## PREFACE TO THE SECOND EDITION

THE author has been much gratified by the reception accorded to the first edition of this book.

In the preparation of the second edition, the opportunity has been taken to revise the text and to bring it up-to-date, while the chapter on the Foreign Exchanges has been considerably enlarged in view of the present importance of that section of the subject.

## PREFACE TO THE FIRST EDITION

THE object of this book is to present the elementary principles of Economic Science in as clear and interesting a manner as possible. Every attempt has been made to meet the needs of students working for the various professional examinations for which a knowledge of Economics is required, but the purely abstruse intricacies of the subject and its many controversial issues have been avoided as much as possible or but lightly touched upon.

The author makes no pretence of attempting the difficult task of adding to the sum total of the science of Economics at the present stage of its development. He nevertheless recognises

that the charge of abstraction made against its usual treatment is by no means dead, and hopes that new ground has been broken in an endeavour to apply orthodox Economic theory to practical affairs, and to link up that theory with its outward phenomena as seen in daily life.

Special attention has therefore been given to the many problems of modern industrial organisation which to-day claim so large a share of public thought, and to those intricate questions of international currency and trade which are the cause of much mystification to the general reader. In a volume of this kind it is necessarily impossible to give to such matters that degree of attention which is commensurate with their great importance at the present time, but it is hoped that the consideration given to these problems and the many up-to-date examples which are included will make the volume of service and of interest, not only to the student, but also to the layman and the man of affairs.

The author's thanks are due to Mr I. V. Hoskins, B.A., LL.B., and Mr F. Whitmore, B.Com., for their assistance in preparing the manuscript for press and in reading the proofs.
