 and Khunti in 1907. The dispensary at Gumlā has accommodation for twelve in-patients and is in charge of an Assistant Surgeon. The remainder are in charge of Sub-Assistant Surgeons or local Indian doctors. At the outlying dispensaries the bulk of the work is the treatment of out-patients, either at the hospitals, or at the bazars which are visited by the medical officers, and in 1915, 22,231 patients received treatment. The aboriginal is still somewhat shy of the dispensary, and prefers to trust to his own jungle drugs or to apply to his missionary for assistance. He is impatient of slow medical treatment, but will readily submit to a surgical operation or come to the local hospital for the treatment of wounds, received either from his own kinsmen or from wild animals.

Aided and
private
institutions.

The most successful private dispensary is that at Murhu, in the Khunti subdivision, maintained by the S. P. G. Mission and aided by the District Board. The dispensary was opened by the Rev. Dr. Kennedy in 1905, with accommodation for 16 in-patients and in the first nine months nearly 3,000 cases were treated and 50 major operations performed. The hospital was enlarged in 1911 and the staff now includes an Indian doctor and a trained European nurse, in addition to the Missionary in charge. In 1910 a dispensary was started by this Mission at Itki in Berothāna, to carry on medical work among the Oraons. Buildings were erected in 1912, and consist of a dispensary, four small wards and an operating theatre, and the staff consists of a European Lady doctor and a compounder. The hospital at the headquarters of the S. P. G. Mission in Ranchi is in charge of a Sub-Assistant Surgeon and a European nurse.

The Lutheran Mission maintain the Elizabeth Dispensary at Ranchi, and at Lohardagā, in addition to the dispensary, there is a home for incurables and the small leper asylum, which has been mentioned above.

Vaccination was introduced into the district in 1867, and Act IV (B. C.) of 1865, prohibiting the practise of inoculation by itinerant *tikaits*, was extended to the Division in 1869. The compulsory Vaccination Act, Act V (B. C.) of 1880, is in force only in the Municipal areas, where the cost of the establishment is met from Municipal funds, and in the Civil station of Dorandā. In rural areas vaccination is performed by licensed vaccinators, numbering about forty-five, who receive two annas for each successful operation. There are also four inspecting officers whose pay is met from provincial funds. The average number of successful vaccinations performed annually during the five years ending 1914-15 was 50,958. The value of the protection is keenly appreciated, and in 1914-15 out of 51,818 persons vaccinated 38,189 were infants, or about 79 per cent. of the surviving infant population. Revaccination is not so popular, and the people who have been accustomed to inoculation do not realise that vaccination is only a temporary preventive, and it is only in times of an outbreak of small-pox that they will go to the trouble and expense of the operation. In addition to the prescribed fee, the vaccinators are usually required to do *pujā* for the speedy recovery of the patients and receive a few annas remuneration for this essential service.

Vaccinati

A vaccine depôt has recently been opened at Nāmikum, few miles from Rānchi on the Purulia road, from which the supply of lymph required for the province is drawn.

Two factors combine to render the problem of sanitation less acute in Rānchi than in other districts. In the first place the natural drainage, owing to the configuration of the ground, is excellent, and in the second place, there are no very large villages and bazars. The main problem is the supply of good drinking water. The town of Rānchi has plenty of good wells, and the water-supply was sufficient for the population before the town became the temporary headquarters of the Local Government. The increase in the population has made it necessary to consider the possibility of a water-supply scheme, but the schemes which have been prepared are too costly to be undertaken for some years to come. Two small pumping stations have been erected, one at Rānchi to supply water to Government House and the quarters occupied by officers, and one at Hinu to supply water to the quarters occupied by clerks. The villages rely for their water-

Sanitati

supply on rivers, tanks, and *dāris*, or springs which are found in the low-lying paddy-fields, while at the more important bazars and villages the District Board have constructed masonry wells. Many more such wells are needed, and an increase in their number will improve greatly the health of the district, by removing one of the chief causes of dysentery and other bowel complaints. In the town of Ranchi considerable improvements have been made of recent years in the scavenging and conservancy arrangements, but the arrangements are still far from satisfactory and a proper drainage system is urgently needed in the more congested parts. At Bandu and Gumlā Union Committees, financed by the District Board, have recently been instituted to look after the sanitation of these large bazars.

CHAPTER V.

AGRICULTURE.

THE cultivable land of the district is divided into two classes, viz., *don* and *tānr*. The *don* lands are the terraced low lands on which rice only is grown, and the *tānr* are the uplands which produce a coarse form of rice, known as *gora*, millets, pulses and oil-seeds. In the Khunti subdivision these lands are known as *loyong* and *piri*, respectively. Classes of land.

The *don* lands are prepared by levelling and embanking the slopes, so that they may retain the water. They are classified according to the amount of moisture they naturally retain. Fields lying at the bottom of the depressions between the ridges are known as *garhā don*, and, as they retain the moisture well, produce excellent crops in normal years and good crops even in years of drought. The most valuable *garhā don* is *kudar*, that is, land kept permanently moist by a rivulet or spring flowing through it. *Garhā don* in the Bengali-speaking portion of the Five Parganas is called *bxhal* or *dabar*. Lands lying next above the *garhā don* are known as *sekrā*, while those at the top of the slopes and immediately below the *tānr* lands are known as *chaurā* or *bade*. Such lands are extremely liable to drought, and those parts of the district which have the highest proportion of *chaurā* lands are most liable to famine. In the Settlement record *don* lands have been divided into four classes, viz. :—

Don I.—Land which is continually wet and grows both the ordinary winter rice crop and a summer rice crop known as *tewa*.

Don II.—Lands which produce the winter rice crop, which is cut in the month of Agahan (December).

Don III.—Lands which produce the winter rice crop which is usually cut in Kartik (November).

Don IV.—Lands which produce the autumn rice crop which ripens in Bhado and Aswin (October).

These four classes correspond to the *kudar*, *garhā*, *sokrā* and *chaurā don*, respectively.

The area which produces two crops in the year is very small and only amounts to 760 acres, of which nearly half is in Khunti thāna. For all practical purposes the land which is classified as *Don II* may be regarded as the best rice-producing land in the district, and of the total cultivated area of the district 12 per cent. has been included in this class, the percentage being slightly higher in the Khunti and Sadar subdivisions than in the Gumlā subdivision. Twenty-one per cent. of the total cultivated area is included in the two lowest classes; in the Sadar subdivision, where the population is more dense and the rice cultivation consequently more extended, the percentage is 23 while in the Gumlā subdivision it is only 16. From crop-cutting experiments made by officers of the Settlement Department, the produce of an acre of the two first classes of land has been ascertained to be about 19 maunds of paddy while that of the two lowest classes is about 12 maunds.

The uplands are also subdivided by the inhabitants according to their productiveness. The land nearest the village site which profits most by the manure and drainage of the houses is known as *dihāri dānr*. This includes the *bāri* or small garden which is immediately adjacent to the house and is used for growing maize, vegetables and spices, and the *bira-bāri*, in which paddy seedlings are grown for transplantation. Further away from the village site come the ordinary *tānr* lands which are divided according to the fertility of the soil, the worst being that which is very stony, with little depth of soil (*rugri tānr*). The Settlement Department have also divided *tānr* into classes. *Tānr I* corresponds to the *bāris* round the houses. *Tānr II* is level land more remote from the village, but with good depth of soil. *Tānr III* is the stony or sloping land usually furthest away from the village site, with little depth of soil and little or no capacity to retain moisture. Lands of the two latter classes usually lie fallow once in two or three years, and, taking this fact into account, the produce of the three classes in terms of paddy may be said to be, *Tānr I* eight maunds per acre, *Tānr II* and *III* three maunds per acre.

The soil is generally very poor in quality. From the earliest days of the British administration, the district was regarded as infertile and therefore of very inconsiderable value. Mr. Grant, in his "Historical and Comparative Analysis of the Finances of Bengal," written in 1787, refers to "the area commonly called Nāgpur, from the diamond mines of that place" as "barren in almost everything except the most precious jewels in the world". The soil is an infertile laterite. In the lowlands there is a large admixture of clay, but the soil of the uplands consists mainly of sand and gravel and only thinly covers the rocks beneath. As is to be expected from its gneissic origin, the soil is rich in potash but very deficient in lime and phosphates. The chief vernacular names for the different varieties of soil are (1) *pankua*, or alluvial soil, found chiefly in the Five Parganas; (2) *nagra*, called *chite* in the Five Parganas, a black sticky clay soil; (3) *khirsi*, a loam consisting of equal proportions of clay and sand; (4) *rugri*, or gravelly soil; (5) *bala*, or sandy loam; (6) *lāl matia*, the red ferruginous sandy loam, found in the *tānr* lands. Soil.

The cultivator of the Rānchi district is practically entirely dependent on a good rainfall for his crop of rice. There is very little artificial irrigation in the district. Some of the zamindārs have constructed tanks or *bāndhs* for the irrigation of their lands, and the raiyats in some few cases derive benefit from these. But many of the zamindārs are in too bankrupt a condition to undertake any works of improvement, and are, or have been, on such bad terms with their raiyats that they are reluctant to combine with them in carrying out any large works. The raiyats also are notoriously improvident, and though they have shown themselves capable of united action in the struggle against landlords, they have not yet shown themselves capable of joining together to carry out any large irrigation schemes, such as utilizing for their crops the water of the numerous rivers and streams which intersect the district. In the less developed parts of the district they are still able to reclaim lands from the jungle or to make new fields by embanking and terracing the lands in the bed of a stream, and they rest content with extending their cultivation in the manner which has been followed for centuries. In the more populous parts of the central plateau, the limit of extensive cultivation Rainfall.

appears to have been reached, and if the population increases rapidly the raiyats will be compelled to learn what are to them new methods of cultivation, to improve their uplands by the use of manure, and to make good crops a certainty in their lowlands by means of irrigation. Under present conditions the rice crops are dependent on a good rainfall, or rather on a well distributed rainfall. If the monsoon ceases in the latter half of August or early in September, the rice crop on the *chaurā* lands perishes and the raiyats are unable to get a good crop of *gorā* rice, pulse, or oil-seeds from their *tānr* lands. The dependence of the crops upon a well-distributed rainfall is illustrated by the facts of recent years of scarcity and famine. In 1899 the prospects were favourable till the end of July; in the next three months the rainfall was 15 inches below the normal. Again in 1904 the total rainfall of the year was above normal, but the early cessation of the rains caused the crops to be very poor. In 1907 the rain was normal, or above normal, during August, but no rain fell after the 9th of September.

Cultivation of
Rice.

Rice is the staple food-crop of the district. The rice grown on the uplands is known as *gorā* and includes many varieties of coarse rice, such as *alsanga* and *karanga*. It is sown broadcast as soon as the first rains break, and is reaped in September. The total area under *gorā* paddy was ascertained in the Settlement operations to be 317 square miles, or 13.17 per cent. of the net cropped area of 2,483 square miles, and the produce of this area in a normal year may be taken to be 1,444,960 maunds of paddy or 732,480 maunds of rice.

The lowland paddy may be divided into two classes, the bhadoi and the aghani. The bhadoi crop corresponds to the *lauhan*, or light rice, crop grown on the *chaurā don* and includes many varieties of coarse rice, such as *jhalar-genda* and *mughdi*. The aghani crop, which is reaped in November, corresponds to the *garuhan* or *barika* rice, grown on the lowest and best lands, and includes the finer varieties of rice, such as *kalamdani*, *tilasar* and *rai-muri*. The total area under bhadoi and aghani rice is 756 and 447 square miles, respectively, and the total produce about 10,778,880 maunds of paddy or 5,383,440 maunds of rice.

There are three processes for the cultivation of lowland paddy, viz., *bunā*, *lewā* and *ropā*. *Bunā* is sowing the rice on dry

fields shortly after the first rain of May or June, *lewā* is sowing in mud, at the end of June, seed which has been brought to the point of germination by being soaked in water for twenty-four hours, and *ropā* is the transplantation of seedlings which have been reared in a nursery. Before sowing or transplantation the fields are generally ploughed three or four times; the first ploughing (*chirna*) is done as soon as possible after the winter rice is harvested, or after the winter rains; if the *bunā* process is to be carried out, the fields are ploughed again in February or March, the clods broken up and the field harrowed and levelled; the second and third ploughing being known as *dobarna* and *uthaona*. The fields are manured sometimes in the month of Chait by spreading cowdung over them. The final ploughing just before the seed is sown on the pulverised soil is known as *puraona*. For the *lewā* process the field is thoroughly ploughed again after the first heavy rainfall of June or July and brought into a state of liquid mud. For transplantation, the seedlings are reared in the *bira-bāri* near the homestead and, after the wet field has been ploughed, are planted out by the women of the household. The fields are weeded three times, first before the seed is sown, secondly, in July or August, with the help of the plough and harrow, and, lastly, by hand in August or September. When the crop is ripe, it is harvested by both men and women, and carried off to the *khalihān*, or threshing-floor, which is preferably a flat piece of bare rock (*chātān*), or failing that, a plot of waste land in a *bāri* or mango-grove, which has been carefully levelled and smoothed. The threshing is done by men and bullocks, and the grain is stored in large bundles made of twisted straw rope known as *morās*, or in large cylindrical baskets made of split bamboo and plastered inside with mud and cowdung, called *chatkās*.

The principal bhadoi crops grown on the uplands, apart from the *gorā* rice, are cereals, such as *gondli*, or small millet (*Panicum miliare*) and *marua* (*Eleusine coracana*), pulses, such as *urid* (*Phaseolus Roxburghii*), and oil-seeds, such as *surguja* (*Guiyotia Oleifera*). The upland crops are usually sown in rotation. In the first year the ground is manured and a crop of *marua* sown; this is followed by a crop of *gorā* paddy, which profits by the manure given in the previous year. In the next year *urid* is sown and in the last year *gondli*, which thrives even in a poor soil and which, being reaped early in the summer, can be followed in

Other crops,

the same year by a crop of *surguja* or *kurthi*. Frequently *rahar* (*Cajanus Indicus*) is sown with the *gorā* or *gondli* and reaped in the *rabi* harvest, while *bodi* is sown along with *marua*. In most villages, as the soil of the uplands is extremely poor, they are left fallow by turns for one, two, or three years at a time. The net area under the principal crops other than rice was found in the Settlement operations to be:—*Urid*, 127 square miles; *gondli*, 300 square miles; *marua*, 110 square miles; *surguja*, 157 square miles. Maize, spices, and vegetables are grown in the enclosed *bāris* near the houses. The *rabi* crops are not important. Wheat and barley are not grown in large quantities, the uplands being too dry during the cold-weather months and irrigation from wells being an expensive labour which the aboriginal cultivator will not undertake. *Rahar* (*Cajanus Indicus*) and *sarson* or mustard (*Sinapis dichotoma*) are the principal *rabi* crops.

Tobacco.

Tobacco is grown only in the alluvial soil of the Five Parganas; about 230 acres were found to be cultivated with tobacco in Tamār thana at the time of the recent Settlement operations. A detailed account of the cultivation of tobacco is given in Hunter's Statistical Account of Lohardaga district, but the crop is not sufficiently important to call for a repetition of that account. The tobacco consumed in the district is imported from Bihar and that produced locally is smoked in the form of small cheroots by the inhabitants of the Five Parganas.

Sugarcane is also grown in a few villages of the Khunti subdivision, chiefly in thānas Sonahatu and Tamār.

Cotton or *कपड़ा* (*Gossypium Herbaceum*) occupies about 11,000 acres in the Gumā subdivision and is grown by aboriginals, semi-aboriginals, and Kurmis, who appreciate the stout homespun cloth that can be manufactured from it.

Market gardening.

Market gardening is almost exclusively practised by Koiris and is confined to the town of Rānchi and the surrounding villages, and to the neighbourhood of Lohardagā. Chutiā in particular has a large colony of Koiris, originally immigrants from Bihar, and the aboriginal inhabitants of that village have also devoted themselves to the cultivation of vegetables. English vegetables do well in gardens during the cold weather, and some of them, such as tomatoes, may be found growing in the *bāris* of Christian aborigines, who have been induced to grow them by the European missionaries. The well-to-do aboriginals sometimes grow

Indian vegetables, such as brinjals, onions, pumpkins, gourds and sweet potatoes, and spices, such as turmeric (*haladi*) and chilli.

In nearly every village there is a grove of mango trees, Fruit tree planted by the Hindu landlord, the fruit of which is the common property of the village; the trees are frequently barren and the better varieties of mangoes are not obtainable. Jack trees are also common and, according to the custom of the country, both the tree and the fruit are the property of the man who planted it. Theft of jack-fruit is a frequent subject of complaint in the courts. The fruit of the tamarind and the *karanj* (*Pongamia glabra*) is also the exclusive property of the owner of the tree. The fruit of the *karanj* is not eaten but is made into oil and used for various purposes. It is used to kill the insects which infest the hair of the people, and it is also said that wood coated with the oil resists the attacks of white-ants. Its principal use is, or rather was before the days of Kerosine oil and Dietz lanterns, as a lamp oil. The fruit of other trees, such as *mahua*, *jāmun*, *kusam*, etc., which are found round the village, are, like mangoes, ~~the common property~~ of the villagers. Plantains, guavas and limes of various kinds are grown principally by the Hindu inhabitants, and a Hindu village can often be distinguished from an aboriginal village by the plantains or papeyas growing round the houses.

The cultivation of tea in the district of Rānchi dates back Tea. to 1862 and owes its origin to Mr. Stainforth, a retired civilian who settled at Rānchi. He started two gardens, one at Hotwar, about three miles north of Rānchi, and the other at Palāndu, about 12 miles east, on lands leased from the Barkagarh Estate which had been confiscated by Government after the Mutiny. In 1872 the whole area of the Palāndu garden (184 acres) was under mature plants and yielded 20,500 lbs. of leaf, all of which was manufactured into black tea. Of the Hotwar Estate only 35 acres were under mature plant and the yield was 3,200 lbs. Since that date a number of new gardens have been opened, all under European management, and there are now 21 gardens with an area of 2,070 acres, while the produce is over 300,000 lbs. The leaf is now practically all manufactured into green tea. Coffee also does well in Chotā Nāgpur, but the cultivation is not carried out on any extensive scale.

Silk.

The rearing of tasar cocoons is carried out in portions of thanas Tamār and Khunti, bordering on Singhbhūm, but nowhere on a very large scale. Wild cocoons are very rare and tasar is usually obtained from cocoons reared on the *asan* tree (*Terminalia tomentosa*). By custom no payment is made for trees used for the cultivation of cocoons, whether on cultivated land or waste lands and jungle. The Roman Catholic Mission at Khunti are endeavouring to encourage the industry among their converts.

Lac.

The cultivation of lac is sporadic throughout the district. It is most common in the Khunti subdivision and in a portion of the Sadar subdivision, but in some parts, though the conditions appear equally favourable, little lac is produced. Lac is the resinous incrustation which is produced on the twigs of several varieties of tree round the bodies of colonies of the lac insect (*coccus lacca*). Originally lac was merely collected from trees on which it was found, but with the development of the trade, cultivation has become widespread. The method of propagation is simple; twigs of a tree utilized in the previous year and crowded with larvæ are bound to the twigs of a tree to be brought under cultivation. The insects are gradually hatched out from the larvæ and proceed to feed on the resinous sap of the tree which exudes from their bodies and forms a hard crust of lac over the whole twig. The trees most suitable for lac are *palās* (*Butea frondosa*) and *kusum*, (*Schleichera trijuga*), but it is also grown on the *bain* (*Zizaphus jujuba*) and other trees. The lac of a *kusum* tree commands the best price, and a fair-sized tree produces two crops in a year, in the hot weather and again in the beginning of the cold weather, and the annual value of the lac is not less than Rs. 10.

Cattle.

The cattle of the Ranchi district are very small and undersized, and this is largely due to the lack of good pasturage and of good fodder. In the remote parts there is still ample pasturage in the jungles, but owing to the extension of cultivation the area is rapidly decreasing. In the more extensively cultivated parts, the cattle are grazed on the waste lands of the village, or on the fields after the harvest has been cut, and in the hot weather are in a wretchedly poor condition. In the rains grass grows rapidly, and they pick up and become somewhat fat. The aoriginals seldom feed their

cattle in stalls, and only paddy^o straw is stored for use as fodder. Cows are not kept for milk. The Mundās in fact think it almost a crime to drink the milk of a cow which they consider should be left entirely to the calf. Cows are habitually yoked to the plough and are known as *gudri* or plough cows. Buffaloes are not bred in the district, but are imported from North and South Bihar and from Palāmau. They are used for ploughing the heavier *don* lands.

The agricultural stock list compiled during the Settlement operations shows a total number of 540,000 bulls, bullocks and cows, 137,000 buffaloes and 201,000 calves, or between three and four head of cattle to each cultivating family. Though the inhabitants of the district have no objection to eating beef, they cannot afford to kill their cattle for this purpose. The hides of cattle are usually the perquisite of the Lohār or Ahir of the village and cases are not uncommon in which they resort to poisoning cattle for the sake of the hides. There is a considerable export of hides and skins from Rānchi.

Cattle disease is extremely prevalent in the district. Epidemics of rinderpest and hæmorrhagic septicæmia are common, and cause great mortality, while foot-and-mouth disease causes the plough cattle to deteriorate. The official statistics for the year 1914-15 show nearly a thousand deaths from rinderpest and over two hundred and fifty from hæmorrhagic septicæmia, but these figures are of little value as the majority of the deaths are not reported. The aboriginal is extremely apathetic in taking any preventive measures against the disease; he regards such calamities, which he cannot account for, as due to the malignant spite of one of the village *bhūts* and beyond trying to appease the spirit by sacrifices takes no steps to prevent the spreading of the infection. The Christian population are beginning to appreciate the benefits of inoculation as a prophylactic against these diseases. An interesting and promising experiment has recently been made. Twenty boys nominated by the Heads of the three Missions were trained in Rānchi in the work of inoculation and then sent out to the various Mission stations to tour and inoculate cattle in the surrounding villages, under the supervision of the Missionary in charge. During the year 1913-14 no fewer than 67,900 cattle were inoculated. Members of the Roman Catholic Co-operative Society are encouraged to get their

cattle inoculated by being unable to obtain loans for their purchase, if the cattle of their village have not been inoculated in spite of the opportunity being given. It is too early to say whether this experiment has resulted in decreasing the mortality, but the measure gives great promise of success.

Besides cattle the cultivators keep large numbers of sheep and goats, mainly for food purposes. In an aboriginal village there are pigs innumerable, as the sacrifice of a pig, and the subsequent feast on its flesh, forms an important part of their religion. Horses and ponies are not numerous, and the possession of a pony is regarded as a sign of wealth.

Veterinary
dispensary.

The District Board has a well-provided Veterinary dispensary at Ranchi under the charge of a Veterinary Assistant, and employs two itinerant Veterinary Assistants, one of whom has his headquarters at Gumla.

District
Agricultural
Association.

The District Agricultural Association, which was formed in 1905, has devoted its attention to the improvement of methods of agriculture but, like similar associations in other districts, has not met with any great success in overcoming the conservatism of the agriculturist. The need for irrigation has already been mentioned. Improvement in the breed of cattle and in the fodder supply is also much needed. With the gradual deforestation of the district the problem of pasturage becomes more acute and unless the breed of cattle is improved, such improved methods of agriculture as deep ploughing cannot be adopted. Attempts to induce the cultivator to use an improved form of plough are always met with the reply that their cattle are not sufficiently strong. In many villages the limit of extensive cultivation has already been reached, and with the increase of population a more intensive cultivation will have to be carried on. In the past there was plenty of waste land waiting to be cultivated, and the need for improved methods of cultivation was not apparent, but the problem of the next century in the district of Ranchi will be how to improve the soil so as to produce sufficient grain for the increasing population.

The Association holds an Annual Agricultural Show on the site of the old *mela* at Chutiā. The exhibits are fairly numerous but come for the most part from Ranchi itself, the most conspicuous exhibits being usually the collections of English vegetables produced by the Missions or by the Jail.

CHAPTER VI-

FORESTS.

THE name Jhārkand, or the "forest tract," shows that the whole of Chotā Nāgpur was at one time a huge forest, consisting no doubt mainly of *sāl* trees, from which stood out isolated hills covered with "upper mixed" forest. The forest has gradually been destroyed by the axes of the cultivators, and at the present time the whole of the central plateau has been almost completely cleared and there remain only the jungle-clad hills on the outskirts of the district. In the early days of British administration the destruction of the forests went on unchecked. Their value was not appreciated; the economic effects of denudation were not recognized, and it was generally accepted that nothing should be done to prevent the extension of cultivation. In 1883 Mr. Hewitt, the Commissioner, called attention to the rapid destruction of private forests in the Division and to the "incalculable misfortune resulting from their wholesale destruction not only to the Chotā Nāgpur country but to the Bengal districts lying below the plateau". In 1885 Dr. Schlick reported that "in a general way it may be said that the Hazāribāgh and Rānchi plateāu contains now comparatively little forest". Dr. Schlick probably referred only to valuable forests, though the correctness of his opinion is open to doubt.

Extent
Forests.

Statistics compiled during the recent settlement operations shows that there are still 2,281 square miles of jungle in the district, or 32 per cent. of its total area. Of this area 889 square miles have been classified as culturable jungle, and 1,392 square miles as unculturable jungle. In the Sadar subdivision, with an area over 2,002 square miles, there are only 600 square miles of jungle, both culturable and unculturable, principally in thānas Burmu, Angara, and Lohardagā, which comprise the hills fringing the north and north-west of the central plateau. In these thanas jungles still cover more than 45 per cent. of the total area, but in the remaining seven thanas less than 23 per cent. of the area is jungle, the greater part of which is growing on land which can never be brought under cultivation. In the northern

and western half of the Khunti subdivision and in the eastern part of the Gumlā subdivision the country is similar to that in the Sadar subdivision and thānas Karra, Khunti, Torpa, Sisai, Ghaghra and Gumlā only contain 281 square miles of jungle, or 15 per cent. of the total area. In the whole of this central plateau the country is dotted at intervals with sharp rocky peaks practically devoid of vegetation. Low rocky ridges also occur, covered sometimes with a meagre growth of scrub but more frequently without any forest growth whatever. In a few places patches of stunted *sāl*, are seen and at rare intervals isolated trees of fair size appear, growing on the most precipitous slopes, apparently devoid of all soil. In some villages the *sārṇās*, or sacred groves, are still of considerable size, but in most villages only small clusters of trees remain, the only proofs that these tracts were ever under forest. Indeed, if they did not exist, it would be difficult to believe that a forest had ever grown on them. In the sub-plateau tract, consisting of thānas Silli, Sonahatu and Bundu, similar conditions prevail, 22 per cent. of the total area being jungle-covered, and that principally on the *ghāts* which cut off the lower from the higher plateau. In thāna Tamār, which forms the southern border of the lower plateau, there is still a large tract of jungle, extending over 140 square miles. But it is in the south and west of the Gumlā and Simdegā subdivisions that the largest and most important forest areas are found and it is only in this part of the district, where the population is still comparatively sparse, that there is any hope of taking effective steps to prevent further denudation. In thāna Bishunpur 64 per cent. of the total area is jungle. The long range of hills, which runs north from Pālkot to the borders of Palāmau and forms the watershed between the north and south Koel, is generally covered with forest containing only *sāl* of very poor growth, and scrub, consisting of such shrubs as *Woodfordia* and *Cleistanthus*. The steepness of the slopes and the poverty of the soil render the production of any forest of value an impossibility, while in the small areas of level ground the forest has been cut down and burnt by the cultivators so that a crop may be raised from the soil rendered temporarily fertile in this way. The slopes of the Rājāderā plateau, to the west of Tendār and Bishunpur, are covered with a poor type of forest sufficient for the needs of the inhabitants but containing few large trees. The Rājāderā

plateau itself, at an elevation of 3,500 feet, is now mainly denuded, but must have been covered with jungle at a comparatively recent date. Round the village of Rajādera some of the original forest still remains, but it contains few large trees, as, owing to its elevation, the maximum girth which *sāl* will attain probably does not exceed 4½ feet. The Sankh river rises in these forests and leaves the plateau through a narrow gorge containing virgin forest of fair hill type, with *sāl* trees up to five feet in girth, but the forest is gradually being destroyed by the inhabitants of a village situated in the gorge, who are rapidly extending their cultivation and by contractors. In the undulating plateau of Barwe, through which the Sankh flows, the country is almost devoid of jungle, even the steepest slopes being flecked with cultivation. The destruction of the forest in this tract is of comparatively recent date and missionaries who have resided here for the last twenty years state that on their first arrival dense forests surrounded their stations. In the valley of the Sankh, south of Rāidih, patches of better forest are found. Between Kondrā and Kulukerā on the western border of the district there is a large tract of forest, but as it has been worked for some time past by contractors for sleepers, it contains few large trees. The flat country south of Kulukerā is practically denuded of jungle, but the rocky ridge in Kurdeg thāna, near the southern border of the district, is well covered with second class forest, free from cultivation. Further east, in thānas Kochedegā, Kolebirā and Bano, the country appears at first sight to be covered with thick jungle but on a closer examination the forests of Biru, Bhaunrpahār and Palkot are found to contain few large trees and to have suffered from reckless cutting by timber contractors. The following table shows the area under jungle in the western and southern thanas of the Gumlā and Simdegā subdivisions :—

Thana.	Area in square miles.	Area of cultivable jungle.	Area of non-culturable jungle.	Total jungle area.	Percentage of jungle to area of thana.
Dishunpur ..	237	43	111	153	34
Channpur ..	47	19	131	150	37
Raidih ..	113	38	49	87	40
Kurdeg ..	366	55	114	169	54
Kochedegā ..	630	93	153	246	46
Kolebirā ..	326	111	100	211	53
Bano ..	213	41	49	90	42
Palkot ..	223	30	64	94	42

Causes of de-
forestation.

Of the causes which have led to deforestation the most important is the extension of cultivation, for, while other causes, such as the exploitation of forests by contractors, or reckless cutting for timber and fuel by the cultivators, tend to lessen the density of the jungle and to prevent the growth of large trees, reclamation of jungle areas for purposes of cultivation causes its total destruction. It is difficult to estimate the extent to which cultivation has been extended at the expense of the forests during the last quarter of a century, as no detailed survey of the district was made till the recent settlement operations. A comparison, however, has been made between figures obtained during the recent survey and those obtained during the survey of the Chotā Nāgpur estate in 1882—84, and it has been found that in fourteen villages the average net decrease in the area under jungle was 11 per cent. These villages were in the central plateau, and it is probable that in outlying tracts, in which the population has increased very rapidly during the last 25 years, the area brought under cultivation, either temporary or permanent, is considerably larger. Though the reclamation might have been better regulated, extension of the cultivated area was necessary in the interests of the growing population, as a very high percentage of the waste land, not under forests, is unfit for cultivation. The landlords have in most cases consented to the reclamation, in return for a *salāmi* or increased rent; and it is only in the case of absentee landlords that the reclamation has been carried out without their consent, and sometimes without their knowledge. "Jhuming", or a form of cultivation akin to "jhuming", obtains in the remote parts of the district. Under this system, the trees are felled from patches in the jungle, and burnt on the ground with the undergrowth, and the land thus cleared yields poor crops for a few years and then is abandoned. The practice is undoubtedly very destructive of forests, and the value of the forest destroyed is entirely disproportionate to the value of the crops raised, but the practice can hardly be said to be very prevalent in the district.

The second main cause is the sale or lease of forests to contractors and others. The felling of large trees is open to no objection, but, even if the contractor is given a carefully worded lease, the owner of the forest is not able to supervise his work, or that of his agents, or to prevent them recklessly thin-

ning out the forest. Over-exploitation by contractors is very obvious in the jungles of Biru, Tamār, Basia and Bhaunrapahār, which were mentioned by Dr. Schlick, in 1888, as important *sāl* forests, but now hardly contain a tree from which a sleeper can be made. This cause has always been in operation but has been more marked of recent years. The opening of the railway to Rānchi and Lohardagā and the improvement of communications by road has made timber more marketable and has led to the sale of jungles previously untouched. Moreover, since the settlement operations commenced, the abuse by the tenants of their customary right has given an impetus to sales, as the landlords naturally try to obtain as much profit as possible from the jungle, before all the valuable timber is felled.

Apart from the sale of jungle to contractors and timber companies, much damage has been done to the jungle by the raiyats themselves. The decrease in the area of the jungles and the increase in population has greatly enhanced the demand for timber both for building purposes and for fuel, especially in the neighbourhood of Rānchi and the railway. By the custom of the district, a raiyat has no right to sell wood cut from the village jungle but in some villages, where the relations between landlord and tenants are strained, the raiyats have exceeded their right and cut the jungle wholesale for purpose of sale, without the consent of the landlords. The practise is difficult to stop; if the raiyat is found cutting wood in the jungle, he asserts that it is for his own use; if he is found selling it in the bazar, he denies that it came from the zamindār's jungle. In some villages the landlords exact a payment of so many rupees or annas from each family for the exercise of the right to cut wood and sell it at the weekly bazar. This system is known as *bankatti* and, though it has the advantage of securing some profit to the landlord, yet, as no restrictions are placed on the amount cut, it has as much effect in lessening the density of the forest as the abuse by the raiyats of their customary rights. Apart from cutting timber for sale, the raiyats are also most wasteful in cutting wood for agricultural purposes. A large tree will be felled to make a plough or a door-post, or even to secure the honey secreted in its top. One of the worst forms of waste is the indiscriminate cutting of *sāl* saplings to make a fence round a house, or even to make a temporary enclosure for a

wedding, when other less valuable wood would serve the same purpose.

Other minor causes, which, if not active causes of deforestation, prevent the progress of natural reforestation, are indiscriminate grazing, and the practise of firing the jungle. Grazing, especially of browsers, destroys the young trees. Firing, if carefully regulated, does not cause any very serious damage. The destruction of the undergrowth helps the growth of the larger trees, and it is only the firing of young plantations which would cause any very marked denudation of the forest area. The total damage caused by firing in the district is probably not very great as the zamindars usually take steps to prevent the firing of young jungles.

Effects of
deforestation.

The indirect effects of the destruction of forests are difficult to estimate. Scientific investigations go to show that forests under some conditions increase the rainfall, by lowering the temperature of the surrounding air and thereby provoking the precipitation of rain. In Ranchi district the masses of barren rock, from which all soil has been washed and on which all vegetation have been killed, were undoubtedly formerly covered with trees, and it is possible that this change in the physical aspect of the country has had its effect on the climate, but there are no statistics to show that the rainfall has decreased, or even that there has been any marked variation in the distribution. There is also no evidence to prove that the level of the sub-soil water has become lower. Considering the large areas still under jungle, and the fact that the country, as a whole, is well wooded, it is safe to conclude that deforestation in Ranchi has not yet reached the stage at which these serious effects are noticed.

The direct effect of the loss of the forests are more obvious but are apt to be exaggerated. Many of them are purely local, and it is incorrect to draw any wide generalizations and to assert that the district as a whole has become less fertile or is more liable to famine and scarcity than it was in the days when the forests were more extensive. A few fields may have become unfit for cultivation owing to the loss of moisture caused by the radiation of heat from the barren rocky hills; in a few villages the inhabitants may be forced to use cowdung for fuel and thus to rob the fields of the only manure they ever get; in some areas the population may be unable to obtain jungle produce in such

quantities as formerly and are thus deprived of one of their chief sources of food in years of bad harvests; but it is fallacious to say that, because no famines are known to have occurred before 1897, the three famines since that date were due to, or were intensified by, the diminution in the jungle area. Though generalizations, such as these, are exaggerated, there is no doubt that the deforestation of the district is rapidly reaching a stage at which these effects will make themselves felt. Formerly the raiyats obtained without difficulty all the wood needed for fuel or for the construction of their houses or agricultural instruments, and there was ample grazing-ground for their cattle within a short distance of their villages. Already in the more cultivated tracts the raiyats are put to trouble or expense in getting timber. The diminution of the areas from which timber can be obtained leads to excessive cutting in the remaining jungles, while the decrease in the grazing area similarly tends to over-grazing of existing areas and thus prevent the natural regeneration of the forest. The effects of deforestation, in fact, become in time the causes of further deforestation, and when, in addition to this, it is remembered that the cultivators are accustomed to cutting timber in the most wasteful and extravagant manner, and that the landlords on their part are endeavouring to make as much immediate profit as possible by the sale of their property to contractors, it will be recognized that measures are urgently required for the preservation of the existing forests.

Various suggestions have been made as to the protective measures to be adopted, but before describing these, it is necessary to give an account of the rights of the landlord and tenants in the jungle.

Generally speaking, it may be said that the proprietary right in the jungles of the Ranchi district rests with the landlords, while the raiyats, who represent the ancient village communities, retain a right of user for certain purposes. This condition has arisen gradually. The aboriginal tribes, who first entered the district, found it covered with virgin jungle and reclaimed land for cultivation. Jungle lands were abundant, and each village community extended the limits of cultivation and cut timber

Right of
landlords
and tenants

for domestic and agricultural purposes, as it thought fit. Later, feudal chiefs imposed their authority, and received a small tribute and exacted certain services, but in no way dispossessed the descendants of the original settlers of their proprietary rights either in the cultivated or uncultivated land. The chiefs, however, gradually became Hindunized and both the chiefs themselves and the Hindu settlers introduced by them came to acquire the position of landlords and were recognized by the Courts as the owners of the soil. In early days, as the jungle land was still abundant, the landlords did not prevent the raiyats cutting all the timber they required for their own use, and neither raiyats nor landlords realized that timber had any commercial value. It is only within comparatively recent years that the jungle question has arisen. With the increase of population, the decrease in the area of jungle, and the improvement of communications, both by road and rail, timber came to be a marketable commodity. Landlords began to assert their proprietary right, and met with no opposition from the raiyats, provided they were still permitted to cut for their own requirements. By degrees the landlords imposed restrictions, in some cases reasonable, and designed merely to prevent waste, in other cases unreasonable and designed to reserve the exclusive proprietary right to themselves. The villages of the Ranchi district now present the jungle rights in three different stages of development. In the intact *khunkatti* villages of the Munda country the proprietary right in the jungles still rests with the *khunkattidars*, who have jealously and successfully opposed any interference with that right by the superior landlords. In the majority of villages the proprietary rights of the descendants of the original clearers of the soil have passed to the landlord and the raiyats merely retain the right to cut timber for fuel and domestic purposes. In a few villages the landlord has succeeded in establishing his sole proprietary right and some jungles are found, especially in the Sadr sub-division, which are designated *rakhawat*, or reserved jungle of the landlord, in contradistinction to *katawat*, or jungle in which the raiyat still has the right to fell trees.

In the record-of-rights prepared by the Settlement Department the customary rights of the raiyats have been carefully recorded. The tenants of village have —

Settlement
record of
jungle rights.

- 1) the right to cut trees for the purpose of building and repairing their houses, for agricultural purposes, such as making ploughs, and for fuel;
- (2) the right to graze their cattle in the jungle;
- (5) the right to collect the fruit of the *mahuā* and other forest trees, and to gather other kinds of forest produce for *bonā fide* domestic purposes. They have no right to fell timber or gather forest produce for sale.

These rights are subject to a quantitative limitation. Thus the raiyats have no right to cut certain valuable trees, such as *śāmun*, *mahuā*, *āsan*, *hārā*, *kusum*, *palās* and *ām*; nor can they cut *sāl* trees beyond a certain girth, about 27 inches in circumference at a height of three feet from the ground, or, if they are needed for the *bonā fide* purpose of making ploughs or carts, of a girth not exceeding three feet. Tenants of villages, in which there is no jungle remaining, usually have the right to cut wood from the jungles of an adjacent village. This right is really a survival from the days when all jungles were open to all inhabitants of the district. The raiyats are not allowed to reclaim waste or jungle land without the permission of the landlord.

The landlords have a full right to sell the timber of the jungles but, though the question has never been raised in the Courts, this right must be considered as subject to the restriction that, in so doing, they must not deprive the tenants of their right of user. In other words, the landlords can only sell surplus trees, that is, trees which the raiyats have not the right to fell, and such trees as are not reasonably required for the satisfaction of the present or future *bonā fide* reasonable requirements of the tenants.

The difficulty of the problem of forest preservation in Chotā Nāgpur lies in reconciling these conflicting interests. In 1909 the Government of Bengal appointed a Committee to make local enquiries as to the extent of deforestation in Chotā Nāgpur and Orissa, and, on the report of the Committee, decided that the preservation of large tracts of jungle in these areas was an administrative necessity, and that, as there was no hope that the progress of denudation would slacken, since the natural causes all

Proposal for
the protection
of forests.

tended to its-increase, it was the duty of Government to take action in the interest of the people. The provisions of the Bengal Forest Act VII of 1878 were not considered suitable. Under this Act a landlord may apply to have his forest managed by Government as reserved or protected forest, but experience had shown that landlords had not taken advantage of this provision in the past and there was no reason to anticipate that the landlords of Chotā Nāgpur would make use of it in the future, as they do not yet appreciate the benefits of scientific management, which may secure for them large future profits but deprive them of all present profits. Nor was it considered desirable to apply to Chotā Nāgpur those sections of the Act which give Government the power to take over certain tracts and enforce certain prohibitions, subject to the condition that the owner may claim to have the forest acquired. It was thought that the cost of acquisition was a bar to any action on these lines and that, apart from this, such action would not be acceptable either to landlords or tenants and would cause considerable friction between them, as they would have to adjust their joint claims to new conditions. It was therefore proposed to introduce a Private Forests Bill, the objects of which were—

- (1) to empower the Government to intervene, in the public interest, to preserve private forests from destruction; and
- (2) to facilitate, or in some cases direct, the afforestation of private waste lands.

The Bill gave power to the Forest officer in charge of any forest of which Government had assumed control, to scrutinize leases, to supervise cutting and growing, and to prevent fires. Both landlords and tenants were to be left as free as possible to exercise their customary rights, but in extreme cases the Forest officer would have power to close entirely blocks of forest and fines could be inflicted on the village communities or on the proprietors if damage was done to such closed blocks, either by felling timber, by cultivation, or by grazing of cattle. The Bill was submitted to public criticism and the criticisms received, both from the landlords and the missionaries who voiced the opinion of the aborigines, showed the great difficulty of reconciling their conflicting interests. Both parties admitted the necessity, but

the landlords, viewed with disapproval a measure which would result in expropriating them from their forests, for a term so extended that it would in practise amount to permanence, without giving them any adequate compensation, and the raiyats feared that the powers given to the Forest officers to enforce prohibition would result in depriving them of their customary rights, in particular of their right to take jungle produce and to graze their cattle in the jungle, and that the management of the forests would let loose a number of forest subordinates who would practise extortion in various ways. In view of the opposition which the introduction of the Bill would inevitably stir up, the Government of Bihar and Orissa decided not to proceed with it.

The system of State management which the Bill contemplated, bristles with difficulties, and an alternative suggestion that certain blocks of forest lands should be acquired by Government appears likely to meet with greater success. In such acquired blocks all rights both of landlords and tenants would be extinguished, and the blocks would be so selected as to leave in each village sufficient jungle to provide fuel and timber for the inhabitants and grazing for their cattle. The objection to such a measure is of course the expense involved, for, even though the forests reserved in this way would become of considerable commercial value, the initial expenditure would be probably very high, while it would also be a task of some difficulty to calculate the present value of the jungle. Complete reservation, however, in this way would have the advantage that certain areas would become covered with dense jungle, and, if it be a fact that forests do affect rainfall, such jungles would have considerable effect on the amount and distribution. As an alternative to acquisition, it has been suggested that as a large number of estates in the district are under the management of Government under the Encumbered Estates Act, Government in its position as landlord of these estates should apply for the reservation and protection of certain areas under the Bengal Forest Act, thus setting a good example to other landlords in the district. There is no doubt that much good could be done in this way; and during the long period that heavily encumbered estates are under the management of Government there would be ample time for the recuperation of the forests. It is true that on the release of the estates the

zamindār would have full power over the forest and might again dispose of it to contractors with a view to getting a large immediate profit, but the principal objections to the proposal are that in many cases the estates are so insolvent that they could with difficulty bear the cost of an effective system of management by the Forest Department, and that this procedure could only be followed in a very limited area and would involve the imposition of restrictions and prohibitions by the Forest officer which would be regarded by the tenants as infringements of their customary rights. A further solution that has been proposed aims at doing away with the antagonistic rights of landlords and tenants by partitioning the jungles. Each party would have full proprietary rights in its share, and there are reasons to anticipate that both raiyats and landlords, if they were in sole possession, would come to realize the value of their property and take steps to prevent its wholesale destruction. Though the aboriginal takes little thought for the morrow, and still less for future generations, even the aboriginals, and especially the Christian aboriginals, might easily be persuaded through the influence of the Missionaries to take the necessary steps for the preservation of their own property. In the course of the Settlement operations some examples were found of efforts on the part of the villagers themselves to preserve their forests. In some villages of Bero thana in which the jungle area was small, the raiyats and their landlords had adopted a regular system of cutting blocks of the jungle in rotation for purposes of fuel, each block being left uncut for four or five years. The objection that is usually raised to this proposal is that the partition could not be settled without friction between the parties. It is doubtful whether this objection is valid, as the antagonism which was formerly rife between landlord and tenants has died down as a result of the recent settlement operations and, though there is a remembrance of the agrarian disputes of the last half century, the main causes of dispute have been removed and both parties might be willing to accept a compromise of this nature.

Reafforestation.

Apart from the problem of the protection of existing forests there is the problem of reafforestation. At Tendār an interesting experiment was conducted by the people themselves; *sāl* seed was sown some twenty years ago with satisfactory results and

there is now strong *sāl* copse covering several acres, but this experiment is the only instance of reforestation by the raiyats themselves. The raiyats are reluctant to plant trees because there is no specific provision of the law that the man who plants and rears the tree should become its owner. If the law was altered there is some hope that the raiyats and landlords might be encouraged to carry out such work themselves. Though in many places the soil has been washed away and reforestation thus rendered impossible, there are undoubtedly still large tracts in which forests might be raised, of greater value than the meagre crops at present cultivated.

CHAPTER VII.

NATURAL CALAMITIES.

FAMINE,
Causes of
famine.

FAMINE due to deficiency of rainfall may be said to be the only natural calamity from which the inhabitants of Ranchi can suffer. Floods are rendered almost impossible, except for a very short period and within the narrowest limits, by the physical conformation of the country and the rapid discharge of the surface drainage. The crops in the lowest fields are sometimes injured to a small extent by very heavy falls of rain. When famine or scarcity has occurred, it has been due almost invariably to the failure of the rains in the latter part of August and in September and October. The crops are in fact entirely dependent on the rainfall, as there is very little artificial irrigation in the district. Zamindars occasionally construct tanks and *bāndhs* for the benefit of their *khās* lands and the raiyats sometimes derive benefit from these reservoirs, but of the total cropped area of the district (2,483 square miles), the irrigated area only amounts to 3,058 acres. Though the country is intersected by numerous streams and rivers, practically no attempt is made either by landlords or tenants to utilize the water for irrigating the crops. Under present conditions a serious failure of the rain means famine through a large part of the district, while a partial failure causes scarcity and distress. The water drains away from the uplands and even the higher lowlands with great rapidity and unless the crops on those lands receive a plentiful and continuous supply of water, they wither and die very quickly.

Two instances may be given of the benefits of irrigation. In 1903, when famine conditions prevailed over a considerable part of Ranchi district, there was no scarcity in the Dhalbhūm pargana of Singhbhūm. The conditions were exactly similar; but in Dhalbhūm the aboriginal villagers, in concert with the

headmen, have constructed tanks and *bāndhs* for irrigation, and by damming the streams and small rivers make use of the water for the fields of the villages on their banks. The inhabitants of the tract are thus not dependent entirely on the rainfall and can resist periods of scarcity which play havoc with the people of Rānchi. In this same year, Ghāghrā thana was part of the area in which distress prevailed and famine was declared, but in three villages, in which irrigation *bāndhs* had been constructed, little distress was experienced and good *rabi* crops were obtained.

The most important crop is the autumn and winter rice. The total area under rice amounts to 1,530 square miles, or 61.61 per cent. of the total cropped area, and of this the area under *khadoi*, *aghani* and *gorā* rice is 756, 447 and 327 square miles, respectively. The *gorā* rice which is grown on the better class of uplands (*tānr*) is the first to suffer from an early cessation of the rains, and, next, the rice grown on the *chaurā*, or higher lowlands, and in years of scarcity famine areas will generally be found to correspond with the areas in which there is the greatest proportion of the classes of land entered in the settlement record as Don III and Don IV, with a high proportion of uplands. Such areas are found in villages in the more backward tracts, where the land has been cleared at comparatively recent dates. In villages in the more intensely cultivated areas there are large stretches of low-lying rice lands, classified in the settlement as Don I or Don II, which remain moist for the greater part of the year, and such villages are little liable to scarcity. The areas most liable to famine are, thus, thanas Bishunpur, Chainpur, Rāidih, Kurdeg, Kochedegā, and part of Ghāghrā adjacent to Bishunpur. Bishunpur is probably the area which is least able to resist conditions of scarcity.

Though the importance of the rice crop cannot be overestimated, there are other factors to be taken into consideration. In the Khunti subdivision, the lac crop has an important bearing on the prosperity of the people. If lac is abundant and good prices are obtainable, the people can resist famine, and their power to resist has been greatly increased by improved communications. Before the opening of the railway, importation by road was slow and difficult, but supplies from other districts can now be easily obtained, and there is little doubt that in 1908 the distress,

at any rate in the parts round Rānchi, was alleviated by the importation by rail of over 6,000 tons of rice. Jungle produce, in particular the *mahuā* crop, also plays an important part in the economy of the district, and has been estimated to be equivalent to a two months' supply of food. Both in 1897 and in 1900, the partial-failure of the *mahuā* crop greatly aggravated the distress.

Early famines.

There is no record of famine in early times. There was severe drought in 1820, 1823, 1827, and 1837, but in none of these years was the distress sufficient to cause famine. Even the great famine of 1866 did not seriously affect the district. On the plateau coarse rice rose to the unprecedented price of $11\frac{1}{2}$ seers to the rupee, but though the people felt the pressure of scarcity to some extent, there was no approach to actual scarcity, except in one or two places on the border of Mānbhūm where the price of rice rose as high as eight seers to the rupee, probably owing to heavy exports.

In 1873 the rains began so late that only a portion of the *bhadoi* crop could be sown. Later in the year, they fell in such torrents as to beat down the young crops, while from the 13th September till the following January there was an unbroken stretch of dry, hot weather. Distress was confined to the Five Parganas, and even in this tract the construction of a few roads and the issue of land improvement loans amounting to Rs. 2,360 were the only relief operations required. A bumper crop of *mahuā* and of jungle fruits in 1874 served to dispell any apprehension of serious distress. The experience of those years led to the conclusion that famine need not be anticipated in the district, and that even scarcity would be confined to the Five Parganas, where the proportion of *chaurā* to *garhā don* is high. Subsequent experience has shown this conclusion to be false. Since 1888 there have been three famines, in 1896-97, in 1899-1900, and in 1907-08. Whether the distress was really greater in these than in previous years, is uncertain. Greater knowledge of the district, owing to improved communications, may have resulted in relief measures being taken to meet distress, which in former times would have passed unnoticed. But it is probable also that the destruction of the forests has led to a decrease of jungle products, and thus deprived the people of one of their chief means of resistance to famine. In each of the

recent famines the distress was greatly aggravated on the outbreak of the rains, when the collection of jungle produce was no longer possible, and on the first two occasions, there were a partial failure of the *mahuā* crop.

In 1897, though famine was never actually declared in the district and relief operations were only carried on for a few months on a small scale, there is reason to believe that the sufferings of the people were great. The harvest of 1895 had been deficient, and in 1896 the monsoon was very weak in August and September, the rainfall being only 8.08 and 9.08 inches, respectively, in those months against a normal fall of 13.67 and 8.76 inches. In October no rain fell. The rainfall was also badly distributed, and in some places excessive rain did damage to the *bhadai* crops. The whole district was affected, and the outturn of the rice crop was estimated at only eight annas. As the crop of the previous year had only been ten annas, the stock of food-grains was very low, while the high prices obtainable in other districts tempted the people to a reckless export of their stocks and drained the district of what little grain it contained. At first no apprehension of serious distress was entertained, and the only relief measures undertaken in April, May and June were the opening of a few kitchens at Ranchi and Lohardagā and work on the Bundu-Silli road. The price of rice had, however, been steadily rising. In the second half of October 1896, it had risen from 11 to 9½ seers, and, though the price fell slightly during the next two months, it rose steadily from February 1897 till it reached 6 $\frac{5}{16}$ seers in June and 5 $\frac{6}{16}$ seers at the end of July; in many markets only four seers could be obtained for the rupee. Contributory causes to the distress were the partial failure of the *mahuā* crop and the total failure of the mango crop, while the break of the monsoon stopped the collection of jungle produce. The isolated position of the district and the deficiency of carts precluded the importation of grain during the rains, and it became clear that the people would not be able to surmount the calamity without assistance from public funds. The outbreak was sudden, sharp, and short-lived; and immediate relief operations had to be undertaken in an area of 700 square miles, south-west of Ranchi, the worst tract being one of 100 square miles, west of the unfordable Kāro river, in Lāpung, Basia and Sisai. Test works were opened, but failed to attract

Famine of
1897.

labour, as the people preferred to support life on a meagre diet of jungle products, without working, to obtaining a ration insufficient to compensate them for the expenditure of physical energy. In all, 52,710 persons in terms of one day received relief in return for work; the average daily number being 675, and the cost per unit per day being 9 pies. Gratuitous relief was the chief means of meeting the distress, 153,200 units in all being relieved in this way, the average daily number being 2,042. The acute stage was of short duration and scarcely last two months." A bumper crop of *gondli*, seasonable weather and an increase in the importation of rice, owing to a bounty of one rupee per maund being given, had the effect of lowering prices, and the relief works were closed at the end of August, and the kitchens in the following month. The total expenditure from public funds was Rs. 1,80,000. Only three deaths from actual starvation were reported, but cholera broke out in epidemic form, and there was an exceptionally high mortality from bowel complaints, probably the result of an unwholesome diet of *gondli*, unmixed with rice, upon constitutions already enfeebled by a low diet of jungle fruits and roots. In August and September alone the mortality was 21·18 per mile.

Famine of
1900.

The famine of 1900 was entirely due to the early cessation of the rains in 1899. The monsoon was normal in June and July, but in the next three months the average rainfall (except in thanas Silli and Tamār) was 9·08 against a normal district average of 24·85, and in thanas Lohardagā and Chainpur only 6·60 and 7·76, respectively. As a result, the winter rice crop was a failure; the outturn for the whole district was only six annas, while in thanas Toto, Sisai, Lohardagā and Bishunpur, it was only three annas. The *bhadoi* crops were fair, but the *rabī*, which is of little importance, failed absolutely. The mango and *mahuā* trees, which might have yielded a three-months' food-supply at a time when it was specially needed, produced, in March 1900, the worst crop known for years. In spite of these unfavourable circumstances, the people showed great powers of endurance, and until April distress was nowhere so severe as to amount to famine. Test works were opened during March, April and May in various parts of the district, but it was not till June, that famine was declared in thanas Chainpur, Khunti, Sisai, Karrā, Toto, Bishunpur, Lohardagā, Basīā and Palkot.

The total area affected was about 2,180 square miles, with a population of 320,251, and comprised roughly a tract, about 70 miles long and 30 miles wide, running from the centre of the district to its extreme north-west corner. The areas, in which the distress was most severe, were thana Karrā and the adjacent parts of Sisai, and thanas Chainpur and Bishunpur. Test works were also opened in thanas Rānchi, Māndar, and Kochedegā, but the distress in these parts was neither very general nor very acute.

By the end of July 60 relief works and 14 test works had been opened, on which 10,271 persons were employed; the number gradually increased, till, in the first week of September, over 14,000 men, women and children were at work. Gratuitous relief was first given in July and was confined as far as possible to relief in kitchens, only those for whom such relief was unsuitable being given dry doles. The attendance reached its maximum of 8,561, in the week ending the 18th of August. Both relief works and kitchens were closed in the middle of September, when a good *bhadon* crop had been harvested and there was a promise of a good crop of winter rice. The cost of the relief operations was Rs. 2,02,936; of which Rs. 1,11,636 were expended on wages, Rs. 20,190 on doles and rations, and Rs. 54,472 on establishment. The relief works undertaken were the construction of tanks and reservoirs, or of roads. The former are far the more useful, but the people preferred work on the latter.

The famine of 1908 ought to have found the people in a position to surmount it. Normal harvests from 1900 onwards had been succeeded by bumper crops in 1905-07, but the bulk of the grain was exported owing to the impetus given to trade by the failure of crops elsewhere. The lac crop was also on the whole good during these years, though the price of lac had fallen by more than 50 per cent. owing to depression of trade in America. These favourable circumstances, combined with the fact that, during the pendency of the settlement operations, many raiyats withheld their rent, should have caused more cash than usual to remain in the district. Unfortunately the aboriginal cultivator never looks ahead, and recklessly spends his ready money on clothes, amusements or drink; and he was in no better position to tide over the bad harvest of 1907 than in previous years.

Famine of
1908.

The famine was again due to the early cessation of the rains of 1907 and was intensified by the large export during that year. The total rainfall, though in excess of the normal, was very badly distributed; August, with 25.61 inches of rain and the first week of September were abnormally wet, but, except for one or two local showers, there was no rain after the 9th of September. The result was that the *gorā*, or early paddy, suffered from the absence of sun in August, and gave an average outturn of only eight to twelve annas, while the winter rice, especially on the higher, or *chaura*, lands dried up owing to insufficient moisture, and though the outturn varied throughout the district, it did not average more than eight annas, and in Chainpur and Tamār thanas did not exceed three annas. The oil-seed crops completely withered and the *rabi* was a total failure. Distress was general throughout the district, but the distribution of nearly three and a half lakhs of rupees in seed loans assisted two-thirds of the district to tide over the crisis. Famine was declared only in the Gamlā subdivision, in thanas Kurlég, Kochhedgā, Chainpur, Bishunpur, and Ghaghā, an area of 2,231 square miles with a population of 237,233. Relief works were also necessary in Sizi thana and in part of Sonahatu, and test works were opened in Barmū and part of Tamār. The distinguishing mark of the famine was the unprecedentedly high price of rice throughout the district. By December 1907 it was higher than in the famine of 1900 and nearly as high as in 1897, and it rose gradually from eight seers to the rupee to five and, in some places, four seers. The classes chiefly affected were the poorer cultivators, whose holdings contained a large proportion of *chaurā* lands, and the land-less classes. The first test work was opened in Bishunpur in February, but the people held aloof as long as they could obtain a subsistence from jungle produce. Even when they came and prospected the work, they remained only a few days at a time, were very suspicious, refused to come far from their homes and loathed a set task to be done in a set time. The distribution of seed loans in April alleviated, and in some places entirely staved off, distress, and by the end of May only twelve relief works had been opened, the majority in Bishunpur and Chainpur thanas. The break of the rains, contrary to experience in other districts, intensified the distress and by the end of June twenty-three relief works had been opened. Famine

was declared in the six thanas in the beginning of July and the number on relief works rose rapidly. Gratuitous relief, which began with the rains, developed very rapidly. The distress was at its height in July and August. The largest number of workers in one day was 12,221; in the middle of August 3.47 per cent. of the population of the declared area were employed on the works, which by that time numbered 35, while 2.47 per cent. were receiving gratuitous relief. Towards the end of August a good crop of *gondli* was harvested but afforded little relief, the price being 12 seers to the rupee as compared with 64 seers to the rupee in 1900. As soon, however, as the *gorā* crop began to come on the market, steps were taken to close the operations, gratuitous relief was terminated on 15th September, and all works were shut down by the 24th. During the hot weather all the relief works undertaken were the construction and repair of tanks and *bāndhs* for the storage of water; the rains made this work impossible and the construction of roads was taken up. Gratuitous relief was given in the form of money doles, distributed fortnightly at suitable village centres. The number of persons relieved, reckoned in terms of one day, was 1,273,799. The total expenditure, excluding seed loans, was Rs. 2,11,763, wages accounting for Rs. 1,12,958, gratuitous relief for Rs. 51,963 and establishment for Rs. 25,094, and the cost per unit was 31 pies. The railway which had recently been opened greatly facilitated the import of rice to Ranchi and the adjacent parts, and the large import had a great effect in steadying prices throughout the district, even though the rice imported did not reach the outlying tracts. The number of emigrants, especially to the tea gardens, was unusually high, and this too may be partly attributed to the increased facilities offered by the railway. The year was unhealthy, small-pox, fever and cholera succeeding one another, and the death-rate was 46.4 against an average of 23.4 per mille for the preceding five years.

CHAPTER VIII.

RENTS, WAGES AND PRICES. MATERIAL CONDITION OF THE PEOPLE.

ORIGIN OF RENTS.

It has been shown in the Chapter on the history of the district that the aboriginal tribes who cleared the lands several centuries ago were the original proprietors of the soil and paid no rent to anybody. As time went on, chiefs arose who exercised an overlordship over the village communities and received some tribute and personal services from them. The chiefs by degrees became Hinduized and, to establish their supremacy on a firmer basis, encouraged Hindu immigrants to settle in the country and gave them grants of land and villages. The Hindu settlers were not owners of the soil and were entitled only to the tribute and petty services formerly rendered to the chiefs. With this they did not rest content; gradually they reduced the aboriginal proprietors of the soil to the position of ordinary tenants and succeeded in exacting more and more from the cultivators in the form of rent, prædial dues and personal services; they also deprived them of their cultivated lands or, taking possession of the jungles and waste lands, brought them under cultivation and settled them on rent with other tenants. At the beginning of the 19th century the agrarian struggle first took definite shape. The chiefs, or their grantees, sought to increase the charges on the land while the aborigines refused to comply with their demands, and the Kol insurrection of 1832 was the attempt on the part of the latter to get rid of the alien landlords and recover their ancient lands and rights. The suppression of the rebellion strengthened the hands of the landlords and the establishment of courts tended still further to improve their position. The officers who administered the law

were often ignorant of local customs and failed to recognize the proprietary right of the Mundā or the Oraon who was in no way fit to compete on anything like even terms with his Hindu antagonists. Many of the disputes, however, were never brought to the Courts but decided in the villages themselves, success remaining with the stronger party, and this fact accounts for the wide divergence between the incidents of tenancies in different parts of the district. In a few villages, known as Mundāri *khuntkātti* villages, the ancient system of land-tenure still survives and the descendants of the original settlers are still the co-proprietors of the land included in the boundaries of the village, paying only a quit-rent to the superior landlord; in others the ancient system is found in various stages of decay, the head of the village community, or his successor in interest, has acquired the position of a landlord, while the other members have been reduced to the position of ordinary raiyats but hold their lands on privileged terms; and finally there are the purely zamindāri villages in which no trace of the ancient village community can be found, save perhaps in the existence of a few monolithic burial stones.

The Mundāri *khuntkātti* village usually contains three elements, namely—(a) the *khuntkāttidārs*; (b) the *parjas* or raiyats, and (c) the subsidiary artisan classes. The *khuntkāttidārs* are the descendants in the male line of the original founders of the village. They are the owners of the whole of the area included in the village boundaries and are responsible for the payment to the superior landlord of a fixed annual rent, which represents the tribute which the founders, or their descendants, agreed to pay for the support of their feudal chief. The rent is made up out of the *chāndās*, or subscriptions, of the various *khuntkāttidārs*, but the subscriptions of most of them have been reduced and the deficit is made up by the rents paid by the *parjas*, or raiyats, who hold land under the joint brotherhood. The duty of collecting the subscriptions and paying the quit-rent to the superior landlord rests with the Mundā, or civil head of the village community. Originally the Pāhān was the head of the village both in civil and religious matters, but he gradually left to the Mundā this distasteful task which involved intercourse with alien landlords and alien officials. The villages were also united into groups of ten or

Mundāri
Khuntkātti
tenancies.

twelve known as *pattis*, and at the head of each *patti* was the Mānki, whose duty, like that of the Mundā, was to collect the *chāndās* of the villages and pay them to the landlord. *Pattis* are now found as a working unit only in the east of Khunti thana, which is known as the *Mānki patti*. The Mundā was not the landlord or owner of the village, nor was the Mānki the owner of the group of villages, but he was allowed to retain half the quit-rents collected by him as his share. The villages of a *patti* are thus divided into two categories, *thākūr* villages, or those which pay contributions for the landlord's share of the rent, and *chāputā* villages, or those which contribute the Mānki's share. The *chāndās* payable by the members of the village community and by the various villages composing a *patti* appear to have been fixed in an arbitrary manner and vary enormously. The amount of the subscription of each *khuntkātīdār* no doubt corresponded originally with his share of the cultivated lands which he inherited, but as the individual *khuntkātīdār* had the right of reclaiming uncultivated lands, no such correspondence is now found to exist. The Mundā and Pāhān frequently pay nothing. After the rebellion of 1832 *pattas* were granted to the Mānkis fixing the rent payable by the *patti*.

In the recent Settlement operations 156 intact Mundāri *khuntkātī* villages were found, with an area of 144 square miles. The total rent payable by these villages to the superior landlords is Rs. 3,018, of which Rs. 1,735 are paid by the *parjās* holding land under the *khuntkātīdārs*. The average total rent of a village, including the commuted value of prādial conditions, is thus only Rs. 19-4-0, while in Khunti thana the average contribution paid by each of the *khuntkātīdārs* is only 14 annas. The excess amount collected by the Mundās from the *khuntkātīdārs* and *parjās* over the actual rent payable to the superior landlords is only Rs. 463 or less than Rs. 5 per village. This small amount is usually spent on entertaining the "Rājā's" peons and tahsildārs when they visit the village. The extent to which the Mānkis have been deprived of their position as heads of the *pattis* is shown by the fact that of the 156 Mundāri *khuntkātī* villages there are only 59, of which the rents are still payable to them. In the remaining villages the rights of the Mānkis have been permanently

alienated to *khorposhdārs*, *jāgīrdārs* and others. The villages in which the old system still survives are with three exceptions in Khunti thana.

Special provisions for the protection of Mundāri *khuntkātti* tenancies were laid down in the Chotā Nāgpur Tenancy (Amendment) Act, 1903, and have been reproduced in the Act at present in force. The chief provisions are that such tenancies are not transferable by sale, whether in execution of a decree or otherwise; that mortgages or leases can only be given subject to certain restrictions and that no suits can be brought for arrears of rent, which are only recoverable by Certificate procedure.

The Mundāri *khuntkātti* system no doubt at one time obtained over the greater part of the district. Various causes contributed to its breakdown. The Mundās themselves were ignorant, shy, and uncivilized, and were no match for the more advanced races with which they were brought into contact. The zamindārs and money-lenders were eager to obtain possession of the villages and reduce the *khuntkāttidārs* to the position of ordinary raiyats and were assisted in their attempts by the courts who were ignorant of the customs of the country and unable to appreciate the position of the cultivators. In many cases the process by which the communal system was broken down was somewhat as follows:— The headman of the village endeavoured to secure for himself a superior position. He did so in various ways; he appropriated to himself the rents paid by the *parjas* for additional lands which they were allowed to cultivate, though any such payments should have been used to reduce the contributions payable by each of the members of the community; he assumed control over the jungles and waste lands and disposed of them without reference to the co-proprietors. He ran into debt, borrowed money from the local money-lender, and executed a document in his favour, in which he pledged the whole village as his security. He failed to pay the quit-rent to the superior landlord, often because the other *khuntkāttidārs* became jealous of him and refused to pay their contributions. He was sued in the courts, either for his debts or for the arrears of rent, and the courts, find-

Breakdown
of the
Khuntkātti
System.

ing him to be the rent-receiver, not unnaturally regarded him as the sole proprietor and sold the village in execution of the decree to the money-lender or superior landlord. "The intruder, who thus succeeded to the interest of the Mundā, carried on the process. He sued the *khunthāttidārs* for their arrear contributions as if they were ordinary raiyats, dispossessed them of their holdings, and either cultivated them himself or settled them with other, preferably Hindu, cultivators. Thus in many cases the breakdown of the system was due to the greed of the Mundā; in a few cases it was due to political agitation. The Sardārs, especially during the years 1888-92, refused to acknowledge obligations to any landlord below the State and induced the *khunthāttidārs* to withhold their rents from the Mānki. The Mundās were sued, and being wrongly regarded by the courts as proprietors, the whole village was sold. Both Revenue and Civil courts showed themselves equally ignorant of local customs, and even Government officials have been responsible for the destruction of the system. An example is to be found in pargana Siri which at the time of the Mutiny was found to be an intact *khunthātti* area. The *jāgīrdārs* of a portion of this area endeavoured to get some of their lands recorded as *mānjhikās* in the Bhuinhari Survey, but the Special Commissioner found that the area was *khunthātti* and that no *mānjhikās* land could exist in it. The estate soon after came under the management of Government under the Encumbered Estates Act, and the Manager, whether through ignorance or through a mistaken zeal for the estates under management, accepted an *ex-parte* statement of the proprietor that there was *mānjhikās* land in the village for which the headmen paid rent, brought a suit for a declaration to this effect and obtained a decree. The tahsildārs made further encroachments and at the time of the recent Settlement operations the original status of the village had been so far destroyed that the *khunthāttidārs* paid rent individually and had lost their proprietary rights in the village jungle and waste. In the neighbourhood of Tamār the system was destroyed by the constant aggression of the "Rājās" of Tamār who, for three generations, have taken advantage of accidents, such as the minority of a Mānki or a Mundā, or even employed downright force in breaking down the rights of the Mundās.

At the recent settlement 130 square miles were found to be in possession of Mundāri *khuntkātti*dārs, apart from the intact Mundāri *khuntkātti* villages which have been described above.

From the Mundāri *khuntkātti* tenancies we may pass on to describe the *bhūinhāri* tenancies. *Bhūinhāri* is a local variant for the word *khuntkātti*, and many of the *bhūinhāri* villages are villages in the same stage of decay as the broken Mundāri *khuntkātti* villages. The term, however, has a somewhat wider significance than the term *khuntkātti* and includes not only lands held by the descendants of those persons who settled in the district long before the landlords established themselves, but also lands reclaimed by more recent settlers, who cannot, therefore, claim the same proprietary right as the *khuntkātti*dārs. It was to protect these tenures and to put a stop to the numerous disputes between the aboriginals and the landlords over them that Act II (B. C.) of 1869 was passed. Under that Act special Commissioners were appointed who had power to survey and demarcate the privileged lands of the tenants (*bhūinhāri*) and the privileged lands of the landlords (*mānjhikās*). They also had power to restore to possession persons who had been dispossessed of lands of *bhūinhāri* or *mānjhikās* tenure at any period within twenty years before the passing of the Act. The record was declared to be final and conclusive of the incidents of the tenures recorded, and it was further provided that after the publication of the records no lands not mentioned in the register should be held to be of *bhūinhāri* or *mānjhikās* tenure. The *bhūinhāri* tenancies are thus all the lands recorded in the register which was prepared between the years 1869 and 1880 under this Act. The record was in many ways defective; no definition of "*bhūinhāri*" was given, and the decisions of the Commissioners must have been to some extent arbitrarily made, while many cultivators, either from ignorance or owing to the persuasions of their landlords, failed to claim their lands. In spite of these defects, the record had the great advantage of finality, and in the recent Settlement operations the Settlement officers had no difficulty in identifying these privileged lands. Included in the term *bhūinhāri* are certain cognate tenures:—

Bhūinhāri
tenancies.

- (1) *Bhūkhetā*, or devil's acre; this term is applied to lands which are dedicated to the worship of the village spirits (*bhūt*). The lands are either the property of

a particular *khūnt*, or class, and are cultivated by a member of the *khūnt*, who devotes the proceeds to propitiating the family ghost, or they are the property of the village community and are made over to the Pāhān, whose special duty is to sacrifice to the village *bhūts*. In the Mundā country, the office of Pāhān is hereditary, but in the Orāon country a new Pāhān is usually selected with the aid of the magic *sūp* or winnowing basket from the *Pāhān Khūnt* every three years. In both areas the land is seldom actually cultivated by the Pāhān, but is settled by him with an under-raiyat for a period of three years.

- (ii) *Pāhāni* and *dalikatāri*.—These lands are also held by the village priest for the performance of certain sacrifices.
- (iii) *Pānbharā*.—These lands are held by the Pāhān's assistant in return for carrying water and cooking during the sacrificial rites.
- (iv) *Māhātoi Mundāi*.—These are service tenures held by the village headman, who is known as the Mundā in the Mundā country and the Māhto in Orāon villages. The Māhto is usually elected from the *Māhto Khūnt* and in some villages the election has to be approved by the zamindār. In new zamindāri villages the Māhto is practically the agent of the landlord.

Bhūinhāri tenancies are usually held rent-free or on payment of a small quit-rent. The holders also had to pay certain prædial dues and render certain services, which have now been commuted into a cash rent. A *bhūinhāri* tenancy is not liable to any enhancement of rent; it is a tenure under the law but for all practical purposes may be regarded as a raiyati tenancy, held under certain favourable conditions.

The total area of *bhūinhāri* lands found in the recent settlement operations was 21½ square miles; at the time of the *Bhūinhāri* Survey the area was larger, but since that date a considerable proportion has passed to the possession of the landlords by sale, dispossession and abandonment.

Cultivating
tenancies.

The land in possession of cultivating raiyats is known as *rājhās*, in contradistinction to the *mānjshās* land which includes

all land cultivated by the landlords or their servants. The *rājās* land includes *chattisa*, *uttakar* and *korkar*. *Chattisa* is a tenancy consisting of lowlands (*don*) with a quantity of uplands (*tānr*) thrown in. For such lands a higher rent is usually paid than for other classes of lands, no doubt because they are of superior quality. In addition to the cash rent, prædial dues (*rakūmāts*) were ordinarily leviable and prædial services (*begāri*) were rendered, but all such conditions have been commuted into cash rent in the Settlement operations. If there is no complementary upland, or *ūyān tānr*, the tenancy is known as *mūrī chattisa*.

Uttakar, or *balkat*, is also a tenancy of *don* only, usually of inferior quality to that contained in a *chattisa* holding. Such lands are assessed to rent generally at half the rates of *chattisa* lands and sometimes at an even lower rate. No *rakūmāts* are payable. The name *uttakar* is said to be derived from the fact the raiyat only paid rent (*kar*) in the years in which he raised (*uthao*) and cut a crop (*bal*), and it is stated by Mr. Webster in his report on the tenures of Chotā Nāgpur, written in 1875, that by the custom of the country no length of possession gave the holders any rights of occupancy, and that it was only in one or two villages that any such claim was put forward and then only by alien tenants who wished to introduce the Bihar custom. This distinction, however, appears to have lapsed and tenants of *uttakar* lands now have the same rights as the tenants of *chattisa* lands. *Korkar* is the general term applied to a tenancy consisting of rice lands which have been made by the raiyat himself by the conversion of uplands, jungle, or waste lands. Dr. Davidson reported, in 1839, that no rents were payable for these holdings, the tenants only being liable for about 15 days' service, apparently irrespective of the area of the holding. This custom no longer prevails, though in a few villages, in thanas Māndar and Kuru, *korkar* lands have been found to have been held rent-free since before the *bhūinhāri* Survey. The general custom of the district is that during the preparation of the lands, *i.e.*, for the first three or four years, no rent is payable; after that lands are assessed at half the rate payable for *chattisa* holdings. The custom, however, is not uniform. In Biru, where the area of such lands is large and where the preparation of new *korkar*

lands is going on apace, the same rates are levied as for *chattisa* holdings; in Silli ten-sixteenths of the ordinary rate is charged; in some areas half the rate for *uttakar* holdings is levied. The custom of half-rates is recognized to be equitable by both landlords and tenants, but some powerful landlords have succeeded in overriding the custom. By a well-established custom which has been recognized in the present Tenancy Act, a raiyat who prepares *korkar* acquires a right of occupancy in it at once, and it is also a general custom that the raiyat shall obtain the consent of the landlord before preparing such lands. It was, however, formerly a common practice for landlords to allow a raiyat to prepare *korkar* for three or four years and then, when the land had become valuable, sue him for ejectment as a trespasser. This practice has now been prevented by the Tenancy Act which requires the landlord to bring the suit within two years from the date on which the cultivation of the lands was begun.

According to the custom of the country, uplands (*tānr*) are complementary to the holding of lowlands (*don*), and hence no cash rent is payable for them. It is only in the more intensely cultivated portion of the district that *tānr* lands are found in addition to those which are included in the *chattisa* holding. When a cash rent is assessed on such lands they are known as *damgat tānr*; when a rent-in-kind is paid, of the quantity of seed required for the fields, they are known as *maswār tānr*.

Prædial
conditions.

Prædial conditions are defined in the Tenancy Act as "conditions or services appurtenant to the occupation of land, other than the rent, and include *rakūmāts* payable by tenants to the landlords, and every *mahtut*, *mangan* and *madad*, and every other similar demand, howsoever denominated, and whether regularly recurrent or intermittent". These conditions are locally known as *rakūmāts* and *begāri*. In the recent Settlement operations all prædial conditions have been commuted into a cash rent, and the record and commutation are final and conclusive. Under the present Tenancy Act no tenancy can be created with prædial conditions attached nor can new prædial conditions be imposed on any existing tenancy. Thus both *rakūmāts* and *begāri* have been finally abolished and may be said to be now only of historical interest.

It has sometimes been contended that both *rakūmāts*, which are a species of *abwāb* and *begāri* are not leviable in Chotā Nāgpur, inasmuch as zamindārs were enjoined by section 54 of Regulation VIII of 1793 to consolidate all such charges and were prohibited by section 55 from imposing any new *abwābs* or *mahtuts*. Regulation IV of 1794, however, specially exempted the zamindārs of "that part of Zila Rāngarh which is included in the Soubah of Bihar" from the operation of the rules contained in section 54 of Regulation VIII. The landlords were thus not forced to consolidate existing charges but were forbidden to impose new ones after that date. But the law was not known to, or was not observed by, the landlords of Chotā Nāgpur, and the claims of the landlords to levy additional *rakūmāts* were upheld by the civil and revenue courts. In 1793, the *rakūmāts* and *begāri* leviable were no doubt insignificant, but the Hindu *jāgīrdārs*, anxious to get as much profit as possible from the land, gradually increased them, and during the whole of the 19th century there was a long-continued struggle over their imposition. Attempts were made to put a stop to them by executive order. In 1827, the Magistrate of Rāngarh issued a proclamation enjoining their total abolition, which apparently met with some success, as Dr. Davidson, Principal Assistant to the Agent, wrote in 1839 as follows :—“ These *abwābs* were a fruitful source of oppression to the Kols, but fortunately they have been abolished for the last ten or twelve years by an order of the Magistrate of Rāngarh. The Rājā complains greatly of the hardship of this order and at my first coming here I made some enquiry into the subject, but found the demands so enormous that to enforce them would ruin the whole country. . They are well got rid of and ought never to be revived in any shape”. The landlords, however, continued to levy these duties and to add to their number, in spite of these orders and in spite of a decision of the High Court, in the case of Urjan Sahi *versus* Anand Singh, that no cesses could be legally levied in Chotā Nāgpur in which Act X of 1859 was in force. It is doubtful whether this decision was correct, but whether correct or not, it certainly did not stop the levy. The landlords also had some claim for consideration for, as Mr. Oliphant, the Deputy Commissioner, pointed out in 1875, “ it was obviously improper to prohibit the levy of all cesses without affording the zamindārs an opportunity in the first

Rakūmāts.

instance of commuting these dues to rent". *Rakūmāts*, too, or some of them, may be regarded as a species of produce rent for the *tānr* lands and, as such, were not prohibited by any of the Acts or Regulations. The legality of their imposition was at length recognized by Act I of 1879, which provided for their commutation. Little use was made of these provisions, and during the last twenty years of the 19th century the landlords became more exacting in their demands, especially of compulsory labour (*begāri*), while the tenants, aided by the Christian missionaries, became more strenuous and successful in their refusal. The Commutation Act of 1897 permitted either party to apply for commutation and, though many applications were made, nothing like a general commutation of prædial conditions took place. It was not till the Settlement operations of 1902—1910 that the problem was finally solved, and a stop put to these exactions which had been the most fruitful source of agrarian discontent. The commutation then carried out was fair as far as possible to both parties. The criterion of liability was local custom or usage, or contract, and, though in some cases the landlords have suffered a diminution of income owing to the fact that illegal and unauthorised dues, not sanctioned by custom, were disallowed, yet it may be said that on the whole they have been liberally treated. The levy of any new cesses had been forbidden in 1793 and though this levy had been at first tacitly and afterwards openly recognized, yet there is no doubt that the landlords had in many cases carried these exactions to excess, and by so doing had hindered the development of the country.

The most common kind of *rakūmāts* were payments of *urid*, *sarguja*, *gondli*, cotton, paddy, straw, and *kher*, and were in reality a produce-rent consisting of a fixed quota of the produce of the uplands included in a *chattisa* tenancy. The other class of *rakūmāts* were miscellaneous, and sometimes irregular, dues, payable on certain specific occasions or for certain specific purposes. The following examples will suffice to show their nature: *Dasai*, a payment made to the landlords on the occasion of the *Dasāhara* festival, sometimes in the form of goats or buffaloes for sacrifices, sometimes in cash (*dasūin salāmi*). *Laurdan ghi* was a small quantity of *ghi* given at the same festival.

Bhatta was a payment, usually in kind, to meet the expenses of the landlord and his servants when they visited the village. *Nawākhāni* was a contribution of rice made at the winter harvest. *Nimako Dhān* was paddy taken by the landlord in lieu of salt. The landlords used to import salt and exchange it at the rate of one seer of salt for a *kāt* of paddy. The payment was still made, even after the import of salt was discontinued. *Dāk mashāra* or *dāk coss* was a cess originally levied by landlords to meet the expenses of the Government cess. The *dāk* cess was abolished in 1907, and though some landlords continued to levy it, it was not commuted in the Settlement operations, as it was not paid for the use or occupation of land. *Rasid Likhāt* was the charge made for writing rent receipts. As landlords are now required by law to give rent receipts, free of cost, its value was not allowed in the commutation proceedings. *Mahuā* oil and *mahuā baheri* were taxes paid for the right to take *mahuā* flowers and fruit. *Panriai* and *Diwāni* were contributions paid by the *jāgirdārs* to the Mahārāja's record-keeper (*pānre*) and *diwān*. Formerly the landlord used to exact from the villagers the best bullock of the herds but, after the custom was discontinued, a cash payment known as *bardoch* was made. *Thāna Kharcha* was a cess levied for the upkeep of the police, for which the Mahārāja and the *jāgirdārs* were responsible, and continued even after the police were taken over by Government.

At the time of the settlement it was found in most villages that the payment of *rakūmats* in kind had ceased and that their money values were collected instead, and in some cases they had been commuted to Re. 1 or Re. 1-8 per unit of land. Some of the miscellaneous charges such as *dasai* were levied on *korkar* and *uttakar* as well as *chattisa* tenancies. The incidence of *rakūmats* varied considerably from village to village.

Begāri consists of a number of days' labour given by the raiyats free of charge to the landlord for the cultivation of his *khās* lands, or as personal service. There is no doubt that from the earliest times the landlords exacted a considerable amount of service from their aboriginal raiyats. What was the ground for this is uncertain; Dr. Davidson in his report of 1839 advances the theory that the labour was given for their *bethbegāri*, or service holdings and for their *bhūinhāri* and *korkar* lands which they held rent-free or at a quit-rent. The special commissioners of

Begāri.

the *Bhūinhāri* Survey also found that *bhūinhāri* land was held rent-free, but that the holders had to render, sometimes, as much as 30 days' service. The enquiries of the Settlement officers go to show that it was a recognized incident of every holding for nearly a century. Even in the earliest times the system was much abused; Dr. Davidson in 1839 issued a proclamation that under no circumstances should landlords levy more than a fair amount of *begāri*, which was reckoned to be about 15 days. Similar proclamations were issued at other times, and in 1890 when the disputes over *begāri* had become very acute, owing to the spread of Christianity, Mr. Grimley, the Commissioner, with the authority of Government, issued a proclamation limiting it to 14 days. The incidence of *begāri* varied from thana to thana and village to village in the same way as the incidence of *rakū-mats*, and the amount of service rendered depended on the relative strength of landlords and tenants. In villages such as those in Chainpur, Kochedegā and Kurdeg thanas, in which the aboriginal inhabitants had become Christians *en masse*, it was found by the Settlement Department that no *begāri* had been levied for periods varying from seven to twenty years. The landlords had been forced to give way to the united opposition of their tenants and either lease out, or cultivate by hired labour, their *bhās* lands. On the other hand, several zamindārs claimed that their right to *begāri* was only limited by their requirements, and in Bishunpur thana one landlord was found to have actually succeeded in levying 50 to 60 days' labour annually from each of his raiyats. The *begāri* rendered in a typical village was found to be about 10 to 15 days, made up as follows:—

- 3 days' ploughing (*har*),
- 3 days' digging (*kori*),
- 3 days' planting or sowing (*ropni*),
- 3 days' cutting (*kātni*),
- 1 day's thrashing (*misni*),
- 1 day's storing the grain (*mōrābhāndhi*),
- 1 or 2 days' carrying the landlord's burden on his journeys (*des bides*).

In each case the period of labour was generally limited to about half a day, and, as the raiyat received food and drink from the landlord, the cash value of a day's service rarely exceeded one anna, and was therefore commuted at this rate by the Settlement officers.

Land measures in the ordinary sense of the term do not exist in Ranchi district. The local term for the area for which rent is payable does not represent any uniform superficial area but the amount of land for which a certain quantity of seed is required. Thus a *kāt* of land represents the area for which a *kāt* of paddy seed is required. A *kāt*, however, as a measure of quantity, is itself indeterminate and varies in different parts of the district from twenty seers to one maund, according to the size of the *pailā* or measure used. Further, the amount of seed depends upon the fertility of the soil, and it is thus impossible to express these units in the terms of any standard measure, such as acres or *bighas*. The area of a tenancy is usually described with reference to the unit in vogue for the lowlands (*don*) and these units are known as *pawās*, *annās* and *kāts*. The *pawā* and the *annā* are the units most generally used but they are even more indeterminate than the *kāt*, which is used for both lowlands and uplands in the Mundā country; thus in Ghāghrā thana a *pawā* corresponds to the area which can be sown with two to ten *kāts* of seeds according to the locality. The subdivisions of the *annā* and *pawā* differ in various parts of the district. Thus in parganas Khukrā, Korambe, Kuru, Lodhma, Jaspur and Omedanda, 2 *kānis* make 1 *kanwā*, 2 *kanwās* make one *pawā* and 4 *pawās* make one *khari*; in pargana Belkaddi, 2 *kānis* make one *kanwā*, 4 *kanwās* make one *pawā* and 4 *pawās* make one *khari*; in parganas Biru, Basia, Doisa and Palkot, 2 *kānis* make one *kanāsi*, 2 *kanāsisi* make one *kanwā* and 4 *kanwās* make one *annā*. In some villages the *kanwā* denotes the same area as an *annā*. In some parts of the district the rupee is used and in this measure four annas equal one *pawā* and four *pawās* equal one rupee, and it is probable that this measure denoted originally the area for which one rupee of rent was paid. The *kāt* is subdivided into two *khandis* and forty *pailās*. In Tori pargana *don* land is measured by *pattis*; 20 *dhurs* equal one *katha*, 20 *kāthas* equal one *kara* and 3 *karas* equal one *patti*; the area of a *patti* varies from two to four *bighas*. In parts of Chainpur and Bishunpur thanas, on the level hill-tops, known as the *pāts*, land is measured in *kāts* or ploughs, and the rent is assessed on the number of ploughs which the raiyats possess.

Cash rents.
System of
Land
Measurement.

Another reason for the difference in the size of the unit, even in the same village, is that *pawās* or *annās* which abut on uplands have been increased in size by the cultivator who has

enlarged his rice-land by terracing and taking in portions of the upland while other cultivators having land in less favourable surroundings have to be content with their original *pawā*. Further, when new cultivators settle in a village, they are usually required to pay a higher rent, and a simple way of doing this was to give them a smaller *pawā* but make them pay the customary rate. By this system rents were often illegally enhanced. In the settlement record the area of all tenancies has been recorded in acres and decimals and the people are gradually becoming acquainted with this standard and are realizing the advantage of a determinate measure over the indeterminate measure previously in force.

Enhancements
of rents.

During the agrarian struggles of the 19th century the landlords not only increased the *prædial* conditions but also largely enhanced the cash rents. The enhancement of the rents of holdings other than *korkar* by private contract was prohibited by the Chotā Nāgpur Tenancy Act of 1879, but the decisions of the courts rendered this wise provision of the law futile. The landlords frequently persuaded or forced the raiyats into agreeing to an enhancement of rent. They paid for a time, but when they fell into arrears and were sued, the courts decreed the amount which they had actually paid, even though it was admitted to have been enhanced quite recently. Another favourite device of the landlords for obtaining the sanction of the courts to enhanced rates of rent was to sue the raiyats for a sum in excess of what they had actually paid. False account books and *jamābandis* were prepared for the benefit of the court, receipts for the enhanced rates, and not for the sums actually paid, were given to the raiyats, who, owing to their illiteracy, were unable to detect the fraud; a certain number of raiyats who were friendly to the landlords were produced as witnesses, or even made defendants; and admitted the higher rates, and the court not unnaturally misled by this volume of evidence decreed the suit in favour of the landlord. Another method of enhancing rent was to sublet a village on a temporary lease to a *tikādār* at a very high rate with the deliberate object of making him extract, by fair means or foul, higher rents from the raiyats. In many cases the arbitrary and exorbitant demands of the landlords defeated their own objects. They became involved in harassing and expensive litigation and the raiyats driven to desperation either attacked the

landlord and his servants or abandoned the village. The victory too was not always with the landlords. Christian aborigines have exhibited remarkable powers of combination and have often defeated the landlord with his own weapons. Just as the landlords brought suits for enhanced rates, so the tenants deposited their rents in the treasury at reduced rates. Wealthy and influential zamindārs who kept proper books of accounts were easily able to disprove the correctness of such deposits, but the poor and illiterate zamindārs were reluctant to embark on expensive litigation and after accepting the amounts deposited were unable to obtain subsequent decrees for enhanced amounts. It must be remembered too that enhancement of rates is not necessarily synonymous with an increase of rent. Raiyats frequently included new lands in their old tenancies without paying additional rent, and in the absence of any definite system of land measurement, it was easier for the landlords to enhance the rate, the normal area remaining the same.

In the record-of-rights all holdings have been entered in acres and decimals and as all prædial conditions have been commuted to rent, it is possible to give statistics showing the incidence of rent per acre. Statistics giving the average rate per acre over the whole district or over a large tract are of little value, as the rates vary considerably from village to village. It has been calculated by Mr. Reid in his Settlement Report that the incidence of rent per cultivated acre is ten annas in the Sadr subdivision and five annas in the Gumlā and Khunti subdivisions. The gross rental of the lands occupied by all classes of raiyats has also been calculated to be only one-eighteenth of the volume of the produce in a normal year. Mr. Reid remarks: "The incidence of rent throughout the district is not heavy. The disputes about rents are due rather to the arbitrary and illegal manner in which the charges have been increased and to their unequal distribution than to the heaviness of the burden".

Incidence of
rent.

The amount of land held on produce rent in the district is comparatively small. Three systems are in vogue, *viz.*, *ādk batāi* or *sājkhā*, *saiikā*, and *maswār* or *kar*. Under the *sājkhā* system half the produce is payable, under the *saiikā* system a fixed amount, and under the *maswār* system an amount of the produce equivalent to the seed sown. Under the *saiikā* system the contributions are generally heavy, as the lands held are often

Produce rents.

part of the landlord's privileged lands. Many applications for commutation of these produce rents were received by the Settlement officers.

Rent of trees.

In many parts of the district the raiyats make considerable profit by the cultivation of lac. By the custom of the district the owner of a tree is the person who planted it, or his successor in interest, and he has a full right to grow lac on his tree. Landlords, however, have, in some cases, ignored this custom of ownership and enforced the payment of rent for privately-owned trees. On trees growing in the jungle the raiyats have not the same customary right to grow lac free of rent. But the rates payable are by no means uniform and vary with the market price of lac. In Kochedegā and Rāidih thanas no payments are made. In Rānchi thana the landlord charges from 8 annas to Rs. 3 per tree. In Gumlā and Ghaghrā thanas the raiyats pay sometimes half the value of the produce.

Wages.

From circumstances not peculiar to the Rānchi district wages have steadily risen during the last sixty years. In 1856 day labourers received four to five or six pice, and in 1886 six or eight pice. Two annas was the standard wage for a long period, but the general rise in the price of food-grains, the increased demand for labour, especially in Rānchi town, and also the greater facilities for emigration to Bengal and the tea districts have all contributed to raise wages, and at the present time an unskilled labourer can obtain a daily wage of two or three annas in any part of the district, while in the town of Rānchi he can obtain four or even five annas. The wages of women and boy labourers also show a corresponding increase. Women who, in the eighties, received three to four pice a day and, till recently, five to six pice, can now obtain two annas, while boys can get five to six pice. Cash wages, however, are still the exception rather than the rule in the district, and it is only labourers in and near Rānchi or those employed on Government work who receive payment in cash. Grain payments vary in amount from $2\frac{1}{2}$ to $4\frac{1}{2}$ seers and in value are approximately equivalent to the cash payments.

Wages of skilled labour.

Masons and carpenters who, in 1856, received two or three annas a day and for a long period continued to receive a standard wage of six annas can now obtain eight annas or more. Skilled

blacksmiths obtain equally high wages, but the village blacksmith, like other village artisans, still receives annual payments in kind. The *lorhā* receives a certain measure of paddy, usually a maund, annually for every plough owned by each cultivator who requires his services. He is paid separately for his services in making or mending other tools and implements. Ahirs receive a similar remuneration for each pair of cattle which they graze, and also a certain proportion of the milk. Basket-makers, such as Turis, Ors, Mahlis, are paid for each article, and potters also receive a fixed sum for their work.

Monthly wages have also risen, and an unskilled labourer now commands five to seven rupees a month while women can obtain four rupees or even more. Since the railway was opened, and especially since Ranchi became the headquarters of the Local Government, wages have risen to an abnormal degree, and a servant if provided with food and clothing receives four rupees or double that amount if food and clothing are not given. Monthly wages.

Daily or monthly wages, whether in cash or kind, cannot be said to be typical of the district. Before the commutation of *begāri* the raiyats of a village ploughed, sowed, and harvested the landlord's fields, while permanent field servants, or *dhāngars*, were also employed. A *dhāngar* is often a younger member of a respectable raiyat's family who takes service under the zamindār for a year in order to earn a lump sum for his family. He is hired usually in the month of *Māgh* (January) and receives wages in kind varying from six to twelve or even to eighteen *kāts* of paddy and a cash wage which has risen from Rs. 4 a year to Rs. 12, or even to Rs. 18 in some localities where the labour, such as that involved in irrigation, is heavy. He also receives a ration of food at midday. In some parts of the district, in lieu of receiving paddy, the *dhāngar* is fed and clothed by his master and lives as a member of the family, while in other parts he is given a parcel of land, or receives a portion of the land which he has helped to cultivate. Dhāngari.

Another form of hired labour is known as *pasri*. A *pasridāy* is a man who has no ploughs or plough-cattle of his own and enters into an agreement with some wealthier cultivator, by Pasri.

which the latter agrees to lend his plough in return for manual labour during the cultivating season.

Prices.

In Ranchi, as elsewhere, the prices of grain have risen largely during recent years, and the rise is apparently permanent. An old proverb "*sab dhān bais paseri*" refers to the days when one rupee purchased from 110 to 154 seers of paddy, and persons still living can remember when paddy was sold at three maunds to the rupee, but in those early days money was not in large circulation and transactions were all by exchange, and hence these figures hardly represent the true value of the commodities. Even in 1859 common paddy was sold at two maunds to the rupee and rice at one maund; by 1870 the price had only increased by 35 per cent. In 1888 rice sold at two rupees a maund, and from that date prices, though varying with the season, have steadily risen; in 1902 fifteen seers of rice could be obtained for a rupee in Ranchi and sixteen at Lohardagā and Palkot, and in 1914, after a moderately good harvest, rice was selling in Ranchi at eight or nine seers while in the outlying parts one or two seers more were obtainable. The large rise in prices in the Ranchi market during the last two years is due partly to the large increase in the population of the town since it became the headquarters of Government. There are still great variations between the price of grain in Ranchi and in markets accessible to the Railway and that in the inaccessible parts of the district. This variation is most marked just after the harvest is reaped, the improvident aboriginal being anxious to sell his crop and pay his rent and the dealer being anxious to buy in the cheapest market. As the year proceeds, prices tend to become more level throughout the district and when the *gora* crop is reaped in August, rice is in defect owing to export and consumption, and prices rule nearly as high in the south and west as in the east of the district.

Material condition of the people.

From the fact that the incidence of rent is not heavy, that wages have risen during the last quarter of a century and that the inhabitants of the district readily emigrate to the tea gardens of Assam and the Duars where remunerative employment can always be found, it might be inferred that the material condition of the people is good. A further argument in support of this inference which is sometimes put forward, is the fact that the excise revenue is increasing yearly and that the inhabitants of the

district spend more than 15 lakhs a year on liquor. Yet the inference is not wholly true ; and, though the material condition of the people has no doubt improved considerably in recent years and there are hopeful signs of a more marked improvement in the future, yet the cultivator under present conditions cannot tide over years of scarcity and is forced to borrow at heavy rates of interest from the money-lender and to become heavily involved in debt.

From data collected during the Settlement operations it has been calculated that the average holding of a cultivator is 12 acres, of which 4 acres is *don*, or lowland, and 8 acres *tānr*, or upland. On the basis of crop-cutting experiments, the average annual produce has been ascertained to be about 80 maunds of paddy and, assuming that the cultivator's family consists of 5.3 persons and that each member requires half a seer of rice a day for his sustenance, 24 maunds of rice, or 48 maunds of paddy, are required for home consumption. Out of the remaining 32 maunds, 6 maunds must be set aside for seed and there are thus only 26 maunds, the market value of which is about Rs. 32-8, out of which the cultivator has to pay his rent and purchase necessaries, including clothes, salt and tobacco. The rent charges of an ordinary raiyat's holding are equivalent to about one-eighteenth of the gross value of the produce, but after the necessaries of life have been purchased, the balance out of which the rent charges have to be paid is extremely small and in bad years it vanishes altogether. It is true that most cultivators have a supplementary source of income. Each raiyat keeps some poultry, goats, sheep, cattle or pigs. One or two members of the family work as labourers or emigrate to Assam and the Duars and their earnings help to increase the family income. Many raiyats also make a considerable income by the cultivation and sale of lac, and it is from these additional sources of income and not from the produce of the cultivated land that the rent is paid. The average raiyat has thus in a good year a bare margin for the purchase of luxuries, or for any expenditure on the improvement of his holding. Many holdings, however, are below the average and their produce affords a bare minimum of subsistence for the cultivator and his family.

In these circumstances it is not surprising that the capacity of the cultivator to tide over periods of stress, engendered by a

Indebtedness

partial failure of the crops, is small. The aboriginals and semi-aboriginals can, it is true, subsist in conditions which would play havoc with more civilized races and can maintain life, even when their crops fail, on jungle fruits and vegetables, but even in good years they frequently have recourse to loans to meet some extra expenditure, such as on a marriage, or borrow the seed for their holding at exorbitant rates of interest from the *banā* who is to be found in nearly every aboriginal village. Interest at seventy-five per cent. per annum is the normal, but not the maximum, rate of interest charged to the cultivator, and once he gets into the clutches of the money-lender, it is no easy matter for him to extricate himself. The oppression of the money-lender in former days reduced some of the cultivators and labourers almost to the position of serfs and frequently drove whole families to migrate to the labouring districts. Attempts have been made at various times to protect the raiyat from the results of his improvidence. Restriction on the transfer of holdings were introduced in the Tenancy Act of 1903, the object being to stop the sale of raiyati holdings by improvident raiyats and to restrict all forms of mortgage and thereby save the aboriginal population from becoming the serfs of the money-lenders. These restrictions were reproduced in section 46 of the present Tenancy Act. Transfer by raiyats of their rights in their holdings for any period exceeding five years are prohibited; but a raiyat may enter into a *bhugut bandha* mortgage for any period not exceeding seven years. A *bhugut bandha* mortgage is one in which the loan is repaid by the profits arising from the tenancy during the period of the mortgage. The restrictions of the transfer of Mundari *khuntkatti* tenancies are similar and the provisions of section 46 were made applicable to *bhūinhāri* tenancies in 1908. During the Settlement operations, statistics were collected showing the extent to which all cultivated lands, whether held by tenants, holders, tenants or raiyats, are sublet under mortgage leases, mortgages and *bhugut bandhas* entered into after the passing of the Act being shown separately. In the whole district 9,725 acres of *don* and 4,932 acres of *tānr* were mortgaged before the passing of the Act. After the passing of the Act, the amount of *don* mortgaged was 5,111 acres, and the amount of *tānr* 2,285 acres. The amount of land sublet in *bhugut*, both before and after the passing of the Act, was comparatively

Restrictions
on the
transfer of
lands.

small and amounted only to 340 acres of *don* and 133 acres of *qanr*. The total area of cultivated lands affected by mortgages of both kinds was 35 square miles or 8·2 per cent. of the land cultivated by raiyats, while the total recorded indebtedness amounted to Rs. 7,83,141. The average amount advanced per acre of *don* and *qanr* was, before the passing of the Act of 1903, Rs. 39-4-0 and Rs. 10, respectively. The Act of 1903, while not diminishing the number of transfers, had the unexpected effect of increasing the security value of both classes of land: that of *don* lands increasing to Rs. 61-4-0 per acre. This increase, though partly due to the large increase in the value of lands during the last seven or eight years in the Sadr subdivision, is mainly due to the fact that the security afforded by the mortgage of a raiyati holding for a period of five years is considered by the money-lenders not to be less than the value of a mortgage on the same holding for an indefinite period. Even if the mortgagor demands to be put in possession of the land at the end of the period, the money-lender can still attach and sell his movable property, including his crops. As a matter of fact, experience has shown that the raiyat seldom demands to be put in possession and often agrees with the money-lender to execute a second mortgage for a period of five years. Another method by which the intention of the law is defeated and the sale or permanent transfer of raiyati holdings effected is for the raiyat to make a collusive surrender of the holding to his landlord, who then resettles the land with the money-lender. Thus the restrictions on the transfer of land have not proved a success, and it appears desirable to amend the law and to permit the transfer of holdings, provided the transfer is approved by the Deputy Commissioner. This would prevent raiyats selling or leasing their lands at unfair rates.]

At the time of the settlement it was found that *bhūjnāri* and *khyatkārti* holdings had also been largely mortgaged and that in all 43 square miles had been mortgaged by tenure-holders, *bhūjnāris*, and *khyatkārtidārs*, of which probably more than half was mortgaged by the two latter classes. It was accordingly decided to grant loans under the Agriculturists' Loans Act to Mundāri tenants in all cases in which the value of the land exceeded the amount of the debt, to pay off the

mortgagee and restore possession of the land to the mortgagor. In all a sum of Rs. 1,48,600 was given out in loans under this scheme, but the scheme did not meet with the success that was anticipated, and there is little doubt that in many cases the lands were remortgaged shortly after the original mortgage had been redeemed. It will be seen from this that the attempts to improve the economic condition of the people by legislation or Government action have been partial failures. There are, however, signs that the people themselves are beginning to take steps to improve their own condition. Government and the Christian Missions are doing much to spread education among the aboriginals and thus to improve their moral and material condition, for education not only opens the door to employment of various kinds but also makes the people realize the folly of improvidence. The non-Christian Oraons and Mundās are following the example of their Christian brothers and are making efforts to qualify their children for some additional employment besides their hereditary occupation of agriculture. Recently an Association called the "Oraon-Mundā Sikhsa Sabha" has been started to raise funds to assist boys in prosecuting their studies at schools and colleges. With the spread of education it may be hoped that the Oraon or Mundā will conquer his improvident habits, will give up the vice of intemperance, and will devote the profits of his land to improved methods of agriculture, and especially to the development of irrigation. The Settlement operations have given to the raiyat security of tenure, and he now appreciates the fact that any improvement of his holding will result in profit to himself and is well aware that he is not liable to be deprived of his land through the rapacity and oppression of his landlord. The most remarkable feature of the history of the last four or five years has been the spread of the Co-operative movement, which is due partly to the efforts of missionaries and other persons interested in the welfare of the aboriginals, and partly to the growing desire of the people for an improvement of their material condition.

Co-operative
Societies.

The movement has now taken firm root among the Christians of Chotā Nāgpur and societies under the supervision of missionaries are in a very flourishing condition. Without close supervision the societies languish and fail, and there is little prospect of the non-Christian aboriginals forming societies of their own accord. The benefit derived from co-operation is great, and,

as the history of the last half century shows the successful struggle of the Mundās and Oraōns against the serfdom which the landlords endeavoured to impose, the coming half century will witness the struggle between the cultivator and the *mahājan*, and it may be confidently anticipated that the development of the co-operative movement will end in setting free the cultivator from the toils of the money-lender, as effectually as the publication of the record-of-rights has set him free from the oppression of the landlord.

The first societies in the district were established by the late Mr. Lonsdale in the Anglican Mission Stations of Kachabāri and Bargari, and these and eight other societies in the parish of Itki flourished under his supervision. Since his death they have received little attention and a recent report shows them to be nearly all in a stagnant condition. The Bishop of Chotā Nāgpur has now taken up the matter, the existing societies are to be reorganized on denominational lines, new societies are to be started in mission centres, and ultimately there will be a central society at Rānchi. The ten existing societies have a membership of 365 and a working capital of Rs. 3,849.

The Lutheran Mission was also not slow to appreciate the benefits of co-operation, and the societies instituted and supervised by the Rev. Paul Wagner of Purūlia have achieved good results. There are in all ten societies attached to the Mission, eight of which are in this district, with 1,635 members and a working capital of Rs. 28,854. The societies originally started with a loan from Government, but this has been repaid, and they rely now almost entirely on the deposits, partly compulsory and partly voluntary, made by the members. The deposits amount to nearly 85 per cent. of the working capital. The societies are thus independent of outside aid and the system has the advantage not only of giving the cultivator loans at an easy rate of interest, when he needs them, but also of teaching him the lesson of thrift.

The societies of the Society for the Propagation of the Gospel and the Lutheran Mission are eclipsed by the giant society of the Roman Catholic Mission, started some five or six years ago by the Rev. Father Hoffman, which has now the distinction of being the largest society of the kind in India and practically in the world. The success of the movement among the Roman

Catholic converts is entirely due to the energy and enthusiasm of Father Hoffman. The society in 1915 had over 10,000 members and a working capital of over Rs. 1,00,000, and the rapidity with which the movement is spreading may be judged by the fact that the working capital has increased by over Rs. 60,000 in the last two years. The society is confined entirely to members of the Mission and though criticisms are sometimes levelled against it on this score, it is clear that were this not the case it could not possibly cope with the work thrust upon it.

The purposes for which loans are given show the needs of the aboriginal. Cattle-disease is always more or less prevalent in Chotā Nagpur, and heavy mortality of cattle is one of the chief causes which tend to impoverish the raiyat. In 1912 more than one-third, and in 1913 nearly one-quarter, of the money given out in loans was for the purchase of cattle. Father Hoffman, however, did not rest content with assisting the members to replace their losses; he endeavoured with some measure of success to induce them to take prophylactic measures and so reduce cattle mortality. The training of aboriginal Christians in methods of inoculation and the attempts to make inoculation popular have been described in Chapter V.

Loans for the repayment of debts form a large item in the amount given out, but, though the urgent need of setting the cultivator free from the burden of his old debts is fully recognized. Father Hoffman has adopted the sound principle of placing thrift before credit and encourages the members of his society to work out by thrift their own salvation. The society also has its indirect effect in improving the condition of its members. Resolutions and rules demanding self-sacrifice are voluntarily accepted by the members. Two typical rules may be quoted:—Any member who gets drunk has to pay a fine to the society; any member who resides within five miles of a school and does not send his children to be educated, may be called upon to resign his membership.

Side by side with the Chotā Nagpur Co-operative Society is the Chotā Nagpur Catholic Co-operative Store which also owes its origin and success to Father Hoffman. The objects of the society are defined in its bye-laws:—

“The primary and immediate object of the society is to train

the aborigines of Chota Nagpur to trade, and thus gradually render them fit to secure for themselves that share in their own country's trade to which they have the first right. The ultimate object is to secure for the members, whether cultivators, traders, or artisans, all that co-operative buying of raw materials and co-operative sale of produce and manufactured articles can procure. With these objects in view the store is open to all members and non-members alike for the sale of produce and the purchase of the necessaries and luxuries of life".

The store, or "Gola" as it is known in Ranchi, stocks most things—cloth, salt, oil, yarn are in great demand, but the main business is in rice. Rice is bought and sold at the market rate, and both sellers and purchasers enjoy the great advantage of fair measurement. Eventually rice will be purchased only from members, and this will secure that the profit of the land goes into the hands of the cultivator who is now compelled to sell his produce soon after the harvest in order to pay his rent and purchase the necessaries of life and who is liable to be cheated in both transactions by the *bania* whose success both as buyer and seller is reputed to depend largely on his sleight-of-hand. The members are at present somewhat suspicious of the system of commission sale and prefer hard cash for their goods, but eventually no doubt they will see the advantage of receiving a small percentage of the price at first and later on sharing in the profits made by waiting for the market. The business is rapidly increasing; in 1912 the turnover was Rs. 60,000; in 1913 it rose to Rs. 1,11,000. Branches have been opened at eight different centres throughout the district. Father Hoffman had many difficulties to contend with: but with the aid of a lay brother who had experience of a commercial firm in Calcutta, he built up the business upon sure foundations. Apprentices are now trained to manage the central store and to take charge of its branches, and the staff are learning by experience to avoid the pitfalls which beset amateur dealers.

In addition to the Co-operative Societies working under the control of the missionaries, there is a Central Bank at Ranchi, to which are attached 85 small societies, composed of Chamars, Mehtars and other depressed classes, mostly in or near Ranchi town, or of weavers and aboriginal cultivators in the interior. The societies are not in a flourishing condition, in spite of the

enthusiasm and energy of Rai Bahadur Radha Gobind Chaudhuri, their founder, of Babu Amarendra Nath Banarji, and of Babu Sarat Chandra Roy. The lack of success of these societies illustrates the difficulty of spreading the movement in villages, the inhabitants of which are of different races, different religions and different languages.

CHAPTER IX.

OCCUPATIONS, MANUFACTURES AND TRADE.

ACCORDING to the census of 1901, pasture and agriculture were the occupation or means of livelihood of 951,257 persons in the Ranchi district, or over 80 per cent. of the population. Of these 16,494 were engaged in stock-breeding and dealing, 13,530 were rent-receivers, 877,452 rent-payers (*i.e.*, ordinary cultivators) and 35,005 agricultural labourers. At the census of 1911 pasture and agriculture were the occupation or means of livelihood of ~~929,436~~ persons, or ~~nearly~~ 67 per cent. of the population. Of these 44,314 were rent-receivers, 723,683 rent-payers, 94,316 farm labourers, and 53,750 herdsmen, graziers, etc. These figures include both actual workers and dependants, the latter amounting to 375,315, or 40 per cent. of the total. The marked variation between the totals of all these classes is not due to any real decrease in the number of persons engaged in agriculture, but to the fact that in 1911 a different system of classification was adopted and greater accuracy was obtained. The classification, however, is still somewhat elaborate for a district such as Ranchi in which the enumerators, who are unskilled and often barely literate, find it no easy task to distinguish between a worker's primary and subsidiary occupation or to classify workers under their proper heads. The figures obtained require careful examination. For instance, the total number of persons engaged on agriculture, excluding those engaged on forestry and the raising of farm stocks amounts only to 868,340, or 62.6 per cent. of the total population, a smaller percentage than in any other district of the province, except Mánkhūm, but it must not be inferred

CENSUS STATISTICS.

from this that commerce and industry form the sole occupation of a large proportion of the inhabitants of the district. Nearly all the artisans of the district, the weavers, blacksmiths, potters, etc., have small holdings, while the money-lenders and traders also derive part of their income from agriculture.

The industrial population accounts for 8·2 per cent. of the total, and of these about 53 per cent. are actual workers and include 9,200 cotton-weavers, 6,300 workers in wood (carpenters, sawyers, basket-makers), 6,600 workers in metal, (principally blacksmiths), 8,200 potters, brick-makers, etc., 8,100 manufacturers of articles of food (grain-parchers, sweetmeat-makers, butchers, distillers), 9,200 tailors, barbers and shoemakers. Trade and commerce support 118,752 persons, or 6·7 per cent. of the population, of whom 53 per cent. are dependants. Included under this head are 3,800 drivers and cart-owners, 5,600 brokers and bankers, *i.e.*, *mahājans*, 6,500 dealers in chemical products (drugs, dyes, petroleum, etc.), 16,800 dealers in food-stuffs, 6,300 dealers in fuel, charcoal, cowdung, etc., and 3,100 general dealers. The professional classes number only 11,379, or ·8 of the population, of whom 1,300 are priests and ministers of religion, 378 lawyers, *muktars*, etc., and 530 teachers. This class also includes nearly 1,000 musicians, *i.e.*, the *Ghāsis*, who perform at weddings and festivals. Apart from these four major classes, 71,218 persons were supported by domestic service, of whom 45,768 were actual workers; 2,400 were employed in the police or as village *chaukidars*; 1,764 were in the service of the State; 146,318 persons, of whom only 45,906 were dependants, were described vaguely as labourers, without any definite occupation being given; and finally 7,739 persons were included in the class of beggars, vagrants and prostitutes.

INDUSTRIES.

Apart from the industries of the village artisans, the only industries of any importance in the district are the collection and manufacture of lac which is carried on principally at Bundu in the Khunti subdivision, and the manufacture of tea. A description of the methods employed in the manufacture of lac will be found in the Gazetteer of Mān-bhūm and, as the methods employed in this district are similar, need not be repeated. According to the figures obtained at the industrial census of 1911 there were eight lac

factories in the district, giving employment to 415 male workers and 222 female workers. The figures somewhat under-estimate the extent of the industry as at the time of the census several factories were not working. The war in Europe has again caused the trade to decline, and several factories have been closed. The lac industry owes its development to Mr. Stainforth who established a factory at Dorandā forty years ago. A description of the tea industry has been given in the chapter on Agriculture. At six gardens the manufacture of tea, principally green tea, is carried on and gives employment to 330 male workers and 205 female workers.

There are no large weaving centres in the district and cotton weaving is carried on only as a home industry, *i.e.*, production on a small scale for merely local consumption, by the weaving castes, such as the Chik Barāiks, Pāns and Muhammadan Jolāhās. The cotton used in weaving is often locally grown and spun by the women of a cultivator's family. The Mundās have a strong prejudice against taking up the industry of weaving, which they consider to be a degrading occupation, only fit for the Pāns of the village. The Roman Catholic Mission recently attempted to induce Mundā boys to take to weaving and thereby supplement their incomes derived from agriculture, and sought to overcome their prejudice by the use of the Japanese loom which was worked with the feet, but the attempt was unsuccessful and had to be abandoned.

Cotton Weaving.

The ordinary iron utensils required for domestic use are made locally throughout the district by the village Lohrās and Lohārs. Iron is extracted from iron ore by the Asurs and Lohrās, and sometimes by the Orāons and Mundās themselves. The appliances used by the blacksmith are primitive and the products of his hearth and anvil have no pretensions to fine work. The weapons used by the aboriginal tribes in hunting are sometimes good examples of rude work, especially the hunting axes, known as *balua* or *phalsa*, according to their shape. Heavy axes (*tāngi*) are also made for wood-cutting.

Ironware and Cutlery.

Attempts have been made at various times to develop the gold-washing industry in the Sonapet valley, but without success, and abandoned machines can still be seen there, to bear witness to the disastrous results of the Calcutta gold boom. The

Gold-washing.

Jhorās of Biru occasionally wash for gold in the auriferous sands of the Sankh and other rivers, but a hard day's work is well rewarded if the gold-dust obtained is worth three or four annas. Diamonds, for which the country was famous in historical times, are no longer found.

Other industries.

Other industries call for no special description; workers in brass and bell-metal, principally at Rānchi and Lohardagā, manufacture the ordinary vessels for household use; the village Kūmhārs supply pottery of the most ordinary description; the carpenters turn out only rough work, but aboriginal boys, trained in the Industrial School at Rānchi, show some aptitude for wood-carving and wood-turning, and there are signs that this industry will develop. Basket-making is carried on by the Turis and Doms, who are scattered about the district. Rope is manufactured by Birhors and other the aboriginals from jungle grasses and fibres. Musical instruments, especially drums, so dear to the heart of the aboriginal, are also of local manufacture.

TRADE.

The chief centres of trade in the district are Rānchi, Lohardagā, Gmmlā, Pālkot, Gobindpur and Bundu, and the importance of the two former markets has increased since the opening of the extension of the Bengal-Nagpur Railway. Trade from the southern portion of the district goes to the main line of the Bengal-Nagpur Railway at Chakardharpur, Rājāngpur, and other stations. Apart from the railways, a considerable amount of trade still goes by road *via* Hazāribāgh and Chattrā to Gaya. In the wilder parts of the district pack-bullocks are regularly used as the only means of conveyance, and long trains of them may be seen passing through Barwe bringing oil-seeds from the Feudatory States of Jashpur and Surguja. Except at Rānchi and Lohardagā, there are no permanent markets, and trade is carried on by means of the weekly *hāts* held at various centres, at which the merchants purchase food-grains, oil-seeds, lac, hides, etc., from the cultivators and sell in return salt, kerosine oil, and Manchester goods. The chief articles of export after a good harvest are oil-seeds and rice. Stick lac is also exported, chiefly to the manufacturing centres in Mirzapur and Mānbhūm. Other items of export are hides and skins, tea, timber and bones. Sugar, salt, kerosine oil, coal and manufactured articles are the principal articles of import. An interesting attempt to do away with the *bania*

and secure for the aboriginals the profit of their cultivation has been made by the Roman Catholic Mission by the establishment of a large Co-operative Store, of which an account is given in Chapter VIII.

The standard *ser* of 80 *tolas* is practically only known in the larger markets and trade centres. In the Five Parganas the *solāhi ser* is used, and is equal to one-third of the standard *ser*; it is so called because it is equal in weight to sixteen Gorakhpuri pice. In other parts of the district the weight in most common use is the *athāisi kachi ser* which is equal in weight to twenty-eight copper pice, or half a standard *ser*. Seven *ser*s make a *paseri* and eight *paseris* one maund. The *kachcha ser*, which equals 9·6 standard *chitaks*, is also in common use; six *kachcha ser* go to one *paseri* and 48 to the maund, which is thus equal to 23 standard *ser*s.

Weights and Measures.

Grain, however, is seldom weighed, and all transactions in grain are carried out by means of the measure known as the *paila*. The size of the *paila* varies, and to ascertain which merchant will give him the best price for grain the customer has not to enquire what the rate is but to see whether a large or small *paila* is being used. The following *pailas* are in common use; the *chhapnāhi paila*, so called because a *paila* of cleaned rice is equal to 56 common pice or one standard *ser* of 80 *tolas*; the *baragandi paila* which equals twelve *gandas* (48) of common pice and the *sawāi paila* which derives its name from being the equivalent to one-and-a-quarter of the *chhapnāhi paila* and is equal to five-fourths of a standard *ser*. In measuring grain for family consumption or the distribution of grain-wages the *rozni paila* is used.

Divisions of time are but vaguely recognized by the rural population, the time of day being usually fixed with reference to the position of the sun or to a meal or some agricultural operation, *e.g.*, taking out or bringing home the cattle. The day and night are each divided into four *pahar*, each *pahar* into four *ghari* and each *ghari* into two *dand*. A *ghari* varies in length according to the duration of daylight and is longer by day in summer and by night in winter; it averages about three-quarters of an hour. The Hindi Sambat year is used throughout the district.

The local measure of distance is the *kos* or league; it consists of sixteen *goli*, or gunshot distances, which consist of 440 *deg* or paces. The *kos* is a somewhat indefinite measure and is said to be the distance which a man can walk carrying in his hand a green *sāl* twig before it becomes withered. The system of land measurement is described in Chapter VIII.

CHAPTER X.

MEANS OF COMMUNICATION.

A CENTURY ago the only means of communication in the district consisted of jungle paths over which no wheeled vehicle could pass. On the establishment of the Agency in 1834, roads were constructed from Ranchi to the headquarters of the surrounding districts, but even in 1870 only 175 miles were maintained, the most important being the roads from Ranchi to Silli, and from Ranchi to Barkheta on the northern boundary of the district. Under the Road Cess Committee many new roads were constructed, and existing roads were improved, and in the year 1888 there were 700 miles of road, many of which were only fair-weather tracks. The improvement of the communications has been carried on by the District Board and there are now over a thousand miles of road. So great is the area of the district, and so small the resources of the District Board, that the metalled roads connecting Ranchi with the neighbouring districts are maintained at the cost of Government. The Public Works Department maintains 129 miles of metalled road which open up the north-west, north-east, and south of the district. The District Board is responsible for the roads connecting Ranchi with the subdivisional headquarters at Gumla and with the west and south-west of the district, and also for the feeder roads to the railway. In all 901 miles of roads, including from village roads, are maintained, all of which, except for a few miles near Ranchi, are unmetalled. The more important roads are surfaced with red gravel, or "murrum", which is found in great quantities in the district, but the majority are merely tracks over the high lands with drains cut on either side and brick or wooden culverts for drainage purposes. The physical conformation of the country makes the construction of roads difficult. Even in the undulating central plateau,

there are numerous streams and rivers which, though dry in the hot weather, are impassable after a storm in the rains, and the roads have to be embanked where they cross the low-lying valleys between the ridges. In the west and south-west where the country is hilly and more broken, the work is even more difficult. The streams are more numerous and the roads have to pass over steep *ghāts*, or passes in the hills. In spite of these difficulties great improvement has been made in the roads in the last few years, and it is now possible for a motorist during the dry season to reach even the most distant parts of the district without encountering any insuperable obstacles. The detailed account of the roads which is given below shows the progress which is being made. On the roads maintained by the Public Works Department there are inspection bungalows every ten or twelve miles, while there are bungalows at several thanas, constructed and maintained at the cost of the *ghāt-wāli* fund.

Vehicles.

The bulk of the trade of the district, except on the metalled roads, is still carried on pack-bullocks, and long streams of pack-bullocks and pack-ponies are met crossing the hills in the west of the district and bringing to the railway at Lohardagā or Rānchi the produce of Barwe, Biru, and the Feudatory States. Bullock-carts are numerous on the metalled roads radiating from Rānchi, and much of the trade with the Gaya district and South Bihar is still carried in carts along the road to Hazāribāgh, instead of by the circuitous railway route *viā* Purulia and Asansol. For these large carts bullocks are imported from Bihar, as the small and undersized bullocks of Chotā Nāgpur are unable to pull anything heavier than the *sagar*, the ordinary cart of the district. The *sagar* which is a low cart with two solid wheels, built up of three blocks of wood, can traverse the roughest country with a light load and is used for bringing timber from the jungles and rice to the markets. The aboriginals and low-caste Hindus carry their goods by means of the *banghi*, a flat elastic wooden or bamboo rod, about four feet long, which is carried on the shoulder, the articles being placed in two nets which are suspended from the ends. For the conveyance of passengers, the *pālki*, similar to that in use in other parts of India, is used by well-to-do Indians, but the most characteristic vehicle of Chotā Nāgpur is the "push-push". This has been aptly described as "a bathing machine on two wheels, only not half

so high or roomy". It is about four feet high inside, and stretched over the top is a semi-circular roof of matting, beneath which are the traveller's servants and luggage. The vehicle is propelled by from four to eight coolies. Before the Rānchi-Purūlia railway was opened, a "push-push" was the only form of conveyance for the journey of 75 miles from Purūlia, and even with fresh relays of coolies every eighth mile, the journey under the most favourable circumstances used seldom to take less than twenty hours. In the eighties visitors to Rānchi had an even longer journey in this uncomfortable conveyance, as the route from Calcutta was by rail to Giridih, and thence by road through Dumri, Bagodār and Hazāribāgh. Since the opening of the railway to Rānchi, the "push-push" is rapidly becoming a relic of the past, but it may still be seen at Rānchi railway station waiting to carry the traveller's luggage and servants to his destination, or met in the bazar conveying a Secretariat Assistant to his office, or his children to the school. With the improvement that has been made in the roads in recent years, and with the increase in the official population of Rānchi, since it became the headquarters of Government, motor cars have become very numerous and form a striking contrast to the primitive *sagar* and the cumbersome "push-push"

The four first-class roads maintained by the Public Works Department connect Rānchi with the headquarters of the Mānbhūm, Hazāribāgh, Singhbhūm, and Palāmau districts. The first three are metalled with quartz, and the last with good gravel. Main Roads

The Rānchi-Purūlia Road (74½ miles, 38½ miles in the district) is metalled and bridged throughout. The two largest bridges are across the Subarnarekhā—one a girder bridge at the 36th mile, on the boundary of the district, and the other a stone bridge a few miles outside Rānchi. Until the opening of the Rānchi-Purūlia railway this was the most important of the roads from Rānchi and carried a great volume of traffic, both in passengers and goods. Even now the number of bullock-carts using the road is considerable, and there is much traffic in goods to the intermediate stations between Rānchi and Purūlia and to the large bazars of Silli, Jonha, and Jhalda. Motorists also make great use of the road.

The surface of the road is so good and the gradient of the *ghāt* so easy, that the journey to Purūlia can be performed as quickly in a car as in the train, and the pleasure of the motor drive through the beautiful scenery is highly preferable to the tedium of the journey by rail. There are good inspection bungalows at Tatisilwāi, Angara, Jonha, and Kita. The dāk bungalow at Thulin (40 miles), formerly much used as a half-way house in the days of the "push-pish" journey, is just outside the district.

The road from Rānchi to Hazāribāgh (58 miles, 20 in the district) is also metalled and bridged throughout. It decreased in importance on the opening of the railway to Purūlia, but much of the goods traffic to Bihar still follows this route to avoid the necessity for transshipment at Purūlia, while most of the coal used in Rānchi is brought by this road from the Rāngarh coalfield. The road has a great attraction for motorists, and now that the bridge over the Dāmodar river at Rāngarh has been completed, the journey presents no difficulties. Before the bridge was opened, the motorist could cross the river in the dry season by a temporary wooden bridge, but, if the river rose at all, he had to entrust his car to the tender mercies of coolies who slung it on poles and carried it on their backs, or, if it rose still higher, to load it on to a clumsy ferry-boat, which was slowly pushed to the opposite bank. There are inspection bungalows at Ormānji and Chutupalu. At the 18th mile from Rānchi a road branches off to the foot of the Ichadāg hill, on the summit of which (3,500 feet above sea-level) the District Board has erected a bungalow, to serve as a sanatorium for the inhabitants of Rānchi who find the heat of April and May too oppressive.

The Rānchi-Chaibassa road (88 miles, 38 in the district) has increased considerably in importance since the establishment of a subdivision at Khunti. It is metalled and bridged throughout. The Subarnarekhā at the 7th mile is crossed by a causeway, and bridges have recently been erected over the Kānchi river at the 15th mile, and the Tajna at the 20th mile. There are inspection bungalows at Kalamati, Khunti, and Murhu. The Rānchi-Chaibassa and Rānchi-Hazāribāgh roads form an important part of the Trunk Road which will link up Bankipore and Bihar with Cuttack and Orissa.

The Public Works Department also have charge of the Rānchi-Daltonganj road, of which 36½ miles are in the district,

and a portion of the Rānchi-Pithauria road. The former with the District Board road from Kuru links up Rānchi with Lohardagā but its importance has been considerably reduced since the opening of the Rānchi-Lohardagā Railway; the latter forms the approach to the Lunatic Asylums which are in course of construction, some six miles out of Rānchi, and has been improved by the erection of a bridge over the Potpoto river at the fourth mile. The road via Pithauria used to connect Rānchi with Hazāribāgh before the present road via Rāmgarh and Ormānjhi was constructed.

Of the roads maintained by the District Board, the most important are those connecting Rānchi with Gumlā and Biru in the west, and with Bundu and Tamār in the south-east, Lohardagā with Gumlā, and Khunti with Torpa and Basia. The Rānchi-Gumlā road (56 miles) is gravelled throughout and has masonry bridges over all the rivers, except the South Koel. An attempt was made to provide a ferry for this river but did not prove a success. During the dry weather the river is easily fordable but during the rains it is often uncrossable for days together, even in the primitive *donga*. Two roads link up Rānchi with the south-west of the district; the main route is via Khunti and Torpā to Basia and thence to Kolebira, Simdegā and Kochedegā; while another road passes through Lodhmā, Karrā and Jariā to Basia. From Basia a road goes to Pālkot and Gumlā. These roads are at present unmetalled and not surfaced with gravel, but the main road via Torpā is being improved by the erection of bridges and culverts, while the improvement of the road between Kolebirā and Simdegā is under consideration. A road will also be constructed, linking Simdegā and Biru with the B.-N. Railway near Rājgāngpur. The road to Bundu is bridged throughout, and will soon be metalled. The Lohardagā-Gumlā road (32 miles) has become of great importance since the opening of the railway to the former town and with the assistance of grants from Government the District Board is constructing bridges over the rivers and metalling the greater portion of the road, as it has been found by experience that gravelled roads are little better than *kutchā* roads if the cart traffic is at all heavy. The timber traffic in this part of the district is very heavy, as many of the *sāl* jungles in the north-west of the district are being exploited by contractors, and a

District
Board Roads.

large number of carts pass along the Ghaghra-Netarhāt road which leaves the Lohardagā-Gumlā road at the 16th mile. Bridges are being constructed on this road which, apart from the timber traffic, owes its importance to the fact that it unites the potential hill station of Netarhāt with the railway and with Rānchi. The roads in the outlying parts of the district and the village roads are little better than cleared tracks, with drains cut by the side. In the famine of 1908, the roads in the famine areas of Biru and Barwe were improved by the construction of embankments, but the improvement has not been permanent. The chief need on all the roads in the district is the construction of masonry bridges over the small rivers and of permanent culverts, to prevent the surface drainage breaching the embankments.

Arboriculture.

The main roads from Rānchi are lined with avenues of shady trees. Trees are also being planted by the side of the District Board roads, especially quick-growing trees, such as *pipal*, *bar* and *tun*, and fruit trees, such as jack, mango, *jāmun*, and *karanj*, which afford both shade to the traveller and profit to the planter.

The District Board has constructed wells at the larger bazars and villages on the main roads,

Water communica- tions.

There are no canals or navigable rivers in the district. The larger rivers are crossed during the rains in a *dongā*, a primitive boat constructed of the hollowed-out trunk of a tree and propelled with long bamboo poles.

Railway communica- tions.

The opening of the Purulia-Rānchi branch of the Bengal-Nagpur Railway has made Rānchi easily accessible from Calcutta and elsewhere. The line was begun in 1905 and was opened by Sir Andrew Fraser, Lieutenant-Governor of Bengal, on November 14th, 1907. It is built on the 2' 6" gauge and is 72.55 miles in length, 36.63 miles being in the Rānchi district. There are six intermediate stations between Rānchi and Purūliā, those at Tatisilwai, Gunga Ghāt, Jonha and Silli being within the district boundaries. The journey from Calcutta to Rānchi can now be accomplished in 14 hours, and that from Bankipore to Rānchi in the same time. The extension of the line to Lohardagā was begun in 1911, and was opened for traffic in October 1913. The line passes midway between the Rānchi-Gumlā and Rānchi-Lohardagā roads and is 42.8 miles in length; there are

intermediate stations at Argora, Pisga, Tangārbansli and Naggira.

The effect of the Railway on the district is shown by the increase in the amount of goods exported between the years 1908, 1912 and 1914-15. In 1908 exports amounted to 5,863 tons, in 1912, to 16,818 tons, and in 1914-15, after the opening of the Lohardagā extension to over 21,000 tons.

The following table shows the chief exports from Ranchi stations.

	1908	1912	1914-15
	Tons.	Tons.	Tons.
Grain and Pulses ...	306	214	223
Rice ...	1,489	5,513	223
Hides and Skin ...	567	851	435
Lac stick ...	1,662	2,007	1,427
Oil-seeds ...	963	6,897	3,618
Tea ...	105	172	107
Timber ...	101	174	641
Bones ...	313	527	344

Imports amounted to 24,362 tons in 1908, to 27,735 in 1912, and to 45,386 in 1914-15. The principal imports are :—

	1908	1912	1914-15
	Tons.	Tons.	Tons.
Coal ...	1,905	2,747	10,032
Cotton Twist ...	805	912	1,021
Rice ...	6,241	48	1,017
Wheat ...	402	290	253
Wheat flour ...	467	462	720
Lime ...	119	1,802	3,630
Kerosine oil ...	875	1,496	1,719
Salt ...	4,659	5,640	5,856
Sugar ...	1,728	1,319	711
Mahua flowers ...	1,052	39	340

The Lohardagā branch promises to have an equally heavy export traffic, the import traffic being naturally considerably less than to Ranchi. The export traffic on this line in 1914-15 amounted to 12,251 tons and the import traffic to 4507 tons.

The figures for passenger traffic to and from Ranchi are as follows :—

	Outward.	Inward.
1908 781,134	67,555
1914-15	... 131,885	146,913

Here again the figures show the great benefit of the railway in a famine year, the large number of outward passengers in 1908 being due to the emigration of coolies to Bengal and the tea districts to obtain work. The total number of passengers carried on the Lohardagā line in 1914-15 was over 76,000.

Postal communications.

There are altogether 35 post offices in the district, including one head office, 11 sub-offices and 23 branch offices, and 475 miles of postal communication. The number of postal articles delivered weekly averages over 38,000, while the value of money orders issued in 1914-15 was Rs. 17,33,315, and of money orders paid was Rs. 8,71,910.

Six hundred and ninety-four accounts have been opened in the Savings Banks, the deposits amounting to Rs. 1,65,834 in the year 1914-15.

There are six combined post-telegraph offices in the district. The number of messages despatched was 17,905 in 1911-12 before Ranchi became the headquarters of the Local Government, and 73,856 in 1914-15.

CHAPTER XI.

LAND REVENUE ADMINISTRATION.

For purposes of Land Revenue administration the district consists of only one permanently-settled estate, that of the Maharāja of Chota Nāgpur. The estate embraces the whole of the district, with the exception of a few villages which belong to the Padma Rāj estate in the district of Hazāribāgh, and the Kashipur Rāj estate in the district of Mānbhum. The land revenue of these villages is paid in the districts in which the parent estate is situated. The land revenue payable by the Chota Nāgpur estate is Rs. 15,042. Of the total area of the estate, 724 square miles are in the *khās* possession of the Maharāja, the remainder being held by subordinate tenure-holders. Three of these tenures are in the direct possession of Government, having been confiscated after the Mutiny, and for these estates a rent of Rs. 678 is payable to the Chota Nāgpur estate and is set-off against the total land revenue demand.

THE CHOTA
NAGPUR
ESTATE.

Though the early history of the district, as indeed of the whole of Chota Nāgpur, is involved in obscurity, it is certain that the Mundās and Oraons entered the country at an early date, which cannot now be fixed with any precision, or dispossessed the Asurs, of whom traces are still found and reclaimed it from virgin jungle. The primitive village communities of the Mundās were united into *pārkhās*, or groups of villages, over each of which a Chief presided. At a very early period, possibly the tenth century of the Christian era, the Chief of Khukhrā became the feudal superior of the other Chiefs. Whether he was elected or whether he succeeded in imposing his authority is doubtful, but

Origin of the
Estate.

it is certain that the original Chief of Chotā Nāgpur was a Mundā and that his authority was recognized both by the Mundās and by the Oraons and other inhabitants of the district, who agreed to render him certain feudal services and to pay some small tribute. The Chief of Khukhrā was the ancestor of the present Mahārāja of Chota Nāgpur. As the family prospered, the Chiefs intermarried with Rājput families of Pachet and Singhbhūm and gradually came to be recognized as Rājputs. Having thus become a member of the Hindu community, the Rājā sought to induce other Hindus to come and settle in the country, in order that they might afford him assistance, not only in protecting himself against the invasion of neighbouring Chiefs, but also in controlling his own turbulent vassals. He achieved his object by making grants of villages on easy conditions; frequently the grantees were only required to render personal service and to keep up a standing force of militia, and, in return, were left free to make what they could out of their villages. They were naturally not content that the village communities should render them merely a few petty services and pay an insignificant tribute and, as they were more civilized and better organized than the aborigines, they succeeded in ousting them from their position of proprietors of the soil, reduced them to the position of mere cultivators or tenants, imposed payments of various kinds and exacted greatly increased services. Thus it came about that the Mahārāja established his position as the overlord of the whole of Chota Nāgpur, the Hindu settlers introduced by him, and the members of his family to whom maintenance grants were given, became his subordinate tenure-holders, while the aborigines sank to the position of rent-paying tenants.

Tribute payable to the Muhammadans,

This was the condition of affairs when in 1585 A. D. the Rājā of Khukhrā, as the Chota Nāgpur Rājā was then called, became a tributary of the Muhammadans. The subjection was at first purely nominal; the Mughals exacted no yearly tribute and were content with making occasional raids into the country and carrying off as tribute a few diamonds which were found at that time in the Sākh river. In 1616 the Emperor Jāhāngir sought to make the subjection more real, and his lieutenant, Ibrāhim Khān, the Governor of Bihar, defeated Rājā Durjan Sal and carried him off captive to Delhi. Twelve years later he secured his release, owing, it is said, to his skill in testing diamonds, and agreed to pay an annual tribute of Rs. 6,000. Even after this the

Muhammadans exercised but little control over the internal affairs of the district and were content if they received a portion of the stipulated tribute.

The district together with the rest of Chota Nāgpur came under British subjection in 1765, when the *divāni* of Bengal, Bihar and Orissa was ceded by the Nawab. At first the British made little attempt to bring the country under their administration and it was not till 1769 that Captain Camac penetrated into the country. The revenue of Nāgpur which amounted to only Rs. 4,000 was paid at this time through the Rājā of Rāngarh, but in 1771 the Rājā of Nāgpur applied to Captain Camac for permission to pay his revenue direct to Government and also for the restoration of some disputed tracts of territory. The Council of Patna agreeing with Captain Camac as to the importance of securing the good will of this Rājā "whose country would form a barrier against the incursions of the Mahrattas", made a slight rectification of the boundaries in favour of Nāgpur and made a settlement with the Rājā Drip Nath Sahi, by which he stipulated to pay an annual revenue of Rs. 12,000 including customs and transit duties. The agreement was for a period of three years (1772-5). The Rājā however, was very remiss in making payments, and towards the end of 1773 Captain Camac had to send an expedition to the country to make him fulfil his obligations. In 1774 the settlement were renewed for a period of three years and according to the *patta* the revenue was fixed at Rs. 15,001, of which Rs. 12,001 were revenue and Rs. 3,000 *nazarāna*. The apparent increase may be due to the exclusion of pargana Tori from the earlier settlement. In the *kabuliyat* given to the Rājā in 1787 he agreed not to levy *sayer* and other prohibited cesses, for which he had received a deduction; to be responsible for the safety of travellers and to arrest thieves and dakaits and bring them to justice. In case he failed to pay the stipulated revenue, his estate or such portions thereof as might be necessary were declared to be saleable. The terms of the *patta* and *kabuliyat* given at the time of the decennial settlement on the 3rd May 1790 are exactly similar to those contained in the *kabuliyat* and *patta* of 1787. The revenue agreed upon was Rs. 14,100-15-3, the difference of Rs. 900 as compared with the *jama* fixed at previous settlements being

Payment of
revenue to
the British
administra-
tion.

due to the remission on account of exchange. The settlement with the Rājā does not appear to have been formally declared permanent, but when the point was raised in 1799, the Board of Revenue, in reply to a reference, held that the revenue was fixed for ever under Regulation I of 1793, and this decision was upheld when the point was again raised by Collector of Rāmgarh in 1823.

Mode of
collecting
the revenue.

Up to 1799 the revenue of the estate was paid to the Collector at Chatrā. The mode of collection^a was peculiar. A *Suzāwal* (agent), appointed by the Collector but paid by the Rājā, was attached to the estate. The Rājā made over to him a certain proportion of the harvests under the appellation of *tai-dad*. From this the *Suzāwal* realised the Government revenue and his own allowances, returning the balance, if any, to the Rājā. In 1799-1800 when the Collectorship of Rāmgarh was temporarily abolished and the district was annexed to the revenue jurisdiction of Bihar, the system of collection in vogue was discontinued and balances began to accumulate. In 1808, at the Rājā's request, a *Suzāwal* was again appointed and soon after a Deputy Collector was appointed at Rāmgarh.

Sayer and
excise duties.

A frequent subject of dispute between the Rājā and the British authorities about the year 1820 concerned the *sayer* and excise duties. The general policy of Government at the time of the Decennial Settlement was to take into their own hands the collection of these duties and to compensate the zamindars for the consequent loss of income by a remission of revenue. The conditions of Chota Nāgpur differed greatly from those of Bihar, and Mr. Leslie, the Collector of Rāmgarh, in June 1789, represented that the collection of the *sayer* by Government officials would stir up the opposition of the "jealous and uncivilized" people of the district, and in a letter written a few months later reported that "the *sayer* collections consist only of three articles at present, viz., '*gungeat*, *gauthwari* and *haut* duties,' none of which can be in my opinion discontinued without a disadvantage to Government; but as the *gungeat* is composed of two articles, viz., a duty on the sale of goods and one on passing through, called *nikkusai*, I think the latter ought to be struck off as a hardship to traders."

Though it is not quite clear what policy Government followed in the matter, it is certain that the Rājā did not receive any remission of revenue but that a remission was granted to the Rājās of Rāmgarh and Palāman and that the covenants executed by him in 1790 contained the same conditions as those granted to these and other zamindars, and stated that a deduction had been made for *sayer*. He did not however, raise the question of remission till much later and appears to have gone on collecting the duties, the British authorities having but a weak control over the country and being unable or reluctant to raise any objections. The question of transit duties appears to have been raised in 1823, and the Collector, holding their collection to be prohibited by the Rājā's covenant, advised the merchants not to pay and to resist *vis et armis* any attempt to realise them. The Board of Revenue called on the Rājā to state his claim for a remission on account of the abolition of *sayer*, and he based his claim chiefly on the ground that his estate had been expressly exempted from the scope of the Regulations and that the *sayer* and *abhāri* collected by him for the last 35 years had been used to defray the cost of the police thanas and preserve the peace of the district. The Collector, in forwarding his petition, disposed of the argument that he was not bound by the Regulations by referring to a *parwana* of 1780, which directed the Rājā to discontinue the collection of *sayer* and produce *sayer* accounts, on which the remissions were granted, and contended that the Rājā was bound by the terms of the covenant which he had accepted without objection for many years. He also pointed out that the Rājā could claim no consideration on the ground of the expenditure incurred in the upkeep of the police, as he kept them heavily in arrears and allowed them to pay themselves by extorting money from the inhabitants under warrants granted by himself. The final orders of the Board in this matter are not extant but it appears that no remission on account of *sayer* was granted. Mr. Webster, a former Manager of the Chotā Nagpur Estate, considered that the Rājā was hardly treated in this matter. At this length of time and in the absence of complete papers it is difficult to form an opinion, but it may be held that the Rājā was himself responsible for the mistake, if mistake it was, as he allowed the inclusion of the condition in his covenant

to pass without protest and continued to collect the duties, both those which were legal and those which had been abolished.

With regard to the excise duties, there is no doubt that the Rājā received no compensation, when this source of revenue was resumed by Government in 1823 and the collection farmed out for the whole pargana for Rs. 6,500. The Rājā had for many years steadfastly opposed any attempts on the part of the authorities to take over the excise; he represented that the result of such action would be to drive the Kols back to their old home of Rohtās and to endanger the public revenue; he also concealed the true facts and pretended that the collections were no source of profit to him or his *jagirdars*. Thus in the case of excise also the Rājā was largely responsible for the failure to obtain any remission of revenue.

Status of the
Raja.

Another question of some historical interest is whether the Rājā had any claim to be regarded as a Feudatory Chief. This claim is based chiefly on a Resolution of 1789, which exempted the district from the Regulations, and also on the fact that, in the early days of British administration, the Rājā was given a very free hand in the internal affairs of the district, the only interference being by the despatch of small detachments to secure the arrest of a criminal, or to assist the Chief in realizing his dues from his subordinate tenure-holders. The question was finally disposed of by the orders of Government issued in 1824, in which it was held that the district had only been exempted from the Land Revenue regulations and that the general regulations applied to Chotā Nāgpur in the same way as to other parts of the province.

SUBORDINATE
TENURES.

The tenures subordinate to the Rājā of Chotā Nāgpur may be divided into three classes—(1) those of the dependent Rājās; (2) service tenures and (3) maintenance tenures.

Tenures of
dependent
Rajas.

The Five Parganas, i.e., the low-lying plateau in the east and south-east of the district, were undoubtedly in early days in the possession of independent Rājās. The tenures of these Chiefs were not creations of the Rājā of Chotā Nāgpur but the Chiefs gradually came to recognize him as their feudal superior. In most cases this recognition was enforced, in the first instance, by

conquest; in many cases the Chiefs regained temporarily their independence, and it was not till the end of the 18th Century that they were finally reduced. In the early days of their subjection they rendered feudal services to the Rājā but when the necessity for such service disappeared, they agreed, or were forced, to pay a fixed quota of the revenue into his hand as rent. Tamār was formerly subject to Orissa and was apparently brought into subjection when the Chotā Nāgpur Chief accompanied the Muhammadans in their invasion of Orissa. Bundu and Rahe were compelled by the British authorities in 1793 to enter into agreements to pay rents. Silli was probably subordinate to Chotā Nāgpur before the cession of the country to the British. Apart from the estates of the Five Parganas there are other estates which have a similar origin. The Barwe estate was originally subordinate to the Rājā of Surguja but was annexed by conquest. The Rājā of Surguja, however, re-established his authority and it was not till 1799, that the Rājā of Chotā Nāgpur was able, with the assistance of British troops, to bring back the Chief to his allegiance. These tenures, not being in origin creations of the Chotā Nāgpur Chief, differ from other tenures in the district, in that they are not resumable on the failure of male heirs. The Chotā Nāgpur Estate has, it is true, endeavoured to deprive them of this privilege by contending that the present proprietors are not the legitimate descendants of the original Chiefs and in some cases have got the proprietors to accept *pattas* in which this condition is specially mentioned. Mr. Webster, a Manager of the estate, writing of them in 1875, says:—"All these estates are held under what are called *bhandowa pattas* and on the failure of heirs male to the original holder they escheat to the Chotā Nāgpur Estate." Rahe has in fact been resumed but the grounds on which the resumption was granted in 1845 have been declared unsound by a subsequent judicial decision and Tamār has been judicially declared to be non-resumable. The question of the status of the proprietor of Barwe is at present the subject of civil suit.

The origin of the service *jāgīr* is as follows:—Prior to the establishment of British dominion; the Chiefs of Chotā Nāgpur were constantly engaged in petty warfare; sometimes with their own vassals, sometimes with the Chiefs of neighbouring States. To protect their country from the ravages

Service
Jagira.

of their enemies as well as to enable them to make reprisals on their neighbours, a standing force or militia was required. The Rājā accordingly gave lands in *jāgīr* to foreigners from other parts of India on condition that they were at all times ready to assist him with a certain proportion of armed followers. The *jāgīrs* are thus feudal tenures, "the counterpart", as Mr. Walpole described them in 1809, "to those engagements which existed in the middle ages to so great an extent in many parts of Europe." When the country became vested in the British Government the necessity for military service ceased, and it was deemed equitable that they should pay a cash rent and some praedial dues (*rakūmāts*), in lieu of the services formerly rendered. The holders of these tenures are usually members of the fighting castes, either Rājputs, or Rāutiās and Bhogtās who claim to be Rājputs. The holders of the tenures are known as *barāik*, *ghāt wāl*, etc. Besides these feudal *jāgīrs*, other *jāgīrs* were given to the numerous officers and servants with which the Rājā surrounded himself in imitation of the pomp and pageantry of Hindu or Mughal royalty. Thus we find a village granted to a composer of *extempore* poems with which the Mahārājā of the day was well pleased, to a noted wrestler for his feats of strength, to domestic servants such as a *diwān*, "sepoy", *kot wāl*, or *hukābardar* (preparer of the Mahārājā's *hukāh*), while others were granted in return for special services, as, for instance, to persons who killed enemies of the Mahārājā under his orders. There are also religious *brīt* tenures. As the Rājās adopted the Hindu religion, they introduced a number of Brāhman priests, erected temples to the Hindu deities throughout the country, and made *brāmhottar*, *debottar* and other *brīt* grants of lands or villages to the priests for their maintenance and for the upkeep of the temples and the worship of the gods. Two curious forms of such tenures, mentioned by Mr. Webster in his account of the estate written in 1875, are *Tanga* villages and *Chiba brīt*. "*Tanga* villages", he writes, "usually belong to Brāhman and according to tradition were obtained in this way:—If a Brāhman failed to obtain a village from the Mahārājā by fair means and was willing to sacrifice himself for the benefit of his heirs, all he had to do was to betake himself to a village and, taking care to select a good one,

deliberately hang himself therein. The only way of expiating the guilt of possessing a village in which a Brāhman had hanged himself was by getting rid of the accursed spot and by giving it away in *jāgīr* to the heirs of the deceased. The origin of *Chiba brit* was said to be :—The Mahārājā having finished chewing his *pan* or betel threw it away. Some great admirer picked up the choice morsel and put it in his mouth and was recompensed for his devotion to the Mahārājā by the grant of a village or two.”

The Rāj family has always followed the custom of primogeniture, and hence it became usual for the Rājās to allot maintenance holdings to their near relatives, the Thākurs and Lāls, as the younger brothers of the Mahārājā and their descendants are called. At first it would seem that these grants meant nothing more than the assignment of the tributes or supplies which the Rājā got from the village communities, but, like the service *jāgīr-dārs* and the Rājā himself, the *khorposhdār* gradually reduced the cultivators to the position of rent-paying tenants.

Maintenance
Tenures.

The incidents of these tenures are too numerous and too varied to be enumerated in detail and it must suffice to mention only the most important which are found particularly in the feudal *jāgīr* and in the maintenance grants. The term *jāgīr* connotes resumability, that is, the tenure lapses to the parent estate on the failure of male heirs and all such tenures are locally known as *putra putrādhiik*. The maintenance grants are also resumable, though the condition is not always stated in the deeds under which the original grant was made, yet if the tenure was originally a *jāgīr*, the custom is none the less certain. Even *brit* grants lapse to the parent estate on the failure of male heirs of the original grantee, though, according to Hindu usage, such grants are not resumable under any condition by the grantor. Previous to the Permanent Settlement, the Mahārājā did in some cases exercise the right to resume at will, but the power to resume such grants as existed at the time of the Permanent Settlement, without the consent of Government, was expressly taken away by the *patta* granted to the Rājā of that time. *Jāgīr* tenures are also impartible and inalienable. The *jāgīrdārs*, maintenance-holders, and even tenure-holders subordinate to them, have adopted the custom of primogeniture which prevails in the Chotā Nāgpur family. The usage was recognized as long ago as 1800, as by Regulation X of that year the provisions of

Incidents of
service and
maintenance
tenures.

Regulation XI of 1793, under which the estates of persons dying intestate were declared to be liable to be divided among the heirs of the deceased according to Hindu or Muhammadan law, were declared to be inapplicable to the jungle *mahals* of Midnapur and other districts. Colonel Dalton, the Commissioner of the Division, who was for 18 or 19 years in Chota Nāgpur and made a special study of local usages, wrote in 1875: "The ordinary Hindu law does not apply to the estates (*jāgīrs*), as by custom and under the provisions of a Regulation passed in 1800 primogeniture is admittedly the *lex loci*, but judicial decisions based on a mistaken analogy with similar tenures in Bihar and Bengal have held the *jāgīrs* to be partible as well as transferable. Should further judicial decisions succeed in introducing a system of succession which is entirely opposed to local usage, the ancient estates of the district will become subdivided and in the end transferred piecemeal to money-lenders and other proprietors."

Other
Tenures.

Apart from the tenures described above, the Mahārājās have at various times given leases of portions of the estate to the money-lenders, traders and other adventurers, who first began to find their way to Chota Nāgpur at the beginning of the 19th century. Some of these leases are permanent, (*doami* or *bemi-adi thika*), others are perpetual leases on fixed rentals (*mokarrari*), others usufructuary leases (*sarposhgi* and *bhugat*).

Of the whole estate measuring 7,052 square miles, only 724 square miles are now in the *khās* possession of the Mahārājā; 1,050 square miles have been given out by him, or his predecessors, as *khorposh*, while 4,480 square miles are in the possession of the feudal, and other, *jāgīrdārs*. Brit grants absorb 134 square miles, and the remainder is held on leases, viz., *Mokarrari* 22.55 square miles; *thika* 126 square miles; *sarposhgi* 3 square miles, *doami* (permanent absolute grants) 493 square miles.

The cultivating tenancies, some of which are technically tenures, are described in the chapter on Rent.

Landlord's
privileged
lands.

All lands which are in the *khās* cultivation of a landlord are locally known as *mānjihās*, a word which literally means the headman's share and is an interesting survival of the time, when the villages were ruled by headmen and landlords had no jurisdiction in the village economy. The landlords have appropriated

this heritage and demarcated *mānjhīhās* land now means land in the possession of the landlord and at his absolute disposal. The Chotā Nāgpur Tenures Act of 1869 provided for the preparation of a record of all *mānjhīhās* and *beth-kheta* lands, or privileged lands of the landlords, of which they could prove their possession for a period of twenty years before the passing of the Act. *Beth-kheta* lands are, as the name implies, lands set apart for service. The villagers, who cultivate them, render special services to the landlords; or they are cultivated by the whole body of the villagers, who share the produce and in return render a fixed number of days' service to the landlord. No occupancy rights can accrue in such lands, however long the possession of the raiyat. In the recent settlement a record was prepared not only of *mānjhīhās* and *beth-kheta* lands, demarcated at the time of the *bhūinhāri* survey, but also of all landlords' privileged lands. The latter are defined by the present Tenancy Act as all lands which are cultivated by the landlord himself, or which are leased to tenants for a term of years or year by year, and in which by local custom occupancy rights do not accrue to the tenants. This definition operated somewhat harshly on landlords who had been in the habit of leasing their *khās* lands to *thikadārs*, who in turn sublet them to raiyats for indefinite periods. As the definition of "settled raiyat" was introduced into the Tenancy Act of 1908, many of the raiyats to whom such lands had been leased had acquired rights of occupancy, and lands which were undoubtedly the landlord's *khās* lands have thus been converted into ordinary raiyati holdings. The record prepared by the Settlement Department shows that the *mānjhīhās* and *beth-kheta* lands demarcated under Act IX of 1869 occupy 89 square miles, other privileged lands of the landlords 65 square miles, while 251 square miles are in actual cultivating possession of the landlords. The landlords thus hold 11·2 per cent. of the total area at present under cultivation of 3,614 square miles.

The tenure-holders of Chotā Nāgpur are notoriously improvident; their estates produce no very large income and the proprietors, even in the earliest times, incurred heavy debts to money-lenders and traders. If estates belonging to ancient families were sold up in execution of decrees of the courts, and possession passed to alien landlords, there was fear of disturbances and discontent among the tenants. In the year 1795 the sale of

Exemption
of estates
from sale for
arrears of
debt.

the great estate of Pachet in Manbhūm for arrears of revenue had caused a general rising of the tenants, which was only put down by the cancellation of the sale. The purchase of the Palāmau estate by Government at a sale for arrears of revenue, in 1820, had made the people sullen and discontented, and they readily joined the Kol insurrection of 1831 and again gave considerable trouble both before and during the Mutiny of 1857. Profiting by these examples Government adopted the policy of stopping as far as possible the sale of estates. Under rules drawn up by Captain Wilkinson, the first Agent, and sanctioned by Government, the sale or transfer of landed property without the Agent's consent, on any account whatsoever, was prohibited, and it became customary for the Agent and his Assistants to interfere in, and decide summarily, questions between debtors and creditors. The practice in fact was to attach, and take under direct management, such estates as were likely to default or be sold up in the Civil Courts in execution of decrees for debts. Such procedure was purely executive and when Act VIII of 1859 (the Civil Code of the day) was extended to Chota Nāgpur, it was held that the power could no longer be effectively exercised. When, however, application was made to the Commissioner for sanction to the sale of estates, according to the terms of the provision of the notification extending the terms of the Civil Procedure Code to Chota Nāgpur, he ordinarily refused to allow the sale, when it was found that the assets were sufficient to meet the liabilities within a reasonable time.

Encumbered
Estates Act.

To legalize the procedure which had been followed since the earliest days of the British administration, the Chota Nāgpur Encumbered Estates Act (Act VI of 1876) was passed. The objects and reasons were stated as follows: "The accumulation of debts and the sale of large ancestral estates in satisfaction thereof is a process calculated to cause trouble in most parts of India. This is notably the case in the districts of the western portion of Bengal, which are comprised in the Chota Nāgpur province. In these districts there are many landed proprietors who are very improvident and apt to run into debt to an extent which exposes their estates to the danger of being brought to sale. If such sale takes place, trouble arises between the purchaser and the villagers and the rights of the cultivators are likely to be

imperilled." The Act empowered the Commissioner, with the previous sanction of the Lieutenant-Governor, to appoint a manager and to vest in him the entire management of encumbered estates, whenever he thought fit to do so. On publication of the vesting order, all proceedings in the Courts, including processes for the execution for debts, become barred; the holder of the property is not liable to arrest for debt and the power to alienate any portion of the estate is vested in the manager. The Act has been amended by Act V (B. C.) of 1884 and again by Act III (B. C.) of 1901. By the latter Act the Deputy Commissioner is empowered to file *suo motu* an application for the protection of an estate, and at the same time it was definitely laid down that the holder of an estate must be of political or social importance or, if this is not so, Government must be satisfied that it is desirable in the interest of the tenantry that the estate should be protected. Frequent use has been made of this latter provision and estates of no political or social importance have been taken under management in the interests of the tenants. The recent Settlement operations, however, have placed the tenants in a much stronger position. Their rights have been carefully recorded and, with the spread of education and Christianity, they are better able to protect themselves. The necessity of protecting some of the older estates still remains but it may safely be said that the estates will not be brought as readily under management in the future as in the past.

In 1916 there were thirty-five encumbered estates under the management of Government. Of these the most important are the Armai and the Tamār estates, of which the rent-rolls are Rs. 29,640 and Rs. 21,384 respectively. The proprietors of the Armai estate are of the money-lending caste, and the estate was taken over in the interest of the tenantry. The remaining estates are comparatively small and their total rent-roll is only a little over one lakh, while their debts amount to rather more than 5½ lakhs. There are two estates under the Court of Wards of which the largest is that of the Thākur of Jariā, with a rent-roll of Rs. 85,000.

Three of the tenures subordinate to the Chota Nāgpur Estate were confiscated by Government on account of the assistance given by the proprietors to the mutineers in 1857. Like other

Government
Estates.

estates in the district they are resumable on the failure of male heirs. A total rent of Rs. 678 is payable to the Mahārājā.

Barkagarh.

The Barkagarh estate was created by Mahārājā Raghunāth Sahi, who gave the villages forming the estate to his brother Ani Sahi for maintenance. Thākur Biswanāth Sahi, the grandson of the original grantee, joined the mutineers and was hanged in the following year, his estate being confiscated under Act XXV of 1857. In 1872 Kapilnāth Sahi, the only son of Thākur Biswanāth Sahi, brought a suit against Government to obtain possession of the estate but was unsuccessful. The estate consists of 113 villages, of which 23 are held in *jāgīr*, *khorposh*, etc., and the remainder are under direct management. Thirty villages which were leased to Mr. Stainforth in 1881 have recently been resumed and brought under direct management.

Patia.

The proprietor of the Patia estate was Pānde Ganpat Rai, the hereditary secretary of the Mahārājā. The estate consists of 9½ villages, of which three are in Lohardagā thana, and the remainder scattered over the Gumlā subdivision. The estate was settled by Captain Grey for a period of thirty years in 1881 and the whole of the estate, except for half a village leased out in *thika*, is now under direct management.

Silam.

The proprietor of the Silam estate who joined the mutineers was Bhika Rām Rāntiā, whose ancestor had received the village in *jāgīr* from the *jāgīrdār* of Pālkot. It is thus a sub-tenure of a subordinate tenure-holder and rent is payable to the Armai Encumbered Estate, the successor in interest of the *jāgīrdār*.

TENANCY
LEGISLATION.

From the foundation of the Agency till the passing of Act X of 1859, it does not appear that there was any Code of law in force prescribing a procedure for the disposal of revenue suits or for the realization of revenue. The Courts, however, followed the old summary suit laws (Regulation V of 1800 and VII of 1837). In 1859 the Commissioner submitted a proposal to the Board of Revenue for the introduction of Act X of 1859 throughout the division with some modifications and omissions. The Board questioned the expediency of the proposal, and strongly objected to the proposal for extending the distraint clauses of the Act for the benefit of the landowners. The Act was accordingly not introduced, but the existing procedure was modified in accordance

with its spirit, save that appeals continued to lie to the Commissioner, instead of to the Judge and the High Court. Eventually, however, the Commissioner ordered that the procedure laid down in the Act regarding appeals should also be followed, and, by the year 1869, all the provisions of the Act were generally followed, except that the distraint clauses were not applied and that the sections relating to the sale of land were subject to the restriction that no sale could be effected without the permission of the Commissioner. Act X of 1859 was never actually declared to be in force in the district, though the High Court appear to have held so. The correctness of this decision is open to doubt, in view of the provisions of Regulation XIII of 1833, which were in full force when Act X of 1859 was passed, and the Commissioner and the local authorities did not themselves consider that the Act applied to the district.

In 1869 the Chotā Nāgpur Tenures Act [Act II (B. C.) of 1839] was passed, authorizing the appointment of special commissioners for the survey and demarcation of the privileged lands of both the landlords (*mānikhās*) and the tenants (*bhūihāri*). The causes which led to the passing of this Act and the survey which was carried out under its provisions are described in detail in Chapter II. Its defect was that it only dealt with one particular kind of tenancy; it left untouched the *Mundāri khuntkatti* villages, on the one hand, and the ordinary raiyati lands, on the other; it made no attempt to deal with the question of prædial dues and services, which had even at that time begun to be a fruitful source of strife between landlords and tenants; it even omitted from the survey one important class of privileged lands, the *sarnās*, or sacred groves, which are to be found in every Mundā or Orāon village. It was soon recognized that a Tenancy Act suited to the peculiar conditions of the district was an administrative necessity, for, though the provisions of Act X of 1859 were generally followed, it was clear that, in many respects, they were unsuitable. The distraint clauses were considered to be inapplicable to the wild aboriginal population, while the clause which practically prohibited the realization of *abwābs* was unduly harsh on the landlords. *Abwābs* were in accordance with the local custom of the district, and, as long as the demands were moderate and reasonable, were paid without objection. The levy of *abwābs* had also been expressly permitted

Act II (B. C.) of
1869.

by earlier legislation. The Rāmgarh district was exempted by Regulation IV of 1794, from the operation of the section 54 of Regulation VIII of 1793, on which the clause prohibiting the levy of *abwābs*, in Act X of 1859, was based, and to quote the words of Mr. Oliphant, the Deputy Commissioner, writing in 1875, "it was obviously unfair to force on the country a law which prohibits the levy of all cesses without affording to the zamīndārs an opportunity in the first instance of commuting their cesses into rent"

Act I (B. C.) of
1879.

In recognition of the inapplicability of the ordinary tenancy laws to Chota Nāgpur, the Chota Nāgpur Landlord and Tenant Procedure Act (Act I of 1879) was passed. The provisions of Act X of 1859 were generally followed, but the provisions regarding *distrain* and *enhancement of rent* were omitted. The restrictions on the sale of landed property which had been observed for many years were legalized by the insertion of a clause prohibiting the sale of all under-tenures for arrears of rent without the permission of the Commissioner, and, finally, landlords were allowed the option of applying for commutation of any conditions or services, to which they were entitled in addition to money rents. The provisions of Act I of 1879 had as little effect in allaying the agrarian discontent or in improving the relations of landlords and tenants, as the proceedings of the special Commissioners appointed under Act II of 1869. Disputes as to *praedial dues* (*rukumāts*) and *praedial services* (*beth begāri*) grew more frequent and more violent, and in 1897, after several years of discussion, a Bill was passed by the Bengal Council providing for the voluntary commutation of *praedial conditions and services*, laying down a procedure for the *enhancement of rents*, and regulating the registration and resumption of *intermediate tenures*. It was also proposed to repeal Act I (B. C.) of 1879 and to extend to Chotā Nāgpur the Bengal Tenancy Act with some modifications. The Bill was, however, referred back by the Government of India for reconsideration, especially of the clauses dealing with registration and resumption, which were opposed by the majority of the persons concerned and the Government of Bengal decided only to proceed with that part of the Bill dealing with the commutation of *praedial conditions and services*. The Commutation Act [Act IV (B. C.) of 1897] was accordingly passed. The question of the

Amendment
Act I of 1879.

Act IV (B. C.)
of 1897.

extension of the Bengal Tenancy Act to Chotā Nāgpur remained under consideration, but in 1899 the Lieutenant-Governor, Sir John Woodburn, decided that it was inadvisable for two reasons to proceed with a consolidating Bill like the one proposed. In the first place the agitation of the Mundā *sardārs*, which culminated in the Bīrsa revolt, rendered it extremely undesirable to introduce a contentious measure of such magnitude, and, secondly, it was held that, until a survey and record-of-rights had been prepared, it was impossible to say definitely which provisions of the law were suitable to Chota Nāgpur. Settlement operations were accordingly begun in 1902, and by the end of 1903 sufficient data had been collected by the Settlement Officers to justify the introduction of an amending Act. The chief object of the amending Act V of 1903 was to give finality to the record of rights regarding the incidents of Mundāri *khuntkālti* tenancies. At the same time provision was made for the summary sale of holdings in execution of decrees for rent and a special procedure was prescribed for the recovery of arrears of rent from Mundāri *khuntkāltidārs*. The vexed question of the registration of transfers of, and succession to, tenures, was settled and all tenures were made saleable for arrears of rent.

Act V of 1903.

The Act, as amended in 1903, remained in force till 1908, by which year the Settlement operations were nearly completed. The Chotā Nāgpur Tenancy Act (Act VI of 1908) came into force from November 11th, 1908. It reproduced with certain modifications the provisions of the Commutation Act (Act IV of 1897) and of Act V of 1903. The provisions of the Limitation Act and of certain sections of the Civil Procedure Code were made applicable to all proceedings under the Act, in so far as they were not inconsistent with any of its provisions; the law relating to "settled raiyats" and the procedure for making surveys and records-of-right, with some modifications, were incorporated from the Bengal Tenancy Act. Landlords' privileged lands were defined and provision was made for a final and conclusive record of their rights.

Act VI (B. C.) of 1908.

A topographical survey of the district was made in the sixties by Captain Depree; the boundaries of estates, parganas, and even of the district were not accurately recorded and the map was found to be of little use in the recent cadastral survey. In 1862 a survey was begun of the villages of the Government estates of

Survey and Settlement.

Barkagarh, Patia and Silam and the work appears to have been continued, off and on, for nearly ten years. Between the years 1876-1880 a complete survey and settlement was carried out by Captain Grey. The *bhūinhāri* survey carried out by the special Commissioners appointed under Act II (B. C.) of 1869 was begun in 1869 and was not completed till 1880.

In 1876 the survey of the Chota Nāgpur Estate was taken in hand by a professional party of the Survey Department, but it was found that the estate could not bear the cost of such an elaborate survey, and it was decided to carry out the work by a non-professional party, working under the Manager of the estate. After the survey had been completed in 1885, the settlement of rents and the commutation of all praedial dues and services in the villages in the *khās* possession of the Mahārājā was taken in hand by Mr. Slacke, the Divisional Settlement Officer, and completed in 1888. The total area surveyed, for which a record-of-rights was prepared, amounted to 742 square miles. Rents were settled for all cultivated lands, except *bhūinhāri* and *mānjhikās* lands, which had been dealt with by the *bhūinhāri* Commissioners. The work was not carried out under the authority of any law, or rules having the force of law, but the decisions, especially the rent settlement, were accepted by the proprietor and the great majority of the raiyats. In only three per cent. of the cases did the raiyats refuse to accept *jamābandis* in token of their acceptance of the Settlement Officer's decision. The good effects of this settlement are shown by the fact that in the recent settlement operations the agrarian conditions in these villages presented a striking contrast to the conditions prevailing in neighbouring villages, disputes of all kinds being less numerous and less acute.

The discussions regarding the Tenancy Bill of 1899 showed clearly that it was necessary to prepare a record of local agrarian rights and customs before undertaking any legislation. Such a record had long been recognized by the local authorities as the only measure which was likely to remove some of the chief causes of agrarian discontent. The Birsa revolt brought matters to a head, and in 1902 survey and settlement operations were commenced in the Mundā country in an area, as at first defined, of 1,846 square miles. It was soon found that it was impossible to confine the operations to the Mundā country. The Mundās were scattered over the district, and it was recognized that equally cogent

reasons existed for preparing a similar record for the areas occupied by non-Mundari races. The absence of standards of measurement, the uncertainty of the incidence of rents and the insecurity of tenure all combined to make a record necessary, while such a record was an essential preliminary to any commutation of praedial dues or services.

The operations were finally completed in 1910. Mr. Lister was in charge of the operations from 1902 to 1907 and Mr. Reid for the remainder of the period. The total cost of the operations amounted to rather more than 16½ lakhs of rupees, of which one-quarter was met from Imperial Revenues and the balance recovered from the landlords and tenants.

CHAPTER XII.

GENERAL ADMINISTRATION.

Administrative
staff.

Rānchi, like other districts of the Chotā Nāgpur Division, is a non-regulation or scheduled district, i.e., one to which certain Acts and Regulations in force in other parts of India have not been extended. From a practical point of view the main distinction may be said to be that the executive officers have higher judicial powers than in regulation districts. Thus the Deputy Commissioner had till recently enhanced judicial powers under section 30 of the Code of Criminal Procedure but with a resident Sessions Judge these powers were exercised less frequently than in the outlying districts of Palāmanu and Singhbhūm. The Deputy Commissioner and the Deputy Collectors subordinate to him also have powers under the Chotā Nāgpur Tenancy Act [Act VI (B. C.) of 1908] to try rent and other suits which in regulation districts come before the Munsifs and Sub-Judges.

Till 1902 the whole district was administered from the headquarters at Rānchi; the evils of this system and the reasons which led to the establishment of a subdivision at Gumlā in 1902, at Khunti in 1907 and at Simdegā in 1915 have been detailed in a previous chapter. At the District headquarters the Deputy Commissioner is assisted by a staff of five Deputy Collectors, of whom one is occasionally a Joint Magistrate in the Indian Civil Service, one or two Probationary Deputy Collectors or Sub-Deputy Collectors, and from time to time an Assistant Magistrate. The administration of excise and income-tax is in the hands of a special Excise Deputy Collector, while the management of the Wards and Encumbered Estates is entrusted to a European Manager. The subdivisions are administered either by Joint Magistrates of the Indian Civil

Service or by European Deputy Collectors. At Gumlā the Sub-divisional Officer was assisted by a Munsif, who had the powers of a Magistrate of the second class and of a Deputy Collector, and by a Sub-Deputy Collector; while at Khunti the Subdivisional Officer himself exercises civil as well as criminal and revenue powers and is assisted by a Sub-Deputy Collector. Since the opening of the new subdivision of Simdegā, the Subdivisional Officer, both there and at Gumlā, has been given similar powers to those of the Subdivisional Officer at Khunti and is assisted by the same staff.

Other local officers are the Superintendent of Police, the Civil Surgeon who is also Superintendent of the Jail, the Deputy Inspector of Schools, and the District Engineer.

Rānchi is also the headquarters of the Commissioner of the Chotā Nāgpur Division, of the Superintending Engineer in charge of the Western Circle, of the Public Works Department, the Executive Engineer in charge of the Chotā Nāgpur Division, of the Inspector and Assistant Inspector of Schools in the Chotā Nāgpur Division, and of the Inspectress of Schools in Chotā Nāgpur and Orissa.

The total revenue of the district under the main heads Revenue. amounted in 1880-1 to Rs. 41,91,000 and in 1890-1 to Rs. 7,14,000. In 1892 Palāmau was formed into a separate district, and the revenue in 1900-1 fell to Rs. 5,93,000. The ordinary revenue of the district is now over 10 lakhs, Rs. 50,000 being derived from Land Revenue, over one lakh from Cesses, six lakhs from Excise, a lakh and a half from Stamps and three-quarter of a lakh from Income-tax.

The only permanently-settled estate in the district is that of the Mahārājā of Chotā Nāgpur. Land Revenue. The land revenue demand of the district consists of the revenue payable by this estate and of the rents realized from the subordinate estates of Barkagarh, Palā and Silam which were confiscated after the Mutiny. The land revenue payable by the Chotā Nāgpur Estate amounts to Rs. 15,041, against which is set off the rent due to the estate for the three subordinate tenures in the *khās* possession of Government, leaving a net demand of Rs. 14,364. Of the confiscated estates a small portion is leased out in farm, as *jāgir*, *khorporā* or *debtār* and is classified under the head "Temporarily-Settled Estates". For these estates a rent of Rs. 378 is

paid. The greater portion of the estates is under direct management, and the raiyats pay their rent direct to Government. The total demand on account of Land Revenue amounted in 1914-15 to Rs. 50,725.

Excise.

Excise always has been, and always will be the principal source of revenue in the Ranchi District. The Raja of Chota Nagpur appropriated this source of revenue till 1823, when, in spite of his protests that he derived no revenue from it, it was taken away from him and farmed out for the pargana for Rs. 6,500. In 1859 the excise revenue was Rs. 53,750 and by 1871 had risen to Rs. 60,050. In the decade ending in 1901-2 it only fell below three lakhs of rupees in two years of famine, and between the years 1900-1 and 1910-1 it rose from Rs. 2,91,160 to Rs. 5,78,771, the increase being over half a lakh in each of the years 1905, 1906 and 1907. In the year 1914-15 the excise revenue amounted to Rs. 6,39,953, of which 86 per cent., or Rs. 5,52,760, was derived from the sale of country liquor. The manufacture of country liquor was formerly carried on solely in licensed outstilla, but in 1908 a central distillery was opened in Ranchi for the supply of liquor to the adjacent thanas. The central distillery now supplies the whole of thanas Ranchi, Ormanjhi, Angara, Silli, Bundu, Sonahatu, the larger portion of Tamār and small portions of Burmu, Karra and Bero; the area of the tract supplied being 1,468 square miles with a population of 352,711. During the year 1914-15 the total amount of liquor consumed in the forty-five shops supplied from the distillery was 54,719 gallons (London Proof) and the total revenue realised in license fees and duty was Rs. 1,76,616. The contract system will soon be extended to the greater part of the district. It has many advantages over the outstill system; it enables the excise authorities to exercise a close control over consumption, and is thus peculiarly suitable for a district in which the inhabitants are addicted to excessive drinking. The success of the system is proved by the fact that since the year 1908 the consumption per 100 of population in the area served by the distillery has fallen from 21 gallons to 15 3/4 gallons, and this in spite of the fact that recent years have been years of marked agricultural prosperity.

In the remainder of the district liquor is supplied from out-stills which are sold annually by auction, and in 1914-15 Rs. 3,76,144 was realized from 85 outstills. The amount of liquor consumed in the outstill area has been roughly calculated at 32 gallons per 100 of population, but this figure is probably too high, as the outstill vendor's methods of distillation are extremely crude and outturn is consequently considerably less than it would be with more efficient plant. *Mahua*, from which the liquor is manufactured, varies in price from annas 6 per maund in the western and inaccessible parts of the district to Re. 1-12-0 per maund in the neighbourhood of Ranchi: the average price being Re. 1-8-0 per maund.

The excise administration of the district presents a difficult problem, and, even though steps are being taken to check consumption, the excise income shows a steady increase. The number of shops has been decreased considerably in recent years, and in 1915, there were 85 shops, or one for every 67 square miles of country and every 12,000 of the population. No shop may now be established within a quarter of a mile of a market or a public road, a measure which checks to some extent the number of visits which cart-men and other travellers pay to an out-still but does little to prevent the raiyat, who has walked ten or fifteen miles to market, from refreshing himself to excess before he turns homeward. The excise authorities have also recently adopted the policy of consulting public opinion as to the situation of shops and out-stills, and this policy will enable them to obtain the advice of the missionaries on this important question. It will, however, be many years before drunkenness decreases to any marked extent, though there can be little doubt that one of the best effects of Missionary teaching has been to stop the vice among the Christian converts.

The high figures for the consumption of country liquor are the more remarkable, when it is remembered that the national drink of the aboriginals is rice-beer (*hānriā* or *pačhwar*) and that they are allowed to brew this comparatively harmless liquor for their own consumption. The preparation of this liquor is simple. Rice, or sometimes *gondli* or *maruā*, is the grain used. Four seers of the grain are boiled with a small quantity of water and are spread out to dry. The grain is then rubbed between the hands and mixed with *ranu*, a concoction of wild roots which

is sold in the bazar and the preparation of which is confined to a few aboriginals. The ingredients are secret, but apparently include, like the yeast used in the preparation of *sake* in Japan, something which will convert the starch in the grain into sugar as well as the yeast proper which is required for converting the sugar into alcohol. The mixture is put into an earthen vessel of water, the mouth of which is covered with straw. The liquor will be ready for consumption in three days in the hot weather and in a week or ten days in the cold weather. The amount of undiluted liquor obtained in this way is about six seers, which is diluted for drinking to eighteen seers, or about two and half gallons. The aboriginals require *hānriā* for all their social and religious ceremonies. It is in fact used as food and drink, and the privilege of home-brewing checks the temptation to resort to the more harmful country liquor. The tribes who are permitted this concession are :— Mundā, Oraon, Asur, Bhuiyā, Bhumij, Birhor, Nagesiā, Pahāria, Lohār, Khariā, Karwar, Gond, Bedcā, and Korwār. Many of the semi-aboriginal tribes of the district are also addicted to the consumption of this liquor, but the policy has always been to restrict the privilege of home-brewing to the animistic tribes whose religious customs require its preparation and consumption. The non-aboriginals have to obtain a license for brewing *pachwai* or to run the risk of being detected by the excise staff and fined. That they prefer to run the risk is shown by the fact that only one license for home-brewing was issued in 1914. There were also 73 shops for the sale of *pachwai* which produced a revenue of Rs. 7,730.

Drugs.

The aboriginal is not addicted to drugs such as opium, *gānja*, or *bhāng*, and the receipts from drugs only amounted to Rs. 77,439 in 1914-15. The greater part (Rs. 42,146) was derived from *gānja*. This drug is imported from Rajshahi by licensed wholesale dealers at the rate of about Rs. 100 a maund, sold by them to retail dealers at about Rs. 150 a maund, and by the retail-dealers, who pay the duty of Rs. 13 a seer, to the public at Rs. 30 a seer. The consumption has risen slightly in recent years, but this is probably due to the immigration of labourers for work on the railways, etc. The revenue from opium in 1912-13 was only Rs. 31,880, but in 1913-14 it rose to Rs. 41,486, an abnormal figure due to an increase in the opium

consuming population of Ranchi town, and perhaps to smuggling of the drug by Chinamen to Burma and Eastern ports. In 1914-15 it fell to Rs. 35,293. The aboriginal population is not addicted to opium, and *madak* smoking is confined to the inhabitants of Ranchi, Lohardagā, Silli, Bundu and Tamār.

The revenue from stamps rose from Rs. 1,12,270 in 1892-3 to Rs. 1,23,956, in 1900-1, and to Rs. 2,06,440 in 1910-11. In 1914-15 the revenue amounted to Rs. 1,66,605 of which Rs. 1,22,835 were obtained from the sale of judicial stamps and Rs. 36,770 from the sale of non-judicial stamps. The income derived from the sale of stamps varies with the amount of litigation. The settlement operations have put a stop to infructuous litigation and hence the income derived from stamps has decreased during the last few years.

In the decade ending 1901-2, during which the minimum assessable income was Rs. 500, the number of persons assessed to income-tax averaged 1,000 and the net collections about Rs. 18,700. When the minimum assessable income was raised in 1903 to Rs. 1,000, the number of assessees fell to 434, while the net collections rose to Rs. 22,987. In 1914-15 the number of assessees was 907 and the collections amounted to Rs. 70,848. This figure, however, gives a false impression of the economic condition of the district, as nearly Rs. 40,000 was realized from the officers of Government temporarily resident in Ranchi. The number of professional men, traders, and merchants assessed to income-tax in this year was 549, of whom 213 were money-lenders, and 166 dealers in food-grains, liquors, piece-goods, etc., and the amount levied was Rs. 27,632. That the district has increased in prosperity since the opening of the railway is shown by the fact that the corresponding figures for 1905-6 were 353 and Rs. 15,634.

As in other districts, the road and public works cesses are levied at the rate of one anna in the rupee. The first valuation under Act X of 1871 was made in 1874-7. Three general revaluations under Act IX of 1880 were completed in 1883, 1892, and 1900, and a revaluation of the whole district, on the basis of the Settlement Record, was completed in 1913. In the older revaluations it was a systematic practice of the landlords to file returns showing rents far in excess of what was actually paid or was legally demandable with the object of

filing them subsequently in rent suits. The publication of a record-of-rights has stopped this evil practice, and a valuation can now be fairly made on the basis of that record. The greater part of the cess is paid by the Chotā Nāgpur Estate, though recovered not without difficulty from the subordinate tenure-holders. In 1914-15 the total demand was Rs. 1,25,143, of which Rs. 2,088 were derived from mines and jungles and the remainder from land.

Registration.

There are four Registration offices in the district, viz., at Rānchi, opened in 1865, Khunti transferred from Bundu in 1907, Lohardagā 1898 to 1904 and again in 1907, and Gumlā transferred from Lohardagā in 1904. At the headquarters station the District Sub-Registrar deals, as in other districts, with the documents presented there and assists the Deputy Commissioner, who is *ex-officio* District Registrar, in supervising the work of the Sub-Registrars at the outlying offices. In 1908 the total number of registrations was 12,670. On the introduction of the Chotā Nāgpur Tenancy Act of 1908, the number of registrations fell to 8,491 in 1910 and 7,227 in 1911; the reason for this was that the Act prohibited the sale of raiyati holdings and the provision of the Act permitting mortgage under certain conditions for a term of years was not understood by the inhabitants. Since 1911 mortgages have become more common and the raiyats ~~circumvent the provisions of the Act by surrendering~~ their holdings in collusion with their landlords as an indirect way of selling them.

Administra-
tion of Justice
Criminal
Justice.

The Judicial Commissioner of Chotā Nāgpur, whose headquarters are at Rānchi, is Sessions Judge for the district as well for the districts of Palāmau and Hazāribāgh. The Deputy Commissioner had powers under the Criminal Procedure Code to try all cases not punishable with death, but these powers have now been withdrawn. Of the Deputy Magistrates stationed at headquarters four are usually vested with the powers of a first-class Magistrate and the remainder with the powers of a second or third-class Magistrate. The Subdivisional Officers also have first-class powers while the Sub-Deputy Collectors are vested with second-class powers. There are benches of Honorary Magistrates at Rānchi and at Lohardagā which dispose of unimportant cases under

the Municipal by-laws and the Police Act, and two Honorary Magistrates at Khunti, one of whom has the powers of Magistrate of the second-class.

The Judicial Commissioner is the chief Civil Court of the district. He occasionally tries original suits but is occupied mainly with civil appeals. The Subordinate Judge at Rānchi deals with original suits valued at over Rs. 1,000 and hears appeals from the decisions of Munsifs. He also exercises jurisdiction in the districts of Palāmau and Hazāribāgh. A Munsif is also stationed at Rānchi while the Subdivisional Officers of Khunti, Gumlā and Simdegā exercise the powers of a Munsif. Suits under the Chotā Nāgpur Tenancy Act are tried by the Subdivisional Officers or by Deputy Collectors.

Civil Justice.

For police purposes the district is divided into 18 thanas and 10 outposts. The latter, which have been found to facilitate the investigation of crime, were, in 1905, declared to be police stations within the meaning of the Criminal Procedure Code. They are not thanas, but for the sake of convenience were treated as thana units for the purposes of the settlement record and also for census purposes.

Police.

Recently three new police-stations have been formed in thanas Kolebirā, Kochedegā and Kurdeg, to facilitate the investigation and prevention of crime and to improve the general administration, as it had been found that it was not possible to control these large areas from one centre. The new police-stations are at Jaldega in thana Kolebirā, Thethaitangār in thana Kochedegā, and Bolba in thana Kurdeg.

The sanctioned strength of the regular police force in 1915, was one Superintendent, eight Inspectors, 59 Sub-Inspectors, one Sergeant, 74 Head-Constables and 495 Constables, representing one police office to every 11.1 square mile and to every 2,114 persons. To assist the Superintendent, an Assistant or Deputy Superintendent is usually posted to the district. In addition to the civil police, a Gurkha Company of Military police is stationed at Doranda and consists of two Subadars and Jamadars, twelve Havildars and Naiks, and 97 Sepoys.

The rural police force, intended for watch and ward duties in the villages, consists of 2,457 Chaukidars appointed under the Chotā Nāgpur Rural Police Act (Act I), Bihar and Orissa, of

1914. The total cost of the rural police amounts to Rs. 91,637 and is realized from the inhabitants of the villages. The tax is collected by thirty Tahsildars appointed by the Deputy Commissioner. The Chaukidars are usually Ghāsi Ahir or Lohrā by caste, and occasionally Mundās, Orāons or low caste Muhammdans are employed; their pay varies from Rs. 3 to Rs. 4 a month.

Ghāt-wāls and
Ghāt-wāli cess.

The history of the police system in the early days of British administration has already been given in Chapter II. The system of zamindāri police proved a failure, and after the passing of the Police Act (Act V of 1861), an organized system of police, paid for and managed by Government, was introduced. The Rājā was thus relieved of a considerable burden, and, though by the terms of his covenant with the British Government, he was bound to make provision for the protection of life and property within his territory, it appears that he was only required to make a small contribution for the upkeep of the new police, and a *ghāt-wāli* cess was realized from proprietors and holders of tenures which were subject to a condition, express or implied, of protecting lines of roads or passes. The realization of this cess was legalized by the Chotā Nāgpur Rural Police Act [Act V (B. C.) of 1887], which also empowered the Deputy Commissioner to fix the number of, and appoint, road patrols or *ghāt-wāls* for the protection of such roads and passes. The duties of the *ghāt-wāls* differ from those of the village chaukidars in that they are exercised not within any village but within any area roughly determined by immemorial custom as a *ghāt*; their chief duties are to patrol the *ghāt*. There are in all 70 *ghāt-wāls*, ten of whom receive a salary of Rs. 5 a month and the remainder Rs. 3-8. The cess is collected by the Chaukidari Tahsildars and the annual demand is Rs. 4,061. The *ghāt-wāli* fund is administered by the Superintendent of Police, subject to the control of the Deputy Commissioner, and is applied in the first instance to meeting the pay of the *ghāt-wāls* and the office establishment, and also for the construction and repairs of the *ghāt-wāli* bungalows, which have been constructed for the convenience of touring officers on all the principal roads of the district.

Crime.

In the early days of British administration Chotā Nāgpur had an unenviable notoriety as a criminal district and was described by the Collector of Chatrā writing in 1793 "as a

receptacle for murderers, thieves and vagabonds and disturbers of the public peace." The establishment of the South-West Frontier Agency in 1834, and of the State constabulary in 1863, caused some improvement in the criminal administration of the district, but apart from crime which was the direct result of the strife between the landlords and tenants, murders, dakāitis, and similar crimes of violence were common, at least in the outlying parts of the district, till the beginning of the present century, and it was not till the opening of subdivisions at Gumlā and Khunti that there was any marked improvement in the administration of criminal justice or in the prevention and detection of crime. The wild nature of the country gives exceptional facilities for the commission of dakāitis and highway robberies and the escape of the culprits, as well as for the concealment of murders. Mr. Reid, who was the first Subdivisional Officer at Gumlā, thus describes the condition of the west of the district :—

" There were parts of the area, notably the more remote parts of Kurdeg, Kochedegā and Kolebirā thanas, where the system of British administration could hardly be said to be in force. Murder cases and other very serious offences were usually brought before the courts, but offences of lesser magnitude went unpunished. Even murders were frequently concealed : and I know of one case at least, in which a zamindār was reported to have committed as many as ten and yet has escaped conviction. The control over the police was so ineffective that they were the real rulers of the country and before any reform could be effected, it was found necessary to prosecute or dismiss many of them. The Chaukidāri force was equally corrupt. During the first year after the foundation of the subdivision, the convictions of the chaukidārs, who were the supposed guardians of the peace, for serious offences, such as dakāiti, robbery, theft and trespass, were numerous, the percentage being nearly treble that of any other class of the community. It was therefore necessary to discharge or dismiss large numbers of the worst of them who usually belonged to the Ghāsi and Mahali caste." A recent outbreak of dakāiti in the south-west of the district committed by a branch of the Mundās, known as the Eranga Kols, showed the necessity of exercising an even closer control over these outlying tracts and led to the decision to form a fourth subdivision at Simdegā. The Eranga Kols, though not

a criminal tribe, were no doubt encouraged by the facility with which petty crimes escaped notice to commit crimes of a more serious nature and trusted to make good their escape to the jungles of the neighbouring Feudatory States. Generally speaking, the aboriginals of the Rānchi district are not criminal, and the Mundās, Orāons and Khariās are justly proud of their respectability. Before the Settlement operations put a stop to agrarian disputes, cases of trespass and paddy-cutting, often accompanied by violence, were common, but such crimes were committed in defence of real or imaginary rights, and one cannot but feel sympathy with the aboriginal who, failing to obtain any redress in the Courts, took the law into his own hand and reaped the crops of his ancestral holding of which he had, often unjustly, been dispossessed by the zamindār. Cases of murder are still common, but the majority of them are pathetic rather than revolting. In a sudden drunken quarrel the quick-tempered aboriginal uses the axe, which he invariably carries with more violence than discretion. He confesses his crime and is quite ready to undergo the punishment. A more serious class of case is the murder of suspected witches or wizards. Sometimes a whole village combine to beat from their boundaries the old woman who is pointed out by the *soḥā* or witch doctor as the cause of disease among men or cattle, and such cases are often never reported to the police, or, if reported, no evidence is forthcoming against the guilty person. In other cases a man in a frenzy of grief at the loss of his child or wife or cattle, considers that the only way to save himself from further trouble is to destroy the person or persons who have cast the evil eye upon him. The tribes most addicted to theft, petty burglaries, and robberies are the Ghāsis, Mahlis, and Domrās. Cattle-theft is common, and often the thieves themselves or the receivers of the stolen property are detected by the owners of the cattle who visit market after market in their search for the missing property. Cattle-poisoning is also not uncommon and is committed by Chamārs, Lohrās or Ghāsis for the sake of the hides. A method frequently adopted is to shoot the animal with a bamboo-headed arrow, such as is commonly used by graziers for driving cattle, into which has been fixed a poisonous berry, hardened to a sharp point. A small puncture is made in the skin, but the

poison rapidly spreads through the veins. The crime is difficult to detect and often the villagers themselves attribute the deaths to the work of a *dhūt* and do not realize that they are caused by human hands.

CHAPTER XIII.

LOCAL SELF-GOVERNMENT.

The District Board.

OUTSIDE the two municipal areas of Ranchi and Lohardaga the administration of local affairs, such as the maintenance of roads, bridges, and roadside rest-houses, except those maintained by the Public Works Department, the management of pounds, the establishment and maintenance of schools, either wholly or by means of grants-in-aid, the provision of medical and veterinary relief, and the control of village sanitation, rests with the District Board. There are no Local Boards. The District Board was constituted in 1900 under Act III (B. C.) of 1885 to take the place of the Road Cess Committee, which up to that time had looked after the communications of the district.

The Board consists of nine members, appointed *ex-officio*, including the Deputy Commissioner as Chairman and nine members nominated by Government. The district is too backward for an elective system and this system of nomination secures the appointment of persons representative of all interests and well acquainted with the needs of the district. Of the nominated members, two are tea-planters and one is a lawyer; the landed interest is represented by the Manager of the Chota Nagpur Estate, the Manager of the Encumbered Estates and a landholder, while the heads of the Christian Missions form a most useful element on the Board.

Income.

The income of the District Board in the first year of its existence was Rs. 93,872, of which Rs. 47,679 were derived from Road-Cess, and during the decade 1901-2 to 1910-11 the average income was Rs. 1,36,373. In 1912-13 the income was Rs. 1,31,472, of which Rs. 55,974 were derived for Road-Cess. In 1914-15 the income rose to Rs. 2,85,769, owing to the

surrender to the Board of the Public Works Cess (Rs. 39,818) and to special grants received from Government for education and for the improvement of roads and communications. Of the minor items of revenue, receipts from pounds are the largest and amounted to over Rs. 4,000 while about Rs. 1,300 are derived from school fees and Rs. 2,000 from veterinary receipts. The incidence of taxation is very low and amounts only to ten pies per head of population.

The average expenditure during the decade 1901-2 to 1910-11 amounted to Rs. 1,33,750. In 1912-13 it amounted to Rs. 1,37,849, of which Rs. 77,241 were spent on civil works, including Rs. 58,007 on the extension and maintenance of roads. In 1914-15 the total expenditure rose to Rs. 3,16,588, that on Civil Works to Rs. 2,29,511, over Rs. 1,80,000 being spent on roads. Special grants received from Government were devoted to the improvement of the road from Lohardagā to the plateau of Netarhāt in Palāmau via Ghāghrā and Bishunpūr. Apart from the desirability of connecting Rānchi by a good road to this potential hill station, the road from Lohardagā to Ghāghrā and Bishunpūr carries the traffic from the western part of the district to the railway and has become of increasing importance since the extension of the Bengal-Nagpur Railway to Loharlagī was opened. Expenditure.

Next to Civil Works, Education constitutes the heaviest charge on the resources of the Board; the amount expended on it in 1912-13 was Rs. 39,467, Rs. 30,227 being given as grants-in-aid to primary schools. In 1914-15 the expenditure under this head rose to Rs. 61,885, including Rs. 43,763 for aided schools. The increased expenditure was mainly due to a grant of Rs. 15,000 received from Government for raising the stipends of Gurus in primary schools. Seven middle schools are maintained by the Board, at Gumlā, Khunti, Jaria, Thakurgaon, Pākot, Silli and Tamār; and grants-in-aid are made to two middle schools (at Bundu and Murhu), to 57 upper primary schools, and 719 lower primary schools. Large grants are also given to the three Missions for the maintenance of primary schools, the S. P. G. Mission receiving Rs. 3,420, the Lutheran Mission Rs. 4,860 and the Roman Catholic Mission Rs. 1,663.

The Board in 1914-15 spent Rs. 9,329 on medical relief, maintaining five dispensaries, at Gumlā, Khunti, Silli, Chainpur, and Bundu, giving contributions to the Government hospitals at Rānchi and Lohardagā and grants to the hospitals of the S. P. G. Mission at Itki and Murhu. The question of village sanitation also receives attention and, though rapid progress cannot be made owing to the limited resources of the Board, steps are taken to improve the water-supply by the construction of wells in the larger villages and bazars and by cleansing private wells and tanks. Since 1912 a sanitary inspector has been employed to supervise this work.

A veterinary dispensary has been opened at Rānchi, with a shoëing forge attached to it, and a veterinary assistant and a farrier have been entertained since 1902. There are also two itinerant veterinary assistants, in charge of the Gumlā and Khunti subdivisions. Rinderpest and hæmorrhagic septicæmia cause great mortality among cattle in the district, and the duty of these officers is to instruct the inhabitants in preventive measures and to persuade them to have their cattle inoculated in the event of outbreaks of infectious diseases.

Municipali-
ties.

There are only two Municipalities in the district. The Rānchi Municipality, which is the largest in Chota Nāgpur, was constituted in 1869, and the Lohardagā Municipality in 1888. Municipal administration is still in an elementary stage, but there are hopeful signs of a more corporate activity. In the case of a petty rural Municipality like Lohardagā it is no easy matter to instil life and vigour into the proceedings of the Commissioners. An account of both towns will be found in the Gazetteer.

Rānchi.

Rānchi has a Municipal Board of nineteen Commissioners, including the Chairman. Of these three, the Deputy Commissioner, the Civil Surgeon, and the District Superintendent of Police, are members *ex-officio*, twelve are elected triennially by the rate-payers, and four are nominated by Government. Thirteen members are Indians, ten being Hindus, two Muhammadans, and one a Christian, and of these all are lawyers, with the exception of a schoolmaster, a doctor, and a retired Government officer.

The Municipal area is about 6 square miles, but the Commissioners are taking steps to extend the boundaries, so as to be in a

position to control the future development of the town and to include the suburb which is rapidly growing to the north-east of the town by Morābadi hill. The population of the town according to the last census was 33,069, but since Rānchi has become the temporary headquarters of Government, has risen considerably and is now probably not far short of 38,000. Not only have a large number of Government officers taken up their residence within municipal limits but the increased trade and prosperity of the town has caused a corresponding increase in population. The number of rate-payers in 1914-1915 was 4,984, or 15·1 per cent. of the population and the incidence of taxation per head was Re. 1-8-5. The average annual income of the Municipality during the decade ending 1901-2 was Rs. 16,955 and the expenditure Rs. 20,998; during the following decade they were Rs. 55,667 and Rs. 49,157, respectively. In the three succeeding years the income has shown a marked increase and rose to Rs. 1,02,726 in 1912-13, Rs. 1,01,709 in 1913-14, and Rs. 1,21,204 in 1914-15. The chief source of income, apart from grants and loans from Government, is a tax on houses and arable lands, assessed at 7½ per cent. on their annual value, which in 1914-15 brought in Rs. 25,604, while a conservancy tax levied on a sliding scale on the annual value of holdings brought in Rs. 21,300 and the fees from markets and slaughter-houses Rs. 13,155. During the past years the Municipality has received liberal assistance from Government, the grants amounting to Rs. 43,905 in the year 1912-13, to Rs. 37,681 in 1913-14, and to Rs. 51,271 in 1914-15. The expenditure in 1914-15 amounted to Rs. 1,20,581, of this amount 24·7 per cent. was spent on conservancy, 29·2 per cent. on the maintenance of roads, and 16·4 per cent. on medical relief. About 100 miles of roads are maintained by the Municipality, of which 15 miles are metalled, 60 miles gravelled, and the remainder unmetalled.

Rānchi, from its position as the headquarters of the division and its reputation as a health resort, has always been of considerable importance, and its importance has been enhanced by the temporary establishment of the seat of Government. The assistance given by Government has enabled the Commissioners to carry out many much needed reforms. The staff has been increased and the conservancy arrangements, which were formerly

inadequate, have been improved with the aid of the special grants given in 1912-13 and subsequent years. The roads have received more attention and the lighting of the streets is much better than it was a few years ago. A daily market, to supply the needs of the well-to-do inhabitants, has been instituted, the cost of the building being met by a loan of Rs. 15,000. Though the last few years show a record of steady progress, much remains to be done, but the Municipality, like others in the province, is hampered by lack of funds from taking in hand any large projects. A drainage scheme has been under consideration for some time past, but without liberal assistance from Government the Municipality cannot hope to meet the cost of over two lakhs of rupees. The natural drainage of the town is good, and it is only in the more congested portions that a system of artificial drainage is needed. An even more ambitious scheme is the supply of good drinking water, either by damming the Subarnarekhā or Potpoto rivers or by constructing a reservoir in the highlands to the west of the town. But this scheme involves an expenditure of more than seven lakhs of rupees, and it will be many years before funds are available for carrying it into effect.

Lohardagā.

The Lohardagā Municipality is administered by a Board, consisting of ten members nominated by Government. The area included in the Municipality is only 2·5 square miles and the rate-payers number 947, or 13·9 per cent. of the total population. The total income in 1914-15 was Rs. 6,497. This income is chiefly derived from a tax on persons, levied at one per cent. on the income of the assesses, and in 1914-15 Rs. 2,643 was obtained from this source. Other items of revenue are rent of pounds (Rs. 415), and rent of sarais (Rs. 252). The incidence of rates and taxes, which is 7½ annas per head of population, is the lowest in Chotā Nāgpur. In 1914-15 Rs. 1,080 were spent on conservancy, Rs. 1,193 on roads, these being the two chief items of expenditure, apart from the construction of a hospital with the aid of a grant from Government. The Board maintains one Upper Primary School for boys and one Lower Primary School for girls and grants are given to two Lower Primary Schools for boys and to a local *maktab*.

CHAPTER XIV.

EDUCATION.

The progress of education in Ranchi district during the last forty years has been remarkable and the credit for it must be given to the Christian Missions. At the time of the British occupation, and during the sixty years that intervened between that and the Kol insurrection, there were hardly any literate persons in the district. After the establishment of the Agency, in 1834, a school was founded at Ranchi, but even in 1857 it was still the only Government institution in the district and contained only 67 pupils. During the next decade some progress was made, but in 1871-2 there were only 22 schools in the district (including Palaman), with 986 pupils, and a few indigenous *pathshals* and *maktabs*. From 1871 to 1881 progress was more rapid and was due largely to the expansion of the Lutheran Mission during this period, and partly to Sir George Campbell's scheme, introduced in 1872, under which grants-in-aid could be given to schools under private management. The effect of this scheme was at once apparent, and in 1872-3 there were 178 Government and aided schools, with 4,553 pupils, and 57 unaided schools, attended by 580 pupils. Since that date there has been a steady increase in the number of schools. Between 1892 and 1902 the number of schools rose from 492 to 796, and the number of pupils from 12,569 to 20,503. In 1915 there were over 1,300 schools and nearly 40,000 pupils, the number of boys under instruction being 34,603 or 34 per cent. of the male population of school-going age. With the increase in the number of schools and pupils, there has been a corresponding increase in the number of literate persons, in 1881 only 30 males in every 1,000 were literate and in 1891 only 36, but during the last

Progress of
Education.

twenty years, in which the number of Christians has risen by over 100,000, the number of literate males has risen to 57 per mille.

In spite of this marked progress, Ranchi is still more backward in education than other districts of the province, except Palāmau, Angul and Singhbhūm. The conditions of the district are such as to render the diffusion of education difficult. The villages are few and far between, the inhabitants are poor and indifferent to the benefits of education, and it is only in those parts in which there is a large proportion of Christians in the population that the number of literates is at all large. Among the aboriginals, who still adhere to their animistic religion, only 4,385 persons were recorded as literate in 1911 out of a total population of 607,820, or 13 per mille of the male and 2 per mille of the female population, but out of the Christian population of 177,473, 10,436 were literate, or 93 per mille among men and 25 per mille among women. The progress of education among the Christian inhabitants of the district has had the effect of stirring up the Hindus and Muhammadans to improve their condition. Among Hindus 83, and among the Muhammadans 146 per mille of the men are literate, a higher proportion than is found in the district of North Bihar.

**Secondary
Education.**

There is no college in the district, but there are four flourishing High English Schools, with more than 1,500 boys on their rolls. The Ranchi Zila School, maintained by Government, is under the charge of a European Head-master of the Indian Educational Service, and is rapidly growing in size and popularity. New school buildings, including hostels for the various classes of pupils, have recently been constructed on a site in the compound of the house formerly occupied by the Commissioner of the Division. The other three High Schools are maintained by the three Missions, who are assisted by annual grants from Government and have also received recently special grants to enable them to erect new school buildings and boarding-houses. They are the Lutheran Mission School, St. Paul's High School maintained by the S. P. G. Mission and St. John's High School maintained by the Roman Catholic Mission.

There are thirteen Middle English Schools, of which three (at Gumlā, Khunti, and Jariā) are maintained, and one (at

Bundu), is aided, by the District Board; one is aided by the Ranchi Municipality; and five are aided by Government. Three of the latter, as well as three which are unaided, are under the management of one or other of the Missions.

There are five Middle Vernacular Schools in the district, of which one is attached to the Ranchi Training School and is maintained by Government, and the remainder are maintained and managed by the District Board. The Missions have no Middle Vernacular Schools. The schools, which are but little superior to primary schools, are declining in popularity, as parents of all classes prefer an English education for the children.

Primary
Education.

Primary Schools are the principal agency for diffusing education among the mass of the population, and the rapid strides which education is making may be judged by the fact that during the past seven years the number of primary schools has risen from 788 to 1,284, and the number of pupils from 18,256 to 34,239. Upper Primary Schools generally have satisfactory accommodation, but the Lower Primary school is usually found in a wretched hut, or in the verandah of the house of the leading villager.

At Ranchi there is a first-grade training school for vernacular teachers in Secondary Schools, with 60 pupils on its rolls. The school is maintained by Government, and is accommodated in the buildings formerly occupied by the Zila School. There are four schools for the training of teachers in Primary Schools with about 60 pupils, one of which prepares teachers to teach up to the Upper Primary stage and the remainder up to the Lower Primary stage. Two of these were formerly reserved for Mundās and Oraons, but, owing to the inferior qualifications both of the pundits and the pupils did not prove a success. They have now been thrown open to all castes, and aboriginal teachers, both Christian and non-Christian, are trained in the schools which have for some years been efficiently maintained by the three Missions. The Missions receive a grant-in-aid from Government, on condition that 24 gurus are trained each year, 12 of whom are nominated by the Deputy Inspector of Schools with a view to their subsequent employment in Government or Board Schools. The S. P. G. Mission and the Lutheran Mission each maintain a training school for mistresses. The schools contain about 30 pupils and are

Training
Schools.

aided from Provincial funds. The Roman Catholic Mission also has a female Training School on a smaller scale which is at present unaided.

Technical and
Industrial
Schools.

The Ranchi Industrial School was started with the balance of the assets of the Chutiā Fair fund, the object being to give a training in handicrafts to aboriginal youths. It is now maintained by Government, and has been enlarged by the opening of classes for sub-overseers and for motor mechanics. In 1915 there were 181 students in the sub-overseer classes, 11 in the motor mechanics class, and 87 pupils in the artisan classes. A hostel is attached to the school, and considerable improvement has been made during the last few years in the plant and machinery. In an Industrial School at Bundu, aided by the District Board, blacksmiths' and carpenters' work used to be taught to some twenty boys, but the school has not proved a success and has now been closed. A more promising school has lately been started by the S. P. G. Mission at Murhu. The Lace Schools maintained by the three Missions, and the Blind School maintained by the Anglican Mission are described in the chapter on Missions.

Since the influx of Secretariat clerks into Ranchi, a commercial school has been opened, at which candidates for employment under Government can get instruction in Typewriting and Shorthand. Only 17 pupils were under instruction in 1915.

Female
Education.

Female Education in Ranchi has made greater progress than in many districts of the province, as the Missions maintain a large number of schools, many of which are efficiently managed by Europeans. The S. P. G. Mission maintains a Middle English School for girls at Ranchi, which has 16 girls in the secondary classes and 271 girls in the primary classes. The school receives a monthly grant of Rs. 60 from provincial revenues, and Rs. 40 for the Kindergarten school. There are in all 85 primary schools for girls, with 3,411 pupils on their rolls, the majority of which are privately managed, but receive aid from public funds. Of these 42 are under the management of the Missions. The success of the Missionaries in spreading education among the women and girls belonging to their congregations is shown by the fact that 25 per mille of the female Christian population is literate, whereas among the Hindus, Muhammadans, and Animists, the proportions are only 5, 11, and 2, respectively.

Besides these schools there are 37 *Madrassas* and *Maktabas*, 28 of which are aided, for the special education of Muhammadans. The principle is the Seraj-ul-Islam Madrassa at Ranchi, recognized as an Urdu Upper Primary School. There is also a Sanskrit *Tal* at Ranchi, which is aided by Government and the Municipality. Special
Schools.

The total expenditure on education in the year 1914-15, including inspection and miscellaneous charges, was Rs. 4,60,912, of which Rs. 1,03,973 were met from Provincial funds, Rs. 67,848 from District Board funds, Rs. 5,696 from Municipal funds, and Rs. 2,78,385 from fees and private sources. Expenditure.

The Inspector of Schools in the Chotā Nāgpur Division has his headquarters at Ranchi, but the work of inspecting and superintending the schools in the district mainly falls on the Deputy Inspector, assisted by eight Sub-Inspectors, two Assistant Sub-Inspectors and two inspecting Pandits. Inspection.

The only newspapers in the district are the *Ghar Landhu* which is published by the Lutheran Mission and the *Ranchi Church Messenger* published by the English Mission. Both these papers deal principally with topics of missionary interest. Newspapers.

CHAPTER XV.

MISSIONS.

Progress of
Christianity.

The rise and progress of Christianity among the aboriginals of the district is an outstanding feature of the history of the last half century. Work amongst aboriginals has always been a favourite field for missionary enterprise, and in Ranchi the conditions were exceptionally favourable. The population was backward, uncivilized, and illiterate; agrarian strife was rife, and the spread of Christianity has gone hand in hand with the efforts of the aboriginals to resist the oppression of the landlords and to assert, and secure recognition for, their claims to the lands on which they were the first settlers. In the struggle against the landlords it was the Missionary who could give the raiyat the greatest assistance.

A well-known Roman Catholic Missionary writes as follows regarding inducements to conversion:—"As a general rule religious motives are out of the question. They want protection against zamindari and police extortions and assistance in the endless litigation forced on them by zamindars. As a consequence—

- (a) most of the converts came over (after panchāyats) in whole villages or in groups of villages ;
- (b) a certain number of isolated families came over, either for help against zamindars or police extortion, or against the rest of their co-villagers who persecuted them because they were pointed out by the *Sokhās* as wizards or witches ;
- (c) Personally I know of some cases where individuals came over from religious motives. But these cases are rare.**

In numbers the Christians have increased from 1,227 in 1860 to 11,108 in 1868, 36,265 in 1881, and 75,693, 124,958 and 177,473 at the subsequent censuses; but apart from this remarkable increase in the number of converts the spread of Christianity has exercised a profound influence on the lives, customs and habits of thought of the whole population, particularly in developing a manly independence of character. To the Christian Missionaries must be given the credit for freeing the cultivator from the oppression of the landlord; they have now taken up the work of freeing him from the clutches of the money-lender, and the spread of the Co-operative movement among the Christian converts promises to effect an economic revolution in the district.

Mission work in Chota Nāgpur owes its origin to Johannes Gossner, a scholarly Bavarian priest, who, on being excommunicated from the Church of Rome on account of his liberal tendencies, joined the Evangelical Lutheran Church and devoted the latter part of his life to founding Missions in all quarters of the globe. In 1844 he sent out four young missionaries, E. Schatz, F. Batsch, A. Brandt and H. Janke, to Calcutta with no definite instructions as to the region in which they should take up their work. While waiting in Calcutta they were attracted by the appearance of some Kols from the Rānchi plateau and, after making further enquiries, decided to start work in this district. Like other pioneers of mission work, their first efforts met with little success. The Kols received their preaching with animosity and even stoned them from their villages, and for five years they continued preaching without making a single convert. At last, in 1850, four Orāons came to the Mission House and asked to see the man "Jesus" of whom they had read in a tract. No explanation of the missionaries would satisfy them that Jesus was not a living person, and they left the house vociferating and abusing the missionaries. Some time later, they returned, professed their readiness to join the Church, and thus became the first converts of the mission. During the next few years the number of converts increased rapidly, so that by 1857 there were no less than seven hundred baptized Christians. Soon after their arrival the German Pastors had begun the erection of a church in Rānchi and, labouring largely with their own hands, completed in 1855 Christ Church, the first Christian Church in Chotā Nāgpur.

Foundation
of Gossner's
Mission.

Mutiny of
1857.

The Mutiny of the Rāmgarh Battalion in July 1857 seemed to shatter the hopes of spreading Christianity. The missionaries themselves were compelled to flee to Calcutta, the converts and enquirers were scattered among the villages and exposed to the attacks not only of the mutineers but also of the zamindars who, even before the outbreak, had endeavoured to stop the spread of the movement. A wholesale spoliation of the property of the Christians occurred; many died of starvation in the jungles, and some were only saved by their non-Christian neighbours. The missionaries, however, took the first opportunity of returning to Ranchi and arrived with the troops in October 1857 to find their bungalows looted and damaged, the Christian village of Prabhusharan levelled to the ground, the windows of the Church broken, the organ destroyed, and the bells removed.

Progress,
1857—1867.

But the Mutiny only caused a temporary set-back to the progress of Mission work, and in the next ten years a remarkable advance was made. At the time of the Mutiny the number of converts was only a little over seven hundred. At the end of 1860 it had risen to fourteen hundred, and seven years later there were no less than ten thousand converts. There was at this time, according to Colonel Dalton, a widespread feeling among the Kols that it was their destiny to become Christians. Enquirers no longer came by twos or threes, but whole families, and in some cases whole villages, applied eagerly for baptism. On one day in November 1864 no less than six hundred men, women and children presented themselves. This rapid increase in numbers rendered the work of organization imperative. The small body of missionaries at Ranchi could obviously not keep in touch with the large body of Native Christians, living, as some of them did in villages fifty or sixty miles distant. Elders were therefore appointed in each village, or group of villages, in which there were a large number of converts. The elder received no salary but was taught to regard his position as one of great honour, and his duties consisted in assembling the converts for Sunday service and instructing them in the Bible and Catechism. In addition to these stationary elders there was a body of catechists constantly going backwards and forwards for purposes of instruction and exhortation.

During this period of progress the Mission was sadly hampered by lack of funds, and branches which had been opened at Lohardaga, Gobindpur, and elsewhere, had to be abandoned. The Mission was no longer under the fostering care of Pastor Gossner, but was supported and managed by the central committee, or Curatorium, of the Evangelical Mission Society of Berlin, founded shortly before Gossner's death in 1858. An appeal made by Bishop Cotton, the Metropolitan of India, who visited Ranchi in 1864 and was much impressed with the work of the Mission, had little effect in stirring up to the central society in Germany to give the financial assistance needed but resulted in some funds being collected in Calcutta.

A few years later the Curatorium, in response to an urgent appeal for more men, sent out several younger men who had educational qualifications at the Universities denied to the older missionaries. Their arrival in 1863 led to a split in the Lutheran Mission and to the founding of the Anglican Mission in Ranchi. Shortly after their arrival the young missionaries sent letters to Berlin in which grave insinuations were made against the older missionaries, charges of irregularity in their accounts, of neglect of Mission duties, even of misappropriation of Mission funds. So serious were these charges that the Curatorium sent out their Secretary, the Rev. Mr. Anson, to enquire into them. A conference was held at Ranchi in November 1863 in which two leading Calcutta merchants, one an Englishman and the other a German, were present as assessors. The assessors found the charges "frivolous and unfounded" and sympathized entirely with the older missionaries, but Mr. Anson's sympathies were with the younger men. Under the authority given him by the Curatorium, he endeavoured to create a "new organization" which practically deprived the elder missionaries of the position they had held for twenty-four years and placed them as a minority in the hands of the younger men, who had brought such serious and, in their opinion, unproved charges against them. Rather than join this constitution, the older missionaries withdrew and sent an appeal to the Bishop of Calcutta (Bishop Milman) for assistance. For some time Bishop Milman declined to interfere, but when all hope that the dispute might be settled from within vanished on receipt of a letter from the Curatorium upholding Mr.

Division of
the Lutheran
Mission.

Ansorge's decision, dismissing the missionaries and denouncing them as traitors and seceders, he decided to visit the Mission and endeavour to restore peace and harmony. On his arrival in Ranchi over six thousand converts came to him with a petition to be received into the English Church, and were supported by the European inhabitants of the town. The Bishop, after he had obtained a promise of support from the Calcutta Diocesan Committee of the Society for the Propagation of the Gospel, decided to accede to their request, and in April 1869 ordained into the English Church the German pastors, F. Batsch, H. Batsch and F. Bohn, and a Rājput Catechist, Wilhelm Luther Dāud Singh, and admitted by confirmation a large and representative body of native converts.

From that time the Anglican and the Lutheran Missions have continued working side by side. "Such a division", says the Report of the Anglican Mission for 1869-70, "necessarily involved, especially at first, much that is to be regretted, but already we see with thankfulness that very much good is resulting from what some have imagined to be an unmixed evil." The good that resulted from the division is exemplified by the history of the next forty years. Both Missions have made great progress and there has been keen but generous rivalry between the members of the two churches.

The Lutheran
Mission,
Progress,
1870—1880.

Of the two, the Lutheran Mission has throughout this period been better staffed in respect of numbers and has made the greater progress. In 1872 the working staff of the Mission consisted of six ordained, and seven lay, European missionaries, two native teachers, 50 catechists, 25 teachers, and 195 *prachāraks*, or village elders, while the total number of Christians belonging to the Mission was 16,742. The congregation was soon found to be too numerous and too scattered for effective supervision from Ranchi. Accordingly out-stations were added at Burju (1869), Gobindpur (1870), Lohardagā and Takarmā (1873). Burju, or Patrasburj as it was first called, is in the centre of the Mundā country and was founded by a Russian nobleman, who made over 3,000 roubles for the purpose, on condition that the new station should be called after St. Petersburg. Lohardagā was conveniently situated for spreading the work in the north-west of the district, and Takarmā, in the south of Basiā thana, is at the centre where the three tribes of Mundā, Orāon and Khariā meet and was therefore particularly suited

for spreading the work in the south and south-west of the district. The educational work was also well organized; at the headquarters in Rānchi a theological seminary or training class for pastors and teachers was established in 1867, and by 1873 contained thirteen pupils who received instruction in sacred and profane subjects. A boarding school for boys contained 110 pupils, and that for girls 50 pupils. The efficiency of the teaching may be estimated from the fact that three European missionaries assisted by two *pandits* and six native teachers devoted their whole time to the management of the seminary and the school.

During the eighties two causes contributed to make the development of the Mission less rapid. The nationalist Sardars, whose exaggerated claims were discountenanced by the missionaries, set up a bitter opposition and endeavoured to seduce the converts and enquirers from their allegiance. During this decade also the Roman Catholic Mission was established in the district and carried out the work of proselytization with characteristic energy and enthusiasm. The new Mission, which devoted as much attention to the temporal as to the spiritual welfare of their converts, not only won over many who would otherwise have joined the Lutheran Church but also many members of that Church, but the great campaign of Rev. Father Lievens, S. J., among the Oraons (in 1893), paved the way for a marked expansion of Lutheran missionary work, especially in the west of the district, during the closing years of the 19th and the opening years of the 20th century. New stations were opened at Chainpur, in Barwe, in 1892, at Khutitoli, in Biru, and at Gumia in 1895, at Kinkel in Kurdeg thana in 1899, at Tamār in 1901 and at Koronjo in 1903. Since that date the Mission has endeavoured to spread its work among the inhabitants of Jashpur State and though not permitted to build churches or chapels within the State has established stations at Kondra and Kinkel on its borders and has won over a large number of converts. In 1880 the Mission had 31,253 Christians, with a staff of seventeen missionaries, seven ordained native pastors and 111 catechists. By 1890 the number of Christians in the division had risen to over 35,000; by 1901 the number had nearly doubled, and at the census of 1911 over 75,000 persons in the district of Rānchi alone were recorded as members of the Lutheran Church. This figure includes a certain number of persons not admitted by the missionaries

1880—1913.

themselves to belong to their church, and more accurate statistics compiled by the Mission for the year 1913 show that in that year there were 96,543 Christians, of whom rather more than 73,000 were attached to churches in the Rānchi district. The European staff consisted of twenty-one ordained missionaries, five unordained missionaries, and three deaconesses, and the Indian staff of 31 pastors and 322 catechists. Of the Christians over 37,000 are Mundās, over 30,000 Oraons and over 6,000 Khariās.

The outbreak of war between England and Germany in 1914 rendered it necessary for Government to take measures against all hostile aliens, including those engaged on missionary work. Of the missionaries in Rānchi district, those of military age were interned, while the older men and women and children were repatriated to Germany. In spite of the removal of the missionaries, the Mission, thanks to its excellent organization, still continues its work, the pastoral work being left entirely to the Indian pastors, while the educational work is supervised by members of the Anglican Mission.

Schools:

Of the schools the most important is that at Rānchi, which originally taught up to the Primary Standard, was raised to the Middle Vernacular Standard in 1834, and to the Matriculation Standard in 1895. The substantial and spacious building in which the school is held was built forty-three years ago, a solid testimony to the wise forethought of those pioneers of education. The majority of the pupils, who number over 300, are boarders, and a new boarding-house has been constructed with the assistance of a grant from Government. The school is very efficiently managed, and the late Mr. Cunningham, Inspector of Schools in the Chotā Nāgpur Division, wrote of it a few years ago :—“In every really essential respect I am satisfied that the school may serve as an excellent ‘model’ school to which others may with advantage aspire. I am impressed with the school as a masterpiece of educational organization and only those who have attempted such organization in India can appreciate what that means.” Apart from the High School and the Girls’ School at Rānchi, there are 32 Primary boarding schools at the out-stations and native pastorates, with 2,400 pupils of both sexes, and 223 village schools with nearly 4,000 pupils, of whom 900 are non-Christians.

Medical work has also not been neglected. There is a dispensary at Rānchi, and at Lohardagā a small Leper Asylum and Home for Incurables. Hospitals.

An account of the Lutheran Mission would be incomplete without some mention of Rev. Dr. Nottrott, to whose indefatigable exertions and wise guidance the Mission largely owes its success among the tribes of Chotā Nāgpur. He arrived in Rānchi in 1867 and retired only in 1913. In spite of the arduous work devolving on him as the head of a large community, Dr. Nottrott also devoted his time to translating the Scripture into Mundāri. His translation of the New Testament was published, many years ago, by the Bible and Tract Society and his translation of the Old Testament was completed shortly before his retirement.

If the Lutheran Mission owes its success largely to Dr. Nottrott, the Anglican Mission is equally indebted to the Rev. J. C. Whitley, the first Bishop of Chotā Nāgpur. Shortly after the pioneer pastors of the Lutheran Mission had been received into the English Church, Mr. Whitley, who had worked for seven years in the Punjab, was sent to Rānchi from Kurnal, to superintend the work of the new Mission. His first work was to organize the work among the six thousand Christians who had come over. The three hundred villages, in which all or some of the inhabitants were Christians, were divided up into thirty-five circles; the old system of village elders remained as before, and in each circle a catechist or reader was appointed, on a small salary, to hold services and instruct the young in the Bible and Catechism. Owing to the small staff the missionaries were only able to visit the circles occasionally. During this early period one great lack was the want of chapels and schools in the villages. This defect was soon removed, and by 1870 enough money had been collected, chiefly by the European ladies of Rānchi, to build small chapels, rough mud buildings with red-tiled roofs, in each of the central villages of the circles. Another need was a central church at Rānchi. The service of ordination and confirmation, held by Bishop Milman in 1869, was performed in a primitive mud-walled building. When he returned in the beginning of 1873, there was a fine stately brick church capable of holding fully twelve hundred persons. The church was designed by General Rowlatt, then Judicial Commis- The S. P. G
Mission.

sioner of Chotā Nāgpur, and the foundation-stone was laid on September 1st, 1870, by General Dalton. Of the total cost of the building, Rs. 26,000, Rs. 7,000 was raised in Rānchi itself, General Dalton contributing over Rs. 3,000, Rs. 3,600 represented a grant from the Government of India and the balance grants from the Society for the Propagation of the Gospel and Society for the Propagation of Christian Knowledge. Bishop Milman's visit to Rānchi in 1873 is noteworthy not only for the consecration of the new church but also for the ordination of the first five Indian clergy of Chotā Nāgpur. These five deacons were placed in charge of five districts, with headquarters at Maran-ghada, Murhu, Tapkara, Rāmtolia and Itki. Their salary, at first only Rs. 15 a month, was met partly by the offerings of their congregations and partly by the Native Pastorate Endowment Fund of Calcutta, no contribution being received from the ordinary Mission funds. The progress of the Mission during the first ten years of its existence may be judged by the following facts. The number of Christians had risen from 5,773 in 1870 to 10,679 in 1880; the number of communicants had quadrupled and, though the number of European missionaries had not increased, there were no less than eleven Indian clergymen. In the next decade the progress of the Anglican Mission was hampered by the same causes that affected the Lutheran Mission the Sardāri agitation and the rise of the Roman Catholic Mission. Still there was some progress; the number of Christians rose to 12,519 in 1890, while the number of pupils rose from 865 to 1,209. Churches were built at Kachabari and Murhu, the former in memory of the Rev. Mr. Vallings, the latter out of a legacy left by General Dalton.

Bishopric of
Chotā
Nāgpur.

But the most noteworthy event of this period was the foundation of the Bishopric of Chotā Nāgpur. In the year 1885, a petition was sent to the Bishop of Calcutta signed by all the priests and deacons of the Mission, praying for the appointment of a Bishop for Chotā Nāgpur. Bishop Johnston favoured the scheme, but legal difficulties stood in the way, as the diocese of Calcutta had been created by Act of Parliament in 1814, and it was only by a similar Act that a new bishopric could be created. The problem was at last solved by the appointment of a kind of suffragan bishop, "on the primitive foundation of consensual compact and canonical obedience".

An endowment of Rs. 13,500 was raised by the Missionary Societies in England, and in March 1890 the Rev. Mr. Whitley was consecrated to be the first Bishop of Chotā Nāgpur. Finding the staff of the Mission insufficient for the work they were called upon to perform, Bishop Whitley, in 1902, invited the Dublin University Mission, which had been established at Hāzaribāgh since 1892, to undertake the educational, medical and evangelistic work at Rānchi, but since 1908, owing to paucity of recruits, the Dublin Mission has been forced to confine its work mainly to the former district.

In 1904 Bishop Whitley died, and was succeeded by the Rev. Foss Westcott, under whose able and energetic guidance the Mission has continued its progress. Present-day Staff.

The staff now consists of seven European and seventeen Indian clergymen, assisted by 94 Readers and *Prachāraks*, with a congregation of over 15,000 persons. At Rānchi and the two out-stations of Itki and Murhu, which are in charge of European clergymen, there is a staff of nine ladies who render valuable assistance in the medical and educational work. In addition to this staff, some members of the Mission have been engaged, since the removal of the Lutheran missionaries, in the educational work of that Mission.

Of the educational institutions, the most important is the St. Paul's High School at Rānchi. Schools. The numbers are rising rapidly and there are now 322 boys in the senior school, an increase of 171 boys in five years, and 161 in the junior school. Of these 139 are non-Christians, but all alike receive religious instruction daily. One hundred and ninety-three boys from this school and others connected with the Mission are boarders, and a spacious new hostel has recently been opened, while the construction of new buildings for the school itself has been taken in hand. A Training School for masters provides teachers for the numerous village schools, and its efficiency has been recognized by Government who send for training a certain number of teachers, destined for Government and District Board Schools. Female education has not been neglected; the girls' school at Rānchi, under the able management of a European Lady missionary, has nearly 300 pupils on its rolls, of whom 110 are boarders. A Training School for mistresses was opened in 1909 and

a Lace School in 1908. At Chutiā near Rānchi there are flourishing schools for boys and girls, the majority of the pupils being Hindus or Muhammadans, and at Dorunda schools for the children of the Bengali clerks of the Secretariat have recently been opened. At Murhu, in the Mundā country, there is a boys' Middle English School with over 150 pupils, of whom more than 100 are boarders, and a girls' school with 113 children, of whom 82 are boarders. In all, the Mission maintains in the district 28 boys' schools, 11 girls' schools, and 46 mixed schools, with 3,266 pupils. The Blind School at Rānchi is an institution almost unique of its kind in India. It was started in 1895, and blind men are trained in industrial work in cane and bamboo, and blind women in mat-making. Reading and writing are also taught on the Braille system.

Hospitals.

The medical work of the English Mission is important and its ministrations are extended to Christians and non-Christians alike. Details of the hospitals maintained by the Mission have been given in Chapter IV. The good work done at Mission hospitals may be judged from the following extract from the annual report:—"Among the patients fifteen cataract operations have been done and a considerable number of corneal ulcers treated. There has been a marked absence of serious cases requiring immediate operations, the three chief ones being two Muhammadans, one with a liver abscess and one with an empyæma and a small Mundā boy badly gored in the stomach by a buffalo, all three of whom made complete recoveries. A fair number of operations which, though small and unimportant in themselves, will add greatly to the future usefulness and comfort of the patients have been done, such, for instance, as the freeing of joints and limbs bound by contracting scar tissues and adhesions, operations for entropia and ectropia, removal of cysts, etc. Chloroform has been given 34 times for operations and about a dozen times for examination purposes, dressings and movings of joints. Local anæsthesias, apart from cataract operations, have been given about twenty times. One high amputation of the arm has been done. The medical work as distinct from the surgical in a hospital like Murhu is, on the whole, rather disappointing as it is almost impossible to keep patients under treatment when once they begin to improve."

Though the success of the Lutheran and Anglican Mission is remarkable, even more remarkable is the story of the rise and development of the Roman Catholic Mission. An idea of the rapid expansion of the Mission may be gathered from the following figures :—

Roman Catholic Mission.

The number of Catholic converts rose from 15,000 in the year 1887 to 39,567 in 1897, of whom 22,728 were baptized converts and 16,839 neophytes. By 1900 the number had swelled to 71,270, and by 1909 the Roman Catholic Mission in Chotā Nāgpur counted as many as 147,366 converts, including 72,943 neophytes, of whom over 91,000 belonged to the district of Rānchi. In the census of 1911 over 77,000 persons in the district of Rānchi were recorded as Christians of the Roman Church, but, the figures compiled by the Ecclesiastical authorities in their own census show that the total number of Christians is 107,187, of whom 70,668 were baptized Catholics and 36,519 Catechumens. The Catholic Mission centres in the district are now sixteen in number and are located at Rānchi (established in 1887), Sarwadā (1882), Torpa (1835), Mandar (1893), Nāwātoli (1890), Karrā (1888), Khunti (1891), Tongo (1891), Katkahi (1892), Rengāri (1901), Soso (1901), Kurdeg (1903), Sāmtoli (1903), Nawādih (1907), Majhatoli (1907) and at Dīghia (first established in 1866, then abandoned and re-established in 1913). Each of these stations is a flourishing centre of religious, educational and social work. In spite of the difficulty of obtaining efficient workmen in the out-of-the-way parts of the district the missionaries have succeeded in building handsome brick churches in each station, many of which are fine specimens of ecclesiastical architecture and copies of the picturesque churches of Flanders, Brittany and Belgium, from which most of the Fathers come. Large spacious schools have also been built, and a traveller who arrives at one of these stations in the jungles must be filled with admiration at the work.

Statistics.

The Roman Mission, as it is popularly termed, is a part of the Archdiocese of Calcutta, formerly known as the Vicariate Apostolic of Western Bengal. The Vicariate was established in 1834, but in 1886 was raised to the status of an Archbishopric. When the English Jesuits left Bengal, the Mission was entrusted in 1859 by Pope Pius IX to the Belgian Jesuits. For a time their activity was confined to educational work in Calcutta and to missionary work in the immediate neighbourhood. In 1869

History.

the Rev. Father Stockman was sent by the Vicar Apostolic to Chaibassa, to try and establish a Mission among the aborigines, and extended the work to Rānchi, in 1874, by establishing a station in the jungle at Burudih near Kochang. In 1876 the Rev. Father DeCock, who had been sent to Dorundā to look after the Madrasi sepoy, opened a Mission there. In 1881 another station was opened at Sarwada. In 1883 the Dorundā Mission was transferred to Rānchi. The real founder of the Roman Catholic Mission in the district of Rānchi is, however, the Rev. Father C. Lievens, S. J., whose marvellous work won for him the title of "the Apostle of the Orāons". Arriving in 1885 he stayed for a few months at Jamgain and in the same year established a station at Torpā, where he speedily acquired a wonderful influence in the west of the Mundā country. In 1886—88 the Roman Mission stood forth as the champions of the raiyats against the oppression of alien landholders, and in that short period not only won over many non-Christians to their church but caused some 5,000 converts to desert the Protestant Missions, in the hope of obtaining greater and more efficacious help in their law suits against the zamindārs. But it was in the Orāon country in the west of the district, which was as yet untouched by missionary work and in which the antagonism of raiyats and landlords owing to the exaction of unlimited *beth begāri* was acute, that Father Lievens met with the greatest success. Here whole villages became Christian, new stations were established, generally in the neighbourhood of police-stations, and Father Lievens, when he became Director of the Catholic Mission in Lohardagā, received into the Church in Parganas Khukra, Panāri, Nawagarh, Barwe, Biru, and Chechāri (Palamāu) no less than 40,000 aboriginals, mostly Orāons. His health broke down and he died at Louvain in 1893. He had, however, laid a solid foundation for future work, and the success of the Mission, which is far the best equipped both in men and money of all the missions, has continued unbroken.

Staff.

The staff of the Mission now consists of more than fifty European priests, over five hundred catechists and more than three hundred schoolmasters.

The out-stations are grouped into four circles under local superiors at Rānchi, Khunti, Tongo, and Rengāri, and at each station

there is a staff of two or three priests, while at the larger stations there are convents of European Nuns who superintend the secular and religious instruction of the girls and women.

Great importance is attached by the missionaries to the educational side of their work, as they realize that the best hope of progress of religious work lies in establishing an influence over the boys and girls. Apart from the High School at Ranchi, the Catholic Mission has no less than 230 Boys' Schools in Chotā Nāgpur with over 6,800 pupils, of whom 1,326 are boarders. Of these schools, the majority of which are in the Ranchi district, twelve are Upper Primary Boarding Schools, four Lower Primary Boarding Schools, and the remainder village day-schools. The Central School at Ranchi was started in 1887 as a Lower Primary School to impart elementary instruction to the children of Catholic converts in the town and neighbouring villages. It was soon necessary to admit to the school-boys from the stations in the interior of the district, with a view to training them for the posts of catechists and schoolmasters. In 1903 the school was raised to the Middle English standard, and in 1905 to the High English standard. The school was at first a boarding school for Christian boys, but since 1904 non-Christian boys are admitted as day-scholars. At present the number of boarders, mostly Mundās and Orāons, is over 270, and the number of day boys 192, of whom 143 are Hindus and 40 Muhammadans. The increase in the number of pupils made it necessary to erect a new class building. This building, having a frontage of 330 feet, was completed in 1914. Its 17 class-rooms and three large halls can accommodate 500 pupils. The plans were prepared by a Calcutta architect and the actual work of building undertaken by one of the lay-brothers of the Mission, at a cost of Rs. 78,000, Rs. 36,000 being contributed by Government. A new hostel has also been constructed, to accommodate 300 boarders, allowing to each boarder the floor space required by Government regulations. Apart from the actual school work the boys are expected to do some manual work, and an interesting feature in the training of the boys is the performance of dramatic plays on the lines of the mystery plays of the Middle Ages.

To obtain better masters for their numerous schools, the Roman Catholic Mission have opened a Training School,

exclusively reserved for aboriginals. The school has been recognized by the Education Department, and, together with its own candidates, trains a certain number of Government nominees.

A more ambitious institution is the Apostolic School of the Mission which was started in 1903 for training for the priesthood such of the more intelligent of the boys as feel spontaneously called to it. As long as the school was in the experimental stage, the students after completing a six years' classical course in Ranchi, were sent to the Papal Seminary in Ceylon for a further seven years' course in Philosophy and Theology. When, however, the success of the school seemed assured, the authorities decided to build, in the Mission ground at Ranchi, a seminary for the teaching of Philosophy and Theology. The building is expected to be ready by the beginning of 1916. As before, the whole course will remain spread over a space of thirteen years. There are at present 27 students in the section of Philosophy and Theology. The first Orāon Priest was ordained in Ranchi on October 25th, 1914.

The Girls' School at Ranchi is typical of the Girls' Schools at the other centres of Khunti, Rengāri, and Tongo. It was started in 1890 by an Irish congregation of Nuns, known as the Loretine Nuns, and in 1903 was taken charge of by the Ursuline Nuns. The school is divided into two departments. The first department is conducted in accordance with Government regulations, and the girls, who number nearly six hundred, receive instruction up to the Upper Primary standard. The second department contains girls who only attend for three or four months in the year, principally during the cold weather, when they are not required to help their parents in the fields, and receive only elementary and religious instruction. The number of girls in this division varies considerably but they may be taken at an average of 1,500 per annum. All the girls in these departments are aboriginals and free boarders.

Another interesting institution under the charge of the Ursuline Nuns is the Lace School which was started in 1905. More than a hundred aboriginal women daily attend the school. Most of them are married women and are paid at a fixed rate for every yard of lace. The lace is of excellent quality and commands a good market in Calcutta and England.

The Jesuit missionaries have also paid great attention to the industrial development of the people. Agriculture is practically the sole occupation of the aborigines, and as a raiyat's holding barely yields sufficient produce for the consumption of himself and his family, and as he is also notoriously improvident, he is in a state of habitual indebtedness. To ameliorate the condition of the Christians, an Industrial school was opened at Rānchi in 1894 for training carpenters and masons but was discontinued a few years later, and a more ambitious school started at Khunti. This school consisted of four departments, viz., the weaving and dyeing departments, the carpentry department, the iron-work department and the silk-worm-rearing department. The Mundās have a strong prejudice against weaving, which is done in a Mundā village by the low caste of Pāns, and a Mundā who weaves his own cloth loses his caste. An attempt was made to get rid of this custom by the introduction of Japanese looms which are worked with the feet, but unfortunately the prejudice against the work of weaving could never be entirely overcome. The young men, who, after completing their course of training in Khunti, had returned to their villages, one after another gave way before the prejudice and gave up the work. It had never been the aim to found a factory or weaving establishment but only a school where boys could learn a trade which they could practise in their homes. The costly experiments did not seem to help towards the attainment of this object, and ultimately the school was discontinued, and the looms sold off.

Industrial
school

Another industrial experiment was tried at Rānchi. In 1908 Rev. Father Hoffmann conceived the idea that it might be possible to interest the aborigines in a scheme of Industrial Co-operation. A tile factory was opened on a plot of ground lent by the Mission; the required capital being also advanced by the Mission. The idea was that the aborigines might slowly pay back the capital and thus become the proprietors of an independent and promising industrial concern. From the very beginning the tile factory was meant as an experiment in the Industrial Co-operation and an experiment it has remained. Hence though the Roman Mission tiles, as they are called, have been in great demand; the factory has never been a commercial success, and will soon be closed down altogether.

Co-operative
Societies.

As measures for improving the material condition of the people, these "industrial enterprises are overshadowed by the Chotā Nāgpur Catholic Co-operative Society started by Rev. Father Hoffmann a few years ago. A detailed account of this society is given in another Chapter. A quotation from the Government Report on the working of Co-operative Societies for 1909-10 will suffice to show the aims and prospects of this movement :—" The problem is how to give the aboriginal tribes the full advantages of co-operation, in order to prevent their future exploitation by their more advanced and pushful neighbours and to enable them to hold their own in the economic struggle. Father Hoffmann's society offers a practical solution of the problem. The scheme cannot fail of ultimate success, and it is bound sooner or later to effect an economic revolution in Chotā Nāgpur. "

CHAPTER XVI.

GAZETTEER.

Barwe, the most western pargana of the district, comprises the whole of thana Chainpur (Bhitar Barwe) and part of thana Bishunpur (Bahar Barwe). The plain of Bhitar Barwe is shut off from the rest of the district by a long range of hills and is drained by the Sānkh. The Barwe estate was formerly subject to the Rājā of Surguja, and Brāhman tradition gives the following story of its origin. A Brāhman of Benares, who was on a visit to the Rājā of Sūrguja, mistook a Chamār bearer who was seated near the *gadi*, dressed in the cast-off clothes of his master, and addressed him as "Mahārāja Sahib". Finding out his mistake, the Brāhman begged the Mahārāja not to let him fall under the imputation of having told a lie, and the latter thereupon conferred upon the bearer the title of "Rājā" and gave him the estate of Barwe. The Estate finally became subject to the Rājā of Chotā Nāgpur in 1801. Some years previous to this, the Rājā of Sūrguja overran the pargana and the Rājā of Barwe, receiving no help from the Rājā of Chotā Nāgpur, submitted to him. Later, the Rājā of Chotā Nāgpur, who was assisted by the British troops, induced the Rājā of Barwe, on promise of personal safety, to submit and place himself in his hands. The promise, however, was broken, and the officers of the Rājā of Chotā Nāgpur put the Rājā of Barwe to death near Pālkot. The present family hold the estate under a *patta* granted by Mahārāja Jagannāth Sahi Deo, and the estate was recorded in the Settlement records as a tenure resumable on the failure of male heirs. The estate, however, is claimed by the Mahārāja as a life-grant, and the case is still before the Courts.

Barwe is a great stronghold of the Orāons, many of whom have become converts to Christianity. The Lutheran Mission has a station at Chainpur, and the Roman Catholic Mission stations at Tongo, Katkahi and Nawādh. The total population of Chainpur thana is 54,404, of whom over 29,000 are Christians.

Chainpur is connected with the subdivisional headquarters at Gumlā by two unmetalled roads; one, running in an easterly direction, crosses the hills by the Kurumgarh-Jori *ghāt* and joins the Lohardagā-Gumlā road at Toto; the other runs due south to Raidih and there joins the Lohardagā-Sambalpur road. The distance from Chainpur to Gumlā by the former route is about 28 miles and by the latter about 31 miles. There are *ghātwāli* bungalows at Chainpur, Kurumgarh, Jori, Toto and Raidih. The road connecting Netarhāt, on the borders of Palāmau district, with Ghaghrā and the Lohardagā-Gumlā road passes through the centre of Bahar Barwe; it is 25 miles in length and is gravelled and with one exception bridged throughout. There is a *ghātwāli* bungalow at Adar, six miles from Ghaghrā.

Biru Pargana, in the south-west of the district, comprises the whole of thānas Kochedega and Kurdeg and some villages of thāna Kolebira. Khariās and Orāons form the bulk of the population. The estate belongs to Bahera Hukm Singh, who is locally known as "Rājā". The family claim descent from Hitambar Deo, the son of a Mahārāja of Puri, who removed to Sambalpur, where he received a grant of some villages. His son, Hari Deo, in pursuance of divine direction, left Sambalpur in 1557 and went to Bijalīh in pargana Kesalpur, which was then included in the dominions of the Rājā of Chotā Nāgpur. In return for a gift of a diamond the Chief gave him the pargana as *jāgir* and recognized him as Rājā. Later, Rājā Bhīm Singh assisted Rājā Durjan Sal against the Muhammadans and was taken prisoner with him to Delhi. Durjan Sal gained his release by his skill in testing diamonds and is said to have been assisted in this by Bhīm Singh, to whom, out of gratitude, he gave the whole of pargana Biru, in addition to that of Kesalpur. A successor of Bhīm Singh incurred the displeasure of the Mahārājā by his failure to embark the Sānkh, and was deprived of the title of Rājā, that of Bahera being substituted, and made to pay a rental of Sikka

Rs. 375. The Zamindār is still locally known as Rājā, but the title is not recognized by Government. The estate is now under the management of the Encumbered Estates Department. Over 40 per cent. of the total population of thanas Kochedegā and Kurdeg are Christians, mostly Khariās and Orāons. The Roman Catholic Mission has stations at Bengāri, Kurdeg and Sāmtoli and the Lutheran Mission at Khuntitoli, Koranjo and Kinkel. Buildings for the headquarters of the subdivision have been recently erected at Simdegā, an important market, ten miles south-west of Biru.

Bundu, the only town in the Khunti subdivision, is situated about 18 miles from Khunti and 27 miles south-east of Ranchi, in 23° 10' N. and 85° 36' E. The population increased from 5,496 in 1901 to 6,950 in 1911, of whom 5,256 were Hindus, 114 Jains, 372 Musalmans and 1,385 Animists. The town contains a police-station, District Board Dispensary, Middle English School, and Guru Training School. It is important as the centre of the lac industry and contains several factories for the conversion of lac into shellac. Owing to the fall in prices, the number of the factories has decreased considerably in recent years and there are now only 18 as against 37 a few years ago. Situated below the tableland, Bundu is hot, and, owing to the effluent of the lac factories, is unhealthy. A Union Committee has recently been appointed to look after the sanitation of the village. The Bundu pargana, one of the five parganas, is now in possession of Rājā Srinath Rai of Dacca, who purchased it in 1909 in execution of a Civil Court decree for money lent to the local Rājā.

Chokāhatu, a village in thana Sonahatu, pargana Baranda, is famous for its large burial ground, the largest in the Munda country. The burial-ground covers over seven acres in area and contains more than 7,000 *sasāndiris* or sepulchral stones. According to Mundā custom, only the *bhuinhārs*, or descendants of the original settlers of the village, are buried in the *sasān*, and it is somewhat curious to find such a large burial ground attached to one small group of villages. It has been conjectured that in the *lutur desam*; or low country of the Five Parganas, the Mundās followed a different custom from those

of the central plateau and allowed all settlers in the village the privilege of burial in the *sasān*. There is little proof in support of this conjecture, and it is more probable that the burial ground at Chokāhatu dates back to the time when the Mundās retired westwards from Mānbhum. The Bhumij of that district have one *sasān* for each *taraf* or group of twelve to seventeen villages, a *taraf* being the area allotted to a *kili*, or sept, and burial grounds nearly as large as that at Chokāhatu are to be found in the Bhumij country. The Bhumij are probably ethnologically identical with the Mundās, but among the Mundās *kilis* are now scattered and are not, as among the Bhumij, confined more or less to one area. It is possible, therefore, that Chokāhatu was a *kili sasān* of the Mundās who settled in this part of the country, being driven there either by pressure of population in their settlements in Mānbhum, or, less probably, by the incursions of the Kurmi Mahatos. From Chokāhatu they spread westward into the jungles of Tāmar, Sonpur and Bundu and lost touch with their original settlements.

Chutiā, a straggling village on the eastern outskirts of Rānchi and within the Municipal limits. The village was one of the earliest residences of the Nāgbansi family of the Rājās of Chotā Nāgpur and is said to have been selected for the capital by Rājā Partab Rai, the fourth in descent from Rājā Phani Mukut; it gives its name to the country, which, though now spelt Chotā Nāgpur, is found in old records as Chuttiah, or Chutea, Nāgpur. It contains an old temple, standing in a small square enclosure, with four flanking bastions and a well in the centre, which is approached by a sloping covered stone passage. An inscription on the northern wall of the temple shows that it was constructed by Hari Brahmachāri, the *guru* of the Rājā, in Sambat 1742 (1684 A. D.) during the reign of Rājā, Raghu Nāth, the fiftieth in descent from Rājā Phani Mukut. At the time of the Mundā rising under Birsā, the temple was entered and desecrated by Birsā and some of his followers.

Chutiā was formerly the site of a large annual fair. The fair was established in 1851 by Mr. Crawford, Agent to the Governor General, at Silli, but, Silli not providing sufficient shelter for the persons attending the fair, it was removed in 1855 to Chutiā, where there were large mango groves and a plentiful

supply of water. The object of the fair was to establish an attractive centre for the general encouragement of trade, to improve the social relations between the different Chiefs, and to bring them into friendly communication with the European officers. For some years these objects were attained, but, with the rise of permanent shops in Rānchi and elsewhere, the fair gradually declined as a meeting for purposes of trade. It continued for some years as a social gathering and the athletic sports and games, such as cock-fighting, ram-fighting and push-push races, attracted a large concourse of Europeans and Indians. It was discontinued in 1874, and the funds in hand were diverted to other objects, such as the establishment of the Rānchi Industrial School. In 1907 the District Board held its first agricultural and horticultural exhibition on the site of the old fair, and this exhibition is yearly growing in popularity.

Doisa, or Doisa Nagar in the Fiscal Division of the same name and in Sisai thana, about 40 miles south-west of Rānchi, is the site of a ruined palace of the Rājās of Chotā Nāgpur, which is the chief object of archæological interest in the district. The palace, which is known as the *Nauratan*, was built of brick and was five-storied, each story containing nine rooms. An object of interest is the treasure-house, full of quaint niches and corners, in which the children of the family, and also, it is said, the Rājā and Rāni, used to play at hide-and-seek. Round the palace are numerous temples, one of which contains curious underground chambers, said to have been used either as dungeons, or as hiding-places in times of trouble. The temples and buildings are of carved granite, but the carvings are not of any great artistic merit and consist of conventionally designed friezes in slight relief and representations of birds, animals, elephants and horsemen. An inscription on the front door of the temple of Jagannāth shows that the temple was built in Sambat 1739 or A. D. 1683, by Hari Nāth, who also built the temple at Chutiā. Another inscription on the temple of Kapilnāth, i.e., Srikrishna, bears the date 1767 Sambat or 1711 A. D. A picturesque little temple known as the Dhobi Math was probably built at a later date.

Tradition gives the following account of the building of the palace: Rājā Durjan Sal, after he had been defeated and taken prisoner to Delhi, was confined in the fort of Gwalior, but

owing to his skill in distinguishing a real from a false diamond was released and restored to his former position. Durjan Sal secured the release of some other Rājās who were also in confinement, and, some years later, they came to Jhārkand to pay their respects to their liberator, and were surprised to find him living in an insignificant house at Khukhrā. Accordingly, on their return, they sent down architects and masons, marble slabs and other materials, for the construction of a palace befitting his dignity. The legend goes on to say that the Rājā, after living there for a few years, was told by a Brāhman that it was unlucky, and accordingly went and lived at Pālkot, selecting that spot on account of the perennial stream issuing from the rocky hill side.

The tradition does not agree with the date given in the inscriptions, but there is no doubt that the Rājās frequently changed their place of residence. Chutiā, Khukhrā, Doisā, Pālkot, Bharno, all claim the honour of having at one time or another formed the seats of the Rāj family, now established at Rātu. Doisā, however, is the only village in which buildings of any importance were erected.

Dorandā, a village two miles south of Rānchi and separated from it by a small tributary of the Subarnarekhā, was formerly a military cantonment. Soon after the establishment of the South-West Frontier Agency in 1834, the headquarters of the Rāmgarh Battalion, which had been raised at Chatrā in 1778, were transferred to Dorandā, so as to be near the civil headquarters at Kishanpur. The Rāmgarh Battalion consisted of light infantry, irregular cavalry and artillery. In 1857 the infantry joined the mutineers of the 8th Native Infantry, who were stationed at Hazāribāgh, and, after doing considerable damage to public and private property in Rānchi, Dorandā and the neighbourhood, were defeated near Chatrā. After the mutiny, it was proposed to make Dorandā a cavalry station but the buildings constructed were never used for this purpose and were subsequently sold for a Lac Factory. The troops stationed here consisted of a wing of a native infantry regiment, and were removed in 1905. The barracks and buildings occupied by the troops were utilized for a Police College and Police Training School, and a new college, a spacious red-brick building, was built in 1910. On the formation of the province of Bihar and Orissa and the selection of Rānchi as the temporary head-

quarters of the Local Government, the Police College and Training School were removed to Hazāribāgh; the college buildings were converted into the Secretariat, and the old lac factory, which had been re-acquired by Government for the Survey Department in 1905, into offices for the Accountant-General and the Heads of departments. Lines of temporary houses for the accommodation of both officers and subordinates were erected at Dorandā and Hinu. The area formerly included in the cantonment is administered by a Committee, appointed and financed by Government.

The main objects of interest in Dorandā, apart from the Secretariat and the staff quarters, are the picturesque tank and the European military cemetery on its bank. There is a large parade-ground, and a maidān, round which a short golf course has been laid out.

Gumla, the head-quarters village of the thana and subdivision of the same name, is situated in $23^{\circ}2'N.$ and $84^{\circ}33'E.$, about 59 miles west of Rānchi and 32 miles south of Lohardagā. The village is a flourishing trade centre and an important cattle market: the name, in fact, is said to be derived from *gau* (cow) and *melā* (market). The subdivisional buildings consist of courts and offices for the Subdivisional Officer, the Deputy Collector, and the Sub-Deputy Collector; the office of the Sub-Registrar and the Jail. There is also a Dispensary, maintained by the District Board, a Middle English School, and a Guru Training School. The landlord of Pargana Panāri, in which Gumla is situated, is a Rantiā by caste, who received his estate as *jāgīr* from the Rājā of Chotā Nāgpur. He is known by the title of "Barāik". The Lutheran Mission has a station about a mile from the bazar, and there is a station of the Roman Catholic Mission at Soso about three miles away.

Gumla Subdivision contains an area of 2,057 square miles. When first started, it comprised the whole of the west and south-west of the district, but since 1915 the southwestern thanas have been formed into the Simdega Sub-division. With the exception of thanas Sisai and Basā and the eastern portion of thanas Ghaghra and Gumla, which form part of the undulating central plateau, the country is mountainous and covered with jungle. Thana Bishunpur in the

north-west contains the lofty hills! (including Sîru hill, 3,604 feet above sea-level), which rise to the west of Lohardagâ, and the *pâts* which form such a distinctive feature of this boundary of the district. Thâna Chainpur which corresponds to pargana Barwe consists mainly of the broad valley of the Sânk, which a quarter of a century ago was covered with jungle but is now almost entirely under cultivation. The greater part of Râidih and Pâlkot thânas consists of jungle-covered hills, which form a barrier, cutting off Gumlâ and Chainpur from Kochedegâ and Kurdeg in the south. Of the southern thanas, Kurdeg, Kochedegâ, Kolebirâ and Bano, which border on the Tributary State of Gângpur and now form the Simdegâ subdivision, nearly half of the total area is covered with jungle, intersected with ranges of hills. The only open country in the south of the district is the valley of the Sânk which flows in a southerly and south-easterly direction through Kochedegâ and Kurdeg. The population is very scattered; there are no towns, and the villages, which number 1,396, consist of small *tolas*, often containing not more than five or six houses each. In the whole subdivision the density of the population is only 146 to the square mile, and is highest in thanas Gumlâ (224), Sisai (219), Basiâ (201) and lowest in thanas Bishunpur (77), Kolebirâ (115), Kurdeg (116), Pâlkot (120), and Chainpur (134). In the north and west of the subdivision Orâons are the predominant tribe, while Mundâs are numerous in Pasiâ and Bano in the south-east, and Khariâs form the greater part of the population of Biru in the south and south-west. Of the total population of 511,711, more than half (225,363) are classified as animists. Christianity has made rapid strides during recent years, especially among the Orâons, and the total number of Christians in the subdivision is over 100,000. In Chainpur thana more than half the population is Christian, and in Kochedegâ thana nearly 40 per cent.

Communications throughout the subdivision are bad, though they have been considerably improved of recent years. From Gumlâ to Rânci (59 miles) there is a gravelled road, which is bridged throughout, with the exception of the South Koel. The Koel is easily fordable in the cold and hot weather, but in the rains is frequently impassable even for the primitive *donga*. The opening of the Rânci-Lohardagâ branch of the Bengal-

Nagpur Railway has done much to bring the northern part of the subdivision into touch with the outside world, and as soon as the Gumlā-Lohardagā road (32 miles) is bridged throughout, a work which is being taken in hand, the journey from Gumlā to Rānchi will be easy at all seasons of the year. Chainpur is connected with Gumlā by two unmetalled roads, one passing through Rāidih and the other coming direct over the hills via Jori Ghāt. The south of the district is linked up with Rānchi by an unmetalled road which passes through Kochedegā, Biru, Kolebirā, Basiā, and thence either via Khunti or via Jariā and Lodhmā. There is also an unmetalled road from Gumlā to Palkot and Basiā.

The subdivision was opened in 1902, and is in charge of a member of the Indian or Provincial Civil Service who is assisted by a Sub-Deputy Collector, and disposes of all civil, criminal and revenue work.

Jagārnathpur, a village in the Barkagarh estate, six miles south-west of Rānchi, contains the largest temple in the district. It stands on a high rocky hill commanding an extensive view of the surrounding plateau, and is built on a plan roughly resembling the Puri temple. The temple was built in Sambat 1748 or 1691 A. D., by Thākur Aini Sahi, a *khorphoshdār* of the Nāgbansi family, and the village was granted to the god as *debottar*. The whole of the Barkagarh estate was forfeited to Government owing to the assistance given by the proprietor to the mutineers in 1857, and the appointment and dismissal of the priest now rests with the Deputy Commissioner. The Rath Jātra, or Car festival, which is held here, attracts many thousands from all parts of the district. The image of the god is dragged in a cumbersome wooden Car, decorated with flowers and tinsel, from the main temple to a smaller temple on a rocky spur some two or three hundred yards away, and remains there for seven days till the Ultā Rāth. The festival is also a fair, and dealers in clothes, ornaments, and goods of all kinds, congregate at the foot of the hill.

Khunti, the headquarters of the subdivision and thana of that name, is a village 23 miles south of Rānchi on the Rānchi-Chaibassa road. The combined subdivisional court and munsifi, which was completed in 1908, is situated on rising ground about a mile and a half south of the village. In addition to these

buildings, there are a Sub-jail, Sub-registry office, and a District Board dispensary, with in-patient and out-patient wards. In the main village are the police-station, Middle English School and Inspection bungalow. The population, of which only a small proportion are Mundās, has increased considerably since the opening of the subdivision in 1905. A bi-weekly market is held in the village.

Khunti is also the headquarters of the Mundā section of the Roman Catholic Mission. There is also a Convent in charge of four European sisters, in which lace manufacture is taught to Mundā girls and women.

Khunti Subdivision contains the south-eastern portion of the district, lying between $22^{\circ} 38'$ and $23^{\circ} 18'$ N. and between $81^{\circ} 56'$ and $85^{\circ} 51'$ E., with an area of 1,545 square miles. The subdivision contains the south-eastern portion of the central plateau and the low-lying country of the Five Parganas; the country is for the most part undulating, the only hills being those which fringe the west and south of the Five Parganas. The tributaries of the Subarnarekhā, of which the most important are the Kānchi and the Karkari, drain Khunti, Bundu, Sonahatu and Tamar thanas; the Kāro forms a portion of the western boundary of the subdivision and then flows through the centre of Torpā thāna and unites with the Koel in Singbbhūm district. The principal roads in the subdivision are the Rānchi-Chaibassa road, which passes through Khunti, and the Khunti-Kamdāra road, passing through Torpā. From Bundu roads run to Silli via Rahe, and to Jhaldā in the Mānbhūm district, via Sonahatu. Except for the Rānchi-Chaibassa road, which is metalled and bridged throughout, the roads are all unmetalled, with only temporary culverts.

The population of the subdivision has risen from 300,205 in 1901 to 349,633 in 1911, the density being 223 persons to the square mile. Of the total population nearly 39,000 are Christians and 139,000 Animists. The Khunti subdivision was opened in 1905, to provide for the better administration of that portion of the district in which the Mundās predominate; it includes the following thanas:—Khunti, Karra, Torpa, Tamār, Bundu and Sonahatu. The Subdivisional Officer, in addition to his magisterial powers, has the powers of a Munsif, and is assisted by a Sub-Deputy Collector.

Lohardagā, a town in the sadr subdivision, 47 miles west of Rānchi was, till 1843, the headquarters of the district to which it gave its name. It is the most important market in the north-west of the district, and its importance has been enhanced by the opening of the Rānchi-Lohardagā branch of the Bengal-Nagpur Railway in 1913. Much timber passes through Lohardagā from the forests on the north-west border of the district, and also rice and oil-seeds from Barwe and the Feudatory States of Jashpur and Surguja. The population has decreased during the last twenty years from 7,110 in 1891 to 6,773 in 1911. Of the total population nearly five-sixths are Hindus or Muhammadans. The town was formed into a Municipality in 1888 and a detailed account of the municipal administration will be found in the Chapter on Local Self-Government. There is a bench of Honorary Magistrates, who dispose of municipal cases, and a sub-registry office.

The Lutheran Mission station at Lohardagā was one of the first to be founded outside Rānchi. Attached to it is a small Leper Asylum and Home for Incurables.

Lohardagā is connected with Rānchi both by the railway and by a good metalled road which passes through Kuru and Māndar. The road to Gumlā (32 miles) is being metalled, and bridges are being constructed over the numerous rivers.

It was at one time intended to make Lohardagā the headquarters of a subdivision, but this project has been dropped.

Murhu, a village 28 miles south of Rānchi on the Rānchi-Chaibassa road, is the headquarters of the S. P. G. Mission in the Mundā country. The handsome church was built out of a legacy of £500 from General Dalton. It holds 600 people and was opened in 1887. The Mission also maintains a dispensary which was established in 1905, with fourteen beds for in-patients, and does excellent work both among Christians and non-Christians. There are also schools for both boys and girls, with boarding houses attached. A bazar instituted by the Mission is held on Monday and Thursday and is a large centre for the sale of lac, salt and jungle products from Porāhāt.

Nāgpheni, a small village in Sisai thāna, picturesquely situated above some rocky falls of the Koel. On a hill near the village many roughly carved stones lie scattered about, one of which bears the date 1761 Sambat (1705 A. D.). It is said that

one of the Rājās intended to erect a palace on the site, but died before the work was completed. On a tomb in the village is a rude carving said to represent the Rāja, his seven Rānis, and his dog. The name Nāgpheni means the cobra's hood, and owes its origin to a stone, somewhat of the shape of a cobra's hood, which is visible on the hill side.

Pālkot, a large village and bazar in the thāna of the same name, is situated in 22° 52' N. and 84° 39' E. It was formerly the residence of the Mahārājā of Chotā Nāgpur. Doiṣā having been declared to be ill-omened, the Mahārājā selected Pālkot because of the cool and fresh spring of clear water which issues from the hill, and built himself a cell so that "he could drink and perform his devotions with the aid of the water, pure and uncontaminated by his subjects who lived in the town below". The family, according to its own records, established itself here about 1667 A. D., but more probably in the first half of the 18th century. The extensive buildings of the palace, which is built on the side of the hill, are devoid of architectural interest. The village contains numerous tanks and gardens, one of which is known as the *sati bagicha*, in memory of a lady of the Chief's household who became *sati* on the site of it. Owing to dissensions with his nephew, Bara Lāl Upendra Nath Sahi Deo, Mahārājā Jagannāth Sahi forsook Pālkot for Bharno in 1867. The present owner is Bara Lāl Nawāl Kishore Nath Sahi Deo, the grandson of Upendra Nath Sahi Deo. He contested the right of the present Mahārājā to the *gadi* but failed in the appellate courts. The name Pālkot is said to be derived from an Orāon word *pāl*, a tooth, or a Mundāri word *pahal*, a ploughshare, and to owe its origin to a curious natural pillar which stands about a mile to the north of the village.

The Pats have already been noticed in Chapter I. Captain Depree, who conducted the Topographical Survey in 1868, thus described them : " In the north-west corner, and along the boundary of Jashpur, are to be seen the peculiar hill features called *pāts*. These hills extend westward into Sarguja and Jashpur. They are of a nearly uniform height, 3,600 feet above the sea. Looking at them from a distance, their summit is as level and uniform as that of a masonry wall, and they form as perfect an horizon as the sea itself. On a near inspection, however, they are

found to consist of rocky spurs of various heights, with deep alleys and many precipitous ravines radiating from the central mass. The ascent of these *pāts* is steep. The path winds amongst boulders of rock, or up earthy slopes covered with forest, until 20 or 30 feet from the summit is reached; here a precipitous rock, the edge of a horizontal stratum, bars progress except through some fissure, not seen at first view. This horizontal stratum of trap rock forms a true contour or level line, being visible like a collar on every side of the *pāt*. It in fact gives the *pāt* its form, were it not that it continued to resist the action of rainfall, these *pāts* would long ago have had their upper soil washed away, and would have put on the form of peaks or ridges common to ordinary hills. On the summits there is generally a small depth of soil overlying the rock, consequently very little can be cultivated; forest trees, however, grow, and the slopes of the *pāts* generally bear heavy timber. It is probable that the *pāts* at an early period were one continuous mass, forming a plateau."

Ranchi, the administrative headquarters of the district and of the Chotā Nāgpur Division and, since 1912, the temporary headquarters of the Government of Bihar and Orissa, is situated in 23° 23' N. and 85° 23' E., on the central plateau, at a height of 2,128 feet above the sea level. Rānchi is a long straggling town with traces in the scattered way the houses lie of the separate villages of which it is composed. The history of the development of Rānchi into a town reflects the history of the British administration. On the creation of the South-West Frontier Agency in 1834, the first Agent, Captain Wilkinson, selected the hamlet of Kishanpur as his headquarters, his court being on the site now occupied by the office of the Executive Engineer. To avoid confusion with other places of the same name, the station was, a few years later, designated Rānchi, from a small village now called Purāna Rānchi. Captain Wilkinson built the house, which was, till recently, occupied by the Commissioner, on a site leased from the *jāgīrdār* of the village Chadri, and excavated the Wilkinson, or Bhutaha, tank with jail labour. Lieutenant-Colonel Ousely (1839 to 1848) extended the compound of the house erected by his predecessor to include a coffee garden and the Rānchi hill, and excavated the Sahib Bāndh, or Rānchi Lake, a splendid piece of water, some fifty acres in extent, fringed by trees, with picturesque islands in the midst, and a pillared bathing ghat and two small

temples on one side. On the summit of the pyramid-shaped Rānchi hill, he erected a summer house, as a place of rest during his morning walks. This structure, though surmounted with a cross, has been annexed by the inhabitants of Rānchi as a Mahādeo asthān and is a place of worship for both Hindus and Animists. In 1843 the headquarters of the Principal Assistant to the Agent were transferred to Rānchi from Lohardagā, and the first Assistant, Captain R. Ousely (1842 to 1849) acquired from the Mahārājā a site in Chadri with a circumference of nearly three miles, and set about building an imposing residence. To carry out this work, he embezzled Rs. 12,000 from the Government treasury, and, on the crime being detected, his brother, the Agent, committed suicide and he himself went mad, but was subsequently extradited from England and tried by court martial. The house which he built was taken over by Government and now forms the Court of the Commissioner and the Judicial Commissioner, and the extent of the compound can be appreciated by the remains of the two gates which still are to be seen, one on the west side of the Deputy Commissioner's office, and the other about a quarter of a mile south of the jail. Of the other old houses in Rānchi, the principal are that till recently occupied by the Judicial Commissioner, which was built by Captain Hannyington, the first Deputy Commissioner of Chotā Nāgpur (1850 to 1856), and that of the Deputy Commissioner, built by Captain Birch who was Deputy Commissioner in 1862. The bungalow to the north of the office of the Deputy Commissioner was built by Mr. Stainforth, a Civilian, who retired to Rānchi and played a remarkable part in the economic development of the district, by starting tea cultivation at Hotwar in 1862, and by giving considerable impetus to the lac industry by the establishment of a lac factory at Doranda. The present office of the Deputy Commissioner, a long low red-brick building, was built in 1882, and since that date numerous other offices have been erected in its neighbourhood, while houses for Government officers have been built on the open high ground to the north. The selection of Rānchi as the temporary headquarters of the Government of Bihar and Orissa made it necessary to build houses for the Lieutenant-Governor and the officers of Government. A Government House was erected in the compound of the Judicial Commissioner's house and, though a temporary structure, contains a fine Darbar Hall.

The other buildings of importance in Rānchi are those of the Missions. The Lutheran Mission occupies a fine site in the centre of the town, and a cross in the compound marks the spot where the first missionaries pitched their tents in 1845. Six years later the foundation-stone of the first Christian Church in Chotā Nagpur was laid, and the substantial Gothic edifice of Christ Church which was built by the pioneers of the German Mission, mainly with their own hands, was consecrated in 1855. On the mutiny of the Rāmgarh infantry and the disaffected zamindārs of the district, the Mission compound was pillaged and guns brought to bear against the church. A shot, fired by the mutineers, is still visible in the tower, half embedded in the stonework.

In the compound of the English Mission stands the stately brick church known as St. Paul's Cathedral. The church was designed by General Rowlatt, the Judicial Commissioner, and consists of a lofty nave, the roof of which is supported on strong stone pillars, connected by Gothic arches, and two side aisles. The Chancel is separated from the nave by a high arch and terminates in a capacious apse. At the west end is a tall well-proportioned spire, which is a conspicuous landmark from many miles around. The cost of the church (Rs. 26,000) was met mainly by public subscriptions; the European inhabitants of Rānchi collecting Rs. 7,000, to which Colonel Dalton, the Commissioner, contributed over Rs. 3,000. The foundation-stone was laid by Colonel Dalton in September 1870 and the building was consecrated in March 1873.

The Roman Catholic Mission, which settled in Rānchi in 1887, has acquired a large site on the Purūlia Road. The Catholic Church, with its two steeples 107 feet high, is a large and conspicuous building. It was begun in 1906 and completed in 1909. The plans were prepared, and the work of erection supervised, by one of the lay-brothers of the Mission. All the skilled workmen employed on the building were aborigines trained by the Brother himself. The church is in the simple but effective Roman style. It is 206 feet long and 76 feet broad. The body of the church 125 feet long, with its central nave, 40 feet broad, and two side aisles, each 15 feet broad, can accommodate a large native congregation, while the spacious sanctuary lends itself well to the

solemn ceremonies of the Catholic Church. Besides the church and Manresa House, the residence of the Jesuit Fathers, there is a Convent. Handsome and spacious buildings have also been recently erected for the High School.

Besides these buildings there are the Hospital, the new Zila School, the Training School for teachers, and the Jail. Five miles north of Ranchi, a large central Lunatic Asylum for Europeans from Northern India is nearing completion, while the construction of an Asylum for Indians from the provinces of Bengal and Bihar and Orissa has been sanctioned.

Ranchi, though not a commercial or manufacturing centre, is a large trading centre both for the district and the Feudatory States to the west. Rice, oil-seeds, and timber are exported in large quantities and cloth, salt, oil and manufactured articles are imported. The opening of the railway has increased the trade of Ranchi and has also made the town a favourite health resort for Indian gentlemen from Calcutta and elsewhere. The population has risen by more than 20,000 in the last forty years, from 12,086 in 1871 to 32,994 in 1911, and since that year it has risen still further by the influx of officers, clerks, and menials employed in the Secretariat, and by a corresponding increase in the number of traders and merchants. The population, as might be expected, is for the most part alien, and of the total population over 17,000 are Hindus and over 7,500 Muhammadans. The Christian population numbers 5,312, of which a large proportion are the pupils of the Mission Schools. Non-Christian aboriginals number only 2,156 and are either servants, or the descendants of the original inhabitants of the villages of which the town is composed.

The soil is clay mixed with gravel and sand. The climate is extremely healthy and pleasant, the mean temperature varying from 62° in December to 88° only in May and, though the rainfall is considerable (58 inches), the natural drainage of the town is so good that even after the heaviest storm the rain is soon carried away. The atmosphere is consequently very dry.

The town is well served with metalled roads, lined with avenues of shady trees. The Ranchi-Chaibassa road passes through the main bazar, and the Ranchi-Hazāribāgh and the Ranchi-Pūruḷiā roads branch off to the east from the centre of the town.

Rānchi was constituted a Municipality in 1869, and an account of the Municipal administration is given in the chapter on Local Self-Government.

Rānchi is the headquarters of the Chotā Nāgpur Light Horse, which is attached to the Presidency Brigade of the Lucknow Division. The regiment, formerly known as the Chotā Nāgpur Mounted Rifles, was formed by Mr. Grimley, the Commissioner, in 1885, and now consists of four squadrons and two infantry companies. No. 1 troop of "A" Squadron is composed of volunteers from the Rānchi district.

Rānchi or Sadr Subdivision, lies between $22^{\circ} 21'$ and $23^{\circ} 43'$ N. and $84^{\circ} 0'$ E. and $85^{\circ} 54'$ E. and comprises the whole of the north of the district, with an area of 2,054 square miles and a population of 526,172. It contains the following thānas :—Lohardagā, Kuru, Burmu, Māndar, Bero, Lāpung, Rānchi, Ormānjhi, Angara, and Silli. The subdivision consists of the undulating country of the central plateau, the hills which fringe the north and north-west of the district, and the lower plateau on the east. Of the total area, 1,121 square miles are under cultivation, and 620 square miles only under jungle, while the percentage of rice lands to the total area (22) is considerably higher than in the Gumlā Subdivision (13), or in the Khuntī Subdivision (19). The population consequently, is considerably more dense than in the other two subdivisions and averages 256 to the square mile. Apart from Rānchi, Lohardagā is the only town. The chief village bazars are at Silli and Jonha on the Rānchi-Purulia line and at Nagri ten miles west of Rānchi.

The Orāons, who occupy the centre and west of the Subdivision are most numerous in Lohardagā, Māndar, and Rānchi thanas; the Mundās are numerous in the south and east, and Kurmis form a large proportion of the population of Silli thana. A large percentage of the Orāon population has become Christian. Apart from the central Mission stations at Rānchi, there are stations of the Roman Catholic Mission at Māndar, and Dighiā, of the Lutheran Mission at Lohardagā, and of the S. P. G. Mission at Itki in Bero thana.

Communications in the sadr subdivision are good, as the main roads (Rānchi-Purulia, Rānchi-Hazāribāgh, Rānchi-Chaibassa, and Rānchi-Lohardagā) pass through it.

Simdega, a village in thana Kochedegā and pargana Biru, is the headquarters of the subdivision of that name, opened in 1915. An account of the subdivision is included in the account of the Gumlā subdivision.

Sonapet, a valley about seven miles long by six miles wide lying in the extreme south-east of Khunti Subdivision, 28 miles south of Tamār. This area, which is almost entirely surrounded by the Dalmā trap, has long been known to contain gold, but from the recent investigations of experts it appears very doubtful whether its extraction, either from the alluvium or from any of the quartz veins, can ever prove remunerative. Companies have been formed at various times to extract the gold, but have met with no success and their derelict buildings are still to be seen in the valley. Women still wash for gold in the alluvial sand of the Sonā *nadi* and, if they are lucky, extract gold worth from one to two annas a day. It is said that, before proceeding to work, they divest themselves of all their clothes in the hope that the god, seeing their destitute condition, may take pity on them and help them to secure the precious metal. Three miles from Sonāpet there is a small factory for burning out soap-stone for the Calcutta market.

Sutiambe, a village of 15 inhabitants close to Pithauria, about 10 miles north of Rānōhi. It is believed to be the original home of the Nāgbansi Rājās of Chotā Nāgpur. At the Ind festival held annually in *Bhādo* at places which are, or have been the headquarters of a Rājā, two giant umbrellas attached to a pole 40 feet long are erected in commemoration of the Nāgbansi Chiefs. At Sutiambe, however, the first umbrella is raised in honour of Madra, the reputed Mundāri foster-father of the first Nāgbansi Rājā, whose descendants are still the Bhuinhārs of the village and enjoy considerable local influence, which they sustain by performing the festivals in commemoration of their former power.

The following legend of the origin of the Nāgbansis is widely known in the district and is given in the "Kursināma" of the Chotā Nāgpur Rājā, submitted in 1794 to the Governor General by Mahārājā Dhirip Nāth Sahi. "In the Pauranik era when Rājā Janmejaya was seeking to destroy the whole race of serpents, by the celebration of Sarpa-yajna, because one had

killed his father, one, by name Pundarika Nāg, escaped and, assuming human form, married Parvati, the daughter of a Brāhman of Benares. Pundarika, however, was unable to get rid of his serpent's tongue which not long after attracted the notice of his wife. Parvati became inquisitive about it, and, to divert her mind, Pundarika took her on a pilgrimage to the great temple of Jagarnath at Puri. On their way back they passed through Jhārkand and on their arrival at a jungle near Sutiamba hill Parvati was found to be in the throes of child-birth. She once more questioned the Nāg about his serpent's tongue and he revealed his identity and disappeared in his proper form into a tank close by. Parvati, stricken with grief, gave birth to a son and immediately afterwards created a funeral pyre and immolated herself as a *Sati*. Pundarika, attracted by the child's cries, rose out of the water and protected the child from the sun's rays by spreading his hood over him. Just at this time arrived a Sakaldwipi Brāhman carrying an idol of Surya-devata, the sun-god, and, placing his idol by the pool, went to quench his thirst, but on his return he found he could not raise the image from the ground. Looking round for some explanation of this, he caught sight of the child protected by the cobra. The snake revealed himself to the Brāhman as Pundarika Nāg and prophesied that the child, who was to be named Phani Mukut Rai, was destined to be the Rājā of the country, that the Brāhman was to be his priest and the sun-god his tutelary deity. The Nāg then disappeared and the Brāhman, taking charge of the boy, delivered him over to Madra Munda, the Rājā or Mānki of the *patti* in which Sutiamba was situated. Madra brought up the boy with his own son and, when both were grown up, he called an assembly of all the Mānkis and Parha Rājās to decide which of the two should be their Chief. Various tests were carried out to decide which was the best. The Munda boy showed himself slovenly in his dress, indiscriminating in his choice of food and unable to ride a horse and the assembly unanimously decided that Phani Mukut Rai should be Rājā. Phani Mukut invited Brāhmans and other Hindu castes to his palace, but as he was reputed to be the son of a Munda, he had great difficulty in obtaining the daughter of a Rājput as his wife. A marriage was at last

arranged with the daughter of the Sikharbhum Pancheta Rājā after Pundarika Nag had himself appeared to convince the Rājā's priest of the purity of his son's lineage."

The story given in the Kursināma agrees generally with the legends of the Mundās and Orāons, but also contains many interpolations of a later date. Thus the account contains an explanation of the origin of Brāhman priests of the Mahārājā's family and also seeks to show that Phani Mukut was Rājā not only of the central pargana of Nāgpur but also of the adjacent countries of Rāmgarh, the Five Parganas and Barwe, of which the possession was then disputed. Though the chronicle fixes the date of this event as Sambat 121, or 64 A.D., Phani Mukut is said to have visited the court of the Emperor Akbār at Delhi! According to the genealogical tree of the family, the present Mahārājā is the 61st in descent from Phani Mukut and, allowing an average of 25 years for the reign of each Rājā, the reign of the first Rājā would be fixed as at the end of the 4th century A. D.

Sutiambe is said to have been the seat of the family for four generations, the fourth Rājā, Partab Rai, removing to Chutiā, but the traces of an ancient palace appear to indicate a longer period of occupation.

Sutiambe and Pithauria were, till the settlement of 1894, one village. Pithauria must at one time have been an important market as it was on the main road between Hazāribāgh and Rānchi but it is now of little importance. The pargana was formerly in possession of a Bhogtā family but was resumed in 1884 by the Mahārājā on the failure of male heirs. The Parganāit Jagatpāl Singh rendered assistance to the British at the time of the Mutiny by defending the *ghāt* against the mutinous troops who were advancing from Hazāribāgh, and thus diverting them from their march on Rānchi.

Tamar, a village and extensive thana and pargana in the south-west of the district. Pargana Tamār is one of the Five Parganas and is owned by Tikāit Upendra Nāth Sahi Deo, locally known as Rājā. The family which is very old, is Mundā in origin, but like many others in the district has become Hinduized and now claims to be Rājput. The estate was formerly practically independent and paid some tribute to the Feudatory State of Māyurbhanj in Orissa.

Tilmi, a village in pargana Sonpur and thana Karra of the Khunti subdivision, contains the remains of a fortress of the Nāgbansi Thākurs. On the mouth of a stone well, within the *enceinte* of the fort, is a Sanskrit inscription, written in the Devnagri character, to the effect that the well was dedicated in Sambat 1794 (A. D. 1737) by one of the Thakurs, named Akbar "for the attainment of the four *vargas* or beatitudes". The adoption of the Muhammadan name, Akbār, by the Nāgbansi Hindu is curious but not unprecedented.
