## EAST INDIA (TRADE).

## REVIEW

# OP THE <br> TRADE OF INDIA 

## 1901-02.

LONDON:
PRINTED FOR HIS MAJESTY'S STATIONERT OFFICE, by dalling \& SON, Ltd., 34-40, Bacon Steeet, E.

And to be purchased, pither directly or through any Fookseller, from EyRE \& Sputtisiloude, East Harding Strbet, Fheet Strget, E.C., and $3:$, Abingdon Stratt, Westminster, S.W.; or OLIVER \& BOYD, EDINBURGH;
or E. PONSONBY, 116, Grafton Strekt, Dudins.
1902.
[Cd. 1287.] Price $4 \frac{1}{8} d$.

## SALE OF GOVERNMENT PUBLICATIONS.

The under-mentioned Firms have been appointed olo Agonta for the kalo of Government Publiontiona neduding Parliamentary Reports and Paper, Acts of Parliament, Rocord Offico Publiationa, \&o., \&o., and all auch rorks can be purchased from them cither directly or through rotail broksellers, who aro ontitied to a discount of 25 per cent. from the selling prices :-

## IN ENGLAND .-

For all publications emepting Ordnance and Geological Mapa, the Hydrugraphical Wurks of the Admiralty, and Patent Office Publications :-Messrs. Eyre ant Smotriswonne, East Handing Streot, F.O.
For Hydrographical Worls of the Admiralty :-MIr. I. D. Potter, 145, Minorien, E.Q.
Patent Office Publications are sold at the Patent Offec.

For all pablications ercenting the Bydmgraphical Works of the Admiralty, Patent Offico Publications, nind Ordanace and Geological Nape
IN SCOTLAND :-Messrs Olifer and Boyd, Edinburgh
IN IRELAND -Mr. E. Ponsonby, 116, Grafton Street, Dublin

The Pablications of the Ordnance Sexver and of the Geolmitical. Servey man ive purchased from Agenta in most of the chief towns in the Enited Kingrom, through any laonksller, or from the Director (ieneral of the Ordnance Surver, Southampton, or in the cise of Ireland. from the Officer in Charge, Orinance Survey, Doblin. It. addition, Ordinance Surrey Publications can be obtained through Head Post (Iffices in towns where there are do socredited Agents.

The following is a list of some of the more important Parliamentary and Official Publications recently isuod :Parliamentary!
Statutes-
Public General, Session 1900, Sese 2, and 1901. With Index, Tahles, de. Moy. 8ro. Cloth. Price 3e. öecond Rerimed Editiom A.D. 1235-1713 to A.D. 1879-18s3. TVI. Vola Prico 7a. bd. each.

Statutes in Force. Chrondogical Talle of and Joder ta. 17th Edition. To end of 1 Eilward VII. (i,m!). 2 rola. Price 10e id.
The Statutory Rules and Orders rexised. Statutory Role- and Oriers, other than thoso of a loral, pernonal, or temporary character, issued prior to 1890, and now in force. Vris. I. to VIII. Price 10a. cach.
Slatutory Rules and Orders other than those of a Local. I'enonal, or Temporary Charactar. With a Lis: of the more important Statutory Orders of a L cal Characthr arranged in clasen : and an Index. Boy. 8 ra Boards. Iscued in the jears 1890, 1891, 1892, 1893, 1894, 1א45, 1896, 1897, 1898, 1899, $19(\mathrm{~m})$, and 1901 .

Price 10 e each.
Statutory Rules and Orders in force on 31st December 189?. Index to.
Prico 10a.
Statutory Rules and Orders, 1902 Registered ander the Rules Publication Sct, 1893. In courno of isana. Index to Local and Persomal Acts, 1801-1899.

Price lus Ads of Parliament, Seesion 1902. In conrse of issue.
Edecational Subjects. Special Reporta. Vola. II. to IX. United Kididom and Colonial and other Pomemana; and the Principal Conntries of the World. Price (complete) il 7s. $\overline{\mathrm{y}} \mathrm{d}$. (Vol. I. is out of print.)
[Cd. 1039.] Better Regrlations Conmittee. Evid:ne, Appendices, and Index.
Price 2e. 10d.
[Cd. 1105.] [Cd. 1173.] Trade. Annual Statement for 1901. Vols. I. and II. Imports and Exporta.
Prico 11a. 5d.
[Cd. 1111.] Land Begigtry. Beport on Constructing'a fiencral Register of Title for London. Price 4fd.
[Cd. 1112.] Factories and Workshors. Report of Chicf Inspector, 1901. Part I. Price 4a. 7d
[Cd. 1121.] Agriculture Betcrisa, Great Britain. 1911.
Price 1a, 3d.
[Cd. 1151.] Port of London. Report from Royal Commisaion on. With Appendicen.
[Cd. 1160.] Edocation. Supplementary Regulations for Secondary Day Schools and Eroning Schools.
Price 4d.
[Cd. 1163.] Socth Aprica. Correspondence from January 1901 to July 1902. Prico 2a. 2d.
[Ce. 1170.] Agriceltcral Statigtič, Ireland. Detailed Heport, 1901.
Price 11 d
H.C. No. 131. Lipe Abserance Companieg. Statemeat of Accounte, 1901.

Price 4:
Cessus, England and Wales, Scotland and Ireland, 1901. Reporta and Population Tablea. In course of imac.
Mines. Reports of BLM. Inspectors for 1901, with Summarice of the Statistical portion under the provisions of the Coal Mines Regulation Act, 1887 ; Metalliforous Mines Regulation Acts, 1872-1875; Slato Minee (Gonpowder) Act, 1882, Districts Nos. 1 to 12 Complete.

Price 8s 2jd.
Mrest in the United Kingdom and the Islo of Man List of, for 1901 . Price 8a. 2\}d.
Quarrizs. Do. do. do. $1901 . \quad$ Price 4n. ©d.
Mines Abandoned. List of the Plans of. Corrected to 31st Ducember 1901. Price 1s
The following appear periodically, and can be subecribed for:-
Trade of the Uxited Kingdon with Beitisi Porabgiong and Poreion Countrige, showing the Quantitioe and the Declared Falue of the Articles.
Trade Reports of the British Colonies, with information relative to population and general condition.
Trade Reports by His Majeaty's Bepresentative in Foreign Countrios, and Reports on Oommercial and General Interents.
The Proceedings of Parlisment in public and private business, published daily. Honse of Lorde. Price 1d. per 4 pp. ; Hoase of Commons, 1d. per 8 pp.

## THE

## TRADE.OF BRITISH INDIA

## WITH

FOREIGN COUNTRIES
for the official year ending March 31, 1202

## General Summary

The value of the trade of the year is subjoined, with the values of the preceding four years for comparison. They are stated in rupees:

|  | Imports- |  | 1897-98 | 1898-99 | 1899-1900 | 198001 | 1901-02 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Merchandiso | - - | - 69,26,66,625 | 68,38,03,412 | 70,71,18,634 | 76,27,78,883 | 81,47,08,170 |
|  | Gold - | - - | - 7,28,12,221 | 8,84,00,542 | 11,44,78,674 | 11,87,13,827 | 8,29,76,205 |
|  | Silver . | - • | 13,19,50,644 | 9,04,39,025 | 9,51,06,458 | 4,59,22,253 | 11,35,07,593 |
| $\checkmark$ | Total Imports | - • | - 89,74,29,490 | 86,26,42,979 | 91,67,03,766 | 92,74,14,933 | 101,11,91,966 |
| Export- |  |  |  |  |  |  |  |
|  | Foreign merchandise | re-exported | 3,75,11,720 | 3,37,81,965 | 3,29,24,912 | 3,20,85,314 | 3,26,03,218 |
|  | Indian merchandise | - - | - 93,78,61,010 | 109,35,02,765 | 105,68,36,961 | 104,16,04,944 | 121,20,45,021 |
|  | Gold - | - - | - 2,37,27,326 | 2,33,66,460 | 2,00,81,962 | 4,30,58,851 | 3,36,64,785 |
|  | Silver . | - - | - 4,76,14,364 | 5,07,15,347 | 5,94,18,443 | 3,16,85,700 | 5,09,60,877 |
|  | Total Exports | - - | - 104,67,14,420 | 120,12,96,537 | 116,92,62,278 | 114,84,34,849 | 132,92,73,904 |

The shadow of famine hung darkly over the land in the first half of $\mathbf{1 9 0 0} 0$ or but lifted in the second half of the year, with the return of an ordinary monsoon followed by winter rains which, on the whole, favoured the growth of the great staples of Indian trade. Still the commercial and industrial features of the year bore eloquent testimony to the extent of the disaster which had supervened on the failure of the monsoon and the destruction of the crops in 1899. The traces of the calamity were, however, in great measure effaced last year, and the return of fairly good conditions for the pursuit of agricultural operations, which constitute the greatest industry of the country, was accompanied by the reversion of imports and exports to normal conditions and by a great increase in their dimensions. The imports of merchandise increased in value by 519 lakhs of rupees ( $£ 3,462,000$ ), much of the inerease indicating the restoration to the people of purchasing and consuming capacity and the resumption of industrial operations after the $p$ riod of depression had passed away. Cotton goods and yarn increased by abou, 306 lakhs ( $£ 2,040,000$ ), and there was a marked revival of activity in the imports of machinery and millwork, metals, mineral oils, railway material, coal, chemicals, and dyes. There was also an appreciable development in the importations of various other articles, some of greater, others of lesser, importance, such as tobacco, salt, sugar, precious stones and
pearls, apparel, carriages (which include bicycles and motor-cars), glassware, matches, paints and colours, paper. The only really significant reduction is limited to food-grains, and of these it may be said that, as they are not needed in India in an ordinary season, their large importation is a symptom of the existence of abnormal conditions and the disappearance of the trade may be regarded with satisfaction.

While the imports increased the exports which paid for them also increased, and the increase was in greater proportion, owing to the additions made to the sum annually drawn in Council bills. The exports of Indian merchandise increased by 1,704 lakhs ( $611,362,000$ ), the increase being at the rate of 16 per cent. Most of the improvement may be assigned to the agricultural products which are such dominating factors in the export trade. The return of a good season, with good harvests, led to a trade greatly in excess of that of the preceding year in rice, wheat, oilseeds, cotton, jute. The ability to supply these articles to the consuming markets found those markets ready to take them at profitable prices, and the trade of the year was on the whole of advantage for the exporter as well as for the producer.

The inprovement in agricultural conditions which enabled the producer to put on the market large supplies of the articles just mentioned, was accompanied by other conditions favouring and encouraging the export trade. Money continued in good supply throughout the year, the Bank of Bengal rate not having reached $S$ per cent until the i2th February, dropping again to $;$ per cent by the 27th March.- This was the third consecutive year in which the maximum did not rise above 8 per cent. The minimum rate of $j$ per cent in July and August lasted for a little over a month. The course of exchange was perfectly steady throughout the year, ranging quietly from is. $3 \overline{5} d$. to is. $4{ }_{4}^{1} d$, and it may be said now that, after the experience of the last four years, importers and exporters alike have ceased to concern themselves about the course of exchange or to insure themselves against its fluctuations, the violent shocks which from time to time jerked and dislocated trade being confidently considered things of the past. It may be noted that while the rupee has as steadily maintained the value assigned to it as the silver coin of France, the changes in the price of silver have been as sudden and violent as in any former years, while its downward course has been unprecedented in swiftness and depth. The highest price of silver in the year was $271 \frac{15}{6} \mathrm{~d}$. an ounce, the lowest was $241 \frac{13}{13} \mathrm{~d}$. a difference of 12.6 per cent. As things stand, the vicissitudes of silver left the Indian market untouched, and their only effect was to qualify in some measure the restoration to normal conditions of our trade with China by the introduction of an element of uncertainty giving rise to speculative operations. Nevertheless the close of the period of disturbance in China and the gradual easing off of an overloaded market, combined with a fall in the price of cotton and a recovery in the value of yarn, brought renewed vitality to the Indian spinners of yarn for China, while spinners for the Indian market also found that the consuming capacity of the weaver, which had been seriously affected by famine, had been restored. The outcome of these more auspicious conditions was a resumption of activity in the Indian cotton industry and a very large increase in production and export.

The jute mills of Bengal also prospered as well as the cotton mills of other parts of India, and large sales of gunny bags and cloths were made, at profitable prices, for the local market and for export, at the same time that there was an active export of the raw material. On the whole, the principal features of the
export trade of the year were the renewal of activity in the shipments of foodgrains and oilseeds, due to a good season and to favouring conditions of the market, and a large export of cotton and jute and of the manufactures of the cotton and jute mills.

While the return of agricultural prosperity was indicated on the one hand by an increased volume of trade in the articles mentioned, it was also indicated on the other hand by the return of the trade in hides and skins from the unprecedented dimensions attained in 1900-01 to ordinary proportions, this decline being as satisfactory in its way as the increase in the other articles mentioned. But it must not be assumed that the conditions of the trade were in all respects entirely satisfactory. In some important items, indeed, the restriction of exports indicated the continuance of depression which has caused anxiety to all interested in the progress of some of our large industries. The shipments of tea declined materially, more in value, by reason of a continued low level of prices, than in quantity, although in this also the decline was substantial. The reduction in quantity was partly due to voluntary restriction of output, but perhaps even more to climatic causes. Indigo also was exported on a reduced scale, as a consequence partly of an indifferent crop and partly of the contraction of cultivation under the discouragement of low prices. Nor was the reduction of exports followed by any material elevation of the low level of prices which was established when the synthetic indigo entered the market as an active competitor with natural indigo. The outlook for indigo planters does not seem more favourable than it did a year ago, but it is now recognised by them that their business has moved from the basis on which it stood in the days before dyers began to put into their vats dyes made in a chemical laboratory, and the recognition of the fact is the first step to the readjustments which the new conditions compel.

Opium was the only other article of prominence in the trade in which there was an important decline. This was due to a material contraction in the quantity of Malwa opium exported from Bombay, in consequence of the failure of the crop in the famine year in the States of Central India, where this description of opium is grown for export.

There was a heavy fall in Lac, but the exports of this article in the two preceding years were excessive, and the market is variable and fluctuating.

In 1900-0 the export trade of Bombay and Sind was reduced to a low level; but last year the restoration of ordinary conditions was attested by the prompt increase of exports from Bombay and from Karáchi. Into both ports also imports were actively brought, with too much activity indeed into Bombay where the speculative enterprise of dealers was somerrhat discouraged by the unexpected slowness of recuperation in the districts which had been so sorely smitten by famine.

## Imports of Merchandise

The trade of 1900.01 was large, partly because prices of some of the staple articles of trade were on a high level. Last year the value was still larger, exceeding that of 1900 -01 by nearly 7 per cent, but this increase was due to a greater volume of trade rather than to higher prices, for prices ranged at a lower level in 1901 than in 1900 . There has been a cons nicuous increase in the aggregate value of imports in recent years. It average 1 annually in the five years ending $\mathbf{1 8 0 8} 8 \cdot 99$, R6,978.49 lakhs; in $1899 \cdot 1900$ it amounted to $\mathrm{R}_{7,071} \cdot 19$
lakhs, rising in the following year to $\mathrm{R} 7,62779$ lakhs; while last year there was a further increase to RS, 147 lakhs. A very large proportion of this increase occurs in the class of manufactured articles which constitute much more than half the articles imported. But there was an increase under the other heads toc, with the exception of articles of food and drink and animals, these last being relatively of small importance. The relative dimensions of each of these large groups, and the changes in the aggregate value of each during the year will be seen from the figures appended (rupees):

|  | 1900-01 | 1901-02 |
| :---: | :---: | :---: |
| Animals, living (mostly horses) | 48,73,197 | 40,65,638 |
| Articles of food and drink | 12,07,25,412 | 11,70,65,098 |
| Metals and manufactures of metal, hardware and cutlery, machinery and millwork, railway plant and rolling stock | 11,87, 16,379 | 13,15,41, 5 20 |
| Chemicals, drugs, medicines, narcotics, djeing and tanning materials. | $2,22,56,241$ | 2,40,95,992 |
| Oils | 3,75,70,198 | 4,21,89,079 |
| Raw materials and unmanufactured articles | 3,70,75,368 | 3,81,62,948 |
| Articles manufactured and partly manufactured | 42,15,62,058 | 45,69,87,595 |

When the items comprised in these groups are examined in detail, it appears that in only two of the important articles enumerated was there a decline. These tro are woollen goods, in which a comparatively small decline followed a large increase in the preceding year, and silk, raw and manufactured, in which an abnormally extensive trade had been done in 1900-01 on a rather speculative basis encouraged by the high prices for an abundant harvest of rice in Burma. The importation of horses too in that year was unusually large, owing to army requirements, and last year there was a reduction to ordinary proportions.

## Articles of Food and Drink

Sugar bulks most largely amongst these, the value of the principal items comprised in the group being:

The value of sugar was quite half the aggregate value of all the items comprised in this group, and the progress of the trade has been watched with close attention on account both of its large dimensions and the operation of the countervailing duties levied on bounty-fed beet sugar. The importations of beet sugar were very large during the year, exceeding substantially the heavy imports of 1897.98 which led to the imposition in 1899 of the countervailing duties. Assuming the imports from the United Kingdom to be half beet and half cane, the quantity of each kind imported from all countries is as follows in the last six years (cwt) :

But as there is little doubt that the imports from the United Kingdom are in fact all beet sugar, the quantity of beet sugar imported in the year may be taken to amount to $3,030,346 \mathrm{cwt}$, say 151,517 tons, the importations of the preceding year having been 95,000 tons, which was an increase of nearly 60 per cent. With the increased imports there was a heavy fall of price from which, however, there was a recovery after the close of the year. The countries from which these imports are mainly brought are these (cwt):

| - |  |  |  |  | 1896-97 | 1897 -98 | 1808-99 | 1899-1500 | 1900-01 | 1901-02 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Beed- |  |  |  |  |  |  |  |  |  |  |
| Austria-Hungary | - | . | - | - | 115,514 | 945,745 | 1,063,737 | 7778821 | 1,321,310 | 2,257,928 |
| Germany | . | - | - | - | 758,806 | 1,203,309 | 433,971 | 60.536 | 401,980 | 577,199 |
| United King. ${ }^{\text {a }}$ On | - | - | - | - | 6,16t | 23,192 | 17,783 | 32,712 | 59,636 | 94,150 |
| Other Countrien | - | - | - | - | 6,11t | 33,818 | 30,800 | 1,456 | 9,664 | 6.979 |
| Tot: 1 | - | - | * | - | 886,502 | 2,206,064 | 1,526,291 | 872,515 | 1,792,590 | 2,936,106 |
| Cane- |  |  |  |  |  |  |  |  |  |  |
| Mauritius | - | - | - | - | 1,488,85t | 1,406,047 | 1,793,607 | 1,417,115 | 2,085,156 | 1,759,203 |
| China | - | * | - | - | 130.310 | 291,175 | 185,082 | 316,975 | 487,445 | 182,767 |
| Java . | - | - | - | - | 97,458 | 140,485 | 162,500 | 190,553 | 225,247 | 310,592 |
| Straits . . | - | . | - | - | 63,322 | 74,357 | 75,656 | 79,999 | 144,166 | 62,486 |
| Other Countries | - |  | - | - | 6.930 | 117.266 | 21,174 | -58,835 | 107,032 | 176,859 |
| Total | - | - | - | - | 1.795,871 | 2,029,330 | 2,238,619 | 2,063-477 | 3,049,046 | 2,491,907 |

Thus, of the aggregate quantity of sugar imported into India last year quite 54 per cent was beet sugar, and of this the great mass was imported from Austria-Hungary and Germany - 141,753 tons out of the $151,5^{17}$ tons imported, sugar of Austrian origin representing $112,8,6$ tons. It must really have exceeded this quantity, for some of the sugar imported from Hamburg is known to be of Bohemian origin, but it cannot be specifically stated what the quantity is. It may, however, be taken as certain that Austrian sugar represents at least three-fourths of the beet sugar imported into India.

The figures given above illustrate in a very striking way the rapid progress made by beet sugar in recent years. In the first of the six years entered in the table the quantity of cane sugar imported was more than two to one of beet sugar; in the next year beet sugar exceeded cane sugar; the latter again dominated the situation in the three following years; but last year the imports of beet sucar greatly outstripped those of cane sugar. While the latter declined from all sources of supply except Java, the former increased greatly, the increase from Austria-Hungary being exceptionally large-so larse as to induce sugar refiners in India to persuade themselves that the countervailing duties did not cover the whole bounty received by beet sugar, and after the end of the year a memorial was addressed to the Government praying for additional protection at leat during the interval before the decisions of the Brussels International Conference take effect in September 1903. Action was taken as desired in the present month by the passing of a law imposing further addisionai duties on sugar imported from Austria-Hungary and Germany.

The greater pat of the beet sugar imported, that is, well orer iro-thirds of the whol, was brought into Bombay and Karáchi, most of it inta Karáchi, which port indeed received not much less than half of all the $b$-et sugar imported into India. Much of this was sent norchward into the Panjab and across the British fromier into Afghanistan and Kashmir. The demand in the Panjab was active in consequence of two consecutive bad or indifferent seasons for cane. and moreover imported sugar can be laid down more cheaply from Karáchi thar Indian suyar brought into the Panjab from other provinces, the railway finding it expedient to concede favourade terms for sugar from the port. As the
waggons must be brought back thence hundreds of miles, empty or full, it is profitable to accept sugar at low rates for the upward run from the sea. There has also been a rapidly increasing export of sugar to Kashmir, which is now a health resort for hundreds of Europeans, all of them in comfortable circum. stances and all large consumers of sugar, and there is a somewhat extensive industry in the manufacture of jam in Kashmir as there is in Simla. Before the invasion of beet sugar the consumption of sugar in Western India was in great degree limited to cane sugar from Mauritius. That also was consumed in Karáchi, where it was obtained from Bombay, while the Panjab depended mostly on local sugar, supplemented by small importations from the adjacent province. The importations of Mauritius sugar have not indeed decreased; they have, as the foregoing figures show, been on a large scale in the last two years; but beet sugar has, in just the last year, gone rapidly to the front, Mauritius sugar apparently not being able to find sufficient encouragement in the low range of prices which bas prevailed. On the eastern side of India the consumption was limited, until beet sugar entered the market, to local sugar, made from cane and date, supplemented by importations of cane sugar from China, Java, and the Straits, and such sugar still occupies the most important place in the market, the importations of beet sugar being relatively small. They amounted to less than 43,000 tons last year imported into Bengal, a quantity which is only 30 per cent of all the beet imported. Madras imports but little beet sugar direct, but the greater part of such sugar consumed in the Madras Presidency is imported by ray of Bombay; it does not seem to be a large quantity, however. Burma also imports but little beet sugar direct from the Continent, but there is a considerable importation from the United Kingdom (Greenock) supplemented by imports by way of Calcutta.

The price of beet sugar in India is on the whole regulated by the price in London, rising and falling here as it rises and falls there, and the price of beet sugar now governs the price of cane sugar, imported and domestic, at the ports and in all the large commercial and consuming centres throughout India. Hence the concern, one might say the consternation, caused by the recent rapid and heavy decline in the price of beet sugar. The course of prices began to take a downward track in September igoo, and, after fluctuating much during the next twelve months, again fell heavily and continuously from October 1901. The prices (per maund) since then have been as follows, in Calcutta :

This was the lowest point, followed by a recovery to $\mathrm{R} 7 \cdot 8$, which was the averac.! price in May.

It matibe noted here that the competition of beet sugar in Ceylon with the cane sugar which used to be sent thither from Southern India has been found so strong that cane sugar has given way. The export of refined sugar from Southern $I_{1}$ dia to Ceylon, which used to average some $24,000 \mathrm{cwt}$ annually, fell in $1900 \cdot \mathrm{Cl}$ to $10,529 \mathrm{cwt}$ and still further last year to less than $5,000 \mathrm{cwt}$, whict. may be taken to mean the practical extinction of the trade, at least for the tim. being.

The importation of molasses from Mauritius continued in the year on the same extensive scale as in 1900-01, about 21,224 tons having been imported, most of it into Calcutta.

Provisions.-From the point of view of values the place of next greatest importance after sugar, in the entries under articles of food and drink, belongs. to Provisions, which slightly increased in the year to 198.47 lakhs, although the importations of $g h i$ returned to their normal level after the exceptional trade in rgoo-or during the famine period. While it was no longer necessary to resort to the Persian Gulf for ghi, which Indian cattle were again able to supply in quantity equal to the demand, the importations of dates increased, as did those of salted fish, wet and dry, these being the most prominent amongst enumerated articles under this bead.

Salt.-The export trade having been active enough to attract shipping to Indian ports in considerable numbers, salt was imported by steamers which were unable to obtain other profitable cargo, and the quantity imported was unusually large. The largeness of the importations was also influenced by the condition of the affairs of the Salt Union whose policy of maintaining prices at a high level had resulted in the accumulation of their stocks and the reduction of their dividend. The manufacture of salt in India was also, owing to seasonal conditions, not so large as in a favourable year. The importations therefore amounted to 516,23 I tons, the imports of the two preceding years having been only 416,636 tons and 347,787 tons, respectively. The augmentation of the imports into Burma last year and the year before may be taken to indicate that a more effective excise control of local manufacture has been established. Importations from all countries increased very largely, the increase in the trade from Aden and the coasts of the Red Sea being especially noticeable, as well as from Germany. English salt was only just over half the aggregate quantity imported, whereas until recently, and the inauguration by the Salt Union of the policy of keeping up prices, it was the dominating factor in the salt trade.

Liquors.-The importations have increased. Malt liquor to the extent of 3,673,000 gallons was imported, most of it from the United Kingdom, the quantity from other countries not exceeding 237,000 gallons; but no doubt some of the beer imported from England is of German origin. However that may be, the consumption of German beer in India must increase very largely before the English brewer finds his market seriously attacked.

The increase in Spirits was not large, and the trade moves but slowly from year to year. The British distiller does not possess quite such a hold on the Indian market as does the British brewer, a large quantity of foreign spirits being received. Last year's imports were as follow :

Spirit from the United Kingdom therefore was only a little more than half the aggregate imports, and some of the imports from England consists of French brandy. The spirit imported from "other countries" is mainly rum from the Straits and arrack from Ceylon, imported into Southern India where these liquors are consumed by the native population, coolies who have consumed them during their residence in those colonies on planters' estates.

It may be noted that not all the spirit mentioned above is potable, some of it being methylated, or perfumed, or a vehicle for drugs. The proportions of

- the different kinds of potable spirit imported in the year were (gallons):

| Whisky | - . | 553,971 |
| :---: | :---: | :---: |
| Brandy | - . . | 302,050 |
| Gin | . . ${ }^{\text {- }}$ | 73,215 |
| Rum | - • | 40,671 |
| Other sorts | - . . | 149.721 |
|  | Total | 1,119,637 |

While the imports of beer and spirit increase the consumption of $W$ ine makes no headway, and taking into account the fact that the European population, who may be said to be the only consumers of wine, has incruased, the habit of wine drinking see ms to be distinctly on the decline. The importations in the year were limited to 300,672 gallons.

Spices were imported in smaller quantity, the demand for betelnuts, which comprise the largest proportion of this trade, having declined with a recovery in the production in Bengal.

The reduction of grain and pulse to less than a third of the quantity imported in 190001 is a return towards normal conditions, although these have not even yet been reached, for a value of 29 lakhs is much more than India paid for grain in the period antecedent to the famine. Possibly the permanent rise in the price-level of food-grains, which has been a prominent feature of recent years in Indian economics, may have the effect of attracting grain in larger quantities for the future than in the past.

The importations of Tea declined to about the level of $1899-1900$, the fall indicating a diminished use of Bombay as a depot for the shipment of teas to the regions served from the Persian Gulf and Afghanistan. Moreover, the prices of tea in the Indian market ranged on too low a level last ycar to offer an inducement for importation on an extensive scale for local consumption. The operations at present in hand for extending the consumption of Indian tea in In iia should have some effect presently on the importations of China tea.

## Metals and Manufactures of Metals

Hardzare and Cullery-

|  |  | $18.80-1050$ | 10. (a)t | 11901.02 |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 4 | K | R |
| Cutlery | - . | 9,71.700 |  | 12,11,227 |
| Agricultural implements |  | 7,22,5 ${ }^{\text {, }}$ | 8,37.530 | $6,170, \pm 6$ |
| Other implements and tools | - | 11,85,273 | 11.7.7,4.39 | 1.41,7e5 |
| Sewing machines | . . | 5.5.3.858 | 6.19.725 | 5.91,040 |
| Unspecified hardwar* | - . | 1,24,06,044 | 1.4.4,15,107 | 1.3i), 25.51 |
|  | rotal | - 1,59,62.924 | 1,84,14,7,39 | 1,70,66,375 |

Following on the large trade in 1goo-ut there was a set-back in this trade last year, but the sei-back was due ruther to lower prices than to a smaller trade, except in regard to agricultural implements, the depression in the tea industry accounting for this decline. The Continent continues to supply about 26 per cent of the imports, and the importations of British goods have fallen below $\mathbf{z o}_{0}$ per cent of the whole. The trade in German hardware and cutlery continues to be pushed, the very cheap goods made on the Continent for export to Asiatic and African markets finding an easy outlet in the Indian bazars.

In Metals the recovery of 1 goo-ut from the dispression of the preceeiing year was followed by an increased and active import which was conspicuously large in copper and steel.

The importations of Copper fell to a very low level in the famine year, as usual in times of distress. This metal is largely used in India for the manufacture of articles of domestic use-plates, dishes, water-pots, and drinking cups-, and these in a time of stress are replaced by earthenware, the imports of copper for the time subsiding. In the last famine year the subsidence of the demand was accelerated by a sharp elevation of price brought about by a combination. The usual result of collapse followed in due course after a time, and prices began to droop early in the year, the fall being from about $£ 80$ a ton in March to about $£ 63$ by the end of the official year. This decline of prices and the return of prosperity accounted for some resumption of activity in the trade. But it is still so much below the level of former years, especially in those descriptions (tiles and other unwrought copper) which form the raw material of the brazier's industry, that it would have been interesting to know the condition of the braziers during the last three or four years, for they must have suffered severely from depression. In India, however, there are hardly any means of ascertaining the condition of an industry other than those conducted by Europeans, such as the tea and indigo industries, or which are worked by large jointstock companies like the cotton, jute, and paper mills.

The heavy decline in copper and its slow recovery are sufficiently accounted for by the fact that nearly half of the whole trade is carried on at Bombay, the distress having been greatest in the districts supplied from that port. But some of the recovery is no doubt due to the demand for the metal, in wire and other forms, in connection with electrical apparatus. So much, however, is this trade a sort of economic barometer, measuring the presence or absence of pressure on the people, that the figures of the trade merit attention (cwt):

Iron and Steel.-The importations of Iron were also on a larger scale, and an extensive trade was done, alchough the trade was not up to the level of the years before the recent years of scarcity. This, however, may be attributed rather to the fact that steel has been taking the place of iron than to any inelasticity in the trade by itself. The trade in both should be considered together, and so considered it will be found that the recovery from the recent depression has been complete (tons):

From these figures it appears that last year's imports extended to 339,558 tons of iron and steel, a great advance on the 289,250 tons imported five years previously.

Bars are the commonest form in which both metals are imported, and bars of steel now largely exceed in quantity iron bars, the importations in both cases coming principally from Belgium. That country is the main source of supply now of bar and angle iron, as also of sheet iron (black), while from the United Kingdom is received the greatest proportion of the imports of sheet iron
(galvanised and tinned). Belgium also supplies a preponderating proportion of steel bars and sheets. The Belgian iron and steel imported into India are ordinarily of inferior quality, but being much cheaper than the metal from the United Kingdom they command a market which, like other Asiatic markets, considers cheapness first and quality afterwards. Nor need this be considered as affording reason for throwing hard words at the market, for in a poor and backward country, where industrial operations are so largely carried on in a small way by men of small means, it is but reasonable that they should select the article which, though not of the best, serves the purpose and is within their means. If British ironmasters feel inclined to obtain possession of the market (which, however, is but a small one compared with many others) they must offer it the quality the consumer is content with at the price he pays for the Belgian metal. The importations of the different descriptions of iron and steel from Belgium and the United Kingdom, were as follows last year (in tons) :

Importations of Lead continue to be made mainly in the form of sheets for lining tea chests, the article being almost entirely of British manufacture. There was a rather large importation last year, although the yield of tea did not expand. There seems to be no particular reason why these sheets should not be rolled in India unless it is the relatively small dimensions of the market to be supplied, for the British manufacturer works for the markets of Ceylon, Java, China, and Japan, as well as for India, and the larger the scale on which such work is done the lower is the cost of production.

In Tin and Zinc there was some activity accompanying, as is always the case, the recovery in the trade in copper.

The advance in the imports of Machinery and Millwork to the value of $\mathrm{R}_{3} 00$ lakhs, which was a third larger than in the preceding year, is a satisfactory indication of improvement in the industrial position, although the imports into Bombay were not up to the level of the time before the depression in the cotton mills set in. The trade in Bengal was very active, largely in consequence of the rapid development in Calcutta of the demand for electrical machinery for traction, lighting, and fans. But there was a larger importation of machinery at all the other large ports as well as at Calcutta and Bombay, the meaning of which is that factories were working everywhere with renewed activity, and as the demand for tea machinery was not elastic the
other industries must have been more active than would appear from the imports.

The importations of Railway material, other than on Government account, do not seem to progress, but that is due to some extent to the increasing mileage which is constructed and maintained by the State. Importations of material by the State were large, the two together being, for Companies $R_{1,53,72,336}$, for the Government $R_{3,54,96,602 .}$

## Chemicals, Drugs, Medicines, Narcotics, Dyeing and Tanning Materials

The trade in Chemicals increased, following an increase in the preceding year, although a set back in chemicals for paper-making was one of the accompaniments of the severe depression which has overtaken the Bengal papermaking industry to which reference is made elsewhere.

The further increase in Tobacco is due in some degree to a revival of imports of unmanufactured tobacco, but in large degree to the quick growth of the trade in cigarettes which have taken the fancy of the people in a notable way, at least of the town-dwellers. The cigarettes imported in the year represented a value of about 21 lakhs of rupees, only a portion of these being of the descriptions consumed by Europeans. Cigarettes from the United States were valued at $R 5,94,332$, these being mainly of the cheap kinds consumed by natives, more especially by natives of the lower classes. It would seem that there might be profit in the Indian manufacture of cigarettes now, if some of the cigar factories of Southern India were to take the business up. They would have to import the paper, for paper of the sort needed for cigarettes cannot be made in India.

The temporary contraction in 1900-0I of the trade in Ansiline and Alizarine dyes, due to the reduced purchasing power of the people of Western India where most of the trade lies, was succeeded by a complete recovery last year, and the trade was very active, reaching a value of $R 65,74,638$. The quantity imported was just under nine million pounds, pretty equally divided between alizarine and aniline, the former rather predominating, being the cheaper. The trade was in the main, as it has always been, from Belgium and Holland, much of the imports being, however, of German origin. It is possible that British dyes may now try the market, for a representative of the English company which manufactures these dyes visited India last cold weather to investigate the market. But the Continental manufacturers, represented in the main by the well-known Badische Fabrik, whose operations with synthetic indigo have so rudely interfered with Indian indigo in the European markets, have secured a strong position for their dyes here. It may as well be noted that a large proportion of the dyes imported is adulterated in varying degrees with coloured, not colouring, matter.

## Oils

Mineral Oil.-The consumption of kerosene oil for illumination has been actively stimulated by the substitution of oil imported in bulk in tank vessels for oil imported in cases, and the consequent facility of obtaining Russian oil, which is much cheaper than the American oil in cases which formerly held the market. Last year's importations of kerosene oil approximated to $9 \mathrm{r} \frac{1}{8}$ million gallons, of which about $84 \frac{1}{3}$ million gallons were of Russian origin. Of American oil
only $55^{3}$ million gallons were imported, the importations in the two preceding years being $12 \frac{3}{4}$ and 5 million gallons respectively. American oil in fact is out of the reach of the native consumer by reason of its price, and when it held the market the consumption was in the main restricted to the European community and to street-lighting. For these purposes the use of mineral oil does not now expand owing to the introduction of gas and electricity, and for native use the cheapness of the Russian oil commends it, the cheapness of the German and Austrian lamps in which it is burnt aiding in the expansion of use. It is stated that the Standard Oil Company of New York are now arranging to substitute the sale of oil imported in bulk, like the Russian imports, for oil imported in cases. If the arrangement is carried into effect the competition between the American and Russian oil will recommence with vigour, and the consumer will benefit by lower prices.

Russian oil having practically superseded American oil, it is now in turn undergoing active competition from Burman oil, the production of which last year is reported to have amounted to about 50 million gallons, representing probably at least 25 million gallons of kerosene, of which $15^{\frac{1}{2}}$ million gallons were shipped from Rangoon to ports in India, besides lubricating oil. But little mineral oil is used in India besides kerosene, only about $7 \frac{1}{}$ million gallons having been imported last year, this being lubricating oil; but the trade increases with the extension of mills and railways.

The trade in kerosene is now one of principal importance in the list of Indian imports, the value of it reaching $351 \frac{1}{2}$ lakhs last year, and other mineral oil representing a further 32 lakhs, the total value of the trade in mineral oil thus reaching close on $3^{8+}$ lakhs.

## Rall Materials

Coal.-The minds of some people seem to have been disturbed by the revival of the import trade in coal, and they have given expression to apprehensions that the Indian coal trade was being placed under heavy restrictions by the action of the railways in respect of the conveyance of Indian coal. There does not seem, however, to be much substantial foundation for the indignation and alarm that have been expressed, for the whole quantity of coal imported (including in that term coke and patent fuel) only reached 230,000 tons, the Government having imported 55,769 tons more, say 286,000 tons altogether, compared with an Indian production of 6.63 million tons. The quantity imported was about double the imports of 1900.01 , but that year was exceptional in consequence both of the high prices of English coal and the depression of the cotton manufacturing industry in Bombay where most of the coal is landed. But, although there has been an expansion of trade following a temporary depression, the trade is very much more limited than in former years. The proportions and decline of the imports will be better appreciated when it is observed that whereas 703,341 tons of coal were imported by the public and by Government in $1892 \cdot 93$, ten years ago, there were only 285,786 tons imported last year, which is a decline of 59 per cent. Two circumstances should be borne in mind in connection with this matter: ( 1 ) most of the imports are required for Bombay and Karáclii, and in the conditions of transport which still exist in India these two ports are about as easily supplied from Cardiff as from Calcutta; (2) some of the imported coal is required, for special purposes, of a quality not produced in India. There can be no doubt
that in the near future even the present limited importation of coal must be very appreciably further restricted; but it is not necessary to assign blame anywhere because the conditions which arose out of exceptional causes ceased to exist when the causes were removed.

Cotton.-The importation of raw cotton, especially of the longer-stapled varieties-Egyptian and American-fell heavily last year from the relatively high level in the two preceding years. The price of Indian cotton was lower, with a better crop, and the experiments in the production of yarn of No. 40 and upwards were pursued on a smaller scale when the demand for the coarser yarns revived and the mills were again at full work. There was but little reduction, however, in the spinning of counts from No. 3t to No. 40 ; but these were spun from cotton imported in the preceding year. The importation of long-stapled yarn was limited to $42,708 \mathrm{cwt}$, the trade in the preceding year having reached $173,33^{8} \mathrm{cwt}$. The yarn of No. $3^{1}$ and upwards spun in the Bombay mills was 11.2 million lb , the quantity spun in the preceding year having been 11.08 million lb .

## Manufactured Articles

Cotton yarn.-The imports ( 38.3 million ft ) were larger than in $1900-01$ ( 348 million fb ), when the trade was abnormally small owing to a higher range of prices and the distress which prevailed; but the dimensions of the business were very much smaller than in previous years. As usual the bulk (four-fifths and more) of the imports consisted of the finer counts from No. 30 upwards:

There is some interest in noting the contrast between the qualities of yarn made in India and of the imported yarn, as indicated by the following figures of trade and production last year:

|  |  | Imported yarn million b | Indian yarn million it $^{2}$ |
| :---: | :---: | :---: | :---: |
| Nos. 1 to 30 | - | $7 \cdot 4$ | $559{ }^{\circ} 1$ |
| ,/ $3^{1}$ to 40 |  | $23 \cdot 86$ | 12.61 |
| Above No. 40 | - | 44 | 91 |

Thus the coarser counts of yarn are imported only in the proportion of 1 to 75 of local spinnings, while the imports of Nos. 31 to 40 are 2 to 1 of the local spinnings. In both cases, the finest yarns, above No. 40, are of very small importance, for the finer fabrics are woven in but small quantity in India and of particular descriptions, the muslins and other fine classes of cotton goods being imported much more cheaply and in greater and more pleasing variety than is obtainable in local manufacture. It may be added that in the production of yarns of counts betreen 30 and 40 the .Irdian mills have made such rapid advances in recent years as to point to the serious reduction of importations of these counts in the near future, and it is not doubtful that the importations of lower counts will practically cease when the Indian mills set themselves seriously to supply the Indian demand which hitherto has been somewhat unduly neglected in favour of the China market. Much of this yarn is coloured yarn, imported into Burma for the hand-weaving which is so much practised in that country as a domestic occupation of the women.

Cotton goods.- In this trade, which still represents about 36 per cent of the aggregate value of imported merchandise, there appears :o be a gradua) change and shifting of the business from grey (unbleached) pioce-goods to the other two classes, namely, white (bleached) and coloured and printed goods. The bulk of the imports still consists of grey gouds, but the proportions not only do not increase but have rather declined ; and, considering the increase of population, the decline is even greater than it would seem from the fiyures to be. The conditions were no doubt affected in the last two years by prevalence of scarcity and distress so intense that, even at this moment of writing, subscrip. tions are being invited by a leading Bombay newspaper (the Times of India) to a fund for the provision of clothing for the destitute in Gujarat. But in the case of grey piece-goods the non-progressive character of the trade has been apparent for many years, and so has the progressive character of the other two classes, as will be seen from the figures appended, which are the quantities imported (in millions of yards):

|  | Grey <br> (unbleached) | White <br> (bleached) | Coloured. printed. or dyed | Percentage of grey in total |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { Average } \begin{array}{c} \$ 80-90 \text { to } \\ 1 \$ 93-94 \end{array} \end{gathered}$ | ) 1,223.47 | 308.62 | 374.16 | 62 |
| Average $\begin{gathered}1894-05 \text { to } \\ 1898-99\end{gathered}$ | \} 1,209:77 | 418.58 | 35149 | 61 |
| 1899-1900 | 1,27491 | 4+455 | $471 \cdot 88$ | 59 |
| 1900-01 | 1,19217 | 46748 | $3+3 \cdot 16$ | 59 |
| 1901-02 | 1,186\%\% | 550.09 | 42256 | 54 |

Here we see a continuous decline, with the exception of the famine year in the percentage of grey goods in the total importations, from 62 per cent to 54 per cent. This gradual shifting may be regarded as due to two reasons. In the first place the increase in the weaving capacity of the Indian mills has steadily affected the demand for imported goods of similar classes. In the second place there can be no doubt that fashion is veering towards the use of white and coloured garments where hitherto grey goods were almost exclusively used. This is a conspicuous feature in some cities and towns to-day. where touches of colour are seen in every street which formerly exhibited only the monotone grey of the unbleached, and mostly unclean, cloth. In Burma also, where the love of colour is universal, the increase of population has been followed by a still greater increase in the importation of coloured cloths, with white cloth for the women's jackets. This newly created desire for white and coloured cloth amongst the people in India and Burma has no doubt been stimulated by the cheapness of the bleached and dyed cloths which many Indian mills now make, and by the ease and convenience with which a faded coloured cloth can be brightened and freshened up in the wearer's own house by the cheap mineral dyes now made familiar in almost every Indian home. It seems probable therefore that in course of time the great trade which is still done in unbleached cottons will decline and be superseded in a large degree, if not entirely, by bleached and coloured goods, India in that respect following the example of other peoples as they advanced in civilisation and wellbeing. The principal descriptions of unbleached goods, and the manner in which they are gradually being discarded for similar fabrics, bleached and coloured, will be seen from the figures appended, which state the imports in millions of yards:

| Shirtings : $18.90 \cdot 1900$ |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Grey | - | . | . |  | $586 \cdot 28$ | 531;87 | 530.29 |
| White |  | - |  |  | 60.24 | 87.28 | 87.14 |
| Coloured |  |  |  |  | $73 \cdot 45$ | 5123 | 61.8 |

The first three of the five classes of goods above specified comprise the bulk of the trade in unbleached goods, and it is at once clear that the competition of bleached and coloured goods with these important classes is very active. There are some other descriptions of goods which are confined to the one class, grey, white, or coloured, as the case may be, or (in one case) to two. The importations of these in the years specified have been as follows (in millions of yards) :

| Grey : |  |  |  |
| :---: | :---: | :---: | :---: |
| Madapollams | $33^{\prime} 95$ | 25.45 | $34^{2}$ |
| T-cloths and domestics | 15.31 | $15^{\circ} 09$ | 14.66 |
| White: |  |  |  |
| Nainsooks | $160{ }^{\circ} 5$ | 133.37 | 208.8 |
| Cambrics, twills, muslins, lawns | 10.61 | 17.01 | 14.94 |
| Checks, spots, stripes | $7 \cdot 2$ | 6.59 | 12.4 |
| Coloured: |  |  |  |
| Prints and chintz | $161 \cdot 07$ | 109.28 | 15192 |
| Cambrics, twills, muslins . | $93 \cdot 68$ | 5369 | 74.78 |

Unbleached T-cloths and domestics, which are made from the coarsest counts of yarn, are a staple manufacture in the Indian mills, and the importations of such goods have fallen in recent years to a low level. The Indian mills possess such advantages for the manufacture of goods of this class that it is highly probable the import trade will not long survive the competition. The active trade in nainsooks, as also in prints and chintz, is noticeable. These last mentioned articles, it may be mentioned, are in demand across the Indian border, in Afghanistan and Persia, where Russian chintz is a common object in the bazars. It seems clear, in any case, that the importer may take note of the fact that in the future his agency will be needed more for the supply of white and coloured than of unbleached goods. Already the quantity imported of the former two classes is almost equal to the quantity of the latter, and presently must exceed it more and more. The Indian mills are giving increasing attention to the production of white and coloured cloths, many of them of excellent quality and good finish. The khaki drills of the Buckingham mills in Madras are conspicuously good, as are the coloured cottons made there and in some of the Bombay mills in imitation of tweeds.

The extent to which the cotton piece-goods imported into india are a British trade is shown in the figures appended (million yards) :

|  | 1899-1900 |  | 100001 |  | 1901.02 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Tutal | Erom | Cotal | frons <br> England | Total | from Englarad |
| Unbleached goods | . 1,2749 : | 1,270.47 | 1,193'17 | 1,183.2S | 1,186.76 | $1,178 \cdot 46$ |
| Bleached ", | - $4444^{\circ} 55$ | ${ }_{43} 8 \cdot 64$ | 46748 | $461 \cdot 83$ | $5^{8009}$ | $5743^{8}$ |
| Coloured " | - 471.8 S | $457 \cdot 28$ | $3+3 \cdot 16$ | 327.04 | 422.86 | 401'23 |

If it is assumed that tissues imported from the United Kingdom are of British origin, which is probably almost, if not entirely, the case, then in the case of grey and white goods the British manufacturer has an almost complete monopoly, $99^{\circ} 3$ and 99 per cent respectively, of these two classes having been im. ported last year from the United Kingdom. In coloured goods the monopoly is not so complete, importations from the United Kingdom representing only about 95 per cent of the whole. The small balance consists of French and German prints and chintzes.

The aggregate value of the imports of cotton yarns and woven and other goods in the last five years was (in millions of $R$ ):

The importations of manufactures of Silk and Wool are unimportant in comparison with the imports of cotton manufactures. In must parts of India the climate and the habits of the people discourage the extended use of woollens, and they are wom mainly by the better classes in Northern India and then only in the colder months of the year. Nor is the use of woollen bed clothes at all a habit amongst them, the quilted razai of cotton, or the cotton sheet, taking the place of the blanket very commonly. As for silk the people are too poor, speaking generally, for the possession of even the one garment of silk which in so many other countries is brought forth for wear on high days and holidays. In Burma alone is silk commonly employed for apparel. A large proportion of the imported silks and woollens is needed for European use, and for the rest consumption is confined to the well-to-do classes, is not always common even with them, and is therefore strictly limited in comparison with cottons. The value of silks was last year 14.8 millions of rupees and of woollens 19.7 millions. In both cases there was a set-back after the speculatively large trade of the preceding year, as was anticipated, but the two years' trade together was above the average. It may be mentioned, however, that cotton shawls are being imported, made in imitation of the woollen shawls which have become a somewhat conspicuous aspect of the winter-clad Bengali, and are displacing them to some extent both in Bengal and Burma. Whether made of cotton or of wool, the manufacture of these shawls might very well attract the attention of the Indian millowner.

Other manufactured goods.-Of the other articles enumerated in this class the following are the most important :

|  | ${ }^{1809-1900}$ | ${ }_{8}^{190001}$ | ${ }_{\substack{1001-02}}$ |
| :---: | :---: | :---: | :---: |
| Apparel, including boots and shoes | 1,46,43,066 | 1,53,97,776 | 1,69,41,441 |
| Arms and ammunition | 25,31,460 | 23,45,770 | 27,19,771 |
| Books and printed matter | 22,80,961 | 22,86,837 | 25,56,233 |
| Building materials | 19,14,452 | 21,35,379 | 20,89,497 |
| Carriages and carts | 26,48, I 12 | 23,51,867 | 30,99,399 |
| Earthenware and porcelain | 19,90,369 | 20,14,754 | 25,99,868 |
| Glass and glassware | 76,66,515 | 75,51,762 | 92,53,270 |
| $J$ Instruments and apparatus (scientific) | 24,01,273 | 32,33,729 | 33,45,636 |
| Matches | 34,75,938 | 39,80,573 | 43,65,854 |
| $\mathrm{Paints}^{\text {and colours and painters' materials }}$ | 34,71,505 | 40,39,848 | 42,89,55 |
| Paper and pasteboard | 41,13,201 | 45,29,996 | 52,71,634 |
| Stationery | 29,37,653 | 31,68,746 | 32,28,576 |
| Tea chests | 14,74,255 | 22,70,708 | 10,17,068 |
| Umbrellas | 27,30,307 | 27,00,332 | 18,04,231 |

In the case of tea-chests the decline was only a reaction after the very large trade of the preceding year. In the case of umbrellas it appears that the importation of the finished article is being interfered with by the importation of the parts which are put together and covered locally. In respect of all the other articles there has been a continued increase of trade indicative of the existence of generally satisfactory conditions. There is, however, an exception to be noticed in the paper trade, for the increase in the imports has unfortunately been accompanied by, and has indeed been the cause of, a serious depression in the paper-making industry in Bengal. The British and other European paper-makers have been able to undersell the local mills by the importation at low rates in large quantities of paper of attractive appearance made from wood pulp, which has been freely purchased by printers and others in preference to the less attractive, if more durable, paper made from grass, gunnies, and rags, in the Bengal mills, and most of these are at present in great straits. The importation of printing paper has steadily enlarged in the last few years, from 4,550 tons in 1898-99 (in itself a great increase on previous years) to 6,077 tons last year, an increment of 33 per cent in four years.

The articles which are most conspicuous in the 'import trade are enumerated in the appended list, with the value of last year's trade set aganst each in rupees (ooo omitted) :

Five-eighths of the trade consist of cotton, metals and metalware, machinery and railway material, sugar, and petroleum.

In the geographical distribution of the import trade the United Kingdom continues to occupy the predominant place, ending something like two thirds of all the merchandise landed at Indian ports. The share of the United Kingdom, however, does not increase, mainly in consequence of the recently acquired great relative importance of the trade in sugar and petrolcum which are received from other countries; while certain other articles, also received from other countries, have been growing in importance. The percentage of the imports belonging to each of the principal countries from which India receives merchandise is stated below. The feature of the list is the prominent position held by Russia (petroieum), Austria-Hungary (sugar, cotton goods, glass and hardware, paper, and other articles) and Germany (sugar, salt, cottons and woollens, hardware, beer and spirits, and sundries). The trade with these two countries has been stimulated by bounties on exports of sugar and by shipping subsidies:

There is no appreciable revival in the re-export trade from the limitation of it which began with the advent of the plague in Bombay, or rather which had already set in when the epidemic made its appearance. The figures appended will show how the trade has shrunk, chiefly to the detriment of Bombay where the bulk of the trade is carried un:

| $1894-95$ | $\cdot$ | $\cdot$ | $5,05,74,144$ | $1898-99$ | $\cdot$ | $\cdot$ | $3,37,11,965$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $1895-96$ | $\cdot$ | $\cdot$ | $4,71,75,159$ | $1899-1900$ | $\cdot$ | $\cdot$ | $3,29,24,912$ |
| $1896-97$ | $\cdot$ | $\cdot$ | $4,03,36,372$ | $1900-01$ | $\cdot$ | $\cdot$ | $3,20,85,314$ |
| $1897-98$ | $\cdot$ | $\cdot$ | $3,75,11,720$ | $1901-02$ | $\cdot$ | $\cdot$ | $3,25,98,163$ |

The value of the trade in the last four years was only ${ }^{1} 313$ lakhs, contrasted with 1756 lakhs in the preceding four years, and the decline has been continuous, with the exception of a small increase last year.

The plague alone, however, has not occasioned the contraction, which is also due in a measure to the establishment of direct communications between Europe and the two regions for which Bombay acted and still continues in a lesser degree to act, as a receiving and distributing agent, namely, the Persian Gulf and the east coast of Africa. The change in conditions has been fully explained in recent issues of this review and need not again be discussed. The small recovery last year was due to the larger exportation of cotton manufactures (which represented altogether about 44 per cent of the trade) in the hope of finding a better market than existed in Bombay at the time.

## Exports of Indian Merchandise

The exports of the year were very much the largest on record, the aggregate value exceeding that of the year in which the next greatest value was reached ( $1895-96$ ) by 10 per cent, and the value of 1900 -0 by 16 per cent. The progress of the export trade since 1880 is exhibited in the figures appended:

The fluctuations of the trade from year to year are illustrated by the appended list of the principal articles in the trade and their values (in $\mathbb{R}$ ):

|  | 1898-99 | 1899-1900 | 190001 | $1901-02$ |
| :---: | :---: | :---: | :---: | :---: |
| rirain and pulse | 27, 19,75,674 | 18,09,82,330 | 14,03,13,382 | 18,28,78,815 |

| Coffee | - 1,74,98,242 | 1,48,47,146 | 1,22,84,498 | 1,25,02,200 |
| Wood and timber | - 1,08,57,055 | 1,08,69,202 | 1,07,06,089 | 89,15,416 |

Drought and famine stand out plainly as the predominant factors in the restricted trade of $1900-0$ : the grain trade was hardly more than half that of 1898 ; the exports of cotton were at a low level for two years; the decline of oilseeds was remarkable; and on the other hand the mortality of cattle raised the exports of hides to an abnormally large figure. Adverse seasons having passed away, at least in a corsiderable degree, the trade in these great staples recovered sufficiently to make a marked difference in the totals of the trade of the two years. The exports of India in fact consist to such an extremely large extent of vegetable products, for food or for industrial purposes, that the trade of the country is dependent upon the seasons, a good season being folloved by active exports and a bad season by depressed trade, the depression being far more severely felt from time to time in one port of shipment than in others. At Karáchi, for instance, the failure of wheat and rapeseed in the Panjab may almost extinguish for the time the trade of the port, while other ports will not suffer from anything more than a contraction not seriously felt. Indeed, Rangoon
flourished in 1900.01 as a consequence of the scarcity which depressed Bombay and Karáchi. Besides drought and famine other causes have operated to bring about violent fluctuations in trade, such as those which have affected tea, indigo, and cotton yarn. On the whole, although some of the choud that had completely overspread the sky in the preceding year still hung about, the conditions were, generally, fairly satisfactury. Prices fluctuated in accordance with the conditions to which reference has been made, some articles rising and others falling in price. They are stated below, the figures being for January in each year, and the basis being 100, which is taken to represent prices in 1873:

Classifying the articles of trade as they are grouped in the accounts, and as they will be dealt with in the following paragr.iphs, it a ppears that articles of food and raw material for industrial purposes bulk very largely in the trade. The only group in which the value of the trade dij not increase is that of chemicals, drugs, narcotics, this lower value being due to a decline in the value of opium from the unusually high level reached in 1900.01:

|  | $\mathrm{SSOFP9}^{8}$ | 1597-190 | 19060: | 1901-02 |
| :---: | :---: | :---: | :---: | :---: |
| Articles of food and drink | 38,57,67,2S5 | 30,37,78,416 | 26,30,45,344 | 29,31,34,535 |
| Chemicals, drugs, medicines, narcotics, and dyeing and tanning materials | 11,33,39,260 | 12,36,20,111 | 12,85, 83,296 | 11,S6, 12,460 |
| Raw materials and unmanufactured articles | 39,14,39.977 | 40,8S,55,807 | +2,71,60,535 | 53,84,01,450 |
| Articles manufactured and partly manufactured | 19,19,84,095 | 20,77,47,320 | 20,94, 8i,243 | 24,98,47,620 |

It will not escape notice, in looking at this list, that the exports of articles of fond and drink stand at a level far beneath that of 1895.99 ; but there was a quite exceptional demand in Europe for Indian wheat in that ycar, and while prices were attractively high the harvest in the Panjab was exceptionally abundant; the figures of that gear were in fact unusual. In raw materials the darge excess of last year was due to the very active trade done in cotton and oilseeds; and the recovery under manufactured articles was the outcome of the revival of the exports of cotton yarn to China after a period of depression.

In the following paragraphs the general features of the trade of the year in the important items of trade will be discussed.

## Articles of food and idink

Coffee.-The exports have been:

There was a small recovery in the exports, but the quantity was still much below the level of former years, and it cannot be said that the trade is progressive. The quality of Indian coffee is good, so good that it is appreciated by Arabs and Turks, but the world's markets are dominated by the great abundance of the supply of the cheaper kinds from Brazil which gives threefourths of the production of the world, and last year's exports from that country were so excessive that prices fell to a lower point than ever. Indian coffee remains depressed in price even when the available supply is restricted either by an unfavourable season or by the ravages of disease. It is difficult, however, to ascertain with accuracy the area, yield, or condition, of the coffee estates of Southern India, the planters being averse, for some unstated and unconjecturable reason, to communicate statistical information relating to the industry.

The menace of differential treatment of Indian coffee in France (to which a full third of it is exported) by applying to it the duties leviable under the general tariff while Brazilian coffee is charged at special minimums rates, has not yet taken effect. The modus vivendi under which the minimum tariff is provisionally applied to Indian coffee has been prolonged from time to time and will continue for a few months longer.

Rice.-The exports are stated below, in cwt ( 000 omitted) :

|  | $\begin{gathered} \text { From } \\ \text { Butoma } \end{gathered}$ | From Bengal | From other Provinces | Total | Value in R |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1895-96 | 24,612 | 7,925 | 2,099 | 34,636 | 13,43,07,029 |
| 1896-97 | 19,370 | 5,053 | 3,397 | 27,820 | $11,85,02,610$ |
| $1897-98$ | 18,002 | 4,953 | 3,317 | 26,272 | $11,58,70,280$ |
| 1898-99 | 25,905 | 8,636 | 2,852 | 37,393 | 15,67,76,454 |
| 1899-1900 | 21,671 | 7,873 | 2,318 | 31,862 | ${ }^{1} 3,00,58,725$ |
| 1900-01 | 21,394 | 8,106 | 1,566 | 31,066 | 13,14,22,857 |
| 1901-02 | 24,190 | 6,275 | 3,275 | 33,740 | ${ }^{1} 3,84,64,287$ |

The actual destination of the whole of the exports is not known, for more than one-third is shipped nominally to Egypt, which means to Port Said for orders; moreover, some of the rice shipped to the United Kingdom is sent to Falmouth for orders; and in neither case can it be said to what ports in the Mediterranean or in the Northern seas the rice is ultimately conveyed. It may be said generally that 14 million out of the $33^{\frac{3}{4}}$ million cwt shipped were taken to Europe, say 42 per cent; while another 14 million were taken for consumption in Asiatic countries, making altogether 84 per cent of the exports equally divided between Europe and Asia. Asiatics in Eastern Africa and the islands on the east coast of that continent, and in South America and the West Indies, consumed the other i 6 per cent. As stated last year, roughly about 55 per cent of the exports from India are a food supply for Indians and Chinese in Asia, Africa, and America, while some 45 per cent are consumed in Europe as food and as material for the manufacture of spirits and starch; but it cannot be said in what proportion it is used for spirit and starch or for food.

Prices during the year were lower than in either of the two preceding years, the excited demand for Burman rice for the supply of the distressed tracts having abated considerably, but they maintained a higher level than in other ordinary years, and the requirements of India were still large enough, even with the return of moderately good agricultural conditions, to divert some Burma rice which would ordinarily have been shipped abroad. Exports from Bengal were on a very low scale, measured by the exports from
that province in former years of ordinary harvests, and it may be noted here that the exports from Bengal to other provinces by railway as well as by sea were greatly restricted. The conviction gains strength that Benyal is gradually ceasing to possess the capacity of being an exportor of rice and that the time is not far off when rice must be imported into the province, in regular course.

Wheat.-The anticipations of a large export were not realised. The wheat harvest in the Panjab, which is the great source whence the export trade is supplied, was extremely good, far above the average; but after a season of drought stocks in the country needed replenishment, and prices also kept at a somewhat high level-higher than the level at which an active and profitable export trade could be carried on in view of the level of prices in England. Consequently, the collapse of 1 goo-01 was followed by but a moderate export, much smaller than the trade of many former years including the year just before the collapse. The quantity exported only reached 366,091 tons, of which almost all was shipped from Karáchi, only 4,165 tons being shipped from Bombay, the fields supplying that port having yielded an insufficient harvest. The prospects of a large trade this year are not encouraging, for the wheat harvest has everywhere been below the average owing to the absence of the winter rains generally and to the ravages of rats in Western India.

The exports of other grains and pulse were also only moderately large. They exceeded those of the bad yearimmediately preceding, but there was no full revival of the export trade in them any more than there was in rice and wheat, the reason being the same in all cases, namely, the divergence of price at the port of shipment and at the port of destination.

Sugar.-Although India may be said to have practically ceased to export sugar and to have lost the considerable trade in that article which existed in former years, it is of some interest to note two marked features in the trade in the last two or three years. The first is that the export of refined sugar to Ceylon has been reduced to next to nothing, apparently because Madras sugar cannot compete in Colombo with beet sugar. The other feature is that the exportation of raw sugar to the United Kingdom dropped from $\mathbf{5 2 S}_{2} \mathrm{~S}, 000$ cwt in 1899-1900 to 243,000 cwt in 1900-01, and dropped again to 101,000 cwt last year. This is partly due to the competition of raw beet sugar for the supply of the British refineries, but is even more due to scanty supplies resulting from deficient crops. It seems practically certain that a large export trade in Indian sugar is a thing of the past, but growers and refiners have a much more assured market in India itself if they will grow and refine the article under conditions preventing the waste and exaggerated cost of production which accompany defective cultivation and manufacture.

Tca.-

The principal consumers of Indian tea were found in the countries specified below in the last two years (in $1 \mathrm{lb}, 000$ omitted) :

These are direct exports as declared in India and do not include re-exports from the United Kingdom.

For the first time in ten years there was a decline in the quantity exported, but the decline of 11 million pounds was hardly sufficient to do more than arrest the downward trend of prices which tried the industry so severely in 1 goo. Until towards the end of roor that year was as discouraging as the one it followed, and the small recovery which then occurred has hardly been maintained, as regards the superior descriptions at any rate. The owners of tea estates are still, struggling with the difficulties created by the too rapid extension of production and the consequent fall in prices; nor do they see their way clearly as yet to a sound position, although prospects are not so cheerless as in 1900 and the struggle not so intense. The small contraction of production was consequent on climatic influences in Assam and Cachar in a larger degree than on the action of growers in fine plucking. No special endeavour was made in the year to win new markets for Indian tea, and the exports to foreign countries generally, Russia excepted, did not expand and in most cases were on a restricted scale. The voluntary contributions from estates for the purpose of developing external markets were not as freely and satisfactorily paid as was to be desired, and a proposal was made to the Government to levy a cess in the form of a small tax on each chest of tea exported, as is done in Ceylon, the proceeds to be applied to the cost of opening up external markets. This proposal, in which the owners of about tro-thirds of the acreage under tea acquiesced, is still under the consideration of Government. But while the means and methods of securing wider external markets are still under discussion, the practical efforts to find an Indian market for Indian tea have been successfully continued by the firm who undertook the business last year, and it is understood that the results obtained so far are full of promise and encouragement.

The area and yield of tea in India, as far as these have been reported, were as follows in the last two years:

In the competitive conditions with which the tea industry has to contend to-day, it is certain that the time for empirical cultivation and manufacture has passed, and that rational, that is, scientific, methods must be pursued if Indian tea is to maintain its reputation and be sold at remunerative prices. The cultivation must be based on careful study and selection of soils and fertilisers, the parasites that infest the plant must be effectively dealt with, the conditions which result from infrequent and frequent plucking of the leaf
must be ascertained by competent observation, and the manufacture must be: based upon a scientific study of fermentation. The necessity for scientific teaching in all these respects is recognised by the Indian Tea Association which has taken a useful practical step by the engagement of a skilled chemical adviser who has done excellent work within the opportunities available to him. The opportunities, however, are but limited, and one man cannot be expected to do all that is needed when his operations extend over an area of little less than half a million acres in two large provinces, especially when the means of communication between the estates do not permit of swift movement. To make such teachings really efficient time should be given to the personal instruction of planters. The instruction should be based upon careful and prolonged experiment in an asricultura! station, or more than one station, suitably located in the tea districts, and sufficiently manned to admit of the deputation of a scientific assistant to stay at an estate for some days, long enough to give the manager detailed lessons on the points on which instruction is needed. Such a station it is intended to establish in Bihar for the instruction of indigo planters in the theory and practice of processes of cultivation and manufacture of indigo, sugar, and other crops, and nothing could be better devised to attain the end desired. A station of the kind for tea in Assam, or in the Darjeeling district, or in both, is equ.lly needed, and would have an equally good effect. But no association of tea-owners can provide the funds requisite for such stations, and it is necessary for the State to assist and probably to manage them. If the proposed cess on exported tea is partly applied to defray a proportion of the cost of such a station it would be well expended.

Another matter that now presses for attention is the consolidation of tea estates in order to reduce the cost of direction, agency, and management. Thie average tea-bearing area of each estate is, in Assam +20 acres, in Bengal 290 acres, and it cannot be denied that three, four, six, or mure, of such estates might, with advantage, when lying adjacent to each other, be consolidated under one management, with one agency at the port. and one board of directors.

## Dregs, Narcctics, Dies

Opium.-The fluctuations in exports and prices are indicated oy the figures below:

|  |  |  |  |  | A | pric |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Benga! chests | Ecmbay <br> chests | Total chests | Hidue R | Bensal | $\underset{k}{\text { Bumbav }}$ |
| 1897.98 | - 37,846 | 18,223 | 56,069) | 6,09.75.132 | 1,029 | 1,00 |
| $1898-99$ | - 41,169 | 25,959 | 6,7,128 |  | $1.0 \downarrow 7$ | 1,0ヤ2 |
| 1899.1900 | - 42,427 | 24,923 | 67.350 | S,20,37,148 | 1,215 | 1,2:3 |
| 1900-nt | - 44,994 | 24,744 | $69.70{ }^{\text {\% }}$ | 9,45,54,357 | 1,36,1 | 1,347 |
| 1901-02 | - 48,062 | 17,541 | 65.603 | 8.52,20,854 | 1,21,9) | 1,301 |

The exports of Malwa opium fell to a low level last ye.ir, in consequence of the drought in Central India by which the crop was seriously affected. The larger supply available, and shipped, of Bengal opium did not compensate for the reduction in Malwa opium, and the exports were smaller by 4,105 chests than in the preceding year. But with the cessation of the troubles in China and a better yield of the indigenous crop in that country, speculation was not quite so active, and the average price receded from the high level of the preceding year, falling from $R_{1,3} 6_{1}$ to $R_{1,299}$ per chest of Bengal opium.

That the rate of exchange between India and China is not, as has occasion-
ally been suggested, a substantial factor in the price of opium, seems tolerably clear from the figures appended:

| ppended | Average price (in rupees) | Rate of exchange on Hong Kong ( $R$ per $\$ 100$ ) |
| :---: | :---: | :---: |
| $1892-93$ | 1,227 | 222 |
| $1893-94$ | 1,132 | 205 |
| $1894-95$ | 1,316 | 188 |
| $1895-96$ | 1,390 | 191 |
| 1896-97 | 1,288 | 181 |
| 1897-98 | 1,087 | 155 |
| 1898-99 | 1,061 | 143 |
| 1899-1900 | 1,218 | 146 |
| 1900-01 | 1,356 | 150 |
| 1901-02 | 1,299 | 143 |

Here we find a price of $R_{1,299}$ in one year and $R_{1,061}$ in another year, the exchange in both years being at the same rate, and an almost equally low price ( $\mathrm{R}_{\mathrm{I}, 087 \text { ) when exchange was much higher. Prices seem to have borne little or }}$ no relation in the period in the table, which begins just before the closure of the mints, to the variations in exchange. They are dependent on supply and demand not on the varying rates of the media of exchange, though a particular transaction may be affected by the variation of exchange, and it is sometimes supposed that such a temporary bargain illustrates the operation of a general latr.

Indigo.-The course of the export trade is indicated in the subjoined figures (cwt) :

|  | From Calcutta | From Madras | From other ports | Total | - Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1894-95 | - 106,830 | 44,974 | 14,504 | 166,308 | 4,74,59,153 |
| 1895-96 | - 111,714 | 62,425 | 13,198 | 187,337 | 5,35,45, 112 |
| 1896-97 | - 109,001 | 43,680 | 10,842 | 169.523 | 4,37,07,570 |
| 1897-98 | - 71,364 | 48,165 | 14,320 | 1 33,849 | 3,05,74,019 |
| 1808-99 | - 81,779 | 42,760 | 10,648 | 135, 187 | 2,97,04,781 |
| 1809-1900 | - 59,078 | 39,853 | 12,489 | 111,420 | 2,69,25,107 |
| 1900-01 | - 71,637 | 18,940 | II,914 | 102,491 | 2,13,59,808 |
| 1901-02 | - 55.038 | 25,400 | 9,312 | 89,750 | 1,85,22,554 |

These figures can give no comfort even to the most optimistic, for they show that the trade has been in a rapid decline since 1897. The reduction of the exports of indigo from Calcutta is due in part to seasonal influences crops being bad; but the seasons have not been uniformly bad, and the more durable cause of the restriction is to be found in the fall of prices which followed when synthetic indigo was offered in the market in commercial quantities. Soon after the competition began it was understood that it was really formidable, and to-day the question which planters ask themselves is whether natural indigo can maintain the struggle. The question has already been answered in the negative in Lower Bengal where the cultivation of indigo has contracted almost to the vanishing point. In Bihar the planters are carrying on the competition manfully, arming themselves on the one hand by the application of scientific methods to the reduction of cost and the increase of yield, and insuring themselves on the other hand against ultimate failure with indigo by the cultivation of other remunerative crops. It is not unlikely that they will recognise that probably sugar is the best of these crops, the one which best repays the application of skill and capital, the one which is of universal and daily consumption by all classes, and the one which presents least cause for the apprehension that the native agriculturist can do the business, with his
rude and primitive methods, as well as the planters with modern apparatus and skilled management.

While indigo exported from Calcutta has declined in quantity in consequence of smaller supplies, due partly to inadequate harvests but more largely to the abandonment of cultivation in Bengal, Bihar, and the United Provinces, and while prices have uniformly ranged round a very low level regardless of the reduced quantities, it appears that Madras indigo has during the last three or four years presented similar features in a reduction of the quantity exported unaccompanied by a rise in price. On the whole, it must be admitted with reluctance that the trade is in a precarious condition, having declined much as the trade in raw silk, that other fine industry of the olden days, has seen its best days. Taking the average of the last four years, the exports of indigo from Calcutta have averaged only 66,883 cwt annually compared with 99,727 cwt in the four years immediately preceding. The total value of all the indigo exported has in the same perind declined from an average of $\mathrm{R}_{4,3} 8$ lakhs to an average of $\mathrm{R}_{24} \mathrm{I}$ !akhs. The average value of indigo exported from Calcutta was in the first four years R330 lakhs, in the last four years R171 lakhs, so that, while the decline in quantity in this period has been at the rate of about 33 per cent, the decline in value has been at the rate of 48 per cent.

## Ralw Materials

Coal.-In 1900.01 the export of Indian coal was stimulated by the great rise in price of English coal which marked that year. The imports of coal into India were greatly reduced, Indian coal taking its place, and it was also substituted to some extent for English coal in places out of India between Singapore and Aden. The exports rose in that year to $5+1,4+5$ tons, the exports of the preceding year having been only $304,55^{6}$ tons. The stimuius, however, was abated last year by a reduction in the price of British coal, the use of which for steamers was resumed at Colombo, Aden, and Perim. The trade in Indian coal in consequence did not advance, and indeed receded to $5^{2} 4,687$ tons. The output of Indan coal in the year is reported to have been 6,635,727 tons, so that relatively the exports were small, being in the proportion of one ton only to about 13 tons produced. Indian coal will no duubt always be much more largely consumed in India than elsewhere. The principal external market for coal remains in Colombo, whither 336,372 tons were shipped, Singapure coming next with 89,592 tons, Aden taking 47.194 tons. The significant thing about the trade is that the coal seems to have acquired a hold on the principal markets although the exceptional conditions which permitted export to them have ceased to exist ; shipments were made to British East Africa (16,922 tons), to Mauritius ( 18,745 tons), to Sumatra ( 10,690 tons).

Cotton.-The trade in cotton was restricted in 1 yoo.01, the quantity availabie for export veing limited in consequence of bad crops, and at the same time the very high level of prices interfered with demand. The crop of $1,00.01$, which went into the market for shipment last year, was good enough to be but little below the average and prices also were much lower than in 1900 though on such a high level as to mean a satisfactory profit to the cultivator (or the middleman). There was consequently a larger export than had been seen for years. The fair yield, the satisfactory prices, and the activity of the demand were profitable for owners of the raw material, and the recession of prices from the prohibitory level of 1900 was useful to the millowners, aiding the revival of the spinning and weaving industry.

The figures of the trade and prices are:

|  | Exports |  | Prices |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\underset{\left(000 \text { omit } t^{\prime} \cdot d\right)}{C \mathrm{~d})}$ | Value R |  |  | $R$ per candy, $7^{8 / 4} \mathrm{fl}$. |
| 1896-97 | 5,216 | 12,97,00,886 | Average | 1898 | 141-8 |
| 1897-98 | 3,723 | 8,87,13,130 | " | 1899 | $151-8$ |
| 1898-99 | 5.11 I | $11,18,85,385$ | " | 1900 | 214-13 |
| 1899-1900 | 4,3?3 | 0,92,50,646 | January | 1901 | 199-12 |
| 1900-01 | 3,576 | 10,12,74,007 | April | " | 167-4 |
| 1901-02 | 5,700 | 14,42,60,933 | January | 1902 | 182-8 |
|  |  |  | Apri! | " | I 86-4 |

Not far from half ( $2,526,183 \mathrm{cwt}$ ) the whole quantity exported was shipped to Japan, which in the preceding year had bought so much American cotton as to excite apprehension that Indian cotton was about to be discarded in the Japanese market. Indian cotton, however, is far too suitable, when it can be bought at a moderate price, for the coarse spinnings of the Japanese mills to fear the competition of longer-stapled and more expensive cotton. The fact that China also took $559,24^{1} \mathrm{cwt}$ is a practical illustration in support of the proposition that China cannot as yet produce any thing like the quantity of cotton required even for internal consumption and is cetainly not in a position to compete with India for the supply of external markets. The continent of Europe absorbed most of the remainder. The United Kingdom now consumes only a trifling proportion of the Indian cotton exported.

Hides and skins.-Exceptional conditions provided the trade in 1899-1900 and 1900.01 with 28 million hides of cattle for export in response to an exceptionally active demand. The mortality amongst the cattle having abated with the abatement of the conditions which produced it, the exportation of hides was reduced to about an average level, the number approximating to 8 millions. The quality averaged rather better than the poor hides shipped during the famine time, and the value of the trade was therefore proportionately higher. The activity of the trade was transferred from the larger hides to the skins of smaller animals, goats and sheep, mainly goats, and there was a very considerable trade done in these, chiefly for the United States, where they are in great demand for the manufacture of leather for small articles. But it should be noted that this trade in raw (untanned) skins has increased at the expense of the tanned skins which until recently were exported, largely from Madras, for the same purposes. It seems to have been found advantageous to transfer the demand from the tanned Madras skins to the untanned Bengal skins, and while the one has been declining the other is progressing, the tanning of the skins in the United States by an improved process being more suitable than the purchase of skins tanned in India by the primitive and imperfect native methods. The change is to the disadvantage of the Madras tanning industry, but no doubt it has the effect of widening and expanding the demand for Indian skins. The figures of the trade are appended:

Gute-The exports of jute amounted to as much as $14^{3}$ million cwt, a quantity only once exceeded by the 15 million cwt exported in 1897.98 ; but the range of prices last year was higher than in 1897, and the value of the trade consequently much larger, approximating to the great figure of 1180 lakhs of rupees. When the trade in jute is good and there is an active demand for the manufactures of the Bengal jute mills, the commercial and industrial condition of Calcutta is fairly well assured, for on them is mainly based the commercial fabric of Calcutta. Hence, with the good business done last year in the export of the raw material and in the sale of the articles manufactured therefrom, complaints of the condition of trade in Calcutta were few and indistinct, notwithstanding the depression in tea and indigo which, in the days antecedent to the predominance of jute in the commercial situation, would have spread gloom over commercial circles. For the United Kingdonn, Germany, the United States, and France, which are the markets for most of the jute exported, larger quantities were shipped and the trade actively maintained at prices which were good though not as high as in the preceding year. Appended 'are the figures of this important trade:

|  | $\begin{gathered} \text { Cut } \\ \text { (000 omitfes) } \end{gathered}$ | Value R |  | $\begin{gathered} \text { Cwt } \\ \text { (roo omilteit) } \end{gathered}$ | Value R |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1896-97 | - 11,464 | 10.55,05.775 | 189901900 | - 9.725 | S.07,16.4 ${ }^{\prime} 5$ |
| 1 897-98 | - 15,023 | 10,12,99 916 | 1900-01 | - 12,414 | $10,86,77,562$ |
| 1898-99 | 9, $\mathbf{S 6}_{4}$ | 6,94,12,452 | 1901-02 | - 14,755 | 1 1,79,72,723 |

Sceds.-This great trade is, like wheat, subject to violent vicissitudes from year to year, the cause lying, as with wheat, in the condition of the season and the extent of the crop. The question of demand hardly affects the dimensions of the trade, a good crop being always followed by an extensive export, for there is always a demand for oilseeds from India, some being needed for the manufacture of drying oils, others for food, others again for the manufacture of soap, candles, margarine, lard, and so forth. The disastrous failure of the crops in 1899 and 1900 was followed by the most contracted trade, especially in 1900-01, when the exports did not reach $55^{\prime \prime}, 000$ tons, the three principal kinds-linseed, sesame, and rapeseed-falling in a marked degree. The exports of rapeseed fell off by one-half, the crop having been a failure in the Panjab where it is chicfly grown. In the following year, however, the crop of rapeseed in the Panjab was one of unexampled magnitude, linseed and sesame were not so bad as in the preceding year, and the trade in seeds of lesser importance also revived, earthnuts especially having recovered from the disastrous effects of disease and drought, which, recurring over a series of years, had threatened the extinction of the trade.

The year was further notable for the creation of an extensive trade in cotton sted. Until last year the exports of this seed had been of the most moderate, indeed almost insigrificant, dimensions. In 1899.1000 they only reached $43,48 \mathrm{cwt}$, in the following year they advanced to $225,000 \mathrm{cwt}$, and then last year increased almost tenfold, amounting to $2,036,000 \mathrm{cwt}$. The seed was all shipped to the United Kingdom which previously had been supplied almost entirely from Egypt. The reason for the sudden activity of the demand is not quite clear; it has bren assigned to the necessity for finding a substitute for olive oil which was scarce in the market; also to the scarcity of scsame oil; to the demand for lard and margarine, for which materials were lacking; to the discovery of a new process for hulling the seed cheaply and efficiently; to the high price of the seed resulting from an American demand for all that
could be got on the American continert, Prices rose as the result of one or more of the causes mentioned, and, as it happened, seed was abundant in India for there had been an average crop of cotton and the demand for seed for cattle feeding was below the average in consequence of the mortality amongst the cattle of Gujarat in the drought. The rise of prices and the active demand were therefore readily responded to, and, if the business did not owe its existence to entirely ephemeral causes, one more already important stem has been added to the list of Indian exports.

The dimensions and fluctuations in the trade in seeds, and in each of the principal descriptions, are stated below :

Total trade

| Cwt | R |
| :---: | :---: |
| (000 omitted) |  |
| 24,229 | 16,75,32,514 |
| 20,887 | 14,20,15,203 |
| - 19,280 | 11,84,71,942 |
| - 15,775 | 10,09,95,284 |
| - 10,998 | 9,01,40,35 ${ }^{\text {1 }}$ |
| - 22,965 | 16,77,92,684 |

Quantity of each seed (cwvt, ooo omitted)

Other articles.- The other items in the group of raw materials it is not necessary to discuss at any length. Wool, the most important of them, has been in a declining condition for the last three years, due to the mortality of sheep in the regions whence supplies are drawn, during the recent times of drought. The trade will no doubt revive with the return of good seasons, the growth of pasturage, and the renewal of water sources.

Silk is a fluctuating but non-progressive trade; last year's business was better than that of the depressed year which preceded it.

Teakwood has declined materially in the last three years, supplies from the Shan States having fallen away.

Antmal bonts have declined, like hides, and for the same reason. The exports may now be said to average about 100,000 tons annually, some being imported by Germany for the fertilisation of the fields where is grown the beet sugar which is sent in great quantity to a sugar growing country. It is a singular and suggestive set of conditions which may be stated thus: (I) India is a large producer of cane sugar and could extend the cultivation almost indefinitely; (2) but the production is not equal to the consumption; (3) there is a large importation of foreign sugar to meet the Indian demand; (4) India produces bones with which the yield of cane to the acre could be largely increased, but does not use them for that purpose; (5) they are shipped in quantities to Germany where they are used to increase the product of beet;
(6) the resulting sugar is imported, largely and cheaply, into India. It may be added that Indian bones are also sent to Ceylon where they fertilise the fields on which is grown the Ceylon tea that undersells Indian tea not only out of India but even in India itself. This statement of the facts seem to point to the absence of capital, skill, and enterprise in undertakings dependent on agricultural operations.

## Articles Manufactured and partly Manufactured

The following figures indicate the relative proportions of the export trade in each principal class of manufactures in the last five years ( $R$ ):

|  | $1 \mathrm{~S}_{97}$-8 | 1580 | $1508-1900$ | 1000-0 | $1-02$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Cotton yarn and goods | . 8,15,13.379 | 7,78,84,697 | S,27,41,2.46 | 5,70,29,565 | 10,86,53,008 |
| Jute goods | - 5,93,08,558 | 5,79, $\mathbf{S}_{3,595}$ | 6,26,43,495 | 7,\$6,46,012 | $8.71,14,174$ |
| Tanned hides and skins | - 3,82.32,372 | 3.29.41.349 | 3,57,45,259 | 4.49,41,853 | 2,65,40.461 |
| Lac | - $1,06,06,642$ | S5,64,921 | 1,12,48,159 | 1,04,97,976 | 95,45,409 |
| Coir | 27,34,105 | 29,84,549 | 33,23,10.4 | 40,17,414 | 37.73.820 |
| Woollens | - 22,38,987 | 22,02, ${ }_{5} 5$ | 25,32.550 | 29,64,3,3 ${ }^{3}$ | 26,07,670 |
| Apparel | - 16,41,356 | 15,19,282 | 15.97,207 | 20,19,814 | 20.99,65 |
| Silks | 12,60,409 | 12,S1,S90 | 12,89,018 | 12,54,447 | 10,54,6 |

It will be noticed that a considerable proportion of the trade is limited to articles which are only partly manufactured and must undergo further processes before they can be used: such are yarn, the most important of all, tanned hides, and lac. To lac indeed the term manufacture can, perhaps, hardly be applied with accuracy, for shell and button lac are obtained simply by triturition in water to separate the insect which secretes the lac from the resinous secretion, the resulting broken resin being then melted and cooled in lumps or sheets.

Cotton manufactures. - The figures of the export trade given below indicate the very satisfactory removal of the depression which weighed upon the industry in 1900.01 :

The recovery is further attested by the figures of profuction of yarn and cloth in the mills (in $\mathrm{fb}, 000$ onitted) :

| Yarn |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 1898-99 \\ & 1899-1900 \end{aligned}$ |  |  | in Bombay | elsewhere | Total |
|  | - | $\leqslant$ | - 368,050 | 144,335 | 512,385 |
|  | - | . | - 371,041 | 1.12,882 | 513.923 |
| 1900-01 | , | . | - 243,625 | 109,348 | 352,973 |
| 1901-02 | - | - | - 415,028 | 157,910 | 572,938 |
| Cloth |  |  |  |  |  |
| $\begin{aligned} & 1898-99 \\ & 1899 \cdot 1900 . \end{aligned}$ | - | - | - 82,366 | 19.324 | 101,690 |
|  | . |  | - 78,583 | 19,482 | 98,065 |
| $1900-01$ | - |  | - 80,689 | 18,058 | 98,747 |
| 1901-02 | - |  | - 98,546 | 21,105 | [19,65: |

Conditions in India were ameliorated by the restoration of purchasing capacity to the people, and that restoration was accompanied by the necessity of renewing apparel which had done more than a fair share of duty during the period of distress. The situation in China also improved with the return of peaceful and orderly conditions, and the reduction of the excessive stocks which had depressed prices. The price of the raw material and of coal was reduced, while there was an improvement in the price of the manufactured article. Such a complete reversal of the conditions which prevailed in 1900-oI brought welcome relief to the industry, and fair profits were made.

Jute manufactures.-This important industry, which is to Calcutta what the cotton industry is to Bombay, also did very well in the year, the bags and cloth made in the mills selling at fair prices for internal consumption as well as for export. The dimensions and value of the export trade are ( 000 omitted in each case) :

|  |  | 1897.98 | 1898999 | 1899-1900 | 1900-1901 | 1901-1902 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Bags | . No. | 197,620 | 180,896 | 168,324 | 202,908 | 230,126 |
| Cloth | - yards | 242,951 | 280,382 | 307,021 | 365,215 | 418,566 |
| Value | R | 5,93,08 | 5,79,83 | 6,26,43 | 7,86,46 | 8,71,14 |

It will be noticed that a considerable proportion of the development of this industry is in the manufacture of cloth, which has increased much more rapidly than that of bags.

Hides and Skins, tanned.-The very large decline was due to the causes stated when discussing the trade in raw hides and skins on page 27 of this paper. The exports fell as shown below :

Gencral distribution of the export traile. -The value of the exports of Indian produce and manufactures in the last four years was distributed in the ratios stated below among the principal countries with which the trade is carried on :

The noticeable decrease in the proportion of Indian exports shipped to the United Kingdom is in the main due to Continental countries drawing their requirements of Indian oilseeds, cotton, jute, rice, hides, direct in steamers of subsidised lines. It is partly also due to the practical disuse of Indian cotton in English mills and to the great increase in the exports of cotton to Japan. That country was last on the list in 1900-01, but with the revival of the demand for raw cotton when there was a supply available the proportion of the export trade with Japan again increased. China stands next to the United Kingdom
as a consumer of Indian goods, owing to the extensive trade in cotton yarn and opium. Germany is the largest European consumer of Indian goods next to the United Kingdom, and the share of that country is really larger than is indicated by the figures, for a portion of what is assigned to Egypt represents trade with Germany, though declared, on departure of the vessels from India, as being for Port Said. Last year the value of our export trade to the United Kingdom was about equal to that of the trade to all other Europan countries: in former years it was much larger.

## Customs Revenue

No important change was made in the tariff during the year, but in the present month a duty has been imposed on beet sugar from Germany and Austria-Hungary additional to the ordinary and special duties now levied.

The gross revenue from imports, salt excluded, was $R_{4,5} 8,03,102$, a considerably larger sum than the revenue ( $\mathrm{R}_{4}, 01,42,29 \mathrm{j}$ ) realised in igoo-ot, a material portion of the increase being due to the importations of bounty-fed sugar. The ordinary duty on imported sugar was $R_{3} 1,93,686$ and the additional duties amounted to $\mathrm{R}_{40,4 \mathrm{~S}, 2 \mathrm{~S} 7 \text {. }}$

The following are the principal items from which the customs revenue on imports is derived ( R ):

|  | 198prigu | 140001 | $11001-02$ |
| :---: | :---: | :---: | :---: |
| Articles of food and drink: |  |  |  |
| Spirit | 64,92.799 | 63,83,274 | 64.94.209 |
| Sugar | 25.98,799 | 52,52,863 | 72,41,973 |
| Provisions | 4,85,531 | 5,07.228 | 5,57,936 |
| Spices. | 4, $\mathrm{SI}_{1,344}$ | 4,59,900 | +,42,999 |
| Chemicals, Drugs, Narcotics, Dyes: |  |  |  |
| Drugs, medicines, narcotics | $3,64,304$ | 4,41,872 | 4,68,457 |
| Chemicals - | 2,58,4 ${ }^{3}$ | 3,26,417 | 3,41,405 |
| Dyes and tans | 3,75,156 | 3.39,825 | 3,99,771 |
| Metals and articles made of metal: |  |  |  |
| Hardware and cutlery | 8,24,379 | 9148,85 | S,96,o6 5 |
| Copper and brass | 2,61,594 | 4,55,409 | 5,47,584 |
| Iron and steel | 3,49,4 ${ }^{2} 3$ | 4,69,913 | 5,21,971 |
| Silver | 24,32,247 | 13.34,940 | 30,63,806 |
| Manufactures of cotton : |  |  |  |
| Plece goods: grey (unbleached) | 48,16,838 | 49,58,157 | 50,29,944 |
| ", white (bleached) | $18.55,136$ | 21,21,125 | 27,25,971 |
| " coloured | 23,01,282 | 20,20,570 | 23,55,80+ |
| Oils : ${ }^{\text {a }}$ |  |  |  |
| Petroleum | 43,13,542 | 49,29,432 | 53,05,104 |

Of the other articles enumerated in the tariff schedules, only the few specified below yield an appreciable revenue ( $R$ ):

|  | 1509-1900 | 19000\% | nol-02 |
| :---: | :---: | :---: | :---: |
| Aplarel . - - . | 6,92,752 | 7,72,162 | $8,010,26{ }_{4}$ |
| Sik and articles made of silk | 8,56,393 | 13,32609 | 11,68,3:9 |
| oolven goods | 8,82,174 | 10,52,050 | 9,88,535 |

It will be observed from the foregoing figures that, though the Indian tariff comprises a lengthy list of dutiable articles, there are but few on which individually any revenue of importance is collected: these are spirituous liquor, petroleum, sugar, metals (including silver), and cotton piece goods. These yielded last year three-fourths of the whole revenue. Cotton piece goods are
much the most important source of revenue in the tariff, and the rate of duty on them is only $3 \frac{1}{2}$ per cent, whereas the general rate is 5 per cent.

The export tariff schedule is limited to rice and rice-flour, a duty of three annas (three-sixteenths of a rupee) being levied on each maund of $82 \frac{2}{7}$ th. The duty realised last year, R90, 87,957 was higher than it has been recently, the export trade having increased as the demand for Burman rice for the famine stricken tracts in India declined.

## Balance of trade

The figures appended state the excess of exports over imports, including merchandise and treasure, in each of the last five years (R):

|  | Including Government transactions | Excluding Government transactions |
| :---: | :---: | :---: |
| 1897-98 | - 10,60,38,000 | 14,92,85,0co |
| 1898-99 | - 30,21,40,000 | 33,86,54,000 |
| 1899-1900 | - 20,76,15,000 | 25,25,58,000 |
| 1900.01 | - 16,47,46,000 | 22,10,20,000 |
| 1901-02 | - 27,03,19,000 | $3 \mathrm{I}, 80,77,000$ |

In the same years the drawings of Council bills have been as follows :

|  | 6 | Exchange, pence | R |
| :---: | :---: | :---: | :---: |
| 1897-9S | 9,506,077 | 154 | $=14,81,28,000$ |
| 189S-99 | - 18,692,377 | 15.98 | $=28,07,64,000$ |
| 1899-1900 | - 19,067,022 | 16.07 | $=28,48,01,000$ |
| 1900-01 | - 13,300,276 | 15.973 | $=19,98,38,000$ |
| 1901-02 | - 18,529,071* | 15987 | $=27,83, \mathrm{c} 2,000$ |

## Gold and Silver Coin and Bullion

The value of the imports and exports is (R):

|  | Imports | Exports | $\begin{gathered} \text { Net } \\ \text { imports } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Gold . |  |  |  |
| 1897-9S | 7,28,12,000 | 2,37,27,000 | 4,90,85,000 |
| 1898 -09 | - 8,84,00,000 | 2,35,66,000 | 6,50,34,000 |
| 1899-1900 | - 11,44,88,000 | 2,00,82000 | 9,44,06,000 |
| 1900-01 | - $11,89,80,000$ | 11,05,59,000 | ${ }^{4} 4,21,000$ |
| 1901-02 | - S,30,75,000 | 6:36,99,000 | 1,93,76,000 |
| Silver- |  |  |  |
| 1 897.98 | - 33,24,94,000 | 4,77,59,000 | 8,47,35,000 |
| 1808-99 | 9,05,56,000 | 5,07,48,000 | 3,58,08,000 |
| 1899-1900 | - 9,52,49,000 | 5,94,82,000 | 3,57,67,000 |
| 1900-ol | - 12,67, 77,000 | 3,17,15,000 | 9,50,7 2,000 |
| 1901-02 | 12,29,38,000 | 5,10, 10,000 | 7,29,28,000 |

Stated in ounces, the net import of gold and silver in the last five years has been :

It may be of interest to note here that in the seven years 1895.96 to $1901-02$ the registered imports of rupees have amounted to $R_{5,20,91,013}$ and the exports to Rio,33,04, SS8, making a net withdrawal from the currency of $\mathrm{R}_{5,12,13, \mathrm{~S}_{7} \text {, say } 512 \text { lakhs. }}$

[^0]
## Trade with Countries

The trade of India with the world, in merchandise imported and exported, was distributed as follows last year ( $R, 000$ omitted) :

The trade with Europe was about 63.5 per cent, and with Asiatic countries about 24 per cent of the whole. Approximately the trade of India is conducted with European countries to the extent of two thirds, and of that trade much the largest share is carried on with the L'nited Kingdom, which indeed took 40.6 per cent of the whole trade that India did with the world last year; but this was a much smaller proportion than in previous years, owing chiefly to the diversion of Indian exports to European countries direct instead of through England.

In the appended list are enumerated the princip.l countries with which our trade is conducted, and the value in each case (in rupees, 000 omitted). It should be noted that the places assigned in the list to some European countries might need revision if we knew the destination of the exports to Egypt.

|  |  |  |  |  |  | 189\%-1900 | 1000-01 | 1901.02 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 14. | Mauritius | - | - | - | - | 2,68,15 | 3,72.80 | 3.34,59 |

## Shipping

In 1899-1900 the contraction of the export trade caused by failure of crops was followed by a reduction in tonnage, and the further contraction of the trade in 1900 -or led to another reduction in both numbers and tonnage. Last year, with the revival of trade following on the return of agricultural productiveness, there was an increase in tonnage, of which about 96 per cent was steam tonnage.

Below are given the number and tounage of steamers and sailing vessels, with cargoes and in ballast, which entered from and cleared to foreign countries :

| $\begin{aligned} & 1898-99 . \\ & 1899-1900 \\ & 1900-01 . \end{aligned}$ |  |  |  | No. | Tons | Average tonnage |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | - |  |  | 9,686 | 9,115,646 | 9+1 |
|  | - |  | . | 8,528 | $8,627,486$ | 1,012 |
|  |  |  |  | 8;302 | 8,269,430 | -996 |
| 1901.02 |  |  |  | 8,613 | 9,625,317 | 1,118 |

The total number of steamers which entered and cleared was 4,917 , with an aggregate burden of $9,211,549$ tons, the average tonnage of each steamer being 1,873 tons.

The entries from and clearances to the United Kingdom were $2,366,986$ tons, being $24^{\circ} 6$ per cent of the total tonnage. Entries from and clearances to British Possessions amounted to $4,001,933$ tons, or 41.6 per cent of the whole. The tonnage from and to the United Kingdom and British Possessions amounted iherefore to two-thirds ( 66 per cent) of the whole.

The vessels which enter and leave the ports of India for the most part fly the British flag, the tonnage under that flag representing 79 per cent of the whole. Adding the proportion of the tonnage of vessels under the British Indian registry, it appears that about 81 per cent of the trade of India is carried under the British flag.

The number of vessels under foreign flags, which entered and left Indian ports last year, was 1,333 , their burden aggregating $1,711,157$ tons, a considerable increase on the preceding year. The number of vessels under the principal flags as stated below shows how quickly the employment of German and Austrian vessels in the Indian trade is increasing. They are in great measures steamers of the Austrian Lloyds, the North German Lloyds, and the Hansa lines:

## Frontier Trade

The value of this trade has increased in a very satisfactory way during recent years, and it has now attained substantial dimensions. The figures, including trade in gold and silver as well as in merchandise, are ( $K$ ):

The record of gold and silver is, however, necessarily so fragmentary that, in considering the geographical distribution of the trade, it will be convenient to notice only the figures which relate to merchandise. These are entered below, the principal countries being arranged geographically, proceeding from west to east along the line of frontier ( $R$ ):

As has been said in former years, the registration of the trade includes much which at the present day is not really foreign (frontier) trade any more than is the trade between British territory and a Native State, such as Mysore. Most of the trade with Kashmir and with the Shan States should be classed as internal trade, and the registration posts now maintained in British territory to register the trade passing to and from these States should be removed to the northern frontier of Kashmir and the eastern frontier of the Shan States. The record would then show the flow of really foreign trade carried across what is practically the British frontier of India.

Accepting the conditions, however, as they exist, the facts may he taken generally to be as stated below:

About 42 per cent of the whole trade crossed the North-Westirn frontier last year. The principal countries with which trade is conducted are Kandahar, Kabul, Bajaur, and Kashmir.

There was a material increase in the trade with each of the countries specified; but there were no special features in the trade inviting comment.

The new cardvan route to Persia, from Quetta by way of Nushki and Seistan, offers facilities to traders of which increasing advantage has bren taken. The trade is as yet small, and Seistan is not specified with the others in the foregoing list, but its development has been suggestively quick. From $R_{1,80,000}$ in $1899 \cdot 1900$, it increased to $R_{5,17,000}$ in $1900-01$, and last year again to $\mathrm{R}_{12,05,000}$, the largest items in the exports thither being cotton piece goods, indigo, and tea.

Of the trade which crosses the Northern and North-Eastern frontior, that with Nepal is far the most considerable, and is of importance, amounting to ${ }_{31} .6$ per cent of the whole frontier trade last year. Except for the contraction of the trade in teak with the Northern Shan States and Karenni, the trade over each section of this frontier increased satisfactorily in the year, and there was a noticeable increase in the trade with $W_{\text {estern China, which has hitherto kept at }}$ a disappointingly low level. There is but little in the trade with China at present, teyond the importation of raw silk and yellow arsenic and the exportation of cotton and manufactures of cotton; but it has possibilities if it is nursed.

The general character of the trade carried on across the Irdian frontiers will be inferred from the appended list in which are entered the principal articles imported and exported, and their value last year (in R):

| Inports |  |  | Exports |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Caule | $1900-01$ | 1901-02 | Cotton, raw | 190001 | 1901-02 |
| Other animals |  |  | Cotton yarn: | 11,50,150 | 12,75,617 |
| Drugs and medicines, including charas | 17,56,704 | 2.,01.48y | European <br> Indian | $22,63 \cdot 556$ | 35,68,457 |
| Fruits, vegetables, and |  |  | Cotton goods : |  | 02 |
| nuts . - | 30,48,336 | 37,19,320 | Forcign |  |  |
| Grain and pulse (largely rice) . |  |  | Indian | - $\begin{array}{r}151.40,523\end{array}$ | $1,78,57,514$ $6,4,7,525$ |
|  |  | 1,37 | Grain and pulse | - 15,10,805 | $1,1,7,525$ $10,35,365$ |
| Hides, skius, and horns . . . . | 26,04,822 | 26,70,353 | Metals, mainly bra copper, and iron | . 26,00,900 | 10,35,363 |
| Provisions: Ghi | 76.32,367 | 82,77,756 | copper, and iron Provisions | 26,00,900 | 33.10,350 |
| Pickled tea | 20,74,324 | :5,01,603 | Salt | 2.4 .43863 | 21,46,743 |
| Seeds (chicfly linseed and rapesced) | 41,99,965 | 53,28,405 | Silk goods | $\begin{aligned} & \quad 35,97,884 \\ & \text { - } \quad 14,7,3,890 \end{aligned}$ | $43,13,875$ $11,24,430$ |
| Silk - . | 10,63,703 | 25,69,016 | Spices | - 25,29.710 | 10,24.430 |
| Wood and timber, chiefly teak | 86,85,357 | 74,59,658 | Sugar Tobacco | - $\begin{array}{r}22,60,690 \\ \text { - } \\ \hline\end{array} 4,28,835$ | 32,19,792 |
| Wcol, raw . | 29,87,987 | 32,92,258 |  | 35 | 12,82,42S |
| Wvollen goods. | 14,51,453 | 14,19,094 |  |  |  |

The relative importance of the trade of each frontier province with the countries on the other side of its border will be seen from the figures of last year's trade here appended (in lakhs of R):

The trade of the Panjab (which will now fall in the main to the new Frontier Province) is chiefly with Kabul and Kashmir, and the tribal regions lying between India and Afghanistan. The trade of Bengal is chiefly with Nepal, and of Burma with the protected States lying between Burma, China, and Siam.

## THE

# TRADE OF BRITISH INDIA 

WITH<br>FOREIGN COUNTRIES

For the official year ending March 31, 1903

General Summary

The value of the trade of the year, excluding Government transactions, is subjoined, with the values of the preceding four years for comparison. The values are stated in rupees:

The whole trade of the year in merchandise and treasure is greater than of the preceding year by the large sum of 757.5 lakhs ( $£ 5,050,100$ ) equivalent to a rise of 3.2 per cent. The increase is smaller in the case of imports than exports, being 287.5 lakhs ( $£ 1,917,500$ ) or 2.8 per cent for the former and 470 lakhs ( $£ 3,132,600$ ) or 3.5 per cent for the latter. The results are not, however, quite so favourable when viewed in detail. First separating merchandise from treasure the imports are seen to be smaller than in 1 goi-02 by 273 lakhs ( $£ 1,820,700$ ) or 3.3 per cent; and looking to the steady progress in previous years, notwithstanding the widespread destitution arising from the failure of the crops in 1899, it may seem surprising that after. two years of good harvests imports should decline. But it was not in the natural order of things that imports should increase rapidly when exports were declining as in the years 1899-1900 and 1900-01. And even in the following year when the great revival of the export trade gave an ample margin for large imports, the return of material prosperity to the people did not exhibit itself in such an addition to their consuming capacity as to justify an increase in the value of the imports of 524 lakhs ( $£ 3,494,100$ ), of which 306 lakhs ( $£ 2,039,700$ ) was in cotton goods. The fall last vear in these ooods bv nearly ase lakhe ( $f$, fan inn) is therefore
not surprising, and there can be little doubt that the unfortunate prevalence of plague in many of the great distributing centres and marts has been inimical to a large business. Similar causes seem to have affected the trade in woollen manufactures which decreased by 56 lakhs or nearly 29 per cent. Among the other principal imports which declined are sugar, petroleum, raw silk, machinery, and salt. Although the trade in sugar decreased by $9+5$ lakhs, it was extraordinarily large in view of the practical exclusion during nearly threefourths of the year of Austrian and German sugar through additional countervailing duties : and of petroleum large stocks are held. The principal articles in which there was improved trade are copper ( 382 lakhs), hardware and cutlery ( 29.2 lakhs), iron and steel ( 22.3 lakhs), and silk manufactures ( $1+8$ lakhs).

The exports of foreign merchandise are steadily declining for reasons explained at page it of this paper. Of Indian merchandise the exports were 3.8 per cent greater than in $1901-02$, and far in excess of any previous year. The value of the trade in grain and pulse which incrased by $7 \boldsymbol{j}$ lakhs ( $64,794,900$ ), has been surpassed only in $1898-99$, when there was a very large export of both wheat and rice, while last year though there was a phenomenal trade in rice and the commoner food-grains, there was only a moderate export of wheat. There was an abundant crop and large exports of cotton, a marked recovery in lac. raw wool, and vegetable oils, and a good trade in hides and skins. The year was, however, far from being wholly favourable, and if it had been the exports would have reached a far higher value. Thus owing to short crops the value of jute was less than in the previous vear. notwithstanding a considerable rise in price ; and there was a very heavy fall in rapeseed and linseed. Low prices also considerably reduced the value of opium and brought the depression in the tea and indigo industries to the lowest depths. The out-look for tea is, however brighter for the present year, and less gloomy for indigo, which has suffered severely in the past from unseasonable weather.

Among the manufacturing industries the jute mills in Bengal have prospered, although the exports have not advanced in as marked a manner as in the. two preceding years. The exports of cotton manufactures, principally yarn, show a considetable decline, but they have still maintained a comparatively high level, and as prices held up and raw cotton was cheap the mills, whose output has on the whole been maintained, should not have done badly.

The state of the money market was also satislactory. For the fourth year in succession the maximum rate of the Bank of Bengal did not rise above 8 per cent, at which it remained only from the 19th February to the 26th March when it dropped to 7 per cent. The minimum rate of 3 per cent lasted for over three months from July to October. The course of sterling exchange remained practically steady, the range being from is. $33_{3}^{29} d$. o $15.4 \mathrm{~s}, \mathrm{~d}$. The variation in the price of silver per ounce was on the other hand from $24 \frac{7}{3} d$. to the very low figure of 21110 ., a difference of $14 \% 7$ per cent; and the uncertainty as to the dollar and tael exchanges caused by these fluctuations was some embarrassment to the China trade.

An unusually large share of the balance of 'trade was paid in the precious metals. Including imports and exports by the Government and allowing for the production of the Indian gold mines, valued at $305^{\circ} 3$ lakhs, which is exported to London, the value of the gold absorbed was 1181.8 lakhs and of the net imports of silver 689.6 lakhs. The total of both metals, namely, $1871^{\circ} 4$ lakhs, is the highest value recorded since the great cotton famine of 1865.66 , with the
exception of the year $1890-9 \mathrm{I}$ when the extraordinary fluctuationsin the exchange value of the rupee ranging in a few months from is. $5 d$. to $1 s .8 \frac{5}{5} d$. caused enormous speculative purchases of silver and gold.

## Imports of Merchandise

The value of last year's trade in imported merchandise, namely, 7879 lakhs, is less than of the year $1901-02$ by 273 lakhs or 3.3 per cent, but higher than of any other year. After five years of non-progressive fluctuations, the rapid advance during the three years ending with 1901-02, which include the period of the severe and wide-spread famine of 1899-1900, was exaggerated; and some reaction is not unnatural. The volume of trade was noticeably smaller but prices ranged at a slightly lower level than in 1901-02, in which year also values declined. The aggregate value of the trade in each of the large classes in which all articles are grouped is shown in the figures appended in rupees:

|  | , | 1902-03 |
| :---: | :---: | :---: |
| Animals, living (mostly horses) | 46,65,638 | 44,49,407 |
| Articles of food and drink | 11,75,46,722 | 10,50,62,568 |
| Metals and manufactures of metal, hardware and cutlery, machinery and millwork, railway plant and rolling stock |  |  |
| Chemicals, drugs, medicines, narcotics, dyeing and tanning materials | 2,40,95,992 | 2,44,66,564 |
| Oils | 4,21,89,079 | 3,71,48,452 |
| Raw materials and unmanufactured articles | 3, 81,62,948 | 3,47,20,120 |
| Articles manufactured and partly manufactured | 45,69,87,595 | 43,79,14,64 |

The largest decrease is in the principal class of manufactured articles, there being a heavy fall in cottons, mainly in bleached cloth, after excessive imports in the previous year, and a smaller trade in woollen goods for the second year in succession. Fresh restrictive regulations directed against subsidised sugar, which were in force during nine months of the year, explain the fall in the second class; and the principal decrease under raw materials was of Chinese silk.

## Articles of Food and Drink

The value of the principal articles comprised in the group during the last two years has been (R):

Sugar.-Peculiar interest attaches to the trade in sugar both on account of the large dimensions it has attained and the legislation which has been trice undertaken to countervail the bounties on beet sugar. As the effect of special additional duties imposed on the 6th June 1902 on sugar produced in AustriaHungary and Germany; and from the 1st March 1903 on sugar produced in certain other countries, the importations of beet sugar fell last year to just below half the abnormally large imports of $1901-02$; but in partial compensation of this decline the imports of cane sugar increased by $4^{16}$ per cent. The
quantity of each kind imported from all countries is as follows in the last seven years（cnt）：

In making this division the accepted formula is that half the imports from the United Kingdom consists of beet sugar，but from the evidence of the certi－ ficates of origin presented at the Custom Houses it appears that during the last five month of 1902－03 there was a large preponderance of cane sugar．It is probable，however，that before the effect of the additional duties was felt bect sugar preponderated and accordingly a moiety has been given as heretofore to each class in the following statement of the imports from each country（cwt）：

| － | 1300－97 | 1－0i－3 | 1－20－99 | （Sか－1900 | 190001 | 1901402 | 180－93 |

These figures illustrate the remarkable progress of the trade in beet sugar． The imports from Germany first assumed importance in 1895.96 and Austria－ Hungary entered the field in the following year．To avert the danger threaten－ ing the sugar industries of India through the rapid growth of the imports from these two countries，countervailing duties on subsidised beet sugar were imposed in March 1899．The Calcutta price of beet sugar was then R7－1 a maund，but after the passing of the Act it rose steadily to R8－14 in October 1899，and then after an abrupt fall to R7－12 in December of that year，it again resumed its upward course and reached the maximum of $\mathrm{R} 9-4$＇in June 1900 ．In that month a cartel system was established in Germany，copied from that of Austria，and prices began to decline at first slowly but steadily from September 1900 till April 1902 when the lowest point，$R 6 \cdot 7$ a maund，was reached．The imports which had been temporarily reduced by the rise in prices began to revive as prices fell．In 1901－02 the imports from Austria－Hungary surpassed those from Mauritius，and with large receipts from Germany beet sugar was，as in 189798 ，imported to a larger extent than cane sugar． In the meantime the proceedings of the Brussels Sugar Convention， which was signed by the delegates on the 5th March 1902，had revealed the bounties created by the operations of the trade combinations，known as cartels， formed in Germany and Austria－Hungary，and to countervail these bounties a law was passed authorising the imposition of further additional duties on imported foreign sugar，the bill of lading for which was signed or given after the 22nd May $19 b 2$.

The additional duties may be said to have operated for nine months of the year and their effect was to virtually extinguish the trade in Austrian and German
sugar. Of the total impo-ts from Austria-Hungary slightly more than half was received in April 1932 and by September the trade was nominal. The exclusion of German sugar was complete, as only one ton was received during the last five months of the year. From August considerable supplies amounting for the year to 13,300 tons were received from Belgium and Holland, most of it being Dutch sugar by origin. There were large imports of cane sugar from Mauritius, China, and Java, and in greatly increased quantities from the United Kingdom and the Straits. The total quantity imported of refined sugar, both beet and cane, was less by 8.1 per cent than in 1901-02, but it was larger than in any other year and greater b; 32.5 per cent than in the year $1898-99$ at the close of which countervailing duties were first imposed. This large importation is suggestive of the development of a strong demand for foreign refined sugar of a better quality than common Indian sugar, which was perhaps stimulated by the Indian crops being deficient.

Of beet sugar the imports into Bengal were about one-third of the imports in 1991-02. The decline of imports at Karáchi, which has been the chief recepient of sugar from Austria-Hungary, was 54.8 per cent and at Bombay $\mathbf{2 7}^{\prime \prime}$ i per cent. But of both cane and beet sugar there were larger imports than in 1901-02 into Bengal, Bombay, and Burma, the decline being marked only in the case of Karáchi. Owing, however, to a lower level of prices the value of the trade of all the provinces diminished.

The price of beet sugar in Calcutta rose from R6-7 a maund in April 1902 to $\mathrm{R}_{7}-8$ in May and R 8 in June. The minimum was $\mathrm{R}_{7}$ in August and the closing price R7-6. The price of beet sugar at Bombay opened at R9 a cuwt and closed at Rir a rise of 22 per cent; and the rise at Karáchi was from R8-12 to R1I-5 a cwt or 29 per cent. The price of Mauritius sugar in Bombay also rose by in'5 per cent from R9-4 to Rio-5 a cwt. The price of beet sugar in London was dissociated from the price in India by the operation of the countervailing duties; and owing to the depression caused by over-supplies record prices ruled until the end of September, since when they have advanced.

The importation of molasses from Mauritius, chiefly to Calcutta, continued on a large scale, the quantity being $22,47 \mathrm{I}$ tons.

Provisions.-The value decreased by 7.2 per cent to 1.84 lakhs. The principal articles of those enumerated are dates, of which and other adried fruits there were smaller imports into Western India ; and salted tsh, wet and dry, the imports of which into Burma diminished in value though not in quantity. The imports of $g h i$ which is in demand when Indian cattle are suffering from want of pasturage, were nominal. During the last six months of the year, biscuits, jams, and condensed milk were on the list of enumerated articles, the value imported of each during that period being $6.74,1^{\circ} 87$, and 4.08 lakhs respectively. The unenumerated miscellaneous articles, however, still stand at the high value of over 76 lakhs.

Salt.-The importations were unusually large in 1901-02, in fact the largest recorded, and heavy stocks remained in bond. Accordingly the supply from all the principal sources, Egypt excepted, was smaller last year, the deficiency being nearly 93,000 tons. The total quantity received, $4^{23}, 286$ tons, was, however, still much above the average. Of this 90 per cent was imported into Bengal and the remainder into Burma where the demand for foreign salt is increasing. The decrease of the import duty on salt from two and a half rupees to two rupees per Indian maund, except in Burma, where the duty continues to be one rupee per Indian maund, should increase consumption and stimulate importation. The reduction took effect from the i8th March 1903.

Liquors.--The importations continue to increasc. Of the malt liquor imported nearly 94 per cent was from the United Kingdom, the share of other countries being 239,400 gallons out of a total of $3.820,900$ gallons. The production of the Indian breweries during 1902 was $6,47+860$ gallons of which a large proportion was consumed by British troops.

There was a considerable advance in spir-its, the imports from the United Kingdom being 54 per cent of the whole. The quantities imported, including spirit methylated, perfumed or used with drugs, were (gals) :

Chief among the other countries are Ceylon, from which arrack is imported into Madras, and the Straits, which sends rum to Burma. The proportion of the different kinds of potable spirit imported were (gals):

The importations of Wine increased by ${ }_{11}$ per cent to $333,85^{1}$ gallons. Nevertheless the trade tends to decline or at the best to remain stationary.

The Spices imported are chiefly betelnuts from the Straits and Ceylon into Madras and Bengal, and cloves from Zanzibar into Bombay. The quantity re: ceived was larger but there was a proportionate fall in the price of betelnuts.

A large import trade in Grain and Pulse is an unfailing sign of distress and high prices, and the reduction to less than half the quantity imported in 1901.02 , and one-seventh the quantity in the previous year, is an approach to normal conditions. The value of ${ }_{1} 34$ lalihs is, however, still high.

The importations of Tea increased by 20 per cent but the quantity$3,848,000 \mathrm{fb}$ is rather less than half the quantity imported in 1896.97 . The bulk of the imports is destined for re-exportation by sea and land; and the decline indicates the diminished use of Bombay as a depôt for the shipment of teas owing to the establishment of direct communication between Russia and the Far East by vessels which touch at Colombo; and also to the facilities for sending, tea in transit to Central Asian and Persian markets through the port of Batoum.

Metals and Manufactures of Metals
Hardware and Cutlery-

|  | $1900 \cdot 01$ $R$ | $\begin{gathered} 1901.02 \\ R \end{gathered}$ | $\begin{gathered} 1902 \cdot 03 \\ R \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Cutlery | 9,64,948 | 12,11,227 | 12,67,004 |
| Agricultural Implements | 8,37,520 | 6,97,286 | 7,73,926 |
| Other implements and tools | 11,77,439 | 9,41,765 | 10,86,191 |
| Sewing machines - | 6,19,725 | 5,91,046 |  |
| Unspecified hardware |  | 1,36,25,051 | 1,61,60,244 |
| Total | 1,84,14,739 | 1,70,66,375 | 1,99,91,678 |

There was a satisfactory advance last year. The progress is most noticeable under the very comprehensive class "unspecified hardware," from which since October 1902 enamelled ware has been separated. The value of this ware imported during the last six months was 8.14 lakhs, of which about 83 per cent came from Austria-Hungary and most of the remainder from Germany. British goods were just below 70 per cent of the whole; and the cheaper Continental goods, mostly from Germany, Austria-Hungary, and Belgium, were under 25 per cent, a slightly lower proportion than in the previous year.

Metals.-There was a very large importation of the principal metals, namely, copper, iron, and steel, all three of which increased and the first named conspicuously. Since the famine year of $1899^{-1900}$ the importation of copper has steadily increased, but it is still far below the levels of the years preceding the famine of 1896-97. This metal being largely used by the masses for domestic utensils, and being easily re-convertible into a marketable form, is in large demand when times are good and is thrown back on the market when times are bad, as happened in 1900; so that the trade in copper faithfully reflects the economic condition of the people, a fact frequently noticed in these reviews. The demand is moreover readily affected by a rise in the price of the metal, and owing to the operations of speculators prices are very unstable. The following figures showing the imports during the last eight years are of interest:

|  | $\mathrm{C}_{\mathrm{wt}}$ |  | $\mathrm{C}_{\mathrm{wt}}$ |
| :---: | :---: | :---: | :---: |
| $1895-96$ | 471,824 | $\mathbf{1 8 9 9 - 1 9 0 0}$ | 90,846 |
| $1096-97$ | 240,648 | $1900-91$ | $159,97 \mathrm{I}$ |
| $1897-93$ | 322,348 | $1901-02$ | 193,822 |
| $1898-99$ | 251,301 | $1902-03$ | 395,850 |

Prices ruled lower in 1902-03 than in the previous year and the importation was greater by $10 \Psi^{\circ} 2$ per cent, the increase of the unwrought metal being $114^{\circ} 8$ per cent. The development of the use of electricity for traction, lighting, and other purposes must have augmented the demand for manufactured copper. The total value of the copper imported was 196 lakhs, and in 1901-1902, 108 lakhs.

Iron and Steel.-The importations were large of both metals and exceeded those of the former year in each case by about 8 per cent. Though better than in recent years of depression the trade in iron is below the level of six years ago but this is due chiefly to the increasing use of steel in place of iron. The trade in both has been (tons):

|  | Iron | Steel |
| :--- | :---: | :---: |
| $1897-98$ | $196, S 95$ | 92,355 |
| 1898.99 | 164,517 | $S 4,145$ |
| $1899-1900$ | 149,097 | 72,636 |
| $1900-01$ | 169,992 | 92,586 |
| $1901-02$ | 180,604 | 158,468 |
| $1902-03$ | 196,292 | $171,00 S$ |

The increase during the last six years has been 78,050 tons or nearly 27 per cent. The commoner forms in which iron is largely imported, namely, bars, angle iron, and sheets of black iron, are of Belgian origin or shipped from Belgian ports, but the United Kingdom still retains a virtual monopoly of galvanised and tinned plates and a very large preponderance in beams, girders, pipes and tubes, and other manufactures of iron. The advantage secured by the cheaper products of Belgium is much greater in the case of steel than of iron, and that country now holds the foremost place in the import trade in steel. The
descriptions of both iron and steel imported from the United Kingdom and Belgium were as follows last year (in tons):

|  | United Kingdom |  | Belgium |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Tron | Steel | Iron | Stecl |
| Bars | S,065 | 5.388 | 24,805 | 31,914 |
| Sheets and plates | 1,464 | 21,377 | 3,722 | 12,550 |
| ", " galvanised | 57, $\mathrm{SO}_{9}$ | ... | 292 | ... |
| , tinned | 12,135 | $\ldots$ | 11 | $\cdots$ |
| Hoop | 2,397 | 12:495 | 1,476 | 2,576 |
| Angle, bolt, and rod | 1,92S | ... | 5,839 | ... |
| Angle, channel, and spring | ... | 8,400 | ... | 2,337 |
| Beams, pillars, girders, and bridgework | 3.129 | 8,2, 6 | 35 | 12,848 |
| Pipes and tubes . | 18,69 \$ | ... | 681 | ... |
| Nails. screws, rivets, and washers | 2.961 | -•• | 3,153 | $\cdots$ |
| Other sorts | 28.377 | 7,207 | 2,593 | 30,656 |
| Total | ${ }_{13} 6,963$ | 63.114 | 42,607 | $\mathrm{y}_{2}, 8 \mathrm{St}$ |

Lead is received chiefly in the form of sheets for lining tea chests. There were large importations in 1901-02, and with a smaller production of tea last year importations declined. This is almost entirely a British trade.

Tin, mostly from the Straits, and Zinc were imported in larger quantities, owing to the larger trade in copper.

The importations of Machinery and Milliark were to the value of 280 lakhs, a decline of 67 per cent from the 300 lakhs reached in 1901-02. In that year the trade in Calcutta was very active, both for extensions in jute mills and the supply of electrical power for traction, lighting, and fans, and the trade at that port has decreased by over 28 lakhs. In Bombay there was an improvement of nearly 15 lakhs, but the trade is still below the level prevailing before the depression of the cotton mills.

The importations of Railway $\mathbb{H}_{\text {aterials }}$ were on a very large scale, the total being the highest recorded, though only slightly in excess of the values of the years $1897-98$ and $1899-1900$. The total is divided into private importations for companies $\mathrm{R}_{\mathrm{I}}, 61,17,207$ and for the Government $\mathrm{R}_{3,74,} \mathrm{~S}_{5,224}$. In this classification all material imported by companies for State-owned lines leased to them is treated as Government stores.

## Chemicals, Drcgs, Medicines, Narcotics, Dyeing and Tanning Materials

The trade in Chemicals declined by 2 lakhs to about the level of the year 1900-or, and there was an advance of 4 lakhs in Drugs. Of unmanufactured tobacco a much smaller quantity was imported, but the far more valuable trade in the manufactured article expanded. The value of the cigarettes imported rose from 20.9 to 23.6 lakhs. They are received from varied sources and of greatly differing qualities, but interest chiefly attaches to the commoner kinds largely manufactured in the United States, which are now smoked to a greater extent each year by the lower orders in the large towns. This habit, which has also taken root in conservative China, can hardly fail to extend, and the trade should increase largely. It may be noted that there is a cigarette factory in Shanghai, and that part of the imports is of its manufacture. The imports last year from Hongkong of $50,000 \mathrm{Hb}$ may be of American origin, but from the Treaty Ports also $57,500 \mathrm{th}$ were received.

The imports of Aniline and Alizarine dyes were a little over 9 million pounds, valued at $R 65,49,728$, compared with a slightly smaller quantity valued at R $65,74,638$ in $1901-02$. The imports are to the extent of about nine-tenths into Bombay, and the complete recovery from the depression during recent years of distress is satisfactory. Rather more than half the quantity is of the cheaper alizarine dyes.

## Oils

Mineral oil.-The very large importation of Kerosene oil in 190:-02, of which about 47 per cent was Russian oil in bulk, was last year reduced to $81,45^{1,255}$ gallons, a fall of ten million gallons equivalent to 109 per cent. The supremacy in the Indian market of Russian oil over American oil, which was first definitely asserted in $1895 \cdot 96$, had until last year rapidly increased, so that American oil which was undersold by Russian oil, whether imported in cases or in bulk, seemed in danger of being excluded from a market which is more regardful of cheapness than quality. It is therefore somewhat remarkable that while the imports of Russian oil diminished by 13,352,000 gallons, American oil was more largely imported to the extent of $3,461,000$ igallons, the proportions now being roughly 71 million gallons of Russian oil to 9 million gallons of American oil. The revival of the competition is further indicated by the bulk oil installations of the Standard Oil Company and the rising prices of Russian oil.

The development of the oil-fields in Burma is creating active competition with imported oil. The production last year was reported to be $54,849,000$ gallons of petroleum, which must have represented quite half that quantity of kerosene, and the shipments from Burma to Indian ports were kerosene $17,269,000$ gallons, and lubricating and other oils $3,435,000$ gallons. The value of the foreign trade in kerosene was $314^{\circ} 6$ lakhs, or 37 lakhs less than in the previous year, and including nearly $7 \frac{1}{3}$ million gallons of lubricating oil the total value of the trade in mineral oil was $346 \frac{1}{2}$ lakhs.

## Raiv Materials

Coal.-Estimated by its value coal is no longer an article of much consequence among imports, but the trade excites interest by reason of the competition of the imported article with Indian coal whose position in the home market should, it is thought, be unassailable. That this will be so at no very distant date can hardly be doubted, but to achieve this communications must be improved and local freights lowered, as English coal has in favourable years great facilities for cheap transport to Western India, besides being of superior quality to Indian coal. Of last year's imports the quantity from the United Kingdom increased to nearly gi per cent of the total, but there was a very small import from other countries so that the total decreased by $3^{2,500}$ tons. The total quantity including 31,100 tons imported by the Government was 228,500 tons and the value $\mathrm{R}_{43,81,000}$. So recently as in $1894 \cdot 95$ the quantity imported was $8+8,000$ tons, valued at $R_{1,51,78,000 \text {. The production of coal in India was then below } 3}$ million tons, while last year it was over $7 \frac{2}{5}$ million tons.

Silk of which the bulk comes from China is mainly woven in the Bombay mills and the trade is subject to fluctuations. Last year the China crop was deficient in quality and quantity, and there was a reduction in the value of the
imports of 31.8 per cent compared with 1901-02, and with the previous year of $45^{\circ} 7$ per cent, the figures of the trade being :

|  |  | It | R |
| :---: | :---: | :---: | ---: |
| $1900-01$ |  | $2,535,377$ | $1,01,69,402$ |
| $1901-02$ | $\cdot$ | $2,128,483$ | $S 0,96,200$ |
| $1902-03$ | $\cdot$ | $1,639,189$ | $55,16,149$ |

Cotton.-The importations of cotton which assumed some importance during the year $1900-01$ when the Indian crop was a failure have fallen to the normal level of comparative insignificance, the quantity last year being $67,500 \mathrm{cwt}$ and the value $R: 6,95, i 25$. The very large proportion of long stapled cotton received two years previously, namely, 173,300 cwt out of a total of 225,200 cwt, was thought to forecast the production on a much larger scale of the higher counts of yarn which had previously been imported. The imports of long stapled cotton have, however, now dropped to $30,000 \mathrm{cwt}$, and the spinning of yarn of No. $3^{1}$ and upwards in the Bombay mills has shown no progress in the last three years, the quantities being:

## Manufactured Articles

Cotton yarn.-The very small imports of $1900-01(3.48$ million tb) were attributed to a high range of prices and the impaired purchasing power of the people, but after a not very satisfactory recovery to 38.3 million tb in 1901.02 the imports fell again last year to the abnormally low level of $33^{\circ} 7$ million tb ; The high cost of the raw material left a very small margin of profit for Lancashire spinners and the prices of yarn were slightly lower than in the previous year, but making allowances for all passing conditions the tendency of the trade to decline is strongly marked, and it is evident that the production of the Indian mills will, to a steadily increasing extent, supply the place of imported yarn.

The decrease was greatest in the medium counts Nos. 31 to 40 , which form the major portion of the imports and consist, to the extent of about two-thirds, of coloured yarn (ib) :

|  |  | 1900.01 | $1901-02$ | $1902-03$ |
| :--- | :--- | ---: | ---: | ---: |
| Nos. I to 30 | . | $8,021,527$ | $7,408,346$ | $7,259,555$ |
| $\# 31$ to 40 | - | $20,226,936$ | $23,860,468$ | $19,811,878$ |
| Above 40 | - | $4,372,812$ | $4,405.299$ | $4,244,846$ |

During these three years the production of yarn in the Indian mills has been :

|  |  | 1900-01 | 1901-02 | 1902-03 |
| :---: | :---: | :---: | :---: | :---: |
| Nos. 1 to $3^{\circ}$ |  | 339,202,175 | 559,412,589 | $563,0+7,171$ |
| ", 31 to 40 |  | 11,066,106 | 12,611,556 | 12,512,860 |
| Above 40 | - | 2,704,806 | 914,021 | 674,495 |

The proportion of local spinnings to the imports in the case of the coarser counts is now $77 \frac{1}{2}$ to 1 and of Nos. 31 to 40 it has risen to a little below 1 to $1 \frac{1}{2}$.

Cotton goods.-This trade is so extensive, for the value last year was $35^{\circ} 7$ per cent of the total value of all imported merchandise, that a reduction in value of nearly 7 per cent has a very depressing effect on the results of the entire import trade, and on the trade of the Western Presidency, where the whole of
the decline occurs, the effect is very marked. The figures appended exhibit the course of the trade during the last 14 years in the three classes of grey, white, and coloured goods, the quantities being stated in millions of yards:

|  | Grey (uableached) | White <br> (bieached) | Coloured, printed, or dyed | Percentage of grey in total |
| :---: | :---: | :---: | :---: | :---: |
| $\left.\begin{array}{c} \text { Average } 1889-90 \text { to } \\ 1893.94 \end{array}\right\}$ | 1,223.47 | $363 \cdot 62$ | 374 ${ }^{16}$ | 62 |
|  | 1,209'77 | $418 \cdot 58$ | $351 \times 49$ | 61 |
| 1899-1900 | 1,27491 | 444*55 | 471•88 | 58 |
| 1900-0t | 1,192.17 | $467 \cdot 48$ | $343 \cdot 16$ | 59 |
| 1901-02 | 1,186.76 | 580\%09 | $422 \cdot 86$ | 54 |
| 1902-03 | 1,283.68 | 38998 | $433 \cdot 66$ | 61 |

It is at once seen that the fall occurs in bleached goods and that there was a much larger business in unbleached cloth as well as an advance in coloured cloth. The imports of bleached cloth in 1901-02 were on an exaggerated scale, far above the off-take; and though the reduction last year was 190 million yards the trade of that and the preceding year taken together would give an average of 485 million yards which is above the normal. The large trade in grey goods coinciding with the restricted trade in white goods raised the share of the total for grey goods from 54 to 61 per cent, at which level it had stood for some years. The striking movements from one class to another during the last two years, being diametrically opposite, do not support any conclusions as to changes in fashion; and sudden changes are hardly to be expected. But the general fact stands out with sufficient clearness that the trade progresses only in the two smaller classes of white and coloured goods. The competition of each class in the principal descriptions of goods is shown in the following statement of the imports in millions of yards:

In the first two groups, in which unbleached goods are most largely represented, the decrease last year of bleached goods was less marked than in the
remaining classes. The further descriptions of goods belonging to one or two of the three classes are stated below with the importations in millions of yards:

|  |  | s900-or | 1901.02 | 1902-03 |
| :---: | :---: | :---: | :---: | :---: |
| Grey : ${ }^{\text {a }}$ |  |  |  |  |
| Madapollams | - . | $25^{\prime} 45$ | $34^{2}$ | 36.64 |
| T-cloths and domestics |  | 15.09 | $14^{\circ 66}$ | 17.14 |
| White: |  |  |  |  |
| Nainsooks . | - • | 133.27 | 208.8 | 13517 |
| Cambrics, twills, m lawns. | muslins, | 17.01 | 14.94 | 10.82 |
| Checks, spots, stripes | - - | 6.59 | 12.4 | 5.95 |
| Long cloth . | - . | $1 \cdot 64$ | $1 \cdot 66$ | $1 \cdot 67$ |
| Colourcd: |  |  |  |  |
| Prints and chintz | - - | 109.28 | 15192 | 156.1 |
| Cambric, twills, muslins |  | $53 \cdot 69$ | 7478 | 77.64 |

Here again the fall in white goods is noticeable. The descriptions most largely manufactured in India are unbleached sheetings, T-cloths and domestics, and dhutis and chádars. There is moreover a rapidly increasing production in the Indian mills of white and coloured goods, the quantity manufactured last year being $18 \cdot 6$ per cent of the quantity of all woven goods.

The extent to which cotton piece-goods are imported from the linited Kingdom is indicated below (million yards) :

|  | 19000: |  | 2501-02 |  | 190:-03 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total U | $\begin{gathered} \text { from } \\ \text { cing dom } \end{gathered}$ | Total | $\xrightarrow[\text { Ifod King }]{\substack{\text { Iom }}}$ | Total $U$ | $\stackrel{\text { frnm }}{\text { King }}$ |
| U'inbleached goods | - 1,192:17 | 1,183.2S | ${ }_{1,1} \$ 6 \cdot 76$ | 1,178.46 | 1,283.68 | 1,273.06 |
| Bleached | - 46748 | 406.83 | 5 ${ }^{\text {So'09 }}$ | $574 \cdot 38$ | 389.98 | $3^{82} 74$ |
| Coloured | - $3+3 \cdot 16$ | 327.04 | +22.86 | $401 \cdot 23$ | $433 \cdot 66$ | 41546 |

The proportion of grey goods is 99.2 per cent, and of bleached goods 98. 1 per cent, this for the latter being smaller than usual owing to the restricted trade. For coloured goods the proportion drops to 95.8 per cent. The aggregate value of imports of cotton yarn and woven and other goods in the last five years was (in millions of R):

|  | Yarns | Woven and other <br> goods | Total | Proportion to <br> totalimprts of <br> merchandise |  |  |
| :--- | :--- | :--- | :---: | :--- | :---: | :---: |
| $1898-99$ | - | - | 25.52 | 246.78 | 272.3 | 40 |
| per cent |  |  |  |  |  |  |

Silk goods.-There was a revival of trade, both in Bombay and Burma, where the imports are chiefly directed. The value was 16.3 millions of rupees, compared with 148 millions in 1901-02, of which Bombay took 11 millinns and Burma 3.6 millions. Nearly three-fourths of the piece goods of pure silk were, as usual, of Chinese and Japanese manufacture.

Woollen goods.-In all the principal classes of goods, namely, piece goods, shawls, carpets and rugs, and braids there was a heavy fall, the total value being 14 millions of rupees, or $5^{\circ} 6$ millions less than in $1901-02$. A speculatively large trade in the two preceding years seems to be the main reason for the setback of which about 46 per cent is in German goods; but to a certain extent fabrics made of cotton may have been substituted for pure woollen goods. The Indian woollen mills are doing well, but the industry is still on a very limited scale.

Other manufactured goods.-Of the other articles enumerated in this class the following are the most important:

|  |  | $\begin{gathered} 1900-01 \\ \boldsymbol{R} \end{gathered}$ | ${ }^{1901-02}$ | $\underset{R}{1902-03}$ |
| :---: | :---: | :---: | :---: | :---: |

| Limbrellas. . | - | 27,00,332 | 18,04,231 | 18,85,647 |

With one or two unimportant exceptions every head shows satisfactory progress, and there is a remarkable increase in jewellery, which was probably occasioned by the Delhi Durbar. The trade in carriages and carts, which increased rapidly some years ago with the transient boom in cycles, was declining until revived by the advent of motor-cars. The importations of tea-chests were excessive in $1900-0$ and the trade is returning to a normal level. The practice of importing umbrellas in parts to be fitted and covered locally accounts for the smaller numbers of the complete article. Paper was more largely imported, though the value declined slightly. This paper, of which the cheaper kinds are largely manufactured in Austria, undersells the paper manufactured from grass, gunnies, and rags in the Bengal mills, and consequently the local industry is suffering from acute depression.

The principal imports are stated in the following list with the value of the trade in each for the last two years (in thousands of R) :

|  |  |  | 1901-02 | 1902.03 |
| :---: | :---: | :---: | :---: | :---: |

| 30. Carriages and carts | - . | 30,99 | 37,32 |
| $31 . \mathrm{Coal}$ | - • | 45.09 | 37,13 |

Two-thirds of the trade consist of cottons, metals and metalware, machinery and railway material, sugar, and petroleum.

General distribution of the import trate. - The value of the inports of foreign merchandise was thus distributed among the principal countries with which the trade is carried on:

| 1. United Kingdom |  | - | $\begin{gathered} 1899.99 \\ 68.8 \end{gathered}$ | $\begin{gathered} 1899-1900 \\ 68.9 \end{gathered}$ | $\begin{array}{r} 1900-01 \\ 63.8 \end{array}$ | $\begin{gathered} \text { tont-02 } \\ 645 \end{gathered}$ | $\begin{gathered} 1502 \cdot 03 \\ 66.3 \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 2. Belgium |  | - | $3 \cdot 3$ | $2 \cdot 6$ | $3 \cdot 2$ | 37 | 3.9 |
| 3. Russia | - |  | 3 | $3 \cdot 4$ | 37 | $3 \cdot 9$ | 3.4 |
| 4. Austria-Hungary | . |  | $3 \cdot 5$ | $3 \cdot 4$ | $4 \cdot 1$ | 48 | $3 \cdot 2$ |
| 5. Straits Settlements |  |  | $2 \cdot 9$ | $2 \cdot 7$ | 3 | $2 \cdot 9$ | 29 |
| 6. China |  | - | $2 \cdot 5$ | 2.2 | $3 \cdot 3$ | 22 | $2 \cdot 8$ |
| 7. Germany |  | - | $2 \cdot 5$ | 2.4 | $3 \cdot 4$ | 37 | 27 |
| S. Mauritius |  |  | $2 \cdot 9$ | $2 \cdot 3$ | $3 \cdot 2$ | 2.4 | $2 \cdot 5$ |
| -9. France - |  |  | 1.5 | 14 | $1 \cdot 4$ | 17 | $1 \cdot 8$ |
| 10. United States |  | . | 2 | 17 | $1 \cdot 6$ | 1.4 | 15 |

The change in the position of some of the Continental countries is noticeable. Belgium has risen from the fifth to the second place, although its trade shows little actual increase, and Russia retains the third place but with a reduced percentage owing to a large reduction in the imports of petroleum. On the other hand the exclusion of bounty-fed sagar by special duties has reduced Austria-Hungary from the second to the fourth place, and similarly the loss of its sugar trade and a much smaller business in woollen goods have brought down Germany from the fourth to the seventh place.

## Exports of imported goods

With the exception of a small increase in $1901-02$ the re-export trade has declined steadily for the last ten years as shown in the figures appended, giving the value in rupees:

| 1893-94 |  | 4,43,19,7:2 | 1898-99 |  | 65 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1894-95 |  | - 5,05,74,144 | 18¢9-1900 |  | 3,29.24,912 |
| 1895-¢6 |  | - 4,71,75,159 | $1900-01$ |  | 3,20,85,314 |
| 1896-97 |  | - 4,03,36,372 | 1901-02 |  | 3,25,98,163 |
| 1897-98 |  | - 3,75, 11,720 | 1902-03 |  | 2,93,56,132 |

Bombay is the principal distributing centre for trade in foreign produce with ports in the Persian Gulf and on the east coast of Africa. A much smaller share falls to Karáchi, and the re-export trade of the other ports is trivial. The marked decline dates from the time plague became epidemic in Bombay and Sind, but the more potent and lasting causes are the opening of direct comm unication between Europe and the regions served, and in the case of the
once flourishing tea trade, the transport of China and Ceylon tea from Colombo in Russian subsidised vessels. The principal export to the United Kingdom is raw wool, most of which is imported overland from Afghanistan and Thibet. Cotton manufactures form about 40 per cent of the entire trade, and in these there was a fall last year of 19 per cent. The new Persian tariff fixed by a convention between Russia and Persia, which took effect from the 14th February 1903, and substituted high specific duties for a general rate of 5 per cent ad valorem, will probably further depress the trade with Persia.

## Exports of Indian Merchandise

The marked increase in the exports in 1901.02 to the highest value till then recorded was followed by a further rise in value last year of 3.8 per cent. The progress of the export trade since $1880-81$ is indicated by the figures given below :

The fluctuations of the trade from year to year are illustrated by the appended list of the principal articles in the trade and their values (in R ):

|  | 1599-1900 | 150001 | 1901-02 | 1908-03 |
| :---: | :---: | :---: | :---: | :---: |

| Coffe | I, $48,47,146$ | 1,22,84,49 | 1,25,02,200 | 1,32.12,628 |
| Indigo | 2,69,25,107 | 2,13,59,808 | 1, $5_{5,22,55}{ }^{\text {f }}$ | 1,20,56,819 |
| Wool, raw | 1.35,63,745 | 90,29,944 | 79,38259 | 1,16,53,204 |
| Wood and timber | 1,08,69,202 | 1,07,06,089 | 89,15,416 | $87,51, ¢ 55$ |
| Oils | 86,86,48i | 65,65,180 | 69,17,507 | 85.76,793 |
| Provisions | 61,70,586 | 57,75.562 | 60,96,61: | 67.88 .510 |
| Silk, raw | 69,86,106 | 51,22,057 | 66,34, | $65.48,153$ |

Indian exports consist largely of raw agricultural products, and in these there is a continual rise and fall following on prosperous or adverse seasons. The trade, last year, shows variable conditions in respect of the crops exported during that period. Thus of rice and the common varieties of food grains there was great abundance and a phenomenal export, but the wheat crop of 1902 was unfavourable, and there was only a moderate export though greatly exceeding that of the previous year. Again, the cotton crop was very large, but the jute crop was somewhat deficient and the yield of oilseeds was very much reduced. The improved condition of livestock is shown by the much larger yield of wool and a supply of hides and skins much below the swollen figures in the years following the last famine. The depression of tea and indigo is due to special causes but in the case of the latter also to very adverse seasons. The reduced value of
opium represents a fall in price as well as a deficiency in the Malwa supply, and the remarkable revival in the trade in lac was stimulated by a brisk rise in price.

Compared with 1901-02, last year's prices of nearly all the important staples except jute, hides and skins, and lac either fell or remained almost stationary. Taking those articles of which the quantity as well as the value is recorded, representing 97 per cent of the total exports, and assigning to the quantilies of last year the value of $1901-02$ there appears an aggregate fall in value or price of $1 \cdot S_{3}$ per cent and an increase in quantity deduced from the values of 5.24 per cent.

The great preponderance of raw products exported as food and as material for industrial purposes is shown in the following classification of the articles of trade which is adopted in the accounts:

|  | IS90-9000 t9000 | 190102 | 1902-03 |
| :---: | :---: | :---: | :---: |
| Articles of food and drink | $30,37,78,416 \quad 26,30,45,344$ | $29,31,40,1+5$ | $35,89,93,056$ |

In the following paragraphs the general features of the trade of the year in the important articles are discussed.

## Articles of Food and Drink

Coffee.-The exports have been :

Owing to the anticipation of smaller supplies better prices were realised than in the previous year, the average price in London for East India plantation coffee in 1902 being 6os. $1^{\frac{1}{2}} d$. per cwt compared with 47 s . $3^{\frac{1}{2}} d$. in 1901 . The over-supply of Brazilian coffee, which depresses the prices of all descriptions, does not, however, give signs of any permanent diminution. Improvement is noticeable in the quantity exported last year, but not in the declared values, which is probably due to the absence of a local market and a quotation of Indian prices. The last season appears to have been favourable, but it is impossible to ascertain the real position of the coffee industry in Southern India, owing to the withholding of statistical information and the inaccuracy of estimates of the yield, which, in 1901, gave a total of the reported and estimated production amounting to little more than half the quantity exported. About one-fourth of the exports is taken by France, and the conclusion of an arrangement, by which Indian coffee is to continue to be assessed at the minimum rates of the French tariff, removes the menace of differential treatment, which at one time threatened the Indian industry.

Rice.-The exports are stated below in cwt ( 000 omitted) :

The volume of the trade, last year, reached a level greatly in excess of any previous year, the exports from Burma having increased by 52 per cent. The winter crop of 1901-02 was the largest known in Burma, and as the following monsoon gave good crops throughout India, a larger proportion than usual of the Burma crop was available for export to foreign markets; and though the next season's rice crop was not equally good in Burma, there was an improvement in Bengal and Madras. Prices ruled lower than during the three previous years, and in addition to a large trade with Europe there was an exceptional Eastern demand owing to failure of the crops in Japan and Southern China.

The exact destination of the exports is not known, for about one-third of the total is nominally shipped to Port Said to receive orders there as to ports to which it is to be conveyed, and a similar practice prevails in respect of other ports. But generally it may be said that out of the 47 million cwt about $20 \frac{2}{2}$ million cwt or 44 per cent was shipped to Europe, nearly 22 million cwt or 46.5 per cent to Asiatic countries, of which the principal are the Straits, Ceylon, Japan, Arabia, China, Java, and the Philippines; 3 millions or 6.4 per cent to East Africa and adjacent islands in the Indian Ocean; and $1 \frac{1}{2}$ millions or 3 per cent to South America and the West Indies.

Wheat.-Notwithstanding a generally unfavourable harvest the export of wheat was, contrary to expectations, on a much larger scale than in 1901-02 which followed a good harvest. Apart from the necessary cessation of exports on extensive failure of the crop as in 1900-01, the trade in wheat depends on the very variable margin between prices in India and Europe, and hence is subject to greater fluctuations than the trade in any other principal staple. With a big crop offering at remunerative prices a very large trade may be done; and though the export of a million and-a-half tons in 1891-92 was due to very exceptional conditions, there have been five other years since $1881-82$, the last being 1898.99, in which the exports have exceeded or approximated to a million tons. The exports, last year, amounted to 514,607 tons, valued at $45^{\circ} 5$ lakhs, prices being lower than in 1901-02, when the quantity shipped was 366,091 tons, valued at 325.6 lakhs. The bulk of the exports was, as usual, from Karáchi. This season there has been a very good harvest and with falling prices a large export business should be done.

Other food grains. - The fall in the price of millets and pulse, and a bountiful supply from good harvests, caused an advance on the moderate exports of the previous year of 154 per cent, the quantity $235,89+$ tons being the largest recorded, and value, 160 lakhs, having been surpassed only once, namely, in 1898-99.

The trade in Fruit and vegetables almost doubled last year, the exports of cocoanut kernel or copra from Madras having increased nearly four-fold to $18 \frac{1}{3}$ lakhs, the total of the head, including fresh fruit and vegetables sent to Ceylon and the Straits, being 32 lakhs.

Provsions and Spices. - The most important of various articles under these two heads are ghi (clarified butter) and pepper. There was a larger trade in the former and smaller exports of the latter. The total values are as below (in R):

|  | Provisions | Spices |
| :---: | :---: | :---: |
| 1900-01 | 57,75.5iz | 54,15,153 |
| 1901-02 | 60,06,61 | 74,08,269 |
| 1902-03 | $67,88,510$ | 63,62,103 |

Sugar.-As recently as in 1896-97 more than a million cwt of sugar, chiefly unrefined, was exported from Madras to the United Kingdom, and there was also a trade with Ceylon in refined sugar. Both branches of the trade have sunk to insignificance owing to the competition of foreign sugar and deficient crops of Indian cane.

Tea.-Exports in the last five years have been :

|  |  | ID <br> 1000 omitten $)$ | $R$ |
| :---: | :---: | :---: | :---: |
| $1898-99$ | - | 157,71 | $8,04,48,038$ |
| $1899-1900$ | $\cdot$ | $175,03 \mathrm{~S}$ | $9,09,21,120$ |
| $1900-01$ | - | 190,305 | $9.55,09,301$ |
| $1901-02$ | - | 179,685 | $8,14,94,893$ |
| $1902-03$ | - | 181,423 | $7,36,16,421$ |

Though the quantity, last year, was slightly larger than the much diminished exports of 1901-02 and nearly nine million pounds below the exports of the previous year, the results were, both as regards the actual minimum and the general average of prices, the worst of the recent years of depression. The early closing of the season belied the unfounded anticipations of a large crop, which, owing to the over-loaded state of the market, had unduly depressed prices, and the total production in India as now ascertained is less by 2.7 million th than in the previous year; but the advance of prices consequent on the certainty of a moderate crop did not take place till too late in the season to raise the average price. The diminished productiveness of the crop owing to unfavourable weather and shortness of labour cannot, in itself, be a subject of congratulation, but it is entirely a healthy sign that large additional areas are not coming into bearing, and this with fresh and expanding markets available warrant the belief that equilibrium has been established between supply and demand. The principal countries, to which Indian tea has been supplied in the last three years, have been ( $\mathrm{ib}, \infty 00$ omitted) :

The smaller export to Australia is probably only a temporary set-back owing to the general trade depression caused by prolonged drought, and the increase against other countries, notably America and Russia, is very satisfactory. From the 1st April 1903, with the practically unanimous assent of those interested in the tea industry, a compulsory customs duty or cess of one quarter of a pie per pound on all tea exported from India was imposed by law with the object of
creating a fund, to be administered by a special committee, for pushing the sale and increasing the consumption of such tea. This measure should have very important results. Further relief is being given to the black tea market by the increased manufacture of green tea, which will probably have a successful future. The sale of tea in India is also being vigorously pushed, but though the total in farthing packets and cups of tea is imposing and the numbers increase satisfactorily, the quantity disposed of when stated in pounds of tea, namely, $430,000 \mathrm{tb}$ in eighteen months, is still insignificant in proportion to the great potentialities of the home market. The decision of the Indian Tea Association to form an organised Scientific Department to conduct scientific investigation and researches into the cultivation and manufacture of tea is further a progressive and important measure deserving of every encouragement and success. The reported area and yield of tea in India were as follows in the last two years:

|  | Area (acres) |  | Yield (ib) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1901 | 1902 | 1901 | 1502 |
| Assam and Cachar | 338,186 | 339,640 | 134, S96,317 | 132,117,278 |
| Bengal | - 135,129 | 135,158 | 46,203,980 | 46.027, ${ }^{\text {2 }} 3$ |
| Madras and Travancore | - 31,463 | 31,493 | 5,434,749 | 6,426,97 ${ }^{1}$ |
| Panjai, U. P. of Agra and | , |  |  |  |
| Burma | - 19,989 | 18,96! | 4,767.727 | 4.017189 |
| Total | - 524,767 | 525,252 | 191,302.773 | 188,589,26ı |

## Metals

There is only one important item in this class, namely, Manganese ore, in which there is an expanding trade of recent origin. Last year 3,105,490 cwt were exported, valued at nearly 19 lakhs.

## Chemicals, Drugs, Narcotics, and Dies

Saltpetre.-This is the only chemical substance of any importance exported from India. The trade fluctuates but makes no progress, though there was an improvement last year:

|  |  |  |  | Cwt | R |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1900-01 | - | - | - | 346,388 | 33,05,324 |
| 1901-02 | - | - | - | 354,401 | 35,68,046 |
| 1902-03 | - | - | - | 410,622 | 4327,283 |

Opıum.-The fluctuations in exports and prices are indicated by the figures below :

|  |  |  |  |  |  | price |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Bengal chests | Bombay chests | Total <br> chests | Value $\mathbf{R}$ | Bengal R | Bombay $\mathbf{R}$ |
| 1897-98 | . 37,846 | 18,223 | 56,069 | 6,09,75,632 | 1,029 | I,209 |
| $1898-99$ | . 41,169 | 25,959 | 67,128 | 7,12,60,093 | 1.049 | 1,082 |
| 1899-1900 | - $4^{2,427}$ | 24,923 | 67,350 | 8,20,37,148 | 1,215 | 1,223 |
| 1900-01 | . 44,994 | 24,714 | 60,708 | 9,45,54,357 | 1,361 | 1,349 |
| 1901-03 | . 48,062 | 17,541 | 65,603 | 8,52,29,854 | 1,299 | 1,301 |
| 1902-03 | . 48,154 | 19,377 | 67,531 | 8,01,69,354 | 1,144 | 1,295 |

The exports of Malwa opium, which were greatly restricted in 1901-02 through the drought in Central India, improved but still remained much below the normal. The average price of Bengal opium though low was higher than was anticipated from a rapidly falling market, as there was a recovery in prices at the close of the
year. The wholesale price per chest ranged from $\mathrm{R}_{1,075}$ in May 1902 to $\mathrm{R}_{1,262}$ in March 1903. The quantity sent to China increased by 2.943 chests, but the exports were smaller to the Straits by 392 chests, to Cochin China by 300 chests, and to other countries by 323 chests.

Indigo.-The course of the export trade during the last ten years is indicated in the subjoined figures (cwt):

|  | From Calcuta | From Majras | Fiom other ports | Total | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | $\boldsymbol{N}$ |
| $1893-94$ | - 76,398 | 42,751 | 12,250 | 131,399 | 4,18,21,281 |
| 1 S94.95 | . 106,S30 | 44,974 | 14.504 | 166,308 | 4,74,59,153 |
| 1 S95-96 | - 111,714 | 62, ${ }^{2} 5$ | 13,198 | 187,337 | 5.35,45,112 |
| 1 S96-97 | - 109,001 | 43,680 | 16,842 | 169,523 | 4,37,07,570 |
| 1897-98 | - 71,364 | 48,165 | 14.320 | 133,849 | 3,05,74,019 |
| 189S-99 | 8t,779 | 42,760 | 10,6,48 | 135,187 | 2,97,04,781 |
| 1 S99-1900 | - 59,078 | 39,853 | 12,489 | 111,420 | 2,69,25,107 |
| 1900.01 | - 71,637 | 18,940 | 11,914 | 102,419 | 2,13,59,8o8 |
| 190:-02 | - 55,03S | 25,400 | 0,312 | S9,750 | 1,85,22,554 |
| 1902-03 | - 29,403 | 32,242 | 3,732 | 65,377 | 1,20,56,819 |

During the first three years of the series the production and exports of indigo were above the average and in $1895-96$ were exceptionally large, but then came a sudden drop followed by a continuous and rapid decline culminating last year in a fall of $27^{2} \mathbf{2}$ per cent in quantity and $34^{\circ} 9$ per cent in value.

That these figures reveal a very grave position cannot be denied, but it is not quite so bad as the bare facts would imply. The fall in prices largely induced by the competition of synthetic indigo, by diminishing profits, would inevitably lead to the poorer lands being discarded; but planters have also had to contend with a cycle of bad seasons terminating last year with the worst season ever known in Bihar. The reduction in the acreage last year, compared with the average of the previous five years, is about 50 per cent for the whole of Bengal, Northern India, and Madras. It is to be feared that restricted cultivation will continue over the greater part of the country, unless there is a considerable advance in prices, but in the most important indigo region, namely, Bihar, where the fall was about 33 per cent compared with 70 per cent in Lower Bengal, the want of moisture had restricted sowings and some recovery may be expected this year. Whether with good seasons giving a larger yield and a better quality of dye, prices will advance sufficiently to restore some degree of prosperity to the industry remains to be seen, but it does not appear that synthetic indigo has quite the mastery of the position that its producers claim for it. Last season's prices were rather better notwithstanding the poor quality than in the previous season, and the fall in the general value is due to the small proportion of Bengal indigo and the consequent preponderance of the cheaper Madras indigo. The larger export from Madras is, however, a distinctly favourable sign of the continued demand for the natural dye. A very small proportion of last year's crop went to the Continent of Europe, the chief consumers being Egypt, the United Kingdom, Japan, and the United States.

Compared with indigo other dyeing and tanning materials are of small importance. The trade in these has been:

## Oils

The export value of R85,76,793 shows an advance of 24 per cent on the value of $1901-02$ and is higher than of any previous year except 1899.1900 when the value was $R 86,86,48 \mathrm{I}$. In that year, however, there was a considerable export of mineral oil from Burma, which is now all diverted to India, though paraffin wax to the value of 10.4 lakhs was exported last year from that province to foreign countries. The increase was remarkable in the exports of cocoanut oil, mainly from Madras, which rose from 12.9 lakhs to $29^{\circ} 6$ lakhs. Castor oil, of which the price fell, was largely exported, chiefly from Calcutta, the value being 26.8 lakhs in 1901.02 and 24.7 lakhs last year.

## Raw Materials

Coal.-The trade in coal did not maintain the high level of the two previous years which it suddenly acquired through the rise in the price of English coal. The quantity exported was $431,55^{2}$ tons, a fall of 177 per cent from the 524,687 tons exported in $1901-02$. The reduction in value from 56.6 to 38.8 lakhs was 31.5 per cent as prices fell considerably. The principal destinations to which coal was shipped were Colombo ( 274,473 tons), Singapore ( 89,592 tons), Aden ( 21,214 tons), Mauritius ( 14,700 tons), Sumatra ( 14,655 tons), British East Africa ( 11,562 tons), and Natal ( 2,324 tons). At Colombo and Aden ground was lost through the competition of English coal, but at Singapore its position was maintained.

The quantity imported was rather more than half that exported, the net export thus beirg only 203,000 tons. The output of the Indian mines, which is chiefly consumed in the country, was $7,424,480$ tons, valued at about 205 lakhs, the production of $1901-02$ being $6,635,727$ tons.

Cotton.-The large exports of 1901.02 were exceeded last year, the level attained being higher than of any year since $1890-91$. There was a heavy crop for the season ending September 1902, which exceeded expectations, and the crop for the present season, part of which was shipped last year, was reported to be more extensive. The exports from Bombay, where the trade is mainly centred, were smaller than in 1901-02, but the quantity shipped from Madras was greater by 74 per cent and from Sind by 41 per cent. Prices ruled at a lower level as shown by the view of the trade in the figures below :

The table appended states the destination of the cotton during the same period (cwt, 000 omitted):

|  | 1896-97 | 1897-99 | 1898-99 | 1899-190 | 1500-01 | 1901-02 | 1902-03 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Japan | 1,499 | 1,311 | 1,941 | 2,319 | 634 | 2,526 | 1,722 |
| Germany | S71 | 586 | 857 | 531 | 656 | 754 | 1,122 |
| Belgium | 631 | 394 | 614 | 298 | 599 | 413 | 779 |
| Italy | 668 | 501 | 606 | 370 | 421 | 520 | 647 |
| Austria-Hungary | $53^{8}$ | 334 | 439 | 204 | 381 | 373 | 569 |
| France | 382 | 177 | 363 | 178 | 279 | 267 | 419 |
| United Kingdom | 379 | 206 | 217 | 133 | 381 | 166 | 372 |
| China | 163 | 151 | 283 | 285 | 109 | 559 | 196 |

A very large business was done with the Continent of Europe and made good he deficiency in the exports to the Far East. Japan continued to be the prinsipal consumer of Indian cotton, but whereas in 1901-02 its requirements bsorbed over 443 per cent of the total quantity, they were satisfied last year by $s 5$ per cent. In the case of China the drop was proportionately much greater, ut in 1901-02 the exports were stimulated by the failure of the China crop; ihile the next season's crop was remarkably abundant and was exported to an inusually large extent to !apan, where the market had also been greatly overtocked by the heary speculative shipments of Indian cotton during the previous eason.

Hides and Skins.-The great mortality of cattle in the famine of 1900 , horn in the enormous exports in that and the following year, has somewhat estricted the supply of hides and though there was a good demand at advanced rices the quantity by weight was less, and the number not much larger, than in $901-02$. As in that year there was also a very brisk demand for untanned kins and at higher prices, but not to the detriment of the trade in tanned skins, ihich had been greatly reduced in $1901 \cdot 02$; for the falling-off last year in raw kins was less than half the increase in the exports of tanned skins. The exorts are :

|  | Hzdis |  | Skins |  |
| :---: | :---: | :---: | :---: | :---: |
|  | No. | R | No. | R |
| 1897-98 | 10,072,470 | 3.37,40,320 | 0, $\mathbf{S}_{42,403}$ | 1,11,93,650 |
| 189S-99 | 8,864,329 | 2,94,84,746 | 10,667,44 ${ }^{8}$ | 1,20,66,09 |
| 1899-1900 | 13,474.323 | 4,92,49,617 | $16,83_{3} 8.54^{\circ}$ | 1.96 .33 .877 |
| $1900-01$ | ${ }_{4}^{1,654,818}$ | 5.26,62,193 | 14.349,4t4 | 1,72,22.325 |
| $1901-02$ | 7,9:2,097 | 2,87.99,134 | 20.810,676 | 2,69,67.253 |
| 1902-03 | 8,209,524 | 3,01,76,046 | 18, ${ }^{\text {S } 20.523}$ | 2,51,93,622 |

$\mathcal{F}$ ute. -The crop of 1902 was estimated to be about 80 per cent of the full :rop of the previous year, and this shortage caused a considerable advance in srice. The quantity exported was, however, much above the average and has seen exceeded only on tro occasions, namely, in $1897-98$ and 1901-02, while the ralue was greater than in the former year when the price was low. Jute now anks very high among the staples of Indian trade, and being virtually a monoonly of Bengal, is to that province, both for export in its raw state and for manulacture, what cotton is to Bombay. The total value of the exports to foreign countries of raw jute and the manufactures of the jute mills of Bengal is about four-fifths the value of the exports of raw cotton and its manufactures from all parts of India.

Of the jute exported the United Kingdom took 42.5 per cent, Germany $19^{\circ 2}$ per cent, the United States $13^{\circ} 6$ per cent, and France $12^{\circ} 5$ per cent, of the whole. Appended are the figures of the trade:

|  | Cwt (000 omitted) | Value R |  | $\begin{gathered} \text { Cwt } \\ (000 \text { omitted) } \end{gathered}$ | Value K |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $180 \%-98$ | - 15,023 | 10,12,99,916 | 1900-01 | - 12,414 | 10,86,77,562 |
| $1898-99$ | 9,864 | 6.94,12,452 | 1901-02 | - 14,755 | 11,79,72,723 |
| 1899.1900 | 4,725 | 8,07,16,465 | 1902.03 | - 13,036 | $11,12,04,752$ |

Seeds.-The volume of the trade in oilseeds closely follows the yield of the crops, which being dependent on very uncertain conditions of rainfall for the necessary moisture in the soil at sowing time, and also for the principal
varieties (which mature during the winter) on showers during growth, is often liable to great contraction and sometimes, as in 1899-1900, to extensive failure. The seasons for the produce exported last year were generally unfavourable for linseed and rapeseed, and the crop of the latter in the Panjab, which had been phenomenally abundant in the previous year, was followed by a very poor crop in 1902 with the consequent great diminution of exports. But there was a good crop of sesamum and the exports of this and the other seeds increased, except of earthnut, which, however, maintained a high level in comparison with that of the five years following 1895-96, when the combination of drought and disease (now combated by introducing fresh varieties) devastated the crop. The fall in prices was more or less pronounced in the case of all seeds, except poppy and cotton seed of which the prices rose. The sudden development and expansion of the trade in cotton seed is very remarkable, this article having in a year or two reached among oilseeds the second place in quantity and the fourth place in value, the exports being valued at roi lakhs. A large demand for Indian seed sprang up in tgot owing to the excessive prices for Egyptian seed caused by speculation, and as it has been found satisfactory both for oil and cakes the continuance of a large and probably increasing trade seems assured.

The dimensions and fluctuations in the trade in seeds and in each of the principal descriptions are stated below :

## Total trade

Quantity of each seed (cwt, ooo omitied)

Silk.-The comparatively large exports of 1901-02 were fairly maintained last year but there was a fall in price. This trade has made no progress during the last twenty years.

Teak arood.-The continued decline in the exports of teak is due to failing supplies from the Shan States arising from expiry of contracts and a poor floating season.

Wool.-There was a recovery from the depression of recent years caused by the great mortality of sheep in the times of drought. Nearly 28 million to were exported, of which all but a trifling amount went to the United Kingdom.

Among the other items in this group are the following with their values in $R$ :

|  | $1900 \cdot 01$ | 1901002 | 1902-03 |
| :---: | :---: | :---: | :---: |
| Animal bones | 58,41,916 | 50,48,815 | 54,97,967 |
| Oil-cake | 31,07,934 | 29,84,230 | 34,2,616 |
| Rice-bran | 35.19,856 | 38,08,333 | 44,40, $13^{2}$ |
| Hemp | 33,72,394 | 38,45,298 | 43,47,247 |
| Horns | 17,54,672 | 13,35,759 | 17,05,257 |
| Nica | 16.43 .310 | 10,50,511 | 13,13,909 |

The large business done by the rice mills of Burma in milling rice for export is reflected in the increase of the bye-product ricc-bran, which is exported as fodder. The exports of animal bones have increased rapidly in recent years, the quantity now averaging 100,000 tons.

## Articles mancfactlred and partly mancfactered

The following figures indicate the relative proportions of the export trade in each principal class of manufactures in the last five years ( $R$ ):

|  | 1 Sg 589 | 1897-1900 | 190001 | 1901 -02 | 100203 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Cotton yarn and goods | - $7,78,84,697$ | 8.27,41,246 | 5,70,29.566 | 10,86,53,003 | 10,00,76,891 |
| Jute goods | 5.79, $3_{3.595}$ | 6.26,43.405 | 7,86.46.012 | 8,71,14,174 | 9,01,95,997 |
| Tarned hides and skins | 3,29,41,349 | 3.57,45,259 | 4.49.41, $8_{5}^{5} 3$ | 2,65.40.461 | 2,89,81,566 |
| Lac | 85,64,921 | 1,12,48,159 | 1,04,97,976 | 95.45.409 | 1,50,75,444 |
| Coir | $29 n 4.549$ | 33.23.104 | 40,17.414 | 37,73,520 | 45,76,343 |
| Apparel | 15,19.2S2 | 15,97,207 | 20,19,814 | 20.99.597 | 26,4,959 |
| Woollens | 22,02,855 | 25.32,550 | 29,64.332 | 26,97,670 | 25,15.715 |
| Silks | 12,81,890 | 12.Sy,ot 8 | 12.54.447 | 10,54,69+ | 9.4.4,85: |

The large decrease in the first and most important class is more than compensated by the increase in the other principal classes enumerated above and in the total of the group.

Cotton manufactures.-There was a remarkable revival of this trade in 1901-02, following a period of acute depression, and though this high level was not maintained last year prices kept up and the exports as shown below were much above the average:

|  |  |  |  |  | goods |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | I) <br> ( 000 omitted) | $R$ |  | yards <br> (ooo omitt | $R$ |
| 1898-99 . | - 219,624 | 6,6c,30,883 | 1898.99 . | - 60,619 | 1,05,83,827 |
| 1899-i900 | - 240,693 | 6,90,21,784 | 1899.1900 | - 69,556 | 1,26,17,445 |
| 1900-01 | - 118,081 | 4,17,05,891 | 1200-01. | - 69,342 | 1,43,32,297 |
| $1901-02$ | - 272,468 | 9,31,66,944 | 1901-02 | - 72,625 | 1,42,54,982 |
| 1902-03 | - 248,539 | 8,54,00,344 | 1902-03 | 69,535 | 1,32,75,43 |

During the same period the production of yarn and cloth in the Indian mills has been (in $\mathrm{Hb}, 000$ omitted):

| Yarn- |  |  | in Bombay | elsewhere | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1898-99 | - | - | 368,050 | 144,335 | 512,385 |
| 1899-1900 | - | - | 371 ,041 | 142,882 | 513,923 |
| 1900-01 | - |  | 243,625 | 109,348 | 352,973 |
| 1901-02 | - | - | 415,028 | 157,910 | 352,973 $\mathbf{5 7 2 , 9 3 8}$ |
| 19C2-03 | - | - | 419,526 | 156,709 | $576,235$ |
| Cloth- |  |  |  |  |  |
| 1898-99 | - | - | 82,366 | 19,324 |  |
| 1899.1900 | - | - | 78,583 | 19,482 | 101,690 98,065 |
| 1900-01 | - | - | 80,689 | 18,059 | 98,065 98,748 |
| $1901-02$ | - |  | 98,546 | 21,105 | 98,748 $\mathbf{1 1 9 , 6 5 1}$ |
| 1902-03 | - | - | 100,466 | 22,308 | 122,774 |

The principal markets for Indian cloth are the Straits, Ceylon, the Coasts of the Persian Gulf and the Red Sea, and East Africa. The decline last year was in coloured goods for the Straits and the Philippines. Of the far more important trade in yarn, 93 per cent was with China and nearly 3 per cent with the Straits. While the prices of yarn were maintained both the raw material and coal were cheaper; and the main impediment to the tiade. with China, where there was a good demand and the stocks of yarn were reduced, was the fluctuations in the price of silver and the consequent uncertainty as to exchange.

Fute manufactures.-The dimensions and value of the export trade are (ooo omitted in each case) :

|  |  |  | $4895 \cdot 99$ | 1899.1900 | 1900.01 | 1901.02 | 1902-03 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Bags | . | . No. | 180,896 | 168,324 | 202,908 | 230,127 | 225,195 |
| Cloth | - | . yards | 280,382 | 307,021 | 365,215 | 4i8,567 | 492,884 |
| Value | all sorts | R | 5.79,83 | 6:26,43 | 7,86,4 ${ }^{6}$. | 8,71,14 | 9,01,99 |

Though the total value is the highest recorded the progress is very much below the rapid rise of the two previous years. The value of gunny bags decreased mainly owing to a falling off in the exports to Australia of 40 per cent, equal to 48 lakhs, the industries of the Commonwealth having suffered greatly from severe and prolonged drought. The exports of cloth increased materially and the value of this trade has approximated to, and will doubtless soon exceed the value of the export trade in bags. The chief consumer of cloth is the United States which took 353.8 million yards, valued at $295: 6$ lakhs, or 72 per cent of the total. The manufactures of the jute mills, of which 34 are in Bengal and one at Cawnpore, are also largely consumed in India, and their total value in 1901-02 was estimated at about ${ }_{1} 150$ lakhs.

Hides and skins, tanned-The exports during the last three years are shown below:

The figures for the first year are abnormally large owing to the great mortality of live-stock occasioned by the drought; but as mentioned in the remarks on raw hides and skins at page 22 of this paper, the very large decrease in the following year, especially in skins, was due to a preference being shown for untanned skins. Last year the demand for tanned skins partly revived. The tanning industry is chiefly located in Madras.

Lac.-This is a very speculative trade which is frequently subject to violent fluctuations. Last year there was a sharp rise in price and the value of the exports nearly doubled.

The greater part of the increase in Apparel is in boots and shoes, which now form two-fifths of the whole, and of which there were large exports to South Africa.

The Woollen manufactures exported consist chiefly of carpets and rugs, and until recently the trade was making satisfactory proyress.

The trade in Silk manufactures appears to be decaying, and the value is only half what it was ten years ago.

General distribution of the cxport tradc. - The value of the exports of Indian produce and manufactures in the last live years was distributed in the ratios stated below among the principal countries with which the trade is carried on:

The position of Egypt is fictitious as it is credited with enormous shipments of rice, wheat, and oilseeds, which on departure are declared for Port Said, but are wholly destined for various European countries, and hence the share of those countries in the export trade is proportionately lowered. The reduced value of opium and smaller takings of cotton yarn have lowered the share of China, and Japan has fallen from the sixth to the eighth place owing to a very much smaller consumption of raw cotton.

## Customs Revenue

An Act amending the Indian Tariff Act, 1894, was passed on the 6th June 1902. to admit of special duties being imposed on sugar produced in countries where the difference between the rate of duty or other taxation to which foreign sugars are subject and that imposed on the home product exceeds 6 francs per 100 kilog for refined sugar and 5 francs 50 centimes for other sugar, the duty being limited to half such excess. Special duties were imposed on the same date by notification on sugar produced in Austria-Hungary and Germany, but they were not to apply if the bill of lading had been signed and given before the twenty-third day of May 1902. By a further notification special duties were imposed with effect from the 1 st March 1903 on sugar produced in France, Denmark, the Argentine Republic, and Russia, but the existing additional countervailing duty on Russian sugar was cancelled from the same date. The existing additional duties on sugar exported from France were revised from the ist September and on sugar exported from Holland from the 6th December 1902. The additional duties on sugar shipped from Austria-Hungary between the ist August 1901 and the 31st July isce were reduced to an amount equal to the maximum bounty, and refund of the excess paid was authorised in February 1903.

In October 1902 petroleum with its flashing point at or above 150 degrecs Fahrenheit and intended for use as fuel was exempted from customs duty in excess of five per cent ad vatorem, and from the $24^{\text {th }}$ February 1503 vinegar in casks and green copperas were similarly exempted from customs duty in excess of two and-a-half per cent ad valorem.

The tariff valuations for assessment to duty were revised in January and a new schedule of valuations issued.

The gross revenue from imports, salt excluded, was $\mathbf{R}_{4,44,25,184}$, a smaller sum than the revenue ( $R_{4,5} 8,03,231$ ) realised in $1901 \cdot 02$, the decrease being chiefly due to the smaller importations of bounty-fed sugar and cotton goods, which were only partially compensated by a larger revenue from silver, copper, and spirit. The ordinary duty on imported sugar was $R_{25}, 13,018$, the additional duty $\mathrm{R}_{16,94,655}$, and the special duty $\mathrm{R}_{3,33,1 I_{3}}$.

The following are the principal items from which the customs revenue on imports is derived ( $R$ ):

|  | 1900001 | 1901-02 | 190203 |
| :---: | :---: | :---: | :---: |
| Articles of food and drink: |  |  |  |
| Spirit | 63,83,274 | 64,94,209 | 69,64,128 |
| Sugar | 52,52,863 | 72,41,973 | 45,40,786 |
| Provisions | 5,97,228 | 5,57,936 | 5,76,499 |
| Spices | 4,59,900 | 4,42,999 | 4,36,244 |
| Chemicals, Drugs, Narcotics, Dyes: |  |  |  |
| Drups, medicines, narcotics | 4,41,872 | 4,68,457 | 4,97,731 |
| Chemicals | 3,26,417 | 3,41,405 | 3,21,144 |
| Dyes and tans | 3,39.825 | 3,99,77 ${ }^{1}$ | 3,88,596 |
| Metais and ar ticles made of metal: |  |  |  |
| Hardware and cutlery | 9,48,850 | 8,96,065 | 10,36,819 |
| Copper and brass | 4.55,409 | 5,47,584 | 10,93,547 |
| Iron and steel | 4,69,913 | 5,21,971 | 5,48,863 |
| Silver | 13,34,940 | 30,63,806 | 39,40,580 |
| Manufactures of cotton: |  |  |  |
| Piece goods: grey (unbleached) | 49,58. 157 | 50,29,944 | 53,15,838 |
| white (bleached). | 21,21,125 | 27,25,971 | 17,72,512 |
| coloured | 20,20,570 | 23,55,804 | 22,99,067 |
| Oils: |  |  |  |
| Petroleam | 49,29,432 | 53,05,10 ; | 53,79,857 |

Of the other articles enumerated in the tariff schedules, only the few specified below yield an appreciable revenue (R):

|  | 1900001 | 1901-02 | 190203 |
| :---: | :---: | :---: | :---: |
| Apparel | 7,72,162 | 8,09,264 | 8,09,564 |
| Silk and articles made of silk | 13,32,609 | 11,68,389 | II, 02, 8 40 |
| Woollen goods | 10,52,056 | 9,88,535 | 7,07 |

It will be observed Irom the foregoing figures that, though the Indian tariff comprises a lengthy list of dutiable articles, there are but few on which individually any revenue of importance is collected: these are spirituous liquor, petroleum, sugar, metals (including siiver), and cotton piece goods. These yielded last year three-fourths of the whole revenue. Cotton piece goods are much the most important source of revenue in the tariff, and the rate of duty on them is only $3 \frac{1}{\frac{1}{9}}$ per cent, whereas the general rate is 5 per cent.

The export tariff schedule is limited to rice and rice-flour, a duty of three annas (three-sixteenths of a rupee) being levied on each maund of $82 \frac{8}{7} \mathrm{Ht}$. The duty realised last year, $R 1,26,06,624$, was higher than it has ever been before, the export trade having increased with a very large crop in Burma and a smaller demand for consumption in India. From the ist April 1903, a cess or customs duty on tea exported beyond the limits of British India is also levied at the rate of one-quarter of a pie per pound to provide a fund to be expended for the promotion of the interests of tea by a specially constituted committee.

## Balance of trade

The figures appended state the excess of exports over imports, including merchandise and treasure, in each of the last six years ( $R$ ):

|  | Including Government transactions | Excluding Government transactions |
| :---: | :---: | :---: |
| 1897-9 S | - 10,60,38,000 | 14,92,85,000 |
| IS98-99 | - 30,21,40,000 | 33,86,54,000 |
| 1899-1900 | - 20,76,15,000 | 25,25,58,000 |
| 1900-01 | - 16,47,46,000 | 22,10,20,000 |
| 1901-02 | - $26,78,43,000$ | 31,76,01,000 |
| 1902-03 | - 27,91,77,000 | 33,55,27,000 |

In the same years the drawings of Council bills have been as follows:

|  | 6 | Fachance, pence | 2 |
| :---: | :---: | :---: | :---: |
| 1897-9 S | - 9,506,077 | 154 | $=14,81,28,000$ |
| 1898-99 | - 18,692,377 | 15.98 | $=28,07,64,000$ |
| 1899-1900 | - 19,067,022 | 16.07 | $=2 \mathrm{~S}, 48,01,000$ |
| 1900-01 | - 13,300,276 | 15.973 | $=19,98,3 \mathrm{~S}, 000$ |
| 1901-02 | - 18,539,671* | 15.857 | $=27,53,02,000$ |
| 1902-03 | - 18,499,94 ${ }^{\text {6* }}$ | 16.002 | $=27,74,67,000$ |

## Gold and Silver Coin and Bullion

The value of the imports and exports is ( $R$ ):

|  | Impots | Exports | $\begin{gathered} \text { Net } \\ \text { imports } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Gold- |  |  |  |
| 1897-98 | 7,28,12,000 | 2,37,27,000 | 4,90,55,000 |
| 1 898 -99 | - 8,84,00,000 | 2,33,66,000 | 6,50,34,000 |
| 1899-1900 | . 11,44,88,000 | 2,00, 2,000 | 9,44.06,000 |
| 1900-01 , | - 11,89,80,000 | 11,05,59,000 | S4,2 1,000 |
| 1901-02 | - 8,30,75,000 | 6,36,99,000 | 1,93,76,000 |
| 1902-03 | - 13,19,24,000 | 4,42,78,000 | 8,76,46,000 |
| Silver- |  |  |  |
| 1897-98 | - 13,24,94,000 | 4,77, 19,000 | 8,47,35,000 |
| 1898-99 | - 9,05,56,000 | 5,07,48,000 | 3,98,08,000 |
| IS99-1900 | - 9,52,49,000 | 5.94,82,000 | 3,57,57,000 |
| 1900-01 | - 12,67,87,000 | 3,17,15,000 | 9,50,72,000 |
| $1901-02$ | - 12,29,38,000 | 5,10,10,000 | 7,19,28,000 |
| $1902-03$ | - 12,12,59,000 | 5,22,98,000 | 6,89, $\mathbf{6 1 , 0 0 0}$ |

The net import of both gold and silver shown by these figures is $\mathrm{R}_{1}, 66,06,808$, but the real absorption is greater by the amount produced in the Indian gold mines, which is exported to London, and was valued last year at $\mathrm{R}_{3,05,34,228}$. With the addition of the local production of gold the total absorption of the precious metals amounts to R18,71,41,036, a sum which has only been surpassed once since the great cotton famine of $1865-66$, nainely, in $1890-91$, when the phenomenal variations in the price of silver caused immense speculative purchases of that metal, and the rapid rise in exchange of $3 \frac{5}{8} d$. during the first half of the year stimulated the importation of gold,

The value of the additions during the year to the gold hoards of the country was $R_{11}, 81,79,887$ ( $£ 7,878,659$ ), of which $R_{4,28,55,105}\left(£_{2,857,007}\right)$

* Inclusive of remittances to the Gold Reserve Fund
represents the value of sovereigns added to the Government reserves, and $\mathrm{R}_{3,28,44,879}\left(£_{2}, 189,658\right)$ of sovereigns held by the public. The Government balance of gold bullion was reduced by $£ 16,364$ so that the whole of the net import of bullion valued at $R_{4,24,79,903}\left(£^{2}, 831,993\right)$ was taken by the public. The value of the gold exported by the Government was $\mathrm{R}_{75}, 04,095$ and the increase in its gold reserve $R_{4,26,09,645}$; and the sum of the two or R5,01,13,740 ( $£ 3,340,916$ ) represents the value of the gold tendered by the public in exchange for rupees.

The exports of rupees exceeded the imports by R65, 10,866 . The net importation of silver bullion to the value of $\mathrm{R} 6,89,61,149$ is large, but by itself it would be in no way remarkable, even if the sudden drop in the rupee price of silver bullion had not encouraged speculative purchases. No new silver was used for coinage by the Government, and only 344,729 ounces passed into the mints of Native States.

Stated in ounces, the production of gold and the net imports of gold and silver in the last five years have been :

| 1898-99 |  |  |  | Gold production | Gold import | Silves |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | - | - | - | 418,944* | 1,022,000 | 23,165,425 |
| 1899-1900 |  | - | - | 470,403 | 1,560,812 | 18,646,282 |
| 1900-01 |  | - |  | 506,890 | 106,678 | 49,435,164 |
| 1901-02 |  | - |  | 524,461 | 274,506 | 39,005,192 |
| 1902-03 |  | - |  | 536,690 | 1,416,618 | 42,872,201 |

It may be of interest to note here that in the eight years 1895-96 to $1902-03$ the registered imports of rupees have amounted to $R_{5,71,55,375}$ and the exports to R11,48,80,116, making a net withdrawal from the currency of R5,77,24,741, say 577 lakhs.

## Trade with Countries

The trade of India with the world, in merchandise imported and exported, was distributed as follows last year, compared with the tro preceding years ( $\mathrm{R}, 000$ omitted) :

The trade with Europe was about $6_{3} \cdot 2$ per cent, and with Asiatic countries about 23.3 per cent, of the whole. Approximately the trade of India is conducted with European countries to the extent of two-thirds, and of that trade much the largest share is carried on with the United Kingdom, which took $+0^{\circ}$ 多 per cent of the whole trade that India did with the world last year; but this was a much smaller proportion than in previous years, owing chiefly to the diversion of Indian exports to European countries direct instead of through England.

In the appended list are enumerated the principal countries with, which our trade is conducted, and the value in each case (in rupees, 000 omitted). The uncertainty as to the destination of the exports to Egypt referred to in the
remarks on the distribution of the export trade at page 26 of this paper is, how ever, liable to give a misleading conception of the extent and distribution of the trade with European countries.

## Shipping

With the revival of trade in 1901-02. following on the return of agricultural productiveness, there was an increase in numbers and tonnage, and the still larger export trade last year led to a further increase, of which about 96 per cent was steam tonnage.

Below are given the number and tonnage of steamers and sailing vessels, with cargoes and in ballast, which entered from and cleared to foreign countries :

|  |  |  |  |  | Na | Tons | Average tonnago |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $1898-99$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | 9.686 | $9,115,646$ | 941 |
| $1899-1900$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | 8,528 | $8,627,486$ | 1,012 |
| $1900-01$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | 8,302 | $8,269,430$ | 995 |
| $1901-02$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | 8,613 | 9,6251317 | 1,118 |
| $1902-03$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | 9,089 | $10,926,560$ | 1,202 |

The total number of steamers which entered and cleared was 5,367 , with an aggregate burden of $10,501,828$ tons, the average tonnage of each steamer being 1,957 tons.

The entries from and clearances to the United Kingdom were $2,663,5{ }^{2} 3$ tons, being $24^{\circ} 4$ per cent of the total tonnage. Entries from and clearances to British Possessions amounted to $4.640,249$ tons, or $4^{2} 5$ per cent of the whole. The tonnage from and to the United Kingdom and British Possessions amounted therefore to two-thirds (nearly 67 per cent) of the whole.

The vessels which enter and leave the ports of India for the most part fly the British flag, the tonnage under that flag representing 79 per cent of the whole. Adding the proportion of the tonnage of vessels under the British Indian registry, it appears that a little over 81 per cent of the trade of India is carried under the British flag.

The number of vessels under foreign flags, which entered and left Indian ports last year, was 1,304 , their burden aggregating $1,910,194$ tons, a considerable increase in tonnage on the preceding year. The number of vessels under the principal flags are stated below:

## Frontier Trade

The value of this trade, after increasing steadily during recent years, received a set back in 1902.03 to the extent of 150 lakhs, the decrease being most marked in the trade with Kashmir ( 46 lakhs), Nepal (34 lakhs), and Western China ( 30 lakhs). The figures which include the trade in gold and silver, as well as in merchandise, are ( $R$ ) :

As stated, however, on previous occasions the record of gold and silver is necessarily fragmentary, and it will be convenient to notice only the figures which relate to merchandise whè conṣidering the geographical distribution of the trade. This is indicated below, in respect of the principal countries, proceeaing from west to east along the line of frontier ( $R$ ):

| N.-W. Frontier | \{Afghanistan - | 159 | 1599-1900 | 1900-01 | 1901-03 | 1902-03 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Southern and Western | - 59.38,013 | 71,43,184 | 5S,19,196 | 6S,53,672 | 53,55,125 |
|  | Northern and Eastern | - 51,18,404 | 44,20,873 | +S,00,740 | 60,99,774 | 75,60,168 |
|  | Dir, Swat, and Bajaur | - 73,64,467 | 1,23,33,828 | 99,66,253 | 1,02,65,315 | 96,06,519 |
|  | Kashmir | . $1,55,9+163$ | 1,88, $\mathbf{S O}_{9}, 262$ | 2,24,79,269 | 2,57,67,370 | 2,05,19,663 |
| N. and N.-E. Frontier | - Thibet | - 29,398337 | 28,97,272 | 25,31,914 | 29,72,425 | 31,42,901 |
|  | - Nepal | . $3,63,55,552$ | 367,10,064 | 398,61,192 | 4,09,19,684 | 3,54,30,219 |
|  | Western China | - 28,34.794 | 33,59,188 | 43,99,729 | 68,50,93 5 | 43,730297 |
| E. Frontier | i North Shan States | - 56,63,313 | 73,40,530 | S2,44N91 | 70,64,656 | 78,00,353 |
|  | . 2 South Shan States | - 69,48,502 | 65,27,905 | 67,36.488 | 6s,55,697 | $63,53,259$ |
|  | Karenni . | - 20,05,568 | 26,76,093 | 27,05,171 | 21,58,359 | 25,65,2S1 |
|  | North Siam | - 29,09,261 | 25,72,033 | 28,03,634 | $34,27,473$ | $25,03,415$ |

About 40 per cent of the whole trade crossed the North-Western frontier last year. The figures show a large falling-off in the trade with Kashmir due to smaller imports of ghi, linseed, and woollen manufactures, and reduced exports of cotton goods, salt, and sugar. From Dir, Swat, and Bajaur, there were smaller imports of grains and provisions. In the trade with Kandahar and the southern portion of Afghanistan, where drought prévailed, there was a decrease in ghi and wool, and a corresponding general increase of trade with Kabul and the northern provinces.

The new caravan route to Persia from Quetta by way of Nushki has not quite fulfilled expectations, and the trade is still small. The sudden increase in the value of the trade to Seistan to 105 lakhs in 1901-02, was partly forced by experimental ventures, notably in a large consigmment of tea, which did not meet with a degree of success justifying further efforts; and there seems to have been some exaggeration by the inclusion of local or Afghan trade. Last year the drought in Seistan and neighbouring regions was very unfavourable for trade, and the value of the imports and exports of merchandise fell to about 5.4 lakhs.

Of the trade which crosses the Northern and North-Eastern frontier, that with Nepal is far the most considerable, and is of importance, amounting to 315 per cent of the whole frontier trade last year. The trade over each section of this frontier has been subject to fluctuation in the year, and there was a noticeable falling-off in the trade with Nepal, especially in the exports thereto of cotton
goods, metals, salt, and sugar, and in the imports therefrom of animals, oilseeds, fruits, and provisions. The trade with Western China also shows a decline in the import of amimals, raw silk, and orpiment, as well as in the export thereto of cotton goods, prurisions, and salt.

The general character of the trade carried on across the Indian frontiers will be inferred from the appended list, in which are entered the principal articles imported and exported and their values in the last three years (in R):

The relative importance of the trade of each frontier province with the countries on the other side of its border will be sten from the figures here appended (in lakhs of $\mathbf{R}$ ):

The figures of the trade of the North-West Frontier Province were in the first two of these years included in the trade of the Panjab.

## Coasting Trade

The value of the trade in merchandise (imports and exports) was R690 millions, this being R59 millions or 7.9 per cent less than the trade of 1901-02. It was still more below the trade of the two previous years, namely, R81I millions in 1900-01 and R 755 millions in $1897-1900$. But compared with the trade of $1898-99$ there was an increase last year of $R_{3} 6$ millions. In both of these two years there was a very large export to foreign countries of rice, millets, and pulses, and a consequent shrinkage of the grain trade between coast ports compared with the intermediate years, when Burma rice and the spare grain of other provinces were directed to the famine-stricken and distressed tracts of India. There was also a noticeable falling-off last year in the coal trade between Bengal and Bombay owing to the larger imports of English coal. The only remarkable improvements are. in the exports of mineral oils from Burma and in the transport of raw cotton of which there was a very heavy crop.

# FOREIĠN COUNTRIES 

For the official year ending March 31, 1904

General Summary

The value of the trade of the year, which is stated in rupees, is set forth in the figures appended, with the values of the four preceding years. The imports and exports on account of the Government are excluded:

The whole trade of the year, that is, the total of the imports and exports of both merchandise and treasure, is greater than that of the preceding year by $3,123.8$ lakhs ( $£ 20,825,400$ ) equal to 13 per cent. The contribution of the imports of merchandise to this remarkable result is disproportionately small, for their value is but 603 lakhs greater than in the preceding year, : and only $33^{\circ}$ lakhs more than in 1901.02. The value of the merchandise exported, however, has increased by 2,414 lakhs since 1902-03 and by 2,849 lakhs since 1901-02. This disparity between the imports and exports of merchandise is largely reduced by the phenomenal imports of treasure, but the net excess of exports still remains without a parallel. Among the causes which have contributed to this result is one that has had a two-fold effect, namely, the extraordinary rise in the price of raw cotton, for while, on the one hand, it produced partial paralysis of the Lancashire cotton industry, and so kept at an unduly low level imports of goods which represent more than one-third of the value of all imported merchandise, it created, on the other hand, an extraordinary demand for Indian cotton, and this, with the increased price, accounts for an advance in the
export trade of nearly 962 lakhs ( $f_{6,4} 6,12,600$ ). But putting aside cotton goods, the imports of the year of all other commoditics furnish striking evidence of industrial development and general prosperity; for, with only one or two exceptions, all the principal articles were imported to a greater extent than in any previous year. Records were thus established for sugar, provisions, hardware, metals, railway material (including imports for State lines), chemical dyes, precious stones, silk fabrics, woollen fabrics, apparel, glassware, and several other articles of minor importance. The head, machinery and millwork, is not included in the list as, although the inports were nearly 20 per cent larger than in 1902-0.3, they were still greater in 1895-97. So general in fact was the progress that the only articles of any consequence of which the imports were smaller than in $1900^{-03}$ are oils and spices, the cause of the decline being in each case the increased Indian produclion.

The progress of the exports was scarcely less uniform than of the imports. The exceptional exports of raw cotton have already been"mentionted, and there was further a phenomenal trade in-grain, for coupled with a trade in rice, which has never been surpassed in value and"only once in quantity, there was a remarkable export of wheat, which furnishes one of the most striking developments of the year, and also has been exceeded only once. The favourable character of the seasons is further apparent in the increased yield of the other important agriculural products, namely, oil-seeds and cocoanuts, jute, opium, tea, and indigo. Price is, however, a factor which has also played an important part, for while the prices of cotton, opium, and lac were extraordinarily inflated, of oilseeds they were very much reduced, and the small margin of profit for coffee and indigo was still further restricted by prices continuing to fall. The tea industry, however, improved its condition materially by obtaining a slightly enhanced price for an extremely large crop. The position of the two important textile industries working in cotton and jute cannot be wholly gauged by the state of the export trade, for both of them have a large Indian market, but while the jute mills disposed of a rapidly growing production with uninterrupted profit, the cotton mills, whose profits during the earlier part of the year were considerable, had torards its close to face the difficult and unprofitable position of an extravagant price for the raw material.

The supply of money sufficed to meet unusually heavy demands, for the Bank of Bengal maximum rate of 7 per cent lasted only during the. first week of April and from the 21 st January to the $9^{\text {th }}$ March, while its minimum rateof 3 per cent ran from the 27 th August to the 9 th December: The sterling exchange now varies only within narrow limits, the range during the year being from is $3 \frac{15}{6} d$ to is $4{ }_{18}^{3} d$. The existence of an unstable and uncertain exchange is, however, still a disconcerting factor in the trade with China. The price of silver which regulates the dollar and tael exchanges was on the average higher than in 1902.03, but the fluctuations covered a wider range and were equally sudden and erratic.

The transactions in treasure reached extraordinary dimensions. The net imports by the public were of gold, $1,63_{2} 28$ lakhs, and of silver, 683 t lakhs. Including the large importations of silver by the Government for coinage purposes and its remittances of gold to London, the net total is $2,385^{\circ} 7$ lakhs, of which $1,392^{\circ} 5$ lakhs represents the value of silver and $993^{\circ} 2$ lakhs the value of gold. To this has further to be added the production of gold in India to the value of 354 lakhs, giving a total absorption of the precious metals of $2,739^{\circ} 7$ lakhs - $r \cdot 8,264,500$ ), a sum which has never been approached in any other year.

## Imports of Merchandise

The value of the imports of merchandise exceeded that of the previous year by 603 lakhs or 7.6 per cent, and surpassed the imports of $\mathbf{1 9 0 1 - 0 2}$, which previously were the highest, by 3304 lakhs or 4 per cent. In view of the remarkable growth of the export trade a larger increase might have been expected, but the crisis in the cotton industry restricted the imports of yarn and cotton manufactures, which jointly represent more than a third of the import trade. The advance in the price of these goods and of kerosene, is also the principal cause of. a rise in the average value of the year's imports; which accounts for nearly one-seventh of the total increase. The aggregate value of the trade in each of the large classes in which all articles are grouped is shown in the figures appended in rupees:-

. 'It will be noticed that in only one of these groups, Oils, was there a deciine, and the smaller imports are satisfactory evidence of the growth of indigenous industries, namely, petroleum refining in Burma and Assam and the production of cocoanut oil in Madras. "The increase in the second class is explained by the great trade in sugar; and in raw materials by exceptional imports of precious stones and pearls. The absolute increase is greatest in the principal class of manufaciured. articles and of practically all of these there were larger imports except of cotton yarn and grey piece-goods, though as a whole the value of the coftor frade was higher than in $190: 03$ by 56 lakhs. Proportionately the increase is by far the largest in the class of metals and their manufactures which - show general and unprecedented progress, for the decline in railway material is not real but the result of an artificial classification, as including importations for railways owned by the State, the value is the highest recorded.

## Articles of Food and Drink

The value of the principal articles comprised in the group during the last three years has been ( $R$ ):

Sugar, which is far above all others in this class and accounts for 51 per cent of the total value, is also the third article in the import trade of India, coming next to cotton piece-goods and iron and steel. The great development of this trade is due to the introduction of bounty-fed beet sugar, of which in 1890-91 55,000 tons were imported from Germany. The importation of Continental sugar then declined until i $895-96$, when the trade in German sugar was revived, to be followed in the next year and soon alter sepplanted by Austrian sugar. By 1897.98 the trade in beet.sugar had reached what was then considered extraordinary dimensions, while the importations of cane sugar simultan. eously increased. The quantity of each kind of refined sugar and the countries from which it was imported during the last seven years is stated below in cwt :

This table indicates the countries from which the sugar was shipped to India, and in the case of imports from the United Kingdom, it has been assumed that half was beet and half cane sugar until 1903-04, when the division was made according to the certificates of origin presented at the Custom Houses, excepting $23,580 \mathrm{cwt}$, of which the origin was unknown and which as formerly has been divided in moieties. Prior to November 1902, certificates of origin were not required and hence sugar refined in the United Kingdom escaped the countervailing duties, but when duty was charged with reference to the origin of the raw sugar, the trade was largely diverted to cane sugars which receive no bounty.

The suppression of the trade in beet sugar by the countervailing duties, originally imposed in March 1899 with but a transient effect to meet the direct bounties and greatly enhanced in May 1902 to countervail the bounties created by trade cartels, has not been effective in restricting the volume of the imports, for as the supply of beet sugar was cut off, the void was filled by cane sugar, the receipts of which were greater last year than those of beet and rane sugar combined in any year except 1901.02 , ard including unrefined sugar, they were very slightly below that year. None of this received any direct bounty except about 23,568 cwt refined in the United Kingdom from raw sugar produced in the Argentine and Chile, and the advantages derived therefrom were fully countervailed by the special duties imposed on it. The imports from Mauritius increased by nearly 37 per cent and established a record, while the increase in the direct imports from Java including unrefined sugar was 133 per cent. This country is rapidly coming into the front rank as an exporter of sugar to India, and the competition with Mauritius is likely to increase owing to the preference obtained in the United States by Cuba sugars under the Reciprocity Convention which came into force in February 1904, and the consequent necessity for Java
sugars to find markets elsewhere. Another noticeable feature of the year was the largely increased imports of cane sugars refined in the United Kingdom. These were chiefly the growth of Mexico, South America, and the West Indies, but also included $56,000 \mathrm{cwt}$ produced in Java and 9,700 cwt of Egyptian origin.

The indirect influence of the beet sugarindustry is strongly marked in the development of the Indian demand for good refined sugar, but it had further a direct and important influence on the trade of the last quarter of the year. The Act passed in 1902 to countervail bounties on sugar created by private trade combinations expired on the 3 1st August 1903 , but its operation was extended to the 3 1st March $190+$ by an amending Act passed in August 1903, and the expiring provisions were again revived and continued in force from the ist April igot by in Act passed in March 1904. As long as the special duties were imposed little beet.sugar reached India except from Holland which country contributed in all about $174,000 \mathrm{cwt}$, rather more than half of it being shipped from Belgium. The other Continental countries sent only trifling quantities direct, but of the beet sugar refined in the United Kingdom, which is estimated at nearly $52,000^{\circ} \mathrm{cwt}$, half seems to be Danish, as 27,000 cat of Danish sugar came indirectly to India. On the ist September 1903, the Brussels Convention, the parties to which had agreed to abolish bounties, came into operation, and though India has not acceded to the Convention, it was decided that, in view of what had passed in the Brussels Conference at which India was represented, the countervailing duties could not be maintained in respect of sugar produced after the $3_{3}$ rst August 1903 in any country which is a party to the Convention. A notification remitting the duties was accordingly issued on the 2nd December 1903, and being unexpected by the trade, it caused a slump in prices, the fall in the price of Mauritius sugar at Bombay being one rupee per cwt, or nearly to per cent. Until that date prices had been very stable with a downward tendency in Western India and there the fall was immediate as Austrian sugar, to which an opening was thus afforded, is shipped chiefly to Karáchi and Boonbay. The anticipated renewal of an extensive trade in beet sugar was not long delayed. The total of the imports from AustriaHungary, during the first nine months of the year was 11,495 cwt. In January the imports were 33,767 cwt, in February 89,977 cwt, in March 164,020 cwt, and during April and May of this year $457,403 \mathrm{cwt}$. It is impossible to foretell the future of the trade in beet sugar, but it is significant that the expected rise in prices on the abolition of the bounties did not take place, and prices in London were practically the same at the close as at the beginning of the year 1903-04.

Besides refined sugar 209,413 cwt of unrefined sugar was imported into Madras from Java. Brown sugar of similar quality was also very largely shipped to Calcutta, in fact about 830,000 cwt or nearly 97 per cent of the sugar imported from Java into Calcutta was of this description, but there it has been classed as refined sugar, although, as in Madras, it is subjected to a final refining process. Of molasses 13.323 tons were inported from Maurilius, this being very much below the usual standard and 41 per cent less than in the previous year.

Provisions.-The value rose by 10 per cent to $202 \frac{3}{4}$ lakhs after a fall of 7 per cent in the previous year, and the trade is on the whole progressive. The principal among the articles specified are dates $36 \frac{1}{4}$ lakhs, dried fruits $24 \frac{1}{4}$ lakhs, and salted fish $19 \frac{3}{2}$ lakhs. The imports of biscuits 18 lakhs and cor. densed milk $11 \frac{1}{3}$ lakhs show marked progress, and these articles with jams, $3 \frac{\frac{3}{5}}{5}$ lakhs, were not shown separately in the accounts till the latter half of $1902-03$.

Salt.-The reduction in March 1903 of the duty on salt from two and a nalf to two rupees per Indian maund, except in Burma where the duty continued to be one rupee per maund, gave only a slight stimulus to imports, for though the quantity received, 446,557 tons, was $5 \cdot 5$ per cent greater than in the previous year, it was still nearly 70,000 tons less than in 1901-02, which was, however, a year of exceptionally heavy imports. About two-thirds of the salt consumed is produced in India, and the revenue returns for the year show an advance of $2 \frac{1}{2}$ per cent in the total consumption consequent on the fall in the retail price. Of the total 88.7 per cent was imported into Bengal and $1 I^{\prime \prime}$ per cent into Burma.

Liquors.-The importations continue to make normal progress. Of the malt liquor imported nearly 93 per cent was from the United Kingdom, the share of Germany being 226,311 gallons, and of other countries 55,020 gallons, out of a total of $4,062,016$ gallons. The production of the Indian breweries during 1903 was $6,067,041$ gallons, or about 408,000 gallons less than in the previous year, of which the Army Commissariat purchased 46 per cent.

There was a slight increase in Spirit, the -trade in which advances slowly. The share of the United Kingdom, namely, $54^{\circ} 6$ per cent, is much less than in the case of beer. The quantities imported including liyueurs, and spirit, methylated, perfumed, or used with drugs, were in gallons:

| Fron |  |  | 190203 | 1903.04 |
| :---: | :---: | :---: | :---: | :---: |
|  | United Kingdom |  | 764,125 | 784,983 |
| " | France | . $\quad$ | 203,911 | 220,208 |
| " | Gerınany | . $\cdot$ | 238,346 | 218,518 |
| " | Other Countries | . - | 202,892 | 214,623 |
| $\therefore$ |  | Total | 3,409,274 | ,438,332 |

The potable spirit imported from other countries is chiefly arrack from. Ceylon, rum from the Straits, and gin from Holland.

The proportions of the different kinds of potable spirit inported were (gals) :

The demand for $W_{2} n e$, of which 333,023 gallons were imported, does not increase. The quantity was nearly a thousand gallons less than in the previous year, but the value decreased by more than 8 per cent to nearly $27 \%$ lakhs.

The trade in Spices declined by nearly 3 per cent in value and 1 per cent in quantity. Betelnuts which account for 63.7 per cent of the total value and of which there is a large home production were in less demand, and the receipts of pepper from the Straits fell off by 45 per cent. The shortness of the crop of cloves in Zanzibar caused a rise in price of nearly 23 per cent.

In prosperous times the imports of Grain and Pulse are never large, though following the last famine, that is in 1900-01, they reached nearly one hundred thousand tons, valued at 96 lakhs. The reduction this year to about seven thousand tons, valued at 7 lakhs, is a favourable sign of the abundant harvests of the last two seasons.

The importations of Tea decreased by $175,500 \mathrm{fb}$, but the value was slightly higher than in 1902.03 . The quantity imported, $3,672,833 \mathrm{tb}$, is about the average level of importations from 1897-98, when half the transit trade vid Bombay to Persian and Central Asian markets was extinguished by the Russian measures for fostering dirtct trade between Russia and Eastern Asia by discouraging the trade with Central Asia through Persia and encouraging it to these territories or Northern Persia in transit through the port of Batoum. It is noticeable that last year's imports from Ceylon declined by nearly $347,000 \mathrm{fb}$ to $433,365 \mathrm{lb}$, and further that the re-exports by sea were only $24^{\circ} 2$ per cent of the imports of all foreign tea, compared with $41^{\circ} 7$ and 39 per cent in the two previous years. Including re-exports by land, the net imports or consumption of these years averages $1 \frac{1}{2}$ million tb , while in 1903-04, in consequence of the diminished re-exports by sea and land, the balance rose to $2,336,000 \mathrm{fb}$. This may be only a temporary addition to stocks due to the decline of $705,000 \mathrm{fb}$ in the re-exports by sea to Persia, but a larger Indian demand for foreign tea would not be inconsistent with the apparent deficiency in the supply of Indian tea caused by the exceptionally large exports, which is discussed at page 23 of this paper.

## Metals and Manupactures of Metals

Hardware and Cutlery-

|  | $\begin{gathered} 1901-02 \\ R \end{gathered}$ | $\begin{gathered} 1902.03 \\ R \end{gathered}$ | $\begin{gathered} 1903-04 \\ \text { R } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Cutlery | 12,11,227 | 12,67,904 | 12,55,499 |
| Agricultural Implements | 6,97,286 | 7,73,926 | 7,38,185 |
| Other implements and tools | 9,41,765 | 10,86,191 | 11,16,793 |
| Enamelled iron ware | ... | (a) $8,14,373$ | 18,13,2 1 I |
| Sewing machines | 5,91,046 | 7,03,413 | 10,08,458 |
| Unspecified hardware | 1,36,25,05 | 1,53,45,871 | 1,73,46,157 |
| Total | 1,70,66,375 | 1,99,91,678 | 2,32,78,303 |

There was an advance last year of $16 \cdot 4$ per cent. The tendency of the trade has been almost constantly progressive, and during the last nine years the value has increased nearly 75 per cent. The first among the enumerated articles is enamelled ware, of which 80 per cent was received from Austria-Hungary and nearly 14 per cent from Germany; but more than three quarters of the whole is under the general head "Unspecified hardware." The share of Continental goods, mostly from Germany, Austria-Hungary, and Belgium, rose somewhat to 26 per cent which is but little above the average of recent years. British goods; on the other hand, which are of superior quality and consequently dearer, did not show the same proportionate advance and their share fell from nearly 70 to 54.7 per cent of the whole. The advance under other countries is mainly due o imports of hardware to the value of 6 lakhs from the United States and $7 \frac{1}{2}$ akhs from Russia, being an increase of 2 and 6 lakhs respectively.

The important trade in Metals shows remarkable expansion and reached - level never before approached, for following a rapid advance in 1902.03 here was a further rise last year of 23.6 per cent in quantity and 15.7 per cent n value, the aggregate for copper, iron, steel, and other minor metals, wrought and unwrought, being 496,874 tons, value $929 \frac{1}{3}$ lakhs, in 1903.04 , compared with

40t.989 tons, value 799 lakhs, in 1902.03 . This development is a sure sign of industrial and material progress.

Copper. - The importation of copper has been steadily rising during the last five years. The advance of 94 per cent last year succeeded a remarkable rise of 104 per cent in 1902-03. Besides the industrial demand for electrical and other purposes, there is an almost universal demand for domestic utensils, and the remarkable fluctuations in the quantities imported from year to year are to a large extent due either to a rise in price, which places it beyond the limited means of a very large section of the purchasers, or to the impoverishment of the people by failure of the crops and a rise in the price of the necessaries of life. The following figures of the trade start from 1895-96, the last prosperous year before the famines of $1896-97$ and $1 S 99-1900$ :

|  | Cwe | Price per cwit |  | Cwt | Price per cwt |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | R a.p. |  |  | R |  | $p$. |
| 1895.96 | 471,824 | $44 \quad 4 \quad 9$ | 1900-0 | 159,971 | 57 | 5 | 4 |
| 1896-97 | 240,648 | 44103 | 1901-n2 | 193,822 | 55 | 12 | 0 |
| $1897-98$ | 322,348 | $44 \quad 4$ | 1902-03 | 395,850 | 49 | 9 | 2 |
| 1898-99 | 251,301 | 44911 | 1903.04 | 433,091 | 50 | 1 | 3 |
| 1899-1900 | 90,846 | $5^{8} \quad 4 \quad 0$ |  |  |  |  |  |

Prices had a downward tendency throughout the year, but the average value in $1903-04$ was slightly higher than in the previous year. The total value of the copper imported was $216 \frac{4}{3}$ lakhs and in 1902-03 196 lakhs.

Iron and Steel.-The importations of both iron and steel, of which the prices fell, were unusually heavy, the advance in quantity on those of 1902-03 being 18.5 per cent for the former and $32^{\prime} 7$ per cent for the latter, or for both combined 25.4 per cent. The trade during the last six years, which include two years of temporary depression, has been (tons):

|  | Iron | Stee! | Total |
| :--- | :---: | ---: | :---: |
| $1898-99$ | 164,517 | 84,145 | 248,662 |
| $1899-1900$ | 149,097 | 72,636 | 221,733 |
| $1900-01$ | 169,992 | 92,586 | 262,578 |
| $1901-02$ | 180,604 | 158,468 | 339,072 |
| $1902-03$ | 196,292 | 171,007 | 367,299 |
| $1903-04$ | 232,570 | 226,585 | 459,155 |

The increase since $1898-99$, a year of normal trade, is 210,500 tons or 84.6 per cent. The rise is much greater in the case of steel than of iron, and the returns indicate the increasing use of steel for many purposes; but it is doubtful whether much dependence can be placed on a classification which often cannot be tested, and it may be noted that while Belgium is shown as supplying more steel to India than comes from any other country and as sending about $t$ wice as much steel as iron, the official returns of the trade of Belgium show that during the years 1901 and 1902 the exports of iron to India were from eight to nine times greater than the exports of steel. The distinction is however of little consequence, and it is more important to note that quite half the imports of iron and steel from Belgian ports is not of Belgian but German manufacture, and though the quantity imported direct from Germany is only $5 \%$ per cent of the total trade and direct from Belgium ${ }^{2}{ }^{2} 5$ per cent, Germany is really as keen a competitor with the United Kingdom as Belgium in the cheaper forms of iron and steel. The nature of the competition is illustrated by the following
statement of the quantities of each description imported from the United Kingdom and from Germany and Belgium jointly during last year (tons) :

|  | United Kingdom |  |  | Germany and Eelgium |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Iron | Steel | Total | Iron | Steel | Total |
|  | 9,129 | 8,524 | 17,653 | 22,303 | 46.835 | 69,143 |
| Sheets and plates | 1,683 | 26,555 | 28,238 | 3,080 | 18,337 | 21,417 |
| " galvanised | 61,653 | ... | 61,653 | 402 | , | 402 |
| $" \quad$ tinned | 14,897 | $\cdots$ | 14,897 | 1 | ... |  |
| Hoop | 2,486 | 16,439 | 18,925 | 1,137 | 4,151 | 5,288 |
| Angle, bolt, and iod | 1,632 | ... | 1,632 | 6,011 | , | 6,011 |
| Angle, clannel, and spring | ... | 11,240 | 11,240 | ... | 2,861 | 2,86r |
| Beams, pillars, girders, and bridgework | 4,238 | 17,155 | 21,393 | 166 | 17,327 | 17,493 |
| Pipes and tubes | 37,485 | ... | 37,485 | 1,112 | ... | 1,112 |
| Nails, screws, rivels, and washers | 2,825 | ... | 2,825 | 7,236 | ... | 7,236 |
| Other sorts | 36,411 | 13,398 | 49,809 | 2,85 6 | 42,032 | 44,888 |
| Total | 172,439 | 93,311 | 65,750 | 44,309 | 1,543 | ,852 |

Among the descriptions classed under iron the United Kingdom has a preponderance, more or less complete, in all but the commoner kinds, namely, bar, angle and bolt, plain sheets, and nails screws and rivets, in all of which except the last-named the trade declined. The greatest advance was in "pipes and tubes" the value of the imports of which into Burma rose by 21 lakhs to a total of 28 lakhs, an increase for that province of nearly 300 per cent. In the case of steel there was a satisfactory increase in all descriptions.

Lead was imported to the value of $18 \frac{1}{\frac{1}{2}}$ lakhs, a rise of 6.2 per cent, due to a larger trade in sheets for lining tea chests, which represent two-thirds of the total and are supplied by the United Kingdom.

A brisk trade in copper is usually accompanied by large imports of Tin, and the increase last year, compared with 1902.03 was remarkable, the quantity being greater by $44^{\circ} 6$ per cent and the value, which rose to $39 \frac{\pi}{3}$ lakhs, by 53.6 per cent. Zinc was also imported to the value of nearly 16 lakhs, a rise of over 13 per cent, but as prices were much higher the increase in quantity was less than 2 per cent.

The importations of Machinery and Millwork reached the large total of 335! lakhs, which is $19 \frac{1}{y}$ per cent greater than in 1902.03. This level has been surpassed only in 1896.97 when the value of the Bengal trade was $182 \frac{1}{\mathrm{~g}}$ lakhs, compared with $14 \frac{9}{3}$ lakhs last year. Calcutta also imported machinery to the value of 150 lakhs in 1901-02, but Bombay has exceeded last year's total of $126 \frac{8}{4}$ lakhs only once with $160 \frac{8}{4}$ lakhs in 1898999 . The advance is proportionately greatest in Burma with an addition of 8 lakhs and a total of nearly 34 lakhs. The United Kingdom secured nearly 95 per cent of this trade by supplying goods to the value of $37^{\frac{1}{9}}$ lakhs.

The importations of Railway Materials as tabulated in the returns of general trade show a decline of 21 lakhs or 13 per cent, but on the other hand the importations for State lines which are classed as Government stores increased by $48 \frac{2}{3}$ lakhs. The total of the two classes, $5 \sigma_{3} \cdot 7$ lakhs, is the highest value recorded, the nearest being 536 lakhs in 1902-03. The value for Com. panies' lines was $140 \frac{1}{5}$ lakhs and for State lines, whether worked by Companies or the State, $423 \frac{1}{7}$ lakhs.

## Chemicals, Drugs, Medicines, Narcotics, Dyeing and Tanning Materials

The value of imported Chemicals and Drugs was 59 and 68 lakhs respectively, there being an increase, compared with 1902-03, of nearly 7 per cent in each case. Chemicals for paper-making show a drop of $1 \frac{1}{\frac{1}{2}}$ lakhs or 18.4 per cent, an indication of the depression of the Indian paper-making industry through the competition of cheap foreign paper. Among the unspecified chemicals is calcium carbide, for which there is an increasing demand owing to the use of acetylene lights in marriage and other processions.

The trade in Tobacco increased by 113 per cent to $49 \%$ lakhs. The chief
 by 25 per cent, that is, to $2,240,200$ th, worth $\mathrm{R}_{29,54,300 \text {. The increase in }}$ the four years during which this trade has been registered is over 90 per cent, and the prevalence of the habit of cigarette smoking is very noticeable in Calcutta and other large towns. The cigarettes are sold at a price which brings them within the reach of all and creates a demand, for in the case of articles of popular consumption cheapness is in India the first consideration. The United Kingdom sent $64^{\circ} 6$ per cent of the imports, and excluding Egypt which supplies the better qualities consumed by Europeans, the other largest contributors are the United States and China which has a factory at Shanghai. The trade has undoubledly the capacity of very great expansion.

The imports of Aniline and Alisarine dyes were unusually heavy and surpassed those of any previous year. The quantity of $12,182,600 \mathrm{fb}$ is one-third as much again as in 1902.03 , but owing to a considerable fall in the average price of aniline dyes the valce, $R 82,67,010$, was only 26 per cent higher. The prices of the cheaper alizarine dyes show a very slight decline, and with an increase of nearly 39 per cent the quantity imported exceeded that of aniline dyes by $1,216,000 \mathrm{fb}$. About four-filths of the trade is with Bombay and almost the same proportion is recorded as the joint share of Belgium and Holland, but riost of this comes through those countries in transit from Germany which exported to India in $19022,198,900$ kilogs of alizarine, valued at $2,990,000$ marks, and $1,214,800$ kilogs of aniline and other coal-tar dyes, valued at $3,766,000$ marks. This accounts for practically the whole of the alizarine and about 60 per cent of the aniline.

## Oils

Mineral oil.-For the second year in succession the importation of kerosene oil fell by nearly 10 million gallons, so that, compared with 1901.02, there was a reduction of nearly 20 million gallons equal to 21.7 per cent. The imports in 1901.02 were however exceptionally large, and the quantity last year, $71 \frac{1}{2}$ million gallons, is not more than 7 million gallons below the average of the previous five years. The decline in Russian oil was $19^{\circ} 4$ per cent and in American oil 27 per cent, 57.3 million gallons being received of the former, of which 48 per cent was in bulk, and 6.7 million gallons of the latter, wholly in cases. The imports from other countries, that is, either the Dutch East Indies or Borneo, increased sevenfold to $7 \frac{1}{2}$ million gallons.

The cause of the diminished imports of foreign oil is the rapid development of the Indian oil-fields. The output of crude oil in Burma during 1903
was 85 million gallons, an increase in one year of over 55 pei cent, and inAssam, where production is also rapidly developing, $2 \frac{1}{2}$ million gallons. The quantity of kerosene refined from the total output of crude oil is estimated to have been over 40 million gallons, and the quantity exported from Burma to India during $1903-04$ after satisfying local requirements was $3 \nmid 8$ million gallons. This is double the previous year's export; and in addition 734,500 gallons of kerosene were exported to the Straits. 'This oil is not at present of as good quality as most of the imported foreign oils, but it is cheap, and this secures it a market. The outside prices of kerosene rose, as shown by the rise in import values, but owing to keen competition retail prices have been very variable. Fresh competition has also sprung up from Sumatra and Borneo, these countries sending jointly, either direct or through the Straits, $7 \frac{1}{2}$ million gallons of which nine-tenths was in bulk. Sumatra oil was shipped in con ${ }^{2}$ siderable quantities to India in $1897-98$ and $1898-99$, about $7 \frac{1}{2}$ millions in the former year and $4 \frac{1}{2}$ in the latter year, when with the sudden giving out of the existing wells the trade ceased. Its revival now is made under different conditions for the coalition of the interests of the Royal Dutch Company and the Shell Transport and Trading Company in respect of the Eastern markets by the formation of the Asiatic Company, registered in July 1903, with a capital of $£ 600,000$, and the important development of the Borneo property of the "Shell'? Company have brought great sollrces of supply, backed by ample capital; into united action. American oil has security for a limited market in its superior quality, but among all kinds of the commoner grades there is likely to be keen competition.

Besides kerosene, lubricating and other oils were largely imported; the quantity, $8,963,000$ gallons, being $1 \frac{1}{2}$ million gallons greater than in the previous year. This is mostly American, 58 per cent being received direct from the United States and $27^{\circ} 6$ per cent from the United Kingdom. Burma also shipped to India $3^{\circ 2}$ million gallons of these oils.

The total value of the trade in mineral oil was $338 \frac{1}{2}$ lakhs, of which nearly 301 lakhs represented the value of kerosene.

## Raw Materials

Coal.-The imports of coal are the smallest of any year except $1900-0$ I when English prices were abnormally high. The quantity of coal and coke imported on private account was 180,040 tons, valued at $\mathrm{R}_{33,77,713}$, and by the Government 26.789 tons, the total being less than one-fourth of the quantity imported nine years ago, though only $9 \frac{1}{3}$ per cent less than in 1902.03 . There was a rise in price last year but the average value declined slightly owing to larger imports of cheap coal, of which Australia supplied 25,000 tons and Japan 16,400 tons. The United Kingdom supplied all the requirements of the Government and 75.3 per cent of the private trade. The continuance of so extensive a trade in face of the large output of the Indian collieries, which amounted last year to about $7 \frac{1}{\frac{1}{2}}$ million tons, is due to the fact that good English coal is much superior to the best Indian coal and is often assisted by exceedingly low outward freights to the East.

Silk.-The trade in silk has been much depressed during the last two years. Most of the silk comes from China and is directed to the mills in Bombay, while a small share goes to Burma. The exports of Shanghai silk proved to be much below expectations owing to the $f=$ ilure of the Mid-China crop, and the rise in mrires made trade undrofitable. The value of the imports increased by $7 \frac{1}{\frac{1}{2}}$ per
oent, but this was due to higher prices as the quantity was less by nearly 6 per cent. The recent decline is brouglat out by the figures of the trade during the last three years :

|  |  | Ib | R |
| :---: | :---: | :---: | :---: |
| $1901-02$ | $\cdot$ | $2,128,483$ | $80,96,200$ |
| $1902-03$ | $:$ | $1,639,189$ | $55,16,149$ |
| $1903-04$ | $\cdot$ | $1,544,3 \times 5$ | $59,29,527$ |

Cotton.-Large imports of cotton into India are of rare occurrence, and last year, as might be expected from the high prices prevailing throughout the world and the abundance of the Indian crop, the quantity was quite insignificant, nanmely, $18,279 \mathrm{cwt}$, valued at 5 lakhs. Egyptian and American cotton is in demand for spinning the higher counts of yarn, and it is a strange coincidence that, with the reduction of the imports of long stapled cotton to about $11,500 \mathrm{cwt}$, the spinning of counts of No. 31 and upvards in the Bombay mills should have suddenly risen to over 15 million Ib in 1903.04 after three years' stagnation at a level of slightly over 11 million fb .

Precious stones and pearls, unset.-Little is known of this trade which shows very remarkable expansion during the last five years. The value made a great jump in $1899-1900$ to nearly 93 lakhs, fell in the following year to 58 lakhs, and rose again in $1901-02$ to 111 lakhs. The same high level was maintained in $1902-03$ with $114 \frac{1}{2}$ lakhs, and this was followed by a rise last year of nearly 33 per cent to 152 lakhs or over one million sterling. Pearls from Muscat and the Persian Gulf account for about one-third of the total, while the United Kingdom with $66 \frac{3}{4}$ lakhs and France with 24 lakhs divided most of the remainder. The imports are, it may be noted, duty free.

Timber.-This trade has reached considerable dimensions in the last few years, and the value of $42 \frac{1}{2}$ lakhs is 27 per cent greater than in 1902.03 . Teak from Siam represents nearly two-thirds of the total value.

## Manupactured Articles

Cotton yarn.-The trade in yarn has been much depressed during the last few years, and commencing with 1898-99 when the imports were on a scale then considered to be very moderate, the variations have been in millions of Ib :

The fall last year was 16.8 per cent, and though the trade is peculiarly subject to violent fluctuations, so low a level has not been reached for thirty-three years, that is, since $1871-72$. Both of the last two years have, however, been unprofitable to spinners, and in 1903 the extraordinary rise and erratic fluctuations in the price of the raw material greatly restricted production and impeded business. At the same time the increasing competition of the Indian mills is manifest in the general results and in the details below of the quantities of yarn imported and locally manufactured. Imported yarn falls principally into the class of medium counts Nos. $3 \mathrm{t}-4 \mathrm{a}$, and about two thirds of this consists of coloured yarn of which Burma is the chief consumer (tb) :

|  |  | 1901.02 | 1902-03 | 1903.04 |
| :---: | :---: | :---: | :---: | :---: |
| Nos. 1 to 30 |  | 7,408,346 | 7,259,555 | 6,470,114 |
| $33^{\text {I }}$ to 40 |  | 23,860,468 | 19,811,878 | 14,498,4 11 |
| Above 40 |  | 4,405,299 | 4,244,846 | 4,822,593 |

The production of yarn in the Indian mills is on the other hand very largely of the coarser counts :

|  | 1901.02 | 1992-03 | 1903-04 |
| :---: | :---: | :---: | :---: |
| Nos. 1 to 30. | 559,412,589 | 563,047, 7 \% | - $56 \mathrm{r}, 298,972$ |
| 31 to 40 | 12,611,556 | 12,512,860 | 16,517,788 |
| Ábove 40 | 914,021 | 674,495 | 942,315 |

These figures show that progress has slackened, and the slight increase last year in the total production is not real, for it is caused by including returns for two mills outside British India that did not report their production in the previous year. In regard to the arrest of progress the explanation is the same as in other parts of the world, namely, dear cotton and comparatively cheap yarn.

Cotton goods.-The magnitude of the trade in cotton goods can be appreciated from the fact that it represented last year 34 per cent of the value of all imported merchandise, and usually the proportion is about 2 per cent higher. As a general rule the volume of the trade responds at once to the enhanced demand created by a year of favourable harvests on which the prosperity of the great body of consumers directly depends, yet during the last two years of increasingly prosperous seasons the value of imported cotton goods has remained much below the level it attained in 1901-02, though there was a rise last year of 2亲 per cent, compared with 1902.03 . The course of the trade during the last fifteen years in the three classes of grey, white, and coloured goods is indicated in the figures appended, the quantities being stated in millions of yards:

|  | Grey (unbleached) | White (bleached) | Coloured, priaied, or dyed | Percentage of grey in total |
| :---: | :---: | :---: | :---: | :---: |
|  | 1,223'47 | 368.62* | - $\mathbf{3 7 4} 16$ | 62 |
| $\begin{gathered} \text { Average } \left.\begin{array}{c} 1804.95 \\ 1898.99 \end{array}\right\}, ~(o) \\ \hline \end{gathered}$ | 1,209'77 | 418.58 | 351*49 | - 61 |
| 1899.1900 | 1,27491 | 444.55 | 471.88 | 58 |
| 1900-01 | 1,192'17 | $457 * 48$ | 34316 | 59 |
| 1908-02 | 1,186.76 | 580\%9 | $429 \cdot 86$ | 54 |
| $1902-03$ | 1,283'68 | 389.98 | 433'66 | 61 |
| 1903-04 | 1,085'11 | 466.34 | 481.27 | 53 |
| Average $\left.\begin{array}{c}1899.1900 \\ \text { to } 1903 \cdot 04\end{array}\right\}$ | 1,204.53 | 469.69 | $430 \cdot 56$ | 57 |

The decrease in $1902-03$ of 190 million yards in bleached goods is traceable to the excessive imports of that class of goods in the previous year, but the falling off last year of 198.5 million yards in grey piece-goods, though partially compensated by improvements in white and coloured cloth of $76^{\circ} 3$ and $47^{\circ} 6$ million yards, respectively, is the direct result of the abnormal conditions affecting the cotton industry which reduced production and told principally on heavy goods. The percentage of the total belonging to grey goods has, therefore, been unduly lowered, but taking the average for the last five years, the percentage is 57 which undoubtedly shows, in comparison with preceding periods, a progressive decline due to the advance of the other two classes. The principal descriptions of imported goods belonging to the three classes are shown in the following statement in millions of yards :

| 14 |  |  |  |
| :---: | :---: | :---: | :---: |
|  | 1901-02 | 1902.03 | 1903-04 |
| Faconets: |  | TS5.85 | 93'34 |
| Grey - , - | 9044 36.57 | 1512 | 18 |
| White . Coloured | 3.59 5 | 5.04 | 5.02 |
| 1. M/ulls: |  |  |  |
| Grey - | $23^{2}$ | 18 | $25 \cdot 16$ |
| White . | 132.66 | 81.33 | 102.11 |
| Coloured | 371 | $1 \cdot 67$ | -96 |
| 5. Drills, jcans, shectings: |  |  |  |
| Grey . . - | 20.99 | 24.97 | 20.87 |
| White (ditlls and jeans) | 5*6 | 3.62 | 4.18 |

| 6. Unspecified descriptions: |  |  |  |
| Grey . | ${ }^{3}{ }^{2}$ | 41 | -33 |
| White . | $20 \cdot 64$ | 12.12 | 17.93 |
| Coloured | 72.11 | $66 \cdot 03$ | 93.53 |

Unbleached goods show the principal fall in the first and second groups, in which they are most largely represented, while the largest advance of unbleached goods is in the fourth group and of coloured goods in the second and sixth groups. The further descriptions, which are produced in considerable quantities and belong to either one or two of the main classes, are stated below with the importations in millions of yards:

|  | 1901.02 | 1902-03 | 1903.04 |
| :---: | :---: | :---: | :---: |
| Grey: |  |  |  |
| Madapollams | $34^{\circ 2}$ | $26 \cdot 64$ | 121 |
| T-cloths and domestics | 14.66 | 17.14 | 12.29 |
| Printers | $1 \cdot 07$ | $\cdot 33$ | $3^{8}$ |
| White: |  |  |  |
| Nainsooks | 208.8 | $135^{\circ} 17$ | 181.85 |
| Cambrics, twills, lawns | 14.94 | 10.82 | 14.15 |
| Checks, spots, stripes | $1 \cdot 24$ | 5.95 | 6.49 |
| Long cloths . is | $1 \cdot 66$ | $1 \cdot 67$ | $1 \cdot 61$ |
| Coloured: |  |  |  |
| Prints and chintz | 15192 | 156.1 | 171.28 |
| Cambrics, twills, muslin | 74.78 | $77 \cdot 64$ | 71.52 |

The most noticeable variations are the reccuery in white goods, especially in nainsooks, the advance in prints and chintz, and the decline in grey goods. The re-exports by sea of cotton piece-goods advanced by 10.4 million yards, nearly two-thirds being coloured goods, but the re-exports by land, which are registered by weight and not by length, decreased by $4,764 \mathrm{cwt}$.

The production of the Indian mills, which chiefly consists of unbleached sheetings, T-cloths, domestics, dhuties, and chadars, increased by 51.1 million yards, and allowing for an increase of 6.3 million yards in the exports by sea and of $20,382 \mathrm{cwt}$ across the land frontiers, there was still a considerable balance to set off against the large deficiency ( $74^{6} 6$ million yards) in imported goods. The mill production of white, fancy, and coloured goods also continued to advance and represented last year 18.8 per cent of the quantity of all woven goods.

The extent to which cotton piece-goods are imported from the United Kingdom is indicated below (million yards) :

|  | 1901-02 |  | 1902003 |  | 190304 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | $\xrightarrow[\text { from King dom }]{ }$ | Total | $\overbrace{\text { from }}^{\text {ed Klngdom }}$ | Total |  |
| Unbleached goods | . $1,186.76$ | 1,17846 | 1,283.68 | 1,273'06 | 1,085:11 | 1,077.22 |
| Bleached ", | - $580 \cdot 09$ | $5743^{8}$ | 389.98 | 382.74 | $466 \cdot 34$ | 458.36 |
| Coloured | - $422 \cdot 86$ | $401 \cdot 23$ | $433 \cdot 66$ | 41546 | $481 \cdot 27$ | 461.68 |

The proportion of grey goods is $99^{\circ} 3$ per cent and of bleached goods $98^{\circ}$ per cent. For coloured goods the proportion is only $95^{\circ} 9$ per cent.

Besides these three great classes, there is a comparatively s mall importatio of other fabrics, and the trade in these which was exceptionally active last yea increased by 57 per cent or 43 lakhs, a sum half as much again as the increas, in piece-goods and nearly treble the falling-off in yarns. The principa descriptions and the figures of the trade are ( R , ooo omitted) :

The share of the United Kingdom was last year only 115 per cent ol hosiery and 46 per cent of other manufactures, the remainder being mostly of Continental origin, though Japan sent hosiery to the value of 6 lakhs.

The aggregate value of the imports of cotton yarn and woven and other goods in the last five years has been (in millions of $R$ ):

Silk goods.-While the imports of raw silk have declined, the trade in silk manufactures has been progressive, and last year rose in value to 18.3 millions of rupees (the bighest level yet attained), compared with 16.3 millions in 1902-03. The share taken by Bombay was 11.5 millions and by Burma, where the increase was 49 per cent, 54 millions. Nearly nine-tenths of the piece-goods of pure silk came from China and Japan. The cheap Japanese silks, which are rapidly improving their position, increased last year by 59 per cent and accounted for 68 per cent of the total.

Woollen goods.-The heavy fall in all classes of imported woollen goods which occurred in 1902-03 has been followed by brisk revival, bringing the value of the trade up to its highest level, namely, 21.6 millions of rupees, compared with 14 millions in 1902-03. German imitations of Bradford cloth have not maintained the position they occupied two or three years ago, but on the other hand Germany has passed all competitors in the trade in shawls, of which it sent over one million to the value of 23.8 lakhs out of total of 40.7 lakhs.

Other Manufactured Goods.-Of the other articles enumerated in this class the following are the most important:

Steady progress is revealed almost throughout. The growth and large dimensions attained by the trade in apparel is worthy of notice. Excluding imports of boots and shoes to the value of nearly 28 lakhs, which is principally British trade, the United Kingdom has orily half the trade, its nearest competitors being Austria-Hungary and France. In another growing and important trade, namely, glassware, Austria-Hungary takes more than one-third, while the United Kingdom has orly one-sixth, and in respect of the matches British trade now secures only one-sixteenth. The extending use of motors accounts for the larger imports of carriages. The large demard for jaclli,y in 1902.03 was caused by the Delhi Durbar and imports have returned to the normal level.

The principal imports are stated in the following list with the value of the trade in each for the last two years (in thousands of rupees):

| 1. Cotton manuactures: | 1902.03 |  |  | 1903.04 |
| :---: | :---: | :---: | :---: | :---: |

Two thirds of the trade consists of cottons, metals, metalware, machinery, railway material, sugar, and petroleum.

General distribution of the import trade.-Following the classification of imports adopted in the accounts of trade, that is, according to the countries from which they come as shown in the bills of entry, the value of the imports of foreign merchandise was thus distributed a mongst the principal countries trading with India:

In respect of the share of the United Kingdom, it should be noted that this relates to private trade only, and that of the imports of Government stores, of which the value last year was 777 lakhs, the United Kingdom absorbed 97 per cent, or nearly one-seventh of its exports to India of private merchandise. Well over one-half of these stores also consists of railway material which is largely imported by Companies working for profit lines leased to them by the State, and such stores, not being the property of the Government, are when dutiable charged with import duty, though most railway material is duty free. In such transactions, therefore, there is no well-marked distinction from private trade.

The present arrangement of the countries places some of them in quite a different position from that which they would occupy if the classification were made according to the origin of the goods. Germany, for instance, should come next to the United Kingdom, for much of the trade credited to Belgium and Holland belongs by origin to Germany, the trade in iron and chemical dyes being notable examples of this. On the whole, the export trade of Germany to India would seem to be almost double that recorded, while Belgium receives credit for quite twice its share. Some Italian goods come from Austrian ports, and trade with China and Japan is credited to the Straits Settlements. The share of the United States would seem to be understated, probably owing to American goods being transhipped at British or Continental ports. Japan has recently made noticeable progress by sending larger quantities of silk piecegoods, hosiery, apparel, copper, and coal.

## Exports of Imported Goods

The re-export trade is mainly carried on with the chief ports of Western India, namely, Bombay and Karáchi, the former being the principal centre for the distribution of European goods to the Persian Gulf and the Arabian and African Coasts and for the collection and re-exportation'to Europe, of merchandise from those regions, or in the case of wool and a few other articles, of goods imported into India overland. The trade which has never been very large reached its highest point in 1894-95, and since then the decline has been nearly
continuous as shown in the figures appended, giving the value in rupees during the last ten years :

| 1894-95 | 5,05,74,144 | 1899-1900 | - 3,29,24,912 |
| :---: | :---: | :---: | :---: |
| $1895-96$ | - 4,71,75,159 | 1900-01 | - 3,20,85,314 |
| 1896-97 | - 4,03,36,372 | 1901-02 | - 3,25,98,163 |
| 1897-98 | - 3,75,11,720 | 1902-03 | - 2,93,56,132 |
| 189S-99 | - 3,37,11,965 | 1903-04 | - 3,32,55,087 |

The decline is most marked in the trade with ports in the Persian Gulf, the principal cause being the development of direct communications with Europe, which to some extent dispensed with the need of an emporium at Bombay. Trade with the United Kingdom in foreign produce has also fallen away greatly, and this is indirectly due to the same cause, for taking as an example wool, which is the largest export of foreign origin to the United Kingdom, much less of this now comes from Persia to Bombay for re-export. No large expansion of the re-export trade is therefore at all probable, though last year there was a satisfactory improvement of 39 lakhs, giving a higher total value than in any of the preceding four years. In cotton manufactures, which represent $41 \cdot 3$ per cent of the total trade, the improvement was 20.4 lakhs, in metals $10^{\circ} 2$ lakhs, in provisions 4.5 lakhs, in oils $3^{\circ} 4$ lakhs, and in hardware 3.1 lakhs. The chief decreases were 4 lakhis each in sugar and tea, the reductions being almost entirely in the exports to Persia. This is doubtless the effect of the enhanced Persian tariff, for the higher rates of duty must have impeded transit trade. But on the whole the tariff does not appear to have checked consumption, for excepting (in addition to the articles already mentioned) Indian tea, which also goes indirectly through Russian and Turkish ports, and food grains, which are free or very lightly taxed, the trade with Persia in all the important articles of Indian and foreign produce increased in 1903-04.

## Exports of Indian Merchandise

The arrested development of the export trade during the ten preceding years was followed by a marked revival in 1901-02, further progress in 1902-03, and an advance last year of 2,375 lakhs ( $£ 15,836,000$ ) equal to 19 per cent, an expansion for which there is no precedent. The progress made since $\mathbf{1 8 8 0 - 8 1}$ is indicated in the figures appended:

The fluctuations from year to year are illustrated by the appended list of the principal articles in the trade and their value $(R)$ :

|  | 190001 | 1901.02 |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 14,42,60,933 | 14,75,71,98: | 24,37, |
|  | 13,21,91,491 | 13,91,95,678 | 18,89,52,506 | 19,08, |
| Jute, raw | 9,01,40,351 $10,86,77,562$ | 16,77,92,684 | 14,88,25,711 | 14,5 |
| Wheat - | 38,84,008 | $\begin{array}{r} 11,79,7^{2,723} \\ 3,62,72,080 \end{array}$ | $\begin{array}{r} 11,12,64,752 \\ 4,08,08,201 \end{array}$ | $11,7$ |
| n yarn | 5,70,29,566 | 10,86,53,008 | 40,90, $10,0,76,891$ |  |
| manufa | 9,45,54,357 <br> 7,86,46,012 | 8,52,20854 |  |  |

The direct influence of the seasons, which fortunately during the last three years have been continuously and progressively favourable for agriculture, is as usual strongly marked. Thus the fall in the price of food grains coupled with an abundant supply has resulted in an unparalleled development of the exports of grain and pulse, for simultaneously with very large exports of wheat, millets, and pulse, the trade in rice exceeded in value, though not in quantity, the phenomenal trade of the previous year. So also of oil seeds larger quantities were produced and exported but at much diminished prices, for the remunerative prices of recent years have led to a large increase of cultivation throughout the world and created a temporary excess of supply which has reacted sharply on prices. The seasons were favourable for both jute and cotton. In the case of cotton moreover an extraordinary demand coincided with an unusually heavy crop, and the quantity is the largest ever exported, but the phenomenal increase in value, compared with that of recent years, is due in a greater degree to the inflated price. Inflation of prices also accounts for the large improvements in opium and lac. The tea industry has recovered from the state of depression, and a very heavy crop has been disposed of at a slight advance in price. In only three of the twenty articles specified, namely, indigo, provisions, and silk, is there a decline, and the indigo industry shared in the general prosperity of the year to the extent of obtaining a much superior crcp, but a slack demand and the competition of the chemical product have kept down prices to an unprofitable level.

Besides the inflation of the prices of opium, raw cotton, and shellac, higher prices were realised for rice, raw hides, cotton goods, and gunny bags, and the average level was therefore higher than in 1902.03 . The increase due to variation in price is thus 626 lakhs, equal to 5 per cent, and to a larger volume of trade, 1,749 lakhs, equal to 14 per cent, the sum of the two representing the actual increase of the year.

The value of the trade in each of the classes under which articles are grouped in the accounts was in R :

|  | 1900.01 | 1901-02 | 1902-03 | 1903-04 |
| :---: | :---: | :---: | :---: | :---: |
| Articles of food and drink . | $26,30,45,344$ | $29,3 \mathrm{I}, 40,145$ | $35,89,88,056$ | $H, 71,02,673$ |
| Chemicals, drugs, medicines, narcotics, and dyeing and tanning materials | 12,88,83,29 6 | 11 | 5 | 13,00,71,626 |
| Raw materials and unmanufactured articles | 42,71,60,535 | 53, $84,01,450$ | 52,08,49,462 | 62,67,38,477 |
| Articles manufactured and partly manufactured | 20,94, 81, 243 | 4,98,37,62 | 5,81,69,367 | 6,42,96 |

The great preponderance of raw products exported as food or as material for industrial purposes is very noticeable. Exports of manufactured articles are still on a small scale, and with the exception of textiles the manufacture is generally not carried beyond the initial or preparatory stages.

## Articles of Food and Drink

Coffce-Accurate information regarding the iniportant coffee planting industry of Southern India is not always procurable, but owing to the low prices realised in recent years the area planted appears to be contracting. Practically the whole of the production is exported, and the figures of the trade during the last five years are:

The quantity increased last year by $S^{2} 2$ per cent, but owing to a decline in the declared value of $\mathrm{R}_{2-2-3}$ per cwt , the rise in the total value is only $3 \frac{1}{2}$ per cent. The very large stocks held throughout the world have depressed prices, but the outlook for this year is somewhat better owing to a deficiency in the Brazil crop of 2 million bags, or 16 per cent. Hall of this however is made good by an estimated increase in other sources of supply of one million bags. A large share of the Indian crop is taken by France, the proportion last year represented by direct shipments to French ports being $3^{6}$ per cent of the total exports.

Rice.-The exports since $1895-95$ are stated below (cwt, 000 omitted) :

Commencing with the year immediately preceding the first of the two great famines of the last decade, this table irdicates the influence of the conditions of Indian agriculture on the exports of rice from Burma to foreign countries. For Burma, though it is far from the largest producer of rice, as its production is on average not more than one-sixth of the production of Bengal and little, if anything, greater than that of Madras, retains for home consumption less than one-fifth of the crop and exports the remainder to India and foreign countries, the amount of the foreign exports being directly dependent on the state of the Indian demand. Thus in 1900.01 , when the foreign exports were comparatively small, there were abnormally large exports to India, and the total shipments of Burma rice amounted to 43 million cwt , or more than any other year except 1902.03 when the total was 45.4 million cwt. Last year comparatively little Burma rice was sent to India, and the foreign exports kept up to a high level, being only 9.4 per cent less than in the phenomenal year 1902.03 which, in regard
to foreign exports, exceeded the preceding year by nearly 52 per cent. Exports from Bengal and Madras were larger, and, owing to a rise in price occasioned by extensive speculation in Rangoon, the value of the export trade was slightly in advance of the preceding year, which had established a record far above all previous years. The Burma crop of $1901-02$ was exceptionally large, and in the next year there was a fall of 12 per cent, but this has been followed in 1903.04 by an outturn $21 \frac{1}{2}$ per cent larger, thus establishing a fresh record. The total yield for India is however smaller than in 1902-03, owing to a reported large deficiency in the Bengal crop.

The uncertainty as to the destination of exports, owing to the practice of shipping rice to Port Said to await orders for delivery, has been removed by ascertaining from the shippers or by other enquiries the final destinations and correcting the record of exports accordingly. Owing to these corrections the share allotted to Egypt, which formerly averaged about one-third of the quantity of exports, has fallen to about one-sixty-sixth. The most noticeable result of the reclassification is to raise the value of the exports to Germany from about 17 to 192 lakhs, to Holland from 3 to 88 lakhs, and to AustriaHungary from 34 to 91 lakhs. The share of Europe and Egypt combined which was 44 per cent of the total trade in 1902-03 has, however, fallen to under 30 per cent as the result of the heavy demands from the Far East. Owing to partial failure of its rice crop, Japan imported very largely, the quantity from all sources in 1903 being 723,950 tons or nearly treble the previous year's imports. It, therefore, took more Indian rice than any other country, the exports reaching the very high total of 351,500 tons, giving a value of $296 \frac{1}{4}$ lakhs. Hitherto the demands from Japan have been only occasional, the three years of considerable exports of rice to that country being $1897-98$ with 56,900 tons, $1898-99$ with $8 \mathrm{r}, 200$ tons, and 1902.03 with 204,000 tons. The direct shipments to the Philippines began in 1902-03 with 19,500 tons, which increased last year to 43,000 tons. The exports to the Straits amounted to 366,200 tons, the greater part of this being distributed to China and other countries in the Far East. The exports of rice from Bangkok in 1903, 585,000 tons, were 26.7 per cent smaller than in the previous year, and for Saigon with 474,000 tons, the falling off was $41 \cdot 3$ per cent. The trade with South America is principally with Brazil, and the direct exports to that country have declined noticeably in the last three years, namely, from a value of 57 laklis in 1901-02 to $31 \frac{1}{8}$ lakhs in 1903-04. Improvement does not seem likely in view of the recent increase of the import duty and other dues by 50 per cent for the purpose of affording protection to the home producer. Indirectly, that is through British and German ports, there are large exports to Cuba, averaging in recent years about 75,000 tons, and this trade also has been subjected from February 1904 to an increase of duty of 20 per cent, while a preference is allowed to the United States of 40 per cent under the recent Reciprocity Convention. The cheapness of the Indian article should, however, enable it to retain its hold on this market, though the cultivation of rice in Texas is extending greatly.

Wheat.-As was anticipated the excellent harvest reaped in the spring of $1903^{\circ}$ was followed by a large export of wheat, which exceeded the trade of $1902-03$ by 780,958 tons or 152 per cent, the rise in value being $657 \frac{1}{3}$ lakhs or 146 per cent. The fact that the exports of $1902-03$ exceeded those of any of the three years immediately preceding it inight lead to the inference that last year's trade was abnormal, but a wider view of past conditions rather justifies its
being regarded as a full and healthy recovery from years of abnormal depression. An export duty on wheat existed till 1873, and it was not till the last quarter of the nineteenth century that extension of railways gave proper facilities for export. Then came the severe famine period of $1877-79$, recovery from which did not manifest itself till 1880.8 r , and with an increase in the following year of 167 per cent above the highest figure previously recorded a total not far short of a million tons was attained. From then till the present time, that is, in twentythree years, the trade has shown great fluctuations, but practically no progress, and it is instructive to contrast the seven worst and the seven best years ( 000 omitted):

The average annual export for the whole period is 706,118 tons, but for the first twelve years it is 911,099 tons against 482,501 tons for the last eleven years, for all the worst years fall in the later period which contains only two of the best years. The period of serious crop failures, which started in 1895.96 , had greatly reduced the area placed under wheat, and though $4 \frac{1}{5}$ million acres were added this year, the deficiency has not been made up. The area in Northern India, where the crop is most productive and is largely irrigated, has, however, increased greatly, and the yield from this year's harvest, which exceeds that of the previous year by $1 \cdot 6$ million tons, is by far the largest known. An insufficient margin between prices in India and Europe has, however, often restricted the export trade when supplies were ample, but both conditions were favourable last year and are still more so this year, for prices in India are lower than they have been for five years, and the great falling off in supplies from America makes it unlikely that European prices will decline. There should, therefore, be a very large export this year. The conditions also seem favourable for the continuance of a remunerative demand for Indian wheat and large exports unless the prospects are marred by bad seasons, for wheat, though assisted by irrigation, is an uncertain crop, and an extensive failure of other food grains through a defective monsoon would necessarily enhance the price of wheat, though that crop did not suffer.

As in the case of rice, large shipments of wheat are made to Egypt to await orders for delivery, and the correction of the record according to the final destinations, although a shipment of 4,650 tons is still unadjusted, has reduced the share of Egypt from 23 to $\mathbf{t}$ per cent of the total. Next to the United Kingdom which absorbed $1,061,600$ tons, or 82 per cent, Belgium with 140,130 tons had the largest share, followed by France with 44,9co tons and Japan with 9,000 tons.

There is also an expanding trade in wheat flour, over 40,500 tons of which to the value of 53 lakhs was also exported, the chief markets being Aden, East Africa, Mauritius, the Persian Gulf, and Ceylon.

Other food grains.-There were very large exports of millets and pulse, and the total of all grains other than rice and wheat, amounting to 272,000 tons, was 15.5 per cent greater than in 1902.03, which was much in excess of any previous year.

The increase in the trade in Fruits and Vegetables is phenomenal, for it nearly doubled in $1902-03$ and increased again last year by 70 per cent. The expansion is mainly in cocoanut kernel or copra, which is exported from Madras chiefly to Germany and France, the value being 5 lakhs in 1901-02, 181 lakhs in 1902-03, and last year $42 \frac{1}{4}$ lakhs, a figure which has never been approached. Including fresh fruit and vegetables sent to Ceylon and the Straits ${ }_{1}$ the total value is $54 \frac{1}{4}$ lakhs, compared with 32 lakhs in 1902-03. .

Provisions and Spices.-The principal•articles classed as provisions are preserved or salted fish of various kinds and ghi (clarified butter), each with a value of 23 lakhs. The trade in spices exceeds that of any other year, owing to exceptionally large exports of pepper 5t lakhs, ginger 25 lakhs, and chillies $12 \frac{2}{3}$ lakhs.

Tea.-The exports in the last five years have been:

So much has overproduction been regarded as the bane of the tea industry in recent years, that the diminished productiveness of the crop of 1902 caused by inclement weather and labour difficulties was considered as on the whole advantageous by equalising supply and demand. Yet in 1903 the demand fully kept pace with an abnormally prolific crop, which, with a slight contraction of the area, has given an outturn by far the largest obtained and exceeding that of 1902 by 20 million tb or 11 per cent. This increase is principally due to a very generous growth of leaf but also, in part, there can be little doubt, to freer plucking induced by the inflated price of common grades of tea.: Another cause, which has attracted little attention, is probably the very large net addition to cultivation made in 1898 and 1897, or even a year earlier, for though these have long been classed as mature areas they are only now beginning to bear fully. There are also strong reasons for believing that the production was considerably greater than reported ; for while it is stated to have risen by 20 million fb , the foreign exports by sea are shown to have advanced by $25 \frac{3}{4}$ million fb . Moreover the total exports by land and sea exceed the total reported production of India (excluding Burma) by $1,049,000 \mathrm{HD}$, while the exports from Bengal to foreign countries and other provinces exceed the joint crops of Bengal and Assam by $3 \frac{1}{4}$ million Ib . The net deficiency for India would be further increased by the amount consumed in the country, which though never ascertained with accuracy, can scarcely be below 3 million fb . Accepting the exports as sub. stantially correct, either invisible stocks must have come forward or the production must have been some millions of pounds greater than was reported. There is no evidence of considerable stocks, but the strong demand for useful low priced qualities, which exceeded the supply, would bring forward what existed. On the other hand, there is evidence in the returns of inland trade that the exports from Assam were nearly $6 \frac{3}{3}$ million to greater than its reported production, while the tea districts of Northern Bengal exported about $2 f$ milliontb less than they claim to have produced. The increase in the price of tea sold in London was nearly one-fifth of a penny per Ht , and at the Calcutta sales, where the prices of the better grades were not so flat, about seven-twelfths of a penny. . The generally poor quality of the rrop is, hawever,
indicated by the value of the total exports, which shows an advance of only $1 \cdot 3$ pices, or nearly one-ninth of a penny, per th.

The principal countries to which Indian tea has been supplied in the last three years have been (tb, 000 omitted):

The most satisfactory feature of the year is the increase of exports to Colonial and foreign markets by $8,445,000 \mathrm{Hb}$, bringing the total to nearly 37 million fb . Good progress has been made in Canada, bút for the Australian trade, which should do better, the supply of suitable cheap tea is said to be inadequate, and Ceylon will probably obtain by far the largest share of any benefit derived from the recent remission of the duty on British grown tea imported into New Zealand. The great expansion of the year is in the exports to Russia, which is also taking larger quantities of Indian tea from the United Kingdom, for the direct shipments to Russian ports, including $4,905,000$ th consigned to Dalny, amounted to $9,45^{2,000} \mathrm{lb}$. Purchases were however made in Calcutta by Russian buyers of $1 \mathrm{I}_{4}^{1}$ million Hb , part of which must have been consigned for transhipment at foreign ports. The shipments of tea to Dalny for conveyance to Russia by the Manchurian and Siberian railways began in July 1903, but later the use of this route, for the few months it remained open, was no doubt stimulated by the enhancement in September 1903 of the duty on Indian and Ceylon tea at the Black Sea ports and European frontiers by $1 \frac{1}{8}$ roubles per poud, equal to one penny per lb . On the evidence of purchases at the sales the increased duty in Persia does not appear to have restricted the demand, and though the registered exports have decreased by over a million lb , it must be remembered that tea for Persia is consigned to Turkish and Russian ports as well as to the Persian Gulf.

The funds collected under the Tea Cess Act of 1903 were expended by the Tea Cess Committee in extending by advertisement the sales in other countries, by the grant of a bonus of 6 pies per lb on green tea exported by sea, and in promoting the sale and consumption of tea in Southern India, for Northern India is worked by a special commission whose three years' agreement with the Indian Tea Association terminates on the 31st July 1903. The bonus was admitted only in respect of $2,600,000 \mathrm{fb}$, though including the gardens in Upper India whose production was mainly to be exported by land or sold locally, the manufacture reached $4,837,700 \mathrm{fb}$. This year the green tea export bonus has been raised to 9 pies per Hb , and a similar bonus is offered for a limited supply of imitations of Formosa Oolongs. The smallness of the cess however limits the grants made by the Committee for these and other contemplated measures to amounts which barely secure the objects in view. The improvement of the situation depends, as all interested in the tea industry realize, on extending the field of consumption, for the position of tea in the English market is likely to suffer from the recent increase of the duty from $6 d$ to $8 d$ per lb . Increase of production this season, éxcept through coarser plucking,
is not indicated by the returns of cultivation. The reported area and yield were as follows in the last two years:

## Metals

Manganese Ore is the only important item in this class. The quantity exported last year, $3,623,789 \mathrm{cwt}$, is eight times greater than the exports of eight years ago, and India is now the third largest producer of this metal. The value, which last year was 22.9 lakhs or 21 per cent greater than $1902=03$, shows a proportionately greater rise than the quantity, owing to the increasing production in the Central Provinces, as that ore, which is shipped from Bombay and now amounts to over 60 per cent of the total, is valued at nearly double the price of the ore obtained in the Vizagapatam district of Madras.

## Chemicals, Drugs, Narcotics, and Dyes

Saltpetre is the only chemical substance of which a considerable quantity is exported. The trade decreased slightly last year and has for many years been unprogressive:

Opium.-The fluctuations in exports and prices are indicated by the figures below :

| 1898-99 | Bengal chests | Bombay chests | Total <br> chests | $\begin{gathered} \text { Value } \\ \mathbf{R} \end{gathered}$ | Average price per chest |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | $\begin{gathered} \text { Bengal } \\ \mathbf{R} \end{gathered}$ | Bombay R |
|  | - 41,169 | 25,959 | 67,128 | 7,12,60,093 | 1,049 | 1,082 |
| 1899-1900 | . 42,427 | 24,923 | 67,350 | 8,20,37,148 | 1,215 | 1,223 |
| $1900 \cdot 01$ | - 44,994 | 24,714 | 69,708 | 9,45,54,357 | 1,361 | 1.349 |
| 1901-02 | - 48,062 | 17,541 | 65,603 | 8,52,29,854 | 1,299 | 1,301 |
| 1902-03 | - 48,154 | 19,377 | 67,531 | 8,01,69,354 | 1,144 | 1,295 |
| 1903.04 | - 48,218 | 25,419 | 73,637 | 10,47,01,638 | 1,460 | 1,349 |

The exports increased last year by 9 per cent in quantity and $30^{\circ} 6$ per cent in value, which is the highest attained in the last twenty five years. After reduced production in the two years following the great drought in Central India, large supplies of Malwa opium came forward, and the extraordinary demand caused by failure of the China crop sent up the price, especially of Bengal opium, to an unusual height. The price per chest at the monthly sales in Calcutta ranged from $R_{1,240 \frac{1}{3}}$ in April 1903 to $R_{1,765}$ in February 1904, the closing price for March being $R_{1,697 \frac{1}{2}}$. The year's average of $R_{1,460}$ is greater than of any other year since $1861-62$. The exports to China direct increased
by $5,03_{3}$ chests, to Coclin China by 950 chests, and owing to a shipment of 944 chests to Siam, by 712 chests to "other countries,". but the exports to the Straits were smaller by 588 chests.

Tobacco.-The trade in tobacco leaf fluctuates considerably. The principal destinations arè Aden (as a centre of distribution), the Straits, Hong hong, and Holland.- The marked decrease noticeable in manufactured tobacco, that is, cigars, is due to the cessation of the demand from South Africa which lasted only for two years. The exports are nof principally to the Straits and the L-nited Kingdom. 'The trade during the last three years has been:

Manufactured

| Cwt | $R$ |
| :--- | ---: |
| 14,141 | $16,82,867$ |
| 10,745 | $12,62,547$ |
| 9,207 | $8,10,438$ |

Indigo.- The course of the export trade in the last ten years is indicated in the subjoined figures ( cwt ):

|  | From Calcuta | From Madras | Frow alter poats | Total | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | R |
| 1 S94-95 $^{\text {a }}$ | 106,830 | 44,974 | 14,504 | 166,308 | 4,74,59,153 |
| 1895-96 | 111,714 | 62,425 | 13,198 | 187,337 | 5,35,45,112 |
| 1 196-97 | - 109,001 | 43,680 | 16,842 | 169,523 | 4,37,07,570 |
| 1 Su 7.98 | - 71,364 | 48,165 | 14,320 | 133,849 | 3,05,74.019 |
| 1 198-99 | 81,779 | 42,760 | 10,643 | 135,187 | 2,97,04,781 |
| ${ }_{1}$ S99-1900 | 59.078 | 39,553 | 12,489 | 111,420 | 2,69,25,107 |
| 1900-01 | 71,637 | 18,940 | 11,914 | 102,491 | 2,13,59,So8 |
| $1301-02$ | 55,038 | 25,400 | 9,312 | 89,750 | 1,85,22,554 |
| $1 \mathrm{gO2} \cdot \mathrm{O} 3$ | 29,403 | 32,242 | 3.732 | 65,377 | 1,20,56,8:9 |
| $1903-04$ | 29,858 | 21,414 | 6,138 | 60,410 | 1,07,62,026 |

Starting with the years of greatest prosperity, these figures reveal a decline for the last eight years, differing only in the rapidity of the descent. Indigo has always been an uncertain crop varying with the nature of the season, but so long as a reduction of yield meant an enhancement of price fair profits could always be made without much attention to economy. The position, however, suddenly changed when the planting industry had to face a disheartening cycle of bad seasons, combined with a continued fall in prices, owing to the production of synthetic indigo in increasing quantities at a constantly diminishing cost. The immediate and heavy reduction of profits naturally resulted in a great restriction of cultivation and a lamentable depreciation of valuable properties. Admitting, as is often asserted, that natural indigo has indefinable properties, making a superior dyeing agent to the chemical product, the superiority is still not so great as to secure for it a much higher price and the vital question therefore is, Which of the competitors can produce most cheaply? In respect of introducing improvements in manufacture and other economies in production, natural indigo is probably in a better position than its rival, but on the other hand the fact that the quantity of indigo exported from Germany was 37 per cent greater in 1903 than in 1902 is proof of an increasing demand for the chemical product.

Except in Bengal, where the acreage continued to fall slightly, indigo was more largely grown than in 1902 and the yield was everywhere much-superior. The larger supplies concurrently with a much restricted demand from cotton printers, owing to the abnormal prices of raw cotton, had an unfavourable effect on the prices of both natural and synthetic indigo, and for Bengal indigo the fall
was 10 per cent. ' Owing to the low range of prices supplies did not come forward readily, and the exports from Madras, which show, a large decline in quantity, account for only 46 per cent of the estimated crop, while the exports from Bengal in April of this year have been unusually large, namely, $7,047 \mathrm{cwt}$, valued at nearly 14 lakhs. A noticeable falling off occurs in the trade with Japan, especially in Bengal indigo, this being traceable to the effect of the enhanced tariff, in anticipation of which large shipments were made in the previous year. From the ist April 1903 the duty on Indian indigo was raised from 12.953 yen to $21^{\circ} 422$ yen per picul, equal to additional taxation of 1.55 pence per lb or Rs. $7 \cdot 3.6$ per factory maund. The new statutory rate applies to India, owing to her not having acceded to the Anglo-Japanese treaty under which all other indigo-producing countries, through the most favoured nation clause, continue to pay the former conventional duty. This lower rate also applies to German synthetic indigo, which has a further advantage in respect of duty over all vegetable indigos, owing to the much higher percentage it contains of indigotine.

The remaining dyeing and tanning materials are Cutch, which showed great improvement, though the exports are still below the level prevailing some years back; Myrabolams in which there was also a satisfactory increase; and Turmerac of which the exports are fluctuating and decreased largely. The figures of the trade are-

## Oils

The value of the trade in oils, which is 20 per cent larger than in 1902-03, is by far the highest attained. This result is due to the large exports of cocoanut oil from Madras which, like the trade in copra, have increased in a remarkable manner, the values being $12^{\circ} 9$ lakhs, $29^{\circ} 6$ lakhs, and 48.8 lakhs, respectively, during the last three years. Of castor oil which is next in importance the exports decreased and prices continued to fall, the value being 20.8 lakhs, compared with 24.7 lakhs in 1902-03. Mineral oil from Burma which is making remarkable progress in India was also exported to foreign markets (chiefly to the Straits and Ceylon), the value being 44 lakhs. This is not a new departure but a revival after two or three years of a trade which so far has only attained small dimensions.

## Raw Materials

Coal.-Outside India, where its use is almost universal, there is only a limited demand for Indian coal, as it has to compete in all outside markets with English, Japanese, or Australian coal, and although there is plenty of good coal, the inferior quality of some of the shipments has not improved its reputation. The exports, amounting to 493,070 tons, were 14 per cent greater than in 1902.03, but owing to the continuous fall in prices, which has largely diminished
the profits of the coal industry, the value was slightly lower, namely, 38 I lakhs, compared with $3^{8} 8$ lakhs in 1902-0). To Cejlon which is the principal foreign market the exports ( 257,251 tons) declined, but the shipments to the straits ( 142,256 tons) and to Aden ( 43,410 tons) increased largely. The other principal destinations were East Africa ( $19,6{ }^{2} 2$ tons), Sumatra ( 13,975 tons), Mauritius ( $\delta, \mathrm{SO}_{2}$ tons), Java ( $3, \delta_{42}$ tons), and Egypt ( 3,000 tons).

The output of the Indian mines did not advance as in previous years, for the quantity raised, nearly $7 \frac{1}{3}$ million tons, was about the same as in 1902-03, while the value was lower, namely, 198 lakhs, compared with 205 lakhs.

Cotton.-The large trade of $1902-03$ has been exceeded this year by $65^{2} 2$ per cent, of which 31.7 per cent is due to larger exports and 33.5 per cent to higher values. In no year has so large a quantity been exported and in few has it been approached, for since the trade began exports over six million cwt have occurred only six times, and in tro only of these years have seven million cwt been exceeded, namely, in $1865-66$ with $7,171,000 \mathrm{cwt}$ and in $1871-72$ with $7,225,400 \mathrm{cwt}$, while last year nearly 8 million cwt was reached. The crop of $1902-03$ was exceptionally large, being estimated at more than half a million bales greater than the large crop of the previous year, and the present season's crop, notwithstanding damage over extensive areas from excessive rain, is also estimated to have attained the same high level owing to an increase of 5 per cent in the area planted. The extraordinary range of prices established by the gambling operations of American speculators was the principal cause of the remarkable rise in the price of Indian cotton, but prices were also advanced by the knowledge of the shortness of the crop in certain cotton growing districts which was more regarded than the reported growth of cultivation. A view of the trade is given in the figures below :

Exports

|  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :---: | :---: | :---: |
|  |  | Exports |  |  |  | Declared value |
|  |  |  | Cwt | Value | per cwt |  |

The table appended states the destination of the cotton during the same period (cwt, $\infty$ omitted) :

|  | 1897-98 | 1898-99 | 1899-1900 | 1900-01 | 1901.02 | 1902.03 | 1903.04 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| France | 177 | 363 | 178 | 279 | 267 | 419 | 560 |
| Spain China | 4 151 | 12 28 | 20 | 57 | 67 | 111 | 265 |
| China | 151 | 283 | 285 | 109 | 559 | 196 | $\therefore 165$ |

Japan as usual figures as the largest buyer, but including what is received through Belgium, Germany was probably the largest consumer. The demand from Continenal Europe for Indian cotton has always been large, and until the development of the trade with Japan twelve years ago it received nearly the whole
of the exports, either direct or through the United Kingdom. Under prevailing conditions when the world's supply is barely able to meet the demands of spinners, Indian cotton, whatever its deficiencies may be in the matter of staple, will always find a market, and the fact that the area under cotton has increased during the last two years by at least 3 million acres implies that the cultivator finds it a profitable crop. That the agriculturist will share in the benefits derived from the improvement of quality and staple to which attention is now being directed is certain, but nevertheless the party most largely interested and whose advantage will be greatest is the manufacturer, and it is therefore unwise to expect the display of remarkable zeal by the agriculturist in carrying out the contemplated improvements.

Hides and Skins. - The trade in raw hides was normal, the quantity by weight being practically the same and the number slightly larger than in 1952-03, while the higher prices prevailing raised the value by 5.4 per cent. During the last five years there have been large exports of untanned skins, and the very high level maintained by the trade during the last three years is double the highest figure reached until six years ago. Compared with 1902.03, last year's trade was greater in quantity by nearly 10 per cent and in value by 6 per cent, while in value it is only I per cent lower than the record year 1901-02, though 1.8 per cent less in quantity. Raw hides are shipped principally to the Continent, Germany taking $39^{\circ} 3$ per cent of the total exports. The United States with 75 per cent of the total almost monopolises the exports of skins, which are there converted into the finer leathers by rapid processes of chemical tanning. There are practically no exports of raw hides or skins from Bombay (excluding Sind). Madras also does not export raw hides, and comparatively small quantities of untanned skins for that Presidency takes the lead in the tanning industry, which is atso of some importance in Bombay. The export figures are:

Hides

Skins

| No. | $R$ |
| :---: | :---: |
| $16,838,540$ | $1,96,33,877$ |
| $14,349,444$ | $1,72,22,325$ |
| $20,810,676$ | $2,69,67,253$ |
| $18,820,523$ | $2,51,93,622$ |
| $19,634,429$ | $2,66,86,740$ |

fute.-The crop of 1903 was estimated at $6 \frac{1}{2}$ million bales, an increase of nearly 20 per cent over the previous season's estimate, and, although the actual yield appears to have been still larger, prices kept up to the same average level as in 1902-03, as both for the mills, which required over 40 per cent of the crop, and for the export trade which increased by $5^{\circ} 2$ per cent, there was a full demand. The exports from Madras, chiefly from the port of Bimlipatam, though only 0.6 per cent of the total, are increasing and last year the value approached 6 lakhs. This fibre which is employed locally in the mill at Vizagapatam and is sent to Calcutta in small quantities from the adjoining districts of Orissa is known commercially as Bimlipatam jute, but appears to be a variety of Hibiscus Cannabinus or Deccani hemp.
:- Of the jute exported $43^{\circ} 2$ per cent was conveyed to the United Kingdom; $19^{\circ}$ I per cent to Germany, $14^{\circ} 4$ per cent to the United States, and $10^{\circ} 5$ per cent to France. There are, however, large reshipments from the United Kingdom to the Continent ( $\mathbf{1 2 2}, 000,122,700$, and 80,600 tons, respectively, in the three years 1901-1903), and of this France receives the largest share or an average of

5,500 tons for the five years ending 1902. The figures of the trade are ppended:

|  | Cwt ( 000 omittcd) | Value R |  | $\begin{gathered} C_{w t} \\ (000 \text { omiltod) } \end{gathered}$ | $\begin{aligned} & \text { Value } \\ & \text { R } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 189S-99 | - 9,864 | 6,94,12,452 | 1901-02 | - 14.755 | 11,79,72,723 |
| 1899-1900 | 9,725 | S,07,16,465 | 1902-03 | - 13,036 | 11,12,64,752 |
| 1900-01 | 12,414 | 10,56,77,502 | 1903.04 | - 13,728 | 11,71,81,222 |

Seeds.-The seasons have been generally favourable for the oil seed crops, nd the volume of the trade has increased, so that the aggregate of all arieties of seeds, though individually this applies to poppy alone, is larger ian of any other year, and was closely approached only in 1893-94. In the latter of value, however, last year's trade is comparatively low in the scale, eing 226 lakhs less than in 1901-02, a result due to smaller exports of the ore costly seeds, such as linseed and rape, and to a general fall in prices. ompared with $1902-03$, there was an increase in quantity of over $11 \% 2$ per ent, but a fall in value of $2 \frac{1}{9}$ per cent. The price of all seeds fell during the sar, and the reduction of the average values, stated as percentages of the values (1902-03, are for castor 16, cotton 2, earthnuts $14^{\circ} 5$ linseed $25^{\circ} 8$, mowa $j \% 4$, poppy $21 \%$, rape 7.3 , and til $11 \%$. The extraordinary rise in the price of aseed in 1900 , which continued during the two following years, induced a great crease of its cultivation throughout the world, and particularly in the Argenne Republic, which has further had an unusually prolific crop, so that the :ports in 1903 were 615,000 tons, or 275,000 tons more than in the previous ar. For India half a million tons is a very large export of linseed and so high figure has not been reached since $1893-94$, while the actual record is 543,330 ns in 1891-92. The fall of prices arising from the overstocking of the market is been continuous until April of this year when Rs. $3-4$ per maund was toted in Calcutta and Rs. 5 per cwt in Bombay, but in June the Calcutta ice had risen by 8 annas a maund. These prices were nearly approached in i83 but not actually. touched since $\mathbf{1 8 6 2}$. Similarly the price of til has fallen the level of 1860, and of rape and poppy to the levels of 1886 and 1887, spectively. The fall in price is likely to affect cultivation in other countries ore than in India, which has the advantage of extremely cheap labour, and hough the seasons are uncertain in the regions where oil seeds are chiefly own, they appear to be at least equally unreliable in the Argentine. The cent large additions in India to the acreage under linseed is also, it should be membered, not an actual advance but a return to conditions prevailing before $e$ years of drought and famine.

The trade in cotton seed did not continue at the high level it suddenly tained in $1902-03$ through the short deliveries of Egyptian cotton seed, but it as still comparatively large in view of its recent origin. The expansion of e trade in earthnuts which increased by 86 per cent in quantity and 59 per int in value is very satisfactory, for during some years ( 1896 to 1900 ) it was reatened with extinction owing to the ravages of disease and drought. nce its recovery the direction of the trade has completely changed, for in i94-95, when it reached its highest point, out of exports valued at. 130 lakhs,诰 lakhs went from Bombay, but last year out of a total of $1133_{3}^{2}$ lakhs less an 6 lakhs belonged to Bombay and $107 \frac{1}{2}$ lakhs was the share of Madras, the :ports being almost entirely from the port of Cuddalore. There is also in me years a very large export direct to France from the adjoining port of ondicherry, examples according to the latest figures available being
$1,068,477 \mathrm{cwt}$, value $7^{\circ} 7$ lakhs, in $1902 \cdot 03$ and $1,311,377 \mathrm{cwt}$, value 91 lakhs, in 1901-02. The total value of the trade is therefore much greater than is represented in the accounts relating to British India.

The dimensions and fluctuations in the trade in seeds, and in each of the principal descriptions, are stated below:

Total trade

Quantity of each seed (cwt, ooo omitted)

|  |  |  | 1899-1900 | 1900-01 | 1901-02 | 1902-03 | 1903-04 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Linseed | - - | - | - 7,293 | 5,060 | 7,328 | 6,328 | 8,616 |
| Rape | - - | - | - 3,409 | 1,727 | 6,925 | 3,927 | 4,343 |
| Sesamum | - - | - | - 2,470 | 1,844 | 2,447 | 3,733 | 3,513 |
| Cotton | - . | - | - 43 | 225 | 2,036 | 3,974 | 2,677 |
| Earthnuts | - |  | - $\quad 156$ | 232 | 1,085 | 1,036 | 1,922 |
| Castor | - • |  | - 883 | 876 | 1,324 | 1,752 | 1,567 |
| Poppy . | - . | , | - 949 | 802 | 934 | 966 | 1,31 |

Silk.-The exports vary, ordinarily within small limits, but have not increased for twenty years or more. Prices rose slightly last year and the reduction in the value of the exports was 3 per cent, compared with 1902-03. The statistics of the employment of labour in the mills also indicate stagnation of the weaving industry.

Teak.-There were large exports following two years of restricted trade, and both in respect of quantity and value the trade of last year has been. surpassed only on two occasions.

Wool.-The exports of $33 \frac{1}{4}$ million Hb are 19 per cent greater than in 1902-03 and are the highest recorded. Re-exports of wool imported overland also amounted to $5 \frac{1}{3}$ million Hb . The trade is almost entirely with the United Kingdom.

Among other items in the group are the following, with their values in $R$ :

The diminished export of animal bones is by no means to be deplored, for it indicates either decreased mortality of cattle or the larger employment of bone - manure in the country. Exports of rice-bran now vary according to the
quantity of rice milled, and the trade has more than doubled in the last ten years. The exports of bristlis and fibre are increasing satisfactorily.

## Articles manufactured and partly manufactured

The relative proportions of the export trade in each principal class of manufactures in the last five years are shown in the figures appended ( $R$ ):

There has been an increase in each class, except the two of least importance, and in the total of the group of 7 per cent, compared with 1902.03 . The value of all manufactures was last year $18 \frac{1}{3}$ per cent of the total exports of merchandise, and in the two previous years $20 \frac{1}{2}$ per cent. Half of the total, however, represents goods which may be described as partly manufactured, as they supply the material for other manufactures. These are cotton yarn, tanned hides, and lac, the last-named being really misclassified by inclusion in the group of manufactured articles.

Cotton manufactures.-The crisis in the cotton industry has been less acute in India than other parts of the world and was later in making itself felt, for the shipments of yarn to all countries, as also to China, which took 93 per cent of the total, were for the first nine months of the official year, or the whole of the calendar year 1903, the largest recorded. But in the last quarter of the year the position changed very much for the worse, the rising price of the raw material, of which very large quantities were being exported, and the small advance in the price of yarn, making profitable working difficult or impossible, so that exports declined and several mills either closed or worked short time. The total trade in yarn, of which the export price was 5 annas and 7 pies per Ib or 1 pie greater than in $1902-03$, was, however, still very large, being $3 \frac{1}{2}$ per cent more in value than in 1902-03, though 5 per cent less than 1901-02, which still holds the record for official years.

The weaving mills were less affected than the spinning mills by the dearness of the raw material, for there was a considerable advance in the price of cloth, and as both the home and the foreign demand was good, production increased by 12.4 per cent. Weaving is certainly the most profitable branch of the textile industry, but its progress is not rapid, for only 1,508 looms were added during 1903, for the whole of India, an increase of $3 \frac{1}{\frac{1}{2}}$ per cent. The export trade in cloth was greater by 9 per cent in quantity and 117 per cent in value than in 1902.03, and in point of value has been exceeded (by 1 per cent) only in $1895-96$ when the quantity was $16 \frac{1}{5}$ million yards greater. The principal markets for Indian cloth are the Straits, Ceylon, the coasts of the Persian Gulf and the Red Sea, and East Africa. Dyed and printed cloth, which represent $44^{\circ} 3$ per cent of the quantity and $6_{3} \cdot 2$ per cent of the value of piece goods, is exported principally to the Straits, Ceylon, and the Philippines, and over two-thirds is of Madras manufacture.

The figures of the trade for the last five years are:

During the same period the production of yarn and cloth in the Indian mills has been ( tb , 000 omitted) :

$\mathcal{F}$ ute Manufactures.-The dimensions and value of the export trade are ( 000 omitted in each case) :

There were smaller exports last year of bags, but the trade in cloth was greater by 12 per cent, and the value of all manufactures increased by 5 per cent. The recovery of Australia from the losses caused by years of drought is noticeable in the return of the large trade in bags to a more normal level than the shrunken figures of $1902-03$, which were exceeded by $32^{\circ} 4$ per centThe exports of cloth make continuous and rapid progress, and have now surpassed the value of the trade in bags. The chief market for cloth is in the United States, which took $365 \frac{1}{2}$ million yards, valued at 307 lakhs or 63.3 per cent of the total. The monster harvest of wheat and linseed in the Arantine required large supplies of gunny cloth, of which $131 \frac{1}{3}$ million yards, valued at $122 \frac{1}{2}$ lakhs, were shipped to that Republic. The trade with the United Kingdom of $77 \frac{1}{8}$ lakhs, of which 817 per cent is the value of bags, is for re-export principally to North and South America.

The decline in the exports of bags does not indicate diminished production, for the large crops of wheat and seeds caused a brisk internal demand, to meet which exports inland from Calcutta and the neighbouring districts, where the mills are situated, increased by nearly 22 per cent. The value of the goods manufactured in the mills was estimated to be 1,152 lakhs in 1901-02. A similar estimate based on the registered movements of produce by sea and land gives a value of 1,203 lakhs in 1902-03 and 1,279 lakhs, or approximately $8 \frac{1}{2}$ -millions sterling, in 1903-04. The additions to plant during the last two years have been 2,285 looms and 45,336 spindles. The growth of the industry would be more rapid but for the difficulty of obtaining labour, for it returns good profits.

[^1]Hides and Skins, tarncd.-The exports during the last three years at shown below:

|  | 1901.02 |  | 1902.03 |  | $\underbrace{1903.04}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwt | $R$ | Cut | $R$ | Cut | $R$ |
| Hides | - 134,249 | 76,70,877 | 107,879 | 62,84,922 | 102,625 | 61,45,989 |
| Skins | - 132,193 | $1,88,69,58_{4}$ | 149,299 | 2,26,46,944 | 161,869 | 2,48,42,770 |

Exceptional mortality of live stock from drought, which happily th country has escaped for the last three years, produces inflated exports of hide and skins, both raw and tanned, and the tanning industry is consequently liabl to suffer from the reaction. The exports of hides which have recently bee, diminishing are still somewhat above the normal level of ten years ago, but thr trade in tanned skins, though now improving, is below that level, owing in grea part to the development of the trade in untanned skins. The tanning industr) is most important in Madras, which exported sis per cent of the hides anc $77^{\circ}$ per cent of the skins, while Bombay took the remainder.

Lac.-This is the most variable and speculative of all trades, owing to the extraordinary fluctuations in price. The quantity was slightly smaller than in 1902-03, but the value was greater by 48 per cent and has never been approached, for prices continued to rise and in December were the highest obtained for twenty-nine years.

Woollen manufactures.-The exports consist almost entirely of carpets and rugs. There was an improvement last year, but during the last five years there has been no real progress.

Apparel.-Smaller exports of boots and shoes to South Africa, of which in 1902-03 there were unusually large shipments, account for the decline last year.

Silk manufactures.-The exports are only one-third of what they were ten years ago, and have steadily diminished during the last five years partly, it may be, owing to increasing local consumption, as the production of the mills and weaving establishments is largely designed for the Indian market.

General distribution of the export trade.-The value of the exports of Indian produce and manufactures in the last five years was distributed in the ratios stated below among the principal countries with which the trade is carried on :

The deposition of Egypt to the bottom of the list is the result of the revised classification, by which goods consigned to Port Said to await orders for delivery, principally rice and wheat, are finally transferred to the account of the country for which they are destined. The transfers have
increased the ratios of Germany and Belgium. The improved position of Japan is due to its extraordinary consumption of Indian rice and a large trade in raw cotton.

## Customs Revenue

The additional and special duties on sugar were remitted by notification in respect of sugar produced after the 3 rst August 1903 in countries which had acceded to the Brussels Sugar Convention of 1902. Section 8B of the Indian Tariff Act, in pursuance of which special duties were imposed to countervail bounties on sugar created by private trade combinations, expired on the 3 rst August 1903, but an amending Act passed on the 28th August 1903 authorized the continuance, until the 31 st March 1904, of the duties which had been imposed under that section. By a further Act passed on the ith March 1904 the same section was revived and continued in force with effect from the ist Ápril 1904, and the special duties were thereupon re-imposed by notification on sugar imported from Denmark, the Argentine Republic, and Russia.

Exemptions from import duty were notified in respect of agricultural implements and memorials of a public character intended to be put up in a public place, including materials to be used in their construction. The tariff valuations for assessment to duty were revised in December and a new schedule of valuations was issued, having effect from the ist January 1904.

The gross revenue from imports, salt excluded, was $R_{4,45,01,571}$ and showed no appreciable variation from the gross revenue of 1902.03 , but the net revenue after deduction of refunds and drawbacks, namely, $\mathrm{R}_{4,32,27,790}$, advanced by 3.4 lakhs. The ordinary duty on sugar, R29,27,997, increased by a little over 4 lakhs, but the sum of the additional duty, $\mathrm{R}_{2,11}, 990$, and the special duty, R21,428, was less than in 1902-03 by nearly 18 lakhs.

The following are the principal items from which the customs revenue on imports is derived ( R ):

Articles of food and drink:

$\therefore$ Of the other articles enumerated in the tariff schedules those mentioned below yield individually a revenue of some consequence ( $R$ ):

|  | $1901 . c 2$ | 1902.03 | 1903.04 |
| :---: | :---: | :---: | :---: |
| Apparel | S,09,264 | 8,09,564 | 9,18,753 |
| Silk, articles made of silk | $11,68, \mathrm{j}^{89} 9$ | 11,02,840 | 12,09,492 |
| Woollen goods | 9,88,535 | 7,07,201. | 10,80, 195 |
| Glass and glassware | 4,58,766 | $4.75,193^{\circ}$ | 4,99,4\% |

The articles specified above account in the aggregate for 85 per cent of the totai revenue, and including six other arlicles, namely, arms and ammunition, cotton manufactures (other than piece goods), fruits and vegetables, instruments, wines, and paper, yielding individually between 3 and 4 lakhs and jointly $R_{21}, 33,473$, the share of the total is raised to 90 per cent. The lengthy list of dutiable articles in the Indian tariff thus comprises only a small number which yield an appreciable revenue, and those from which the revenue collected is of importance are very few, namely, spirituous liquor, petroleum, sugar, metals (including silver), and cotton piece goods, which yielded. last year $69^{\circ} 4$ per cent of the whole revenue. Of the articles mentioned those subject to special rates of duty are arms and ammunition, wines and spirits, petroleum, and (in addition to the general duty) sugar. The general duty on imports is 5 per cent, which in the case of cotton goods is reduced to $3 \frac{1}{2}$, and in the case of most classes of iron and steel to 1 , per cent.

The export tariff schedule is limited to rice and rice flour, a duty of three annas (three-sixteenths of a rupee) being levied on each maund of $82 \frac{2}{7} \mathrm{ib}$. The net duty realised last year, $R_{1,1}, 1,1,557$, was nearly 6 lakhs less than in 1902.03, but very much greater than in any other year.

A customs duty at the rate of a quarter of a pie (one-forty-eighth of an anna) per pound has also been levied from the ist April 1903 on all tea produced. in India and exported from any customs port to any port beyond the limits of British India, the collections being paid to a committee constituted to receive and expend the proceeds of this cess on measures for promoting the sale and increasing the consumption of teas produced in India. The gross collections amounted to about $2 \frac{2}{3}$ lakhs.

## Balance of Trade

The figures appended state the excess of exports over imports, including merchandise and treasure, in each of the last five years ( $R$ ):

|  | Including Governmedt transactions | Eycluding Goveriment tranactiona |  |
| :---: | :---: | :---: | :---: |
| 1899-1900 | - 20,76,15,000 | 25,25.58,000 | - |
| 1900-01 | - 16,47,46,000 | 22,10,20,000 |  |
| 1901.02 | - 26,78,43,000 | 31,76,01,000 |  |
| 1902-03 | - 27,85,62,000. | 33,58,17,000 |  |
| 1903.04 | - 37,06,79,000 | 44,97,18,000 |  |

In the same years the drawings of Council bills have been :

| $\therefore$. |  | 6 | Exchange, peace | 2 |
| :---: | :---: | :---: | :---: | :---: |
| . - . - | 1899-1900 | - 19,067,022 | 16.07 | $=28,48,01,000$ |
| $\cdots$. | 190001 | - 12,300,276 | 15.973 | $=19,98,38,000$ |
|  | 1901-02 | - 18,539,071* | 15.987 | $=27,83,02,000$. |
|  | 1902.03 | - $18,499,947 *$ | $16 \cdot 002$ | $=27,74,67,000$ |
| : | 1903-04: | $\therefore 23,859,303 *$ | 16.049 | $=35,67,95,000$ |

[^2]The nearest approach to the large excess of exports was in 1894-95, but the balance for that year including Government transactions was less by $303 \cdot 8$ lakhs and excluding Government transactions by $77^{\circ} 5$ lakhs. The actual balance is also greater than appears, for the foreign trade of the French Settlements which also shows a large excess of exports, has not been included. The recent growth of the trade in earthnuts, which are shipped direct to France and other countries from Pondicherry, has greatly increased the excess of foreign exports over foreign imports, the balance being 17 million francs (io2 lakhs) in $1902-03$ and 21 million francs ( 125 lakhs) in 1901-02. The trade of the Portuguese Settlements direct with foreign countries is trifling.

Gold and Silver
The value of imports and exports is ( $R$ ):

The silver exported has all been previously imported, since none is ..produced in the country, but of gold there is a large and rapidly increasing production, the value of which last year was $\mathrm{R}_{3,53,98,052 \text {. This is practically all exported }}$ to London for assay, and the net import of foreign gold is therefore larger than is shown above by the amount of the local production, with the addition of which it reaches $R_{13,47,14,649 \text {. The nearest approach to this (including the local }}$ production) is $R_{12,13,01,067}$ in $1899 \cdot 1900$, and in the years before gold mining begani, $R_{9}, 8_{3,99,640}$ in 1864.65 . This, however, does not indicate the relative quantities of gold, for the sterling value in $1864-65$ was $£ 9,788,714$, and, owing to the fall in the sterling value of the rupee from $2 s$ to is $4 d$, only $£ 8,980,976$ last year. Similarly the disparity between the value of coined and uncoined silver since the closing of the mints to the public in June 1893, vitiates comparison of the value of the imports of silver before and after that occurrence. Thus last year's net import of $1,392^{\circ} 5$ lakhs has been exceeded in value in $1865^{\circ} 66$ ( $1,866^{\circ} 8$ lakhs), in 1877.78 ( $1,467^{\circ} 6$ lakhs), and in $1890 \cdot 91$ ( $1,417^{\circ} 5$ lakhs), and nearly approached in 1893.94 ( $1,371.9$ lakhs), but converting the highest of these into ounces on the basis of R1o7 per 100 tolaş; which was the approximate rate for silver bullion when the mints were open, for quantities were not registered till 1887.88, the quantity is $65,428,357$ ounces, while owing to the continued fall in the price of silver $78,575,469$ ounces were, obtained last year for a much smaller rupee value. The 'registered quantities in $1890-91$ and $1893-94$ are $51^{\circ} 5$ and $54^{\circ} 3$ million ounces respectively.

The value of the addition to the stock of gold was as stated above $\mathrm{R}_{1}{ }_{3,47,14,649}(68,980,976)$ and included sovereigns and half sovereigns to the value of $£ 4,298,483$, of which $£ 1,011,444$ was added to the Government
reserves, and the balance, $£ 3,287,039$, was held by the public. The whole of the bullion to the value of $R_{3,33,75,230}(62,225,015)$ was also taken by the public. The value of the net exports of gold on account of the Government was $R 6,39,68,370$, while its gold reserve was increased by R9,23,102, and the sum of these two, or $R 6,4^{S}, 91,4$ S $^{\text {: }}(£ 4,326,099)$, must represent approximately the value of the gold tendered by the public in exchange for rupees. -

The exports of rupees exceeded the imports by $\mathrm{R}_{5} 8,9_{2}, 697$, and the net withdrawal from the currency caused by this outward flow, which is mainly directed to Ceylon, Arabia, Mauritius, and East Africa, has amounted to 689 lakhs in the last ten years. The value of the net importation of silver bullion was $R_{13}, 77,70,543$, and this includes bullion to the value of $R 6,18,12,560$ imported by the Government to provide for very extensive coinage operations. The value of the silver coinage during the year was R16,53,11,541, and of this RII,09,35,111, representing $41,600,666$ ounces, was from new silver. The quantity of new silver passed into the mints of Native States during 1903 was 423,222 ounces.

Stated in ounces the production and the net imports of gold and the net imports of silver in the last five years have been :

|  |  | Gold'production | Gold import | Silver |
| :---: | :---: | :---: | :---: | :---: |
| 1899-1900 | - - | 470,403 | 1,560,812 | 18,646,252 |
| 1900-0 1 | - - | 506,890 | 105,678 | 49,435,164 |
| 1901-02 | . . | - 52,4,46 | 274,506 | 39,005,192 |
| 1902.03 | - - | 536,928 | 1,416,618 | 43,274,309 |
| 1903.04 | - • | 614.359 | 1,566,237 | 78,575,469 |

It may be of interest to note here that the sterling value of the net imports of gold since $1835-36$ is approximately $£ 162,055,225$, and in addition to this gold to the value of $£ 18,838,618$ has been produced in India since 1885 . Figures of the production for earlier years are not available, but it is a negligeable quantity. The net absorption of gold during 69 years has thus exceeded the large sum of $£ 181$ millions. For this calculation the net imports have been converted from rupees into sterling at the average rate of the year of importation, and from 1873.74 to $1886-87$, when exchange was variable, the conversions have been made monthly. From 1887.88 the quantity has been registered in ounces and this has been multiplied by the English mint price of an ${ }^{\circ}$ ounce of standard gold ( $£ 317510 \frac{1}{2} d$ ). The value of the net imports of silver for the same period of 69 years reaches the gigantic total of $R_{4,34,53,56,891}$. This cannot be converted into sterling, since coined rupees and bullion have different values and the proportion of each is unknown, but the quantity as registered from 1887.88 and as estimated for the earlier period on the assumption that R107 per 100 tolas was the approximate price of silver bullion, is $1,655,26_{3}, 453$ ounces.

## Trade with Countries

The trade of India with the world in merchandise, imported and exported, was distributed as follows last year, compared with the two preceding years (R, 000 omitted) :

The trade with Europe was $66^{\circ} \mathrm{I}$ per cent, and with Asiatic countries $23^{\circ} 4$ per cent, of the whole. The proportion for Asia is the same as in 1902-03, but for Europe it is 2.9 per cent higher with an equivalent decrease for Africa, this change being due to the classification of exports to Egypt "for orders" being amended from last year in order to show the countries to which the goods thus shipped are really consigned. Reference to this change of practice, as well as the exaggeration of the trade with Belgium and Holland at the expense of the trade with Germany, and other defects in the trade statistics in the matter of indicating the countries from which imported goods are consigned and exported goods are consumed, has been made in the remarks on the distribution of imports and exports respectively at pages 17 and 34 of this paper, and it may be added that the existence of distributing centres at Hong Kong, Singapore, Colombo, and Aden tend further to obscure the real course of trade. But according to the classification adopted in the trade statistics the value of the trade with each of the principal countries was as stated in the appended list ( $R, 000$ omitted) :

- The share of the United Kingdom is $40{ }^{\circ} 5$ per cent, but as already remarked (page 17) this does not include the very large supplies for Government departments and State ràilways, which are a British monopoly.

## Shipping

- The large imports, and the unprecedented development of the export trade, caused a proportionate increase in numbers and tonnage, of which 96.5 per cent was steam tonnage.

Below are given the number and tonnage of steamers and sailing vessels, with cargoes and in ballast, which entered from and cleared to foreign countries:

The total number of steamers which entered and cleared was 5,820 , with an aggregate burden of $12,123,216$ tons, the average tonnage of each steamer being 2,083 tons.

The entries from and clearances to the United Kingdom were 2,946,128 tons, being 23.4 per cent of the total tonnage. Entries from and clearances to

British Possessions amounted to $5,284,656$ tons, or $42^{\prime} 1$ per cent of the whole.
The tonnage from and to the United Kingdom and British Possessions amounted therefore to nearly two-thirds ( $650^{\circ} 5$ per cent) of the whole.

The vessels which enter and leave the ports of India for the most part fly the British flag, the tonnage under that flag representing about 79 per cent of the whole. Adding the proportion of the tonnage of vessels under the Britiṣh Indian registry, it appears that a little less than Si per cent of the trade of India is carried under the British flag.

The number of vessels under foreign flags, which entered and left Indian ports last year, was 1,362 , their burden aggregating $2,281,046$ tons, a considerable increase in tonnage on the preceding year. The number of vessels under the principal flags are stated below :

A subsidized steamship service between Venice and Calcutta was inaugurated during the year. The conditions of the guarantee of the Italian Government are that twelve vogages shall be carried out annually by vessels with a minimum tonnage of 3,530 tons. The first vessel sailed from Venice in October 1903. Direct lines of steamers were also established between Calcutta and Antwerp, and Calcutta and Java.

## Frontier Trade

The trade of the year 1902.03 showed a fall in value of 164 lakhs. On the North-Western frontier this was the effect of drought and scarcity, which, in the southern and western provinces of Aighanistan and the adjoining districts of Persia, amounted to famine; while the Kashmir trade suffered from a serious outbreak of plague in the frontier districts of the Panjab. The apparent check to the trade with Western China represented a return to normal conditions on the cessation of the disturbances which had temporarily. diverted drade from the Red River route. Last year the trade was on the whole progressive, having increased in value by nearly 105 lakhs, and the figures, which include trade in gold and silver as well as in merchandise, are ( R ):

With the exception of goods carried by railway to or from stations on the frontier the registration of the traffic across the frontiers is of a kind which cannot be relied on as indicating with more than fair precision the nature and extent of the trade by the several routes. As applied to merchandise the information is on the whole accurate enough for practical purposes, but in respect of gold and silver it is fragmentary and so untrustworthy that it is preferable to notice only the figures which relate to merchandise, when considering the geographical distribution of the trade. This is indicated below in respect of the
principal countries, proceeding from west to east along the line of frontier ( $R, 000$ omitted):

| N.W. Prontier - | (Afghanistan- | 1896-1900 | 1900-01 | 1901-02 | 190:-03 | 1903-04 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1898-900 | 1900-8 | 1903-02 | 190.03 |  |
|  | Southern and Western | 71.43 | 58,19 | 68,54 | 53.48 | 68,02 |
|  | Northern and Eastern | 44,21 | 48,01 | 61,00 | 71,14 | 70,56 |
|  | i Dir, Swat, and Bajaur | 1,23,34 | 99,66 | 1,02,65 | 96,06 | 89,08 |
|  | LKashmir. | 1,88,89 | 2,24,79 | 2,57,67 | 2,05,18 | 2,36,09 |
| N. and N.-E. Frontier | \{ Thibet | 28,97 | 25,32 | 29,72 | 31,43 | 20,62 |
|  | SNepal | 3,67,10 | 3,98,61 | 4,09,20 | 3,84,30 | 3,95,28 |
|  | Western China | 33.59 | 44,00 | 68,51 | 43,73 | 45,04 |
| E. Frontier | North Shan States | 73,40 | 82,45 | 70,65 | 78,00 | 85,20 |
|  | $\{$ South Shan States | 65,28 | 67,36 | 68,89 | 63,53 | 70,74 |
|  | Karenni . | 26,76 | 27,08 | 21,58 | 25,65 | 32,86 |
|  | LNorth Siam | 25,72 | 28,03 | 34,27 | 25,93 | 33,38 |

About 38 per cent of the whole trade crossed the North-Western frontier. The trade with Northern Afghanistan has expanded considerably in the last two years owing, it is reported, to the reduction of tolls and imposts on trade. Information on this point is being collected, but it seems that the heavy transit duties have been reduced to the equivalent of about $2 \frac{\pi}{2}$ per cent ad valorem on goods destined for Bokhara, and this should increase the trade in tea and indigo, which are among the few articles admitted at the Russian frontiers. Recovery from the effects of the severe drought appears in the larger trade with Kandahar and Southern Afghanistan. This drought has restricted trade along the caravan route from Nushkito Persian Seistan, both directly by the devastation it caused in the regions served and indirectly by increasing the existing difficulty of transport, so that the value of the trade in merchandise remained at the low level of the previous year, that is, about 5 lakhs. The imports from Dir, Swat, and Bajaur consist principally of agricultural and pastoral produce, and after two bad seasons the surplus for trade was apparently restricted. The imports from Kashmir were greatly reduced in 1902-03 by the epidemic of plague in the Panjab, but there was marked improvement last year except that the trade in linseed, of which the price has-fallen greatly, and in silk was much reduced. The exports show similar improvement, although there was a reduction, compared with $1901-02$, of 777 lakhs, equal to 6.6 per cent, in cotton piece goods, which was probably caused by the rise in the price of all cotton goods, of over 9 lakhs or 8 per cent in salt, and of $4^{\circ} 5$ lakhs in sugar.

By far the largest trade which crosses the Northern and North-Easterin frontier is that with Nepal, which amounted last year to one-third of the whole frontier trade; and the construction of railways to several points along the very extensive frontier indicates its importance. The decline which appears in the last two years is in the trade with Bengal, but as more than half the imports consist of grain and pulse and a considerable share of oilseeds (of which the prices have fallen greatly) and of ghi, variations are natural. An improved system of valuing the imports and exports, introduced in $1902-03$, also explains some differences from previous years. Among.the imports is jute, of which nearly 7,000 tons to the value of $7 \frac{1}{2}$ lakhs reached Bengal last year. Sabai grass which is used for paper-making in the Calcutta and Lucknow mills is also largely imported, the value being 4 lakhs last year and 6 lakhs in 1502-03. The trade with Thibet has decreased as the result of disturbances caused by the armed resistance to the progress of the mission to that country, for the decline occurs in the trade by the route passing through Yatung.

Of the trade on the Eastern frontier that with the Shan States is not strictly foreign trade, for these States are British territory, but some trade passes through them from China and Siam. The direct trade with Western China is
mainly from Bhamo through the treaty port of Tengyueh. The principal imports are raw silk, and mules and other animals. The chief export is Indian cotton yarn which last year showed an advance of 10 lakhs, the value being $24 \frac{2}{3}$ lakhs, equal to three quarters of the whole export trade. The exports of foreign cotton goods was much reduced, this being a general feature of the whole frontier trade. Allowing for the temporary inflation resulting from the disturbed conditions which diverted trade to this route in 1901.02 , while the route vid Mengtse to Tonkin was obstructed, there has been almost continuous, though slow, progress. The great improvement in the trade with Karenne is accounted for by very large imports of teak to the value of 3i lakhs. Cattle and other animals to the value of $12 \frac{1}{3}$ lakhs and teak to the value of 117 l lakhs represented the imports from Northern Siam, the exports being under 9 lakhs and consisting chiefly of cotton and silk goods.

The general character of the trade carried on across the Indian frontiers is indicated by the appended list of the principal articles, imported and exported, with their values in the last three years ( $R, 000$ omitted) :

The relative importance of the trade of each frontier province with the countries adjoining its border is represented in the figures appended ( $R, \infty$ omitted) :

## Coasting Trade

The value of the trade in merchandise (imports and exports) was R 701 millions, this being R11 millions greater than in 1902-03. The increase is small, being equal to 1.6 per cent, but the conditions of the trade generally were satisfactory, and a large increase in the value of the coasting trade indicates as a rule a more or less serious failure of the crops, giving rise to a great local
demand for food grains, which, under the designation "Grain and pulse," are the principal export from India to foreign countries. Last year, however, as might be expected, the grain trade was small, and the exports of rice from Burma to It ${ }_{\text {dian }}$ ports amounted to only 195,000 tons, this being less than half the previous year's export and only 18 per cent of what was exported three years previously. The rapid expansion of the Burma petroleum industry is shown by the expori of $38,048,100$ gallons of oil, the quantity exported in 1902-03 being $20,704,40 \mathrm{C}$ gallons. Imports of raw cotton into Bombay increased from 717,344 cwt ir 1902-03 to $1,241,535 \mathrm{cwt}$ last year, this being the result of the very heavt crop and the great demand for export to Europe and Japan. Exports of Bengal coal increased by 178,000 tons, the total being $1,504,000$ tons, of whicł $8_{1}^{7}, 100$ tons were directed to Bombay.

# TRADE OF BRITISH INDIA 

WITH<br>FOREIGN COUNTRIES

For the official year ending March 31, 1905

General Summary

The value of the trade of the year, which is stated in rupees, is set forth in the figures appended, with the values of the four preceding years. The imports and exports on account of the Government, of both merchandise and treasure, are omitted :
 per cent, than in 1903.04, that year's trade having been 15 per cent in advance of the previous year. Taking merchandise only, the great advance in imports has corrected the extraordinary disparity between the value of the imports and exports which appeared in the previous year. In 1903-04 the value of the imports for home consumption, that is, deducting the re-exy its from the registered imports, increased by $564 \frac{1}{2}$ lakhs, or 7.4 per cent, while the exports of Indian merchandise in that year advanced by $2,375 \frac{1}{2}$ lakhs, or 18.8 per cent; but in 1904-05 the conditions were reversed, the imports growing by $1,18 \mathrm{l}$ lakhs, or 14.4 per cent, while the exports rose by only $449 \frac{1}{3}$ lakhs, or 3 per cent. Adding the results of the two years, that is, comparing the trade of 1904.05 with the trade of 1902.03 , there has been an even develop: ment of both imports and exports, the former increasing by 1,745 lakhs, or 23 per cent, and the latter by 2,825 lakhs, or 22.4 per cent. In both years one of the most potent influences affecting the trade has been the American cotton crop. In the former year the scarcity of raw cotton threw the cotton manufacturing industry of the whole world out of gear, and so checked the imports of cotton goods, the principal article of Indian trade, while at the same time it caused exports of raw Indian cotton of unprecedented magnitude. In the latter year an extraordinary abundance of American

[^3]cotton brought great prosperity to the cotton spinning and weaving industry, and the revived Indian demand for cotton goods exceeded that of any previous year. Imports of cotton yarn and fabrics in 190405 thus increased in value by $22^{\prime} 7$ per cent or $703 \cdot 6$ lakhs, and exports of raw cotton fell by 28 per cent or 694 lakhs. The value of cotton piece goods was 627 lakhs greater than in $1903-0_{4}$ and 458 lakhs higher than the previous record in 1901-02. These results are partly due to the high price of the raw material when the contracts were made, for $311^{2}$ lakhs ( $£_{2,076,000 \text { ) more was paid for imported cotton yarn and cloth }}$ than the same quantities would have cost at the prices of 1903-04. Imports of other textile manufactures were also beyond all precedent, silks increasing by 15立 per cent and woollens by $42 \frac{1}{3}$ per cent. The value of all yarns and textile fabrics reached the great sum of $4,35 \mathrm{~S}$ lakhs ( $629,053,000$ ), this being 23.4 per cent more than the value in $1903^{-0} 4$ and representing 45 per cent of the total imports of merchandise. Most of the large trade in apparel, valued at $189{ }^{2}$ lakhs, in $1904-05$ also consists of made-up tex:ile fabrics. Among the other principal articles the imports were the highest ever recorded of sugar, hardware, metals, and machinery, and there are few articles in which the trade did not improve. The largest registered decrease is in precious stones and pearls, but the valuations of these are not reliable. There were also smaller imports of mineral dyes, following exceptionally large imports in 1903-04, and a decline in the value of imported mineral oil.

That agriculture is the foundation on which rests the whole economic structure of India is norhere so plainly revealed as in the export trade and its remarkable expansion during the last four years; for putting aside gold and other minerals, of which only a few like coal, salt, saltpetre, petroleum, mica, and manganese have been developed bey ond a rudimentary stage and none of which figure prominently in the export trade, all save an almost negligible fraction of the raw produce and articles mainly unmanufactured, which form the great bulk of the exports of India, and of the material for the comparatively small exports of manufactured articles, are provided by its own husbandry, pasturage, or forests. Reference has already been made to the large decrease of 694 lakhs in the value of raw cotton, which was entirely due to the smaller volume of the exports, for the high average price of the previous year was maintained. The characteristic feature of the year's trade is the unparalleled exports of wheat, rice, and other food-grains. The exports of wheat increased in value by 698 lakhs and of all grains by 851 lakhs. Estimated by value the exports are the highest recorded of raw jute, raw skins, raw wool, cotton manufactures, jute manufactures, and lac, while larger quantities than in any previous year were exported of tea, coal, and seeds. Among other principal articles there were sinaller exports of spices, indigo, vegetable oils, raw silk, and dressed skins. Notwithstanding extremely high prices fetched by raw jute during the last quarter the jute mills had a prosperous year, while the falling price of raw cotton and the improving demand for yarn and cloth had brought the cotton industry at the close of the year to a condition of almost unexampled prosperity

The registered net imports of treasure by the public were gold $1,811 / 3$ lakhs and silver 693.8 lakhs, to which has to be added the gold produced in the mines, valued at 355 lakhs. Including also the importations of silver by the Goverminent, mainly for coinage, and its remittances of gold to purchase silver or for irvestment on account of the Gold Reserve Fund, the value of the precious metals retained in India during 1904.05 becomes $1,325^{\circ} 6$ lakhs worth
 The value in 1903 -04 was even greater, namely $£ 18,614,500$, so that in these two years, which stand quite apart from any of their predecessors, gold and silver to the value of $£ 36,367,800$ have been absorbed by India.

## Imports of Merchandise

The value of the imports of merchandise in 1903-04 was greater than in the preceding year by 603.5 lakhs, or 7.6 per cent, and in 1904.05 there was a further advance of $1,185^{\circ} 5$ lakhs, equal to 14 per cent. So large an increase as 1,780 lakhs in two consecutive years is unrivalled, and no other year bas quite so large an absolute increase as 1904-05, though it was approached by the increase of 1,057 lakhs in $1880-81$, in which year a brisk revival of trade marked returning prosperity after a period of widespread distress and famine, and almost equalled by an advance of 1,135 lakhs in $1893^{\circ} 94$, when the temporary stimulus to imports given by the closing of the mints on the introduction of the currency reform raised their value far above that attained in any of the seven succeeding years. The progress made since 1880.8 t is shown in the following statement of the average annual value of imports in five quinquennial periods, and although, as stated above, $1880-8 \mathrm{I}$ was marked by a notable increase in the import trade, the value in 1904.05 was 92 per cent greater, that is to say, imports have almost doubled in value in 25 years:

The value of each of the seven classes in which articles are grouped in the accounts of trade was in $R$ :

|  | $1901-02$ | 1902-03 | 1903-04 | 1904-05 |
| :---: | :---: | :---: | :---: | :---: |
| Animals, living (mostly horses) | 46,65,638 | 44,49,407 | 53,62,833 | 59,27,625 |
| Articles of food and drink | 11,75,46,722 | 10,50,62,568 | $11,69,47,243$ | 13,08,64,808 |
| Metals and manufactures of metal, hardware and cutlery, machinery and millwork, railway plant and rolling stock | 13,15,41,820 | 14,41,17,326 | 16,37,79,228 | 17,18,04,223 |
| Chemicals, drugs, medicines, narcotics, dyeing and tanning materials | 2,40,95,992 | 2,44,66,564 | 2,75,07,969 | 2,80,41,090 |
| Oils | 4,21,89,079 | 3,71,48,452 | 3,53,74,907 | 3,44,75,069 |
| Raw materials and manufactured articles | 3,81,62,948 | 3,47,17,810 | 3,88,92,53I | 4,22,40,500 |
| Articles manulactured and partly manufactured | 45,69,87,595 | 43,79,16,957 | 46,03,68,219 | 55,34,27,569 |

The increase in the several classes is principally due to large imports of sugar in the second class, of machinery in the third class, of raw cotton in the sixth class, and of textile manufactures in the seventh class. The increase in the last and principal class accounts for 78.5 per cent of the total increase of the year under all heads, and textile manufactures alone (including yarns but omitting made-up goods classed as apparel), $86 \cdot 7$ per cent of which was British trade, increased by $825^{\circ} 9$ lakhs (the increase in cotton manufactures being $703^{\circ} 6$ lakhs), an amount nearly equal to 70 per cent of the year's increase. The decline in the fifth class, Oils, which has been continuous during the last three years, is caused by the increasing consumption of indigenous mineral oils refined in Burma and Assam.

On the whole the average value of imports was considerably higher than in 1903-04, as higher prices account for 306 lakhs, or $25^{\circ} 8$ per cent, of the total
increase of $1,185 \cdot 5$ lakhs in the value of the year's import trade. This result is, however, almost entirely due to the high price of colton which increased the cost of yarn and piece-goods by 311 lakhs and raw cotton by 10 lakhs. The cost of sugar was also enhanced by 40 lakhs. The principal savings effected through lower prices are under liquors, 13 lakhs; metals, 14 lakks; mineral oil, 23 lakns; and woollens, to lakhs.

## Articles of Food and Drink

The value in rupees during the last three years of the principal articles in this group has been:

Sugar accounts for nearly 53 per cent of the total value of this class, and owing to the rapid growth of the trade during the last three years, it has now reached the second place among Indian imports, that is, next to cotion piece-goods. Throughout the year the trade has been exempt from legislative restrictions except such as remain in the form of countervailing duties against sugar produced in or exported from certain countries (Denmark, Chile, the Argentine Republic, and Russia) which have not adhered to the Brussels Convention, but the imports included the production of only two of these countries, namely, Russia ( $1,005 \mathrm{cwt}$ ) and the Argentine Republic ( $5+6 \mathrm{cwt}$ ). The changes during the last five years in the imports of beet and cane sugar, respectively, are shown below in cwt :

This statement designates the countries from which the sugar was imported, not those in which it was produced or refined; and during the last two years the division between cane and beet-sugar, in respect of imports from the United Kingdom, has been made according to the declarations of origin required for tariff purposes. For the earlier period British exports to India were assumed to consist of beet and cane sugar in equal proportions.

Practically no raw sugar comes to India, but about 34,000 tons of sugar, were imported in 1904.05 for refining, five-sixths being landed at Calcutta, where it was all classed as refined sugar on the ground that it was partially efined and crystallised. The remaining 5,810 tons were imported by refiners in
the Madras Presidency and were classed as unrefined sugar. The imports in 1904.05 of both refined and unrefined sugar were greater than in the previous year by 8.4 per cent in quantity and by 16.2 per cent in value, so that the rise in the average price of the year for all qualities of sugar was 7.8 per cent. The large surplus from previous years at the time the Brussels Convention became operative caused a steady decline in prices, and the year opened with the price of beet-sugar in Calcutta lower than it had been for several years except for the sudden and temporary drop during the last quarter of 1901-02, immediately before the additional countervailing duties were imposed. An indirect effect of the Convention was the reduction of the excise duties in Germany, France, and Belgium, and this combined with the abrogation of the cartels in Germany and Austria lowered domestic prices and greatly increased consumption in the producing countries. Following this came an extensive failure of the beet crop owing to drought which was imperfectly compensated by a larger yield of cane sugar. Aided by speculation a rapid rise in prices set in from September and reached its highest point in February, then falling slightly in March and more rapidly in April. Taking 100 to represent the price of German beet-sugar in Calcutta in the first week of April 1904, the maximum was $14^{16} 6$ in February 1905 and the closing price of the year $1354^{\circ}$. The price of German sugar in London, where the rise was most rapid during November and December 1904, reached a maximum of $16 s$ id in the third week of January 1905 and was ${ }^{1} 453 d$ in the last week of March. The variations in the price of Austrian sugar at Karáchi were very similar to those of German sugar in Calcutta, the maximum in February representing a rise of $4^{8 \cdot 1}$ per cent during the year. The price of Mauritius sugar in Bombay and of Java sugar in Calcutta had a range of 47 per cent and 50 per cent, respectively.

Turning to the sources of supply, Java, which has rushed into the front rank, occupies the first place as a direct exporter to India with $2,092,000 \mathrm{cwt}$, while by origin $2,546,000$ cwt or 38.9 per cent of the total imports were Java sugar, part of this being refined at Hongkong and part re-exported from the Straits Settlements. The Reciprocity Convention of 1904 between the United States and Cuba, giving a preference to Cuban sugars, and the recovery of the sugar industry of that island had deprived Java sugar of its assured position in the American market, and in 1903.04, as exports to the United States declined, part of the crop was diverted to India. In 1904-05 the trade with India increased simultaneously with large purchases by American refiners as the Java sugar crop of 1904 was unusually large. From Mauritius, which comes next to Java, $1,824,000$ cwt were received, which, though less by 30 per cent in respect of quantity than in the previous year, when the crop was abnormally large, is up to the average. The third country is Austria-Hungary which has contributed directly and indirectly $1,505,000 \mathrm{cwt}$, this being a larger total than in any year except 1901-02, which immediately preceded the suppression of the trade by the additional countervailing duties imposed in May 1902. The revival of the trade dates from the removal of all the countervailing duties by a notification issued in December 1903. The reduction of freights granted by the Austrian Lloyd Company from 175 to 145 per ton from Trieste, and the promise of a refund of $2 s$ for every ton of 1,000 kilo's on the freight of 145 to those firms, who from October 1904 to the end of September 1905 shall have loaded on board their steamers at least 10,000 tons for Karáchi, Bombay, Colombo, and Calcutta, are among the inducements to
shippers to India, and it is rumoured that an advantage is also secured by manufacturers in special railway freights to the port of shipment. The three countrics mentioned have supplied $89^{\circ} 7$ per cent of the total imports, and next to these as countries of origin come Egypt with 332,000 cwt and Germany with $151,000 \mathrm{cwt}$. The imports of sugar refined in the United Kingdom have fallen from 637,277 cot to $121,348 \mathrm{cwt}$. This trade was the outcome of the advantages conferred on cane sugars by the repressive legislation against the introduction of bounty-fed beet sugar, but with the withdrawal of restrictions on the latter the advantages of refining cane sugars for the Indian market ceased and the British trade therein declined.

The gromth of the imports of sugar is chiefly remarkable from the fact that India is the largest individual producer of sugar in the world. Well-informed opinion has put the annual production at 3 million tons, which is about onethird as much again as appears in the commercial estimates of the crop. Taking the higher estimate as the outside limit and adding the imports of 1904$0_{5}$, which represent one-ninth of the home production, the quantity for consumption provides only 25 Hb per head of the population, a rate less than that estimated for Germany ( 28 Hb ) and only slightly above the average for France ( 24 fD ) during 1902-03, when the artificial restrictions on consumption were mest powerful, and only 28 per cent of the estimated per capita consump. tion of the C-nited Kingdom in that year. A considerable advance on the present rate of consumption is therefore possible, and the material will be obtained by importation so long as the home production fails, as it does now, to provide a sufficiency of refined sugar of good quality to meet the demand. During the four years following $1898-99$ the area under cane decreased, chiefly from climatic causes, but last season showed a considerable recovery and the yield was remarkably good.

Procisions.-Numerous and heterogeneous articles are included in this class, of which the value increased during the year by nearly 7 per cent to $216 \frac{1}{2}$ lakhs. Dates (41 lakhs) from the Persian Gulf and Muscat, dricd-fruits, chiefly almonds, ( $22 \frac{2}{3}$ lakhs), from Persia, France, and Italy, and salted-fish ( 25 lakhs) from the Straits, biscuits ( 17 lakhs), and condensed milk ( 13 lakhs) are the principal items. The unspecified imports have risen in value to 70 lakhs, but this will be reduced from the current year by the separate enumeration of "canned provisions," " pickles, vinegar, sauces, and condiments," and "farinaceous foods" as well as "almonds" under other sorts of dried fruits.

Salt.-The quantity imported 486,980 tons was 9 per cent greater than in the previous year, but this provided slightly less than one quarter of the quantity consumed, the balance being produced in India. The consumption increased by $4^{\circ} 7$ per cent, for with the reduction of the duty in India (including Burma) by 8 annas a maund in March 1903 prices fell, and on the 22nd March 1905 a further reduction of 8 annas in the Indian duty was notified, the duty per maund thus becoming $1 \frac{1}{2}$ rupees in India and remaining at one rupee in Burma. The imports into Bengal absorbed 90 per cent of the total quantity, and all but a trifing quantity of the remainder was as usual taken by Burma.

Liguors.-Of the three main divisions, malt liquor, spirits, and wines, the trade in the two former only is progressive. The quantity of the beer imported increased by 13 per cent but the value only by 8 per cent to $60_{5}^{2}$ lakhs. Rather more than 93 per cent was from the United Kingdom, while shipmients direct from Germany amounted to $25^{2,9} 9^{2} 3$ gallons and from other countries

56,577 gallons out of a total of $4,607,530$ gallons. The imports represent little more than two-thirds of the quantity brewed in India during 1904 ( $6,219,76$ I gallons). The Army Commissariat purchased 46 per cent of the production, which, though larger by 152,720 gallons than in 1903, was still a quarter of a million gallons less than in 1902.

The increase in Spirits of which the value has reached $98 \frac{4}{5}$ lakhs was slight. Including liqueurs and methylated and perfumed spirit, the quantities imported were in gallons:

| g |  |  | 1902-03 | 1903-04 | 1904.05 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| From United Kingdom |  | - - | 764,125 | 784,981 | 772,350 |
| " | France | - - | 203,911 | 220,208 | 252,815 |
| " | Germany | - - | 238,346 | 219,207 | 195,579 |
| " | Other Countries | - - | 202,892 | 213,934 | 253,054 |
|  |  | Total | 1,409,274 | 1,438,330 | 1,473,798 |

The potable spirit imported from other countries is chiefly arrack from Ceylon, rum from the Straits, and gin from Holland.

The proportions of the different kinds of potable spirit imported were (gallons):

The value of the wines imported decreased by nearly 5 per cent to $26 \frac{1}{5}$ lakhs and the quantity by 4 per cent to 319,209 gallons. The decline is slow, but looking at the imports of ten years ago it is clearly marked.

Spices.-The imports have increased by 19 per cent in quantity and $25^{\circ} 6$ per cent in value. Betelnuts are the principal item and their value has risen by $3^{6}$ per cent to $7 \times 3$ lakhs. The recorded rise in price is 13 per cent, but this is largely due to the correction of undervaluations at Calcutta which is credited with 60.5 per cent of the trade, and Madras with 24 per cent. The chief source of supply is the Straits Settlements which sent $88 \frac{9}{10}$ million tb out of a total of $104 \frac{3}{4}$ million Hb . Next to betel-nuts come cloves from Zanzibar with imports valued at $19 \frac{1}{3}$ lakhs, the increase of nearly 14 per cent being due to a rise in price, for notwithstanding a large crop, nearly 9 million Ho or 160 per cent greater than very short crop of 1903 , the average price was $15 \%$ per cent higher than the high price of $1903-04$ owing to a large demand from other countries and speculation in Bornbay.

The quantity of $T e a$ imported was $3,734,579 \mathrm{fb}$ compared with $3,672,833 \mathrm{fb}$ in 1903.04 , but the value fell by 9 per cent, owing to Ceylon tea valued at 6 annas per tb having increased from $433,000 \mathrm{Ib}$ to $1,611,000 \mathrm{ID}$, while China tea valued at $11 \frac{1}{4}$ annas per HD decreased from 2.3 millions to $1 \cdot 3$ million H . The imports of China green tea were reduced from $1 \frac{3}{4}$ million tb to a little over 1 million Hb . The re-exports during the year were $927,000 \mathrm{tb}$ by sea and $470,000 \mathrm{HD}$ by land, making a total of $1,377,000 \mathrm{HD}$, of which 44 per cent was black tea, and leaving $2,337,000 \mathrm{Hb}$ for consumption in India. This calculation cannot, however, be implicitly relied on, $\sin \mathrm{e}$ in respect of the exports by land it is not improbable that foreign tea, especially Ceylon tea, is sometimes classed as Indian tea, and vice versd.

## Metais and Manufactures of Metals

There was an improvement of nearly 3 per cent, and during the last ten years the advance has been 87 per cent. Apportioning their shares of the total to the countries from which the goods were imported, the United Kingdom takes 67.7 per cent, Germany and Belgium jointly (probably mostly German by origin) is 5 per cent, and Austria-Hungary 7.6 per cent. The interest of Belgium and Germany is proportionately large in cutlery and in enamelled ware, but Austria-Hungary has nearly 62 per cent under the latter head against Germany's $3^{1}$ per cent. The head "Unspecified hardware" is four-fifths of the total of hardware and includes a great variety of articles, but two additional heads for umbrella fittings and lampware (other than glass. ware) will appear in the accounts for $1905 \cdot 06$. The imports from the United States and Russia referred to in the Review of the Trade of 1903.04 represented the value of the tins in which case oil (kerosene) was imported into Bombay and Madras, and the misclassification dates from January 1903, when the tins were first assessed to import duty in addition to the duty on the oil which they contain. In the other provinces the value of the tins was recorded as imports of "Wrought iron-other kinds". The classification has now been corrected by showing the value of the tins and the oil contained in them under the one head " kerosene in cases".

The imports of Metals amounted to 505,869 tons, value $934^{2}$ lakhs, compared with 496,623 tons, value $929 \frac{1}{2}$ lakhs, imported in 1903.04 . The advance is small but the expansion had previously been very rapid and the trade has increased by $45^{\circ} 3$ per cent in value in the last five years. About $22^{\circ} 5$ per cent of the total value belongs to copper and $65 \cdot 8$ per cent to iron and steel. The growth of the iron trade is an indication of industrial development in certain directions, but, on the other hand, it emphasises the want of an iron manufacturing industry in India, of which the pioneer and at present the sole representative in the field is the Bengal Iron and Steel Company with a capital of $£ 250,000$, working at Barakar.

Copper.-After five years of steady progress the imports of copper have fallen by 1.3 per cent in quantity and 2.7 per cent in value. The decrease is wholly in unwrought copper, of which $70,41_{1} \mathrm{cwt}$, value $36{ }^{3}$ lakhs, was imported. compared with $106,024 \mathrm{cwt}$, value $52 \frac{4}{5}$ lakhs, in 1903.04 . A strange effect of the fluctuation in prices is that the average value of unwrought copper was higher than of wrought copper, the average price per cwt being R52-2-9 for the iormer and $\mathrm{R}_{4} 8-13-9$ for the latter. Owing to the rise of prices in Europe caused by large demands for America and China, imports of both unwrought and wrought copper were greatly restricted during the last quarter of the year. The sensitiveness of the Indian demand to price changes is always noticeable, for
besides its increasing use for industrial purposes copper as the material for house: hold utensils is an article of great importance in the domestic economy of the people, and their ability to satisfy their requirements is regulated first by their material prosperity, which is principally a question of good or bad crops, and secondly by the commodity being cheap or dear. The fluctuations dependent on these causes are shown in the figures of the trade for the last ten years:

|  | Price per cwt |  |  | Price per cwt |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwt | $R$ a. p |  | Cwt | R | $a$. | $p$ |
| 1895-96 | 471,824 | 4449 | 1900-01 | 159,971 | 57 | 5 | 4 |
| 1896-97. | 240,648 | 44103 | 1901-02 | 193,822 | 55 | 2 | ${ }^{\circ}$ |
| 1897-98 | 322,348 | $44 \quad 1$ | 1902-03 | 395,850 | 49 | 9 | 2 |
| 1898-99 | 251,301 | 44911 | 1903.04 | 433,09: | 50 | 1 | 3 |
| 1899-1900 | 90,846 | $58 \quad 4 \quad 0$ | 1904-05 | 427,233 | 49 | 5 | 9 |

Iron and Steel.-The importations of iron and steel during the last five years have been in tons:

|  | Iron | Steel | Total |
| :---: | :---: | :---: | :---: |
| $1900-01$ | 169,992 | 92,586 | 262,578 |
| $1901-02$ | 180,604 | 158,468 | 339,072 |
| $1902-03$ | 196,292 | 171,007 | 367,299 |
| $1903-04$ | 232,570 | 226,335 | 458,905 |
| $1904-05$ | 257,580 | $211,58 \mathrm{I}$. | $469,16 \mathrm{I}$ |

The trade of 1904.05 shows but a slight advance compared with the marked progress of the four preceding years, and in the case of steel, of which the imports had previously grown most rapidly, there is a set-back of $10^{\circ} 7$ per cent in value. The distinction drawn in the statistical returns between common bars, plates, and sheets of iron and steel, respectively, is not, however, wholly trustworthy, and until January 1905 there was a motive for misdeclaration in the fact that previously steel was mostly assessed to duty ad valorem and iron on fixed tariff valuations. Prices were on the whole lower than in 1903-04, but the average value for iron was 2 per cent higher, mainly owing to the large increase of galvanised sheets and plates, while bigger imports of cheap basic bars and a falling off in steel for structural purposes reduced the average for steel by 4 per cent. Shipments from the United Kingdom, which are mostly of British origin, account for 65.8 per cent of the total quantity and $6_{5}$ per cent of the value of iron and steel. Germany takes the second place in reality, though in appearance this belongs to Belgium owing to shipments of German iron from Belgian ports. Data are wanting for an exact division according to the countries of origin, but the following statement indicates approximately how much of the main descriptions of iron and steel imported were British and German or Belgian, respectively (in tons) :

|  | United Kingdom |  |  | Germany and Belgium |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Iron | -Steel | Tatal |  |  |  |
| Bars | 8,693 | 7,779 | 16,472 | 23,376 | 48,034 | 71,410 |
| Sheets and plates | J,043 | 28,235 | 29,278 | 2,633 | 16,273 | 18,906 |
| " . " galvanised | 97,202 | ... | 97,202 | 449 |  | 449 |
| "" " tinned. | 18,751 | ... | 18,751 | 98 | . 88 | 98 |
| Hoop - | 1,754 | 12,075 | 13,829 | 1,053 | 2,785. | 3,838 |
| Angle, bolt, and rod | 843 | ... | 843 | 5,584 | ... | 5,584 |
| Angle, channel, and spring |  | 10,385 | 10,385 | ... | 4,548 | 4,548. |
| Beams, pillars, girders, and bridgework | 5,809 | 13,742 | 19,551. | 950 | 15,736 | 16,686 |
| Pipes and tubes . | 27,03 I. | ... | 27,031 | $3^{64}$ | .... | 364 |
| Nails, screws, rivets and washers | 3,645 | ... | 3,645 | 5,636 |  | 5,636 |
| Other sorts | 35,231 | 10,805 | 46,036 | 3,903 | 31,109 | 35,012 |
| Total | 200,002 | 83.02: | 283,023 | 44,0,6 | 118,485 | 162,531 |

The competition with British manufactures has been chiefly in the common and cheap descriptions, namely, angle, bar, plain sheets, nails, screws, and rivets. Imports of galvanised sheets have increased in quantity by $57^{\prime}$ ' per cent, that is, from $1,243,188$ cwt to $1,953,029 \mathrm{cwt}$, valued at $158^{\circ} 3$ lakhs. The development of the bulk oil trade accounts for an increase of $26^{\circ} 4$ per cent in tinned plates, of which the value was nearly $3^{8} 3$ lakhs. The imports of pipes and tubes, valued at $46^{\circ} 2$ lakhs, were considerably less than the large imports of 1903.04, valued at $57^{\circ} 8$ lakhs, but as in that year Burma took the largest share for its petroleum pipe lines.

Importations of lead were practically the same as in the previous year, the value being 18.4 lakhs, 12.9 lakhs of this being the value of sheets for lining tea chests imported from the United Kingdom.

Of tin, which comes almost wholly from the Straits Settlements, the quantity imported, valued at $39 \frac{1}{3}$ lakhs, was nearly 3 per cent smaller but the price 3 per cent higher than in $1903^{-0} 4$, which was a year of unusually large imports. The imports of sinc were 17 per cent less than in the previous year, but the value of $14 \frac{2}{3}$ lakhs shows only half this deficioncy owing to the continuous advance in price.

The value of Machinery and Millsork reached the unprecedented total of $402 \frac{3}{4}$ lakhs, this being 20 per cent greater than in 1903-04, which also was $19 \frac{1}{3}$ per cent in advance of the previous year, and it is nearly 15 per cent above the previous record of 351 lakhs in 1896.97 . The share of Bengal, whose former record was $182 \frac{1}{9}$ lakhs in $\mathbf{1 8 9 6} 97$, amounted to $995 \frac{3}{3}$ lakhs, compared with 1413 lakhs in $1903^{\circ} 04$, and this rise of 38.2 per cent is wholly due to the increase of jute mill machinery from $50 \frac{1}{2}$ to $94 t$ lakhs. The value of Bombay imports fell from $126 \frac{3}{4}$ lakhs to 121 lakhs, which, though much below the maximum of $160 \frac{8}{4}$ lakhs in $1898-99$, is still well above the average. The share of the other provinces was $85 \frac{4}{5}$ lakhs, compared with $66 \frac{4}{5}$ lakhs in 1903-04, equal to a rise of 29 per cent. New sub-heads have been introduced from April 1905 to distinguish textile, electrical, and mining machinery from other descriptions.

Railway Material, which includes rolling stock as well as materials for construction, is represented by imports of great magnitude, but the practice of eliminating from the accounts of private trade, by classifying as Government stores, all material for railways owned by the State, including those leased to and worked by Companies, obscures this fact; and for the same reason the purchase from time to time of private lines by the State may give the misleading impression that the imports have declined. To get a true view of the trade the imports for both State and private lines must be combined, and this total for $1904-05$ gives a value of $561^{\circ} 5$ lakhs, compared with $563^{\circ} 7$ lakhs in 1903.04, which was 5 per cent higher than the previous record of $53^{6}$ lakhs in $1902-03$. The value for private lines was 141 lakhs and for State lines $420 \frac{8}{5}$ lakhs, the respective values for 1903 -04 being $140 \frac{1}{3}$ lakhs and $423 \frac{1}{3}$ lakhs.

## Chemicals, Drugs, Medicines, Narcotics, Dyeing and Tanning Materials

The value of Chemicals rose from 59 lakhs in 1903-04 to $61 \frac{\mathrm{~J}}{\mathrm{~J}}$ lakhs in 190405. The principal among the specified descriptions is "Chemicals for paper making," of which the value rose from $6 \frac{3}{5}$ lakhs to $7{ }^{3}$ lakhs. More than twothirds of the imports are described as. " pther sorts " with a value of 43 急 lakhs.

Several new descriptions such as calcium carbide, chemical manures, desinfectants, etc., will, however, be shown from the current year.

Drugs and Medicines were imported to the value of $70 \frac{3}{4}$ lakhs, compared with 68 lakhs in the previous year. Imports of camphor which comes almost entirely from Japan and Formosa increased in quantity by 7 per cent and the value of 16 lakhs by 24 per cent, so that the average price per 现 rose by 17 per cent. The quantity of quinine increased by 32 per cent, but as the price was 21 per cent lower, the value of $6_{1} \frac{9}{0}$ lakhs was only 11 per cent higher than in the previous year. The value of "Other sorts". was 37 lakhs, of which "Proprietary and patent medicines," to be separately specified in 1905-06, form a principal item.

Tobacco.-The value of imported tobacco increased during the year by nearly 12 per cent to $55^{\circ} 6$ lakhs. The descriptions "unmanufactured tobacco," "cigars," and "other sorts" (largely American pipe-tobacco) are relatively unimportant and do not show any progress, but the trade in cigarettes, which are the chief item, has increased by 106 per cent in the five years during which it has been registered. Compared with 1903-04, the value of imported cigarettes has increased nearly 19 per cent to 35 lakhs. The quantity of $2,518,659 \mathrm{ft}$ would represent nearly 840 million cigarettes. The imports from the United Kingdom were valued at 23 lakhs, from Egypt at $3^{\frac{1}{2}}$ lakhs, from America at 5 lakhs, and jointly from the Treaty Ports of China, Japan, and the Straits Settlements at nearly 3 lakhs. The average value per tb from each of these sources was British R1-4-5, American R1-1-2, Egyptian R6-9-1, and Eastern 15 annas 9 pies, the value per 1,000 being roughly three times the value per ID . The trade in the cheap descriptions may be expected to grow as the habit of cigarette-smoking is on the increase.

Dyes.-The trade in aniline and alizarine dyes was altogether exceptional in 1903.04 when the quantity was $12,182,600 \mathrm{H}$, value $82 \frac{2}{3}$ lakhs, and although the imports fell by 12 per cent in quantity to $10,705,077 \mathrm{fb}$ and the value by $13 \frac{1}{\frac{1}{2}}$ per cent to $71 \frac{1}{2}$ lakhs, these results are still better than in any other year. Though most of the imports are shipped from ports in Belgium and Holland, the dyes are chiefly of German manulacture. Recently there have been large amalgamations in the German aniline trade in the direction of pooling profits in order to reduce competition and steady prices, which have been falling, for the average value was 3.8 per cent lower than in 1903.04, which also had an average 6.3 per cent lower than in the previous year. The alizarine trade is already controlled by a combination and the average value per HD was 1.9 per cent higher than in 1903-04, for imports of $5,875,708 \mathrm{mb}$, valued at $30 \frac{1}{2}$ lakhs. More than four-filths of the mineral dyes were imported into Bombay.

## Oils

Mincral Oil.-The trade in kerosene oil shows some interesting changes, The imports had fallen off during each of the two preceding years by 10 million gallons, and though the quantity received in $1904-05$ increased by $4 \frac{3}{3}$ million gallons, or 6.4 per cent, the total value of the imports was nearly 8 lakhs or 2.6 per cent lower. Bulk oil importsi increased. by $20 \frac{1}{2}$ million gallons, one million of the gross increase being Russian oil and 20 millions the produce of Sumatra and Borneö, of which $11 \frac{3}{4}$ million gallons were shipped from the distributing port of Singapore. Thus, put.of a total of 55 million gallons for bulk oil,

Russia provided 285 millions and the Dutch Indies 260 millions. The large receipts of bulk oil caused a drop in the imports of case oil of 158 million gallons. Russian oil fell by is millions to iit millions, while American oil increased by $\frac{3}{8}$ of a million to 7.4 millions. Case oil from the Dutch Indies and the Straits Settlements amounted to 950,000 gallons. The shifting of the sources of supply is caused by the rapid development of the indigenous oil industry. There was hardly any advance in the small Assam field which produced about $2 \frac{1}{\frac{1}{2}}$ million gallons of crude petroleum as in the previous year, but the crude oil output in Burma rose from $85 \frac{1}{2}$ to $115 \% 9$ million gallons or by 36 per cent. This would represent in all about 50 million gallons of kerosene, and the exports of illuminating oil from Burma during $1904-05$ amounted to 48.6 million gallons, of which is millions twent to the Straits Settlements and the remainder in coasting vessels to Bengal and the other Indian provinces. The Burma Oil Company, which monopolises the Burma oil trade, is rapidly expanding its business, and with the projected increase of $£ 1,000,000$ will have an authorised capital, including $£ 500,000$ debentures, of $£ 3,000,000$. Though inferior as an illuminant Burma oil is cheaper than American and Russian oil, but oils of like quality produced in the Dutch East Indies are also cheap, and as the producing interests have formed a coalition to work the Eastern markets they are able to compete vigcrously with Burma oil, notwithstanding the advantage the latter obtains from the high duty on foreign petroleum imported for illuminating purposes. The effect of this competition on prices is apparent in their constant fluctuations. The average value per 10 gallons of oil in bulk was lower than in 1903.04 by 10 annas 8 pies for Dutch Indian oil, but the fall in Russian oil, whether in bulk or cases, and in American case oil is hardly appreciable.

The imports of other mineral oils, chiefly lubricating oil, were $7,441,000$ gallons, a decrease of $1 \frac{1}{3}$ million gallons from the imports of the previous year, and Burma shipped to Indian ports $3 \frac{1}{6}$ million gallons of these oils. Fuel oil, of which nearly a million gallons was imported into Bombay from Borneo, will be separately designated from this year.

The total value of all mineral oils was 327.9 lakhs, of which 293 lakhs was the value of kerosene.

## Raw Materials

Coal.-The development of the Indian coal fields has brought about a rapid diminution of the imports of coal, but the year $1904-05$ showed a remarkable recovery of as much as 40 per cent in quantity and nearly $3^{2}$ per cent in value. The depression in the British coal trade and the excessively low freights for Welsh coal to Bombay and Karáchi, which owing to the remunerative freights obtainable for the homeward journey fell as low as $6 s$ a ton, account for the rise. The total of private imports was 252,400 tons, value $44 \frac{1}{2}$ lakhs, of which the United Kingdom supplied 177,129 tons, value $33^{\frac{1}{7}}$ lakhs. The imports from Japan which are increasing remarkably reached the considerable total of 55,443 tons, value $8 \frac{2}{5}$ lakhs. The remaining 20,000 tons came chiefly irom Australia and African ports. Imports of British coal by the Government amounted to 22,812 tons, value $R_{4,92,622}$. The production of Indian coal in 1904 was $8,212,000$ tons, an advance of 773,620 tons or $10^{\circ} 4$ per cent compared with the previous year.

Silk.-After two years of great depression the trade in silk shows a satisfactory recovery, the advance on the value in 1903.04 being 24 per cent.

The crops in Italy, Japan, and China were good, and in the earlier months of the year prices fell but they recoverd later, and the average value per lib was nearly 4 per cent higher than in the preceding year. Direct imports from China were $1,464,40 \mathrm{IH}$ and from the Straits Settlements $340,129 \mathrm{Hb}$, out of a total of $1,858,709 \mathrm{Hb}$. The value of the imports was $73{ }^{2}$ lakhs, of which Bombay took $58 \frac{1}{2}$ lakhs and Burma nearly 14 lakhs.

Cotton.-Of cotton 192,554 cwt were imported-a quantity ten and-a-half times greater than in the previous year-and the value rose from 5 lakhs to 63.8 lakhs. Excepting $1900-0$ the year following the failure of the Indian crop, when $225,214 \mathrm{cwt}$ valued at 70 lakhs were imported, and the previous year with imports valued at 46 lakhs, the average value of the imports during the last decade has been about 20 lalihs. The great fall in the price of cotton resulting from the gigantic American crop and the activity in the Indian cotton industry are the immediate causes of the growth of the imports, for ${ }^{1} 13,30 \mathrm{rawt}$ of the total was received during the last quarter of the year. The quantity of long-stapled cotton, chiefly American shipped from the United Kingdom, was $20,300,000 \mathrm{Db}$, and the quantity of yarn of counts above 30 spun in the Indian mills during 1904-05 was $18,427,809$ to compared with $17,460,103$ to in 1903.04 .

Precious stones and pearls, unset.-The imports fluctuate considerably, and the value of $87 \frac{3}{4}$ lakhs is 42 per cent less than in 1903 -04, which was 33 per cent higher than the previous record. The decliṇe is chiefly in jewels from the United Kingdom and France, while pearls from Muscat and the Persian Gulf to the registered value of 45 lakhs take the first place. The declared average value of imported pearls during the last five years has been about 51 lakhs, but they have been very much undervalued, and there are further unregistered imports by letter pest of the estimated annual value of 10 lakhs. Although nearly the whole of the pearls is re-exported, the registered value averages only $2 \frac{1}{8}$ lakhs, as the rest are sent by registered letter post and thus escape registration. The real value of the exports, including commission and other charges, is believed to be double the declared value of the imports or over 100 lakhs on the average.

Timber. -The trade is growing and the value of 58 lakhs is 37 per cent greater than in 1903.04. Two-thirds is teak from Siam which is taking the place of Burma teak.

## Manufactured Articles

Cotion manufactures.-The year 1904-05 saw a revolutionary change in the Lancashire cotton trade which supplies the Indian market. The long period of depression caused by the scarcity and high cost of the raw material came to an end with the certainty of an abundance of American cotton for the ensuing year. The revival began in June and in a few months machinery and work people were in full employment, contracts were entered into, exceeding in amount and length of time for delivery anything experienced for many years, and the trade was rejoicing in a spell of great prosperity. The restoration of confidence and the attenuation of stocks caused an eager demand from India, and as the contracts were made and imports on a large scale began before the great drop in the price of raw cotton in the latter part of the year, they were arranged on the basis of dear cotton and the average values for the year were therefore exceedingly high. The great margin thus latterly existing between the price of raw cotton and the price of manufactured goods must have brought great profits for the time being to the manufacturers.

Cotton yarn.-The imports during the last six years have been in millions of to :

The British export trade in cotton yarns did not show the same advance as in piece-goods, and much of the increased production of the spindles was absorbed by the looms. There was a fair demand in India for 40 's mule, and on the whole an advance, compared with the very small imports of the previous year, of 9 per cent in quantity and 16 per cent in value, for dear cotton, made prices on the average 7 per cent higher. Dyed and undjed yarn are about equally divided, and of the former about 2 million fb out of a total of 15 millions was of nonBritish origin, Austria-Hungary and Italy each being credited with about 4 a million th . The gradual shrinking of the trade is due to the large production of the Indian mills, which compares as follows with imported yarn as to quantity and descriptions:

|  |  | Importid yarn |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 190803 | 120304 | 198405 |
| Nos. 1 to 25 | - | 3,955,582 | $4,3{ }^{\text {So,4 } 4} 8_{3}$ | 2,524,081 |
| , 26 to 40 | - . | - 23,115,551 | 16,58S,042 | 19,995,875 |
| Above 40 | . | - 4,244,846 | 4,S22,593 | 5,0+1,552 |
|  | total | - $3^{1, \mathrm{~S}^{16,279}}$ | 25,791,118 | 27,56ı,5j ${ }^{\text {S }}$ |
|  |  | Indian yarn |  |  |
| Nos. 1 to 25 |  | - ${ }_{\text {539,606,503 }}^{\text {15020 }}$ | $\begin{gathered} 1900-24 \\ 536,856,691 \end{gathered}$ | $\begin{gathered} 190405 \\ 531,444,743 \end{gathered}$ |
| $n{ }^{\prime 2}$ to 40 |  | - 35,413,172 | 40,960,669 | 45,658,619 |
| Above 40 | - $\cdot$ | - 674,495 | 942,315 | 1,277,913 |
|  | Total | - $575,694,260$ | 578,759,075 | 578,381,275 |

Practically the whole of the exports of Indian yarn consists of numbers 25 and under, and the greater part of the imports of these low counts are re-imports from China of Indian yarn.

Cotton fabrics.-The recovery of the great trade in cotton fabrics from a period of depression, owing to reasons already stated, and the ample purchasing powers provided by years of agricultural prosperity, have caused an advance on the previous year of 23.2 per cent in the value of these goods, which represents 36.8 per cent of the value of all private importations of merchandise. Taking piece-goods the number of yards is greater than in any previous year, not excepting 1894-95 when there were very large importations on account of the expected 5 per cent import duty which was imposed in December 1894, and owing to high prices the value stands quite by itself, being 458 lakhs greater than the value in 1901-02 which makes the nearest approach to it. Compared with moderate trade of 1903 -04 the quantity has increased by $255^{6} 6$ million yards or 12.5 per cent and the value by 627 lakhs or 22.8 per cent. This signifies a rise in the average price per yard of about 3 pies. Separating the classes the average price of grey goods rose 12 per cent, of white goods 7.8 per cent, and of coloured goods il'i per cent. The course of the import trade in these classes

[^4]during the last sixteen years is stated in the figures appended in millions of yards :

|  | $\begin{gathered} \text { Grey } \\ \text { (unbleached) } \end{gathered}$ | White <br> (bleached) | Coloured, printed, .or dyed | Percentage of grey in total |
| :---: | :---: | :---: | :---: | :---: |
| Average, 1889.90 to 1893-94 | 1,223'47 | $368 \cdot 62$ | 374 16 | 62 |
| $\text { Average, } 1804-95 \text { to }$ $189899$ | 1,209 77 | 418.58 | 357'49 | 61 |
| Average, 1899-1900 to $1903-04$ | 1,204*53 | 469'69 | $430 \cdot 56$ | 57 |
| 1904-05. | 1,210 16 | 584.3 | $493 \cdot 92$ | 53 |

The decreasing importance of grey goods both relatively and absolutely is manifest from this statement-a fact which is explained by the great preponderance of these goods in the rapidly increasing production of the Indian mills. It is also noticeable that while Bombay takes an equal or, as last year, a greater share of white and coloured goods compared with Bengal, it takes a comparatively small and diminishing share of grey goods, of which Bengal where there are no cotton weaving mills absorbs a very large share, $904,778,615$ yards, in 1904.05. The hand-weaving industry is also by no means a negligible factor, for its production in cloth is probably double that of the Indian mills, and it is still the largest industry in the country next to agriculture, as the census of 1901 showed 22 million cotton hand-loom weavers, besides dependents numbering $2 \frac{4}{3}$ millions. This ancient industry has suffered greatly from the introduction of machine-made goods and though still possessed of considerable vitality seems to be steadily decaying.

The principal descriptions of imported goods belonging to the three classes are shown in the following statement in millions of yards :

2. Chadars, dhutis, sáris, and scarves:

| Grey - |  | - | - | 497'9 | 454.58 | 529.72 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| White |  |  | - | 52.82 | 54.65 | 56.56 |
| Coloured |  |  | - | 5577 | $67 \cdot 12$ | 64.58 |

3. Faconets:

4. Mulls:

| Grey - |  | 18 | ${ }^{2} 5^{16}$ | 27.46 |
| :---: | :---: | :---: | :---: | :---: |
| White |  | $8 \mathrm{r} \cdot 3$ | 102.11 | 134.89 |
| Coloured |  | $1 \cdot 6$ | $1 \cdot 96$ |  |

5. Drills, jeans, sheetings :

| Grey | 24.97 | 20.87 | 18.77 |
| :---: | :---: | :---: | :---: |
| White (drills and jeans) | $3 \cdot 62$ | 4.18 | 779 |
| Coloured (drills) . | $5 \cdot 61$ | $5 \cdot 63$ | $5 \cdot 09$ |

6. Unspecified descriptions:

Among these shirtings, dhutis, and mulls show the principal advance. The further descriptions which are imported in considerable quantities and belong to either one or two of the three classes are stated below in millions of yards:

|  | 1902-03 | 1903.04 | .1904-05 |
| :---: | :---: | :---: | :---: |
| Grey : |  |  |  |
| Madapollams | - 26.64 | 121 | 1794 |
| T-cloths and domestics | - 17.14 | 12.29 | 12 |
| Printers | - 33 | $3{ }^{3}$ | $\cdot 49$ |
| White: |  |  |  |
| Nainsooks | - 135:7 | $181 \cdot 85$ | 177.33 |
| Cambrics, twills, muslins, |  |  |  |
| Checks, spots, stripes | - 5.95 | 6.49 | 7.56 |
| Long cloths | 1.67 | 1.61 | 2.05 |
| Coloured: |  |  |  |
| Prints and chintz | - 156.1 | 171.28 | 181.55 |
| Cambrics, twills, muslin | - 77.64 | 71.52 | 66:46 |

The principal improvement is in madapollams and prints and the largest decline in nainsooks.

The production of the Indian mills which consists chiefly of unbleached shirtings, dhutis, T-cloths, domestics, and chadars increased by $20^{\circ} 7$ million pounds or 15 per cent. The yardage which is stated only for plain goods that is bleached or unbleached but not coloured or figured, increased by 87.2 million yards, the total for this class being 5477 million yards, and the weight thereof $1_{3}$ o million $\mathrm{Hb}_{\mathrm{b}}$ out of a total weight for all classes of woven goods of 158.7 million tb .

The extent to which cotton piece-goods are imported from the United Kingdo.n is indicated below (million yards) :-

The proportion of grey goods is $99^{\circ} 6$ per cent and of hleached goods 98.3 per cent. For coloured goods the proportion is only $95 \cdot 5$ per cent.

Besides these three great classes, there is a comparatively small importation of other fabrics, and the trade in these increased as in the previous year by 42 lakhs equal to 30 per cent. The principal descriptions and the figures of the trade are ( $R, 000$ omitted) :

In handkerchiefs and shawls and sewing thread the United Kingdom has the large shares of 86 per cent and 90 per cent, respectively, but its share of the total of all these descriptions has fallen from $49^{\circ} 5$ per cent in 1903 -04 to $39^{\circ} 6$ per cent last year. It retains only 6.7 per cent of the trade in hosiery which is imported principally from Japan, Italy, Germany, Austria, and Spain. The value of hosiery imported direct from Japan increased from 6 lakhs in 1903-04 to $12 \frac{3}{4}$ lakhs in $1904-05$, and imports from Hongkong and the Straits Settlements to the value of $4 \frac{1}{2}$ lakhs were probably also of Japanese make.

The aggregate value of the imports of cotton yarn and woven an $d$ other goods in the last five years has been (in millions of $R$ ):

|  |  | Yarns | Woven and other goods | Total | $\begin{array}{r} \text { Potal } \\ -\substack{\text { total } \\ \text { mee }} \end{array}$ | ortion to mports of chandise |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $1900 \cdot 01$ | - | 24.89 | $273 \cdot 46$ | 298.35 | 39 | per cent |
| 1901.02 | - | 26.47 | 302:48 | 328.95. | 40 | " |
| 1902-03 | - | 22.97 | 281.49 | $3044^{6}$. | 39 | " |
| 1903.04 | - | 21.42 | 288.69 | 31011 . | 37 | " |
| 1904-05 | - | 24.88 | $355^{\circ} 59$ | $380 \cdot 47$ | 39 | " |

Silk goods-The imports of silk manufactures have steadily advanced during the last three years, and the value of 21.8 lakhs is ${ }^{1} 5^{\frac{1}{2}}$ per cent greater than the previous record in 1903.04, though prices were lower. Piece-goods of pure silk are chiefly of Chinese and Japanese make, the latter predominating, and jointly (including re-exports from the Straits Settlements) they amounted to 16.3 million yards, value 102 lakhs, out of a total of 18.9 million yards, value $124 \frac{3}{4}$ lakhs. The value of silk goods mixed with other materials, 43.8 lakhs, is 30 per cent greater than in 1903 .04. There was also an advance of 25.8 per cent in "other sorts", of which the value rose by $51 \%$ per cent to 42.9 lakhs. This includes warp and yarn of Italian silk imported into Bombay for handweaving.

Woollen goods-As in the case of cutton and silk goods, the very large imports of woollen manufactures manifest the increased spending power of the public. The value of $307^{\circ} 6$ lakhs is $42 \frac{1}{8}$ per cent greater than in $1903^{-0} 4$ which had a larger trade than in any previous year. Piece-goods increased in quantity by about 55 per cent to $23 \frac{3}{4}$ millions yards and their value by 44 per cent to $194 \frac{1}{3}$ lakhs, so that the average price per yard was nearly 11 per cent lower than in the previous year. The value of piece-goods from the United Kingdom was ${ }_{13} 6.8$ lakhs, a rise of 30 per cent, while imports from Germany increased by $109^{\circ} 6$ per cent to $37 \frac{1}{2}$ lakhs. The value of shawls, 6 I lakhs, was half as much again as in 1903-04 and $19^{\circ} 7$ per cent above the previous record in 1900-or, but as the shawls were on the whole of finer quality and consequently i3 per cent dearer, the number imported, $2,481,000$, was only 37 per cent larger. The trade is chiefly with Germany, as $1,820,000$ shawls, value 46.9 lakhs, were imported direct from that country. The description "other sorts" which includes hosiery and yarn (both to be specified from the current year) has a value of 33.6 lakhs of which half came from the United Kingdom and all but a small fraction of the remainder from Germany and Austria.

Other manufactured goods.-Of the other articles enumerated in this class the following are the most important :

|  | $\underset{R}{1902-03}$ | $\underset{R}{1903.04}$ | $\underset{R}{190+05}$ |
| :---: | :---: | :---: | :---: |
| Apparel, including boots and shoes | 1,78,12,795 | i, $99,57,57 \mathbf{}$ | 2,23,99,627 |
| Arms and ammunition | 24,88,606 | 24,37,422 | 28,17,214 |
| Books and printed matter | 26,15,314 | 28,44,218 | 31,95,745 |
| Building materials | 22,76,035 | 28,70,853 | 35,30,727 |
| Carriages and carts | 37,32,585 | 43,53, 865 | 55,02,106 |
| Clocks and watches | 16,54,257 | 17,37,622 | 19,23,876 |
| Earthenware and porcelain | 27,42,648 | 28,00,038 | 29,31,813 |
| Glass and glassware | 94,58,190 | 99,30,759 | 1,12,57,101 |
| Instruments and apparatus, scientific | 37,93,069 | 42,83,744 | 48,78:122 |
| Jewellery and gold and silver plate | 33,58,890 | 15,03,988 | 17,48,156 |
| Leather and manufactures of leather | - 25,76,958 | 26,19,633 | 25,21,909 |
| Matches | - $46,76,376$ | 50,61,057 | 48,95,283 |

Of these twenty articles five, namely, leather manufactures, matches, parts of ships, stationery, and umbrellas, show smaller imports than in $1903 \cdot 0.4$, but the decline is small and the imports remain above the average except in the case of the last named. The smaller imports of complete umbrellas are, however, compensated by larger imports of ribs and fittings to be made up in India These which are now classed as hardware will in future be separately designated in the group of manufactured articles, for their value, which was $12 \frac{1}{3}$ lakhs in Bengal, is probably not far short of the ralue of complete umbrellas.

The smallest advance among the other arlicles is $4^{\prime} 7$ per cent for earthenware, and the largest, nearly 51 per cent, for tea chests. The important and steadily progressive head " apparel" has increased by ia per cent and the sub-head "boots and shoes" (value $34 \frac{1}{2}$ lakhs) by $23 \frac{1}{2}$ per cent. Three additional subheads have been added this year, and under one of these "imitation gold and silver thread," the registered imports into $M_{\text {adras }}$ were valued at nearly 16 lakhs, while th ere were considerable imports into Bombay and Karáchi. The increase of 25.4 per cent under "carriages" is due to larger imporis of motor cars and motor cycles which will appear in future under a distinct sub-head. The large and expanding trade in glassware has risen in value by over 13 per cent. The value of imported paper is higher by 24 per cent. Printing paper increased by 36 per cent to $21 \frac{2}{3}$ lakhs, though the price per cwt was 5 per cerit lower. The average price of "other kinds of paper," of "hich the imports increased in value from about 15 to 21 lakhs, seems to have fallen by 40 per cent, but this result is mainly due to the inclusion under this head from 1904-05 of old newspapers for packing, which were formerly included under various heads.

The principal imports are stated in the following list with the valut of the trade in each for the last two years (in thousands of rupees) :

|  | 19030.4 | 1904-05 |
| :---: | :---: | :---: |
| 14. Spices | 82,20 | 103,24 |
| 15. Spirits | 99,15 | 100,59 |
| 16. Precious stones and pearls | 152,15 | 87,76 |
| 17. Instruments and apparatus | 66,74 | 74,40 |
| 18. Silk, raw | 59,29 | 73,41 |
| 19. Aniline and alizarine dyes | 82,67 | 71,45 |
| 20. Salt | 63,69 | 71,13 |
| 121. Drugs and medicines | 68,12 | 70,74 |
| 22. Paper and pasteboard | 52,18 | 64,37 |
| ${ }^{2} 3$. Cotton | 5,03 | 63,85 |
| 24. Chemicals. | 59,02 | 61,32 |
| $)^{25}$. Beer | 55,91 | 60,42 |
| 26. Timber | 42,47 | 58,14 |
| 27. Tobacco | 49,69 | 55,63 |
| 28. Horses | 52,49 | 55,48 |
| 29. Carriages and carts | 43,54 | 55,02 |
| 30. Matches | 50,61 | 48,96 |
| 31. Paints and colours and painters' materials | 42,69 | 46,52 |
| 32. Coal | 33,78 | 44,46 |
| 33. Stationery, excluding paper | 37,08 | 36,78 |

Over 68 per cent of the trade consist of cottons, metals, metalware, machinery, railway material, sugar, and petroleum.

General distribution of the import trade. - Imports are credited in the accounts of trade to the countries containing the ports from which the goods were shipped direct to India. In the case of goods transhipped, this means the port at which they were transhipped and placed on board the vessel in which they arrive, unless a through bill of lading was granted at the port of first embarkation when that port, and not the place of transhipment, is, as a rule, taken to be the port of direct shipment to India. Arranged on this basis the value of the imports was distributed in the following proportions amongst the principal countries trading with India:

This distribution refers to what is classed as private trade and omits to take into account the large imports of Government stores, valued at 773 lakhs in $1904 \cdot 05$, of which 94 per cent was credited to the United Kingdom. With quite unimportant exceptions, such as stores returned from Aden and Somali ports, these imported stores represent commercial transactions between India and the supplying countries. Including these stores in the trade of the United Kingdom, which is the only couniry appreciably affected, its share of the total imports of merchandise would be, per cent:

| $1900-01$ | 1901.02 | $1902-03$ | 1903.04 | $1904-05$ |
| :---: | :---: | :---: | :---: | :---: |
| 6.6 | 67 | 68.9 | 67.3 | 67.4 |

The system of registering imports according to the place of shipment on the principles stated above has the solid advantage of resting on a basis of facts which can be accurately checked. On the other hand it often fails to represent the true commercial exclanges, for certain countries, owing to their geographical position, send much of their produce in transit by inland routes through adjacent countries to be shipped from the ports of those countries; while other countries contain ports doing a large transhipment trade. Thus certain regions of central Europe, mostly belonging to the German Empire, export much of their produce through ports in Belgium and Holland, so that nearly half of the imports of German origin are credited in the Indian accounts to the countries through which they pass in transit. Switzerland, having no seaports, does not appear at all, American and Continental exports are credited to the United Kingdom, Italian exports to Austria, and so on. Transhipments at Singapore and Hongkong also obscure the real course of trade with the Far East and countries in the Pacific. Alternative systems likewise have their defects, and a suggested improvement which is being considered is 10 supplement the present system by registration of the country of consignment, that is, the country from which the goods have come in unbroken transit by land and sea or by sea only.

Taking the recorded percentages, the most noticeable changes of the year are the rise of Austria-Hungary from the seventh to the second place owing to the revival of the trade in beet-sugar. The smaller exports of sugar from Mauritius have deposed it from the fourth to the seventh place, while the extraordinary development of the imports of sugar from Java have suddenly brought that country from obscurity into the sixth place. Russia has sunk from the fifth to the tenth place owing to the great falling off in the imports of Russian kerosene oil.

## Exports of Imported Goods

The re-expart trade reached its highest value in $189+95$, with 505 lakhs, after which as direct communications developed tetween other countries and ports in the Persian Gulf and Indian Ocean there was an almost unbroken decline to $293 \frac{1}{2}$ lakhs in 1902-03. The next year there was a recovery of 13.3 per cent followed by a small advance of 1.4 per cent in $1904-05$. The fluctuations during the last ten years are shown in the figures appended, giving the value in rupees :

The chief ports of Western India, Bombay and Karáchi, absorbed 88 per cent of the total trade, the share of Bombay alone being 76 per cent. According to destinations the United Kingdom takes $20^{\circ} 4$ per cent, Persia 16.5 per cent, Arabia 13.5 per cent, China 8.1 per cent, the Straits 7 per cent, British East Africa $5^{11}$ per cent, Ceylon $4^{\circ} 6$ per cent, and Aden $4^{\circ} 2$ per cent. The chief export to the United Kingdom is raw wool, the value of $25 \frac{1}{2}$ lakhs for $5^{\frac{1}{8}}$ million Hb being 10.7 per cent higher than in the previous year owing to the price having risen. Cotton manufactures are, however, by far the largest item in the general trade, accounting for 37 per cent of the total. Cotton yarn valued at $9^{\prime} 12$ lakhs, of which Persia took $7^{\circ} 1$ lakhs, increased by 21 per cent,
but notwithstanding higher prices and a rise of $\mathbf{1} 3$ per cent in bleached cotton, the value of piece goods as a whole fell from $123^{\circ} 4$ to $119^{\circ} \%$ lakhs, and of coloured goods from $93 \frac{\frac{1}{3}}{}$ to $87 \frac{3}{4}$ lakhs, as the principal importing countries, namely, Persia, Arabia, East Africa, the Straits Settlements, and Aden, all purchased smaller quantities. The value of apparel also fell from about 17 to 15 lakhs, of metals from 23 to $14 \frac{3}{3}$ lakhs, and of provisions from 20 to 19 lakhs, while the value rose of oils from $6 \frac{1}{5}$ to $10 \frac{2}{3}$ lakhs and of refined sugar from $4 \frac{1}{5}$ to $9^{2}$ lakhs. Tea has lost its former importance as an article of re-export since the Central Asian markets have ceased to be served through the Persian Gulf, and the total was only $927,000 \mathrm{Hb}$, value $6 \frac{1}{3}$ lakhs, compared with $890,000 \mathrm{Hb}$, value $6 \frac{1}{\frac{1}{2}}$ lakhs, in 1903.04 . Persia took about half a million th as in the previous year, and it is noticeable that nearly $150,000 \mathrm{fb}$ went to Russia, while exports of green tea-increased by $280,000 \mathrm{Hb}$.

## Exports of Indian Merchandise

The value of exported merchandise was 449 lakhs, or 3 per cent, greater than in 1903.04. Although this is the smallest advance of the last four years, it is still remarkable, for it followed an unfrecedented increase of 19 per cent in 1903-04, and rapid development in the two preceding years, so that the increase in four years is 48 per cent. The year 1900-01 was, however, the last of ten years of practical stagnation in the export trade, so that the advance in fourteen years is less than 49 . per cent. Since 1880.8 I , that is, during 25 years, exports have increased in value by 114 per cent. The figures appended give the progress in the annual average values of five quinquennial periods $(\mathbb{R})$ :

The fluctuations from year to year are set forth in the appended list of the principal articles in the trade and their values $(\mathrm{R})$ :

|  | 1901 | 3 | 04 |  |
| :---: | :---: | :---: | :---: | :---: |
| Rice | 13,91,95,678 | 18,89,52,506 | 19,08,49,230 | 19,60,66,732 |
| Wheat | 3,62,72,080 | 4,98,08,201 | 11,6x,88,389 | 18,59,82,302 |
| Cotton, raw | 14,42,60,933 | 14,75,71,981 | 24,37,61,464 | ${ }^{1} 7,43,46,872$ |
| Seeds | 16,77,92,684 | 14,88,25,711 | 14,51,58,299 | 14,41,08,555 |
| Jute, raw | 11,79,72,723 | 11,12,64,752 | 11,71,81,222 | 11,96,56,462 |
| Cotton yarn and cloth | 10,86,53,008 | 10,00,76,891 | 10,47,23,079 | 11,64,31,908 |

| Coffee | 1,25,02,200 | 1,32,12,628 | 1,36,73,773 | 1,66,09,757 |
| Oils | 69,17,507 | 85,76,793 | 1,03,09,017 | 1,00,30,678 |
| Indigo | 1,85,22,554 | 1,20,56,819 | 1,07,62,026 | $-83,46,073$ |
| Wood and timber | 89,15,416 | 87,51,055 | 1,12,19,810 | 78,41,703 |
| Spices | 74,08,269 | 63,62,103 | 92,80,760 | 69,40,103 |
| Provisions | 60,96,611 | 67,88,510 | 61,45,524 | 65,72,001 |
| Silk, raw | 66,34,209 | 65,48,153 | 63,42,468 | 49,69,975 |

Since the long cycle of lean years, which marked the close of the last century, unbroken agricultural prosperity, which is essential to the well-being
of the exported trade, has been generally experienced, for the distress caused by the partial failure of the last monsoon in Gujerat and parts of the Madras Presidency was of only local importance, and the damage to the spring crops by frost in certain districts of Northern India will influence the trade of the present year. The most notable feature of the year is the extraordinary development of the grain trade, which increased in volume by 32 per cent and in value br $\delta_{5}$ l lakhs, of which wheat accounts for $\sigma_{9} S$ lakhs. The total of "grain and pulse" reached the unprecedented value of 4,111 lakhs, this being 26.7 per cent of the total value of the export trade. The volume of the trade in seeds was also unrivalled, the increase being 9 per cent, but owing to very low prices the value declined. There was also notable progress in the value of exports of coffee, raw lides and skins (principally the latter), raw jute (owing to the rise in price), raw nool, cotton manufactures, jute manufactures, and lac. In contrast to the extraordinary development of the grain trade, stands out the collapse of the raw cotton trade from the abnormal position it attained in 1903 -04, for without any fall in price the exports decreased by $2 S^{\prime} 5$ per cent, equal in value to $69+$ lakhs. Other principal articles showing a considerable fall in value are spices, indigo, raw silk, teak, and dressed skins. Prices were on the whole higher than in $1903 \cdot 04$, and a rise of 59 laklis or 13 percent of the total increase of $4+9$ lakhs was due to this cause. The rise was attributable principally to the higher prices of cotton yarn, raw jute, manufactures of jute, hides, and raw wool, which were partially compensated by lower prices of grain' and pulse, seeds, indigo, and dressed skins.

The value of the trade in each of the four principal classes under which articles are grouped in the accounts was in $R$ :

| Articles of food and drink | 190t-02 | 1902.03 | 1033-4 | $\begin{gathered} 1904.05 \\ 53,05.55,456 \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| Chemicals, drugs, medicines, narcotics, and dyeing and tanning materials | 11 | 10.71,44,675 | 6 | 12,73,92,444 |
| Raw materials and unmanufactured articles | 53,54,01,450 | 52,08,49,462 | 62,67,39,477 | 57,39,65,16 |
| Articles manufactured and partly manufactured | 24,98,37,620 | 35,81,69,367 | 27,64,42,958 | 29,32,16,631 |

Opium and indigo are the principal articles to which variations in the second class are attributable, and the decrease last year was due to the failing trade in the latter. The reduced exports of raw cotion more than account for the fall in the third class. In the other two classes progress has been continuous during the last four years.

## Articles of Food and Drink

Coffee.-More than half the coffee-producing area is situated in Mysore and the remainder in Coorg, Madras, and Travancore. The official statistics indicate a continuous decrease of the area under cultivation since 1898 and great variations in the yield, but the reports from which they are prepared are known to be incomplete and inaccurate, and the indications are refuted by the following statement of the exports which account for practically the whole of the production and show a steady rise during the last five years:
$\left.\begin{array}{cccccccc} & & & & & & & \text { Cwt } \\ 1900-01 & \cdot & \cdot & \cdot & \cdot & \cdot & \cdot & 246,431\end{array}\right)$

The volume of the exports in $1904^{\circ} 05$ is the largest for fifteen years, but owing to the great drop in prices in recent years it is only necessary to go back six years to obtain a higher value. Compared with the exports of 1903.04, the rise in value is $21 \frac{1}{2}$ per cent, and in the average price per cwt 8.3 per cent. But for the large stocks existing prices should have shown a greater rise, for the Brazilian crop of 1903.04 produced only $10,407,000$ against $12,3^{24,000}$ bags in 1902.03 and $15,496,000$ bags in $1901-02$. The crop of $1904-05$ is reported to be 10 million bags or less as the recent heavy yields are reported to have weakened the trees and scanty crops are probable during a few seasons. Nearly 57 per cent of last year's exports was directed to the United Kingdom and a little more than half that quantity to France.

Rice.-The exports during the last five years are stated below in cwt (ooo omitted) :

| ) |  | $\begin{gathered} \text { From } \\ \text { Burma } \end{gathered}$ | From Benga! | From other <br> Provinces | Total | $\underset{R}{\text { Value }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1900.01 |  | 21,394 | 8,106 | 1,566 | 31,066 | 1.3, 14,22,857 |
| 1901-02 | - | 24,190 | 6,277 | 3,275 | 33,742 | 13,84,69,897 |
| 1902-03 |  | 36,792 | 6,623 | 3,618 | 47,033 | 18.78,73,780 |
| 1903-04 |  | 33,346 | 6,936 | 4,159 | 44,44 I | 18,95,42,429 |
| 1904-05 | - | 37,475 | 8,055 | 3,305 | 48,835 | 19,45,85,005 |

Both in regard to quantity and value the trade is the largest known, though the average price for the year was 7 per cent lower than in 1903.04. The bulk of the exports is always from Burma, but as that province is the granary of India from which large supplies are drawn in times of famine or scarcity, the volume of its foreign exports is largely dependent on the state of the Indian crops. The principal rice-growing regions of Burma are immune from drought and more than four-fifths of its crop is exported. The official year cuts into two rice seasons, that of 1903.04 giving a very large crop in Burma, though somewhat short of what was expected, and the estimate of 1904.05 for that province was about 6 per cent less than in the previous year. The coasting exports from Burma amounted to 301,000 tons, mainly directed to Bombay and Madras, this being about 106,000 tons more than in 1903 -04. Except as a constiluent of cargo rice to prevent its heating, unhusked rice or paddy of which the exports were $613,075 \mathrm{cwt}$, value $14^{\circ} 7$ lakhs, goes only to Ceylon. A large portion, however, of the exports to Europe consists of uncleaned rice, and the principal destinations west of Suez of all qualities of rice were the United Kingdom 218,913 tons, value 164 lakhs; Germany 277,297 tons, value 205 lakhs; Austria-Hungary 198,232 tons, value 135 lakhs; and Holland 169,705 tons, value 119 lakhs. Trade with ports in the Levant 44,015 tons, value 33 lakhs, has come into prominence only in the last two years; since exports for orders via Egypt have been adjusted against the countries of final destination. The direct trade with the West Indies is small, but there is a large indirect trade with Cuba, which imports on the average about 75,000 tons of Indian rice, all but a very small fraction thereof being re-exported from the United Kingdom and Germany. The direct trade with Brazil, which is chiefly in the best quality of milled rice, has increased from $34,9: 3$ tons to 51,969 tons, value 41 lakhs, notwithstanding the increase of the import duty and certain surtaxes by 50 per cent from the ist January 1904 for the purpose of protecting and developing the native production. Some abatement in respect of the surtaxes was, however, contemplated and may have been granten.

In the Eastern section of the trade nothing but ordinary fluctuations are noticeable in regard to Arabia, Africa, and Mauritius. There is, however, a
remarkable development in the exports to Japan to the unprecedented total of 463,562 tons, value 352 lakhs, being 19 per cent of the whole quantity exported from India and 53 per cent of the total imports of rice into Japan in 1904, which as in the previous year were exceptionally heavy. The increase in quantity over the exports to Japan in 1903.04, which were far above any other year, is $3^{2}$ per cent, and as the last two rice harvests in that country have been large, the latter indeed being one of unprecedented abundance, 21 per cent above the average, it seems likely that the demand for Indian rice, which was fitful before 1902-03, will become constant. Next to Japan comes Ceylon with $305, \$_{15}$ tons, or 6.5 per cent more than in $1903-04$, value 287 lakhs. The exports to the Straits Settlements are largely for re-distribution and the quantity shows a fall from the previous year of 26 per cent to $\mathbf{2 7 0 , 7 2 5}$ tons, value 207 lakhs. The exports of rice from both Bangkok and Saigon were much larger in 1904 than in 1903, the former increasing by $44^{\circ} 4$ per cent to 845,217 tons and the latter by $45^{\prime} 6$ per cent to 690,506 tons. Bangkok exported chiefly to Hongkong, Singapore, and Europe; and Saigon to Europe, the Philippines, China, Japan, and Java.

IV heat.-The remarkable changes in the wheat trade are set forth in the figures appended giving the exports during the last ten years ( 000 omitted):

|  | 促 | From Bengal cwt | From Bombay cwt | From Sind cwit | Total exports cwt | Total value R |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1895-96 | - . | 1,012 | 2,79S | 6,193 | - 10,003 | 3,9:39 |
| 1896097 | . - | 74 | 1,160 | 676 | 1,91: | 83,64 |
| $1897-98$ | - , | 76 | 378 | 1,939 | 2,393 | 1,34,18 |
| 1898-99 | - . | 3,458 | 6,484 | 9,57 ${ }^{\text {S }}$ | 19,520 | 9,71,97 |
| 1899-1900 | - - | 2,385 | 2,310 | 5,009 | 9,704 | 3,90,95 |
| 1900.01 | - - | 24 | 24 | 2 | 50 | 3,01 |
| 1901-02 | - - | 65 | 83 | 7,174 | 7.323 | 3,25,59 |
| 1902-03 | - - | 1,053 | 391 | 8,848 | $10,29^{2}$ | 4,51,54 |
| 1903.04 | - - | 4,833 | 3,691 | $17.3 \mathrm{~S}_{5}$ | 25,91t | $11,08,90$ |
| 1904.05 | - - | 8,647 | 5,965 | 28.381 | 43,000 | 17,90,61 |

The exports of the first year of this series were from the crop of $1894-95$, which covered $28 \frac{8}{5}$ million acres, and this area was not reached again till $1903-04$, for during the eight years from 1895.96 to $1902-03$ the area was much restricted sinking to $20 \frac{1}{2}$ million acres in $1896-97$ and to 183 million acres in 1899-1900. In 1903-04 there was a sudden increase of 5 million acres and the same level has been maintained in 1904.05 . During the eight years of restricted cultivation there were, however, three years giving a good yield of about 7 million tons, namely, 1897-98, 1898-99, and 1900.01. The year 1902.03 produced $7,971,450$ tons, and this was exceeded by $1,670,000$ tons in 1903.04 which was an abnormally productive year. The fact that a much larger proportion of the crop than ten years ago is now grown in Northern India, where there are large tracts of irrigated land and where heavier crops are reaped from unirrigated land than in the more southern regions, is also accountable for an improving yield. The exports in 1904-05 exceed those of 1903.04 by 854,459 tons and 682 lakhs, an increase of 66 per cent in quantity and $61^{\circ} 4$ per cent in value. The previous record was $1,515,171$ tons in $1891 \cdot 92$, which has now been exceeded by 42 per cent. In that year owing to short crops in Europe and speculation the price of wheat ran up to nearly 425 a quarter and an enormously profitable business was done in Indian wheat, but last year although the wheat production of the United Kingdom was the lowest recorded and the exports from America were the smallest known for thirty years, the average Gazette
price of wheat in 1904 was only $28 s 4 d$ compared with $26 s 9 d$ in 1903 ; for besides the abnormal surplus in India abundant supplies were available from Russia, Argentina, and Australasia. During 1904-05 India exported $1,446,438$ tons or 67 per cent of the total to the United Kingdom, and in 1904 it took the first place among the countries from which British supplies of wheat are drawn, so that it has been written about as the "granary of the Empire." But for the last quarter of a century India has possessed in fayourable years a large surplus of wheat available for export, and except that a larger yield through recourse to better lands will increase the normal surplus, there has been no change in its position. In the future, as in the past, unfavourable and disastrous seasons will recur and will severely restrict the exports either through a direct lack of supplies or through prices rising to a point which will leave no margin of profit to the shippers. In the present season much of the excellent crop has been blighted as it was coming to maturity by the unwonted circumstance of severe frosts, the expected yieldi being thus reduced by about one-6ifth, and although the estimated yield of $7 \frac{1}{2}$ million tons together with existing reserves gives a large surplus, this year's export trade is not likely to reach the level of 1904-05.

Exports of wheat flour were 27 per cent larger than in 1903.04, amounting to $5^{1}, 575$ tons, value $69 \frac{1}{5}$ lakhs. More than four-fifths of the trade is from Bombay and was directed mainly to Arabia, Aden, Mauritius, Ceylon, and East Africa. For the first time considerable exports appear to the United Kingdom, namely, $5^{2,523} \mathbf{c w t}$, value nearly $3 \frac{3}{4}$ lakhs.

Other food-grains. -The favourable harvests of recent years have caused a great expansion in the exports of food-grains other than wheat and rice. The previous record of 1903.04 bas now been exceeded by nearly 57 per cent, the total being 426,772 tons, value $290 \frac{1}{4}$ lakhs. Arranged according to magnitude ${ }_{1}$ pulse with ${ }^{1} 56,346$ tons has increased by $44 \frac{1}{\frac{1}{2}}$ per cent; jawar and bajra with 126,327 tons by 23 per cent; gram with 38,865 tons by 113 per cent; barley with 18,827 tons by 233 per cent; and "other sorts" (which include maize) with 86,407 tons by 131 per cent.

Fruits and vegetables.-The principal item is copra, the exports of which from Madras decreased by 56 per cent, following an increase of 147 per cent in the previous year. The total value including fresh fruit and vegetables exported to Ceylon and the Straits was 31 lakhs (copra $18 \frac{1}{2}$ lakhs), compared with $54 \frac{1}{4}$ lakhs in 1903-04 and 32 lakhs in 1902-03.

Provisions and spices.-Owing to a decrease of 30 per cent in pepper to the value $35 \frac{1}{2}$ lakhs, of 22.6 per cent in ginger to $19 \frac{1}{4}$ lakhs, and of 11 per cent in chillies to $11 \frac{1}{3}$ lakhs, the exports of spices, valued at $69{ }_{5}^{2}$ lakhs, were 25 per cent below the unprecedented exports of 1903-04. Provisions, however, rose in value by 7 per cent to 65 lakhs, the principal items being preserved or salted fish of various kinds, value 23 lakhs, (more than one-third exported as manure), and ghi (clarified butter), value $26 \frac{3}{3}$ lakhs,

Tea.-The exports in the last five years have been :

|  | (000 omitted) | R |
| :---: | :---: | :---: |
| 1900-01 | - 109,305 | 9,55,09,301 |
| 1901-02 | . 179,685 | 8,14,94,893 |
| 1902-03 | - 181,423 | 7,36,16,421 |
| 1903-04 | - 207,160 | 8,55,79,327 |
| 1904-05 | - 211,887 | 8,46,54,867 |

The season of $1904-05$ was a disappointing one to the Indian tea industry, which has again suffered from the burden of over-production, as evidenced by
the accumulation of stocks and a general fall of prices, so that exports larger by 2.3 per cent than in $1903^{-04}$ have given a cash return smaller by $1 \cdot 1$ per cent, the average fall in price thus being 3.4 per cent, equal to $2^{\circ} 6$ pies per th. The quantity of tea sold in Calcutta in 1904-05 was $63{ }_{3}^{4}$ million Hb , and the average price realised for 669,495 chests sold by auction was 5 annas 4 pies, contrasted with 5 annas 10 pies in 1903-04. For $98 S, 000$ packages sold in London at auction from the ist July 1904 to the end of February 1905, the average was 7d, the corresponding averages for the two previous years being $7 \frac{8}{8} d$ and $7 \frac{1}{3} d$ per Hb , respectively. Compared with the outturn of the previous season, the increase in quantity seems moderate, but it is still the largest crop produced and coincides with a record crop of Ceylon tea. It also succeeds a rapid advance in the previous year, as shown by an increase of the exports in that year by $25 \%^{\circ}$ million Ib or 14.2 per cent. The extent to which consumption was arrested by the imposition in April 1904 of the additional duty of $2 d$ per fb on tea imported into the United Kingdom is somewhat uncertain, as there were other causes operating in the same direction; but the unexpectedness of this fresh impost (which has been remitted from the 1st July 1905) on a heavily taxed industry caused a sudden run on cheap teas, and this had the two-fold effect of stimulating the production of common tea and increasing the imports of China tea. It has been asserted, and also denied, that quality has been sacrificed to quantity, and this statement is difficult of proof or disproof. On the one hand going back to the year 1901-02 and comparing it with the season of i9n4-05, it appears that while the area under tea has not changed appreciably the production as represented by the exports (for the statistics of production are not accurate enough for exact comparison) has increased by nearly 18 per cent. Making a further comparison with the earlier year 1900-01, whose very large exports represent endeavours to recoup losses sustained through the fall in prices by pushing production to its utmost limits, the increase in exports has been II per cent, as against an addition to the planted area about 2,000 acres. On the other hand the heavy additions of some years back have been coming into fill bearing and the last two seasons have been favourable to growth, though not to quality. The increase of production has, however, its limits, to whatever causes it may be due, and the rigid abstention from additions must soon strengthen the position of the producers.

The principal destinations to which exports have been declared during the last three years have been, ( l , 000 's omitted):

| United Kingdom |  |  |  | $1902-03$ 152,895 | 1903.04 <br> 170,186 | 190405 |

| Persia . . |  | - |  | 390 | 216 | 363 |
| United States |  |  |  | 3,254 | 2,871 | 3,136 |
| China |  |  |  | 2,672 | 1,528 | 2,237 |
| Ceylon |  |  |  | 1,521 | 2,009 | 1,813 |
| Germany |  |  |  | 170 | 869 | 1,292 |
| y |  |  |  | 592 | 546 | 930 |

Exports to the United Kingdom were less by $2 \frac{1}{2}$ million bb than in 1903-04, and consequently a larger proportion was taken by foreign and colonial markets, namely, 44 million th, compared with 37 million it in 1903-04, and $28 \frac{1}{2}$ million tb-in 1902.03 . The progress made in $1904-05$ in supplying outşide markets
was not so great as in the previous year, but including reeexports from•the United Kingdom the off-take of Indian tea outside the United Kingdom was better. Notwithstanding the absence of demand for Indian green tea, of which only $1 \frac{1}{2}$ million fb in all was exported, the exports to America show good progress, and in view of the disturbed condition of Russia the very small decrease in the exports to that country, which in $1903-04$ included 4.9 million it shipped via Dalny, is a good augury of progress in the future. Direct trade with Persia has increased by a million BD , and the shipments to Turkish ports in the Persian Gulf and Trebizond, part of which is intended for Persia, increased by $1,157,000$ th to nearly $2 \frac{3}{4}$ million fb . The predominant position of Ceylon tea in Australia keeps Indian exports to that country on a low level.

The Indian Markets Expansion Commission concluded its three years' labours on the 31st July 1904 and was then dissolved. During this period only $738,792 \mathrm{fb}$ of tea was disposed of, so that the Indian market gives as yet little promise of development. The sum realised from the tea cess of onefourth of a pie per Bb on the exports of the year was $\mathrm{R}_{2,77,957}$.

Excluding Burma, which produces only pickled tea, the reported area and yield were as follows in the last two years:

The aggregate yield of Assam, Cachar, and Bengal seems; however, to have been understated by about $4 \frac{1}{9}$ million fb in 1903, and to have been exaggerated by $2 \frac{1}{2}$ million D in 1904.

## Metals

Manganese ore stands practically alone in this class, its value representing $71^{\circ} 5$ per cent of the total value of all exported metals and manufactures thereof, other than hardware, the balance being represented by brass, 'copper, and iron manufactures.. The rapid progress of recent years has been arrested, as the quantity exported, 180,945 tons, is very slightly less than in 1903-04, though the value of 24 lakhs is 5 per cent higher. The exports from Bombay amounting to 66.8 per cent of the total are drawn from the workings in the Central Provinces, and the ore contains a higher percentage of metal than that exported from Madras, which is produced near the coast and thus escapes the heavy transit charge of a long journey by rail. Next to Russia, India now appears to be the largest producer of manganese, which is exported to America, the United Kingdom, and the Continent for use in steel-making.

## Chemicals, Drugs, Narcotics, and Dyes

Saltpetre.-Except for small quantities of borax, averaging about 5,000 cwt a year, chemicals are represented by saltpetre. The exports which amounted to $348,74 \mathrm{I}$ cwt, value $36 \frac{1}{4}$ lakhs, were in per cent smaller than, in 1903-04, as the abnormally cold winter interfered with its manufacture. The trade is fluctuating and non-progressive, the variation during the last twenty years ranging between $3^{21,033} \mathrm{cwt}-\mathrm{in} 1893-94$ and $528,452 \mathrm{cwt}$ in 1896-97.

Opium.-The exports and the prices per chest are stated below:

|  |  |  |  |  | Averase price per chast |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Bengal | Bombya <br> chests | Total <br> chests | $\begin{gathered} \text { Value } \\ \mathrm{R} \end{gathered}$ | $\begin{gathered} \text { Beng.al } \\ \dot{R} \end{gathered}$ | Bombay $R$ |
| 1900-01 | 44,994 | 24,714 | 69,708 | 9,45,54,357 | 1,361 | 1,349 |
| 1901-02 | 48,063 | 17,541 | 65,603 | 8,52,29,854 | 1,299 | 1,301 |
| 1902-03 | 4S,154 | 19,371 | 67,531 | 8,01,69,354 | 1,144 | 1,295 |
| 1903-04 | 4S,218 | 25,419 | 73,637 | 10,47,01,638 | 1,460 | 1,349 |
| 1904-05 | 47,855 | 19,006 | 06,861 | 10,62,34,442 | 1,585 | 1,599 |

The Malwa crop was short, and exports from Bombay were 25 per cent smaller than in $1903^{\circ} 0^{4}$, there being also a decrease of 363 chests in the exports from Calcutta. There was thus a total decrease in quantity by 903 per cent, but owing to an advance on the very high prices of the previous year of 8.4 per cent for Bengal and 12.4 per cent for Bombay, the total value rose by 1.4 per cent. The average price of the Calcutta sales was $R_{1,616}$ for the calendar year 1904 and $\mathrm{R}_{1,58} 8$ for the year from April 1904 to March 1905 , the maximum of each period being $\mathrm{R}_{1,765}$ in February and $\mathrm{R}_{1,740}$ in April 1904. Both as to maxima and averages these are the nighest prices realised since 1861. Exports to Hongkong amounted to 37,820 chests, an increase of 588 chests, but the shipment of $14,1 \sigma_{3}$ chests to the Treary Ports and 12,255 chests to the Straits Settlements show decreases of 3,646 chests and 1,879 chests, respectively.

Tobacco.-A large trade in Indian tobacco may be one of the possibilities of the future, but the exports are at present of little importance, and sudden developments noticeable from time to time, as in 1901-02, in exports of unmanufactured leaf to Aden and cigars to South Africa, have been due to temporary causes. Aden, Hongkong, the Straits, and Holland take most of the unmanufactured tobacco. The British import duty is prohibitive to unmanufactured Indian leaf, but next to the Straits the United Kingdom is the principal market for Indian cigars. The figures of the trade during the last three years are:

Indigo. - The course of the export trade in the last ten years is indicated in the subjoined figures (cat):

|  | From Calcutta | From Madras | From other ports | Total | Value $R$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1895-96 | 111,714 | 62,425 | 13,198 | 187,337 | 5,35,45,1 12 |
| 1896.97 | 109,001 | 43,680 | 16,842 | 169,523 | 4,37,07,570 |
| 1897.98 | 71,364 | 48,165 | 14,320 | 133,849 | 3,05,74,019 |
| 1898-99 | 81,779 | 42,760 | 10,648 | 135,187. | 2,97,04,781 |
| 1899-1900 | 59,078 | 39,853 | 12,489 | 111,420 | 2,69,25,107 |
| 1900-01 | 71,637 | 18,940 | 11,914 | 102,491 | 2,13,59,808 |
| 1901-02 | 55,038 | 25.400 | 9,312 | 89,750 | 1,85,22,554 |
| 1902-03 | 29,403 | 32,242 | 3.732 | 65,377 | 1,20,55,8i9 |
| 1903-04 | 29,858 | 24,414 | 6,138 | 60,410 | 1,07,62,026 |
| 1904-05 | 30,029 | 11,901 | 7,322 | 49,252 | 83,46,073 |

These figures present a melancholy record of the decline of an old and important industry. The unremunerative level to which prices have been forced down by the competition of synthetic indigo has reduced the indigo plantations of Bengal to less than half the area they occupied ten years ago, and over the whole of India the reduction in that period is 66 per cent. Planters in Bengal
are strengthening their position by cultivating other crops in addition to indigo, and they can carry on a contest for supremacy with synthetic indigo for many years, but the cultivation of indigo in Madras where the area fell by 49 per cent in 1904 appears to be rapidly approaching extinction. The season of 1904 gave a very poor yield, the deficiency compared with the previous year being estimated in the official reports at 31 per cent in Bengal and 45 per cent for the whole crop. The slight rise in exports from Calcutta is due to large exports in April 1904 from the previous year's crop.

The total exports of 1904.05 are less by 18.4 per cent in quantity and 22.4 per cent in value than the exports of the previous year. The fall in the average price was thus 4 per cent, and in Calcutta the fall was more marked in the better kinds than in the ordinary qualities. Exports to the United Kingdom maintained the level of the previous year, and there was a better demand from the Continent, especially from Russia and France. The largest exports were as usual to Egypt (mainly cheap dry leaf indigo from Madras), but the quantity was $25^{\circ}$ i per cent less than in 19c3-04. Direct exports to Persia show a slight improvement, and there was a rise of 3.5 per cent in exports to Turkish ports in the Persian Gulf but a decline of 39 per cent to the Levant, and shipments to the United States were also smaller by 49 per cent. Exports to Japan, which for several years had been one of the chief markets for Indian indigo, almost ceased, only 168 cwt , value R27,700, mostly Madras indigo, being registered. The differential taxation which took effect from the 1st April 1903 and imposed an extra tax equal to $1 \cdot 55$ pence per lb on Indian indigo, which both Java plant indigo and German synthetic indigo escaped, placed an insupportable burden on the trade, but now that Indian indigo has been placed on a most favoured-nation basis by the Convention with Japan, which came into force on the 15 th March 1905, there may be some revival of the trade. German synthetic indigo has, however, now acquired such a dominant position, and its higher percentage of colouring matter still retains for it such an advantage by reason of the duty being charged by weight, that India will find it difficult to recover lost ground.

Other dyeing and tanning materials.-Myrabolams are by far the most important material and the exports were above the average, but of both cutch and turmeric they were very much restricted. The figures of the trade are:

The value of all articles in this class, $100 \frac{1}{3}$ lakhs, is 2.7 per cent less than the exceptional trade of the previous year. The decrease was principally in vegetable oils, and owing to short supplies of copra in Madras the exports of cocoanut oil, valued at 48.8 lakhs in 1903-04, a sum far above all previous records, fell to $29 \frac{1}{5}$ lakhs, the level of 1902-03. The exports of castor oil, valued at 16.4 lakhs, fell by 21 per cent, also owing to a poor crop, and the price of all vegetable oil, other than cocoanut oil, decreased noticeably, the fall in the case of jinjili oil being 26 per cent. Mineral oil from Burma has made remarkable progress, the exports of nearly $4 \frac{1}{\frac{1}{4}}$ million gallons, value $20 \frac{2}{3}$ lakhs, being four and-a-half times greater than in 1903-04. Most of it was consigned
to China and the Straits Settlements where, as in India, it has to mect the strenuous competition of the amalgamated companies interested in the Eastern oil trade. Exports of paraffin wax, which is classed as an oil, increased in value by 37 per cent to $11 \frac{1}{3}$ lakhs. Another product of petroleum, not included in this class, is candles, in which there is a developing trade. The quantity exported in 1904.05 was $3,353,000 \mathrm{tb}$, value $9 \frac{1}{3}$ lakhs, the principal markets being China, the Straits Settlements, and Australia.

## Ralw Materials

Coal.-Notwithstanding an occasional set-back, exports of Indian coal are advancing, and $594,83^{2}$ tons, value $46 \frac{1}{3}$ lakhs, exported in 1904.05, exceed the previous year's trade by 20.6 per cent in quantity and 22 per cent in value. The volume of the exports is greater than in any previous year, but the value is much below that in either of the years $1900-01$ and 1901-02, as during the last three years prices have been much depressed. The principal markets are Ceylon, taking 374,754 tons, or 117,503 tons more than in 1903-04, and the .Straits Settlements, taking 143,729 tons, a slight improvement on the previous year. Exports to Sumatra also increased remarkably, from 13,975 tons to 30,802 tons, but the trade with Aden fell from 43,410 tons to 14,598 tons and to East Africa from 28,444 tons to 20,577 tons. The foreign exports, however, bear a small relation to the production which amounted in 1904 to $8,212,000$ tons, an advance of nearly $\frac{3}{4}$ of a million tons on the production of 1903. All but 4,700 tons of the exports were from Calcutta, and that port shipped $1,785,916$ tons by coasting vessels to other Indian ports, 46 per cent of which was directed to Bombay, and also 770,589 tons of bunker coal for use on steamers engaged in the foreign and coasting trade.

Cotton.-The scarcity of cotton in 1903 -04, due to a short crop in 'America, and the extraordinary height to which prices were forced by speculation, caused a demand for Indian cotton which raised the volume of exports in that year above all precedent. The reaction set in with the appearance of an American crop of unprecedented magnitude, which allayed the fears of insufficiency in the world's supply, and the low range of prices which was then established, brought about a striking recovery in the spinning business. The fall in prices did not, however, occur till the second half of the year, so that the average value for the twelve months is the same as in 1903-04. The decrease in the total value of the trade of $28 \frac{1}{2}$ per cent in 1904005 is thus attributable to the smaller volume of the exports. According to the official estimates, which hitherto have not accounted for the whole of the crop, the yield in 1903.04 was nearly 6 per cent less than the large crop preceding it, but the crop of 1904.05 showed an improvement of in per cent, though the outturn was poor in both Bombay and Madras, for elsewhere the season was favourable. During the last three years the area under cotton in the reporting tracts has increased from $14 \frac{1}{2}$ mlllion to over 19 million acres. A view of the trade is given below :

The figures appended state the destination of sotton during the same period (cwt, 000 omitted):

|  |  | 1900-01 | 1901-02 | 1902-03 | 1903.04 | 1904-05 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Japan | - . | 634 | 2,526 | 1,722 | 1,680 | 1,951 |
| Germany |  | 656 | 754 | 1,122 | 1,568 | 1,025 |
| Belgium | - . | 599 | 413 | 779 | 1,089 | 668 |
| Italy | . $\quad$ | 42 I | 520 | 647 | 1,001 | 627 |
| Austria-Hungary |  | 381 | 373 | 569 | 705 | $45^{6}$ |
| United Kingdom | - | 381 | 166 | 372 | 652 | 347 |
| France | - | 279 | 267 | 419 | 56Q | 235 |
| China | - | 109 | 559 | 196 | 165 | $17!$ |
| Spain | - | 57 | 67 | III | 265 | 127 |

The shrinking of the European demand on the appearance of a large supply of cheap American fotton emphasises the dominant position of Japan as a consumer of Indian cotton. Active measures are being taken throughout the country to improve the growths of indigenous cotton, but the effects cannot be apparent for some years to come.

Hides and skins.-The trade in hides varies with the supply, for the surplus after providing for local needs is readily taken for export. Estimated by weight the export of raw hides was greater by $5 \%$ per cent than in $1903-04$, and the value. increased by $17^{11}$ per cent. The average price thus shows a rise of 114 per cent, and according to the declared values prices have risen steadily during the last four years. Skins on the other hand show a fall in price of $13^{\circ} 1$ per cent, which may be partly due to absence of selection, for they were unusually light, and estimated by weight the exports were 38.4 per cent greater than in the previous year and 36 per cent above the previous record in 1901-02. Altogether the enormous quantity of $31 \frac{2}{3}$ million hides and skins, to the value of $705^{\frac{1}{3}}$ lakhs, was exported. The value of the raw hides exported from Calcutta was $84^{\circ} 6$ per cent of the total, and they were destined mainly for the Continent, the share of Germany being $144 \frac{8}{5}$ lakhs, of Italy 66 lakhs, of AustriaHungary $51 \frac{2}{3}$ lakhs, and of Spain 22 $\frac{3}{4}$ lakhs. The United Kingdom was credited with 23 lakhs and the United States with $40 \frac{4}{5}$ lakhs. Calcutta also claims $75^{\circ} 6$ per cenc of the value of the exports of dried and pickled skins, and 76.3 per cent of the total was consigned to the United States from which there is an insatiable demand for the chrome tanning industry. There is also a rising demand from France which has developed in the last two years, that country being credited with $29 \frac{1}{2}$ lakhs and the United Kingdom with $25 \frac{1}{4}$ lakhs. The unsatisfactory feature of the development of the exports of raw skins is the contraction of the trade in dressed skins which has accompanied it. The export figures are :

fute.-The remarkable feature of the year is the fluctuations in the price of raw jute. Opening with $\mathrm{R}_{3} \frac{3}{4}$ per bale of ordinary jute, the price came down to $\mathrm{R}_{3} 0$ in September $1_{904}$ after the issue of the Government forecast, which anticipated a yield of $7^{2} \mathrm{~s}$ million bales; an amount equal to the estimated outturn of the previous season's crop, and seemingly sufficient for the world's requirements. Very heavy purchases were made by the local mills, and
helped by a very strong foreign demand prices soon began to rise. The cry was then raised that this estimated yield would not be realised and in December prices jumped from $R_{33}$ to $R_{3} S_{2}^{2}$. By January the price was $R_{44}$, by February R47, and the closing quotation was R46. The rise from the lorest to the highest price of the year thus exceeds 50 per cent. The season ends on the 3 Ist July, and the estimated imports during the ten months ended the 3 Ist May into Calcutta and Chittagong amount to $6,789,200$ bales, to which should be added the usual allowance of half a million bales for country consumption. The arrivals of the two remaining months should justify the forecast, and the shortage was thus either created by speculation or arose from the sudden growth of the demand. The takings of the local mills during the first ten months of this season amounted to 48 per cent of the arrivals at the sea ports, and with the large extensions that are taking place the Indian mills will soon require quite half the crop.

The rise in prices affected the values of the last four months, making the tota! value greater by $2^{\circ} 1$ per cent and the average value greater by 8.2 per cent than in $1903-04$, though the quantity was 6.1 per cent smaller. Shipments to the United Kingdom account for $40^{\circ} 1$ per cent of the total quantity, but nearly half of this is re-exported. Germany comes next with $20^{\circ} 1$ per cent, the United States with 15 per cent, France with 10 per cent, Austria-Hungary with 6.2 per cent, Italy with 38 per cent, and Spain with is per cent. Exports from Madras doubled, but still orly amount to $1^{\circ} 4$ per cent of the total. The figures of the trade are appended:

|  | $\begin{gathered} \mathrm{C}_{\mathrm{wt}} \\ \text { (000 omitted) } \end{gathered}$ | Value R |  | $\begin{gathered} \text { Cwt } \\ (0000 \mathrm{mitt<d}) \end{gathered}$ | Value $R$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1899-1900 | 9.725 | 8,07,16,465 | 1902-03 | 13,036 | 11,12,64,752 |
| 1900-01 | 12,414 | 10,86,77,562 | 1903.04 | 13,721 | 11,75,81,222 |
| 1901-02 | 14,755 | 11,79,72,723 | 1904-05 | 12,875 | 1:,96, $\mathbf{j}_{6,462}$ |

Seeds-The exports of seeds, of which all but an insignificant fraction are oil-seeds, surpass by 8.9 per cent the volume of the exports of 1903.04 , which were previously the largest known. A much larger proportion is exported of linseed than of any of the other principal oilseeds, the amount retained for local consumption according to the official estimates of the yield which cannot, however, be implicitly relied on, being on the average only 6 per cent of the total crop. The linseed crop harvested in the spring of 1904 was very large and the exports amounted to 559,100 tons, this being $2 y^{\circ} 8$ per cent greater than the exports of 1903.04 and 2.9 per cent above the previous record in 1891.92 . There was also a large crop of rapeseed, which did particularly well in the Panjab, and the exports increased by 18.7 per cent. The enormous addition to the world's production of linseed for which the Argentine Republic is principally responsible, for the official statistics put the exports of linseed from that country at 888,872 tons in 1904 against 587,750 tons in 1903 and 347,548 tons in 1902, had brought down the local price in April 1904 to a lower level than it had touched for more than forty, years. Sesamum was also similarly affected, and the price of rapeseed and popyseed were lower than they had been for eighteen years. Though there was a temporary improvement in the middle of the year, the general level for linseed was 19.6 per cent and for rapeseed 10.8 per cent lower than the averages of 1903 -04, which were 25.8 per cent and 7.3 per cent, respectively, below the averages of the previous year. The serious damage done to the oil-seeds crops by the severe frosts in the opening months of this year have, however, caused a brisk recovery of prices,
which by June 1905 had been restored to the level of January 1903. Exports of sesamum which were taken partly from the good crop of 1903.04 and partly from the very poor crop of 1904.05 decreased by 28.3 per cent, but the average price was the same as in the previous year, which was 11.2 per cent lower than in 1902-03.

Of the less important oil-seeds poppyseed shows a decrease in value of about 10 per cent, entirely owing to the low range of prices, for the quantity is the largest ever exported. The price of castor-seed has risen and this has balanced a slight decline in quantity. Cotton-seed exports decreased by 5.5 per cent in quantity and 78 per cent in value. This trade has been in existence for only a few years and low-priced linseed oil has recently been a competitor of cotton seed oil. Exports of earthnuts were smaller by about 13 per cent. Prices in Europe were unattractive, but the crop in Madras has also suffered from disease and the outturn has been poor. A large share of the exports of earthnuls is from the French port of Pondicherry and this escapes registration in the trade of British India. The exports from Pondicherry in 1903.04 amounted to $1,276,706 \mathrm{cwt}$, value $64^{\circ} 4$ lakhs, against $1,068,477 \mathrm{cwt}$, value $72^{\circ} 7$ lakhs, in 1902.03 . There are also small exports of oil-seeds from the Portuguese port of Mormugao.

The principal destinations of linseed are the United Kingdom, Germany, and France; of rapeseed, Germany, Belgium, and France; of sesamum and poppyseed, France and Belgium ; of earthnuts, France; and of castor, the United: Kingdom. The totals of the trade and the quantities of each of the principal descriptions are stated below:

Quantity of each seed (cwt, 000 omitted)

Silk. - The trade in raw silk has been unprogressive for many years, and ir 1904-05 the exports of reeled mulberry silk show a set back of 19 per cent, both in quantity and value, the sum of $42 \frac{1}{2}$ lakhs, representing the latter, being the lowest registered for seven years. The season was unfavourable and the exports from Rengal were valued at less than 40 lakhs, a fall of .22 .8 per cent. The exports from Bombay which have developed in the last four years are supplied from the silk filatures in Kashmir and their value fell from i2 to $10 \frac{3}{4}$ lakhs. The exports of reeled silk were distributed to the United Kingdom, $22 \frac{1}{3}$ lakhs; to France, $18 \frac{3}{3}$ lakhs; and to the United States, slightly less than one lakh. Of waste silk and cocoons the value fell from it to. $7 \frac{1}{5}$ lakhs, nearly half the waste, value $6 \frac{2}{5}$ lakhs, being of wild silk, as were nearly all the cocoons.

Tcak.-Five-sixths of the wood and timber exported is teak, the only oth kind of any importance being sandal wood, value 95 lakhs. Teak export decreased by $3^{\circ} 6^{\circ}$ per cent to 47,000 cubic tons, value 60 lakhs, this being th smallest trade of any year since $1893=94$. This great falling off in the export is accompanied by an expansion of more than a third in the imports of teak fron Siam and Java, while exports from Burma to Indian ports decreased in quantity by S'i per cent, so that in Indiàn as well as foreign markets Burma teak was displaced by teak grown in Siam and Java. It may be noted, however, that practically the whole of the teak trade in the north of Siam is now controlled by British Companies.

Wool.-Short supplies of rool from the Colonies and the River Plate have caused a great advance in the price. This stimulated exports of Indian wool, which approached $3 S_{5}^{3}$ million 10 , a quantity 16 per cent above the exports of $1903-04$ which were previously the highest recorded. The average price was ${ }^{21}$ per cent higher so that the total value increased by 37 per cent to $\$ 99$ lakhs. For the first time there were considerable exports to countries other than the United Kingdom. The latter's share was 171 lakhs; of the United States $8 \frac{1}{4}$ lakhs; and of Japan $8 \frac{1}{5}$ lakhs. Re-exports of foreign wool are shown to be only $5 \frac{2}{6}$ million fb , a little less than in the previous year, but it is believed that part of what is classed as Indian wool comes from countries beyond the frontier.

The other principal articles classed as raw material show the following values in $R$ :

|  | 150-03 | $1203-24$ | 120005 |
| :---: | :---: | :---: | :---: |
| Animal bones | 54,97,967 | 41,57,119 | 37,51,4So |
| Oil-cake | 34,22,616 | 39,18,460 | 43,08,621 |
| Rice-bran | 44,40,132 | 42,00,595 | 44,00,086 |
| Hemp | +,347,247 | $4^{8,53,8,80}$ | 44,81,304 |
| Bristles and fibre | 15,79,002 | 20,26,331 | 18,39,854 |
| Horns | 17,05,257 | 12,05,798 | 15.72,375 |
| Nica | 13,13,909 | 12,9 | 14,68,9 ${ }^{\text {c }}$ |

Exports of animal bones have decreased very much in the last two years, and so small a trade has not been recorded for eleven years. Oil-cake, though classed with rice-bran as fodder, is chiefly exported as a manure. The increase in the value of mica which amounts to $13 \frac{1}{\frac{1}{2}}$ per cent is entirely due to improvement in quality or price for the quantity diminished by 9 per cent. On the other hand the average prices fell of oil-cake by $6 \frac{1}{\frac{1}{3}}$ per cent, of bristles by 9 per cent, and of horns by $13 \frac{1}{2}$ per cent. Two articles not mencioned above, of which the prices advanced remarkably, are caoutchouc, increase 27 per cent, and stick lac, increase $39 \frac{1}{2}$ per cent. The former which also increased in quantity by 136 per cent reached a value of $9_{10}^{1}$ lakhs, and the exports of the latter being 75 per cent larger attained a value of $9 \frac{2}{5}$ lakhs.

## Articles manupactured and partly manufactured

The relative proportions of each principal class of manufactures in the last five years are shown in the figures appended ( $R$ ):

|  | 1900-01 | $1901-02$ | 1903-03 | 190308 | 190405 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Cotton yarn and groods | - 5,70,29,566 | 10,86,53,008 | 10,00,76,891 | 10,47,23,079 | $11,64,31,903$ |
| Jute goods | 7,86,46,012 | 8,71,14,174 | 9,01,98,987 | 9,46,91,969 | 9,93,98,676 |
| Tanned bides and skins | - 4,49,41,853 | 2,65,40,451 | 2,89,81,166 | 3,09,88,759 | 2,55,17,173 |
| Lac | - 1,04,97,976 | 95,45,409 | 1,80,75,444 | 2,67,99.705 | $2,51,17173$ $2,93,23.17$ |
| Coir Woollens | - 40,17,414 | 37,73,520 | 45,76,348 | 47,90, 10 | $\begin{array}{r} 2,95,23,017 \\ 51,65,698 \end{array}$ |

| Silks. | $20,19,014$ $12,54,447$ | $20,99,657$ $10,54,694$ | 26,44,959 | 21,99,556 | 18,78,706 |
| . ${ }^{\text {. }}$. | 12,54,447 | 10,54,69+ | 9848,85 | 8,32,669 | 7,30,602 |

In cotton and jute goods, lac, and coir there has been an improvement, but in the other four classes the trade has declined. There is, however, an increase in the value of the whole group of 6 per cent compared with $1903^{-04}$. With the exception of textile fabrics, the manufacturing processes are not carried to an advanced stage, and the classification is conventional rather than logical, for while shellac has undergone only slight manipulation, and the lightly tanned hides and skins a preliminary stage of manufacture, thére will be found instances of materials which have been treated by special preparatory processes, or have been completely manufactured, such as milled rice, wheat flours, coffee, and tea under Articles of Food and Drink, machinery and other manufactures under Metals, saltpetre, opium, tobacco, and indigo under Chemicals, Narcotics, and Dyes, vegetable and mineral oils under Oils. The information derived from the present classification that the exports of articles wholly or partially manufactured represent 19 per cent of the total value of all exported merchandise does not therefore give quite a true impression.

Cotton manufactures-The figures of the export trade in yarn and piece goods are :

|  | Yarn |  | Piece goods |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $\overbrace{(000 \text { omitted })}$ | R | $\stackrel{\widetilde{\text { Yards }}}{\text { (ooo omitted) }}$ | R. |
| 1900-01 | - . $118,03 \mathrm{~F}$ | 4,17,05,891 | 69,342 | 1,43.32,297 |
| 1901-02 | - 272,468 | 9,31,66,944 | 72,625 | 1,42.54,982 |
| 1902.03 | - 248,539 | 8,54,00,344 | 69,535 | 1,32,75,431 |
| 1903-04 | - 252,474 | 8,84,15,43I | 75,815 | 1,48,30,434 |
| 1904-05 | - 247,855 | 9,8I, 56, 814 | 87,456 | 1,65,14,45 |

The value of the exports of yarn is in per cent greater than in 1903-04, but this is entirely due to the rise in price, for the quantity was 1.8 per cent smaller. The conditions were exactly the opposite of those prevailing in the previous year, and the circumstances of the spinning industry have been completely revolutionised. In 1903.04, although the exports were unusually large, the activity was in. the first eight months, and during the last four months the trade was much restricted, for the extravagant price of the raw material had destroyed the margin of the profit and short time had to be resorted to. But by the close of the year $1904-05$ the fall in the price of raw cotton caused by the abundance of the American supply and the increased off-take of the principal markets, resulting from a period of restricted consumption, had launched the industry on the full tide of prosperity, so that every spindle is now employed to its full capacity and forward sales have been made for many months ahead at remunerative rates. The price of yarn has not fallen in the same proportion as the price of raw cotton, and the slow change in the price of the former has brought to the manufacturers compensation for the losses incurred during the trying period of high priced cotton. Exports to China account for $92 \frac{1}{3}$ per cent of the total, the trade with that country being very active during the last quarter of the year. Next to China came the Straits Settlements with $6,869,000 \mathrm{Hb}$, representing 2.8 per cent of the total, but a portion of this appears to be transit trade to places beyond. The trade with the Levant and Egypt is the creation of the last four years. The- exports to the former amounted to $2,112,000 \mathrm{Hb}$ and to the latter to $1,524,012 \mathrm{H}$, while consignments to the European ports of Turkey, also quite a new trade and probably destined for the Levant, amounted to $614,820 \mathrm{Hb}$.

Exports of grey goods amounted to $52,869,093$ yards, value $71^{1} 3$ lakhs, an increase of $25^{\circ} 7$ per cent in quantity and 32.7 per cent in value, while in
coloured goods there was a decrease of nearly I per cent in value to 93 lakhs, though the quantity, $34,460,075$ yards, was 2.6 per cent larger. The weaving mills have enjoyed greater prosperity than the spinning mills, as prices advanced to remunerative levels when cotton values rose, and the strength of the demand has maintained these prices notwithstanding the return of cotton prices to normal conditions. Cloth exports therefore were well maintained and business improved during the second half of the year. The most noticeable development is in the exports to China of grey goods wbich amounted to $10 \frac{1}{3}$ million yards, value $15 \frac{2}{3}$ lakhs, as against little more than one million yards in $1903-04$, but this revival seems but a temporary effect of the war and the exceptional conditions which affected the cotton industry of the world. The ordinary markets for Indian cloth are East Africa, Aden, and ports in the Red Sea including Erythrea (Abyssinia), the Persian Gulf, Ceylon, and the Straits Settlements. About two-thirds of the dyed and printed cloth is exported from Madras, the principal destinations being the Straits, Ceylon, and the Philippines. The value of handkerchiefs and shawls in the piece increased by $58 \frac{1}{2}$ per cent to $12 \frac{1}{4}$ lakhs, the exports being almost entirely from Madras to the United Kingdom.

The production of yarn and cloth in the Indian mills has been ( $\mathrm{B}, 000$ omitted) :

There was a decrease of 34.440 spindles in the Bengal mills and of 2,344 spindles in the Madras mills but there were additions of 26,718 spindles in Bombay and 16,000 spindles in Central India, which with smaller increases in the other provinces make the net addition in $1904^{-05}$ for all India ${ }^{1} 7,124$ spindles. The new loons erected numbered 2,019 , of which Bombay absorbed 1,679 .

Fute manufactures.-The yarn spun from raw jute in the Indian mills is woven into gunny cloth, of which hessians are the finest kinds, the exports consisting in fairly equal proportion of cloth and bags manufactured therefrom. The dimensions and value of the export trade are ( 000 omitted) :

The year was a profitable one for the Indian mills in spite of the extra. ordinary rise in the price of the raw material, for large stocks were laid in at prices giving a favourable average and the briskness of trade maintained a manufacturing margin. The demand for heavy goods exceeded the supply and raised prices to a high level, though hessians remained dull. The increase in the average export price of bags for the year's trade is 6.3 per cent but for cloth it is only $i .4$ per cent. A far larger proportion of the bags manufactured is required for home use, and as pachings for the immense exports of grain, seed, and other produce; than is exported, while most of the cloth is manufac-

[^5]tured for export, so that the exports of bags which were surpassed in value in $1903-04$ by the exports of cloth have fallen further behind in $1904-05$. The principal destinations for bags are Australasia, value $93 \frac{1}{\frac{1}{3}}$ lakhs, a decrease of $13^{8} 8$ per cent on the shipments of the previous year; the United Kingdom, value $54 \frac{3}{4}$ lakhs, this being, as in the case of exports to Hamburg, value $7 \frac{3}{4}$ lakhs, mostly for redistribution and principally to North and South America; Chile, value $47 \frac{1}{3}$ lakhs, an adyance of 66 per cent; China, value 44 lakhs; the Straits Settlements, value 44 lakhs, (largely for redistribution); Egypt, $41 \frac{1}{4}$ lakhs, and numerous other countries in every part of the world.

The distribution of the cloth is more concentrated, for the United States took 352 million yards, value 302 lakhs, or 61 per cent of the total quantity, while they took bags to the value of 16 lakhs only. To the Argentine Republic and Uruguay also 162 million yards of cloth, value 148 lakhs, or 28 per cent of the total, were exported, but the value of bags was only 2 lakhs. Exports to the United Kingdom, mainly for re-export, were valued at $19 \frac{3}{4}$ lakhs, to China at .16 lakhs, and to Australasia at $15 \frac{3}{2}$ lakhs. The importance of the trade has developed the occasional sailings to South America into a regular service.

Extensions are proceeding rapidly inthe Bengal mills. A trade estimate gives the number of looms at work, or in course of erection, as 19,901 on the 1st January 1904 and 21,318 on the 1 st January 1905, while a further addition of 1,250 is said to be contemplated. The official figures show, however, that only 19,816 looms were at work on the 3ist March 1905 and 18,228 on the corresponding date of the previous year, while the number of spindles had increased during the same period from 372,836 to 405,542 , and of person employed in the mills from 122,724 to 131,886 . These extensions arise from the natural desire to utilise to the full the advantages of location and environment which. have carried the jute industry of Bengal on a tide of prosperity, but the accentuated competition is likely to reduce the high rate of profit unless extra supplies can be obtained of the raw material. From the forecast of the jute crop issued in September 1904 it would seem that there was an increase of 28.7 per cent on the reported area of the previous year, which had been shown as almost stationary for a long period, but for the most part the apparent increase represents corrections of imperfect estimates in the past and not actual additions to the planted area. The recently issued preliminary forecast for 1905 puts the acreage at $3,161,400$ acres or in per cent above the estimated area sown in 1904.

An idea of the value of the goods produced in the Bengal mills can be obtained from the registered exports of jute manufactures by sea, by river, and by rail from the small area in which all these mills are situated. The exports during 1904-05 were valued at 1,432 lakhs as against 1,279 lakhs in 1903-04, a rise of nearly 12 per cent.

Hides and skins, tanned.-Though the tanning of hides and skins is an extensiye industry throughout India, the export trade is supplied almost entirely by Madras and Bombay, the former in 1904-05 having furnished 91 per cent of the hides and 73 per cent of the skins and Bombay all but an insignificant fraction of the remainder. The exports during the last five years are :

The exports fluctuate and were abnormally high in $1900 \cdot 0$ owing to the great mortality of stock caused by drought. The demand for hides was good in $1904-05$ and prices advanced nearly 14 per cent, the increase in quantity being 20 per cent and in value 34 per cent. The growing demand for export in the raw state has injuriously affected the trade in tanned skins, of which the exports declined by it per cent in quantity and ist per cent in value, the lower price being partly an indication of poor quality. Skins to the value of $273^{2}$ lakhs were consigned to the United States, but the United Kingdom is the chief market for both tanned skins and hides, taking over So per cent of the former and go per cent of the latter, while most of the raw hides go to the Continent, and of the raw skins to the United States, this change of destinations being explained by the fact that the countries which import the raw products admit them free, but tax the manufactured article.

Lac.-Speculation is characteristic of the trade in lac, and this was a specially marked feature of last year's trade, so that prices have ruled above the abnormally high level of the previous year. Stick and seed lac of which the. exports were valued at $95_{5}^{2}$ lakhs is classed separately in the trade accounts as raw material. Of the other two principal varieties, button lac decreased in quantity from 50,500 curt to $34,276 \mathrm{cwt}$, a fall of 32 per cent, while shellac shows an increase from ${ }^{1} 78,497 \mathrm{crit}$ to $193,305 \mathrm{cwt}$, a rise of 8.3 per cent. The total rise in the average price of these two is 10.3 per cent, the highest price of the year for shellac being R122 per maund in April 1904 and the lowest R 59 per maund in February 1905. The total quantity is only 258 cut smaller, but the value of $298 \frac{1}{4}$ lakhs exceeds that of 1903.04 by 11.3 per cent and of $1902-03$, the next highest year, by 65 per cent. Exports to the United Kingdom were valued at $135 \frac{1}{3}$ lakhs, to the United States at $107 \frac{1}{5}$ lakhs, and to Germany at 25 lakhs.

Coir.-Exports of matting and other manufactures of coir are progressive, and during $1904-05$ increased in value by 7.8 per cent. Over 98 per cent of the trade was from Madras, and Germany seems to take the largest share, for the direct exports to that country were valued at $16 \frac{1}{3}$ lakhs, while it should probably also have been credited with part of the value of $4 \frac{3}{4}$ lakhs to Belgium and $3 \frac{1}{7}$ lakhs to Holland. Next come the United Kingdom with ${ }^{1} 7 \frac{3}{4}$ lakhs, France with $4 \frac{9}{5}$ lakhs, and the United States with 2 lakhs.

Woollen manufactures. - The trade has developed slowly, and the marked improvement in $1903-04$ has been followed by a set-back of over 17 per cent in 1904-05. Piece goods and other miscellaneous manufactures have increased in value from $1 \frac{2}{3}$ lakhs in $1903^{-04}$ to $3 \frac{2}{3}$ lakhs last year, but carpets and rugs, which are the principal item, have diminished in value from 26 lakhs to a little under 19 lakhs, a fall of 27 per cent and the lowest value of the last eight years. The value of the carpets sent to the United Kingdom was about $13 \frac{1}{3}$ lakhs and to the United States 4 lakhs.

Apfarel.-Boots and shoes are distinguished from other forms of apparel, their value being $4 \frac{2}{3}$ lakhs out of a total of $18 \frac{3}{4}$ lakhs. The trade was stimulated by the South African war and reached its highest in 1902.03 , since when exports to South Africa have steadily declined. The decrease compared with 1903-04 is 14.6 per cent.

Silk manufactures.-The exports have steadily diminished during the last five years, the decrease compared with 1903.04 being 12 per cent, and what was once a trade of some importance is rapidly approaching insignificance. The exports are chiefly of tissues woven in Bengal from indigenous silks, for the

Bombay mills employ imported silk and weave principally for the home market.

General distribution of the export trade. -The value of the exports of Indian produce and manufactures in the last five years was distributed in the ratios stated below among the principal countries with which the trade is carried on :

|  |  |  | 1900-01 | 1901-02 | 190203 | 19003-0,4 | 1901-05. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| United Kingdom | - | - | $30^{\prime 1}$ | $25^{1} 1$ | 25.2 | 27.1 | 27.5 |
| China - | - | - | $11 \cdot 3$ | 14.5 | 12.6 | 119 | 12.6 |
| Germany - | - | - | $8 \cdot 8$ | 8.4 | 8 | 9.9 | 9.2 |
| United States | . | - | 6.9 | 6.9 | 6.7 | 6 | $6 \cdot 3$ |
| Japan $\cdot$. | - | - | 2 | 57 | $4 \cdot 6$ | 5.6 | $6 \cdot 3$ |
| France | - | - | $5 \cdot 7$ | $7 \cdot 3$ | $7 \cdot 2$ | $6 \cdot 6$ | $6 \cdot 2$ |
| Belgium . . | - | - | 3.4 | 3.9 | $3 \cdot 9$ | $5 \cdot 1$ | $5 \cdot 4$ |
| Straits Settlement3 | - | . | 6.6 | $5 \cdot 2$ | 6 | $4 \cdot 8$ | $4 \cdot 1$ |
| Ceylon - | - | - | $4 \cdot 6$ | $3 \cdot 7$ | 3.5 | 3 | 3.2 |
| Austria-Hungary | - | - | 2.6 | 2 | 2.5 | $3 \cdot 2$ | 3 |
| Italy | - | - | $2 \cdot 9$ | 2.4 | $2 \cdot 7$ | 3.3 | $2 \cdot 7$ |
| Egypt | - | - | 43 | 4.4 | $6 \cdot 1$ | '9 | $\cdot 8$ |

From 1903-04 trade with Egypt is shown in its true proportions, as from that year the large shipments of produce, principally rice and wheat, which were consigned to Port Said to await orders for delivery, have been credited to the countries of final destination, instead of to Egypt, on information supplied by the exporters. The distribution of the export trade with European countries is therefore now recorded with some exactness and with far greater accuracy than the origin is recorded of imports. There is, however, still no provision for recording exports to countries which possess no sea-board, as Switzerland, and although the exporter is required to declare the final destination of the goods, it has been found that, through ignorance or misapprehension, the place declared by the exporter has been sometimes an intermediate port of transhipment. In the Western trade an erroneous declara_ tion happens most frequently in the case of shipments to the Free Ports and in the Eastern trade in shipments to Singapore and Hongkong. Attention is now being directed to the removal, as far as possible, of these defects.

## Customs Revenue

No fiscal legislation affecting the customs revenue was undertaken during the year. The additional import duty on bounty fed sugar imposed under section 8-A of the Indian Tariff Act remained in force in respect of sugar produced in or imported from Denmark, Chile, and the Argentine Republic, and the special duties to countervail bounties on sugar created by private trade combination, which had been imposed under section 8-B of the same Act, also remained in force in respect of sugar from Denmark, the Argentine Republic, and Russia. The rules for the identification of sugar chargeable with an additional or special duty were consolidated and amended by a notification issued in August 1904, and the forms were further amended by notification in March 1905. In the same month the cancellation was notified of the notifications of December 1903, requiring sugar produced before the 31st August 1903 in countries that had adhered to the Brussels Convention, which remained liable to additional duties, to be distinguished from sugar produced after that date, which could not be charged with these duties, so that the only certificates now required of importers are those prescribed, in the revised rules published in August 1904.

Exemptions from import duty were notified in respect of trade catalogues: and circulars imported by packet, book or parcel post, and also of certain dairy appliances, which being constructed so as to be workable by manual or animal power are not exempt as machinery. The tariff valuations for assessment to duty were revised in December 1904, and a new schedule of valuations was issued having effect from the ist January 1905.

The gross revenue from imports, salt excluded, for the salt duty ( ${ }_{3} 35$ lakhs in $1904-05$ ) is not credited as a customs receipt, was $R_{4}, 88,35,594$, and the net revenue after deduction of refunds and drawbacks was $\mathrm{R}_{4}, 30,35,749$, the gross revenue being better by $43 \frac{1}{\frac{1}{3}}$ lakhs and the net revenue by 48 lakhs than in 1903-04. The amount realised from the additional and special duties on sugar has become insignificant, the receipts from the former being $R_{17,277}$ and from the latter R 9,7 ©o.

The following are the principal items from which the customs revenue on imports is derived ( R ):

| Articles of food and drink: | 1902-03 | 190304 | 1804.05 |
| :---: | :---: | :---: | :---: |
| Spirit | 69,64,128 | 75,16,845 | 76,58,725 |
| Sugar . . . | 45,40,786 | 31,61,415 | 32,70,731 |
| Provisions | 5,76,499 | 6,15,469 | 6,33,529 |
| Spices | 4,36,244 | 4,11,734 | 5,32,358 |
| Chemicals, drugs, narcotics, dyes: |  |  |  |
| Drugs, medicines, narcotics | 4,97,731 | 5,46,85 | 5,73,854 |
| Chemicals | 3,21,144 | 3,42,890 | 3,66,000 |
| Dyes and tans | 3,88,596 | 4,32,320 | 4,50,288 |
| Metals and articles made of metals: |  |  |  |
| Hardware and cutlery | 10,36,319 | 11,72,396 | 12,20,000 |
| Copper and brass | 10,93,547 | 11,04,258 | 10,76,285 |
| Iron and steel | 5,48,863 | 7,06,153 | 7,06,357 |
| Silver | 39,40,580 | 40,27,356 | 41,11,977 |
| Manufactures of cotton: |  |  |  |
| Piece goods : grey (unbleached) | 53,15,838 | 45,74,785 | 56,46,824 |
| " white (bleached) | 17,72,512 | 21,56,913 | 28,72,855 |
| " coloured | 22,99,067 | 27,91,707 | $3^{1,64,62 I}$ |
| Oils: |  |  |  |
| Petroleum | 53,79,857 | 43,99,912 | 45,87,939 |

Of the other articles enumerated in the tariff schedules, those mentioned below yield individually a revenue of some consequence ( $R$ ):

| Apparel |  | 8,09,564 | 9,18,753 | 10,26,137 |
| :---: | :---: | :---: | :---: | :---: |
| Silk and articles made of silk. |  | $11,02,840$ | 12,09,492 | 14,38,006 |
| Woollen goods | . | 7,07,201 | 10,80,195 | 15,39,36: |
| Glass and glassware | - | 4,75,193 | 4,99, 110 | 5,63,896 |

The articles specified above account in the aggregate for 85 per cent of the total revenue, and including six other articles, namely, arms and ammunition, cotton manufactures (other than piece goods), fruits and vegetables, instru*ments, wines, and paper, yielding individually between $3 \frac{1}{2}$ and 5 lakhs and jointly R $24,05,044$, the share of the total is raised to 89.8 per cent. The lengthy list oi dutiable articles in the Indian tariff thus comprises only a small number which yield an appreciable revenue, and those from which the revenue collected is of importance are very few, namely, spirituous liquor, petroleum, sugar,
metals (including silver), and cotton piece goods, which yielded last year 68.7 per cent of the whole revenue. Of the articles mentioned those subject to special rates of duty are arms and aminunition, wines and spirits, petroleum, and (in addition to the general duty) sugar. The general duty on imports is 5 per cent, which in the case of cotton goods is reduced to $3 \frac{1}{2}$, and in the case of most classes of iron and steel to I , per cent.

The export tariff schedule is limited to rice and rice flour, a duty of three annas (three-sixteenths of a rupee) being levied on each maund of $82 \frac{2}{7} \mathrm{f}$. The net duty realised last year, $\mathrm{R}_{\mathrm{I}}, 28,75,997$, was $11 \frac{1}{2}$ lakns greater than in 1903.04 and is the highest recorded.

A customs duty at the rate of a quarter of a pie (one-forty-eighth of an anna) per pound has also been levied from the ist April 1903 on all tea produced in India and exported from any customs port to any port beyond the limits of British India, the collections being paid to a committee constituted to receive and expend the proceeds of this cess on measures for promoting the sale and increasing the consumption of teas produced in India. The collections amounted to $\mathrm{R}_{2,77}, 957$, gross, and $\mathrm{R}_{2}, 75,490$, net. -

## Balance of Trade

The figures appended state the excess of exports over imports, including merchandise and treasure, in each of the last five years ( $R$ ):

|  | Including Government transactions | Excluding Government transactions |
| :---: | :---: | :---: |
| 1900-01 | - 16,47,46,000 | -22,10,20,000 |
| 1901.02 | 26,78,43,000 | 31,76,01,000 |
| 1902-03 | - 27,85,62,000 | 38,58,17,000 |
| 1903-04 | 37,06,79,000 | 44,97,18,000 |
| 1904-05 | 30,21,58,000 | 35,77,10,000 |

In the same year the drawings of Council bills have been :

|  | 6 | Exchange, pence | R |
| :---: | :---: | :---: | :---: |
| 1900-01 | - $13,300,276$ | 15.973 | $=19,98,38,000$ |
| -1901.02 | - 18,539,071* | 15.987 | $=27,83,02,000$ |
| 1902-03 | - 18,499,947* | 16.002 | $=27,74,67,000$ |
| 1903-04 | - 23,859,303* | 16.049 | = 35,67,95,000 |
| 1904-05 | - 24,425,558* | 16.045 | $=36,53,57,000$ |

The net excess of exports, that is, including Government transactions, is 685 공 lakhs below the extraordinary surplus in 1903-04. During the last fifteen years it has been equalled twice and largely exceeded on two other occasions. Assuming that the values are correctly recorded, there are still some adjustments to make on account of unregistered trade. In the first place there is considerable excess of exports from the French Settlements, the figures for the three years ending $1903-04$ being io2, 126, and $59 \frac{1}{4}$ lakhs, respectively. The trade of the Portuguese Settlements direct with foreign countries is small and shows a slight excess of imports of about one lakh a year, but the trade carried on by native craft from ports in the Native States on the West Coast of India with Persia, Arabia, and Ceylon, none of which is registered, must be considerable, and probably exports largely predominate. There are also large re-exports of pearls from. Bombay whose average value probably exceeds 100 lakhs, but as they are sent by letter post they are not

[^6]recorded as exports. For the same reason exports of gems from Burma were unrecorded until 1904-05, when special returns were made to the Customs by the Burma Ruby Mines Company. Exports of Government stores, other than treasure, are also imperfectly recorded. Their value as stated is usually small, being $16 \frac{3}{4}$ lakhs in $1904-05$, but during the two previous years it was 52 lakhs and $49{ }^{\frac{3}{4}}$ lakhs, respectively, the increase being caused by the Somaliland expedition. These exports do not affect the balance of trade, since nothing is given in exchange for them, but still they are recorded, while stores supplied to His Majesty's Government for which payments from the British Exchequer amounting to $£ 2,145,000$ were made in the three years $1900-03$ were not registered as exports.

## Gold and silver

The value of imports and exports is ( R ):

| Gold- Exports Nat imports |  |  |  |
| :---: | :---: | :---: | :---: |
| 1900-01 | 11 S9,So,000 |  |  |
| $1900-01$ $1901-02$ | - $11,59,80,000$ - $8,30,75,000$ | $11,05,59,000$ $6,36,99,000$ | $84,21,000$ $93,76,000$ |
| 1902-03 | - 13,19,24,000 | 4,42,78,000 | 8,76,46,000 |
| 1903-04 | - 20,14,79,000 | 10,21,62,000 | 9,93, 17,000 |
| 1904-05 | - 2I,8r,20,000 | 12,10,61,000 | 9,70,59,000 |
| Silver- |  |  |  |
| 1900-0: | - $12,67,87,000$ | 3,17,15,000 | 9,50,72,000 |
| 1901-02 | - 12,29,38,000 | 5,10, 10,000 | 7,19,28,000 |
| 1902-03 | - 12,18,65,000 | 5,22,98,000 | 6,95,67,000 |
| 1903.04 | - 18,37,82,000 | 4,82,77,000 | ${ }^{1} 3,55,05,000$ |
| 1904-05 | - 17,69,62,000 | 4,32,27,000 | 13,37,35,000 |

Adding to the imports, or deducting from the exports, the gold produced in the Indian mines, valued at $R_{3,55,02,612}$ in $1904-05$, whish is exported to London for assay, the net addition to the stock of gold was $\mathrm{R}_{13,25,61,471}$, compared with $\mathrm{R}_{13,44,47,045}$ in 1903.04 . The nearest approach to these rupee values is 1,213 lakhs in 1899.1900 , but expressed in sterling the results are different, for in $1863-64$ and $1864-65$, when the sterling value of the rupee was half as high again as it is now, the values were $£ 8,85^{1}, 961$ and $£ 9,788,714$, respectively, compared with $£ 8,963,136$ in 1903.04 and $£ 8,837,43$ i in 1904005 . Owing to a mistaken valuation of silver bullion; at the rate applying to coined rupees, the imports and exports of silver during 1903 -04 were overstaled in the report for that year, the former by $160 \frac{1}{3}$ lakhs and the latter by $122 \frac{4}{5}$ lakhs. The correction makes the value of the net imports 1,355 lakhs in that year as against $1,337 \frac{1}{3}$ lakhs in $1904-05$. Owing to the wide difference between the metallic value and the face value of the rupee, which has developed since the closing of the mints to the public in June 1893, these sums represent a much larger quantity of silver than imports of higher rupee values when the mints were open. Stated in ounces the net imports of gold and silver and the Indian production of the former during the last five years have been:

The value of the net imports of gold in 1904-05, in their widest sense, was, as stated above, $\mathbb{R}_{\mathbf{I}} \mathbf{3}, 25,61,471$ ( $£ 8,837,43 \mathrm{I}$ ) and included sovereigns and half
sovereigns to the value of $R_{4}, 68,28,064\left(£_{3}, 121,871\right)$, the remainder being bullion. The whole of these imports and gold to the value of $£ 43,528$ released from the Government reserves went into the hands of the public. The exports of gold by the Government, amounting to $£ 5,605,000$ included remittances to London of $£ 4,500,000$ for the purchase of silver and $£ 1,100,000$ for investment in gold securities on behalf of the Gold Reserve Fund. The difference between the total of the remittances and the reduction of $£ 43,528$ in the gold reserve, or $£ 5,561,471$, is the approximate value of the gold tendered by the public in exchange for rupees. 'This is considerably more than the sum of $£ 4,326,099$ tendered by the public in 1903-04.

The registered exports of rupees exceeded the registered imports by R60, 64,413 , and the net withdrawal from the currency caused by this outward flow, which in 1904-05 was mainly directed to Ceylon, East Africa, and Arabia, has amounted to 696.8 lakhs in the last tepn years. The net importation of silver bullion was 79,322,372 nunces, value R14,36,10,010, and includes $35,105,027$ ounces, value $\mathrm{R} 6,36,32,687$, imported by the Government both for immediate coinage and for the formation of the new ingot reserve of standard silver, which reached its fixed limit of 30 million tolas ( $1,250,000$ ounces) in November 1904, the intention being to keep it as an emergency reserve to meet sudden demands for coinage. The value of the rupee and small silver coinage in the Bombay and Calcutta mints during $1904-05$ was $R_{11,37,04,366,}$ of which $\mathrm{R}_{7}, 77,54,873$, representing $29,158,077$ ounce's, was new coinage. The quantity of new silver passed into the mints of Native States in 1904 was $3,304,125$ ounces, this being about eight times the quantity used in 1903 and two and a half times the average of the last ten years.

An estimate was made in the review of the trade of 1903-04 of the net imports of gold and silver since 1835-36. Adding the figures for 1904-05, the totals are, gold net imports $£ 167,959,439$, and gold production $£ 21,208,210$, which together give $£ 189,167,649$ as the absorption of gold during the last 70 years. The value of the net imports of silver in the same period is $\mathbf{R}_{4,47,90,91,615}$, of which the estimated equivalent is $1,729,621,823$ ounces.

## Trade with Countries

The trade of India with the world in merchandise, imported and exported, was distributed as follows last year, compared with the two preceding years (R, 000 omitted) :

The figures for 1902.03 credit to Egypt large shipments of produce carried in vessels calling at Egyptian ports for orders, and thus exaggerate the trade with Africa, but since the disçontinuance of this system in 1903-04, the distribution of the trade with the Continents is shown fairly accurately, although a small share of the irade with America is still credited to Europe and Asia. The recorded trade with Europe in 1904-05 was 66.5 per cent of the whole, compared with 66.1 per cent in 1903.04, and with Asia 23.4 per cent, a rate which has remained unchanged for three years. In trade with America the
exports are about nine times the value of the imports, and the recorded increase in the total is partly due to more frequent sailings direct from Indian to American ports. Turning to individual countries the special reservations, indicated at pages 19,20, and 39, in the remarks on the distribution of the import and export trade, must be made in respect of transit and transhipment trade, when it is a question of. determining the trading interests of certain countries with India, for the statistical classification is founded on the principle of goods passing from one country to another in unbroken transit by sea, and thus only indirectly on the principle of commercial exchange. The value of the trade with each of the principal countries, according to the statistical classification, is stated in the appended list ( $R, 000$ omitted) :

The share of the United Kingdom in $1904-05$ is 41.8 per cent, compared with $40^{\circ} 4$ per cent in the previous year, and if the value of stores imported for State departments and State railways be included the share is raised to 43.3 per cent.

## Shipping

A vast export trade and a great development of the import trade caused a large increase in numbers and tonnage, of which 97.5 per cent was steam tonnage.

Below are given the number and tonnage of steamers and sailing vessels, with cargoes and in ballast, which entered from and cleared to all countries:

The total number of steamers which entered and cleared was 6,386 with an aggregate burden of $13,528,347$ tons, the average tonnage of each steamer being 2,118 tons.

The entries from and clearances to the United Kingdom were 3,273,419 tons, being 23.6 per cent of the total tonnage. Entries from and clearances to British Possessions amounted to $5,233,914$ tons, or 3777 per cent of the whole. The tonnage from and to the United Kingdom and British Possessions amounted, therefore, to $61 \cdot 3$ per cent of the whole.

The vessels which enter and leave the ports of India for the most part fly the British flag, and the tonnage under that flag which increased largely in $1904-05$ represented about 83 per cent of the whole. Adding the proportion
of the tonnage of vessels under the British Indian registry, a little less than 84 per cent of the trade of India was carried under the British flag.

The number of vessels under foreign flags, which entered and left Indian ports last year, was 1,174 , their burden aggregating $2,112,428$ tons, a considerable decrease in tonnage on the preceding year.

The number of vessels under the principal flags are stated below:

A new line of steamers sailing monthly from Calcutta to Australia and New Zealand was established in June 1904, and a monthly service is about to be started between Calcutta and the River Plate.

## Frontier Trade

The trade across the land frontiers is relatively small, but it is progressive, and during the last ten years the grand total of the registered imports and exports of both merchandise and treasure has increased in value by 66 per cent. The value of the trade in $1904-05$ increased by 161 lakhs, of which approximately 8! lakhs represented merchandise and 80 lakhs treasure. The totals of imports and exports in the last five years are ( $R$ ):

There are no railways crossing the frontier, except the branch line from Sialkot to Jammu in Kashmir which has quite a small traffic, but about twothirds of the trade with Kandahar is carried by rail to or from stations close to the frontier and is registered as railway traffic. At all other points along the frontier, whether in the proximity of railways or not, the registration is made at small posts on the roads crossing the frontier, and as there are no legal formalities or customs duties, there is rarely any examination of the goods, the nature of which is determined from the declarations of the carriers. The registering staff consists at the most of two men, and frequently of a single man, though traffic may pass by night as well as by day, and inspections of some of the remoter posts are too infrequent to be effective. The results obtained are therefore at the best only approximations to accuracy, and occasionally omissions or mistakes of some magnitude are revealed, but on the whole the recorded movements of merchandise are fairly trustworthy. The inducements to conceal the possession of gold and silver are, however, so strong that the registration of these metals is very imperfect, while on the other hand exaggerated declarations are sometimes made, so that no reliance can be placed on the figures relating to treasure. In $1904^{-05}$, for example, the large addition to the recorded imports of treasure is chiefly due to the receipt of $66 \frac{1}{3}$ lakhs from Kashmir and $14 \frac{1}{1}$ lakhs from Afghanistan, but enquiries show that the imports from Kashmir have been exaggerated by the registration at one post of gold carried by traders from Yarkand to the value of $55 \frac{3}{\frac{3}{2}}$ lakhs, which must be almost entirely fictitious.

The total trade in merchandise only, with each of the principal countries, proceeding from west to east along the line of frontier, is stated below ( $R$, ooo omitted) :

|  |  |  | 190001 | 1901-03 | 190:03 | 1909.04 | 1904-05 |

## North-Western Fronticr

Nearly 3 S per cent of the whole of last year's trade crossed this frontier.
Seistan.-Trade with Persian Seistan will doubtless improve when the railway is opened to Nushki, but it has made no progress in the last two years, the value being still only $5 \frac{1}{3}$ lakhs. Cottons, $1 \cdot 5$ lakhs, and indigo, $1 \cdot 2$ lakhs, are the principal exports.

Afghanistan.-Mention was made last year of the reduction of the heavy Afghan transit dues on tea and indigo destined for Bokhara to the equivalent of $2 \frac{1}{3}$ per cent ad valorent, and, if a more liberal fiscal policy were adopted by the Amir, there would be a large expansion of the trade with Afghanistan, which has, however, improved considerably in the last year. The principal imports from Kabul are fruits and nuts, $7^{\circ} 9$ laikhs, animals (horses, sheep, and goats) 4.4 lakhs, hides (including skins) and ghi each about $2 \frac{1}{2}$ lakhs, the total being 26 lakhs as in the previous year. Exports improved by 25 lakhs to 693 lakhs. Cattle, sheep, and goats account for $8{ }_{5}^{4}$ lakhs of the increase, but it is doubtful whether these animals were exported for sale as no such trade appears in other years. Cotton fabrics, value $38 \frac{1}{3}$ lakhs, (more tinan two-thirds being of foreign manufacture), increased by $12 \frac{1}{9}$ lakhs. The other principal articles are coton yarn, (mostly foreign) 3.2 lakhs, and leather, 2.5 lakhs. The exports of tea (nearly all greentea) were $397,265 \mathrm{tb}$ Indian; value 1.5 lakhs, and $300,384 \mathrm{Hb}$ foreign, value $3^{.1}$ lakbs. Among imports from Kandahar, value $40 \frac{1}{5}$ lakhs, are raw wool, 18.8 ; fruits and nuts, 12.2 ; and ghi, 2.6 lakhs, in all of which there was a larger trade. The exports reached $36_{3}^{\frac{1}{3}}$ lakhs, the two principal articles, Indian cottons, $14 \% 7$, and foreign piece-goods, 10 lakhs, both showing an improvement.
$D_{i r}, S_{w a t,}$ and Bajaur.-Imports from Dir, Swat, and Bajaur, value $38 \cdot 7$ lakhs, principally ghi, 17.8 , grain, 8.7 , and hides, $6 \cdot 1$ lakhs, continue to improve; and more noticeable still is the increase of to lakhs in exports, value 66 lakhs, consisting of raw cotton, 3 ; cotton yarn, 8.3 , and piece goods, 34.7 (both, chiefly foreign); salt, 4.8 ; sugar, 2.3 ; with indigo, fruits, leather, metals, tea, and tobacco between one and two lakhs each. Indian tea increased from 102,256 tb to 181,552 th and foreign tea from $76,944 \mathrm{fb}$ to $79,408 \mathrm{Hb}$, nearly the whole being green tea.

Kashmir-There was a decrease in the trade with Kashmir both in imports, value 114 lakhs, and exports, value 1 to lakhs. The principal decrease was in the timber, floated down the rivers, from $30^{\circ} 2$ to $19^{\circ} 3$ lakhs. The other chief imports are ghi, 30 ; hides and skins, 13.5 ; silk, 8.8 ; drugs, 8.6 ; fruits and nuts,
7.5 ; and grain, 4.6 lakhs. The reeled silk produced in the State filatures is of excellent quality and its true value must have been double that stated above. Chief among exports are cotton yarn, $5^{\circ} 2$ lakhs, and piece goods, $43^{\circ} 8$ lakhs, the latter diminishing by 4.8 lakhs, and both being mainly of foreign manufacture ; sugar, $11^{\circ} 7$; salt, $9 \cdot 3$; grain, 6 ; Indian tea (half green), $5 \cdot 3$; tobacco, 39 ; and drugs, $2^{\circ} 5$ lakhs. Tea exports increased from $\mathbf{I}, 251,004 \mathrm{fb}$ to $\mathbf{1}, 484,448 \mathrm{fb}$.

Ladakh.-Trade with Ladakh is registered separately from trade with Kashmir, and charas, the only import of consequence, increased from 4.8 to 9.3 lakhs, this being due entirely to the increased price, for the quantity was smaller, namely, $2,276 \mathrm{cwt}$ as against $2,707 \mathrm{cwt}$ in 1903-04. This drug which comes from Central Asia is subject to a high excise duty, and 542 cwt , value 2.8 lakhs, came through Kashmir. Exports to Ladakh, value 3 lakhs, consist of cotton piecegood (foreign), $2 \frac{1}{4}$ lakhs, and small consignments of coral, tea, spices, and indigo.

## Northern and North-Easlern Frontier

Nepal.-By far the largest trade which crosses this frontier is that with Nepal, which amounted last year to 30 per cent of the whole trade, and the frontier is so extensive that much produce exchanged with the British districts on the border does not pass by the main roads and thus escapes registration. The registered imports of 254 lakhs decreased by $4 \frac{1}{3}$ lakhs, and included grain (chiefly rice) 128.3 ; living animals, 27.9 ; seeds (rape and linseed), $25^{\circ} 5$; provisions (ghi), 17.8 ; fibres (chiefly jute), 12.6 ; hides and skins, 9.4 ; spices, 9 ; timber, 7.7 lakhs, as well as dyes, drugs, and tobacco of smaller values. Exports increased by $11 \frac{2}{3}$ lakhs to $145^{\frac{2}{3}} \cdot$ lakhs, the chief items being cotton yarn, 15 and piece goods, $57^{\circ} 7$ (both, mainly foreign); metals, 16; salt, 114 ; provisions, 7; spices, 6.5 ; oils (petroleum) 6; sugar, 6 ; tobacco, 4 ; animals, $3 \cdot 3$; and fruits, $2^{\circ} 5$ lakhs.

Tibet.-Trade with Tibet has not had time to recover from the check it received through the disturbances in $1903-04$ and to benefit from the trading facilities secured by the signing of the Treaty of Lhasa in September 1904. Imports, value 12 lakhi, fell by one lakh and were 8 lakhs less than in 1902-03; raw wool, 5.8 ; borax, $2: 2$; salt, 1.7 ; ponies and mules, 1 lakh; being the principal articles. Exports, value $10 \frac{2}{5}$ lakhs, increased by $2 \frac{3}{4}$ lakhs, and were composed of cotton yarn and cloth (mostly imported piece goods), 2.4 ; grain, 1.9 ; woollens, 1.3 ; coral nearly i lakh, with metals, sugar, tobacco, and silk goods among numerous minor articles.

Other States and frontier tribes.-Along the remainder of this frontict from Bhutan to the north-east corner of Assam, where a net trade route may eventually be opened into Tibet and including both Manipur and Hill Tipperah to the south, there is at present hardly any trade worthy of the name. Timber, 6.8 lakhs, and caoutchouc, 2.6 lakhs, are the two most notable imports.

## Eastern Frontier

Western China.-On this frontier the trade with Western China, which is mainly from Bhamo to Tengyueh in Yunnan, continued to improve, and imports, value $13^{\circ}$ I lakhs, rose by 1.3 lakhs, these consisting of raw silk, 4.5 ; animals (one-third mules), $\mathbf{2}^{\prime} 4$; hides, $1^{\prime} 7$; lac and orpiment each, 1 lakh. Exports, value 36.8 lakhs, increased by 3.6 lakhs; Indian cotton yarn, $23^{\circ} 7$; raw cotton, 5.6 ; cotton piece goods (imported), $2 \cdot 7$; jade, $1 \cdot 5$; salt, $1 \times 1$; and provisions, I lakh, being the chief items.

Shan Statis. - By far the most important trade registered on this frontier is with the Shan States which, though treated for convenience of registration as foreign countries, are British territory administered under the local chiefs. Both imports and exports are progressive, but the large increase, $133_{3}^{7}$ lakhs, in exports to the . Southern Shan States, is partly the result of improved registration. Among imports, value $54^{?}$ lakhs, from the Northern Shan States are pickled tea, 24.8 ; tea (leaf), $10 \cdot 6$; teak, $5 \cdot 1$; grain, 1 'S; lac, $1{ }^{\prime} 6$; and caoutchouc, ilakh; while exports, value $44^{\frac{1}{3}}$ lakhs, include cotton yarn, 6 (mainly Indian) ; cotton piece goods (mostly imported), $12 \cdot 5$; provisions, 7.4 ; salt, $2^{\prime} 8$; metals, $2 \cdot 4$; betelnuts and leares, 2 lakhs. The imports from the Southern Shan States, value 43 lakhs, include ponies, mules, and cattle, 11.2 ; teak, 9.3 ; lac, 6.5 ; potatoes and other vegetables, $4^{11}$; paints and colours, $1 \cdot 3$; and silk, 1 lakh; while the exports, value $46 \cdot 2$ lakhs, consist of cotton yarn (mainly Indian), $2 \cdot 2$; cotton piece goods (mainly imported), $17^{\circ} 6$; silk goods, $4^{6} 6$; provisions (mostly salted: fish), $3 \cdot 8$; betelnuts, $3 \cdot 2$; woollens, $2 \cdot 2$; oil (petroleum), 2 ; metals, $1 \cdot 7$; and apparel, 1 ' 5 lakhs.

North Siam has imports, 29 lakhs, consisting of cattle and other animals 14 ; teak, 12.8 ; silks, 2 lakhs; and exports, $10 \%$ lakhs, including cotton yarn and piece-good, 4.3 ; silks, 16 ; and apparel 1 lakh. Cattle and other animals, 6 lakhs, and silks $1 \frac{1}{4}$ lakhs, make up the imports from South Siam, the value of the exports being 2 lakhs.

Karenni,-There are only trifing exports to Karenni, value $2 \frac{1}{3}$ lakhs, but there are large imports of teak, value 24 lakhs, which is, however, nearly 7 lakhs below the value of the large imports in 1903-04. .

The general character of the trade carried on across the Indian frontiers is indicated by the appended list of the principal articles, imported and exported, with their values in the last three years ( $R, 000$ omitted) :

| $\begin{array}{ll}\text { Imports } \\ \\ 1905-03 & \\ 1903-04 & \\ 1904-05\end{array}$ |  |  |  | Exports |  |  |  |

There is an increase of 25 per cent in the value of the cotton piece goods of British and foreign manufacture exported to Afghanistan, Dir, Swat, Bajaur, Nepal, and the Shan States, one-third of this being due to the higher price of these goods.

The relative importance of the trade of each frontier province with the countries adjoining its border is represented in the figures appended ( $R$, coo omitted) :

## Coasting Trade

The practice of adding the imports to the exports exaggerates the real value of the coasting trade, since the single transaction of carrying merchandise from one British Indian port to another appears first as an export and again as an import. But there is also a large trade with the ports in Native States and foreign settlements, which like foreign trade is registered only once at the British ports of departure or arrival. The net value of the coasting trade may therefore be determined by adding to the value of the imports into British ports from other British ports the sum of the imports and exports in the trade between British and non-British ports. The value so calculated is for merchandise 426 million $R$, this being 26 million $R$, or $6{ }^{\circ} 5$ per cent, greater than the value in 1903-04. Food grains, more than two-thirds being rice, were as usual by far the largest item, and though the movements were not on a large scale, there were increased exports of rice from Burma to Bombay and Madras, and from Bengal to the latter, as the crops in these two Fresidencies suffered from partial failure of the monsoon. The recorded exports of rice from Burma to Indian ports was 301,000 tons, an increase of 106,000 tons over the exports of 1903.04 , but the corresponding. imports do not tally, there being an average deficiency of about 36,000 tons in the last two years in the arrivals at Madras ports. The exports of mineral oil from Burma increased from $3^{8}$ million gallons in 1903.04 to $5^{\circ}$ million gallons, Calcutta taking 45 millions and redistributing part of it by sea to other provinces, the re-exports to Madras being $3 \frac{1}{2}$ million, and to Sind over one million, gallons. The exports of gunny bags from Calcutta, mainly to Burma and Bombay, increased in value from $119 \frac{1}{3}$ to $160 \frac{1}{2}$ lakhs, representing about 64 million bags. Exports of Bengal coal rose by 282,000 tons to $1,786,000$ tons, of which 822,100 tons went to Bombay and 286,000 tons to Sind. The trade in cotton piece goods manufactured in the Indian mills also showed marked improvement, the exports from the Bombay Presidency being 152 million yards, value 213 lakhs, an advance on the exports of $1903-04$ of $33^{\circ} 5$ per cent in quantity and $39^{\circ} 3$ per cent in value.

# THE <br> TRADE OF BRITISH INDIA <br> WITH 

FOREIGN COUNTRIES
For the official year ending March 31, 1906.

## CLIMATIC CONDITIONS OF THE YEAR.

Climatic conditions in. India determine the volume of exportable produce and the capacity of the country to purchase imports. Some account of the character of the season is therefore indispensable to a comprehension of the general trade of the year. The size of the country forbids any attempt to treat it as a meteorological unit. For this reason the following paragraphs summarise the weather record in respect of each province :-

Assam. -The season in Lower Assam was favourable, but a very high flood in the Brahmaputra affected the jute crop in Goalpara and the Garo Hills.

Eastern Bengal.-The season opened unfavourably on the whole. Excessive rain accompanied by unusually high floods in September and October damaged the rice, jute, and sugar-cane crops. But later in the season want of rain affected the wheat and oilseeds crops in the northern districts.

Bengal Proper. - The rainfall was heavy and general in March to May, while June was a very dry month and the crop suffered from drought. The monsoon set in early in July. From the latter half of July till the end of September the rain was heavy and continuous in Behar and floods damaged the rice and indigo crops. The rainfall in October was generally light and theiere was practically none in November and up to January, when there was generally good rain in Bihar. In February unseasonable and exceptionally heavy ráin accompanied by cloudy weather and, in places, by hailstorms injured the rabi crops, including oilseeds, and the rain in March unfavourably affected the outturn.

Cnited Provinces.-The monsoon was late in arriving. Rain was sufficient in the. first half of July, but in the latter half it was very deficient in the western divisions and Bundelkhand. The rainfall in August and September was light, affecting the indigo, sugar-cane, sesamum, and cotton crops. The months of October and November were entirely rainless. Though the light rair which fell in the second half of December and January did. some little good to the oilseeds, the drought continued till the middle of February, whengood general rain was received throughout the province. This rainfall helped the wheat crop, but it came too late to be of much use to the oilseeds.

Punjab.-There was deficient rainfall in July 1905. Two months' drought. following the first fall of rain in the middle of July resulted in a general failure of the unirrigated crops in the Delhi Division and checked the development of the sugarcane already injured by frosts. The rainfall in September, though beneficial, came rather late to effect material improvement of sesamum. October and

November were dry as usual. The winter rains 'began early. The rainfall was heaviest in the nest and north-west and light rain foll in the north later in the month of December. The conditions were favourable for wheat and oilseeds sowings, but the prolonged drought of January and early February gave the crops a serious check. Heavy and general rain received in the middle of February revived the crop, but it was followed by regular showers throughout March and dry clear weather in April and May.

North-West Frontier Province.-The monsoon rains were deficient, and the absence of moisture at sowing time retarded wheat and oilseeds sowings, which were, however, facilitated by excellent rain in the third week of -December. January was partially rainless, except in Hazara ; but copious and well-distributed rain in February and March proved most beneficial throughout, while in April good showers ensured an unprecedented crop.

Central Provinces and Berar.-Although the usual October showers were wanting, heavy rain in the latter half of September advanced sowings of wheat at the usual time with fair success, but it was detrimental to the sowings of the late varieties of sesamum and caused some deterioration in those districts where the rain was followed by cold mists. Frost, hailstorms, and absence of seasonable winter rains did serious damage to linseed. In Berar, drought in mid-monsoon damaged the sesamum. The monsoon rain was also deficient, and the sowing season unfavourable for wheat. The cold weather rains came late, and though the earlier showers benefited the crop, the later showers did no good.

Bombay.-The favourable character of the early-sowings rain and the short rainfall of the season led to extended cotton cultivation. Through the deficiency of the late rains, both the sesamum and cotton crops suffered in Gujarat and Khandesh. Elsewhere in the Presidency the failure of the September rain entirely destroyed the crops in many places. In Gujarat the wheat crop fared fairly well in the north, but suffered through deficiency of moisture in the south. In the Deccan the crop was generally fair when the late rain fell or the crop was irrigated.

Madras.-The rainfall was seasonable for sesamum, rice, and sugarcane but the cotton crop suffered from want of rain.

Burma.-The rainfall was generally seasonable; but the early rains in Minbu and Sagaing were scanty, and in Chindwin and Myingyan the later rains were excessive.

## GENERAL SUMMARY OF TRADE.

In the following statement the value of the trade of the year 1905-06 is compared with the value of the trade of each of the preceding four years. The values are stated in rupees and exclude Government transactions both in merchandise and treasure :-

|  | 1901-02 | 1902-03 | 1903.04 | 1904-05 | 1905-06 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
| Merchandise | 81,51,89,794 | 78,78,79,084 | 84,82,32,930 | 06,67,82,884 | 103,06,58,826 |
| Gold | 8,29,76,205 | 13,14,66,553 | 20,13,11,752 | 21,81,19,745 | 14,74,29,715 |
| Silver | 11,35,07,591 | 12,10,90,721 | 11,81,20,869 | 11,21,55,553 | 6,17,83,175 |
| Total imports | 101,16,73,590 | 10404,36,358 | 116,76,65,551 | 129,70,58,182 | 123,98,71,716 |
| Exports- |  |  |  |  |  |
| Foreign merchandise re-exported | 3,25,98,163 | 2,93,56,132 | 3,32,55,087 | 3,37,25,945 | 3,52,68,622 |
| Indian merchandise | 121,20,50,631 | 125,87,97,516 | 149,63,40,735 | 154,12,79,999 | 158,18,17,307 |
| Gold | 3,36,64,788 | 3,67,73,923 | 3,80,26,776 | 3,69,85,896 | 5,29,09,830 |
| Silver | 3,09,60,877 | 5,13,26,185 | 4,34,66,954 | -4,27,79,760 | 3,15,87,739 |
| .Total exports | 132,92,74,459 | 137,62,53,756 | 161,10,89,552 | 165,47,71,600 | 168,15,78,498 |

It will be observed that the grand total of imports and exports declined by one per cent or by 3 crores ( $£_{2}$ millions) compared with the trade of 1904-05. The decline was confined to imports which fell by about 6 crores ( $£ 4$ millions) or $4^{\circ} 4$ per cent, due entirely to the contraction in the imports of treasure, which, in the case of gold, receded by 7 crores ( $£ 4.67$ millions) or $32^{\circ} 4$ per cent and in the case of silver receded by about 5 crores ( $£ 3.33$ millions) or $44^{\circ} 9$ per cent. Omitting the imports and exports of treasure the grand total trade (merchandise only) advanced a further $4^{\circ} 2$ per cent, imports having risen 6 crores ( $£ 4$ millions) or 6.6 per cent and exports 4 crores ( $\{2.67$ millions) or 2.7 per cent.

The imports for home consumption, arrived at by deducting the re-exports from the imports, increased by 4.52 per cent while the exports of Indian merchandise rose by 2.6 per cent only. Two-thirds of the advance in imports was on account of cotton goods, the principal article of Indian trade. As is stated in that chapter of this Review which relates to imports of cotton goods, the rise was due to bumper cotton crops in America and Egypt and a marked development in India's purchasing power. As a corollary of India's larger imports of cotton goods her exports of the raw material rose by $22^{\circ} 4$ per cent or $389^{\circ} 7$ lakhs. The imports of cotton yarn and piece goods reached the unprecedented value of $40 \frac{2}{3}$ crores ( $£ 26.89$ millions) compared with 36 crores ( $£_{24}$ millions) in 1904-05. Prices of piece goods ruled higher in 1905-06 than in the year previous and, had the quantities imported in the later year been paid for at the prices of the earlier, the value would have been 34 lakhs ( $£ 227,000$ ) less than it was.

The other principal articles of import in which there were large advances were machinery and millwork and sugar. In the former the value increased from 4 to about 5 crores ( $£ 2^{*} 67$ millions to $£ 3^{\circ} 33$ millions) and in the latter from 6.9 to 7.77 crores ( $£ 4^{\circ} 6$ millions to $£ 5^{\circ} 18$ millions).

The rise in sugar was due solely to a larger consumption of that article and principally of beet the imports of which rose from $1 \cdot 7$ million cwts to 3.4 million cwts. Another single item that increased much in value and helped to swell the total rise was precious stones and pearls.' In 1903-04 the value was a trifle more than $1 \frac{1}{2}$ crores, in 1964.05 it fell to $87 \frac{3}{4}$ lakhs, and in the year under review it rose again to somewhat more than $1 \frac{1}{3}$ crores. But, as has been said more than once, the valuations are not at all reliable. The largest decrease was in mineral oils which declined from 3.32 to 2.23 crores, i.e., a fall of over a crore. This was due entirely to a stronger demand for Burma and Assam Oil.

India is primarily an agricultural country, and the rise and fall of her exports depend almost entirely on the seasonal crops. If the seasons are favourable her exports in the following year are large, if unfavourable, exports decline. And"this law is revealed in' the figures of the export trade. The wheat, oilseeds (principally linseed and'rape and mustard), and rice crops failed to a considerable extent in $1904-05$ with the result that' the exports of wheat in $1905-06$ dwindled to less than half the exports in the previous year (from 18.6 crores or $£_{12} 2^{2} 4$ millions to $9^{2} 2$ crores or $£^{6} \cdot 13$ millions), while in oilseeds there was a decline of 3.86 crores, and in rice of a crore. Notwithstanding the decline of over $1_{3}$ crores ( $£ 8.67$ millions) in these two articles alone the . exports (Indian merchandise only) rose to 158 crores ( 6 ro5.33 millions) in $1905-06$ from 154 crores ( $£ 102 \cdot 67$ millions) in 1904-05. The articles that go to make up the net increase, and the rise in which more than compensates for the decline of 13 crores in wheat and oilseeds, are raw jute, the exports of which reached the unprecedented figure of 17 crores ${ }^{\circ}$ ( $£ 11^{\circ} 33$ millions) compared
with 12 crores ( 68 millions) in the year previous; raw cotton which attained to a value of $21 \frac{1}{3}$ crores, after having fallen in 1904.05 to 17.4 crores from $24 \frac{1}{3}$ crores in 1903.04 ; and raw hides and skins, cotton yarn, and jute bags, each of which rose from $2 \frac{1}{\frac{1}{2}}$ to 3 crores.

## IMPORTS OF MERCHANDISE.

The value of the imports of merchandise continued its upward curve in 1905-06, and rose to R103.07 crores, an advance of 6.6 per cent or R63 8.8 , lakhs over the value in 1904-05. Although the absolute increase in 1905-06 was:, only a little more than half the absolute increase in 1904-05 it is still remarkable, seeing that it followed a year in which the increase was a record one. The following statement compares the value of the imports in $1905-06$ with the average annual value of imports in the five preceding quinquennial periods-

From the above figures it will be seen that India's import trade more than doubled in value in the last quarter of a century.

The value of each of the seven classes, in which articles are grouped in the trade accounts, was (in R):

|  | 1902-03 | 1903-04 | 1904-05 | 2905-06 |
| :---: | :---: | :---: | :---: | :---: |
| Animals, living (mosly horses) | 44,49,407 | 53,62,833 | 59,27,625 | 49,41,452 |
| Articles of food and drink | 10,50,62,568 | 11,69,47,243 | $13,08,64,808$ | 14,59,67,927 |
| Metals and manufactures of metal, hardware and cutlery, machinery and millwork, railway plant and |  |  |  |  |
| rolling stock | 14,41,17,326 | 16,31,12,904 | 17,13,49,857 | 17,85,64,347 |
| Chemicals, drugs, medicines, narcotics, dyeing and tanning materials | 2,44,66,564 | 2,75,07,969 | 2,80,41,090 | 2,97,26,783 |
| Oils | 3,71,48,452 | 3,60,41,231 | 3-49,31,435 | 2,44,05,292 |
| Raw materials and unmanufactured articles | $3,47,17,810$ | 3,88,92,531 | 4,22,41,044 | 4,85,18,170 |
| Articles manufactured and partly manufactured | 43,79,16,957 | 46,03,68,219 | 55,34,27,025 | 59,85,35,055 |

In five classes there was an increase and in two a falling away. Of the increase of $\mathrm{R}_{151} \mathrm{O}_{3}$ lakhs or $11^{\circ} 5$ per cent in the second class, sugar accounted for about half. It rose to $\mathrm{R}_{777^{\circ} 4}$ lakhs in 1905.06 from $\mathrm{R} 690^{2} 27$ lakhs in 1904-05, equivalent to a rise of 12.6 per cent. Imports of wheat in 1904-05 were practically $n i l$ (only $\mathrm{R}_{432}$ ), while in $1905-06$ they rose to $\mathrm{R}_{22}{ }^{\prime} 54$ lakhs, R20.62 lakhs of which were imported in the last month of the year. Provisions rose from $\mathrm{R}_{21} 6^{\circ} 5^{8}$ lakhs to $\mathrm{R}_{2}{ }_{39}{ }^{\circ} 26$ lakhs. The increase in the third class is, as usual, principally due to the large rise in the imports of machinery, from R402.72 lakhs to R491.97 lakhs or 22.1 per cent. In the fourth class the increase was due to larger imports of chemicals, by R $7 \frac{1}{3}$ lakhs, and of tobacco, by Rio lakhs. Precious stones and pearls, together with timber, more than account for the increase in the sixth class. In the last and principal class the increase of R $451 \circ 8$ lakhs, equivalent to 706 per cent of the total increase under all heads, is made up, to the extent of $55^{\circ} 4$ per cent, by increased imports of textile manufactures, 88.3 per cent of which represents Britain's trade. The continued declinemore than $R_{1}$ crore in $1905^{-06}$-in the fifth class (Oils) is ' due entirely to the ever-increasing demand for the indigenous mineral oils of Burma and Assam.

## ARTICLES OF FOOD AND DRINK.

The values in rupees during the last three years of the principal articles in this group have been:

Sugar.-Sugar represents $53^{\circ} 3$ per cent of the total value of the articles of Food and Drink imported into India, and retains the place which it assumed in 1904-05 as the second largest single article of importation.

Beet-sugar continues to rule the Indian sugar market; and the extraordinary; vicissitudes of the trade during the past year cannot be better presented at a glance than by means of a statement showing the fluctuations in the monthly prices and arrivals.

At the beginning of the year the largest quantities came from Mauritius' with Austria second, at 98,000 cwts and 90,000 , respectively. In June the trade of Mauritius and Austria began to dwindle equally, and in July Java came to the front with 83,579 cwts. This lead it improved to 276,082 cwts in August, with Mauritius coming up at 187,766 cwts ; and in September, Java did its best of the year at 438,742 cwts, with Mauritius second, while the total beet sugar from all countries fell to a total of 1,996 cwts. In October, Java fell back a ' little and Mauritius came up almost in line with it ; but in November beet-sugar began to take the upper hand: Java withdrew, being in fact sold out. Mauritius kept its place for a few weeks with a total of 342,566 and Austria at 168,227, but in December Austria had risen to 381,248 and Mauritius had receded to 120,000. In these two months France sent to India considerable shipments which were understood to issue from speculative stocks in liquidation. In January, February, and March Austria has placed increasing quantities on the market, making a total of $\mathbf{1 , 5 6 2 , 5 2 8} \mathbf{~ c w t s}$ since the beginning of the calendar year, with Mauritius and Germany disputing the second place.

The previous financial year closed in March 1905 with , the Bombay price at R13.15.o per cwt and the European price of 88 per cent sugar at ${ }_{3} 3 \mathrm{~s}$. $3^{d}$. f.o.b. Hamburg. The highest point in recent years had been reached two months before that time when R14-5ㅇ was recorded in Bombay. These high levels were due to several causes. The abolition of the bounties in European
producing countries and the consequent reduction of the internal sugar taxes had led to a restriction of cultivation, and had induced such an expansion of domestic consumption as had not been foreseen. The crop season in Europe in 1904 had been characterised by widespread drought, and on the strength of it an extensive speculation arose. But the high prices attained brought their own cure, for they induced at once an increase of some 16 per cent in the acreage sown with beet in Europe, and also a resort on the part of consumers to reserve stocks of which the speculators had not had knowledge. After the opening of the financial year 1905 -o6 prices fell steadily, and they gave way completely about the month of July. Since July the decline has been practically continuous, and since the close of the calendar year the price in Bombay had stood practically steady at R9-14-o per cwt. During certain months, when high prices prevailed, the quotations were really nominal. Some embarrassment has also been suffered by importers as a consequence of the agitation for the preference of indigenous products; but it remains to be seen how far that movement will prevail against the inducement offered by the present extraordinarily low price of beet-sugar.

The arrivals of beet and of cane-sugar in each of the last five years are shown in the following statement. The statement designates the countries from which the sugar was shipped to India, not those in which it was produced or refined. Until $1902-\mathrm{O} 3$ it was assumed, for statistical purposes, that the imports from the United Kingdom consisted of cane and beet-sugar in equal proportions. Since $1903-04$ the division has been made in accordance with the declarations of origin ; but the last three years have been too abnormal to admit of any deduction from them regarding the probable amount of error under the old system :

Java, which last year headed the list of contributors, has given way to Austria-Hungary, which now resumes the first place with a total exceeding even its record of 1901.02 by some $82,800 \mathrm{cwts}$. Mauritius, which in 1901-02 stood second, and in 1903.04 stood first, has resumed the second place with some 600,000 cwts less than in the latter year.

In his Budget statement, published in the Gazette of March 24th, 1906, the Hon'ble the Financial Member of Council reviewed certain of the statistics of the sugar trade in recent years with a view to determining what effects, if
any, had attended the impositions of additional duties to countervail the bounties of producing countries. That legislation was embodied in four Acts passed, respectively, in 1899, 1902, 1903, and 1904, the last two being little more than continuing enactments. He quoted the figures of the area under sugarcane in India in each year from $1890-9$ to to $1898-99$; and, taken by themselves, these figures do not substantiate the allegations of greatly reduced cultivation on which the original plea for legislation was founded. On the other hand the contraction of sugar area which has taken place since the passing of the first Act is much more marked; and when the figures are taken in conjunction with those representing the increasing volume and diminishing cost of beet imports, they fully bear out the conclusion of the Finance Minister that the legislation and the provisions of the Sugar Convention to which it gave place have not achieved their object so far as India is concerned.

All the best-informed auguries portend a European beet crop not less than that of last year, unless indeed the abnormal climatic conditions reported from Europe should be maintained and be found to have caused injury.

Provisions.-The term "provisions" as applied to foreign merchandise covers a number of heads and several of these are of very comprehensive character though of relatively small amount. Dried fruits, for instance, which represent a value of R70\%6 lakhs, and consist mainly of almonds, cover many other fruits imported in smaller quantities. The largest single item under Provisions is that of dates which now represent!a total value of some $\mathrm{R}_{44^{\circ}} 9$ lakhs. The trade in salted fish continues to grow and reached a sum of $\mathrm{R}_{3} 0^{\circ} 9$ lakhs in 1905-06. The steady increase in the imports of foreign biscuits is an example of the acquisition of new tastes by the people of India. So far is the establishment of certain biscuit factories in India from having injured the import business that it has probably familiarised the purchasing public with an article formerly unknown and so extended the demand. The comprehensive category of "other sorts" amounted to R69 lakhs which represents a small decline, while the value of the whole class was R2. 39 crores against R2•16 crores in 1904-05.

Salt.-The important points about Salt in India in recent years are the successive reductions of salt duty and the growth in consumption. These have been as follows:

| [__工 Duty |  |  |  | , |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | British India excluding Burma | Burma | Consumption tons | Increase per cent | 2 |
| 1902-03 | - | R2-8 and R2 | RI | 1,346,830 | 3'05 |  |
| 1903-04 | - . | R2 | " | 1,381,344 | $25^{6}$ |  |
| 1904-05 | - | $\mathrm{R}_{2}$ and RI-8 | " | 1,437,499 | 407 |  |
| 1905-06 | - . | $\mathrm{R}_{1}=8$ | " | 1,496, 186 | 408 |  |
| 1906-07 | months) | RI-8 | " | 347,010 |  |  |

'The imports of salt also increased in each of the two years .1903-04 and 1904-05; but in neither of these did the figure reac $h$ the level attained in 1901-02 when 516,231 tons were imported. In 1905-06, however, there was a decline of tbout 4.3 per cent to 465,875 tons with a value of R $65^{\circ} 92$ lakhs. This was due, n great part to the political boycott of foreign goods. The price of Liverpool ialt ex warehouse in Calcutta was $\mathrm{R}_{4} 8$ per 100 maunds ( $8,271 \mathrm{lbs}$ ) in April 1905, leclined to $R_{47}$ in May, hardened till it stood at $R_{49}$ to $R_{51}$ in July and lugust, then abruptly broke to R43 to 45 in September. Since that time it has rradually stiffened with little trade passing and stood at R53 at the close of the inancial year.

Liquors.-These are divided into three groups, malt-liquors, spirits, and ines. In all three classes there was substantial progress in 1905-06.

In respect of beer a general resort to the lighter and cheaper descriptions is marked by the discrepancy between the rates of increase in respect of quantity on the one hand and of value on the other. In quantity the increase to $5,002,593$ gallons was one of 8.6 per cent, but the rise in value amounted only to $4^{\circ 2}$ per cent bringing the total to some R63 lakhs. This trend of trade also naturally brought with it a relative decline in the position of the United Kingdom as a source of supply, and it now furnishes only $91^{\circ 2}$ per cent of the total while Germany contributes some 6.7 per cent and other foreign countries about 2'i per cent.

But it must be borne in mind that these import figures do not represent the consumption of beer in India seeing that in 1905.06 Indian breweries produced $5,994,955$ gallons, which is less by 224,806 gallons than in 1904.05 and less by 479,905 gallons than in 1902.

The same factor of indigenous production must be kept in view in respect of spirits. The following statement shows the totals in gallons of all spirits including liqueurs and methylated and perfumed spirits imported from the several principal countries:

| pror | 1903-04 | 1904-05 | 1905-06 |
| :---: | :---: | :---: | :---: |
| From United Kingdom | 784,981 | 772,350 | 855,049 |
| " France | 220,208 | 252,815 | 281,399 |
| " Germany | 218,607 | 195,579 | 209,478 |
| Other countries | 213,934 | 253,054 | 315,051 |
| Total | 1,437,730 | $\underline{1,473,798}$ | 1,660,977 |

The quantities of spirits issued from Indian distilleries were $8,439,167$ gallons in 1903-04 and 8,744,302 gallons in 1904-05.

The potable spirit imported from "other foreign countries" is chiefly arrack from Ceylon, rum from the Straits and gin from Holland.
.The quantities of the principal descriptions of potable spirit imported were (in gallons) :

|  |  | 1903-04 | 1904-05 | 1905-06 |
| :---: | :---: | :---: | :---: | :---: |
| Whisky | - - | 606,805 | 589,723 | 664,010 |
| Brandy | . . | 363,359 | 372,723 | 406,569 |
| Gin | $\cdots \cdot$ | 78,897 | 76,131 | 79,049 |
| Rum | , | 66,766 | 70,609 | 84,619 |
| Other sorts | - - | 183.570 | 193,812 | 187,124 |
| - | Total | 1,299,397 | 1,302,998 | 1,421,371 |

In the Gasette of India of January 27th, 1906, Part IV, will be found the text of the Indian Tariff Amendment Act of 1900 which came into force on the 26th February 1906 and which raised the rates of import duty on ordinary spirits from R6 to $\mathrm{R}_{7}$ per imperial gallon and on liqueurs and perfumed spirits to a rate corresponding with that on ordinary spirits. The Hon'ble the Finance Minister in introducing the Bill explained that it was designed to place imported spirits on a par with native spirits in the matter of taxation.

For some years there has been a fairly constant decline in the value of wines imported; but in 1905-06 there has been a substantial recovery of sorne 71 per cent in quantity bringing the total to 342,135 gallons. The value on the other hand has risen by $130^{\circ} 6$ per cent to some R29.75 lakhs which marks the converse of that decline in average value which was noticed in the case of beer.

Spices.-There has been a further increase of 2.2 per cent in the quantity of spices imported and an improvement of 5 per cent in the value which now
reaches $\mathrm{R}_{108}$ lakhs. Of this betelnuts represent $\mathrm{R}_{74} 43$ lakhs which is 4.2 per cent above the figure of 1904-05. The total quantity received amounts to some 47,191 tons. Of this total some $86^{\circ} 1$ per cent are derived from Straits Settlements and $65^{\circ} 7$ per cent are received at Calcutta, 20.9 per cent going to Madras. Of cloves from Zanzibar the total quantity imported was 3,132 tons with a value of $\mathrm{R}_{21} \mathrm{H}_{3}$ lakhs. This marks an increase of 17.5 per cent in quantity but only $\mathrm{R}_{2} \cdot 64$ lakhs'in value seeing that the price fell away about 3 per cent from the high level attained in 1904-05.

Tea.-The imports of foreign tea-which includes tea from Ceylon-remain fairly constant. The quantity rose from $3,734,579 \mathrm{lbs}$ to $3,799,225 \mathrm{lbs}$, while the value declined from $\mathrm{R}_{1} 8.96$ lakhs to $\mathrm{R}_{1} 8.35$ lakhs., This gradual decline in the specific value of the teas imported arises from the 'increasing predominance of Ceylon teas as against the dearer teas of China, and in this particular year from a common fall in price. The tea imported from Ceylon had an average value of $5^{\circ} 9$ annas per lb , while that from China stood at 10.1 annas, with the effect that, while the total quantity of imported tea increased by 17 per cent, the total value decreased by $3^{.2}$ per cent. Ceylon tea increased from $\mathbf{x}, 6 \mathbf{\pi} \mathbf{2}, 608$ lbs to $1,741,838 \mathrm{lbs}$ or 8 per cent, while China tea showed an increase of 3.5 per cent to $1,379,067 \mathrm{lbs}$, green tea alone advancing by 5.5 per cent to $1,107,8_{4} \mathrm{I}$ lbs. Estimates of re-exportation, more particularly by land, must be taken with some reserve; for on the inland routes the differentiation between foreign and Indian tea is probably imperfect. But if the figures be accepted as correct it would appear that a quantity of some $4,951,000 \mathrm{lbs}$ of imported tea were retained by India, $782,000 \mathrm{lbs}$ being re-exported by sea and 563,000 by land. This makes a total re-exportation of $1,345,000 \mathrm{lbs}$ of which $\sigma_{3} \cdot 2$ per cent was black tea.

## METALS AND MANUFACTURES OF METALS.

Hardware and Cutlery.-From the following statement it mill appear that the imports of Hardware and Cutlery have declined by about $4{ }^{\circ} 5$ per cent :

|  | $\begin{gathered} 1903-04 \\ R \end{gathered}$ | $\underset{\mathrm{D}}{1904-05}$ |  |
| :---: | :---: | :---: | :---: |
| Cutlery | 12,55,499 | 14,95,436 | 14,05,068 |
| Agricultural Implements | 7,38,185 | 7,85,577 | 8,28,810 |
| Other implements and tools | 11,16,793 | 11,33,090 | 13,23,570 |
| Enamelled iron ware | 18,13,2 II | 17,00,785 | 13,23,463 |
| Sewing machines | 10,08,458 | 10,06,625 | 10,86,045 |
| Unspecified hardware | 1,73,46,157 | 1,76,70,954 | 1,67,50,521 |
| Total | 2,32,78,303 | 2,37,92,467 | 2,27,17,477 |

Of the total, the United Kingdom increased its percentage to 68.8 but showed an absolute falling off of about i lakh. Germany marked an absolute increase of about the same amount; but since Belgium showed a decline of some $\mathrm{R} 98,000$ it may be taken that a considerable part of these particular differences is due to greater accuracy in classification as to country of origin. It is probable however that a substantial quantity of the Hardware and Cutlery still ascribed to Belgium really emanates from Germany. The two countries together have increased their absolute share of the total by some $\mathrm{R}_{22,000}$ and now represent $19^{\circ} 4$ per cent of the total as against 18.6 in the previous year. The most notable declines are in Austria-Hungary, which has fallen away to 5.6 per cent of the total, and in Russia, whose participation has almost ceased for the present. In enamelled ware Austria used to be supreme; but in $1905-06$ her share has receded from 62 per cent to 40 per cent, while

Germany's has advanced from 31 per cent to 54 per cent, The total under "Unspecified Hardware" has been diminished by the new classification under which umbrella fittings imported for use in manufacture, with a value of $\mathrm{R}_{14}{ }^{\circ} 15$ lakhs, are transferred to the heading "Umbrellas." Lampware, which has also been distinguished this year for the first time, is found to contribute $\mathrm{R}_{1} 6.86$ lakhs to the total of unspecified hardware, which now represents seven-tenths of the grand total.

Metals.-The imports of metals continued to increase, the quantity in $1905-06$ having risen from 504,160 to 549,863 tons, while the total value declined from R93I 9 lakhs to Rgo 6 lakhs. It is unusual to find in so large and composite an item a quantitative increase of 9 per cent accompanied by a decrease of 2.9 per cent in value; and the explanation is to be found both in the cheapening of the metals most largely used and the restriction of the imports of certain metals of relatively high specific value the prices of which have been exceptionally strong; as, for instance, copper in which the decline amounts to no less than R67.5 lakhs. This metal represented in 190506 only $15{ }^{\circ} 8$ per cent of the total value of metals imported, as against 22.6 per cent in 1904-05, while iron and steel have gone up from 65.8 per cent to $73^{\circ} 4$ per cent of the total value.

Copper.-It will be remembered that in 1904-05 the imports of copper showed an incipient decline, doubtless on the satisfaction of the more urgent requirements and in response to the elevation of price. In the past twelve months this decline has become marked and has amounted to $3^{6} 5$ per cent of the quantity and $3^{2}$ per cent of the value. Both wronght and unwrought descriptions share in the decline. Unwrought fell to 22,661 cwts, or R12'66 lakhs, the contraction in quantity being one of 67.8 per cent, and in value $65^{\circ} 5$ per cent. The average value was $\mathrm{R}_{55} \cdot 8$ per cwt. Wrought copper, which represents 91 per cent of the whole copper imports, fell 30.4 per cent in quantity and 25 per cent in value, the actual receipts amounting to 247,295 cwts with a value of $R_{130}$ lakhs. The general contraction is a phenomenon of the extraordinarily high level of copper prices throughout the world. These prices at the close of the financial year ruled higher than at any time since 1888 ; but, whereas in that year the rise was operated by speculators in France, the present high levels may be accepted as due to a real industrial demand of exceptional intensity. The abnormal consumption of copper during recent years has depleted stocks; buyers have been working as far as possible from hand to mouth in expectation of a fall; and now the extraordinary activity of the engineering industries has carried prices to an extreme level.

Iron and Steel. The year 1905-06 was one of exceptional activity and of improved prices in the iron and steel trades. The revival was first felt in America where business generally has been extraordinarily prosperous; and it gradually took effect in the United Kingdom and in India after midsummer, when the development of the engineering industries and the increase in shipbuilding intensified demand. The extent of the expansion during 1905 may be gauged by the following statistics of the production of pig-iron in the three principal producing countries ${ }^{\circ}$ :

In the United Kingdom the average price of Cleveland warrants was 49s. 6 d. in 1905 against 43 s. 3 d. in :904.

In $1905-06$ the price of Iron Bars on April 6th 1905 was R4-4-0 per cwt. It gradually declined to $R_{3-14}$ at 20th July, rose to $\mathrm{R}_{4-7}$ at 22 nd February 1906, and on 15 th March stood at R4-4.

The following gives the total values of the Imports of Iron and of Steel distinctly and conjointly in each of the last five years :

It will be seen that while the total of Iron was exeeeded in 1904-05, the fall being one of $7 \cdot{ }^{\prime}$ per cent, there has been an increase of $34^{\circ} 7$ per cent in Steel.

This is in accord with the general trend of trade throughout the world; and though the United Kingdom is dwarfed by the United States and by Germany in the production of Steel, the Board of Trade returns show that she imported of hematite pig iron 20.5 per cent more in 1905 than in 1904.

The monthly importations of Iron and of Steel, respectively, in 1905-06 compare as follows with the monthly averages for each of these metals during the previous two years.

The year has seen the establishment of several combinations among producers of special grades of goods, as for example steel rails and galvanised sheets. The effect of the former was to raise the average price from $\mathcal{E}_{4}: 1 .$. to about $£ 6$ while in the latter the enhancement was one of about $£^{2} 15$ per ton. Imports of galvanised sheets into India in $1905^{-06}$ have decreased by $3^{1} 1$ per cent, i.e., to $13,45,143$ cwts, with a value of RiI 7.9 lakhs.

A calculation of the average value per cwt of Iron or Steel imported has only a limited value, for the descriptions of goods comprised under these heads
vary greatly and fluctuations in the relative quantities of the various descriptions affect the average value of the total as much as a general movement in the level of prices. . Comparison, however, shows that in Iron there was a fall of average value by 2.5 per cent, i.e., from R7-6-4 to R 7 -3-5 while in steel there was a rise of $2 \cdot 64$ per cent, i.e., from $R_{5-S}-6$ to $R 5-10-10$ per cwt.

From the statement below it will be seen that there was an absolute contraction in the receipts from the United Kingdom which supplied only $33^{\circ} 9$ per cent of the total quantity and $61 \cdot 5$ per cent of the total value as against 60.5 per cent and 676 per cent in $1904-5$.

|  | United Kingdom |  |  | Germany and Betgium |  |  |

It will be observed also that while the United Kingdom improved her position absolutely in respect of steel alone, Germany and Belgium registered an advance in both departments. The tin plate trade has been subject to a good many disturbing influences in the past year, on the one hand the great rise in the price of tin, and on the other hand the enormously increased production of plates with accumulation of stocks. The imports of this class of goods fell away 5 per cent to a value of about $R_{3} 6 \cdot 9$ lakhs. A furthe $r_{r}$ decline in the value of pipes and tubes used in connection with the oil industry brought the total down to one of $\mathrm{R}_{3} 8 \cdot 2$ lakhs.

Lead.-Imports of Lead have risen slightly to a value of about $\mathrm{R}_{19}$ lakhs, the average value having ${ }_{i}$ declined from $R_{13-11-8}$ to $R_{13-3-3}$ per cwt . The United Kingdom supplied sheets for tea chests to the value of R1066 lakhs against R12.89 in the previous year, while the imports in this class from other countries rose from about $R_{4,000}$ to $R_{5} 8,000$; the average value was in the first case $R_{16-4-11}$ per cwt and in the second $R_{12-12-4}$.

Tin.-Tin is associated with copper in the constitution of materials used in certain industries that are now exceptionally active; and the two metals often share common vicissitudes of demand and price. This association received formal recognition from the circumstance that the two metals fell conjointly within the operations of the famous "secretan" group of 1888. It has recently been well marked in the course of the two trades not only throughout the world but in India in particular. Professor James Douglas in the American Engineering and Mining Fournal recently showed that the demand for copper bears a fairly constant relation to the demand for pigiron. It would probably be equally easy to establish the existence of a relation between tin and copper; each of the
metals was formerly the subject of continual speculation; and it is possible that holders, like those of other commodities in abnormal dernand, do nothing to minimise the conditions that make for the rise. But there is good reason to believe that those conditions have a very real existence. As in the case of copper so in the case of tin, the prices now ruling are the highest since 1888. And in each case it seems fairly clear that consumption has entirely outstripped production, but the conditions and their effects are more pronounced in the case of tin. The American Fournal of Commerce of the 9 th April quoted $£_{1} 74$ per ton as having been recently paid in London as compared with $£_{170}$ in 1888 , and it hinted that the advance might proceed to $£ 200$. An article in the Times' Financial and Commercial Supplement of $14^{\text {th }}$ May reproduced most of the facts, figures, and opinions in the New York paper but added that on 12th May $£^{204}$-ios. was actually paid. This represents an advance of over 110 per cent on the $£ 97$-10s. recorded at the end of 1901, and of about $5^{1}$ per cent on the price of twelve months ago. Whereas the consumption in 1888 was only from 60,000 to 63,000 tons, in 1905 it was from 90,000 to 93,000 tons, and this in spite of great economies adopted in the methods of tinning and soldering. About half of the world's tin is derived from the Malay Archipelago; and practically the whole of India's imports during $1905-06$ came from that source. But while the quantity imported in $1905-06$ declined some 46 per cent, the value fell only $37^{\circ} 5$ per cent, that is to say, from R $39^{\circ} 4$ lakhs to $\mathrm{R}_{24} 4^{\circ} 9$ lakhs.

Machinery.-The continuous growth in the importation of machinery is one of the most healthy features of Indian trade, and has been remarkable in the year 1905-06. In the three years before the, cycle of bad seasons arrested the economic growth of the country the figures were as follows: 1894-95, $\mathbf{R}_{244 *}{ }^{\circ} 24$ jakhs; 1895-96, R $\mathbf{3}_{3} 3.74$ lakhs; 1896-97, $\mathrm{R}_{350}{ }^{\prime} 9$ lakhs. This last figure remained the record till 1904-05, when $\mathrm{R}_{402} 7$ lakhs was attained. In 1905-06 this has been exceeded by no less than $22^{2} 2$ per cent, which brings the total value to R491.97 lakhs, the net increase being R89.24 lakhs. The year has been exceptional, more especially in respect of the great activity in the textile industries ; and although the installation of new cotton and jute plant is proceeding actively, it is doubtful whether the same rate of progress can be maintained in the current year. Bengal imported machinery to the value of R236 lakhs which is 20.6 per cent above the figure for $1904-05$. Almost the whole of this increase of $R_{40} \cdot 27$ lakhs is accounted for by the increase from R94.25 lakhs to nearly $\mathbf{R}_{125}$ lakhs in jute machinery, while in Bombay the increase is due to additions to plant in cotton mills. In Bombay the increase has exceeded that in Bengal and amounts to R $54^{\circ} 5$ lakhs or $44^{\circ} 9$ per cent of the value for that port in 1904-05. The total value is $\mathrm{R}_{175}{ }^{\circ} 6$ lakhs against $\mathrm{R}_{121}$ lakhs in the previous year. The extent to which the extraordinary activity of the year was, however, confined to the two main textile industries is emphasised by the fact that in the provinces other than Bengal and Bombay the value of machinery imported actually receded from R 85.8 lakhs to R 803 , the fall being one of 6.4 per cent. The totals of the various classes of machinery imported into all India were as follows:

Railway Material.-The expansion in the imports of Railway material (State and private) has been fairly continuous in the last lour years. In 1902.03 these imports represented $\mathbb{R}_{53} 6$ lakhs, in 1903.04 they rose to $\mathbb{R}_{5} 6_{3}{ }^{\prime} 7$ lakhs, in $1904^{-0}$ there was a slight drop to $\mathrm{R}_{5} \mathrm{~K}^{\circ} \cdot 5$ lakhs, but in $1905-06$ this was more than made good by a rise to $\mathrm{R} 673^{\prime} 73$ lakhs. These figures include rolling stock and comprise imports for private lines ( $\mathrm{R}_{1} 6_{2} 2_{2}$ lakhs) and for State Railways ( $\mathrm{R}_{51}{ }^{1} 5$ lakhs). In official returns imports for State Railways are kept distinct from the movements of private trade; and under these conditions such modification of the figures as necessarily attends the progressive acquisition of lines by the State might well give an impression that the quantity of Railway material imported was diminishing.

## CHEMICALS, DRUGS, MEDICINES, NARCOTICS, DYEING, AND TANNING MATERIALS.

Chemicals. - The value of the imports of chemicals increased from R61.3 lakhs to R68"g lakhs. The heading "Chemicals for paper making" which represented $\mathrm{R}_{7} \cdot 74$ lakhs in 1904-05 has been abolished, and the following new sub-heads have been introduced. Bleaching materials, $\mathbf{R}_{2} 21$ lakhs; Calcium carbide, R1 lakh; Cyanide of potassium, R2.25 lakhs; Disinfectants R2.11 lakhs; Soda, caustic, $\mathrm{R}_{5} 46$ lakhs; Soda, other sorts, R92,000. This last head does not include Bicarbonate of soda which has long been shown separately and which amounted to R3.99 lakhs.

The class "Other scrts" which has been considerably reduced by the creation of the new sub-heads, still represents some 58 per cent of the total.

Drugs and Medicines.-The imports of Drugs and Medicines, which represented $\mathrm{R}_{7} 0^{\circ} 74$ lakhs in $1904^{-05}$, fell back in $1905^{-06}$ to $\mathrm{R}_{6} 7^{\circ} 57$ lakhs or slightly less than the figure at which they stood in 1903-04. Camphor was received to a total value of $\mathrm{R}_{13} \cdot 3^{8}$ lakhs as compared with $\mathrm{R}_{16} 6{ }_{17}$ lakhs in the previous year. This represents a decline of 17 per cent in value as against a quantitive decline of 40 per cent; so that the average value per lb which rose 17 per cent in 1904-05 rose by a further 37 per cent in $1905-06$. On the other hand, the average value of quinine declined as much as 55 per cent, with the effect that the imports while showing an increase of 112.6 per cent in quantity marked a fall of 5.5 per cent in value to R6.5 lakhs. "Proprietary and Patent medicines" are now distinguished from "Other sorts" for the first time and show a value of $\mathrm{R}_{12}{ }^{\circ} 54$ lakhs. Other sorts represent $\mathrm{R}_{24}{ }^{\prime 7}$ la lakhs only, but this figure in combination with that for Proprietary and Patent medicines marks an advance on 1904.05.

Tobacco.-The increase in the importation of cigarettes of the cheaper descriptions is maintained, and that importation continues to be the only progressive feature of the tobacco trade. Ten years ago the imported cigarette was scarcely known to the native community. In 1905-06, in spite of an agitation for preference of the indigenous article, the imports represented some $3,119,047$ lbs or about 1,040 million cigarettes, while the value amounted to $\mathrm{R}_{45}$ lakhs. This marks an increase of 23.8 per cent on the large total quantity recorded in 1904-05, and of 167.6 per cent in the course of the six years since the article was first distinguished statistically. Of the total of $R_{45}$ lakhs, $R_{28.25}$ lakhs came from the United Kingdom, R1i44 lakhs from the United States, $\mathrm{R}_{1} \cdot 5^{\prime}$ lakhs from Japan, Straits Settlements, and the Treaty Ports of

China, and only $\mathrm{R}_{3} \cdot 13$ lakhs from Egypt. This last represents the best qualities and the only class of cigarette in which a contraction had taken place. The average value per lb from each of the sources was: British, $\mathrm{R}_{\mathrm{I}}$-8-10; American, R1-1-6; Egyptian, R6-4-3; and Eastern 13 annas, the value per 1,000 being roughly three times the value per lb .

The total value of imported tobacco increased by 18 per cent to R65*98 lakhs.

Dyes.-There was a slight recovery in the importation of aniline and alizarine dyes which increased from $10,705,077 \mathrm{lbs}$, with a value of R 7145 lakhs, to $11,604,284 \mathrm{lbs}$ with a value of R 7570 lakhs. These figures represent a rise of 8.4 per cent in quantity and $5 \%$ per cent in value, the average value per lb having declined from to annas 8 pies to 10 annas 5 pies or 2.3 per cent lower. These products are of course derived mainly from Germany where, during 1905, they became the subjects of various combinations among the chief manufacturers. One group was formed by the Badische Anilin Fabrik, Messrs. Friedr. Bayer and Company, and the Aniline Manufacturing Company. A second consists of Messrs. Meister, Lucius and Bruning and Messrs. Casella and Company ; while perhaps the most important in its bearings on India is that of the Badische Anilin und Soda Fabrik with Messrs. Meisters, Lucius and Bruning for fixing the price of synthetic indigo and terminating the acute competition that has hitherto prevailed. Bombay continues to be the principal port of entry, about 80 per cent of the imports being received there. Of alizarine the imports increased from $5,875,708 \mathrm{lbs}$ with a value of $R_{3} 0^{\circ} 53$ lakhs to $6,297,577 \mathrm{lbs}$ with a value of $\mathrm{R}_{3^{2}}$ lakhs, the average value declining from As. 8 p. 4 to As. 8 p. 2 per lb.

## -. OILS.

Mineral Oil.-The total value of all mineral oils imported in 1905-06 was $R_{222} 9$ lakhs or $\mathbf{3}^{2}$ per cent less than in 190400 . Of this total $R_{1}^{\prime} 7^{\circ} 3$ lakhs or just 80 per cent related to kerosene.

The trade in kerosene has entered on a new phase in 1905.06 as a consequence of the arrangement made between those companies that have hitherto contended for the Eastern markets. It is well therefore to review the imports of the past ten years ; and in the interest of brevity this must be done tabularly. The first of the following statements shows the quantities in thousands of gallons received from each principal source in each year. The second statement shows the value of imports in thousands of rupees.

The following figures may be accepted as an approximate estimate of the Burma production in the same period:

The equivalent of kerosene to crude oil is about 50 to $115^{\circ} 9$, or $43^{\circ} 2$ per cent nearly.
The prices of kerosene in Calcutta have ranged as follows:

| A verage 1896-97 | American | Russtan |  |  | Burya |  | Bornio <br> Cobra. per a tins | Sumatra <br> Silver light per case |

It will be seen that in $1905-06$ the imports of foreign kerosene declined by 33 per cent in quantity and 40 per cent in value. On the other hand, the shipments from Burma to India proper increased by io per cent in both respects.

The decline of imports amounted to 21 million gallons in the case of Russia and 6 millions in the case of Sumatra and Borneo, while an increase of 13 millions occurred in the arrivals from America. Case oil continues to give place to bulk oil importation, and more than half of the above decline in total imports is to be traced to the falling off of $11 \frac{1}{3}$ million gallons in arrivals of case oil from Russia alone (this'being due to the destruction and anarchy that prevailed in the Russian oil region) an increase of $1 \frac{1}{2}$ million from America being offset by a loss of similar amount in the arrivals from Italy.

The prices of American Chester oil, the standard illuminant, have been very steady, taken over a period of ten years. The average price per case in $1896-97$ was R4*3-3 and in the year under review R4-2-91 . The monthly averages, however, show considerable fluctuations, the highest being R4-ro:o in March 1906, and the lowest R4 in April, June, July, August, September and October 1905.

In imports of other mineral oils, mainly for lubricating, there was an increase from $7,441,100$ to $10,157,326$ gallons, while a further $3,520,316$ gallons nere received from Burma.

The imports of fuel oil, this year distinguished for the first time, amounted to 716,306 gallons with a value of R90,201. This description was formerly included under the heading " other kinds of mineral oils." The chief sources are Borneo and, as éntrepott, the Straits Settlements. The receipts in Bombay fell from 727,370 gallons to 436,774 gallons, while 613,007 gallons were received at Karachi.

## RAW MATERIALS

Coal.-The decline in the importation of foreign. coal continues as the Indian production increases, and the trade is now governed largely by considerations of freight obtainable on the return journey. The quantity of private imports, which under exceptional conditions showed a considerable rise in 1904-05, has gone back from 252,000 tons to the level at which it stood in 1903-04, namely 180,000 tons; but the value of $\mathrm{R}_{32} \cdot 12$ lakhs falls short of the earlier year's figure by some $4^{\circ} 9$ per cent. The contribution of the United Kingdom declined from 177,100 tons to 137,700 tons with a value of R26 lakhs; while Japan sent only 27,862 tons with a value of $\mathrm{R}_{3} \cdot 8$ lakhs or about half of the quantity she supplied in $1904-05$. The remaining 14,300 tons came mainly from Australia, Ceylon, China, and Italy. Imports of British coal by Government amounted to only 6,976 tons with a value of Ri•I lakhs. For particulars as to the production of Indian coal reference should be made to the chapter relating to Exports of coal.

Silk.-The crops in France, Hungary, and the Levant were good, and with the heavy stocks from the 1904 campaign silk prices in April 1905 were low. But towards September they rose greatly as a result of bad reports from Italy and Japan and a revival of demand in America and Russia. On the average, prices were perceptibly higher than in 1904. The imports into India receded from $1,858,700 \mathrm{lbs}$ with a value of $\mathrm{R}_{7} 3^{\prime} 4 \mathrm{I}$ lakhs, which had marked a rise of 24 per cent on the figures of the previous year, to $1,645,700 \mathrm{lbs}$ with a value of $\mathrm{R}_{71}{ }^{\circ} 19$ lakhs. The fall in total value was, therefore, one of 3 per cent, although the average value rose by 9.4 per cent, that is to say, from $R_{3-1}{ }^{-3-3}$ to $R_{4-5-2}$ per lb . Of the above total of R71'19 lakhs, Bombay took R $57^{\prime \prime} 9$ lakhs and Burma

Ri3. lakhs. Direct imports from China, at $1,356,912$ lbs, were short of the previous year's figures by $107,48 \mathrm{~g} \mathrm{lbs}$ or 7.3 per cent; and those from the Straits Settlements, at $180,747 \mathrm{lbs}$, showed a decline of 46.9 per cent.

The Imports of Cotton in $1905-06$ declined from 192,554 cwts to $161,476 \mathrm{cwts}$; but when it is remembered that two years ago the quantity imported was only 18,279 cwts this need occasion no surprise. The value in the year under review receded from R63.8 lakhs to R 54 lakhs, so that the decline was one of 16.1 per cent in quantity and 15.4 per cent in value, the average value of the imports having decreased by a per cent. Foreign cottons are used mainly for spinning counts higher than the Indian staple lends itself to; and the strong demand for coarse yarns throughout India and the East enabled Indian manufacturers to dispense with the imported article at the relatively high prices asked. For American Middling these ranged from $3.81 d$. to $6.4 d$. per lb with an average of $5^{\circ} 09$ d. in 1905 , as against $3^{\circ} 63 d$. to $8.7 d$. with an average of $6.6 d$. in 1904: while Egyptian (good, fair, brown) ranged from $6.25 d$. to $8 d$. with an average of $7 \cdot 13 \mathrm{~d}$. for 1905 , against $6.75 d$. to $10 \cdot 06 d$. with an average of $8 d$. in 1904 . About 94.7 per cent of the total quantity imported is American shipped mainly from the United Kingdom with smaller quantities from the United States and Germany. The slight increase of imports from Persia which now amount to $1,708 \mathrm{cwts}$ is interesting, and favourable reports have been received regarding its qualities. .

The Imports of precious stones and pearls, unset, as recorded in the trade accounts, probably bear no very close relation to the true imports. It is well known that large quantities of pearls are both imported and exported by post in such a way as to escape record. The values under the heading of precious stones fluctuate very greatly. Whereas in 1904-05 the total dropped by $42^{\circ} 3$ per cent to $\mathrm{R} 87^{\circ} 76$ lakhs, it has risen in $1905^{-06}$ by nearly 53 per cent to $\mathrm{R}_{134}{ }^{14}$ lakhs: Nearly balf the increase arose in pearls from Muscat and the Persian Gulf. These advanced from $\mathrm{R}_{45}$ lakhs to R68 lakhs, which is $23^{\circ} 6$ per cent more than the average of the last five years; and the shipments from Arabia alone, which represented R62 lakhs of the total, rose by 55 per cent. There was also a large increase in the imports of jewels from the United Kingdom ; and their value advanced by nearly 121 per cent, that is to say from $\mathbf{R}_{22}{ }^{25}$ lakhs to $\mathrm{R}_{49}{ }^{15}$ lakhs. In the case of France, however, there was a continuance of the decline marked in the previous year, and her total shrank to R8. 88 lakhs.

Timber. -The trade in timber has risen from R $5^{8} 8^{\circ} 74$ lakhs in 1904.05 to R82.67 lakbs in 1905-06, the increase being one of 40.7 per cent and following an increase of 37 per cent in the previous year. Of the total imports, R61.43 lakhs or 74.3 per cent represented the value of teak. Of this, $\mathrm{R}_{52}{ }^{2} 2$ lakhs -or five-sixths-came from Siam which is taking the place of Burma teak. The quantity of teak imported in $1905-06$ was 70,764 cubic tons compared with 46,915 cubic tons in 1904-05, representing an increase of 50.8 per cent. The average price of teak therefore fell $4^{1} 1$ per cent, from R $90^{\circ} 5$ to R86.8 per cubic ton. The imports from the Straits Settlements have also increased considerably: in 1904.05 they were 149 cubic tons, valued at R9,781, while in 1905-06 they rose to 4,764 cubic tons, valued at $R_{4,30,763}$. The trade in timber other than teak has also increased, though not in the same proportion. In 1904-05 the quantity was 28,380 cubic tons, valued at R15.68 lakhs, and in 1905.06 it rose to 37,744 cubic tons, valued at R20'04 lakhs. The largest increase was in the case of the United States the imports from which rose from 2,961 cubic tons, valued at $R_{1,34,910,}$ in $\mathbf{1 9 0 4 - 0 5}$ to 8,869 cubic tons, valued at $R_{3,25,436}$.

## MANUFACTURED ARTICLES

The Imports of Cotton goods in 1905-06 were on an unprecedented scale, and reflected the general activity of the textile industry except in Russia. The attenuation of stocks in China, the establishment of peace in the Further East, and a marked development in the purchasing power of India coincided with greatly increased production of the raw material in America and Egypt and a return of prices to more advantageous levels. In this connection reference may be made to particulars given in those sections of this Review which relate to imports and exports of raw cotton.

The aggregate value of the imports of cotton yarn and of woven and other cotton goods in the last five years (stated in millions of Rupees) has been :

The increase in total value of cotton goods was thus $1 I^{\circ} 6$ per cent or $\mathrm{R}_{43} \mathbf{9 月}^{\prime} 9$ millions.

In Jarns the increase of value was R9.37 millions or 37.7 per cent; while in quantity the increase, as will be seen below, amounted to $15,201,000 \mathrm{lbs}$ or 497 per cent, the decline in specific value thus being one of 7.99 per cent:

| 1900-01 | $34^{\circ} 8 \mathrm{lbs}$ | 1903-04 | 28.0 lbs |
| :---: | :---: | :---: | :---: |
| 1901-02 | 38.3 " | 1904-05 | $30^{\circ} 58$ " |
| 1902-03 | 33.7 ; | 1905-06 | 45.78 " |

Yarns from the United Kingdom, which represent $93^{\circ} 5$ per cent of the whole, increased from $28,021,000 \mathrm{lbs}$ to $42,801,000 \mathrm{lbs}$, the rise being one of 52.7 per cent ; and, since the British exports of yarn in igos showed an advance of $25^{\circ} 7$ per cent on those of 1904 , it may be considered that India took her full share. The imports of dyed and of undyed yarn continue to be of nearly equal value. Of the former, with a total of $23,000,000 \mathrm{lbs}$, about 89 per cent is of British origin, while Italy increased her contribution to $1,000,000 \mathrm{lbs}$ and Austria-Hungary receded to about $600,000 \mathrm{lbs}$. The imports of 40 s mule increased from $6,349,000 \mathrm{lbs}$ with a value of $\mathrm{R}_{43} \mathbf{F}^{\circ} 5$ lakhs to $10,673,000$ lbs with a value of R68.26 lakhs.

Imported Yarn

It is well to compare the imports of coarse, medium, and fine yarns as ren above with the production of similar yarns by Indian mills. In doing so i ould be noted that the local manufacturers have increased their output by 1773 $r$ cent ; but whereas they, hold the market for counts I to 25 and foreign counes make no progress in that class, so the strong demand for indigenous low unt yarns monopolises the Indian spinners' energies and all the expansion in $\geq$ better classes of goods is represented by imports.

The Imports of Cotton Fabrics increased in value from $\mathbf{R}_{35,55,92,000}$ $\mathrm{R}_{39,01,77,000}$ which represents 379 per cent of the total imports of private archandise. The increase is one of 9.7 per cent, bringing the total increase two years to 35 per cent. Some descriptions of cotton goods are not stated yards. It is, therefore, convenient in ascertaining the change of specific value confine the calculation to piece-goods. In this last class the imports reached e e entirely unprecedented level of $2,463^{\circ} 24$ million yards with a value of $3,695 \cdot 35$ lakhs. The increase was $174^{\circ} 85$ million yards or $7 \cdot 6$ per cent in quan$y$, and $\mathrm{R}_{321} \cdot 87$ lakhs or 9.5 per cent in value; the specific value being therere 1.35 per cent higher, assuming that the quantitative relations of the various asses remained approximately constant. The specific value of grey goods in ct rose by 3.7 per cent ; that of white goods advanced by $5 \% 7$ per cent, while loured goods declined by 43 per cent.

The following statement shows in millions of yards the relative importance these three classes in the course of the last sixteen years; and it will be noted at whereas, during the period exhibited, the demand for grey goods did not sep pace with the development in white and coloured goods, the former conibuted by far the greater part of the increase in 1905-06:

The advance in that department was 11.4 per cent, coloured goods following vith $9: 7$ per cent, while bleached goods showed a decline of nearly 2 per cent. Jonsidering the large contributions now made by the Indian mills to the supply ff grey goods, their unprecedented activity in that particular line in the year Inder report and the revival in the hand-loom industry whose output is believed to be double that of the Indian mills, the increase in the imports of these textiles most largely used by the poorer classes must be regarded as a mark of prosperity anong the masses. It is noticeable that Bengal, where there are two cotton-weaving mills, took $998,408,333$ yards or 74 per cent of the total of imported grey goods in 1905-06.

The principal descriptions of imported goods belonging to the three classes are shown in the following statement in millions of yards :

The principal advances are in grey shirtings, dhutis, and jaconets. In mulls there is a slight contraction. The following statement shows, in millions of yards, other descriptions which are imported in considerable quantities. The only really noticeable gain is in white nainsooks which showed a decline in the previous year. This alternation of advance and decline in individual years, is familiar in trade statistics:

|  | 1903.04 | 1904-05 | 1905-06 |

| Cambrics, twills, muslins | $7 \times 52$ | 66.46 | $79^{\prime \prime} 6$ |

The production of the Indian weaving mills consists chiefly of unbleached shirtings,' dhutis, T-cloths, domestics, and chadars, and it increased by $5,100,000 \mathrm{lbs}$ or 3 per cent. The yardage, which is stated only for bleached or unbleached goods but not for coloured or figured, increased by $15,200,000$ yards, the total for this class being $562,900,000$ yards and the weight $133,700,000 \mathrm{lbs}$. out of a total of $163,900,000 \mathrm{lbs}$. for all classes of woven goods.

The extent to which the cotton piecegoods of the three main classes are derived from the United Kingdom is indicated below in millions of yards:

Britain therefore supplies 99.12 per cent of the grey goods, 98.09 per cent of the bleached goods and $95^{\circ} 3^{2}$ per cent of the coloured goods.

Besides these there are certain subsidiary classes of goods imported, the principal descriptions and the value of the trade, in thousands of Rupees, being :

| Handkerchiefs and sharls in the piece |  | 1903.04 | 190405 | 1905-06 |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 26,29 | 25,00 | 34,96 |
| Hosiery . |  | 50,19 | 67,45 | 63,02 |
| Sewing thread |  | 21,09 | 22,78 | 25,61 |
| Other manufactures |  | 41,84 | 67,20 | 82,82 |

The progress in this department thus amounted to R24 lakhs or $1_{132}$ per cent on the figures of the previous year. The United Kingdom supplies 88.5 per cent of the handkerchiefs and shawls, and $85^{\circ} 7$ per cent of the sewing thread. But of the total it does only 45 per cent, seeing that the considerable class of hosiery is practically absorbed by Japan, Italy, Germany, Austria, Belgium and Spain, Of these, Japan further strengthened her position with a total value of R16.9 lakhs in 1905-06 while Ri•35 lakhs of hosiery from Hongkong and the Straits Settlements were also probably Japanese.

Sills Goods.-After three years of continuous progress, the value of imports of silk manufactures receded by $10^{\circ} 2$ per cent to R190'15 lakhs, although the average price improved slightly. Of the contraction of R21.6 lakhs, silk piece goods accounts for $\mathrm{R}_{10} \cdot 8_{3}$ lakhs. In this class Japan continues to predominate and has increased its share from R $50^{\circ} 5$ lakhs to $\mathrm{R}_{59}$ lakhs. China contributes $R_{3} 6 \cdot 5$ lakhs against $R_{33}$ lakhs; but the Straits Settlements, which in 1904-05 was entrepöt for a trade amounting to R18.6 lakhs, now stands at Ro'6 of a lakh. That proportion of the total which is derived from these three sources rose from $8 \mathrm{r} \cdot 8$ per cent to $84^{\circ} 4$ per cent. In goods of silk mixed with other materials the decline was one of 21 per cent and their value contracted to $\mathrm{R}_{34} \cdot 6$ lakhs. "Other sorts" includes warps and yarn of Italian silk imported for the production of wares for the Indian market. This industry is mainly conducted in Bombay, but it appears that hand-weavers upcountry also are coming to rely on the imported yarns. In this class there was an increase of 2 per cent in quantity but a fall of 3.3 per cent in value, the figure being $\mathrm{R}_{4} \mathrm{I}$ lakhs.

Woollen Goods.-In imports of woollen goods there was a reaction of some 21 per cent in 1905-06; and the total value receded from R $307^{\circ} 6$ lakhs to R242.64 lakhs. Of the total decline of R65 lakhs, R26 lakhs are accounted for by piecegoods, which went back from R194.5 to R168.5 lakhs and from $23,742,000$ yards to $19,991,000$ yards. The contraction is therefore, one of $15{ }^{\prime} 8$ per cent in quantity and 13.3 per cent in value, with an enhancement of 3.2 per 'cent in the average value per yard. The share of the United Kingdom in this piecegoods trade went back from $\mathrm{R}_{13} 6^{\circ} 8$ lakhs to $\mathrm{R}_{11} 7^{\circ} 64$ lakhs while Germany's share contracted from $\mathrm{R}_{37}{ }^{\circ} 5$ to $\mathrm{R}_{35} 5$ lakhs. The declines in these two cases were thus 14 per cent and 5.3 per cent; and the two countries now participate in the trade to the extent of 69.8 per cent and 21 per cent, respectively. Nearly $\mathrm{R}_{33}$ lakhs of the total decline occurred under shawls alone, and in this class the figure stated represented a shrinkage of some $54^{\circ} 7 \mathrm{per}$ cent, this percentage holding good approximately in respect of quantity also. Of the total of $\mathbf{1 , 1 1 8 , 2 7 3}$ shawls imported, Germany supplied 927,259 or 82.9 per cent. Hosiery and yarn are this year distinguished for the first time from the general head of "Other sorts". Hosiery represents some $33 \mathrm{x}, 393 \mathrm{lbs}$ with a value
of R8.95 lakhs, of which $91 \cdot 5$ per cent was derived from the United Kingdom. Yarn amounted to 529,390 lbs with a value of 88.67 lakhs, Germany sapplying 51.8 per cent of that value.

Other manufactured goods.-Of other manufactured goods the following are the most important:

The most notable increase among these twenty-one articles is that of $\mathrm{R}_{21,77,585}$ or $39^{\circ} 6$ per cent in carriages and carts. This heading includes". Motor cars and Motor cycles R $34^{\circ} 99$ lakhs; and Cycles R15.4 lakhs.' From 1906.07, motor cars and motor cycles, which already exceed in value the total imports of books and printed matter, will be shown separately. In Books, etc., however, the progress is fairly constant. They increased by 1.6 per cent or $\mathrm{R}_{3}{ }^{2} 47$ lakhs. Printing paper decreased in the same ratio to a total of $\mathrm{R}_{2} \mathrm{r}_{3}{ }^{\circ}$ lakhs with a slight increase in the value per cwt. Other kinds of paper increased from R2I lakhs to $\mathrm{R}_{26} 5$ lakhs, but the average value in this case has apparently fallen by some 10.4 per cent. Building materials show an increase of $\mathrm{RrO}^{\circ} 7$ lakhs or $30^{\circ} 3$ per cent. The trade in Matches has revived greatly since the resumption of imports from Japan, and that in Earthen-ware and Porcelain shows a healthy growth in each of the last three years, while ${ }^{\text {' }}$ imports of Leather and manufactures of leather have risen by $21^{\circ} 4 \mathrm{per}$ cent to $\mathrm{R}_{3} 0^{\circ} 61$ lakhs. In spite of the importation of a large quantity of umbrella fittings for use in manufacture, the receipts of the finished umbrellas increased by 4.4 per cent, but are still considerably below the total in 1903-04. Umbrella fittings have hitherto been included in "Hardware" and are now distinguished for the first time. The steady growth in the imports of soap is worth noting. There are indications that the natives of India, who wash very frequently, are learning the merits of soap and the trade is one with great possibilities.

Apparel seems to have called a halt for the moment; and several of the articles which showed the most marked advances last year have receded in

1905-06. This often results from the accumulation of stocks; but the apparent contraction of soientific instruments and apparatus by nearly $50^{\circ} 6$ per cent is due to the separate specification of "Electrical," "Surgical," and "Optical" instruments formerly included under this head. If these three items were included the head "Scientific Instruments" would show an increase of R64.5S lakhs or $3^{\circ}{ }^{\circ} 4$ per cent. The value of Electrical Instruments was $\mathrm{R}_{3} 0^{\circ} 5$ laths.

In the following list, which shows in thousands of rupees the value of the principal articles of import in the last three years, it is interesting to note how the large increases in cotton manufactures, sugar, iron, and machinery reflect the well-known features of the year throughout the world and how a decrease in copper coincides with remarkable rise in the price of that metal.

|  | $1503-04$ | 1904.05 | 1905-06 |

The large contraction in the imports of foreign mineral oil are ascribable to causes detailed in the chapter relating specially to that article.

The Sources of Imported Merchandise are, in the trade accounts of India, assumed to be those countries from which the goods were shipped in
such vessels as landed them in India. "In the case of transhipment cargo, the port of such transhipment therefore appears as the port of origin unless a through Bill of Lading was granted at the port of original shipment. When such through Bill of Lading has been granted, the country of first shipment is assigned as the country of origin. Arrangements have now been made, and will shortly come into force, by which the true countries of origin will be more correctly ascertained; but it will be necessary for some years to conduct retrospective comparisons on the basis of the old system. According to that old system, the value of the imports was distributed among the various principal countries in the proportions indicated below:

|  | 1901-02 <br> per cent | 1902-03 <br> per cent | 1903-0. 4 <br> per cent | 1904-05 <br> per cent | 1905-46 per cent |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1. United Kingdom | 64.5 | $66 \cdot 3$ | 649 | 65.2 | $65 \cdot 7$ |
| 2. Belgium | 37 | 3.9 | 3.9 | $3 \cdot 6$ | $4 \cdot 3$ |
| - 3. Germany . | 37 | 2.7 | 3.4 | $3 \cdot 9$ | $4 \cdot 2$ |
| 4. Austria-Hungary | $4 \cdot 8$ | $3 \times 2$ | $2 \cdot 6$ | $4 \cdot 1$ | $3 \cdot 9$ |
| 5. Straits Settlements | 2.9 | $2 \cdot 9$ | $2 \cdot 9$ | $3^{2}$ | 2.4 |
| 6. United States | 1.4 | 1.5 | 15 | $1 \cdot 1$ | $2 \cdot 2$ |
| 7. Mauritius | 2.4 | $2 \cdot 5$ | 31 | 21 | 2 |
| 8. Java | 5 | 7 | 14 | $2 \cdot 1$ | 1-8. |
| 9. China | $2 \cdot 2$ | 2.8 | $2 \cdot 3$ | 2 | 17 |
| 10. France | $1 \cdot 7$ | 1.8 | 19 | $1 \cdot 9$ | $1 \cdot 7$ |
| 1.1. Japan | -97 | 1. | 1:5 | $1 \cdot 2$ | $1 \cdot 2$ |
| 12. Italy | $1 \cdot 2$ | - 1 | $1 \cdot 1$ | 13 | $1 \cdot 1$ |
| 13. Russia | 3.9 | 3.4 | 2.9 | 17 | 3 |

The United Kingdom has increased its predominance. Belgium appears to hold second place with 4.3 per cent; but it is well known that large quantities of German goods, being shipped from Belgium and Dutch ports, are erroneously credited to these countries. There can therefore be no doubt that Germany really occupies the second place. Austria-Hungary, in spite of her enormous shipments of sugar, has ceded the second place, which she held by virtue of the diffusion of Germany's total; but the decline was only relative. Java and 'Mauritius, as the representatives of cane sugar, have nearly maintained their position, having indeed had the sugar trade pretty well to themselves about July 1905; while the United States have doubled their share. Russia has for the present practically dropped out of the table; but Japan has retained her percentage of the increased total. The importance of China's direct shipment has diminished, and there has also been a fall in imports from the Straits Settlements which, as a port of transhipment, does much to confuse the statistical records of the East.

Imports of Government Stores are not included in these figures. These are large, amounting to R902.7 lakhs in :905-06 as against R773 lakhs in 1904-05; and the share of the United Kingdom in this part of the trade, while showing a relative decline from 94 per cent to 90 per cent of the total, marked an absolute increase of $\mathrm{II}_{4}$ per cent, i.e., from R $728 \%$ to R811.16 lakhs.

Material for State Railways forms a considerable part of the total; and this and the other stores, with unimportant exceptions, in reality represent commercial operations. The following figures therefore show the share of the United Kingdom in the total import trade including Government Stores:

| $1901-02$ | $1902-03$ | $1903-04$ | $1904-05$ | $1905-06$ |
| :---: | :---: | :---: | :---: | :---: |
| per cent | per.cent | per cent | per cent | per cent |
| 67 | 68.9 | 67.3 | 67.4 | 68.5 |

## EXPORTS OF IMPORTED GOODS.

The general development of direct communication between various parts of the world tends to diminish the trade of cutrepoits. Other things being equal, acontinuous decline in India's re-exports would, therefore, be expected under present conditions, and any rise in the re-export figures may be accepted as at very healthy sign. Such a rise-though amounting only to about $\mathrm{R}_{15,43}$ lakhs or $\boldsymbol{q}^{\prime} 5$ per cent on the previous year's total value-has in fact taken place; and it more than maintains the continuous expansion shown in the two previous years. The following statement records the extent of the trade in each of the last ten years:

|  | A |  |  |
| :---: | :---: | :---: | :---: |
| 1896-97 | 4,03,56,372 | 1901.02 | 3,25,98,163 |
| 1897-98 | - 3,75,11,720 | 1902-03 | - 2,93,56,132 |
| 1898-99 | - 3.37,11,965 | 1903-04 | - 3,32,55,087 |
| 1S99-1900 | - 3,29,24,912 | $1904-05$ | 3,37,25,945 |
| 1900-01 | 3,20,S5,314 | 1905-06 | 3,52,68,623 |

The steady decline until $1902-0_{3}$ will be noted toge:her with the recovery since that date. Some allowance might reasonably be made for the rise in the sterling value of the rupee during the earliest years of that period as shown in " the statement given on page ii.

Of the total for 190505 , the share of the United Kingdom, though mark.: ing a slight absolute decrease at $\mathrm{R}^{\cdot} 6_{3}$ lakhs, declined relatively from $20^{\circ} 4$ per: cent to $19{ }^{\circ} 3$ per cent. Yersia increased its share to 174 per cent, Arabia to 17 per cent, while Turkey-in-Asia and China stood for $5^{\circ} 2$ per cent and 49 per cent, respectively. The Straits Settlements, as might be expected, went back to $4^{\prime}$ i per cent. British East Africa declined to $4^{\circ} 4$ per cent, Cejlon remained nearly constant at 4.5 per cent, while Aden increased her proportiorr to ; 5 per cent.

The increase pertains most largely to Bombay, whose share has risen ifrom 76 per cent of the total to 78 per cent. . The share of the chief ports of Western India (Bombay and Karachi) has gone up from 88 per cent to 89 per cent ${ }^{\text {. }}$ of the total. The greater pars of the increase relates to goods from western: countries ; of these, cotton goods form the most important class and represent 40 per cent of the whole. Piece-goods more than recovered the loss of the previous year, and rose from R119.7 lakhs to R $_{12} 9^{\circ} 8$ lakhs, most of this increase appearing in coloured goodṣ which rose from R 8775 lakhs to R 975 . The level of prices was higher, so that the quantitative increase was less than that marked by the values; and Perṣia, Arabia, East Africa, and Aden all increased their demand. Yarn however at R6. 22 lakhs showed a shrinkage of 31.8 per cent, and of this article Persia took only $\mathrm{R}_{4} \cdot 27$ lakhs in place of $\mathrm{R}_{7} \cdot 1$ in the previous year. Apparel sbowed a further decline to ${ }^{\prime} 14^{\prime} 65$ lakhs, and oils fell by 48 per cent to $\mathrm{R}_{5} \cdot 57$ lakhs. The value of metals rose from R $\mathrm{R}_{14}{ }^{\prime} 75$ lakhs to R19'9 lakhs; and refined sugar, under the stimulus of the extraordinarily low prices lately ruling, leapt from R9.62 lakhs to R20.2 lakhs. The exports of foreign
 the difference here more than accounting for the fall of the total exports of foreign tea from $927,000 \mathrm{lbs}$ ta $781,000 \mathrm{lbs}$. Russia took only $30,000 \mathrm{lbs}$ in place of 150,000 in $\mathbf{x}, 04.05$ and the exports of green tea fell away from 338,000 to $73,000 \mathrm{lbs}$.

The re-exports weṣtward are of. much.less dimensions. The United Kingdom takes R68 lakhs or $19^{\circ} 3$ per cent of the total re-exports, as against $20^{\circ} 4$
per cent in 1904-05. The chief commodity is raw wool (mainly from Karachi). The quantity declined from $5,177,000 \mathrm{lbs}$ to $5,045,000 \mathrm{lbs}$, and the value from R2590 lakhs to R25.81 lakbs.

## EXPORTS OF INDIAN MERCHANDISE.

While imports of merchandise increased by 6.6 per cent, the value of exported merchandise increased by only. 2.65 per cent or R4io lakhs. "This percentage, though small in itself, followed an increase of 3 per cent in 1904-05, which had been preceded by the urprecedented'increase of 19 per cent in 1903.04 ; and, had it not been for the considerable set-back in the trade of food grains and seeds, the percentage of increase would have been slightly higher. The following figures are interesting as showing the progress which the Indian export trade has made in the past 26 years:

$\because$ The principal articles in the export trade are emumerated in the appended $\because$ list with their values. (in R ) for five years:

Indian exports consist largely of raw agricultural products, and in these there is a continual rise and fall following on prosperous or adverse seasons.

The decline in the exports of . wheat from the extraordinary level of $\mathrm{R}_{1}, 859.82$ lakhs attained in $1904-05$ to $\mathrm{R}_{91} 7^{27} 27$ lakhs in $1905-06$, is very noticeable and represents a fall of $50^{\circ} \eta$ per cent." The decline in wheat, coupled with a falling off in the exports of rice, seeds, and pulse; millets, and cereals, shows that damage done to the crops in one year takes effect in the exports of. the succeeding year. The decline'in the value of exports of opium was almost entirely due to the contraction of the Malwa crop. The fall in indigo was to be expected; indeed there appears no good ground to look for anything but continued subsidence. As explained in the chiapter on oils, the fall in the article is to be attributed to the arrangement now, established between the various oil interests that have hitherto: been in acute conflict in the Eastern' market and not to any inactivity in the oil trade of Burma.

The decline of trade in the articles mentioned above was more than compensated for by the increases in the value of certain other articles. Notable among these was the revival in the exports of raw cotton which in $1904-05$ had fallen to $R 1,743^{\circ} 77^{\text {lakhs }}$ from R2,43761 lakhs in the previous year. In 1905 -06 it rose to $\mathrm{R} 2,133^{2}$ lakhs. Cotton yarn and cloth also rose from RI, $16+3^{2}$ lakhs to $R 1,44^{2} 55$ lakhs. In the case of raw jute the value reached the unprecedented figure of R1,712.57 lakhs, but the quantity exported in $1905-06$ ( $1,4,4$ So cwts) did not come up to the level of the quantity exparted in $1901-02$ ( $14,755 \mathrm{cwts}$ ) which is the best on record. Jute manufactures, hides and skins, and lac also increased considerably.

The statement below shows for five years the value (in rupees) of the trade in each of the four principal classes under which articles are grouped in the Accounts :

|  | $\therefore 1901-02$ | 1902-03 | 1903-04 | 1904-05 | $1905-\infty$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Articles of food and drink | 29,31,40,145 | 35,S9,S8,056 | 44,71,02,673 | 53,05,55,415 | 42,34,43,036 |
| Chemicals, drugs, medicines, narcotics and dyeing and tanning. materials. | $11,86,12,460$ | 10,71,44,675 | 13,00,71,626 | (2,78,92,414 | 11,45,07,954 |
| Raw materials and unmanufactured articles | $53, S_{4}, 01,450$ | 52,08,49r462 | 62,67,38,477 | 57,39,71,008 | $67,18_{r+2}, 348$ |
| Articles manufactured and partly manufactured | 24,98,37,620 | 25,8r,69,367 | 27,64,42,968 | 29,32,16,631 | 35,65,34,036 |

The decline in the first class is attributed to the fall in food-grains, and in the second it was due principally to the continued drop in opium and indigo. In the third and fourth classes there has been a steady and continuous rise.

## ARTICLES OF FOOD AND DRINK.

Coffee.-The coffee market showed no marked features in $1905 \%$. The prices of bigh grade coffees declined while those of inferior descriptions hardened slightly; but Indian coffee, with a large production, was pushed for sale and the price fell away. The close of the financial year was marked by the conclusion of an agreement by which the Brazilian Government hopes at once to fix its coffee at not less than 55 francs per bag of 60 kilos.

In India the coffee crop is gathered in November to January and the export season is at its height about the close of the financial year. Half the crop is grown in. Mysore, the remainder in Coorg, Madras, and Travancore. The area in Burma has contracted steadily in recent years. A contraction (less marked) appears in the returns for other parts of India; but this is belied by the increasing exports shown in the following statement; and the estimation of crop areas in all countries is more or less empirical :

There has thus been an increase of 9.26 per cent in quantity ; but owing to the lower average price, which declined by $3^{.1}$ per cent, the rise in total value was one of only $5 \cdot 76$ per cent. The quantity taken by the United Kingdom. was 172.384 cwts as compared with 187.344 cwts in 1904.05 and represented $4^{8}$ per cent as against 57 per cent of the total ; while 132,233 wts or $36 \% 7$ per cent of the total were exported to France as against 96,876 cwts or 29.39 per cent in the previous year.

Fruits and Vegetables.-The value of the exports of fruits and yegetables amounted to $\mathrm{R}_{37}{ }^{25}$ lakhs as against R31 lakhs in 1904.05 . : The principal article is copra exported mainly from Madras. There was an improvement of 13.54 per cent in quantity and of 19 per cent in value, the average price showing a substantial advance on that of the previous year. But the total of 177,049 cwts and R22.07 lakhs is still far short of the $353.7244^{\circ} \mathrm{cits}$ and $\mathrm{R}_{42} \cdot 25$ lakhs in 1903-04.

Rice.-Exports of rice represent $63 \cdot 1$ per cent of the total value of foodgrains exported from India and $1 \% 8$ per cent of the value of all Indian produce exported.

- The following statement shows in thousands of hundred weights and in yalue the exports during each of the last five years:

In 1905006 the total exports to foreign countries receded by 13 per cent in quantity, but only $4^{\circ} 9$ per cent in value. This difference proceeds from a rise of $9^{\circ} 2$ per cent in the average declared value. But the exportable surplus of rice depends not merely on the crop of rice produced, but on the relative success or failure of the other food crops throughout the country and on the greater or diminished demand that may arise for rice in substitution for those others. Some gauge of this factor may be found in the shipments of rice from Burma to India proper. These amounted in 1905-06 to 460,000 tons, which marks an advance of no less than 159,000 tons, or $52^{\circ} 8$ per cent, on the figures of the previous year. The greater part of that increase arose since the new crop came in, and with a price a good deal stronger than at the same date in 1905, it would be reasonable to expect that, with a Burma crop not greatly exceeding that of the previous year, the surplus available for export abroad will contract. In the three months January to 'March 1906 India took no less than 242,000 tons from Burma, most of this going, as usual, to Bombay and Madras.

Japan retains its position as the largest purchaser of Indian rice ; but there has been a fall to $6,593,500$ cwts, this being nearly 29 per cent less than in the previous year. The largest quantity taken by Japan in any one month in the past year was $1,493,097$ cwts in February 1906.. The other principal customers are Ceylon and the Straits Settlements each of which in the past two years has taken fairly equal and constant amounts varying between $5,031,000$ cwts to the Straits and $6,803,000$ to Ceylon. The latter island takes a considerable proportion of the unhusked rice exported, which in 1905.06 amounted to , 829,415 cwts with a value of $\mathrm{R}_{22} \cdot 6$ lakhs. In all, Ceylon took $340,16 \mathrm{r}$ tons which is $10 \div 2$ per cent more than in 1904-05, while in value the rise from R287 lakhs to $R_{344}$ lakhs represented an addition of 20 per cent or an enhancement of average value by about 9 per cent.

The growth of the practice of direct shipment tends to diminish the exports to the Straits as a point of distribution, and in 1905-06 they declined by a further $7^{\prime}$ I per cent to a value of R2o6 lakhs.

Of western countries it is somewhat more difficult to speak with confidence regarding recent figures, because the major portion of the large quantities
ascribed to Esypt are really. sent there "for orders," and. may on adjustment (which is now carried out wehn the information becomes. available) be assigned to a number of other countries, so upsetting each of them. The most important occidental buyer of Indian rice is Germany: The quantity taken by the United Kingdom in $1905^{-06}$ fell away to 173,695 tons with a value of R149'in lakhs; while Germany took 248,469 tons with a value of Rig7 lakhs. The direct shipments to Austria-Hungary declined from 198,231 tons to $\mathbf{1 2 2 , 1} 34$ with a value of only R $57 \cdot 5$ lakhs, while Holland received 125,67 I tons with a value of RSg lakhs.

Wheat-On the average of the last five years, the value of the wheat exported has represented $39^{\circ} \mathrm{S}$ per cent of the exports of all food-grains and 6.4 per cent of the total value of Indian merchandise exported.

The wheat crop of $1905-06$-more particularly in the United Provinceswas very seriously injured by frosts when it was approaching maturity; and although the damage was in some cases found to be less than was expected, the effects of the misfortune are very clearly marked in the contraction of the exports to less than half the figure attained in the previous year.

It must be understood that the wheat exports of one financial year. are drawn mainly from the crop of the previous year. The wheat exported in 1905-06 therefore belongs mainly to the crop of 1904.05 ; but no review of the wheat trade can be properly intelligible from which particulars of the crop are excluded. For these reasons the following statement shows much more clearly than any explanation could, the Indian exports for the year $1905-06$ in comparison with the crop data for $1904-05$, and the average exports in the five years period ending $1904-05$ with the average crop data for the five years ending 1903.04. : Comparison is also made between the figures for the year under revier and those for the last preceding jear; and in every case the percentage ratio of increase or decrease is brought out, the average of the earlier period or year being taken as 100 . A column is added showing the areas under irrigation; and it may be stated that in 1899-1900 the irrigated area, under wheat, which now stands at $7,420,000$ acres, represented $8,120,000$ acres.

|  | 2 | 3 | 4 |  |
| :---: | :---: | :---: | :---: | :---: |

(a) For British India only.
(b) In respect of area and outturn the "year under review" is 1904-05. In respect of Exports and Imports the "year under review" is 1905-06.

The five years periods include respectively $\mathbf{1 9 9 9}$-1900, in which there was a signal failure of the wheat crop, and $1900-01$ in which restriction of area and contraction of exports were among the sequiela of the disaster. It is not generally remembered, or indeed known, that some foreign wheat is imported into
certain provinces of India every year and that in times of shortage it is taken in considerable quantities even by ports from which "grain is commonly shipped. In 1905-06, the imports amounted to some 454,600 cwts with a value of about R22.5 lakhs. Of this, Australia furnished some $396,000 \mathrm{cwts}$ and the Persian Gulf ports about 59,000 cwts. This total was exceeded only in 1896-97 and in 1900-01 when $601,356 \mathrm{cwts}$ and 559,351 cwts, respectively, were imported ; bi $u_{t}$ in each of the famine years $1877-78$ and $1878-79$ the imports exceeded $400,000 \mathrm{cwts}$.

In 1904, India was the largest contributor to the wheat supply of the United Kingdom and furnished $25,493,000$ cwts out of a total of $97,782,500$. But in 1905 it fell back into the third place with 22,807,422 cwits, which Russia and Argentina both exceeded.' The United States; which in 1903 sent $24,197,895$ cwts to Britain, sent only $6,634,700$ in 1905 . On the other hand, the British crop, which in 1904 had sunk to about $36,880,216$ bushels, rose to $58,902,499$ bushels in 1905 , the yield per acre increasing from $30{ }^{\circ} 56$ bushels to $3^{2} \cdot 78$, and being of good quality.

The shortage in wheat and the enhancement of prices necessarily restricted $\because$ the exports of wheat flour. These had grown from 810,422 cwts to $1,031,495$ cwts in 1904-05, and in $1905-06$ they contracted to $899,056 \mathrm{cwts}$ which marks an approximate return to the normal rate of progress since 1900-01. The decline is one of 12.8 per cent in quantity and 7.8 per cent in value. The exports, go mainly to Aden, Arabia, Mauritius, East Africa, the Straits Settlements, and Ceylon. The new trade with the United Kingdom contracted from 52,500 cwts to $15,800 \mathrm{cwts}$, the shrinkage in this section representing 277 per cent of the total shrinkage under flour.

Other Food-grains.-The food-grains other than wheat and rice exported in 1905 -06 showed a contraction of no less than 47 per cent as a consequence of unfavourable weather conditions. The total quantity amounted to only 224.303 tons with a value of $\mathrm{R}_{171} \cdot 26$ lakhs. The largest quantitative shirinkage occurred in pulse which contracted by $31^{\circ} 7$ per cent to 106,826 tons. Jawar 'and Bajra declined by 42,787 tons which however represented $29^{\circ} 6$ per cent in the previous year. Gram receded by 46 per cent to $20,88_{4}$ tons, barley by 75 per cent to 4,647 tons and "other sorts" (including maize) by 90 per cent to 8,406 tons.

Provisions and Spices.-The value of provisions increased by 8 per cent to R7r.i lakhs, the principal articles in the class being ghi (clarified butter) which increased to $\mathrm{R}_{2} 9^{\circ} 4$ lakhs and fish which receded to R21.6 lakhs on the transfer to "Manures" of that portion of dried fish which is designed. to be used as a fertilizer.

Exports of spices showed a marked recovery from the low figures of 1904.05, and at R90.79 lakhs are within measurable distance of the record of 1903.04. The increase was due mainly to the circumstance that $1905-06$ saw the largest export of pepper on record, namely $17,890,000 \mathrm{lbs}$, this being 77 per cent greater than ín 1904-05. The value increased, in slightly lower ratio; to R61०07 lakhs, the average declared value being $A s .5=6$ per lb against $A s .5-7$ in 1904-05. In Ginger there was a quantitative decline of 116 per cent to $9,869,000 \mathrm{lbs}$ with a value of R $\mathrm{R}_{12} 53$ lakhs. Chillies, on the other hand, declined by about 54 per cent in quantity while rising in value by 13 per cent to about Ri2. 8 lakhs.

Tea.-The area under tea in India in 1885 was 283,925 acres, and the yield $71,525,977 \mathrm{lbs}$. In 1895 the area under tea had increased to 415,717 acres,
nd the production to $143,407,837$ lbs. The area and production since gol have been as follows:

In 1905 there were 422,335 acres (or So per cent of the whole) in the rovince of Eastern Bengal and Assam which with Bengal Proper represented o per cent of the total, the other tenth being divided between Northern India ith $17,3,6$ acres and Southern India with 33,083 acres.

The production has increased much more rapidly than the area; and, while nce $1 \mathrm{SS}_{5}$ the latter has developed by only $\mathrm{S}_{5}$ per cent, thefor mer has advanced y 210 per cent. It is however extremely difficult to check the estimates f production owing to the unascertainable nature of the internal consumption, hich there is good reason to believe, must exceed 7 million lbs per annum.

The following figures show the quantity and value of tea exported from ndia in the last five years:

The figures for 1905.06 represent a record both in quantity and value. The increase in quantity as compared with $1904-05$ is $2.3+$ million lbs or ilightly over one per cent and in value $\mathrm{R}_{3} 8.21$ lakhs or 4.5 I per cent, the ncrease in specific value thus being one of $3^{\circ} 37$ per cent.

The joint-stock capital engaged in the industry amounts to nearly £14,316,727, viz.:

$$
\text { Companies registered in India . . } \mathrm{R}_{3,3} 8,58,869=£ 2,257,258
$$

This gives an average capital of $£_{27}$ per acre.
It takes, however, no account of the large but unknown quantity of private capital also engaged.

The labour employed is returned as 469,208 permanent and 83,791 temporary hands making a total of 552,999 hands or about one to the acre.

The quantities of tea exported to the principal countries in the last three. years have been as follows:

| United Kingdom | $\begin{gathered} 1903^{-04} \\ 1 b s \\ 170,186,000 \end{gathered}$ | $\begin{gathered} \begin{array}{c} 1904-05 \\ 1 \mathrm{bs} \\ 167,691,0 c o \end{array} \end{gathered}$ | $\begin{gathered} 1905.06 \\ \text { lbs } \\ 166,591,000 \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Canada | 8,576,000 | 12,607,000 | 15,019,000 |
| Russia | 9,451,000 | 9,332,000 | 9,988,000 |
| Australia | 7,269,000 | 6,601,000 | 7,729,000 |
| Turkey in Asia | 2,830,000 | 4,009,000 | 3,543,000 |
| China | 2,008,000 | 1,813,000 | 3,076,000 |
| Persia | 2,171,000 | 3,136,000 | 1,102,000 |
| United States | 1,528,000 | 2,237,000 | 2,175,000 |
| Other countries | 3,141,000 | 4,461,000 | 5,001,000 |

The share of the United Kingdom thus appears to have declined from 79.14. per cent in $1904-05$ to $77^{\circ} 7$ per cent in $1905 \cdot 06$. To determine exactly the true
destinations of this tea, it would be necessary to examine the statistics of reexports from the United Kingdom, and for this there is no space here available. Owing, moreover, to the use of optional Bills of Lading for shipments to London, the figures here given do not in all cases represent the actual destination of the goods. It is however found that over the sixteen years 1890 to 1905 the net discrepancy between the Indian returns of exports to the United Kingdom and the British returns of imports from India is less than 1 per cent. The direct shipments to the United States are found to have declined somewhat in 1905-06.

The exports to Canada have on the other hand developed from 6 per cent of the total to 7 per cent; and those to Australia, which represented $3^{\circ} 1$ per cent in 1904-05, now represent 3.6 per cent. The shipments to Russia have also developed satisfactorily. Generally, it may be said that the percentage that goes to the United Kingdom declines continuously, while the direct imports by other countries increase in an equal proportion.

Five years ago Calcutta shipped 87 per cent of the entire tea exports of India. Last year she did only about 74 per cent of the total, while Chittagong. in the same time has raised her percentage from $8: 2^{\text {to }} 19^{\circ} 3$, and Southern India at 6 per cent has doubled her share.

In the last year India has increased her exports of tea by 44 per cent. Ceylon, with $170,183.558$ lbs in 1905, has increased hers by 55 per cent. China's exports of Black and Green tea, at $112,152,533 \mathrm{lbs}$, have in the same period declined by 3 per cent and her exports of brick and dust, at $70,784,267 \mathrm{lbs}$, have receded by 10 per cent.

The average prices of the three descriptions of tea most largely sold at public sales in Calcutta in the last five years have been as follows, stated in annas and pies per lb:

- These figures exhibit the rise in the prices of superior qualities, and. the decline in the prices of inferior descriptions, which have made a noticeable feature in the year's trade.
. In the first three months of the financial year the British tea trade was restricted and deranged by rumours that the import duty on tea would, with effect from ist July 1905 , be reduced from $8 d$. to $6 d$. This led to abnormal accumula. tions of stocks in bond and to the unprecedented clearances on the night of the 3oth June. Special arrangements were made by the Customs and the sum paid in as advances of duty on tea to be cleared amounted to between $£ 300,000$ and $£_{400,000}$, the smaller 'of which sums represents' some $12,000,000 \mathrm{lbs}$ of tea. The consumption in the United Kingdom in igos is estimated at about $259,000,000$ lbs ; though the consumption per head is still short of the figure it attained some years ago. Owing to shortage in the supplies from China and Japan the market at home was, as has been said, comparatively strong as regards better class teas but weak for inferior descriptions; and this tendency appears to have been intensified by the further reduction of the British duty by one penny. with effect from the ist July 1906.

## METALS

Manganese Ore represents nearly S2 per cent of the value of all exported metals and manufactures thereof other than hardware, the balance consisting of manufactures of brass, copper, and iron. The trade, which has virtually come into existence in the last ten years and had grown to 180,945 tons in 1904-05, received a great impulse from the failure of the Russian supplies as a consequence of the political disturbances which affected the mines at Donetz as well as those in the Caucasus. Before those disturbances Russia exported some 420,000 tons; but during a great part of the year under review the trade was virtually closed. The exports from India accordingly rose to $3^{16,694}$ tons, marking an increase of more than 75 per cent while the value rose by 79 per cent to $R_{43}$ lakhs. The rise in average value here indicated is only from . R13-4-1I to R13-10-0 per ton or about 2.4 per cent; but there can be little doubt that the real gain was considerably greater and that the profits at present being made must be large, seeing that the price of manganese in Europe has risen by about 50 per cent. The exports go mainly to America, the .United Kingdom, and the Continent of Europe; and the present activity in the steel industry, synchronising with the restriction of the Russian output, makes an extraordinarily happy combination for the Indian seller.

## CHEMICALS, DRUGS, NARCOTICS, AND DYES

Saltpetre.-Saltpetre, together with Borax, practically represents'the exports of chemicals from India. The quantity fell from 348,741 cwts to 336,429 cwts, while the value rose from $\mathrm{R}_{3} 6 \cdot 25$ lakhs to $\mathrm{R}_{3} 8 \cdot 5$ lakhs. The quantitative contraction of 3.5 per cent, in conjunction with a 6.3 per cent rise in value, marks an increase of 10.2 per cent, in the specific value of the article. This only reflects the general tendency in all nitrates as a consequence of the increased consumption and the regulation of the output by the Nitrate Directorate at Iquique.

Borax was exported to the extent of $4,146 \mathrm{cwts}$ with a value of R 8 lakhs, its average value thus standing some 70 per cent higher than that of Saltpetre.

Opium.-The Malwa crop continues to contract, and whereas ten years ago it probably amounted to some 40,000 chests of 140 lbs each and five years ago to from 30,000 to 35,000 , in the last two years it has shrunk first to aboutt 25,000 chests and then to about 18,000 . The continuous decline in the exports of Malwa opium to China since 1885 is shown by the following figures derived from an unofficial but reliable source :

Apart from accidents to the crop, Malwa opium has the trade disability of varying greatly in consistency, weight, strength, and price, with the effect that. Bengal opium of the standard type is increasingly preferred in China. For example, " middling good" last year's Malwa might be quoted at $\mathrm{R}_{1,430}$ while 7 or 8 years old might fetch anything between $R_{1,650}$ and $R_{1,700}$. The
shortage in Malwa and the consequent relative predomiñance of old stock aćcount for the extraordinarily high price attained in $1904-05$ in Bombay, where it rules the market, and for the further increase of $80^{\circ} 6$ per cent in 1905-06 as shown in the statement below. This statement gives the export and the prices per chest for each of the last five years :

The decrease was one of 5.9 per cent in quantity and $10^{\circ} 8$ per cent in value. In Bengal the price more than lost what it had gained in the previous year, and, with an increased export, fell back to $R_{1,438}$. The average price of the Calcutta sales was $R_{1,498}$ for the calendar year and $R_{i, 43} 6$ for the year from April 1905 to March 1906, the maximum of each of these'periods respectively being $R_{1,621}$ in February and RI,533 $^{2}$ in June. 1905. Exports to Hong-Kong and the Straits Settlements showed increases of 66 chests and 113 chests, respectively, their totals being 37,886 chests and 12,368 chests while ship. ments to the Treaty Ports. registered a fall of 4,042 chests to a total of 10,12 I.

Tobacco.-The unmanufactured tobacco exported from India consists. largely of leaf intended for the hookah or narghili and not destined for processes of manufacture. Aden has in past years taken large quantities of this leaf, partly because the port is an entrepot of the trade in fine Arabian Tumbeki and nas therefore afforded an outlet for various qualities. The British duty is prohibitive as regards unmanufactured Indian leaf; but certain conditions that . have arisen in the home trade in recent years make it just possible that light coloured grades of this article might be used seeing that more than $2,000,000 \mathrm{lbs}$ go to Holland every year. The exports of unmanufactured descriptions have grown in quantity by 6.3 per cent and in value by nearly 12 per cent.' In the manufactured class-which consists mainly of cigars-the increase has been a substantial one of about 10 per cent in quantity and about $12 \times$ per cent in value, but both in quantity and value it still falls short of the record of 1902-03.

The figures of the trade during the last three years were:

|  |  | Unmanufactured |  | Manufactured |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Cwts | R | Cwts | R |
| 1903-04 | - - | 101,500 | 12,86,241 | 9,207 | 8,10,438 |
| 1904-05 | - . | 109,968 | 12,56,950 | 9,497 | 8,24,320 |
| 1905-06 | - - | 116,886 | 14,07,241 | 10,543 | 9,33,196 |

Indigo.-Discussion continues regarding the relative merits of natural and synthetic indigo and the possibility that the former can survive. Meantime the laws that are debated continue to operate, and the statistics. of the trade almost suggest that before the disputants desist, the subject of their difference as a "serious" article of commerce may have disappeared.

The following statement shows the exporis va aurg an we past eneven years:

The total exports from India in 1905.06 amounted to only 31,186 cots with a value of $R_{5} 8.63$ lakhs. Ten years before they were 187,337 cwts with a value of $R_{535 \% 45}$ lakhs. Therefore in ten years there has been a loss of $83 \cdot 26$ per cent in quantity, and in value a decline of $89^{\circ} 05$ per cent, the difference betreen these percentages marking a decline in specific value. In 1895-96, the average value was $\mathrm{R}_{2} \mathrm{~S}_{5} \cdot 8$ per cwt . In $1905 \cdot 06$ it was $\mathrm{R}_{1} 88$ per cwt . The loss therefore is one of $\mathrm{R} 97^{\circ} 8$ per cwt or 34 per cent. In $1904-05$ the quantity exported was $49,25^{2}$ crits and the value R $83^{\circ} 46$ lakhs. On these figures the totals for $1905^{-06}$ mark a decline of 36.7 per cent in quantity and $29^{\circ} 7$ per cent in value. The average value in the earlier year was R169.6 per cwt , so that there has been a recovery of about 7 per cent in price. This was the result of a really stronger demand induced in home markets by the contraction of supply, and it was reflected in London where, during the year 1905, a rise of $9 d$. a lb was. recorded. This is the first movement that has seemed to suggest a possibility that bottom has been touched so far as concerns those few purposes for which indigo possesses a recognised advantage over the artificial dye. The exports to the United Kingdom fell away no less than 30 per cent, and the Continent also took less than in the previous year. Egypt still retains first place but with a lead so diminished as to bring it behind the figures attained by United Kingdom last year; while direct exports to Persia have shrunk by $55^{\circ} 9$ per cent. The United States took only 1,530 cwts compared with 4,334 in the previous year. Only a negligible revival has appeared in the Japan trade, in which the natural article continues to be handicapped in relation to the synthetic dye by the quantitative assessment of both to import duty without regard to the higher tinctorial strength of the latter. The recovery brought the quantity exported to Japan to only 242 cwts with a value of $R_{47,506}$. And while the pist year has been marked in Germany by an agreement between the chief manufacturers for the purpose of the more effectual prosecution of the rival industry, in India it has seen such a further contraction of indigo cultivation as appears to indicate an indisposition on the part of planters to await the issue of the academic discussion that has been referred to above. The area under indigo in Bengal, United Provinces, Punjab, and Madras in December last was 380,663 acres as against 476,949 in the previous year. In the previous five years the area averaged 833,742 acres, and in the previous ten years $1,1: 2,661$. Much of the ground that used to be under indigo has now been turned over to cotton, which offers a fairly constant market, and to sundry experimental cultures like rubber, flax, etc. The most interesting of the
experiments now in hand is that with the Java-Natal seed. It is stated on good authority that some 2,000 acres have been placed under that crop by various planters, and the results of this year ought to show whether it is possible to maintain the high percentage of indigotine obtained from the earlier samples tested. A very great deal will depend on that issue.

Other Dyeing and Tanning Materials.-Of this class Myrabolams is by far the most important item and represents a branch of trade that has naturally benefited by the great activity in leather. The exports increased by about $\mathrm{I}^{\prime 6}$ per cent while the average value rose from $\mathrm{R}_{3-9-5}$ to $\mathrm{R}_{3-11-2}$ per cwit or $3^{\cdot 1}$ per cent. The contraction in Cutch was continued, and the quantity represents less than 49 per cent of the exports of two years earlier. In Turmeric there was a very slight recovery both in quantity and price.

## OILS

Oils (animal, essential, mineral, and vegetable) showed in 1905-06 a decline of 18.4 per cent on the exports of the previous year and represented a total value of only R81. 78 lakhs as against $R_{100 \cdot 3} 1$ lakhs in 1904-05. The greatest falling-off was in mineral oils, the exports of which fell away by some $2,460,864$ :gallons and $R_{11}, 71,636$. But that this was due to no lack of activity in the. industry, is shown by the facts that the shipments of kerosene from Burma to other Indian ports increased by $4,886,777$ gallons and $\mathrm{R}_{2} 3,77,218$ or about ro $\dot{p e r}$ cent and that the average declared value per gallon in the foreign exports rose from As. 7-9 to As. 8 per gallon. This is to be attributed to the arrangement now established between the various oil interests that have hitherto been in acute conflict in the Eastern markets.

Exports of paraffin wax, which is classed as oil, increased by $4^{\circ 9} 9$ per cent. to Rir: 68 lakhs, while the trade in candles produced from petroleum increased in quantity by about $79^{\circ} 2$ per cent and attained the substantial figure of $6,009,000 \mathrm{lbs}$ with a value of R16.5 lakhs.

Vegetable oils have fallen away by 13.5 per cent to $R_{53,99,475 \text {. Cocoanut, }}$ with a total value of Ris2, 6,673 , declined by R69r lakhs, which is more than accounted for in Madras alone. Some 10 per cent of this is offset by a small increase of castor oil to $\mathrm{R}_{1} \boldsymbol{7}^{\prime} 1_{2}$ lakhs, but it was augmented by a lors of $\mathrm{R}_{2} \cdot 18$ lakhs in linseed, mustard, til, etc.

## RAW MATERIALS

Coal.-There were, at the end of the year 1905-06, 47 companies engaged in mining for coal in India, working with a nominal capital of R2,88,54,500, of which $R 2,26,13,248$ had been paid up. Forty-six of these companies conducted their operations in Bengal, their nominal capital amounting to $\mathrm{R}_{2}, 87,04,500$; the other company was in Burma. The first coal mine in India was opened in Bengal in 1820 . For 20 years this was the only mine at work in India, and there was hardly any progress after that until the construction of railways began, and the East Indian Railway in 1854 passed through coal-fields. In the beginning, however, Indian railways not only consumed comparativelv.
little coal, but depended to a large extent for their supplies upon the United Kingdom. With the construction of mills and factories in Western India and in the neighbourhood of Calcutta the demand for Indian coal grew apace. Indian factories now work almost entirely with Indian coal, and-Indian railways have reduced their demands for foreign coal to a minimum, whilst Indian coal is being taken yearly in greater quantities by ships trading to Indian ports.

The increase in output from the beginning, and particularly during the last 20 years, has been steady with but few set-backs. The output of Indian coal in 1885 was $1,294,221$ tons. In 1904 the production had risen to $8,216,706$ tons, and it stood in 1905 at $8,417,739$ tons, the increase being one of 5.35 per cent in 20 years and 2.45 per cent in the last twelve months.

In 1905-06 the exports of coal and coke exceeded all records in respect of both quantity and value. The largest quantity previously shipped had been 594, $\mathrm{S}_{32}$ tons in 1904-05, and the largest value of shipments was $\mathrm{R}_{59} 9^{\circ} 39$ lakhs in 1900-01. The record attained in 1905.06 was 837,25 t tons with a value of R65.8 lakhs, which figures exceed those for sgo4-05 by $40^{\circ} 7$ per cent in quantity and 41.4 per cent in value. The average value was $\mathrm{R}_{7} \cdot 86$ fer ton against R781 in 1904-05, and R10-97 in 1900-01.

Ceylon continues in the first place as buyer of Indian coal, and its shipments made a further advance of 6,297 tons, bringing its total to $38 \mathrm{x}, 05 \mathrm{y}$ tons against 374,754 in the previous year. Straits Settlements have made a great stride in the past twelve months, and took 235,429 tons against i43,729 in 1904-05.

Exports to Sumatra also continued to increase and show 35,227 tons against 30,802. The trade with Aden, which fell away by one-third in 1904-05, has this year recovered to some extent and stands at 29,312 tons; but in shipments to East Africa the decline is maintained, and these are little more than half of what they stood at in the previous year.

All but 1,600 tons of the exports went from Calcutta; and in addition to that port's foreign exports no less than $2,012,546$ tons were shipped to other Indian ports, this representing an increase of about 12.7 per cent ( 53 per cent of the total going to Bombay). Exports of bunker coal for use on steamers rose from 770,589 tons to 851,639 .

Cotton.-The export trade in raw cotton is of course conditioned by the indigenous crop results, but is governed, when internal conditions are favourable, by the relation of textile activity in Europe and the United States to the supplies available in America and Egypt. In all these respects the season of 1905-06 was fairly satisfactory. The area under cotton in India has' in the last three years increased from 16.5 million acres to nearly $20^{\circ} 5$ million. The yield of the crop of 1904.05 , from which much of the exports was derived, showed an increase of 21 per cent over that of 1903-04, and amounted to 13.66 million cwts; but the crop of 1905.06 diminished by 15 per cent to about 11.60 million cwts. The conditions were in the latter year especially unfavourable in the Central Provinces, Berar, Hyderabad, and the Punjab. The American crop of $13^{\circ} 56$ million bales of 500 lbs in 1905, as compared with 1001 million bales in 1904, was the largest on record, and might have been expected to weaken Indian export prices greatly. But the general activity in the textile industries, the reports of extensive mill construction and the rumours of restricted cultivation and regulated selling in America sustained the Indian values better than could have been foreseen. : The following are the prices of Middling

Uplands Cotton at Liverpool in the last two years stated in pennies and decimals of a penny per lb :

Another factor that tended to harden the price of country cotton was the great activity of the Indian textile industry. Allowing for wastage in process of manufacture it is calculated that the Indian mills in 1905.06 have. used 7,234,760 cwts of cotton against 6,145,301 cwts in 1904-05-the former being equal to $2,025,733$ Indian bales of 400 lbs . The difference of: $1,089,459 \mathrm{cwts}$ is equal to about 8 per cent of the entire crop of 1904-05.

The following figures give a summary of the export trade in the last five years:

The statement below shows the destinations of cotton during the same period, the unit as before being $1,000 \mathrm{cwts}$ :

|  | 1901.02 | 1902-03 | 1903-04 | 1904-05 | 1905-06 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Japan | 2,526 | 1,722 | 1,680 | 1,951 | 2,231 |
| Germany | 754 | 1,122 | 1,568 | 1,025 | r,384 |
| Belgium | 413 | 779 | 1,089 | 668 | 1,126 |
| Italy | 520 | 647 | 1,001 | 627 | 808 |
| Austria-Hungary | 373 | 569 | 705 | $45^{6}$ | 615 |
| United Kingdom | 166 | 372 | 652 | 347 | 373 |
| France | 267 | 419 | 560 | 235 | 482 |
| China | 559 | 196 | 165 | 171 | 185 |
| Spain | 67 | III | 265 | 127 | 140 |

: The importance of Japan as a buyer of Indian cotton is clearly shown by these figures, and it is not surprising that some misgivings are felt regarding "the possibility of her finding new' sources of supply. Germany and Belgium, which may be regarded conjointly, have increased their takings by some 817,000 cwts. Italy, France, and Austria-Hungary have all done so in less measure, but the increase in exports to the United Kingdom is insignificant.

Hides and Skins.-Trade in 1905-06 has been attended by several very marked movements in prices; and the bide and leather trades have furnished some of the most marked examples!. The very great consumption of leather during the Japanese war and the extensive employment of certain classes of goods in industries that are now active, have depleted stocks and induced an enhancement of the European bide prices ranging generally from about 25 per cent to 60 per cent. The all-round increase in price is indicated by the fact that Britain's imports of leather in 1905 showed a quantitative decline of 13,553 cwts with an increase of $£ 29,104$ in value. The Indian exports of hides and skins did not share in the rise of value to anything like this extent ; but comparison of the
quantities and values exported in $1904-05$ and in $1905-06$ shows that the average value per crit of raw hides rose from $\mathrm{R}_{52-4-8}$ to $\mathrm{R}_{55} 9$ 7-0 or 6 per cent and that of raw skins fell from Rgt-i-6 to Rgo.7-i or 7 per cent. At the same time the trade was greatly stimulated and the exports of raw hides rose by. $33^{\prime} \mathrm{I}$ per cent in weight and $41^{\circ} 1$ per cent in value. The exports of raw skins increased in number by 38.4 per cent oyer those of the prẹious year, and in value by 46 per cent. An improvement in average weight is marked by the fact that the total weight increased $47^{\circ} 1$ per cent as compared with the above $3^{8 .} 4$ per cent. The number of raw hides and raw skins together amounted to $43^{\circ} 2$ millions with a value of no less than $\mathrm{R}, \mathrm{ol} I^{\prime} 9$ lakhs. This represents 6.4 per cent of the entire exports of Indian produce, and it places the trade among the most inportant. Of the total, 76.6 per cent were shipped from Calcutta, and of that total the United States took nearly 43 per cent or $R_{432}{ }^{4} 6$ lakhs, while Germany came second with R216.48 lakhs, and thereafter.
 lakhs, and Spain with R3006 lakhs. The predominance of the United States (where there has been such a shortage in leather supplies as to create a movement for abolition of the duties) was mainly in skins, of which from Calcutta alone she took $266,598 \mathrm{cwts}$ out of a total of $347,238 \mathrm{cwts}$. Both in France and the United Kingdom the demand for raw skins has greatly gained in strengththe former country having taken 30,854 cwts against 14,183 in the previous year, and the United Kingdom 27,456 cwts in place of 17,978 .cwts.

The following statement shows the exports of raw hides and raw skins in the past five years :-

All the auguries are that the "pinch" in leather is likely to be felt for some time to come; and an attempt is being made in the home boot trade to exact a uniform 20 per cent increase of price in order that the expedient of lowering quality may not be resorted to. (See also p. 48.)

Jute.-On the average of the last three years the exports of raw jute represent some 2 I. 8 per cent of the total value of Indian raw produce exported.

The growth of this export trade in the last six years is shown in the following statement of quantity and value, the unit in each case being 1,000 . The percentage of quantitative increase or decrease is also given ; and the rise in price and its accentuation in recent years is indicated by the average declared values which are stated in rupees and decimals of a rupee.

The largest percentage increase in quantity occurred in $1900-01$ when the exports rose by $27^{7} 7$ per cent ; but the largest total exportation so far recorded
was attained in 1901-02 when the quantity shipped exceeded that exported in 1905\%6. Yet the value of last year's shipments exceeded that of 1901-02 by $R_{5,32,83,918}$ or more than 45 per cent. It exceeded that for $1904 \circ 05$ by 43 per cent, and the average value at the same time rose by 27.3 per cent.
.The estimated outturn of the jute crop in each of these six years is given below in thousands of cwts side by side with the estimated Indian consumption and the estimated balance available for export. These last should be compared with the figures of actual export.

The exportable surplus from a given crop depends upon the local consumption ; and, although jute manufactures will be dealt with in a later chapter, it is well to show in this connection the numbers of spindles and of looms in position in each of the last six years.

In 1884, when the Indian Jute Mills Association was formed, the number of looms was 6,337 . It is estimated that in the season 1906 it is about 22,750 . But the high cost of the raw material has restricted the local consumption so that in the last years it has not kept pace with the increase in the number of spindles.

During the year $1905-06$ the prices (per bale of 400 lbs ) on the 1 st of each month were as follows :-

Since that time it is stated that as much as R7x a bale has been paid. The average of the year is $\mathrm{R}_{44-11-7 \text {, which is } \mathrm{I}_{3} 3 \text { per cent of the average }}$ of the previous five years.

During the year under review $43^{\circ} 5$ per cent of the exports of raw jute from India went to the United Kingdom whence nearly half of that quantity is distributed to other parts of the world. Germany takes directly from India $18 \cdot 1$ per cent, the United States nearly 14 per cent, France 10 '9 per cent, AustriaHungary 6 per cent, Italy $4^{\prime}$ I per cent and Spain isp per cent. Exports from Madras increased from $\mathrm{I}^{\prime} 4$ per cent to $I^{\prime} 7$ per cent of the total.

Allegations of the wetting and sanding of jute for the purpose of increasing its weight continue to be made, and it is asserted that the practice has reached a point injurious to the trade. A Bill has been drafted by the Association and submitted to Government. The principle on which it proceeds is that of holding the mere possession of adulterated jute to be criminal.

The exports of seeds represent 6.7 per cent of the entire exports of Indian produce. In $1905^{-06}$ their value amounted to $R_{1,060}{ }^{\prime 2}$ lakhs which marks a decline of 26.4 per cent as compared with the exports of the previous year.

These latter had however been the largest on record: The exports of the principal descriptions of seed are shown below, the values in $1905-06$ being as follows: linseed R4t1•55 lakhs, sesamum R146.93 lakhs, Rapeseed R121•79 lakhs, cotton seed R1O2.18 lakhs, castor R78.67 lakhs, and poppy R60.22 lakhs.
.
Quantity of each seed (Unit I,000 cmis)

|  |  | 1901-02 | 1902-03 | 190304 | 1904-05 | 1905-06 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Linseed | - | -7,328 | 6,328 | 8,616 | 11,182 | 5,789 |
| Rape | - | - 6,925 | 3,927 | 4,343 | 5,155 | 1,994 |
| Cotton | - - | - 2,036 | 3,974 | 2,677 | 2,529 | 3,891 |
| Sesamum | - | - 2,447 | 3.733 | 3,513 | 2,517 | 1,685 |
| Earthnuts |  | - 1,085 | 1,036 | 1,922 | 1,674 | 1,374 |
| Castor |  | - 1,324 | 1,752 | 1,567 ${ }^{\text {. }}$ | 1,461 | -1,299 |
| Poppy |  | 934 | 966 | 1,315 | 1,363 | 797 |

Of the total, Bombay shipped R6:179 lakhs or $57 \% 7$ per cent, Calcutta $23^{\circ} 17$ lakhs or $21^{\circ} 9$ per cent, and Karachi R109.65 lakhs or $10 \% 3$ per cent. Linseed goes chiefly to the United Kingdom, Germany, and France; rapeseed to Germany and Belgium ; sesamum and poppyseed to France and Belgium ; cotton seed to the United Kingdom; castor to United Kingdom; and earthnuts to France.

Of Linseed it is roughly estimated that only about 6 per cent of a normal crop is retained for local consumption, and yet the difference shown by the following figures was only about 3 per cent. The crop in 1905 was estimated at only 298,400 tons, and exports amounted to 289,443 tons against 559,100 tons in the previous year, which however was a record. The decline in exports was one of 48.2 per cent and would probably have been greater if the failure in the United Provinces had not been to some extent made good by the increased yield in Hyderabad, Berars and the Central Provinces, and if the reported shortage in the Argentine crop had not led to a smart rise in prices. It is estimated that Argentine shipments in 1905 amounted to. only 650,000 tons against 908,900 in 1904.

In the case of Rapeseed there were no such compensating conditions. Up to the end of January the prospects of the crop had been excellent, with the result that stocks were freely marketed and depleted. Severe frosts in the beginning of Pebruary destroyed a great part of the crop in the United Provinces, while the ohenomenal outturn of the Danubian crod drevented any proportionate
rally in prices. The total estimated outturn in India was only 540,400 tons, and the exports declined by 61.3 per cent to 99,684 tons. Towards the close of the financial year however a strong position developed as a consequence of reported deficiencies in the Indian crops and the absence of any compensating conditions in competing countries. The average values of linseed and rapeseed showed advances of $25^{\circ} 6$ per cent and $15^{\circ}$ I per cent, respectively, as compared with those of 1904.05 .

The shortage in rapeseed led to an acute internal demand for Sesamum and occasioned great embarrassment to shippers; and, since in this case also the favourable nature of the crop prospects had led to depletion of available stocks, the exports which declined by 28 per cent in 1904-05 underwent a further contraction of 33 per cent making a total of 52 per cent in two years. The - average value rose by 26.3 per cent.

The recognition of the richness of. Indian Cotton seed in oil and of its merits as a material for cattle-feed has led to a steady growth in the exports, which in $1905-06$ rose to 194,567 tons with a value of $R_{1,02,17}, 600$. The increase in quantity was thus one of $53^{\circ} 87$ per cent and in value $65^{\circ} 8$ per cent, which marks a rise of 7.75 per cent in specific value ; and all indications point to a development of the trade.

Poppyseed declined $41^{\circ} 5$ per cent in quantity and $23^{\circ} 2$ per cent in value, and it is very possible this article may be affected by the popularity of cotton seed. The price of Castor seed continues to rise; and while the total quantity exported receded by in'i per cent, the total value advanced by $13^{\circ} 7$ per cent, the increase in average value thus being 28 per cent. Disease among Earthnats and various other factors have led to continuous abandonment of this crop in favour of others more immediately profitable; and the exports registered a further decline of 18 per cent. A large proportion of the exports of earthnuts from India is shipped from the French port of Pondicherry, and so escapes registration in the trade of British India. In 1904.05 the exports from Pondicherry amounted to $1,284,656 \mathrm{cwts}$ with a value of R $85^{\circ} 9$ lakhs as against $1,276,706$ cwts and R64.4 lakhs in 1903-04.

Silk.-In 1905-06 there was an improvement in the trade in all classes of raw silk, which, collectively, rose $3^{2.4}$ per cent in quantity and $13^{\circ} 5$ per cent in value. The exports of reeled mulberry silk increased 13.3 per cent in quantity -from $487,03 \mathrm{I}$ lbs to $55_{1,546} \mathrm{lbs}$-and $11 \cdot 3$ per cent in value, from $\mathrm{R}_{41,68,426}$ to $R_{46,28,361 . ~ T h e ~ d i f f e r e n c e ~ i n ~ t h e ~ p r o p o r t i o n ~ o f ~ i n c r e a s e ~ b e t w e e n ~ q u a n t i t y ~}^{n}$ and value indicates a fall of 1.94 per cent in the average price per lb -from R8-8-11 to R8-6-3. While the exports from Bengal of this class of raw silk (reeled mulberry) showed an improvement from $389,089 \mathrm{lbs}$ valued at$\mathrm{R}_{3} 0,93,376$ in $1904-05$ to $459,160 \mathrm{lbs}$ valued at $\mathrm{R}_{3} 6,26,111$ in $1905^{-06}$, there was a further decline in the exports from Bombay, from $97,942 \mathrm{lbs}$ valued at $\mathrm{R}_{10}, 75,050$ to $92,386 \mathrm{lbs}$ valued at $\mathrm{R}_{10,02,250}$. The distribution of the exports of reeled silk (mulberry and wild combined) was as follows in 1905-06:

The exports of waste silk (chasam)-more than half of which was wild silk—rose in $1905-06$ to $1,13 \mathrm{I}, 960 \mathrm{lbs}$ valued at $\mathrm{R} 8,43,059$ from $751,355 \mathrm{lbs}$ valued at $R 6,40,957$ in $1904 \cdot 05$. The average price per lb therefore fell from
$13^{\circ} 6$ annas to $11^{\circ} 9$ annas. The exports of cocoons, however, three-fourths of which were wild, fell from $85,990 \mathrm{lbs}$ valued at $\mathrm{R} 79,837$ to $68,906 \mathrm{lbs}$ valued at $R 6_{3,7} 85$. The average price per lb of cocoons remained the same, vis., ${ }_{1} 4^{\prime} S$ annas.

Teak Timber-A great expansion in ship-building and in some other branches of construction in the United Kingdom, Germany, and the United States, has synchronised with a contraction in the available supplies of Teak and has induced a rise of price-in some cases prohibitive. The average price in 1904.05 at Calcutta was Rili to $\mathrm{R}_{11} 6$ per ton of 50 cubic feet. In 1905-06, it was R120 to R125. Exports of Teak have increased in quantity by 12.5 per cent to 53,000 cubic tons and in value by 17.25 per cent to R $70^{\prime} 4$ lakhs. But the difference betireen these two. percentage rates of increase does not gauge the enhancement in average value of a uniform quality of timber, for it. is understood that a good deal of inferior wood has gone forward in the twelve months under report. Exports from Burma to India proper decreased by a further 59 per cent and reached a value of only $\mathrm{R}_{71}, 30,683$, while imports into India from Siam and Java increased by some $34^{\circ} 7$ per cent to a total of Rj7 lakhs. But, as was pointed out last year, practically the whole of the teak trade in the north of Siam is controlled by British Companies.

Wool.-In spite of such an increase in Europe's supply of wool from the Colonies and River Plate as made good the deficiency in the previous year, the activity in the textile trade induced a general rise in the price of the raw material and an expansion of the Indian exports. These reached 42.5 million lbs, with a value of 211.47 lakhs, in $1905-06$, which marks an advance of 10.2 per cent on the figure for the previous year and establishes a progressive record for the third year in succession. The United Kingdom took wool to the value of, R200'57 lakhs as against R171 lakhs in 1904005, while the exports to the United States receded to R4.5 lakhs and those to Japan to R4\% lakhs, Re-. exports of foreign wool continue to contract and are now at 5 million lbs; but it is probable that some of the wool exported as Indian came from beyond the land frontiers.

The other principal raw materials exported have in the last three years been as follows:

The most important increase is that of 33 per cent in Bones which advanced by $\mathrm{R}_{12 \cdot 27}$ lakhs and approached the $\mathrm{R}_{54}{ }^{\circ} 98$ lakhs registered in igoi-03. This trade naturally tends to keep pace with those in hides and horns, the latter." of which increased by $\mathrm{R}_{3} \cdot 78$ lakhs or nearly 28 per cent. Rice-bran increased. , by $\mathrm{R}_{11^{\prime} 42}$ lakhs and Oil-cake by $\mathrm{R}_{25} \mathrm{~g}^{\prime}$ lakhs. A notable advance is that in Hemp. There are various indications of an increased interest in Indian hemp abroad. The expansion in Mica shipments is remarkable and is due to large shipments of mica clippings and dust from Madras. It represented an advance of $609{ }^{\circ} 5$ per cent in quantity and 63 per cent in value, the decrease in average vaiue thus being 77 per cent. Caoutchouc, which increased in value by 163 per
cent in 1904-05 recorded a further advance of $40^{\circ} 6$ per cent. and attained a tot value of RI2.82 lakhs with a substantial gain in specific value. Stick La which increased in value by about 188 per cent in 1904.05 advanced further $t$ $5^{2} \cdot 8$ per cent to a total of R4.9 lakhs.

## ARTICLES MANUFACTURED AND PARTLY MANUFACTURED

The statement below shows the comparative value (in rupees) for the pas five years of each principal class of manufactures:

|  | 1901-02 | 1902-03 | 1903-04 | 1904-05 | $\begin{gathered} \text { Ratio } \\ \text { 1905-06 } \begin{array}{c} \text { incre } \\ \text { valu } \end{array} \end{gathered}$ | oper cent c ase over th le of $1904^{-0}$ |

There has been an improvement in every class except in Sillss and Woollens. In the former class there has been a constant and steady decline for a large number of years, until the value of the exports of silk manufactures has now fallen so low as $\mathrm{R} 7,15,109$. The decline in Woollens should not be taken as indicating a set-back in the industry; but is understood to be due to a strong internal demand. The class in which there has been the most marked improvement is Candles the value of which in 1900 or was only $\mathrm{R}_{15,157}$, while five years later ( $1905-06$ ) it rose to R16,53,646, an increase of over a hundred-fold. The increase in the value of the whole group was $2 r^{\circ} 5$ per cent, while the value itself represented $22^{\circ} 5$ per cent of the total value of exported merchandise. It should bo remembered; in drawing any conclusions from the figures, that there aremany manufactured and partly manufactured articles which are not included in this group in the accounts. They are, from their nature, more properly included in the other groups of articles. For instance, milled-rice, wheat-flours, coffee, and tea are included in the group "Articles of Food and Drink"; machinery is included in the group "Metals", saltpetre in "Chemicals", opium and tobacco in " Narcotics", indigo in "Dyes", and vegetable and mineral oils under the group "Oils". The group "Articles manufactured and partly manufactured " contains such manufactured and partly manufactured articles as cannot be included under one of the other main groups of arricles,

Exports of Cotton Manufactures, showed extraordinary expansion in response to the restoration of peace in the Far East, the opening of markets rendered bare by a series of unfavourable years, and a return of prices, both of the raw material and of the finished articles, to favourable levels. The following are the quantities and values of yarns and piece-goods exported in the last five years :

| 1901-02 1902-03 1903-04 1904-05 1905-06 |
| :---: |
|  |  |
|  |  |
|  |  |
|  |  |

| (unit 1,000 lbs) . $\mathrm{B}_{\text {. }}$. |
| :---: |
| -272,408 9,31,66,944 |
| 248,539 : 8,54,00,344 |
| 252,474 $\because 9,84,15,431$ |
| 247,855 - 9,81,56,814 |
| 297,634 12,38,76,874 |

It will be seen that in both classes of goods the figures attained in 1905-06 are unprecedented. Yari represents nearly 85.87 per cent of the total value,
and has shown an increase of no less than 26.2 per cent in 1905.06 , which corresponds approximately with the estimated rate of increase in the exports of cotton goods from the United Kingdom in 1905. The quantitative increase in the exports of Indian yarn was about 20 per cent, so that the rise in specific value was one of $5^{\circ 1}$ per cent. The exports to China, which represented some 94.3 per cent of the total value, showed an increase of R269 lakhs, thus constituting $10{ }^{4} 6$ per cent of the total increase of the year and marking an. addition of $29^{\circ} 93$ per cent to the figure of the previous year. The figures for the Straits Settlements show a slight contraction at $6,490,200 \mathrm{lbs}$ or 2.2 per cent of the total. This is no doubt a result of the exceptionally healthy state of the trade and consequent increase of shipment direct to ultimate destinations.

The trade to the Levant, which had developed well two years ago, has been neglected in favour of the larger markets and has shrunk to some $689,700 \mathrm{lbs}$, while Egypt took only $836,800 \mathrm{lbs}$ and European Turkey $63,08 \mathrm{l}$ lbs.

The exports of piece-goods increased by R21 44 lakhs or about . 12.98 per cent. This is a lower rate of expansion than that shown by yarns; but the fact is due to no deficiency of demand but to the incapacity of the Indian weaving mills to increase their output commensurately. The quantitative increase was one of 5.17 per cent so that the increase in specific value amounted to 743 per cent.

The exports of Grey goods amounted to $55,822,652$ yards with a value of $\mathrm{R}_{7} 8 \cdot 9$ lakhs. This represents 42.27 per cent of the total value of piece-goods and marks an increase of 5.6 per cent in quantity and 10.6 per cent in value with a rise of 4.8 per cent in specific value.

Coloured goods again increased 14.6 per cent in value to Rio6. 7 lakhs and in quantity by 3.8 per cent to $35,760,000$ yards.

The shipments of Grey goods to China alone advanced by no less than 24.3 per cent in quantity and 21.2 per cent in value, the total being $12,824,000$. yards and R18.87 lakhs. But the main markets for Indian' cloth are found in East Africa, Aden, Red Sea ports, Abyssinia, the Persian Gulf, Ceylon, and the Straits; while dyed and printed cloths go, mainly from Madras, to the two last and the Philippines. Madras also sends handkerchiefs and shawls to the diminished value of R8.51 lakhs almost wholly to the United Kingdom.

The production of yarn and cloth in the Indian mills in thousands of pounds was:

Additions to spindles have amounted in all to 37,454 of which 7,359 are in Bombay, 22,823 were in Bengal, and 6,222 in Madras. In looms the additions were 4,976 of which 4,474 were in Bombay. And since it may be assumed that every spindle and loom has worked to its utmost output during the exceptional year under review it is possible to compute for the first time that the average
capacity per spindle and per loom respectively under Indian conditions is 13177 lbs of yarn or $3,22 \mathrm{I}^{\circ} 2 \mathrm{glbs}$ of cloth per annum.

Exports of Jate Manufactures increased largely both in quantity and yalue, as may be seen from the appended statement which shows details regarding bags, cloth, and the total value. This latter includes for $1905 \cdot 06$.R5 lakhs of rope and twine, $\mathrm{R}_{44,000}$ of twist and yarn and R1 lakh of other kinds.

Particulars about the supply and prices of the raw material and about the numbers of spindles and looms in position will be found in the section dealing with the exports of raw jute. The continuous rise of the said prices seriously affected the working of those mills that were not well covered ; and the shortage of labour in the hot weather led to the appointment of a Government Commission of. enquiry. But plant was largely augmented and the aggregate production reached a level never before attained. The exports of bags developed by 15.8 per cent in quantity and 27.8 per cent in value, the enhancement of specific value thus being 10.35 per cent. Cloth increased by $14^{\circ} 45$ per cent in quantity and $23^{\circ} 24$ per cent in value, the rise in specific value being one of $7 \cdot 66$ per cent. Against these figures must be set the fact cited elsewhere that the specific value of the raw material exported increased by $27^{\prime} 3$ per cent.

The shortage in the Indian wheat shipments diminished the country demand for bags and the quantitative increase in the exports was greater in bags than in cloth, the strong demand from Australasia, Chile, etc., maintaining values. The total values of the two classes continue to be nearly equal. The most marked advance in the shipments to any one country was in those to Australasia which, with its large wheat crop and its inadequate supply of manufacturing labour, took ready-made bags to the value of $\mathrm{R}_{14} 1^{\circ} 5$ lakhs, which represent an advance of 51.3 per cent on the R93.5 lakhs of 1904-05. Chile, with the assistance of certain new shipping arrangements, assumed for the first time a position above that of the United Kingdom and took bags worth R $64{ }^{\circ} 25$ lakhs. The increase here is one of $35^{\circ} 6$ per cent which, calculated on the figures enhanced by 66 per cent in 1904-05, makes a total advance of 125 per cent in two years.

The trade with the United Kingdom and Germany, which might have been expected to suffer from the growth of direct shipments to places formerly supplied from these centres, increased respectively from R $54^{\circ} 75$ lakhs to R63.2 lakhs and from R $7 \cdot 75$ lakhs to R8.8 lakhs. The Straits Settlements' trade, which also is largely for distribution, increased from R44 lakhs to $\mathrm{R}_{52^{\circ} 4}$ lakhs and that of China from R44 lakhs to R 46 lakhs due to the elevation of prices. Egypt probably suffered from the growth to be noticed in the direct shipments to the Levant, but her trade increased from $\mathrm{R}_{4} \mathrm{r}^{\circ} 25$ lakhs to $\mathrm{R}_{49^{\circ}} 3^{6}$ lakhs.

There is a heavy duty in the United States on imports of made bags and that country in 1905.06 took of this class of goods only $\mathrm{R}_{1} 6_{2} 2$ lakhs which is little more than the figure attained in the previous year.

Of cloth however she bought $419^{\circ} 5$ million yards with a total value of $\mathbf{R}_{37} 8$ lakhs. This represents $63 \cdot 7$ per cent of the total exports of cloth, and marks a quantitative advance of $19^{\prime}$ : per cent on the figures of the previous year,

The exports of cloth to the Argentine and Uruguay showed a quantitative decline but an advance in value from R147'9 lakhs to $\mathrm{R}_{15} \mathrm{I} \cdot 8$ lakhs, which: represents about $24^{\prime} 1$ per cent of the total ; while the value of the bags taken by the Argentine alone advanced from $R_{2}$ to $\mathrm{R}_{4}{ }_{4}$ lakhs.

Exports of cloth to the United Kingdom, which, like the bags, are mainly for distribution, rose from R19.75 lakhs to $\mathrm{R}_{42}{ }^{\circ} 87$ lakhs, while China increased her purchases by about 50 per cent to R24.32 lakhs and Australasia in addition to its large quantities of bags took cloth to an enhanced value of $\mathrm{R}_{17}$ lakhs.

The exports of Sill Manufactures continue to decline, and their value nor amounts to only R $7,15,109$ which is 2 per cent less than in the previous year. The exports are chiefly tissues woven in Bengal from indigenous silks. Else. where the industry is conducted mainly for the Indian market.

Exports of Woollen Manufactures in $1905-06$ declined by 8.5 per cent to a value of R20,75,344. Carpets and Rugs form the most important class and represent some $92^{\circ}$ per cent of the total. They showed a very slight rise at Rig'i lakhs, of which Ri3.9 lakhs went to the United Kingdom and R $_{4}$ lakhs to the United States. Piece-goods and other miscellaneous manulactures receded by $5^{6}$ per cent, that is to say from $\mathrm{R}_{3} \cdot 7$ to R1•6 lakhs, which is slightly higher than in 1903.04; but this decline indicates no failure in the industry but a stronger internal demand. Indeed it may here be noted that in 1905-06 the production in woollen mills in India amounted to $4,126,937 \mathrm{lbs}$ with a value of $\mathrm{R}_{44,28,887}$, thus marking a quantitative increase of more than 17 per cent and the highest total so far attained.

The exports of apparel increased in value from R18.79 lakhs in 1904.05 to $\mathrm{R}_{19} 9^{\circ}$ in $1905-\infty$; while boots and shoes of Indian manufacture, which form the most important sub-head in this class, increased from $R_{4} \cdot 69$ lakhs to $R_{4} \cdot 9$ lakhs. In 1902.03 the value was swelled by exports to South Africa to Rro.6 lakhs. That trade is gone for the present ; but there is a noticeable growth in the shipments to China where a large market might be found for foot-gear of a suitable kind. Re-exports of foreign boots and shoes usually amount to about R50,000.

Coir.-The trade in matting and other manufactures of coir is almost entirely in the hands of Madras, and the exports continue their steady growth. Their value now amounts to $\mathrm{R}_{54^{-1}}{ }^{7}$ lakhs, of which the United Kingdom takes R17.69 lakhs, Germany 16.2, Belgium 5.2, France 4, Holland 3.96 , and the United States 2.1 .

Hides and Skins, tanned.-The unprecedented activity in the leather trade of the world during the twelve months under review has occasioned a remarkablelincrease in the quantity of tanned hides exported and a notable rise in the average values of both tanned hides and skins. The exports of tanned hides increased from 123,390 cwts with a value of $R 82.52$ lakhs to $201,982 \mathrm{cwts}$ with a value of $\mathrm{R}_{154^{\prime}} 8$ lakhs. These figures mark an advance of 63.7 per cent in: quantity, 87.6 per cent in value, and of $14^{\circ} 6$ per cent in average value in addition to that of 14 per cent recorded in 1904-05. The only year in which the tanned hide exports of $1905-06$ were exceeded was $1900-01$, when drought occasioned great mortality among the cattle; but on that occasion the average: value per cwt of hides stood at $\mathrm{R}_{57}$-10-0 as compared with $\mathrm{R}_{7} 6-10-3$ in 190506. Quantitatively the export of tanned skins was less than in 1904-05; but the decline of about 1.2 per cent was accompanied by a rise in total value of 3.1 per cent. The average value per cwt of skins in 1905-06 was R151-14-3 as compared with $\mathrm{R}_{140-10-6}$ in igoo-01. It must, however, be borne in mind,
that these two classes of hides and skins comprise many diverse qualities and that these vary in relative quantity from year to year, so that it is not permissible to regard these fluctuations in average value with such reliance as is warranted in the case of a single article or a homogeneous and constant group of articles. The exports during the past six years have been :

Of hides, Madras exported 88 per cent of the total and Bombay il per cent whilst the shares of these two provinces in the skin shipment were, respectively, 73 per cent and 24 per cent.

In the absence of any protective tariff the United Kingdom continues to take the greater part of the tanned hides and skins; but in the past year America has taken a considerably larger share of the hides, and Britain's percentage in this department has declined from 80 to 77.5 per cent while in skins it has advanced from 90 to $93^{\circ} 6$ per cent, this being ascribed to the demand for motor padding and clothing. As illustrating the extent to which transhipment of hides is made from the United Kingdom-to America, it may be mentioned that the report of the British Consul at Chicago for 1905 records 27,269 tons received from India, 22,960 tons from United Kingdom, and 33,611 tons from South America. (See also p. 40.)

Lac is one of the articles for which the demand has grown steadily in recent years and has become marked in 1905-06 as a consequence of activity in the electrical and certain other industries. Like all destructible articles of relatively high specific value, it is a subject of speculation; and this element in the trade is intensified by the facts that the article is of precarious supply, being in fact a forest produce of insect origin and so exposed to influences of weather. The price fluctuates greatly but within narrower limits as the demand defines itself. There has for three years been a marked upward tendency; and in response to the net enhancement the exports have grown largely. The following statement collates the figures relating to shellac and button-lac with those relating to stick and seed lac which belong strictly to the category of raw materials: Neither quantitatively nor in respect of specific value is the raw material comparable with the prepared article; but it is interesting to note (a) the total values of the two classes, and (b) the quantitative advance or decline in each of the two classes respectively as indicating the course of the local industry.

|  | 1903-04 |  | 1904-05 |  | 1905-06 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $C_{w t s}$ | R | Cwts | $\underbrace{}_{R}$ | Cwts | R |
| Shellac | 178,497 | 2,18,30,905 | 193,305 | 2,58,93,713 | 217,593 | 2,64,53,774 |
| Button-lac | 50,500 | 49,35,903 | 34,276 | 38,70,479 | 41,851 | 44,41,287 |
| Total | 228,997 | 2,67,66,808 | 227,581 | 2,97,64,192 | 259,444 | 3,08,95,06I |
| $\begin{aligned} & \text { Stick and seed } \\ & \text { lac . } \end{aligned}$ | 6,383 | 4,39,264 | 11,152 | 9,41,104 | 11,004 | 7,79,613 |

It will be seen that exports of shellac increased in quantity by 12.56 per cent and in value by 21.63 per cent, while button-lac increased by $22^{\prime} 1$ per cent in quantity and $14^{\circ} 75$ per cent in value. Together the two increased by 14 per
cent in quantity and 3.8 per cent in value, the fall in average value thus being 8.95 per cent. On the other hand the raw material declined by 13 per cent in quantity and 1716 per cent in value. The highest price for shellac in the year under report was Ri40-3 per cwt in February 1906, and the lowest R88-8 per cot in June 1905. There appears to be among persons in the trade some misgiving as to whether the high level of recent prices has not induced reckless gathering with consequent danger to succeeding crops.

In the past year the United States has assumed the first place as a buyer of lac from India, 'her total being now R149'52 lakhs as against R94'24 lakhs shipped to the United Kingdom and $\mathbf{R}_{44}$ lakhs to Germany.

General distribation of the export trade.-The value of the exports of Indian produce and manufactures in the last five years was distributed, in the ratios stated below, among the principal countries with which the trade is carried on:

|  | , | 1901-02 | 1902-03 | 1903-04 | 1904.05 | 1905-06 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| United Kingdom |  | 25.1 | 25.2 | 27.1 | 27.5 | $25 \cdot 3$ |
| China |  | 14.5 | 12.6 | 199 | 12.6 | 13.5 |
| Germany |  | $8 \cdot 4$ | 8 | $9 \cdot 9$ | $9 \cdot 2$ | 8.9 |
| United States |  | 6.9 | 6.7 | 6 | 6.3 | $8 \cdot 2$ |
| Japan |  | 57 | 4.6 | $5 \cdot 6$ | 6.3 | 6.3 |
| France |  | 73 | 7.2 | 6.6 | 6.2 | $5 \cdot 9$ |
| Belgium - . |  | $3 \cdot 9$ | $3 \cdot 9$ | 51 | 54 | 4.0 |
| Straits Settlements |  | $5 \cdot 2$ | 6 | 48 | 4.1 | 339 |
| Ceylon |  | 37 | $3 \cdot 5$ | 3 | 3.2 | 3.5 |
| Italy. |  | $2 \cdot 4$ | 2.7 | $3 \cdot 3$ | 27 | 2.9 |
| Austria-Hungary |  |  | $2 \cdot 5$ | 3.2 |  | 2.8 |
| Egypt |  | 44 | 6.1 | ${ }^{9}$ | 8 | 2.2 |

Egypt, which in 1902.03 was sixth in the list, fell to the last place in 190304 in consequence of the change made in crediting to the countries of final destination, instead of to Egypt, the large shipments of produce, principally rice nd wheat, originally consigned to Port Said to await orders for delivery. This last position she has retained for three consecutive years. It is probable also that the percentage of China, which has been steadily second, will be affected considerably when the exports, now being recorded with reference to country of destination, come to be scrutinised; for both Singapore and Hong-Kong are transhipment ports for the Eastern trade. The relative position of the countries remained practically unchanged in $1905-06$.

The United Kingdom of course continued to be a long way ahead of any other country, but its proportion to the total export trade fell from $27^{\circ} 5$ per cent to 25.3 per cent, a relative decline of 2.2 per cent. Italy and Austria-Hungary changed places owing to a proportionately larger increase in the exports to the former country.

## CUSTOMS REVENUE

The only important change made during 190506 in the tariff was the raising, by Act I of 1906, of the rates of import duty on ordinary spirits from R6 to R7 per imperial gallon and on liquors and perfumed spirits to a rate corresponding with that on ordinary spirits.

The additional import duty on bounty-fed sugar imposed under section 8-A of the Indian Tariff Act was reduced, with effect from the 6th September 1905, from R15-3-10 to R10-15-8 on "all kinds" of sugar produced in, or imported from, the Argentine Republic; whilst that imposed on sugar produced in, or imported from, Denmark and Chile remained the same. The special duties
to countervail bounties on sugar created by private trade combination, which had been imposed under section 8-B of the same Act, remained the samte in respect of sugar from Denmark and Russia; but in the case of sugar from the Argentine Republic were, with effect also from 6th September 1905, revised thus :

In place of the two"kinds of sugar, "Refined." and "Unrefined," with rates of special duty at $R_{5-7-5}$ and $R_{4}-0 \cdot 8$ per cwt, respectively, three kinds were substituted :
(1) Refined sugar or sugar polarising $96^{\circ}$ and more was charged with a special duty of R6-0-2 per cwt.
(2) Unrefined sugar or sugar polarising less than $96^{\circ}$ with a special duty of R4-8-9.
(3) Sugar Candy with a special duty of $\mathrm{R}_{3}-2-9$ per cwt .

The only alterations made in the rules in 1905-06 for the identification of sugar chargeable with an additional or special duty was the addition of a clause (4) to rule 7 by which, in any case referred to in clause 2 of rule 7 the sugar is alleged to be the produce of a country which is a party to the Brussels Sugar Convention of 1902, a certificate granted by a duly authorised Customs Officer of that country as to the origin of that sugar shall be accepted as sufficient proof of its origin.

There were no exemptions from import duty notified in $1905-06$; but modifications were-made in the rules for the exemption of passengers' baggage from Customs duty and came into force on ist January 1906. The tariff valuations for assessment to duty were as usual revised in December 1905 and a new Schedule of valuations was issued with effect from ist January 1906.

The gross revenue from imports was $\mathrm{R}_{5,00,89,113}$ in $1905 \cdot 06$ whilst refunds and drawbacks were $R_{7,40,552}$, thus leaving the net revenue at $R_{4,93,48,561}$. The duty on salt ( $\mathrm{R}_{1} 83$ lakhs in $1905-06$ compared with $\mathrm{R}_{2} 35$ lakhs in 1904-05) is not included in the above figures for it is not credited as a customs receipt. The gross revenue increased 2.6 per cent, having been $R_{4,88,36,084}$ in 1904:05, whilst the net revenue increased 2.7 per cent, having been $R_{4}, 80,33,912$ in 1904.05. There was a decline to the extent of 7.7 per cent in the refunds and drawbacks.

The principal items from which the customs revenue is derived are as follows:

|  | 1903-04 | 1904-05. | 1905-06 |
| :---: | :---: | :---: | :---: |

| coloured | 27,91,707 | 31,64,621 | 33,19,833 |
| Oils: |  |  |  |
| Petroleum | 43,99,912 | 45,88,289 | 36,64,723 |

Of the other articles enumerated in the tariff schedules, the three mentioned below yield individually a revenue of some consequence :

The revenue realised on the 18 articles enumerated above aggregates $82^{\circ} 5$ per cent of the total revenue realised and if the revenue on eight other articles, namely, arms and ammunition, carriages (including motor cars and cycles), cotton manufactures (other than piece-goods), fruits and vegetables, instruments, paper and pasteboard, wines, and wood and timber, each of which yield between $\mathrm{R}_{3} \frac{3}{4}$ and 5 lakhs and jointly $\mathrm{R}_{34,55,945 \text {, be added the }}$ share of the 26 articles in the total is $89^{\circ} 4$ per cent. The above figures show that although the Indian Tariff comprises a lengthy list of dutiable articles there are comparatively only a few on which individually any revenue of importance is collected : these are spirituous liquor, petroleum, sugar, metals, (including silver) and cotton piece-goods. On these the duties realised approached threefourths of the total.

The import rate of duty on cotton goods is $3 \frac{1}{2}$. per cent ad valörem, and the total duty realised thereon in 1905.06 amounted to $\mathrm{R}_{132} .89$ lakhs or $26^{\circ} 5$ per cent of the whole Customs Revenue. On most classes of iron and steel the rate of duty is only 1 per cent. On such other articles as are dutiable at a general ad valorem rate, that rate is, with two exceptions, 5 per cent. The exceptions are vinegar in casks and green copperas on each of which the duty is $2 \frac{1}{2}$ per cent.

The export Tariff Schedule is limited to rice and rice flour, the duty on which is levied at the rate of three annas per maund of $82 \frac{2}{7} \mathrm{lbs}$. The net duty realised in 1905 -06 was $R_{1,12,66,983}$ against $R_{1,28,75,997}$ in 1904.05 (a record year) and represent a fall of R16 lakhs or 12.5 per cent, the decline corresponding, of course, with the decline in the exports of wheat.

A customs duty (known as the Tea Cess) at the rate of a quarter of a pie per pound, was levied from the ist April 1903 on all tea the produce of India and exported from any customs port to any port beyond the limits of British India. The collections realised are paid to ạ committee constituted to receive and expend the proceeds of this cess on measures for promoting the sale and consumption of Indian-produced tea. The collections since the institution of the cess have been as follows:

## BALANCE OF TRADE

The excess of exports over imports, including treasure as well as merchandise, for each of the last six years was (in thousands of rupees) :

$\left.\begin{array}{ccccccccc}\text { Including }\end{array}\right) \quad$| Excluding |
| :---: |
| Government |
| transactions. |

- In the same period the drawings of the Secretary of State in Council Bills have been:

The excess of exports, including Government transactions, rose from $\mathrm{R}_{3,021^{\circ} 62}$ lakhs in 190400 to $\mathrm{R}_{3,354^{\circ}} \mathrm{O}$ lakhs in 1905\%0, the increase of R667.53 lakhs being almost as much above the 1904-05 surplus as the latter was below that for 1903-04. In striking the balance of India's trade it must be remembered that the figures quoted above represent only the registered trade and that only at British-Indian ports. Some adjustments have therefore to be made on account of the unregistered trade and the trade of the French and Portuguese Settlements in India. The unregistered trade consists largely of trade carried on (chiefly by native craft from ports in the Native States on the West Coast of India) with Persia, Arabia, and Ceylon; and it is supposed that the exports therefrom greatly exceed the imports thereto. The value of the large re-exports of pearls from Bombay is also not registered, as the pearls are sent away from India by letter post; and the trade is therefore not recorded. The trade of the French Settlements for the five years ending 1904.05 (the statistics for $1905-06$ have not yet been received) has been:

|  |  |  |  | $\underset{R}{\text { Imports }}$ | $\begin{aligned} & \text { Exports } \\ & \text { RR } \end{aligned}$ | Excess of exports R |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1900.01 |  |  |  | 14,86,630 | 54,89,488 | 40,02,858 |
| 1901-02 |  |  |  | 13,61,496 | 1,39,35,776 | 1,25,72,280 |
| 1902-03 |  |  |  | 17,36,236 | 1,19,40,994 | 1,02,04,758 |
| 1903.04 |  |  |  | 37,37,708 | 96,75,216 | 59,37,508 |
| 1904-05 |  | - |  | 17,13,449 | 1,42,10,414 | 1,24,96,965 |

The trade of the Portuguese Settlements for the five years ending 1903.04 (the statistics for 1904.05 and 1905.06 have not yet been received) has been :

It should also not be overlooked that the exports of Government Stores in some years-as for instance at the time of the South African War and the Somaliland Expedition-unduly swell the total exports from India; and that they are imperfectly recorded seeing that there is no obligation on the part of the officials concerned in the export of those stores to pass them through the Customs.

## GOLD AND SILVER

The value of the Imports, Exports, and Net Imports of Gold and of Silver in the last five years, in thousands of Rupees, was as follows:

| Gold- |  |  | Imports | Exports | Net imports | Production |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1901-02 | - | 8,30,75 | 6,36,99 | 1,93,76 | 2,86,99 |
|  | 1902-03 | . | 13,19,24 | 4,42,78 | 8,76,46 | 3,05,87 |
|  | 1903-04 | - | 20,14,79 | 10,21,62 | 9,93, 7 | 3,51,30 |
|  | 1904-05 | - | 21,81,20 | 12,10,61 | 9,70,59 | 3,55,59 |
|  | 1905-06 | - | 14,74,90 | 14,29,10 | 45,80 | 3,58,76 |

[^7]

It must not however be supposed that, in respect of Gold, the foregoing figures represent India's absorption of the metal. To ascertain the absorption the Indian production of gold must be added to the above Net Imports. The gold produced in India is sent to England for assay and thus swells the exports and diminishes the net imports calculated in the ordinary way. But if no imported gold were exported it would be necessary to consider the total imports as absorbed. For this reason the production figures of the last five years are added to the above statement. It will be seen that the imports of gold declined from R2,181 lakhs to $R_{1,475}$ lakhs while the exports increased from $R_{1,210}$ lakhs to $R_{1,429}$ lakhs. These movements are characteristic of the year with its strong demand for gold in Japan and America, and they were contributed to by the new arrangement under which gold destined for the Gold Reserve Fund (hereafter to be known as the Gold Standard Fund) is shipped directly from the country of production to London.

The net imports of gold thus dropped from R970.59 lakhs to $\mathbf{R}_{45} 8$ lakhs. Including the production with a value of $\mathrm{R}_{35} 8 \cdot 76$ lakhs, the net addition to the stock of gold still amounted to $\mathrm{R}_{4} \mathrm{O}_{4}{ }^{\circ} 5$ lakhs.

In relation to the records of imports of silver it should be borne in mind that during those years in which the value of silver was declining but while the mints in India remained open for free coinage, the value of the metal when converted into rupees was recorded at its value upon importation. The statistics relating to years since the closing of the mints assign to the metal its true market value, so that silver of the value of $\mathrm{R}_{1}, 000$ in these statistics represents a much larger quantity of the metal than was indicated by R1,000 in the statistics of ten years ago. This however scarcely affects the figures of the last five years which are here recorded. It will be seen that the imports of silver, though they have slightly declined, remain at a level which would a few years ago have been regarded with misgivings by those sceptical about the Government's currency policy. The exports have subsided to Riry'9 lakhs-a figure so low as to find no parallel since 1885-86-and the net imports reached the entirely unprecedented total of $\mathrm{R}_{1,572} 3$ lakhs. Stated in ounces the net imports and production of gold and the net imports of silver in the last five years have been as follows:

|  |  |  | Production of gold | Net Imports of gold | Net Imports of silver |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1901-02 |  |  | 524,461 | 274,506 | 39,005,192 |
| 1902-03 |  |  | 534,763 | 1,416,618 | 43,274,305 |
| 1903-04 | - | - | 613,755 | 1,566,237 | 78,575,469 |
| 1904-05 |  |  | 619,571 | 1,516,991 | 74,956,262 |
| 1905-06 |  | - | 625,037 | -65,473 | 84,317,765 |

The value of the true increment of gold in 1905.06 was, as has been said, R404.56 lakhs or, say, $£ 2,697,050$, all of which was bullion. It did not include sovereigns and half sovereigns, as was the case last year ; because the exports of such in $1905 \cdot 06$ exceeded the imports by $R_{4}, 66,74,824$ or $£ 3,111,655$. The exports of gold by Government amounted to $£ 6,000,000$ and included
the large additions to the Gold Standard Fund resulting from the heavy coinage of silver.

## TRADE ACCORDING TO COUNTRIES

The following shows the trade of India with the world in merchandise, imported and exported for five years (in thousands of rupees):

|  | 19 | 19 | 1903.04 | 1904-05 | 1905-06 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Europe | , | 1,31,15,12 | 1,57,37,21 | ,69,00,76 | 1,71,42,98 |
| Africa and a jacent islands | $11,49,58$ | 14,15,50 | 8,79,80 | 8,09,20 | 8, 17,68 |
| Asia | 49,47,53 | 48,32,60 | 55,70,30 | 59,57,09 | 62,39, 1 |
| America | 15,60,62 | 12,04,57 | 13,28,43 | 14,98,19 | 19,45,48 |
| Australasia | 2,70,06 | 1,92,53 | 2,52,55 | 2,52,57 | 3,30,13 |
| Total |  |  |  |  |  |

As explained on page 50, the trade with Africa was exaggerated up to 1902-03 in consequence of large shipments of produce consigned to Port Said, to await orders for delivery, being credited to Egypt. The apparent falling off in the trade with Africa is not, therefore, real. When the new system of registering imports by country of consignment and exports by country of destination is properly established the trade with America will perhaps appear to have unduly increased, for at present a share of the trade with that Continent is credited to Europe and Asia. There has been a slight relative set-back in the trade with Europe, which fell from $66^{\circ} 5$ per cent of the whole to $6_{4}{ }^{\circ} 8$ per cent. The trade with Asia ( $23 \cdot 6$ per cent) was practically the same as during the four preceding years ( $23^{\circ} 4$ per cent). The total trade with America, of which 78.5 per cent was with the United States, increased by about 30 per cent. In the case of Europe the exports thereto were only slightly lower than the imports therefrom (imports R8,592 lakhs,' exports R8,55I lakhs). In the case of the other Continents, however, the export trade very largely exceeds the import trade : exports to Africa were twice as much as the imports therefrom, to Asia four and a half times, to America eight times (in 1904-05 it was nine times), and to Australasia about three times.

The following statement shows India's trade with each principal country for the last four years (in thousands of rupees) :

|  | 1902-03 | 1903-04 | 1904.05 | 190506 |
| :---: | :---: | :---: | :---: | :---: |
| United Kingdom | 84,66,27 | 96,30,58 | 106, 17,59 | 109,45,45 |
| China | 18,19,23 | 20,03,66 | 21,62,93 | 23,26,58 |
| Germany | 12,33,76 | 17,73,97 | 18,03,84 | 19,11,24 |
| United States | 9,74,80 | 10,33,52 | 11,21,73 | 15,27,13 |
| France | 10,56,95 | 11,47,54 | 11,36,47 | 11,30,48 |
| Japan - | 6,70,48 | 9,74,06 | 10,91,84 | 11,23,56 |
| Belgium | 8,05,7 | 10,97,50 | 11,91,95 | 10,98,62 |
| Straits Settlements | 10,09,7 | 9,87,22 | 9,51,00 | 8,96,45 |
| Austria-Hungary | 5,77,0 | 7,03,01 | 8,70,63 | 8,92,17 |
| Ceylon | 5,24,51 | 5,41,19 | 5,73,50 | 6,36,32 |
| Italy | 4,25,47 | 5,93,88 | 5,54,18 | 5,94,94 |
| Mauritius | 3,13,20 | 3,85,85 | 3,19,55 | 3,26,09 |
| Australia | 1,57,78 | 2,13,39 | 2, 19,32 | 2,91,30 |
| Java | 85,07 | 1,62,04 | 2,47,01 | 2,82,96 |
| Holland | 1,42,80 | 2,60,36 | 3,01,76 | 2,38,14 |
| Egypt . | 8,02,05 | 1,92.91 | 1,93,58 | 1,95,53 |
| Russia | 3,09,64 | 3,28,73 | 2,25,57 | 87,44 |

In determining, from the figures as they appear in the accounts, the trading interests of certain countries with India, and in making comparisons, much
care is necessary; for in the case of imported goods, the countries containing the ports from which the goods were shipped direct to India are credited with the trade, as are also the countries containing the ports at which goods were transhipped, except when goods are shipped on a through Bill of Lading, in which case the country containing the port at which the Bill was granted is credited with the trade. In the case of exported goods, the countries containing the ports at which the goods are discharged, whether destined for that country or not, are credited with the trade. Taking the figures as they stand, however, the share of the United Kingdom, which is a long way ahead of the other countries, in 1905-06 was much the same as in 1904.05 ( 41.8 per cent in the earlier year and 41.3 in the later). India's trade with Russia fell away very considerably, from R225.57 lakhs in 1904-05 to R87.44 lakhs in $1905 \cdot 06$ or a fall of 61.3 per cent.

## SHIPPING

While the net increase in the value of imports and exports of merchandise in $1905-06$ amounted to $\mathrm{R} 10,59,17$ lakhs (say $£ 7,061,133$ ) there was a decline of about $9^{\circ} 25$ per cent in the tonnage of shipping that entered and cleared from Indian ports. The figures for 1904-05 were, however, entirely abnormal, and those of the later year indicate a return to the normal rate of progress. The following statement gives the numbers and tonnage of steamers and sailing vessels, with cargoes and in ballast, which entered from and cleared to all countries:

Of these 97.4 per cent represented steam tonnage. The total number of steamers that entered and cleared was 5,706 with an aggregate burden of $\mathbf{1 2 , 2 7 0 , 2 6 3}$ tons as against 6,386 and $13,528,347$ tons in the previous year. The average tonnage per steamer increased from 2,118 to 2,150 tons.

The entries from and clearances to the United Kingdom were 3,140,281 tons as against $3,273,419$ in 1904-05, but this reduced quantity represented 24.9 per cent in place of 23.6 per cent of the total tonnage.

Entries from and clearances to British Possessions other than the. United Kingdom receded from $5,233,914$ to $4,784,555$ tons which represent 38 per cent of the total as against $37 \%$ in the previous jear. The tonnage from. and to the British Empire therefore amounted to $62^{\circ} 9$ per. cent. of whole in place of $6 I^{\prime} 3$ per cent.

The tonnage under the British flag including the Indian register, represents about 81.3 per cent of the whole, while that registered under the English Merchant Shipping Act was nearly $80^{\circ} 6$ per cént.

The number of vessels under foreign flags which entered and left Indian ports was 1,296 with an aggregate burden of $2,230,400$ tons as against 1,174 in $1904-05$ with an aggregate of $2,112,428$ tons.

The humber of vessiels under the principal flags are given below:

|  | 19010\% | 1902-03 | 1903.04 | 1904-05 | 1905-06 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| British | 3,988 | 4,257 | 4,772 | 5,633 | 4,838 |
| German | 270 | 325 | 393 | 339 | 387 |
| Austro-Hungarian | - 164 | 142 | 134 | 156 | 162 |
| Norwegian | - 78 | 116 | 173 | 141 | 174 |
| French |  | 157 | 143 | 94 | 105 |
| Italian | 60. | 54 | 63 | 74 | 85 |

During the year a monthly service between Calcutta and the River Plate was established.

## FRONTIER TRADE

The bulk of India's Foreign trade is, and always must be, sea-borne, the value of the trade across the land frontiers of India being equal to only 5 per cent of the trade carried by sea. Although. the Foreign land trade is relatively' small, one of its chief features is its steady progress. It has now attained fairly substantial dimensions the grand total value of merchandise and treasure imported and exported having been R16,84,01,939 in 1905-06, compared with R15,31,94,907 in 1904-05. In 1878-79 the first year for which there are complete statistics, the trade was only Rgo, 33,123 ; and since that time it has increased by 177 per cent. It must however be recognised that the valuation of frontier trade is difficult and defective.

The following statement is interesting as comparing the value of the trade in 1905.06 with the average annual value in the five preceding quinquennial periods:

|  |  | $\begin{gathered} \text { Imports } \\ \mathbf{R} \end{gathered}$ | $\begin{gathered} \text { Exports } \\ \mathbb{R} \end{gathered}$ | $\begin{gathered} \text { Total } \\ \mathrm{R} \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| Average | 1880-8I to 1884-85 | 5,24,04,656 | 5,17,28,273 | 10,41,32,929 |
|  | 1885-86 to 1889-90 | 4,49,38,384 | 5,95,82,674 | 10,45,2 ¢,058 |
| " | 1890-9r to 1894-95 | 4,29,06,151 | 4,05,44,663 | 8,34,20,814 |
| " | 1895-96 to 1899-1900 | 5,87,54,796 | 4,99,30,583 | 10,86,85,379 |
| " | 1900-01 to 1904-05 | 7,63,30,044 | 6,33,66,488 | 13,96,96,532 |
| 1905-06 | . . . | 9,39,78,927 | 7,35,33,362 | 16,75, 2 2,289 |

With the exception of the small trade via the branch line from Sialkot to Jammu in Kashmir, goods are not carried by railway across the frontier, but a large portion of the trade with Kadahar is carried by rail to and from stations close to the frontier and is therefore registered as railway traffic. It may however be assumed that the movements of merchandise are recorded with sufficient 'accuracy for analysis. '「aking merchandise only the geographical distribution of the trade by frontiers and principal countries, proceeding from west to east, is as follows (in thousands of rupees) :

|  | (Afghanistan- | 1901-02 | 1902-03 | 1903-04 | 1904-05 | 1905-06 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\cdots$ | Southern and Western | 68,54 | 53,48 | 68,02 | 76,53 | 85,63 |
|  | Northern and Eastern | 61,00 | 63,99 | 70,56 | 87,29 | 83,43 |
|  | Dir, Swat, and Bajuur | 1,02,65 | 96,06 | 89,08 | 1,04,55 | 1,02,96 |
|  | KKashmir | 2,57,67 | 2,08,32 | 2,41,45 | 2,30,26 | 2,77,19 |
| N. and N.-E. | \{Tibet | 29,72 | 31,43 | 20,62 | 22,39 | 37,52 |

|  | North Siam . | 34,27. | 25,93 | $33,3^{8}$ | 39,64 | 31,67 |

## NORTH-WESTERN FRONTIER

Seistan.-The Quetta-Nushki railway has now been opened ; and it is reason able to hope that, with the greater facilities afforded by the daily service of train since April last, trade will improve. There has been a steady though small increas in both imports and exports during the last five years.

The value of the trade with Seistan was R7弪 lakhs in 1905.06 compare with $\mathrm{R}_{5 \frac{1}{3}}$ lakhs in 1904.05 . The principal imports were silk manufacture valued at $R_{176}{ }^{7} 778$ and precious stones and pearls unset valued at $R_{4} 6,500$ The principal exports were cotton manufactures $R_{1,79,343}$ and indig $\mathrm{RI}_{1,40,2 S 2}$.

Afghanistan.-India's trade with Afghanistan as a whole has increased from R163.82 lakhs in $1904 \cdot 05$ to R169.06 lakhs in $1905-06$, or by 3 per cent the exports representing R104.59 lakhs or 62 per cent of the total, with R64.4t of imports.

Fruits and nuts with a value of $\mathrm{R}_{7}{ }^{5} \mathbf{5}^{2}$ lakhs in $1905 \cdot 06$, compared with $\mathrm{R}_{7} 9$ : lakhs in igot-05, are conspicuous among the imports from Kabul. Animal: (living), drugs and medicines, ghi, and raw wool follow in the order mentionec and range individually from $\mathrm{R}_{2} \cdot 5$ lakhs to $\mathrm{R}_{1} \cdot 25$ lakhs. The total imports fel away by 15 per cent to $\mathbf{R} 22$ lakhs. There was an inappreciable increase in the exports to Kabul at R61.48 lakhs, the principal articles being cotton piece-goods, which, however, fell from $\mathrm{R}_{3} \delta_{3} 6$ lakhs to $\mathrm{R}_{3} 6.48$ lakhs-a decline of $\mathrm{R}_{1} \cdot 88$ lakhs. Next in importance to cotton piece-goods, but a long way behind, is tea, $6,071 \mathrm{cwts}$ with a value of $\mathrm{R}_{4,31,720}$. Of this, 3,012 cwts with a value of only $\mathrm{R}_{1,24,176}$ was Indian, from which it appears that the price of foreign tea at Kabul is more than twice that of Indian tea. The only other articles of any importance are cotton yarn (mostly foreign) valued at $\mathrm{R}_{3} \cdot 22$ lakhs, and manufactured leather valued at R2.42 lakhs. More than half the imports (R42 lakhs) from Kandahar consisted of raw wool, which rose from R18.77 lakhs to R23.48 lakhs. Next came fruits and nuts with a value of R12.36 lakhs, which is much the same as last year, and ghi which fell to R1.44 lakhs from R2. $6_{3}$ lakhs. The exports to Kandahar in $1905 \cdot 06$ rose to $R_{43} \cdot 1$ I lakhs from $\mathrm{R}_{3} 6^{\circ} 3^{1}$ lakhs in the previous year, the principal articles being foreign and. Indian cotton piece-goods valued at R13.42 lakhs and $\mathrm{R}_{13}{ }_{3}$ o6 lakhs, respectively, the former having risen $\mathrm{R}_{3} \frac{3}{3}$ lakhs and the latter having fallen R13 lakhs, while the specific value in each case advanced by 31 per cent and 10 per cent, respectively.

Dir, Swat, and Bajaur.-The imports from Dir, Swat, and Bajaur were the same as in 1904-05 namely $R_{39}$ lakhs. Ghi with an increase of about $R_{1}$ lakh represented R18.75 lakhs or about one half of the total. The imports of grain had a value of $\mathrm{R}_{5}$ lakhs and consisted principally of husked rice at R 6 lakhs and unhusked rice at $R_{1} \cdot 65$ lakhs. Hides and skins declined from R6.I lakhs to $\mathbf{R}_{4} \cdot \mathrm{I}$ lakhs, and timber advanced from RI lakh to $\mathrm{R}_{2} 75$ lakhs. While the imports thus remained stationary, the exports receded to R $64 \cdot 02$ lakhs from $65 \cdot 88^{\circ}$ lakhs. The principal articles of export were : cotton piece-goods 35 lakhs (foreign R25 lakhs and Indian 10 lakhs), twist and yarn 6.8 lakhs (foreign 4.59 and Indian 2.2 lakhs), salt 4.63 lakhs, raw cotton 3 lakhs, sugar 2.09 lakhs. Metals, spices, tobacco, indigo, and tea, ranged in value from 2 to 1 lakhs each; indigo and metals advancing, while spices, tea, and tobacco receded. Indian tea decreased from $181,55^{2}$ lbs valued at R64,812 to 159,264 lbs valued at R49,009; but foreign tea increased from $79,408 \mathrm{lbs}$ with a value of $\mathrm{R} 82,195$ to $105,280 \mathrm{lbs}$ with a value of $R 90,142$. A little more than three-fourths of the tea exported was green tea.

Kashmir. - Both the import and export trade with Kashmir improved in 1905-06. Imports increased from R120' 18 lakhs to R $_{159}{ }^{\prime} 33$ lakhs (equivalent to an increase of $3^{2}$ per cent) and exports from Riro'o7 lakhs to Ri26. ${ }^{\circ} 6$ lakhs (equivalent to an increase of ${ }_{14}$ per cent). Appended are the principal articles of import from Kashmir with their values for the last three years:

|  | 1903-04 | 1904-05 | 1905-06 |
| :---: | :---: | :---: | :---: |
|  | R | R | R |
| Silk | [1,11,080 | 15,12,884 | 31,83,600 |
| Ghi | $3^{1}, 3,2,444$ | 30,02,974 | 29,80,649 |
| Timber - | 30,20,622 | 19,31,577 | 24,14,877 |
| Drugs and Medicines | 6,82,013 | 8,63,825 | 19,44,843 |
| Charas | $r, 19,160$ | 2,84,760 | 14,18,900 |
| Hides and skins | 12,27,780 | 13,53,225 | 16,52,839 |
| Woollen piece-goods | 9,34,655 | 10,75,047. | 10,81,770 |
| Shawls | 500 | 1,000 | 18,780 |
| Fruits and nuts | 4,97,279 | 7,48,883. | 8,52,724 |
| Grain | 4,77,737 | 4,58,901 | 8,21,284 |
| Wheat | 82,145 | 2,19,720. | 4,38;947 |
| Rain crops other than |  |  |  |
| rice | 60,147 | 53,798 | 1,22,253. |

Silk, which is of excellent quality and produced in the State filatures, has, it will be seen, increased 53 per cent in value but only 43 per cent in quantity, the actual quantities were $231,280 \mathrm{lbs}$ in 1904005 and $330,848 \mathrm{lbs}$ in 1905-06. While wheat and rain crops other than rice almost doubled in quantity, they more than doubled in value, the average price - per cwt of the former rising from $R_{2-1} \mathbf{3}^{-10}$ to $R_{3}-6-9$ and of the latter from $R_{2-1}$ :3 to $R_{2}-6-6$. There was a large increase in the imports of timber and of hides and skin, both in quantity and in value. In the case of timber the increase in quantity was 27 per cent and in value 26 per cent. Hides and skins increased 3 per cent in quantity and 23 per cent in value. Fruits and nuts increased 9 per cent in quantity and 14 per cent in value. The imports of ghi fell in quantity but remained constant in value the average price per cwt having risen to $\mathrm{R}_{45}$ from $\mathrm{R}_{43}$. The price of woollen piece-goods fell from Rigo to R186 percwt.: The imports of charas, which comes principally from Central Asia and which is subject to a high excise duty, showed a rise very marked in quantity and even more noticeable in value.

In the following statement are enumerated the principal articles of export to Kashmir with their values:

|  | 1903-04 | 1904-0,5 | 1905-06 |
| :---: | :---: | :---: | :---: |
|  | R | R | R |
| Cotton piece-goods | 48,55,525 | 43,79,041 | 52,94,524 |
| Sugar | 12,05,148 | 11,72,436 | 14,11,951 |
| Cotton Yarn | 4,75,170 | 5,16,989 | 8,01,506 |
| Tea | 3,57,434 | 5,26,486 | 7,28,302 |
| Salt | 9,45,432 | 9,32,601 | 6,33,269 |
| Metals | 6,62,039 | 4,86,287 | 5,33,898 |

Cotton piece-goods, by far the largest item of export, increased 16 per cent in quantity ( 44,611 cwts in 1904.05 to 51,034 cwts in 1905-06) and 21 per cent in value ( $\mathrm{R}_{43}{ }^{\circ} 79$ to $\mathrm{R}_{5} \mathbf{2}^{\circ} 94$ lakhs), whilst cotton yarns increased 43 per cent in quantity ( 7,038 cwts to $10,245 \mathrm{cwts}$ ) and 60 per cent in value ( $\mathrm{R}_{5} \cdot 17$ lakhs to R8.02 lakhs). More than four-fifths of the former and 96 per cent of the latter were of foreign manufacture. Tea exports increased 8 per cent in quantity (from $1,484,448 \mathrm{lbs}$ to $1,664,768 \mathrm{lbs}$ ) and 40 per cent in value ( $\mathrm{R}_{5} \cdot 26$ lakhs to R $7 \cdot 28$ lakhs), the price of foreign tea being Ro-6-11 per lb compared with

Indian tea at Ro-10-7 per lb. Sugar increased 2.5 per cent in quantity ( $114, \mathrm{~S} 25$ cwts to $117,220 \mathrm{cwts}$ ) and 27 per cent in value ( $\mathrm{R} 1 \mathrm{I}^{\prime} 72$ lakhs to R14'12 lakhs). The only principal article that fell was salt, which declined 20 per cent in quantity ( 266,376 civts to $214,385 \mathrm{cwts}$ ) and 33 per cent in value (R9.33 lakhs to R6. 33 lakhs).

Ladakh. -Ladakh is a junction for trade between India and Western Tibet on the one hand and Yarkand and Kashgar on the other. Trade with it, which is registered separately from the trade with Kashmir, is small, its value amounting to only R 6.86 lakhs ( $\mathrm{R}_{5}{ }^{\circ} 78$ lakhs imports and exports only Ry.08 lakhs). Both imports and exports declined in $1905-06$-imports 50 per cent and exports 66 per cent. In imports, charas was the only article of importance its value being 80 per cent of the total value and this fell away from $2,276 \mathrm{cwts}$ valued at $\mathrm{Rg}^{\circ} 29$ lakhs to $\mathrm{t}, 086 \mathrm{cwts}$ valued at $\mathrm{R}_{4} \cdot 21$ lakhs. There has been a remarkable increase in the imports of raw silk from Ladakh; in 1904-05 it was only 56 cwts , valued at $\mathrm{R}_{2} 6,600$, and in $1905-06$ the quantity rose to 172 cwts and the value to R82,000. Cotton piece-goods form the principal item of export.; for their value was more than three-fourths of the total value of exports; but a decline occurred both in quantity and in value, the fall in the former case being 67 per cent and in the latter 65 per cent. Practically all the piece-goods were of foreign manufacture.

## NORTHERN AND NORTH-EASTERN FRONTIER

Nepal and Tibet are the only two states or countries along this frontier which can be said to have any trade of importance with India.

Nepal.-The trade with Nepal increased from R 399.65 lakhs in $1904-05$ (imports $R_{253}{ }^{\circ} 99$ lakhs and exports $R_{145} 66$ lakhs) to $R_{48} 7^{\circ 15}$ lakhs in. 1905-06 (imports R $\mathbf{3 3}^{2} \cdot 88$ lakhs and exports R154.27 lakhs). In the latter year it amounted to 33 per cent of the total frontier trade of India as against $3^{\circ}$ per cent in 1904-05. The fluctuations in the past three years are set forth in the appended list of the principal articles of imports :

Of the total imports from Nepal, grain (principally rice, husked and unbusked) accounted for 52 per cent. The imports of this article rose from $3.594,291 \mathrm{cwts}$, valued at R128.27 lakhs, in 1904-05 to $4,463,201 \mathrm{cwts}$, valued at $\mathrm{R}_{173} .34$ lakhs, in 1905-06, this representing an increase of 26 per cent' in quantity and 35 per cent in value. More than half the cattle imported into India ' across the land frontiers came from Nepal into Bengal, the number imported in $1905-06$ being 43,976 with a value of R18,26,302, : which gives an average
price per head of R4ís. Another article of importance, the imports of which have been steadily growing, is raw jute. Nepal in fact is the only country from which India imports any jute. In 1905-06 the quantity rose to 236,214 cwts from ${ }_{150,1} 73$ cwts in the previous year, or an increase of 57 per cent while the value more than doubled, having increased from R901 lakhs in 1904-05 to R21'4. lakhs in 1905-06. The average value of raw jute imported from Nepal was R9 per cwt in $1905-06$ compared with an average price of R6 per cwt in the previous year. Oilseeds valued at R23 $\frac{1}{2}$ lakhs. (mustard and rape R16.02 lakhs and linseed R6.67 lakhs) was the only principal article. of which the imports fell away in 1905-06. Besides the articles enumerated above, there are several of which the value exceeds a lakh of rupees, the principal of these being : railway materials $\mathrm{R}_{\gamma^{\prime} 76}$ lakhs, timber $\mathbf{R}_{5}{ }^{\prime 3} 3$ lakhs and dyes $\mathrm{R}_{4}{ }^{\circ} 94$ lakhs. Railway materials have risen from half a lakh in 1904-05 to over R78 lakhs.

The following are the principal articles of export to Nepal:

Cotton piece-goods with twist and yarn (six-sevenths of which was of foreign manufacture) accounted for half India's exports to Nepal. The former increased by 10 per cent in quantity and 5 per. cent in value. Metals is the only item that fell both in quantity and in value, the decline being 3 per cent in the former and 7 per cent in the latter.

Sikkim and Bhatan.-The trade with both Sikkim fand Bhutan advanced in $1905 \cdot 06$. The imports from the former reached $\mathrm{R}_{4} \cdot 08$ lakhs (principally grain R1•12 lakhs and fruits, etc., R.74 lakhs) in place of R2.35 lakhs in 1904-05. The imports from Bhutan amounted to R12.4I lakhs and of theselthe most important were : timber, R66 lakhs and fruits, etc., R2'76 lakhs. The exports to Sikkim ( $R_{4} \frac{3}{3}$ lakhs) consisted principally of : grain R1.29 lakhs, cotton piece-goods and yarn (chiefly the former and of Indian manufacture) R94,000, and salt $R_{31,000}$. The exports to Bhutan amounted to R1.g2 lakhs and of these the most important were : cotton piece-goods and yarn (chiefly the former and of foreign' manufacture) with a value of $\mathrm{R}_{5} 6,000$, silk manufactures $\mathrm{R}_{3} 1,000_{1}$ and spices R26,000.

Tibet.-The effect of the treaty of Lhassa of September 1904 on the Indo-Tibetan trade has not yet been felt to any appreciable extent, but better equipped trade agencies have now been established at Gyangtse and Gartok. Chumbi traders, lately returned from Lhassa, state that there are now more Indian goods in Lhassa than has ever been the case in the past. Prices have fallen considerably, but supplies on the road between Gyangtse and Lhassa are said to be unusually dear.

The imports from Tibet in 1905-06 rose to R19'19 lakhs from R1I 95 lakhs in the year previous. More than half the imports consisted of raw wool which increased 100 per cent in quantity (from $21,940 \mathrm{cwts}$ to 42,741 cwts) 'and 120 per cent in value (from R5• 86 lakhs to Rir'3 lakhs). Other principal articles were : borax R1•93 lakhs, salt 168 lakhs, and horses,' ponies and mules about 2 lakh. Exports increased in about the same proportion as imports . (from

R $10^{\circ} 43$ lakhs in 1904.05 to R1S. 33 lafhs in 1905.06 ), the principal articles, as is usual in transfrontier trade, being cotton piece-goods with a value of $\mathrm{R}_{5}{ }^{\circ} \mathrm{O} 5$ lakhs and yarn with a value of R22,356. Other principalarticles of export were, in the order in which they are named: grain R2'39 lakhs (about half being husked rice), coral 2.28 lakhs, woollen manufactures 1.88 lakhs, and metals R85,000.

Other States.-The two most important among the remaining States are Manipus and Hill Tipperah. The imports from Manipur were valued at $\mathrm{R}_{3}{ }^{\circ} 17$ lakhs in 1905-06 compared with $\mathrm{R}_{3} \cdot 74$ lakhs in 1904-05, the principal articles being : cattle Rro6 and husked rice Ri•i8 lakhs. The exports to Manipur, which in $1904-05$ were R2.68 lakhs, declined in 1905.06 to $\mathbf{2}^{12} 12$ lakhs. They consisted principally of: spices $\mathrm{R}_{73,297}$, cotton piece-goods $\mathbf{R}_{44,458}$ (about equally divided between Foreign and Indian), salt. $\mathrm{R}_{18} 8,370$, and oil $\mathrm{R}_{\mathbf{1} 5,55 \mathbf{1}}$. The imports from Hill Tipperah advanced from $\mathrm{R}_{5}{ }^{\circ} 39$ lakhs to $\mathrm{R}_{7} \cdot \mathbf{\circ}$ lakhs and were composed principally of timber $\mathrm{R}_{2} \cdot 78$, bamboos R1.53, and raw cotton Ri44 lakhs. The exports to Hill Tipperah also advanced, from R1.95 to $\mathrm{R}^{2}{ }^{\circ} 47$ lakhs, and were composed of a number of small items, the three principal being dry fish $R_{23}, 604$; tobacco $R_{32,3} 88$; and grain and pulse, R21,678.

## EASTERN FRONTIER

Western China-While the import trade with Western China, which really means the trade of Bhamo with Tongyueh in Yunnan, advanced from R13. 14 lakhs in 1904-05 to R17.25 lakhs in 1905-06, the increase being one of 30 per cent, the export trade received a small set-back, having' declined to $\mathrm{R}_{33}{ }^{\circ}$ or lakhs from $\mathrm{R}_{3} 6.78$ lakhs, a fall of 8 per cent. Among the imports, the largest increase was in opium which rose from $\mathrm{R}_{14,975}$ to $\mathrm{R}_{3} \cdot \mathrm{6}_{2}$ lakhs. The other principal items which increased were: raw silk; from $R_{4}{ }^{\circ} 52$ lakhs to $\mathrm{R}_{5}{ }^{\prime}{ }^{2}$ lakhs; hides of cattle, from $\mathrm{R}_{1} \cdot 74$ lakhs to $\mathrm{R}_{2} \cdot 16$ lakhs; orpiment from R97,290 to R1•2 lakhs. Animals (living) declined from R2.39 lakhs to R1.81 lakhs, and lac from $\mathrm{R}_{1} \cdot O_{3}$ lakhs to $\mathrm{R}_{26} 6,672$. More than half the exports ( 58 per cent) consisted of cotton yarn, all of Indian manufacture which fell from R23.74 lakhs to R19.09 lakbs. Cotton piece-goods however increased by 72 per cent, from R2.22 lakhs to $\mathrm{R}_{3} \cdot 8$ lakhs. The other principal items of export were: raw cotton $3^{\circ} 5$, jadestone $1 \cdot 22$, provisions $1^{\circ} 65$, and salt 1.24 lakhs. Exports of petroleum increased 120 per cent having risen from R29,896 to R64,211.:

Shan States (North and South.)-These States are British territory under local chiefs; but for convenience of registration they are treated as foreign countries and two-thirds of the trade across the Eastern frontier is with them. The trade as a whole increased 7 per cent in 1905-06, the imports having increased by $\mathbf{R}_{39,000}$, although there was a decline of $\mathrm{R}_{3} \cdot 72$ lakhs in the imports from the Northern States. The exports increased by more than $\mathrm{R}_{1}{ }_{3} \frac{1}{2}$ lakhs, about equally shared between the Northern and Southern States. The principal items of import in 1905 -06 from the Northern States (total value R50.49 lakhs) were : letpet (pickled tea) R22.51 lakhs (in 1904-05! R24.8 lakhs), tea (leaf) R10.8 lakhs, teak R3.76 lakhs (in 1904-05 R8.15 lakhs), husked rice R1. 87 lakhs, and lac R1.57 lakhs. The exports (total value R51.42 lakhs) : consisted of cotton piece-goods (almost entirely foreign) R9.97 lakhs, as against ${ }^{\text {' }}$ R12.53 lakhs in 1904005, yarn R9.51 lakhs (mostly foreign) compared with $\mathbf{R}_{5}{ }^{\circ} 98$ lakhs in 1904-05; provisions R8.09 lakhs (seven-eighths of which was fish), salt R2'95 lakhs, iron R2.55 lakhs, opium R2. 53 lakhs, and animals (living) $\mathbf{R}_{2}$ lakhs. The imports from the Southern Shän States (total value $\mathrm{R}_{4} 7^{\circ} \mathrm{O} 3$
lakhs) were composed of: horses, ponies and mules ${ }^{\prime} \mathrm{R}_{3}{ }^{\prime}{ }^{2} 3$ lakhs, cattle $\mathrm{R}_{7} \cdot 09$ lakhs, teak R 8.85 lakhs, lac R6.56 lakhs, potatoes Rr 95 lakhs, "other fruits, vegetables, and nuts" $\mathrm{R}_{3} \cdot 21$ lakhs, and hides and skins $\mathrm{Rt}^{\prime} \cdot{ }_{2}$ lakhs (in 1904-05 they were only $\mathrm{R}_{24}, 000$ ). The exports to the Southern Shan States ( $\mathrm{R}_{52} .84$ lakhs) were made up of cotton piece-goods (mostly foreign) R19038 lakhs, provisions (principally fish) $\mathrm{R}_{4} 94$ lakhs, manufactured silks $\mathrm{R}_{4}{ }^{\circ} \mathrm{O2}$ lakhs, betelnuts $R_{3}$ lakhs, apparel $R_{2} \cdot 63$ lakhs, cotton yarn $R_{2} \cdot 59$ (mostly Indian), and metals R2. 24 lakhs (of which iron constituted $\mathrm{R}_{1} \frac{1}{2}$ lakhs).

North and South Siam.-India's trade with North Siam is more than three and a half times her trade with South Siam. Her imports from North Siam in $1905-06$ fell 28 per cent, that is to say from R28.93 lakhs to R20.75 lakhs. They consisted mainly of teak $R_{12} \cdot 28$ lakhs, cattle $R_{3} \cdot 84$ lakbs (with a. decline from R10'94 lakhs in the previous year), and other kinds of animals which, however, rose from R2.96 lakhs in 1904-05 to R4.06 lakhs in 1905-0 ${ }^{\circ}$ Exports to North Siam (Rio 9 lakhs) were composed of cotton piecé-goods (almost' all foreign manufacture) R2.31. lakhs, yarn R1•71 lakhs (which like piece-goods was almost all of foreign manufacture), apparel $R_{1} \cdot 3$ lakhs, and manufactured silk $R_{1}{ }^{\prime} 12$ lakhs. The imports from South Siam ( $\mathrm{R}_{5} \cdot 64$ lakhs) were made up almost entirely of manufactured silk R2. 88 lakhs and animals (living) Ra ${ }^{\prime} 1$ lakhs. The exports of South Siam had a value of only $\mathrm{R}_{3} \cdot 43$ lakhs. but are to be compared with $R_{2} \cdot 1$ lakhs in .1904-05. The only item that exceeded half a lakh of rupees was manufactured silk valued at $\mathbb{R} 66,000$.

Karenni. -The exports to Karenni are trifling, but they advanced in igo5-06 to $\mathrm{R}_{4}{ }^{\circ} \mathrm{I} 7$ lakhs from R 2.37 lakhs in 1904-05, the two principal items' being animals (living), which increased from half a lakh in igo4-05 to R1:78 lakhs in $1905-06$, and jewellery and precious stones and pearls unset, which rose from' only R4,000 in 1904-05 to R81,000 in 1905-06. The imports (R26"95 lakhs) consisted almost entirely of teak valued at R26.35 lakhs.

The general character of the trade with countries across the Indian frontiers will be observed from the appended list of principal articles of imports and exports. The values are stated in thousands of rupees:

| IMPORTS |  |  | Exports |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The relative importance of the trade of each frontier province with the countries on the other side of its border is indicated by the following figures (in thousands of rupees):

## COASTING TRADE

It has been pointed out in previous issues of the Review that merchandise shipped from one part of India to another appears first under exports and next under imports, so that the total of the two is approximately double the true. dimensions of the single transaction. But half of the sum of the total Imports and total Exports under Coasting Trade would not represent even approximately the true scope of the trade, for the statistics comprise such exchanges with ports in Indian Native States and Foreign Settlements as appear in Indian stajtistics only as Imports or as Exports. It has, therefore, been the practice to ${ }^{\text {? }}$ state in the Review the net value of the coasting trade arrived at by "adding to the value of the imports into British Ports from other British ports the sum of the imports and exports in the trade between British and non-British ports in India." The value so calculated, in respect of igo5-6 is for merchandise -
 lakhs recorded last year and a percentage increase of $6 \cdot 1$ per cent. Food-grains represented 2 2. 6 per cent of the total with a value of R977 lakhs, the increase in this case amounting to $34^{\circ} 2$ per cent. Of the total value of Food-grains, rice represented 68.7 per cent; and there were increased exports from Burma to Bombay and Madras, and from Bengal to the latter. .The recorded exports from Burma to Indian ports were 460,000 tons, an increase of 159,000 tons over those for 1904-05; but the discrepancy between the shipment figures and those of reciepts continues and in the case of Madras still amounts to the diminished two years' average of 26,000 tons. The exports of mineral oil from Burma to Indian ports increased from 50 to $55^{\circ} 3$ million gallons. The quantity taken by Calculta for distribution by sea to other ports decreased from 45 to $3 \dot{4}$ million gallons the direct shipment from Burma to the other provinces being: Bombay 10.8 millions, Madras 7.4 millions, and Sind 1.4 millions. The coastal exports of gunny bags from Calcutta, mainly to Burma and Bombay, decreased in value from $\mathrm{R}_{160} 5$ lakhs to $\mathrm{R}_{15} 8^{\circ} 5$ lakhs, representing about 58 million bags. The expansion in the shipments of Bengal coal was one of 226,000 tons bringing the total to $2,012,000$ tons. The quantity of Indian-made cotton piece-goods exported from the Boinbay Presidency rose only 13.8 per cent above the figures recorded in 1904.05; but this was due to no slackness of demand and the value of the $173^{\circ} 15$ million'yards shipped showed an increase of 17 per cent to R249'5 lakhs, the average value per yard having thus advanced by 2.8 per cent.

## NOTE

All sums in this review are stated in Rupees. In order that any sum so stated may be converted into sterling at the average rate of exchange for the year to which the said sum relates, there is shown below the proper divisor for each official year since 1890-91, such divisor being the number of Rupees equivalent to a pound sterling.

| Year | Number of Rupees equivalent to 6 : | Year | Number of Rupees equivalent to 51 | Year | Number of Rupees equivalent to $\mathrm{f}:$ | Year | Number of Rupees equivalent to 61 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1890-91 | 13.3 | 1892-93 | 16 | 1894-95 | 18.3 | 1896-97 | 16.6 |
| $1891-92$ | 143 | 1893-94 | 16.5 | 1895-96 | 17.6 | 1897-98 | 15.6 |

1898.99 and subsequently $R 15$.

The rupee is divided into sixteen annas and the anna into twelve pies. The anna is at the current rate of exchange equal to one penny.

Weights in this Review are stated in lbs, cwts, and tons but for purpose of reference to current literature about Indian trade, it is well to state that the weights most commonly quoted in such literature are as follows :-

# THE <br> TRADE OF BRITISH INDIA 

WITH

## FOREIGN COUNTRIES

For the official year ending March 31, 1907

## CLIMATIC CONDITIONS*

The trading power of India depends on the success of its crof Therefore some account of the climatic conditions of each year is requisite for comprehension of the trade recorded and of the prospect. In respect certain crops the volume of trade in one statistical year is determined by th weather of the previous season; and in the notes on produce of this kind th necessary particulars regarding that earlier season are given. The followin notes summarise the weather record of the season 1906007 in respect, each province. They are founded on weather reports that accompanied th various crop forecasts and have been revised by the respective Local Ggverr ments. The cropped area including current fallows is shown in each case.

Eastern Bengal and Assam (23,290,000 acres)-Rainfall was scanty i April and the jute and sugarcane crops suffered from want of moisture. Generz rain was, however, received in May, which entirely changed the situation, but i August a flood of abnormal height and long duration retarded the cutting of jut and damaged the other autumn crops. Heavy rain again fell in the end o October, which delayed the sowing of oilseeds but was beneficial to winter rice and left sufficient moisture in the soil for the sowing of wheat; this was, however succeeded by drought, practically unbroken, during the cold weather months which did more or less injury to all spring crops.

Bengal ( $\mathbf{4 0 , 0 7 0 , 0 0 0}$ acres)-The rainfall in March was on the whol slightly in excess of the average. April was exceptionally dry; this retardec the sowing of the Jute crop. The weather in May was not so unfavourable though the rainfall was below normal. The monsoon set in about the middle o June, but the showers were rather in defect. In July and August, the rainfall wa: very heavy, especially in North Bihar, where all the crops suffered from floods. In September and October rainfall was general except in Bihar, where the fall was scanty. Want of rain was also felt later in the season, and the spring crops suffered in consequence. Some damage was done to these crops about the time of harvesting by hail and rain.

United Provinces ( $38,114,000$ acres)-General rain' sufficient to give a start to the sewing of autumn crops was received in the last week of June. In July the falls were ample and well distributed. In the western divisions and in Bundelkhand the rainfall in August was sufficient, but that in September was rather excessive. The reverse was, however, the case in the eastern submontane districts, where the August rainfall was excessive causing extensive floods, but the falls in

September were scanty. The months of October and November were practically rainless. The floods in August and the drought in September, October, and November seriously damaged the standing crops in the eastern districts; but the clear weather did much good to the cotton crop, the outturn of which was unusually heary on an unusually large area. Apart from the tracts where the crops first suffered from floods and then from drought, the yield of sugarcane and of the autumn crops was on the whole exceptionally good. The winter rains were late; when they arrived in February, they were beneficial to almost all crops, but continued wet and cloudy weather produced rust and fungoid diseases. The yield of the spring crops was therefore not so good as had been estimated at the end of February: wheat suffered most and other crops to a less extent.

Panjab (27,764,000 acres)-Rainfall was rather deficient in July and early August. The monsoon, however, gave abundant rain throughout the Delhi Division and in some of the submontane districts. Elsewhere good rain at the end of August and in the first fortnight of September proved beneficial to sugarcane and cotton. Strong winds and heavy rains in September caused some damage to cotton and sesamum in places, but they left an abundance of moisture in the soil for the sowing of wheat and spring oilseeds. General and well-distributed rain received in almost all the districts in December, January, February, and March proved beneficial to the crops.

North-West Frontier Province (2,558,000 acres)-The rainfall up to June was on the whole good and timely. In August and September the deficiency of rain in Peshawar and Kohat and its excess in Hazara greatly interfered with the sowings of wheat and oilseeds, which were, however, facilitated by the winter rains which set in in the third week of December. Good rain in February proved beneficial throughout the province.

Sind (8,662,000 acres)-Late opening of the canals in Thar and Parkar and floods in Sukkur and Khairpur interfered with the sowing of cotton; but the season was otherwise generally favourable. Sesamum suffered through adverse winds and insects in places. Wheat and rapeseed were sown under favourable inundation, but suffered later on through hail and rain which courtailed outturn.

Bombay ( $\mathbf{3 0 , 4 3 5 , 0 0 0}$ acres)-Favourable early rains led to an extended cultivation of cotton. Both the sesamum and cotton crops, however, suffered somewhat through excess of rain in Gujarat and Khandesh, and through its deficiency and also through disease in Karnatak and east Deccan. Wheat and spring oilseeds were sown under seasonable rainfall; but the crops suffered through deficient later rains in parts of Deccan and Karnatak, and through cloudy weather and frost in parts of Gujarat and Khandesh ; and the Decenber rain induced rust in Karnatak. Rain and hail in February were injurious in North Gujarat.

Central Provinces and Berar (27,321,000 acres)-Rainfall in June and July was ample and well-distributed. Heavy and continuous rain with consequent floods, however, damaged the cotton and sesamum crops in certain places; but timely breaks in August and September facilitated weeding, and gave opportunity for sowing the late variety of sesamum. . Heavy showers were again received in the first week of October, which, though somewhat injurious to cotton and sesamum, left sufficient moisture in the soil for the sowings. of linseed and wheat. Light local showers were received during November in certain districts. In December there was no rain in the Nerbudda valley' and the Vindhyan districts, but elsewhere it was fairly well-distributed. Rain and hail
during February damaged the crops slightly in several districts. Towards the end of March, showers fell in a few districts. The rain brought with it a few hailstorms and caused rust in parts of the Northern districts. Damage to crops was, however, neither serious nor extensive.

Madras (33,499,000 acres)-Rainfall was seasonable for rice, groundnut, and indigo, but for cotton, sugarcane, and sesamum, the season was less favourable owing to deficient water supply.

Burma (15,653,000 acres)-Rainfall was generally deficient at the commencement of the season. Middle rains were scanty, but later rains were beneficial.

## GENERAL SUMMARY OF TRADE

In the following statement the value of the trade of India for the year ending March 31st, 1907, is compared with the value of the trade in each of the preceding four years. The values are stated in rupees and exclude Government transactions in both merchandise and treasure :-

The grand total of imports and exports combined was therefore $\mathrm{R}_{317} / 78$ crores ( 21.85 millions sterling) as against R292.14 crores ( $194^{\circ} 8$ millions sterling) in $1905-06$, the increase being one of $R 25.64$ crores or 8.77 per cent. This includes some $\mathrm{R}_{3} \cdot 5$ crores of foreign merchandise re-exported but excludes some $\mathrm{R}_{4} \cdot 3$ crores of material imported by Government for State Railways.

Exports represented 57.36 per cent of this grand total, and amounted to R182.27 crores ( 121.5 millions sterling) as against R 168.15 crores in the previous year. The increase was therefore one of R14'11 crores, represented an advance of 8.4 per cent on the figures for $1905-06$, and formed 55 per cent of the grand total increase in trade.

Imports had a total vàlue of $\mathrm{R}_{135} \mathbf{5 1}^{1}$ crores ( $90^{\circ} 3$ millions sterling) as against $\mathrm{K}_{12} 3^{\circ} 9^{8}$ crores ( $82^{\circ} 7$ millions sterling) in the previous year, the advance in this case being one of R11.53 crores ( $7^{\circ} 68$ millions sterling) or 9.3 per cent and contributing 45 per cent of the grand total increase in trade.
'The exports of Indian Merchandise rose from R 15 $^{5} 8^{\prime} 18$ crores to $\mathrm{R}_{173}{ }^{\circ} \mathrm{O} 7$ crores ( $£ 11.54$ millions), the increment being R14.9 crores or slightly over 9 per cent. . India is primarily an agricultural country, and the rise and fall of her exports and of her power to import depends almost entirely on the success of her crops.

The re-exports of Foreign Merchandise declined from $\mathrm{R}_{352} \cdot 8$ lakhs to $\mathrm{R}_{349} \cdot 1$ lakhs, the decline amounting to $\mathrm{R}_{3} \cdot 7$ lakhs or slightly over I per cent.

Imports of merchandise increased from Rio3'06 crores to $\mathrm{Rto8} 3$ crores ( ${ }_{6} 7^{\circ} 2$ millions), the increase being $R 5^{\circ} 24$ crores or $5^{\circ} 08$ per cent.

Imports of Treasure rose from R $\mathrm{R}_{3} \cdot 65$ crores to $\mathrm{R}_{44} \cdot 58$ crores, the difference being R12.93 crores or $40^{\circ} 8$ per cent. Of this increase, about R6.65 crores ( 62 per cent) arose in imports on Goverument account, while imports on private account contributed some R6. 28 crores, equal to 30 per cent of the previous year's figures.

Bengal the total movement of merchandise rose from R112.52 crores to R120.91 crores, the difference being R8.39 crores and representing 7.45 per cent on the figures for $1905-05$. The exports rose from R70.62 crores to R 78.9 crores, the difference being R 8.28 crores or $11 \%$ per cent. Imports rose from $R_{41} \cdot 9$ crores to $R_{42}$ crores, the difference being Riolakhs, or about $\frac{1}{4}$ per cent ; and this increase is independent of the fact that the trade of Eastern Bengal and Assam formerly included in the Bengal figures are now for the first time recorded separately. The total figure for the previous year was about $\mathrm{R}_{3} \cdot 18$ crores, so the increase is $\mathrm{R}^{\prime} \cdot 1$ crores or $34^{\circ} 73$ per cent. The total seaborne trade of the new province in private merchandise had a value of $\mathrm{R}_{4} \mathrm{H}^{\circ} 28$ crores, of which $\mathrm{R}_{3} 9$ crores were Exports and $\mathrm{R}_{3} 8$ lakhs Imports.

Bombay was the only province in which the total value of merchandise received and exported showed a decline. The value fell from R85 ${ }^{\circ} 22$ crores to R $8_{3} \cdot 39$ crores, the difference being $\mathrm{R}_{1} \cdot 63$ crores or something under 2 per cent. This decline resulted from a fall of $\mathrm{R}_{3} \cdot 17$ crores in Exports, offset in part by a rise of $R 1^{\circ} 54$ crores in Imports.

Sind's total movement of merchandise increased from R20.14 crores to $\mathrm{R}_{25}{ }^{\circ 21}$ crores, the difference of $\mathrm{R}_{5} \circ 7$ crores being made up of $\mathrm{R}_{4}{ }^{\circ} 34$ crores in respect of Exports and R73 lakhs in respect of Imports. The rate of increase was 38 per cent in Exports and less than 9 per cent in Imports.

Madras returns a total trade of $\mathrm{R}_{26} 6^{\circ} 88$ crores which is greater by $\mathrm{R}_{3} \cdot 11$ crores or 13 per cent than in the previous year. Her Exports improved by $11^{\circ} 7$ per cent to $\mathrm{R}_{1} 7^{\prime} 41$ crores and her Imports by 16.6 per cent to $\mathrm{Rg} \cdot 06$ crores.

Burma's sea-borne trade in merchandise rose by R 87 lakhs or $3^{\circ} 7$ per cent to R $24^{\circ} 5^{8}$ crores, of which $\mathrm{R}_{15}{ }^{\circ} 21$ crores was Exports and R9.37 crores Imports, but while Imports showed an improvement of $14^{\circ} 7$ per cent, the Exports were less by 2 per cent than in the previous year.

Among Exports of Indian Merchandise the most notable increase is that of R14.39 crores in Class VI, Rawn Materials and Unmanufactured Articles, which represents about 47 per cent of the total Exports of Indian Merchandise. The total value in this class was R 81.53 crores or 21.4 per cent more than in the previous year. In 1894-95, 1897-98, and 1900-oI raw $\mathcal{F}$ ute exceeded cotton, but this was due to widespread failure of the latter crop. But 1906.07 is the first year in which Jute exports can be said to have exceeded cotton in value under equal conditions. Raw jute had a value of nearly R 26.84 crores as against Cotton R21.g6 crores. The increase amounted to R9.71 crores or more than 56 per cent on the figure for $1905-06$. Jute, this year, represents 32.9 per cent of the Exports of Indian raw materials, Cotton taking second place with 26.9 per cent. The increase in Cotton was a substantial one of $\mathrm{R} 6_{3} \cdot 27$ lakhs, which fepresents an advance of nearly 3 per cent on the previous year. Seeds amounted to $\mathrm{R}_{1} 3^{\circ}{ }^{\circ}$ crores which represents 16 per cent of the Exports of Indian merchandise and marked an advance of $\mathrm{R}_{2} \cdot 41$ crores or nearly 23 per cent on the figures
for 1905-06. This, however, is still considerably short of the record exports of seeds- R14.41 crores in :904-05. The largest single advance has taken place in raw hedes, which had a value of nearly $\mathrm{R}_{6} \cdot 41$ crores as against $\mathrm{R}_{5} \cdot 23$ crores in 1 go5-06. The increase here is one of $22^{\circ} 47$ per cent or $\mathrm{RI}^{\cdot} 1_{j}$ crores. It must be borne in mind that the marked rise in prices of Jute and of Hides contributed largely to these increases of value. Raw skins on the other hand declined by R 37.6 lakhs to $\mathrm{R}_{4}{ }_{4}{ }^{\circ}$ crores.

Among the Exports of Indian Manufactures, $\mathfrak{F}$ ute goods again took the
 in the previous year, the increase being one of 26 per cent. Cotton manufactures declined from R14'42 crores to $\mathrm{R}_{12} \cdot 16$ crores, the fall amounting to R2.25 crores or 15.5 per cent. The class of cotton goods in which the largest decline took place was Yarns which fell by R 1.99 crores to R10'39 crores. Piecegoods fell by $\mathrm{R}_{21}$ lakhs to $\mathrm{R}_{1} \cdot 65$ crores and other cotton manufactures by $\mathrm{R}_{5} 3^{3}$ lakhs to RII 8 lakhs. It must, however, be remembered that a considerable part of this shrinkage arose not from any failure of demand abroad-though this also counted for a good deal in the later months-but to great activity in the internal markets. The Exports of Lac continue to increase and in the past year have grown, by nearly $\mathrm{R} 26^{\circ} 9$ lakhs or 8 per cent, to a total of R 3.37 crores. And the increase of R61'12 lakhs in the exports of Tanned Skins, which brings the total to R2.72 crores, more than accounts for the decline in Raw skins alluded to above. These together indicate a real improvement in the industrial position. Tanned Hides also showed a substantial increase of $R 18{ }^{1} 6$ lakhs, bringing the total value of this article to about R1.73 crores. The exports of Hides and Skins, Raw and Tanned, then, rose from $\mathrm{R}_{1} 3^{\circ} 75$ crores to $\mathrm{R}_{15}{ }^{\circ} 3+$ crores, the increase being one of $\mathrm{T}_{1} \mathrm{I}_{59}$ crores or more than 11.5 per cent.

The total value of Exports of Indian Articles Manufactured and Partly Manufactured rose by R2•16 crores or 6 per cent and amounted to $\mathrm{R}_{37} \cdot 8_{4}$ crores.

In Class II, Articles of Food and Drink, there was a net falling-off of $\mathbf{R}^{\prime}{ }^{\circ} 07$ crores, the total value being about $\mathrm{R}_{4} 0^{\circ}{ }^{2} 5$ crores as against $\mathbf{R}_{42^{\circ}} 3^{2}$ crores in the previous year. The only article in this class which showed an increase was Tea, which rose from R8.84 crores to $\mathrm{Rg} \cdot 86$ crores. The increase is one of nearly $\mathrm{F}_{1} \mathrm{O}_{2}$ crores or $\mathbf{1 1}^{\circ} 5$ per cent. The largest decline was in Wheat and Wheat Flour, which lost nearly R1•33 crores as compared with $1905-06$, and had a total value of only $\mathrm{R}_{7} .84$ crores. The statistical year, however, closes while the present crop is in process of being shipped, and it is a full one. Rice, with its high value of $\mathrm{R} 18.5^{2}$ crores, shows a decline of some RrI lakhs; but there is reason to believe that an increase in internal consumption and stocks has contributed largely to this contraction.

The Exports of Metals and Manufactures thereof have grown in a single year from R 54.26 lakhs to $\mathrm{R}_{97} \cdot 18$ lakhs. The increase is one of $\mathrm{R}_{3} 8.92$ lakhs, of which $\mathrm{R}_{27} 77$ lakhs are contributed by Manganese Ore alone with a total of R70.88 lakhs.

Chemicals, Drags, etc., have advanced by $\mathrm{F}_{\mathrm{t}} \mathrm{ol}$ lakhs upon Rin 44 crores, bringing the total to R11.54 lakhe: Ers:
$\therefore$ In Exports of Oils there has been a marked decline of R1182 lakhs, $\mathrm{R}_{5} 78$ lakhs of which was in the mineral class and R6\%04 lakhs in the vegetable class. The total value of R69.86 lakhs is to be compared with R8i. 68 lakhs in $1905-06$ and R $_{1}$ crore in 1904-05.

In the Exports of Foreign Merchandise there has been a decline of $R_{3} 77$ lakhs. The total of $R_{3} \cdot 49$ crores is, however, to be compared also with the figures for 1904-05 on which they show an advance of R11.79 lakhs.

The largest single item in this class is as usual cotton manufactures (including twist and yarn), with a total of R1.3I crores which is less by R9'26 lakhs than in 1905.06 and R2. 66 lakhs in 1904-05.

In Metals and Hardware, an increase of R10'94 lakhs brings the total value to R42'i lakhs.

Raw wool has risen by $\mathrm{R}_{3} \cdot 77$ lakhs to $\mathrm{R}_{29}{ }^{\circ} 5 \mathrm{~S}$ lakhs, Provisions by $\mathrm{R}_{3} \cdot 5^{2}$ lakhs to R20'92 lakhs, and Apparel by R1'99 lakhs to R16.64 lakhs. In Oils, Sugar, and Other Articles there were declines of R2.99 lakhs, R 5.57 lakhs, and R617 lakhs respectively.

The increase in Total Imports has already been recorded.
The largest class of imports is that of Articles Manufactured and PartIy Manufactured, which represent nearlv 55 per cent of the total Imports, and in which the total has this year declined from $\mathrm{R}_{59}{ }^{\circ} 85$ crores to $\mathrm{R}_{59} 19$ crores. The loss of R65'8 lakhs represents about $1 \cdot 1$ per cent of the previous year's figures. In the Cotton Goods section of this class, the decline was one of $R_{1} \cdot 3$ crores or 3.5 per cent, and the total value fell from $\mathrm{R}_{3} 6.95$ crores to $\mathrm{R}_{35} 6_{4}$ crores. Most of this fall occurred in White Goods which receded by RIOo9 crores to R $7 \cdot 38$ crores, while Grey Goods fell by R 22.49 lakhs to $\mathrm{R}_{18}{ }^{7} 7$ crores and Yarn by $\mathrm{R}_{20} \mathrm{O}_{2}$ lakhs to $\mathrm{R}_{3^{\prime} \cdot 22}$ crores. Coloured Goods alone showed a small improvement at R9. 55 crores.

Imports of Articles of Food and Drink increased by Ri•12 crores to $\mathrm{R}_{1571}$ crores and this increase was due mainly to Sugar and Spices. The imports of sugar rose by R96.30 lakhs to above R8.73 crores, while spices advanced by R 33.87 lakhs to about R1.44 crores. Salt also improved by slightly over RI lakh and stands at R66. 76 lakhs, which, however, compares ill with R71•12 lakhs of 1904-05. Alcoholic Liquors all showed declines aggregating about R16. 17 lakhs or 8 per cent of the figures for 1905-06.

Imports of Chemicals, Drugs, Medicines, etc., show no very remarkable features, but record a net increase of $\mathrm{R}_{13} \cdot 54$ lakhs, bringing the total to $\mathrm{R}_{3} \cdot 1$ crores. Drugs and Medicines were greater at R 78 or lakhs, Tobacco and Opium at R69'37 lakhs, and "Other Dyeing and Tanning Materials" at K19'73 lakhs, while Chemicals at R68'75 lakhs and Alizarine and Anilines at $\mathrm{K}_{74} \mathrm{~g}^{2}$ lakhs each showed a slight decline.

The imports of Raw Materials have fallen away from $R_{4} \cdot 86$ crores to $\mathrm{R}_{4} \cdot 39$ crores in spite of an advance of $\mathrm{R}_{1} 6.36$ takhs in Coal and Coke which are recorded at $\mathrm{R}_{47} 97$ lakhs.

The imports of oils advanced from R $\mathbf{2}^{2} 44$ crores to $\mathrm{R}_{2} \cdot 76$ crores, and of the difference of R $\mathbf{3 2}^{2}, 3^{1}$ lakhs, R19\%9 lakhs are accounted for by Mineral Oils with a value of R2.42 crores and $\mathrm{R}_{1} \mathbf{1}^{22}$ lakhs are contributed by Other Oils, totalling $\mathrm{R}_{34}$ lakhs.

## IMPORTS OF MERCHANDISE

The total value of the imports of merchandise continues to grow, and in 1906.07 it amounted to R108.31 crores. This constitutes a further advance of R5 $\% .4$ crores or 5 per cent on the figures of the previous year. The following statement compares the value of the imports in 1906007 with the average

- annual value of imports in the previous year and in the five preceding quinquennial periods, the unit being $1,000:-$

The value of each of the seven classes in which the articles are grouped in the trade accounts was in thousands of rupees:

| 1903-04 | 1904-05 | 1905.06 | 1906-07 |
| :---: | :---: | :---: | :---: |
| Animals, living (mostly horses) . . 53,63 | 59,28 | 49,41 | 46,60 |
| Articles of food and drink . . . $11,69,47$ | $13,08,65$ | 14,58,6! | 15,71,48 |
| Metals and manufactures of metals, hardware and cutlery, machinery and millwork, raikway plant and rolling stock . . . . . . 16,31,13 | 17,13,50 | 17,85,67. | 22,65,88 |
| Chemicals, drugs, medicines, and narcotics, and dyeing and tanning materials 2,75,08 | 2,80,41 | 2,97,27 | 3,10,81 |
| Oils . . . . . . . 3,60,41 | 3,49,3 ${ }^{1}$ | 2,44,46 | 2,76,78 |
| Raw materials and unmanufactured articles . . . . . 3,88,92 | 4,22,41 | 4,86,13 | 4,39,81 |
| Articles manufactured and partly manufactured . . . . . 46,03,68 | 55,34,27 | 59,85,01 | 59,19,33 |

Of these, the class Articles manufactured and partly manufactured represents the largest sum, and in it there was a net decline of R65.68 lakhs sufficiently accounted for by the loss of R 152.56 lakhs in cotton manufactures and $\mathrm{R}_{37} \cdot 37$ lakhs in woollens. The third class, Metals and manufactures thereof, comes next in importance, and in it the net increase is one of $\mathrm{R}_{4} 8 \mathrm{~K}^{\circ} \mathbf{2 1}$ lakhs or 26.9 per cent on the figures for the previous year. Of this sum, R253.52 lakhs is contributed by railway material alone which has a value of $R_{415} 7^{8}$ lakhs. Machinery after advancing steadily for some years took a stride of $\mathrm{R} 87^{\circ} 3^{2}$ lakhs (or $\mathrm{I}_{7} 73$ per cent) to a total of $\mathrm{R}_{579}{ }^{\circ} 89$ lakhs. Metals increased dy R99.89 lakhs to R1,004•16 lakhs and Hardware and Cutlery by R 39.48 lakhs to R266 lakhs. In the second class, Articles of food and drink,

- there was an increase of R112.87 lakhs or 7.74 per cent. Of this rise, 85 per cent was derived from sugar which increased by Rg $6 \cdot{ }^{\circ} 6$ lakhs, or a further $12^{\circ} 4$ per cent, to a total of R $37 \cdot 38$ lakhs. Imports of wheat receded to $\mathrm{R} I 139$ lakhs. Provisions improved from $\mathrm{R}_{23} 8^{\circ} 5^{5}$ lakhs to $\mathrm{R}_{242}{ }^{\circ} 33$ lakhs. In the fourth class, Chemicals, etc., there was a net gain of R13:54 lakhs, of which R9. 57 lakhs was contributed by camphor. The net increase of $\mathrm{R}_{32} \cdot 3^{2}$ lakhs in Oils was due to an expansion of R19:1 lakhs in mineral oil from the United States and Sumatra, and of Rirg lakhs in vegetable oils, mainly cocoanut. The sixth class, Raw materials, etc., shows a net decline of R $46^{\circ} 3^{2}$ lakhs due to contraction in precious stones and pearls, in. raw silk, and in raw cotton offset in part by an increase of R16.36 lakhs in imports of coal.

## ARTICLES OF FOOD AND DRINK

The value in rupees during the last three years of the principal articles in this group have been-

Sugar represents $5^{2} .07$ per cent of the total value of the articles of food and drịik imported into India, and retains the place which it assumed in 190.4-05 as the second largest single article of importation.

The sugar trade throughout the world .in tgo6 was spared those marked vicissitudes that were present in the two previous years, and was one of low but fairly constart prices. The large shipments. to India counted for a great deal in steadying the markets. Consumption, moreover, showed great adaptability, responded to the easy terms offered, and rapidly absorbed the large surplus left over from the campaign of 1905 . Heavy buying for America together with political unrest in Cuba hardened the market in August, but the intervention of the United States removed anxiety and brought prices back to their earlier level. Towards the end of the Indian financial year, Cuba was again a factor in the values of sugar, as there were contradictory reports as to the crop and adequacy of the labour supply. The failure of a large section of the Argentine crop and her consequent heavy purchases of raw sugar for refining, helped to stiffen prices, but in the end they gave way in the face of increasing Cuban figures, and first products beet closed at 9 s .3 d . The price of 88 per cent beet sugar f. o. b. Hamburg was about 8s. $5^{d}$. in April rgo6, which is below cost. Refined beet in Calcutta at the same time was quoted at rates equal to ils. $7^{d}$. per cwt, while the price in Bombay was i2s. $1 d$., and in Karachi iss. 10 d . Mauritius sugar in Bombay was at the parity of 11 s .5 d . The highest for 88 per cent sugar in London was 9 s. $7 \frac{1}{3} d$. reached in September, while in Karachi refined sugar touched i2s. $4 d$. in October, and Calcutta was at 12s. 7d. in November. Throughout the statistical year, Bombay remained steadily at 12 s . 1 d .

It will be seen from the statistics given below that the imports of sugar have very largely exceeded earlier records both in quantity and value. This was no doubt due in part to the failure of the cane crop in Northern India ; but there can be no reasonable doubt that even in the presence of a full crop and in the face of an agitation for the preference of native sugar, the low prices at which good beet sugar has been offered in the past year would have commanded the attention of the Indian buyer.

- The arrivals of beet and cane sugar in each of the last five years are shown in the following statement. It designates the countries from which the sugar was shipped to India : not necessarily those in which it was produced or refined. Until 1902-03 it was assumed, for statistical purposes, that the imports from the United Kingdom consisted of cane and beet in equal proportions. Since 1903 the division has been made in accordance with the declarations of origin, so for the first time the following statement is in this respect homogeneous in its terms :-

| , | $\begin{gathered} \mathrm{igo2}-\mathrm{O} 3 \\ \dot{C} \mathrm{Cwts} \end{gathered}$ | $1903-04$ Cwts | 1904-05 <br> , Cwts | 1905-06 Cwts | 1906-07 Cwis |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Total | 3,529,678 | 5,485,378 | 4,833,309 ${ }^{\circ}$ | 4,263,796 | 5,926,879 |

While it is true that beet sugar dominates the Indian markets, it does so only on account of its level of prices. In the quantity imported, cane sugar largely predominates; and the fact that even at the present prices a wellequipped cane country can maintain the contest with beet, offers a lesson both of encouragement and of discouragement to India as a producer. It shows what can be done by a cane industry embodying all the most modern practice, but it also shows that even if beet sugar were out of the market, the Indian industry with its primitive methods would-except in the recesses of the Continent-be at the mercy of Java and Mauritius. It is estimated that cane sugar represented $40^{\circ} 9$ per cent of the world's supply of commercial sugar in 1906 as against $39^{\circ} 9$ per cent in 1905, but in the importations into India, it represented in the year under review $60^{\circ} 9$ per cent as compared with $55^{\circ} 4$ per cent in $1905-06$.

The chief external sources of cane sugar are Java and Mauritius, while Germany and Austria-Hungary supply the mass of the beet sugar.

The imports of sugar of both kinds together expanded by $2,034,500 \mathrm{cwts}$ in quantity and $\mathrm{R} 68 \cdot 26$ lakhs in value. This represents an increase of 26.44 per cent in quantity and $9^{\circ}$ per cent in value with a net decline of 13.71 per cent in specific value.

In cane sugar the increase was one of $1,66_{3}, 081$ cwts or 39 per cent in quantity and $\mathrm{R}_{54}{ }^{\circ} \mathrm{O}$ lakhs or $12^{\prime} 5$ per cent in value with a loss of 19 per cent in specific value.

In beet sugar the increase amounted to $371,183 \mathrm{cwts}$ or 10.82 per cent in quantity and R14'19 lakhs or $4^{\circ} 47$ per cent in total value, the fall in specific value being $5 \circ 73$ per cent.

Of the refined sugar, Java, which in $1905-06$ ceded the premier place to a. beet country Austria-Hungary, resumes it with a quantity largely exceeding that ever before imported from a single, country. She supplied in fact nearly $3^{1}$ per cent of the entire arrivals. The other cane country, Mauritius, follows with 24.61 per cent of the total. Austria-Hungary, diminishing her contribution by nearly $723 ; 500 \mathrm{cwts}$, drops to the fourth place with 17.53 per cent of the total; and Germany, with the largest arrivals she has yet recorded, takes third place. with $21^{\circ} 7$ per cent. In the first quarter of the year the largest quantities came from Germany and Austria, which contributed $1,403,400$ cwts and 666,800 cwts respectively, while Mauritius sent only 478,400 cwts and Java 43,000 cwts. In July there was a marked falling-oft in European shipments and a corresponding advance in the arrivals from the cane countries; and in August, Java with $518,000 \mathrm{cwts}$ took the first place which she retained for four months. In the
second quarter, the receipts from the cane countries were-Java $1,161,400 \mathrm{cwts}$ and Mauritius 340 , Soo cwts with Germany at 515,700 cwts and Austria 96,500 cwts. On the half year the beet countries held the lead with $2,856,600$ cwts against $2,520,700 \mathrm{cwts}$ of cane sugar; but in the succeeding quarter Java raised her total on the nine months to $2,288,700$ crts with Mauritius coming up at $1,532,200$ cwis, while Germany with $1,991,500$ cwts was rapidly losing her place through dwindling eastern shipments and Austria with $1,061,100 \mathrm{cwts}$ had at the end of the calendar year already assumed the fourth place ascribed to her by the twelvemonths' figures given in the statement above. In January she made the largest consignments received from any country in a single month of the last quarter but those from Java were better sustained, and Mauritius on the three months greatly improved her position in respect of all competitors. The following statement summarises the monthly imports of cane sugar and of beet sugar during the year 1906-07:-

|  |  |  | Cane |  |  | Beet |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Quantity $\mathrm{C}_{W} \mathrm{ts}$ | Value R | Average value R | Quantity Cwts | $\begin{gathered} \text { Value } \\ \mathrm{R} \end{gathered}$ | Average value R |
| April | 1906 | 246,443 | 21:34,216 | $8 \cdot 7$ | 808,524 | 70,87,788 | 8.8 |

| Total |  | - 5,926,879 | 4,86,48,283 | 3.82 | 3,803,834 | 3,31,79,994 | $8 \cdot 7$ |

Provisions-This term as applied to foreign merchandise covers a number of heads, and several of these are of a very comprehensive character, though of relatively small amount. Dried fruits, for instance, represent a value of R71.3 lakhs, and consist mainly of almonds, but the term covers many other fruits imported in smaller quantities. The largest single item under Provisions is that of dates which now represent a total value of nearly $\mathrm{R} 4^{\circ} \mathrm{A}_{4}$ lakhs. This is an advance of nearly 8 per cent on the quantity in the previous year, but it results from a rise of 14.7 per cent in the specific value of the article taking effect of a quantity diminished by 6 per cent to $814,78 \mathrm{I}$ cwts. The trade in salted fish receded to $\mathrm{R}_{2} 2.85$ lakhs as compared with $\mathrm{R}_{3} 0^{\circ} 9$ lakhs in $1905 \cdot 06$. The steady increase in the imports of foreign biscaits is an example of the acquisition of new tastes by the people of India. So far is the establishment of certain biscuit factories in India from having injured the import business that it has probably familiarised the purchasing public with an article formerly unknown and so extended the demand. A recent enquiry made in a number of districts in Bengal elicited the fact that a demand for biscuits of various kinds existed in all. The comprehensive category of "other sorts" of provisions increased to R $_{7} 6$ lakhs which marks an increase of 7 lakhs or io per cent, while the value of the whole class was $R 24^{\circ} 33$ lakhs against $R 238^{\circ} 56$ lakhs in 1905-06.

Salt-The important points about Salt in India in recent years are the successive reductions of salt duty and the growth in consumption. These have been as follows :-

In 1906-07 as in the previous year there was a decline in the quantity of salt imported, but it amounted to only 35 per cent and was accompanied by an increase of about i. 6 per cent in total value. The actual figures were 462,89 I tons and R66.76 lakhs against $464,53^{1}$ tons and R65.72 lakhs in $1905-06$. The decline is to be ascribed mainly to the boycott of foreign goods and the success with which obstacles have been opposed to the supply of imported salt to wouldbe buyers up-country. The price of Liverpool salt ex-warehouse in Calcutta was $\mathrm{R}_{51}$ per 100 maunds ( $8,27 \mathrm{lbs}$ ) in April 1906, it rose to R 54 in May, gradually receded to $R_{47}$ in September, stood at $R_{50}$ in October, and subsided again to $\mathrm{R}_{47}$ in February and remained at that figure till the close of the financial year.

Liquors are statistically distinguished as malt-liquors, spirits, and wines. In all three classes there was a decline both of quantity and of value. The following statement summarises the trade of the last two years:-

|  | $\underbrace{190506}$ |  | $\underbrace{1906 \cdot 07}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Gals | R | Gals | R |
| Malt-liquors . | 5,011,357 | 63,24,287 | 4,926,513 | 60,58,336 |
| Spirit | 1,650,226 | 1,08,78,491 | 1,585,689 | 98,65,664 |
| Wine | 341,669 | 29,75,347 | 329,318 | 26,39,828 |

In Beer the decline is one of $x^{\circ} 75$ per cent in quantity and $4^{\circ} 27$ per cent in total value, the difference marking a fall of 2.7 per cent in specific value. While this decline of average value is due in part to the increased popularity of those light beers originally produced by Germany, it is noticeable that the United Kingdom has now adapted herself to the demand and did 9r.66 per cent of the beer trade in 1906-07, while Germany contributed about 6.9 per cent and other foreign countries about 1.44 per cent.

It must be borne in mind however that these import figures do not represent the consumption of beer in India, seeing that in 1906 Indian breweries produced $5,599,900$ gallons. This, however, marks a further subsidence of 395,000 gallons in Indian production, and brings the total decline in the last three years to 619,800 gallons or $99^{6}$ per cent.

The same factor of indigenous production must be kept in view in respect of spirits. The following statement shows the totals in gallons of all spirits including liqueurs and methylated and perfumed spirits imported from the several principal countries :-

|  |  | 1904-05 | 1905.06 | 1906.07 |
| :---: | :---: | :---: | :---: | :---: |
| From United Kingdom |  | 722,350 | 837,094 | 828,957 |
| , France | - . | 252,815 | 281,320 | 257,073 |
| , Germany | - . | 195,579 | 209,006 | 226,055 |
| " Other countries | - • | 253,054 | 322,806 | 273,604 |
| Total |  | 1,473,798 | 1,650,226 | 1,585,689 |

The quantities of spirits issued from Indian distilleries were $8,744,302$ gallons in $1904^{-05}$ and $9,288,013$ gallons in 1905-06.

The potable spirit imported from "other countries" is chiefly arrack from Ceylon, rum from the Straits and Java, and gin from Holland.

The quantities of the principal descriptions of potable spirits imported were (in gallons) :

The decline in the imports of wines which had been continuous for some years was interrupted in 1905-06, but during the year under review it re-appeared and the quantitative decline of 361 per cent was accompanied by a contraction of 1128 per cent in total value at $\mathrm{R}_{2} 64$ lakhs. The difference in percentage marks a loss of 7.95 per cent in the average value per gallon, which is now R8.016 against $R 8 \cdot 708$ in the previous year.

There has been a further increase of 6 per cent in the quantity of spices imported into India during 1906-07, and a marked advance of 30.8 per cent in the total value which now stands at Ri44 lakhs. Of this betelnats with a total of $5_{1}, 623$ tons represent $\mathrm{R}_{115}{ }^{\prime} 35$ lakhs, which is 51.8 per cent higher than in 1905-06. Of this total $83^{\circ} 9$ per cent are derived from the Straits Settlements and 60 per cent are received at Calcutta, 22 per cent going to Madras. Of cloves from Zanzibar the total quantity imported was 1,829 tons with a value of $\mathbb{R}_{15} 5^{\circ} 29$ lakhs. This marks a decline of $42^{\circ} 8$ per cent in quantity and about $28^{\circ} 5$ per cent in value, the price having improved by about $24^{\circ} 6$ per cent.

Tea-The imports of foreign tea, which includes tea from Ceylon, declined in quantity by 29.4 per cent to $2,683,875 \mathrm{lbs}$ and in value by 12 per cent to Ri6.15 lakhs. This is to be accounted for by the shortage in the Ceylon crop and in China's general shipments and by the full crop in this country. The average value of the imported tea rose by nearly 24 per cent to annas 9 pies 7 per lb. In teas from Ceylon, the advance of price to annas 6 per lb was small, but in China teas, the average rate rose by nearly 30 per cent to annas 13.12 per lb . The imports from Ceylon dropped by about $929,000 \mathrm{lbs}$ or 53.3 per cent to $812,900 \mathrm{lbs}$, while China tea receded by: 22.8 per cent to $1,064,500 \mathrm{lbs}$, green tea declining by 176 per cent to $912,600 \mathrm{lbs}$. Estimates of re-exportation must be taken with some reserve, for it is known that, more especially on the land routes, foreign tea is not always accurately distinguished from Indian tea. But if the figures be accepted as correct, $501,577 \mathrm{lbs}$ were re-exported by sea and $69 \mathrm{r}, 488 \mathrm{lbs}$ oy land, making a total of $\mathrm{I}, 193,065 \mathrm{lbs}$ of which 60.8 per cent was black tea. On the average of the last five years it would appear that some $8,244,000 \mathrm{lbs}$ of foreign tea are yearly retained for consumption in India.

## METALS AND MANUFAC'IURES OF METALS

The imports of Hardware and Cutlery represent in'74 per cent of the total imports of metals and manufactures of metals. From the following statement it
will appear that they have increased in value by $\mathrm{R}_{39} \mathrm{~A}_{4} 8$ lakhs or $\mathbf{1 7}^{7} 42$ per cent in the last year:-

|  | $1904 \div 05$ | $1905-06$ $\boldsymbol{R}$ | $1906-07$ |
| :---: | :---: | :---: | :---: |
| Cutlery | 14,95,436 | 14,05,128 | 14,08,040 |
| Agricultural Implements | 7,85,577 | 8,29,758 | 10,55,914 |
| Other implements and tools | 11,33,090 | 13,24,443 | 16,56,825 |
| Enamelled ironware | ${ }_{17,00,785}$ | 13,23,689 | 18,78,959 |
| Sewing machines . | 10,06,625 | 10,86,095 | 11,79,722 |
| Unspecified hardware | 1,76,70,954 | 1,66,88,216 | 1,94,25,763 |
| Total | 2,37,92,467 | 2,26,57,329 | 2,66,05,223 |

Unfortunately the heading is so composite and comprises articles of so heterogeneous a nature that it is impossible to show briefly in what measure the general rise in the specific value of metal articles has contributed to this rise. It is clear, however, that no such enhancement of value would account for the increase of 41.9 per cent in the imports of enamelled ironware. This item now assumes for the second time the premier place among the specific classes, and its expansion has peculiar interest, for it marks the extent to which the people have been compelled by the high levels of copper and brass to replace their distinctive domestic utensils of that metal with German and Austrian ware. These may be seen in the distant interior. Their adoption marks a departure from immemorial habits and must have affected many of the traditional operations in many thousands of houses. Of this trade Germany now does 68 per cent as against 54 per cent in $1905 \cdot 06$, and Austria, which was supreme in it till two years ago, has receded from 42 per cent in the previous year to 23.5 per cent.

In cutlery the increase in value is so small as probably to have accompanied a decline in quantity; but the expansion of 27 per cent in the value of Agricultural Implements almost certainly implies an increase in quantity. The value of unspecified hardware expanded by R27.37 lakhs or 16.4 per cent and this head covers Lampware which increased by R 67 lakhs or nearly 40 per cent. The expansion in this item, like that in enamelled ware, is also symptomatic of a widespread adoption of new customs by the people, in the substitution of kerosene lights for the old metal lamps and vegetable illuminants on which they formerly relied. The steady growth in the imports of sewing machines has also significance of the same kind though in a less measure.

The share of the United Kingdom in the hardware and cutlery trade declined from 68.8 per cent to $65^{\circ} 9$ per cent, but it showed an absolute increase of Rig. 65 lakhs or 12.6 per cent, while Germany's addition of 35.5 per cent or Riliz lakhs to her total brought her share to 15.94 per cent of the whole arrivals. Although greater accuracy has been attained in classification of goods as to country of origin, it is probable that some part of the shipments from Belgium really emanated from Germany. The two countries conjointly increased their total by some $\mathrm{R}_{13} \cdot 89$ lakhs and now hold 21.8 per cent of the trade as against 19.4 per cent in the previous year. Austria-Hungary with a further decline now does only $4^{\circ} 73$ per cent of the total, while Russia's share, as was the case last year, is negligible.

The imports of metals represent 9.27 per cent of the total value of imported merchandise. In $1906-07$ the quantity declined from 548,938 tons to 547,746 tons, but the total value rose from R $904^{\circ} 3$ lakhs to $\mathrm{RI}_{\mathrm{I}}, 004^{\circ} \mathrm{I}$ lakhs. The prices of metals have been so high during 1906.07 that it is not surprising to find a diminution in the quantities imported. In 1905.06 there was a quantitative increase of 9 per cent accompanied by a fall of 2.9 per cent in total value, and in last year's Review it was pointed out how unusual is a discrepancy of
such dimensions in so large and composite an item of trade. In that year iron and steel were cheap and therefore flowed to India in large quantities, while the sudden rise in the rates for some other metals, such as copper, excluded them from trade and from a statistical influence on average prices. In 1906.07 the prices of these dearer metals have been enhanced; but iron and steel dominate all other metals, and their prices considerably exceeded those in the previous year. Consequently in the year under review we find a quantitative decline of $\cdot 22$ per cent accompanied by an increase of 11.04 per cent in total value, the average specific value of India's metal imports having risen by $11 \cdot 29$ per cent.

Copper-The imports of copper in 1904.05 formed 22.6 pet cent of the value of metal imports. In $1905-06$ it fell to 15.87 per cent, and in 1906.07 to 138 per cent. The rise which took place in the price of copper during 1905-06 was sufficiently striking; but it has been outdone by the enhancement recorded in the year now under review. The world's production of copper is estimated at some 712,000 tons, and not only is the consumption believed to be on a par with it, but the activity of the market leaves little doubt on the point. During March 1907, £109-10-0 was paid for Chili bars in London, as compared with $£ 799^{-0}$ in March 1906. The highest price previously recorded was $£_{101}-0-0$ in 1888 , during the operations of the Secretan ring. This enormous rise is due to activity in many industries but mainly to the extended use of electricity. It compels resort to substitutes in all uses for which these are adaptable. It is natural that the Indian demand, so far as it reposes on the use of the metal for household utensils, should be depressed by such a rise and that the trade in enamelled ware should show the expansion recorded in another paragraph. The decline, which in $1905-06$ amounted to 36.5 per cent in quantity and 32 per cent in value, has progressed in the last 12 months by a further 21.9 per cent in quantity and 2.9 per cent in value. There was therefore a rise of 24.4 per cent in specific value. Wrought copper now represents 93.14 per cent of the whole copper imports and while it declined by 20.17 per cent in quantity, the contraction in total value was only 76 per cent, the gain in specific value being therefore 24.4 per cent. The actual receipts amounted to $197,416 \mathrm{cwts}$ and R129.24 lakhs as compared with $247,295 \mathrm{cwts}$ and $\mathrm{RI}_{1} \mathrm{z}_{0}$ lakhs in the previous year. In unwrought copper the decline was $41^{\prime} 9$ per cent in quantity and 26.25 per cent in value, the average value being R 70.97 against $\mathrm{R}_{55} 89$ in $1905 \cdot 06$. Serious efforts to produce copper are being made in India and some 40 cwts were turned out in 1906-07.

Brass is also used for household utensils to a less but considerable extent and the total imports in $1906-07$ amounted to 11,138 cwts and $R 7,56,502$ against $10,78_{3}$ cwts and $R 6,94,276$ in the previous year. The increase was thus one of 3.3 per cent in quantity and $9^{\circ} 1$ per cent in value. The specific value was thus higher by 5.5 per cent but it fell short by 8 per cent of the price level of five years before (i.e., 1901-02) when the total value of the imports was $\mathrm{R}_{7,39,126 \text {. A Brass syndicate has been formed in Germany which commenced }}$ its activities by at once raising prices very considerably.

Iron and Steel-The exceptional activity that marked the iron and steel trades in 1905-06 increased in 1906-07, which will be remembered as remarkable in many ways. The consumption of the metals in ship-building, tinplates, galvanised sheets, constructional steel, cutlery, cycles and motor cars was entirely unprecedented, and the abnormal intensity of demand was especially marked in the United States. The price of pig iron is largely affected by those of ore and coke, and these have been extraordinarily high. The production and prices of
pig iron again govern the trade in the metal mart ; and the output in 1906 made a further progressive record, It amounted to $59,900,000$ tons as against $53,700,000$ tons in 1905 and $44,965,000$ tons in 1904. While Great Britain's contribution to the total increased in less ratio than that of the United States, it grew by 557,000 tons to a total of $10,149,000$ tons, and a satisfactory feature was the improvement in the average output per furnace. The rate of expansion in the three principal countries may be seen from the following statement :-

|  | 1904 | 1905 | 1906 |
| :---: | :---: | :---: | :---: |
|  | Tons | Tons | Tons |
| United States | 16,497,033 | 23,000,000 | 25,300,000 |
| Germany | 10,103,941 | 11,000,000 | 12,400,000 |
| United Kingdom | 8,562,658 | 9,200,000 | 10,100,000 |
| Total | 36,163,632 | 43,200,000 | 47,800,000 |

The price of Cleveland Warrants in the United Kingdom opened in 1906 at 55s. and closed at $62 s$. ; but owing to low levels in the earlier part of the year (the price being about $47 s .3 d$ when the Indian statistical year began), the average price was only $535.5 \frac{1}{2} d$-sufficiently in advance of the $495.6 d$ recorded in 1905.

The price of iron bars (Swedish rolled) in Calcutta had risen during 1905-06 from R7-12-0 to $\mathrm{R} 8-4-0$ per cwt , and in the course of the year under review it advanced (with the usual weakness in the monsoon) to $\mathrm{R} 8-8 \cdot 0$ and closed at its highest.

The following statement gives the total values of the Imports of iron and steel distinctly and conjointly in each of the last five years:-

|  |  |  | Iron | Steel | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | $\boldsymbol{R}$ | $R$ | $R$ |
| $1902-03$ | $\cdot$ | $\cdot$ | $3,03,04,888$ | $2,05,60,343$ | $5,08,65,231$ |
| $1903-04$ | $\cdot$ | $\cdot$ | $3,38,07,892$ | $2,62,10,257$ | $6,00,18,149$ |
| $1904-05$ | $\cdot$ | $\cdot$ | $3,78,51,121$ | $2,34,03,379$ | $6,12,54,500$ |
| $1905-06$ | $\cdot$ | $\cdot$ | $3,40,76,911$ | $3,23,62,181$ | $6,64,39,092$ |
| $1906-07$ | $\cdot$ | $\cdot$ | $4,31,83,326$ | $3,23,96,882$ | $7,55,80,208$ |

In 1go5-06 iron had shown a decline and steel a large development. In 1906.07 steel, in spite of the enhancement of average value, advanced by only $\cdot 1$ per cent, while iron pulled itself up by Rg106 lakhs or 26.7 per cent. The share of iron in the totals of the last three years has therefore been 61.8 per cent, $51 \cdot 3$ per cent, and $57^{\circ} 1$ per cent.

The monthly importations of iron and steel respectively in 1906.07 compare as follows with the monthly average for the two previous years taken together, that average being taken as 100 . It must be borne in mind that the trade is usually rather slack in the monsoon months :-

|  | Iron |  | Stral |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Value | Percentag <br> ratio | Value | Percentage ratio |

In a class of goods so composite and comprehensive as that under discussion it is not permissible to postulate constancy in the quantitative relations of one description to another or uniformity in the price movements of the various descriptions. For this reason little real value attaches to a calculation of the average value per cwt of total arrivals. It may be mentioned, however, that in iron there was a rise of $14^{\circ} 6$ per cent, i.e., from R $7 \cdot 3.5$ to $\mathrm{R} 8 \cdot 4 \cdot 4$ per cwt, while in steel the advance was one of 8.8 per cent, i.e., from R5-10-10 to R6-2-10.

From the statement below it will be seen that the arrivals from the United Kingdom increased by 52,604 tons or 18.7 per cent and now represent $63^{\prime} 78$ per cent of the total quantity imported, as compared with 54 per cent in. $1905-06$. Her share in the total value rose from $61^{\circ} 5$ per cent to $70^{\circ} 53$ per cent or R5 33 lakhs. In iron she increased her shipments to India by $19^{\circ} 7$ per cent and in steel by 12.4 per cent, while Germany and Belgium receded largely in both departments.

The most notable increase in Great Britain's shipments occurred in galvanised sheets and plates which rose by 26,328 tons in spite of a rise of some $25 s$ per ton in price. In this class the continent of Europe scarcely competes, but in plain sheets and plates Germany and Belgium were little inferior in 1905-06. In the year under review, however, they lost some 14,200 tons, and Britain, with shipments increased by 10,000 tons, improved her lead to one of 26,000 tons. The imports of tinned plates subsided by some $3^{2 \cdot 1} 14$ per cent under the weight of prices affected by the extraordinary market vicissitudes of tin. In value the decline was one of 23.6 per cent; and the difference between this and the rate of quantitative decline is due to a rise of no less than 12.51 per cent in specific value. In 1905-06 Germany and Belgium had held the lead in beams, pillars, girders, and bridgework, but in the year under review, the share of these countries receded by some 4,600 tons, and the United Kingdom took first place with a quantity increased by 5,000 tons, while similar reciprocal movements of the competitors in respect of angle, channel, and spring gave Britain a superiority of some 9,100 tons. Pipes and tubes form a branch of the trade which the United Kingdom has had pretty much to itself, and in $1906-07$ it developed by 30 per cent in quantity and nearly 34 per cent in value. The total sum was R $51 \cdot 17$ lakhs, of which the United States contributed R5 lakhs and Belgium R3•79 lakhs.

There is probably no business in which combination has been carried further than in the iron and steel trade, and the past twelve months have seen fresh developments of this nature. The most notable have probably been that of the makers of structural steel in Scotland and the north of England, that of the British steel tube makers for the regulation more particularly of export prices,
the South Wales Siemens syndicate, and the Iron-founder's ring. During recent months there apparently was doubt in some quarters as to whether the German Steel Trust would renew its bond but towards the end of April 1907, the agreement was concluded. This brings with it the renewal of the Belgian Steel syndicate and of the German cast iron syndicate.

Lead, like all other metals with which the electrician concerns himself, has shown extraordinary price developments in the past two years; and while 1906 presented none of the extraordinary bounds that marked 1905, the London rate for spot soft foreign lead which had risen to $£ 17$ in the earlier year, passed $£ 20$ in 1906. It is therefore not surprising that Indian consumption has been curtailed and that the imports have declined from $143,844 \mathrm{cwts}$ and R ig lakhs to 102,455 cwts and R158 lakhs. The decline is one of 28.77 per cent in quantity and 16.61 per cent in total value, the average price per cwt having risen from Ri3-3-1 to R15.7-2 per cwt or 17 per cent. The United Kingdom supplied sheets for tea chests to the value of only $\mathrm{R}_{7} .8$ lakhs which marks a continued decline, while the imports in this class from other countries rose from $R_{5} 8,000$ to $\mathrm{R}_{9} 6,600$. There is thus a net decline of $\mathrm{R}_{2} \cdot 47$ lakhs in value which contrasts ill with the expansion in India's tea trade and is not accounted for by the fact that the price of the British sheet fell from R16-4-11 to R15-11-1 per cwt and that of the foreign articles from R12-12-4 to R12-11-5.

Tin is assockated with copper in the constitution of materials used in certain industries that are now exceptionally active; and in respect of both metals there is doubt as to the adequacy of the visible supply to immediate consumption. The increase in the production of tin has been much less than in that of copper, and the strength with which actual users have continued to buy at rising rates to the discomfiture of successive bear operators leaves no doubt as to the reality of the demand. A year ago we quoted a rumour that $£_{1} 74$ per ton had been paid in London as compared with $£_{170}$ in 1888 when the Secretan ring included this metal in the scope of its operations. At the close of the year under review the price was at $£ 191-15^{\circ} 0$, and in December last it touched $£ 197$. It is estimated that the present production of $\operatorname{tin}$ in 1906 was about 98,000 tons and the consumption about 99,000 tons. About half of the production is derived from the Malay Archipelago, and it is from this source that India takes most of her supply. Her demand in 1906-07 expanded from $21,152 \mathrm{cwts}$ and $\mathrm{R} 24 \cdot 17$ lakhs to 32,011 cwts and $\mathrm{R}_{3} 0^{\circ} 62$ lakhs, the increase being 51.34 per cent in quantity and 26.68 per cent in total value, tne specific value having declined by 16.3 per cent. The Straits imported unwrought tin to the extent of $17,4^{86} \mathrm{cwts}$ and $R 25.67$ lakhs in place of 18,246 cwts and R 20.95 lakhs in the previous year.

Machinery-The imports of machinery form $25^{\circ} 59$ per cent of the total value of imported metals and manufactures of metals, and their steady increase is an indication of sound economic development. From 1897-98 to 1903.04 such development was arrested by frequent recurrence of bad seasons, and the figure of $\mathrm{R}_{350} 9$ lakhs recorded in $1896-97$ was not surpassed till $1904-05$. In that year R402.7 lakhs was attained. In $1905-06$ this grew by R $89^{\prime} 73$ lakhs or 22.28 per cent to a total of $R_{492} \cdot 5$ lakhs; and in 1906.07 the addition of a further R $87^{\circ} 43$ lakhs or ${ }^{1} 7.75$ per cent has brought the sum to $\mathrm{R}_{579} .89$ lakhs or nearly $\mathrm{R}_{5} \cdot 8$ crores. Bombay now takes the first place not only by virtue of its total importation of machinery, which represented a sum of R $257^{\circ} 9$ lakhs as against R175.6 lakhs in 1905 -o6, but also in respect of the dimensions of its increase which is R $82^{\circ} 3$ lakhs or 46.8 per cent. Of Bombay's total, Ra16.58
 year. Bengal's receipts of machinery on the other hand have diminished from $\mathrm{R}_{23} 6$ lakhs to $\mathrm{R}_{22} 8_{7}{ }^{2}$ lakhs which marks a net decline of $\mathrm{R}_{7}{ }_{3}$ lakhs or $3^{\circ} 1$ per cent. The subsidence in her imports of textile machinery is one of no less than $\mathrm{R}_{23} 8$ lakhs and reduces the figures to $\mathrm{R}_{104} \cdot 2$ lakhs. This, however, is still $\mathrm{R}_{10}$ lakhs above that for $1904-05$. In Sind and Madras there were also substantial declines in the imports of textile machinery ; and for all India the total in this branch of the trade is $\mathrm{R}_{22} 7^{\circ} 45$ lakhs against R248.98 lakhs in $1905-06$. The contraction is one of $\mathrm{R}_{21} \mathrm{I}_{53}$ lakhs, but this only makes an abatement in the total increase of Rio8.96 lakhs in other departments of machinery. The circumstance that expansion is becoming more general throughout all classes of machinery is emphasised by the fact that in provinces outside those of Bengal and Bombay, where the textile trades are the strongest, the imports of machinery advanced from R80' 7 lakhs to $\mathrm{R}^{2} 2^{\prime} 3$ lakhs, the improvement being Rin'6 lakhs or $14^{\circ} 7^{2}$ per cent. The totals of the various classes of machinery imported into India in the last two years have been (in thousands of rupees):-

Railway material -The progressive expansion in the imports of railway material continues, and the figures again attained the highest level on record. In the last five years they have been as follows in lakhs of rupees:-

| $1902-03$ | $1903-04$ | $1904-05$ | $1905-06$ | $1906-07$ |
| :---: | :---: | :---: | :---: | :---: |
| 536 | 563.7 | 561.5 | 673.88 | 849.23 |

The increase in the twelve months under review has therefore been 26 per cent. These figures include rolling stock and comprise imports for private lines ( $R_{415} / 78$ lakhs against $R_{162} \cdot 2$ lakhs in 190500 ) and for State Railways (R433*45 lakhs as against $\mathrm{R}_{511} \mathrm{I}^{\circ} 6$ lakhs in 1905-06). In the ordinary official returns, imports for State Railways are kept distinct from the movement of private trade; and under these conditions such modification of the figures as necessarily attends the progressive acquisition of lines by the State might be construed as recording a diminution in the imports of railway material. It may be noted that during the twelve months $960^{\circ} 25$ miles of railway were opened ; while $2,873^{.17}$ miles were under construction or sanctioned at 1st April 1907. At that date the total length of line open in India was $29,571 \cdot 32$ miles.

## CHEMICALS, DRUGS, MEDICINES, NARCO'TICS, DYEING AND TANNING MATERIALS

Chemicals-The value of the imports of chemicals in $1906-07$ was R68\% lakhs against R68.9 lakhs in 1905.06. The heading "Chemicals for paper making", which represented R 7 '74 lakhs in 1904-05, was abolished in 1905.06, and the following new sub-heads were introduced. Bleaching materials advanced to $\mathrm{R}_{3} \cdot 39$ lakhs as compared with $\mathrm{R}_{2} \cdot 21$ lakhs in 1905 -06. Calcium carbide increased from R1•11 lakhs to $R_{1} \cdot 13$ lakhs. Cyanide of potassium amounted to $\mathrm{R}_{2} \cdot 92$ lakhs against $\mathrm{R}_{2} \cdot 6$ lakhs in the previous year. Disinfectants went to $R_{2} \cdot 75$ lakhs in place of $R_{2} \cdot 44$ lakhs, Caustic Soda developed from $\mathrm{R}_{5} \cdot 86$ lakhs to $\mathrm{R} 7 \% 3$ lakhs, Bicarbonate of Soda also
improved from $\mathrm{R}_{3} \cdot 99$ lakhs to $\mathrm{R}_{4} \cdot 28$ lakhs, while Soda, other sorts, at RI. 8 lakhs, showed a gain of R24,000. The comprehensive heading, Chemicalsother sorts, this year represents 43 per cent of the total in place of 48.4 per cent in $1905 \% 06$. The year was on the whole one of notably high values in the chemical trade.

Drugs and Medicines-The year under review was one of high values in the drug trade also; and even in cases in which there is no space for an analysis of the specific value, it must not be assumed that the quantitative increase or decline was on the same scale as the variations in total values shown below. The total value of the imports of Drugs and Medicines advanced by about $15^{\circ} 6$ per cent, that is to say, from R $67^{\circ} 49$ lakhs to $\mathrm{R} 78^{\circ}$ or lakhs, which is the largest total so far recorded in any one year. The remarkable development of the rise in Camphor is shown by the fact that, while the increase in the value of the imports to $\mathrm{R} 22^{\circ} 96$ lakhs represented an advance of 7146 per cent on the figures for the previous year, the quantity imported was less than 21 per cent above the quantity received in $1905-06$. The specific value of imported camphor rose by 16 per cent in 1904-05, by 37 per cent in 1905-06, and by 42 per cent in $1906.0 \%$. At present camphor stands at the highest figure known in thirty years, and although a synthetic camphor suitable for the celluloid industry has been produced in Germany and has given rise to an important Customs dispute in the United States, it does not yet appear that a medicinal camphor can be artificially produced at a profit. The Quinine trade has been extraordinarily dull, and $7 d$., the lowest price on record, held good for weeks, though latterly there has been a recovery which might become marked if the Dutch "outside" factories could be brought into the ring. The import figures of $1906-07$ show nothing so sensational as the contrast presented last year by a quantitative increase of 4 per cent and a decline of 6.8 per cent in total value; but the total value in the year under review was $R 6.28$ lakhs, or 2.5 per cent lower than in the previous year, while in quantity a further advance of 3.2 per cent was recorded bringing the total to $71,121 \mathrm{lbs}$. Proprietary and Patent Medicines have increased from $\mathrm{R}_{13}{ }^{\prime} 5^{6}$ lakhs to $\mathrm{R}_{1} 7^{\prime} 4$ lakhs and Other Sorts have declined from R23.53 lakhs to R20.82 lakhs.

Tobacco-One of the few good auguries for the Indian tobacco industry is the decline that has appeared for the first time in the importation of foreign cigarettes and the hardening of average prices. That decline, however, appears only in the figures of quantity which have fallen by 6.6 per cent to $2,912,841 \mathrm{lbs}$, while the value has increased by 2.2 per cent to R 46 lakhs. An enquiry undertaken recently has shown that cigarettes costing upwards of R8 per ioo, average about 3 lbs to the thousand, while those of lower price average about $2 \frac{1}{9} \mathrm{lbs}$ per thousand. In normal times the low quality cigarettes usually represent $95 \%$ per cent of the whole. The contraction of imports probably took effect principally in these lower qualities, seeing that it was due mainly to the movement for preference of indigenous products with which these compete. Assuming that this is so and accepting the above weights per thousand as correct, the number of cigarettes imported must have been some 1,158 millions. This represents some 5 cigarettes per head of the population of British India but the consumption of the imported article is still insignificant as compared with the consumption of the native biri. Cigarette factories are being established in various parts of India, and considerable consignments of local manufacture have been shipped from Karachi and Bombay to Calcutta. Of the total of R46 lakhs, $\mathrm{R}_{3} \mathrm{I} \cdot 3 \mathrm{l}$ lakhs came from the United Kingdom, R 8.9 lakhs from the United

States direct, Ri.47 lakhs from Japan, the Straits Settlements, and the Treaty Ports of China, and $R_{3} .57$ lakhs from Egypt. This last represents the best qualities of cigarettes and marks a slight advance on the figures for 1905-06; but this increase together with the decline in average value suggests that Egypt has been opening up a new line. The average value per th from each of the sources was-British R1-11-6, American R1-2-2, Egyptian R6-3.9, and Eastern As. 10-7.

Dyes-The imports of aniline and alizarine dyes improved from $11,605,784$ lbs to $11,787,144 \mathrm{lbs}$, but the value declined from R $75^{\prime} 71$ lakhs to $\mathrm{R}_{74}{ }^{\prime} 93$ lakhs. These figures represent a rise of $1 \cdot 56$ per cent in quantity and a fall 0 1.04 per cent in value, the average value per lb having declined from 10 annas 5 pies to 10 annas 2 pies or $2^{2} 5^{6}$ per cent lower. This does not necessarily mean that the price of these dyes declined generally as the prices of the different grades vary greatly. These products are of course derived mainly from Germany where, during 1904, they became the subjects of various combinations among the chief manufacturers. Up to the close of the financial year, these combinations had not been made absolute, although there is reason to believe that the increase in cost of materials and consequent reduction of profits have led to further negotiations. These negotiations may be complicated by the fact that certain companies have acquired special patents for the production of the necessary nitrates. Bombay continues to be the principal port of entry, about 76 per cent of the imports being received there. Imports of aniline increased from $5,308,207 \mathrm{lbs}$ and $\mathrm{R}_{43} 7_{71}$ lakhs to $6,054,249 \mathrm{lbs}$ and $\mathrm{R}_{4} 6 \cdot 55$ lakhs. There was an increase of $14^{\circ} 2$ per cent in quantity and 6.5 per cent in value; the specific value having declined from 13 annas 2 pies to 12 annas 3 pies or 7 per cent. Of alizarine, the imports decreased from $6,297,577 \mathrm{lbs}$ with a value of $\mathrm{R}_{32}$ lakhs to $5,732,893 \mathrm{lbs}$ with a value of $\mathrm{R}_{2} 8.38$ lakhs, the average value declining from 8 annas 2 pies to 7 annas in pies per lb .

OILS
The total value of all mineral oils imported in $1906-07$ was R $242^{\circ} 7$ lakhs or 8.5 per cent more than in 1905.06 . Of this total, 80 per cent represents kerosene.

The following figures show the quantity and value of kerosene in thousan of gallons and thousands of rupees :-

| Source | Quantity |  |  | Value |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1904-05 | 1905-06 | 1906-07 | 1904-05 | 1905-06 | 1906-07 |
| Russia | 40,304 | 7,761 | 2,249 | 1,62,50 | 27,04 | 9,24 |
| United States | 7,477 | 22,332 | 28,835 | 46,34 | 96,24 | 1,21,87 |
| Borneo | 9,281 | .5,193 | 1,423 | 28,74 | 13,17 | 3,56 |
| $\underset{\text { ments }}{\text { Straits }}$ Settle- | 11,969 | 10,391 | 6,213 | 35,75 | 26,58 | 16,13 |
| Sumatra | 5,943 | 5,254 | 10,796 | 18,71 | 15,54 | 33,86 |
| Other Foreign Countries | 1,216 | 15 | 3,519 | 5,52 | 11 | 11,51 |
| Total Foreign Countries | $\underline{76,190}$ | 50,946 | 53,035 | 2,97,56 | 1,78,68 | 1,96,17 |
| Coastwise from |  |  |  |  |  |  |
| Burma | 42,729 | 47,159 | 6r,834 | 1,71,26 | 1,62,34 | 2,19,50 |

From these figures it is seen that, excluding Burma's unascertainable internal consumption of indigenous oil, India in the last three years has absorbed some $110^{\circ} 6$ millions of gallons of kerosene per annum and it is known that its use is expanding. In 1904:05 Burma oil represented 36 per cent of
the total consumption. The percentage rose to 48 in $1905-06$ and to nearly 54 in 1906-07.

The imports of foreign kerosene in $1906-07$ have, after a marked decline in 1905-06 (which should be read in conjunction with the prices given below), advanced by some four per cent to $53,000,000$ gallons, with a value of R196.17 lakhs. The specific value per unit of imported kerosene improved by some six per cent.

On the other hand the shipments from Burma to India proper increased by $3^{1}$ per cent in quantity and 35 per cent in value.

Russia which in $1904-05$ supplied 53 per cent of the imported kerosene now furnishes only some $4 \frac{1}{4}$ per cent. Her share of the trade amounts to $2,249,000$ gallons with a value of Rg. 24 lakhs as compared with $7,761,000 \mathrm{gal} \cdot$ lons and R27.04 lakhs in 1905.06. This of course is due to the continuance of disturbed conditions in the productive regions; and the damage is now so great that it cannot well be quickly repaired.

On the other hand, the United States which in 1904-05 supplied less than ro per cent of the total now sends 54 per cent, her total being $28,835,600$ gallons and $\mathrm{R}_{121} \cdot 87$ lakhs against $22,33 \mathrm{I}, 800$ gallons and Rg6.24 lakhs in $1005-06$.

Sumatra now holds the second place with $10,795,500$ gallons and $\mathbb{R}_{33} \cdot 56$ lakhs which marks a cent per cent advance on the previous year's figures. Borneo's contribution has fallen from $5,192,600$ to $1,422,600$ gallons and that of the Straits Settlements as entrepot from $10,390,700$ to $6,213,400$ gallons.

Bulk oil which in $1905-06$ amounted to $40,888,000$ gallons or 80 per cent of the total, stood in $1906-07$ at $38,3^{21,400}$ gallons or 72 per cent of the whole. Of this America supplied 47 per cent, Sumatra 21 per cent, Russia 2.8 per cent, the Straits Settlements 16 per cent, and Borneo $\Omega^{\circ} 7$ per cent.

Of the $14,713,300$ gallons of case oil, America supplied 73 per cent, Sumatra 18 per cent, Russia 8 per cent, and Italy 04 per cent.

The following are the average prices of the leading descriptions of kerosene in Calcutta during the last three years:

The price of American Chester declined gradually from $\mathrm{R}_{4 \cdot 1} \mathrm{I}_{3} \cdot \mathrm{O}$ in April 1906 to $R_{4-6-3}$ in September, and after a recovery reaching $R_{4-6-9}$ in December receded again to $\mathrm{R}_{4}-6-3$ in January 1907. Victoria oil from Burma on the other hand rose from $\mathrm{R}_{3-2-0}$ in April 1906 to $\mathrm{R}_{3-7-0}$ in March 1907.

In imports of other mineral oils, mainly for lubricating, there was a decrease from 10,260,500 gallons in 1905-06 to 10,152,200 gallons in 1906-07, while the quantity drawn by India proper from Burma fell away from $3,520,300$ gallons to $3,006,900$ gallons.

Imports of fuel oil declined from $1,329,194$ gallons in $1905-06$ to 352,312 gallons with a value of $\mathrm{R}_{39,118}$. The chief sources are Sumatra and Borneo. The receipts in Bombay fell from 436,774 to 43,368 gallons or 90 per cent, while the arrivals in Karachi declined from 613,007 gallons to 10,973 gallons in 1906-07. Madras took 276,744 gallons against 260,205 gallons in the |previous year.

## RAW MATERIALS

Coal-The increase in the imports of foreign coal reflects at once the activity of India's industries and railways during the year and the large expansion that took place in coal movements throughout the world. An active and profitable coal trade is of importance to commerce in general, because it carries shipping into distant ports, and mostly into those ports where industry is most progressive and tends to create in those ports a supply of tonnage at reasonable rates. For many years there has been a general tendency in India to substitute country coal for the imported article, but two years ago there was a recovery to 252,000 tons, and again in the year under review the figure has risen from the small one of 180,000 tons recorded in $1905-06$ to 257,200 tons with a value of $\mathrm{R}_{4} 8 \cdot 6$ lakhs. The increase in quantity is thus 43 per cent and in value 51.3 per cent, the average value having risen by $5 \%$ per cent. The net increase of 77,268 tons is more than accounted for by the additional consignments from the United Kingdom, these having risen from 137,700 tons with a value of $R_{26}$ - lakhs to 222,100 tons with a value of R43 lakhs. Japan sent only 4,500 tons in place of the 27,862 tons in $1905 \cdot 06$. The remaining 30,600 tons came mainly from Australia, Ceylon, China, Italy, Borneo, East Africa, and Mauritius. Imports of British coal by Government amounted to only 5,083 tons with a value of $R 87,500$. For particulars as to the production of Indian coal, reference should be made to the article relating to Exports of coal (page 45).

Silk-The abnormally high price of silks in $1906-07$ resulting from a shortage of some two million kilos in the 1905 crop and from a strong demand in America and elsewhere, brought about a further reduction of India's imports in this line. They receded from $1,645,700 \mathrm{lbs}$ and $\mathrm{R}_{7} \mathrm{r} \cdot 19$ lakhs to $\mathrm{I}, 420,467 \mathrm{lbs}$ and $\mathrm{R}_{5} 6^{\circ} 8$ lakhs, which represents a decline of $\mathrm{I}_{3} .7$ per cent in quantity, 20.21 per cent in total value, and 7 per cent in specific value per unit. Of the above total of R 56.8 lakhs, Bombay took R $45^{\circ} 9$ lakhs and Burma R10.4 lakhs. Direct imports from China, at $1,049,567 \mathrm{lbs}$, were short of the previous year's figures by $307,345 \mathrm{lbs}$ or 22.65 per cent, while those from the Straits Settlements at $220,118 \mathrm{lbs}$ showed an increase of $21 \cdot 78$ per cent.

The imports of cotton in $1906-07$ showed a further decline of $43,217 \mathrm{cwts}$, the receipts amounting to $118,259 \mathrm{cwts}$ against 161,476 cwts in the previous year. But in 1903-04 the imports were only $18,279 \mathrm{cwts}$, so that in three years they have increased by 100,000 cwts. The diminution in the demand for imported long staple cotton is due mainly to the strong internal off-take of the lower description of manufactures used by the mass of the people. The quantitative decrease is one of 26.76 per cent, but owing to a rise of 16 per cent in the average value, the decline in total value at $R_{45}{ }^{\circ} 89$ lakhs was only 5 per cent. About 69 per cent of the total quantity imported is American, and of this, $8 \mathbf{1}, 829 \mathrm{cwts}$ were received vid the United Kingdom with smaller quantities from the United States and Germany. The increase in importation from Persia which was foreshadowed in last year's report has taken place and 7,789 cwts were received from that source as against 7,621 cwts in 1905-06.

Precious stones and pearls, unset-As recorded in the trade accounts, the figures probably tear no yery clo:e relation to the true imports. It
${ }^{\bullet}$ is well known that large quantities of pearls are both imported and exported by post in such a way as to escape record. The values under the heading of precious stones fluctuate very greatly. In 1904-05 the total dropped by 42.3 per cent, in $1905-06$ it rose by 53 per cent to a total of R134 1 lakhs, and in $1906-07$ it has fallen by $30^{\circ} 37$ per cent to R 93.38 lakhs. The reduction is one of about $\mathrm{R}_{40}$ lakhs. This is more than accounted for by the contraction of the imports from the United Kingdom from R $49^{\prime} / \mathrm{s} 2$ lakhs to R 7.83 lakhs, but it should be remembered that the importation from that source in the previous year had been altogether abnormal. France also experienced the decline, and her imports shrank from R 8.88 lakhs to $\mathrm{R}_{13}, 600$. The imports from Arabia, which consist mainly of pearls, increased by $19^{\circ} 4$ per cent to $\mathrm{R} 74^{\circ} \mathrm{O}$ lakhs, while those from Persia decreased from R6.21 lakhs to R5*28 lakhs. Diamonds are found in Central India and rubies in Burma. Of the former, the ascertained production amounted to $R_{39,500}$ in 1904, $R_{37}, 100$ in 1905 , and $R_{77,400}$ in 1906. Of rubies the output is larger, having been as follows in the last three years :-

But there seems to be good reason to believe that the artificial rubies now being made at high temperatures by the process of $M$. Verneuil may affect the value of the natural stones.

Wood-The imports of unmanufactured wood (which includes timber, firewood, and ornamental woods) declined in $1906-07$ from R83.43 lakhs to R80.94 lakhs, the decrease being one of 3 per cent. The decrease is mainly due to the trade in timber which fell from 109,421 cub. tons with a value of $R 82.21$ lakhs to $94,72 \mathrm{I}$ cub. tons with a value of $\mathrm{R} 79^{\circ} 28$ lakhs. The decline was one of $13^{\circ} 4$ per cent in quantity but amounted to only 3.6 per cent in value, seeing that the average value rose by nearly 114 per cent. The marked rise in the world's price of timber throughout the year has tended to restrict the supplies from distant sources; and even teak, the value of which now represents 75 per cent of the whole, has come in smaller quantity. The imports of this wood have decreased from 71,676 cub. tons with a value of $R 62 \cdot 17$ lakhs to 61,696 cub. tons with a value of $R 60^{\circ} 7^{2}$ lakhs. The loss was $13 \cdot 9$ per cent in quantity and $2 \cdot 3$ per cent in value, the specific value having risen by 13.5 per cent. Siam furnished 90 per cent of this teak, the rest coming from Java direct, while the imports from the Straits Settlements practically ceased. The trade in timber other than teak fell away from 37,745 cub. tons with a value of $\mathrm{R}_{20} 0^{\circ} 04$ lakhs, to 33,025 cub. tons valued at R18.56 lakhs. Here the decline in quantity was 12.5 per cent and in value $7{ }^{\circ} 4$ per cent, the average value having gained 5.8 per cent. The imports from the United States which stood at 8,869 cub. tons with a value of $R_{3} \cdot 25$ lakhs in 1905 -06 dwindled to 93 cub. tons with a value of only R2,372. The American supply was curtailed not only by the great demand arising from the re-building of San Francisco and the prosperity of Southern California but also by the unprecedented congestion of lumber on the railways and by the sailors' strike on the Pacific coast. Prices in the United States have been extraordinarily high and the activity of industry and the coal trade caused a great consumption of timber in those countries where mines exist. The only moderating influence on rates has been the dearness of borrowed money and the consequent postponement of building operations.

## MANUFACTURED ARTICLE

The Imports of Cotton goods in 1906-07 were restricted as a result of various influences operating simultaneously. These were (a) the high level of cotton goods prices, ( $b$ ) the dearness of food-grains and the consequent contraction of the people's purchasing power, and (c) the movement for the preference of indigenous products. The firmness of the world's market for British cotton goods is shown by the fact that enormous as was the exportation from the United Kingdom in 1905 , it was largely exceeded in 1906. The British exports of yarn increased by $2,272,600 \mathrm{lbs}$ and $£_{1,517.413}$, and the specific value rose by nearly 13.5 per cent. The British exports of piecegoods increased. by $64,511,100$ yards and $£ 4,573,118$, while the specific value rose by about $5^{\circ} 26$ per cent. The net increase in the value of the British exports of cotton goods was thus' $£ 6,090,531$ in spite of India's having taken something like $£ 1,000,000$ less. The extent to which the purchasing power of the people twas restricted by the dearness of food-grains, may be gathered from the fact that the monthly averaye prices of the seven principal food-grains was $31^{\circ} 2$ per cent higher in 1906 than in the average of the previous five years. On the estimated total consumption of food-grains in India and the estimated average value of such grains, an increase of $31^{\cdot 2}$ per cent means an additional expenditure of $R 96.5$ crores or $£ 64,4^{20,000}$, while $\mathrm{R}^{2} 108{ }_{3}$ crores represents the total value not of cotton goods alone but of all merchandise imported nto India in the record year 1906.07 . The so called swadeshi movement has counted for something, but for very much less than the factors stated above. The Swadeshi movement began in September 1905 and a comparison of prices made at the end of the first Swadeshi year showed that while the average prices of eighteen descriptions of Indian fabrics had risen by $8^{\prime} 4$ per cent as compared with the previous twelve months, the average prices in India of seventeen descriptions of imported fabrics had risen in the same time by 24.75 per cent. Such an enhancement of price was obviously likely in itself to restrict importation.

It is notable however that the shipments of cotton piecegoods by sea from Bombay Fresidency to other provinces contracted by some 8.64 million yards or 5 per cent in quantity and by R 2.84 lakhs or 1.14 per cent in value.

The aggregate value of the imports of cotton yarn and of woven and other cotton goods in the last six years (stated in lalhs of Rupees) has been:

|  |  |  | Yarn | Woven <br> and <br> other goods | Total | Proportion to <br> totalimports <br> of merchandise |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $1901-02$ | . | . | . | $264 \cdot 7$ | $3024 \cdot 8$ | $3289 \cdot 5$ | 40 | per cent |

The decrease is therefore one of $\mathrm{R}_{15^{\circ}} .26$ million or $3^{\circ} 6$ per cent.
In Yarns the decrease was one of $8, \mathrm{i} 46,400 \mathrm{lbs}$ or ${ }^{1} 7.8$ per cent in quantity and $\mathrm{R}_{20} 0^{\circ}$ lakhs or 59 per cent in value, the specific value having risen by $14^{\circ} 4^{6}$ per cent. The quantities imported in the last six years are here stated in millions of lbs:-

Yarns from the United Kingdom, which represent $93^{\circ} 5$ per cent of the whole, fell by $17^{\prime} 8$ per cent from $4^{2,801,000}$ lbs to $35,177,000 \mathrm{lbs}$, which, however, largely exceeds the imports two years ago. The imports of dyed and undyed cotton yarn continue to be of nearly equal value. 'Of the former, with a total of $17,800,000 \mathrm{lbs}$, about 88 per cent is of British nrigin, $4^{222}$ per cent Italian, and about 3.5 per cent Austrian. The imports of 405 mule receded from $10,673,000$ lbs and $\mathrm{R} 68 \cdot 26$ lakhs to $9,694,000 \mathrm{lbs}$ and $\mathrm{R} 67 \cdot 62$ lakhs.

It is of interest to compare the imports of coarse, medium, and fine yarns with the production of similar lines by the Indian mills. In doing so it should be borne in mind that the local manufacturers have diminished their total output by about 4 per cent.

It will be seen that the proportions borne by the different groups of counts to the total consumption remain nearly constant, and that the shares of the Indian and the imported production in the various groups show little change in recent years.

The Imports of Cotton Fabrics represent $34^{\circ} 8$ per cent of the total imports of private merchandise against $37^{\circ} 9$ per cent in $1905 \%$. The value decrased from $\mathrm{R}_{39,01,77,000}$ to $\mathrm{R}_{37}, 69,43,000$, the difference being $\mathrm{R}_{1,32,34,000 \text { equal to }}$ $3^{\circ} 39$ per cent on the earlier figure. Some descriptions of cotton goods are not stated in yards. It is therefore convenient in ascertaining the changes of specific value to confine the calculation to piecegoods. In this last class, the imports amounted to $2,317,930,000$ yards and R $3,564.43$ lakhs as against $2,463,232,000$ yards and $R_{3}, 605 \cdot 35$ lakhs in $1905-06$. The decrease is one of $145^{\prime} 3$ million yards and $\mathrm{R}_{1} 3^{\circ} 0^{\circ} 9^{\prime}$ lakhs, which marks a decline of $5^{\circ} 9$ per cent in quantity and 3.54 per cent in value with a rise of 2.5 per cent in the specific value. These ratios of course vary in respect of diverse classes. For example, the specific value of grey goods rose by 264 per cent, that of white goods by 7 per cent, and that of coloured goods by $3^{\circ} 4$ per cent.

The following statement shows in millions of yards the relative importance of these three classes in the course of the last eighteen years. It will be noticed that whereas the figures for grey goods show a marked decline from those for 1905-06, they exceed considerably those for $190+005$ :

|  | Grev (unbleached) | White (bleached) | Coloured, printed, or dyed | Percentage of grey in total |
| :---: | :---: | :---: | :---: | :---: |
| Average, 5889-90 to 1893-94 | 1,223*47 | $368 \cdot 63$ | 374*7 | 62 |
| 1894-95 " 1898-99 | 1, 209.77 | 418.59 | $351 \cdot 49$ | 61 |
| 1899-1900 ,, 1903-04 | 1,204 53 | 369.69 | $430 \cdot 57$ | 57 |
| 1904.05 | 1,210.16 | $5{ }^{8} 4.3$ | 493.92 | 53 |
| 1905-06 | 1,34884 | $572 \cdot 75$ | $541 \cdot 6$ | 55 |
| 1906-07 | 1,2¢,8.48 | 494.97 | 524.48 | 56 |

The decline in greys was one of 3.7 per cent, while bleaclied goods lost no less than 13.5 per cent and coloured goods 3.1 per cent. Bengal, where there are two weaving mills, took $900,55^{2,000}$ yards or 69 per cent of the total of imported grey goods as against $998,408,000$ yards or 74 per cent in $1905 \cdot 06$.

The principal descriptions of imported goods belonging to the three classes are shown in the following statement in millions of yards:-

The only classes that show a substantial increase are grey shirtings and white mulls. There is an improvement also in grey mulls. All the others show a decline which in the case of grey chadars, dhuties, saris, and scarves is very marked.

The following statement shows also in millions of yards other descriptions which are imported in considerable quantities. The only classes here that show a healthy advance on the figures of two years ago are those of prints and chintz and cambrics, twills, and muslins :-

| Grey: 990405 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Madapollams | - . | 17.94 | 18.85 | 16.29 |
| T-cloths and domestics | . . | 12 | 8.8 | $13 \cdot 28$ |
| Printers |  | 49 | $\cdot 22$ | $\cdot 1$ |
| White: ${ }^{\text {a }}$ |  |  |  |  |
| Nainsooks |  | ${ }^{1} 77.23$ | 229.13 | 174.51 |
| Cambrics, twills, lawns | muslins, | 16.5 | 11.39 | 14'I |
| Checks, spots, stripes | . . | 7.56 | 5.42 | 5.2 |
| Long cloths | - . | $2 \cdot 05$ | 2.88 | $1 \cdot 45$ |
| Coloured: ${ }^{\text {c }}$ |  |  |  |  |
| Prints and chintz |  | ${ }_{181}{ }^{\text {P }} 55$ | 184.88 | 191.84 |
| Cambrics, twills, muslins | s | $66 \cdot 46$ | 79 ${ }^{16}$ | 82.19 |

The production of Indian weaving mills, about which some particulars are given in the chapter upon exports of cotton manufactures (pages 54 to 56 ), consists chiefly of unbleached shirtings, dhuties, T-cloths, domestics, and chadars, and it increased by $1,887,500 \mathrm{lbs}$. or $1 \cdot 15$ per cent which may be taken as a gauge of its increased working capacity. The yardage of grey and bleached piece-goods increased by $3^{2,818,000}$ yards or 581 per cent from $564,990,000$ yards to $597,808,000$ yards, the weight having risen from $133,657,000$ lbs to $136,090,000 \mathrm{lbs}$ which is $82 \cdot 7$ per cent of the total weight of all woven goods.

The extent to which the cotton piece-goods of the three main classes are derived from the United Kingdom is indicated below in millions of yards:-

|  | 1904.05 |  | 1905-06 |  | $\underbrace{1906-07}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | From United Kingdom | Total | From <br> United Kingdom | Total | From United Kingdom |
| Unbleached goods | 1,210.16 | 1,205'19 | 1,348.84 | 1,337\% 1 | 1,298.48 | 1,289.34 |
| Bleached | 584.3 | 574.5 | 572.75 | $561 \cdot 85$ | 494.97 | $486 \cdot 32$ |
| Coloured | 493.92 | $471 \cdot 53$ | $541 \cdot 65$ | 516.32 | 524.48 | $500 \cdot 44$ |

Britain therefore supplies $99^{\circ} 3$ per cent of the grey goods, 98.25 per cent of the bleached goods, and $95^{\circ} 4$ per cent of the coloured goods. All these percentages are better than those shown in 1905-06.

Besides these there are certain subsidiary classes of goods imported, the principal descriptions of which and the value of the respective trades, in thousands of rupees, being :-

The trade therefore showed a net loss of $\mathrm{Ri}_{42}$ lakhs or 7 per cent as compared with the gain of R24 lakhs in the previous year. The United Kingdom supplies 86.75 per cent of the handkerchiefs and shawls and 86.26 per cent of the sewing thread. But of the total it does only 46 per cent, seeing that the considerable quantity of hosiery is practically absorbed by Japan, Germany, Italy, Austria, Belgium, and France. Japan becomes increasingly dominant, and in $1906-07$ she sent hosiery to the value of $\mathrm{R}_{2} 3^{\circ} \mathrm{O}_{3}$ lakhs as against $\mathrm{R}_{1} 6^{\circ} 9$ lakhs in the previous year. And the R2. 36 lakhs of hosiery from Hongkong and the Straits Settlements was probably also of Japanese origin.

Silk Goods-That decline in imports of silk goods which appeared in 1905 -06 has continued; and in the year now reviewed, it amounted to 4 per cent. The total value was $\mathrm{R}_{1} 82.5$ lakhs as compared with R1go 15 lakhs in the previous year, the net decline being one of $\mathrm{R} \eta \cdot 65$ lakhs. Silk piece goods represent RI22. 85 lakhs or about 67 per cent of the total; and in this class there was a development of some R8.93 lakhs. The predominance of Japan in this section was increased both by the expansion of her shipments by $\mathrm{R}_{1} \cdot \mathrm{I}$ lakhs (that is to say, from R $59^{\circ} 19$ lakhs to $\mathrm{R}_{7} 2^{\circ} 29^{\circ}$ lakhs) and by the decline in the consignments from other countries. The imports from China declined from R $\mathrm{R}_{3} 6_{5}$ lakhs to $R_{33.4}$ lakhs which is much where they stood in 1904-05, and the trade with the Straits Settlements amounted to only Rgo,ooo. The Eastern section of the trade represented by these three sources now represents $86^{\circ} 8$ per cent of the total. Goods of silk mixed with other materials showed a drop of in per cent and stood at $\mathrm{R}_{3} 0^{\circ} 78$ lakhs. "Other sorts" consists mainly of warps and yarn of silk imported for the production of textiles for the Indian market, and in this department there was a decline of no less than $30^{\circ} 6$ per cent, bringing the total to R 28.74 lakhs.

In the Woollen goods trade, as in several others, the year $1906-07$ will be remembered as a time of high prices, and this condition led to a further contraction of imports. The total value fell from R $242^{\circ} 58$ lakhs to R205 22 lakhs or $15^{\circ} 4$ per cent. Of the total decline of $R_{37} \cdot 3^{6}$ lakhs, $R 28.93$ lakhs is accounted for by piecegoods which receded from R168.46 lakhs to $\mathrm{R}_{13}{ }^{3} 9^{\circ} 53$ lakhs and from $19,981,000$ yards to $15,323,000$ yards. The contraction is therefore one of 23.32 per cent in quantity and 17.18 per cent in value with a rise of 8 per cent
in the average value per yard. The share of the United Kingdom in this piecegoods trade went back from R1if.62 lakhs to RiO3.3I lakhs, while Germany's share contracted from $\mathrm{R}_{35} \cdot 47$ laklis to R26.76 lakhs. The declines in these two cases were thus 12.17 per cent and 24.56 per cent; and the two countries now participate in the trade to the extent of 74 per cent and 19 per cent respectively. Of the total decline in piecegoods, R11 ${ }^{\circ} 8$ lakhs occurred under shawls, bringing them down to R 15 多 g lakhs. This represents a shirinkage of 42.6 per cent in value, and since the number imported ( 790,293 ) is less by only $29^{\circ} 33$ per cent than that in 1905.06, it is clear, in the presence of the year's high level of prices, that an inferior class of goods has been entering. Germany supplied $564,8 \mathrm{II}$ of the shawls in question or 7147 per cent of the total number. Woollen hosiery declined from $333,77 \mathrm{I} \mathrm{lbs}$ and R 9.05 lakhs to $287,523 \mathrm{lbs}$ with a value of R 8.06 lakhs, of which the United Kingdom supplied $253,296 \mathrm{lbs}$ and R 6.97 lakhs or 86.48 per cent of the total value. In yarn there was a most satisfactory expansion from $599,093 \mathrm{lbs}$ and R9.99 lakhs to $979,024 \mathrm{lbs}$ and R 20.83 lakhs. Of this Germany supplied no less than 71 per cent.

Other manafactured goods-Of other manufactured goods, the following are the most important:

|  | 1904.05 | 1905-06 | 1906 -07 | Increase or decrease per cent |
| :---: | :---: | :---: | :---: | :---: |
|  | $R$ | R | $\boldsymbol{R}$ |  |

| materials | 46,91,972 | 49,25,356 | 56,74,656 | $+15.25$ |
| Paper and pasteboard | 64,37,288 | 70,48.978 | 80, 1 1, 105 | $+1365$ |
| Sbips, parts of | 24,98,000 | 10,61,304 | 2,67,354 | -74.81 |
| Soap | 27,23,705 | 31,90,890 | 32,28,156 | +1.17 |
| Stationery | 36.77,860 | 37,70,433 | 40,40,347 | $+716$ |
| Tea chests | 30, 66,531 | 19,18,020 | 23,57,108 | $+22.89$ |
| Toys and requisites for games | 27,73,715 | 29,11,559 | 28,61,703 | +1.71 |
| Umbrellas - . | 18,95,064 | 19,79,269 | 18,85,939 | $-4.72$ |
| Umbrella-fittings | - ... | 14,32,652 | 23,63,688 | $+44$ |

The largest item among these is Apparel, and it shows a contraction of R10. 54 lakhs or 4.7 per cent, largely arising from the restriction in the boot and shoe trade. Once more the most notable expansion is in Carriages and Carts which increased by $\mathrm{R}_{1} 565$ lakhs or 20.38 per cent. This heading included Motor cars and Motor cycles at R $44 \cdot 68$ lakhs, which marks an advance of R9. 46 lakhs or 26.86 per cent, and cycles which advanced by R 4 lakhs or 24.8 per cent to R20' lakhs. These mechanical vehicles therefore now represent 70 per cent of the total under this head. Glass and Glassware after a slight decline in 1905.06 advanced by R 8.67 lakhs, while Earthenware and Porcelain contributed R 5.39 lakhs to the general increase. Paper and Pasteboard which is next to glassware in importance, improved by Rg62 lakhs. Seven lakhs ot this is accounted for by the increase in printing paper with a total of R28.34
lakhs and with a decrease of 7 per cent in the average value per cwt. Other kinds of paper decreased from R 26.5 lakhs to $\mathrm{R} 25^{\circ} 75$ lakhs, the average value in this case having apparently fallen by 4 per cent. Stationery developed by R2.7 lakhs, while Books and Printed matter showed a decline of R2.08 lakhs or 6.4 per cent. The trade in Matches showed a net increase of nearly R4. ${ }^{\circ} 29$ lakhs, while the imports from Japan alone rose by R2. 58 lakhs to a total of R $14^{\circ} 5$ lakhs. Efforts are being made in certain quarters to create an internal match Industry, and specimens of suitable wood were recently shown at the Calcutta Industrial Exhibition. There was a development of R $7 / 49$ lakhs in Paints, etc. The imports of Soap continue to grow: It is interesting to note the decline of $\mathrm{R} 93,000$ or 4.72 per cent in the imports of Umbrellas together with the increase of no less than R9.3: lakhs or 44 per cent in the value of umbrella-fittings. The expansion in imports of Leather is not greater than might be accounted for by the marked rise in average value of the article. The increase in the arrivals of tea chests was due of course to the magnitude of the shipments of the leaf. Musical instruments are not shown in the above statement but it may be mentioned that the item has increased from R $\mathrm{F}_{3} .28$ to R20.22 lakhs largely through the heavy trade now being done in record instruments such as gramophones.

The contraction in the imports of parts of ships arises chiefly in the Burma figures which in recent years had been swelled by large arrivals for the construction of the river steamers of the Irrawaddy Flntilla Company, Limited. In 1903-04 Burma alone figured for nearly R24 lakhs under this head and in $1904-05$ for $\mathrm{R}_{2} 2$ lakhs.

The principal articles of importation into India and their values in each of the last three years is shown in the following statement, the unit being R1,000 :-

|  | 1904-05 | 1905-06 | 1906.07 |
| :---: | :---: | :---: | :---: |
| 1. Cotton manufactures: |  |  |  |

| 28. Silk | 73,41 | 71,19 | 56,80 |
| 29. Paints and colours and pain ers' materials | 46,92 | 49,25 | 56,75 |
| 30. Coal | 44,46 | 32,12 | 48,60 |
| 31. Cotton | 63,85 | 54,03 | 45,89 |
| 32. Horses | 55,48 | 46,76 | 44,89 |
| 33. Stationery (excluding paper) | 36,78 | 37,70 | 40,40 |

The most remarkable feature is the decline in cotton manufactures in a year of unprecedented activity in the world's textile industry. It is only necessary to make special reference also to the increases in Railway material, Sugar, Iron and Steel, and Machinery. A peculiar interest attaches to the subsidence of copper under pressure of high prices.

The sources of Imported Merchandise have hitherto been assumed in the Indian trade accounts to be those countries from which the goods were shipped in such vessels as landed them in India. In the case of transhipment cargo, the port of such transhipment appeared as the port of origin unless a through Bill of Lading had been granted at the port of original shipment. When such through Bill of Lading had been granted, the country of first shipment was assigned as the country of origin. During the course of the year under review, arrangements came into force by which the true countries of origin are more correctly ascertained; but for the present it is necessary to retain the old basis for retrospective comparison. According to the old system, the value of the imports has in the last five years been appropriated to the various principal countries in the proportion shown below :-

|  |  | 1902.03 <br> per cent | 1903-04 per cent | $\begin{aligned} & 1904-05 \\ & \text { per cent } \end{aligned}$ | $1905.06$ per cent | 1906-07 per cent |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 United Kingdom | - | $66 \cdot 3$ | 64.9 | 65.2 | 66.7 | 66.8 |
| 2 Germany | . | 27 | 3.4 | 3.9 | $4 \cdot 2$ | $5 \cdot 3$ |
| 3 Belgium | - | 39 | 3.9 | 3.6 | 43 | $4{ }^{\circ}$ |
| 4 Austria-Hungary | . | - 3:2 | 2.6 | 4.1 | $4^{\circ}$ | 2.8 |
| 5 Java . | . | . 07 | 14 | $2 \cdot 1$ | 1.8 | 2.7 |
| 6 Straits Settlements | - | . 299 | 2.9 | 3.2 | $2 \cdot 5$ | 2.6 |
| 7 United States | . | 1.5 | 1.5 | 1.1. | $2 \cdot 2$ | $2 \cdot 3$ |
| 8 Mauritius | - | 2.5 | 3.1 | 21 | 2.0 | $2 \cdot 0$ |
| 9 Japan | - | $1 \cdot$ | 15 | $1 \cdot 2$ | $1 \cdot 2$ | $1 \cdot 5$ |
| 10 China | . | . 2.8 | $2 \cdot 3$ | $2 \cdot 0$ | $1 \cdot 7$ | 14 |
| ${ }_{11}$ France | . | - 18 | 1.9 | 1.9 | $1 \cdot 7$ | 14 |
| 12 Italy | - | 1.0 | $1 \cdot 1$ | $1 \cdot 3$ | $1 \cdot 1$ | 10 |
| 13 Russia |  | - 3'4 | $2 \cdot 9$ | $1 \cdot 7$ | $0 \cdot 3$ | $0 \cdot 1$ |

The total value was $\mathrm{R}_{108} \mathbf{3}_{1}$ crores as against $\mathrm{R} 103^{\circ} 07$ crores in $1905^{\circ} 06$. The United Kingdom with $\mathrm{R}_{72} 3_{3}$ crores has again increased its predominance. Germany has now definitely assumed the second place with a total of R5.79 crores and it is probable that the improved system of record will confirm it to the disadvantage of Holland and of Belgium which latter now comes third with $\mathrm{R}_{4} .36$ crores. Austria-Hungary retains the fourth place but with a total reduced to $\mathrm{R}_{3} \cdot 07$ crores mainly by the contraction of her sugar shipments. Java, which was the largest shipper of sugar to lndia in the year under review is now well up with a total of R2.9 crores and moves from the eighth to the fifth place. . The Straits Settlements has strengthened her position with
a total increased by $R 22$ lakhs to $\mathrm{R}_{2} .77$ crores. The United States have also added some $\mathrm{R}_{3}$ o lakhs to their total, which now stands at $\mathrm{R}^{2} 55$ crores. In consequence of the reduced money value of sugar, the large increase in the quantity of that article supplied by Mauritius has not availed to alter her percentage or her place in the scale, although her total of $\mathrm{R}_{2} \cdot 17$ crores marks a substantial increase in the volume of cargo other than sugar. Japan with ${ }^{1}$-61 crores now supersedes China and France, whose contributions to the import trade fell to $\mathrm{R}_{1} 49$ crores and $\mathrm{Rr}_{1} 46$ crores respectively. Italy with $\mathrm{R}_{1} \cdot 08$ crores and Russia with Rir lakhs also recorded considerable diminution. The deterioration in Russia's position is very marked.

Imports of Government Stores are not included in the foregoing figures. They amounted to $\mathrm{R} 893^{\circ} \cdot{ }^{6}$ lakhs in $1906 \cdot 07$, as compared with Rgo2.9 lakhs in $1905-06$; and of that total $\mathrm{R}_{3} \mathrm{~B}^{2} \cdot 27$ lakhs came from the United Kingdom as against R 811.42 lakhs in the previous year. The absolute increase in the share of the United Kingdom therefore was one of $\mathrm{R}_{2} 0.85$ lakhs or 2.6 per cent, which raised that share from 90 to 93.15 per cent of the total.

Material for State Railways amounted to R 433.45 lakhs or 48.5 per cent of the total, while in the previous year the figure was R $\mathrm{R}_{1} \mathrm{I} \cdot 63$ lakhs or 56.7 per cent of the total. There is therefore a decline both absolute and relative ; but the imports of material for State Railways in $1905-06$ were exceptionally heavy. In 1904.05 they amounted only to $\mathrm{R}_{420} 5^{8}$ lakhs or 54.4 per cent of the total. These and the other stores, with unimportant exceptions, really constitute commercial transactions.

It may be mentioned here that the imports of material for Railways, State and non-State, have in the last three years been as follows : $-1904.05-\mathrm{R} 561.54$

The following figures show the share of the United Kingdom in the total import trade including Government Stores in the last five years:

| $1902-03$ | $1903-04$ |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| pet cent | per cent | 1904-05 | per cent | $1905-06$ |
| 68.9 | 67.3 | 67.4 | 68.6 | $1906-07$ <br> per cent |
|  | $7 \% .8$ |  |  |  |

## EXPORTS OF IMPORTED GOODS

On the average of the last three years, the value of the re-exports by sea represented 2.02 per cent of the total exports of merchandise and 3.22 per cent of the total imports from which they were derived.

The general development of direct communication between various parts of the world tends to diminish the trade of entrepots. Other things being equal, a continuous decline in India's re-exports would, therefore, be expected under present conditions; and such a decline, though amounting to only $\mathrm{R}_{3} \cdot 77$ lakhs or a little over i per cent, has in fact taken place in the year under review. The following statement records the extent of the trade in each of the last ten years:-

The United Kingdom took goods to the value of $\mathrm{R} 8 \mathrm{I}^{\cdot} \cdot \mathrm{I}_{3}$ lakhs which is $23^{\circ} 24$ per cent of the whole and marks an increase of $\mathrm{R}_{1} 3^{\circ} \mathrm{O}$ lakhs or 19 per
cent on the figures of the previous year. Persia's share contracted by R $\gamma^{\prime} 44$ lakhs or 13 per cent to a sum of R $53^{\circ} 9$ lakhs which represents $15^{\circ} 4$ per cent of the total. Arabia also showed a decline which amounted to R16.45 lakhs or 27 per cent of the previous year's figures and brought her share down to 12.5 per cent of the whole, while Turkey in Asia receded to R 16.9 lakhs or 4.8 per cent of the total. China at R18.8 lakhs improved her share to 544 per cent of the total. The Straits Settlements form an entrepott, and their share which is now R13.71 lakhs or 3.9 per cent of the whole, naturally tends to contract. Aden is also mainly a distributing point and lies nearer to Europe than India does, so she also, with $\mathrm{R}_{1} 6.93$ lakhs, takes a diminished share ( 4.85 per cent) of the trade. Ceylon and British East Africa are naturally served increasingly by direct shipment, and their shares declined respectively to $\mathrm{R}_{1} 3^{\circ} 63$ lakhs ( $3^{\circ} 9$ per cent) and R14.33 lakhs ( $4^{\circ} 1$ per cent).

The chief ports of Western India did 87 per cent of this trade, as against 89 per cent in the previous year, while the share of Bombay itself ( $2257^{\circ} 09$ lakhs) declined from 78 to 74 per cent, this shrinkage largely exceeding the net contraction in the whole trade. The greater part of the trade consists of manufactures from Western countries. Of these, cotton goods still form the most important class, though representing only $37 \% 7$ per cent of the whole, as against 40 per cent in the previous year. The high price of these fabrics naturally restricted the trade, and the decline in quantity was necessarily greater than the decline in value here discussed. Piece goods declined from R129.8 lakhs to Rir $9^{\circ} 7^{6}$ lakhs which is very much where they stood two years ago, although coloured goods at R92.64 lakhs have retained about half the gain made in 1905-00. The bareness of the European yarn market, the consequent high level of prices, and the more active competition of the Indian product, set free by the difficulties of the China trade, further reduced the exports of foreign yarns by 157 per cent, bringing the total down to $\mathrm{R}_{5} \cdot 25$ lakhs as against R6.23 lakhs in 1905-06. Persia which is the chief buyer took only $\mathrm{R}_{4} \cdot 14$ lakhs against $\mathrm{R}_{4} \cdot 27$ akhs in $1905-06$ and R $7 \cdot 1$ lakhs in $1904-05$. The value of metals continued to grow and now amounts to R29.73 lakhs in place of Rig.9 lakt.s in the previous year. Apparel also advanced from $R 14^{\circ} 65$ lakhs.to $R 16.64$ lakhs; but sugar, in spite of low prices, dropped from R 20.2 lakhs to $\mathrm{R}_{14} .65$ lakhs, and oils fell by no less than 53 per cent to R2. 57 lakhs. The exports of foreign tea receded from $781,000 \mathrm{lbs}$ to $501,000 \mathrm{lbs}$, the difference being $280,000 \mathrm{lbs}$ of which 56 per cent or $157,000 \mathrm{lbs}$ arises from the contraction of Persia's purchases to $207,000 \mathrm{lbs}$. The export of foreign tea to Russia, which had dwindled to $30,000 \mathrm{lbs}$ in 1905-06, became extinct; but it is shown elsewhere that Russia largely increased her demand for Indian tea. The exports of foreign green tea also nearly reached vanishing point with a total of only $26,000 \mathrm{lbs}$.

The re-exports to Western countries are comparatively small, but the R81'13 lakhs taken by the United Kingdom represents 23.24 per cent of the total re-exports as against R68 lakhs or 19.3 per cent in 1905-o6. The chief commodity is raw wool which is shipped mainly from Karachi and which advanced from $5,045,000 \mathrm{lbs}$ and $\mathrm{R} 25^{\circ} 8 \mathrm{I}$ lakhs to $5,221,000 \mathrm{lbs}$ and $\mathrm{R} 29^{\circ} 59$ lakhs.

## EXPORTS OF INDIAN MERCHANDISE

The exports of Indian merchandise represent 98 per cent of the total exports and $60^{\circ} 75$ per cent of the total trade in merchandise. The total value of the exports of Indian merchandise in $1906-07$ was $\mathrm{R}^{1} 73^{\circ} 07$ crores as against R $158^{\circ} 18$ crores in the previous year. The increase was thus one of $9^{\circ} 4^{1}$ per
cent to be compared with the increase of $5^{\circ} 08$ per cent in the value of imported merchandise. The increases in exports in the previous three years had been-1903-04, 19 per cent ; 1904-05, 3 per cent; $1905 \cdot 06,27$ per cent. The following statement shows the progress made in the past 27 years :-

| Average | 1880-81 to 1884-85 | R |  | Percentage increase + |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | - | 79,44,52,789 |  |  |
| " | 1885-86 to 1889-90 | - | 88,75,15,074 | +117 | per cent |
| " | 1890-91 to 1894-95 | - | 1,01,43,43,860 | +143 | " |
| " | 1895-96 to 1899-1900 | . | 1,03,64,92,715 | +22 | " |
| " | 1900-01 to 1904-05 | - | 1,31,00,38,459 | $+26.4$ | " |
| 1905-06 | . . . . | - | 1,58, $17,91,6{ }_{+2}$ | +20.7 | " |
| 1906-07 | . - . - | - | 1,73,07,04,827 | + 9.4 | " |

The principal articles in the exports trade are enumerated in the appended list with their values (in R ) for five years :-

|  |  | 1902-03 | 1903-04 | 1904-05 | 1965-06 | 1905-07 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Colton |  | 14,75,71,981 | 24,37,61,464 | 17,43,46,872 | 21,33,29,690 | 21,96,56,729 |

Indian exports consist mainly of raw agricultural produce; and they tend to increase as a consequence of a good season and to diminish in times of shortage. But it is evident that in India, as in other countries, reduced exportation of food-grains may result from the smaller production or larger internal consumption arising from increased earnings in respect of crops like jute, and that exportation of commodities of this latter description may be stimulated by a shortage of produce in whose handling and transportation they are required. The second and third articles on the list furnish an example. The prodigious increase of R971.3 lakhs or 56.7 per cent in the exports of raw jute (which now largely surpasses in value any other single article) was swelled out of proportion to the quantitative increase by the high prices paid for the crop; and certain details given elsewhere regarding the movements of rice leave little doubt that the diminution in the exports of that grain (much more marked in quantity than in value) was conduced to by the greater consuming power of the people, more particularly in the jute districts. On the other hand, the increase in the exports of jute manufactures would probably have been less but for the falling-off in the shipments of wheat and seeds in the past two seasons. Jute manufactures increased by $R_{3} 66.82$ lakhs, making the total figure for jute and its manufactures $R_{4,255} .49$ lakhs and the total increase R1,298.12 lakhs. Cotton, which comes next to jute in importance, increased by about $\mathrm{R}_{3} 3^{\circ} 27$ lakhs or nearly 3 per cent in value but very slightly in quantity. On the other hand, exports of cotton manufactures receded by 2225.67 laklis or 18.5 per cent, the net decline on cotion and its manufactures being $\mathrm{R} 162^{\circ} 4^{\text {lakhs. The contraction in the exports of wheat }}$
and wheat flour was one of R132.93 lakhs or about $14^{\circ} 5$ per cent, while Pulse, millets, and cereals showed a loss of $\mathrm{R}_{4} 2^{\circ} 3$ lakhs or $24^{\circ} 7$ per cent.

In addition to the articles specified in the foregoing list there are certain others which in the past year have attained a considerable value. The largest of these is Manures, which represented a total of Rior'3 lakhs, while Fodder, bran, and Cattle food amounted to R94 lakhs; Indian metals and manufactures, Rgr'5 lakhs; Coal and Coke, R76.i5 lakhs; Razv hempp, R68.73 lakhs, and Coir manufactures, R56 lakhs.

The statement below shors for five years the value in thousands of rupees of the trade in each of the four principal classes under which articles are grouped in the Accounts:-

|  | 1902-03 | 1903.04 | 1904.05 | 1905.06 | 1906.07 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Articles of food and drink |  | 44,71,03 | 53,06,93 | 42,32,37 | 40,24,89 |
| Chemicals, drugs, medicines, narcotics, and dyeing and tanning materials | 10,71,45 | 13,00,65 | 12,78,88 | 11,44,84 | 11,54,89 |
| Raw materials and unmanufactured articles. | 52,08,49 | 62,67,38 | 57,39,71 | 67,13,98 | 81,53,38 |
| Articles manufactured and partly manufactured | 25,81,69 | 27,64,43 | 29,32,17 | 35,67,45 | 37,84,2I |

## ARTICLES OF FOOD AND DRINK

In this class there was a net decline of $\mathrm{R}_{2} \cdot 07$ crores in value, the total value being about $R_{40}{ }^{\circ} 25$ crores ( $£ 26.83$ millions), as against $R_{42} \cdot 3^{2}$ crores ( $\left(£_{28} \cdot 21\right.$ millions) in $1905-06$ and R $_{53} .07$ crores in $1904-05$. Of this decline 64 per cent was accounted for by the falling•off in wheat and wheat flour. The crop of 1906 and that of the current year have both compared ill with the abnormal yield of 1905 , although largely exceeding the average of the previous five years. The only article in this class which shows an increase is Tea, of which the exports have attained the unprecedented value of R 9.87 crores.

Coffee.-The Indian coffee trade in $1906-07$ has been bad. The main causes of the depression are the increased popularity of tea abroad and the nugatory character of the Brazilian valorization scheme in the face of the heavy crop in that country. Contracting exports are accompanied by derlining values, as may be seen from the statement below :

The decrease is 36.67 per cent in quantity and $43^{\circ} 28$ per cent in value, for the value per cwt at $\mathrm{R}_{43-11-0}$ has declined by 10 '4 per cent in one year and by 133 per cent in two years. And all the European indications point to a weak market ahead.

The shipments of coffee to the United Kingdom make a depressing scholion to those relating to tea. They declined from $\mathbf{1 7 2 , 3 8 4}$ cwts to 82,358 cwts and now represent only 36.2 per cent of the diminished total, while France's reduced purchases of 95,493 cwts instead of the 132,233 cwts taken in 1905 -06 now represent $41^{\circ} 86$ per cent of the total. It is known that most of the superior
coffee shipped to the United Kingdom is forthwith distributed to other parts of the world; so it may be taken that the diminished continental demand betrayed by the fall of 28 per cent in the exports to France contributed to the decline of 52 per cent in those to the United Kingdom.

Fruits and Vegetables-The value of the exports of fruits and vegetables amounted to $\mathrm{R}_{34}{ }^{\circ} 57$ lakhs as against $\mathrm{R}_{37} 729$ lakhs in 1905-06. The principal article is copra exported mainly from Madras, but the quantity fell from $177,049 \mathrm{cwts}$ to $126,454 \mathrm{cwts}$ and the value from R22.07 lakhs to R 18.95 lakhs. The decline was thus 28.58 per cent in quantity and 14 per cent in value, the average value having improved by a further 20 per cent to $\mathrm{R}_{1}{ }_{4} 99$ per cwt.

Rice-Exports of rice in 1906.07 represented 66.96 per cent of the total value of food-grains exported from India, against $63^{\circ} 1$ per cent in the previous year, but only $10^{\circ} 7$ per cent of the value of all Indian produce exported as compared with $11 \%$.per cent.

The most salient features of the Indian rice trade in 1906-07 have been the strong internal demand, high prices, the large shipments from Burma to India proper, and the substantial diminution of exports to foreign countries. The surplus available for foreign export may be curtailed either by a shortage in the crop of rice produced, or by a shortage in other food-grains for which rice may be substituted, or by exceptional prosperity and enhanced consuming and holding power among the cultivators of crops other than food-grains, or by a movement or disposition of cultivators to substitute such specially profitable crops for rice. All of these contributed in greater or less measure to the facts now to be recorded; and'some idea of the cumulative effect of a small increase in consumption or reservation of stock may be gathered from the following figures. If we accept the lowest estimate of average consumption of rice per head (i.e., $\frac{1}{2}$ ser $=1 \% 0_{3}$ lbs ) and assume that the increased consumption or reservation by the $50,722,000$ of population in Bengal alone amounts to only one hundredth part of such average consumption, the total withdrawal from visible supply on account of the one province alone would amount to $2 \cdot 3$ million maunds or about 84,500 tons. The total rice crops from which the exports of $1906-07$ were mainly drawn was estimated at $433,138,000$ tons against $448,461,000$ tons in the previous year and in places it certainly fell short of the estimate.

The following statement shows in thousands of hundredweights and in thousands of rupees the exports abroad during each of the last five years :-

The exports to foreign countries therefore receded 'y io per cent in quantity, which bears out the forecast made in last year's Rev ew. In value the decline was only 0.61 per cent, which is accounted for by a further rise of 10.5 per cent in the average declared value. Some gauge of the intensification of Indian demand may be found in the shipments of rice from Burma to India proper. These amounted in 1906.07 to 821,000 tons, which marks an advance of no less than 411,000 tons or 78.4 per cent on the figures for the previous year, and nearly 171 per cent on those for $1904-05$. Formerly the greater part of these
coastivise exports from Burma went to Bombay and Madras; but in the year under review the quantities and values were-

|  | Quantity (cwt) |  |  | Valub (R) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1905.06 | 1905-07 | Increase + or Decrease- | 1905.06 | 1906.07 | Incrense or Decrease - |
| Bengal | 273,299 | 5,530,816 | +5,257,517 | 11,09,330 | 2,47,99,099 | $\div 2,36,89,769$ |
| E. B. and Assam | 531,097 | 4,780,119 | +4,249,023 | 21,35,241 | 2,26,15,330 | +2,04,80,089 |
| Bombay | 4,508,941 | 2,292,679 | -2,216,262 | 1,94,13,176 | $1,11,63,994$ | $-82,49,182$ |
| Madras | 3,441,084 | 3,455,440 | + 14,356 | 1,06,63,611 | 1,30,04,321 | + 23,40,710 |
| Burma ${ }^{\text {a }}$ | 162,885 | 145,469 | -17,416 | 5,78,554 | 6,23,989 | +45,435 |
| Native States | $44^{6,752}$ | 214,776 | -231,976 | 14,19,244 | 6,78,477 | $-7,40,767$ |
| Toral | 9,364,058 | 16,419,299 | +7,055,24r | 3,53,19,156 | 7,28,85,210 | +3,75,66,054 |

It is noticeable that, whereas the average price of rice in Calcutta was about 55 per cent higher than in 1905*06, the price in Rangoon advanced by only 19 per cent. There is reason to believe that the increase of price in Bengal and in Eastern Bengal and Assam was promoted by the jute cultivators' exceptional prosperity. A careful estimate of the sums paid to cultivators for jute in the different districts shows the total farm value to have been some forty crores of rupees, of which about fifteen and a half crores were clear profit. And a marked rise in the selling price of one form of produce induces a rise in the prices of all crops for which it can be readily substituted. Whereas Bengal together with Eastern Bengal and Assam imported rice to a value exceeding that of the previous year by $\mathrm{R}_{441^{\circ} 7 \text { lakhs, they together exported raw jute exceeding }}$ the previous year's record by R 968.9 lakhs.

Japan, which in the previous four years had taken rice from India (including Burma) at an average rate of nearly 337,262 tons per annum, reduced her demand to 133,153 tons or about 39 per cent of the said average. Ceylon is now the largest single purchaser of Indian rice and took 338,862 tons, worth $R_{4}$ crores, as against 340,128 tons in $1905-06$ with a value of $\mathrm{R}_{3} \cdot 44$ crores. There was a decrease of $\cdot 38$ per cent in quantity with an increase of 16 per cent in value, which marks a rise of 16.8 per cent in specific value. It was expected that the destruction of crops in Southern China would greatly strengthen the demand from that country. There was an increase to 15,946 tons as egainst 4,315 tons in ${ }^{1905} 506$; but in $1904-05$ China under war conditions took 17,160 tons. The shrinkage of the exports to the Straits Settlements from 251,400 to 203,400 tons indicates a decline of 21.5 per cent partly due to a further resort to direct shipment and a resultant neglect of the Straits as a point of distribution.

The practice of shipping rice to Egypt "for orders" and then forwarding it to destinations not at first known in India vitiates to some extent the figures relating to exports to western countries. For example, at this time last year Egypt figured for 321,775 tons in the accounts, but on adjustment this has been reduced to 65,858 tons, the balance of nearly 256,000 tons having been distributed among other countries. So the following figures must be recognised as incomplete. Germany has increased her lead as the chief occidental buyer of Indian rice and took 262,498 tons with a value of R227 lakhs. The quantity taken by the United Kingdom showed a further decline at $\mathbf{1}_{3} 1,996$ tons with a value of $\mathbb{R}_{125}{ }^{\prime} 4$ lakhs, and the direct shipments to Austria-Hungary fell away to ${ }^{1} 16,332$ tons, though the value was slightly higher at R88 lakhs.

The exports of unhusked rice declined from 41,437 tons with a value of $\mathrm{R}_{22} .6$ lakhs to 32,757 tons with a value of R1999 lakhs, of which Ceylon took $\mathbf{3 2 , 7 3}^{2}$ tons included in her figure quoted above.

Wheat-On the average of the last five years the value of the wheat exported represented $3^{2} 76$ per cent of the exports of all food-grains and $5 \cdot 23$ per cent of the total value of Indian merchandise exported.

It must be understood that the wheat exports of one financial year are drawn mainly from the crop of the previous year. The wheat exporte 1 in 1905 07 therefore belongs mainly to the crop of $1905-06$; but no review of the wheat trade can be properly intelligible from which particulars of the crop are excluded. For these reasons the following statement is given as showing the Indian exports for the year $1906-07$ in comparison with the crop data for 1905-06, and the average exports in the five years ending 1905.06 with the average crop data for the five years ending 190405. Comparison is also made betweea the figures for the year under review and those for the last preceding year; and in every case the percentage ratio of increase or decrease is brought out, the average of the earlier pe:iod or year being taken as 100. A column is added showing the areas under irrigation; and it may be stated that in 1897-1900 the irrigated area under wheat, which now stands at $9,133,000$ acres, represented $8,120,000$ acres.

The five years' period relating to crop includes 1930-or, in which the area was restricted as a consequence of the failure of the crup in 1899-1900; and this restriction naturally affected the exports in 1901-02, which is the first of the group of five years averaged in respect of exports. The crop of $1905-06$ again was seriously damaged by drought and hail when approaching maturity. It was from this crop that the exports in the year under review were mainly drawn; and this accounts in great measure for the fact that these exports represented in quantity only $85^{\circ} 6$ per cent and in value only $85^{\circ} 04$ per cent of those in the previous year. The crop of 1906.07 has to a great extent been garnered at the time of writing and some of it has been shipped. It is estimated as being $8,508,040$ tons, which is short of previous year's figure by 70,500 tons and 10.9 per cent greater than the average for the five years ending 1904-05.

(a) For British India only.
(b) In respect of areas and outturn, the " year under review " is $1905-06$. In respect of Exports and Imports, the "year under review" is 1906-07.

In 1904 India was the largest contributor to the wheat supply of the United Kingdom and furnished $25,493,000$ cwts out of a total of $97,782,500 \mathrm{cwts}$. But in 1906 it fell back into the fourth place with $12,636,200 \mathrm{cwts}$, which the United States, Russia, and Argentina all exceeded. The United States, which in 1903 sent $24,197,895$ cwts to Britain, sent only $22,490,900$ cwts in 1906. On the other hand, the British crop in spite of a contraction of 2 per cent in area yielded about $7,577,305$ quarters against $7,541,582$ quarters in 1905 .

The only other considerable purchaser of Indian wheat in the year under review was Belgium, which took about $79 \mathrm{r}, 000 \mathrm{cwts}$; but this is only $70^{\circ} \mathrm{per}$ cent of her takings in 1905-06, and France reduced her demand from $1,855,000$ cwts to about $194,000 \mathrm{cwts}$. The figures relating to individual European countries may, however, undergo substantial modification when advices have enabled the Department to assign to them separately their shares of the considerable shipments made to Egypt "for orders."

It is not generally remembered that some foreign wheat is imported into certain provinces of India every year and that in times of shortage it is taken in considerable quantities even by ports from which grain is commonly shipped. In 1906 -07 the imports amounted to some 209,696 cwts with a value of about R114 4 lakhs. Of this 186,511 cwts were received from Asiatic Turkey and $21,95^{2}$ cwts from Persia.

The year was notable for the fact that the Government of India procured the adoption by the export trade of a new form of contract limit g much more strictly the proportion of dirt and seeds in Indian wheat.

The shortage in wheat and the continued high prices neces rily restricted the exports of wheat flour. These stood at $1,031,500 \mathrm{cwts}$ in $1904-05$ and 899,056 in 1905-06, but declined in $1906-07$ to 818,461 cwts with a value of $\mathrm{R}_{5} 8.57$ lakhs. The decline in 1906.07 is one of 8.96 per cent in quantity and 8.24 per cent in value. The exports go mainly to Aden, Arabia, Mauritius, East Africa, the Straits Settlements, and Ceylon. It was unfortunate that Indian millers should have been incapacitated from competing for a share in the abnormal Chinese demand of recent months by which certain of their competitors have profited considerably. The essays at trade with the United Kingdom were for the time being practically abandoned, the parity of prices both in wheat and flour being altogether unfavourable.

The food-grains other than rice and wheat exported in 1906-07 declined by 28 per cent or $1,265,800 \mathrm{cwts}$; and this, following a decline of 47 per cent in the previous year, brought the total to $3,220,200$ cwts with a value of R129 lakhs, as compared with $8,535,400 \mathrm{cwts}$ and $\mathrm{R}^{2} 20^{\circ} 25$ lakhs recorded two years ago. The largest quantitative shrinkage was this year in jawar and bajra, which fell by 53 per cent to $780,400 \mathrm{cwts}$, and pulse contracted by 48.6 per cent to $1,098,400$ cwts, while barley more than recovered the shrinkage of $1905-06$ and attained the level of $416,100 \mathrm{cwts}$. Other sorts including maize, also showed a decline of 54 per cent to $76,700 \mathrm{cwts}$; and gram recorded at 848,600 owts an advance which amounted to 103 per cent on the figures of the previous year.

Provisions-The value of provisions exported declined by 8.4 per cent to R65: lakhs, which is slightly below the figure at which they stood in 1904.05 . The principal articles in the class are ghi (clarified butter), which receded to $\mathrm{R}_{23} \cdot 6$ lakhs, and fish which fell to $\mathrm{R}_{15}{ }^{\circ} 6$ lakhs.

Spices-Exports of spices dropped from R $90^{\circ} 79$ lakhs to R60.2 lakhs, which is lower than in any of the five previous years. The $\mathbf{R}_{3} \circ \cdot 59$ lakhs so lost
represents a decline of 33.69 per cent, and of this $\mathrm{R}_{2} 8$ lakhs is accounted for by the contraction of exports of pepper to $R_{33}$ lakhs or $9,499,000 \mathrm{lbs}$.

It must, however, be borne in mind that pepper stood at an extraordinarily high figure in last year's accounts ; whereas the decline of R2. 85 lakhs in ginger, bringing the value to $R_{9}{ }^{\circ} 67$ lakhs, is a real departure from the normal, and makes a reduction on figures already exceptionally low. The reality of the shortage in ginger is emphasised by the advance of 41 per cent in the specific value of the article to As. $2-10$ per lb , while the rise in that of pepper is only $\mathrm{I}^{\circ} 7$ per cent to As. $5^{-6}$ per lb. Exports of chillies on the other hand advanced by 22.27 per cent in quantity and 12.34 per cent in value, the totals being 11,008,000 lbs and $\mathrm{R}_{14}{ }^{3} 3^{8}$ lakhs.

Tea-The year under review has, on the whole, been the most prosperous recorded in the Indian tea trade. It began with considerable misgivings; but the trade revived rapidly after the British duty was reduced to five pence; and the increase in the Russian demand helped to sustain the market through a most active season. Good souchong, which stood at 6d. in London in April 1905 and 8d. in April 1906, touched is. in August 1906, and was firm at 11d. in March 1907. The demand for Indian tea was stimulated by a contraction of some $3,000,000 \mathrm{lbs}$ in Ceylon's production as a consequence of unfavourable weather and by a shortage in China's shipments. Ceylon's shipments to the United Kingdom were reduced by about $5 \frac{1}{2}$ million pounds while the English market also took from China nearly 2 million less than in 1905. This last deficiency was however nearly made good by increased shipments from Java, the imports from which in the last 3 years were :-

The area and production of tea in India since 1902 have been as follows:-

In 1906 there were 423,828 acres (or 80 per cent of the whole) in the province of Eastern Bengal and Assam, which with Bengal proper represented $81 \cdot 5$ per cent of the total, the balance being divided between Northern India with $\mathbf{1 7 , 4 2 2}$ acres, Southern India with 36,028 , and Burma with $1: 498$ acres.

The production has increased much more rapidly than the area; and while since 1902 the latter has developed by only 1 per cent, the former has advanced by 26.08 per cent. It is, however, extremely difficult to check the estimates of production owing to the unascertainable nature of the interral consumption, which there is reason to believe as must exceed 7 million lbs per annum.

The joint-stock capital engaged in the industry amounts to nearly £ $14,540,875, v i s$. -

|  |  | R | 6 |
| :---: | :---: | :---: | :---: |
| Companies registered in | India | 3,41,82,985 | 2,278,866 |
| " $\quad$ | London |  | 12,262,009 |

This gives an average joint-stock capital of $£ 27$ per acre. It takes, however, no account of the large but unknown quantity of private capital also engaged.

The labour employed is returned as 491,457 permanent and 81,642 tem. porary hands, making a total of 573,099 hands. This represents a net increase of 20,000 on the previous year and an average of $1 \cdot 08$ hards per acre.

The following figures show the quantity and value of tea exported from India in the last five years:-

The figures for 1906.07 represent a record both in quantity and value. The increase in quantily, as compared with 1905.06 , is $19^{\circ} 48$ million lbs or slightly over 9 per cent, and in value Rior' 86 lakhs or 115 per cent, the increase in specific value thus being one of about 2.18 per cent.

The quantities of tea exported to the principal countries in the last three years have been as follows in thousands of lbs:-

As compared with the 9 per cent increase in total exports, we find that the United Kingdom took only $5^{\circ} 77$ per cent ( $9,623,000 \mathrm{lbs}$ ) more than in 1905-06, so that her share in the total shipments declined from $77^{\circ} 76$ to $75^{\circ} 4$ per cent. This percentage tends to diminish continuously. It is impossible in this place to analyse the distribution of this tea from the United Kingdom, and it is known that, owing to the use of optional bills of lading for shipments to London, the figures above do not in all cases show the actual destination of the goods. It is, however, found that over the seventeen years 1890 to 1 go6 the net discrepancy between the Indian returns of exports to the United Kingdom and the British returns of imports from India is considerably less than I per cent. The consumption in the United Kingdom in 1906 is' estimated at $270,100,000 \mathrm{lbs}$ or $6 \cdot 18$ lbs per head of population. Among foreign countries the largest single increase appears in the figures relating to Russia, which took $3,773,000 \mathrm{lbs}$ more than in 1905 06 , the increase being about 37.77 per cent.

The direct shipments to the United States are found to have declined by a further $19^{\circ} 6$ per cent. The exports to Canada show a decline, both relative and absolute, and now represent 6.2 per cent of the total; and those to Australia, which represented $3^{\circ}{ }^{1}$ per cent in 1904.05 , now represent 3.6 per cent, having registered an advance of some $1,770,000$ lbs or nearly 23 per cent.

Five years ago Calcutta shipped 94 per cent of the entire tea exports of India. Last year she did only about $75^{\circ} 4$ per cent of the total, while Chittagong in the same time has raised her percentage from 8.2 to 18 , and Southern India at 6.7 per cent has more than doubled her share.

The average prices of the three descriptions of tea most largely sold at public sales in Calcuuta in the last five years have been as follows, stated in annas and pies per lb .:-

|  |  |  |  | Broken Pekoe | Pekoe |  | Pekoe Souchong |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | $a$ | $p$ | $a$ | $p$ | $a$ |$)$

It must not be assumed that the wide divergence between the prices of superior and inferior teas in 1905 was due only to the fact that some exceptionally fine teas were produced or that the inversion of these relations in 1906 was due entirely to the absence of exceptional teas. It is very probable that the reductions of the British duty, while not large enough to lead to a reduction of retail price, induced dealers to improve the quality of their mixings, and that the gradual all-round rise of wholesale prices has recently led to an abandonment of this policy and a stronger demand for teas of lower class to be retailed at an unchanged rate.

## METALS AND MANUFACTURES

On the average of the last three years the exports of Indian Metals and Manufactures have represented only 4 per cent of the total exports of Indian merchandise.

Exports of Indian Metals and Manufactures during 1906-07 present some curious statistical features. The total increased to $10,051,664$ cwts with a value of $R_{9} 1,49,57^{8}$, the increase being $55^{\circ} 5$ per cent in quantity and $73^{\circ} 5$ per cent in value. But the specific values of different descriptions vary so greatly that the figures by themselves have little meaning. Manganese ore, which this year represents $77^{\circ} 5$ per cent of the increased total value (as against 81.9 per cent in 1905-06) has a value of only As. 11-6 per cwt (as against As. 1o-iI in the previous year) ; while copper and brass (wrought) which represent only 8 per cent of the total (against 9.5 per cent last year) has a value of $\mathrm{R} 76-7 \cdot \mathrm{I}$ per cwt (against $\mathrm{R}_{59-14-9 \text { in the previous year); and "Other sorts" which now form } 14.5}$ per cent (against 8.4 per cent) of the total have an average value of $\mathrm{R}_{7} 76-7$ per cwt as compared with $\mathrm{R}_{3}-10-3$ in 1905-06. The specific value has therefore increased by $5{ }^{\circ} 5$ per cent in the case of Manganese ore and by no less than 1036 per cent in the case of "Other sorts," while it would, in spite of all probabilities to the contrary, appear to have declined by 2 1:6 per centin the case of copper and brass. But the quantity and valu of copper and brass exported were 12,194 cwts and $R_{7,30,1} 37$ while the value of "Other sorts" was $R_{13,3}{ }^{1}, 16 \mathrm{r}$; and this comprised increases of no less than $\mathrm{R} 6,30942$ in old copper for remanufacture, $\mathrm{R}_{44,2,} 8$ in tin ore, $\mathrm{R}_{1,11,350}$ in pig iron, and R81,808 in unenumerated metals. In addition to these there were in the year under review exports of chrome iron ore with a value of $R_{1}, 66,090$, iron, wrought, $R_{1}, 23,0 \cdot 3$, iron, old, for remanufacture R60 342, l -ad R46,810, and br $\sim$ ss, unwrought, R 37,54 I .

The continued restriction of the Russian output of manganese ore, the fact that the greater part of the exports from India is superior in quality to the Caucasian product, and the exceptional activity in the steel industry during the past twelve months, have together rendered the business extraordinarily profitable; and the total shipments amounted to $9,859,855$.cwts with a value of B.70,88,280, which went mainly to the United Kingdom 4,392, r30 cwts, Belgium 1,971,614 cwts, and the United States $2,786,400 \mathrm{cwts}$.

## CHEMICALS, DRUGS, NARCO'IICS, AND DYES

Saltpetre, together with Borax, practically represents the exports of chemicals from India. The quantity increased from 336,429 cwts to 353,378 cwts, while the value rose from $\mathrm{R}_{3} 8 \cdot 5$ lakhs to $\mathrm{R}_{4} 1{ }_{4} 4$ lakhs. The quantitative expansion of 5 per cent in conjunction with a $7: 5$ per cent rise in value, marks a further increase of 2.36 per cent in the declared. value of the article. This only reflects the general tendency in all nitrates; which have again been subject to marked fluctuations during the year.

Borax, which in the world's markets showed a rise of some 15 per cent in price during the year, was exported to the extent of $5,61_{3}$ crits with a value of $\mathrm{R}_{1,15}, 300$, its average value having risen by $5^{\circ} 7$ per cent.

The Opinm trade during the latter part of the year 1906.07 was largely influenced by the proposals of the Chinese Government for its ultimate abolition and for the early doubling of the import duty. Doubts have been suggested in well-informed quarters as to the reality of the Chinese Government's power to abolish the internal traffic, and it is believed by shippers with a good knowledge of China that the area under opium in certain parts of that country is being increased to make good any such shortage in supply as may result from restriction of the imports from India. On the other hand, there have been recent reports that the official movement is already taking effect. The proposal to increase the Chinese duty and the uncertainty as to when it may come into force have moreover discouraged Indian shippers and created an uneasy feeling among cultivators, who, although they had a good crop last year, are said to be now contemplating a reduction of area. The effect of reducing production should have been to raise prices, and in the case of Bengal opium the intention of Government to curtail the monthly sales from the scheduled 4,400 chests to 4,000 as from July 1907 caused a recovery after a considerable decline. But Malwa opium is subject to special disabilities, amongst which is its variability in consistency, weight, and strength; and during the year under review the price for this description has ruled about R150 lower than in $1905-06$.

The continuous decline in the exports of Malwa opium to China is shown by the following figures:-

The extent to which Malwa opium dominates the Bombay market may be seen on comparison of the above figures with those relating to Bombay in the following table. This statement shows for the last five years the quantities of all opium exported from Bengal and Bombay respectively, the total value in thousands of Rupees, and the average prices.

|  | Exports |  |  |  | Average price per chest |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Bengal chests | Bombay chests | Total chests | Value | $\overbrace{\underset{R}{\text { Bengal }}}$ | Bombay $\mathbf{R}$ |
| 1902-03 | 48,154 | 19,377 | 67,531 | 8,01,69 | 1;144 | 1,295 |
| 1903-04 | - 48,218 | 25,419 | 73,637 | 10,47,02 | 1,460 | 1,349 |
| 1904-05 | - 47,855 | 19,006 | 66,861 | 10,62,34 | 1,585 | 1,599 |
| 1905-06 | - 48,833 | 14,103 | 62,936 | 9,47,18 | 1,438 | 1,736 |
| 1906-07 | - 53,588 | 12,686 | 66,274 | 9,30,79 | 1,38: | 1,501 |

In Bombay there was a decline of 1,417 chests or to per cent in quantity and a loss of $1^{1} 7$ per cent in average value. Bengal increased its shipments by 4,755 chests or about to per cent with a loss of nearly 4 per cent in average value. The total quantity showed a net increase of 3,338 chests or 5.3 per cent and a decrease of ${ }^{\circ} 73$ per cent in the total value. The average price of the Calcutta sales was $R_{1,371}$ for the calendar year and $R_{1,391}$ for the twelve months ending March ${ }_{1907}$, the highest in each of these periods respectively being $R_{1,513}$ in November 1906 and $R_{1,511}$ in March 1907. Exports to Hong Kong and the Straits Settlements showed increases of 2,158 chests and 585 chests respectively, the totals being 40,044 chests and 12,953 chests. Shipments to Treaty Ports rose by 425 chests to a total of io, 546 chests.

Tobacco-The trade in Indian tobacco, unmanufactured and manufactured, is feeling very severely, both at home and abroad, the competition of America as a grower and as a maker of cigarettes and of certain European countries as producers of cigars. Some progress is, however, being made in the adoption of more exact methods of cultivation and manufacture ; and it is to be hoped that such quantitative expansion of exports as we have to record this year may not always be made at a sacrifice in value.

The following are the figures of the trade for the last three years :-

|  |  |  | Unmanufactured |  | Manufactured |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Cwts | R | Cwts | R |
| 1904-05 |  |  | 109,968 | 12,56,950 | 9,497 | 8,24,320 |
| 1905-06 |  |  | 1 16,886 | 14,07,24 | 10,543 | 9,33,196 |
| 1906.07 |  |  | 187,001 | 20,49,623 | 12,039 | 10,46,355 |

In unmanufactured description therefore the exports in $1906-07$ grew by 60 per cent in quantity but in value the increase was only 46 per cent, the specific .value having declined to R 10-15-4 or by nearly 9 per cent in spite of considerable firmness in the world's markets for raw tobacco. In the manufactured classes the decline in specific value is 14 per cent ; but it reduces the satisfaction that otherwise might have been felt in the increase of $\mathbf{I} 4$ per cent in the quantity shipped. The largest quantities of Indian cigars are taken by the Straits Settlements, the United Kingdom, and Gibralter. Most of the unmanufactured leaf goes to the Straits Settlements, Aden, China, and Holland and much of it is intended to be consumed in the hookah.or narghili, so that strictly its values are not comparable with the values of leaf produced in other countries for manufacturing purposes.

Indigo-The year $1906-07$ has brouyht some encouragement to Indigo planters. The results obtained from the Java-Natal seed have left no doubt as to its superiority, and a larger area has been sown with it for the coming season. Considerable hope and some controversy were awakened by the publication of the conclusions arrived at by the Government of India's bacteriologist after two years' investigation regarding the relative virtues of natural and synthetic indigo. The one point that remains uncontroverted is the absolute necessity for standardization of strength in the vegetable product. In Bihar the first crop was destroyed by floods, but the quality of the later product was exceptionally good. Prices both in Calcutta and London consequently hardened about 12 per cent. From this it is argued in some quarters that bottom has been reached and that such demand, as now survives, is for purposes to which the synthetic dye cannot be applied. The statement of exports given below does not quite support this view, for it will be seen that the increased demand emanates mainly from Persia and Japan and is a new and therefore perhaps temporary demand.

One element of strength in the recent demand for indigo has been the activity of iron and machinery trades and the large consumption of indigo-dyed clothing commonly worn in the shop.

The following statement shows the exports of indigo in $1906-0$ and the five previous years. The total, ten years ago, was 169,50 o cwts with a value of $\mathrm{R}_{4} .37$ crores, and that was about 19 per cent below the value for the previous year.

Therefore the declines in quantity and value respectively have been as follows:-In ten years nearly So per cent in quantity and nearly 84 per cent in value; in five years 60 per cent in quantity and 62 per cent in value. In 1906.07 , however, there was a recovery of $12^{\circ} 5$ per cent in quantity and of $19^{\circ} 5$ per cent in value, the difference between these percentages being due to an improvement of 6 per cent in the specific value, foliowing one of 11 per. cent in 1905 -06. These successive rises bring the average declared value to R199 per cat.

The exports to the United Kingdom improved by some 2.5 per cent to 7.942 cwts , and the Continent of Europe increased its demand very slightly to 7,063 cwts. Egypt still retains the first place, but with a reduced total of 9,195 cwts, and the purchases fer the Uniied States fell off from $\mathbf{1 , 5 3 0}$ to $\mathbf{1 , 2 5 8} \mathbf{c w t s}$. Japan and Persia are the two countries that have shown a marked recovery in the past year. In place of 242 cwts in $1905-06$, Japan took $1,600 \mathrm{cw}$ ts with a value of $R_{2} 93$ lakhs; and Persia in place of 1,676 cwts took $2,422 \mathrm{cw}$ s with a value of $\mathrm{R}_{4} \cdot 3$ lakhs. These mark quantitative increases of 661 per cent and 44.5 per cent on the year; but it must be remembered that in $1905 \cdot 06$, the Persian figures showed a decline of nearly $5^{6} \mathrm{per}$ cent, while the expors to Japan five years ago amounted to $5,710 \mathrm{cwts}$.

The psychological effect of the year's results are indicated by an increase of 18 per cent in the area placed under the crop for the current season. In Madras the total area is now only 1 per cent below the average of the five years ending $190+05$, but the overall shortage in Bengal, Madras. the United Provil ces and the Panjab is one of about $3^{8}$ per cent. The total yield in these four provinces, was estimated in December 1906 at 69,700 cwts, and it is understood that the return has been fully up to expectation.

Other Dyeing and Tanning Materials-The following statement shows the exports of the principal articles in this class in the last three years :-

| Cutch | 1904-05 |  | 1905-06 |  | 1906-07 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwis | R | Cwts | R | Cwis | R |
|  | 62,562 | 9,71,041 | 55,070 | 8,63,876 | 97,269 | 15,92,561 |
| Myrabolams | . $1,187,585$ | 42,59,063 | 1,206,398 | 44,60,676 | 1,162,219 | 43,97,591 |
| Turmeric | 44,090 | 3,04,756 | 49,545 | 4,41,768 | 62,246 | 7,08,967 |

Of these myrabolams is by far the most important and is influenced by the internal demand which is indicated by the increased exports of tanned hides and skins (q.v.) The exports of myrabolams declined by $3^{\circ} 66$ per cent in quantity
and by $x^{4} 4$ per cent in value, the difference in these ratios being due to a rise of $2 \cdot 33$ per cent in the specific value. Cutch recovered by 766 per cent in quantity and about 84 per cent in value, while the exports of Turmeric represented a quantitative improvement of $25^{\circ} 6$ per cent and a gain of more than 60 per cent in value.

## OILS

Oils (animal, essential, mineral, and vegetable) showed in 1906-07 a further decline of 14.5 per cent, and represented a total value of only R69:86 lakhs as against R81-68 lakhs in 1905*06. The greatest falling off was in mineral oils, the exports of which receded by $49^{\circ} 08$ per cent to $906,13^{6}$ gallons, with a value of $R_{2}{ }^{3}$ lakhs. Similar features were reported last year ; and that they are due to no inactivity in the industry is shown by the fact that the production in Burma in the last three years has (in thousand of gallons) been:-1904, 115,904; 1905, 142,064; 1906, 137,654 ; while in the same period the shipments of kerosene from Burma to other Indian ports were (in thousand of gallons) 1904-05, 46,794; 1905-06, 51,$680 ; 1906-07,55,796$. In the arrangement made two years ago between the contending oil interests, it was of course contemplated that the Indian markets should in the main be served by Burma, and the advantageous nature of the arrangement is shown by the increase of the profits of the Burma Oil Company to $£ 578,155$. The average declared value per gallon declined from As. 8 to As. 7-1, whereas in the United States prices hardened by some 5.25 per cent.

Exports of paraffin wax, which is classed as oil, increased by 6 or per cent to 60,209 cwts with a value of R12.43 lakhs, while the shipments of candles produced from petroleum declined by 15.2 per cent to $5,095,000 \mathrm{lbs}$ with a value of $\mathrm{R} 14^{\circ} \mathrm{II}$ lakhs.

Vegetable oils have receded by $13^{\circ} 4$ per cent (almost the same percentage as gauged their fall in the previous year) and now have'a value of $\mathrm{R}_{46}{ }^{7} 77$ lakhs. Cocoanut oil, with a total value of R14. 18 lakhs, showed a loss of R8.og lakhs; but this is offset to the extent of $6_{3}$ per cent by an increase of castor oil from $R_{1}{ }^{7}{ }^{12}$ lakhs to $R_{22}{ }^{22}$ lakhs, while linseed, mustard, sesamum, etc., registered a net falling-off of $\mathrm{R}_{4} \cdot 23$ lakhs.

## RAW MATERIALS

Coal-On an average of the three years ending 1905-06, exports of coal have represented $8 \mathbf{I}$ per cent of the exports of raw materials, and 33 per cent of the exports of Indian merchandise. In $1906-07$ they represented 93 per cent and 44 per cent respectively.

The annual production of Indian coal in the five years ending 1885 averaged $1,227,197$ tons, in that ending 1895 it averaged $2,758,640$ tons, and in that ending 1905 it averaged $7,626,592$ tons. The production in 1906 was estimated at $9,735,010$ tons.

In twenty years the average exports had grown from 16,524 tons to 576,278 tons per annum. In $1906-07$ they attained 940,054 tons with a value of $R 76.15$ lakhs which represents an advance of 12.28 per cent in quantity and $15 \% 75$ per cent in value on the exports in 1905-06. The average value was R8'I per ton as compared with R 7.86 per ton in the previous year.

Among foreign buyers of Indian coal, Ceylon retains the first place with a total of 404,000 tons against 381,000 tons in 1905.06 and the Straits Settlements have increased their demand from 235,400 to 293,700 tons. East Africa took 15,000 tons against 10,600 tons in 1905-06, but that market ostensibly took

20,500 tons in 1904.05. Calcutta was the port of shipnient for all the expor except 5,956 tons from Bombay and about 4,935 tons from other ports. The shipments from Calcutta to other Indian ports amounted to $2,251,99$ tons which represents an increase of 1109 per cent on the similar figure fo 1905-06, Bombay alone taking $1,107,837$ tons as compared with $1,067,77$ tons in 1905-06. Shipments of bunker coal from Calcutta for use on steamer rose from 851,639 tons to 896,484 tons.

India still takes some 250,000 tons of coal and coke from abroad, but s universal is the use of Indian coal in the power-using industries of the country that the varying difference between the indigenous production and the export of coal might be taken as a rough gauge of the activity of internal manufacture and of shipping.

The price of first class Jheria Bengal coal per ton in wagon in $1905^{-c}$ averaged $\mathrm{R}_{2}-10-6$ with $\mathrm{R}_{2-4}-0$ in April as lowest and $\mathrm{R}_{3}-12-0$ in March a highest. In $1906-07$ the average price has been $R_{4} \cdot 5-5$ with $R_{3}-8-0$ in April a the lowest and R6 in March as highest.

Cotton-The exports of raw cotton represent 26.94 per cent of the whol value of Indian raw materials exported. The trade is governed primarily by India crop results and secondarily by the relation of textile activity in Europe an the United States to the supplies available in America and Egypt. In a these respects the season of $1906-07$ was extraordinarily favourable.

The crop which mainly furnished the exports under review was that c 1905.06. It was estimated at 21 million acres with a yield of some $3,426,00$ bales of 400 lbs ( $12,235,714 \mathrm{cwts}$ ) as against $19^{\circ} 9$ million acres in 1904.0 with an outturn of $3,826,000$ bales ( $13,66_{4}, 286 \mathrm{cwts}$ ). This decline in quantit upon an increased area was due to very unfavourable conditions in the Centr: Provinces, Berar, Hyderabad, and the Panjab. In $1906-07$ the area rose to $22^{\circ} 3$ millions of acres with an estimated outturn of $4,908,000$ bales ( $17,528,571$ cwt and the great increase in yield per acre which was shown by these estimat gave rise to some scepticism on the part of persons inexperienced in the climati vicissitudes that affect Indian agriculture. It may be mentioned that th average yield per acre in $1905-06$ was 56 lbs per acre, while that of $1906-07$ expected to give 88 lbs per acre. This is the largest recorded average yiel for all India; but it has often been exceeded in single districts or provinces an compares very poorly with the estimated average of 233 lbs per acre in Americ in 1906.

The American crop in the last three years has been estimated as follow by the Census Bureau:

| 1904 | 1905 | 1906 |
| :---: | :---: | :---: |
| $6 \times, 601,200$ cwts | $48,236,500$ cwts | $59,769,402 \mathrm{cwts}$ |

The Egyptian crop handled in 1906 is reported to have been one , $5,960,000$ cantars or $5,271,000 \mathrm{cwts}$.

The following are the prices of middling upland cotton at Liverpool the last two years stated in pence and decimals of a penny per lb :

The price of good Broach cotton at Bombay in the last two years was as follows in annas per lb:

Prices were therefore somewhat higher than in 1905-06; and although the margin of profit was perhaps less than in that year, the textile trade throughout the world -with the exception of Russia-was extraordinarily active. In England the consumption in 1906 exceeded that in 1905 by some 370,000 cwts or 2.2 per cent. In India there was a considerable decline of activity more particularly in the later months; and the mill consumption fell by nearly 285,900 cwts, from $7,234,800 \mathrm{cwts}$ to $6,948,900 \mathrm{cwts}$. This figure allows for wastage in manufacture and is equal to $1,945,500$ bales of 400 lbs . The difference of 285,900 cwts is equal to about 3.9 per cent of the figure for. 1905.06 and 2.34 per cent of the entire crop of that year.

The following figures give a summary of the export trade in the last five years, the unit being $\mathbf{1 , 0 0 0}$

In the year under review there was only a negligible increase in quantity accompanied by an increase of nearly 3 per cent in value, the rise in the specific value being 3 per cent.

The statement below shows the destinations of cotton during the same period, the unit as before being $\mathbf{1 , 0 0 0} \mathrm{cwts}$ :

The decline in Japan's purchases is one of 22 per cent and might be ominous, but her total imports of raw cotton in 1906 declined by some 28 per cent, that is to say, from $5,203,699$ cwts to $3,749,778$ cwts. The United Kingdom has increased her demand by $\boldsymbol{7} 8,000 \mathrm{cwts}$, while Austria, Italy, and France have done so in less degree. Germany has taken 264,000 cwts more than in 1905-06, while Belgium, China, and Spain have taken somewhat less.

Hides and Skins - The exports of raw hides and skins represent 6.3 per cent of the entire exports of Indian produce. The strong demand for raw hides which was noticed in last year's review continued in $\mathbf{1 9 0 6} 00$. A rough idea
of its further effect may be obtained from the fact that in 1906 the imports of hides into the United Kingdom increased by 18.3 per cent in quantity and nearly 29 per cent in value, the rise in specific value being 9 per cent. The value of the imports into America in 1906 is estimated at 17 millions sterling. Between these rates of advance and the developments in the Indian trade there is a long lag; but the average declared export value of hides rose by a further 6 per cent to $\mathrm{R}_{5}$ 8-11-9 per cwt, while skins this year also rose by 7 per cent to R $96.9 \cdot 9$ per cwt . These enhancements of specific value resulted in a discrepancy between the rates of progress shown by the weight and the value of the exports exhibited in the statement below. The exports of raw hides rose by 156 per cent in quantity and by 22.46 per cent in value. The exports of raw skins decreased by $13^{\prime} 78$ per cent in quantity and by 7.74 per cent in value, but these facts should be read in conjunction with the notes about tanned hides and skins (page 59). An increase of 1.08 per cent in the average weight is marked by the fact that the total weight declined by $1_{3} 7^{8}$ per cent as compared with the numerical decline of $14^{\circ} 7$ per cent. The number of raw hides and skins together amounted to 39.8 millions, with a value of RI, $\mathrm{OS}^{\circ} 75$ lakhs, as compared with 43 millions in $1905^{\circ} 06$ with a value of Ri, $009^{\prime} 9$ lakhs. Of the total weight $75^{\prime} 55$ per cent were shipped from Calcuta. The United States took 36 per cent of the total or $R_{390}{ }^{2} 23$ lakhs (a decline), while Germany came second with R258.34 laikhs (an advance), and thereafter Italy with Rio2.34 lakhs, Austria-Hungary with R98 66 lakhs, the United Kingdom with R97 59 lakhs (an increase of nearly 25 per cent), Spain with $R_{4} 693$ lakhs, and France with $R_{44}{ }^{\circ} 3$ lakhs. Germany buys the largest quantity of hides, but in skins the United States continue to take three-fourths of the exports, while the United Kingdom now takes about 13 per cent.

The following statement of the exports for the last six years enables the reader to gauge the growth of the trade :

|  | Hides |  | Skins |  |
| :---: | :---: | :---: | :---: | :---: |
|  | No. | $R$ | N | R |
| 1901-02 | - 7,972,097 | 2,87,99,134 | 20,810,676 | 2,69,67,253 |
| 1902-03 | - 8,210.524 | 3,01,76,046 | 18,820,523 | 2,51,93,6:2 |
| 1903-04 | - $8,261,198$ | 3,16,75 395 | 19,634,429 | 2,66,86,740 |
| 1904-05 | 8,722,520 | 3,70, 87,322 | 22,889,526 | 3,34,54,063 |
| 1905-06 | . 11,531,809 | 5,23,37,942 | 31,520,699 | 4,86,48,878 |
| 1906-07 | - 12,917,227 | 6,40,50,472 | 26,889,054 | 4,48,84,685 |

There has been a fairly consistent advance in prices throughout the year except for the usual weakness in the monsoon when hides hold a relatively large proportion of moisture. In buffalo hides the rise has been specially marked, a contributory cause being the great activity in the textile industry and the strong demand for this description ol hide for refitting the "picker" which throws the shuttle in the power loom.

The generally high level of prices has given rise to a movement in America
 should be made to the statistics regarding exports of tanned hides (page 59).

Jute-The exports of raw jute now represent 32.92 per cent of the total value of Indian aw produce exported, but the increase of percentage is due in part to a decline in the exports of certain other classes.

The year under revitw has been one of extraordinary activity and unprecedented profits. It is computed that the cultivators have received some $\mathbb{R}_{40}$
crores ( $£_{2} 6.6$ millions) in payment for jute and that of this sum about $R_{15} \frac{1}{2}$ crores ( $£$ ro millions) was profit. The world's consumption of raw jute is believed to be about $8,200,000$ bales ( $29^{\circ} 3$ million cwts ), and since India retains a virtual monopoly of the article, it is well to show the estimates of area, outturn, consumption, and surplus in the last five years, the unit being $\mathbf{1 , 0 0 0}$.
Area $\quad$ Outturn $\left.\begin{array}{cccc}\text { Estimated } \\ \text { Indian } \\ \text { consumption }\end{array} \begin{array}{c}\text { Estimated } \\ \text { exportable } \\ \text { surplus }\end{array}\right\}$

The exportable surplus depends on the crop and on the internal consumption; and in this connection reference should be made to the industrial statistics shown in the chapter on exports of jute manufactures (pages 56 to 58 ).

Jute differs from certain other Indian crops in that the mass of the produce is moved in the statistical year in which it is grown. The shipments of $1906-07$ therefore include the major part of the exportable surplus of 1906 . The growth of the export trade is shown by the following statement, the unit being 1,000 :-

|  | Quantity <br> cwts | Centesimal variations |  | Value R | Average value $\mathbf{R}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1902-03 | 13,036 | - | ri'7 | 11,12,65 | 8.53 |
| 1903-04 | 13,721 | $+$ | $5 \cdot 3$ | 11,71,81 | $8 \cdot 54$ |
| 1904-05 | 12,875 | - | 6.2 | 11,96,56 | $9 \cdot 29$ |
| 1905-06 | 14,480 | + | 12.5 | 17,12,57 | 11.83 |
| 1906-07 | 15,970 | + | $10 \cdot 3$ | 26,83,87 | 16.81 |

During the year $1906-07$ the prices (per bale of 400 Ib ) in the 1 st week of each month were as follows :-

| 1906 | April | $\mathrm{R}_{48 \text { 8-3 }}$ | 1906 | October | R60-0 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| " | May | R56-o | " | November | R60-0 |
| " | June | R64-0 | , | December | R60-8 |
| " | July | no quotation | 1907 | January | R62-8 |
| " | Augus | R72-0 | " | February | R54-0 |
| " | Septer | R650 | " | March | R60-8 |

It is understood that since March R64 per bale has been paid again. The average of the year is R60-4-4, which is greater by $73^{\circ} 7$ per cent than the average of the previous five years.

- During the year under review the United Kingdom took 6,860,246 cwts or $42^{\prime} 96^{\prime}$ per cent of the total exports of jute as against $6,298,246 \mathrm{cwts}$ in the previous year. Germany increased her demand from $2,624,950 \mathrm{cwts}$ to $3,459,790$ cwts or $2 \mathrm{I}^{\circ} 66$ per cent of the total as compared with $18 \cdot$ I per cent in 190506. The.United States took $2,058,570 \mathrm{cwts}$ or 12.89 per cent, France $1,630,547 \mathrm{cwts}$ or 10.2 per cent, Austria $4^{\circ} 8$ per cent, Italy $3^{\circ} 84$ per cent, and Spain 2.14 per cent. Calcutta shipped $88^{\circ} 1$ per cent of the total, Chittagong $9^{\circ} 9$ per cent, and Madras 2 per cent.

Allegations of the watering and adulteration of jute continue to be made though less loudly than a year ago. The proposals to legislate were vetoed by the Local Governments concerned, on the grounds that the evil was mainly due to a discrepancy, presumably temporary, between supply and demand, that the measures proposed presented grave administrative difficulties, that an enactment might embarrass trade by driving all damaged jute from the market, and that
they would in any case involve fixing in respect of moisture or sand a maximum percentage to which all sellers would thereafter work.

The exports of seeds represent 1597 per cent of the entire exports of Indian raw produce. They amounted to $19,731,000 \mathrm{cwt}$ in 1906.07 with a value of R1,301.95 lakhs which marks an increase of $2,155,000 \mathrm{cwts}$ or 12.26 per cent while the increase in total value, resulting from an enhancement of 9.3 per cent, in specific value, is one of $22 \cdot 72$ per cent. The figures for the last five years have been a : follows, the unit being 1,000:-

|  |  |  | Cwt | $R$ |
| :---: | :---: | :---: | :---: | :---: |
| 1902-03 | - | . | 22,194 | 14,88,26 |
| 1903-04 |  |  | 24,68! | 14,51,58 |
| 1904-05 | - | . | 26,874 | 14,41,08 |
| 1905-06 |  |  | ${ }^{17,576}$ | 10,60,92 |
| 1906-07 |  |  | 19,731 | 13,01,95 |

It will be noted that while the quantity falls short of the record figures of 1904.05 by 26.58 per cent, the difference in total value is only about 9.6 per cent. As compared with $1905-06$, the increase is one of 12.26 per cent in quantity, $22^{\prime} 7^{2}$ per cent in total value, and about $9 \cdot 3$ per cent in specific value. The quantities of the principal descriptions of seeds exported are shown below, the values in 190607 being:-linseed R $3^{2} 5^{\prime} 99$ lakhs, sesamum R253.82 lakhs,
 castor seed R $113^{\prime} 77$ lakhs, and poppy seed R $65^{\prime} 77$ lakhs.

Quantity of each seed exported in the last five years (Unit 1,000 cwts):

Of the total, Bombay shipped R714.95 lakhs or 5491 per cent, Bengal R224.42 lakhs or 17.24 per cent, and Sind R204.96 lakhs or $15 \% 74$ per cent. Linseed goes chiefly to the United Kingdom (R116.2 lakhs), France (R83.55 lakhs), and Germany (R 43.78 lakhs). The largest buyers of the rapeseed are Germany ( $\mathrm{R} 47 \cdot 24$ lakhs), France ( $\mathrm{R} 63 \cdot 86$ lakhs), and Belgium (R $8 \mathrm{I} \cdot 76$ lakhs). Sesamum and poppyseed are shipped mainly to France and Belgium, cotton-seed to the United Kingdom, castor seed to the United Kingdom, and groundnuts to France.

Of the Linseed grown, it is commonly supposed that on an average about 94 per cent is exported, but in $1906-07$ only about 79 per cent of the estimated production was shipped. The market was not as strong as that for certain other products; for while Argentina fell short of the expectation, the United States came out with altogether unprecedented shipments and Eastern Europe increased her contribution by about 10 per cent. The effect of this in the presence of a crop curtailed by rather severe misfortunes in some quarters, was to reduce India's exports by a further 24.36 per cent in quantity and $20^{\prime} 79$ per cent in value.

Rape seed was more happily circumstanced; for the Danubian crop which had swamped the market in $1905-06$ was a failure, and prices for Indian rapeseed hardened although complaints were made about the quality of certain descriptions. The total estimated outturn in India was 570,700 tons, and the
exports, which showed a fall of 6i per cent in the previous year, rebounded-as may be seen in the statement-by 86.8 r per cent of the reduced total, without, however, recovering the ground lost. The gain in total value was one of 102.37 per cent and the rise in specific value amounted to 8.31 per cent.

The internal demand for Sesamum is largely influenced by the supply of rapeseed; and the easier conditions in respect of the latter during 1906.07 set free a fair quantity of sesamum for export. The quantity shipped, which had declined continuously since $1902-03$, will be seen to have risen by 62.64 per cent of the figures for $1905-06$, while the increase in total value was one of $72^{\prime} 75$ Des cent marking a rise of $6{ }^{\circ} 03$ per cent in specific value. While the total quaritity falls short of the shipments in $1903-04$ by 21.98 per cent, it is greater in valuf by 4.5 per cent.

Cotton seed represents io per cent of the exports of seeds and about 1.6 per cent of the total exports of raw Indian produce. It further improved its position in the Western markets, and the exports attained the record figure of 219,537 tons with a value of $\mathrm{R}_{1} \mathrm{O}^{\circ} 3$ lakhs. The increase in quantity was thus one of 12.83 per cent and in value 27.53 per cent which marks a further rise of 12.03 per cent in specific value. This result was due partly to the establishment of the virtues of the Indian seed as a cattle feed, the growing familiarity of crushers with its peculiarities, the dearness of linseed, and more lately to the large retention of American seed for re-sowing. The shipments to the United Kingdom were stimulated by the absorption of the Egyptian supplies by the continent of Europe and rose from 173,842 tons to 197,799 tons which is equal to 90 per cent of the whole exports of cotton-seed, while 8,257 tons went to Egypt. From cotton-seed is made not only cake for which an agricultural demand is clearly setting in, but an excellent edible oil and wholesome substitutes for the now costly ghi so widely used in India. There is no a pparent reason why the crushing and further processes should not be carried out with the power that works the gins during the cotton season; and it is surprising to find the exportation of the raw material continue on such a scale.

In last year's Review it was foreshadowed that Poppy seed might suffer from the growing popularity of cotton seed, and this is reported to have been felt in the Western markets. But while the exports fell short of those in 1904-05 by 41 per cent in quantity and 16 per cent in value, they showed a minute increase of quantity as compared with those for $1905-06$ and an advance of 9 per cent in total value due to a rise of 8 per cent in specific value, the actual figures being $802,600 \mathrm{cwts}$ and $\mathrm{R} 65^{\circ} 77$ lakhs.

The average declared value of Castor seed on the other hand rose by 26 per cent in addition to the advance of 27 per cent in 1905-06; and the exports increased by $15^{\circ} 6$ per cent in quantity and by $44^{\circ} 63$ per cent in value.

The exportation of Groundnuts has increased by $25^{\circ} 54$ per cent in quantity $\nu$ and $44^{\circ} 54$ per cent in value. The crop from foreign seed imported experimentally compared well with the yield from the native seed which had in recent years indicated degeneracy and susceptibility to disease. This as well as the rise in price has induced a considerable extension of area under the crop and a further importation by Government of seed from America, Japan, and Pondicherry. A considerable proportion of the exports of groundnuts from India is shipped from the French port of Pondicherry and so escapes registration in the trade of India. In 1905-06 the exports from Pondicherry amounted to 33,623 tons with a value of $\mathrm{R}_{4} 3^{\circ} 64$ lakhs as against 64,233 tons in $1904-05$ with a value of $\mathrm{K} 85^{\circ} 9$ lakhs.

Silk-Among the many articles that have recorded a rise of price in 1906-07 there are few in which the enhancement has been more marked than in silk. A leading firm estimate the rise in the calendar year 1906 as 35 to 38 per cent for Canton silk, 20 to 30 per cent for Europe Levant and Japan silks, and 10 to 20 per cent for Shanghai silks; and they ascribe it to the coincidence of improved consumption with a shortage of two million kilos. in the 1905 crop. The exports of raw silk from India in $1906-07$ increased from $1,779,316 \mathrm{lbs}$ with a value of $\mathrm{R}_{5} 6.4$ lakhs in 1905 -06 to $1.943,438 \mathrm{lbs}$ with a value of $R 68.65$ lakhs. The increase here is $9^{\circ} 2$ per cent in quantity and $21^{\prime} 7$ per cent in value, the difference resulting from a rise of $11 \cdot 3$ per cent in the specific value. In reeled mulberry Silk, however, there was a loss of $10^{\circ} 5$ per cent in the average value; and the exports, while they increased by $42^{\circ} 46$ per cent in quantity, advanced in total value by only 27.4 per cent-from $551,546 \mathrm{lbs}$ and R46.28 lakhs to $785,764 \mathrm{lbs}$ an ${ }^{2} \mathrm{R}_{5} 8^{\circ} 96$ lakhs. In this section (reeled silk) therefore there was an all-roundiop of to per cent in specific value and it will be seen that this arose most largely from the inferiority of Bombay's shipments. Bengal increased her consignments from $459,160 \mathrm{lbs}$ and $\mathrm{R}_{3} 6 \cdot 26$ lakhs to $649,842 \mathrm{lbs}$ and $\mathrm{R}_{49}{ }^{9} 74$ lakhs, and Bombay after successive recessions in recent years improved her contribution from $92,386 \mathrm{lbs}$ to ${ }^{135,922} \mathrm{lbs}$, but did so only at a very heavy loss in average value. Bengal's increase was $41^{1} 6$ per cent in quantity and $37^{\circ 2}$ per cent in value, while Bombay's increase of $47^{\circ} 1$ per cent in quantity was accompanied by a fall of 8 per cent in the total value.

The distribution of the exports of reeled silk (mulberry and wild) was as follows:-

The exports of Waste Silk (chasam)-43 per cent of which was wild silk—declined from $1,131,960 \mathrm{lbs}$ and R 8.43 lakhs in 1905.06 to $1,063,093 \mathrm{lbs}$ and R 8.32 lakhs in $1906-07$. The average declared value per lb therefore rose from $1 I^{\circ} 9$ annas to 12.6 annas. The exportation of Cocoons (of which more than half were wild) improved from $68,906 \mathrm{lbs}$ and $\mathrm{R} 63,788$ to $70,591 \mathrm{lbs}$ and R68,592. The average value would then appear to have advanced from $14^{\circ} 8$ annas to $15^{\circ} 5$ annas.

Teak Timber-The unprecedented activity of ship-building in 1906.07 and the dearness of possible substitutes caused a further rise in the values of teak. The average price in Calcutta was Rili to $\mathrm{R}_{11} 6$ per ton of 50 cub. feet in 1904-05; R120 to R125 in 1905-06; and R122 to $\mathrm{R}_{127}$ in 1906-07. Exports of teak decreased by 16.23 per cent in quantity to 44,200 cub. tons and in value by 12.69 per cent to R 61.48 lakhs. This is in part explained by the intensified internal demand which is shown by the increase of $13^{\circ} 11$ per cent in the shipments from Burma to India proper, bringing the total value to R80.66 lakhs.

Wool-The world's markets have been strong throughout the year and there has been a gradual and unwavering increase in price on such a scale that the average value per bale imported into Europe and America in 1906 stood at 617. This was exceeded only in 1882 when the price was $617-1000$; but in that year the total imports amounted to only $57^{\circ} 5$ per cent of the quantity
taken by the two Continents in 1906. And yet there is good ground for doubt as to whether the increased supply is now adequate to the machinery and the demand; and it is contended that from various causes a gradual and marked diminution is taking place in the number of sheep in the world. This diminution seems to be very marked in Argentina where land is being largely turned over from grazing to agriculture with a restrictive effect on her wool exports. In India also the demand has been strong but the price of Kandahar wool at Karachi in $1906-07$ has on the whole been lower than in 1905.06 with a downward tendency till February. The exports during the year rose from $42^{\circ} 5$ millions of lbs and R211.47 lakhs to $45^{\circ} 9$ million lbs and R242.65 lakhs, which establishes a progressive record for the fourth year in succession. The increase was one of 8 per cent in quantity, 14.73 per cent in total value, and 6.24 per cent in specific value. The United Kingdom took wool to the value of R232.I lakhs as against R200 57 lakhs in $1905 \cdot 06$. The exports to the United States improved from $\mathrm{R}_{4}{ }^{\circ} 5$ lakhs to $\mathrm{R}_{5}{ }^{\circ} 58$ lakhs, while those to Japan fell away from R4.6 lakhs to $\mathrm{R}^{2} 45$ lakhs. Re-exports of foreign wool showed a substantial advance at $\mathrm{R} 29^{\circ} 59$ lakhs as against $\mathrm{R} 25^{\circ} 8 \mathrm{I}$ lakhs in the previous year.

The other principal raw materials exported have, in the last three years, been as follows :-

Of these, Oilcakes form the most important item; and the increase of $\mathrm{R}_{7}$ lakhs in the value of the exports should be noted in conjunction with the statistics given about oilseeds (pages 50 and 51 ). Hemp is now second in importance ; and the advance of R14.54 lakhs in its value is the largest single advance in this category of articles. The trade in Bones has expanded by R 541 I lakhs or 10.88 per cent and now exceeds the record of $1902-03$; but that in Horns has declined by $\mathrm{R}_{5} 8,000$ or 3.34 per cent. It might have been expected that the exports of homs would keep pace with those of hides and bones and a reference to the quantities shows that in weight there was an increase of $7^{\circ} 14$ per cent. A decline of R 3.8 lakhs occurred in Bristles and Fibre and one of R 6.06 lakhs in Rice-bran. The other form a group of articles in which modern industries are much interested. Electrical developments have led to an intensified demand for Indian Mica, the exports of which rose in 1906.07 by R 14.3 lakhs or 59.75 per cent. The continuous advance in the total value of Stick lac exported is striking. It has amounted to 188 per cent in 1904.05, 52.8 per cent in 1905-06, and 126 per cent in 1906.07 ; the specific value having risen in these several years by $5^{\circ} 77$ per cent, by $9^{\circ} 45$ per cent, and by 367 per cent. The chapter upon Lac (manufactured) may be referred to (pages 59 and 60 ). Caoutchouc, which advanced in total value by 163 per cent in $1904-05$ and by $40^{\circ} 6$ per cent in 1905006 , fell back in the year under review by $12^{\circ} 76$ per cent.

## ARTICLES MANUFACTURED AND PARTLY MANUFACTURED

The statement below shows the comparative value for the past five years of each principal class of manufactures, the unit being R1,000:-

|  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |
| per cent |  |  |  |  |  |  |  |  |  |  |

The most noticeable feature in this table is perhaps the decline of $\mathrm{R225.67}$ lakhs ( $£ \frac{1}{2}$ millions) or $15^{6} 6$ per cent in Cotton Yarns and Goods. This was due in part to the strong internal demand for Indian goods and should be compared with the figures relating to the imports of cotton goods. The disorganisation of the trade with the Further East also contributed to the fall, more particularly in recent months. The increase of nearly R326.82 lakhs in Jute goods is of course large; and since it represents an expansion of 26.25 per cent in one year, it is sufficiently striking. At the same time, it indicates the operation of no new forces but merely the intensification of a defined demand. As regards both that class and Tanned Hides and Skins, a great part of the increase is due to a rise in specific value. In the latter the increase of total value was one of $\mathrm{R}_{79.28}$ lakhs, while Lac increased by $\mathrm{R}_{2} 6^{\circ} 9$ lakhs. The contraction of $\mathrm{R}_{2} 3_{2}$ lakhs in the exports of Candles approximately balances one of R1. 35 lakhs found in the imports of candles; so the decline is due to the creation of a sounder economic position. There has been a satisfactory increase of R2.2 lakhs in the exports of Woollens, but Silks continue to decline as they have done continuously for the last five years. It should be remembered, in drawing any conclusions from the figures, that there are in the accounts many manufactured and partly manufactured articles which are not included in this group. They are, from their nature, more properly included in the other groups of articles. For instance, milled-rice, wheat-flour, coffee, and tea are included in the group, "Articles of Food and Drink"; machinery is included in the group, "Metals", saltpetre in "Chemicals", opium and tobacco in "Narcotics", indigo in "Dyes", and vegetable and mineral oils under the group, "Oils". The group, "Articles manufactured and partly manufactured", contains such manufactured and partly manufactured articles as cannot be included under one or the other main groups of articles.

Exports of Cotton Manufactures in 1906-07 did not maintain the high level of $1905 \cdot 06$. In cloth, a decline was to be expected as a consequence of the movement for preference of indigenous manufactures and a certain contraction in the exportable surplus of yarn might have attended the intensified activity of the looms. But the contraction actually recorded greatly exceeds anything that was looked for a year ago. Soon after the opening of the year under review, it became known that there were heavy accumulations of yarn stocks in China; and the China merchants declined to make further sales to dealers until the latter took delivery of the goods. But the distributing trade was paralysed by the famine in Southern China and by variations in exchange, and it could not comply with the demand. So while shipments of yarn to China were fairly well maintained during the first months of the year, they showed, from August onwards, a very
marked decline. After the close of the financial year, an effort was made by the Bombay Millowners to organise a short-time movement ; but it failed, and the figures given below will show that the production of yarn in spite of a decline of prices has continued unabated.

The following statement shows the quantities and values of yarns and piecegoods exported in the last five years, the unit in all cases being $\mathbf{1 , 0 0 0}$ :-

|  |  | Yarn |  | Piece goods |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | lbs | R | Yards | R |
| 1902-03 | - | 248,539 | 8,54,00 | 69,535 | 1,32,75 |
| 1903-04 | . | 252,474 | 8,84,15 | 75,815 | 1,48,30 |
| 1904-05 |  | 247,855 | 9,81,57 | 87,456 | 1,65,14 |
| 1905-06 |  | 297,634 | 12,38,77 | 91,975 | 1,86,59 |
| 1906.07 | - | 243,517 | го,39,65 | 76,699 | :,65,42 |

Yarn represents 85.44 per cent of the total value and has shown a net decrease of R199.12 lakhs or 16.07 per cent on the figures for the previous year. It may be noted that the exports of yarn from the United Kingdom to China in :906 were less by $2,890,300 \mathrm{lbs}$ and $£ 63,18 \mathrm{I}$ than in 1905 . The quantitative decrease in the exports of Yarn from India was $\mathbf{1 8} \mathbf{1} 8$ per cent, so that there.was a rise of $2 \cdot 64$ per cent in specific value. The exports to China represented $91 \cdot 36$ per cent of total value, as against 94.3 per cent in 1905.06 and shewed a decline of 18.66 per cent on the figures for the previous year. The actual sum represented was R $9,49,84,748$ which marks a decline of R 217.89 lakhs; so in trade with countries other than China, there was an increase of some Rig lakhs. The figures relating to the Straits Settlements reflected the general conditions in the Further East with $\mathrm{R}^{27,57,629}$ as compared with $\mathrm{R}_{3} 0,66,507$ in $1905-06$.

The trade with the Levant has responded in an encouraging way to certain renewed efforts made in that direction in recent months. The trade with Turkey in Europe rose from $63,080 \mathrm{lbs}$ to $342,830 \mathrm{lbs}$ and that with Turkey in Asia from $3,204,200 \mathrm{lbs}$ to $5,316,620 \mathrm{lbs}$, making a total of $5,659,45^{\circ} \mathrm{lbs}$ for the Ottoman Empire, while the Egyptian demand grew from $836,800 \mathrm{lbs}$ to $1,564,710 \mathrm{lbs}$.

The exports of Piece goods decreased by $\mathrm{R}_{2} \mathrm{I}^{\circ} 17$ lakhs or $11 \cdot 84$ per cent which was due to a strong internal demand. The quantitative decrease was one of 16.6 r per cent, so there was a rise of 6.4 per cent in specific value.

The exports of Grey goods amounted to $42,218,822$ yards with a value of R61•33 lakhs, as against $55,822,652$ yards and R 78.9 lakhs in $1905-06$. This represents 37.08 per cent of the total value of piecegoods and marks a decrease of 24.37 per cent in quantity and 22.24 per cent in total value with a rise of 3 per cent in specific value. The shipments of grey goods to China fell from $12,824,000$ yards and R18.87 lakhs to 995,866 yards and RI. 34 lakhs, the decline being 92 per cent in quantity and 93 per cent in value. But the principal foreign markets for Indian cloth are in East Africa, Aden, Ceylon, and the Straits.

Coloured goods again decreased in value by 3.8 per cent to Rro2. 64 lakhs and by 4.27 per cent in quantity to $34,231,000$ yards.

Dyed and printed cloths go mainly from Madras and Bombay to the Straits, Aden, Ceylon, and the Philippines, and the shipments in $1906-07$ from the two ports named, had a value of $\mathrm{R}_{7} 3^{\circ} 98$ lakhs and $\mathrm{R}_{2} 7^{\prime 2} 27$ lakhs respectively.

It is notable, however, that the shipments of cotton piecegoods by sea from Bombay Presidency to other provinces rontracted by some 8.64 million yards or 5 per cent in quantity and by R 2.84 lakhs or $\mathrm{r}^{\cdot} 14$ per cent in value.

Particulars about cotton crop conditions and prices of the raw material will be found in the chapter about exports of raw cotton (pages 46 and 47).

The number of cotton mills at work in British India on 3Ist March 1907 was 210 of which 172 were joint stock concerns with a capital of $£ 723,274$ and $12 \cdot 8$ crores or $69,258,142$ in all.' There were registered during the twelve months ro new textile concerns with a nominal capital of R95.15 lakhs, and new capital to the extent of $£ 80,782$ and $R 43,69,462$ or $£ 372,079$ in all was raised by existing companies. There were at that date $5,544,624$ spindles and 59,467 looms in position. The additions to plant in $1906-07$ amounted to 250,790 spindles and 7,186 looms. Of the spindles $3,931,871$ were in Bombay, $44^{1}, 469$ in Bengal, and $393,45^{2}$ in Madras. Of the looms 47,015 were in Bombay, 568 in Bengal, and 1,748 in Madras.

The following statement shows for each of the last five years the spinning and weaving plant in position, the production of yarn and of cloth, and the average monthly production per spindle and per loom :-

In the hope of tracing any influence exerted on output by the peculiar conditions of the past year as regards yarn on the one hand and cloth on the other, the production of each of these in each month of the year 1906-07 has. been compared with the average monthly production of the record year 1905-06, and the variations are found to be as follows :-

It is noticeable that while T-cloths rose in 1905 -06 from As. $9-9{ }^{\circ} 5$ to As. $9.5 @ 10^{\circ} 5$ per lb , it declined in 1906.07 from that level to As. $8.75 @ 9.25$. Yarn likewise which in $1905-06$ rose from As. $6 \frac{1}{4} 7$ to As. $7 \frac{7}{8} @ 8 \frac{3}{4}$, declined in the year under review to As. $6 \frac{5}{16} @ 7 \frac{1}{2}$.

The Exports of Jute Manufactures in the three years ending 1905.06 represented 34.57 per cent of the total exports of Indian manufactured articles. In $1905 \cdot 07$ the percentage rose to 41.53 per cent as a consequence of contraction in certain other exports of the class (notably cotton goods) and a notable expansion in the jute goods.

The continuous rise in the price of the raw material, as shown in the article relating to it (pages 48 and 49), and the backwardness displayed by the prices of textiles, made the year an anxious one for the mills. The restriction in the exports of wheat which embarrassed the industry in $1905-06$ was much more marked in the year under review; and there was a diminished movement in other articles
of export for which bags are required. Nevertheless the installation of spinning machinery continues as will be seen from the apperided statement of spindles and looms in position in each of the last six years :-

|  |  | Spindibs |  | Looms |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Number | Percentage increase | Number | Percentage increase |
| 1901-02 | - | 331,382 | $4 \cdot 42$ | 16,119 | 5.08 |
| 1902-03 | - | 352,214 | $6 \cdot 28$ | 17,189 | $6 \cdot 64$ |
| 1903.04 |  | 376,718 | $6 \cdot 96$ | 18,400 | $7{ }^{\circ} 04$ |
| 1904-05 |  | 409, 70 | $8 \cdot 61$ | 19,991 | $8 \cdot 65$ |
| 1905-06 |  | 453,168 | 10.75 | 21,986 | 9.98 |
| 1906-07 | - | 491,496 | $8 \cdot 46$ | 24,088 | $9 \cdot 56$ |

In 1884 when the Indian Jute Mills Association was formed, the number of looms was 6,337 . It is estimated that in the season 1906.07 it was about 24,088 . But the high cost of the raw material has restricted the local consumption so that in the last year it has not kept pace with the increase in the number of spindles.

While the working was less profitable, the mills are believed to have used some 4 per cent more of the raw material than in the previous year.

The following statement shows for the last six years the value of the exports of various classes of goods, the unit being $\mathbf{1 , 0 0 0}$ :-

|  |  | 1901-02 | 1902-03 | 1903-04 | 1904-05 | 1905-06 | 1906-07 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Bags | SNo. | 230,127 | 225,196 | 206,208 | 201,436 | 233,326 | 257,683 |
|  | \{R | 4,72,58 | 4,64,07 | 4,56,47 | 4,75,54 | 6,07,84 | 7,34,72 |
| Cloth | \{ yards | +18,567 | 492,884 | 552,320 | 575,512 | 658,671 | 696,068 |
|  | \{R | 3,89,40 | +,31,47 | 4,84,53 | 5,11,61 | 6,30,50 | 8,25,87 |
| Value of all sorts R |  | 8,71,14 | 9,01,99 | 9,46,92 | 9,93,89 | 12,44,80 | 15,71,62 |

The exports of Bags developed by 10.44 per cent in quantity and 20.87 per cent in value, the enhancement of specific value being $9^{\circ} 44$ per cent. Cloth increased by 5.7 per cent in quantity and nearly 31 per cent in value, the rise in specific value being 23.93 per cent. Against these figures must be set the fact that the specific value of the raw material exported increased by $4^{2^{\prime}} \mathrm{I}$ per cent. The largest buyer of Indian jute fabrics is the United States, which, because of her heavy import duty on made bags, takes her supplies mainly as cloth. In 1906-07, however, she took bags to the value of $\mathrm{R} 48 \cdot 27$ lakhs as against $\mathrm{R}_{1} 6.21$ lakhs in 1905-06. The increase is not far off 200 per cent. The largest single buyer of bags is Australia which increased her demand by 11.8 per cent to Ris8.18 lakhs as against Rial. F lakhs in 190506 . The growth of nearly 50 per cent in the exports to the United Kingdom, which reached R949 lakhs as against R63•16 lakhs in the previous year, is satisfactory, considering that she also largely augmented her demand for cloth. Chile, on the other hand, which in 1905.6 surpassed the United Kingdom with a total of $R 64 \cdot 27$ lakhs, has receded to R 48.57 lakhs, which is about where she stood two years ago; while Peru advanced from $R_{7} \cdot 15$ lakhs to $R_{12} \cdot 38$ lakhs. Egypt took R 49.39 lakhs which is little better than in 1905-06. China also remained much at her normal level with R 49.27 lakhs; and the West Indies, with $\mathrm{R}_{4} 1^{\circ} 37$ lakhs, maintained the increased demand which came into existence in the previous year. The Straits Settlements, which form an important distributing centre, continued to increase their purchases, and assumed the third place with a total of R66.87 lakhs in place of R52.45 lakhs. The shipments to Cochin-China rose from R16.07 lakhs to R19:24 lakls, while
the direct consignments to Java and Siam contracted by about $\mathrm{R}_{4}+$ lakhs. Cape Colony with $\mathrm{R}_{15} 5_{57}$ lakhs bettered her position by some $\mathrm{R}_{2} .53$ lakhs and Natal with R 10.67 lakhs was only about $R_{5}, 000$ short of her previous year's figures. Germany in the past year took bags worth $\mathrm{R}_{14^{\circ} 29}$ lakhs instead of R8•79 lakhs in 1905-06. Turkey in Asia increased her purchases to R16.09 lakhs, while the shipmen:s to Turkey in Europe grew to Rg.o7 lakhs, the total increase for Turkey being $\mathrm{R} 5+7$ lakhs.

The exports of Cloth increased from $\mathrm{R} 6_{3} 0^{\circ} 5$ lakhs to $\mathrm{R} 825^{\prime} 87$ lakhs. Of this the United States took $65^{\circ} 3^{2}$ per cent with a value of $R 5399^{\circ} 48$ lakhs, as against $R_{377} 9$ lakhs in 1905-06, which marks an advance of $42^{\circ} 75$ per cent on the previous year. The shipments to the Argentine fell off from $\mathrm{R}_{1} \mathrm{H}^{\prime} \mathrm{I}_{3}$ lakhs to $\mathrm{R}_{12} 8$ lakhs, while Uruguay took $\mathrm{R}_{5}$ lakhs in place of R6.64 lakhs. The shipments to the United Kingdom, which are mainly for distribution, have risen markedly in recent years, the figures being R19'75 lakis in 1904-05, R42.87 lakhs in 1905-06, and RS1.43 lakhs in 1906.07. China took R25.19 lakhs instead of $\mathrm{R}_{24} \mathrm{~B}^{2}$ lakhs, and Australia required R2101 lakhs in place of $\mathrm{R}_{17}$ lakhs in the previous year.

The exports of Silk Manufactures continue to decline and their value now amounts to only R6.86 lakhs, which is $4^{\circ} 06$ per cent less than in the previous year. The exports are chiefly tissues woven in Bengal from indigenous silks. Elsewhere the industry is conducted mainly for the Indian market ; and the decline in exports does not necessarily indicate decay of the industry. The scattered and unorganised condition of the industry does, however, prevent its commanding attention commercially; and efforts are being made in some quarters to develop it on the lines of co-operation between the weavers.

Exports of Woollen Manufactures increased by 10.48 per cent in 1906.07, the total value being R22.93 lakhs against R20.75 lakhs. Carpets and Rugs still form by far the most important class and represent some $9 r^{\circ} \cdot 3$ per cent of the total. At $R 20 \cdot 89$ lakhs they show a rise of about 9.23 per cent on the value of the previous year; and it is noticeable that this trade tends more to the United Kingdom ( $R_{15} \cdot 66$ lakhs), while the United States with only R 3.96 lakhs of Indian rugs is understood to be buying more largely in Levantine markets. Piece goods and other miscellaneous manufactures advanced by $25^{\circ} 26$ per cent to a value of R 2.03 lakhs. The quantity, however, was considerably short of that exported in 1904-05, and this is due to a sustained internal demand. The imports of woollen yarns are interesting in this connection, and it may be noted that the production of the woollen mills in India amounted in 1906 to $2,827,290 \mathrm{lbs}$ with a value of $\mathrm{R}_{34}, 81,808$, thus marking a decrease of 31.5 per cent in quancity and 21.4 per cent in total value, and a rise of $14^{\circ} 8$ per cent in specific value.

The exports of Apparel in $1906-07$ at R19.58 lakhs showed a gain of some R16,000 on the figures for 1905-06. Boots and Shoes, which form the most important sub-head in this class, declined from $R_{4}{ }^{\circ} 9$ lakhs to $\mathrm{R}_{4} \cdot 68$ lakhs which is very slightly below the figure for $1904 \cdot 05$. The rise in the price of leather work must necessarily have impeded development of trade with primitive countries; and the trade with China, which in the previous year had shown signs of growth, fell back from $\mathrm{D}_{1} 8,500$ to $\mathrm{R}_{13,500}$. Re-exports of foreign boots and shoes amounted to $\mathrm{R}_{49,551}$ as against $\mathrm{R}_{56,336}$ in $1905 \% 06$.

Coir--The trade in coir-matting and other manufactures of coir is almost entirely in the hands of Madras, and the exports continue their steady growth. Their value amounted in $1906-07$ to $\mathrm{R}_{5} 6$ lakhs, of which the United Kingdom
 and the United States Rr.7o lakhs.

Hides and Skins, Tanned-The continued activity in the leather trade of the world has led to a further marked increase in the quantity of tanned hides and skins and to a further considerable rise in the average values. As in the case of raw hides, a rough idea of the increase of the world's demand may be gathered from the fact that the United Kingdom in 1906 imported leather in quantity greater by 13.5 per cent than in 1905, while in consequence of a rise of 5 per cent in the specific value of the article, the increase in the total value of the imports amounted to 19.3 per cent. And the Board of Trade returns show that in 1906 the United Kingdom received from India 354,877 cwts of leather against 297,566 cwts in 1905. The exports of Tanned Hides from India in the statistical year 1906.07 increased from 201,982 cwts with a value of $\mathrm{R}_{154} \mathbf{B l}^{8}$ lakhs to 219,855 cwts with a value of $\mathrm{R}_{172}{ }^{\circ} 96$ lakhs. The advance is thus one of 8.85 per cent in quantity and $11 / 73$ per cent in value with an enhancement of the specific value by 2.65 per cent in addition to $14^{6} 6$ per cent in the previous year and 14 per cent in 1904-05. The total quantity has not yet attained the figure recorded in $1900-0$ r when drought occasioned great mortality among the cattle ; but the total value is $117^{\circ} 8$ per cent of the value then shown, and the average value per cwt is now $\mathrm{R}_{7} 8-10.9$ as compared with $\mathrm{R}_{57} \cdot 10 \cdot 0$ in $1900 \cdot 01$. The increase in the exports of Tanned Skins as shown below was one of 8.33 per cent in quantity and of 28.96 per cent in value, the specific value per cwt of skins having risen by 19 per cent. The average value per cwt was RI80-14-1 as compared with R140-10-6 in 1900-01. It is necessary, however, to remind readers that these two classes of hides and skins comprise many diverse descriptions and qualities, and that these vary in relative quantity from year to year; so that it is not permissible to regard the fluctuations in average value with such reliance as is warranted in the case of a single article or a homogeneous and constant group of articles.

The exports during the past six years have been:

|  | Tannbd Hides |  | Tanned Sains |  |
| :---: | :---: | :---: | :---: | :---: |
|  | cwts | $\bar{R}$ | cwts | R |
| 1901-02 | 134,249 | 76,70,877 | 132,193 | м, $88,69,584$ |
| 1902-03 | 107,879 | 62,84,922 | 1 49,299 | 2,26,96,944 |
| 1903.04 | 102,625 | $6!, 45,989$ | 161,869 | 2,48,42,770 |
| 1904-05 | 123,390 | 82,52,052 | 139,2 14 | 2,02,65,121 |
| 1905-06 | 201,982 | 1,54,80,070 | 138,898 | 2,11,04, 250 |
| 1906-07 | 219,855 | 1,72,96,337 | 1 50,465 | 2,72,16,204 |

In tanned hides Madras exported 89.83 per cent of the total and Bombay 9.41 per cent; while the shares of these two provinces in the skin shipments were respectively $72^{\circ} 7$ per cent and $21^{\circ} 55$ per cent.

In the absence of a protective tariff, the United Kingdom continues to take the greater part of the tanned hides and skins, though it is known that there is a movement in America for repeal or reduction of the import duties. In hides Britain's share has declined from $93^{\circ} 6$ per cent of the total to nearly 92 per cent, while in skins she has taken only $77^{\circ} 5$ per cent as against $77^{\circ} 7$ per cent in 1905-06, her absolute total showing, however, an increase of $21,533 \mathrm{cwts}$ or $7 \cdot 2$ per cent. The United States have taken fewer hides but have raised their demand for skins to $18 \cdot 1$ per cent of the total in this class.

The price of Lac has risen continuously in recent years as a consequence of activity in the electrical industry and increased demand for"high-class varnishes

India is the main source of supply and there appears to be some reason to believe that the high level of prices has induced reckless gathering prejudicial to succeeding crops. Strictly only the manufactured article lac should be here discussed; but since it is really a raw material, it is interesting to collate the figures relating to the two branches of the trade-

A given quantity of stick and seed lac such as is exported may be taken as equivalent to half that quantity of shell or button-lac.

There has therefore been a quantitative decline of 5.57 per cent in shellac accompanied by an increase of 9.53 per cent in total value, while in button-lac there was a decrease of 1131 per cent in quantity together with a minute increase in total value. Together the two decreased by 65 per cent in quantity, while the total value increased by 8.17 per cent, the difference marking a rise of 157 per cent in specific value. On the other hand, crude material stick-lac and seed-lac increased by 38 per cent in quantity and 65 per cent in total value, apparently with an enhancement of $19^{\circ} 5$ per cent in specific value. It is necessary, however, to bear in mind that valuation of exports not subject to export duty is apt to be loose.

The highest price for shellac (T.N.) in the year under report was $\mathbb{R}_{155}{ }_{5}$ per cwt in September 1906 and the lowest R126.9 in April 1906. These are to be compared with the highest and lowest in the previous year, which were $R_{138-13}$ and $R 89 \cdot 13$ respectively.

The United States maintained and confirmed its leading position as a buyer of shellac and button-lac, and took lac to the value of $\mathrm{R}_{1} 67.95$ lakhs as compared with $\mathrm{R}_{149} 5^{2}$ lakhs in the previous year. The United Kingdom reduced her demand from R94:24 lakhs to R91 47 lakhs, while Germany took $\mathrm{R}_{5} 8.66$ lakhs in place of R 44 lakhs in 1905-06.

In the course of the year considerable official interest has been taken in the problems of such cultivation and harvesting of lac as would secure the future of the crop. The results so far are encouraging, though it is impossible to say whether any definite measures are necessary.

General Distribution of the Export Trade-The value of the exports of Indian produce and manufactures in the last five years was distributed, in the ratios stated below, among the principal countries with which the trade is carried on :-

|  |  | 1902-03 <br> Per cent | 1903-04 Per cent | 1904-05 <br> Per cent | $1905-06$ <br> Per cent | 1906-07 <br> Per cen |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| United Kingdom | - |  | 371 | ${ }_{27} 7$ | 25.3 | $\begin{array}{r} \text { ref cel } \\ 26.9 \end{array}$ |
| China . |  | - $12 \cdot 6$ | 119 | 12.6 | 13.5 | 109 |
| Germany - |  | - 8.0 | $0 \cdot 9$ | 9.2 | 8.9 | 110 |
| United States |  | - 67 | 6.0 | $6 \cdot 3$ | $8 \cdot 2$ | 90 |
| Japan |  | - $4^{6}$ | $5 \cdot 6$ | $6 \cdot 3$ | $6 \cdot 3$ | $4 \cdot 1$ |
| France |  | - $7 \cdot 2$ | 6.6 | $6 \cdot 2$ | 5.9 | 6.4 |
| Belgium |  | - 39 | $5 \cdot 1$ | $5 \cdot 4$ | $4{ }^{\circ}$ | $4 \cdot 1$ |
| Straits Settlements |  | - 60 | 4.8 | $4 \cdot 1$ | 3.9 | $3 \cdot 8$ |
| Ceylon |  |  | 3.0 | 3.2 | 3.5 | 3.7 |
| Italy |  | - 27 | $3 \cdot 3$ | 2.7 | 2.9 | $3 \cdot 3$ |
| Austria-Hungary |  | $2 \cdot 5$ | 3.2 | 3.0 | $2 \cdot 8$ | 3.3 |
| Egypt |  | 6.1 | $\bigcirc$ | 0.8 | 2.2 | 2.4 |

The United Kingdom has slightly irnproved her position as compared with that held by her in 1905-06, but is still short of the percentage of two years ago. The feature of the table is the assumption by Germany of the second place in consummation of the advance shown in the earlier years. China drops into the third place through the shrinkage of the yarn trade and certain improvements of method in ascertaining the actual countries of destination, for both Singapore and Hongkong are transhipment ports for the Eastern trade. The drop in Egypt's figures in 1903.04 is accounted for by a similar change made in crediting to the countries of final destination instead of to Egypt, the large shipments of prodice-principally rice and wheat-originally consigned to Port Said "for ordei"." As Germany now takes precedence of China, so France supersedes Japan. Otherwise the order remains unchanged.

## CUSTOMS REVENUE

The Tariff Schedule was revised in December 1906 and the new schedule came into force on ist January 1907.

The valuations of cotton fabrics for Tariff purposes and the list of cotton goods recognised as piece-goods were revised at the same time.

No important change in Customs procedure was made during the year ; but the following modifications were effected :-

1. Exemption from import duty of certain printing and lithographic appliances.
2. Exemption of articles of British Indian production or manufacture imported by land.
3. Prohibition of importation of American or West Indian cotton seed, not fumigated.
4. Prohibition of importation of cocaine by post or by persons not specially authorised by a Local Government to import it.
5. Exemption from any duty exceeding 5 per cent, of such petroleunn having its flashing point at or above $150^{\circ}$ Falrenheit as is intended for use in sanitatıon.

The gross revenue from imports rose from $R_{5,00,89,706}$ to
 R $7,45,569$ in the previous year. The net revenue therefore increased from $\mathrm{R}_{4,93,44,1}$, 7 to $\mathrm{R}_{4}, 97,86,750$. The rates of increase were as follows :- $1 \cdot 5$ per cent in gross revenue and 9 per cent in net revenue. There was an increase of $42^{.3}$ per cent in the refunds and drawbacks. The revenue from salt is not included in the foregoing figures, for it is not credited as a Customs receipt. It amounted to R184 lakhs in 1906.07 as against R183 lakhs in the previous year. With effect from the 20th March 1907 the rate of duty was reduced from R $\mathrm{R}_{1}-8$ to Ri per maund of $82 \frac{2}{7} \mathrm{lbs}$, say, from R2-0-8 per cwt to $\mathrm{R}_{1-5}-9$ per cwt.

- The following statement shows the revenue derived in the last three years from the principal dutiable articles:-

|  |  | 1904-05 | 1905-06 | 1906-07 |
| :---: | :---: | :---: | :---: | :---: |
| Articles of food and drink- |  | R | R | R |
| Spirit | - - | 76,58,725 | 90,31,698 | 77,97,770 |
| Sugar | - . | 32,70,731 | 39,92,987 | 43,82,637 |
| Provisions | - . | 6,33,529 | 6,86,055 | 7,41,339 |
| Spices | - . | 5,32,358 | 5,61,455 | 6,37,860 |

| customs revenue | 62 |  |  |
| :---: | :---: | :---: | :---: |
|  | $\begin{gathered} 1904-05 \\ \text { R } \end{gathered}$ | $\begin{gathered} 1905-06 \\ R \end{gathered}$ | $\begin{gathered} 1906-07 \\ R \end{gathered}$ |
| Chemicals, druss, narcotics, and djes- |  |  |  |
| Drugs, medicines, narcotics . | 5,73,854 | 6,01,821 | 6,34,661 |
| Chemicals . . . | 3,66,000 | 3,67,053 | 3,94,573 |
| Dyes and tans . - | 4,50,28S | 4,79,594 | 4,93,015 |
| Mictals and articles made of metals- |  |  |  |
| Hardware and cutlery | 12,20,000 | 12,49,752 | 15,42,210 |
| Copper and brass . | 10,76,285 | 7,16,350 | 6,53,943 |
| Iron and steel. | 7,06,357 | 7,27,195 | 8,14,554 |
| Silver | 41,11,977 | 29,33,850 | 40,79,319 |
| Manufactures of cotion- |  |  |  |
| Piece-goods: grey (unbleached) | 56,46,S24 | 64,92,338 | 64,10,439 |
| " white (bleached). | 28,72,855 | 29,36,490 | 25,73,117 |
| " coloured | 31,64,621 | $33,19,833$ | 33,48,458 |
| Oils- |  |  |  |
| Petroleum . | 45,88,289 | 36,64,723 | 37,66,65! |

Of the other articles enumerated in the tariff schedule, the three mentioned below yield individually a gross revenue of some consequence :-

|  |  | R | R | R |
| :---: | :---: | :---: | :---: | :---: |
| Apparel |  | 10,26,137 | 10,39,580 | 9,31,560 |
| Silk and articles made of silk |  | 14,38,006 | 13,14,752 | 11,92,983 |
| Woollen goods |  | 15,39,3 ${ }^{1}$ | 12,10,741 | 10,23,689 |

The gross revenue realised from the eighteen articles enumerated in these two statements aggregates R414*19 lakhs or 8145 per cent of the total gross revenue. If there be added the revenue from eight other articles, namely, arms and ammunition, carriages (including motor cars and cycles), cotton manufactures other than piece-goods, fruits and vegetables, instruments, paper and pasteboard, wines, and wood and timber, which yield individually between $\mathrm{R}_{3} \cdot 8$
 total revenue is accounted for by the twenty-six articles specified. These figures show, that although the Indian tariff comprises many dutiable articles, there are comparatively few on which a considerable revenue is levied. Spirituous liquor, petroleum, sugar, metals (including silver), and cotton piecegoods by themselves constitute 70 per cent of the total.

The import duty on Cotton fabrics is $3 \frac{1}{2}$ per cent $a d$ valorem and the total revenue realised on this one item was R129¹4 lakhs as against R132.89 lakhs in the previous year. This is equal to $25^{\circ} 4$ per cent of the whole Customs revenue. The receipts on account of Excise duty on cotton fabrics of Indian manufacture amounted to R29.46 lakhs as against R27.54 lakhs in 1905-06. This, however, falls outside of Customs revenue proper.

On most classes of iron and steel, the duty is only 1 per cent. On such other articles as are dutiable at a general ad valorem rate, that rate is, with two exceptions, 5 per cent. The exceptions are vinegar in casks and green copperas, on each of which the duty is $2 \frac{1}{2}$ per cent.

The export tariff schedule is limited to rice and rice-flour, the duty on which is levied at the rate of three annas per maund of $82 \frac{2}{7}$ lbs. The net duty realised from this source in 1906.07 was Riu2.2 lakhs against R112.6 lakhs in the previous year and marks a fall of $R 10^{\circ} 4$ lakhs or $9^{\circ} 2$ per cent.

A Customs duty, known as the Tea Cess, at the rate of a quarter of a pie per pound, has been levied since the ist April 1903 on all Indian tea exported. The collections realised are paid to a committee constituted to receive and expend the proceeds of this Cess on measures for promoting the sale and
consumption of Indian tea. The collections since the institution of the Cess have been as follows:-

## BALANCE OF TRADE

The following statement shows in thousands of rupees the excess of exports over imports, including treasure as well as merchandise, in each of the last six years :

It has hitherto been the practice to give here the total amount of Council Bills including the drawings on account of the Gold Standard Reserve fund. But that fund represents profit on coinage of silver; and drawings on its account are made not in settlement of any balance of trade, but in provision against a future contingency. The accident of its being held in England instead of India does not make it a factor in the balance of trade. Moreover, in a year when Indian produce was heavy and when exports and drawings on account of them would be large, coinage and the total profit thereon would probably also be heavy. Every increment in the excess of exports would therefore induce a proportionate and adventitious distension of the total. For these reasons, the following statement shows; in sterling and in thousands of rupees, the amount of the drawings by the Secretary of State by Council Bills, excluding those on account of the Gold Standard Reserve :

In the five years ending $1905-06$ the average excess of exports over imports including Goverument transactions was R3,121•44 lakhs; and this sum represented $1^{\prime} 1$ per cent of the total value of exports. In the same five years the average amount of the drawings of the Secretary of State was $\mathrm{R}_{3}, 20{ }^{2}{ }^{\prime} 62$ lakhs. This is equal to $20^{\circ} \mathrm{I}$ per cent of the average value of exports and exceeds the average excess of exports over imports by R $80^{\circ} 18$ lakhs which is equal to 2 ' 57 per cent of that average excess and 5 per cent of the average value of exports including Government transactions.

Excluding Government transactions, the average excess of exports over imports was $\mathrm{R}_{3}, 793$ lakhs, equal to $24^{\circ} 4$ per cent of the total value of exports with Government transactions excluded. The excess, with Government transactions excluded, is greater by R 671.56 lakhs than the excess iound when such transactions are included. It also exceeds the average amount of drawings
by $\mathrm{R}_{59 \mathrm{r}} \cdot 3 \mathrm{~S}$ lakhs, which is equal to $15 \cdot 6$ per cent of the average excess and 3.86 per cent of average exports, while the said drawings were equal to 20.9 per cent of the exports.

In the year under review the excess of exports over imports including Government transactions receded from $\mathrm{R}_{3}, 354^{\circ} 91$ lakhs to $\mathrm{R} 2,056 \cdot 63$ lakhs which represents 113 per cent of the total value of exports with Government transactions included. The difference is one of $\mathrm{R}_{1,298} \cdot 28$ lakhs. On the other hand, the crawings of the Secretary of State increased by R 994.6 lakhs, namely, from $R_{3,993^{\prime}}$ II lakhs to $R_{4,987} 7^{1}$ lakhs. This last sum is equal to 27.34 per cent of the total value of exports, and it is greater than the excess of exports over imports by $2,931 \circ$ oS lakhs which again is equal to 16.07 per cent of the total value of exports.

Excluding Governiment transactions, the excess of exports overimports increased from $R^{4}, 417 \circ 07$ lakhs to $R_{4}, 67666$ lakhs, which latter figure represents $25^{\circ} 6$ per cent of the total value of exports. The increase is $\mathrm{R} 259^{\circ} 59$ lakhs and the increased total fell short of the amount of the Council Bills by R31ro5 lakhs, which is $8 \cdot 2$ per cent of the average excess of exports and $1 \cdot 7$ per cent of the total exports.

It is not possible in this place to give a full analysis of the Indian balance of trade in the sense in which that term is sometimes construed. To do so would entail numerous adjustments and reconciliations, some of which are the subject of dispute, and the net effect of which might be to obscure the main point to be brought out, namely, the relation of exports to imports. Confining ourselves to this one point, it is still necessary to bear in mind that the figures quoted above relate only to the registered trade and to that at British Indian ports alone. The unregistered trade consists largely of trade carried on (chiefly by native craft from ports in the Native States on the West Coast of India) with Persia, Arabia, and Ceylon; and it is believed that the exports from such Native States greatly exceed the imports. The value of the large re-exports of pearls from Bombay is also not registered, as the pearls are sent from India by letter post. The trade of the French Settlements in the five years ending 1905.06 (the latest available) has been :
$\left.\begin{array}{lllcrr} & & & \text { Imports } & \text { Exports } & \text { Excess of Exports } \\ & & & & \mathrm{F} & \mathrm{R}\end{array}\right)$

The trade of the Portuguese Settlements for the five years ending 1904-05 (the statistics for $1905-06$ and 1906.07 have not yet been received) has been:-

It should also not be overlcoked that the exports of Government stores in some years-as for instance at the time of the South African war and the Somaliand expedition-unduly swelled the total exports from India; and that they are inaccurately recorded, seeing that thete is no obligation on the part of the officials concerned in the export of those stores to pass them through the Customs.

## GOLD AND SILVER

The value of the Imports, Exports, and Net Imports of Gold and Silver in the last five years, in thousands of Rupees, was as follows :-

Gola-

|  |  |  |  | Imports | Exports | Net imports |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | Production

| Silver- |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 1902-03 | . | 12,18,65 | 5,22,98 | 6,95,67 |
| 1903-04 | - . | 18,37,02 | 4,72,55 | 13,65,27 |
| 1904-05 | - | 17,69,62 | 4,43,47 | 13,26,15 |
| 1905-06 | - - | - 16,90,20 | 1,17,90 | 15,72,30 |
| 1906-07 |  | 26,04,64. | 2,04,09 | 24,00,55 |

It must not, however, be supposed that, in respect of Gold, the foregoing figures represent India's absorption of the metal. To ascertain the absorption, the Indian production of gold must be added to the above Net Imports. The gold produced in India is sent to England for assay and thus swells the exports and diminishes the net imports calculated in the ordinary way. But if no imported gold were exported, it would be necessary to consider the total imports as absorbed. For this reason the production figures for the last five years are added to the above statement.

It will be seen that the imports of gold increased from $\mathrm{R}_{1,475}$ lakhs to $R_{1}, 853^{\circ} 34$ lakhs, while the exports decreased frcm $R_{1,429^{\prime}} 1$ lakhs to $R_{3} 67 \cdot 73$ lakhs.

The net imports of gold thus increased from $\mathrm{R}_{45} \cdot 8$ lakhs to $\mathrm{R}_{1,485^{\prime}} 6$ lakhs ( $£ 9,904,000$ ), which is the highest on record. Including the production with a value of R ${ }^{22} 2.56$ lakhs, the net addition to the stock of gold amounted to $\mathrm{R}_{1,808} \cdot 17$ lakhs ( $£ 12,055,000$ ). In this total the net imports of sovereigns and half-sovereigns figured for $1,266,652 \mathrm{oz}$. valued at $\mathrm{R}_{742^{\circ} 58}$ lakhs or $£ 4,951,000$. In the previous year the exports exceeded the imports by R $466 \% 75$ lakhs or $£ 3,112,000$. There was no export of gold on Government account during the year under review.

With regard to imports of silver it should be borne in mind that, during those years in which the value of silver was declining but while the mints in India remained open for free coinage, the value of the metal when converted into rupees was re, 'd as its value upon importation. The statistics relating to years since the closing of the mints assign to the metal its true market value, so that silver of the value of $R_{I, 000}$ in these statistics represents a much larger quantity of the metal than was indicated by $\mathrm{R}_{1,000}$ in the statistics of fifteen years ago, and a smaller quantity than the same figure would have represented five years ago. And in view of the marked rise in the price of silver in the last two years, this is not to be altogether disregarded. The average price of silver in London in 1906 was $30 \frac{7}{8} d$. per oz.; and one must go back to 1893 to find a higher average, though it was nearly equalled in 1896 .

The imports of silver have attained the unprecedented level of R2,604.64 lakhs and there can be no doubt that the heavy demand for the metal, which has attended the commercial development of the silver-using East is the prime factor in the rise of price recorded above. The exports increased, but were far below the average and consisted mainly of Government rupees. These
were widely distributed; but Ceylon took the greatest quantity and showed the largest individual rise in her demand.

The net imports amounted to $\mathrm{R} 2,400 \cdot 55$ lakhs, which largely exceeds the figure for any previous year.

Stated in ounces, the net imports and production of gold and the net imports of silver in the last five years have been as follows:-

|  | Production of Gold | Net Imports of Gold | Net Imports of Silver |
| :---: | :---: | :---: | :---: |
| 1902-03 | 534,763 | 1,416,618 | 43,274,309 |
| $1903-04$ | 613,755 | 1,566,237 | 79,182,136 |
| 190405 | 619,571 | 1,516,991 | 74,349,595 |
| 1905-06 | 625,247 | -65,473 | $84,317,765$ |
| 1906-07 | 562,232 | 2,377,151 | 118,198,857 |

The silver coinage struck in the Indian Mints during the last five years has been-

## $\mathbf{R}$

| 1902-03 | - | - | - | - |  | $11,38,94,8,48$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1903-04 | - | - | - | - |  | 16,53,11,541 |
| 1904-05 | - | - | - | - |  | I $1,37,04,366$ |
| 1905-06 | - | - | - | - |  | 20,00,14,451 |
| 1906-07 | - | - | - | - |  | 26,09,70,025 |

The number of ounces may be found approximately by dividing by $\mathrm{R} 2 \frac{1}{2}$.

## TRADE ACCORDING TO COUNTRIES

The following shows the trade of India with the world in merchandise, imported and exported, for five years (in thousands of rapees) :-

|  |  | 1902-03 | 1903-04 | 1904-05 | 1905-06 | 1906007 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Europe | . - | 1,31,15,12 | 1,57,37,2 | 1,69,02,2 | 1,71,40,26 | 1,89,8ı, 68 |
| Africa and AdjacentIslands. |  |  |  |  |  |  |
| Asia | . - | 48,32,60 | 55,70,45 | 59,57,56 | 62,41,58 | 59,03,44 |
| America |  | 12,04,57 | 13,38,43 | 14,98,19 | 19,45,60 | 21,93,68 |
| Australasia |  | 1,92,53 | 2,52,40 | 2,52,10 | 3,32,23 | 3,48,81 |
|  | AL | 2,07,60,32 | 2,37,78,29 | 2,54,19,26 | 2,64,77,35 | 2,84,86,78 |

Up to 1902-03 the trade with Africa was exaggerated owing to the circumstance that large shipments of produce consigned to Port Said "for orders" were credited to Egypt. The apparent falling•off in the trade with Africa is therefore not real, though it is probable that the figure for $1906-07$ may require some abatement. In proportion as effect is given to the new system of registering imports by countries of consignment and exports by countries of destination, the trade with America must appear to be unduly increased, for hitherto a share of the trade with that Continent is credited to Europe and Asia. The trade with Europe has increased by $\mathrm{R} 18,41^{\circ} 4^{2}$ lakhs and her share in the total has risen from $64^{\circ} 7$ per cent to $66^{\circ} 6$ per cent of the total, which is slightly better than in $1904-05$. The trade with Asia shows a decline of $\mathrm{R}_{33} 8^{1.14}$ lakhs and now represents $20^{\circ} 7$ per cent of the total in place of $23^{.6}$ per cent. The total trade with America ( 83 per cent of which was with the United States) increased by R 248.08 lakhs or about 12 '75 per cent. The exports to Europe amounted to R10,043 lakhs and the imports to R8,938 lakhs. Exports therefore exceeded imports by RI, 105 lakhs or 11 per cent of the former. Exports to Africa were thrice as great as imports therefrom, and Asia and America respectivel y took three and a half and seven and a half times as much as they sent, while Australasia took four times as much.

The following statement shows India's trade with each principal country for the last five years in thousands of rupees :-

|  | 2-03 | 1903-04 | 1904-05 | 05-06 | 1906-07 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| United Kingdom | 84,66,27 | 96,30,58 | 106,17,67 | 109,43,01 | 119,71,77 |
| China . | 18,19,23 | 20,03,80 | 21,62,93 | 23,26,55 | 20,53,40 |
| Germany | 12,33,76 | 17,74, | 18,03,84 | 19,10,9 | $24,87,84$ |
| United Sta | 9,74,80 | 10,33,52 | 11,21,73 | 15,27,20 | 18,19,59 |
| France | 10,57, | II,51,64 | 11,36,47 | [1,30,48 | 12,61,23 |
| Japan | 6,70, | 9,74,06 | 10,91, 84 | 11,23,57 | 8,71,99 |
| Belgium | 8,05,72 | 10,99, | 1,91, | 10,98,7 | 1,51,93 |
| Straits Settlements | 10 | 109,7 | 9,48, | 8,99,4 | ,44,03 |
| Austria-Hungary | 5,7 | ,O1, | 8,72,ot | 8,92,26 | 12,29,13 |
| Ceylon | 5,24,51 | 5,41,1 | 73,50 | 6,36,32 | 7,36,07 |
| Italy | 4,25,47 | 5,93,85 | 5,54,18 | 5,94,34 | 6,8r, 83 |
| Mauritius | 3,13,10 | 3,85,85 | 3,19,55 | 3,26,07 | 3,47,86 |
| Australia | 1,57,78 | 2,13,39 | 2,19,32 | 2,93,70 | 3,08,22 |
| Java | 85,07 | 1,62,04 | 2,47,or | 2,83,02 | 3,43,31 |
| Holland | 1,42,80 | 2,60,36 | 3,01,76 | 2,38,14 | ,85,35 |
| Egypt | 8,02,05 | 1,88,69 | 1,93,53 | 1,95,53 | 4,26,12 |
| Russia | 3,09,64 | 3,28,73 | 2,25,57 |  | 86,0 |

In determining, from the figures as they appear in the accounts, the trading interests of certain countries with India, and in making comparisons, much care is necessary ; for in the case of imported goods, the countries containing the ports from which the goods were shipped direct to India were formerly credited with the trade, as were also the countries containing the ports at which goods were transhipped, except when goods were shipped on a through Bill of Lading, in which case the country containing the port at which the Bill was granted is credited with the trade. In the case of exported goods, the countries containing the ports at which the goods are discharged, whether destined for that country or not, are credited with the trade. Taking the figures as they stand, however, the share of the United Kingdom increased by R, 028.76 lakhs; and that the advance was shared by the other countries trading with India is shown by the fact that this large increase only raised the share of the United Kingdom from $41^{\circ} 3$ per cent to 42 per cent of the total. The increase $\mathrm{R}_{576} 9$ lakhs in the trade with Germany is in part due to the improved methods of registration, but while Holland shows a shrinkage of $\mathrm{R}_{52^{\circ} 79}$ lakhs, Belgium improved by $\mathrm{R}_{53} \cdot 19$ lakhs. Besides Holland, the only other countries that showed contraction were China, Japan, and Russia.

## SHIPPING

While the net increase in the value of imports and exports of merchandise by sea amounted to $7^{\circ} 2 \mathrm{per}$ cent of the total for the previous year, there was an increase of it 61 per cent in the tonnage of shipping that entered and cleared for Indian ports. The following statement gives the numbers and tonnage of steamers and sailing vessels with cargoes and in ballast which entered from and cleared to all countries : -

|  |  |  | No. | Tons | Average tonnage |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $1902-03$ | - | - | 9,089 | $10,926,560$ | 1,202 |
| $1903-04$ | - | . | 9,530 | $12,559,260$ | 1,318 |
| $1904-05$ | . | . | 9,798 | $13,881,336$ | 1,417 |
| $1905-06$ | . | . | 9,269 | $12,598,321$ | 1,359 |
| 1906.07 | . | . | 9,329 | $13,775,43$ | 1,477 |

Of those 97.78 per cent represented steam tonnage. The total number of steamers that entered and cleared was $5,9.44$ with an aggregate burden of
$13,469,417$ tons as against 5,706 and $12,270,26_{3}$ tons in the previous year. The average tonnage per steamer increased from 2,150 to 2,266 tons. The rate of increase was about 5.4 per cent.

The average tonnage per sailing ship decreased from 92 to 90 tons.
The entries from and clearances to the United Kingdom were 3,121,861 tons as against $3,140,281$ tons in 1905-06, and this reduced quantity represented 22.66 per cent in place of $24^{\circ} 9$ per cent of the total tonnage.

Entries from and clearances to British Possessions other than the United Kingdom increased from 4,784,555 to 5,650,916 tons, which represent $41^{\circ} 02$ per $_{5}$ cent of the total, as against $37^{\prime} 98$ per cent in the previous year. The tonnage from and to the British Empire therefore amounted to $64^{\circ} 4^{1}$ per cent of whole in place of $62 \cdot 88$ per cent.

The tonnage under the British flag, including the Indian register, represents about 80.35 per cent of the whole, while that registered under the English Merchant Shipping Act was nearly $79^{\circ} 05$ per cent.

The number of vessels under foreign flags which entered and left Indian ports was 1,102 with an aggregate burden of $2,536,714$ tons, as against 1,296 in 1905-06 with an aggregate of $2,230,400$ tons.

The number of vessels under the principal flags are given below :-

|  |  | $1902-03$ | $1903-04$ | $1904-05$ | $1905-06$ | $1906-07$ |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  |  |  |  |  |  |
| British . | . | 4,257 | 4,772 | 5,633 | 4,838 | 4,920 |

## FRONTIER TRADE

The bulk of India's Foreign Trade is, and always must be, sea-borne, the value of the trade across the land frontiers of India being equal to only 514 per cent of the trade carried by sea. Although the Foreign land trade is relatively small, it is characterised by steady progress. It has now attained fairly substantial dimensions, the grand total value of merchandise and treasure imported and exported having been $\mathrm{R}_{17} 7,68,18,555$ (say $\mathrm{f}_{11}{ }^{1} 79$ millions) in $1906-07$ compared with $\mathrm{R}_{16,75,51,873}$ in 1905-06. In 1878-79, the first year for which there are complete statistics, the trade was only R8,90,33,123 (at that time equal to about $£ 7,390,000$ ), and in rupees at all events is now apparently about twice as great.

It must however be recognised that the valuation of frontier trade is difficult and defective, and that improved registration may account for part of the increase.

The following statement is interesting as comparing the value of the trade in 1906.07 with that in $1905-06$ and with the average annual value in the five preceding quinquennial periods:-

|  |  | Imports | Exports | Total |
| :---: | :---: | :---: | :---: | :---: |
| Average | 1880-81 to 1884-85 | $\boldsymbol{R}$ - $5,24,04,656$ | $\underset{5,17,28,273}{R}$ | $R$ $10,41,32,929$ |
| " | 1885-86 to 1889-90 | - 4,49,38,384 | 5,95,82,674 | 10,45,21,058 |
| " | 1890-9r to 1894-95 | - 4,29,06,151 | 4,05,14,663 | 8,34,20,814 |
| " | 1895-96 to 1899-1900 | - 5,87,54,796 | 4,99,30,583 | 10,86,85,379 |
| " | 1900-01 to 1904-05 | 7,63,30,044 | 6,33,66,488 | 13,96,96,532 |
| 1905-06 | . . . . | 9,39,93,91 | 7,35,57,962 | 16,75,51,873 |
| 1906-07 | - | 9,91,39,591 | 7,76,78,964 | ${ }^{1} 7,68,18,555$ |

With the exception of the small trade via the branch line from Sialkot to Jammu in Kashmir, goods are not carried by railway across the frontier, but a large portion of the trade with Kandahar is carried by rail to and from stations close to the frontier and is therefore registered as railway traffic. It may, however, be assumed that the movements of merchandise are recorded with sufficient accuracy for analysis; and in the following notes the figures relate to merchandise only. Taking merchandise only, the geographical distribution of the trade by frontiers and principal countries, proceeding from west to east, is as follows (in thousands of rapees) :-

|  |  | 1902-03 | 1903.04 | 1904-05 | 1905-06 | 1906-07 |

## NORTH-WESTERN FRONTIER

Persia-The Quetta-Nushki railway has been open throughout the year, but trade with Persia by land has been subject to various discouragements, and its value has receded from $\mathrm{R}_{7}{ }^{\circ} 5$ lakhs to $\mathrm{R}_{5}{ }^{\prime} 39$ lakhs, which is only slightly above its level in 1904-05. The principal imports were, as usual, silk manufactures; and these decreased from $R_{1}, 76,778$ to $R_{1}, 60,485$, while the land imports of "precious stones and pearls, unset", which had amounted to some $R_{4} 6,500$ in the previous year, disappeared. The principal exports were cotton manufactures, which diminished from $R_{1,79,343}$ to $R_{1,77,597}$. Indigo dropped from $R_{1,40,282}$ to $R_{50,462}$.

Afghanistan-The year as regards communication with Afghanistan was rendered exceptional by the visit of His Majesty the Amir, and the exchanges of goods increased in value from Ri69'06 lakhs to Rig9052 lakhs, the difference being $\mathrm{R}_{3} 0^{\circ} 46$ lakhs or 18.02 per cent. The exports rose from $104^{\circ} 59$ lakhs to RII2.48 lakhs and represent 56.37 per cent of the total, while imports advanced from R 64.46 lakhs to R 87.04 lakhs. The total imports from Kabul increased by ${ }_{13} 6$ per cent to $R_{25}$ lakhs, the principal item being fruits and nuts with a value of R10'97 lakhs against R $7 \cdot 52$ lakhs in $1905-06$. Drugs and medicines follow with $\mathbf{R}_{2,76} \mathbf{6}_{3} \mathbf{1}$, ghi (clarified butter) with $\mathbf{R}_{2,56,099 \text {, }}$ wool with $R_{2,01}, 841$, and live animals with $R_{1,44,917}$. Exports to Kabul developed from R61.48 to R68.23 lakhs; and in this branch, the principal staple, cotton piecegoods, with a total of $\mathrm{R}_{42} \cdot 77$ lakhs showed an increase of R6.29 lakhs, which leaves barely $R_{4} 6,000$ to be accounted for by other articles. Cotton yarns (mostly foreign), with a value of $\mathrm{R}_{4}{ }^{\circ}{ }^{\circ} 5$ lakhs in place of $\mathrm{R}_{3}{ }^{\circ} 22$ lakhs, have in the year under report surpassed tea in importance. Tea subsided from $6,071 \mathrm{cwts}$ and $\mathrm{R}_{4,3}{ }^{1,720}$ to 4,780 cwts and $R_{3,28,933}$. The share of Indian tea improved from $49^{\circ} 6$ per cent to 52 per cent, but the exportation contracted from 3,012 to 2,430 cwts and from $R_{1,24,176}$ to $R_{1,16,101}$. From these figures it appears that the values of foreign and of Indian teas for the Kabul market are, respectively, R92 and R47 per cwt. The high prices of
leather goods led to a contraction of the trade, which receded from $\mathrm{R}_{2} \mathbf{4}^{2}$ to R1.69 lakhs, and it is understood that plant for the preparation and manipulation of leather has recently arrived and is now being erected in Kabul. Imports from Kandahar amounted to R71,53,543 as against $R_{42,52,353}$ in 1905-06. Of this wool represents R 39 lakhs as against R23.48 lakhs in the previous year, while fruits and nuts increased from $R_{12} \cdot 3^{6}$ to $R_{22} \cdot 7$ lakhs, and ghi from Rr'44 to R2. 35 lakhs. The exports to Kandahar recorded a further advance from R43.11 to R $\mathbf{H 4}^{-24}$ lakhs, the principal articles being foreign piecegoods
 $\mathrm{R}_{1}{ }^{\circ} \cdot 06$ lakhs). The trade in foreign piecegoods therefore increased by $\mathrm{R}_{5} \cdot 38$ lakhs with a rise of 2.35 per cent in specific value, while that in Indian piecegoods fell off by a further R2.08 lakhs, the average value remaining almost unaltered.

Dir, Swat, and Bajaur-The imports from these territories after remaining for two years at $R_{39}$ lakhs advanced to $R_{51}$ lakhs. Ghi with a value of $\mathrm{R}_{2} 3.57$ lakhs represents 46.2 per cent of the total, and increase under this head is 40.58 per cent of the increase of $R_{12}$ lakhs. The imports of grain at Riolakhs were double of those of the previous year and consisted mainly of husked rice ( $\mathrm{R}_{7}$ lakhs) and unhusked rice ( $\mathrm{R}_{2} \mathrm{O}_{4}$ lakhs). The receipts of hides and skins recovered from $R_{4^{11}}$ to $R_{5}$ lakhs, and timber advanced from $R_{2} \cdot 77$ to $R_{4} \cdot 26$ lakhs. The increase in exports to these countries was much less marked and brought their value only to $\mathrm{R} 67^{\circ} 8 \mathrm{t}$ lakhs in place of $\mathrm{R} 64^{\circ} \mathrm{O}_{2}$ lakhs.

Of the total value of the principal articles, cotton piecegoods remained unchanged at $\mathrm{R}_{35}$ lakhs, while the share of foreign goods contracted to $\mathrm{R}_{23}$ lakhs, and that of Indian goods expanded to R:2 lakhs. Twist and yarn showed an improvement at $R 8.87$ lakhs (foreign $R_{5} .85$ lakhs and Indian $3^{\circ} 02$ lakhs), while salt had a value of R $4_{4} \cdot 46$ lakhs, raw cotton 3 lakhs, and sugar 2.68 lakhs. Metals, tobacco, tea, spices, and indigo ranged in the order named, from $\mathrm{R}_{1} \cdot 78$ to $\mathrm{R}_{1} 43$ lakhs, spices being the only item that did not show improvement. In the $\mathrm{RI}_{1} \cdot 57$ lakhs represented by tea, Indian tea with a total of $266,112 \mathrm{lbs}$ and $\mathrm{R}_{\mathrm{i}, 02,618}$ assumed a predominating position comparing very favourably with ${ }^{159,264}$ lbs and R49,000 of the previous year, while foreign tea fell back from $105,28 \mathrm{l}$ lbs and $\mathrm{R}_{90}, 142$ to $89,824 \mathrm{lbs}$ and $\mathrm{R}_{54,550}$. More than two-thirds of tea exported was green tea and the position now taken by Indian tea in this trade shows that the concerted measures employed have not been fruitless.

Kashmir - The trade with Kashmir forms 18 per cent of the total frontier trade of India. Its value showed a net increase of $\mathrm{R}_{37}{ }^{\circ} 36$ lakhs or nearly 13.47 per cent, and amounted to R ${ }_{314}{ }^{17}$ lakhs as against R27741 lakhs in 190500. The increase was confined to imports, which developed from $\mathrm{R}_{\mathrm{I}} 5^{\circ} 5^{\circ}$ to $\mathrm{R}_{190^{\circ} 9} 8$ lakhs, the difference being $\mathrm{R}_{40}{ }^{\circ} 4$ lakhs. The following are the principal articles of imports from Kashmir with their values for the last three years:-

Silk from Kashmir is made in the State filatures and is of good quality. The increase in value as shown above was one of 16.8 per cent, but the quantit $y$ was greater by 16.62 per cent, $v i z ., 385,840 \mathrm{lbs}$ against $33^{\circ}, 84^{8} \mathrm{lbs}$ in $1905 \cdot 06$. There was a large increase in the value of ghi imported, but this was swelled by a rise of some 7.75 per cent in the average value of the article. The rise in the specific value of timber during the year is not shown in the table given above, but the increase of 11 per cent in total value was accompanied by a rise of $5^{\circ} 5$ per cent in quantity. On the other hand, the general rise in the price of hides and skins in India failed to induce larger imports, and these declined from 29,469 cwts to 25,136 cwts and from $R_{1} 653$ to $R_{15} 55$ lakhs. The expansion in the imports of drugs and medicines which in two years have grown from R8.64 lakhs to $\mathrm{R}_{22}{ }^{\circ} 51$ lakhs is remarkable, and is due entirely to Charas, or hemp, which comes chiefly from Central Asia. It is subject to a very high excise duty; but the trade has increased in the last two years from R2.85 to K18.34 lakhs, the growth in the last year alone being $\mathrm{R}_{4} \cdot 15$ lakhs. The trade in fruits and nuts sprang up from $\mathrm{R} 8 \cdot 53$ to $\mathrm{R}_{27} \cdot 17$ lakhs and assumed the second place in importance. Kashmir fuits are now widely distributed in India and the trade is one that may be expected to grow as methods of handling and transportation are perfected and new orchards brought into bearing. Grains of all kinds fell off by $\mathrm{R}^{2} \mathbf{4}^{2}$ lakhs, the greater part of which is attributable to the reduced imports of wheat. In woollen piecegoods there was an increase of $6^{\circ} 76$ per cent in value, but a reduction of quantity was disguised by a rise of nearly in per cent in specific value-from R186 to R202 per cwt. The discontinuance of the imports of shawls must be viewed in relation not only to the figures of the previous year but to the very much smaller figures of 1904-05 and 1903-04.

In the following statement are enumerated the principal articles of export to Kashmir with their values :-

|  | $\begin{gathered} 1904-05 \\ \mathbf{R} \end{gathered}$ | $\begin{gathered} 1905-06 \\ \mathbf{R} \end{gathered}$ | $1906 \cdot 07$ <br> R |
| :---: | :---: | :---: | :---: |
| Cotton piecegoods | 43,79,041 | 52,94,524 | 49,19,716 |
| Sugar | 11,72,436 | 14,11,951 | 15,74,845 |
| Cotton yarn | 5,16,989 | 8,or,506 | 6,67,786 |
| Tea | 5,26,486 | 7,28,302 | 7,80,091 |
| Salt | 9,32,601 | 6,33,269 | 8,05,219 |
| Metals | 4,86,287 | 5,33,898 | 7,03,13 |

The value of the exports of cotton piecegoods, which form the principal item, declined by $7^{\circ} 08$ per cent, but exceeded the figure for 1904-05. In quantity the decline was one of 6.2 I per cent and the weight stood at $47,864 \mathrm{cwts}$ as against $51,034 \mathrm{cwts}$. in the previous year and 44,611 cwts in 1904-05. Cotton yarn decreased by $20^{\circ} 3^{1}$ per cent in quantity ( $8,164 \mathrm{cwts}$ in place of $10,245 \mathrm{cwts}$ ) and 16.68 per cent in value. Of the piecegoods $7!$ per cent and of the yarns 94 per cent were of foreign manufacture. Exports of tea increased by 7 II per cent in value, but in quantity the contraction was one of $7^{\circ} 2$ per cent ( $1,544,93^{8}$ lbs in place of $1,664,768 \mathrm{lbs}$ ). Indian tea amounted to $1,46 \mathrm{l}, 040 \mathrm{lbs}$ or 9457 per cent of the whole; and the average declared value of foreign tea was annas $10-9$ per lb as against annas $7-9$ for Indian. Sugar increased by 8.8 per cent in quantity ( $127,509 \mathrm{cwts}$ in place of $117,220 \mathrm{cwts}$ ) and $11 \cdot 54$ per cent in value as shown above. Salt (with 283,801 cwts and R8.o5 lakhs) increased by no less :han $3^{2.4}$ per cent in quantity and $27^{\circ} 15$ per cent in value, while metals at $\mathrm{R}_{7} \cdot 03$ akhs also made a contribution of R1• 69 lakhs to the net advance.

Ladakh-Ladakh is a junction for trade between Indian and Western Tibet on the one hand and Yarkand and Kashgar on the other. Trade with Ladakh is registered separately from the trade of Kashmir, but it is of small volume though showing at $R_{7} \cdot 67$ lakhs a certain advance ( $R 81,000$ ) on the R6.86 lakns of the previous year. linports improved from $\mathrm{K}_{5}{ }_{7} 7^{8}$ to $\mathrm{R} 6{ }^{\circ} 1_{3}$ lakhs and exports from RI•OS to R1•54 lakhs. Charas represents nearly 75 per cent of the total imports, and increased from $1,086 \mathrm{cwts}$ and $\mathrm{R}_{4} \cdot 21$ lakhs to 1,199 cwts and $\mathrm{R}_{4} 57$ lakhs. The large increase in imports of raw silk, which was marked in $1905-06$ and raised the figures to 172 cwts with a value of R82,000, has been followed by a reaction, and the figure has recoiled to 84 cwts and $\mathrm{R}_{40,250 \text {. On this, as on other frontiers, cotton piecegoods (almost entirely }}$ foreign) continue to form the chief item of exportation; but, unlike some other trans-frontier territories in $1906 \%$, Ladakh took 7.8 per cent more in quantity and 6.9 per cent more in value.

## NORTHERN AND NORTH-EASTERN FRONTIER

Nepal and Tibet are the only two States or countries along this frontier which can be said to have any trade of importance with India.

Nepal-The trade with Nepal receded from $\mathrm{R}_{\mathbf{4}} 87^{1 / 15}$ lakhs in 1905.06
 (imports R297.26 lakhs and exports Ri38.43 lakhs). In the latter year it amounted to $24^{\circ} 64$ per cent of the total frontier trade of India, as against 33 per cent in 1905.06 . The principal articles of import and their values in the last three years are shown in the sub-joined table :-

Of the heads here shown, three, namely, grain, jute, and spices, mark decreases of various dimensions. Of these the most considerable occurs in grain and pulse, and this is constituted by large contractions in rice, paddy, and wheat. This head, which in the previous year represented $5^{2}$ per cent of the imports, has therefore now fallen to 44 per cent. The total quantity imported fell from $4,463,201$ to $2,633,980 \mathrm{cwts}$, and the decline was thus one of 41 per cent in quantity and $24^{\circ} 8$ per cent in value. In rice and paddy alone there was a drop of $R_{+7}$ lakhs ( $£_{2} 295,000$ ). The imports of cattle from Nepal into Bengal repre-
sent $64^{\circ} 5$ per cent of the total imports of cattle by land into India, and the number and value expanded in $1906-07$ from 43,976 and $R_{18,26,484}$ to 68,241 and $R_{26,74,473}$. The expansion was greater in number than in value, the average price per head having subsided from $R_{4} 1 \frac{1}{2}$ to $R_{39} \frac{1}{5}$; but it more than accounts for the whole net rise in value under the head of live animals. The contraction in the receipts of jute raw is worthy of note. Nepal is the only country from which India imports jute, and of recent years the production has increased. But in the year under review the importation has gone back by $24^{\circ} 3^{8}$ per cent in quantity (from 235,214 to $178,636 \mathrm{cwts}$ ) and $17^{\circ} 42$ per cent in value, the average declared value having risen from R9 to Rio per cwt. Oilseeds showed a recovery of 46.5 per cent in value; and of the increased total, mustard and rape stood for $\mathrm{R} 25^{\circ} 23$ lakhs and linseed for R8.83 lakhs. Ghi and hides and skins improved though slightly. Besides the articles enumerated above, there are several of which the value is considerable: as for example, railway materials and dyes of $R_{4} 4^{\prime 7}$ and $R_{2} \cdot 85$ lakhs respectively and timber of $R 6.37$ lakhs.

The exports to Nepal fell from $\mathrm{R}_{154}{ }^{\circ} 27$ to $\mathrm{Ri}_{3} 8.43$ lakhs. Among them the following are the most important:-

|  |  | 1904-05 | 1905-c6 | 1906-07 |
| :---: | :---: | :---: | :---: | :---: |
|  |  | R | R | R |
| Cotton piecegoods | - • | 57,68,943 | 60,07,841 | 52,51,947 |
| , twist and yarn | . $\cdot$ | 15,06,067 | 17,47,875 | 14,47,332 |
| Metals | - | -5,98,341 | 14,06,444 | 11,31,654 |
| Salt | - . | 11,37, 18 | 12,38,600 | 11,18,902 |
| Spices | - | 6,48,580 | 7,99,292 | 10,38,375 |
| Sugar . | - . | 5,96,666 | 7,29,602 | 7,72,27 |

Cotton piecegoods as usual head the list but with a total diminished in the year now under review. The decrease was one of 12.26 per cent in quantity and $12.5^{8}$ per cent in value. Yarns again, of which three-fourths are of foreign origin, contracted by io per cent in quantity and $17^{\circ} 2$ per cent in value. The decline in metals continues; and in $1906-07$ amounted to 1.8 per cent in quantity and 19.5 per cent in value. Salt declined from $\mathrm{R}_{12} \cdot 39$ to $11 \cdot 19$ lakhs or 9 ' 7 per cent. Spices and sugar are the only two items that showed an advance.

Sikkim and Bhatan-The trade with Sikkim grew from R8.8 to Riz lakhs, and that with Bhutan receded from $\mathrm{R}_{14} \cdot 38$ to $\mathrm{R}_{1} \mathrm{H}^{\prime} 92$ lakhs. Sikkim supplied grain to the value of $R_{3}{ }^{\prime} 77$ lakhs as against $R_{1} \cdot 12$ lakhs in the previous year, and fruits, etc., to the value of $\mathrm{R}_{1} \circ 2$ lakhs against $\mathrm{R}_{74,000 \text {; the total }}$ imports from that source amounting to $\mathrm{R}^{6} .79$ lakhs as compared with $\mathrm{R}_{4} .08$ lakhs in 1905-06. The greater part of imports from Bhutan consists of timber, and this fell away from R66 to R $5 \cdot 36$ lakhs, with fruits, etc., at RI•o6 lakhs instead of R2.76 lakhs. The total value of timber alone imported in 1905-06 was 58 per cent of the total value of imports ( $\mathrm{R}_{11} \times 35$ lakhs) this year. The exports to both countries improved somewhat. Those to Sikkim rose to $\mathrm{R}_{5} \cdot 25$ lakhs and consisted chiefly of grain RIo4 lakhs, cotton piecegoods and yarn
 The exports to Bhutan increased to R2'57 lakhs; and of these the most important were cotton piecegoods and yarn (chiefly the former ąd of foreign manufacture) with a value of $R 65,000$, silk manufactures $R 26,000$, and spices R19,000.

Tibet-Trade with Tibet has still to contend with great difficulties in the matter of communications, but there is good reason to believe that it is capable of considerable expansion. The total trade fell from R $37 \cdot 52$ to $\mathrm{R}_{35} 5^{\circ} 06$ lakhs, the net decrease being $\mathrm{R}_{2} \cdot 46$ lakhs. This net decrease was more than accounted for by that in exports alone, the imports having developed from Rig.ig to R19.53 lakhs. The major part of this decrease arose from woollen manufactures and coral, which declined from R1.88 and R2. 28 lakhs to R64.600 and R78,000 respectively. Exports fell off by about 15.28 per cent (from RI $8.33^{\text {to }}$ R $15^{\circ} 53$ lakhs), the principal articles being, as usual, cotton piecegoods with a value of $\mathrm{R}_{5}$ lakhs, and yarn with a diminished value of R14,247. Other important articles were grain $R_{2} \cdot 6_{4}$ lakhs ( 4 o per cent of which was husked rice), coral $\mathrm{R}_{7} 8,000$, woollen manufactures $R 65,000$, and metals $R 87,000$. The imports of wool decined by 18.4 per cent in quantity (from 42,741 to 34,869 cwts) and 3 per cent in value (from R113 to R10'97 lakhs). Other principal articles were: borax $\mathrm{R}_{2}+9$ lakhs, salt $\mathrm{R} \cdot 3$ lakhs, and horses, ponies, and mules R90,000.

Other States-The two most important among the remaining States are Manipur and Hill Tipperah. The trade with Manipar increased from $\mathrm{R}_{5} \cdot 29$ to RII 94 lakhs. To this increase, imports which rose from R $3^{\prime} 17$ to R8. 47 lakhs contributed most largely (the principal articles being cattle $\mathrm{R}_{4} \cdot 68$ lakhs and husked rice $\mathrm{R}_{2} \cdot 5$ lakhs); while the exports, which advanced from $\mathrm{R}_{2} \cdot 12$ to $\mathrm{R}_{3}{ }^{\prime} 47$ lakhs, consisted mainly of spices $\mathrm{R}_{1}, 85,880$, cotton piecegoods (only foreign) $\mathrm{R}_{4} 6,720$, salt $\mathrm{R}_{3} 1,826$, and oil $\mathrm{R}_{2} 6,746$. The trade with Hill Tipperah advanced by R 16,000 to R 965 lakhs. This increase was confined to imports and raised the total only to R 7.14 lakhs composed principally of timber ( $\mathrm{R}_{3} \cdot 7 \mathrm{l}$ lakhs), bamboos ( $\mathrm{R} \cdot 25$ lakhs), and raw cotton ( $\mathrm{R} 67,000$ ). The exports to this State increased from $\mathrm{R}_{2}{ }^{\circ} 47$ to $\mathrm{R}_{2} \cdot 51$ lakhs, the only considerable articles being dried fish $\mathrm{R}_{3}, 738$, tobacco $\mathrm{R}_{4}, 020$, and grain and pulse $\mathrm{R}_{29}, 101$.

## EASTERN FRONTIER

Western China-The trade with Western China really means the trade of Bhamo with Tengyueh in Yunnan. It increased from R $50^{\circ} 26$ to $\mathrm{R}_{53} 3^{\circ} 42$ lakhs. Imports showed a small decline of 8 per cent from Ri7.25 to R:7'in lakhs; while exports increased by $\mathrm{R}_{10}$ per cent from R $\mathrm{R}_{3}$.oI to $\mathrm{R}_{3} 6.3 \mathrm{I}$ lakhs, which, however, is short of the figure for $1904-05$. Among the imports the only large decline was that in raw silk, which fell away from R $5 \cdot 42$ :o R 3.47 lakhs. Opium which had risen from $R_{15}, 000$ in $1904-05$ to $R_{3} \cdot 62$ lakhs in 1905-06, dropped back to R2. 15 lakhs in the year under review. Hides of cattle improved from R2.16 to $\mathrm{R}_{4}{ }^{\prime} 8$ lakhs, orpiment from $\mathrm{RI}_{1} \cdot 2$ to $\mathrm{Rr}_{1} 49$ lakhs, animals, living, from $\mathrm{Rr}_{1} \cdot 8$ to $\mathrm{R}_{1} \cdot 85$ lakhs, and lac from $\mathrm{R} 26,700$ to $\mathrm{R} 44,900$. Of the exports, 56 per cent consisted of cotton yarn (all of Indian manufacture), and this article increased from Rig'og to R20.34 lakhs. Cotton piecegoods again showed continued development at $\mathrm{R}_{5}{ }^{\circ} \mathrm{O}$ lakhs as compared with $\mathrm{R}_{3} \cdot 8$ lakhs in the previous year. The other principal items of export were:-raw cotton $4^{1} 17$ lakhs, jadestene $1_{3} 3^{\prime}$ lakhs, provisions : $\cdot 72$ lakhs, and salt $1 \cdot 35$ lakhs. Exports of petroleum decreased by 43 per cent and fell back from R64,200 to R 36,700 .

Shan States (North and South)—These States are British territory under local chiefs; but for convenience of registration they are treated as foreign countries, and two-thirds of the trade across the Eastern statistical frontier relates to them. The trade as a whole increased by R129 lakhs in 19060\%, that is
to say, from R201.77 to R214.67 lakhs. The trade with the Northern States improved by R $7 \cdot 48$ lakhs to RIog 38 lakhs and that with the Southern States by R $5 \mathbf{F}^{\prime 2}$ lakhs to R105.29 lakhs. The trade with the Northem States consisted of R $53^{\circ} 06$ lakhs imports and $\mathrm{R}_{5} 6.3^{2}$ lakhs exports. Among the former, were letpet (pickled tea) R22.07 lakhs (against R22.5I lakhs), leaf-tea R8.84 lakhs (as against $\mathrm{R}_{10} \cdot 8$ lakhs), teak $\mathrm{R}_{6} 3$ lakhs (against $\mathrm{R}_{3} .76$ lakhs), husked rice R.2.1 lakhs (against R1.87 lakhs), and lac R2.42 lakhs (against Ri.57 lakhs). The exports consisted mainly of cotton piecegoods (almost entirely foreign) R10.37 as against R9.97 lakhs in 1905-06, yarn (mostly foreign) Ri2.68 against R9'5I lakhs in r905-06, provisions (of which seven-eighths was fish) R\%3 as against $R 8.09$ lakhs in the previous year, salt $R_{3}{ }^{112}$ lakhs (as against $R_{2}{ }^{\circ} 95$ lakhs), iron R6.47 lakhs (against R2.55 lakhs), opium Ri.06 lakhs (against R2'53 lakhs), and live animals Ri•6 lakhs (against R2 lakhs).

The trade with the Southern States consisted of $\mathrm{R}_{4} 49^{\circ} 45$ lakhs imports and $\mathrm{R}_{55} .84$ lakhs exports against $\mathrm{R}_{47}{ }^{\circ} 03$ and $\mathrm{R}_{52}{ }^{\circ} 84$ lakhs respectively in the previous year. The net increase of $R 2^{\circ} 42$ lakhs in imports was more than accounted for by the growth of lac from R 6.56 to R12.87 lakhs. Teak at R9.53 lakhs, potatoes at R2.38 lakhs, and hides at R2. 6 lakhs all showed improvement, while there were decreases in horses, ponies, and mules at R2.69 lakhs, cattle at R4.52 lakhs, and " other fruits and vegetables and nuts" at R2"97 lakhs. Among exports to the Southern States, the most important item was cotton piecegoods (mainly foreign), the increase in which from $\mathbb{R} 19^{\circ} 3^{8}$ to $\mathrm{R}_{22} \mathbf{F}_{1}$ I lakhs was in itself sufficient to account for the whole net increase. Among the other items, the following showed improvements-betelnuts with $\mathrm{R}_{5}$ lakhs instead of $\mathrm{R}_{3}$ lakhs and yarn (mostly Indian) with R2'89 lakhs in place of R2'59 lakhs. Decreases occurred in provisions (principally fish) with R4.56 lakhs, manufactured silks with $\mathrm{R}_{3} \cdot 6$ lakhs, apparel $\mathrm{R}_{\mathrm{I}}{ }^{*} 46$ lakhs, and metals $\mathrm{RI}^{\circ} 35$ lakhs, of which iron constituted Ri lakh.

North and South Siam-India's trade with North Siam has a value of R 33.5 lakhs, which is four times as great as the trade with South Siam and shows an advance of nearly $\mathrm{R}_{2}$ lakhs on the figure for the previous year. The imports declined from R20`75 to R19.5 lakhs, for while teak improved to R13.39 lakhs and cattle to $\mathrm{R}_{4} .3^{8}$ lakhs, other kinds of animals fell from $\mathrm{R}_{4} .06$ lakhs to Ri'53 lakhs. The exports increased from Rio'9 lakhs to Ris lakhs, the largest growth being in manufactured silk ( $\mathrm{R}_{2} .43$ against $\mathrm{R} \mathrm{I}^{\prime} 12$ lakhs), cotton piecegoods (almost all foreign) R2.99 lakhs, and apparel Rr.66 lakhs; while yarns (which like the piecegoods were mainly of foreign origin) showed a loss of $\mathrm{R}_{43,000}$ at RI.28 lakhs. The trade with South Siam amounted to Rio lakhs, which is about a lakh better than in 1905-06. Of the total, $\mathrm{R}_{5} 3^{2}$ lakhs represented imports consisting almost entirely of manufactured silk at R 2.96 lakhs and live animals at $R_{2} \mathbf{3}^{2}$ lakhs ; while exports showed continued development at $R_{4} .83$ lakhs, the only considerable item being (as in the case of imports) manufactured silk. with a value of $\mathrm{R} 97,000$.

Karenni-The trade with Karenni is less than R25 lakhs and shows a decline of 20 per cent on the previous year's figures. The diminished total is composed of $\mathrm{R}_{20} \mathrm{~B}_{3}$ lakhs imports and $\mathrm{R}_{4} .08$ lakhs exports. The imports consisted almost entirely of teak with a value of $\mathrm{R}^{2} 0^{\circ} 13$ lakhs; and among the exports the only item, live animals, with a reduced total of $R 1 \cdot 66$ lakhs, was considerable, while "jewellery and precious stones and pearls, unset" recoiled from its exceptional level of 1905-06 to R9,571.

The relative importance of the various articles of trade in the commerce of India with trans-frontier countries is shown below. The values are stated in thousands of rupees:

Since the total value of imports in $1906-07$ was Rio crores, the centesimal proportion borne to that total by any of the above sums may be found approximately by knocking off the three last figures. In exports however it is necessary to divide by 774 any of the sums in that section whose importance the reader wishes to establish as a percentage of the whole.

Similarly the appended statement shows again in thousands of rupees the measure in which the various provinces participated in the total of such commerce :

|  | 190203 | 190304 | 1904-05 | 1905 | 19:600 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ind and Baluchis | 75,30 | 88,47 | 1,04,90 | 1,1:,02 | 1,41,30 |
| N.-W. Frontier Province. | 2,07,59 | 2,43,78 | 2,92,77 | 2,98,56 | 3,12,99 |
| Panjab | 2,19,09 | 2,18,86 | 2,61,42 | 2,31,02 | 2,82,88 |
| United Provinces | 1,64,75 | 1,70,52 | 1,64,75 | 1,94,65 | 1,81,29 |

## COASTING TRADE

Merchandise shipped from one part of India to another appears first under exports and again under imports, so that the total of the two is approximately double the true dimensions of the single transaction. But half of the sum of the total exports and total imports under Coasting Trade would not represent even approximately the true scope of the trade, for the figures comprise such exchanges with ports in Indian Native States and Foreign Settlements as appear in Indian statistics only as imports or as exports. It has, therefore, been the practice to state in the Review the net value of the coasting trade arrived at by adding to the value of the imports into British ports from other British ports,
the sum of the imports and exports in the trade between British and non-British ports in India. The value so calculated in respect of 1906.07 is, for merchandise, $\mathrm{R} 5,223$ lakhs ( $\notin 34,820,000$ ), the increase being R $701 \cdot 8$ lakhs or $15 \%{ }^{2}$ per cent on the figures of the previous year. Food-grains represented 28.6 per cent of the total with a value of $\mathrm{R}_{\mathrm{I}, 495}$ lakhs, the increase being $\mathrm{R}_{5} 18$ lakhs. Of the total value of food-grains, rice represented $8 \mathrm{r}^{\circ} 9$ per cent and of this grain, there were greatly increased shipments from Burma to Bengal and to Eastern Bengal and Assam, while less went to Bombay than usual. The recorded exports of rice from Burma to Indian ports amounted to 813,000 tons in 1905-07 (an increase of 353,000 tons); but the discrepancy between the shipment figures and those of receipts persists. The exports of mineral oil from Burma to Indian ports increased from 55.3 to 58.5 millions of gallons. The quantity taken by Calcutta for distribution by sea to other ports decreased from 34 to 33 million gallons, the direct shipment from Burma to other provinces being-Bombay $9^{\circ} 2$ million gallons, Madras 8.9 million gallons, and Sind 2.4 million gallons. The coastal exports of gunny bags from Calcutta, mainly to Burma and Bombay, increased in value from R 158.5 lakhs to $\mathrm{R}_{196} \mathrm{~F}_{2}$ lakhs and in quantity from 58 to 64 million bags. But one of the largest shippers recently chartered a special train to carry bags for the Western markets, and if this practice be resorted to, it will make a palpable difference in the shipping figures. The expansion in the coastal shipments of Bengal coal was one of 245,000 tons, bringing the total to $2,257,000$ tons. The quantity of Indian-made cotton piecegoods shipped from the Bombay Presidency fell from $173^{\prime} 15$ to $164^{\circ} 5$ million yards and the value from R $2499^{\circ} 5$ lakhs to R246.6 lakhs, the decrease being 8.65 million yards or 5 per cent in quantity and R2.9 lakhs or 1.2 per cent in value, the increase in specific value being 4 per cent. The following figures show the quarters in which the largest contraction took place :-

Shipments from Bombay Presidency to other provinces in the last two years were :-

|  | Quantity (yards) |  | Value R |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1905.05 | 1906-07 | 1905-06 | 1906-07 |
| 'To Bengal | 35,518,006 | 39,946,898 | 57,92,990 | 62,28,886 |
| ", Sind | $119,578,585$ | 109,901,625 | 1,62,01,566 | 1,59,50,055 |
| , Madras | 2,174,949 | 1,956,617 | 4,00,641 | 3,51,073 |
| " Burma | ı1,883,8ı6 | $8,767,238$ | 19,72,531 | 15,69,957 |

## RAILWAY GOODS TRAFFIC

The increase in Railway goods traffic is a valuable index of the growth of India's total trade. The statement given below shows (an thousands) the ton-mileage of goods traffic on the principal railways in India during the last five years. They may be summarised and compared as follows :-

The total increase in the period of four years has thus been $2,86_{4}, 593,000$ ton-miles or nearly 40 per cent on the figures for 1902 . It is scarcely surprising that railways have found difficulty in keeping their rolling-stock in line with such an expansion; and indeed a comparison of the rate of additions to goods
traffic rolling-stock in the same period leaves little doubt as to the increased efficiency with which that stock is operated. The following figures show the number of goods wagons at work in India at the close of each of the last five years and the additions made in each year:-

The total increase in the period of four years is therefore 16.4 per cent (to be compared with an increase of 40 per cent in ton-mileage) and the number of ton-miles per wagon has increased from $7^{2,347}$ I to $86,899^{\circ} 5$ or by $20^{\prime} 1$ per cent.

## BANK RATES AND EXCHANGE

The bank rates in India were extraordinarily high and variable in the year under review, as may be seen from the following statement:-

| Bank of Bengal |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

A rate of 9 per cent had not been known in India since July 1898.

## PRICES

Prices-Appended is a chart illustrating graphically the index numbers covering a period of 46 years from 186 r to 1906. They represent the simple averages of the variations in Indian Rupee prices, as far as available, of 39 staple commodities imported into, exported from, and consumed in India. These variations are obtained by expressing the price of each article in each year as a percentage of the price for the year 1895 , which is represented bv $1 n 0$, and combined in the manner explained at foot of the chart.

[^8]
## FREIGHTS

Freights in India were generally lower during 1906 than they had been in the two preceding years. The weakness was contributed to by the cessation of certain abnormal demands in the Far East, although the repatriation of the Russian troops in the early part of the year afforded employment to about 75 steamers. The trade movement in the Far East which was expected to spring up after the war has hung fire, and Japanese shipping has monopolised the business to a great extent. There was a contraction in India's exports of certain kinds of produce, and it is not impossible that the comparatively profitable nature of the long-voyage carriage of case-oil from America instead of Russia tended to slackness in homeward rates. The following statement gives minimum quotations for typical rates of freight from the principal Indian ports to London in March of each of the last five years. The Calcutta ship ton is one of 50 cubic feet, while that recognised at Bumbay and Karachi is of 40 cubic feet.

| Calcutta, | Rice |  | 1903 |  | 1904 |  |  | 1905 |  |  | 1906 |  |  | 1907 |  |  |

## CONTENTS

## NOTE

All sums of money in this Review are stated in rupees and their equivalents in pounds sterling.

For 1898-99 and subsequent years a pound sterling is equivalent to RI5. The rupee is divided into sixteen annas, and the anna is, therefore, at the current rate of exchange equal to one penny.
 $4^{d}$, and a crore of rupees, which is 100 lakhs, is equal to $£ 666,666 \cdot 135 .-4 d$.

The simplest method of conversion is to multiply the number of rupees by 2 and put a decimal point to the left of the unit figure and then divide by 3 , the quotient being the sterling equivalent in pounds and decimals. If it is desired to reduce these decimal figures to shillings and $p \in n c e$, the first two decimal figures should be divided by 5 to furnish the number of shillings, and the remainder to two places divided by 4 to find the number of pence.

## OF THE

## TRADE OF INDIA

For the official year ending March 31,1908

Indra being a country where, in spite of the extension of irrigation, agri; culture continues to be largely dependent upon the rains and the people in turn dependent on agriculture, a report on her annual trade would be incomplete if it contained no reference to the past season and its crops. In this particular instance it is the more necessary because, judged by the total figures of seaborne trade and of the inport trade in particular, it might be assumed that the year under review was one of unparalleled commercial activity-a view which, however true of the first six months, would be absolutely opposed to the facts as regards the latter half of the year. The spring (rabi) harvest of 1907 had been generally indifferent, particularly in Northern India, and when the failure of the south-west monsoon occurred famine conditions declared themselves over a large area. The United Provinces in particular and the contiguous Native States, where the rainfall was less than half the normal, suffered severely, and the eastern districts of the Panjab, the northern half of the Central Provinces and parts of Bengal, Bombay, and Madras were affected in a lesser degree, the distress extending over 133,000 square miles, bearing a population of 49 millions.

The expenditure on famine relief and loss of Imperial revenue was budgetted at 46 I lakhs ( $£ 3,073,000$ ) in 1907.08 and 524 lakhs ( $£ 3,493,000$ ) in 1908-09, but large as these figures are, they afford only a partial gauge of the intensity of the famine and its effect on trade, for the rains were either excessive or in defect all over the country, and there was not a single staple crop harvested during the statistical year the outturn of which was not seriously curtailed. The effect in some cases of this shortage does not appear in the year under review, the wheat crop, for example, which provided the bulk of the foreign shipinents in 1907.08, being the exportable surplus of the 1906.07 harvest, and this also applies to cotton and oil-seeds ; but jute and rice come into commercial consideration within the statistical year in which they are reaped. Agricultural prospents were to some extent improved by good rain in December and January which saved part of the spring harvest of wheat and oil-seeds in Northern India, but the fall was generally too late to remedy the restricted extent of the original sowings.

It was more than unfortunate that the unfavourable character of the season should have declared itself just when the United States of America was passing through a great financial crisis, for not only did tiiis close a profitable outlet for Indian exports, particularly in gunnies and hides, but also caused a drain on the world's reserve of gold which completely upset the tael and dollar exchange in
the Far East and temporarily destroyed the stability of the trade with China. The market weakness incidentally revealed that India like America was suffering, though not to the same extent, from the effects of overtrading which had tempted many petty merchants and small capitalists 10 increase the volume of their business beyond prudential bounds. The bank rate rose and continued high up to the close of the year; exchange, in sympathy with the premium on gold elsewhere, fell below the parity of is $4 d$, and though imports continued to pour in, they were met by no corresponding internal demand, and stocks, particularly of piecegoods, began to accumulate rapidly, in spite of falling prices. The commercial situation when the statistical year closed was therefore in some respects unsatisfactory, but external elements of weakness having almost entirely disappeared, a return to healthy market conditions seemed to depend chiefly upon the sufficiency of the present monsoon, and it is satisfactory to be able to record here that everything points at present to its bsing abundant. If these hopes materialize, it will be found that the expansion of India's commerce has suffered only a temporary set-back. No better indication of its progressive growth and hopes for the future is to be found than in the elaborate proyrimmes of expenditure either contemplated or in course of execution to increase trade facilities at all the principal ports.

There are several other features of the year's trade which deserve mention, as they are for the most part imperfectly disclosed in the statistics. The rise in the price of all the principal food grains, and particularly of rice, continues and is not entirely attributable to seasonal adversity, though no complete solution of this interesting economic problem has yet been propounded. The great increase in the number of prospecting licenses issued during the year, particularly in the Central Provinces, indicates that the mineral wealth of the country is being more systematically exploited, and, in this connection, the fact that the great iron and steel industry at Sini, of which such sanguine hopes have been expressed, is being financed almost entirely with Indian capital is of peculiar interest.

Though industrial progress outside established grooves seems as yet to reveal more promise than performance, the advance during the year is none the less considerable, but several ventures too ambitiously or too hastily conceived have proved commercial failures.

It is in Bombay and not in Bengal that the true "swadeshi" movement has achieved the most concrete results.

The map of India prefixed to this Review is intended to illustrate the principal sources of specific products. The areas of production of the staple crops of British India, namely, rice, wheat, oil-seeds, sugarcane, tea, coffee, cotton, and jute, are indicated by hatchings-horizontal, vertical, and diagonal from right to left-in two colours, black and red, and the location of the principal coal-fields is marked with black dots. For want of data no informalion is given as regards Native States, and the districts in which the area under the selected crop is less than 10 per cent of the total cropped area have been left blank. The chief railway systems are indicated by thin black lines.

## GENERAL SUMMARY OF TRADE

In the following statement the value of the trade of India for the year ending March 31, 1908, is compared with the value of the trade in each of the preceding two years. The values are stated in rupees with equivalents in

pounds sterligg and exclude Government transactions in both merchandise and treasure.

The grand total of imports and exports combined was, therefore,
 millions sterling) in $1906-07$, the increase being one of $\mathrm{R}_{27} 7^{2}$ crores ( 18.34 millions sterling) or 8.7 per cent. This includes some $\mathrm{R}_{3^{\prime} 77}$ crores ( $2^{\prime} 5_{1}$ millions sterling) of foreign merchandise re-exported, but excludes some $R_{2} \cdot 7$ crores ( $1 \cdot 8$ millions sterling) of material imported by Government for State Railways.

Two Circular Charts have been inserted to illustrate graphically the: importance of staple articles and each group of articles under imports and exports, and to exhibit the progress made in the past twenty-five years in the volume of trade in these articles and groups. The year $1882-83$ was a nor? mal year so far as the foreign trade of India was concerned. The values have been reduced to pounds sterling at the rate of $19.5 d$ per rupee in $1882-83$, and of $16 d$ per rupee in 1907-08.

## IMPORTS

Imports contributed 98.7 per cent of the grand total increase in trade with a total value of $\mathrm{R}_{1} 62^{\prime} 68$ crores ( $108^{\circ} 4$ millions sterling) as against $\mathrm{R}_{1355^{\prime}}$ c crores ( $90^{\circ} 3$ millions sterling) in the previous year, the advance in this case being one of $\mathrm{R}_{2}{ }^{\prime} 17$ crores ( $18 \cdot 1$ millions sterling) or 20 per cent.

Imports of merchandise increased from $\mathrm{R}_{108}{ }^{\circ} 3$ crores ( $\left(\mathrm{E}_{72^{\circ} 2}\right.$ millions) to R129.86 crores ( 86.57 millions sterling). The largest class of imports is that of Articles Manufactured and Partly Manufactured, in which the total has this'year advanced to $\mathrm{R} 69^{\circ} 89$ crores ( $46^{\circ} 59$ millions sterling). The increase of R10.68 crores ( $7 \cdot 12$ millions sterling), representing about 18 per cent of the previous year's figures, was chiefly contributed by cotton manufactures (R712.5 lakhs $=£ 4,750,000$ ), woollens ( R $71^{5} 55$ lakhs $=£ 477,000$ ), apparel ( $\mathrm{R}_{47} \cdot 06$ lakhs $=6314,000$ ), and silk manufactures ( R 30.98 lakhs $=£ 206,000$ ).

Metals and manufactures thereof shewed a net increase of $75^{\circ}$ i lakhs ( $65,000,700$ ) or 33 per cent over the figures of 1906 -07. Of this sum R315 14 lakhs ( $£ 2,101,000$ ) was contributed by Metals, which had a value of R1,319.14 lakhs" ( $£ 8,794,000$ ). Railway materials increased by R304.24 lakhs , $\}(62,028,000$ ) to R72000 lakhs ( $£ 4,800,500$ ), and Machinery by R79.52 lakhs ( $£ 5^{\prime} 3^{\circ}, 000$ ) to R658.53 lakhs ( $£ 4,390,000$ ). Hardware and Cutlery also \% contributed an increase of 51.20 lakhs ( 6341,000 ).

Linder Articles of Food and Drink there was an increase of Riqur 9 lakhs ( $6.9+6,000$ ) or 9 per cent. The imports of Sugar and Salt advanced by $\mathrm{R}_{4} \delta^{\circ} \xi_{9}$ lakhs ( $£ 326,000$ ) and R!3.44 lakhs ( $£ 89,600$ ) to R922.70 lakhs ( $£ 6,151,000$ ) and RSO22 lakhs ( $£ 5: 4,700$ ) respectively. Provisions rose from R $24^{\circ} \cdot 33$ lakhs ( $£_{1}, 616,000$ ) to $\mathrm{R}_{27} 7$ lakhs ( $6_{1,8}, S_{27}, 000$ ) and wheat from RII $_{1}{ }_{3}$ glakhs ( $\left(65,900\right.$ ) to R16.63 lakhs ( $£_{110,900}$ ): shewing an increase of $R_{3} 1 \cdot 67$ lakhs ( $£ 211,000$ ) and $R_{5} \cdot 24 l_{i k} h_{5}(£ 35,000)$ respectively.

Raw materials, etc., advanced by $R 60^{\circ} 57$ lakhs ( $£ 403,800$ ) to $\mathrm{R}_{500} 39$ lakhs ( $\dot{£}_{3,}, \hat{3} 6,000$ ), due mainly to a rise of $\mathrm{R}_{4} 1^{\circ} 35$ lakhs ( $£ 275,700$ ) under Silk and ${ }_{10}{ }^{\circ} \delta$ lakhs ( $£ 71,900$ ) under coal and coke.

The imports of Oils advanced from $\mathrm{R}_{2}{ }^{\circ} 77$ crores ( 1.85 millions sterling) to $\mathrm{R}_{3} \cdot 66$ crores ( 2.44 millions sterling), Mineral Oils with a value of $\mathrm{R}_{3} \cdot{ }^{15}$ crores ( $2^{\circ} \mathrm{I}$ millions sterling) accounting for $\mathrm{R}_{7} 2^{\circ} 76$ lakhs ( $£ 485,000$ ) of the difference.

Chemicals, Drugs, Medicines, etc., advanced by $\mathrm{R}_{4} 8$ lakhs ( $£ 320,000$ ) to $\mathrm{R}_{35} 885$ lakhs ( $£ 2,392,000$ ), of which cigarettes accounted for an increase of $\mathrm{R}_{15^{\circ} 22}$ lakhs ( $£ 101,500$ ), alizarine and aniline dyes of $\mathrm{R}^{\circ} 7^{\circ}$ lakhs ( $£ 64, S 00$ ), and camphor of $R_{4}$ lakhs ( $£ 27,000$ ).

The transactions in Treasure were of extraordinary dimensions as in the previous year, though Imports of Treasure fell from R $44 \times 5 \mathrm{~S}$ crores ( 29.72 milliors sterling) to $\mathrm{R}_{4} 2^{\circ} 2 \mathrm{~S}$ crores ( $28^{\circ} 19$ millions sterling), the difference being $\mathrm{R}_{2} \cdot 30$ crores ( $1 \cdot 53$ millions sterling) or $5 \cdot 2$ per cent. There was a decrease of $\mathrm{R}_{7} 9$ 91 crores ( 5.27 millions sterling) or $45^{\circ} 5$ per cent in imports on Government account, but larger imports on private account which rose from $\mathrm{R}_{2} 7^{\circ} 2$ crotes : ( 18.13 millions sterling) to $\mathrm{R}_{3}: 82$ crores ( 21.88 millions sterling), equal to $20^{\circ} 6$ per cent of the previous year's figures.

The descriptions of gold and silver imported were in lakhs of rapees and thousands of pounds sterling :-

## EXPORTS

Exports represented 52.9 per cent of this grand total, and amounted to R182.63 crores ( 121.75 millions sterling) as against $\mathrm{R}_{1} 82^{\circ} 28$ crores ( 121.52 millions sterling) in the previous year. The increase was, therefore, one of $\mathbb{K}_{3 j}$ lakhs ( $£_{2} 33,000$ ), representing an advance of 2 per cent on the figures for . 1906-07.

The exports of Indian merchandise rose from $\mathrm{R}_{173}{ }^{\circ} \mathrm{O}$ crores ( $£ 1154$ millions) to $R_{173.42}$ crores ( 115.61 millions sterling), the increment being $R_{34}$ lakhs ( $£ 227,000$ ) or $\cdot 2$ per cent.

The only notable decrease is that of $\mathrm{R}_{5}{ }^{\prime} 3$ crores ( 3.53 millions sterling) in Class VI.-Raw Materials and Unmanufactured Articles, which represents. about 44 per cent of the total exports of Indian merchandise. The total value: in this class was R 76.23 crores ( 50.82 millions sterling) or 6.5 per cent less than, .
in the previous year. In 1906-07 Jute exports had for the first time exceeded cotton in value under equal conditions, but in the year under review, the values of raw jute fell to R 1797 crores ( 11.98 millions sterling), while those of cotton rose to R25' 70 crores ( ${ }^{1} 7^{\prime} 13$ millions sterling), as against $\mathrm{R}_{2} 6.84$ crores ( 17.89 millions sterling) and R21 ${ }^{\prime} 98$ crores ( $14^{\circ} 65$ millions sterling), respectively, in the previous year. The decrease in Jute amounted to 33 per cent on the figures for $1906 \cdot 07$, while the increase in Cotton represents an advance of nearly 17 per cent. Seeds (almost entirely oil-seeds) amounted to $\mathrm{R}_{1} 6.81$ crores ( 11.21 millions sterling), which represents $9^{\prime} 7$ per cent of the exports of Indian merchandise, and marked an advance of $\mathrm{R}_{3} \cdot 79$ crores ( $2^{\prime} 53$ millions sterling) or 29 per cent on the figures for 1906.07 . These figures of export exceed even those of 1904-05, the previous record year. Raw hides which had a value of R6.41 crores ( 4.27 millions sterling) and showed the largest single advance in $1906-07$ declined by $\mathrm{R}_{2}{ }^{\circ} 09$. crores ( $1 \cdot 39$ millions sterling) or $3^{2.6}$ per cent to $\mathrm{R}_{4} \cdot 3^{2}$ crores ( $2 \cdot 88$ millions sterling). - Raw skins also declined by R1•75 crores ( $\mathrm{I}^{\prime} 17$ millions sterling) to $\mathrm{R}_{2} \cdot 73$ crores ( 1.82 millions sterling).

Articles of Food and Drink showed an increase of R4.44 crores ( $2^{\circ} 96$ millions sterling), the total value being about $\mathrm{R}_{44} \cdot 67$ crores ( 29.78 millions sterling), as against R40.24 crores ( 26.8 millions sterling) in the previous year. Noticeable increases in this class occurred under the head of Tea, 44 lakhs
 While Wheat and Wheat-flour, which had declined to R7.84 crores ( $5^{\circ} 23$ millious sterling) in 1906 -07, rose to Rg' 14 crores ( 6.09 millions sterling), or by 17 per cent.

- The total value of Exports of Indian Articles Manufactured and Partly Manufactured rose by $\mathrm{R}_{1} \cdot 44$ crores ( 96 million sterling) or 3.8 per cent and amounted to $\mathrm{R}_{3} 9.8$ crores ( 26.2 millions sterling). Under this class Jute goods again took the first place as in the preceding two jears with a total value of $\mathrm{R}_{1} 8^{\prime} 3$ crores ( $12^{\prime} 2$ millions sterling) as against $\mathrm{R}_{15} \mathrm{~F}^{\prime} 7^{2}$ crores ( 10.48 millions sterling) in 1906.07 , equivalent to an advance 16.4 per cent. Cotton manufactures declined from $\mathrm{R}_{12} \cdot 17$ crores ( 8.11 millions sterling) to $\mathrm{R}_{10} \% 77$ crores ( $7^{\prime} 18$ millions sterling), the fall amounting to $\mathrm{Rr}^{\prime} 40$ crores ( 93 million sterling) or 115 per cent, chiefly under the head of Yarns which fell by Ri. 42 crores ( 95 million sterling) to R 8.97 crores ( 5.98 millions sterling). Piece-
 sterling), but Other Cotton Manufactures rose by $R_{3} \cdot 8$ lakhs ( $£^{25}, 000$ ) to $\mathrm{R}_{15} \cdot 61$ lakhs ( $£ 104,000$ ). The exports of Lac continue to increase, and in the past two years grew by nearly R $777^{\prime} 5$ lakhs ( $£ 5^{16,700}$ ) or 25 per cent to a total of $\mathrm{R}_{3} \cdot 88$ crores ( 2.59 millions sterling). The exports of Hides and Skins, raw and tanned, dropped from R $\mathrm{R}_{15}{ }^{\prime} 34$ crores ( $10^{\circ} 23$ millions sterling) to $\mathrm{R}_{10} 0^{\circ} 95$ crores ( $7^{\circ} 3$ millions sterling), the fall being one of $\mathrm{R}_{4} \cdot 39$ crores ( $2 \cdot 93$ millions sterling) or more than 28.6 per cent.

Chemicals, Drugs, etc., have declined by R 51.95 lakhs ( $£ 346,000$ ) or $4^{\circ} 5$ per cent from R11.56 crores ( $77^{1}$ millions sterling) to R11.04 crores ( $73^{6}$ millions sterling).

The increase in the exports of Metals and Manufactures thereof from R97. 55 lakhs $(£ 650,000)$ to Ri'il crores ( $£ 740,000$ ) is more than accounted for by an advanice of R15 lakhs ( $(100,000$ ) in the total value of Manganese Ore R85.89 lakhs ( $£ 573,000$ ).

In exports of Oils there bas been a marked rise of Ris.95 lakhs ( $\hat{t} 106,000$ ),

R10.35 lakhs ( $£ 69,000$ ) of which was in mineral oils and R5.61 lakhs ( 637,000 ) in vegetable oils. The total value amounted to $\mathrm{R} 85 \cdot 82$ lakhs ( $657^{2}, 000$ ) as against R 69.86 lakhs ( 6466,000 ) in 1906-c 7 , R 81.68 lakhs ( $65+5,000$ ) in 1905.06, and RI crore ( $£ 667,000$ ) in 1904.05.

Exports of Treasure amounted to R $54+62$ lakhs ( $£_{3}, 630,800$ ), of which
 Gold produced in Indian mines was exported to the United Kingdom to the
 1906.07. This is sent in the form of bars to London for assay and represents about 90 per cent of the exports of this metal from India. The export of silver coins, mostly Government rupees and British dollars, amounted to R199.67 lakhs ( $£ 1,33^{1}, 100$ ) mainly directed to the Straits, Cejlon, Arabia, Mauritius, and East Africa.

## RE-EXPORTS

In the Re-exports of Foreign Merchandise there has been also a rise of $R_{2} 8.24$ lakhs ( $£ 188,000$ ), or slightly over 8 per cent, bringing the total value to $\mathrm{R}_{3}{ }^{\circ} 77$ crores ' $\mathrm{E}^{2}{ }^{\prime} 5^{\prime}$ ' millions) as against $\mathrm{R}_{3} \cdot 4^{8}$ crores ( $\AA^{2} \cdot \hat{S}^{2}$ millions) in 1906.07 . The largest sirgle item in this class is as usual Cotton Manufactures (including Twist and Yarn) with a total of Ri. 8 crore ( $£ 987,000$ ), being more by $\mathrm{R}_{17}$ lakhs ( $£ 113,000$ ) than in 1906-07, by $\mathrm{R}_{7} 44$ lakhs ( $£ 49,600$ ) than in $1905 \cdot 06$, and $\mathrm{R}_{1} \mathrm{H}^{\circ} \mathrm{O}+\mathrm{l}$ lakhs ( $£ 93,600$ ) in 1904.05. In Metals and Hardware there was a fall of $\mathrm{R}_{7} \cdot 8_{3}$ lakhs ( $6_{52}, 000$ ), bringing the total value to $\mathrm{R}_{34^{\circ} 27}$ lakhs ( $£ 228,000$ ). Raw Wool has risen by $\mathrm{R}_{3} \cdot 18$ lakhs ( $£ 21,000$ ) to $\mathrm{R}_{3} 2^{\circ} 77$ lakhs ( $£ 218,000$ ), Apparel by $\mathrm{R}_{2} \cdot 36$ lakhs ( $£ 16,000$ ) to Rig lakhs ( $£ 126,000$ ), and other articles by R 20.66 lakhs ( $£ 135,000$ ) to Ri'il crore ( $£ 740,000$ ). In Oils, Provisions, Sugar there were declines of $\mathrm{R} \cdot 87$ lakh ( $£ 5,800$ ), R1•42 lakhs ( $£ 9.500$ ), and $\mathrm{R}_{4} \cdot 54$ lakhs ( $£ 30,000$ ), respectively.

## IMPORTS OF MERCHANDISE

There was an astonishing increase in the total value of imports of merchandise, the figures for $1907-08$ being 129.85 crores ( $£ 86,571,000$ ) or $21 \cdot 55$ crores ( $£ 14,366,000$ ) in advance of $1906-07$, equal to an advance of approximately 20 per cent.

The following statement compares the value of the imports in 1907.08 with the annual value of imports in the preceding four years and with the average annual value of each of the four preceding quinquennial periods :-

| 1882-83 | - |  | R | Variation, taking 1882-83 as 100 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 50,00,30,405 | +0,627,470 | 100 |
| Average | $1883.8+$ to 1887.88 |  | 55,74,22,027 | 42,324,612 | 111 |
| - " | 1888.89 to 1892.93 |  | 66,27,15,65: | 45,783,701 | 132 |
| " | 1893-94 to 1897-98 |  | 70,90,02 $5^{6} 3$ | 42,038,119 | 142 |
| 10304 | 1898-99 to 1902-03 |  | 75,13,53,955 | 50,090,264 | 150 |
| $1903-04$ | . . . . |  | 84, 82,32,930 | 56,548,862 | 169 |
| $1904-05$ | . . . |  | 96,67,82,884 | $64,452,192$ | 193 |
| $1905-06$ | . . . . |  | 103,08,40,705 | 68,722,754 | 206 |
| $1906-07$ | , - . |  | 108,30,75,818 | 72,205,055 | 216 |
| 1907-08 | $\cdots \cdot{ }^{\circ} \cdot$ |  | :29,85,63,374 | $86,570,892$ | 259 |
| Averag | 1903-04 to 1907.08 |  | $104,5+, 99,143$ | 69,699,943 | 209 |

The value of each of the seven classes in which the articles are grouped in the trade accounts was in thousands of rupees and of pounds sterling:-

|  | 1903.04 |  | 1904.05 |  | 1905-05 |  | 1906.07 |  | 1907-08 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | 6 | R | 6 | $R$ | 6 | $R$ | 6 | K | 6 |
| 1 Animals living (riostly horses) | 53,63 | 357 | 59,2S $=$ | 3.5 | 49,41 | 329 | 46,56 = | 310 | 44,10 | 294 |
| II Articles of fo:d and drink | 11,69,47 | 7,756 | 13,08,65 | 8,7:4 | $14.58,61$ | 9.724 | 15,71,53 | 10,477 | 17,13,42 | 11,423 |
| III Metals and manufactures of metals | 16,31,13 | 10,574 | 17,13,50 | 11,423 | 17,55,67 | 11,905 | 22,64, 9 | 15,095 | 30,14.30 | 20,095 |
| IV Chemicals, drugs. medicines, narcotios and dyes | 2.75,as | 1,834 | 2,50,41 | 1,869 | 2,97,27 | 1,982 | 3,10,86 | 2,0:2 | 3,58,85 | 2,392 |
| V Oils | 3,60,41 | 2,403 | 3,49,31 | 2,329 | 2,4,46 | 1,630 | 2,76,78 | 1,845 | 3,65,6t | 2,438 |
| VI Raw materials and unmanufactured articles | $3,15,92$ | 2.583 | 4,22,41 | $2 . S 16$ | 4, 1 6,13 | 3,2+1 | $4,39 \mathrm{Sa}$ | 2,932 | 5,00,40 | 3,336 |
| VII Articles manufactured and partly manufactuecd | 46,03,6S | 30,691 | 55,34,27 | 36,595 | 59,56,85 | 39.812 | 50,21,02 | 30,474 | 6,,58,95 | 46,593 |
|  |  |  | ANIM | LSS, | LIVING |  |  |  |  |  |

This head is comparatively insignificant, consisting chiefly of horses imported for remount purposes, hacks, carriage horses, polo ponies, and a few high priced thoroughbreds.

The trade in horses, imported mostly from Australia and the Persian Gulf, has steadily declined in recent years-from R $555^{\prime} 48$ lakhs ( $£ 369,800$ ) in 1904 -05 to R38.33 lakhs ( $£ 255.500$ ) in the year of report. This, it is feared, cannot be ascribed to more successful horse-breeding in India but to the increasing popularity of the motor car. Average value in $1907-08$ was $R_{4} 60\left(£_{3}\right)$ ) per head as against $\mathrm{R}_{453}\left(£ 3^{\circ}\right.$ ) in the previous year.

The trade in other animals is inconsiderable, the only noticeable item being the import from South America last year of 1,500 mules valued at 3 lakhs of rupees ( $£ 20,000$ ).

## II.-ARTICLES OF FOOD AND DRINK

The values in rupets and pounds sterling during the last three years of the principal articles in this group have been :-

| Sugar | 1905-06 |  | 1906-07 |  | 1907-08 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | £ | R | $£$ | R | $\ldots$ |
|  | 7,77,45,199 | 5,183,013 | 8,73,81,114 | 5,825,407 | 9,22.70,442 | 6,151,363 |
| Provisions | 2,38,56,185 | 1,590,412 | 2,42,33,411 | 1,615,561 | 2,74.00,093 | 1,826,673 |
| Liqusis | 2,01,78,125 | 1,345,208 | 1,85,67,601 | 1,237, $\mathrm{E}_{4}$ | 200,49.118 | 1,336,608 |

Fraits and vegetables-The total value of the trade is R15 lakhs ( $£ 100,000$ ) against R9 lakhs ( $£ 60,000$ ) in 1906-07, shewing an increase of 66 per cent. Of this increase cocoanut kernel or copra, chiefly imported from Ceylon and the Seychelles, tccounts for $\mathrm{R}_{1} \cdot 65$ lakhs ( $\mathrm{E}_{11,000 \text { ) and 'Other sorts' } \mathrm{R}_{4} \cdot 15}$ lakhs ( $£ 27,600$ ), which includes fresh fruits and vegetables.

The oversea import of fresh fruit is comparatively small, and confined to mangosteens and pine apples from the Straits and apples from South Australia, but until cold storage on a large scale is established at the larger ports the trade. is unfortunately not capable of any great expansion.

Liquors are distinguished in the accounts under the sub heads, malt liquors, spirits, and wines. In all three classes there was an increase in total values, and except in the case of malt liquors, in quantity imported also. The following statement summarises the trade of the last two years:-

In Beer the decline is one of 0.7 per cent in quantity, but there is an increase of 14 per cent in value, and an increase in specific value of 2.4 per cent. The United Kingdom did $91^{\prime} 4$ per cent of the beer trade in $1907-08$, while Germany contributed about $7 \% 7$ per cent and other foreign countries about $0^{\circ} 9$ per cent. The total receipts were $4,879,908$ gallons as compared with $4,916,294$ gallons in $1906-07$, and to these should be added the figures of production in Indian breweries amounting to $5,610,121$ gallons in 1907 as compared with $5,599,930$ gallons in the previous year, in order to arrive at an approximate estimate of the consumption of beer in India.

The factor of indigenous production is even more prominent in respect of spirits. The following statement shows the totals in gallons of all spirits including liqueurs and methylated and perfumed spirits imported from the several principal countries, and the quantity issued from distilleries in India during the last three years :-

|  |  |  | 1905-06 | 1906-07 | 1907.08 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| From United Kingdom |  |  | 827,511 | 766,686 | 815,860 |
|  |  | - | 280,702 | 256,472 | 306,473 |
| " G | Germany | - - | 197,912 | 193,575 | 210,112 |
| , | Other countries | - . | 315,367 | 271,628 | 327,847 |
|  |  | Total | 1,621,492 | 1,488,361 | 1,660,292 |
| Issued | from Indian dist | leries | 9,288,013 | 8,258,233 | 9,052,738 |

The imports were restricted in $1906-07$ owing to enhanced rates of duty under the Indian Tariff (Amendment) Act, I of 1906.

The potable spirit imported from "other countries" is chiefly Colombo arrack, rum from the Straits and Java, and gin from Holland.

The quantities of the principal descriptions of potable spirits imported were (in gallons) :-

The decline in the imports of wines, which but for interruption in 1905-06 had been going on for some years, was temporarily checked in the year under review, a quantitative increase of $5^{\circ} 4$ per cent being accompanied by a rise of 8.6 per cent in total value to $\mathrm{R}_{2} 8.6$ lakhs ( $£ 191,000$ ). The difference in percentage marks a rise of 3 per cent in the average value per gallon, which is now R8-4-1 $\frac{1}{2}$ ( $1151 \cdot 3$ ) against $\mathrm{R} 8 \cdot 0 \cdot 0^{\frac{1}{4}}$ ( $\operatorname{los} 8 \frac{1}{\frac{1}{4}} d$ ) in the previous year.

Provisions-This term as applitd to foreign merchandise covers a number of heads, and several of these are of a very comprehensive character, though of relatively small amount. Dried fruits, for instance, represent a value of R84.9 lakhs ( $£ 565,000$ ) and consist mainly of almonds and dates, but the term covers many other fruits imported in smaller quantities. Dates, the largest single item under Provisions, represent a total value of nearly $\mathrm{R}_{5} \circ 5$ lakhs ( $£ 336,000$ ) with 2 quantity of $: 49,95^{2}$ cwts, representing an advance of $44^{\circ} 4$ per cent in value and of 4.3 per cent in quantity. The specific value of the article remained the same as last year, i.e., R5 94 ol $\boldsymbol{~}^{\prime} 92$ shillings per cwt. The trade in salted fish rose in quantity to $240,043 \mathrm{cwts}$, and increased in value to R2 $\boldsymbol{q}^{1} 18$ lakhs ( $£ 181,200$ ).

The import of foreign biscuits increased from R22.78 lakhs ( $£ 151,900$ ) in 1906.07 to $\mathrm{R}_{2} 5^{\circ} \mathrm{O}$ lakhs ( $\mathrm{K}_{1} 66,800$ ) in $190 \%$-0 , and continues to compete with 'swadeshi' biscuit factories in meeting the demand, which is of comparatively recent growth, but enlarging year by year, for this class of article. Canned and bottled provisions increased by 9.5 per cent from R24.96 lakhs ( $£_{166,400 \text { ) }}$ to R27 33 lakhs ( $£ 182,200$ ), and Farinaceous foods from R26.36 lakhs ( $£ 175,800$ ) to R $30 \cdot 36$ lakhs ( $(202,400$ ) or by i5 per cent.

The comprehensive category of "Other sorts" of provisions increased to R 33.3 lakhs ( $£ 222,000$ ), which marks an increase of R1.04 lakh ( $£ 6,900$ ) or $3^{2}$ per cent, while the value of the whole class increased from R242.33 lakhs ( $£ 1,615,500$ ) to R274 lakhs ( $£ 1,826,600$ ).

Salt-The successive reductions of salt duty in India have resulted in a steady growth in consumption (save for a temporary set-back in 1905-06) as is illustrated by the table below :-

In 1907-08 the imports of salt increased in quantity by 19.4 per cent and in value by 20.1 per cent, the figures being 558,684 tons and $\bar{\AA} 80^{\circ} 21$ lakhs ( $£ 535,000$ ) as compared with 467,949 tons and R66.77 lakhs ( $£ 445,100$ ) in 190607 , and 464,53 I tons and R65.72 lakhs ( $£ 438,100$ ) in 1905-05. This seems to point to the abandonment of the boycott which had been maintained with some success for the preceding two years. The price of Liverpool salt $e x$-ware-house in Calcutta was R63 per 100 maunds ( $8,229 \mathrm{lbs}$ ) in April 1907, rose to R 80 in May, gradually receded to $R_{50}$ in August, and remained at that figure at the close of the financial year.

The following table shows the quantities of salt imported from each foreign country during the last three years :-

There was a considerable decline ( 23,590 tons or $10^{\prime} 7$ per cent) in the imports of Liverpool salt to be set off against larger imports from Spain. Germany also improved its position, but the most remarkable increase is in the figures for Aden and Arabia, which together were $69^{\circ} 4$ per cent larger than in 1906.07 , and but slightly below the figures for $1905-06$. There was also a larger import from Egypt, now a manufacturing country and not merely an entrepdt, where the Government monopoly has recently been abolished.

Spices-The quantity of spices imported into India in 1907.08 shewed an insignificant increase from $128,156,418 \mathrm{lbs}$ to $128,863,048 \mathrm{lbs}$, but there was an increase in value from R144 lakhs ( $£ 960,000$ ) to R156 lakhs ( $f_{1}, 040,000$ ), representing a rise in specific value of 8 per cent. Betelnuts did not occupy so prominent a share of these imports as in the previous year, there being a decline in quantity from $53,45^{2}$ tons to 50,687 tons and in value from 115.35 lakhs ( $£ 769,000$ ) to ${ }_{106}{ }^{1} 3$ lakhs ( $£ 707,500$ ). The Straits Settlements contributed 87 per cent of the total, and of the receiving ports Calcutta took 61 and Madras nearly 23 per cent. There was a large increase in the imports of Zanzibar cloves amounting to 54 per cent in quantity from 1,829 tons to 2,814 tons and 59.8 per cent in value from $\mathrm{R}_{15}{ }^{\circ} 29$ lakhs ( $£ 101,900$ ) to $\mathrm{R}_{24} 4^{\circ} 4$ lakhs ( $£ 162,900$ ), with a rise of 4 per cent in specific value despite an exceptional crop in the two islands.

Other spices which have shown marked increases are pepper and ginger. The former has risen from $1,06 \mathrm{f}, 826 \mathrm{lbs}$, valued at $\mathrm{R}_{4}: 20$ lakhs ( $£ 28,000$ ), to $3,785,973 \mathrm{lbs}$, valued at $\mathrm{R}_{10}{ }^{\circ} 34$ lakhs ( $\mathcal{f} 68,900$ ), the increased percentages being 2566 and 146 respectively. The specific value has, therefore, declined by $31^{1}$ i
 to $2,052,786 \mathrm{lbs}$, valued at $\mathrm{R}_{3} \cdot 77$ lakhs ( $£_{2} 2,100$ ), both the quantity and value having more than doubled those of the previous year.

Sugar-The world's sugar trade during the twelve months under review was, on the whole, uneventful, and distinguished by the absence of any great fluctuations of prices. There were, however, several disquieting features which deserve record. The year opened with a limited demand for sugar in the United Kingdom owing to the conviction of refiners that the import duties upon the article would be abolished or reduced, but prices began to improve when the appearance of the Budget negatived these fears, and it became evident that the world's consumption was going to exceed expectations and the but slightly increased sowings of beet on the Continent were not sufficient to provide for all the requirements of the campaign. At the end of April the price for first products beet 88 per cent analysis f . o. b. Hamburg had stiffened to $9 s{ }_{5 d} d$, and in May the rate had further advanced to ros. $2 \frac{1}{4} d$ owing to unfavourable season reports from all the beet growing countries of the Continent except Austria and the prospects of shortage of supplies for refineries in the United States of America and this market stability was maintained until the end of September.

In October-November a spell of weather favourable to the Continental beet crop brought prices down again to $9 s 2 \frac{1}{4} d$, but from this point there was a partial recovery as it became clearer that the beet production of the Continent would be some 200,000 tons less than that of the previous campaign, and the year 1907 closed with beet at $9511 \frac{1}{2} d$ per cwt. The new tariff opportunely attracted to Canada large guantities of sugar which the markets of the United Kingdom and the United States were unable to absorb owing to the financial crisis. Meanwhile it had been agreed by the parties to the Brussels Convention that His Majesty's Government should be exempted with effect from September ist, 1908, from the obligation to enforce the penal clauses against the imports of bounty-fed sugar, a request which had at one time created apprebensions that the Convention would not be renewed, while the adhesion of Russia was'secured on terms which are generally regarded as satisfactory, her exports between September 1st, 1907, and Sëptember ist, 1909, being limited by protocol to 300,000 tons, and to 200,000 tons thereafter, subject to a maximum of $1,000,000$ tons during the currency of the Act of 1902 and Additional Act of 1907.

The prospects of the Cuban cane crop dominated the market in the early months of the calendar year, and as the effects of the autumn drought there became apparent, estimates of the total production had to be seriously curtailed, and with renewed reports of increased beet requirements in America, a marked advance in prices occurred in March, and the closing price for 88 per cent prompt beet f. o. b. Hamburg, was ins $4 d$ as compared with $9 s 3 d$ twelve months earlier.

Mr. F. O. Licht's estimates of the supply of beet and cane for the current campaign (ending August $31,1,108$ ), which includes the stocks carried over from the previous year, are $6,575,000$ tons and $5,227,500$ tons respectively, but the latter figures do not include the total production of India, but only her exportable surplus which is given as 15,000 tons only. The total production of potential sugar in India-from cane and palm-has been estimated at $5,000,000$ tons, but it is doubtful whether this represents on a liberal estimate more than $\mathrm{I}, 000,000$ tons commercially a available. Recent experience has confirmed Mr. Nöel Paton's estimate that the outturn of raw sugar per acre under cane in India does not exceed 1.25 tons, as compared with 2 tons in Cuba, 3.44 tons in Java, and 4.02 tons in Hawaii. It is remarkable that in a cane-growing country like India the price of imported beet should continue to dominate the market, even when the imports of cane sugar continue to advance at its expense and represent in the year under review no less than $92^{\prime \prime}$ i per cent of the total. As a producer, it would seem that India is losing rather than gaining ground. She is far behind all other cane-growing countries in acreage outturn, and unless this is improved the erection of more factories for the scientific crushing of cane to supersede the wasteful and primitive methods of manufacture from gur will not be sufficient to prevent increased competition on the part of imported sugar, and particularly of cane sugar, from the adjacent markets of Java and Mauritius. This is clearly illustrated in the table below, which shews the arrivals of cane and beet sugar in each of the last five years, though it must be remembered that the countries of shipment are not in all cases identical with the country of production and refinery :-

The imports of sugar of both kinds together expanded by 314,200 cwts in quantity and R60'91 lakhs ( $£ 406,000$ ) in value. This represents an increase
of 3.2 per cent in quantity and 7.4 per cent in value with a net increase of 4 per cent in specific value.

In cane sugar the increase was one of $3,323,993 \mathrm{cwts}$ or $56 \cdot 1$ per cent in quantity and $\mathrm{R}_{31} 7^{\circ} 4^{2}$ lakhs ( $£_{2,116,500}$ ) or $65^{\circ} 3$ per cent in value, but the specific value increased by 6 per cent only.

In beet sugar the decrease amounted to $3,009,774 \mathrm{cwts}$ or $79^{\circ} 1$ per cent in quantity and $\mathrm{R}_{25} 5^{\circ} 57$ lakhs ( $£ 1,710,500$ ) or 77.3 per cent in total value, the rise in specific value being 8.6 per cent.

The imports from Java of refined sugar were more than double the record quantity received in $1906-07$, and from this source came 62.7 per cent of the entire arrivals, much of which would have in the ordinary course been earmarked for consumption in the United States of America. Mauritius accounted for 274 per cent, as compared with $24^{6} 6$ per cent in the previous year. The shipments from the Straits consisted almost entirely of accumulations of China sugar.

The fall in the imports of beet was to a large extent accounted for by the shortage of crops in Germany and Austria-Hungary, particularly the former, whose share declined from $21^{\circ} 7$ to 82 per cent of the total. Austria-Hungary imported nearly a million cwts less than in 1906-07, and her share fell from 17.53 to $7^{\prime} 2$ per cent.

The Indian sugar crop which came into commercial consideration during the statistical year was that harvested in 190\%-08, and it may be of interest to compare the estimated acreage and production with that of the previous five years according to the annual forecasts. The area increased, but owing to failure of rain, all but the irrigated crops suffered severely, and the outturn which, it should be remembered, represents $g u r$ (molasses) and not refined sugar was 14 per cent lower than in 1906-o?.

| 1902-03 |  | - |  |  |  | Acres $2,207,829$ | Cwts $38,135,680$ |

| 1906-07 | , - | . | - | . | . | 2,351,800 | 44,106,000 |
| 1907-08 | $\cdot \quad \cdot$ | - | - | - | - | 2,620,700 | 41,038,000 |

The prices of beet and Java sugar at Bombay, Karachi, and Calcutta at the beginning of April and November 1907, January and April 1908, were as follows:-

The monthly arrivals in India in the last twelve months of cane and beet (quantities and values) and the average values were as follows:

Tea-The imports of foreign tea, which includes tea from Ceylon, increased in quantity by $45^{\circ} 8$ per cent to $3,910,714 \mathrm{lbs}$ and in value by 40.8 per cent to R $22^{\prime}{ }^{7}$ lakhs ( $\oint_{151,500}$ ). The imports from the United Kingdom increased from 18,752 to $66,394 \mathrm{lbs}$.

The average value of the imported tea declined by about 3 per cent to annas 9 pies $4\left(9_{3}^{\frac{1}{3}} l\right)$ per lb . which is yet a higher price than the general quality of the imports would seem to warrant. In teas from Ceylon the advance of price - from 6 annas ( $6 d$ ) to $7 \frac{1}{2}$ annas ( $7 \frac{1}{2} d$ ) per lb is noticeable, but for China teas, the average rate fell by nearly 8.4 per cent to annas 12 (1s) per lb. The imports from Ceylon increased by $608,8_{31}$ lbs or about 75 per cent to $\mathbf{1}, 421,700 \mathrm{lbs}$, while black tea from China increased by 165.8 per cent to $404,368 \mathrm{lbs}$, and green tea by 22.4 per cent to $1,116,800 \mathrm{lbs}$. Estimates of re-exportation must be taken with some reserve, for it is known that, more especially on the land routes, foreign tea and Indian tea are not always accurately distinguished. Subject to this reservation it is estimated that $991,305 \mathrm{lbs}$ were re-exported by sea and $461,104 \mathrm{lbs}$ by land, making a total of $1,45^{2,409} \mathrm{lbs}$, of which 89 per cent was black tea. This represents $22^{\prime} 6$ per cent of the imports by sea and land. On the average of the last five years it would appear that as much as $4,526,000 \mathrm{lbs}$ of foreign tea are yearly retained for consumption in India.

## III.-METALS AND MANUFACTURES OF METALS

The imports of Hardware and Cutlery represent 10 . 5 per cent of the total imports of metals and manufactures of metals. From the following statement it will appear that they have increased in value by $\mathrm{R}_{5} \cdot 19$ lakhs ( $£ 341,300$ ) or $19^{\circ} 3$ per cent in the last year:-

| Cutiery | 14,05,12S | 93,675 | 14,05,040 | 93, $\mathrm{SGO}_{9}$ | 1S,29,6a7 | 121,975 |
| Agricultural implements | 8,29,758 | 55,317 | 10,55,914 | 70,304 | 13,27,478 | 88,498 |
| Other implements and tools | 13,24,443 | 88,295 | 16,56,825 | 110,455 | 19,53,151 | 130,210 |
| Enamelled ironware | 13,23.659 | 88,2.46 | 18,78,959 | 135,26.4 | 24,48,803 | 163,254 |
| Sewing machines | 10,56,095 | 72,406 | 11,79,722 | 78,64 8 | 11,43,342 | 76,223 |
| Unspecified hardware | 1,66,88,216 | 1,112,548 | .03,55.593 | 1,290,373 | 2,29,52,162 | 3,530,144 |
| Total. | 2,26,57,329 | 1,510,488 | 2,65,35,058 | 1,769,003 | 3,16,54,563 | 2,110,304 |

Enamelledironware maintains the premier place among the specific classes with an increase of 30.3 per cent over the figures of the previous year, and its expansion has peculiar interest as marking the extent to which the high prices of copper and brass have led the common people to replace their distinctive domestic utensils with this class of imports. Of this trade Germany is credited with 60.7 per cent as against 68 per cent in 1906-07, and Austria with $29^{\prime} 7$ per cent.

The value of imports of catlery increased by $R_{4} \cdot 21$ lakhs ( $£ 28,100$ ) or by about 30 per cent, and of Agricultural implements by R2.71 lakhs ( $£ 18,100$ ) or by $25^{\circ} 7$ per cent, but the latter is a market capable of almost indefinite expansion. The value of unspecified hardware increased by R $_{35}{ }^{\prime} 96$ lakhs ( $£ 239,700$ ) or by 18.6 per cent, and this head covers Lampware which stood at R26.88 lakhs ( $£ 179,200$ ), an increase of $R_{3}{ }_{3}$ lakhs ( $£ 22,000$ ) or of 14 per cent. The expansion in this item points to eventual substitution of mineral for vegetable illuminants by the common people.

In the hardware and cutlery trade the share of the United Kingdom, taken as a whole, declined from 65.9 per cent to 62.8 per cent, though it showed an increase in value of $R_{23} \cdot 97$ lakhs ( $£ 159,800$ ). The share of Germany increased by $R_{15} 83$ lakhs ( $£ 105,500$ ) or by $37^{\circ} 3$ per cent, and now represents 18.4 per
cent of the total. Greater accuracy has been attained in classification of goods as to country of origin, but it is possible that she ought to have been credited with some of the shipments from Belgium. The two countries conjointly increased their total by some R17.62 lakhs ( $£ 157,500$ ) and now hold 23.8 per cent of the trade as against 21.8 per cent in the previous year. Austria-Hungary representing $5^{\prime}$ I per cent of the whole increased by $\mathrm{R}_{3} \cdot 76$ lakhs ( $£ 25,000$ ) or $29 \cdot 8$ per cent, but Russia's share as for the last three years has been practically negligible.

The imports of Metals represent 10.2 per cent of the total value of imported merchandise. In 1907-08 the quantity increased from 547,629 tons to 648,062 tons, and the total value rose from $R_{1,004}$ lakhs ( $£ 6,690,000$ ) to Rr,319 lakts ( $£ 8,793,000$ ). The quantitative increase amounts to 18.3 per cent and the increase in total value and in specific value to $31^{\circ} 4$ and in per cent respectively. That such an advance should be accompanied by an increased demand in so large and composite an item of trade is perhaps one of the most striking indications which the year's statistics provide of India's economic development.

Brass is in increasing demand, and the total imports in 1907-08 amounted to 21,733 cwts valued at R12.96 lakhs ( $£ 86,400$ ), against 11,138 cwts valued at $\mathrm{R}_{7}{ }^{5} 6$ lakhs ( $£ 50,400$ ) in the previous year. The increase in quantity was as much as $95^{\circ} 1$ per cent, while the specific value declined by 12 per cent in sympathy no doubt with the fall in copper values during the year.

Copper-Not since 1887-88, when the Société des Metaux had temporarily cornered the world market, was the price of copper so high as at the beginning of the year under review, and this was chiefly due to the manipulation of powerful operators in America who succeeded by increasing the output of the mines and offering diminishing quantities for sale to create the impression that consumption was outstripping production. When the accumulation of an enormous unsold stock was disclosed at a time of great monetary stringency, the effect upon prices was sensational, and the year, which had opened with Chili bars at $£ 106-10$ per ton, closed with a quotation of $£ 60-15$.

The Indian demand for the metal is comparatively small, in fact annually less than $\frac{1}{20}$ th of the world's estimated production. The advance recorded in the imports of the year under review should be attributed to the extending use of electricity in India rather than to any intensification of the demand for the metal for domestic utensils which is peculiarly sensitive to the effects of seasonal adversity.

Wrought copper represents 82 per cent of the whole copper imports. It increased in quantity by $3 r^{\circ} x$ per cent and in value by $3 r^{\circ} 6$ per cent, the rise in specific value being only 0.2 per cent. The actual receipts amount ed to 258,897 cwits and Rizoo6 lakhs ( $\mathfrak{f}_{1,13} 3,700$ ) as compared with $197,416 \mathrm{cwts}$ and R129.24 lakhs ( $£ 861,600$ ) in the previous year. The imperts of unwrought copper came to $55,759 \mathrm{cwts}$ and $\mathrm{R}_{35,41,784 \text { ( } £ 236,119 \text { )-an increase of } 324}$ per cent in quantity and 279 per cent in value, the average value being $\mathrm{R} 6_{3} .52$ ( $£ 4 \cdot 4 \cdot 8 \frac{1}{4}$ ) against R 70.97 ( $£ 4 \cdot 14 \cdot 7 \frac{7}{3}$ ) in $1906 \cdot 07$. The bulk of the shipments was received in the latter part of the year when the collapse of prices attracted Indian buyers, and the imports from April 1908 onwards have continued on an unprecedentedly large scale.

India's potentialities as a producer of copper are yet to be seen. Prospecting operations are in progress in Singbhum (Bengal), and diamond drilling has proved the persistence of the copper lodes to depths over r,ooo feet, but it is stil!
doubtful if their richness and thickness are sufficient throughout to warrant the capital outlay necessary for systematic mining.

Iron and Steel-Up to the time of the crisis in October, activity in the iron and steel industries of the world had been remarkably well maintained. The three countries which control the output and distribution of these metals are the United States, Germany, and Great Britain, and for reasons which it is unnecessary to detail, the price of Cleveland warrants has for upwards of thirty years been recognised as the barometer of the trade. The rates per ton of Cleveland pig iron No. 3 during the twelve months under review are therefore worth examining and given below:-

The early part of the year was marked by a sustained American and Continental demand, but the fall in values which began in July gave some premonition of prospective weakness, and though the depletion of stocks continued long after the crash, this was only in consequence of prior contracts entered into, for there were general indications of restricted future demand in all the great industries which require these metals-particularly in shipbuilding.

America endeavoured to meet the situation by greatly reducing her output, but the German Steel Syndicate declined to admit the existence of any serious depression, and her proportionate share of the world's production of pig iron in 1907.08 is therefore much higher than before.

The following statement gives the total values of the Imports of iron and steel into India distinctly and conjointly in each of the last five years:-

|  | Iron | Steel | Total |
| :---: | :---: | :---: | :---: |
|  | R E | R E | $L$ |
| 903-0 | 3,38,07, $892=2,253,859$ | ,62,10,257 $=1,747,350$ | 00,18,149 $=4,001,209$ |
| 1904-05 | 3,78,51,121 2,523,408 | 2,34,03,379 1,560,225 | 6,12,54,500 4,083,633 |
| 1905-06 | 3,40,76,91I 2,271,794 | 3,23,62,181 2,157,479 | 6,64,39,092 4,429,273 |
| 1906-07 | 4,31,83,326 $\quad 2,878,889$ | 3,24,98,703 $\quad 2,166,580$ | 7,56,82,029 5,045,468 |
| 1907-08 | 4,96,68,718 $\quad 3,311,248$ | 4,78,47,14: 3,189,809 | 9,75,15,859 6,501,057 |

The imports of iron increased by R 64.85 lakhs ( $£ 432,300$ ) or by over 15 per cent, and of steel by $\operatorname{Ri} 53^{\circ} 48$ lakhs ( $£ \mathbf{1}, 023,200$ ) or by $46^{\circ} 9$ per cent. The share of iron has been $50^{\circ} 9$ per cent, and that of steel $49^{\circ}$ I per cent, of the total trade.

The Indian market was generally steady and demand well maintained to the very close of the year, though the easier prices prevailing in Europe are said to have encouraged latterly some speculative buying. The price of iron bars (Swedish rolled) in Calcutta in April 1907 was R888-0 (iis 4 d) per cwt, and the usual trade depression of the monsoon months was extended until December when the rate rose from $\mathrm{R}_{7-12-0}$ to $8-6-0$ ( $1054 d$ to $1152 d$ ) and in January to Rg-8-o ( $1258 d$ ), but there was some weakening in March, and the closing price for the year was R9 (12s).

From the statement below it will be seen that the arrivals from the United Kingdom increased by 13,017 tons or 3.9 per cent and now represent $56^{\circ} 3$ per cent of the total quantity imported, as compared with $6_{3} \cdot 8$ per cent in $1906 \% \%$. Her share in the total value was $6_{3} \cdot 2$ per cent or R6i $7 \cdot 08$ lakhs ( $£ 4,113,900$ ) as against $70^{\circ} 5$ per cent or $534^{\circ 24}$ lakhs ( $£ 3,561,600$ ) in $1906-07$. In iron sḥe
decreased her shipments by 1,236 tons or about 0.6 per cent, but in steel she increased her shipments by 14,253 tons or $11 \cdot 5$ per cent, while Germany and Belgium increased largely in both-in iron by 15,810 tons and in steel by 37,430 tons.

The galvanised sheets and plates shipped from Great Britain decreased by $\mathbf{1}, 574$ tons. In this class the continent of Europe scarcely competes, but in plain sheets and plates Germany and Belgium increased by 7,961 tons, and the United Kingdom by 1,648 tons. The imports of tinned plates increased by $42^{\circ} 8$ per cent in quantity and by $47^{\circ} 6$ per cent in value which stood at R41 ${ }^{\circ} 8$ lakhs ( $£_{2} 77,200$ ), the specific value rising by 3.4 per cent. In beams, pillars, girders, and bridgework the imports from the United Kingdom increased by 4,565 tons and in respect of angle, channel, and spring her shipments were larger than those of Germany and Belgium by 4,144 tons. Imports of pipes and tubes declined by 14.8 per cent in quantity, but increased by 6.2 per cent in value. The total imports of pipes and tubes were $R_{54} .37$ lakhs ( $£ 362,500$ ), of which the United Kingdom contributed $R_{4} 6 \cdot 25$ lakhs ( $£ 308,300$ ), Belgium R2. 34 lakhs ( $£ 15,600$ ), and the United States R $5 \cdot 35$ lakhs $(£ 35,600)$.

The receipts (values orly) of iron and steel in the six maritime provinces have been as follows:-

|  | 1906.07 |  |  |  | 1907-08 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Bengal imported $\mathrm{R}_{4} 6^{\prime \prime} 98$ lakhs ( $£ 3{ }_{3} 13,000$ ) under iron and $\mathrm{R}_{29} 47$ lakhs ( $£ 196,000$ ) under steel more than in 1906.07 . Bombay shows no advance under iron, but the import of steel rose by R28.51 lakhs ( $6,190,000$ ). Sind also imported $\mathrm{R}_{1} 6 .{ }_{3} 2$ lakhs ( $£ 108,700$ ) of steel more than in the previous year. The imports of steel into. Burma also improved by R68.02 lakhs ( $£+53,500$ ). Madras imported iron worth R15:57 lakhs ( $£ 103,800$ ) more than in $: 906-07$.

Lead was, like most other metals, affected by the American crisis, and the London rate for spot foreign lead, which had risen to $£ 19-12-6$ in April 1907 and $£_{21}$ in October, fell to $£ 18-1000$ in November, $£ 14 \cdot 10-0$ in December, and at
the close of the official year was quoted no higher than $£ 13.15$ per ton. Indian consumption was considerably extended without quite reaching the level of $1905-06$; the imports increased from $102,455 \mathrm{cwts}$ and $\mathrm{R}_{15} 8$ lakhs ( $£ 105,000$ ) to
 in quantity and 29.6 per cent in value, the average price per cwt having risen
 The United Kingdom supplied sheets for tea chests to the value of R9.5r lakhs ( $£ 63,400$ ) as compared with $\mathrm{R}_{7} \cdot 8$ lakhs ( $£ 52,000$ ) in the previous year, while the imports in this class from other countries fell from Rg6,600 ( $£ 6,440$ ) in $1905-07$ to R $_{4}, 800$ ( $£ 5,650$ ) in $1907 \circ 08$, the explanation being that while the

 to R15-12-10 ( $\mathrm{f}_{\mathrm{I}-\mathrm{I}-\mathrm{I} \text {.) per cwit. }}$

Tin is used in certain industries that are now exceptionally active : but the price of tin is, apart from speculation, subject to more violent fluctuations than that of copper for the total volume of production and consumption is smaller and a comparatively slight increase or decrease in either has a proportionately greater influence. In May 1907 the price per ton in London for Straits tin was about $£ 191$, and in July it was just short of $£ 200$, but in August a steady decline set in; and from $£_{158}$ in October to $£_{134}$ in December, bottom was eventually touched with $£ 118$ in January. Again there was a recovery, and in the last month of the official year the price quoted was $\mathfrak{E} 34$. Bolivia is coming into prominence as a new source of the metal, but the limit of production seems to have been reached in Malaya whence India takes most of her supplies. Her imports rose from $20,33^{6}$ cwts and R29.44 lakhs ( $£ 196,000$ ) to $3^{2,450}$ cwts and $\mathrm{R}_{43^{\circ} 54}$ lakhs ( $£ 290,300$ ), the increase being $59^{\circ} 5$ per cent in quantity and 48 per cent in value, the specific value having declined by 7.3 per cent only. The imports of unwrought tin from the Straits amounted to 28,819 cwts valued at $\mathrm{R}_{3} 8,72,3^{16}$ ( $£_{258,15.1}$ ), as against ${ }^{17,485}$ cwts and $R_{25} 67$ lakhs ( $£ 171,000$ ) in 1906 -07.

Machinery and millw orks-The total of the various classes of machinery imported into India in the last three years has been (in thousands of rupees and of pounds sterling) :-

|  |  | 1905-06 |  | 1906.07 |  | 1907.08 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | R | 6 | R | £ | R | $\ldots$ |
| Textile | - • | 2,48,98 $=$ | ,660 | 2,27,45 | 1,516 | 2,63,29 | 1,755 |
| Steam-engin | and parts | 1,00,34 | 669 | 1,31,13 | 874 | 1,37,73 | 918 |
| Electrical |  | 23,78 | 158 | 27,04 | 180 | 29,71 | 198 |
| Mining |  | 7,46 | 50 | 6,2 1 | 42 | 7,76 | 52 |
| Other sorts |  | 1,12,00 | 747 | 1,87,17 | 1,248 | 2,20,04 | 1,467 |
| Total | - - | 4,92,56 | 3,284 | 5,79,00 | 3,860 | 6,58,53 | 4,390 |

The steady increase under all heads emphasises the growing industrial activities of the country. The figures for $1907-08$ mark a total advance of $\mathrm{R}_{79}{ }^{\circ} 53$ lakhs ( $£ 53^{\circ}, 200$ ) equivalent to $13^{\prime} 7$ per cent on the figures of the previous year. Bombay continues the premier port of import, with a share of $44^{\prime} 7$ per cent and an increase of $\mathrm{R}_{3} 6_{3}$ lakhs ( $£ 242,000$ ), chiefly under Textile machinery. In Bengal the features of the year were increased demand for steam engines for mill work (particularly jute mills), pumping, and mining machinery, and in Madras there were marked increases under electrical and textile heads.

The values of imports into the five principal maritime provinces (in thousands of rupees and of pounds sterling) and the percentage of total imports during the year were as follows:-

|  |  | $R$ | $£$ | Per cent |
| :---: | :---: | :---: | :---: | :---: |
| Bombay | - $\quad$ r | 2,94,19 | 1,961 | 447 |
| Bengal | - - | 2,65,95 | 1,773 | $40 \cdot 4$ |
| Madras | . . | 44,23 | 295 | 67 |
| Burma | - | 37,39 | 249 | 57 |
| Sind | - • | 14,99 | 100 | $2 \cdot 3$ |

Railway Material-The progressive expansion in the imports of railway material continues, and the figures have again attained the highest level on record. In the last five years they have been as follows (in lakhs of rupees and thousands of pounds sterling) :-

| 1903.04 | 1904.05 | $\cdot 1905-06$ | 1906.07 | 1907.08 |
| :---: | :---: | :---: | :---: | :---: |
| $563.70(£ 3,758)$ | $561.54(£ 3,744)$ | $673.89(£ 4,493)$ | $849.29(£ 5,662)$ | $988.74(£ 6,592)$ |

The increase in the twelve months under review is equivalent to 16.4 per cent. These figures include rolling stock and comprise imports for private lines (R72008 lakhs $=£ 4,800,500$ against R $_{4} 15 \cdot 84$ lakhs $=£ 2,772,200$ in 1906.07) and for State Railways (R268.66 lakhs $=£ \mathrm{I}, 79 \mathrm{I}, 100$ against R433.45 lakhs $=$ $£^{2}, 889,600$ in $1906-07$ ). Detailed comparisons with the totals of previous years are vitiated by the transfer of railway administrations from time to time from one to another class. It may be noted that during the twelve months $985^{\circ} 16$ miles of railway were opened, while $2,457^{\circ} 16$ miles were under construction or sanctioned on the 3ist March 1908. On the same date the total length of line open in India was $30,286 \cdot 65$ miles.

Chemicals-The year was on the whole one of continued high values in the chemical trade, and the total value of the imports into India in 1907.08 was R79.3 lakhs ( $£ 528,600$ ) as against R68.7 lakhs ( $£ 458,400$ ) in 1906-07. Bleaching materials rose to $\mathrm{R}_{3}{ }^{\circ} 5^{6}$ lakhs ( $£_{2} 3,700$ ) as compared with $\mathrm{R}_{3} \cdot 39$ lakhs ( $£ 22,600$ ) in $1906-07$, and Disinfectants to R 3.97 lakhs ( $£ 26,500$ ) as against $R 2$ '75 lakhs ( $£ 18,300$ ) in the previous year. Caustic Soda advanced from R 7 O3 lakhs ( $£ 46,900$ ) to $R 8.94$ lakhs ( $£ 59,600$ ) to meet the growing demands of match and soap factories. Bicarbonate of Soda also improved from $R_{4}{ }^{\circ} 28$ lakhs $\left(£^{28,500)}\right.$ to $R_{5} \cdot 15$ lakhs ( $£ 34,300$ ), while Soda, other sorts, chiefly for washing clothes on account of its greater cheapness than Fuller's eartl (Sajimati), showed a remarkable increase from R1'18 lakh ( $£ 7,900$ ) to R6.53 lakhs ( $£ 43,500$ ), of which Bengal took R 5.49 lakhs ( $£ 36,600$ ). The comprehensive heading Other Sorts this year represents 37.5 per cent of the total in place of 43 per cent in 1906-07.

Drugs and Medicines.-The year under review opened with comparatively high prices in the drug trade generally, but there was a marked fall in values in the last six months. The total value of the imports of Drugs and Medicines into India advanced by 16.4 per cent, that is to say, from $\mathrm{R}_{7} 8.06$ lakhs ( $£ 520,400$ ), which is the largest total previously recorded in any one year, to Rgo'92 lakhs ( $£ 606,100$ ).

The quantity of camphor imported rose from $851,049 \mathrm{lbs}$ to $1,191,92 \mathrm{lbs}$ or by 40 per cent, but the value rose only from $R_{22} 99$ lakhs ( $£ 153,300$ ) to $\mathrm{R}_{27}{ }^{\circ} 05$ lakhs ( $£ 180,300$ ) or $17^{\circ} 7$ per cent, there being a decline of $16^{\circ} 2$ per cent in specific value, due chiefly to the menace of the synthetic substitute, but in part also to increased production not only in Formosa but also in Southern China. What further headway will be made by syuthetic camphor, most of which has
hitherto been absorbed by manufacturers of celluloid, to a great extent depends upon the level of prices: it can scarcely compete with the natural product if these further decline. So far as is known there have been no imports into Calcutta or Madras as yet of synthetic camphor, and though the first shipments to Bombay from Germany mysteriously came vid Singapore, the market professed no diffculty in distinguishing it from the natural product.

The total value of Quinine imported in the year under review rose from R6. 28 lakhs ( $£ 4 \mathrm{t}, 900$ ) to R $7 \cdot 2 \mathrm{I}$ lakhs ( $£ 48,100$ ) or by $14^{\circ} 8$ per cent, while a slightly higher quantitative advance of $15^{-2}$ per cent was recorded, bringing the total to $82,079 \mathrm{lbs}$. The figures for production of quinine and quinine bark in India during the past six years have been as follows :-

| Production of bark | Sulphate of Quinine <br> manufactured in <br> Bengal Government factory | Sulphate of Quinine manu- <br> factured in Madras <br> (includes manufacture from <br> imported Java bark) |  |
| :---: | :---: | :---: | :---: |
| $1902-03$ | lbs | $1,440,397$ | lbs |

## Proprietary and Patent Medicines have increased from Rif\%4 lakhs

 ( $£ 116,000$ ) to $\mathrm{R}_{18} 88_{3}$ lakhs ( $£ 125,500$ ). Other sorts have also risen from R20,83 lakhs ( $£_{13} 8,900$ ) to $\mathrm{R}_{2} 5^{\prime} 85$ lakhs ( $£^{172,300 \text { ). }}$Tobacco-The decline, which was chronicled last year in the imports in foreign cigarettes, has not been maintained, though prices have further risen. The figures of quantity shew an increase from $2,912,84 \mathrm{l}$ lbs to $3,634,192 \mathrm{lbs}$, equal to $24^{\circ} 7$ per cent, and total values have advanced from R 45.97 lakhs ( $£ 306,500$ ) to $R 6 i^{\circ} 2$ lakhs ( $£ 408,000$ ), specific value shewing a percentage increase of $6 \%$. Though it is estimated that the total inports of cigarettes amounted to some 1,400 millions, only the fringe of the market which is at present satisfied with the indigenous 'biri' has been touched. Cigarette factories have recently been opened at Monghyr (Bengal) and at Karachi, and considerable shipments coastwise came from the latter port and from Bombay to Calcutta. Of the total of R6I.2 lakhs ( $£ 408,000$ ), $R_{43} \cdot 37$ lakhs ( $£ 289,100$ ) came from the United Kingdom and RII 65 lakhs ( $£ 77,700$ ) from the United States, but these figures do not correctly represent the proportion of English and American-made cigarettes imbported. From Egypt $\mathrm{R}_{3}$. 59 lakhs ( $£ 23,900$ ) were received, chiefly cigarettes of good quality as is shewn by the average value $\mathrm{R} 6-5-2$ ( $8 \mathrm{~s} 5_{\mathrm{d}}^{1} d$ ) per lb , as compared with R1-14-2 (2s 6d) from the United Kingdom, R1-1-1 (is $5 d$ ) from the
 ments. A lb. of cigarettes represents about 400 cigarettes of low quality, or 300 of the superior grades. Imports of leaf from Sumatra and Borneo are chiefly for the coverings of "Trichinopoly" cheroots, of which only the cheapest sorts are manufactured entirely from Indian grown tobacco. Imports of Manila cigars, chiefly vid Hongkong, amounted to $29,883 \mathrm{lbs}$, valued at R1,08,504 (£7,234).

Dyes-The year under review shows a further increase under imports of aniline and alizarine dyes, which are gradually capturing even the internal markets. The quantity rose from $11,736,744 \mathrm{lbs}$ to $12,957,817 \mathrm{lbs}$-(aniline $6,651,355 \mathrm{lbs}$ and alizarine $6,306,462 \mathrm{lbs}$ ) or 10,4 per cent and the value from R74 93 lakhs ( $£ 4.99,500$ ) to R84. 65 lakhs $(~ £ 564,300)$ or approximately 13 per - Incomplete.
cent. The average declared value per lb of aniline remained practically stationary at 12 as 5 pies (is $O_{1} \frac{5}{2} d$ ) per lb , while that of alizarine rose from 7 as 11 pies ( $71 \frac{1}{1} d$ ) to 8 as 5 pies $\left(8{ }_{1} \frac{5}{2} d\right)$. Bombay continues the principal port of entry, her share representing nearly 74 per cent of the total.

## V.-OILS

Under this head the only item of importance is mineral oil, a market of very considerable interest and importance. The Petroleum market all over the world is exceedingly active, and consumption seems to be advancing at a greater ratio than supply. The total value of all mineral oils imported from Foreign countries into India in 1907.08 was $315^{\circ} 45$ lakhs ( $(6,103,000)$ as compared with $24^{2} 7$ lakhs ( $£ 1,618,000$ ) in 1906.07 , a rise of 30 per cent. Of this total kerosene is responsible for no less than $7^{\circ} 7$ per cent, but a view of the trade would be incomplete and one-sided which omitted from consideration and comparison the factor of indigenous production, and the table below accordingly shews the quantity and value of imports coastwise from Burma along with the foreign imports, the unit in all cases being one thousand:

|  | Quantity |  |  | Value |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1905-06 | 1906-07 | 1907-08 | 1905-06 |  | 1906-07 |  | 1907 -08 |  |
|  | gals | gals | gals . | R | $E$ | 1 R | $E$ | R | 6 |
| Russia . | 7,76! | 2,249 | 9,377 | $27,04=$ | $=180$ | 9,24 $=$ | $=62$ | $34,68=$ | 231 |
| United States . | 22,332 | 28,836 | 24,278 | 96,24 | 642 | 1,21,87 | 812 | 1,19,92 | 800 |
| Borneo | 5,193 | 1,422 | 7,9+4 | 13,17 | 88 | 3,56 | 24 | 21,10 | 141 |

| Countries | 50,946 | 53,038 | 65,43 | 1,78,68 | 1,191 | 1,96,19 | 1,308 | 2,48,26 | 1,655 |
| Coastwise from |  |  |  | - |  |  |  |  |  |
| Burma . | 47,159 | 61,834 | 63,530 | 1,62,34 1 | 1,082 | 2,19,50 | 1,463 | 2,26,72 | 1,511 |

From these figures it will be seen that excluding Burma's unascertainable internal consumption of indigenous oil, India in the last three years absorbed some 113.9 million gallons of kerosene per annum. In 1905.06 Burma oil represented 48 per cent of the total imports, and in $1906-0753.8$ per cent, but fell again in 1907.08 to $49^{\circ} 2$ per cent.

The imports of foreign kerosene oil have advanced by $23^{\circ} 3$ per cent and the specific value by 2.4 per cent, while the quantity of shipments from Burma to India proper only increased by 2.7 per cent.

Russia, which in $1904-05$ supplied 53 per cent of imported kerosene, furnished in 1906.07 only $4^{\circ} 2$ per cent and in $1907.0814^{\circ} 3$ per cent. Her share amounts in the year under review to $9,377,000$ gallons with a value of $\mathrm{R}_{34} 68$ lakhs ( $£ 231,200$ ) as compared with $2,249,000$ gallons with Rg. 24 lakhs ( $£ 61,600$ ) in 1906-07, but a recovery to the conditions prevailing prior to the disturbances in Baku must necessarily be slow.

The United States has not maintained the proportion (54 per cent) of the total imports she held a year ago, and Roumania has stepped into second place with imports of $15,699,682$ gallons worth $R_{49}, 85,483$ ( $£ 332,365$ ), equivalent
to 24 per cent of the total, but this does not imply the entry of new competitive interests but is explained by the accident of shipping convenience, Sumatra has fallen back from $10,797,500$ gallons to $2,040,55^{2}$ gallons and Singapore, which is only an entrepôt for kerosene from the Far East, from $6,213,400$ gallons to $6,088,100$ gallons. Borneo on the other hand has increased its direct imports from $\mathbf{5 , 4 2 2 , 6 0 0}$ gallons to $7,943,693$ gallons.

Bulk oil in 1907.08 amounted to $49,489,900$ gallons or $75^{\circ} 6$ per cent of the whole-of which Roumania contributed $3^{1 \cdot 7}$ per cent, America 20 per cent, Russia 17 per cent, and Borneo 16 per cent.

Imports of foreign case oil aggregated $15,940,800$ gallons, as compared with $1_{3}, 826,200$ gallons in $1906-07$; of this America supplied 90.4 per cent, Russia 6 per cent, and Sumatra $2^{\circ} 7$ per cent.

The following are the average prices of the leading descriptions of case oil in Calcutta during the last three years :-

|  |  |  | $\begin{aligned} & 1995 \\ & a . \end{aligned}$ |  |  | 1900 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| American- |  |  |  |  |  | 7 |  |  |  |  |
| Russian- | per case | 4 | 2 | 9 |  | 7 | 6 |  |  |  |
| Ram | " | 3 | 9 | 7 |  | 15 |  | 4 |  | 10 |
| Burma- Victoria | per 2 tilis |  |  | 6 |  | 3 | 6 |  |  |  |
| Gold Mohur |  | 2 | 14 |  | 3 | \% |  |  | 3 |  |
| Cobra |  |  | 11 |  | 3 | 5 | 4 | 3 |  |  |
| Sumatra- Silver-light $^{\text {a }}$ | per case |  | 13 |  |  | 14 |  |  | 12 |  |

It will be noticed that there has been a steady hardening of rates during the triennium, but, it is believed that, thanks to the competition of rival interests, India yet enjoys the benefit of prices 25 per cent lower than any other country in the East.

The imports of Fuel oil, chiefly from the Straits and Borneo, rose from 352,312 gallons to $1,250,115$ gallons, which is still below the figures for $1905 \cdot 06$. Of this Bombay took 690,179 gallons, Madras 350,218 gallons, and Bengal 209,718 gallons.

In imports of other mineral oils, mainly for lubricating, there was a large increase of 31.6 per cent from $9,796,897$ gallons in 1906.07 to $12,893,550$ gallons in $1907-08$, while the quantity drawn by India proper from Burma rose from 3,006,900 gallons to $4,051,400$ gallons.

## VI.-RAW MATERIALS AND UNMANUFACTLRED ARTICLES

Coal-A cogent illustration of india's industrial expansion is to be found in her increasing absorption of coal. While indigenous production has been rapidly progressing, export has declined, and yet the imports of foreign coal are yearly larger. In $1907^{-08}$ the measure of advance is $19^{\circ} 9$ per cent in quantity and 22.1 per cent in value: the net increases being 51,145 tons and Rio. 75 lakhs ( $£ 71,600$ ) respectively. The average value of all coal imported rose by 1.8 per cent.

The consignments from the United Kingdom in the year under review amounted to 215,100 tons, which are slightly below the figures for 1906-07 ( 222,100 tons) but greatly in excess of those for $1905-06$ ( 137,000 tons), and this increase is probably attributable to the rise in price of Indian coal at a greater ratio than Welsh coal, accentuated by the abolition of the export duty by His Majesty's Government and a fall in freights between Cardiff and Bombay which has made the import of Welsh coal increasingly profitable. The figures
which are given below are taken from the Price Current of the Bombay Chamber of Commerce-to illustrate the comparative price per ton of Cardiff and Desharghur (Indian) coal at that port from 1906 onwards, and in the last column is worked out the proportion borne by the price of Cardiff coal to that of Indian coal, the latter being taken as 100 in each year. It will be seen that this proportion has tended steadily to diminish.

The imports from Natal, owing chiefly to convenience of freight, increased from 75 to 35,349 tons and from Australia from 25,863 to 50,290 tons.

The imports of coal as Government stores amounted to 1,477 tons only against 5,083 tons in 1906.07 and 6,976 tons in $1905-06$.

Cotton-After a year's decline the imports of cotton rose to $157,529 \mathrm{cwts}$, i.e., increased by $41,33^{1}$ cwts or $35^{\circ} 6$ per cent. The value increased to R $70,95,518$ ( $£ 473,035$ ) or by $\mathrm{R}_{25,06,55 \mathrm{I}}(£ 167,103$ ) or 54.6 per cent. The average value rose by 14 per cent. The imports are chiefly of long staple cotton and finer counts, and about 82 per cent of the total quantity imported is American, and of this $128,297 \mathrm{cwts}$ were received via the United Kingdom, only 1,457 cwts being imported direct. From Persia 6,522 cwts were received as against 7,789 cwts in the previous year, and from Egypt 15,447 cwts as compared with $6,260 \mathrm{cwts}$ in 1906.07 .

Precious Stones and Pearls, unset-The figures as recorded in the trade accounts cannot be considered complete, as it is well known that large quantities of precious stones and of pearls in particular are imported and exported by post. Further, there are great fluctuations in recorded values. The imports of precious stones in $1907-08$ were valued at $\mathrm{R} 69^{\circ} 57$ lakhs ( $£ 463,800$ ), as compared with R93.38 lakhs ( $£ 622,500$ ) in 190600 , and R134.I lakhs ( $£ 894,000$ ) in 1905-06. The imports from Arabia, Bahrein Islands, and Aden, which consist chiefly of pearls, fell from R 78.95 lakhs ( $£ 526,300$ ) to R 63.35 lakhs ( $£ 422,300$ ), as was only to be expected, the market all over the world being very depressed. Of the precious stones found in India the ascertained productions of rubies in Burma amounted to 334,535 carats valued at R14.26 lakhs ( $£ 95,100$ ), against 326,855 carats valued at R14.33 lakns ( $£ 95,500$ ) in 1906, shewing an increase of 2.3 per cent in quantity, but a fall of 45 per cent in value and of 2.8 per cent in specific value. The manufacture of rubies by the action of radium upon corundum has not yet been advanced so far commercially as to affect the price of the natural stones, but the market like that for diamonds has been very dull since the American crisis. The value of diamonds obtained from the mines in Central India amounted to $R_{41,772}\left(£_{2,785}\right)$ only in 1907, against $\mathrm{R}_{77,400}\left(£_{5,160}\right)$ in the preceding year.

Silk-An unusually large world's crop in 1907.08 scarcely sufficed to make good the deficiencies of stocks caused by the shortage of two preceding years, and until the financial depression in October reached the Continent, the demands of increasing consumption maintained prices at a satisfactory level. Then came a tremendous fall accentuated by bear speculations on the Yokohama exchange, but at the close of the year prospects were more favourable, as the accumulations of unsold silk had been considerably reduced and the financial outlook generally improved. India, however, benefited little from the fluctuations. Her imports of silk rose by $44^{\circ 2}$ per cent in quantity from $1,422,467 \mathrm{lbs}$ in 1906.07 to $2,050,839 \mathrm{lbs}$ in $1907 \cdot 08$, and by 72.8 per cent in value from R 56.8 lakhs
( $£ 378,600$ ) to R 98.15 lakhs ( $£ 654,300$ ) despite a rise in the specific value per unit of $19^{\circ} 8$ per cent. Bombay's share amounted to R $80 \cdot 28$ lakhs ( $£ 535,200$ ) and that of Burma to R17 $5^{2}$ lakhs ( $£ 116,800$ ). Direct imports from China increased from $\mathrm{I}, 049,567 \mathrm{lbs}$ in $1906-07$ to $1,733,3^{2} 3 \mathrm{lbs}$ in $1907-08$ or $65^{\circ} 2$ per cent, and from the Straits Settlements fell from $220,118 \mathrm{lbs}$ to $169,050 \mathrm{lbs}$ or ${ }_{2}^{3} 2^{\circ}$ per cent.

Wood-The imports by sea of unmanufactured wood (which includes timber, firewood, and ornamental wood) rose in the year under review to $\mathrm{R} \dot{8}_{2}$ lakhs ( $£ 546,700$ ), the figures for $1906-07$ being R80.92 lakhs ( $£ 539,400$ ). The timber trade, if not so active as in $1905 \cdot 06$, when $109,421 \mathrm{cub}$. tons valued at R $82 \cdot 21$ lakhs ( $£ 548,000$ ) were imported, shews improvement on the figures for $1906 \cdot 07$, with 99,557 cub. tons and R80'25 lakhs ( $£ 535,000$ ) against 94,721 cub. tons and R79'28 lakhs ( $£_{5} 28,500$ ). There was, however, a fall in the average value of 3.7 per cent. The value of teak imported represents $7 \mathrm{I}^{\circ} 2$ per cent of the whole. 58,095 cub. tons of teak were imported from Siam valued at R54442 lakhs ( $£ 362,800$ ) and from Java, the variety of which is known as djatti, 4,579 cub. tons valued at $\mathrm{R}_{3} \cdot 72$ lakhs ( $£ 24,800$ ).

The trade in timber other than teals advanced from $33,6,65 \mathrm{cub}$. tons in $1906 \cdot 07$, valued at $\mathrm{R}_{18} 85$ lakhs ( $£ 123,700$ ), to 36,611 cub. tons, valued at R21.84 lakhs ( $£ 145,600$ ), representing a rise of 177 per cent in value and 6.2 per cent in average value. The imports from the United States shtwed a recovery from 93 cub. tons valued at $R 2,372$ ( $£ 158$ ) to 5,817 cub. tons worth $\mathrm{R}_{2} 8 \mathrm{I}$ lakhs ( $£ 18,700$ ), but the figures are still considerably lower than those for 1905-06.

## VII.-ARTICLES MANUFACTURED AND PARTLY MANUFACTURED

Cotton goods-The imports of cotton goods into India shew a remarkable advance on any figures previously recorded, though they have not quite kept pace with the general expansion of trade, and the proportion borne by values to those of total imports has fallen from 38 to 37 per cent. The development is significant as an embargo on foreign cloth was the keynote of the boycott movement, and coming, as it does, after a year of decline seems to foreshadow its ultimate failure. In this connection the changes in marks and nomenclature adopted by many importers in deference to the new spirit were perhaps sufficient to satisfy where they did not deceive. The Lancashire textile industry was particularly active during the statistical year, and despite the rise in the prices of raw material, the market for yarns was exceedingly active and profitable, and the export trade to India in cotton textiles was less affected by the financial crisis and high Bank rate than that to the Continent and remained until the close of the year remarkebly brisk. But on this side conditions were not altogether healthy, and the debauch in trading, particularly in Calcutta, was the less justifiable as famine conditions had declared themselves in the United Provinces, one of the most important up-country markets, the prices of food grains being abnormally high and the export trade, save in rice, practically stagnant. It is not surprising that there should have been during the last few months a concurrent fall in prices and accumulation of stocks, and even if the agricultural outlook improves, the outlook for 100800 is distinctly unpromising.

The figures of imports of cotton yarn and of woven and other colton goods in the last twelve months (stated in thousands of rupees and of pounds sterling) compared with those of the previous five years give no indication of this, more particularly when the increase in the coastwise shipments of piece goods manufactured in Bombay to other parts of India valued at $\mathrm{R}_{3} 87^{\prime} 6$ lakhs
( $£ 2,58_{4}, 000$ ) as compared with $R_{246} 6$ lakhs ( $£ 1,644,000$ ) in 1 no6-07 is simultaneously considered.

|  | Yarn |  | Woven and other goods |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | £ | R | $\ldots$ | R | $\ldots$ |
| 1902-03 | 2,29,76 | 1,532 | 28,14,88= | 18,766 | 30,44,64 $=$ | 20,298 |
| 1903-0.4 | 2,14,21 | 1,428 | 28,86,85 | 19,246 | 31,01,06 | 20,674 |
| 1904-05 | 2,48,76 | 1,658 | 35,55,92 | 23,706 | 38,04,68 | 25,364 |
| 1905-06 | 3,42,54 | 2,283 | 39,01,77 | 26,012 | 42,44,31 | 28,295 |
| 1906-07 | 3,22,32 | 2,149 | 37,69,43 | 25,129 | 40,91,75 | 27,278 |
| 1907-08 | 3,69,32 | 2,462 | 44,34,93 | 29,566 | 48,04,25 | 32,028 |

The increase is therefore one of R712.5 lakhs ( $£ 4.75$ millions) or 174 per cent.

In Yarns the decrease was one of $357,55 \mathbf{1}$ lbs or about 1 per cent in quantity, but the value increased by R47 lakhs ( $£_{3} 13,000$ ) or $14^{\prime} 5$ per cent, the specific value having risen by about $15 \%$ per cent. The quantities imported in the last six years are here stated in millions of lbs :-

| 1902-03 | $33 \cdot 68$ | 1905-06 | 45.78 |
| :---: | :---: | :---: | :---: |
| 1903.04 | 28.01 | 1906-07 | - $37 \cdot 67$ |
| 1904.05 | $30 \cdot 58$ | 1907-08 | $37 \cdot$ |

Yarns from the United Kingdom, which represent about 91 per cent of the whole, fell by 3.5 per cent from 35,207 ,oco lbs to $33,946,000 \mathrm{lbs}$, which, however, largely exceeds the imports in 1904-05. The value of twist and yarn, white, was R206.44 lakhs ( $£ 1,376,300$ ) and of coloured R162:88 lakhs ( $£ \mathrm{x}, 085,900$ ). Of white (total imports being $20,828,111$ lbs) 97 per cent was British, and of coloured (total imports being $16,487,626 \mathrm{lbs}$ ) $83 \cdot 1$ per cent came from the United Kingdom, 5.5 per cent from Italy, $4^{\circ} 2$ per cent from Austria-Hungary, and 3.9 per cent from Belgium. The imports of 40 s mule receded in quantity from $9,675,000 \mathrm{lbs}$ to $9,041,088 \mathrm{lbs}$ but increased in value from R 67.45 lakhs ( $£ 449,700$ ) to R $72 \cdot 14$ lakhs ( $£ 480,900$ ).

It is of interest to compare the imports of coarse, medium, and fine yarns with the production of similar lines by mills in Irdia, the unit being 1,000 :-

It will be seen that the proportions borne by the different groups to the total consumption remain remarkably constant, but the production of counts between $26 s$ and 405 in Indian mills shows a disproportionate advance at the expense of foreign imports.

The imports of cotton fabrics represent $34^{11}$ per cent of the total imports of private merchandise against 34.8 per cent in 1906-07. The value increased from $R_{37}, 69,43,294$ ( $£ 25,129,553$ ) to $\mathrm{R}_{44,34,93, \text { O1I }}(£ 29,566,201$ ) or by R6,65,49,717 ( $£ 4,436,648$ ), the difference being equal to 176 per cent. In
ascertaining the changes of specific value calculations must be confined to piece goods, as some of the other descriptions are not stated in yards. Under this head imports amounted to $2,531,733,000$ yards and $R_{4,204}{ }^{3} 6$ laklis ( $£ 28,029,100$ ) as against $2,318,200,000$ yards and $R_{3}, 564 \cdot 43$ lakhs ( $£_{2}^{2} 3,762,900$ ) in $1906-07$. The increase is one of 213.53 million yards and R639'93 lakhs ( $£ 4,266,200$ ), which marks an increase of $9^{\circ} 2$ per cent in quantity and 179 per cent in value with a rise of 78 per cent in specific value. These ratios of course vary but little in respect of different subheads. For example, the average value of grey goods rose by 7 per cent, that of white goods by 8.05 per cent, and that of coloured goods by 8.8 per cent.

The following statement shows in millions of yards the relative importance of these three classes in the course of the last nineteen years. It will be noticed that, whereas the figures for grey goods show a marked decline in the last two years, they exceed considerably those for 1904-05 :-

|  | Grey (unbleached) | White (bleached) | Coloured, printed or dyed | Percentag of grey in total |
| :---: | :---: | :---: | :---: | :---: |
| Average 1889-90 to 1893-94 | 1,223.47 | 368.63 | $374{ }^{17}$ | 62 |
| 1894.95 " ${ }^{1898.99}$ | 1,209.77 | 418.59 | 351*49 | 61 |
| 1899-1900 \# 1903.04 | 1,204.53 | 369.69 | $430 \cdot 57$ | 57 |
| 1904-05 | 1,210.16 | $584 \cdot 3$ | $493{ }^{\prime 2}$ | 53 |
| 1905-06 | 1,348.84 | $572 \cdot 75$ | $541 \cdot 65$ | 55 |
| 1906-07 | 1,298.48 | 494.97 | 524.75 | 56 |
| 1907-08 | 1,253'79 | 733.53 | 544.41 | $49 \times 5$ |

The decline in greys was one of 3.4 per cent, while bleached goods increased by 48.2 per cent and coloured goods by 3.7 per cent. Bengal, where there are but two weaving mills, took $939,738,000$ yards or 74.9 per cent of the total of imported grey goods as against $900,552,000$ yards or 69 per cent in 1906-07.

The extent to which the cotton piece goods of the three main classes are derived from the United Kingdom is illustrated below in millions of yards from the figures of the last three years :-

|  | 1905-06 |  | 1906.07 |  | 1907-08 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | Fro:n United Kingdom | Total | From <br> United Kingdom | Total | From <br> United Kingdom |
| Unbleached goods | 1,348.84 | 1,33701 | I,298.48 | 1,289.34 | 1,25379 | 1,247.38 |
| Bleached " | 572.75 | $561 \cdot 85$ | 494.97 | $486 \cdot 32$ | 733 '53 | 72199 |
| Coloured " | 54165 | 516.32 | 52475 | $500 \cdot 44$ | $544^{\circ} 4$ | 5178 |

Britain therefore supplies $99^{\circ} 5$ per cent of the grey goods, $95_{4} 4$ per cent of the bleached goods, and $95^{\circ}$ i per cent of the coloured goods. The two former mark a fractional advance and the latter an equally fractional decline.

Besides these there are certain subsidiary classes of goods imported, the principal descriptions of which and the values of the respective trades in thousands of rupees and of pounds sterling bei,h :-

| Handkerchiefs and shawls in the piece |  | 1905-06 |  | 1906-07 |  | 1907-08 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | R | $1 £$ | R | $£$ | R | f |
|  |  | $34,96=233$ |  |  |  |  |  |
| Hosiery . <br> Sewing thread . <br> Other manufactures |  |  |  | $36,22=241 \cdot 5$ |  | $40,59=270 \cdot 6$ |  |
|  |  | 63,0225,61 | $420 \cdot 1$ | 56,13 | $374 \cdot 2$ | 67,27 | $448 \cdot 5$ |
|  |  |  | $170 \cdot 7$ 552.1 | 26,4I | ${ }^{176}{ }^{1} \mathrm{I}$ | 28,46 | ${ }^{189} 7$ |
|  |  | 82,82 | $55^{1} 1$ | 86,23 | 5749 | 94:24 | $628 \cdot 3$ |

The trade therefore increased by $\mathrm{R} 25^{\circ} 57$ lakhs ( $\delta_{1} 70,400$ ) or by 12.5 per cent as compared with a net loss of R1:42 lakh ( $£ 9,500$ ) in the previous year. The United Kingdom supplies 819 per cent of handkerchiefs and shawls
and $86^{\circ} 9$ per cent of sewing thread. But in the hosiery trade nothing is so remarkable as the steady advance of Japan, which during the last six years has raised its proportionate share by direct shipment from 34 per cent to 57 per cent, representing an increase of values from Ri,09,380 ( $£ 7,292$ ) in 1902-03 to $\mathrm{R}_{3} 8,39,240$ ( $£ 255,949$ ) in 1907 -08. It may also be surmised that the $\mathrm{R}_{2}{ }^{\circ} 78$ lakhs ( $£ 18,500$ ) of hosiery credited in the accounts to Hongkong and the Straits Settlements was largely, if not wholly, Japanese in origin.

Silk Goods-There was a very appreciable increase after two lean years in the imports of silk goods. The total value was $\mathrm{R}_{21} 3^{3} 48$ lakhs ( $£ 1,423,000$ ) against $R_{182}{ }^{\circ} 5$ lakhs ( $£_{1,216,000}$ ) in $1906-07$, a difference of nearly $R_{31}$ lakhs ( $£ 207,000$ ), being a percentage increase of 17 . Silk piece goods continue to represent about two-thirds of the total, the figures being RI42.18 lakhs ( $£ 947,900$ ), and the shipments of Japan, which rose from R 59 '19 lakhs ( $£ 394,600$ ) in $1905-06$ to R72.29 lakhs ( $£ 481,900$ ) in 1906-07, increased by R13.95 lakhs ( $£ 93,000$ ) to R86.24 lakhs ( $£ 574,900$ ). The imports from China rose from $\mathrm{R}_{33} 4$ lakhs ( $£ 222,700$ ) to $\mathrm{R}_{42}{ }^{\prime} 45$ lakhs ( $£ 283,000$ ), and the Far East is altogether responsible for 91 per cent of the total. Goods manufactured of sills mixed with other materials rose from $\mathrm{R}_{3} 0^{\circ} 7^{8}$ lakhs ( $£ 205,200$ ) to $\mathrm{R}_{47} 94$ lakhs ( $£ 319,600$ ) or by $55^{\circ} 7$ per cent. Silk yarn, noils, and warp amounted to R22.7 lakhs ( $£ 151,300$ ), and other sorts including thread for sewing to R65,776 ( $£ 4,385$ ).
woollen goods-The year opened with great activity in the British woollen trade, despite high prices for raw material, and when the Continental and American demand slackened, manufacturers were fortunate in finding abundant orders from India for the cheaper lines, which explains the large expansion in imports recorded. Sales, however, have been latterly affected by famine conditions, and the proportion of unsold stocks at the end of the year was considerable. The total value increased from R205.22 lakhs ( $£ 1,368,100$ ) to $\mathrm{R}_{27} \mathrm{~F}_{6} \% 6$ lakhs ( $£ 1,845,100$ ) or over $34^{\circ} 8$ per cent. Of the total increase of R71.54 lakhs ( $£ 477,000$ ), piecegoods accounted for R ${ }_{53} \cdot 25$ lakhs ( $£ 355,000$ ), and the quantities ( $19,681,000$ yards), which had receded in $1906-07$ to $15,323,000$ yards, were almost up to the level of 1905.06, viz., 19,981,000 yards. In specific value the increase was $7^{\circ} 6$ per cent. The share of the United Kingdom rose from R103.3ı lakhs ( $£ 688,700$ ) to R143.45 lakhs ( $£ 956,300$ ), and of Germany from R $26 \cdot 76$ lakhs ( $£_{17} 78,400$ ) to R $3^{2} \cdot 26$ lakhs ( $£ 215,000$ ), representing respectively 74.4 and $16 \%$ per cent of the trade. Of the total increase in wool manufactures there was an extraordinary rise in the value of shawls from $\mathrm{R}_{15} \cdot 89$ lakhs ( $£ 105,900$ ) to R $34 \times 15$ lakhs ( $£ 227,600$ ); and the number of shawls imported was $1,203,372$ against 790,118 in 1906-07, the percentage increase in specific value being $41^{\circ} 3$. The tendency in the face of higher prices to import a lower class of goods seems to have been corrected. Germany supplied 88 per cent of the total number by continued assiduous study of native requirements. Woollen hosiery increased from $287,544 \mathrm{lbs}$ and R 8.05 lakhs ( $£ 53,700$ ) to 387,778 lbs and R10'or lakhs ( $£ 66,700$ ), of which the United Kingdom supplied over $360,000 \mathrm{lbs}$. In yarn there was a marked decline from $979,024 \mathrm{lbs}$ to $7^{81}, 854 \mathrm{lbs}$, but Germany maintained her preponderance in this market. Under values the fall was from R $20 \cdot 83$ lakhs ( $£ 139,000$ ) to R'i ${ }^{\prime} \cdot 29$ lakhs ( $£{ }^{1} 15,300$ ).

The increase under knitting wool shews that the knitting industry is making some headway all over the country, and it may be inferred from the figures for carpets and rugs that English manufacturers are successfully imitating the
characteristics of the Oriental product at rates which enable them to find a growing market even in India.

The values for the past three years under the different classes are as follows, the unit being 1,000:-

Other manufactured goods-Of other manufactured goods the following are the most important:-

| 1906-07 |  |  | 1907-08 |  | $\begin{gathered} \text { Increase ( } \\ \text { or } \\ \text { decrease ( } \\ \text { per cent } \end{gathered}$ |

| Umbrelias . | $28,61,703$ $18,85,939$ | 190,780 | 35,04,505 | 233,634 133,118 | +22.4 +5.8 |
| Umbrella fittings | - 23,63,688 | 157,579 | 25,90,873 | 172,725 | +9.6 |

The largest item, Apparel, shewed an increase of R $_{47} \circ \circ$ lakhs ( $_{6}{ }_{31} 13,700$ ) or 22.3 per cent, but Carriages and Carts, which includes motor cars and motor cycles, shewtd a greater proportionate expansion of $\mathbf{R 2 5} \cdot 53$ lakhs ( $£ 170,200$ ) or
27.6 per cent. The values of motor cars and motor cycle imported into India during the last three years were:-

|  | R |  |
| :---: | :---: | :---: |
|  | 35,22 | 234,830 |
| $1906-07$ | 44,67,586 | 297,839 |
| 1907.08 | 63,44 | 422 |

while the growing use of the cycle by the natives of India is illustrated by the expanding values of imports exceeding those of the previous year by R2. ${ }^{\circ}$ lakhs ( $£ 13,600$ ) or $10 \% 2$ per cent. Mechanically propelled vehicles now represent $72^{\circ} 5$ per cent of the total under this head. India is no nearer the solution of the manufacture of Glass and Glassware on a big commercial scale, and the imports increased by $\mathrm{R}_{2} 3^{\prime} 37$ lakhs ( $£ 155,800$ ) or $19^{\circ} 3$ per cent, an item under this head which shews a marked expansion ( $\mathrm{R}_{12} \cdot 89$ lakhs $=£ 85,900$ ) being glass bangles, with which Austria-Hungary is capturing the internal markets, particularly in Southern India. The imports of soap have increased in value
 08 , or by 57 per cent. -

The import trade in Paper and pasteboard, which has a non-progressive indigenous output to contend with, advanced by R19.13 lakhs ( $£ 127,500$ ), of which printing paper accounts for nearly R8 lakhs ( $(53,300$ ) and other kinds of paper for $\mathrm{R}_{5} \cdot 66$ lakhs ( $£ 37,700$ ). Stationery similarly increased to the extent of $R_{3} \cdot 98$ lakhs- ( $\boldsymbol{6}_{2} 6,500$ ), and Books and Printed Matter (chiefly educational) by $R_{2}{ }^{\prime} 73$ lakhs ( $(18,200)$. Earthenware and Porcelain advanced ty $\mathrm{R}_{3} \cdot 22$ lakhs ( $£ 21,500$ ) and Paints and colours by R $5^{\circ} 62$ lakhs ( $(37,500$ ).

The import trade in Matches continues to expand as the manufacture in India has scarcely got beyond the cottage industry stage. Sweden participated largely in the increase, her imports rising by $57^{\prime} 6$ per cent from R12'5 lakhs ( $£_{8} 8,000$ ) to R19.76 lakhs ( $£ 131,700$ ), while the imports from Japan decreased by $14^{\circ} 2$ per cent from R14.5 lakhs ( $£ 96,700$ ) to R12.45 lakhs ( $£ 83,000$ ). The imports of Umbrella fittings increased by 9.6 per cent, and of Umbrellas by 5.8 per cent. Under the head of parts of ships Bengal accounts for a rise from
 lakhs ( $\AA_{13}, 600$ ) to $\mathrm{R}_{7} 77$ lakhs ( $£ 51,300$ ) due to increased activity in the Calcuitta and Rangoon ship-building yards. Musical Instruments increased from
 chiefly to larger importations of the gramophone class which, now that vernacular records are available, are becoming increasingly popular, particularly in Bengal.

The increase in the arrival of tea chests amounting to $14^{\circ} 3$ per cent must be attributed to the increasing preference shewn for patented and other foreign boxes in preference to the locally made article, for the shipments of leaf were smaller than in the previous year. The expansion under Toys amounted to $22^{\circ} 4$ per cent.

Government Stores-The imports of Government stores remain to be separately considered, though with unimportant exceptions they constitute actual commercial transactions. They amounted to R 664.22 lakhs ( $(4,428,100$ ) as compared with R893.46 lakhs ( $£ 5,956,400$ ) and Rgo2'97 lakls ( $£ 6,019,800$ ) in the two preceding years. The share of the United Kingdom was represented by R $615^{\circ} 17$ lakhs ( $£ 4,101,100$ ) or $92^{\circ} 6$ per cent of the total.

## RE-EXPORTS

The value of re-exports by sea in $190 \%$-o 8 represented $2 \cdot 1$ per cent of the otal exports of merchandise and 2.9 per cent of the total impors from which they
were derived as compared with averages for the previous triennium of $2^{\circ} 1$ and $3^{\circ} 4$ per cent.

The following statement records the extent of the trade in the last five years:-

|  | $R$ | $\mathcal{C}$ |
| :---: | :---: | :---: |
| $1903-04$ | $3,32,61,864=$ | $2,217,458$ |
| $1904-05$ | $3,37,30,729$ | $2,248,715$ |
| $1905-06$ | $3,52,88,100$ | $2,352,540$ |
| $1906-07$ | $3,48,40,390$ | $2,322,693$ |
| $1907-08$ | $3,76,6,189$ | $2,510,946$ |

The re-exports to Western Countries are comparatively small, but the 84.86 lakhs ( $£ 566,000$ ) taken by the United Kingdom represents $22^{\circ} 5$ per cent of the total. The chief commodity is raw wool from Afghanistan and Tibet, re-exported from Karachi, which advanced from $5,221,000 \mathrm{lbs}$ worth R $29{ }^{\circ} 59$ lakhs ( $£ 197,000$ ) to $5,26_{3}, 000$ lbs worth $\mathrm{R}_{3}{ }^{2} 76$ lakhs ( $£ 218,000$ ). .

The chief ports of Western India command nearly 90 per cent of the reexport trade, the share of Bombay alone being 77 per cent, and it consists chiefly in manufactures for which India is an entrepôt for Persia, Arabia, Turkey in Asia, Ceylon, China, and British East Africa. Cotton goods representing 39'4 per cent of the total (piece goods $35^{\circ} 3$ per cent) and apparel 5 per cent shew an increase over the previous year's figures, while there is a. decline under metals ( 30.3 per cent), sugar ( 31 per cent), and oils ( $33^{\circ} 8$ per cent).

The re-exports of foreign tea advanced from $501,577 \mathrm{lbs}$ to $991,305 \mathrm{lbs}$ or by $97^{\circ} 6$ per cent, Russia taking $35,860 \mathrm{lbs}$ and Turkey in Asia $323,526 \mathrm{lbs}$ more than in the previous year. Persia's purchases totalled 350,000 lbs against $207,000 \mathrm{lbs}$ in $19060 \%$. The re-exports of foreign green tea increased from 26,000 lbs to $55,000 \mathrm{lbs}$.

## EXPORTS OF INDIAN MERCHANDISE.

The exports of Indian merchandise represent nearly 98 per cent of the total exports and $56^{\circ} 5$ per cent of the total trade in merchandise. The total value of

 previous year. The increase was thus one of $\cdot 2$ per cent as compared with an increase of 20 per cent in the value of imported merchandise. The following statement shows the progress made in the past 26 years:-

The average of the last five years corresponds very closely with the ratio of advance under imports.

The following table which, indirectly, has some bearing upon the balance of trade illustrates to what a remarkable extent the conditions operating
adversely to the export of merchandise impressed themselves upon statistics which as a rule are slow to demonstrate the effects of sudden vicissitudes. The export trade in merchandise increased during the first six months at a phemmenal rate, to be followed in the last six months by a no less phenomenal decline, while the exceptional volume of export of treasure representing chiefly the drain of gold continued until the very close of the statistical $y=a r$.

The principal articles in the export trade are enumerated in the appended list with their values for three years:-

|  | 1905-06 |  | 1906-07 |  | 1907-08 |  |

The statement below shows for three years the value (in thousands of rupees and of pounds sterling) of the trade in each of the seven classes under which articles are grouped in the accounts:

## I.-ANIMALS, LIVING

This is a small and unimportant class and is chiefly made up of shipments of cattle from Southern India to Ceylon and the Straits.

## II.-ARTICLES OF FOOD AND DRINK

Articles of food and drink-In this class there was a net increase of $\mathrm{R}_{4} \cdot 44$ crores ( $£ 2,560,000$ ), the total value being $\mathrm{R}_{44} 67$ crores ( $£ 29,780,000$ ) as against $R_{4} \cdot 24$ crores ( $£ 26,830,000$ ) in $1906-07$, and this despite the fact that the wheat crop of 1506.07 "as 0.9 per cent below that of $1905-06$, though 10.8 per cent above the average of the preceding five years.

Coffee-The statistical year closes before the coffee season in Southern India is completed, but the results so far as known are more hopeful than for some time past, as after a year of lean crop the yields of estates were generally good, and despite a decline in average quality prices realised for shipments were considerably higher than in 1906-07. The Brazilian coffee crop of 1907-08 was short and the prospects of the current season are uncertain, so that, despite the practical failure of the San Paolo valorization scheme, a hardening of prices seems more probable than a decline.

The figures of export, quantities and values, for the last five years are as follows:-

|  |  | Cwts | R | $£$ |
| :---: | :---: | :---: | :---: | :---: |
| 1903-04 | - | 291,254 | 1,36,73,773 | $=911,585$ |
| 1904.05 |  | 329,647 | 1,66,09,757 | 1,107,317 |
| 1905-06 | - | 360,182 | 1,75,67,240 | 1,171,149 |
| 1906-07 | , | 228,094 | 99,64,778 | 664,319 |
| 1907-08 | - | 24, 234 | 1, $\mathrm{I}, 45,202$ | 743,013 |

The increase is $7^{1}$ per cent in quantity and $I_{1} 8$ per cent in value. The value per cwt, R $\mathrm{R}_{45-10-1}$ ( $£_{3}-0-10$ ), has improved by 4.4 per cent in one year. The exports, however, are still much below the figures for $1905-06$ and 1904.05 .

The shipments of coffee to the United Kingdom rose by 49.8 per cent to $123,41^{8}$ cwts and represent $50^{\circ} 5$ per cent of the total exports. This may be in part accounted for by increased consumption in the United States of America for which the United Kingdom acts as a distributing agent. France took 75,817 cwts or 31 per cent of the tota! exports as against 95,493 cwts or 41.9 per cent of the total in 1906.07 , chiefly native-cured or of the cheaper qualities.

Fruits and vegetables-The value of fruits and vegetables exported during the year was $\mathrm{R}_{3} 8.24$ lakins $(£ 255,000)$ as against $\mathrm{R}_{34} \times 57$ lakhs ( $£ 230,000$ ) in $1906-07$. The principal article included in this head is copra, which is the dried kernel of the cocoanut, and is chiefly exported from the Madras Presidency to Germany, Belgium, and France, the quantity and value being 119,829 cwts and R 21.58 lakhs ( $£ 144,000$ ) respectively. The former marks a decline of over 5 per cent, but the latter rose by nearly 14 per cent, as the declared value increased from $\mathrm{R}_{1} 5$ to $\mathrm{R}_{1} 8$ per cwt , due to short supplies and increased foreign demand for copra rather than oil. Fresh vegetables, chiefly potatoes and onions, are also an important item, the value being R16.I lakhs ( $£ 107,000$ ) as against $\mathrm{R}_{15} \cdot 18$ lakhs ( $£ 101,200$ ) in 1906.07 . They are mostly exported to Ceylon and the Straits.

Rice-Exports of rice in $1907-08$ represented $64^{\circ} 5$ per cent of the total value of tood-grains exported from India, against 67 per cent in the previous year,
and in $\eta$ per cent of the value of all Indian produce exported as compared. with 10.7 per cent in $1906-07$.

The chief feature of the Indian rice trade in the year under review was the continued shortage of crops in Bengal (a province responsible in a season of good rainfall for more than a third of the total outturn) chiefly due to an adverse season but also in part to a contraction of acreage, in consequence of the temptation offered by the high price of jute in the sowing season to grow that crop in preference. To meet this deficiency which was accentuated by more general demand for rice in preference to coarser foodgrains, there were very heavy coastwise imports from Burma, particularly to Calcutta, and a rise in price which though particularly marked in the two jute growing provinces was general all over India. Despite, however, the diminution in foreign exports from Calcutta, the total for the whole of India fell very little below the previous year's figures, Madras making good the shortage in shipments to Ceylon, and Burma more than maintaining the volume of her foreign export after meeting all the requirements of the two Bengals.

The following statement shows in thonsands of tons and thousands of rupees and of pounds sterling the foreign exports of rice during each of the

- last five years. The rise in average declared value was equivalent to in'i per cent. In the same quinquennium the quantities and values in the same denomination of exports coastwise from Burma have been as follows :-

|  |  | Quantity | Value |  | From Burma |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | T.ons | $R$ | $E$ | Tons | R | $£$ |
| 1903-04 | - | 2,250 | 19,08,28 | 12,722 | 195 | 1,33,74 | $=893$ |
| 1904-05 | - | 2,474 | 19,61,90 | 13,079 | 301 | 2,05,14 | 1,368 |
| 1905-06 | - | 2,152 | 18,63,69 | 12,425 | 460 | 3,47,40 | 2,316 |
| 1906-07 |  | 1,935 | 18,52,51 | 12,350 | 813 | 7,22,8 | 4,819 |
| 1907-08 | - | 1,913 | 20,33,63 | 1 $3,55^{8}$ | 979 | 9,62,10 | 6,414 |

: The exports to foreign countries fell short by $\mathbf{I}^{\cdot} 1$ per cent in quantity, but rose by 9.8 per cent in value, the rise in specific value being ill per cent. As regards the shipments of rice from Burma to India proper, the total of 979,000 tons marks an advance of 166,000 tons upon the phenomenal figures of the previous year, and is greater by 113 per cent than the figures for 1905-06. This is only in part accounted for by the failure of the crops in the Gangetic delta, and illustrates the intensification of internal demand originating in the growth of a higher standard of comfort among the cultivators who had profited from the boom in jute. The average price of rice both in Rangoon and Calcutta advanced by 15 per cent.

The provincial distribution of coastwise exports from Burma during the last tharee years has been as follows, in thousands of tons :-

The distribution of India's foreign export of rice not in the husk during the past three years is given below, quantities and values being stated in thousands of tons, and thousands of rupees and of pounds sterling, respectively :-

The quantity taken by the United Kingdom showed an increase of 21,000 tons, and by Austria-Hungary 12,000 tons. The exports to Germany declined by 24,000 tons. Those to Egypt also fell short of the figures of $1906-07$ by 24,000 tons and to Aden and Arabia by 25,000 tons. Ceylon took 50,000 tons less than in 1906-o', but Java showed a great advańce as compared with $1906 \cdot 07$, though the total was less than in 1905.06 by $3 \mathrm{I}, 000$ tons. The Straits also took 21,000 tons more than in the previous year.

In the above table the quantities of rice shipped to Egypt "for orders" have been adjusted and credited to the country of final destination.

The exports of unhusked rice or paddy declined from $3^{2,757}$ tons with a value of R19'99 lakhs ( $£ 133,000$ ) to 27,658 tons, value $\mathrm{R}_{1} 8 \cdot 62$ lakhs ( $£ 124,000$ ), of which Ceylon took no less than 27,453 tons.

There was a nominal quantity of 3,472 cwts of rice flour valued at R27,575 ( $£_{1}, 8_{3} 8$ ) exported during the year. The previous year's figures were $6,165 \mathrm{cwts}$, value $\mathrm{R}_{44,484}\left(£^{2,955}\right)$.

Wheat-On the average of the last five years the value of the wheat exported represents 32.9 per cent of the exports of all food grains, and 6.6 per cent of the total value of Indian merchandise exported. The wheat exports of the statistical year are mainly diawn from the cirop of the previous year, and the
figures for $1907-08$ represent chiefly the exportable surplus of the harvest of 1906.07 which, though estimated to be somewhat smaller in volume than that of 1905-06, was 10 per cent greater than the average for the quinquennium ending 1904.05.

The following table shews the outturn in tons and exports, quantities and values, for the past five years :-

India, however, contributes but a small proportion of the world's supply of wheat as the following figures will shew. The crop in the principal wheatgrowing countries in 1907 has been estimated as follows :-

The export trade during the year under review was decidedly brisk. The improvement in the quality of grain shipped in consequence of the new contract reducing the proportion of dirt and foreign matter has perhaps influenced prices less than had been expected, but the general shortage of crops all over the world except in the Argentine and Australia has greatly improved demand, and it is unfortunate, in view of the higher rates likely to continue for some time to come, that the last wheat harvest ( $1907-08$ ) was so poor, owing to the failure of the rains. The advance in the specific value of wheat exported from India amounts to 777 per cent. The distribution of exports was practically confined to three ports, Karachi, Bombay and Calcutta, and of these the first with a virtual monopoly of the Panjab wheat harvest accounts for no less than 96 per cent. Complaints continue to be made from there both of delays in moving the crop by rail to the port and of insufficient storage accommodation at the port itself, but measures for improving the situation have been discussed
by the Railway Board with the local Chamber of Commerce, and in this connection the investigation of the adaptability of the elevator system to India has once more been undertaken.

The following table shews the principal customers for Indian wheat during the past three years (in tons):-

|  |  |  | $1905-06$ | $1906-07$ | 1907.08 |  |
| :--- | :--- | :--- | :--- | ---: | ---: | ---: |
| United Kingdom | $\cdot$ | $\cdot$ | 709,168 | 730,526 | $\mathbf{7 7 1 , 5 2 5}$ |  |
| Belgium | $\cdot$ | $\cdot$ | $\cdot$ | 56,532 | 39,539 | 70,432 |
| France | $\cdot$ | $\cdot$ | $\cdot$ | 92,749 | 9,706 | 15,909 |
| Spain | $\cdot$ | $\cdot$ | $\cdot$ | 44,266 | 2,369 | $\ldots$ |

The imports of wheat into India are inconsiderable and come almost entirely from Asiatic Turkey and Persia-their contributions in 1907.08 being 8,293 and $\mathrm{I}, 364$ tons, respectively, to a total of $\mathbf{1 2 , 7 8} 3$ tons.

The exports of wheat flour generally bear a close relation to those of wheat, but the figures for the year under review shew a further decline of 9 per cent in quantity and $4^{\circ} 3$ per cent in value on those of the previous twelve months. The export trade in flour is confined to the East, chiefly with Aden, Asiatic Turkey, East Africa, Ceylon, and the Straits Settlements, and the fall is more than accounted for by restricted shipments from Bombay to Arabia. The total shipments were 37,219 tons valued at $\mathrm{R}_{5} 6.05$ lakhs ( $£ 374,000$ ) as compared with 40,923 tons valued at $R 58.57$ lakhs ( $£ 390,500$ ) in 1906-07. The rise in specific value was one of $5^{2} 2$ per cent.

The food grains other than rice and wheat exported in $1907-08$ increased by $53^{\prime} 1$ per cent or $1,702,818 \mathrm{cwts}$, but the figures are still much below those for 1904-05. The most striking increase was that of barley, which rose by $1,231,678 \mathrm{cwts}$ or 303 per cent to $1,637,745 \mathrm{cwts}$. The bulk of this goes to the United Kingdom ( 963,205 cwts), Germany ( $438,61_{3}$ cwts), and Belgium ( $208,088 \mathrm{cwts}$ ). Jawar and bajra increased by $345,81 \mathrm{l}$ cwts or 44.3 per cent to $1,125,993$ cwts. Pulse, which contracted by 48.6 per cent to $1,097,945 \mathrm{cwts}$. in the previous year, rose by 92,486 cwts or 8.4 per cent to $\mathrm{I}, 190,431 \mathrm{cwts}$. Other sorts, including maize, also increased by $25,553 \mathrm{cwts}$ or 33.3 per cent to 102,297 cwts, and gram rose by 7,290 cwts or 9 per cent to 853,873 cwts.

Provisions-The value of provisions exported increased by $15{ }^{\circ} 9$ per cent to R $75^{\circ} 45$ lakhs ( $£ 503,000$ ). The principal articles in the class are ghi (clarified butter) and fish, the former rising by 13 per cent to $R_{26} / 74$ lakhs ( $\mathcal{L}_{178}, 000$ ) and the latter by 17.3 per cent to R 18.33 lakhs ( $£ 122,000$ ).

The declared values of ghi per cwt during the last five years have been :-

|  |  |  |  |  | $\boldsymbol{R}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $1903-04$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $47^{.6}$ |
| $1904-05$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | 49 |
| $1905^{-06}$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $50^{\circ} 7$ |
| 1906.07 | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $54^{\circ} 2$ |
| 1907.08 | $\cdot$ | . | $\cdot$ | $\cdot$ | $60^{\circ} 6$ |

and it is believed that the retail prices up country show an equally proportionate advance. The price in fact tends to become so prohibitive for the poorer classes as to afford reasonable hopes of introducing with success a cheap vegetable substitute, such as can be made from refined cotton-seed and cocoanut oils, of which abundant supplies are available in India.

Spices-Exports of spices declined by $802,982 \mathrm{lbs}$ or 3 per cent in quantity and by $\mathrm{R}_{7} \cdot 5$ lakhs ( $£ 50,000$ ) or 12.4 per cent in value, which is lowerthan in any of the five previous years. The decline under Pepper amounting to R8.63
lakhs ( $£ 57: 500$ ) or 26.1 per cent is due to bad prices in Europe, rather than short stocks.

The exports of ginger increased to RiI•1 lakhs ( $£ 74,000$ ) accompanied by a rise in specific value owing to shrinkage in the world's supply. The exports of chillies, on the other hand, advanced by 6.3 per cent in quantity but declined by 4.9 per cent in value, the totals being $11,705,000 \mathrm{lbs}$ and $\mathrm{R}_{13} 67$ lakhs ( $£ 9 \mathrm{r}, 000$ ) respectively.

Tea-The Indian Tea trade has enjoyed another prosperous year. The world's corisumption has apparently caught up supply, and every thing points to its - increasing in the future at a curresponding ratio. The only disquieting features of the year's trading were the temporary inflation of values for lower grades of leaf, which have appreciated by 70 per cent since 1906 , at the expense of the better teas, and complaints of a general decline in quality, but the principal excuse for coarse plucking has been removed now that the market seems to have recovered its sense of proportion. In any event India could not hope to have benefited long by the extravagant rates for her poorer stuff, for they would have provoked the competition of the cheaper China teas, and encouraged increased cultivation in Java.

The advance in consumption which followed the reduction of the import duty in the United Kingdom to $5 d$ per lb has been maintained. Internal absorption is increasing, and tea shops are now a common feature of many bazaars, particularly in Southern India, but it is in the expansion of the Continental markets that the prospects of the Indian industry centre, and of these the Russian market in particular is shewing remarkable development. The following table illustrates in the last three calendar years, compared with the year 1890 , the astonishing growth in absorption of teas from India and Ceylon on the Continent :-
lbs

| 1890 | $\cdot$ | $\cdot$ | $\cdot$ | $14,001,824$ |
| :--- | :--- | :--- | :--- | :--- |
| 1905 | - | $\cdot$ | $\cdot$ | $129,884,250$ |
| 1906 | $\cdot$ | $\cdot$ | $\cdot$ | $162,461,824$ |
| 1907 | (estimated) | $\cdot$ | $171,500,000$ |  |

The Russian market is of particular interest and importance. Its development dates from the discovery that Indian dust gives a greater strength to 'tablet', tea than Chinese. Indian tea reaches Russia not only by direct shipment, but also across the land frontier of India and by re-export from the United Kingdom, Germany, and China. It has been estimated that Russia in the nine months ending September 30th, 1907, absorbed $30,54^{2}, 081 \mathrm{lbs}$ of Indian and Ceylon teas as compared with $24,566,329$ lbs for the same nine months of the previous year. These figures exclude imports of brick tea from China, in which Indian dust has been blended, estimated at $8,000,000 \mathrm{lbs}$ in 1907 or proportionately $6,000,000 \mathrm{lbs}$ for the period January-September. India is encouraged to direct importation into Russia by the preferential duty on her tea and that of Ceylon carried by the Trans-Siberian Railway, and it is announced in this connection that a double service of steamers will be established next season between Calcutta and Vladivostok to save transhipment at Colombo. The duty on tea in Germany was reduced in 1906 to $1 \frac{1}{2} d$ per lb , and this, aided by a vigorous medical campaign against beer and coffee, is likely to encourage imports. Holland and Belgium are two other promising markets.

As regards the competition with Ceylon, it remains to be seen how far the introduction of rubber there will ultimately, affect production, for the cultivation
tends to oust tea from lower levels where the yield is generally greater than at higher altitudes.

The results of improved prospects in the tea trade are illustrated by the appreciation of shares in the market. Mr. George Seton has calculated that the shares of 170 tea companies registered in London have enhanced in value from $\oint^{14,400,000}$ to $\oint^{21,600,000}$ or by no less than 50 per cent between January 1905 and November 1907. China supplied half the requirements of the United Kingdom twenty years ago : in 1907 the proportion had been reduced to 6 per cent and is only sustained at that level by the competitive price for lower grades of Indian and Ceylon teas. The imports of tea into the United Kingdom in 1907 were as follows :-

|  |  | 1906 |  | 1907 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Million lbs | Per cent | Million lbs | l'er cent |
| India | - | 183.8 | 57.2 | 1714 | 54 |
| Ceylon | . | 106.3 | $33^{1}$ | 1075 | 33.9 |
| China | . | 13.2 | 41 | 18.8 | 59 |
| Java | - | 12.6 | 3.9 | 91 | 2.9 |

The consumption per capita in the United Kingdom in 1907 was 6.19 lbs as compared with 6.13 lbs in the previous year.

The following figures shew the quantity and value of tea exported from. India in the last five years:-

|  | Quantity |  | Value |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | lbs | R |  | 6 |
| 1903-04 | - - | 207,159,793 | 8,55,79,327 | $=$ | 5,705,288 |
| 1904-05 | - . | 211,887,158 | 8,46,54,867 |  | 5,643,658 |
| 1905-06 | $\cdots$ | 214,223,788 | 8,84,76,037 |  | 5,898,402 |
| 1906-07 | . | 233,653,637 | 9,85,77,642 |  | 6,571,843 |
| 1907.08 | - $\cdot$ | 227,021,657 | 10,30,03,486 |  | 6,866,899 |

The figures for 1906.07 represented a record both in quantity and value, but the progress in quantity was not maintained in 1907.08, when it declined by 6.63 million lbs or 2.8 per cent, though the rise in value was of $\mathrm{R}_{44} \cdot 26$ lakhs ( $£ 295,000$ ) or 4.5 per cent, the increase in specific value being one of about $7 \cdot 6$ per cent.

The quantities of tea exported to the principal countries in the last three years have been as follows (in thousands of lbs) :-

| United Kingdom |  |  | 1905-06 | 1906-07 | 1907-08. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | - | - | 166,591 | 176,170 | 169,325 |
| Canada |  |  | 15,019 | 14,515 | 4,731 |
| Russia | - |  | 9,988 | 13,761 | 15,407 |
| Australia |  |  | 7,729 | 9,499 | 11 , 090 |
| Turkey in Asia | - | . | 3,543 | 3,101 | 3,504 |
| Ceylon | - | - | 2,101 | 4,818 | 8,881 |
| China |  |  | 3,076 | 4,820 | 7,502 |
| Persia '. |  | , | 1,102 | 929 | 1,578 |
| United States |  | . | 2,175 | 1,739 | 2,086 |
| Other countries |  | - | 2,900 | 4,302 | 2,919 |

Though the figures for the United Kingdom tend proportionately to reduce, as direct shipments take the place of consignments to London on optional bills of lading, her share of the total exports stands at $74^{\circ} 6$ per cent. The expansion inf the Ceylon and China figures is due to Russian requirements, and the heavy decline in direct shipments to Canada should not be regarded as an index

## EXPORTS

of a contracting market. Russia and Australia have made marked advances. The figures to Australia were swelled by a replacement of the shipment of $750,000 \mathrm{lbs}$ lost by fire on the S.S. "Fortunatus."

Another feature of the year's trade which should be noticed is the increase in the volume of sales by auction in Calcutta in preference to Mincing Lane, and London has further suffered as the emporium of imports into the United Kingdom by the competition of lower freights with Glasgow and Liverpool. About $73,200,000 \mathrm{lbs}$ were auctioned in Calcutta during the past season, of which only about $20,000,000 \mathrm{lbs}$ went to London, and of the balance Russia (direct and through China and Ceylon) absorbed $27 \frac{3}{4}$ millions and Australia $10 \frac{5}{4}$ millions. The prices realised in Calcutta have shewn a greater advance on those of the previous year than those in London, and several of the London Assam Companies have found it profitable to auction their lower grades of tea here rather at home. -

Prices at auction in Calcutta

The average price realised in 1907.08 in London was 8.21 per lb , as compared with $8.11 d$ per lb in 1906-07.

In spite of the efforts of the Indian Tea Association, estimates of production continue under suspicion of great inaccuracy, and for this the planters must be held chiefly to blame. The crop in 1907 was generally considered to be better than that of the previous year, except in Bengal. The table below gives approximate figures of the area, production, and land exports during the last five years, and the actual figures of exports by sea during the same period:

|  |  | Area acres | Production | Exports (lbs) |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | lbs | By land | By sea |
| 1903 | - - |  | 526,611 | 209,041,888 | 679,616 | 204, 123,723 |
| 1904 | - - | 524,472 | $221,565,631$ | 744,352 | 211,395,940 |
| 1905 | - . | 528,004 | 221,712,407 | 760,256 | 210,798,056 |
| 1906 | - . | 529,246 | 241,403,510 | 942,256 | 235,8 5 5,697 |
| 1907 | - • | 536,65 2 | 248,020,398 | 865,648 | 235,422,376 |

The export trade is practically confined to three ports, Calcutta shipping $73^{.9}$ per cent, Chittagong 18.9 per cent (almost entirely to the United Kingdom), and Madras 6.2 per cent. Five years ago Calcutta claimed 83 per cent of the total.

The coast shipments were in the last two years:-

The recorded exports of green tea by,.,sea and by land during the last three years were:-

A customs duty, known as the Tea Cess, at the rate of a quarter of a pie per pound, has been levied since the ist April 1903 on all Indian tea exported. The collections realised are paid to a Committee constituted to receive and expend the proceeds of this cess on measures for promoting the sale and consumption of Indian tea. The collections since the institution of the cess have been as follows:-

## III.-METALS AND MANUFACTURES OF METALS

On the average of the last three years the exports of Indian metals and manufactures have represented no more than 64 per cent of the total exports of Indian merchandise.

In $1907-08$ the total exports of Metals rose from $10,063,446$ cwts to 0 $11,337,3^{84}$ cwts or 12.7 per cent in quantity and from R91.86 lakhs ( $£ 612,000$ ). to $\mathrm{R}_{105} 68$ lakhs ( $£ 704,500$ ) or ${ }^{1} 5$ per cent in value. But if illustration were needed of the unreliability of declared values, it may be found in the case of Manganese ore representing 81.3 per cent of the increased total value (as against $77^{\circ} 2$ per cent in 1906-07), which has a value of as. $12-6$ per cwt as against as. 11-6 in the previous year, and Copper and brass (wrought) representing $5^{\circ} 7$ per cent of the total value as against 8 per cent in 1906-07, which has a value of R79-6-5 per cwt against R $59-13-7$ per cwt in $1906 \cdot 07$, though the prices in both cases have fallen steadily during the last six months. Over 90 per cent of the world's supply of manganese is absorbed by the iron and steel industries, and prices dropped in consequence of enormously reduced consumption. Another disquieting feature of the Indian market is that the situation in Russia has so far improved that the restriction of her output is not likely to continue indefinitely, but it is hoped the decline of prices will hasten the general introduction of reducing plant in the chief producing centres to save the enormous cost of freight, and compel less wasteful methods of extracting ore than prevailed during the boom.

Under "other sorts" are comprised mainly :

| $\because$ |  | Cwts | R | $£$ |
| :---: | :---: | :---: | :---: | :---: |
| Copper, old | . . | 3,644 | 2,48,418 | 16,561 |
| Chromite | . | 157,020 | 3,54,194 | 23,613 |

| Tin ore and unwrought | - | 3,337 | 48,124 | 3,208 |
| Usenumerated metals | - . | 1,576 | 1,11,336 | 7,422 |

## -IV.--CHEMICALS, DRUGS, NARCOTICS, AND DYES

Saltpetre and borax represent the bulk of the exports of chemicals from India. The quantity of saltpetre exported increased from 353,378 cwts to 363,954 cwts, while the value rose from $R_{41} \cdot 42$ lakhs ( $£ 276,000$ ) to $R_{41} \cdot 84$ lakhs ( $£^{2} 79,000$ ). The quantitative expansion of 3 per cent in conjunction with I per cent rise in value means a decline of $1 \cdot 7$ per cent in specific value.

Borax was exported to the extent of 5,247 cwts with a value of Ri.o8 lakh ( $£ 7,200$ ), its average value having risen by $\cdot 5$ per cent. The chief source of supply is Tibet.

The exports of Chinchona bark amounted to $473,200 \mathrm{lbs}$ valued at Ri.08 lakh ( $£ 7,200$ ) as compared with 494,587 lbs valued at RI.19 lakhs ( $£ 7,900$ ) in 1906.07 . The fall in specific value is due to competitive Java shipments glutting the home markets.

Opium-As the result of negotiations with China the Government of India have agreed to restrict the export of opium from this country to 61,900 chests during the calendar year 1908, and to effect further reductions of 5,100 chests in each of the two following years, while the question of making still further reductions after the year 1910 will depend on whether China has, in the interval, effected a proportional reduction in her own production and consumption of opium. The ancillary proposal to increase the Chinese import duty, which at present stands at 110 taels per picul ( $259^{d}$ per lb), has been postponed for the present, as the objections entertained to that course are felt to require further consideration, but it has had no doubt an adverse effect on prices, which might otherwise have been expected to rise in response to reduced production.

In pursuance of this agreement with China the area under poppy cultivation in the Bihar and Benares Agencies has already been reduced from 845,000 bighas to 800,000 bighas. The number of chests of Bengal opium offered for sale in 1907 was 50,400 as compared with 52,800 in !906, and the number has been further reduced to 3,900 per mensem until December next and to 3,600 for the first three months of 1909, and the number of chests of Malwa opium which may be exported from Bombay has been limited to a maximum of 15,100 during the present calendar year, and further reductions will probably be effected in 1909 and 1910.

The quantities of all opium exported from Bengal and Bombay respectively during the last five years with value in thousands of rupees and of pounds sterling and the average prices by chest are as follows :-

In Bombay, the port of shipment for Malwa opium, there was a rise of 3,634 chests or 28.6 per cent in quantity and a loss of 6.8 per cent in average value, but the exports from Bengal declined by 6,148 chests or 115 per cent in quantity with a loss of 2.5 per cent in average value. The total quantity showed a net decline of 2,514 chests or 3.8 per cent in quantity, and a decrease of 6.8 per cent in total value. The average price of the Calcutta sales was $R_{1,34}$ for the twelve months ending March 1908, the highest obtained being R 1,456 in April 1907. There was some change in the volume of distribution. While exports
to Hongkong fell by 5,401 chests to 34,643 chests, shipments to the Straits rose by $24^{2}$ chests to 13,195 chests, and to the Treaty Ports of China by 2,560 chests to 13,106 chests.

Tobacco-Undoubtedly tobacco smoking is becoming increasingly popular in India, and despite American competition as a grower and importer of manufactured tobacco, the internal market for Trichinopoly and Burma cheroots continues firm, while the exports, despite rumours to the contrary, shew a steady increase. Cigarette manufacture has been stimulated by the success of the American invasion, and experiments are being made in different parts of the country with special varieties of Havana and Virginian tobaccos.

The following are the figures of the trade for the last three years :-

In unmanufactured description, therefore, the exports in 1907.08 declined by 5.8 per cent in quantity and 11.8 per cent in value, and the specific value declined by 6.3 per cent to $\mathrm{R}_{10-4.2}$ ( 13 s . $8 \frac{1}{\mathrm{~d}} \mathrm{~d}$ ) per cwt, owing to the increasing demand for lower grades of leaf in the Straits Settlements. In the manufactured classes, however, the rise in specific value is 3 per cent and there was a satisfactory increase of $4^{4} 3$ per cent in the quantity shipped. The largest quantities of Indian cigars are taken by the Straits Settlements, the United Kingdom, and Siam.

Indigo-The improved prospects of 1906.07 have scarcely been maintained in $1907-08$, though the Java-Natal variety seems to have come to stay and the season in Bihar was on the whole favourable to the crop. Prices on the other hand have shown great steadiness and a revival of interest is considered more probable than a further decline. It is a significant fact that natural indigo continues to meet a ready sale at prices fully 25 per cent higher than 3 years ago, without any corresponding advance in the price of the synthetic substitute. The following statement shows the average prices of indigo per cwt during 1906 and 1907 :-

The statement of exports given below has no very encouraging features, though the demand from the United Kingdom was greater and also from Persia into some provinces of which the importation of the synthetic dye seems still to be regarded as interdicted. Persia, however, is an indigo-growing country and this market is likely to be only temporary.

The following statement shows the exports of indigo in i907-08 and the four previous years. The total, twelve years ago, was $169,500 \mathrm{cwts}$ with a value of $\mathrm{R}_{4} \cdot 37$ crores ( $£_{2} \cdot 9$ I millions) and that was about 19 per cent below the value for the previous year:-

|  |  |  | Prom Calcutta | From Madras ports | From other.ports | Total | Value |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Cwts | Cwts | Cwts | Cwts | R | 6 |
| 1903-04 |  | - | 29,858 | 24,414 | 6,1 $3^{8}$ | 60,410 | 1,07,62,000 $=$ | 717,000 |
| 1904.05 | - | - | 30,029 | 11,901 | 7,322 | 49,252 | 83,46,000 | 556,000 |
| 1905-06 | - |  | 19,062 | 7,756 | 4,368 | 31,186 | 58,64,000 | 391 , 100 |
| $1906-07$ | - |  | 19,309 | 11,159 | 4,634 | 35,102 | 70,05,000 | 467,000 |
| 1907-08 | - | - | 16,627 | 10,619 | 5,2,4 | 32,490 | 63,73,000 | 425,000 |

In five years there has been a decline of over 46 per cent in quantity and 40.8 per cent in value. In $19 c 6-07$ there was a small recovery, but in 1907.08 a decline of 7.4 per cent in quautity and 9 per cent in value with a fall of $17 \%$ per cent in specific value, the average declared value being $R_{196 \cdot 2-5}$ ( $f_{1} 13$ is. 7 d.) per cwt.

The exports to the United Kingdom improved by some $\cdot 16.9$ per cent to $9,385 \mathrm{cwts}$, but there was a further marked fall in the exports to Egypt, which had hitherto held the first place, from 9,195 to $6,424 \mathrm{cwts}$. The Continent of Europe increased its demand from 7,063 to $8,083 \mathrm{cwts}$, but that of Japan declined from 1,600 to 343 cwts or by 78 per cent. Persia took $2,988 \mathrm{cwts}$ instead of 2,422 cwts, but Asiatic Turkey dropped from 3,453 to 3,235 cwts.

There was in the year a decrease of some 12 per cent in the area placed under the crop. The largest contraction occurred in Madras ( 34 per cent), where the holdings are small and scattered, and is ascribed to lack of timely rainfall and the increased competition of the synthetic dye. As compared with the average of the five years ending $1905^{\circ} 06$, the overall shortage in the four reporting provinces-Bengal, Madras, the United Provinces, and the Panjab-is one of 39 per cent. The total yield in these four provinces was estimated in December 1907 at $51,400 \mathrm{cwts}$, which was not up to expectation owing to insufficient rainfall. The corresponding estımate in December 1906 was of $69,700 \mathrm{cwts}$.

Other Dyeing and Tanning Materials-The following statement shows the exports of the principal articles in this class in the last three years :-

|  | 1905-06 |  |  | 1906.07 |  |  | 1907-08 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwts | $\mathbf{R}$ | $6$ | Cwis |  | 6 | Cwts | R | 15 |
| Myrabolams | - 1,206,39S | 44.61,000 | 297,000 | 1,162,219 | 43.97,000 | 293,000 | 1,493,294 | 5,895 000 | 393,000 |
| Cutch | 55,070 | 8,64,000 | 58,000 | 97,269 | 15,93,000 | 106,000 | 91,690 | 14,48,000 | 96.000 |
| Turmeric | 49,545 | 4,42,000 | 29,000 | 62,246 | 7,09,000 | 47,000 | 82,S44 | 9,91,000 | 66,000 |

The exports of myrabolams increased by 28.5 per cent in quantity, by $34^{\circ}$ per cent in value, and by $4^{\circ} 5$ per cent in specific value. The extraction of tannic acid on a commercial scale has not so far proved successful in India. Cutch scarcely maintained the advance in quantity of the previous year, and there was a decline in specific value of 3.5 per cent. The exports of Turmeric represented a quantitative improvement of $33^{\circ} \mathrm{I}$ per cent and a gain of nearly 40 per cent in value. The chief customers are the United Kingdom ( $15 \cdot 5$ per cent of the total exports), Germany ( 14.5 per cent), Turkey in Asia ( 9.3 per cent), and Aden ( $9^{\circ} 6$ per cent).

Oils.-The total values under this head increased by 22.8 per cent from R69.86 lakhs ( $£ 466,000$ ) in 1906.07 to R85.82 lakhs ( $£ 572,000$ ) in the current statistical year.

Under animal oils (chiefly fish oil) there was a remarkable rise from 28,48 r gallons, valued at $R_{23,171}$ ( $f_{1,545}$ ), to 205,723 gallons, valued at $R_{1,05,169}$ (だ 7,011 ).

Under essential oils, lemon grass oil from the Madras Presidency is the principal description exported, the figures being 16,195 gallons, value $R_{3}, 86,453=$ $£ 25,764$ in $1907-08$, against 12,814 gallons, value $R_{4}, 86,150=£_{3} 2,410$ in 1906-07. The market is very limited, and the increase in supply was enough to account for the fall in specific value from $\mathrm{R}_{3} 8$ ( $£ 2-10-8$ ) to $\mathrm{R}_{2} 4\left(£_{\mathrm{I}} \mathrm{I}-12-0\right)$ per gallon.

Mineral oils marked a remarkable advance owing to the expansion of the exports of petroleum from Burma, chiefly to the United Kingdom ( $1,759,269$ gallons), Holland ( $3,871,505$ gallons), and Ceylon ( 8,108 gallons).

The total under this head increased by 524 per cent in quantity to $5,652,850$ gallons and in value by ${ }_{133}$ per cent to $\mathrm{R}_{5} \cdot 37$ lakhs ( $£_{3} 6,000$ ), and this was done without contraction of supply to the Indian market, for the coastwise'exports from Burma to ports in India proper increased from 55,796,000 gallons to $67,910,000$ gallons during the year under review. The average declared value of mineral oils including kerosene per gallon on export declined from 4 annas ( $4 d$ ) to 1 anna $\sigma$ pies ( $1 \frac{1}{2} d$ ), and it may be of interest to compare this price with that of the vegetable illuminants most commonly used by the people, though these have a somewhat longer burning capacity per unit.

Exports of paraffin wax, which is classed as oil, increased by $45^{\circ} 4$ per cent to $87,564 \mathrm{cwts}$ valued at Rig. 7 lakhs ( $£ 131,000$ ), while the shipment of candles made from petroleum rose by $7^{\circ} 6$ per cent to $5,482,000 \mathrm{lbs}$ valued at $\mathrm{R}_{1} 5^{\circ} 48$ lakhs ( $£ 103,000$ ).

The exports of vegetable oils show a marked decline for the third year in succession, while the export of oil seeds continues to increase, and under this head industrial apathy seems to intensify rather than diminish.

There is a slight recovery under cocoanut oil with a total value of $R 1 \eta^{1} 17$ lakhs ( $£ 114,000$ ) as compared with R14 18 lakhs ( $£ 95,000$ ) in $1906 \cdot 07$, but the bulk of it is crudely extracted in wooden country mills. The markets are chiefly Singapore and Ceylon. The value of castor oil exported shews a slight advance from R22.22 to R22'37 lakhs ( $£ 148,000$ to $£ 149,000$ ), but that of linseed declined by R1'3 lakh ( $£ 9,000$ ) or nearly 60 per cent. For mustard and sesamum oil, etc, the total values recorded are R2•a2 lakhs ( $£_{1} \xi_{10}, 000$ ) in advance of those for 1906-07.

Coal-The export trade in coal has never been very enterprising or very active, and in 1907-08 the exports of coal represented 77 per cent of the exports of raw materials and 34 per cent of the exports of Indian merchandise, the average for the three years ending $1906-07$ being 9 r per cent and ${ }^{3} 8$ per cent, respectively. The quantity exported in 1907-08 was $727,88 \mathrm{I}$ tons as compared with 935,350 tons in $1906-07$, a decrease of $22^{\circ} 2$ per cent. There was a corresponding fall in value from $\mathrm{R}_{74} \cdot 80$ lakhs ( $£ 499,000$ ) to $\mathrm{R}_{5} 8.96$ lakhs ( $£ 393,000$ ) or 21.2 per cent. The decline in exports is not attributable to decreased activity in production, for the total output in 1907 was $11,147,339$ tons against $9,783,250$ tons in 1906, an increase of $1,364,089$ tons and the largest output on record. The explanation is to be found in the growing volume of demand for industrial purposes, and the increasing preference for coal rather than wood fuel shewn by Indian Railways, which has enlarged the total requirements for home consumption, while Japan, the war with Russia over, has already succeeded to a large extent in recovering her position in the Singapore and Chinese markets, which India held on sufferance in the interim.

The following table shews the supply of coal retained for internal consumption exclusive of previous stocks in the ports of Calcutta and Bombay and in each province during 1907:-

|  | Production Tons | Imports (by sea, rail and river) Tons | Exports (by sea, rail and river) Tons | Balance for internal consumption Tons |
| :---: | :---: | :---: | :---: | :---: |
| Calcutta | . ... | 5,070,267 | 3, $871,55^{*}$ | 1,198,717 |
| Bengal (excluding Calcutta) . | 9,993,348 | 12,402 | 6,829,345 | 3,176,405 |
| Bombay | - ... | 1,219,359 | 226,703 | 992,656 |
| Bombay (excluding Bombay Port) | ... | 503,468 | 2,638 | 500,830 |
| Sind and Britisb Baluchistan | 42,488 | 441,855 | 263,590 | 220,753 |
| Madras | ... | 602,493 | 186,727 | 415,766 |
| Eastern Bengal and Assam | 295,795 | 224,375 | 4,309 | 515,861 |
| United Provinces of Agra and Oudh | ... | 675.117 | 2,7\%0 | 672,347 |
| Panjab | 60,749 | 475,672 | 530 | 535,891 |
| Central Provinces and Berar | 134,088 | 229,237 | 14,294 | 349,031 |
| Rajputana and Central India | 206,650 | 320,281 | 32,778 | 494, 153 |
| Nizam's Territory | 414,22I | 2,304 | 204,819 | 211,706 |
| Mysore | ... | 102,492 | 4 | 102,488 |
| Burma | ... | 366,942 | 310 | 366,632 |
| Total | 11,147,339 | 10,246,264 | 11,640,367 | 9,753,236 |

Fifty three per cent of coal exported ( 384,938 tons) was declared for Ceylon, and exports to the Straits Settlements ( 28 per cent) declined from 293,788 tons to 203,419 tons, but Sumatra took larger quantities and is now India's third best customer with 101,651 tons ( 14 per cent). Calcutta was the port of shipment for practically the whole of the exports. Shipments of bunker coal from Calcutta for use in steamers rose from $8 \mathrm{~s} 6,488$ tons to $1,003,821$ tons in 1907.08, but shipments coastwise to other Indian ports amounted to $2,205,532$ tons-a decrease of 2 per cent on the figures for $1906-07$, chiefly due to reduced consignments to Bombay.

The price of first class Jherria Bengal coal pertonf. o. r. was-

[^9]Cotton-The exports of raw cotton represent $33^{\circ} 7$ per cent of the whole value of Indian raw materials exported. The extent of the trade primarily depends of course upon the exportable surplus which in turn depends upon the general harvest in India, but the relation of textile activity in Europe and the United States to the supplies available in America and Egypt is a secondary factor of scarcely less importance. In all these respects the season of $1907-08$ was very favourable, as the textile industry all over the world was unusually active, and the crop of 1906.07 which mainly furnished the exports under review was a good one. It was estimated at $22 \frac{1}{3}$ million acres with a yield of some $4,932,700$ bales of 400 lbs ( $17,616,786 \mathrm{cwts}$ ) as against 21 million acres in 1905 -06 with an outturn of $3,044,000$ bales ( $10,87 \mathrm{r}, 4^{28} \mathrm{cwts}$ ). This increase in area and yield was due to a favourable season, but the average yield per acre works out at only 88 lbs of cleaned cotton which is less than half the estimated average per acre in America.

The American crop in the last three years has been estimated as follows by the Census Bureau (in cwts) :-

| 1905 | 1906 | 1907 |
| :---: | :---: | :---: |
| $48,234,625$ | $60,694,187$ | $50,783,308$ |

While the Egyptian crop handled in 1907 is reported to have been one of $6,900,000$ cantars or $6,099,100 \mathrm{cwts}$.

The following are the contrasted prices of middling upland cotton at Liverpool and good Broach cotton at Bombay in the last two years in pence and decimals of a penny per $\mathrm{lb}:-$

Prices, it will be seen, were on the whole somewhat higher than in 1906-07. The net imports into the United Kingdom in 1907 exceeded those of 1906 by some $2,632,000 \mathrm{cwts}$ or 16.7 per cent. This activity, however, did not extend to India, for the mill consumption in 1907.08 declined again by nearly 163,800 cirts or 2.4 per cent from $6,945,600 \mathrm{cwts}$ to $6,78 \mathrm{x}, 800 \mathrm{cwts}$. This figure allows for wastage in manufacture and is equivalent to $1,898,900$ bales of 400 lbs each which, were there no imports of foreign cotton, would absorb 38.2 per cent of the total Indian crop (1906).

The table given below shows a progressive increase in exports of Indian cotton during the last three years, both in quantity and value :-

In the year under review there was an increase of $15 \%$ per cent in quantity and 16.9 per cent in value, the rise in specific value being $I^{\prime} 1$ per cent.

The exports from different provinces were:-

The statement below shows the destinations of cotton during the same period:-

It will be remarked that the bulk of the shipments goes to the Continent and the Far East, and Lancashire depends to an insignificant extent upon Indian cotton. The imports into Japan rose by 29.8 per.cent, practically a retum to the figures of $1905-06$. Germany's purchases increased by 13 per cent, and those of Italy and Belgium by $21_{3} 3$ per cent and 13.8 per cent respectively. The figures for Austria-Hungary and the United Kingdom are practically the same. In 1907-08 France took 65,000 cwts and Spain 18,000 cwts more, but China took $3 \mathrm{x}, 000 \mathrm{cwts}$ less, than in 1906.07.

Hides and Skins, raw-The exports of raw hides and. skins represent approximately 4 per cent of the entire exports of Indian produce. Taken together the number exported amounted to 25.5 millions, valued at R705.18 lakhs ( $64,701,000$ ), as compared with $39^{\circ} 8$ millions valued at R $1089^{\circ} 4$ lakhs ( $£ 7,263,000$ ) in the previous year.

The following statement of the exports for the last five years shows the fluctuations in the trade, the unit being $\mathbf{1 , 0 0 0}:-$

The exports of raw hides declined by $35^{\circ} 9$ per cent in quantity and 32.6 per cent in value : the average declared value per cwt rising by 8.2 per cent to R63-8-6 ( $£ 4-4-8 \frac{1}{3}$ ) per cwt. Rates continued exceptionally high during the early part of the year, but when at the close of 1907 a slump in all the home markets in the price of leather set in, that of the raw material was naturally adversely affected. Further the tanning industry in Germany was faced with a contraction to normal limits in the Russian market, which had been temporarily inflated during the war with Japan, and Germany is the principal customer for India's raw hides. Calcutta hide shippers have been charged of late with lowering the standard of their assortments by packing to price, a practice against which the present method of Hamburg arbitration gives little or no relief to tanners.

The exports of raw skins declined by $35^{\circ} 9$ per cent in quantity and by $39^{\circ}$ i per cent in value, and there was a decline in average declared value of 8.8 per cent. The United States being India's principal market, the volumeof export was greatly affected by the paralysing effect of the financial crisis upon consumption, and the prohibition with effect from August 1 , 1907, of the import of hides other than dry arsenic cured except under a certificate as to disinfection from the American Consul at the place of export, caused additional uneasiness to shippers on this side.

The share of each province in this class of exports was as follows:-

The principal countries participating in the shipments during 1907.08 were as follows (in thousands of rupees and of pounds sterling ):-

Though efforts continue to be made to convince the Indian ryot of the wanton damage done to the industry by the unnecessary branding of cattle, very little abatement of the evil can yet be recorded.

Jute -The exports of raw jute now represent 23.6 per cent of the tota value of Indian raw produce exported as compared with $32^{\circ} 9$ per cent in 1906.07, but at one time the year under review promised to be even more remarkable than the previous year. The estimates of area, outturn, consumption, and surplus in the last five years were as follows :-

| Area | Outturn | Estimated <br> Indian con- <br> sumption <br> Cwts | Estimated <br> exportable <br> surplus |  |
| :---: | :---: | :---: | :---: | :---: |
| $1903-04$ | Acres | Cwts | Cwts |  |
| $1904-05$ | $2,850,000$ | $25,861,000$ | $11,726,000$ | $14,135,000$ |
| $1905-06$ | $3,128,000$ | $29,429,000$ | $12,405,000$ | $14,024,000$ |
| $1906-07$ | $3,483,000$ | $32,598,000$ | $14,427,000$ | $14,994,000$ |
| $1907-08$ | $3,883,000$ | $34,235,000$ | $12,256,000$ | $20,342,000$ |
|  |  | $15,000,000$ | $19,235,000$ |  |

On the basis of the l.test figures 83.4 per cent of this monopoly crop is grown in Eastern Bengal and Assam and the balance in Bengal.

Jute is distinguished from certain other Indian crops in that the bulk of the harvest is moved in the statistical year in which it is grown. The shipments of 1907.08 , therefore, include the major part of the exportable surplus of the 1907 harvest. The growth of the export trade is shown by the following statement, the unit being 1,000:-

|  | Quantity | Centesimal variations | Value |  | Average value per cwt |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwts |  | $\overparen{R}$ |  |  | 6 |
| 1903-04 | - 13,721 | +. $5 \cdot 3$ | $11,71,81=$ | 7,812 | $8 \cdot 54=$ | 57 |
| 1904-05 | 12,875 | 6.2 | 11,96,56 | 7,977 | 9.29 | 62 |
| 1905-06 | 14,480 | + 12.5 | 17,12,57 | 11,417 | 11.83 | 79 |
| 1906-07 | 15,970 | $+103$ | 26,83,87 | 17,892 | 16.81 | 1.12 |
| 1907-08 | 14,192 | $11^{1}$ | 17,97,28 | 11,982 | $12 \cdot 66$ | ${ }^{8} 4$ |

During the year 1907.08 prices (per bale of 400 lbs ) in the 1 st week of each month were as follows:-

The movement in prices was generally downward, but the great decline both in jute and jute fabrics dates from the last week of July, when the rates quoted for 9 and in Porter Hessians were about 25 per cent lower than those quoted in Dundee at the same time for the same classes of goods. After a temporary recovery and brisker markets in October and November there was again a slarp decline, and though in May 1908 this was made good, prices are now R14 a bale lower than at the same time last year. The average, however, of the year is R $44-12$ which is greater by 9.3 per cent than the average of the previous five years.

During the year under review the United Kingdom took 5,456,579 cwts or 38.4 per cent of the total exports of jute as against $6,857,596 \mathrm{cwts}$ in the .previous year. Germany took 2,957,022 cwts or 20.8 per cent of total exports as against $3,459,790$ cwts in $1906-07$. The United States took $1,981,455$ cwts or 14 per cent, France $1,746,374$ cwts or 12,3 per cent, Austria-Hungary 907,116 cwts or 6.4 per cent, Spain 389.423 cwts or $2^{\prime} 7$ per cent, and Italy $545,060 \mathrm{cwts}$ or $3^{\circ} 8$ per cent. Calcutta shipped 88.8 per cent of the total and Chittagong $\mathbf{r o}^{\circ}$, per cent, the balance being accounted for by shipments of Bimlipatam jute (Hibisrus Cannabinus) from Madras ports.

Allegations of the watering and adulteration of jute are less frequent, but Dundee has complained latterly of the amount of root left in the fibre which may require the organisation of a new department in the mills to deal with.

Seeds - The exports of seeds, of which all but an insignificant fraction are oilseeds, represent $22^{\circ} \mathbf{1}$ per cent of the entire exports of Indian raw produce. They amounted to $23,185,000$ cwts in $1907-08$ with a value of $\mathrm{R}_{1} 681$ crores ( 11.2 millions sterling), which marks an increase of $3.449,000$ cwts or 175 年er cent in quantity and of R 379.35 lakhs ( $£ 2,529,000$ ) or $29^{\circ} 1$ per cent in value and a rise of 9.9 per cent in specific value. The figures for the last five years have been as follows:-

|  |  |  |  | Cwts | R | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1903.04 |  |  | - | 24,681,000 | 14,51,58,000 $=$ | 9,677,000 |
| 1904-05 | - | - | . | 26,874,000 | 14,41,08,000 | 9,607,000 |
| 1905-06 | - | - |  | 17,576,000 | 10,60,92,000 | 7,073,000 |
| 1906.07 |  |  |  | 19,736,000 | 13,02, 17,000 | 8,681,000 |
| 1907-08 |  |  |  | 23,185,000 | 16,81,52,000 | 11,210,000 |

It will be noted that, while the quantity falls short of the record figures of $1904-05$ by 13.7 per cent, the total value of exports in $1907-08$ is greater by 16.7 per cent. As compared with $1906-07$, the increase is one of 17.5 per cent in quantity, 29.4 per cent in total value, and about 9.8 per cent in specific value. The quantities and values of the principal descriptions of seeds exported are shown below : -

Of the total, Bombay shipped R867.I lakhs ( $£ 5.78_{1}, 000$ ) or $5^{1 / 6}$ per cent, Bengal R $395^{\circ} 61$ lakhs ( $£^{2}, 637,0$ oco or 23.5 per cent, Sind R227.46 lakhs ( $\mathrm{E}_{1}, 516,000$ ) or $1_{3} 5$ per cent, and Madras R176.52 lakhs ( $61,177,000$ ) or 10.5 per cent.

Linseed goes chicfly to the United Kingdom R16\% 37 lakhs ( $\boldsymbol{f}_{1,116,000 \text { ) , }}$ France R129.07 lakhs ( $£ 860,000$ ), Germany R60'43 lakhs ( $£ 403,000$ ), and Italy R $\mathrm{R}_{4} \cdot 64$ lakhs ( $\mathrm{E}_{3} 304,000$ ).

The largest buyers of rapeseed are Germany $R_{126} 6_{3}$ lakhs ( $£ 845,000$ ), the United Kingdom R5I'99 lakhs ( $£ 347,000$ ), Belgium $\mathrm{R}_{13} 5^{\prime} 69^{\prime}$, lakhs ( $£ 905,000$ ), and France Rroris lakhs ( $£ 674,000$ ).

Sesamum and poppyseed are shipped mainly to France R63.27 lakhs ( $£ 421,700$ ) and $R_{56} \cdot 21$ lakhs ( $£ 374,700$ ) respectively, and to Belgium $R_{4} 6.35$ lakhs ( $£ 309,000$ ) and $\mathrm{R}_{54 \cdot 32}$ lakhs ( $£ 362,100$ ) respectively, cotton-seed to the United Kingdom R1II89 lakhs ( $£ 746,000$ ), castor seed to the United Kingdom $85^{\circ} 54$ lakhs ( $£ 570,000$ ), and ground nuts to France $99^{\circ} 16$ lakhs ( 6651,000 ).

Of. Linseed the outturn in 1906.07 was estimated at $8,504,000 \mathrm{cwts}$ of which only about 73 per cent was shipped. The market was not as strong as
that for certain other products, but India's exports increased by $4^{\cdot} 6$ per cent in quantity and by 46.8 per cent in value.

Of Rapeseéd the total estimated outturn in India in 1906.07 was $21,062,000 \mathrm{cwts}$, the bulk being consumed in the country itself. The exports increased by $42^{\circ} 3$ per cent in quantity and by $75^{\circ} 3$ per cent in value, and the specific value rose by 22.4 per cent, thus more than recovering the ground lost in $1905-06$.

The Sesamum crop was smaller than usual and the internal demand for the seed intensified by the enlanced price and enlarged export of rapeseed, and the exportable surplus was, therefore, considerably below the figures of 1906-07, though above those of $1905-06$. The decline was one of 43.3 per cent in quantity and of 33.3 per cent in value, the rise in specific value being ${ }^{1} 76$ per cent.

Cotton seed almost maintained its position in the Western markets as compared with the previous year's record figures of $4,387,540 \mathrm{cwts}$, while the value actually shews an advance from Ri29.91 lakhs ( $£ 866,000$ ) to R131. 6 lakhs ( $£ 877,000$ ) equivalent to a rise in specific value of 4.7 per cent. The shipments to the United Kingdom represent $85^{\prime} 7$ per cent of the whole exports. of cotton seed, though the total declined from $4,015,900$ to $3,643,500$ cwts, while Egypt nearly trebled her demand from 165,140 to 476,600 cwts in 1907.08 .

The exports of Poppy seed increased by 56.5 per cent in quantity and by 90.4 per cent in value, and a rise of 21.6 per cent in specific value. The actual figures are $1,256,562 \mathrm{cwts}$ and $\mathrm{R}_{125} \mathbf{5}^{21}$ lakhs ( $£ 835,000$ ), as compared with 802,600 cwts and R65'77 lakhs ( $£ 438,500$ ) in $1906-0 \%$.

The exports of Castor seed increased by 32.5 per cent in quantity and by $32^{\prime} 9$ per cent in value, the declared value being practically unchanged.

The exporlation of Ground nuts declined by $1^{\circ} 6$ per cent in quantity and 6 I per cent in value, but in making deductions from these figures it must be remembered that a varying proportion of the exports of ground nuts from India is shipped from the French port of Pondicherry and so escapes registration in the trade of India. In $1906-07$ the exports from Pondicherry amounted to 879,080 cwts with a value of $\mathrm{R}_{7} \mathrm{O}^{\prime} 1_{3}$ lakhs ( $£ 467,500$ ) as against $672,460 \mathrm{cwts}$ with a value of $R_{43} \cdot 64$ lakhs ( $£ 291,000$ ) in $1905 \cdot c 6$.

Silk-India's position as a producer of silk is altogether unworthy of her potentialities. Her silk manufactures are unprogressive, and though the exports of raw silk shew a negligible decrease in quantity, the values have receded from $R 68.65$ lakhs ( $£ 458,000$ ) in 1906.07 to $R 6_{3} \cdot 78$ lakhs ( $£ 425,000$ ), equivalent to a decline in specific value of 71 per cent. In reeled mulberry silk there was a loss of 2 per cent in the averagevalue, and exports declined by 5 per cent in quantity and by 7.8 per cent in value-from $753,664 \mathrm{lbs}$ and $\mathrm{R}_{5} 8^{\circ} 7 \mathrm{I}$ lakhs ( $£ 39 \mathrm{I}, 000$ ) in 1906.07 to 716,134
 therefore, there was an ovar-all decline of $2^{\circ}$ I per cent in specific value. Bengal dropped from $6_{34,982} \mathrm{lbs}$ and $\mathrm{R}_{5} 5^{\circ} 13$ lakhs ( $£ 334,000$ ) to $512,142 \mathrm{lbs}$ and $\mathrm{R}_{41} 134$ lakhs ( $£^{2} 75,600$ ), while Bombay, after several successive years of retrogression, improved her contribution to $217,39 \mathrm{rlbs}$ valued at R $\mathrm{I}_{3} 3$ lakhs ( $£ 88,700$ ). or by 59.9 per cent in quantity and by $44^{2} 2$ per cent in value, but did so only at a further loss in average value which has been the feature of her trade in this commodity in recent years. Bengal's decline was one of $19^{\circ} 3$ per cent in quantity and $17{ }^{\circ} 5$ per cent in value.

The distribution of the exports of reeled silk (mulberry and wild) was as follows:-

The exports of Waste Silk (Chasam), $31^{\circ} 6$ per cent of which was wild silk, increased in quantity to $1,093,3^{84}$ lbs but declined in value to R779 lakhs ( $£ 53,000$ ). The average declared value per lb , therefore, declined from 12.5 annas ís $0 \frac{1}{2} d$ ) to 11 . 5 annas ( $11 \frac{1}{8} d$ ). The exportation of Cocoons (the majority being 'wild') increased to $119,009 \mathrm{lbs}$ and R1.2I lakhs ( $£ 8,000$ ). The average value slightly advanced.

Teak Timber-The total exports of teak declined by 10.5 per cent in quantity to 39,539 cub. tons and in value by $\cdot 2$ per cent to R6i. 35 lakhs $(£ 409,000)$. The average price in Calcutta of teak was maintained at the $1906-07$ level (R122-127 - $£^{8-2-8}$ to $£ 8-9 \cdot 4$-per ton of 50 cub . ft.) but the year closed with prospects of a decline in sympathy with the world's market for timber, unless the intensified internal demand, which is shown by the increase of 22.5 per cent in the shipments from Burma to India proper, bringing the total value to R98.83 lakhs ( $£ 658,866$ ), is maintained.

The value of Sandalwood exported during 1907-08 amounted to R12.07 lakhs ( $£ 80,500$ ). This is a Government monopoly in Mysore and forms one of the principal items of the State's receipts. The chief foreign markets are Germany, France, and the United States.

Wool - In the first six months of 1907 -08 the world's markets were strong, and in September owing to a temporary shortage of raw material prices were unduly inflated, but unfortunately for shippers the American financial panic occurred just when the abundant new supplies of Colonial wool were coming upon the market, and, in spite of large withdrawals at auction, prices fell very sharply and up to the close of the year had not made any marked recovery. There was some falling-off in the supply of E. I. wool which may have tended to protect India to some extent from the decline in prices, but greater discrimination was shewn in the rejection of dirty parcels, the prices for which were irregular and often extremely low.

After four years of progressive increases the total exports from India fell from $45^{\circ} 9$ million lbs, value $\mathrm{R}_{242} .65$ lakhs ( $£ 1,618,000$ ), to $39^{\circ} 8$ million lbs, value R210.34 lakhs ( $£ 1,402,000$ ). Thus there was a fall of about 13.3 per cent both in quantity and in value, the specific value in 1907-08 being practically unchanged ( 8.5 annas- $8 \frac{1}{2} d$-per lb). The United Kingdom took wool to the value of $\mathrm{R}_{204}{ }^{\circ} 84$ lakhs $(£ 1,366,000)$ as against $\mathrm{R}_{23} 2^{\circ} \mathrm{O}$ 9 lakhs ( $£ 1,547,000$ ) in $1906-07$, the United States R2.42 lakhs ( $£ 16,000$ ) as against " R $5 \cdot 58$ lakhs ( $£ 37,000$ ) in 1906-07, while Japan fell away from R2.45 lakhs ( $£ 16,000$ ) to Ri.99 lakhs ( $£ 3,000$ ). Re-exports of foreign wool, however, chiefly to the United Kingdom, showed a further substantial advance at $\mathrm{R}_{32}{ }^{\circ} 76$ lakhs ( $£ 218,000$ ), as against R29'59 lakhs ( $£ 197,000$ ) in the previous year.

The other principal raw materials exported have, in the last three years, been as follows:-

|  | 1905-06 |  | 1906-07 |  | 1907-08 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | 6 | R | 6 | R | 6 |
| Animal bones | 49,78,778= | 331,919 | 55,45,241 $=$ | 369,683 | 54,45,034 $=$ | 363,002 |
| Bristles and fibre | 21,51,028 | 143,402 | 17,68,930 | 117,929 | 15,44,535 | 102,969 |
| Caoutchouc | 12,82,129 | 85,475 | 11,18,487 | 74,566 | 5,78,397 | 38,560 |
| Hemp | 54,19,756 | 361,317 | 68,73.395 | 458,226 | 80,63,544 | 537.570 |
| Horns | 17,49,944 | 116,663 | 16,91,532 | 112,769 | 16,49,769 | 109,985 |
| $\underset{\text { seed) }}{\text { Llick }}$. an | 7,79,613 | 51,974 | 12,86,242 | 85,749 | 20,59,704 | 137,314 |
| Mica | 23,94,314 | 159,638 | 38,24,488 | 254,999 | 34,22,420 | 228,161 |
| Oil-cake, fodder, and manure | 68,98,380 | 459,892 | 75,99,121 | .506,608 | 75,17,393 | 501,160 |
| Rice-bran | 55,41,825 | 369,455 | 49.35,551 | 329,037 | 87,32,418 | 585,495 |

Of these rice-bran, hemp, and oil-cakes are the most important items. Rice-bran increased by $R_{3} 8.47$ lakhs ( $£ 256,000$ ) or 78 per cent. The trade in hemp rose by Rif.9 lakhs ( $£ 79,000$ ) or 17 per cent, but that in oil-cakes declined by R 82 lakh ( $£ 5,500$ ) or $1 \cdot 1$ per cent. This item consists chiefly of castor and groundnut shipped to the Straits for manurial purposes. A decline of Ri lakh ( $£ 6,700$ ) or 1.8 per cent occurred in Bones. Under Bristles and fibre for brushes and brooms (chiefly palmyra) there was a decline of $\mathrm{R}_{2} \cdot 24$ lakhs ( $£ 15,000$ ), owing to reduced shipments from Tuticorin and Coconada, and under Horns of R.42 lakh ( $£ 2,800$ ). The remainder forms a group of articles in which modern industries are much interested. The exports of Mrica fell short of the previous year's figures by R4\%2 lakhs ( $£ 27,000$ ) or 1005 per cent. The continuous advance in the total value of stick-lac exported is striking, the figures for $1907-08$ represent an advance of $323^{.2}$ per cent on those for $1904-05$, accompanied by a rise in specific value of 44.8 per cent. In Caoutchouc there was a marked decline in value equivalent to 48 per cent, partly due to the fall in price of Para rubber, which governs this market, but the quantity exported declined by $33 \cdot 4$ per cent to $2,990 \mathrm{cwts}$ as compared with $4,4^{8} 9$ cwts in 1906-07.

## VII.-ARTICLES MANUFACTURED AND PARTLY MANUFACTURED

It should be remembered that many articles which strictly are manufactured or partly manufactured are included in the returns under other heads, for example, milled-rice, wheat-flour, coffee, and tea are found under "Articles of food and drink," machinery is included in the group "Metals," saltpetre in "Chemicals," opium and tobacco in "Narcotics," indigo in "Dyes," and vegetable and mineral oils under the group "Oils." The group "Articles manufactured and partly manufactured" in fact is not a complete measure of India's industrial export, but only contains such manufactured and partly manufactured articles as cannot be included under one or the other main groups of articles.

The statement below shows the comparative value for the past five years of each principal class in this group, the unit being $\mathbf{1 , 0 0 0}$ :

The most noticeable feature in this table is perhaps the decline of R140'16 lakhs ( $£ 934,000$ ) or $: 1.5$ per cent in Cotton Yarns and Goods. This was due in part to the strong internal demand for Indian goods and should be compared with the figures relating to the imports of cotton goods. The disorganisation of the trade with the Further East, particularly with China, also contributed to the fall, more particularly in recent months. The increase of R258.14 lakhs ( $£ 1,721,000$ ) in jute goods, equivalent to an expansion of 16.4 per cent in one year, though chiefly due to a rise in specific values, is sufficiently striking, but it would have been even larger if prices had not fallen in the latter part of the year. The South American demand continues to intensify.

Under Tanned Hides and Skins the decrease of total value was one of $\mathrm{R}_{55^{\prime}}{ }^{\prime} 5$ lakhs ( $£ 363,000$ ), but Lac increased by $\mathrm{R}_{50}{ }^{\circ} 59$ lakhs ( $£ 337,000$ ). Deductions of increased economic activity from the rise of R: 27 lakh ( $£ 8,500$ ) in the exports of Candles are vitiated by the advance of R1.54 lakhs ( $£ \mathrm{IO}, 300$ ) in the imports of that article. 'There has been a satisfactory advance of $\mathrm{R}_{4} \cdot 26$ lakhs ( $£_{2} 8,400$ ) in the exports of Woollens, and a small but welcome increase in the exports of Silk from R6.86 lakhs ( $£ 45,700$ ) to RS.3i lakhs ( $£ 55,400$ ) after five years' progressive decline.

Cotton goods-The decline in the exports of Cotton Manufactures from the level of 1905.06 , which was noticed in last year's review, continued in 1907-03. The contraction in the exportable surplus of yarn is sufficiently explained by a remarkable advance in the output of the looms, particularly in Bombay and the United Provinces, and for cloth there is undoubtedly an intensified internal demand as is illustrated by increased shipments of cotton piecegoods from the Bombay Presidency to other provinces. The inward movement of cotton manufactures by rail from Bombay, however, shows a slight decrease on the figures of the previous year ( 421,763 maunds against 454,949 maunds). The figures for the past three years are as follors, the unit being 1,000 :-

|  | 1905-06 |  |  | 1906-07 |  |  | 1907.08 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The following statement shows the quantities and vatues of yarns and piece goods produced and exported to foreign countries in the last five years, the unit in all cases being $\mathbf{1 , 0 0 0}:-$

Yarn represents $8,3.3$ per cent of the total value and shews a net decrease of R142.35 lakhs ( $£ 949,000$ ) or $1_{3} 77$ per cent on the figures for the

[^10]previous year. The quantitative decrease in the exports of yarn from India was 11.5 per cent so that there was a fall of 2.5 per cent in specific value. The exports to China representing 74.3 per cent of total value, as against 91.4 per cent in 1906-07, fell from R949.85 lakhs ( $£ 6,332,000$ ) to R666.55 lakhs ( $£ 4,444,000$ ), a decline of 29.8 per cent on the figures for the previous year. Similarly the value of exports from the United Kingdom to China fell from $£ 305,891$ in 1905 and $£ 243,106$ in 1906 to $£ 207,365$ in 1907 . Fluctuations in exchange upset the trade which was further burdened with some accumulation of previous years' stocks, and the indigenous production of China, thanks to vigorous official dry-nursing, seems to be increasing at a rate which portends the eventual closing of this market to foreign imports. The estimated production of 28 mills in China in 1907 amounted to $450 ; 000$ bales of yarn as compared with receipts from India of 428,000 bales and 11,000 bales from the United Kingdom. In view of these facts it is satisfactory to record that the trade with countries other than China shows a welcome increase of some Ri40'94 lakhs ( $£ 940,000$ ).

The trade with the Levant continues to respond in an encouraging way to the efforts made, chiefly by Bombay, to capture that market. The figures for Levantine ports rose from $2,896,340 \mathrm{lbs}$ to $8,944,280 \mathrm{lbs}$ in the year under review and to ports in Turkey in Europe from $342,83 \mathrm{olbs}$ to $\mathrm{I}, 925,784 \mathrm{lbs}$. Trade with the Turkish ports in the Persian Gulf fell from $2,420,280 \mathrm{lbs}$ to $1,341,160 \mathrm{lbs}$, but the total for the Ottoman Empire is $\mathbf{1 2 , 2 1 1 , 2 2 4} \mathrm{lbs}$ against $5,659,450 \mathrm{lbs}$ in $1906 \cdot 07$. The Egyptian demand advanced from $1,564,710 \mathrm{lbs}$ to $3,017,176 \mathrm{lbs}$ in $1907-08$.

The principal foreign markets for Indian cloth are East Africa, Aden, Ceylon, and the Straits. The exports of Piecegoods decreased by Ri•62 lakh ( $£ \mathrm{Ir}, \circ \infty 0$ ) or one per cent, which is ascribed to a strong internal demand. The quantitative decrease was one of $3^{\circ} 4$ per cent, so there was a rise of $2^{\circ} 5$ per cent in specific value.

The exports of Grey goods amounted to $39,433,666$ yards with a value of R59.74 lakhs ( $£ 398,000$ ), as against $42,218,822$ yards and R61.28 lakhs ( $£ 408,500$ ) in $19060 \%$. This represents 36.5 per cent of the total value of piecegoods and marks decrease of 6.6 per cent in quantity and 2.5 per cent in value with a rise of 4.4 per cent in specific value. The shipments of grey goods to China was 926,170 yards with a value of Ririg lakh ( $£ 8,000$ ), as against 995,865 yards and RI'34 lakh ( $£ 9,000$ ) in 1906-07, the decline being 7 per cent in quantity and 1122 per cent in value.

Coloured goods decreased slightly in value by 6 per cent to Rior 98 lakhs ( $£ 680,000$ ) but increased by 3 per cent in quantity to $34,320,000$ yards.

Dyed and printed cloths go mainly from Madras and Bombay to the Straits, Aden, Ceylon, and the Philippines, and the shipments in 1907-08 from the two ports named had a value of R71.68 lakhs ( $£ 478,000$ ) and R29.47 lakhs ( $£ 196,000$ ) respectively.

The number of cotton mills at work in British India on the 31st March 1908 was 224 , of which 181 were joint stock concerns with a capital of $£ 563,520$ and $\mathrm{R}_{13} 4$ crores or $£ 9,5 \mathbf{1 1}_{1}, 869$ in all. There were registered during the twelve months ending March 1908, 13 new textile concerns with a nominal capital of R128:25 lakhs ( $£ 855,000$ ) and new capital to the extent of R95 lakhs or $£ 633,000$ was raised by existing companies. It is estimated that there were at the close of the official year $5,764,346$ spindles and $65,74 \mathrm{I}$ looms in position. The additions to
plant in 1907.08 amounted to 218,058 spindles and 6,142 looms. Of the spindles$4,106,281$ were in Bombay, 410,541 in Bengal, and 307,664 in Madras. Of the looms 52,436 were in Bombay, 78 I in Bengal, and 1,748 in Madras.

In the past ten years the number of looms has increased by nearly 76 per cent against 29 per cent for spindles.

The following statement shows for each of the last five years the spinning and weaving plant in position, the production of yarn and of cloth, and the average monthly production per spindle and per loom:-

As regards prices, T. cloths which had declined in $1906-07$ from as. 10 to as. 9 per lh, never rose above as. $9 \frac{3}{32}$ during the year, and closed at as. $9 \frac{1}{i s}$ per lb . . The average value of yarn was as. $6 \frac{1}{9} \mathrm{per} \mathrm{lb}$ as compared with as. $6 \frac{3}{8} \frac{\rho_{2}}{3}$ in $1906-07$. The prices of the raw material have been discussed elsewhere.

Jate goods-The exports of Jute Manufactures in the three years ending $1905-06$ represented $34^{\circ} 4$ per cent of the total exports of Indian manufactured articles. In 1906.07 the percentage rose to $41^{\circ} 5$ per cent and in 1907.08 to 46.6 per cent.

The following statement shows for the last five years the nuantity and value of the exports of various classes of goods, the unit being 1,000 :-

| Bags |  | 1903-04 | 1904.05 | 1905.06 | 1906.07 | 1907-08 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | 206,208 | 201,436 | 233,326 | 237,683 | 293.029 |
|  | \{R | 4,56,47 | 4,75,54 | 6,07,84 | 7,34,72 | 8,47,5 |
|  | f | 3,043 | 3,170 | 4,052 | 4,898 | 5,650 |
| Cloth | Yards | 552,320 | 575,512 | 658,671 | 696,068 | 789,856 |
|  | - 2 R | 4,84,53 | 5,11,61 | 6,30,5 ) | 8,25,87 | 9,69,29 |
|  | (t | 3,230 | 3,411 | 4,203 | 5,506 | 6,462 |
| Value of all sorts | $\left\{{ }^{R}\right.$ | 9,46,92 | 9,93,89 | 12,44,80 | 15,71,62 | 18,29,76 |
|  | \{ | 6,313 | 6,626 | 8,299 | 10,477 | 12,198 |

Judged by this remarkable advance, the year would appear to have been one of unexampled prosperity for the mills which increased the number of their looms by 7.5 per cent and of their spindles by 7.9 per cent. In the early part of the year, however, the industry was to some extent handicapped by a rise in the cost of the raw material, and when the fall of prices came, it was accompanied by such a restricted demand for the finished article that stocks begain rapidly to accumulate, and short time was agreed upon in March, as the only way to meet the difficulty. Though the margin of profit was low, the mills were kept busy for six months with an astonishingly active export trade: for after short shipment of wheat in the two previous years the 1907 crop exceeded expectations and a bumper wheat and good maize harvest in the Argentine Republic required enhanced supplies of gunnies and cloth. This to some extent explains why the consumption of raw material in Indian mills is believed to have exceeded by $22^{\circ} 4$ per cent the figures of the previous year.

The exports of Bags increased by 13.7 per cent in quantity and 15.3 per cent in value, the enhancement of specific value being 1.4 per cent. Cloth increased by 13.5 per cent in quantity and 17.4 per cent in value, the rise in specific value being 3.4 per cent. Judged by export declarations the specific value of the raw material fell by $24^{6} 6$ per cent. This would appear to contradict the presumption of reduced profits, but it must be remembered that the bulk of the newly harvested fibre came on to the market, when the depression caused by the American crisis was at its height, and the fabrics exported in 1907-08 were in the main manufactured of jute grown in the previous year.

Bags-The largest buyer of Indian jute fabrics is the United States which, because of her heavy import duty on made bags, takes her supplies mainly as cloth. In 1907-08, however, she took bags to the value of R79.79 lakhs ( $£ 532,000$ ) as against $R_{4} 8.27$ lakhs ( $£ 322,000$ )-an increase in value equivalent to 653 per cent. The largest single buyer of bags is Australia which increased her derrand by 8 per cent to $\mathrm{R}_{17} 0^{\circ} 79$ lakhs ( $£ \mathrm{I}, \mathrm{I} 39,000$ ) as against $\mathrm{R}_{15} 8 \cdot 18$ jakhs ( $£_{1}, 054,000$ ) in $1906-07$. The new tariff increases the import duty from to to 15 per cent ad valorem.

The growth of nearly 15 per cent in the exports of bags to the United Kingdom, which rose to R109'1 I laklis ( $£ 727,000$ ) from R94'9 lakhs ( $£ 633,000$ ), has to be set off against a decline in the value of exports of cloth equivalent to 37.3 per cent. The exports of bags to Chile rose to R 58.53 lakhs ( $£ 390,000$ ) or by 20.5 per cent, but to Peru declined from Ri2.3 lakhs ( $£ 82,500$ ) to R 10.46 lakhs ( $£ 70,000$ ) or by ${ }^{15} 5$ per cent. Egypt also declined from R49'39 lakhs ( $£ 329,000$ ) to R $42: 33$ lakhs ( $\left(£ 282,000\right.$ ) and China from $\mathrm{R}_{4} \cdot 27$ lakhs ( $£ 302,000$ ) to R2147 lakhs ( $£ 143,000$ ), while the West Indies with R $35{ }^{\circ} 16$ lakhs ( $£ 234,000$ ) scarcely maintained the increased demand of the two previous years.

The Straits Settlements, which form an important distributing cenire, declined to $\mathrm{R} 61 \cdot 74$ lakhs ( $£ 412,000$ ) as against R66.87 lakhs ( $£ 446,000$ ), which may be explained by an increase in direct shipments to Indo-China from R $19^{\circ} 24$ lakhs ( $£_{128,000)}$ to $R_{4} 1^{\prime} 18$ lakhs ( $£^{2} 75,000$ ) or by 114 per cent, to Java from R $7 \cdot 65$ lakhs ( $£ 51,000$ ) to $\mathrm{R}_{2} 1 \cdot 87$ lakhs ( $£ 146,000$ ) or 186 per cent, and to Siam from R 9.05 lakhs ( $£ 60,000$ ) to $\mathrm{R}_{17} .85$ lakhs ( $£ 119,000$ ) or 97 per cent, to serve the growing export trade in rice. Cape Colony with R17'02 lakhs ( $£_{11} 13,000$ ) bettered her position by some R1. 4.5 lakh ( $£ 10,000$ ) and Natal with R 16.93 lakhs ( $£$ II 3,000 ) rose by R6. 26 lakhs ( $£ 42,000$ ) or by
 ( $£ 95,000$ ) in 1906.07 and Belgium rose by $\mathrm{R}_{5} 77^{2}$ lakhs ( $\mathrm{f}_{3} 3^{8}, 000$ ) to R $\mathrm{R}_{4} 99$ lakhs ( $£ 100,000$ ). Turkey in Asia increased her purchases to R20.03 lakhs ( $£ 133,000$ ), while shipments to Turkey in Europe declined to R6.I lakhs ( $£ 41,000$ ), the total increase for Turkey being R97,000 ( $£ 6,500$ ).

Cloth-The exports of Cloth increased from R 825.87 lakhs ( $£ 5,506,000$ ) to R969.29 lakhs ( $£ 6,462,000$ ). Of this the United States took $60 \cdot 3$ per cent with a value of R $58+85$ lakhs ( $£ 3,890,000$ ) as against $\mathrm{R}_{539} \cdot 48$ lakhs ( $£ 3,597,000$ ) in $1906-07-$ an increase of 8.4 per cent. The shipments of cloth to the Argentine rose from R128 lakhs ( $£ 853,000$ ) to R240'9: lakhs ( $£ 1,606,000$ ) or by 88.2 per cent in value, but the value of bags taken fell from R $4 \cdot 38$ lakhs ( $£ 29,000$ ) in 1906.07 to RI' 65 lakhs ( $£ 11,000$ ). The shipments to the United Kingdom, which are mainly for distribution, are much below those of the previous year, the figures for the past three years being $\mathrm{R}_{4} \cdot 8_{7}$ lakkhs ( $£ 256,000$ ) in $1905 \cdot 06$, R81.43 laklis $(£ 543,000)$ in $1906-07$, and RyIO9 lakhs ( $6.341,000$ )
in rom7.08. China took R+’39 lakhs ( $£ 29,000$ ) as against R25'19 lakhs ( 6168,000 ) in $1906-07$ and Australia R30.66 lakhs ( $£_{2} 204,000$ ) instead of R21.01 lakhs ( 6140,000 ) in 1906-07.

Silk goods-The exports of Silk Manufactures shew a percentage increase of $21^{1} 1$ over the figures of 1906.07 , but even now amount to only R 8.31 lakhs ( $£ 55,400$ ). The exports are chiefly tissues woven in Bengal and Burma from indigenous silks. Elsewhere the industry depends mainly upon internal markets and will continue to do so while it remains scattered and unorganized. It is satisfactory to record effurts that are being made, as in Benares and Madura, to develop it on the lines of co-operation between the weavers.

Woollens-Exports of Woollen Manufactures increased by 18.6 per cent to R2719 lakhs ( $\mathrm{E}_{181,000 \text { ). Carpets and Rugs continue by far the most }}$ important class and represent some 90 per cent of the total. A total value of $\mathrm{R}_{24}{ }^{4} 4$ lakhs ( $£ 1 \sigma_{3}, 000$ ) represents an advance of 16.8 per cent on the figures of the previous year; the share of the United Kingdom being R18.24 lakhs ( $£ 122,000$ ) and of the United States $R_{4} \cdot 72$ lakhs ( $£ 31,000$ ). Piecegoods and other miscellaneous manufactures, despite increased internal requirements, advanced by $37^{\prime} 4$ per cent to a value of $R_{2}{ }^{\prime} 79$ lakhs ( $£ 18,600$ ), but these figures are still considerably short of those for 1904.05, $^{\circ}$, namely, R $3^{\circ} 7$ lakhs ( $£^{24,700}$ ).

The export of Apparel in 1907 -0 rose to $\mathrm{R}_{2} \mathrm{O}^{\prime} 24$ lakhs ( $£ 135,000$ ) and mark an advance of $\mathrm{R}_{7}, 000$ ( $£ 4,500$ ) on the figures for 1906.07. Boots and Shoes, which form the most important sub-head in this class, increased from R4.68 lakhs ( $£_{3} 1,000$ ) to $\mathrm{R}_{5}^{\circ} \cdot 57$ lakhs ( $£ 37,000$ ). The trade with China shews a slight increase from $R_{13,500}(£ 500)$ to $R_{15,900}(£ 1,060)$, but is capable of infinitely greater development, if local predilections are carefully studied-more especially if the price of leather remains, as at present, low, Re-exports of foreign boots and shoes amounted to $\mathrm{R}_{35,304}\left(£_{2}, 354\right)$, as against $\mathrm{R}_{49,551}$ ( $£ 3.303$ ) in 1906.07.

Coir-The exports of coir-matting and other manufactures of coir, the trade in which is almost entirely confined to the Malabar Coast of Madras, continue their steady growth. Their value amounted in 1907-08 to R $\mathrm{R}_{53} 64$ lakhs ( $£ 358,000$ ), of which the United Kingdom took $R_{14}{ }^{\circ}{ }_{3}$ lakhs ( $£ 93,500$ ), Germany Ri9 54 lakhs ( $£ 130,000$ ), Belgium R $_{5} \cdot 30$ lakhs ( $£ 35,000$ ), France $\mathbf{R}_{4} 49$ lakhs ( $£ 30,000$ ), Holland $R_{3} \cdot 30$ lakhs ( $£ 22,000$ ), and the United States $R_{2} \cdot 45$ lakhs ( $£ 16,000$ ). There was a rise in specific value of $5^{\circ} 9$ per cent.

Hides and Skins, tanned-The export under these heads during the past five years has been as follows:-

|  | Tannen Hides |  |  | Tanned Skins |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwts | $k$ | ¢ | Cwts | R | £ |
| 1903.04 | - 102,625 | 61,45,989 | =409,733 | 161,869 | 2,48,42,770 $=$ | 1,656,185 |
| 1904-05 | - 123,390 | 82,52,052 | 550,137 | 139.214 | 2,02,65,121 | 1,351,008 |
| 1905-06 | - 201,982 | 1,54,80,070 | 1,032,005 | ${ }^{138,898}$ | 2,11,04,250 | 1,406,950 |
| 1906.07 | . 219,855 | 1,72,96,337 | 1, 153,089 | 150,465 | 2,72,16,204 | 1,814,414 |
| 1907-08 | - 131,532 | 1,05,52,045 | 703,470 | 151,78t | 2,84,45,273 | 1, $\mathrm{S}_{\mathrm{j}} 6,352$ |

The exports of tanned hides in the year under review declined by $40^{\circ} 2$ per cent in quantity and 39 per cent in value, the rise in specific value being nearly 2 per cent. Supplies were short, and rates should have been even better but declined in sympathy with the European leather market towards the close of the year. The average value per cwt was $\mathrm{R} 80 \cdot 3 \cdot 6$ ( $£ 56 \mathrm{~s}$. 113 d . ) .

The increase in the export of tanned skins was one of 9 per cent in quantity and 45 per cent in value, the specific value per cowt having risen by
3.6 per cent to R187-7-4 ( $£_{12}^{2} 9 s .11 \frac{1}{3} d$.), but the group being composite, it would be unsafe to rely too much upon fluctuations in average rates.

The quantities of tanned hides, goat skins, and sheep skins shipped to different principal countries during the past two years have been as follows :-

|  | Hides |  | Sherp skins |  | Goat skins |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} 1906-07 \\ \mathrm{cwts} \end{gathered}$ | $\begin{array}{r} 1907-08 \\ \text { cwts } \end{array}$ | 1906-07 <br> cwts | $\begin{array}{r} 1907-08 \\ \text { cwts } \end{array}$ | $\begin{gathered} 1906-07 \\ \text { cwts } \end{gathered}$ | $\begin{aligned} & 1907.08 \\ & \text { cwts } \end{aligned}$ |
| United Kingdom | 202,112 | 126,132 | 42,450 | 46,938 | 69,456 | 73,102 |
| United States | 13,957 | 1,265 | 13,894 | 11,181 | 13,280 | 8,128 |
| Germany | 1,508 | 2,163 | ... | ... | ... | ... |
| Egypt | 1,393 | 1,079 | ... | 4 | ... | 6 |
| Straits Settlements | 219 | 65 | 2,881 | 5,402 | 128 | 26 |
| Belgium | . ... | ... | 85 | 165 | 396 | 661 |
| Japan | - ... | ... | 2,192 | 2,447 | 430 | 368 |

The United Kingdom received $95^{\circ} 9$ per cent of tanned hides and $80^{\circ} 7$ per cent of tanned skins, and continues a distributing agent for both the Continental and American markets.

In 1907 the United Kingdom received from India, according to the Board of Trade returns, $290,95^{2}$ cwts of leather, against 354,877 cwts in 1906 and 297,566 cwts in 1905.

The export trade is almost entirely through the ports of Madras and Bombay. The former ships 86.7 per cent of tanned hides and $71^{\circ} 4$ per cent of tanned skins, and Bombay 13.1 and 26.7 per cent, respectively.

Lac has risen continuously in price in recent years in sympathy with increased external demand, and though there is no immediate likelihood of India losing her place as the chief source of supply, the more ' scientific cultivation and harvesting of the crop has for some time past been engaging the attention of the Forest department. Unfortunately much of the lac comes from forests in Native States where no agency for conservancy and development at present exists.

Shellac and button lac represent the manufactured article, stick and seedlac the raw material, but the distinction is somewhat unreal and the trade is not so distinct as to justify separate treatment. The figures of quantities and values exported during the last three years are as under:-

It may be assumed that a given quantity of stick and seed-lac yields in the factory half that quantity of shell or button-lac.

There has been a quantitative rise of $35^{\circ} 5$ per cent in shellac accompanied by an increase of 14.7 per cent in total value, and in button-lac of 6.4 per cent in quantity and 5.3 per cent in value. Together the two increased by 3 r per cent in quantity and by 13.5 per cent in value, the difference marking a decrease in specific value by 13.4 per cent. On the other hand, crude material, sticklac and seed-lac, increased by $49^{\circ} 7$ per cent in quantity and $60^{\circ}$ i per cent in total value, equivalent to a rise of 6.9 per cent in specific value, but conclusions deduced from declared values in the case of exports not subject to duty are notoriously unsale.

The highest price for shellac (T. N.) in the year under report was $\mathrm{R}_{\mathrm{I}} 56$ ( $£ 108 s .8 d$. ) per cirt in April 1907 and the lowest R6S ( $£ 4105.8 d$.) in November 1907. These shew a much wider range of prices than the maximum and minimum
 respectively.

The United States continued the principal buyer of the manufactured article and took lac to the value of Ri3t45 lakhs ( $£ 696,000$ ) in 1907.08 against $\mathrm{R}_{1} 67.95$ lakhs ( $£ \mathrm{I}, 120,000$ ) in 1906.07. Shipments to the United Kingdom increased from R9r +7 lakhs ( $£ 610,000$ ) to R119.02 lakhs ( $£ 793,000$ ), while Germany took $\mathrm{R}_{9} 8 \cdot 58$ lakhs ( $£_{5} 67,000$ ) in place of $\mathrm{R}_{5} 8.66$ lakhs ( $£ 391,000$ ) in 1906-07.

## TRADE ACCORDING TO COUNTRIES

The folloring table shorrs the value in rupees and pounds sterling of the trade in merchandise only (excluding Governme nt transactions) of British India with (1) the United Kingdom, (2) other British Possessions, and (3) the foreign countries, separately, during the each of the la!st three years and the centesimal percentages:-

The trade with the United Kingdom has increased by R 12.30 crores ( $£ 8^{\circ} 2$ millions), and ber share in the total trade has slightly risun from $42^{\prime} \mathrm{I}$ to $43^{\prime} \mathrm{I}$ per cent of the total trade. Though the centesimal proportion remained constant, the imports increased by $14^{\circ} 35$ crores ( $£ 9^{\circ} 6$ millions) or 20 per cent, while the value of exports declined by $\mathrm{R}_{2} \mathrm{O}_{5}$ crores ( $£ 1 \cdot 3$ millions), and the proportion from 271 to 258 per cent.

The trade with British Possessions other than the United Kingdom is - less by R98.34 lakhs ( $£ 656,000$ ) and reprejents 13 per cent of the total trade as against $14^{\circ} 4$ per cent in $1905-07$. There was a rise of R1•20 crore ( $£ 800,000$ ) or $14^{\circ} 4$ per cent under imports, but a decline of R2. 18 crores ( $£ 1,450 ; 000$ ) or 7 per cent under exports. The centesimal variations are respectively $7 \mathbf{3}$ and $1_{7} 1$ against $\eta^{\prime} 7$ and 18.4 in the previous year.

Trade with foreign countries has increased by Rio. 85 crores (over 7 millions sterling) and represents $43^{\prime} 9$ per cent of the total trade. The imports increased by R6\%I crores ( $£ 4$ millions) or 2177 per cent and exports by R4. 85 crores ( $£_{3} 3^{2}$ millions) or 5 per cent, the centesimal variations being respectively $25^{\circ} 9$ and $57^{\prime} \mathrm{I}$ per cent as against $25^{\circ} 5$ and $544^{\circ}$ per cent in $1906-07$.

The following statement shows India's trade with each principal country other than the United Kingdom, for which figures are given above, during each of the last three years in thousands of rupees and of pounds sterling :-

Until the returns are compiled according to the country of origin (imports) and country of final destination (exports), the figures can only be regarded as a rough and ready-index of the trend of trade. It will be noticed that there was a marked contraction for reasons elsewhere explained in the trade with China and the United States. Japan, Belgium, 'Holland, Java and South America shew considerable advances. The share of China under exports fell from io' 9 to 86 per cent of the total export trade and the United States from 9 to $7^{\circ} 8$ per cent, though under imports they gained 3 and 2 points respectively. Germany has advanced under imports and exports by 3 and 2 points respec-
tively. The shares of Belgium and Japan rose respectively from 41 and 4 to 53 and $5^{\circ}$ per cent under exports, Java improved under imports from 2.7 to $4^{+} 5$ per cent, but Justria-Hungary reduced her share of imports from 2.8 to 2 per cent. The other countries have not shewn any marked change.

Two circular charts have been inserted in the volume to illustrate changes in proportionate distribution of India's export and import trade during last quarter of a century, the difference in size of the two circles indicating the growth in the volume of that trade during the same period.

## TRADE ACCORDING TO PROVINĊES

The figures of the trade of each province by sea with foreign countries stand thus in lakhs of rupees and millions of pounds sterling during the past two years:-

- Taking imports and exports of merchandise together the proportionate share per cent of each province in the whole foreign trade of India stands as follows:-

The following tables indicate the leading features of the import trade and of the export trade (Indian produce only, excluding re-exports) of each province in
lalshs of rupees and thousands of pounds sterling :-

The exports from Eengal are chiefly jute，raw and manufactured，the latter being practically a monopoly of this province，tea，raw hide：，opium，rice，seeds， lac，coal，and indigo．

From Eastern Bengal and Assam the principal exports are raw jute and tea，and from Bombay raw and manufactured cotton，Malwa opium，oilseeds， wheat，and raw wool．

The exports from Sind are raw cotton，hides，wool，seeds，and the bulk of foreign shipments of wheat．

Madras commands a very large share of the trade in tanned skins．Her other principal exports are raw cotton，coffee，rice，and oilseeds．

The export trade of Burma is almost confined to mineral oil，rice，teak wood，raw cotton，and hides．

The bulk of the trade（including treasure）and shipping（cargous only） of India with foreign countries is confined to six principal ports and their proportionate share（per cent）is given below ：－

| Calcutta． | Trade |  |  | Shipping＇ |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1906.07 | 11007．08 | $1005 \cdot 07$ | 1907－us |

## CUSTOMS REVENUE

The tariff schedule was revised in December 190\%, and the new schedule came into force on the 1 st January 1908.

The valuations of cotton fabrics for tariff purposes and the list of cotton goods recognised as piecegoods were also revised at the same time.

The rate of duty on ale, beer, and porter, cider and other fermented liquors was increased from one to two annas per gallon with effect from the 3 rd January 1908, and the following modifications in Customs procedure were effected :-

1. Prohibition of importation of quinine which has been coloured pink (the colour of the quinine issued from Government factories).
2. Prohibition of importation of "novocain"" by post or by persons not specially authorised by a Local Government to import it.
3. Exemplion from duty of re-imported commercial samples not intended for sale.
4. Prohibition of exports of Mhowa flowers to the Portuguese possessions in India.

A manual was issued just after the close of the year with the object of standardising the procedure at the various Customs ports with regard to the administration of the Merchandise Marks Act.

The gross revenue from imports (excluding salt, which is not credited as a Customs receipt)' rose from $\mathrm{R}_{5,08,58,776}(£ 3,390,585$ ) to $\mathrm{R} 6,03,37,7,37$ ( $£ 4,022,516$ ). Refurds and drawbacks amounted to R9,41,947 ( $£ 62,796$ ) as against $\mathrm{R} 10,79,227$ ( $£ 71,948$ ) in the previous year. The net revenue, therefore, increased from R4,97,79,549 ( $£ 3,318,637$ ) to R $5,93,95,790$ ( $£ 3,959,719$ ). The rates of increase were as follows: 18.6 per cent in gross revenue and $19{ }^{\circ} 3$ per cent in net revenue. There was a decrease of $12 \%$ per cent in refunds and drawbacks.

The following statement shows the revenue derived in the last three years from the principal dutiable articles:-

| Arms Ammunition | $E^{1905.06}$ |  | ${ }^{1906-07}$ |  | ${ }^{1907-08}$ |  |

| Woollen goods | 12,10,741 | 80,716 | 10,23,689 | 68,246 | 13,89,239 | 92,616 |

The gross revenue accounted for by the twenty-six articles specified above is $R_{537} 9$ lakhs ( $£ 3,566,000$ ) or $89^{\circ}$ I per cent of the total, which shows that although the Indian tariff comprises many dutiable articles, there are comparatively few on which a considerable revenue is levied. Spirituous liquor, petroleum, sugar, metals (including silver), and cotton piecegoods by themselves constitute 70 per cent of the total.

The total revenue realised from a $3 \frac{1}{2}$ per cent ad valorem daty on cotton goods imported was R15189 lakhs ( $£ 1,012,600$ ) as against R129'14 lakhs ( $£ 860,900$ ) in the previous year. This is equal to $25^{\circ} 2$ per cent of the whole Customs revenue, while the gross receipts on account of Excise duty on cotton fabrics of Indian manufacture amounted to $\mathrm{R}_{34}{ }^{\circ}$ or lakhs ( $£ 226,700$ ) as against R29.or lakhs ( $£ 193,400$ ) in 1906-07. This, however, falls outside of Customs revenue proper.

The export tariff schedule is limited to rice and rice-flour, the duty on which is levied at the rate of three annas per maund of $82 \frac{2}{7}$ lbs. The' net duly realised from this source in $1907-08$ was R99.74 lakhs ( $£ 664,900$ ) against R102.27 lakhs ( $£ 681,800$ ) in the previous year, and marks a fall of R2. 53 lakhs ( $£ 16,900$ ) or 2.5 per cent.

The yield of the voluntary Tea Cess which is collected through Customs agency is dealt with elsewhere.

## GOLD AND SILVER

The value of the Imports, Exports, and Absorption of Gold in the last five years, in thousands of Rupees and of pounds sterling, was as follows:-

India's absorption of gold is arrived at by deducting the re-exports from the imports, for all the gold produced in Indian mines is shipped to England for assay and does not swell the stocks of metal, or enter into commercial consideration in this country. The increase in the net imports of gold during the past two years is remarkable.

In the year under review the net imports of gold amounted to R1, 736.77
 record figures of the previous year. To this total sovereigns and half sovereigns contributed $\mathbf{1}, 642,150$ oz, valued at $\mathrm{R} 965^{\circ} \circ \mathrm{g}$ lakhs ( $£ 6,434,000$ ). The imports of gold on Government account in 1907.08 amounted to R1,80,375 ( $£ \times 2,025$ ), and there was no export of gold on Government account in the year under review.

The value of the Imports, Exports, and Net imports of silver during the last five years was as follows, the unit being 1,000:-

India is not a silver-producing country, and therefore the absorption of the metal is represented by the difference between the imports and exports.

In 1906007 the imports reached the unprecedented level of R2,604.64 lakhs ( ${ }^{17} 7^{\circ} 6$ millions sterling), but in $\mathbf{1 9 0 7} 08$ they fell to R2,153.19 lakhs ( 14.35 millions sterling) which is yet much in advance of the totals for 1905.06 and earlier years. The exports slightly increased but are far below the figures for $1903^{-04}$ and 1904.05 , consisting chiefly of Government rupees for which Ceylon is the largest individual market.

The silver coinage struck in the Indian mints during the last five years has been, the unit being 1,000 :-

|  |  |  |  | R | $\notin$ | $\underset{\text { (approximate) }}{\mathrm{Oz}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1903-04 |  | - | - | 16,53,11 | 11,021 | 6I,992 |
| 1904-05 |  | - | - | II, 37,04 | 7,580 | 42,639 |
| 1905-06 |  | - | - | 20,00,14 | 13,334 | 75,005 |
| 1906-07 |  |  |  | 26,08,57 | 17,390 | 97,822 |
| 1907-08 |  | - | - | 18,11,57 | 12,077 | 67,934 |

The average price of silver in London in 1907 was $30_{18}^{5} d$ but the rate was subject to violent fluctuations, for while in August it reached $3^{2} 1_{8}^{8} d$ per oz, it fell in December to $24 \frac{1}{2} d$.

## BALANCE OF TRADE

The figures appended shew the excess of exports over imports, including merchandise and treasure, by sea in each of the last five years, the unit being 1,000 :-

|  | IncludingGovernment transactions |  | Excluding <br> Government transactions |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | $\ldots$ | R |  | 6 |
| 1903-04 | - 37,34,04 | $=24,894$ | 44,24,02 | $=$ | 29,493 |
| 1904-05 | - 30,34,19 | 20,228 | 35,89,71 |  | 23,931 |
| 1905-06 | - 33,54,08 | 22,360 | 44,16,24 |  | 29,441 |
| 1906-07 | - 20,57,02 | 13,713 | 46,77,05 |  | 31,180 |
| 1907-08 | : 3,98,04 | 2,654 | 19,95,71 |  | 13,305 |
| Average of 5 years | - 25,15,47 | 16,770 | 38,20,55 |  | 25,470 |

In the same years the drawings of the Council Bills by the Secretary of State, including those on account of the Gold Standard Reserve, but deducting sterling bills sold in India, have been as follows in thousands :-

In the five year ending $1907-08$, the average excess of exports over imports including Government transactions was R2,515.47 lakhs ( $£ 16,769,800$ ), representing $14^{\circ} 2$ per cent of the average value of exports. In the same period the average drawings of the Secretary of State, as above defined, were $R_{3}, 844{ }^{\prime} 92$ lakhs ( $£ 25,632,500$ ), being 21.7 per cent of the average value of exports. It exceeds the average excess of exports over imports by $R_{1,329}{ }^{\circ} 45$ lakhs ( $£ 8,863,000$ ).

Excluding Government transactions the average excess of exports over imports was $\mathrm{R}_{3}, 8200^{\circ} 55$ lakhs ( $£ 25,470,000$ ) equal to 22.2 per cent of the average value of exports. This excess is greater by $\mathrm{R}_{1,3} 05^{\circ} 08$ lakhs ( $£ 8,700,500$ ) than the excess found when Government transactions are included. But it falls short of the average amount of drawings, as calculated above, by R24.37 lakhs ( $£ 162,500$ ), i. e., by 64 per cent of the average excess.

The trade figures given above are to this extent incomplete. They relate only to the trade of British Indian ports, they do not include either the absolutely indeterminable volume of private remittances to and from India, or the not inconsiderable value of pearls and precious stones re exported (chiefly from Bombay) through the medium of the post office.

There is said to be a fairly large trade carried on chiefly by native craft from ports in Native States on the West Coast of India with the Persian Gulf, Arabia, and Ceylon, which is only in part registered and tabulated, and it is not possible to gauge how far the trade returns of the French and Portuguese Settlements are to be considered exhaustive. Some idea of the volume of all this additional trade may be gathered from the appended figures as far as available (in lakhs of rupees and of thousands sterling) -

|  | 1905-06 |  |  | 1906-07 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

(a) Report not yet received

## -BANK RATES AND EXCHANGE

The Bank rate in the three Presidency towns was 8 per cent at the sbeginning of April, but money very soon became cheaper, and the rate fell steadily until September-when there was a sharp rise, particularly in Calcutta, and a further sharp rise in January brought the rate up to 9 per cent both in Calcutta and Bombay-which continued until the middle of March when it fell again to 7 per cent. In Madras 9 per cent was not reached until February but there was no change thereafter up to the close of the year.

Exchange fell in November below the parity of Rij to the $£$ sterling for the first time since May 1905 (save for a few days in April 1906) and was quoted at is $3 \frac{7}{8} d$ on demand on the 3 ist March. The lowest rate reached was is $3^{\frac{1}{1} 16} d$ on the 25 th November.

The fluctuations of the money market will be understood from the discount rates month by month of the Presidency Banks, and the rates of Exchange on demand bills, appended below :-

|  | Bank or |  |  | Ratzs op Exchange |  |

|  |  | SHIP | ING |  |  |

While the net increase in the value of imports and exports of merchandise by sea amounted to $7^{\prime} 8$ per cent of the total for the previous year, there was an increase of 5 per cent in the tonnage of shipping that entered and cleared for Indian ports. The following statement gives the numbers and tonnage of steamers and sailing vessels with cargoes and in ballast which entered from and cleared to all countries:

Of these 98 per cent represented steam tonnage. The total number of steamers that entered and cleared was 5,928 with an aggregate burden of $13,957,229$ tons as against 5,344 and $13,469,417$ tons in the previous year. The average tonnage per steamer increased from 2,266 to 2,354 tons, while the average tonnage per sailing ship decreased from 90 to 83 tons.

The number and tonnage of vessels entered and cleared at the chief ports .from and to foreign countries in the past two years are. given below:-

| Chier Port | 1906-07 |  |  |  |  | 1907-08 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Karachi | 610 | 1,332,560 | 365 | 31,383 | 9.9 | 692 | 1,510,726 | 491 | 36,262 | 10.86 |
| Madras | 274 | 710,941 | 6 | 524 | $5 \cdot 16$ | 300 | 847,375 | 3 | 206 | 5'95. |
| Chittagong | 37 | 101,406 | 2 | 307 | $\cdot 74$ | 44 | 119.772 | $\cdots$ | ... | 88 |
| Total | 4,079 | 10,344,637 | 822 | 126,817 | : 76.02 | 4,054 | 10,552,822 | 874 | 103,057 | 74*8 |

The entries from and clearances to the United Kingdom were $3,119,233$ tons as against $3,121,86$ I tons in $1906-07$, and this reduced quantity represented $21^{\circ} 9$ per cent in place of $22^{\circ} 7$ per cent of the total tonnage.

Entries from and clearances to British Possessions other than the United Kingdom decreased from $5,050,916$ to $5,603,697$ tons which represent $39^{\prime} 3$ per cent of the total, as against 4 I per cent in the previous year. The tonnage from and to the British Empire, therefore, amounted to $\sigma_{1} \cdot 3$ per cent of the whole in place of 63.7 per cent in $1906-07$.

The tonnage under the British flag registered under the English Merchant Shipping Act was nearly $75^{\circ} 8$ per cent and including the Indian register $80^{\circ} 4$ per cent.

The number of vessels under foreign flags which entered and left Indian ports was I, 0 ó 5 with an aggregate burden of $2,620,675$ tons as against 1,104 in $\mathbf{1 9 0 6 - 0 7}$ with an aggregate of $2,54^{1}, 982$ tons.

The total number of vessels under the principal flags are given below:- $\because$

## FREIGHTS

Freights in India were generally lower during 1907.08 than they had been in 1906-07. The weakness was contributed to by the sudden collapse of the export trade in November but the fall was not confined to Eastern markets only, and it seems that the world's oversea carrying capacity has increased out of proportion to the additional volume of merchandise requiring to be carried. The tendency to avoid entrepôts is becoming more marked and India benefited from more longvoyage carriage of imports with a margin of profit that weakened homeward rates. The freights for Bombay cotton and Karachi wheat to Liverpool were abnormally low at the close of the year under review. The following statement gives minimum quotations for typical rates of freight from the principal Indian ports to London in March of each of the last five years :

## FRONTIER TRADE

* The bulk of iIndia's foreign trade is and always must be sea-borne, but the value of the trade across her land frontiers, though it represents only 43 per cent of the whole, is characterised by steady progress to which improved method. $\therefore$ of registration has perhaps partly contributed. The valuation of frontier trade, however, continues difficult and defective, and as regards treasure the figures are so notoriously unreliable that it is unsafe to base any conclusions upon them. Subject to all these reservations, however, the total volume of trade is sufficiently considerable and varied to merit detailed analysis, and the grand total of -imports and exports (merchandise and treasure) was R15.54 crores ( $£ 10,360,000$ ) in 1907-08, as against R14.14 crores ( $£ 9,426,000$ ) being the figures for $1906-07$ minus those for Kashmir, Hill Tipperah, and Manipur-which have now for the first time been correctly treated as Cis-frontier States. Similar deductions have been made in the totals for previous years in the table below so as to make the figures really comparable :-

The relative importance of the various articles of trade in the commerce

[^11]of India with trans-frontier countries is shown below. The values are stated in thousands of rupees and of pounds sterling:

The measure in which the various provinces participated in the total of this commerce is shown below in thousands of rupees and of pounds sterling:

In India proper the railway nowhere extends beyond the frontier, but a large porticn of the Kandahar trade, particularly in wool, is carried to and from. stations very close to the border, and has, therefore, the benefit of the greater. accuracy of registration as railborne traffic.

The geographical distribution of trade, merchandise only, with the principal countries has, during the last three years, been as follows in thoasands $\rho f$ rapees and of pounds sterling :-

$$
=R^{1905-0 \delta} f A^{1906-07} f
$$

## NORTH-WESTERN ERONTIER

Afghanistan-One result of the visit of His Majesty the Amir to India has been increased trade exchanges between the two countries, and the figures have risen from Ri69.06 lakhs ( $£ 1,127,067$ ) in 190506 to R209'52 lakhs ( $£ 1,396,800$ ) in 1906 -07 and to R215\%73 lakhs ( $£ 1,438,200$ ) in $190 \%$-08. Of,these exports represent 55 per cent and imports 45 per-cent of the total. From Kabul have come increased quantities of friits and nuts, the quality of which has markedly improved, drugs and medicines, chiefly assafoetida, ghi (clarified butter), and animals. There was all in the exports of cotton piecegoods, but the value of cotton yarns, chiety foreign, has slightly increased. The decline in tea continued, but the proportion of Indian tea improved at the expense of foreign
 per lb- respectively. There was a slight ad vance in the total for leather goods and the effect of indigenous compelition has not yet been felt.

From Kandahar more than half the value of imports is accounted for $\ddot{b}$ Wool, though there was a percentage decline of r4; while under fruits and nuts and ghi there were niarked décreasés. Exports shew continued expansion, par-- ticularly under the head of foreign piece goods.

- The figures for $1906-07$ and 1907 -o8 for Kabül and Kandahar (principal articles only) are sheysn for purposes of comparison below:-

Dir, Swat, and Bajanr-There was a percentage increase of 14 in the mports from these countries, bringing the total to R58 54 lakhs ( 6390,000 ). This
was chiefly due to an increase of over 90 per cent in the import of grain and pulse, due no doubt to the scarcity and prevalence of high prices in Northern India. The value of this trade has quadrupled in two years and is now valued at nearly Rzolakhs ( $£ 133,000$ ). Husked and unhusked rice in the proportion of five to tro accounted for two thirds of this total. Hides and Skins increased
 cent in the recelpts of timber. The increase in exports was less marked but rose from R67 8 I lakhs ( $£ 452,000$ ) to R 70099 lakhs ( $£ 473,000$ ).

The trade of Ladalkh is distinguished from that of Kashmir; of which it is a tributary state, and is of importance out of proportion to its volume as the junction for exchanges with Yarkand and Kashgar for India and Western Tibet. The total of Rir ${ }^{\circ}$ o6 lakhs ( $£ 73,700$ ) marks an advance of 44 per cent on the figures of the previous year, entirely accounted for by improved imports, chiefly of. charas. This preparation of the hemp plant accounts for nearly 85 per cent of the total, and the quantities and values imported increased from 1,199 cwts worth R $4,56,960$ ( $£ 30,464$ ) in $1906-07$ to 1,540 cwts worth R8, 38,400 , ( $£ 55,893$ ) in 1907.08. The imports of raw silk show improvement, but are still below the figures of 1905-06. Cotton piece-goods, as elsewhere on the frontier, form the bulk of the exports, though there was a quantitative decline of 25 per cent, and a decline in value of 33 per cent, as compared with the previous year.

## NORTH AND NORTH-EASTERN FRONTIER

Nepal-The trade with Nepal greatly exceeds in volume that with any other trans-frontier State. The principal articles of import and export and their values for the past two years are shown in the table below :-

Under imports there are advances generally except under the head of cattle, and the total rose by about 15 per cent from $\mathrm{R}_{297} 26$ lakhs ( $£ 1,981,733$ ) to $R 341 \cdot 32$ lakhs $(£ 2,275,467)$. Nepal is the only country from which India imports jute, but the increase of 55 per cent in quantity is discounted by a fall in specific value from $\mathrm{R}_{\mathrm{I}} \circ(13 s 4 d)$ to $\mathrm{R}_{7}(9 s 4 d)$ per cwt. Of articles unenumerated above timber valued at $R 611$ lakhs ( $£ 40,733$ ) and railway materials worth $R_{5}{ }^{\circ} 6_{3}$ lakhs ( $£ 37,533$ ) deserve notice.

The total volume of exports advanced from $\mathrm{R}_{\mathrm{I}} 8^{8.43}$ lakhs ( $£ 922,867$ ) to $\mathrm{R}_{151}{ }^{\prime} 75$ lakhs ( $\mathrm{K}_{1,011,667}$ ). The value of cotton piece-goods has again declined, but that of twist and yarn shews a percentage increase of 14 and the figures for metals have readily returned to the level attained in 1905-06. Salt
. had a further set-back, but spices and sugar continue to progress.
Sikkim and Bhatan-The trade with Sikkim grew from R12 lakhs ( $£ 80,000$ ) to R16 lakhs ( $£ 106,667$ ) and was generally brisk, while that with Bhutan declined from R13.92 ( $£ 92,800$ ) to $\mathrm{R}_{5} \cdot 95$ lakhs ( $£ 39,667$ ). Sikkim supplied grain to the value of $\mathrm{R}_{3} \cdot 89$ lakhs $\left(£_{2} 25,933\right)$ as against $\mathrm{R}_{3} \cdot 7.3$ lakhs ( $£ 24,867$ ) in the previous year, and fruits, etc., to the value of Rr 42 lakh ( $£ 9,467$ ) against $\mathrm{Rr}_{1} \cdot 2$ lakh ( $£ 8,000$ ), the total impurts from that source amounting to R8.24 lakhs ( $£ 54,933$ ) as compared, with R679 lakhs ( $£ 45,267$ ) in 1906.07 . The greater part of imports from Bhutan consists of timber, and this fell away from R $7 \cdot 29$ lakhs ( $£ 48,600$ ) to R20,930 ( $£ 1,395$ ) and fruits, etc., with a value of R67,I50 ( $£ 4,477$ ) instead of R1.06 lakh ( $£ 7,067$ ). The total value of timber alone imported in $1906-07$ was $6_{4}$ per cent of the total value of imports. The exports to Sikkim shewed marked improvement, rising from R $\mathrm{R}^{\circ} 25$ lakhs ( $£ 35,000$ ) to R $7 / 98$ lakhs ( $£ 55,200$ ). They consisted chiefly of grain $\mathrm{R}_{141} \mathrm{R}_{1}$ lakh ( $£ 9,400$ ), cotton piece-goods, chiefly Indian, $\mathrm{R}_{1,54,000(£ 10,267}$ ), and salt $\mathrm{R}_{3} 0,000$ ( $£_{2,000}$ ). The exports to Bhutan decreased to R2.54 lakhs (£ $16,93,3$ ) ; and of these the most important were cotton piece-goods, chiefly foreign, and yarn with a value of R96,000 ( $£ 6,400$ ), silk manufactures

Tibet-Though trade with Tibet has still to contend with great difficulties in the matter of communications, it has steadily improved in the last two years and is likely to be further encouraged by the signing in April last of the Trade Regulations, which were adumbrated in the Treaty of Lhasa. The total trade rose from $R_{35^{\circ}}{ }^{\circ} 6$ lakhs ( $£^{2} 33,733$ ) to $R_{40}{ }^{21}$ lakhs ( $£^{268,067}$ ), the net increase being $R_{5} \cdot 15$ lakhs ( $£ 34,333$ ); chiefly under the head of imports. Exports rose by about 8.6 per cent from RI5 53 lakhs ( $£ 103,533$ ) to R16.88 lakhs ( $£ 112,533$ ), the principal articles being, as usual, cotton piece-goods with a value of $R_{4}$ lakhs ( $£ 26,66_{7}$ ) and yarn with a value of $\mathrm{R}_{59,455}\left(£_{3}, 96_{4}\right)$. Other important articles were grain ( 48 per cent of which was husked rice) R2. $\sigma_{1}$ lakhs ( $£ 17,400$ ), coral R93,000 ( $£ 6,200$ ), woollen manufactures Ri'6r lakh ( $£ 10,733$ ), and metals $\mathrm{R}_{71}, 000\left(£_{6}, 733\right)$. The imports of wool increased by 47 per cent -in quantity (from 34,869 to $50,299 \mathrm{cwts}$ ) and 22 per cent in value (from Rro.97 lakhs $=£ 73,133$ to $R_{13} 4$ lakhs $=£ 89,333$ ). Other principal articles were:
$\therefore$ borax $\mathrm{R}_{2} \cdot 45$ lakhs ( $£ 16,333$ ), salt $\mathrm{Rr}_{1} \cdot 26$ lakh ( $£ 8,400$ ), and horses, ponies, and mules $R_{52,000}\left(£_{3,467}\right)$.

## EASTERN FRONTIER

Western China-The trade registered under this head practically consists of the exchanges between Bhamo and the Yunnan province of China, and in view of the proposals now under consideration to link up Bhamo with Tengyeh and Talifu by railway, the figures below have considerable interest. The trade increased from R $53 \cdot 42$ lakhs ( $£ 356,133$ ) to R 5797 lakhs ( $£ 386,467$ ). Imports showed a small decline of 9 per cent from Rifin lakhs ( $£ 114,067$ ) to R16.95 lakhs ( $£ 113,000$ ), while exports increased by 14 per cent from $R_{36} 6_{3}$ lakhs - $(£ 242,067)$ to R41이 lakhs ( $£ 273,467$ ). Opium, which was R2.15 lakhs ( $£ 14,333$ ) in 1906-07, dropped to Rr:51 lakh ( $£ 10,067$ ) in the year under
review. Hides of cattle decreased irom $\mathrm{R}_{4}{ }^{\circ} 78$ lakhs $\left(\mathcal{L}_{3} 1,867\right.$ ) to $\mathrm{R}_{3} \cdot 15$ lakhs
 but animals, living, increased from Ri• $S_{5}$ lakhs ( $£ 12,333$ ) to R2.22 lakhs ( $£ 14,800$ ), and lac from $R 45,000$ ( $£ 3,000$ ) to $R_{72,000 ~(~}^{£} 4,8 \mathrm{co}$ ). Of the exports 53 per cent consisted of cotton yarn (all of Indian manufacture) and this article increased from R $20^{\prime} 34$ lakhs ( $£ 135,600$ ) to R21 75 lakhs ( $£ 145,000$ ). Cotton piece-goods again showed continued development at $\mathrm{R}_{5}: 11$ lakhs ( $£_{3} 4,067$ ) as compared with $R_{5} \cdot 05$ lakhs ( $£ 33,657$ ) in the previous year. The other principal items of export were: raw cotton $R_{3} \cdot 91$ lakhs ( $£ 26,067$ ), jadestone Rr31 lakh ( $£ 8,733$ ), provisions R2.05 likhs ( $£ 13,667$ ), and salt Rr'49 lakh ( $£ 9,933$ ). Exports of petroleum increased by 56 per cent and rose from $R_{36,700}\left(£ 2,44^{7}\right)$ to $R_{57,320( }\left(£_{3}, 821\right)$.

Shan States (North and South) are Native Siates under British suzerainty, but for convenience of registration they are treated as foreign countries, and two-thirds of the trade across the Eastern Frontier relates to them. The extension of the Northern Shan States Railway to Lashio has, amongst other benefits, lowered considerably the cost of transport. The total trade increased by R51.94 lakhs ( $£ 346,267$ ) or 24 per cent from R214.67 lakhs ( $£ 1,431,000$ ) to R256'61 lakhs ( $£ 1,777,400$ ). The principal articles imported and exported from and to these States are shown below in thousands of rupees and of pounds sterling:-

It will be seen from the above table that there was a much larger import of rice, tea, and teak from the North Shan States, but a great decline in lac and teak imported from the South Shan States. As regards exports, cotton piece-goods, foreign, increased by R6' 50 lakhs ( $£ 43,000$ ) and RII 04 lakhs ( $£ 74,000$ ) to the North and South Shan States respectively. There were also noticeable increases under provisions and silk manufactures exported to the South Shan States.

North and South Siam-The trade is chiefly carried along the Thingannyinaung, Kwanbi, Pa-an, and Papun routes. Teak is floated down the Salween and Menam, but it is reported that the timber trade is much inconvenienced: by constant elephant thefts. The total trade with these territories increased from $R_{43} \cdot 64$ lakhs ( $£ 291, c 00$ ) to $R_{48} 824$ lakhs ( $£ 322,000$ ), of this North Siant accounts for $\mathrm{R}_{37} 785$ laktis ( $£_{252,000}$ ). The chief articles of imports from North Siam are teak timber ( $\mathrm{R}_{1} 3^{\circ} \mathrm{O}_{3}$ lakhs $=£ 87,000$ ) and cattle ( $\mathrm{R}_{5}{ }^{\circ} 49$ lakhs $=£ 37,000$ ) and from South Siam manufactured silk ( $\mathrm{R}_{3} 744$ lakhs $=$ $€ 25,000)$, and those of exports to Norti Siam are cotton yarn and piece-goods ( R 6.23 lakhs $=£ 42,000$ ) and sill manufactures ( $\mathrm{R}_{3} \cdot 47$ lakhs $=£_{2} 23,000$ ).

Karenni-The trade with Karenri is less than $R_{21}$ lakhs ( $£ 140,000$ ) and shows a decline of 16 per cent on the previous year's figures. The diminish-
 ( $£ 26,533$ ) under exports. The imports consisted almost entirely of teals with a value of R16. 46 lakhs ( $£ 109,733$ ) and among the exports the only considerable tem is live animals with a reduced total of R1' 17 lalh ( $\notin 7,800$ ). Jewellery and precious stones and pearis, unset, increased in value from R9,57I ( $£ 638$ ) to $\mathrm{R}_{33,647}\left(£_{2,243}\right.$ ).

## COASTING TRADE ${ }^{\prime}$

The Coasting Trade figures cannict be statistically examined as they stand, as the merchandise shipped from one port in British India to another undergoes double registration as an export and as an import. The correct value is therefore arrived at by adding to the value of the imports into British ports from other British ports the sum of the imports and exports in the trade between British and non-British ports in India. The value so calculated in respect of 1907-08 is, for merchandise, ${ }^{2} 5,880$ lakhs ( $£ 39,200,000$ ), the increase being. R654 lakhs ( $£ 4,360,000$ ) or $12 \cdot 5$ per cent on the figures of the previous year. Though food-grains represented a slightly diminished percentage ( $26^{\circ} 5$ as against 28.9 in $1906-07$ ) of the total, the ralue rose from $R_{1,495}$ lakhs ( $£ 996,600$ ) to $R_{1,558}$ lakhs ( $£ 10,386,600$ ), the increase being $R \sigma_{3}$ lakhs ( $£ 420,000$ ). Of the total value of food-grains, rice represented 78.5 per cent and of this grain there were

* greatly increased shipments from Burma to Bengal and to Bornbay, while less went to Eastern Bengal and Assam where the harvest was good in 1907. The - recorded exports of rice from Burma to Indian pcrts amounted to 979,000 tons, an increase of 166,000 tons. High prices seem to have killed the export trade in parboiled rice from Chittagong which was once considerable. The exports of mineral oil from Burma to Indian ports increased from 58.5 to 72 million gallons. The quantity taken by Calcutta for distribution by sea to other ports increased from 33 to 37 million gallons, the direct shipment from Burma to other provinces being-Bombay $13^{\circ} 4$ million gallons, Madras $12^{\circ} 5$ million gallons, and Sind 19 million gallons. The coastal exports of gunny bags from Calcutta mainly to Burma and Bombay, increased in value from $R_{196}{ }^{2}$ lakhs $\left(£_{1}, 308,000\right)$ to $\mathrm{R}_{235}{ }^{\circ} 5$ lakhs ( $61,570,000$ ) and in quantity from 64 to 80 million bags. There was a slight set-back in the coastal shipments of Bengal coal which fell from $2,257,000$ tons to $2,213,000$ tons. The quantity of rudian made cotton piece-goods shipped from the Bombay Presidency shews a most remarkable advance. The quantity rose from $164^{\prime} 5$ to 239 million yards and the value from R24 $6 \cdot 6$ lakhs ( $£ 1,644,000$ ) to $R_{3} 87 \cdot 6$ lakhs ( $£ 2,584,000$ ), the increase being $74^{\circ} 5$ million yards or 45 per cent in quantity and R141 lakbs ( $£ 940,000$ ) or 57
per cent in value, but in specific value 8 per cent only. The provinces in which the largest expansion took place were Bengal and Sind, as the following table shews:-

## RAILWAY G00DS TRAFFIC

The increase in Railway goods traffic is some measure of the growth of India's total trade, but when famine conditions prevail, as in the latter half of the year under review, interprovincial transport of grain and fodder impairs the value of the figures as an index of purely mercantile activity. The statement given below shows (in thousands) the progressive advance in the ton-mileage of goods traffe on the principal railways in India during the last five years:

|  |  | Units | Units |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1903 | - | 7,623,682 | +436,143 | or | 6.7 | cent |
| 1904 | - . | 8,969,140 | + 1,345,458 | " | 176 | " |
| 1905 | - - | 9,260,752 | +291,612 | " | $3 \cdot 2$ | " |
| 1906 | - • | 10,052, 132 | +791,380 | " | 8.5 | , |
| 1907 | - | 11,103,514 | +1,051,382 |  | 10.4 |  |

The total increase in the period of five years has thus been $3,915,975,000$ ton-miles or nearly 54.5 per cent on the figures for 1902. In the same quinquennium the increase in goods traffic rolling stock is one of 25 per cent, the number of wagons having risen from 99,348 in 1902 to $\mathbf{1 2 4 , 1 0 4}$ in 1907.

From the statistics of twenty leading railways the average charge for freight works out at 1.32 pies per ton-mile.

## CONTENTS

## NOTE

All sums of money in this Review are stated in rupees and their equivalents in pounds sterling.

For $1898-99$ and subsequent years a pound sterling is equivalent to R15. The rupee is divided into sixteen annas and the anna into twelve pies. The anna is, at the stated rate of Exchange, equal to one penny.

A sum of $R_{I}, 00,000$, ordinarily termed a lakh, is equivalent to $£ 6,66613 \mathrm{~s} .4 \mathrm{~d}$, and a crore of rupees, which is 100 lakhs, is equal to $\left(£ 666,66613 \mathrm{~s} .4^{d}\right.$. The simplest methed of conversion is to multiply the number of rupees by 2 and put a decimal point to the left of the unit figure and then divide by 3 , the quotient being the strrling equivalent in pounds and decimals. If it is desired $t$, reduce these decimal figures to shillings and ptnce, the first two decimal figures should be divided by 5 to furnish the number of shillings, and the remainder to two places divided by 4 to find the number of pence.

Weights in this Review are stated in lbs, cwts, and tons, but for purpose of reference to current literature about Indian trade, it is well to state that the weights most commonly quoted in such literature are as follows:

This map is intended to illustrate the principal sources of specific products. The principal areas of production of the staple crops of British. India, namely, rice, wheat, oil-seeds, sugarcane, tea, coffee, cotton, and juie, are indicated by hatchings-horizontal, vertical, and diagonal-in two colours, black and red; and the location of the principal coal-fields is marked with black dots. For want of data, no information is given as regards Native States, and the districts in which the area under the selected crop is less than 10 per cent of the total cropped area have been ignored. The chief railway systems are indicated by thin black lines.

in South-West Bengal and in Orissa and from drought in Bihar. In the first week of October rainfall wa; general; but subsequently drought prevailed, especially in Bihar. This affected the outturn of winter rice and hindered the growth of the early spring crops. The rainfall in the latier part of January did much good to the spring crops, but it was too scanty in Bihar.

United Provinces ( $39,028,000$ acres)-In the third week of June sufficient rain was received in the submontane districts to give an early start to autumn sowings; while in the rest of the province general rain fell early in July.

## THE

# TRADE OF BRITISH INDIA 

WITH
FOREIGN COUNTRIES
For the official year ending March 31, 1909

## CLIMATIC CONDITIONS

The trading power of India depends on the success of its crops. Therefore some account of the climatic conditions of each year is requisite for a compreliension of the trade recorded and of the prospect. In respect of certain crops the volume of trade in one statistical year is determined by the weather of the previous season; and in the notes on produce of this kind the necessary particulars regarding that earlier season are given. The following notes summarise the weather record of the season 1908.09 in respect of each province. They are founded on weather reports that accompanied the various crop forecasts and have been revised by the respective Local Governments. The cropped area including current fallows is shown in each case.

Eastern Bengal and Assam (23,823,000 acres) - During March and April rainfall was scanty, and the jute and sugarcane crops suffered from want of moisture. Good rain fell in May; and this, followed by copious showers in June and July, entirely changed the situation. The latter part of July and the whole of August were, however, characterised by an abnormal drought. This greatly impeded the retting of jute and the transplanting of winter rice. In September good rain fell throughout the province, which greatly benefited the autumn crops as well as the winter rice crop. In October, rainfall was deficient and this not only affected the late transplanted rice on high lands, but also left insufficient moisture in the soil for the sowing of spring crops Light scattered showers were received afterwards, but in general the crops continued to suffer from want of sufficient moisture.

Bengal ( $\mathbf{4 1 , 3 3 5 , 0 0 0}$ acres)-Ante-monsoon showers were defective in April and May and in the beginning of June. The monsoon broke about the middle of June when heavy showers fell in South-West Bengal. Elsewhere the fall was below the normal. In July and August ample rain was received throughout the province except Bihar. The crops suffered from heavy rain in South-West Bengal and in Orissa and from drought in Bihar. In the first week of October rainfall wa; general ; but subsequently drought prevailed, especially in Bihar. This affected the outturn of winter rice and hindered the growth of the early spring crops. The rainfall in the latter part of January did much good to the spring crops, but it was too scanty in Bihar.

United Provinces ( $39,028,000$ acres)-In the third week of June suff.cient rain was received in the submontane districts to give an early start to autumn sowings; while in the rest of the province general rain fell early in July.

The rainfall of that month was copious and well-distributed. The rain in August was heavy and continuous and caused some injury to the crops in places. Light rain fell in all districts early in September, in the west this was the end of the monsoon, but the rest of the province received rain in the last fer days of September and the beginning of Octuber. The drought injured the crops, especially in some of the sub-montane districts. Moisture in the soil was insufficient in many places and irrigation had to be extensively resorted to for the sowing of wheat and other spring crops. November and December were practically rainless, but some rain fell in January. The western plairis had as a rule adequate general falls which benefited the crops; but elsewhere the falls were too light and local to be satisfactory. The rainfall in February also was usually insignificant.

Panjab ( $28,257,000$ acres)-Good rain was received in the second week of April. The monsoon arrived a little later than usual, but gave copious and well-distributed showers which benefited the sugarcane crop and facilitated the sowing of autumn crops on an extensive scale. The heary and continuous rain from the beginning of August to the beginuing of September caused a great deal of damage to the cotton, sesamum, maize, and jawar crops, especially on low-lying tracts, but it left an abundance of mosture in the soil for the sowing of early spring crops. The winter rains opened with light but useful show-rs in the fourth week of December in the Salt Range, the submontane districts, and in parts of certain other districts. The January rainfull was very disappointing. The character of the February rainfall was also unsatisfactory up to the 20th and 21 st when there was precipitation which greatly improved the cond tion of the spring crops. March was very dry, except for one good fall of rain in the Salt Range, and the winter rainfall has been much below the average.

North-West Frontier Province (2,784,000 acres)-Rainfall was deficient during the months of March to June, and this somewhat affected the cotton and sugarcane crops. The rain in September was timely and abundant which facilitated the sowing of wheat and spring oilseeds. The winter rains began in the third week of December, but their amount was smaller than in the previous year.

Sind (8,894,000 acres)-Good inundation facilitated the sowing of cotton and sesamum on an extensive scale. Insects and foost, however, damaged the cotton crop in places. Wheat and rapeseed were sown under favourable inundation, but both suffered from frost which diminished the outturn.

Bombay (32,722,000 acres)-Early rain commenced in the second week of June. In July and August rainfall was continuous in Gujarat, the Konkan, and West Deccan, and excessive in some parts, particularly in Gujarat. In the Eastern Deccan, however, and over most of the Southern Mahratha country the July and August rains were much in defect, and the autumn sowings were accordingly much restricted. Late rains failed in Upper Gujarat, and were moderate in Lower Gujarat. The Konkan and Deccan received admirable rains in September which brought on the autumn crops well and enabled extensive sowings of spring (rabi) crops. Yarts of the Southern Mahratha country, however, got little or none of this rain. Subsequent rains were scanty and partial. The condition of crops in Upper Gujarat was fair to poor, in Lower Gujarat fair to good, in Konkan and West Deccan good, in East Deccan moderate, and in the Southern Mahratta country fair to poor.

Central Provinces and Berar (27,708,000 acres)-The monsoon commenced somewhat late. Heayy and continuous rain in July and August swamped
the fields and damaged the cotton and sesamum crops in certain places. The break which set in at the end of 'September improved the condition of these crops greatly for a time; but subsequently they suffered from want of rain. The heavy rains of July-August left sufficient moisture in the soil for the sowing of wheat and spring oilseeds, and an extensive area was sown with these crops. The holding-off of the winter rains together with cloudy weather, hail, and frost slightly damaged the linseed crop in several districts; but light rain fell in the first fortnight of February and greatly berefited the wheat crop. Light showers accompanied in some instances by hail were received in March in a few districts but the hail did no dannage.

Madras (42,025,000 acres)—Rainfall was seasonable for sesamum and groundnut ; but for rice, cotton, indigo, and surgarcane the season was less favourable owing to deficient water-supply.

Burma (17,649,000 acres)-Weather was favourable till the end of October. In November, heavy and continuous rain and storms did some damage to the standing rice crop in the Arakan Division, and to the cotton crop in Upper Burma; but the damage was not widespred. The winter crop did well, and the spring crops have been satisfactory.

## GENERAL SUMMARY OF TRADE

The returns of the seaborne trade of India for the year 1908-09 show clearly the malign effects of the general stringency in trade that has characterised the year throughout the world, and of the failure of rains in large tracts of India from which export produce is drawn.

The general depression has been so great as to obscure or obliterate the effect of minor influences which, in normal times, it is interesting to trace in the statistics relating to individual commodities. It has been ascribed primarily to reaction from overtrading and overproduction induced by five years of prosperity and rising prices. Production overtook consemption in the world's markets; and this condition made them so sensitive that in 1907 certain secondary influences brought about a collapse. The resultant situation was the more serious because of the large stocks that had accumulated not only in the great centres of the world's trade, where the existence of these stocks was perceived, but in a number of outlying markets where they were out of sight.

The year 1908 began under these conditions; and the depression grew deeper in proportion as the forward business that had been engaged in ran out or was found to be unrealizable.

While the crisis produced in America certain distinctive symptoms, England had troubles peculiar to herself. Among these were the engineering strike on the North East Coast, the strike and lock out in the coiton industry, anxiety about conditions-in India, suspicion as to the goodwill of certain foreign countries, misgivings about possible complications in the Near East, solicitude about the presidential election in the United Sta!es, and a premonition of some such deficit in the home Exchequer as lias now been announced by Mr. Lloyd George.

The universality of the trade depression in 1908 is shown by the following figures. Imports into the United Kingdom were only $£ 593^{\circ} 14$ millions in 1908 or $£ 52.67$ millions less than in 1907 , while the exports at $£ 456.88$ millions marked a fall of $£ 61 \cdot 09$ millions, and the total showed a loss of $£^{11} 3.76$ millions (or 9.8 per $\mathrm{c} \in \mathrm{n}$ ). The imports into the United States were $£^{2} 3^{2} \cdot 58$ millions or
$£^{6} 3^{\prime} 91$, millions less than in 1907 . The exports were $£_{360}{ }^{\circ} 24$ millions or $£ 34^{\circ} 6_{3}$ millions and the total of $£ 592 \cdot 82$ millions was $£ 98 \cdot 54$ millions ( $14^{\prime 2}$ per cent), ress than in the previous year. Germany recorded imports $\mathcal{6} 409^{\circ} 95$ millions and exports $£ 33^{\circ}{ }^{\circ}$ O millions with a total of $6741^{\circ} 98$ millions, which marks a decline of $£^{2}+9$ millions ( $3^{2} 2$ per cent) made up of $£^{2} 0^{\circ} 09$ millions in imports and of only $£_{4} 4^{8}$ millions in exports. Austria-Hungary imported goods worth $£ 105.52$ millions which was some $£ 1 \cdot 27$ millions more than in 1907 ; but her exports fell from $£_{102} \cdot 38$ to $£_{6} 6 \cdot 87$ millions and the total trade declined by 2 per cent, namely, from $£ 206.63$ millions to $£ 202 \cdot 39$ millions. France reduced her imports from $£_{24} 8^{\circ} 9$ millions to $£^{2+3} 6$ millions and her exports from $£^{22} 3^{\circ} 8$ to $£^{210} 9$ millions, the total trade being thus $£ 454^{\prime} 5$ millions as comp rred with $£ 472$ '7 millions, which marks a decline of 38 per cent. Belgium's total trade fell (by $4^{6} 6$ per cent) from $£^{2}+9^{7} 7$ millions to $£_{23} 8 \cdot 3$ millions.

These factors are alluded to because it is impossible to give an intelligent account of the present phase of Indian trade without indicaling the trade conditions that have recently ruled throughout the world. The unity of the world's trade has never received a clearer demonstration than in the uniformity with which all countries felt simultaneously the impulse of enterprise and production which lasted for five jears or mo-e, and then the reaction that resulted from a general state of over extension.

India was subject to a number of special disabilities during 1907 and 1908. The most important was the insufficiency and the bad distribution of the rains, on which everything in India depends. The effect of their miscarriage may be seen in the following figures which slow the extent to which contraction took place in the area under the several prircipal crops and in the estimated outturn :

|  | 1907-08 |  | 1906.07 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Area Acres | Yield Tons | Area Acres | Yield <br> Tons |
| Rice | 54,677,300 | 18,960,600 | 54,157,600 | 21,387,200 |
| Cotton | 21,630,000 | 557,500 | 22,329,000 | 881,000 |
| Wheat | 22,806,200 | 6,104,200 | 29,212,500 | 8,491,700 |
| Jute | 3,974,300 | 1,753,200 | 3,482,900 | 1,644,000 |
| Rape an tard | 5,200,200 | 688,000 | 6,393,100 | ,053,100 |
| Linseed | 2,099,400 | 163,200 | 3,743,200 | 425,200 |

These figures show a decline in every case except jute, and the rates of decline were as follows:

In the face of these figures, it is not surprising that there has been some distress in the country and that prices have ranged high especially for food grains. A calculation based on the average monthly prices of the seven principal food-grains of India during 1908 and during the previous five years shows that the price in 1903 was $57 \%$ per cent higher than the average of the five years' period and a further investigation as to the effect of such a rise when applied to the estimated normal consumption of food grains shows that
it represents an additional expenditure of some $\mathrm{R}_{196} 2$ crores ( $£ 130.8$ millions), whereas the total value of all imports amounted to less than Ri44 crores ( $£ 96$ millions). It is necessary to remember, however, that in India most of the consumers of food grains are also producers. The extent to which these higher rates recouped the money value of the produce lost may be roughly computed by a valuation of the several crops at the average wholesale prices ruling at certain principal marts in India It would of course be wrong to accept as an index of farm values of these prices, but for cumparative purposes the calculation has some interest. It has been made for the last two years in respect of cotton, jute, rice, wheat, tea, linseed, rape and mustard, sesamum, and groundnut. For the last the declared value has been taken in the absence of any other price. The total value of the later year works out at $\mathrm{R}_{420} \cdot 24$ crores ( $\mathrm{f}_{2} 80^{\circ} 16$ millions) against $\mathrm{R}_{42} 1_{5}$ crores ( $£ 281$ millions) lin the earlier year, the fall being about 3 per cent.

In the following statement the value of the sea-borne trade of India for the year 1908-09 is summarised and compared with the value of the trade in each of the preceding two years. Government transactions both in merchandise and in treasure are excluded. The unit in every case is 1,000 :

| Exports- | $1906 \cdot 07$ |  | 1907.08 |  | 1908-09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | $£$ | A | む | R | $\ldots$ |
|  |  |  |  |  |  |  |
| Indian merchandise . <br> Foreign merchandise | $1,73,08,20=115,388$ |  | $1,73,47,82=115,652$ |  | 1,49,82, $39=99,883$ |  |
| Foreign merchandise re-exported | 3,48,40 | 2,323 | 3,76,74 | 2,512 | 3,17,07 | 2,114 |
| Gold | 3,67,73 | 2,452 | 3.38,49 | 2,257 | 3,68,8! | 2,459 |
| Silver | 2,03,57. | 1,357 | 2,06,13 | 1,374 | 2,26,86 | 1,512 |
| Total Exports - | 1,82,27,90 | 121,520 | 1,82,69,18 | 121,595 | 1,58,95,13 | 105,968 |

The increases or decreases under these several heads are as follows as compared with the two previous years:

| Exports- | 1907-08 per |  | 1906.07 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | R | $E$ | R | 1 |
| Indian merchandise | . $-23,65.43$ | $=15,770=13.6$ | -23,25,81 | $=15,505=13.4$ |

| Total Imports | . $-18,8 \mathrm{l}, 79$ | 12,545 | $11 \cdot 6+$ | + 838,90 | 5,593 | $6 \cdot 2$ |
| Grand Total | . $-\{2,55,8.4$ | 28,373 | 123 - | - $14,93,87$ | 9.959 | 4.7 |

The grand total of Exports and Imports was $\mathrm{R}_{3} 302.85$ crores (201.9 millions sterling) as against $\mathrm{R}_{345^{\circ} 41}$ crores ( $£_{230.27}$ millions) in 1907.09 , the decrease being one of $R_{+^{2}} \cdot 56$ crores ( $£_{2} 8.37$ millions) or 12.3 per cent. The total includes some $\mathbf{R}_{3} \cdot 2$ crores of foreign merchandise re-exported but excludes about $\mathrm{R}_{4}{ }^{5} 5^{2}$ crores of material imported by Government for State Railways.

Exports represented $5^{2} 5$ per cent of this grand total and amounted to $\mathrm{R}_{15} 8^{\circ} 95$ crores ( $£ 10507$ millions) as against $\mathrm{R}_{1} 8_{2}{ }^{\circ} 69$ crores ( $£ 121.75$ millions in the previous $y \in a r$. The decrease here was $R_{23.74}$ crores ( $£ 15.82$ millions) and this represented $55^{\circ} 8$ per cent of the total decline in trade and 13 per cent on the export figures for 1907-08.

Imports had a total value of $\mathrm{R}_{1} 43^{\circ} 9$ crores ( $£ 95^{\circ} 93$ millions) as against R162. 72 crores ( $£ 1088_{4} 8$ millions)' in 1907.08 , the dec line here being R18.82 crores ( $£ 125$ millions) or 116 per cent.

Exports of Indian Merchandise fell from $\mathrm{R}_{17}: 48$ crores ( $£ 1: 5 \cdot 65$ millions) to $\mathrm{R}_{149} \cdot 82$ crores ( $£ 99.88$ millions) which involves a decline of $\mathrm{R}_{23} 65$ crores ( $£ 1577$ millions) or 136 per cent. This of course accounts for the greater part ( $55^{\circ} 6$ per cent) of the total decline in the year's trade, seeing that in $190 \%$-08 the exports of Indian merchandise represented 50.2 per cent of the total trade.

Re-exports of Foreign Merchandise declined from $\mathrm{R}_{3} \cdot 77$ crores ( $£ 2.51$ millions) in 1907.08 to $\mathrm{R}_{3} \cdot 17$ crores ( $\mathrm{E}_{2} \cdot 11$ millions) in $1908 \cdot 09$, the decline here being nearly R6o lakhs ( $£ 400,000$ ) or $15^{\circ} 9$ per cent.

The movements of Treasure have been curious during the past year, the large imports of silver in the later months being specially interesting. The total Imports of Treasure fell from $\mathrm{R}_{32} \cdot 82$ crores ( $£ 21.88$ millions) to R22 $6_{3}$ crores ( $£ 1509$ millions), the contraction of R10. 19 crores ( $£ 679$ millions) representing 3r per cent of the earlier year's figure. But whereas the impo:ts of gold dropped from $\mathrm{R}_{20} 073$ crores ( $£_{13} .82$ millions) to R 8.4 crores ( $\mathscr{E} 5.6^{5}$ millions), thus marking a loss of R12.33 crores or $59^{\circ} 5$ per cent, the arrivals of silver at $R_{14.23}$ crores ( $£ 9.49$ millions) showed an advance of $R_{2}{ }^{\prime}{ }_{15}$ crores or 177 per cent.

Bengal's share of the total movement of merchandise was $40^{\circ} 4$ per cent, as against $39^{\circ} 9$ per cent in 1907-08. Her aggregate fell from R122.69 crores ( $£ 81 \cdot 79$ millions) to Ririo 64 crores ( $£ 73.76$ millions), the loss being R $\mathrm{R}_{12} .05$ crores ( $£ 8.03$ millions) or 9.8 per cent. The decline in exports was one of $\mathrm{R}_{3} \cdot 65$ crores ( $£^{2} \cdot 43$ millions) or $5^{\circ} 2$ per cent, bringing the total to R65.4 crores ( $£ 44.3$ millions) in place of $\mathrm{R}_{70006}$ crores ( $£ 46.71$ millions) in $1907-08$. The total imports of $R_{44^{\circ}}{ }^{4}$ crores ( $£ 29.5$ millions) marked a decline of $R 8.4$ crores ( $£ 5^{\circ} 6$ millions) or 16 per cent as compared with the previous year.

Eastern Bengal and Assam returned a total trade of R 5.33 crores ( $£ 3.55$ millions); which consisted of Ro. 6 r.rore ( $£ \mathrm{O}^{\circ} 4$ million) imports and $\mathrm{R}_{4} \cdot 73$ crores ( $£ 3.15$ millions) exports. The comparative figures recorded for the new province, therefore, show an increase of $\mathrm{R}_{1} \cdot \frac{1}{}$ crores ( $£ 0.67$ million) or 23.4 per cent.

Bombay, which did 301 per cent of the total trade in place of $30^{\circ} 5$ per cent as in 1907-08, shows a diminished aggregate of R82'53 crores ( $£ 55$ millions) as against R93.62 crores ( $£ 62^{\circ} 41$ millions) in 1907.08 , the decline here being one of RII 09 crores ( $£ 7.39$ millions). Her exports fell by R6. 7 crores ( $£ 4.47$ millions) to $\mathrm{R}_{42}{ }^{\prime}$ I crores ( $£ 28$ millions) and her imports by $\mathrm{R}_{4} \cdot 39$ crores ( $£^{2} \cdot 93$ millions). The percentage declines in these two cases were 13.7 per cent and 9.8 per cent respectively, the net decline in the total being 11.8 per cent.

Sind's total movement of merchandise was from R28.61 crores ( $£ 19^{\circ} 07$ millons) to R19.92 crores ( $£_{13} 28$ millions) in the year under review and consisted of $R 8.6$ crores ( $£ 5^{\circ} 73$ millions) in exports and $\mathrm{R}_{11} 3_{3}$ crores ( $£ 755$ millions) in imports. Sind's share in the total trade of the country in 1907.03 was 93 per cent. This was not greatly short of the share of Burma or of Madras and was due mainly to her considerable export trade in wheat, etc. In 1908-09 that export trade fell from R:8.09 crores ( $£ 12.6$ millions) to $R 8.6$ crores ( $£ 5.73$ millions) and with imports at $\mathrm{R}_{11} \cdot 3_{2}$ coores ( $£ 77^{\circ} 55$ millions) instead of $\mathrm{R}_{10} 0_{52}$ crores ( $£ 7 \circ$ I millions), the total trade represented only 7.3 per cer't of India's total.

Madras returns a total trade of $\mathrm{R}_{29} 9^{\circ} 77$ crores ( $£ 19.85$ millions), which is greater by $R 8$ crore ( $£ .5$ million) or 2.8 per cent than in the previous year. Her exports decreased by 2.7 per cent to $\mathrm{R}_{1} 8.23$ crores ( $£ 12.15$ millions) but her imports increased by 12.6 per cent to R11.54 crores ( $£ 777$ millions).

Burma returns atotal trade of $\mathrm{R}_{26}{ }^{\circ} 06$ crores ( $f_{17} 173$ millions), which is less by $\mathrm{R}_{2} \cdot 87$ crores ( $£ \mathrm{I} 91$ millions) or 9.9 per cent. than in the previous year. Her exports declined by R4.85 crores ( $£ 3.23$ millions) or 27.3 per cent to $\mathrm{R}_{12}{ }_{93}$ crores ( $£ 8.62$ millions), and her imports rose by R1.98 crores ( $£ \cdot{ }_{3}{ }^{2}$ millions) or ${ }_{17} .8$ per cent to $\mathrm{R}_{13} 1_{13}$ crores ( $£ 8.75$ millions).

The experience of the several provinces in respect of imports has varied greatly. While Bengal imported $\mathrm{R} 839^{\circ} 16$ lakhs ( $£ 5,594,000$ ) less than in the previous year, Eastern Bengal and Assam increased its small total by about
 less than in 1907-09, while Sind increased her imports by R79.58 lakhs ( $£ 530500$ ). Madras and Burma also increased their imports by R129.09 lakhs and $R 198.13$ lakhs ( $£ 860,600$ and $£ 1,320,900$ ) respectively but the aggregate of the increases goes only a small way towards recouping the heavy fall in Bengal and Bömbay.

The Exports of Indian merchandise form ${ }^{5} 4^{\circ} 6$ per cent of the sum of imports and exports, and $97^{\circ} 9$ per cent of the total exports as against 56.5 per cent and 98 per cent in 1907.08 . The total value was $\mathrm{R}_{1499^{\circ} 8}{ }^{\circ}$ crores ( $£ 99.88$ millions) as against $\mathrm{R}_{173} .48$ crores ( $£ 11565$ millions) in 1907.08, the decline being one of $\mathrm{R}_{2} 3^{\circ} 65$ crores ( $£ 15 \cdot 77$ millions) or ${ }_{1} 3.6$ per cent.

Raw materials and unmanufactured articles form $44^{8}$ per cent of the total as against 43.9 per cent in $1907-08$. The total value under this head was R67.18 crores ( $£ 44^{\circ} 79$ millions) as compared with $R 766^{2}$ crores ( $£ 50.82$ millions) in 1907.08 , the decline being one of Rg'05 crores ( $£_{3} 6.03$ milliuns) or nearly 12 per cent. The principal items are raw jute: and raw
cotton, and these, in the year under review, were of nearly equal value,
 millions) in Cotton. There was in Jute a recovery of $\mathrm{R} 1 \cdot 86$ crores ( $£ 1 \cdot 24$ millions) equal to $10^{\circ} 4$ fer cent, while Cotton, after a substantial increase in 1907.08, fell away by no less than $\mathrm{R}_{5} 9$ crores ( $£ 3.95$ millions) equal to $23^{\circ}$ I per cent. Jute represents $29^{\circ} 6$ per cent, and Cotion $29^{\circ} 4$ per cent, of the total. Seeds at RiI 68 crores ( $£ 779$ millions) represent 474 per cent of the total class, but showed a decline of $\mathrm{R}_{5} 1_{3}$ crores ( $£ 3^{\circ} 4^{2}$ millions) or $30^{\circ} 5$ per cent. It may be noted, however, that the figure of $R 16 \cdot 81$ crores ( $£ 11 \cdot 21$ millions) in $1907-68$ was the largest on record. Raw hides, which in 1907.08 declined by nearly one-third to $\mathrm{R}_{4} \cdot 3^{2}$ crores ( $£ 2.88$ millions), made an advance of $R_{4} 6.55$ lakhs ( $£ 310,000$ ) or 10.8 per cent and registered a total of $R_{4} \cdot 78$ crores ( $£_{3} \cdot 19$ millions). Raw skins, which had shown in the last two years successive declines aggregating more than $\mathrm{R}_{2}$ crores, made a recovery of $\mathrm{R}_{2} \cdot{ }_{18}$ lakh; $£_{5} 48,000$ ), bringing the total to $\mathrm{R}_{3} \cdot 55$ crores ( $£ 2.37$ millions).

Exports of Indian manufactures represent about 2.45 per cent of the total exports. Their value declined from $\mathrm{R}_{39} 3^{\circ} 30$ crores ( $£_{2} 6^{\circ} \cdot 2$ millions) to $\mathrm{R}_{3} 6.65$ crores ( $£ 24 \cdot 43$ millions), the loss being R $2 \cdot 6_{4}$ crores ( $£ \cdot 7 \cdot 7$ millions) or 6.7 per cent. In this class $\mathcal{F u t e}$ goods represented 43 per cent of the total and continued to hold the lead with a value of $\mathrm{R}_{15} 773$ crores ( $£ 1049$ millions) which, however, is les; by $\mathrm{R}_{2}{ }^{\prime}{ }_{5} 6$ crores ( $£ 1 \cdot 71$ millions) or 24 per cent than in 1907-08. Cotton goods, which declined largely in 1907-08, rose by a net R $77 \circ 05$ lakhs ( $£ 514,000$ ) or 7 per cent to $\mathrm{R}_{11}{ }^{\prime} 54$ crores ( $£ 769$ millions). Of this rise yarns contributed $\mathrm{R}_{70} 75$ lakhs ( $£ 472,000$ ) and pieccgoods R661 lakhs ( $£ 44,000$ ), while other cotton goods fell by $\mathrm{R}_{30,890}\left(£_{2}, 060\right)$. Exports of Lac, after continuous advances over a series of years, receded by RI. 14 crores ( $£ 660,000$ ) or $29^{\prime} 4$ per cent to $\mathrm{R}_{2} \% 3$ crores ( $\mathrm{r} \cdot 82$ millions). Exports of Hides and skins, raw and tanned, rose by R1. 52 crores ( $£ 1 \cdot 0$ millions) or $13^{\circ} 9$ per cent, bringing the total from R 1009 crores ( $£ 7.3$ millions) to $\mathrm{R}_{12}{ }^{2} 47$ crores ( $£ 8.31$ millions). Tanned hides at R1. 39 crore; ( $£ 930,000$ ) showed a gain of $\mathrm{R}_{34} \cdot 10$ lakhs ( $£ 227,000$ ), but tanned skins at $\mathrm{R}_{2} \cdot 73$ crores $(£ 1.82$ millions) lost R1I'22 lakhs ( $£ 75,000$ ).

Articles of food and drink show the largest decline in any one class in the year under review. It amounted to no less than $\mathrm{R}_{12} 19$ crors ( $£ 813$ millions) or $27^{\circ} 2$ per cent, bringing the total value down to $\mathrm{R}_{32} \cdot 54$ crores ( $£_{21} 69$ millions) as compared with $\mathrm{R}_{44} 73$ crores ( $£ 2982$ millions) in 1907-08. Of this class Wheat and wheat flour represented $20^{\circ} 4$ per cent in 1907.08 and stood at R9. 14 crores ( $£ 6.09$ millions). In 1908.09 the extensive failure of the ciop and the high level of internal prices reduced the value of these exports to $\mathrm{R}: 86$ crores ( $£ \cdot 24$ millions), the contraction of R 7.28 crores ( $£ 4.85$ milliuns) representing 79.6 per cent-of the previous year's figures. The high internal prices of food grains also contributed to the fall of $\mathrm{R}_{4} 45$ crores ( $£_{3}$ millions) or $2 \mathbf{1} 9$ per cent in the exports of rice, which amounted to only $\mathrm{R}_{15} \mathrm{~L}^{\circ} 8$ g crores ( $\mathrm{f}_{1} 10.6$ millions) in place of $R_{20} \cdot 34$ crores ( $£ 13.50$ millions) in: $1907 \cdot 08$. Other food grains at $R \cdot 82$ crore ( $£ \cdot 55$ million) showed a decline of $\mathrm{RI}_{1} \cdot 21$ crores ( $£ \cdot 81$ million), or $59^{\circ} 9$ per cent. All the other articles of food and drink showed increases. Tea rose by R9.34 lakhs ( $£ 62,300$ ) to R10.39 crores ( $£ 6.93$ millions). Coffee rose by $\mathrm{R}_{2} 7.54$ lakhs ( $£ 184,000$ ) to $\mathrm{RI}_{1} 39$ crores ( $£ \cdot 93$ million). Fruits rose by R $31 \cdot 34$ lakhs ( $£ 202,000$ ) to R $69 \cdot 58$ lakhs ( $£ 464,000$ ), and Spices by $\mathrm{R}_{5} \cdot 83$ lakhs ( $£ 39,000$ ) to $\mathrm{R}_{5} 8 \cdot 53$ lakhs ( $£ 390,000$ ).

Exports of Metals and manufactures thereof in 1907.08 represented $\cdot 64$ per cent of the total exports. In $1908-09$ they represented 58 per cent. They declined by $\mathrm{R}_{23} .8$ g lakhs ( $£ 159,000$ ) or 21.6 per cent to $R 86.75$ lakhs ( $£ 578,000$ ), and of this fall Manganese ore, with a value of $R_{7} 2^{\prime} 6_{\ddagger}$ lakhs ( $£ 484,000$ ), contributed $\mathrm{R}_{1} 3^{\circ} 25$ lakhs ( $£ 88,000$ ).

Chemicals and drugs have recovered part of the ground lost in 1907-08, and, with an advance of $R_{43^{\circ}} 5^{\prime}$ !akhs ( $£ 290,000$ ), stand now at $\mathrm{R}_{11} \mathrm{~K}_{47}$ crotes ( $£ 765$ millions), as against R 11.56 crores ( $£ 771$ millions) two years ago.

Exports of Oils form a less important item with a total of R94.44 lakhs ( $£ 6_{3} \mathrm{O}, 000$ ) ; but this shows a net advance of $R 8.62$ lakhs ( $£ 57,500$ ), as compared with the "record" of $\mathrm{R}_{1}{ }^{\circ} \mathrm{O}_{3}$ crores ( $\mathcal{E} \cdot 69$ milion) in 1903:04. Mineral
 ( $£ 8,300$ ) but vegetable and other oils at R 7062 lakhs ( $£ 471,000$ ) rose by Rg 88 lakhs ( $£ 66,000$ ).

In Re-exports of Foreign merchandise, which represent 2.07 per cent of the total export, the total value is $\mathrm{R}_{3}{ }^{\prime} 17$ crores ( $£_{2} \mathbf{n}_{11}$ millions) as against $\mathrm{R}_{3} .77$ crores ( $£ 2.51$ millions) in $1907-08$. The decline is one of R6o lakhs ( $£ 44$ million) or 15.9 per cent. The largest single item in this class is as usual Cotton manufactures (including $T_{\text {wist }}$ and Yarn) with a total of $\mathrm{Rr}^{\cdot 1}{ }_{3}$ crores ( $£ 753,000$ ), which is less by $R_{35} 73$ lakhs ( $£ 238,000$ ) than the $R_{1} 48$ crores ( $£ 987,000$ ) of 1907-08. Metals and hardware showed a further decrease of R10 3 lakhs ( $£ 68,700$ ), bringing the total to R23.97 lakhs ( $£ 160,000$ ) in place of $R_{34} \cdot 27$ lakhs ( $f, 228,000$ ). Raw wool fell by $R_{4} \cdot 8_{5}$ lakhs ( $£_{32} 2,000$ ) to R2791 lakhs ( $(\mathbb{1} 86,000)$; Provisions by Rr 30 lakhs ( $£ 8,700$ ) to R 18.33 lakhs ( $£ 222,000$ ), Apparel by $\mathrm{R}_{3} 97$ lakhs ( $£ 26,500$ ) to R 5.03 lakhs ( $£ 100,000$ ), Oils by R 39,852 ( $£ 2,660$ ), and other articles by $\mathrm{R}_{4}{ }^{7} \mathrm{I}_{3}$ lakhs ( $£_{3^{1}, 500}$ ). Sugar alone with a total value of R11773 lakhs ( $£ 7^{8,200}$ ) marked an advance, which amounted to $\mathrm{R}_{1} \cdot 6_{3}$ lakhs ( $£ 10,900$ ).

## IMPORTS OF MERCHANDISE

This section of India's sea-borne trade forms about 40.5 per cent of the whole. Its value in 1007.08 was $\mathrm{R}_{129.89}$ crores ( $£ 86.6$ millions), but in the year under review it receded to $\mathrm{R}_{121} \cdot 26$ crores ( $£ 80 \cdot 84$ millions). The loss of R $8.6_{3}$ crores ( $~_{5} 576$ millions) represents 6.6 per cent of the previous year's figures ; but it leaves the total largely in advance of any year anterior to 1907 . 08. The following statement compares the value of the imports in 1908-09 with the average values for each quinquennial period from $1880-8 \mathrm{I}$ to 1904.05 and the value in each year since that date (ooo's omitted). It shows also the centesimal variations, the average value from 1880-81 to 1884-85 being taken as 100 :

|  |  | R | $£$ | Variation |
| :---: | :---: | :---: | :---: | :---: |
| Average, | 1880-8 I to 1884-85 | 50,63,14 $=$ | 41,444 | 100 |
| " | 1885-86 to $1889-90$ | 61,19,76 | 43,624 | 120.9 |
| " | 1890-91 to 1894-95 | 68,47,04 | 44,192 | 135.2 |
| " | 1895-96 to $1899-1900$ | 69,89,38 | 43,995 | 138 |
| " | 1900-0x to 1904-05 | 83,61,72 | 55,745 | $16{ }^{1} \mathrm{I}$ |
| 1905-06 | . . . . | - 103,08,40 | 68,723 | $203 \cdot 6$ |
| 1906-07 | . . . . | - 108,30,76 | 72,205 | 213.9 |
| 1907-08 | - . . . | - 129,89,51 | 86,597 | 236.5 |
| 1908-09 | . . . | - 121,26,57 | 80,844 | 2395 |

The value of each of the seven classes in which the articles are grouped was, in thousands of rupees and of pounds sterling :

|  | 1904-05 |  | 1905.06 |  | 1206-07 |  | 1927-08 |  | 1908-09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | \& | $\boldsymbol{R}$ | $\mathcal{L}$ | K | $\mathcal{L}$ | $k$ | $\mathcal{L}$ | R | $\mathcal{L}$ |
| $\begin{aligned} & \text { I Animals living (mostly } \\ & \text { hones) } \end{aligned}$ | 59.28 | 395 | 49,41 | 329 | \$6.56 | 310 | $44,10=$ | 294 | 3n,56 $=$ | ${ }^{204}$ |

| Ill Metals and manufactures of metals | 17,13,50 | 11,423 | 17,85,67 | 11,905 | 22,64,19 | 15,025 | 30,14,30. | 20,095 | 29,96,46 | 19,976 |
| IV Chemicals, drugs, medicines, narcotics, and dyes | 2,S0,+1 | 1,869 | 2,97,27 | 1,9S2 | 3,10,86 | 2,072 | 3,58,55 | 2,302 | 3,27,16 | 2,181 |
| $v$ Oils.. . - | 3:49,31 | 2,329 | 2,4i.46 | 1,635 | 2,76,78 | 1,845 | 3,60,49 | 2,463 | 4,15,85 | 2,77 ${ }^{2}$ |
| VI Raw materials and unmanutactured articles | 4,22,41 | 2,816 | 4, 86,13 | 3,241 | 4,39, $\mathbf{S 2}^{2}$ | 3.932 | 5,00,40 | 3.335 | 4,78,64 | 3,191 |
| VIl Articles manufactured and partly manufacred | 55,34,27 | 36,595 | 59,56,55 | 30,912 | 59,21,02 | 39.474 | 6, ,88,95 | 46,503 | 50,25,26 | 39,50 |

Of these, the class Articles manufactured and partly manufactured contributes the largest sum. In $1906-07$ it formed nearly 55 per cent of the total and in $1907-08$ about 54 per cent. In 1908.09 , the percentage dropped to 48.8 per cent, and the aggregate in this class fell away from the record figure of R 69.89 crores ( $£ 46.59$ millions) to $\mathrm{R}_{59} 9^{\circ} \mathrm{I}_{5}$ crores ( $£ 39^{\circ} 5$ millions). The decline of $\mathrm{R}_{10} 0_{4}$ crores ( $£ 7$ I millions) represents $15^{\circ} 2$ per cent of the previous year's figure. The total decline in Cotton goods was little less, and amounted to $\mathrm{RrO}_{3} \mathrm{O}_{3}$ crores ( $£ 6.7$ millions) or 20.9 per cent. The total value fell from $\mathrm{R}_{4} 8.04$ crores ( $£_{3} 2^{\circ} \mathrm{O}_{3}$ millions) to $\mathrm{R}_{3} \mathrm{~S}$ or crores ( $£_{2} 5.34$ millions). Grey goods, with a value of $\mathrm{R}_{15}{ }^{\prime} 19$ crores ( $£_{10} \mathrm{I}_{3}$ millions), represent about 40 per cent of the coton goods; and the decline of $R_{4} .23$ crores ( $£_{2} .82$ millions) in this class is not only large but represents a contraction of nearly 22 per cent. White goods on the other hand fell to $\mathrm{R} 77^{\circ} 8$ crores ( $£ 52$ millions), the loss here being nearly as heavy as in the much larger grey class. Coloured goods,
 millions), while yarns, at $R_{3} 6_{5}$ crores ( $£^{2} 43$ millions), showed a decline of $R_{4} 44$ lakhs ( $£ 29,6=0$ ). Silk and woollen goods on the other hand each show an increase of about RIt lakhs ( $£ 93,600$ ), while Apparel shared the general decline and lost R16.57 l.kns ( $£ 110,000$ ) in va'ue. Other notable declines in this class were R27.58 lakhs ( $£ 184,000$ ) in glass and glassware and R25.22 lakhs ( $£ 168,000$ ) in carriages.

The third class, Metals and manufactures thereof, comes next in importance. Its total value fell from $\mathrm{R}_{3} \mathrm{O}_{14}$ crores ( $£ 20^{\circ} 09$ millions) to $\mathrm{R}_{29} 9^{\prime 9}$ crores ( $£ 19^{\circ} 97$ millions), the net drop being one of $\mathrm{R}_{77} .04$ lakhs ( $£ 118,900$ ) or 0.6 per cent; but owing to the heavier declines under some other heads, its share of the total rose from 23.2 per cent to 24.7 per cent. Railway plant, with a total of R $7^{\circ} 42$ crores ( $£ 4^{\circ} 95$ millions) contributed an increase of R21.91 lakhs ( $£ 146,000$ ) to the credit side of this class; and there were increases of $R_{3}{ }^{\circ} \circ 5$ lakhs ( $£ 20,400$ ) and R $65^{\circ} 79$ lakhs ( $£ 438,600$ ) under machinery and copper respectively. The total value of metals fell from $\mathrm{R}_{13}{ }^{1} 19$ crores ( $£ 8 \cdot 79$ millions) to $\mathrm{R}_{3}$ crores ( $£ 8.66$ milliors), the net loss being $\mathrm{R}_{1} 9$ lakhs ( $£ 130,000$ ), which resulted from a fall of $R 7077$ lakhs ( $£ 471,800$ ) or 7.3 per cent under $I_{\text {ron }}$ and steel, offset in part by a rise of $R 6_{5}{ }^{\circ} 79$ lakhs ( $£ 438,600$ ) or $3^{2}$ per cent in copper. Hardware and cutlery fell. by R 23.96 lakhs

In the second class, Articles of food and drink, which represents some 16 per cent of the total imports of merchandise, there was a continued increase amounting to $\mathrm{R}_{2} \cdot 39$ crores ( $£ 16$ millions) or 14 per cent, which
brought the total to R19.53 crores ( $£ 13.02$ millions). Of this increase 70 per cent, or R1 68 crores ( 112 millions), was contributed by sugar with a total of R1091 crores ( $£ 727$ millions), which is 18 per cent more than in 1907.c8. The imports of wheat rose to $\mathrm{R}_{39} 9^{\circ} 5^{8}$ lakhs ( $\mathfrak{C}^{26} 4,000$ ), rice not in the husk to R440; lakhs ( $£ 294,000$ ), provisions to R2.81 crores ( $£ 187$ millions)-the increase being $\mathrm{R}_{7}{ }^{\prime} 3^{2}$ lakhs ( $£ 49,000$ )-while spices fell, by R. $8 \cdot 77$ lakhs ( $£ 125,000$ ), to R 1.37 crores ( $£ 915,000$ ).

Chemicals, drugs, etc., showed a net decline of R3I' 6 lakhs ( $£ 211,000$ ), of which drugs and medicines account for RI8.I lakhs ( $£ 120,000$ ) and tobacco, chemicals, and mineral dyes about $R_{4}$ lakhs ( $£ 30,000$ ) each.

The growth in the imports of oils was maintained, the total rising by $R_{4} 6^{\prime} 36$ lakhs ( $£ 309,000$ ) to $R_{4} \cdot 16$ crores ( $£ £^{\prime} 77$ millions). This increase proceeded solely from the arrivals of mineral oils from the United States of America and Sumatra, which showed at $R_{3}{ }^{\prime} 91$ crores ( $£ 2^{\prime} 6$ millions) an advance of R71.57 lakhs ( $£ 477,000$ ) offset in part by a decline of R25.22 lakhs ( $£ 168,000$ ) or $5^{\circ}$ per cent in other oils.

In Raw materials at $\mathrm{R}_{4}{ }^{\prime} 79$ crores ( $£ 3^{\prime} 19$ millions) there was a net decline of R21.75 lakhs ( $£ 145,000$ ). This was due to contractions of R1795 lakhs ( $£ 119,600$ ) in precious stones and $R_{17} 92$ lakhs ( $£ 119,500$ ) in raw cotton, against which were increas's of $R_{22} \cdot 89$ lakhs ( $£ 152,600$ ) in coal, $R_{3} \cdot 7$ lakhs ( $£ 25,000$ ) in raw silk, and $R_{5} \cdot \mathrm{I}$ lakhs ( $£ 34,000$ ) in seeds.

## ARTICLES OF FOOD AND DRINK

The value in rupees during the last three years of the principal articles in this group have been-

Sugar repres nts 55.8 per cent of the total value of articles of food and drink imported into India, and it not only maintains but continuously strengthens its position as the second largest single article of importation in any class. The total value of the trade is now about $7^{\prime} 27$ millions sterling.

The average prices of 88 per cent beet f. o. b. Hamburg in the last four years have been as follows: 1905, its. $6 \frac{1}{2} d ., 1906,8 s .7 \frac{1}{2} d ., 1907,9 s .5 \frac{1}{\frac{3}{2}} d ., 19 c 8$, 10s.5d.

The world's sugar trade in tso8 was once more largely affected by Cuban conditiors. Two years ago the disturbing influences were political. In 1908, as in 1907, they were statistical and arose from an initial overestimate of the cane crop in Cuba. It had been supposed that the crop in question would suffice to render the United States largely independent of further supplies from the European beet market; and the price of 88 per cent sugar f. o. b. Hamburg was rather under ros. in January. The error in computation was suspected
when the shutting down of successive factories in February indicated that the Cuba cane crop was nearly exhausted, while the production of sugar still fell greatly short of what had been looked for. Prices for both descriptions of sugar at once began to rise, holders of Cubans became exacting, and America was driven to the Eurcpean beet markets. These responded; and by April when the Indian statistical year began, the price had gone above 11 s . The 27 th of April saw it at 115 . $11 \frac{1}{4} d$. with Java and Peruvian crystals ( 96 per cent polarization) at 12 s .6 d. to 12 s . 9 d . On the 7th May the Chancellor of the Exchequer announced a reduction of the sugar duties from 4 s . 2 d . to is. 10 d . as regards refined, with prorata reduction on raw. The reduction had not been generally expected; but it proluced little effect on the marker, and the liquidation of the May account brought about a substantial reaction, which was checked only when the demand from America and elsewhere was renewed. But when this had been satisfied largely from cane sources the market became easier and the weakness was intensified by cautious sales in anticipation of the arrival of considerable Russian supplies in Sepiember. The signatories of the Brussels Sugar Convention (which in February was extended for a further period of five years) had sanctioned the export by Russia of 200,000 tons annually to Convention countries, and this concession was to come into force in September. Prices were further depressed by the early and heavy arrivals of Java sugars in the United States markets; and at the end of August the quotation for 88 per cent beet was down at 9s. $3 \frac{3}{4} d$. The arrivals of Russian in September were less than had been expected, but by that month the new beet crop was in sight. and it became available in early October at $9 s .6 d$. Since that time prices have been fairly steady at or about ios.

In Calcutta the price was Rio-14 (14s. 6d.) per cwt at the beginning of April, with Bombay practically at the same parity in respect of European and Mauritius supplies. May saw R1I-4 ( 15 s .) in Calcutta and RII (14s.8d.) in Bombay for beet, while the highest for Mauritius (i.e., R10-12 or 14 s. 4 d.) had been recorded in Bombay in April. After this, the Indian market conformed approximately to the movemerts of the world's demand; and prices at end of March closed at Rio-7 (i3s. ind.) Calcutta, R10-10 (14s. 2d.) Bumbay, and Rio-3 (13s. 7 d., for Mauritius No. i Bombay.

The arrivals of beet and of cane sugar in each of the last five years are shown in the following statement (in cwts). In earlier reports it has been the practice to accept the country of shipment as the country of origin. It is now for the first time possible to assign shifments to the countrits in which the sugar was produced. This brings out some $r$ markatle facts, as for instance that in 1906-07-when Germany was, under the old system, statistically shown as having made larger shipments to India than had come from Austria-Hungary-the latter did in reality retain her first place as purveyor of beet sugar.

Having regard to the facts that India is probably the largest producer of sugar in the world, that her crop is equivalent to about $5,000,000$ tons of potential sugar, that her population approaches $300,000,000$, and that sugar as an article of diet is singularly suited to the populace of a warm country, the rapid, continuous, and enormous expansion in this import trade is the most striking fact in recent Indian commerce It is therefore interesting to subject the figures to some analysis. The following statement shows the yearly progress in each of the two classes of sugar absolutely and in relation to the total :

There is an impression that the cultivation of sugar-cane in India is contracting seriously under the pressure of these external supplies. It cannot be said that the available statistics prove this to be true. For instance, the acreage of the current year's crop is estimated at $2,184,000$ acres against $2,192.700$ acres the average of the last five years, while the area in 1907.08 was estimated at $2,639,200$ acres. But the crop is often grown in small patches which defy estimate allogether; and it is to be remembered that the great mass of the sugar cane of India is not converted into crystalline sugar but is consumed in the form of crude sugar or gur. This is more nutritious than refined sugar and a demand for it will certainly persist. It is therefore not accurately known to what extent the competition of foreign sugar affects the indigenous industry, more particularly in the interior. At the ssame time, it is diffcult to imagine that importation of foreign sugar at th rate of 500,000 tons yearly (giving about 4 lbs per head of the population) ca be continued without affecting the internal industry as a whole. Efforts are being made to improve the methods of manufacture on a large and on a small scale ; but, so far as is known, the fundamental principle of the "central factory" so-called has never been adequately practised in India. The cane-when cane is crushed-is for the most part procured in comparatively small lots and often from considerable distances, with the result that it deteriorates before reaching the rolls. In all
other countries where cane sugar is produced on a competitive footing, the " central factory" is a factory situated in the centre of a tract of land reserved for sugar and its rotation crops only. All the cane is therefore as near the mill as possible, and the operations of cultivation and cutting are under close supervision. The immediate triumph of this system over all others is shown both by the history of Porto Rico and by the recent regeneration of the sugar industry in Formosa by the Japanese. And since so great a superiority exists, it seems improbable that India will ever be able to defend its markets against the foreigner unless she takes a leaf out of the foreigner's book and accepts as indispensable those principlss which elsewhere are regarded as absolute. This is the more necessary as the prospective large increase of Formosa supplies will probably supplant Java's surplus in the Japanese markets and divert the stream more strongly torards India.

Cane sugar represents some 40 per cent of the world's supply of sugar exter. nal to India; but, in spite of the existence of large internal supplies of cane sugar, its share in the import business of 1908.09 was no less than 8 i .8 per cent, while in $1907-08$ it was 92 per cent. The chief sources of cane sugar continue to be Java and Mauritius, while in respect of beet sugar Austria has uniformly retained the dominant place.

The imports of sugar of both kinds together expanded by a further $618,400 \mathrm{cwts}$ and by R161.77 laklis if $1,078,000$ ). The increases were thus 6.1 per cent in quantity and 18.4 per cent in value, marking a rise of 11.5 per cent in the specific value per unit.

The imports of cane sugar contracted by $53 \mathrm{I}, 582$ cwts or $5 \%$ per cent, while, in consequence of a rise of some $11 \% 4$ per cent in the specific value, the total value showed an improvement of $\mathrm{R}_{39} 9^{\circ} 73$ lakhs ( $£ 265,000$ ) or 4.9 per cent. The greater part of the contraction in quantity is traceable to the diminution in Java's shipments to India, although Mauritius also suffered.

In beet sugar the quantitative increase is an enormous one of about $1,150,030 \mathrm{cwts}$ (equal to 145 per cent on the figures of the previous year), while the increase in value is one of $\mathrm{R}_{122} .04$ lakhs $(6814,000)$ or 162 per cent, the enhancement in specific value being $7^{\circ} 1$ per cent.

In refined sugar Java, in spite of the large contraction in her total, still greatly exceeds any other source of supply. Her aggregate was $5 \cdot 355,309$ cwts as against $5,951,462 \mathrm{cwts}$ in 1907-08; and Mauritius, another cane country, came second with $2,466,936$ cwts against $2,600,097$ cwts in 1907-08. Austria, though taking the first place as a source of beet and though nearly trebling its shipments of the previous year, comes third in refined sugar with $1,878,262 \mathrm{cwts}$, while Germany's contribution was only 59.546 cwts.

Provisions-This term, as applied to foreign merchandise, covers a number of heads, and several of these are of a very comprehensive character, though representing small amounts. The total value is $\mathrm{R}_{2} 81 \cdot 3^{2}$ lakhs ( $£ 1,875,500$ ) as against $R_{274}$ lakhs ( $£ 1,826,700$ ) in $1907-08$. This represents 144 per cęnt of the value of all aricicles of food and drink imported, and shows an increase of R $7^{\prime} 3^{2}$ lakhs ( $£ 48,800$ ) or $2^{\prime} 7$ per cent. Dried fruits consist mainly of almonds and dates, but comprise many other fruits imported, in small quantiies. The total in this class is $R 8_{3} \cdot 4$ lakhs ( $£ 556,000$ ) as against R $84^{\circ} 9$ lakhs ' $£ 566,000$ ) in 1907-08. The largest single item is that o dates, which has receded in total value from $\mathrm{R}_{j} 0^{\circ} 5$ lakhs ( $£ 336,700$ ) to $\mathrm{R}_{4} 6 \cdot 3$ lakhs ( $£ 308,000$ ), and in quantity from $849,95^{2}$ cwts to $817,662 \mathrm{cwls}$. This marks
a decline of 8.4 per cent in total value and 3.8 per cent in quantity, the differ-- ence indicating a fall of 4.7 per cent in the specific value. The trade in salted fish, which had advanced to $R 27: 8$ lakhs ( $£ 181,200$ ) in 1907.08 , progressed to $\mathrm{R}_{2} 7^{\prime} 59$ lakhs ( $£ 183,900$ ) in the year under review; and the continuous development in the importation of biscuits was maintained with a rise from R25'02 lakhs ( $£ 166,800$ ) to R 28.08 lakhs ( $£ 187,200$ ). Other important items which show progressive trade are canned provisions and farinaceous foods, each of which exceeds $\mathrm{R}_{32}$ lakhs ( $£ 213,000$ ), and preserved milk R22'72 lakhs ( $£ 551,400$ ). The comprehensive category of Provisions "other sorts", which had slightly risen in 1907.08 from $R_{32} .26$ lakhs ( $£ 215,000$ ) to $\mathrm{R}_{33} 3$ lakhs ( $£ 222,000$ ), receded again to $\mathrm{R}_{3} \mathrm{I}$ laklis ( $£ 207,000$ ), the further drop being one of $6 \cdot 7$ per cent.

Liquors are statistically distinguished as malt-liquors, spirits, and wines. In all three classes there was for some years a tendency to decline in quantity, in value, and in average value per unit. The following statement summarises the trade of the last three years and shows that the decline has been partly checked:

|  |  | 1906-07 |  |  | 1907-08 |  |  | 1908-09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Gals | $R$ | 6 | Gals | R | 6 | Gals | R | 6 |
| Malt-liquors | - 4,92\% ${ }^{\text {, }} 13$ | 60,58,336= | 403,889 | 4,889,171 | $61,38,973=$ | 409,265 | 4,307,153 | 58,50,910=0 | 390,06i |
| Spirits | - $1_{4} 888,361$ | 99,69,497 | 657,966 | 1,660,292 | 1,10,44,021 | 736,268 | 1,681,887 | 1,12,68,228 | 751,215 |
| Wines | - 329,342 | 26,39,828 | 175,98S | 347,051 | 28,66,124 | 191,075 | 337,724 | 27,30,701 | 182,047 |

The total value, R $198^{\circ} 5$ lakhs ( $£ 1,323,300$ ), represents 10.2 per cent of the imports of articles of food and drink, and is less by $R 2$ lakhs ( $£ 13,300$ ) than in 1907-08.

In Malt-liquors the decline is one of $11^{\circ} 9$ per cent in quantity and 4.7 per cent in value, the difference marking a recovery of 8 per cent in the specific value. From the United Kingdom came $89^{\circ} 2$ per cent of the whole as against $91^{\circ} 4$ per cent in $190 \%$; while the share of Germany increased from 7.7 to 9.7 per cent with an increase of 106 per cent in her total quantity, and other foreign countries supplied $I^{\prime}$ I per cent in place of 9 per cent.

These import figures do not represent the consumption of malt-liquors in India, seeing that in 1908 Indian breweries produced 5,185,619 gallons against $5,610,121$ gallons in 1907 . This marks a decline of 424,500 gallons in Indian production and brings the total decline in the last five years to $1,034,142$ gallons or 166 per cent.

The factor of indigenous production is even more dominant in respect of spirits. The following statement shows the totals in gallons of all spirits including liqueurs and methylated and perfumed spirits, imported from the several countries in the last three years; and below the totals, are noted the quantities of spirit issued from Indian distilleries :

The enhancement of the import duty under the Indian Tariff (Amendment Act) of 1906 has not had the effect of restricting the imports. The increases of

21,595 gallons in quantity and of $R 2.24$ lakhs ( $£ 15,000$ ) in value are equivalent to $: 3$ per cent and 2 per cent respectively, and the difference marks an advance of 8 per cent in the specific value exclusive of duty.

The potable spirits of "other sorts" from other countries are chiefly arrack from Ceylon, rum from the Straits and Java, and gin from Holland.

The quantities of the principal descriptions of potable spirits imported were (in gallons) :

| ) |  | 1906-07 | 1907-08 | 1908-09 |
| :---: | :---: | :---: | :---: | :---: |
| Whisky | - | 592,514 | 635,834 | 681,401 |
| Brandy | $\cdots \quad$. | 333,957 | 399,603 | 376477 |
| Gin - | $\cdot \quad$. | 68,575 | 77,139 | 84,160 |
| - Rum | . - | 65,579 | 71,433 | 64,144 |
| Other sorts | - . | 143,125 | 147,496 | 174,731 |
|  | Total | 1,203,750 | 1,331,505 | 1,380,913 |

In imports of , as in many other articles, there appears to be an alternation of increase and decrease. The net effect of these movements since $1903^{-0} 4$ has been a rise of 1.4 per cent in quanity but a decline of 6 per cent in value and a drop of $1^{\prime} 7$ per cent in the average value per gallon. In the year under review the decline has been one of 2.7 per cent in quartity and 4.7 per cent in value, marking a further loss of 21 per cent in average value, which is now R 8.085 ( $10 \% 88$ s.) instead of R 8.258 (iroirs.) per gallon. The total quantity and value were 337.724 gallons and R273 lakhs ( $£ 182,000$ ) as against 347,051 gallons and $\mathrm{R}_{2} 8.6$ lakhs ( $£ 191,000$ ) in 1907-08.

The growth in the Imports of spices is maintained by some $1 \cdot 15$ per cent in quantity; but there has been a decline of 12 per cent in the total value, which now stands at $\mathrm{R}_{1374}$ lakhs ( $£ 916,000$ ). Betelnuts wih a quantity of 48,900 tons as against 50,687 tons in 1907.08, showed a value of R $80 \cdot 78$ lakhs ( $£ 538,500$ ), which is less by 24 per cent than in $1907-08$. Of this article 80 per cent came from the Straits Settlements, 62.8 per cent being landed in Calcutta and 24.5 per cent in Madras. Cloves come principally from Zanzibar. The total trade had increased in 1907.08 by 1,197 tons to 3,457 tuns, but in the year under review declinea to 3,236 tons with a value of R24.91 lakhs ( $£ 166,100$ ). These represented a decline of 6.4 per cent in quantity and 6.9 per cent in value, attended by a diminution of 6 per cent in specific value.

Grain and pulse-This trade temporarily assumed important dimensions last year in consequence of the scarcity prevailing in parts of the country. A comparison of the figures (in tons) of the trade for the last two years is of some interest :

The total imports increased from 29,225 tons valued at $\mathrm{R}_{3} 6 \cdot 72$ lakhs ( $£ 244,800$ ) to 95,400 tons valued at $R_{123} \cdot 36$ lakhs ( $£ 822,400$ ). The most
noticeable increases are under rice not in the husk from 3,478 tons and $R_{4}{ }^{\prime} g^{8}$ lakhs ( $£ 33,200$ ) to 30,987 tons and $\mathrm{R}_{44} \cdot 05$ lakhs ( $(6293,700$ ). Wheat and wheat flour from 15,22 I tons and R20'46 lakhs ( $£ 136,400$ ) to 35,599 tons and $\mathrm{R}_{49}{ }^{\circ} 75$ lakhs ( $£ 331,700$ ), and pulse from $.7,878$ tons and R 8.52 lakhs ( $£ 55,800$ ) to 20,827 tons and $\mathrm{R}_{21} \cdot 28$ lakhs ( $£ 142,000$ ).

Rice was imported chiefly from the Straits Settlements, the receipts from that place amounting to 30,573 tons as compared with 3,176 tons in the previous year. Imports of wheat from Australia rose by 16,678 tons to 19,697 tons and those from Asiatic Turkey, at 8,987 tons, showed an increase of 694 tons. Imports of pulse also showed noticeable increase, $\sqrt{3}, 463$ tons being received from Hongkong and $t, 541$ tons from the Straits Settlements. The following statement shows the imports of the principal kinds of grain and pulse into Bengal and Bombay during the last two years, in tons:

Salt represents 4.3 per cent of the value of articles of food and drink imported. The quantity and value have been as follows in the last five years :

|  | 1904-05 | 1905-05 | 1906.07 | 1907.08 | 1908-09 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Quantity . .tons | 486,980 | $4^{6+, 531}$ | .167,949 | 558,68+ | 588,887 |
| Value, unit, $\mathrm{R}_{1,000}$ | 71,13 | 65,72 | 66,7? | $80,2 \mathrm{t}$ | $8_{4,07}$ |
| $=£ 1,000$. | 4,74 | 4,38 | 4.45 | 5,35 | 5,6o |

Thus for two successive years there have been increases which have not only recouped the declines recorded in the previous years, under the infuence of the boycott movement, but have established a net advance of $20^{\circ} 9$ per cent in quantity and 18.2 per cent in value over the figures of $1904-05$. In 190S-09 the increase in quantity was one of 30,203 tons or 5.4 per cent and the increase in value amounted to $\mathrm{R}_{3} \cdot 86$ lakhs ( $\oint_{2} 5,700$ ) or $4 \cdot 8$ per cent.

The duty on salt, which for provinces other than Burma was Rz-8 (3s. 4 d.) per maund up to 1902-03 (Burma having always enjoyed the rate of R ( 1 s .4 d .) now universal in India), was in that year reduced to $\mathrm{R}_{2}(2 \mathrm{~s} .8 \mathrm{~d}$.) and consumption grew by 3 per cent to $1,346,830$ tons. In 1903-04, alhough the duy remained unchanged, the consumption grew by 2.6 per cent, and in 1934.05 it advanced by 4 per cent on reduction of the duty to $\mathrm{R}_{1}-8$ (2s.). In ${ }^{1} 905-06$ no further reduction was made, and consumption receded by 1.4 per cent. In $1906-07$ the present rate of Ri ( $1 s .4 d$.) per maund was adopted, and consumption improved by 5 per cent. This was continued with a further rise of 4 per cent in 1907.08 , and it is estimated that in 1908.09 the consumption has advanced by 7.8 per cent to $1,668,14$ tons.

In the beginning of the statistical year the depressed condition of agriculture greatiy restricted the consumption but the favourable rains in September brought about a rapid recovery in demand. The price of Liverpool salt ex-warehouse in Calcutta stood at $\mathrm{R}_{50}\left(£_{3} 6 \mathrm{~s} .8 \mathrm{~d}.\right)$ per 100 maunds ( $i . e$, per $8,229 \mathrm{lbs}$ ) at the end of the financial year $1907-08$, but hopes were entertained of a further reduction of duty and importation had for this reason been deferred. The marke was therefore bare, and when the Budget statement was found to contain no proposals for a reduction of duty, holders of local stocks suc̣ceeded in jumping
the price for a short time to R66 ( $£ 4$ ss.) From this point, however, it rapidly subsided to $\mathrm{R}_{54}$ ( $\oint_{3} 12 \mathrm{~s}$.) in May and after a rally to R56 ( $\oint_{3} 14 \mathrm{~s} .8 \mathrm{~d}$.) in June dropped to $\mathrm{F}_{49}$ ( $£_{3} 5 s .4$ id), at which rate it remained during September, October, and November. December showed a small recovery of R2 (2s. 8d.) but this was lost in January and during February and March the price stood at $\mathrm{R}_{47}$
 as compared with $\mathrm{R}_{55}-6-8$ ( $£ 313 \mathrm{~s}$. 11 d .) in the previous year.

Tea-The extraordinary increase in the imports of tea, which in 1907.08 brought the total to $3,910,714 \mathrm{lbs}$ with a value of $\mathrm{R}_{22}{ }^{\prime} 73$ lakhs ( $£ 151,500$ ), was relaxed in 1908-09; but there was a continued growth of 13.7 per cent in quantity and the figures rose to $4,447,506 \mathrm{lbs}$, but the value declined to R21.56 lakhs ( $£ 143,700$ ). The fall in total value amounted to only $5^{\circ} 1$ per cent ; so that there was a fall of nearly 17 per cent in the average value per unit, which was 7 annas 9 pies ( $7 \frac{3}{3} d$ ) per lb . Of the additional $536,800 \mathrm{lbs}$ received, $39 \mathrm{~d}, 000 \mathrm{lbs}$ came from Ceylon, this representing an increase of 27 '5 per cent in her contribution, and bringing her shipments to a total of $1,812,827 \mathrm{lbs}$. This is in keep. ing with the general increase in Ceylon's exports during the year under review; and the fall in average value from 75 to 6.9 annas (or pence) accords with her general experience in prices. The imports of China teas (black and green) showed a net advance of $308,500 \mathrm{lbs}$, or 20.3 per cent, bringing the total to $1,829,659 \mathrm{lbs}$. Of this $1,495,585 \mathrm{lbs}$. were green tea, which showed an expansion of about 34 per cent; while black tea declined by 17.4 per cent to 334,074 lbs. Estimates of re-exportation must be taken with some reserve; for it is known that, more especially on the land routes, foreign tea is not always accurately distinguished from Indian tea. But if the figures be accepted as correct, $833,996 \mathrm{lbs}$ were re-exported by sea and $423,920 \mathrm{lbs}$ by land, making a total of $1,257,916 \mathrm{lbs}$ of which 90 per cent was black tea. On the average of the last five years, it would appear that some $4,939,000 \mathrm{lbs}$ of foreign tea are yearly retained for consumption in India.

Fruits and vegetables-The total value of this trade is Rio95 lakhs ( $£ 73,000$ ) as against $R_{15}$ lakhs ( $£ 100,000$ ) in 1907-08. Cocoanuts declined from $R_{5} \cdot 12$ lakns ( $£ 34,000$ ) to $R_{4} \cdot 83$ lakhs ( $\left(£_{32}, 000\right)$; while Copra-which is strictly a raw material for the oil industry and from which butter substitutes are now being made in Southern India-dropped to $\mathrm{R} \cdot 59$ lakhs ( $£ 10,600$ ), from $\mathrm{R}_{2} \cdot 27$ lakhs ( $£ 15,000$ ). Other sorts fell from R7'6 lakhs ( $£ 50,600$ ) to $R_{4}{ }^{\prime 5} 53$ lakhs ( $£ 30,200$ ).

## METALS AND MANUFACTURES OF METALS

Hardware and cutlery form 98 per cent of the total value of imports of metals and manufactures of metals. From the following statement it will appear that their value has declined by $\mathrm{R}_{2} 3^{\prime} 96$ lakhs $(£ 159,700)$ or 76 per cent :

|  | 1;06-07 |  | :907-08 |  | 1908-09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $R$ | $E$ | R | 6 | R | 6 |
| Cutlery - | 14, $88,04 \mathrm{Cm}$ | 93,869 | 18,29,627= | 121,975 | 17,51,714= | 116,78t |
| Agricuitural implements . | 10,55,914 | 70,3)4 | 13,27,478 | 88,498 | 9,96,489 | 66,433 |
| Other implements and tools | 16,56,8,5 | 110,455 | 19,53,551 | 130,210 | 19,97,750 | 133,183 |
| Enamelled ironware . | :8,78, ¢9 9 | $125,26.4$ | 24,48,803 | 163,254 | 18,00,371 | 120,025 |
| Sewisg machines . | 11,79,722 | 78,643 | 11,43,342 | 76,223 | 12,20,501 | 81,367 |
| Unspecified hardware | 1,93,55,598 | 1,290,373 | 2,20,52,163 | 1,530,144 | 2,14,91,357 | 1,432,757 |
| Total | 2,05,35,058 | 1,700,003 | 3,16,54,563 | 2,110,304 | 2,12,58,182 | 1,950,546 |

The heading is so composite and comprises articles of so heteroyeneous a nature that it is impossible to show briefly in what measure any general variation in the specific value of metal articles has contributed to the fluctuation in the statistics. Enamelled ironware is an item of peculiar interest, and its steady growth in recent years has indicated the extent to which the high prices of copper and brass had compelled the common people to replace their distinctive domestic utensils of those metals with cheap Austrian and German ware. It is impossible therefore to dissociate the reaction which appears in the figures given above, which mark a decline of R6.48 lakhs ( $£ 43,200$ ) or $26^{\circ} 5$ per cent, from the large increase ( 72.44 per cent) in the quantity of wrought copper imported. Austria has now recovered the premier place in this trade, which she ceded to Germany in 1905-06, and has done 63.2 per cent of the whole business instead of $29^{\circ} 7$ per cent, while Germany has taken second place and now does 23.6 per cent in place of 61.5 per cent in 1907.08 . The item of second importance is Implements and tools other than agricultural, and it alone shows an advance which, however, amounts only to about $2 \frac{1}{2}$ per cent. In Cutlery there has been a decline of $4^{\circ} 2$ per cent and in Agricultural implements there has been a set back of 24.9 per cent, which however still leaves the figures well in advance of those for $1905-06$ and little short of those for $1906-07$. The extensive failure of crops must have been the main cause of the reaction; but it may have been promoted by the disappointment felt in some places as a result of incautious importation and purchase of implements not quite suitable to Indian conditions. The value of unspecified hardware contracted by R14.61 lakhs ( $£ 97,400$ ) or 6.4 per cent; and this head covers lampware which decreased by R 2.48 lakhs ( $£ 16,500$ ) or 9.2 per cent. This contraction is due to hard times. The trade in lampware has risen in the last four years from Ri7.52 lakhs ( $£ 1,6,800$ ) to R24.41 lakhs ( $£ 162,700$ ), and everything points to its further development. The superiority, cheapness, and wide distribution of kerosene have led to an almost general abandonment of vegetable illuminants among the people; and it seems probable that a considerable trade might now be created in cooking lamps costing about R2 ( $2 s .8 d$ ). Much of the cooking by the common people in India is done with dried cow dung as fuel. This leads to the destruction of manure which becomes increasingly important as soil exhaustion progresses. Tests conductedin 1908 show that, if the manurial value of the cowdung be taken into consideration, its cost as fuel is such that the number of British thermal units practically obtainable for an expenditure of one rupee is 100,174 against $148,750 \mathrm{~B}$. T. U. for an equal expenditure on kerosene burned in such a lamp as is suggested.

The share of the United Kingdom in Hardware and cutlery trade, while showing centesinally a rise from 62.8 per cent to 66.6 per cent declined absolutely by $\mathrm{R}_{3} \cdot 65$ lalhs ( $£ 24,300$ ) or $\mathrm{I} \cdot 8$ per cent to Ri95*or lakhs ( $6,1,300,000$ ). Germany's share declined relatively from 18.4 per cent to 12.9 per cent and absolutely by R20.6 lakhs ( 6 I 37,000 ) or $35^{\circ} 4$ per cent to $\mathrm{R}_{3} 3.65$ lakhs ( $£^{251}, 000$ ). Although greater accuracy has been attained in ascribing goods to their countries of origin, it is probable that part of the shipments from Belgium really emanated from Germany. Tle two countries conjointly showed a share of 19 per cent as compared with 23.8 per cent in 1907008 and their to:al
 Hungary, on the other hand, increased her share by 15.4 per cent or R2.5 lakhs ( $£ 16,700$ ) to $\mathrm{R}_{1} 8.88$ lakhs ( $£ 125,800$ ) and now does 6.4 per cent of the tota!.

Metals represent 10.7 per cent of the total value of imported merchandise. In 1907.08 the quantity had risen to 648,046 tons and the value to $\mathrm{R}_{1} 3^{\prime} 19$ crores ( $63,793,000$ ). In the yea: now under review the quantity advanced to $652,2 S_{f}$ tons (i.e., by 6 per cent), while the total value receded to $\mathrm{R}_{13}$ crores ( $£ 8,660,000$ ) or by i'5 per cent. The loss of 2 per cent in the specific value as hare indicated is surprisingly smal! considering the decline that has taken place in metal prices during the past 12 months, but it is one of the peculiarities of statistics that a decline in prices sometimes tends positively to sustain the average value of a whole group of articles by inducing an extended importation of a relatively costly item. Thus although copper fell in price more than any other metal, its depreciation led to an increase of some 60 per cent in its importation; and the contribution of an additional R66 lakhs ( $£ 440,000$ ) in a commodity worth about $R_{1,100}(£ 73)$ per ton produces a noticeable effect under a heading where the average value for all other items is about $R 200(£ 13)$ per ton. It may be recorded here that Cleveland iron which stood at 6is.6d. in June 1907 and by February 1903 had declined to 48 s is now about 478 . Copper which stood at $£ 106$ in April 1907 was at the end of the statistical year under reports carcely saleable at $£ 54 \cdot 15-6$.

Copper represented about 2 t per cent of the total value of imports of metal in 1908 -og against 156 per cent in $1907-08,138$ per cent in $1906.07,159$ per cent in $1905-05$, and 22.6 per cent in 1904.05 . It is necessary to go back for some years to obtain an index of the importation under normal conditions, for between 1905-05 and 1907-08 the trade was deranged by successive crises occasioned firstly by a phenomenal rise of price and secondly by an equally extraordinary collapse. The first marked rise occurred in the later half of 1904 when the price moved suddenly to $£ 685 \mathrm{~s}$. By the end of 1905 it had reached $£ 80158$, and in the spring of 1907 it touched $£^{6111}$. By the autumn of that year it was down at $£ 55$; and from that time on it varied within a range of $£ 10$ till, at the close of the Indian statistical year, it stood at $£ 56 \mathrm{I} 8 \mathrm{~s}$. 9d. Some attempt was made by the great American producers to sirengthen prices by restriction of output; but the heavy accumulations prevented success, and the policy was abandoned. The statistics of production indicate that many mines not perfectly situate 1 or equipped find present rates unprofitable and are closed; but the total production of 1908 is the largest on record, being estimated at 748,625 tons or 34,7 co tons ( 4.8 per cent) more than in 1907 . It is considered that, in the presence of stocks estimated at 130,000 tons and in view of the fact that the best mines can produce at a cost of from $£ 30$ to $£ 40$, prices are unlikely to go above $£ 60$ for some time. It may be considered therefore that approximately normal conditions have been reached, and it is interesting to note how the lndian demand has responded to such conditions. There has been an increase of 57.4 per cent in the quantity of copperimported and one of 3 I 9 per cent in the value, the difference between these rates indicating a fall of ${ }^{16} 3$ per cent in the average value per unit. Wrought copper represents $89^{\circ} 6$ per cent of the total quanlity of copper imported, and accounted for the entire growth in the trade. It increased by 72.4 per cent in quantity and by 44.1 per cent in value, the fall in specific value here agreeing nearly with that for all copper. The actual figures are $444.98_{4}$ cwts with a value of $\mathrm{R}_{24} 6^{\circ} 23$ lakhs ( $£ 1,641,500$ ) as compared with $258,064 \mathrm{cwts}$ and $\mathrm{R}_{1} 70 \cdot 06$ lakhs ( $£ 1,133,700$ ) in 1907-08. Unwrought copper decilined by 11.1 per cent in quantity and by $29^{\circ}$ per cent in value, the average value having fallen from
 parts of India but the production in 1908 amounted to only 11 tons.

Brass, like copper, is used for household utensils in India, to a less but considerable extent. The high prices of copper led to an increased resort to brass in the years $1906-07$ and 1907.08 ; and the imports grew fro 1110,783 cwis to 21,736 crits. In $1908-09$ the progress was continued, though not at the same rate as was recorded in the case of copper. Imports grew to 24,584 cwts with a value of R13.38 lakhs ( $£ 89,200$ ), which marks an advance of $\mathrm{I}_{3} \mathbf{3}^{3}$ per cent in quantity and 3.2 per cent in value. From these rates it appears that the specific value of the imports declined by 8.9 per cent.

Iron and steel-The year under review has been dull and unprofitable for makers of iron tand steel. The fall in prices, though general, has been more marked in manufactures than in materials and labour, and more marked in steel than in iron. As an illustration of the depression of the trade, ship-building may be instanced. The average annual addition to the tomnage of vessels (excliding warships) in the United Kingdom in the ten years 1898 to 1907 was $1,466,397$ tons gross, and in the last three years of that period the average had grown to $1,686,467$ tons gross. But in 1908 the tonnage dropped to 929,669 , which is the lowest figure since $\mathbf{1 8 9 3}$; and the conraction of 756,798 tons is almost equivalent to 45 per cent.

Under conditions such as these, efforts were made to keep production within bounds, the example being set-more particularly as regards sterl-by America, which is reported to have found this policy less costly than that of dumping surplus products on a market barely able to absorb its own output. The world's production of pig iron in 1908 has been estimated at 54 million ton as against 60 million tons in 1907. The extent of contraction in the three principal countries may be seen from the following statement, (in tons) -

| United States | . . |  | $\begin{gathered} 1906 \\ 25,307,200 \end{gathered}$ | $\begin{gathered} 1907 \\ 25,78 \mathrm{r}, 400 \end{gathered}$ | $\begin{gathered} 1978 \\ 15,936,000 \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Germany | - . |  | 12,473,000 | 13,045,800 | 11,813,500 |
| United Kingdom | - |  | 10,100,000 | 9,923,800 | 9,300,000 |
|  | Total |  | 47,880,200 | 48,751,000 | 37,049,500 |

But it is worthy of note that one leading firm has estimated that pig iron stocks, which were reduced to 89,203 tons in 1907 and in July 1908 to 47,949 tons, have in the latter part of that year increased to about 130,000 tons.

The price of Cleveland warrants in the United Kingdom averaged 50s. 5 d . in 1908 against $55 s .7 d$. in 1907. In April 1908 the price was at $51 s .9 d$. and after a rise to $5^{25}$. in September, it subsided gradually to 47 s . $3^{d}$. in March , 909.

The price of Iron bars (Swedish rolled) in Calcutta averaged R8-6.0 (118.2d.) per cwt against R8-6.6 (irs. 21/d.) in 1907, the rates having varied much less than in the previous year. They opened at $\mathrm{R}_{9}$ (128.) and diropped at once to R8-4-0 ( 118. ); and, except for a rally to R8-12-0 ( 118.8 d. ) in August they remained almost constant at that figure till the close of the statistical year.

The following statement shows the total quantities and values of the imports of iron and steel distinctly and conjointly in each of the last five years, (ooo's omitted)-

|  | Iron |  |  | Steel |  |  |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | R | 6 | tons | R | $\underline{1}$ | tons | R | 6 |
| 1904.05 | 256 | 3,78,51 | $=2,524$ | 212 | 2.34.03 | $=1,56$. | 468 | 6,12,54 | $=4,084$ |
| $1905 \cdot 06$ | 236 | 3,40,77 | 2,272 | 285 | 3,23,62 | 2,15 | 521 | 6,64,39 | 4,429 |
| 1906.07 | 261 | 4,31,83 | 2,879 | 262 | 3,24,99 | 2,167 | 523 | 7,56,82 | 5,046 |
| 1907.08 | 276 | 4,96,69 | 3.311 | 341 | 4,78,47 | 3,190 | 6.7 | 9.75.16 | 6,501 |
| 1908-09 | 262 | 4,75,94 | 3,173 | 349 | 4,28,45 | 2,856 | 6 | 9,04,39 | 6,029 |

The distinction between iron and steel in certain lines of goods becomes increasingly difficult and has the disadvantage of obscuring the statistics regarding the trade as a whole in particular articles made alternatively of either substance. But the particulars as stated above show iron to have exceeded steel by $\mathrm{R}_{47} 49$ lakhs ( $£ 316,600$ ), thougt its quantity was smaller by 87,000 tons. Its imports declined by 13,911 tons in quantity ( $5^{\circ} 1$ per cent) and by R20'75 lakhs ( $£ 138,300$ ) in value ( $4^{\circ} 2$ per cent), while steel rose in quantity by 7,975 tons ( 2.3 per cent) but fell in value by $\mathrm{R}_{5} \mathrm{ol}$ lakhs ( $(6333.300$ ) equal to 10.4 per cent. The share of iron in the total values of the last three years has been 57 per cent, 51 per cent, and 53 per cent.

In a class of goods so composite and comprenensive, it is not permissible to postulate constancy in the quantitative relations of one description to another or uniformity in the price movenents of the various descriptions. For this reason there would be little real use in bringing out the variations in the average value per cort of total arrivals. There is, however, some interest in noting that, while the average value per cwt of ircn rose from Rg-0-2 ( 12 s . $\mathrm{o}_{0}^{\frac{1}{0} d \text {.) to Rg-1-6 }}$

From the statement below it will be seen that the share of the United Kingdom in the total quantity of the trade rose from 56.3 per cent to 56.5 per cent. She reduced her shipments from 347,334 to 345,381 tons. In iron the figures receded from 209,574 to 194,824 ton; but in steel there was an expansion from ${ }^{1} 37,760$ to 150,557 tons. Germany and Belgium on the other hand supplied 242,063 tons in all against $227^{\circ}, 290$ tons in 1907.08 , and while their iron shipments fell away from $55,73^{8}$ to 51,863 tons, those in steel developed from $171,55^{2}$ to 190,200 tons. It may be explained that Germany and Belgium are bracketed because of the facts that considerable quantities of Germany's products are shipped from Belgium and that it is not yet possible to assign exactly to each source such proportion of the trade as is derived from it. (Quantily in tons.)

Bars, of which three-fourths are steel, constitute the largest item; and of this Germany and Belgium between them do about 84 per cent. In this article there was an increase of 16,031 tons or 116 per cent. Galvanised sheets is the item of next importance; and, as it rel ites to a branch of manufacture which was singularly immune from distress and from price fluctuations in 1908, it is interesting to find that it shows a small advance of 102 tons. Most of this trade is done by the United Kingdom and emanates from a small and well organized group of
manufacturers; but Germany and Belgium, which two years ago contributed only 692 tons, have raised their total to 1,700 tons in 1907.08 and to 2,000 tons in 1908.09. Sheets and plates are mainly of steel and the development here is substantial, being one of 11,423 tons, But this is more than accounted for by the addition of 13,886 tons in the shipments from Germany and Belgium, the difference of 2,400 tons having come out of Britain's share. The value per cwt of sheets and plates imported ffom Germany and Belgium fell from R6-6.o ( $8 \mathrm{~s} .6 d$.) in $1907-08$ to $\mathrm{R}_{5}-13.9$ ( $7 \mathrm{~s} .9 \frac{3}{4} \mathrm{~d}$.) and the average value of British sheets fell from R8-15-9 (irs. $11 \frac{3}{4} d$.) to R8-0.3 (iOs. $8 \frac{1}{4}$ d.). In tinned plates the United Kingdom continues to have its own way; but the total shows a small shrinkage. Comparison of the rates of decline in quantity and in value points to a drop of 10.2 per cent in specific value. This is accounted for by the low cost of production attending the fall in prices of tin, coal, and pig-iron, and the offer of cheap steel bars from the Continent and America. Beams, etc., show an advance of 11,239 tons; and here the United Kingdom records an advance of 17,386 tons, contrasted with a decline of 6,168 tons in the purchases from Germany and Belgium. Pipes and tubes form another branch of trade in which Britain is supreme; and although other countries added some 1,260 tons to their small trade, British shipments also showed an advance of about 80 tons. The total sum was R 65.82 lakhs ( $£ 439,000$ ), of which the United Kingdom did $\mathrm{R}_{54}: 87$ lakhs ( $£_{3} 65,800$ ), Belgium R80,900 ( $£ 5,390$ ), and the United States R roo 0 lakhs ( $£ 67,000$ ). In angle, channel, etc,, the trade is more evenly divided between England and her chief competitors; and on the whole it must be admitted that the latter have pulled up on her in the last year. This holds the more true of Hoop inasmuch as the United Kingdom has lost about 2,350 tons, while the others have gained. Nails come mainly from Germany and Belgium ; and the trade continucs to grow without Britain's being able to secure even a proportional expansion in her shipments.

The year under review brought with it further developments of combination by the United States Steel Corporation and more recently there were strong rumours of an international combination among makers of steel rails for the purpose of maintaining prices and controlling markets.

Lead, like other metals used by the electrician, has shown extraordinary price developments in recent years; and its importation into India has refected the conditions thus creater. The price in London stood at $£ 19-12-6$ in the beginning of $1907-08$ and fell to $£_{13-15-0}$ in March 1908 . The reduced demand, together with increased arrivals, forced the price down to $£ 12-7.6$ in June; and although it recovered temporarily to $£\left(4 \cdot 7 \cdot 6\right.$ in November, it has since $^{1}$ that month dropped to $£_{1} 3^{-1} 5^{-0}$, at which quotation the statistical year closed. It is not surprising that the Indian demand should have responded to these conditions. The arrivels grew in $1907-08$ to 123,077 cwts with a value of $\mathrm{R}_{20^{\circ} 5}$ lakls ( $£ 137,000$ ); and in the year now under review they have increased to ${ }^{1} 38,287$ cwts with a value of $R 19{ }_{3} 6$ lakhs ( $£ 129,100$ ). We have thus to compare a quantitative increase of $\mathbf{1 2}^{\circ} 4$ per cent with a decrease of 5.5 per cent in total value, which contrast marks a fall of 16 per cent in specific value $-i$. e., from R16.10-6 ( $6128.2 \frac{1}{3} d$. ) to R14 ( $18 s .8 d$.) per cwt. The United Kingdom supplied lead for tea chests to the value of R 7.57 lakhs ( $£ 50.500$ ) as compared with R9.51 lakhs ( $£_{6} 63,400$ ) in $1907-08$; while imports of this class from foreign countries also showed a small decline at $R 84,400$ ( $£ 5,630$ ). There is thus a net decline of Rr94 lakhs ( $£ 13,000$ ) or 18.8 per cent in value and of $6,820 \mathrm{cwts}$ or

11 per cent in quantity. The average value of the British sheet fell from

The year was notable for the institution of a convention between leading producers of lead, with the effect that the output of the principal Australian, Spanish, German, and American concerns will in future be handled by two companies situated respectively in London and in Frankfort. The permanance of the combination is in doubt owing to dissatisfaclion felt by the German participants and to delay in bringing the outside interest into line.

Tin is associated with copper in the constitution of materials used in industries that were exceptionally active until the end of 1907; and, under the spur of that activity, it shared with copper in one of the most remarkable price movements on record. But, unlike copper, it has to some extent maintained the high level it had reached; and this in spite of increased supplies and a contracted demand, the latter most noticeable in America. There was a substantial addition to the world's visible stock of tin in 1908 ; and, whils the current prices show a marked drop from the $£ 215$ touched in 1906 and the $£ 200$ touched in 1907, prices have tanged from $£ 147$ in March 1908 to $£ 124$ in July, $£ 139$
 after which it has been weaker at $£_{132}$ in December, $£ 124-15^{-0}$ in February and $£_{130}$ in March. About half of the world's production of tin is derived from the Malay Archipelago; and it is from this source that India draws most of her supply. Her demand in 1908.09 expanded from 32,171 cwts with a value of $R_{43} 4^{8}$ lakhs ( $£ 290,000$ ) to $37,14^{2} \mathrm{cw}$ ch with a diminished value of $\mathrm{R}_{42} 4^{6}$ lakhs ( $£ 283,000$ ). The quantity thus increased by 154 per cent, while the total value decreased by 2.3 per cent from which discrepancy a decline of 154 per cent in the specific value may be deduced. Unwrought tin fiom the Straits was also imported to the extent of $32,8+^{2}$ cwts with a value of R 37774 lakhs ( $£ 251,60$ ) , which shows a substantial quantitative advance on the $28,819 \mathrm{cwts}$ of $1907 \cdot 08$, but, again, a shrinkage of value as compared with the $\mathrm{R}_{3} 8 \cdot 72$ lakhs ( $\boldsymbol{t}^{258} 8,100$ ) of the previous year.

Machinery represents 22.1 per cent of the totai value of imported metals and manufactures thereof and 5.45 per cent of the imports of all merchandise. India has been adding rapidly to its mechanical equipment in recent years; and it is satisfactory to find that the period of depression has not so far led to the arrest of its enterprise in this respect, although progress is being retarded. Its expenditure on machinery in the last five years has been as follows:-1904-05, R $402 \cdot 7$ lakhs ( $£ 2,685,000$ ) ; 1905.06, R 492.5 lakhs ( $£ 3,283,000$ ); 1906-07, R579 lakhi ( $£ 3,860,000$ ); 1907-08, R65853 lakhs ( $£ 4,390,200$ ); 1908-09, R661'59 lakhs ( $£ 4,410,600$ ). The increase in the year under review was therefore one of $\mathrm{R}_{3} \cdot 06$ lakhs ( $£ 20,4 \mathrm{Co}$ ) or $0^{\circ} 5 \mathrm{per}$ cent. Textile machinery continues to hold the first place, and represents 43.5 per cent of the whole. It advanced from $\mathrm{R}_{2} 6{ }_{3} \cdot 29$ lakhs ( $£ 1,755,000$ ) to $\mathrm{R}_{2} 876$ lakhs ( $£ 1,917,000$ ), the increase being $R_{24} 3^{1}$ lakhs ( $£ 162,000$ ) or $9^{\prime 2}$ per cent. Of this, Bengal took the largest share, namely, $\mathrm{RI}_{3} \mathbf{~}^{\circ} 25$ lakhs ( $£ 928,400$ ) in place of Rro8.05 lakhs ( $£ 720,300$ ) in 1907-08, the gain here being R31.21 lakhs ( $£ 208,1 \mathrm{co}$ ) or 28.9 per cent. This machinery is mainly devoted to the production of iute goods. The cotton industry in Calcutia finds it hard to compete with centres that possess a larger choice of staples and where the standard of and tie demand for labour are not determined by the requirements of jute factories.

Bombay, though enjoying these advantages, now takes second place, with textile machinery to the value of $\mathrm{R}_{13} 5_{3}^{\circ} 33$ lakhs ( $£ 902,200$ ) agains $\mathrm{R} 142^{\circ} 74$, lakhs ( $£ 951,600$ ) in 1907-08. The contraction of R $7 / 41$ lakhs ( $£ 49,400$ ) or 5.2 per cent marks the attainment of a point at which the cotton industry is finding difficulty in marketing all its products. Madras, which is also concerned mainly with the cotton industry, likewise shows a diminished total of Rry 88 lakhs ( $£ 7^{2,500}$ ) against Rifli lakhs ( $£ 78,100$ ) in the previous year. Sind, which in $1907-08$ figured at only $\mathrm{R} 79,000$ ( $£ 5,300$ ) in the accounts, has increased her imports of textile machinery to $\mathrm{R}_{2,12,600}\left(£_{14,170}\right.$ ), mainly as a result of the arrivals of plant for the new woollen mill of His Majesty the Amir of Afghanistan. Bengal's share of the total of all descriptions of machinery is 44 per cent, and represents a sum of R291 38 lakhs ( $£ \mathrm{I}, 942,500$ ) as compared with R265.95 lakhs ( $£ x, 773,000$ ) in 1907.08, the advance being R25.43 lakhs ( $£ 169,500$ ) or $9^{\circ} 6$ per cent. Bombay, on the other hand, took less by R39'5 lakhs ( $£ 26_{3.300}$ ) or $13^{\circ} 4$ per cent, her total being $R_{254}{ }^{\circ} 6$ g lakhs ( $£ 1,697,900$ ) in place of R294 19 lakhs ( $£_{1,961,200 \text { ) in 19c7-08. This indicates that, outside }}$ of textile machinery, Bombay reduced her demand by some R32.09 lakhs ( $£^{223}, 900$ ). But the provinces outside Bengal and Bombay increased their business from R98*38 lakhs ( $£ 655,900$ ) to Rir 5 '53 lakhs ( $£ 7 \div 0,200$ ); and the supplementary Rifitlakhs ( $£_{114,300}$ ) - equal to $17^{\circ} 4$ per cent on their previous year's record, - plus Bengal's increase of R25.43 lakhs ( $£ 169,500$ ) recouped Bombay's decrease, and established the small advance recorded above. The value of steam engines imported into all India declined from $\mathrm{R}_{1}{ }^{3} 7^{\prime} 73$ lakhs ( $£ 918,200$ ) to R108. 59 lakhs ( $£ 723,900$ ). Electrical machinery and mining machinery, at R3547 lakhs ( $£ 236,500$ ) and R12.36 lakhs ( $£ 82,400$ ), both showed substantial progress; and it should be borne in mind that a good deal of the electrical plant rally belongs to the textile industry. "Other sorts" at R217.57 lakhs ( $£ 1,450,500$ ) showed a decline from R220.04 lakhs ( $£_{1,467,000) \text {. }}$

Railway material forms $24^{\circ} \% 6$ per cent of the total value of metals and manufactures imported in 1908-09. The expansion of this branch of imports continues. In the last five years the figures, in lakhs of rapees and in thousands of pounds sterling, have been as follows:

|  | R | $\ldots$ |
| :---: | :---: | :---: |
| 190+-05 | 561.54 | 3,744 |
| 1905-06 | $673 \cdot 89$ | 4,493 |
| 1906.07 | 849.29 | 5,662 |
| 1907-08 | 988.74 | 6,592 |
| 1908.09 | 1,193'04 | 7,960 |

The increase of R205.2 lakhs ( $£ 1,369,000$ ) marks an advance of 20.8 per cent. These figures include $R 651 \cdot 42$ lakhs ( $£ 4,343,000$ ) for rolling-stock and comprise imports for private lines and for State railways. The former class shows a total value of R742 lakhs ( $£ 4,947,000$ ) against $R_{720} 0^{\circ} 08$ lakhs ( $£ 4,800,500$ ) in 190700 , the addition of nearly R22 lakhs ( $£ 147,000$ ) being equal to 3 per cent. Government railways, on the other hand, imported materials to the value of $\mathrm{R}_{45}{ }^{\circ} 9.4$ lakhs ( $£ 3,013,000$ ) against R268.66 ( $£ 1,792,000$ ) in the previous year. Here the increase of R183.28 lakhs
 exceeded in earlier years. During the twelve months $774^{\circ} 26$ miles of Railway were opened, while $2,74^{\circ}{ }^{\circ} 8$ miles were under construction or sanctioned in April 1909. At that date the total length of line opened in India was $30,983^{\circ} 04$ miles.

In 190S-09 the return on the Capital expenditure on railways amounted to 3.7 per cent as compared with 4.7 per cent in 1907.08 and 5.4 per cent in 1906-07. For the first time since 1898.99 the railway system worked at a net loss to the State in the year under review, owing to exceptional and temporary causes, as for instance the heavy outlay on repairs and renewals of rails and girders that have proved too light for the loads they have to carry. The pace at which these improvements are being carried out was for the time relaxed and the railway programme for $1909-10$ cut down to $£ 10$ millions, namely, $£ 8,666,900$ for open lines including rolling-stock, $£ 1,099,800$ for lines under construction, and $£^{2} 33,300$ for new lines.

## CHEMICALS, DRUGS, MEDICINES, NARCOTICS, DYEING AND tanning materials

Chemicals-The value of the imports of chemicals in 1908-09 was R747 lakhs ( $£ 498,000$ ) as compared with R790 lakhs ( $£ 528,600$ ) in the previous year. Bleaching materials showed an advance from $R_{3} \cdot 56$ lakhs $\left(\mathcal{E}_{2} 3,700\right)$ to $\mathrm{R}_{4^{\bullet}}{ }^{\circ} 6$ lakhs ( $£ 3^{\circ}, 400$ ). Calcium carbide increased from Ri•iglakhs ( $£ 7,900$ ) to R1'64 lakhs ( $£ 10,900$ ). Cyanide of Potassium also advanced from R2.77 lakhs ( $£ 48,500$ ) to R $3^{\circ} 16$ lakt.s ( $£ 21,100$ ), while the imports of Disinfectants fell away from $R_{3} \cdot 97$ lakhs ( $£ 26,500$ ) to $R_{3} \cdot{ }_{3}$ lakhs ( $£ 20,200$ ) and Caustic soda fron R89+ lakhs ( $£ 5,600$ ) to R73 laklis ( $£ 49,000$ ). Bicarbonate of soda also showed a decline at $R_{3} 99$ lakhs ( $£ 26,600$ ) in place of $R_{5}{ }^{\circ} \mathrm{C} 5$ lakhs ( $(634,300)$, while Soda, other sorts, increased from R6. 53 lakhs ( $£ 43,500$ ) to R8.01 lakhs ( $£ 53,400$ ). The comprehensive heading Chemicals, other sorts, this year represents 35.4 per cent of the total in place of 375 per cent in 1 cco 008 . Its total value receded from R $29^{\circ} 77$ lakhs ( $£ 198,500$ ) to R26.42 lakhs ( $£ 176,100$ ).

Drugs and medicines-The year under review was one of great dulness in the chemical trade and of declining prices, except as regards those articles whose rates are fixed by combination. The depression had begun to be felt towards the end of 1907 , but did not become marked till the beginning of the Indian statistical year. The total value of drugs and medicines imported was $\mathrm{R}_{72} .82$ lakhs ( $£ 485,500$ ) as compared with Rgo'92 lakhs ( $£ 606,100$ ) in $1907 \cdot 08$, the decline being $\mathrm{R}_{1} 8_{4}$ lakhs ( $£ 123,000$ ) or nearly 20 per cent. The vicissitude of camphor in respect of price have been very marked in recent years. Indian statistics showed the specific value of the article to have risen by 16 per cent in 1904-C5, by 37 per cent in $1905 \cdot 06$, and by 42 fer cent in 1905.07 . In the next year the decline set in under the shadow of the synthetic product. In 1907.08 the specific value fell by 16 per cent and in the year under review it has dropped by no less than 5.3 per cent. This is shown by the fact that, while the quantity declined by only 8.3 per cent to $1,093,368 \mathrm{lbs}$, the total value fell by $57^{\prime}$ I per cent to R11.61 lakhs ( $£ 77,400$ ) in place of R27'0j lakhs ( $£ 180,300$ ). With Formosan supplies being slowly exhaustea and companies springing up on the continent of Europe to produce the synthetic substitute, the satter has for the moment made good its position. The financial results produced by these companies do not warrant any great certainty that they can survive at the price levels now ruling. If they do not survive the control of prices will fall virtually into the hands of the Japanese a gency in Europe as reconstituted in 1908, but with the restraining influence of experience and of uncertainty as to

China's resources. If they do survive, there is foreshadowed a long struggle between the natural and artificial products with low prices advantageous to all outsiders, except those planters in Ceylon and elsewhere who have planted camphor trees in recent years. The exports of camphor from Formosa in 1908 were only $2,764,733 \mathrm{lbs}$, in place of $4,121,566 \mathrm{lbs}$ in the previous year, the quantity having therefore been restricted by about 33 per cent. In spite of this the price of camphor, Japanese 1 oz tablets, in London, which stood at $45,8 d$. per lb in March 1907, declined to 2s. 1d. by the end of March 1908, and had fallen to $1 s$. $7 d$. a year later. Quinine is virtually controlled by Java now, although there are still manufacturers who stand out of the ring. The improved production has overtaken consumption, and prices receded by about 9 per cent in 1 go8. German brands of sulphate were quoted $7 \frac{3}{4} d$. to $8 d$. per oz. in April 1908 and this rate held till the middle of September when $\frac{1}{4} d$. was dropped; but since February the current rate has been $7 d$. to $7 \frac{1}{4} d$. which marks the lowest level ever attained, and there is no rtason to look for an early or marked recovery. These facts are gone into at greater length than is warranted by the statistical value of the drugs, because they have peculiar interest for India in several aspects. The imports of quinine subsided to $80,020 \mathrm{lbs}$ and R6. 19 lakhs ( $£ 41,300$ ) in place of $82,079 \mathrm{lbs}$ and R7.21 lakhs $(£ 48,100)$ in 1907.08 . The decline was therefore 2.5 per cent in quantity and 14 per cent in total value, indicating a loss of 12 per cent in the specific value. Proprietary and patent medicines have
 other sorts have increased from $R 25.85$ lakhs ( $£ 172,300$ ) to $R 26.23$ lakhs ( $£ 175,000$ ).

Tobacco-The imports of tobacco in 1908-09 had a value of $R 79^{\circ} 42$ lakhs ( $£ 529,500$ ) as compared with $R 84.36$ lakhs ( $£ 562,400$ ) in the previous year. Of this, 72.8 per cent is represented by cigarettes; and the decrease recorded in their importation is advantageous to the internal industry. In cigarettes, the year's figures show a decline from $3,634,192 \mathrm{lbs}$ to $2,995,692 \mathrm{lbs}$, and írom R6I'2 lakhs ( $£ 408,000$ ) to $R_{57^{\circ}} 79$ lakhs $\left(£_{3} 3_{5} 5300\right)$. The loss is thus 17.6 per cent in quantity and $5^{.6}$ per cent in value; and this would appear to indicate that the shrinkage is more marked in the inferior than in the better qualities. Cigarettes costing more than R 8 ( 10 s 8 d ) per 1,000 weigh about 3 lbs to the thousand; while those of lower price average about $\varepsilon \frac{1}{3} \mathrm{lbs}$ per thousand. In normal times the low quality cigarettes appear to represent $96 \cdot 7$ per cent of the whole. The contraction of imports probably took effect principally in these lower qualities, seeing that it is only in respect of them that a competitive indigenous industry exists and seeing that the foregoing analysis of the figures points to such a conclusion. Assuming that it is well founded, and accepting the above weights per thousand as correct, the number of cigarettes imported must have been some 1,192 millions as against 1,400 millions in $1907-\mathrm{c} 8$. This represents some 6 cigarettes per annum per head of the population of British India. Of the tot 1 l of $\mathrm{R}_{57} 79$ lakhs ( $£ 385,300$ ), R 44.7 lakhs ( $(298,000)$ came from the United Kingdom; $R 8 \cdot 37$ lakhs ( $£ 55,800$ ) from the United States, and $R 31,000$ ( $£ 2,100$ ) from Further East. The $R_{3} \cdot 8: 3$ lakhs $\left(£^{25}, 500\right)$ from Egypt represents a different class of article and varies little from year to year. The average value $\mathrm{p}=\mathrm{r} \mathrm{lb}$ for each of the sources enumerated was British, R2-0-10 (2s $8 \frac{3}{4} d$ ), American

Dyes - The imports of aniline and alizarine dyes receded somewhat from the level of 1907-08. The total was $11,932,409 \mathrm{lbs}$ with a value of $\mathrm{R} \mathrm{SO}_{4} 8$ lakhs $\left(\mathscr{L} 53^{6,500}\right.$ ) as compared with $12,957,817 \mathrm{lbs}$ and $R 84 \cdot 65$ lakhs $\left(£ 564,3^{\circ 0}\right)$
in the earlier year. This marks a decline of 779 per cent in quantity and 4.9 per cent in value, iogether with a rise of about $3^{.2}$ per cent in the average value per unit, which is now 10 annas 10 pies ( $10_{d}^{5} d$ ) as against 10 annas 5 pies ( $1 \mathrm{o}_{1} \frac{5}{3} d$ ). This does not necessarily mean that the price of these dyes rose generally, for there are many grades whose prices diverge widely and which are imported in varying quantities. These products come chiefly from Germany: and the work of amalgamating the interests in that country made further progress in the year under review. Bombay continues to be the principal port of entry, about 72 per cent of the imports having been received there. Imports of aniline accounted for about one-third of the contraction referred to above. The quantity decreased from $6,6 \mathbf{K}_{1,355} \mathrm{lbs}$ with a value of $\mathrm{R}_{51} \cdot 46$ lakhs ( 6343,100 ) to $6,32 \mathrm{I}, 078 \mathrm{lbs}$ with a value of $\mathrm{R} 50 \cdot 19$ lakhs ( $£ 334,600$ ). There was therefore a decline of $4^{\circ} 9$ per cent in quantity and $2^{\circ}: 1$ per cent in value, with a rise of
 8 pies ( IS . 0 g d.) per lb . Alizarine was quantitatively very much on a par with aniline in $190 \%-08$, but the trade in it accounted for two-thirds of the total decline in 1908.09. Its contraction was at the rate of 11 per cent in quantity and 8.7 per cent in value which brought the total figures to $5,611,331$ lbs with a value of $R_{3} 0^{\circ} 29$ lakhs ( $£ 201,900$ ) in place of $6,306,462$ lbs with a value of $R_{33} \cdot 19$ lakhs ( $£ 221,300$ ). The average value per lb rose from 8 annas 4 pies ( $8 \frac{1}{3} d$ ) to 8 annas 7 pies ( $8_{12}^{7} d$ ).

## OILS

The import trade in oils represents about $3^{\circ} 4$ per cent of the total value of merchandise imported into India.

The imports of mineral oils in 1908.0 had a total value of $\mathrm{R}_{3} 390^{\circ} 9$ lakhs ( $£^{2}, 606,000$ ) as against $R_{3} 19.33$ lakhs ( $£^{2,129,000)}$ in 1907 -08. Of this 85 per cent was kerosene, which by itself amounted to $83^{\circ} 58$ million gallons with a value of $R_{333}{ }^{\circ} 25$ lakhs ( $£_{2,222,000}$ ), as compared with $65^{\circ} 43$ million gallons with a value of $\mathrm{R}_{25} \mathbf{2}^{\prime} 14$ lakhs ( $\mathrm{f}_{1}, 681,000$ ) in 1907.08 .

The following statement shows the quantity and value of kerosene imported in each of the last two years. The imports into India proper from Burma are added at the foot. The unit in every case is $\mathbf{1 , 0 0 0}$.

From these figures it will appear that, excluding Burma's unascertainable internal consumption of indigenous oil, India has, on the average of the last two years, absorbed kerosene at the rate of 1379 millions of gallons per annum; and there is no reason to believe that saturation point is in sight. The increase in the total imports from foreign countries in 1908.09 was 18.15 million gallons
or 27.7 per cent, while the increase in visible consumption was $85^{\circ} 9$ million gallons or 12.2 per cent.

In 1907-08, Burma represented 49 per cent of the total visible consumption; but in the year under revieis her share fell to $4^{2}$ per cent as a result of a contraction in her shipments concurrently with a large increase in imports. The decline in shipments from Burma to India was one of 3.5 per $c=n$ in quantity and ${ }_{2} \cdot 3$ per cent in value.

The share of the United States in the visible consumption in the last two years has been 21 per cent; and her share in the imports of the year under review is $40^{\circ} 6$ per cent as compared with $37^{11}$ per cent in 1907.08 . In 1908-09 she increased her shipinents by $9,637,348$ gallons or 39.7 per cent and by a sum of $R_{47} \cdot 66$ lakhs ( $£ 318,000$ )

For the second year in succession, Roumania takes second place among the individual foreign purveyors of kerosene. Her contribution to the visible consumption in these two years has been in per cent, and her share in the inports in $1908-09$ is $19^{\circ} 5$ per cent. She strengthened her position by 584,028 gallons or 3.7 per cent and by a sum of R26,100 ( $£ 1: 740$ ).

- It would probably be well to group Borneo, Sumatra, and (as entrepot) the Straits Settlements; and if this be done the group takes second place, contributing ${ }^{1} 5^{\prime} 3$ per cent of the $v$ isible consumption in the last two years and $31^{\circ} 5$ per cent in the imports of 1908-03. It is impossible to say as yet how much of the shipments by way of the Straits Settlements, came from each of the other sources in this group; so no purpose would be served by specific analysis. The increase in receipts from this group of sources was $10,305,510$ gallons in quantity ( $64^{\cdot 1}$ per cent) and $R_{40} 95$ lakhs ( $£_{2}^{273,000}$ ) in value.

The share of Russia in the visible consumption is 59 per cent and in the last year's imports 8.4 per cent. Her falling-off was one of $2,372,934$ gallons or $25^{\circ} 3$ per cent and of R771 lakhs ( $£ 51,400$ ). Her total is lower than in 1905-06, but much higher than in 1906-07 when her trade suffered from the disturbed conditions in the producing region.

Bulk oil formed 73 per cent of the total foreign imports, in place of 75.6 per cent in 1907-08, the total quantity received in this form being $61,034,000$ gallons. Of this, America supplied $23^{\circ} 1$ per cent, Roumania $26 \cdot 7$ per cent, Russia $11^{\prime} 4$ per cent, and Sumatra, Borneo, and the Straits together 38.8 per cent.

The remaining 27 per cent of the whole was of course Case oil. The quantity was $22,547,000$ gallons, and of this America supplied 87.8 per cent, and Sumatra, Borneo, and the Straits the balance of 122 per cent.

The following are the average prices of the leading descriptions of kerosene during the last three years :

For some years an arrangement has existed between the various companies exploiting the Indian market and prices have been fairly maintained. The close
of the jear under review was marked by a brief interruption of these conditions and by a heavy break in prices followed by a concerted return to the old level. It would probably be difficult to say whether the incident was due solely to a difference of opinion as to the effect of the subsisting arrangement between the parties, of whether some nervousness had been engendered by the operations of a new interest which was securing a prosition in the market. The year was notable for the flotation of the following new companies:-Indo-Burma Petroleum Oil Co., United Twinyo Oil Co, Twinzas Oil Co., and Nath Sing Oal Co., with a nominal capital of $\mathrm{R}_{2} 3^{3}$ crores ( $£ 1 \cdot 53$ millions).

The Egyptian Oil Trust with a capital of $£ 100,000$ also came into working during 1908; and the formation of the Anglo-Persian Oil Company with a capital of $£^{2,0 r 0,000}$ was realised a few days after the close of the statistical year.

Imports of fuel oil, on the other hand, made a striking advance from $1,250,115$ gallons to $2,914,685$ gallons with a value of $R_{2} 92$ lakhs ( $£ 19,500$ ). Of this 873 per cent came from Borneo and 109 per cent from the Straits as entrepôt. Bombay, which in 1907-08 had made its "record" demand of 690, 179 gallons, increased this by about 165 per cent in $1908-09$ and took $1,829,424$ gallons, Madras also took more than twice as much as in $190 \%$-0S, and her total rose to 745,228 gallons as compared with 350,218 ; while Bengal showed more modest progress with 340,034 gallons against 209,718 gallons in the previous year. Karachi has ceased to import

In imports of other mineral oils, mainly for lubricating, there was a reaction from the high level of $12,893.500$ gallons recorded in 1907-08. The total quantity landed was $10,34^{8,33^{\circ}}$ gallons, which shows a contraction of $20^{\circ}$ per cent ; and Burına's exports to India proper declined by 32 per cent to 2,756, 100 gallons.

## RAW MATERIALS

Coal represents 17.2 per cent of the value of raw materials imported into India. Until three years ago, it appeared that country coal was steadily displacing imported coal in India. Since then, it would appear that a reaciion has set in, and the imports recorded in 1908-09 are the highest since 1896.97 . Under the pressure of gener.l industrial inactivity prices of coal in Eagland declined by 3 s. to 4 s . in 1908; but the foreign demand was good and the total exports (if we include coal shipped for use of steatiers engagrd in foreign trade) were $84,654,823$ tons, which is only 27,263 tons less than in 1907. An active coal trade is of the first importance to maritime cominerce in general, because the business of transporting it carries shipping into distant ports and mostly into those ports where industry is most progressive and return Ireight is likely to be found. The country that contains sources of good export coal possesses in effect a title to so much of the world's carrying trade; and acquisition by a foreign people of a ny part of those sources is an adroit stroke of business. It will be interesting moreover to see how far the development of Au-tralia's advantages in this respect (which are clearly reflected in India's import figures) may be found consistent with her policy as regards white crews. Indin's imports grew from 308,348 tons with a value of $\mathrm{R}_{59^{\circ}} 35$ lakhs ( $£ 395,700$ ) to 455,806 tons with a value of R 82.25 lakhs ( $£ 548,300$ ). The increase in quantity is ther-fore 47.8 per cent and in value 38.6 yer cent, the average value having apparently
declined by only 6.2 per cent. The increase in quantity is 147,458 tons, and this approximates to the considerable figure of $\mathbf{1 4 5 , 7 9 6}$ tons imported from Australia in place of 50,290 tons in 1907-03. Australia thus does 32 per cent of the trade; but the United Kingdom does 48 per cent, and retains the first place with 220, 139 tons having a value of R $44^{\circ}$. 1 lakbs ( $£ 297,400$ ) as compared with 215 , 100 tons in $1907-08$, valued at $R_{44} 4^{2}$ lakhs ( $£ 296,100$ ). The Natal trade developed very rapidly from 35,349 tons and $R_{5} 7^{\prime} 1$ lakhs ( $£ 38,100$ ) to 71,367 tons and R12.11 lakhs ( $£ 80,700$ ), but there have been complints about quality. Japan, which formerly sent considerable quantities to India, supplied only 5,950 tons in the year under review. The remaining 12,000 tons come from Portuguese East Africa and Ceylon. Imports of British coal by Government amounted to 18,122 tons valued at $\mathrm{R}_{4} \cdot 18$ ldkhs ( $£ 27,900$ ). Particulars regarding production of Indian coal are given in the arlicle relating to exports of coal.

The imports of Cotton, which had advanced by $35^{\circ} 6$ per cent to ${ }^{1} 57,529$ cwts in 1907 -08 with a value of R $70^{\circ} 95$ lakhs ( $(473,000$ ), receded in $1908-09$ to 125,487 cwts with a value of $\mathrm{R}_{53}{ }^{\circ} \mathrm{O} 3$ lakhs ( $£ 354,000$ ). 'These figures mark a decline of $20^{\circ} 3$ per cent in quantity and $25^{\circ} 2$ per cent in value, the average value per unit having declined by $\sigma .2$ per cent.

The importation was equal to 1.8 per cent of the total mill consumption in 1908 . The imported longer staple is wanted mainly for the production of cloth for internal consumption; and its low ratio in the year under review may be accounted for in part by the congestion of the internal piecegoods market and the activity in spinning for China. It may probably be assumed that the $85.9^{24} \mathrm{cwts}$ received fiom the United Kingdom were of American origin, and this with the 1,850 cwts shipped direct from the United States brings their aggregate to 70 per cent of the total importation. Egypt sent $25,436 \mathrm{cwts}$ in place of 15,447 cwts in the previous year, while Persia supplied 6,572 cwts or little more than in $1907-08$.

Precious stones and pearls, unset-As recorded in the trade accounts, the figures probably bear no very close relation to the true imports. It is well known that large quantities of pearls are both imported and exported in such a manner as to escape record ; but this is not peculiar to India, for it has been recently shown that the mass of the diamonds brought into the United Kingdom escape registration by the Board of Trade. The German Government has taken measures to secure an adequate revenue from the diamonds found in its colony in South West Africa by taking the stones over on the spot, charging itself with the marketing of them at its discretion and paying to the producing companies two thirds of the proceeds less a charge for working expenses. The values under the heading of precious stones fluctuate greatly and are in any case difficult to verify. In the year under review the trade in gems was bad and pearls especially suffered from the collapse that set in late in 1907. In 1907-08 the total recorded value fell from R 93.38 lakhs ( $£ 622,500$ ) to R69.57 lakhs ( $£ 463,800$ ) and in 1908-09 it has fallen to R51. 62 lakhs. $(£ 34+100$ ) or by a further 25.8 per cent. The net decline is about R18 lakhs ( $£_{120,000 \text { ). The }}$ source of the largest single supply is Bahrein which sent gems to the value of R264 lakhs ( $£ 176,000$ ) in place of R43 42 lakhs ( $£ 289,500$ ) in 1907.08 . Next comes Arabia with $\mathrm{R}_{13} \mathrm{O}_{4}$ lakhs ( $£ 86,900$ ) in place of $\mathrm{R}_{1} 6 . \mathrm{H}_{4}$
 ( $£ 35,600$ ), Austria-Hungary with R84,260 ( $£ 5,617$ ) in place of $R_{3,725}$ ( $\mathrm{K}_{2} 248$ ), and the United Kingdoin with $\mathrm{R}_{4}, 883$ ( $£ \mathbf{3}^{25}$ ) instead of $\mathrm{R}_{4,326}$ ( $£_{288}$ )
show the only increases and these are small. Aden's contribution dropped from $R_{3} \cdot 45$ lakhs ( $£ 23,000$ ) to $R_{2} \cdot 35$ lakhs ( $£ 15,700$ ). Diamonds are found in Central India and rubies in Burma. Of the former the ascertained production fell from $R_{4_{1}, 77^{2}}\left(£_{2,7} 8_{7}\right)$ in 1907 to $R_{14}, 103$ ( $£ 940$ ) in 1908 . Of rubies the output is larger, having been as follows in the last three years :

|  |  |  |  | Carats | R |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1906 | $\cdot$ | $\cdot$ | $\cdot$ | 326,855 | $14,33,000=$ | 95,500 |
| 1907 | $\cdot$ | $\cdot$ | $\cdot$ | 334,535 | $14,26,000$ | 95,100 |
| 1908 | $\cdot$ | $\cdot$ | $\cdot$ | 211,194 | $7,18,812$ | 47,900 |

These last figures mark a contraction of nearly 37 per cent in quantity and 49 per cent in value.

Silk-The heavy fall in silk prices, which markrd 1908 , stimulated imports to some extent. They increased from $2,050,839 \mathrm{lbs}$ to $2,168,468 \mathrm{lbs}$ and from Rg8.15 lakhs ( $£ 654,300$ ) to Rior $\because 9$ lakhs ( $£ 679,200$ ). The increase of $\mathbf{1 1 7 , 6 2 9}^{\mathrm{l}} \mathrm{lbs}$ marks a development of 57 per cent in quantity; and the addition of $R_{3} \cdot 74$ lakhs ( $£_{2}^{24,900}$ ) to the total value is equal to 38 per cent of the previous year's figure. The small decline of 1.8 per cent in the specific value, which is thus indicated, only faintly reflects the decline in silk prices throughout the world. Of the total of Riorg lakhs ( $£ 679,200$ ), Bombay took R72.99 lakhs ( $£ 486,600$ ) and Burma R28.74 lakns ( $£ 191,600$ ). Direct imports from China at $1,774,526 \mathrm{lbs}$ were greater than the provious year's figures by $41,=03 \mathrm{lbs}$ or 2.4 per cent; while those from the Straits Settlements, in rising from 169,050 to $251,182 \mathrm{lbs}$, established an advance of 48.6 per cent without very greatly exceeding the figure attained two years ago.

Wood-The imports of unmanufactured wood (which includes timber, firewood, and ornamental woods) declired from R82 lakhs ( $£ 546,700$ ) to R $73^{\circ} 74$ lakhs ( $£ 491,600$ ). The difference of R8.26 lakhs ( 655,100 ) represents ro per cent on the previous year's figure. Of this net decrease, $\mathrm{R}_{7} \cdot 9$ lakts ( $£ 53,000$ ) is due to the contraction of the trade in timber from R 80.25 lakhs ( $£ 535,000$ ) to R $72 \cdot 34$ lakhs ( $£ 482,300$ ) and from $99,557 \mathrm{cub}$. tons to 92,365 cub. tons. The decline of 7.2 per cent in quantity together with one of 9.8 per cent in value, marks a loss of 2.8 per cent in the specific value. Teak now represents $6_{5}$ per cent of the whole, in place of 75 per cent two years ago and 71 per cent in 1907.08 . The decline under this head largely exceeds the increase in the shipments of teak from Burma to India proper. It is one of 20.6 per cent in quantity and 18 per cent in value, bringing the figures for 1908 -09 to 49,965 cub. tons and R 4779 lakhs ( $£_{3} 18,600$ ), in place of $6_{2,946}$ cub. tons and $\mathrm{R}_{5} 8^{\circ} 4$ lakhs ( $£ 390,000$ ). Of this diminished quantity, Siam supplied about 90 per cent, and the rest came mostly from Java. On the other hand, timber other than teal was imported in larger quantities, and the figures stood at 42,400 cub. tons and $\mathrm{R}_{2} 4^{\circ} 55$ lakhs ( $£ 163,600$ ) in place of 36,61 I cub. tons and $\mathrm{R}_{21} \cdot 84$ lakhs ( $£ 145,600$ ), the increase being 15.8 per cent in quantity and 12.4 per cent in value, while there was apparently a fall of 3 per cent in the specific value. The imports from the United States were larger than in the previous year, but the total of 7,639 cub. tons with a value of $R_{3} \cdot 25$ lakhs ( $£_{21,700 \text { ) is about the normal level. }}^{\text {. }}$

## MANUFACTURED ARTICLES

Cotton Goods-On the average of the last three years, Cotton goods represent 674 per cent of the total value of manufactured articles imported. The
year under review was one of difficulty for the European cotton industry. The previous year had been characterised by an extraordinarily wide margin between the prices of the raw material and of the finished products. Contracts made under those conditions redeemed the earlier part of 1908 , but in the later half the margin contracted markedly, demand almost ceased, and even the seven weeks strike and lock-out which began in September failed to relieve the glutted markets and to raise prices. For a note upon the condition of the market for raw cotton, during the year, reference may be made to the chapter that deals with exports of raw cotton; and that on exports of cotton manufactures gives facts about the Indian cotton industry. To the stagnation that was experienced during a great part of the year, the rapid increase in production was certainly contributary. It has been estimated that the number of spindles in the world, which in 1907 was about 114 millions had grown in 1908 to something like 129 millions. The growth in nine years has been about 23 per cent and the outturn of raw cotton is believed to have increased by 24 per cent. In the United Kingdom the number of spindles has grown from less than 46 millions in 1905 to upwards of 57 millions in 1909, while looms have multiplied in the same perind from 652,200 to 739,400 . The output of this additional machinery could not well have been absorbed unless concessions in price had been possible; but its production had made a new demand on the supplies (f raw material and forced prices to a level at which such concessions could not be made profitably. There is reason to fear that in some cases they were ultimately made at heavy loss to holders. So far as the mills in England are concerned, the working of the year was not unprofitable; and an analysis of the returns of roo companies shows an average divideni of 11.2 per cent in 1908 as against $24^{\circ} 6$ per cent in 1907.

As regards India, the features of the year were (a) the diminution in the purchasing power of the people as a result of bad harvests and of the extremely high prices of food grains, and (b) the consequent accumulation of stocks and the collapse in prices.

The offtake of cloth rapidly ceased, dealers were unable to place or to take the goods contracted for, stocks accumulated rapidly and encrmously, and prices broke sharply. Even then, the stocks long appeared to be immoveable. These conditions gave the native dealers a temporary advantage over the importers, and that advantage the dealers in Bombay employed to supplement and to extort certain concessions as regards dates of shipment and penalties for late delivery which they had for some years sought unsuccessfully to procure. It is uncertain how far such concessions can be made effective unless the shipper and manufacturer on the other side be prepared to conform. The Swadeshi movement continues; but it does not appear to have tempered for the Indian weaving industry the wind of adversity felt by the dealer in European goods. This is shown to some extent by the heavy stocks of Indian cloth carried in the country and by the fact that the shipments of cotton piecegoods by sea from the Bombay Presidency to other provinces contracted by 27 million yards or $11 \cdot 3$ per cent in quantity and by $\mathrm{R}_{34^{\circ} 91}$ lakhs ( $£_{232,700}$ ) or 9 per cent in value.

The British exports of yarn in 1908 were $214,876,200 \mathrm{lbs}$ with a value of £ $12,857,270$, as compared with $24 \mathrm{I}, 076,700 \mathrm{lbs}$ in 1907 with a value ot $£^{15,416,971}$. The decrease is thus one of $26,200,500 \mathrm{lbs}$ and $£^{2}, 559,70$ I . British exports of piecegoods contracted from 6,297,707,900 yards and $£ 81,049,207$ to $5,53^{2,41} 3,200$ yards and $£_{, ~ 70,238,263}$, the shrinkage being $765,294,700$ yards and $£ 10,810,944$. The aggregate decrease in the value of

Britain's exports of cotton goods was thus $\mathcal{f} 15,368,6: 28$ or 14 per cent on the figure for the previous year.

The aggregate value of the imports of cotton yarn and of woven and other cotton goods in the last six years has been as follows, the unit being 1,000:

|  | Yam |  | Woven and other goods |  | Total |  | Proportion of total imports of merchandise |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | $£$ | R | $\ldots$ | R | $£$ |  |  |
| 1903.04 | 2,14,21 $=$ | 1,428 | 28, $66,85=$ | 19,246 | -1,01,06 | 20,674 |  | cent |
| 1904-05 | - $2,48,76$ | 1,658 | 35,55,92 | 23.706 | 38,04,68 | 25,364 | 39 | " |
| 1905-06 | 3,42,5+ | 2,283 | 39,01,77 | 26,012 | 42,44,31 | 28,295 | 41 | " |
| 1906.07 | - 3.22,32 | 2,149 | 37,69,43 | 25,129 | 40.91,75 | 27,378 | 38 | " |
| 1907.08 | - 3,69,32 | 2,462 | 44,34,93 | 29,510 | 48,01,25 | 32,028 | 37 | " |
| 1908-09 | - 3 :64, 88 | 2,432 | $34,3^{6,58}$ | 22,914 | 33,01,46 | 25,343 | 36 | " |

The decrease in $1908 \cdot 0$ y was therefore one of $\mathrm{R}_{10,03}$ crores $(£ 6,685,000)$ or $20^{\circ} 9$ per cent.

In yarns, however, there was an increase of $4,203,300 \mathrm{lbs}$ or :1 3 per cent accompanied by a decrease of $R_{4} 44$ lakhs ( $£ 29,600$ ) or $1 \cdot 2$ per cent in total value, the specific value having thus declined by $11 / 2$ per cent. The quantities imported in each of the last six years are shown here in millions of pounds:

| 1903.04 |  | 28.01 | 1906.07 |  | $3 \% 67$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1904-05 |  | $30 \cdot 58$ | 1907-08 |  | 37.32 |
| 1905.06 |  | $45^{\circ} 78$ | 1908.09 |  | 41.52 |

The United Kingdom supplied 90 per cent of the jarn imported, and her total increased by 10.2 per cent to $37.395,000 \mathrm{lbs}$ as against $3.3,946,000 \mathrm{lbs}$ in 1907.08. Of this total, undyed yarn now forms 53.9 per cent with a total of $22,400,000 \mathrm{lbs}$ and R192'3 lakhs ( $\mathfrak{L}_{1,282,000 \text { ), while dyed yarn stands at }}$
 came from the United Kingdom, while the principal other sources were AustriaHungary, China, and Germany. The United Kingdom also suppled $83^{\prime} 9$ per cent of the dyed yarns, of which goods $4^{\circ} 7$ per cent came from Austria, $4^{\circ} 6$ per cent from Italy, and 3.8 per cent from Belgium. The arrivals of 40 s mule, after a marked drop in 1907.08 , recovered to $9,599,6_{37} \mathrm{lbs}$, but the total value fell off to R686 lakhs ( 6457,300 ).

It is interesting to compare the imports of coarse, medium, and fine yarns with the production of similar descriptions by the Indian mills. In doing so, it should be borne in mind that the local manufacturers have greatly increased their exports of low counts :

Cotton fabrics represent 28.3 per cent of the total value of private merchandise imported as compared with $34^{11}$ per cent in 1907-08. The value decreased from $\mathrm{R}_{4,434^{\circ} 93}$ lakhs ( $£ 29,566,200$ ) to $\mathrm{R}_{3,436} 58$ lakhs ( $£ 22,910,500$ ). 'The decrease was one of R998. 35 lakhs ( $£ 6,655,700$ ) or 22.5 per cent. Some descriptions of cotton goods are not stated in yards. It is therefore convenient, in ascertaining the changes of specific value, to confine the calculation to piecegoods. The imports of these amounted to $1,992,516,000$ yards and $R_{3,221} 92$ lakhs ( $£ 21,479,500$ ), against $2,53^{1,733,0 c o ~ y a r d s ~ a n d ~} R_{4,204.37}$ lakhs ( $£ 28,029,100$ ) in $1907 \cdot 08$. The contraction amounts to $539^{\circ} 22$ millions of yards and Rg $82^{\circ} 45$ lalihs ( $£ 6,549,600$ ), which figures represent declines of 21.3 per cent in quantity, 23.3 per cent in total value, and 2.4 per cent in specific value. These ratios vary in respect of diverse classes. For example, the specific value of grey goods declined by $55^{\prime} 8$ per cent and coloured goods by $1^{\circ} 5$ per cent, while that of white goods rose by 1.2 per cent.

The following statement shows in millions of yards the relative importance of these three classes in the course of the last twenty years. It will be noticed that the grey goods class is considerably lower than any of the earlier figures recorded, that white goods are little better than the average of the five years 1899-1 900 to 1903.04 , and that coloured goods are also lower than in any year subsequent to that quinquennium.

|  | Grey (unbleached) | Uhite (bleached) | Coloured, printed or dyed | Percentage of grey in total |
| :---: | :---: | :---: | :---: | :---: |
| Average 1889-90 io 1893-94 | 1,223*47 | 368.63 | 374* 7 | 62 |
| 1894-95 „ 1898-99 | 1,209'77 | $418 \cdot 59$ | $351 \cdot 49$ | 61 |
| " 1899-1900 , 1903-04 | 1,204.53 | 469.69 | $430 \cdot 57$ | 57 |
| 1904-05 | 1,210.16 | 584.3 | $493 \cdot 92$ | 53 |
| 1905-06 | 1,348.84 | $572 \cdot 75$ | $541 \cdot 65$ | 55 |
| 1906.07 | 1,298.48 | 494.97 | $524 \% 75$ | 56 |
| 1907-08 | 1,253'79 | 733.52 | 544.41 | $49 \cdot 5$ |
| 1908-09 | 1,0.42.29 | 47775 | 472.48 | $52 \cdot 3$ |
| Average 1904-05 to 1908-09 | 1,230\%71 | 572.66 | 51544 | 53 |

Grey goods declined by 16.9 per cent, white goods by 34.9 per cent, and coloured goods by $13^{-2}$ per cent. Bengal took only $731,835,000$ yards of grey goods or 70.2 per cent of the total, as compared with $939,938,000$ yards and $74^{\circ} 9$ per cent in $1907-08$.

The following statement shows in millions of yards figures for two years relating to the principal descriptions of imported goods belonging to these three classes under the present system of classification:

IMPORTS $\quad 3^{\text {б }}$

Colourbd, printed, or dycd

It will be seen that among the grey goods the most important groups all show marked contraction, drills and jeans being in fact the only item that expanded. White goods have the same story to tell, but coloured and printed goods in some lines continued to progress.

The production in Indian weaving mills, about which particulars are given in the chapter upon exports of cotton manufactures, consists chiefly of unbleached shirting, dhutis, T. cloths, domestics, and chádars. It increased by $3,3^{1} 3,000 \mathrm{lbs}$ or $1 \cdot 8$ per cent, but this increase resulted in heavy accumulation of stocks. The yardage of grey and bleached piecegoods increased from $680,047,000$ yards to $685,972,000$ yards, the advance being $5,925,000$ yards or 87 per cent. The weight at the same time fell from $155,084,000 \mathrm{lbs}$ to $154,937,000 \mathrm{lbs}$, which is $80^{\circ}$ per cent of the total weight of all woven cotton goods imported.

The extent to which the colton goods of the three main classes are derived from the United Kingdom is indicated below in millions of yards:

|  | 1976.07 |  | 1907 -08 |  | 1908.09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | From Kingdom | Total | $\underset{\substack{\text { Erom } \\ \text { Uingded }}}{\substack{\text { Uing } \\ \text { Kin }}}$ | Total | $\begin{aligned} & \text { From } \\ & \text { United } \\ & \text { Kingdom } \end{aligned}$ |
| Unbleached goods | . 1,298.48 | 1,289.34 | 1,253'79 | 1,2.47 38 | I,042'29 | 1,032.62 |
| Bleached | $49+97$ | $486 \cdot 32$ | 733.52 | 72199 | $477 \times 75$ | 466.19 |
| Coloured | 524.75 | $500 \cdot 44$ | 544* ${ }^{1}$ | 5178 | $472 \cdot 48$ | 441 |

Britain therefore supplies 99 per cent of the greys, $97^{\prime 6}$ per cent of the whites, and 93.5 per cent of the coloured goods. All of these percentages are lower than those recorded in $190 \%$ 08.

Besides these, there are some subsidiary classes of goods imported, the principal descriptions of which and the value of the respective trades were-in thousands :

This branch of the trade therefore showed a net contraction of $\mathrm{R}^{1} 5^{\circ} 9$ lakhs ( $£ \mathrm{r} 06,000$ ) or 6.9 per cent. The United Kingdom supplies $80^{\circ} 9$ per cent of the handkerchiefs and shawls and $90^{\circ} 6$ per cent of the sewing thread. But of the total it does only $5^{1} 7$ per cent, seeing that the considerable trade in hosiery is practically monopolised by Japan and Continental countries. Japan supplied
 ( $£ 255,900$ ) in 1907.08 ; and goods to the value of $\mathrm{R} 95,000$ ( $£ 6,300$ ) which came vid Hongkong and the Straits were probably also of Japanese origin. Germany, however, has now become an important participant in this trade with a total of Ri'it lakhs ( $£ 74,400$ ).

Silk goods-The imports of silk goods represent 5.2 per cent of the total imports of textile manufactures. It is satisfactory to note that the decline which appeared in this trade for some years has in the last two years been replaced by successive advances. In 1907-08 the figures were R213.49 lakhs ( $£ 1,423,300$ ) ; and in the year under review they were $R 228.14$ lakhs ( $\left(1,520,900\right.$ ), the net increase being $\mathrm{R}_{14} \mathrm{~K}_{5}$ lakhs ( $£ 97,600$ ) or 6.8 per cent. Of this, piecegoods represent R 145.56 lakhs ( $£ 970,400$ ) or 63.8 per cent of the whole, the increase in this case being $\mathrm{R}_{3} \cdot 3^{8}$ lakhs ( $£ 22,500$ ), equal to 2.4 per cent of the previous year's figure. This increase is more than accounted for by that of $\mathrm{R}_{4} 7^{\prime}$ lakhs ( $£ 3^{1,500}$ ) or $5^{\circ} 5$ per cent in the consignments from the predominant shipper, Japan, which sent goods to the value of Rgo'96 lakhs ( $£ 606,400$ ) in place of R 86.24 lakhs ( $£ 574, \varsigma 00$ ). The imports from China, which had shown an advance in 1907 -08, fell back from R $\mathbf{4 2}^{2} 45$ lakhs ( $£ 283,000$ ) to $R_{42} 19$ lakhs ( $£_{281,000 \text { ) ; and those from the Straits Settlements rose }}$ from R68,000 ( $£ 4,500$ ) in 1907.08 to R 82,000 ( $£ 5,500$ ). The Eastern section of the trade represented by these three sources now represents 92 per cent of the whole. Goods of silk mixed with other materials had advanced in 1907-08 but receded in 1908.09 by 10.2 per cent to $R_{43} 06$ lakhs ( $£ 287,000$ ). Other sorts consist mainly of warps and yarn importe 1 for the production of textiles for the Indian market; and these increased from $R_{22} \cdot 7$ lakhs ( $£_{151,300 \text { ) to }}$ $R_{3} 8.67$ lakhs ( $£ 257,800$ ), the expansion amounting to R15.97 lakhs ( $£ 106,500$ ) or 70 per cent.

Woollen goods represent about 67 per cent of the total value of textile goods imported into India. The trade responded to lower prices; and the total value of the imports rose from $\mathrm{R}_{27}{ }^{\circ}{ }^{\circ} 76$ lakhs ( $£_{1}, 845,100$ ) to R291'09 lakhs ( $\mathcal{I}, 940,600$ ) or by 5.2 per cent. Of the net increase of R14.33 lakhs ( 695,500 ), the whole may be ascribed to shawls. Piecegoods, while showing at 19,788,721 yards, a minute advance on the earlier year's figures, fell in total
 expansion of 55 per cent in quantity was therefore accompanied by a shrinkage of $2^{\circ} 9$ per cent in value, and this marks a coutraction of 3 per cent in the average
value per yard. The share of the United Kingdom in this branch of the trade receded from $\mathrm{R}_{143}{ }^{46}$ lakhs ( $£ 956,400$ ) to R127779 lakhs ( $£ 851,900$ ) or by

 ( $£ 58,900$ ). The drop in the one case was 10 .9 per cent; and the rise in the other was 27.4 per cent, bringing the shares of the countries respectively to 68.3 per cent and 21.9 per cent of the whole. In shawls, on the o:her hand, there was a substantial advance of Ri 873 lakhs ( 6124,900 ) or 548 per cent, bringing the total value to $\mathrm{R}_{52} \cdot 8$ lakhs ( $£ 35^{2,500}$ ) in place of $\mathrm{R}_{34} \cdot 15$ lakhs ( $£ 227,700$ ). In two years, the number of shawls imported has grown from 790,118 in $1906-07$ to $1,203: 372$ in $1907-08$, and then to $2,030,08_{1}$ in 9008.09 , the increase in the last year being one of 68.7 per cent. The average value per
 R2-9-S (38. $5_{\frac{\circ}{3}}$ d.). Germany supplied $1,810,706$ or 89 per cent of the total number. Woollen hosiery declined from $387,778 \mathrm{lbs}$ and Rioor lakhs ( $£ 66,700$ ) to $331,569 \mathrm{lbs}$ and Ro'7 lakhs ( $£ 6+, 700$ ); and of this the United Kingdom sent $303,878 \mathrm{lbs}$ and R 3.74 lakhs ( $£ 58,300$ ) or 90 per cent. Yarn again declined from $781,854 \mathrm{lbs}$ and R17.29 lakhs ( $£ 115,300$ ) to $757,730 \mathrm{lbs}$ and R15.55 lakhs ( $£ 103.700$ ) ; and of this Germany supplied no less than 78 per cent.

Other manufactured goods-Of these the following are the most important:

| 1907.0S |  |  | 1909-09 |  | $\begin{aligned} & \text { Increase }(t) \\ & \text { or }(t) \\ & \text { decrease }(-) \end{aligned}$ |

| Umbrella fitt | 25,90,873 | 172,725 | 19,27,822 | 128,52 | - $25^{6} 6$ |

The largest item among these is the composite one Apparel; and though it shows a contraction of R 16.57 lakhs ( $£ 110,400$ ) or 6.4 per cent, its total is still well in advance of that for 1906 -07. Glass, in spite of a decline of R27.6 lakhs ( $£ 184,000$ ) or 19 per cent, retains second place; while carriages and
carts, with a drop of R25.2 lakhs ( $£_{1} 68,000$ ) or $21^{\circ} 4$ per cent, barely maintain their position. This heading includes Motor cars and motor cycles at $R_{43} \cdot 14$ lakhs ( $£ 287,600$ ) which marks a decrease of $\mathrm{R}_{20}{ }^{\circ} 3$ lakhs ( $£ 135,300$ ) or $3^{2}$ per cent. Cycles on the other hand improved by $\mathrm{Ri}_{1} 6$ lakhs ( $£ 10,6,0$ ) or 7.2 per cent to $\mathrm{R}_{2} 3^{\circ} 74$ lakhs ( $£ 158,300$ ). Paper and pasteboard lost ground at the rate of 66 per cent or by R66: lakhs ( $£ 44,000$ ), and of this decline the major part or $\mathrm{R}_{5} 3_{3} \mathrm{l}$ lakhs $\left(£_{35,400)}\right.$ was accounted for by printing paper with a diminished total of $\mathrm{R}_{3} 0 \cdot 96$ lakhs ( $£ 2,6,400$ ). Matches have bettered their position by about i per cent; but they represent the only single article of the first dimension in this list which recorded an advance in the year under review. Building materials, it is true, show an advance of Rg lakhs ( $£ 60,000$ ) or 17 per cent, but the heading is a compo,ite one; and the first rank so far as total value is concerned can scarcely be conceded to those other articles that have progressed in 1908-09. Among them are Books and printed matter with an increase of $\mathrm{R}_{7} \cdot 24$ lakhs ( $£ 48,300$ ) or 21.9 per cent, Earthenware with an advance of nearly $\cdot 4$ per cent, Scientific instruments with one of 12.4 prent, Jewellery and plate with 9.8 per cent, Tea chests witi 39 per cent, and Farts of ships with one of 26 per cent. The course of this item is very variable; for when river steamers are being imported in parts by one or other of the steamer companies large sums appear in the statistics, and when the programme is complete a marked fall takes place. In the year under review the increase was $\mathrm{R}_{7} \cdot 8 \mathrm{I}$, lakhs $\left(£_{5} 2, \mathrm{roo}\right)$ and Burma after a year of inaction brought in parts to the value of R $\mathrm{R}_{2} 44$ lakhs ( $£ 183,000$ ), against only $\mathrm{R}_{7} 7 \mathrm{l}$ lakhs ( 51,300 ) in 1907.08 . Paints, ete., fell by R $2^{\circ} 7^{2}$ lakhs ( $£ 18,100$ ): Stationery by $R_{59,000}$ ( $£ 3.933$ ), Soap by Rg6,000 ( $£ 6,400$ ), and Leather by R2 lakhs ( $£ 13,300$ ). The simultaneou; declines of R2.09 lalihs ( $£ 14,000$ ) or 105 per cent in Umbrellas and of $R 6.63$ lakns ( $£ 44,200$ ) or $25^{\circ} 6$ per cent in Umbrella fittings attract attention hecause of the extent to which the trade in these articles has developed in recent years.

The principal articles of importation into India and their values in each of the last three years are shown in the following statement, the unit being 1,000:

The most rernarkable feature here is the decline of some $\mathrm{R}_{10} \mathrm{O}^{\circ} \mathrm{O}$ crores or $20^{\circ} 9$ per cent in cotton manufactures. Mention may also b: made of the increase in sugar which establishes it for the moment as the second article itt order of importance, and of the rise in the arrivals of copper under the influence of low prices. The increase was greater in quantity than might appear from the figures of value. The decline in the imports of Aniline and alizarine dyes is noteworthy as marking the first reaction under this head for some years.

The Sources of imported merchandise have so far been assumed in the Indian trade accounts to be those countries from which the goods were shipped in such vessels as landed them in India. In the case of transhipment cargo, the port of such transhipment appeared as the port of origin unless a through Bill of Lading has been granted at the port of original shipment. When such through Bill of Lading has been granted, the country of first shipment is assigned as the country of origin. Arrangements now in force furnish statistics by which the true countries of origin are more correctly shown; but retrospective figures on that basis have not yet become available; and for the purpose of comparison it is necessary as yet to use the statistics constituted on the old basis. According to these statistics the value of imports has in the last inve years been appropriated to the various principal countries in the proportion shown below:

|  |  | 1904.05 per cent | $1905 \cdot 6$ per cent | 1906.07 per cen | $\begin{gathered} 1907.08 \\ \text { per cent } \end{gathered}$ | 1908.0) per cen |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 United Kingdom | - | $65 \cdot 2$ | $66 \cdots$ | 66.8 | 66.7 | 62.6 |
| 2 Java | . | 2.1 | 1.8 | 27 | $4 \cdot 5$ | 51 |
| 3 Belgium . | - | $3 \cdot 6$ | 4.3 | , | 4.1 | 4.2 |
| 4 Germany . | - | 3.9 | $4 \cdot 2$ | $5 \cdot 3$ | 4 | $4 \cdot 1$ |
| 5 Austria-Hungary | . | $4 \cdot 1$ | 4 | 2.8 |  | 3.2 |
| 6 Straits Settlements | . | 3.2 | 2.5 | $2 \cdot 6$ | 2.4 | 2.8 |
| 7 United States | . | $1 \cdot 1$ | $2 \cdot 2$ | $2 \cdot 3$ | 2.5 | $2 \cdot 7$ |
| 8 Mauritius | - | 21 | 2 |  | $1 \cdot 9$ | $2 \cdot 1$ |
| 9 China | . | 2 | 1'7 | $1 \cdot 4$ | 17 | $1 \cdot 9$ |
| 10 Japan | - | $1 \cdot 2$ | $1 \cdot 2$ | 1'5 | 17 | 17 |
| 11 France |  | $1 \cdot 9$ | $1 \cdot 7$ | 1.4 | 1.6 | $1 \cdot 5$ |
| 12 Italy |  | $1 \cdot 3$ | $1 \cdot 1$ | 1 | $\bigcirc \cdot 9$ | $0 \cdot 9$ |
| ${ }^{3} 3$ Russia |  | 17 | $\bigcirc \cdot 3$ | $0 \cdot 1$ | $\bigcirc$ | 0.9 0.2 |

The total value was R121.26 crores ( $£ 80,840,000$ ) against R129.89 crores ( $£ 86,590,000$ ) in $1907-08$. The United Kingdom with R $75^{\prime} 93$ crores ( $£ 50,620,000$; has lost a part of its lead largely as a consequence of the heavy declines in imports of cotton goods. Java with its enormous shipments of sugar has assumed the second place with $R \in \cdot 2$ crores ( $£ 4,130,000$ ) against $\mathrm{R}_{5} \cdot 8$ crores ( $£_{3}, 8 ; 0,000$ ) in the previous year. Belgium, with $\mathrm{R}_{5}{ }^{\prime} 17$ crores ( $£ 3,450,000$ ) against $R_{5} \mathbf{3}^{1}$ i crores ( $£ 3,540,000$ ), and Germany, with. $R_{4} 93$ crores ( $£ 3,29$, 000 ) against $R_{5} \cdot 16$ crores ( $£ 3,440,000$ ), are in the third and fourth places; but it is known that the present system of registration fails to distinguish in all cases those German goods that are shipped from Belgium. Conjointly they did 3.3 per cent of the trade against $8 \cdot 1$ per cent in 1907.08 Austria-Hungary has assumed the fifth place with $R_{3} \cdot 87$ crores ( $£_{2}, 580,000$ ), against $R_{2} \cdot 65$ crores ( $£_{1,770,000 \text { ) in the previous year. The Straits Settlements }}$ have also improved their position with $R_{3} \cdot 5$ crores ( $£ 2,330,000$ ) in place of $\mathrm{R}_{3} \cdot{ }_{15}$ crores ( $£ 2,100,000$ ). The trade with the United States has increased from $R_{3} \cdot 24$ crores ( $£_{2,160,000}$ ) to $R_{3} \cdot 26$ crores ( $£ 2,170,000$ ) ; and this in a year of diminished total raises the percentages. Mauritius, the second great source of imported cane sugar, also increased her trade from R2.44 crores ( $£_{1}, 630,000$ ) to $\mathrm{R}^{2}{ }^{\prime} 56$ crores ( $£ 1,710,000$ ). Japan's trade with India fell off from R2'17
 with $R_{2} \cdot 3^{2}$ crores ( $£ 1,550,000$ ) in place of $\mathrm{R}_{2} \cdot 2$ crores ( $(1,470,000$ ) in 1907.08. The share of France suffers from the diminution of her total from $\mathrm{R}_{2} \cdot \mathrm{O}_{3}$ crores ( $£ \mathrm{I}, 350,000$ ) to RI.81 crores ( $£ 1,210,000$ ). That of Italy remains unchanged, although her total was only $R_{1}{ }_{1} 3_{3}$ crores ( $£ 753,000$ ) as compared with R1.19 crores ( $£ 793,000$ ); and Russia comes last with a diminished total of R27'97 lakhs ( $£ 186,500$ ) in place of R40'14 lakhs ( $£ 267,600$ ) in the previous year.

Imports of Government stores are not included in the foregoing figures. They amounted to R751.24 lakhs ( $£ 5,008,300$ ) as comvared with R664:29 lakhs ( $£ 4,428,600$ ) in 1907-08. Of this total, R 707.89 lakhs ( $£ 4,719.300$ ) came from the United Kingdom, as against R615.24 lakhs ( $64,101,600$ ) in $1907-08$. The absolute increase in the share of the United
 that share from 926 to $94^{\prime 2}$ per cent of the total.

Material for State Railways amounted to R45:95 lakhs ( $£ 3,013,000$ ) or 60 per cent of the total, while in the previous year the figure was R268.66 lakhs - $\left(£^{1}, 791,100\right)$ or $40^{\circ} 4$ per cent. Imports of other descriptions of stores therefore fell from $R_{395} 6_{3}$ lakhs ( $£_{2}, 637,500$ ) to $R_{299} 3$ lakhs ( $£ 1,995,300$ ), the difference being Rgo. 33 lakhs ( $£ 642,200$ ). It may be said that all these stores, with unimportant exceptions, really represent commercial transactions.

It may be mentioned here that the imports of material for railways, State and non-State, have in the last three years been as follows:-1906-07, R849'29 lakhs ( $£ 5,669,000$ ) ; 1907.08,R988.74 lakhs ( $£ 6,591,600$ ) ; 1908-09, RII 93.94 lakhs ( $£ 7,959,600$ ). In the same period the share of the United Kingdom in the total import trade, including Goverement stores, has been-1906.07, 68.8 per cent; 1907-08, 68 per cent; 1908-09, 64.5 per cent. .

## EXPORTS OF IMPORTED GOODS

In the last three years the value of the re-exports by sea has been on an average $2 \cdot 1$ per cent of the total exports of the merchandise and has represented
2.9 per cent of the imports from which they were derived. The development of direct communications between various parts of the world tends to dimin ish the trade of entrepots, so a íairly continuous decline in this branch of India's trade might be looked for. It has in fact taken place since $1895-96$ when the figures stood at $R_{\mathcal{H}^{\prime}} 7^{2}$ crores ( $£ 3.15$ millions). A slight recovery had appeared in the figures for 1907-0S; but in the year under review the contraction was resumed and the total value at $R_{3} \cdot 17$ crores ( $£_{2} \cdot 11$ millions) showed a drop of $R_{59} \cdot 66$ lakhs ( $£ 399,000$ ). The following statement records the extent of the trade in each of the last four years mith averages for two earlier quinquennial periods:

The chief ports of Western India continued to do the larger part of this trade. But their share of the total declined from 90 per cent to 87.2 per cent; and the decline was more marked in this branch of the trade than in the shipments from Eastern India to the further East. The share of Bombay itself, namely, $\mathrm{R}_{2}{ }_{3}{ }^{\circ}{ }_{3} 6$ lakhs ( $£ 1,536,000$ ), fell away from 77 to about 73 per cent. The greater part of the re-exportation is in manufactured goods from Western countries. Cotton goods continue to constitute the most important class, though the decline, which was interrupted in $190 \%-08$, has been resumed and has brought the percentage to $35^{\circ} 5$ per cent as against $39^{\circ} 4$ per cent in 1907.08 and 37.7 per cent in $1906-07$. Piece goods, after rising to $\mathrm{R}_{133} 3^{\circ}$ lakhs ( $£ 888,700$ ) in $1907^{-08}$, have now declined to R101•53 lakhs ( $£ 677,000$ ), and of these grey goods fell from R1i 54 lakhs ( $£ 77,000$ ) to R8.41 lakhs ( $£ 56,000$ ) and coloured goods from Rio ${ }^{\circ} 75$ lakhs ( $£ ; 05,000$ ) to $\mathrm{R}_{79} 66$ lakhs ( $£ 531,000$ ); the loss being $\mathrm{R}_{26} 6_{1}$ lakts ( $£^{1} 74,000$ ) or nearly 25 per cent. Yarns, which in $1907-08$ had risen to $\mathrm{R}^{\circ} \circ 7$ lakhs ( $£ 60,500$ ), fell to $\mathrm{R}_{5} \cdot 66$ lakhs ( $£ 37,700$ ) ; this is litile more than in $1906-07$ with its high prices. Persia, which is the chief buyer, took only $R_{4} \cdot{ }_{3}$ lakhs ( $£ 27,500$ ) against $\mathrm{R}_{5} \cdot 99$ lakhs ( $£ 40,000$ ) in 1907.08 and $\mathrm{R}_{4} \cdot 14$ lakhs ( $£ 27,600$ ) in $1906 \cdot 07$. The decline in metals, which began markedly in $1907-08$, reducing the value from R29'73 lakhs ( $£ 198,000$ ) to $R 20^{\prime} 72$ lakhs ( $£ 138,000$ ), became emphasised in the total for the year under review, when it fell by 34.9 per cent to $\mathrm{R}_{1} 3^{4} 48$ lakhs ( $£ 90,000$ ). Apparel also returned from Rig lakhs ( $£ 126,700$ ) to $\mathrm{R}_{1} 5^{\circ} \circ \mathrm{O}_{3}$ lakhs ( $£ 100,200$ ) which is below the level of two years ago ; while sugar, which in two successive years had gone from $\mathrm{R}^{2} 0^{\circ} 2$ lakhs ( $£^{1} 34,700$ ) to R10'11 lakhs ( $£ 67,400$ ), made a small recovery to $\mathrm{R}_{11} \cdot 73$ lakhs ( $£ 78,200$ ). Oils, which have also shown a weakening tendency in recent years, fell away by 23 per cent from $\mathrm{R}_{1} \cdot 70$ lakhs ( $£ 11,300$ ) to $\mathrm{R}_{1} \cdot 3 \mathrm{l}$ lakhs ( $£ 8,700$ ). Exports of foreign tea, which in $1907-08$ recovered to $991,305 \mathrm{lbs}$, fell to $833,996 \mathrm{lbs}$, the decline being one of $15 \% \mathrm{per}$ cent. In exports to Persia the decline from 350,000 to $190,500 \mathrm{lbs}$ represented one of $45^{\circ} 5$ per cent, but exports to Russia continued their growth and reached $71,549 \mathrm{lbs}$ against $35,860^{\circ} \mathrm{lbs}$ in 1907.08, and T:srkey in Asia took $389,898 \mathrm{lbs}$ as against $422,139 \mathrm{lbs}$ in the previous year.

Persia's share contracted by Rif 36 lakhs ( $£ 145,700$ ) or 27 per cent to a sum of $R_{4} 6.9$ lakhs ( $£_{3} \times 2,700$ ), which represents 14.8 per cent of the whole. Arabia also shored a decline of R 7.99 lakhs ( $£ 53,300$ ) or $30^{\circ} 5$ per cent and brought her share down to $5 \%$ per cent, while Turkey, Asiatic, reced - d to $\mathrm{R} 25^{\circ} 63$
 buting point, receded to $\mathrm{R}_{15} \cdot 15$ lakhs ( $£ 101,000$ ) or 4.8 per cent of the trade. Ceylon at $R_{15} 93$ lakhs ( $£ 106,200$ ) improved her share to 5 per cent and British East Africa with Rir 69 lakhs ( $£ 78,000$ ) reduced her share to 3.7 per cent of the total trade. China at $R_{16.8}$ lakhs ( $£ 112,000$ ) improved her share to 53 per cent of the whole. The Straits Settlements form an entrepot, and their share is. now $R 12.8$ lakhs ( $£ 85,300$ ) or 4 per cent of the total trade.

- Re-exports to Western countries are comparatively small, but the share of the United Kingdom at R73.35 lakhsl ( $£ 489,000$ ) as aganst $R 84.86$ lakhs ( $£ 565,700$ ) in 1907.08 represents 23.1 per cent of the whole as against 22.5 per cent. The chief commodity is raw wool, which comes partly by the land frontiers and is exporied mainly from Karachi; and this article, which had grown for sume yearj, fell back from $5,262,962$ lbs valued at $R_{32}{ }^{\circ} 76$ lakhs ( $£ 218,400$ ) to $4,994,593$ lbs with a value of R2791 lakhs ( $£ 186,000$ ). The following articles showed declines as detailed: Hardware and cutlery ( $R_{3} \circ{ }^{\circ}$ lakhs $=£ 20,500$ ); Silk, raw and manufactured ( $\mathrm{R}_{1} 86$ lakhs $=£ 12,400$ ); Drugs and medicines ( $\mathrm{Rr} \cdot 45$ lakhs $=£ 9,700$ ); Provisions ( $\mathrm{Rr} \cdot 3$ lakhs $=£ 8,700$ ); Glass and glassware ( $\mathrm{Ri} \circ 7$ lakhs $=£ 7,100$ ); Earthenware and porcelain ( $\mathrm{R} 86,000=£ 5,700$ ); and coral ( $\mathrm{R} 79,000=£ 5,300$ ). The only substantial off-sets to these cumulative decreases were the increase in sugar already referred to and those in Carriages and carts ( $R \cdot 1 \cdot$ lakhs $=£ 7,3^{\circ \circ}$ ) and Machinery and millwork ( $\mathrm{R} 70,000=£ 4,700$ ).

## EXPORTS OF INDIAN MERCHANDISE

Exports of Indian merchandise in $1908-09$ formed 97.9 per cent of the :otal exports and about $54^{\circ}$ o per cent of the total trade in merchandise. Their total value was Ri49.82 crores ( $£ 99.88$ millions) as compared with $\mathrm{R}_{17} \mathrm{~F}_{3} \cdot 48$ zrores ( $£ 11565$ millions) in 1907-08. The decline was therefore one of $R_{2} 3.65$ crores ( $£ 15.77$ millions) or 13.6 per cent, and this comes after a series of juccessive annual advances. The following statement shows the progress made $n$ the past 29 years, the unit being $\mathbf{1 , 0 0 0}$ :

The principal articles in the export trade of the last three years are enumerated below with their values in thousands of rupees and of pounds sterling :

|  | 1506007 |  | 1907-08 |  | 1908-09 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

For the second time raw jute has supplanted raw cotton as the single export article of largest value; and, together with its manufaciures, it represents a larger total than cotion and its manufactures. Raw jute though still far short of the record figure of 1906.07 , showed an incrase of R186.17 lakhs ( $£ 1,241,000$ ) or 10.4 per cent; but, as jute manufactares declined by R256.16 lakhs ( $£ 1,707,700$ ) or 14 per cent, the aggregate of the two classes' showed a loss of about R 70 laklis ( $£ 467,000$ ). Raw cotton on the other hand declined by no less than $\mathrm{R} 593 .+$ lakhs $(£ 3,956,000)$ or $23^{1} 1$ per cent, while cotton manufactures added only $\mathrm{R}_{77} 05$ lakhs ( $£ 514,000$ ) or 7.2 per cent to their value, leaving a net decline of $\mathrm{R}_{51} 6_{34}$ lakhs ( $£_{3,442,000 \text { ) equal to }}$ ${ }^{14.4}$ per cent. Exports of Rice were lower than they have been at any time since 1901-02. Wheat and wheat flour figured at only Ri. 86 crores ( $£ 1.24$ millions), having lost 79.6 per $\mathrm{c} \in \mathrm{nt}$ of the total for $1907-08$, and the class Pulses, millets, and cereals not specified dropped by 59.6 per cent or R ${ }_{120} 69$ lakhs ( $£ 804,60$ ) to a figure unprecedentedly low. In addition to the áricles specified in the foregoing list, there are others which in recent years have generally attained some importance. These are Manures with a reduced total of Rgo'06 lakhs ( $£ 600,400$ ) ; Fodder, bran, and cattlefood with a diminished value of $\mathrm{R}_{131}{ }^{\circ}{ }^{6}$ lakhs ( $\mathcal{L} \subset 78,400$ ); Indian metals and manufactures thereof with a diminished value of R 86.75 ( $£ 578,300$ ) ; Coir manufactures expanding at $R 62^{\circ} 75$ lakhs ( $£ 418,300$ ) ; and raw hemp and Coal and coke at $R_{59} \cdot 68$ lakhs ( $£ 398,000$ ) and $R_{50} 5^{\prime} 1$ lakhs ( $£ 336,700$ ) respectively. Fruits and vegetables, having nearly doubled its total in the single year, attained a level (R69.58 lakhs $=£ 464,000$ ) that would shortly command a place in the tabular statement; while saltpetre, having remained at about $R_{4} 1$ lakhs ( $£ 273,300$ ) in the preceding two years, also made a notable advance to $R_{45} 35$ lakhs ( $£ 302,300$ ). The net increase of $R 8.62$ lakhs ( $£ 57,500$ ) in oils is derived solely from the expansion of $\mathrm{R}_{2} 3.15$ lakhs ( $£ 154,300$ ) in cocoanut oil. This represents $134^{\circ} 8$ per cent on the figures for 1907-08; but it was offset in part by falls of $\mathrm{R}_{7} \cdot 53$ lakhs ( $£ 50,200$ ) in castor oil, $\mathrm{R}_{3} \cdot 54$ lakhs ( $£_{23} 2,600$ ) in mineral oil, and about $R_{2}{ }^{\prime} 3$ lakhs ( $£ 15,300$ ) under each of the heads essential and mustard.

The statement below shows for three years the value in thousands of rupees and of pounds sterling of the trade in each of the four principal classes under which articles are grouped in the accounts:

|  | 1906.07 |  | 1907-08 |  | 1908-09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | む | R | £ | R | む |
| Articles of food and drink | 40,23,64 | 6,824 | $44,73,17$ | 29,82 1 | 32,54,09 | 21,694 |
| Chemicails, drugs, medicines, narcotics, and dyeing and tanning materials . | 11,55,74 | 7,705 | 11,03,78 | 7,359 | 11,47,29 | 7,649 |
| Raw materials and unmanufactured articles | 81,53,23 | 54,355 | 76,23,00 | 50,820 | 67,18,50 | 44,750 |
| Articles manufactured and partly manufactured | 37,85,54 | 25,237 | $39,29,8 \mathrm{I}$ | 26,199 | $3^{6,65,46}$ | 24,436 |

## ARTICLES OF FOOD AND DRINK

These represent 21.7 per cent of the total exports but about 26.8 per cent of the total imports. In this class there was a net decline of $\mathrm{R}_{12} 19$ crores ( $£ 8,127,000$ ) or 272 per cent in value, the total being $\mathrm{R}_{3} 2.54$ crores ( $£ 21,693.000$ ) as against $R_{44}{ }^{\circ} 73$ crores ( $£ 29,820,000$ ) in $1907-08$. The largest single decline was that of $\mathrm{R}_{7} \cdot 28$ crores ( $£ 4,853,000$ ) in wheat and wheat flour, which receded to $\mathrm{R}_{1} \cdot 86$ crores ( $£ 1,240,000$ ) on the shortage of food crops in India and the rise of wheat prices above exportation point. Rice likewise declined by some $R_{4} \cdot 45$ crores ( $£ 2,967,000$ ) to R 15.89 crores ( $£ 10,593,000$ ). Other food grains, which stood at $R_{2} 02$ crores ( $£ 1,347,000$ ) in $1907-08$, fell away to $R 82$ lakhs ( $£ 547,000$ ). It may be said that these variations mark the year as altogether abnormal; but to anyone who knows the extent to which all parts of India are subject to vicissitudes in respect of weather and crops, they serve as a reminder of the precariousness of an Indian exportable surplus and the exceeding diffidence with which it is necessary to regard any estimate of its normal level. The progress in Tea was maintained ; and the addition of R9:34 lakhs ( $£^{62,300}$ ) to its value brought the total to $\mathrm{R}_{10}{ }^{\circ} 39$ crores ( $£ 6,927,000$ ). Fruits advanced by $\mathrm{R}_{31}{ }^{\prime} 34$ lakhs ( $£ 209,000$ ) to R69'58 lakhs ( $£ 464,000$ ), which represents an improvement of 82 per cent; and Coffee at $\mathrm{Rr}^{\circ} 39$ crores ( $£ 926,000$ ) made an advance of $R_{27} \cdot 54$ lakhs ( $£ 184,000$ ) or 24.7 per cent.

Coffee-The exports of coffee represent some 4.3 per cent of the total exports of articles of food and drink. During the past three years the coffee trade has been unsettled by the nugatory "valorization" scheme in Brazil which was evoked by the abnormal crop of 1906.07 . This resulted in the creation of a heavy reserve stock which the Government found it impossible to liquidate, and which lay heavily on the market preventing that rise in price which the scheme was designed to bring about. Some of the initial purchases by the Government of Sáo Paulo were made in 1906 at $4 \$ 750$ per io kilos of No. 4 New York Type which is now quoted at $3 \$ 525$. Resort has been had successively to laws restricting exportation, to heavy borrowing for the financing of the scheme, and to the establishment in London of a subsidised company to push the sale in England of coffee officially guaranteed pure. But only in respect of the last can it be said that there still remains any substantial hope of success; and in the latter half of 1908 the market was further disturbed by reports that the Government of Sao Paulo had, in spite of its statutory obligations, effected clandestine realization of some of its holding in the European market: Since

Brazilian coffee now constitutes some two-thirds of the world's supply it is not surprising that the trade in India slould have felt the incubus of the heavy reserves elserhere. In the circumstances it is satisfactory to find that the statistics fur 1908-09 indicate some recovery from the declines recorded in the previous past years. The following statement summarises the results of the trade in the last five years :

|  |  |  | Cwts | $\boldsymbol{R}$ | $£$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1904-05 | - . | - - | - 329,647 | 1,66,09,757 $=$ | 1,107,317 |
| 1905-06 | - - | - . | - 360,182 | 1,75,67,240 | 1,171,149 |
| 1906-07 | - - | . . | - 228,094 | 99,64,773 | 664,319 |
| 1907-08 | - • | - . | - 244,234 | 1,11,45,202 | 743,013 |
| 1908.09 | - - | - $\cdot$ | - 302,022 | 1,38,99,792 | 926,653 |

The increase of 23.7 per cent in quantity together with one of $24^{\circ} 7$ per cent in value marks a minute improvement in average value, so far as declared values of exports can be relied on. But there is too much reason to believe that the trade has in fact been anything but remunerative; and the total quantity and value are still a long way below those for 1905-06.

The shipments to the United Kingdom ard those to France each represent something over 43 per cent of the total; and while those to the United Kingdom rose to $\mathbf{I}_{3} \mathbf{1}, 927 \mathrm{cwts}$, those to France rose to $\mathbf{1} 30.555 \mathrm{cwts}$. It is known that most of the superior coffee shipped to the United Kingdom is distributed to other parts of the world; and to this cause is due the striking uniformity with which the rise or fall of the exports to England conforms to the variations in the Continental and American demand.

Fruits and vegetables-The value of the exports of fruits and vegetables made a further advance from $\mathrm{R}_{3} 8.24$ lakhs ( $£ 255,000$ ) to R 6958 lakhs ( $£ 464,000$ ), the increase being one of $R_{31} \cdot 34$ lakhs ( $£ 209,000$ ) or 82 per cent. The principal article in this class is Copraw hich would probably be better grouped with other materials for the oil industry, as is done in certain foreign countries. It now represents 76.2 per cent of the total value of the class and figures at $395,126 \mathrm{cwts}$ and $\mathrm{R}_{52} 99$ lakhs ( $£ 353,000$ ) as against $119,829 \mathrm{cwts}$ and $\mathrm{R}_{21}{ }^{\prime} 58$ lakhs ( $£ 144,000$ ) in $1907-08$. The increase is one of $229^{\circ} 7$ per cent in quantity and $145^{\circ} 5$ per cent in total value, by which difference a decline of $25^{\circ} 5$ per cent in average value would appear to be indicated. The sum of $\mathrm{R}_{31} \cdot 41$ lakhs ( $£ 209,000$ ), by which this single article developed, more than accounts for the tutal increase indicated above, and in "others" with a total of $\mathrm{R}_{16}{ }^{5} 59$. lakhs ( $£ 1: 0,600$ ) there was a decline of some $\mathrm{R} 7,000$ ( $£ 467$ ).

Rice formed $85^{\circ} 6$ per cent of the total value of food grains from India in 1908 -09, as against 64.5 per cent in 1907.08 , and represented 10.6 per cent of the value of all Indian produce exported as compared with 117 per cent in the previous year.

For the third year in succession, the salient feature of the Indian rice trade has been the strong internal demand and the curtailment of the exportable surplus. That surplus may be diminished either by poverty of outturn in the crop itself or by shortage in other food grains for which rice may be substituted, or by exceptional prosperity and enhanced consuming power among cultivators of crops other than food grains, or by a disposition on the part of cultivators to grow such specially profitable crops in place of rice. All of these causes have operated in recent years, but such of them as depend on the exceptionally profitable cultivation of other crops have in $1908-0$ been less operative than in
either of the two previous years, seeing that the price of jute has very greatly fallen. But the shortage of food grains in Northern India and in parts of Bengal imposed a heavy demand on the Burman supplies, and maintained prices at a level inconveniently high for the exporter. Many districts of India, which a few years ago rejected Burma rice as unwholesome, for the reason that the people had not learnsd the peculiar methods necessary in cooking it, have now been educated and have accepted this grain as useful. This means that in event of future shortage of food grains in India proper, her demand for Burma rice will be more ready than formerly; and the market will have to take this factor into account.

The total rice crops with which this review is mainly concerned were estimated at $19,945,490$ tons as compared with $19,224,235$ tons in the previous year.

The following statement shows in thousands the quantity and value of the exports abroad during the last five years :-

|  | True Exports from all India |  |  | Burma's share of total per cent | Coastwise Exports from Buraia |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Tons | R | 6 |  | Tons | R | Ł |
| 1904-05 | 2,474 | 19,61,90 | = 13,079 | 76.2 | 301 | 2,05,14 | $=1,367$ |
| 1905-06 | 2,152 | 18,63,69 | 12,425 | 73.3 | 460 | 3,47,40 | 2,316 |
| 1906-07 | 1,935 | 18,52,5 | 12,350 | 73.4 | 813 | 7,22,84 | 4,819 |
| 1907-08 | - 1,913 | 20,33,63 | 13,558 | 76.4 | 979 | 9,62,10 | 6,414 |
| 1908-09 | - 1,512 | 15,88,75 | 10,592 | $72 \cdot 4$ | 1, 157 | 12,04,91 | 8,033 |

The exports to foreign countries therefore declined by nearly 21 per cent or 401,000 tons, which makes the aggregate contraction recorded in three - successive years one of 640,000 tons or nearly 30 per cent, in value the decline in 1908.09 was $\quad 21.9$ per cent, and this would point to a drop of some 1.2 per cent in specific value. On the other hand the average price in Calcutta for Ballam rice No. 1, which was R8-5.O (11s. 1 d .) per cwt in 1907-08, was R8-4-3 (11s. $\frac{1}{4} d$.) or 6 per cent lower in 1908-09; while the average price for Ngatsain rice in Rangoon declined from $\mathrm{R}_{5 \cdot 3} \cdot \mathrm{O}\left(6 \mathrm{~s}\right.$. i1 d ) to $\mathrm{R}_{4 \cdot 14-3}\left(6 \mathrm{~s}\right.$. $6 \frac{1}{4} \mathrm{~d}$.) or by $5 \% 7$ per cent. Since the new Burma crop appeared on the market in December 1908, the price in Rangoon has ranged about $R_{3-13-0}$ ( $5 s .1 d$.) which is lower than it has stood sirice August 1905. Burma's share of the exports to foreign countries was in quantity 72.4 per cent of the total exports from British India as compared with $76^{\circ} 4$ per cent in the previous year.

The growth of Burma's shipments of rice to India proper is striking. In $1908-09$ it amounted to $1,157,168$ tons, which represents an advance of $18 \cdot 1$ per cent in one year and consumates increases of 151 per cent in three years and of 494 per cent in five years. The following statement shows the distribution of Burma's coastwise exports among the various ports of India :

|  | 1934.05 | 1905-06 | 1906.07 | 1907.08 | 1908.09 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Tons | Tons | Tons | Tons | Tons |
| Bengal | 4,538 | 40,220 | 276,040 | 431,301 | 550,957 |
| E. B, and Assam |  | ... | 239,006 | 142,34 | 21,486 |
| Bombay | 171,889 | 225,447 | I 4 4,634 | 206,395 | 243,095 |
| Sind . |  | ... | ... | ... | 91 |
| Madras | 116,005 | 172,054 | 172,772 | 173,733 | 322,611 |
| Travancore . | 8,656 | 22,265 | 10,513 | 25,856 | 18,928 |
| Uther Non-British Ports | ... | 72 | 10 | ... | ... |
| Total | 301,088 | 460,058 | 812,975 | 979,626 | 1,157,168 |

It will of course be understopd that a considerable part of the large shipments received in Bengal were landed at Calcutta in transit for other places in the interior. And here it may be noted that, whereas Bengal together with Eastern Bengal and Assam imported rice to a value exceeding the figure of the previous year by R21:2 lakhs ( $£ 14,600$ ), they tngether exported raw jute exceeding the earlier year's record by RIS8*56 lakhs ( $\oint_{1,257,000 \text { ). }}$

Ceylon is the largest single purchaser of Indian rice and took 255,181 tons of a value of $R_{3} \cdot 21$ crores ( $£_{2,140,000}$ ), as against 283,593 tons in 1907 -0 0 with a value of $R_{3} 48$ crors $\left(£_{2,320,000) \text {. There were thus a decrease of io per cent }}\right.$ in quantity and one of 77 per cent in value, which discrepancy indicates a rise of 2.6 per cent in specific value.

Japan's rice crop in 1908 was a record one, the outturn being estimated as 17 per cent larger than in 1907. It is therefore not surprising that her purchases of Indian rice, which a few years ago averaged 337,262 tons per annum, had fallen in 1907.08 to 125,000 tons, and have now subsided 1020,553 tons.

The exceptional shortage of rice in China had carried India's exports to that country to an average of 16,000 tons in the two previous years. In $1908-09$ the exports to China fell to 2,764 tons which is comparable with the 4.315 tons sent in 1905.06 . Although damage was done by floods in May and June the 1908 crop in some parts of China "as exceptionally good and the Korean crop was estimated as 30 per cent greater than had been known for many yeaĩs. The exports to the Straits Settlements subsided from $\mathbf{2 2 4 , 4 0 0}$ to $\mathbf{1 5 2 , 2 5 3}$ tons or by 32 . per cent, but this was to be ascribed not merely to the decline of the Straits as an entrepot or point of distribution, but to the large supplies drawn thither from other sources. It is noticed that Bangkok, for instance, sent 404,822 tons of rice to Singapore in 1908 as compared with an average of 302,000 tons in the two previous years.

The practice of shipping rice to Egypt "for orders," and then forwarding it to destination not at first known, vitiates to some extent the figures relating to exports to western countries. For example, $\underset{\text { F }}{ }$ of ${ }^{\prime \prime}$ d at first figured for 376,376 tons in the accounts of the previous year, but $h_{s}$ s-adjustment this has been reduced to 59,035 tons, the balance of 317,341 toins having been distribu:ed among other countries. So the following figures must be recognised as incomplete. Germany, whose direct imports of Indian rice had risen 10300,449 tons in $1007-08$ with a value of $\mathrm{R}_{3} 07$ lakhs ( $£ 2,047,000$ ), still retains her lead as the principal occidental consumer, but with a reduced total of 187.486 tons and R188.93 lakhs ( $£ 1,259,500$ ). The United Kingdom also showed a decline with 127,715 tons and R11966 lakhs ( $£ 798$, coo ), in place of 152,865 tons and R16741 lakhs

 lakhs ( $£ 623,000$ ).

The exports of unhusked rice increased from $27,6,58$ tons valued R18.62 lakhs ( $£ 124,000$ ) to 28,885 tons valued $R 18.72$ lakhs ( $£ 124,800$ ), of which Ceylon took 28,790 tons, included in the figures quoted above.

Wheat - On the average of the five years ending $1907-08$, wheat represented $3^{2} 9$ per cent of the value of all exports of food grains from India and 6.6 per cent of the total value of Indian merchandise exported.

Wheat in India is harvested in April to June. The statistical year begins with April. Therefore the trade statistics of one year relate to the crop statistics of the previous year. It will thus be understood how the figures that we
have now to examine reflect the disastrous rainfall conditions that characterised the monsoon of 1907. The rains ceased early. Sowings of all kinds were contracted; and wheat was in many places displaced in favour of food crops capable of earlier maturity. The area under wheat was reduced by 26 per cent and the outturn was about 27 per cent less than on the average of the previous five years. Famine conditions existed over wide tracts, and much of the reduced wheat crop which might have been available for export was diverted to serve internal demand. The following statement shows the Indian exports for 1908-09, in comparison with the crop data for $1907-08$, and the average exports in the five years ended 1907.08 , in comparison with the average crop data for the five years ended $1906 \%$. Comparison is also made between the figures for the year under review and those for the last preceding year; and in every case the percentage ratio of increase or decrease is brought out, the average of the earlier period or year being taken as 100 :-

|  | 1 | 2 | 3 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Average of previous five years. | Previous year. | Year under revien (b) | Ratio of Col. 3 to |  |
|  |  |  |  | C.ol. 1 | Col. 2. |
| Area, thousands of acres | 26,017 | 29,212 | 22,806 | $87 \cdot 66$ | 78.07 |
| Outturn, thousands of tons | 7,971 | 8,492 | 6,104 | $76 \cdot 58$ | 71.88 |
| Irrigated area, thousands of acres (a) . | 8,563 | 9,208 | 8,306 | $97^{\circ}$ | $90 \cdot 2$ |
| Exports, thousands of tons | 1,213 | 880 | 110 | .9'1 | 12.5 |
| Exports, thousands of rupees . | 10,67,38 | 8,58,50 | 1,34,01 | 12.6 | 156 |
| Average export value, rupees per ton | 88 | 97.55 | 121.3 | 138.4 | 124.9 |
| Imports, thousands of tons | 9 | 13 | 29 | 322.2 | 223 |

It will be seen that the expurts of wheat dropped to 109,757 tons, as compared with 880,459 tons in the previous year and with $1,213,003$ tons on the average of the five years ending 1907-08. The value of these exports is estimated at $R$. 134 crores ( $\{833,300$ ) as compared with $R 8.58$ crores $(£ 5,720,000)$ in $1907-08$. Only about 6,000 tons went to places other than the United Kingdom. There would be little use in analysing the trade of a year that was so entirely abnormal. But in order that the scope and the usual distribution of the Indian wheat supply may be borne in mind, it is well to state that of the average exports ( $1,213,003$ tons) the British Empire has taken $95^{2,222}$ tons or 78.5 per cent, the United Kingdom alone absorbing 943,850 tons or 77.8 per cent. Of the 260,78 t tons or 215 per cent purchased by Foreign countries Belgium consumes 137,215 tons, which is 11.3 per cent of the whole. It is necessary to explain, however, that these figures are imperfect in so far as no attempt was made in the earlier years of the period to rectify the error introduced by the practice of declaring exports to Egypt "for orders" and using the ports of that country merely as a distributing point. Since

[^13](b) In respect of area and outturn, the "year under review" is $1907-08$; in respect of Exports and Imports, the "year under review" is 1go8-09.

1905 steady progress has been made in the adjustment of these erro:s by tracing the produce to its true destination.

Some foreign wheat is imported into India every year. In times of shortage it is taken in considerable quantities even by Indian ports from which grain is commonly shipped. In 1908.09 the imports were exceptionally heavy and amounted to 28,948 tons with a value of R 39.58 lakhs ( $\oint_{264} 6_{4}, 000$ ). Of this Australia furnished 19,697 tons and Asiatic Turkey $8,9^{9} 7$ tons. Bombay accounted for 64 per cent of the total and Bengal for $3^{1}$ per cent.

Exports of wheat flour were restricted by the shortage in wheat and the continued high internal prices. In the bumper year of 1904.05 these had amounted to 51,575 tons. In 1907.08 they were 37,219 tons and in 1908.09 they subsided to 30,104 ton; with a value of $R 52.11$ lakhs ( $£ 347,400$ ). The exports go mainly to Aden, Asiatic Turkey, Mauritius, East Africa, the Strais, and Ceylon.

The wheat crop of $1908-c 9$ has an estimated area of $25,836,000$ acres and the outturn is computed at $7,5 \mathrm{So}, 800$ tons. This shows an advance of $\mathbf{1}, 184,200$ tons or 13.5 per cent on the average crop of the five years ending 1905.07. Most of it has been barvested before the time of writing this Review and a considerable part of it has been shipped. Untimely rain in April damaged a quantity of the wheat on the threshing floor in those parts of India where the crop is reaped early; but in the northern wheat regions of the Panjab, where the crop was still standing or in stocks, the damage is reported to have been trifing. There has, however, been considerable damage to certain other food crops, and this might have intensified the intcrnal demand for wheat to a point prohibitive of exportation. But an extraordinary rise in wheal prices throughout the world has taken place, mainly as a consequence of a marked shortage of supplies. This has enabled shippers to secure large quantities; and there appears to be every likelihood of a large trade profitable to the country and tending to confirm exchange.

Food grains other than rice and wheat shared the decline that marked the trade in these principal cereals. The contraction was one of 66.6 per cent or 163,636 tons, the total quantity being 81,881 tons, against 245,517 tons in 1907.08, and the value R8r.72 lakhs ( $£ 545,000$ ) against R $202 \cdot 41$ lakhs ( $£ 1,349,00 c$ ). Barley alone in 1907.08 made a total of 81,887 tons, almost exactly the same as the aggregate of the whole group in the year under review; but in the latter year it fell by 88.5 per cent to a total of 9,423 tons. Gram, which in $1907-08$ amounted to 42,693 tons, fell away by 82 per cent to 7,578 tons. Jawar and bajra dropped by 59 per cent from 56,300 tons to 22,974 tons; while pulse, which in 1907.08 was the largest item in the group with a total of 59,521 ton; retained that place at 36,777 tons with a contraction of only 38.2 per cent. Other sorts remained unchanged at 5,130 tons.

Provisions-The value of the exports of provisions is small, being only about R 76.11 lakhs ( $£ 507,400$ ) as compared with $\mathrm{R}_{75} \mathrm{~F}_{4} 6$ lakhs ( $£ 503,000$ ) in 1907.08 . But it is well maintained and shows indeed a minute advance. The principal article is ghi or clarified tutter, which has fallen back to $R 24^{\circ} 24$ lakhs ( $£ 161,600$ ) from the $\mathrm{R}_{2} 6.74$ lakhs ( $£ 178,000$ ), to which it had advanced in 1907.08 . Fish, on the other hand, continued its upward movement, though at a diminished rate, and recorded a total of R18.74 lakhs ( $£ 125,000$ ) as against R 18.33 lakhs ( $£ 122,000$ ) in 1907-08.

Spices-Exports of spices improved from $R_{5} \cdot 7$ lakhs ( $(\mathbb{K} 351,000)$ to $\mathrm{R}_{5} 8.53$ lakhs ( $£ 390,000$ ), but that figure was the lowest that had been recorded in ten years. The $\mathrm{R}_{5} \cdot 83$ lakhs ( $£ 39,000$ ) so gained represents an increase of ${ }_{1}$ I per cent. Pepper, with a sum of R22.5 lakhs ( $£ 150,000$ ), continues to be the most important item; but its total value declined by RI. 88 lakhs ( $£ 22,500$ ) or $7^{\circ} 7$ per cent, while its specific value fell by 19.4 per cent. Chillies, with a total value of Riך ${ }^{\circ} 06$ lakhs ( $£ 114,000$ ), recorded an advance of $\mathrm{R}_{3} 39$ lakhs ( $£ 22,600$ ) or 24.8 per cent in spite of a drop of rearly 2 per cent in the total quantit y.Ginger, at $\mathrm{R}_{14} \mathbf{H}_{51}$ lakhs ( $£ 97,000$ ), showed an improvement of $\mathrm{R}_{3.41}$ lakhs ( $£ 22,700$ ) in spite of a minute fall in its specific value.

Tea represents 6.9 per cent of the total value of Indian merchandise exported and $3 \mathbf{I} 9$ per cent of the exports of articles of food and drink.

The year under review has on the whole been satisfactory to shippers and to home dealers. Probably its most noticeable feature was the decline in the prices of low grade teas without deflection in higher grades, and the generally stronger tendency in all departments during the winter and spring. The drop in the price of low grades would appear to have been a reaction from the inflated values which had drawn large quantities of inferior descriptions from China and elsewhere into the Western markets; but it restored , the Indian predominance in this branch of the trade. It will be seen that India's production in 1908 was less than in the previous year by some $1_{4}^{1}$ million lbs; and against this are to be recorded considerable increases in the shipments from Ceylon and Java. $\mathrm{Th}_{\mathrm{e}}$ exports from Ceylon in 1908 were $179,398,300 \mathrm{lbs}$ against $179,844,800 \mathrm{lbs}$ in 1907. Those from Java went from $28,286,500$ lbs to $36,579,500$ lbs. Of these quantities, the shipments to the United Kingdom were as follows: From Ctylon 109,297,400 lbs against $111,485,800 \mathrm{lbs}$ in the previous year: From Java $12,629,117 \mathrm{lbs}$ against $9,167,312$ in 1907. It becomes evident that ava, besides being the largest shipper of cane sugar in the world and the absolute arbiter in the quinine trade, is becoming a competitor in tea; and testimony is borne to the skill and care with which the products are prepared for the markets. The absence of stalks in Java teas has occasioned comment and comparison not favourable to some Indian consignoments. China, although a less active shipper than in 1907, was helped by the decline in the value of the tael.

The area and production of tea in India since 1904 have been as follows:-

Of the 548,127 acres in $1908,433,290$ acres or 79 per cent were situated in Eastern Bengal and Assam which, with Bengal proper, represented 89 per cent of the whole, the balance being divided between Northern India with ${ }_{1} 7,479$ acres, Southern India with 41,729 acres, and Burma with 1,724 acres.

The increase in total area since 1903-that is to say, in a period of 5 yearshas amounted to $4^{1}$ per cent, while the growth in estimated production is one of 18.4 per cent. It is, however, impossible to check the estimates of production satisfactorily because of the unascertainable nature of the internal consumption, which is believed to exceed seven million pounds.

The joint-stock capital engaged in the industry amounts to $£ 15,728,306$.

This gives an average capital of $£ 27$ pur acre as the mean of the last three years; but it takes no account of the large but unknown quantity of private capital.

The value per R1oo of joint-stock capital, as calculated on the prices of the shares of 68 companies quoted in the Calcutta market, was $\mathrm{R}_{106}$ in March 1908 and R100 in March 1909.

The labour employed is returned as 509,488 permanent and 74,719 temporary, making a total of 584,207 hands or $1 \times 07$ hands per acre.

The following figures show the quantity and value of tea exported from India in the last five years:

| Quantity | $R$ | Value $¢$ |
| :---: | :---: | :---: |
| 211,887,158 | 8,46,54,867 | $=5,643,658$ |
| 4,223,788 | 8,84,76,037 | 5,898,402 |
| 233,653,637 | 9,85,77,642 | 6,571,843 |
| 227,022,657 | $10,30,03,486$ | 6,066,89 |
| 3,961,538 | 0,39,37, 12 | 6,92 |

The figures for $1908-09$ establish a record both in quantity and total value, although the specific value declined by 2.2 per cent. The increase is 6.94 million pounds or 3 fer cent in quantity and R934 lakhs ( $£ 62,300$ ) or about 1 per cent in total value.

The quantities of tea exported to the principal countries have been as follows in thousands of pounds. The proportion in which they respectively participated is indicated by percentages:

|  |  | 1906-07 | Percentage | 1907 -88 | Percentage | 1908-09 | Percentagr |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| United Kingdom | - | 176,170 | 754 | 169.325 | 74.6 | 177,259 | $75^{\circ}$ |
| Russia | . | 13,761 | $5 \%$ | 15,407 | $6 \cdot 8$ | 18,552 | 7 ' |
| Australia | - | 9,499 | 41 | 10,977 | $4 \cdot 8$ | 8,998 | $3^{\prime}$ ! |
| Canada | - | 14,515 | 6.2 | 4,844 | 2.1 | 7,028 | 3 |
| China | - | 4,820 | $2 \cdot 1$ | 7,502 | $3 \cdot 3$ | 6,770 | 2 ! |
| Ceylon | - | 4,818 | 2.1 | 8,881 | 3.9 | 4,286 | i |
| Turkey in Asia | - | 3,101 | $1 \cdot 3$ | 3.504 | $1 \cdot 5$ | 3,293 | - |
| United States | - | 1,739 | 7 | 2,086 | $\cdot 9$ | 2,139 |  |
| Persia | - | 929 | 4 | 1,578 | 7 | 906 |  |
| Other countries | . | - 4,302 | 1.8 | 2,919 | $1 \cdot 3$ | 4,731 | , |

The United Kingdom took $7,934,000 \mathrm{lbs}$ or $4: 7$ per cent more than i 1907.08; so that she more than kept pace with the general advance. This i the more satisfactory as prevalence of direct shipment tends generally to dim nish such distribution trade as forms a large part of England's business in tei It is impossible to analyse here the distribution of this tea from the Unite Kingdom, and it is known that, owing to the use of optional Bills of Lading fo shipments to London, the figures above do not in all cases show the actu destination of goods. An investigation conducted in 1907 did, however, sho that over seventeen years the net discrepancy between Indian returns of expor to the United Kingdom and British returns of imports from India was conside ably less than : per cent. The consumption in the United Kingdom in 1908
estimated at $275,415,000 \mathrm{lbs}$ or 6.2 lbs per head of the population. India contributed 57 per cent of this total.

Russia appears now to have definitely taken second place as a purchaser of Indian teas; and her total rose by $3,845,000$ lbs or $20^{\circ} 4$ per cent. The Russian development is one of the features of the year. The recovery in shipments to Canada does not restore her to the position formerly held; but it may be noted on the other hand that the falling off in consignments to Australia really represents a reversion to normal figures. The direct shipments to the United States are of course far from representing the total consumption of Indian teas in that territory.

The following statement shows in annas (or pence) and decimals thereof the average prices per lb of the three descriptions of tea most largely sold atpublic auction in Calcutta in the last five years:

The average price obtained in last season was about 6 annas (or pence) against $6_{1 \frac{1}{2}}$ annas (or pence) in 1907.08.

There was some expectation that the import duty on tea in the United Kingdom would be raised in May 1909, and this anticipation is believed to have swelled by some $5,000,000$ lbs the heavy clearances that took place in April. The duty has not been increased.

## METALS AND MANUFACTURES

On the average of the last three years, the exports of Indian Metals and Manufactures thereof have represented only $0^{\circ} 6$ per cent of the total exports of Indian merchandise.

In the year under review they represented only $0^{\circ} 58$ per cent in spite of the heavy reduction in exports of other goods. The quantity of Indian metals contracted from 11,337.384 cwts to $9,000,997 \mathrm{cwts}$ (say 450,050 tons) and the value from Rio5.68 lakhs ( $£ 704,500$ ) to R81.84 lakhs ( $£ 545,600$ ). The shrinkage of 21 per cent in quantity was therefore accompanied by one of 23 per cent in total value. But the values of the several descriptions vary so widely that these figures have little meaning, more particularly as the declared values placed upon free exports are not always accurate. For example, manganese ore, which this year represents 88.8 .per cent of the Indian metals exported as against $81^{\prime} 3$ per cent in $1907 \cdot 08$, has a declared value of only $13^{\circ} 3$ annas (or pence) per cwt, while copper and brass (wrought) which represent only 4.2 per cent under this head had an average value of $\mathrm{R} 84-10 \cdot 6$ ( $£ 5125$. Iol $\frac{1}{3} d$. ) per cwt.

Manganese ore is by far the most important item in this class. The dullness of business in the iron and steel industries brought about not only a marked drop in the spot price of manganese, but a reaction in the Indian exports which had shown continuous progress for a number of years. The quanjity
receded from $5 \psi^{8,420}$ tons to $43^{S, 01}+$ tons and the value from $R 85^{\circ} 89^{\circ}$ lakhs ( $6_{572}, 600$ ) to $\mathrm{R}_{72} \cdot 6+$ lakhs ( 6484,300 ). The decline was therefore $20 \cdot 1$ per cent in quantity and $15^{\circ} 4$ per cent in value. Of the total, the United Kingdom ook 151,274 tons or $34^{\circ} 5$ per cent, while the United States tcok 115,730 tons or 26.4 per cent. Belgium reduced its purchases to 99,344 tons, and France came fourth with a demand for 53,652 tons. The value of " other sorts" exported was $\mathrm{R}_{5} \cdot 78$ lakhs ( $£_{3} 8,500$ ) as against R13.75 lakhs ( $£ 91,700$ ) in the previous year. This comprises pigiron $\mathrm{R}_{1,49,811}$ ( $£ 9,990$ ), chromite $\mathrm{R}_{1,41,519}$ ( $£ 9,43^{\circ}$ ), wrought iron $\mathrm{R}_{\mathrm{I}, 21,161}$ ( $£ 8,0 \circ 0$ ), old iron $\mathrm{R} 85,520$ ( $£ 5,700$ ), tin R41,411 ( $£^{2,760}$ ), and lead R25,638 ( $£ 1,700$ ).

## CHEMICALS, DRUGS, NARCOTICS, AND DYES

Saltpetre, together with Borax, practically represents the exports of chemicals from India. The trade continues to grow, and the exports amounted to 400,271 cwts with a value of $R_{4} \times 35$ lakhs ( $£_{3} 02,300$ ), as against ${ }_{3} 6_{3.954}$ cwts with a value of R41.84 lakhs ( $£^{2} 79,000$ ) in 1907-c8. The quantitative expansion of 10 per cent in conjunction with an increase of 8.4 per cent in the total value marks a fall of $1_{5}$ per cent in average value per unit. It may be inentioned here that the price of Nitrate of Soda in London dropped by 11 per cent in 1908.

Borax, which in London held good at $£ 16$ per ton in 1908, was exported to the extent of only $2,74^{1} \mathrm{cwts}$ with a value of $\mathrm{R}_{52,468}(£ 3,498)$, as against 5,247 cwts and $\mathrm{R}_{1} \circ 8$ lakhs ( $£ 7,200$ ) in the previous year.

The opiam trade has continued to suffer from the disturbance and uncertainty that attend a state of transition. The International Opium Commission, which met at Shanghai, concluded its labours on the 25 th of February last, and the terms of the resolutions adopted will be found in the Times of the 26th February. The limit as regards exports of Malwa opium had been fixed at 15,100 chests for 1908 and 13,600 chests for 1 c 09 . The limit was reached as early as August, and holders thereupon pushed opium forward into the Government warehouses in Bombay and paid the duty in advance in order to secure priority for shipment in 1909. At the end of March 1909 the limit for this year was already practically attained ; but the duty-paid opium is left in the warehouses for shipment in 1910. The limit for 1910 is 12,100 chests.

The continuous decline in the exports of Malwa opium to China is shown by the following figures:

The area under poppy in the Bihar and Benares Agencies has been further reduced from 505,956 to 392,419 acres. The number of chests of Bengal opiur. offered for sale in 1903 was 46,800 as compared with 50,400 in 1907 and with 10,800 for the first threa month. -
-Tre following statement shows the quantities of opium exported from Bengal and Bombay respectively in each of the last five years, together with the total value in thousands and the average prices:

|  | Exports |  |  |  |  | Average price per chest |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Bengal chests | Bombay chests | Total chests | Value |  | Bengal |  | Bombay |  |
|  |  |  |  | R | $£$ | R | $E$ | R | $\pm$ |
| 1904.05 | 47,855 | 19,006 | 66,861 | 10,62,34 | 7,082 | 1,585 |  | 1,599 |  |
| 1955.06 | 48,833 | 14,103 | 62,936 | 9,47,18 | 6,315 | 1.438 | 96 | 1,736 | 116 |
| 1906.07 | 53.588 | 12,686 | 66,274 | 9,30,79 | 6,205 | 1,38t | 92 | I,501 | 100 |
| 1907.08 | 47,440 | 16,320 | 63,760 | 8,67,25 | 5,782 | 1,347 | 90 | 1,399 | 93 |
| 1908-09 | 44,970 | 21,987 | 66,957 | 9,34.92 | 6,233 | 1,400 | 93 | 1,288 | 92 |

On the average of the five years ended $1907-08$, Bengal shipped 73 per cent of the total. In the year under review her share fell to 67 per cent. This was due in part to the actual decline of 2,470 chests in her shipments but mainly to an increase on Bombay's side of 5,667 chests. Bengal's decline is one of $5^{\circ} 2$ per cent and Bombay's increase is $34^{\circ} 7$ per cent ; but whereas the average value per unit increased by 3.9 per cent in Bengal, it declined by 8 per cent in Bombay. The net increase in the total quantity shipped is 3,197 chests or 5 per cent, while the concomitant rise of ${ }^{R} 67 \cdot 67$ lakhs ( $£ 451,000$ ) represents 7.8 per cent on the previous year's value and marks an enhancement of nearly $2^{\circ} 7$ per cent in the average value. Exports to Hongkong grew by 2,321 chests or $6 \cdot 7$ per cent to 30,964 chests, while those to the Straits Settlements declined by 2,021 chests or 153 per cent to 11,174 chests. Shipments to China exclusive of Hongkong and Macáo increased by 2,688 chests, or $20^{\circ} 5$ per cent, to 15,794 chests.

Tobacco-The trade in Indian tobacco continues to feel severely the competition of "interests" more highly organised and equipped. Progress is, however, being made in the adoption of improved methods of cultivation and preparation, while the increase in the consumption of Indian leaf in cigarette factories in this country renders the trade slightly less dependent on foreign buyers. The area under tobacco in British India and Native States is believed to exceed $1,000,000$ acres.

The following are the figures of the export trade for the last three years :

In unmanufactured descriptions, therefore, there was a confraction of 47 per cent in quantity and 34.8 per cent in value, which argues a rise of $22^{\circ} 9$ per cent in the specific value. In the manufactured classes, there was an advance of about 2 per cent in quantity and of 1.7 per cent in value, the slight fall in average value being negligible. Of this head, $96 \cdot 3$ per cent is represented by cigars; and of these the largest purchasers are the Straits Settlements, the United Kingdom, and Siam. Most of the unmanufactured leaf goes to the Straits, to Aden, and to France, and much of it is of the description consumed in the hookah or narghili, so that neither in kind nor in value is it strictly comparable with the leaf produced in other countries for manufacturing purposes. The total exporls of tobacco of all descriptions amounted to $106,490 \mathrm{cwts}$ in place of 188,917 cwts and to R23.21 lakhs ( $£ 155,000$ ) in place of R29.3I lakhs ( $£ 195,400$ ) in $1307-08$. The tobacco trade in England and America is feeling the stress of monopolistic domination and is undergoing very considerable
changes including a gradual but continuous rise of prices augmented, so far as England is concerned, by enhanced duty.

Indigo usually comes on the market in December; and most of the exports are effected before the end of the statistical year. The crop of 1908 showed a continuation of the contraction in area; but although sowing was restricted by deficiency of moisture, a fairly satisfactory yield was on the whole obtained. The outturn was however estimated at some 29 per cent less than in 1907-08.

This is reflected in the reduced exportation; but in spite of the extended use of $k h a k i$ in army clothing, the year has not been without promise for producers. The superiority of the Java-Natal plant is established; improvements have been made in processes of manufacture ; consumers appear to have recognised definitely that in certain classes of work the synthetic article cannot compete; and the constancy of price which the natural product has exhibited during the past two years encourages the belief that these classes of work will furnish an outlet for supplies approximating to present level. Indeed, it has been estimated that with a good crop, natural indigo could now be sold at a rate little, if at all, exceeding that which rules for its synthetic rival. The accounts of the next crop are for the most part good both as regards quantity and quality.

The following statement shors the exports of indigo in 1908.09 and the five previous jears, together with approximate quotations of average price in London. The total ten years ago was 335.187 cwts with a valie of R2 97 crores ( $£ 1.98$ millions) ; and that was 44.5 per cent below the value for 1895.96 .

|  | From Calcutia | Fron Madras ports | From other ports | Total | Value | Average price per cwt |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwts | Cwts | Cwis | Cuts | 6 | E s. d |
| 1903.04 | 29,858 | 24,414 | 6,138 | 60,410 | $1,07,62,000=717,000$ | 2148 |
| 1901.05 | 30,029 | 15,901 | 7:322 | 49,252 | 83,46,000 556,000 | 19120 |
| 195-06 | 19,062 | 7,756 | 4.368 | 31,186 | 58,64,000 - 1,000 | 1974 |
| 1906-07 | 19,309 | 11,159 | 4,634 | 35,102 | 70,05,000 467,000 | 2060 |
| 1907.08 | 16,627 | 10,619 | 5,244 | 32,490 | 63.73,000 425,000 | 2014 |
| 1908.09 | 17,698 | 4,636 | 2,612 | 24,946 | 49,05,000 327,000 | 20108 |

Therefore the declines in quantity and value respectively have been as follows-In ten years, $81^{\circ} 5$ per cent in quantity and $83^{\circ} 5$ per cent in value : in five years, $58^{\circ} 7$ per cent in quantity and $54^{\circ} 4$ per cent in value. In the year under review the rate of decline in quaritity has been 232 per cent and in value 23 per cent.

Prices in Calcutta opened at an average of R145 ( $£ 9^{\circ} 133^{s} .4 d$.) per factory maund of 72 lbs , which is equal to $£ 15-0-9$ per cwt , and closed at an average of $\mathrm{R}_{122}-8$ ( $£ 8 \mathrm{i} 6 \mathrm{~s} .8 \mathrm{~d}$.) or $\mathrm{R}_{12} .8$ ( 16 s . 7 d .) less than at the beginning. The average price for the seacon works out to $\mathrm{R}_{140}$ ( $£ 96 \mathrm{~s} .8 \mathrm{~d}$.) per factory maund.

Exports to the United Kingdom improved by a further 9 ' 9 per cent to $10,209 \mathrm{cwts}$, but the Continent of Europe reduced its demand from 8,083 to 4,506 cwts. This represents a contraction of $44^{\circ 2}$ per cent and leaves a net decline of 2,653 cwts for Europe. Shipments to Egypt, at $3,35^{1}$ cwts as against 6,424 cwts in 1907.08, were 47.8 per cent less; while Asiatic Turkey took 3,309 cwts in place of 3,235 cwts in the previous year. The den and in Persia, which showed encouraging development in the last two years, has contracted from 2,988 cwts to 1,$1 ; 0 \mathrm{cwts}$, but this may be accounted for by the state of that country. The shrinkage of the shortived Japanese demand has been arrested, and she

- took 804 cwts in place of 343 crits in 1907-08; while the United States reduced their imports from $1,417 \mathrm{cwts}$ to $1,295 \mathrm{cwts}$.

Other Dyeing and Tanning materials-The following statement shows the exports of the principal articles in this class in the last three years:

Of these, Myrabolams is by far the most important. The exports of this article declined by 18 per cent in quantity and by 3 per cent in value, with a drop of $1 \cdot 3$ per cent in specific value as declared. In recent years a practice has sprung up of separating the seeds from the myrabolam proper, and there has come into existence a certain trade in these seeds or kernels which are rich in oil. Cutch, after considerable advances in the last two years, fell away by 3 : 5 per cent in quantity and $36 \cdot 1$ per cent in value, while the exports of Turmeric maintained their recent progress by a further increase of $10^{\prime} 3$ per cent in quantity. This however was accompanied by a drop in price, bringing its total value to a point 3.2 per cent lower than in $1907-08$.

## OILS

Oils form only $6_{3}$ per cent of the total value of exports of merchandise from India. They comprise animal, essential, mineral, and vegetable oils. For the second year in succession, a substantial increase has taken place in the value, which now reaches R94.44 lakhs ( $\left(629,600\right.$ ) in place of $\mathrm{R} 85^{\circ} 82$ lakhs $£ 572,000$ ) in $1907-08$. The rise is one of $R 8.62$ lakhs ( $£ 57,500$ ) or to per cent. Vegetable oils form by far the most important class and usually represent about 64 per cent of the whole. Their value increased from $\mathrm{R}_{5} 50.83$ lakhs ( $£ 338,900$ ) to $R 6_{3} \cdot 7$ lakhs ( $£ 424,700$ ) or by $25^{\prime} 3$ per cent. Cocoanat oil makes the largest figure, with a total of $R_{40}{ }^{\circ} 2$ lakhs ( $£ 268,800$ ) in place of
 exceptional, but the year was a favourable one in home markets with prices hardening from $£ 27$ to $£ 30$ ios. Castor oil, which for two years had stood above R22:2 lakhs ( $£ 148,000$ ), dropped by 33.7 per cent to $\mathrm{R} 14^{\circ} 84$ lakhs ( $£ 99,000$ ); while the total of linseed, mustard, and sesamum oils fell from R9.44 lakhs ( $\mathcal{f} 63,000$ ) to R6.96 lakhs ( $(f, 46,400$ ). The article of next importance in this class is Paraffin wax, which usually represents about 22 per cent of the total and now stands at 92,846 cwts with a value of $\mathrm{R}_{21}$ : 99 lakls ( 6146,600 ) in place of $87,5^{64}$ cwts with a value of R19'70 lakhs ( $£ 131,300$ ) in 1907.08 . Shipments of paraffin candles, on the other hand, fell off by $10{ }^{\circ} 7$ per cent to $4,897,575 \mathrm{lbs}$ with a value of $R 13.65$ lakhs ( $£ 91,000$ ). Essential oils, which usually figure at about 12 per cent of the whole, have fallen from R8. 85 lakhs ( $£ 59,000$ ) to R6.5 lakhs ( $£ 43,300$ ). Mineral oil has in Indian commerce such an importance as is not indicated by it export statistics These have now fallen to the small total of $1,836,557$ gallons with a value of $\mathrm{R}_{1} \cdot 8_{3}$ lakhs ( $£ 12,200$ ). This marks a heavy reduction of the figures of the previous year, which were $5,652,850$ gallons and $R_{5} \cdot 37$ lakhs ( $£ 35,800$ ). But figures of internal production and consumption, which are given more appropriately in the article relating to imports of petroleum, will show that this contraction of exports is far from being attributable to any deterioration in the kerosene trade as a whole.

## RAW MATERIALS

Coal-On an average of the three years ending 1907.08 coal has represented 9 per cent of the exports of raw materials and $\cdot 4$ per cent of the exports of Indian merchandise. In 1908-09 these percentages declined to ' 75 per cent and 34 per cent respectively.

The annual production of Indian coal in the five years ending 1885 averaged $\mathbf{1 , 2 2 7}, 197$ tons. In the quinquennium ending 1895 it averaged $2,758,640$ tons; and in that ending 1905 it ayeraged $7,626,592$ tons. In 1908 the production amounted to $12,737,770$ tons as against $11,147,339$ tons in 1907.

In twenty years the average exports had grown from 16,524 to 576,278 tons per annum. In 1906-07 they attained the figure of 935,350 tons, but in the last two years they have fallen, first to 727,88 , tons with a value of $R_{5} 8.96$ lakhs ( 6393,000 ), and now to $571,58_{2}$ tons with a value of $\mathrm{R}_{50} 5^{\prime} \mathrm{I}$ lakhs ( $£ 337,000$ ). The decline is therefore one of $21^{\circ} 5$ per cent in quantity and $14^{\circ} 3$ per cent in value, the average declared value per ton being R8-13-5 (11s. 9읠d).

Among the external buyers of Indian coal, Ceylon retains the first place, but with a diminished quantity of 354,355 tons in place of 384,615 tons in the previous year. The contraction in the shipments to the Straits Settlements continues, and is not surprising in view of certain tacts recorded in the article relating to imported coal. The figure of 107,615 tons in place of 198,688 tons in $1907-08$ shows a drop of nearly 46 per cent. Sumatra also reduced her demand from 101,599 to 85,535 tons, while Aden with 11,224 tons in place of $1_{3}, 835$ and East Africa with 2,508 tons in place of 6,437 tons in the previous year bear testimony to the competition of Natal and other coals as well as reduction in consumption. The total exports of coke amounted to only 1,656 tons in place of 5,180 tons in $1907-08$, and most of this went to the Straits Settlements.

Calcutta was the port of shipment for all the exports except 222 tons from Bombay and 50 tons from Sind. Against the decline of 156,300 tons in exports abroad, is to be recorded an increase of 250,200 tons in the shipments from Calcutta to other Indian ports. The total in the latter case was $2,455,724$ in place of $2,205,532$ tons in 1907.08, which marks an advance $11 \cdot 3$ per cent. Of the total, Bombay took $1,013,611$ tons or $4^{1} 3$ per cent in place of 964,977 tons in the previous year. Shipment of bunker coal from Calcutta for use of steamers were slightly less at $1,000,443$ tons.

The prices of first class Jherria Bengal coal perton in wagon have been as follows in the last three years:

Cotton-On the average of the three years ending 1907.08 raw cotton represented 30.7 per cent of the total value of Indian raw materials exported. In 1908-09 the proportion fell to 29.4 per cent.

The crop which mainly furnished the exports under review was that of 1907.08. It was estimated at 21.63 million acres as compared with 22.49 millions in 1906-07, and the official estimate of outturn was $3,122,000$ bales of 400 lbs ( $11,150,000 \mathrm{cwts}$ ) as against $4,93^{2,700}$ bales ( $17,166,786 \mathrm{cwts}$ ) in the previous year. Serious doubt is thrown upon that estimate by comparison of it - with the sum of net exports and estimated internal consumption on a basis
arrived at in agreement with the Bombay Cotton Trade Association, Ltd., and while it is right to say that the factor of extra-factory consumption involved in that calculation is large and conjectural, there is no real doubt that the crop was substantially underestimated by some Provinces. The crop of 1908 -09 was reported last December at 19.74 million acres with a yield of $3,643,000$ bales or $13,011,714$ cwts. The average yield per acre would appear to be only 74 lbs per acre, and this is about one-third of the average yield sometimes obtained in America.

The American crop in the last three years has been estimated as follows by the Census Bureau (in cwts) :

| 1906 | 1907 | 1908 |
| :---: | :---: | :---: |
| $60,694,187$ | $50,783,308$ | $60,549,437$ |

The Egyptian crop in 1908 is not believed to have exceeded $6,250,000$ cantars ( $5,524,553 \mathrm{cwts}$ ) as compared with some $7,234,000$ cantars ( $6,394,340 \mathrm{cwts}$ ) in 1907.

The following are the prices of middling upland cotton at Liverpool in the last three years stated in pennies and decimals of a penny per lb :

The Liverpool Cotton Trade Association has this year-resolved that quotations shall in future be given in decimals instead of sixteenths of a penny.

It will be noticed that the range of price has been wide in the past year, labour disputes having combined with other influences to induce marked fluctuation.

The price of good Broach at Bombay in the last three years was as follows in annas and decimals of an anna per lb :

|  |  |  |  | rgo6.07 | 1907-08 | $\cdot 1908-09$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| At Bombay- |  |  |  |  |  |  |
| Opening | . | . | . | 5.31 | 5.14 | 5.33 |
| Highest | $\cdot$ | . | . | 5.37 | 5.59 | 5.33 |
| Lowest | . | . | . | 4.8 | 5.04 | 4.41 |
| Closing | . | . | . | 5.14 | 5.14 | 4.94 |
| Average | . | . | . | 5.06 | 5.37 | 4.68 |

The market opened at its highest and touched the lowest point in middle December. In Liverpool Indian descriptions fluctuated within $1 \frac{1}{8} d$, fine Broach touching $5 \frac{13}{\frac{1}{8}} d$ and closing at $4 \frac{1}{1} \frac{1}{6} d$ at the end of the calendar year.

The textile industry throughout the world has been depressed and calculations made upon the collated returns of various groups of weaving mills in England show average dividends of $11 \frac{8}{4}, 14 \frac{1}{3}$, and $15 \cdot 18$ per cent as compared with about double these figures in 1907 . The profit on the share and loan capital of a number of spinning mills in Lancashire has been estimated at $1: \cdot 2$ per cent in 1908 as against $24^{\circ} 6$ per cent in 1907. The Liverpool Cotton Association estimates the British consumption in 1908 at $3,379,000$ bales against $4,055,000$ bales in 1907 and $3,892,000$ bales in 1906 . The stock at the end of the year was about 947,000 bales, of which only 13,000 bales were Indian. Brazilian, Peruvian, and even African staples have made considerable progress in
the home markets during 1gos. Up to the time of writing this review, it cannot be said that conditions at home give any assurance of increased production till well on in the year. In India, on the other hand, the mill consumption increased by about 197,000 cwts or by $2 \cdot 8$ per cent from $6,781,800$ cwts to $6,978,800$ crots. This figure allows for wastage and is equivalent to $1,954,100$ bales of 400 lbs .

The following figures give a summary of the export trade in the last five years, the unit being $\mathbf{1 , 0 0 0}$ :

It will be seen therefore that there was a decline of $20^{\circ} 6$ per cent in quantity and $23^{\circ} 1$ per cent in value, the ostensible decline in specific value being 3.2 per cent.

The statement below snows the destinations of the cotton exported during the same period, the unit as before being 1,000 :

The shipments to Japan therefore fell by $22,000 \mathrm{cwts}$ or 1 per cent, whereas Germany reduced her demand by no less than 743,000 cwts or $39^{\circ} 5$ per cent. The United Kingdom took some 70,000 cwts less than in $1907-08$ and indeed it is understood that the consumption of Indian staples in the United Kingdom in 1908 was only about 173,000 bales as compared with 142,000 bales of Peruvian, African, etc. China was the only country that increased her purchases of Indian cotton; and in so far as this is an indication that her textile industry is dependent on foreign supplies of material, this may be a subject of congratulation.

Hides and skins represent 5.6 per cent of the entire exports of Indian produce. The earlier part of the year 1908 was marked by a heavy fall in the value of hides, and not till the summer did a reaction set in. The imports of dry hides into the United Kingdom from all sources in 1908 amounted to only 357,375 cwts with a value of $£ 1,215,099$, against $406,314 \mathrm{cwts}$ in 1907 with a value of $£_{1,484,570}$; and, though the receipt of wet hides were heavier, the aggregate value of the two classes was about $£ 50,000$ less than in the previous year. The value of the imports into America is estimated at $£_{12}$ or millions as against $£_{16 \cdot 18}$ millions in 1907 . These figures give some indication of the contraction in demand. The exports of raw hides from India, however, rose by 12.6 per cent
in quantity and 10.8 per cent in value, there being a fall of 1.6 per cent in the average value per cwt, which is recorded at $R 62-8-9$ ( $£ 4 \cdot 3-4 \frac{3}{4}$ ). These fact should be read in conjunction with the notes about tanned hides and skins. The average weight of a raw hide was 8.9 lbs in place of 9.2 lbs in 1907-08. Exports of raw skins increased by $52^{\prime} 7$ per cent in quantity and 30 per cent in value, there being a fall of about 14.8 per cent in average value per cwt . There was an increase of 10.4 per cent in the average weight in this class. The number of raw hides and skins together amounted to 33.5 millions in place of 25.5 millions in 1907.08 , and the total value to R 833.92 lakhs ( $£ 5,559,500$ ) in place of R $705^{\circ} 18$ lakhs ( $£ 4,701,000$ ). Of the total weight, Calcutta shipped 79 per cent. The United States took 378 per cent of the total with a value of $R_{324} 58$ lakhs ( $£ 2,164,000$ ), which marks an advance. Germany also increased her demand and came second with Rig9*63 lakhs ( $£ 1,331,000$ ). Italy took R85.36 lakhs ( 6569,000 ) ; Austria-Hungary R70.58 lakhs ( $£ 470,500$ ) ; Spain R $47 \cdot 3$ lakhs ( $£ 315,000$ ); France $\mathrm{R}_{25}{ }^{\circ} 98$ lakhs ( $\mathrm{E}^{1} 73,000$ ) ; and the United Kingdom R $45 \cdot 6$ lakhs ( $\mathfrak{C}_{3} 304,600$ ), which marks a decline of $7^{\circ} 2$ per cent. In skins also the United States hold the first place, since they take four-fifths of the total, while the United Kingdom takes only about 7 per cent.

The following statement of the exports for the last six years enables the reader to gauge the growth of the trade, the unit being 1,000:

The price of hides in India has tended upwards during the year, with the exception of the usual droop in the rains when the material holds a larger proportion of moisture. Buffalo was quoted at $\mathrm{R} 6.8(8 \mathrm{~s} .8 \mathrm{~d}$.) per 20 lbs in April rose gradually to R8 (ios. 8d.) which was reached in December and January, and then declined to $\mathrm{R}_{7}$ (gs. 4d $^{\text {d }}$ ) in March. The same course was followed by cow hides, which opened at R22 ( $£ 1.95 .4 d$.) and closed at the same figure after touching R24 (fir i2s.) in December. The agitation in the United States for abolition or reduction of the import duty on hides is being prosecuted energetically in connection with the revision of the tariff, but the movement is apparently opposed by the packing interest which has engaged largely in tanning.

Jute has in recent years supplanted cotton as the most important single article of exportation. It retains this place and represents 29.6 per cent of the total value of Indian raw produce exported.

The year under reviev has been one of extraordinary depression. It began under the shadow of the American financial collapse, and it is recognised that the markets of the world at that time carried considerable unassimilated stocks of jute and its products from the previous bumper crop. The effecı has been that neither a passing stir of activity in the market, the reports of bad weather at sowing time, nor yet the successive announcements of reduced crop estimates availed to move prices. The world's demand for jute is estimated variously at from $8,000,000$ to $8,200,000$ bales per annum; and as India still
retains a virtual monopoly of the article, it is well to show the estimates of area, outturn, consumption, and surplus in the last five years :

| Area | Outturn | Estimated <br> Indian con. <br> sumption <br> Crits | Estimated <br> exportable <br> surplus <br> Cwts |  |
| :---: | :---: | :---: | :---: | :---: |
| Cwts | Acres | Cwts |  |  |
| $1904-05$ | $2,850,000$ | $26,429,000$ | $12,405,000$ | $14,024,000$ |
| $1905-06$ | $3,128,000$ | $29,421,000$ | $14,427,000$ | $14,994,000$ |
| $1906-07$ | $3,483,000$ | $32,598,000$ | $12,256,000$ | $20,342,000$ |
| $1907-08$ | $3,974,000$ | $35,059,000$ | $13,439,000$ | $21,620,000$ |
| $1908-09$ | $2,841,000$ | $22,536,000$ | $14,625,000$ | $7,911,000$ |

As illustrating the effect of weather on the outturn of the jute crop, it may be pointed out that, if the average length of jute be taken as 6 fee: or $i^{2}$ inches, one inch less or more on the length of the staple would -on a crop of, say, $33,000,000 \mathrm{cwts}$ - make a difference of about $458,000 \mathrm{cwts}$.

As regards the estimate of internal consumption, reference should be made to the industrial statistics shown in the chapter on exports of jute manufactures.

Jute differs from certain other Indian crops in that-under normal conditions of trade-the mass of the produce is exported or absorbed in the statistical year in which it is grown. The growth of the export trade is shown in the following statement, the unit being $\mathbf{1 , 0 0 0}$ :

|  | Quantity | CentesimalVariations | Value |  | Average value per crit |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwts |  | R | $\ldots$ | $\stackrel{\sim}{R}$ |  |  |
| 1904-05 | 12,875 | - 6.2 | 11,96,56. | 7,977 | 9.29 | $=$ | 12.4 |
| 1905-06 | 14.480 | + 12.5 | 17,12,57 | 11,417 | 11.83 |  | 15.8 |
| 1906-0\% | 15,970 | $+103$ | 26,83,87 | 17,8y2 | 16.8 t |  | 22.4 |
| 1907-08 | 14,192 | - 111 | 17,97,28 | 11,982 | 12.66 |  | 16.8 |
| 190809 | 17,880 | + 26 | 19,83,45 | 13,223 | 11.09 |  | $14^{-8}$ |

It will be seen therefore that, in spite of the depression (or perhans because of its effect on the local mills) the quantity exported was greater by $3,688,000$ cwts (or 26 per cent) than in the year of $1907-08$, while the total value increased by $\mathrm{R}_{1} 86{ }^{17}$ lakhs ( $£ 1,241,000$ ), the specific value, however, being less by 12.4 per cent. Compared with the record year of 1905.07 the quantity rose by $\mathbf{1}, 909,425 \mathrm{cwts}$ or 12 per cent, while the value declined by $\mathrm{R}_{7}$ crores ( $£ 4,666,700$ ) or 26.1 per cent, the fall in specific value in this case being 34 per cent.

The following statement shows the average price in Calcutta of jute (M group) per bale of 400 lbs , in each of the five previous years and in the first week in each month of the year under review :

The decrease in the average price is therefore $I^{\prime} 1$ per cent.
The United Kingdom took $6,664,862 \mathrm{cwts}$, or $1,208,283$ cwts more than the $5,456,579$ cwts in $1907-08$, her share being 37.3 per cent of the whole. Germany took $3,690,237$ cwts, or 733,215 cwts more than in the previous year. This makes her share 20.6 per cent of the whole, which is much where she stood before. The United States increased their demand by i,354,605 cwts, bringing. the total to $3,336,060 \mathrm{cwts}$ and their share to 18.7 per cent instead of 14 per cent in the earlier year. France, with $\mathbf{1}, 843,200 \mathrm{cwts}$ or $10 \cdot 3$ per cent of the total, took 96,826 cwts more; while $5^{\circ} 6$ per cent went to Austria-Hungary, $3^{\circ} 5$ per cent to Italy, and 2.4 per cent to Spain. Calcutta shipped 88.4 per cent of the total as compared with 88.8 per cent in 1907-08; while Chittagong supplied ir. per cent in place of 10 '5 per cent, and Madras supplied only o' 5 per cent.

Seeds represent 17.4 per cent of the entire exports of Indian raw produce. The quantity exported in $1908-09$ was $16,243,000$ cwts with a value of $\mathrm{R}_{\mathrm{I}}, 1678 \mathrm{I}$ lakhs ( $£ 7,785,000$ ). This falls short of the figures for the previous year by $6,942,000$ cwts or $29^{\circ} 9$ per cent and by R $513^{\prime} 7$ lakhs ( $£ 3,425,000$ ) or $30^{\circ} 5$ per cent, there being apparently in the specific value of the group a small decline of - 8 per cent, due probably to the greater preponderance of low-priced descriptions in its constitution. The oilseeds crop in India suffered greatly from the climatic conditions described elsewhere. The figures for the last five years have been as follows, the unit being $\mathbf{1 , 0 0 0}$ :

|  | Cwts | $\ldots$ | 6 |
| :---: | :---: | :---: | :---: |
| 1904-05 | 26,874 | 14,41,08 | $=9,607$ |
| $1905-06$ | 17,576 | 10 60,92 | 7,073 |
| 1906-07 | 19,736 | 13,02,17 | 8,681 |
| 1907-08 | 23,185 | 16,8,52 | 11,21 |
| 1908-09 | 16,243 | 11,67,81 | 7,78 |

The quantities and values of the principal descriptions of seeds exported are shown below, the unit being $\mathbf{1 , 0 0 0}$ :

The article "copra" might reasonably be grouped with these, as it is really a material for the extraction of oil. It is discussed under "Fruits," and was exported in 1908 oy to the extent of 395,126 cwts with a value of $R_{52}{ }^{\prime \prime} 99$ lakhs ( $£ 353,000$ ). The oilseeds trade in some of its branches is feeling the competition of the soybean (Glycine hispida maxim) shipped from China and Japan; and as this plant is cultivated in India efforts will be made to develop the supply.

Linseed goes chiefly to the United Kingdom ( $\mathrm{R}_{107}{ }^{\prime} 19$ lakhs $=£ 715,000$ ), France ( $\mathrm{RS}_{2}{ }^{\prime} 49$ lakhs $=£ 550,000$ ), and Italy ( $\mathrm{R}_{4} 1^{\circ} 68$ lakhs $=6278,000$ ). The largest buyers of Rapeseed are Germany (R61:16 lakhs $=£ 408,000$ ), Belgium ( $\mathrm{R}_{95} \cdot 35$ lakhs $=£_{6} 66,000$ ), and France ( $\mathrm{R}_{5} 5^{\circ} 33$ lakhs $=£_{3} 69,000$ ). Sesamum goes mainly to France and Austria-Hungary. Poppyseed to France and Beigium, Castor and Cotton seeds to the United Kingdom, and Groundnuts to France.

Of the total exports of oilseeds, Bombay shipped 56 per cent with a value of R618.72 lakhs ( $£ 4.125,000$ ), Bengal 18.5 per cent with a value of R246.08 lakhs ( $£_{1}, 647,000$ ), Madras 13.3 per cent or R152.11 lakhs ( $\notin 1,014,000$ ), and Sind $10^{\circ} 4$ per cent or R135.75 lakhs ( $£ 905,000$ ). The rate of decline was 26.5 per cent in the case of Bombay, $40^{\circ} 9$ per cent in that of Bengal, and $45^{\circ} 2$ per cent in that of Sind.

In Linseed India no longer holds the dominant position it formerly enjoyed. This is due not only to the accidents that have befallen her crops but to the enormous production in Argentina and Russia. For example, Argentina exported $1,080,000$ tons in the calendar year 1908, while India shipped 160,477 tons. It is true that this was exceptionally low; but in the previous year, which was favourable, the quantity was only 309,894 tons. The figures discussed in this Review, however, relate to the statistical year 1908-09; and her exports of linseed in that period show a decline of 48.2 per cent in quantity and $4^{6 \cdot 6}$ per cent in value. In spite of the heavy exports from La Plata and Russia, a considerable shortage in the American shipments combined with the strong demand for linseed oil to sustain prices, which in England averaged about 45 s 3d.

Rapeseed prices also held fairly good with an average of 56 s . $8 d$ in England; but the Indian exporter suffered not only from the contraction of the crop but from the competition of Japanese seed and oil. The total estimated outturn in India was 990,900 tons as against 688,000 tons from the previous year's crop. The exports, as shown above, fell by 48.2 per cent in quantity and $45^{\circ}$ per cent in value, there being thus a rise of 5.9 per cent in the specific value.

Sesamum is most largely consumed in India when there is a shortage of rapeseed ; but the shortage in both crops together with the relative weakness of price makes it difficult to account for the increase in exports except on the supposition that it was drawn from the new crop of 1908 -09 or was due tomonetary stringency resulting from wide-spread failure of food crops. In any case it will be seen that in this article there was a return to something like normal levels, but that the increase of 6.7 per cent in quantity was accompanied by a. fall of $3 \cdot 6$ per cent in total value.

Cotton-seed represents 11.2 per cent of the exports of seeds and about. 19 per cent of the total value of raw Indian produce exported. The trade is of comparatively recent date and has grown with great rapidity. The largest. quantity exported in any single year was $4,388,000$ ewts in $1906-07$ but the
$4,250,000 \mathrm{cwts}$ in $1907-08$ were little below it. In 1908-09, however, the shortage in the cotton crop itself and in the fodder supply put prices on a high level and restricted exports markedly. That these prices were paid in spite of the existence of a considerable speculative holding of oil in Europe is to be ascribed to the continuous advance made by cotton oil for edible purposes in the Western world, and by undecorticated Indian cottoncake as a cattle feed. The exports from India declined by 13.3 per cent in quantity and by 0.2 per cent in value, this difference marking a rise of 15 per cent in specific value and reflecting, though not very accurately, the rise in European price. In the last two years the United Kingdom has taken about 80 per cent of the whole quantity of Indian cottonseed exported, while Egypt is shown as the destination of some 17 per cent.

Keen interest is being taken in India in the project of establishing factories completely equipped to produce cotton oil and its derivative stearines in the form of subscitutes for the ghi or clarified butter used by the people.

Poppyseed suffers from the competition of cottonseed so far as it is possible for two seeds to compete which require different machinery. The weather conditions, as well as the reduction of area under poppy, further affected the output ; and the exports fell by 37 per cent in quantity and $33^{\circ} 7$ per cent in value, there being thus a rise of 5.4 per cent in the specific value.

Castor seed exports fell by $17^{\circ} 2$ per cent in quantity and 3003 per cent in value. The decline in specific value was thus about $15^{\circ} 8$ per cent.

The business in Groundnuts has shown a marked revival since the introduction of descriptions that resist disease. Exports have progressed by 16.9 per cent in quantity in the year under review, and the total value has risen by $14^{\circ} 6$ per cent. A considerable proportion of the exports of groundnuts from India is shipped from the French port of Pondicherry and so escapes registration in the trade of India. In the last three years, the exports by that route have been as follows:

|  | tons | R | 民 |
| :---: | :---: | :---: | :---: |
| $1905-06$ | 33,623 | $43,67,000$ |  |
| $1906-07$ | 43,954 | $70,13,000$ |  |
| $1907-08$ | 36,509 | $58,48,000$ | 390,000 |

Sils-Just as silk exhibited in a marked manner the rise of prices which was general in 1906 and 1907 , so in 1908 it illustrated the reaction. An average, struck on nine standard quotations in Europe at the end of 1907 and a year later, shows a decline of $10 \% 6$ per cent. Italian silk dropped about in per cent, while some descriptions of Shanghai silk fell as much as 23 per cent, and Canton silk alone recorded a rise which amounted to about 3 per cent. The demoralisation resulting from the general condition of trade was such as to obscure the effects of all minor influences. The exports of raw silk declined from $1,943,126 \mathrm{lbs}$ to $\mathrm{I}, 8_{33,644} \mathrm{lbs}$ and from R $63^{\circ}{ }^{\circ} 8$ lakhs ( $£ 425,000$ ) to R $54^{\circ} \mathrm{O} 5$ lakhs ( $£ 360,300$ ). The decrease was thus 56 per cent in quantity and $15 \% 3$ per cent in value, the fall in specific value being $10 \% 2$ per cent. Reeled mulberry silk, which in $1907-08$ stood at $716, \mathrm{I} 34 \mathrm{lbs}$ with a value $\mathrm{R}_{54} 14$ lakhs $£_{361,000}$ ), fell away by 21 per cent in quantity and 16 . 6 lper cent in value to $565,463 \mathrm{lbs}$ with a value of $\mathrm{R} 45^{\circ} \mathrm{I} 3$ lakhs ( $£ 301,000$ ), which shows an improvement of 5.4 per cent in specific value. Bengal consignments of reeled silk (mulberry and wild) fell away from $5 \mathbf{1 2 , 1 4 2 ~ l b s ~ a n d ~ R 4 1 . 3 4 ~ l a k h s ~ ( ~} £^{2} 75,600$ ) to $453,128 \mathrm{lbs}$ and $\mathrm{R}_{54} .06$ lakhs ( $£ 227,000$ ), the average value per lb being $\mathrm{R} 7-8-3$ ( $10 \mathrm{~s} . \mathrm{o}_{4}^{\frac{1}{4}} \mathrm{~d}$.). Bombay's trade suddenly receded from the $217,39 \mathrm{lbs}$ and $\mathrm{RI}_{3} 3_{3}$ lakhs ( $£ 88,700$ )
to which it had attained in $1907-08$, to $\mathbf{1}_{3,851}$ lbs and R1.27 lakhs $(68,500)$, this being the lowest figure in the last eight years. The decline in Bengal's case is one of $1 \% 5$ per cent in quantity and $17^{\circ} 6$ per cent in valus, while in that of Bombay it is $93^{\circ} 6$ per cent in quantity and $90^{\circ} 4$ per cent in value.

The distribution of the exports of reeled silk (mulberry and wild) was as follows:

The exports of waste silk (chasam)- $53^{\circ} 5$ per cent of which was wild silk increased from $1,093,384 \mathrm{lbs}$ to $1,182,69 \mathrm{lbs}$; but the marked fall in its average value is evidenced by the fact that for the second year in succession an increase in quantity is accompanied by a decline in the total value, which total this year is $\mathrm{R}_{7} \cdot 67$ lakhs ( $£_{5} 1,000$ ) as against $\mathrm{R}_{7} 9$ lakhs ( $£ 53,000$ ) in 1907.08. The average declared value per lb was $10^{\circ} 4$ annas (or pence) as compared with 11.5 annas (or pence) in the previous year. The exportation of cocoons (of which $51 \cdot 2$ per cent were wild) fell back from $119,009 \mathrm{lbs}$ and $\mathrm{Ri}_{1} \cdot \mathbf{2 1}$ !akhs ( $£ 8,000$ ) to $69,387 \mathrm{lbs}$ and $\mathrm{R} 67,000$ ( $£ 4,500$ ), which is little more than in 1906 -07.

Teak timber-The timber trade throughout the world has naturally suffered from the inactivity in the industries employing wood; and although arrivals of teak in London were somewhat short of the demand, prices were weak and offered small inducement. The average price in Calcutta per ton of 50 cub. feet was $\mathrm{R}_{122}$ to $\mathrm{R}_{127}$ ( $£ 8-2 \cdot 8$ to $£ 8 \cdot 9-4$ ) in $1906-07$, R123 to $\mathrm{R}_{128}$ ( $£ 8-4-0$ to $£ 8-10-8$ ) in 1907-08, and only R120 to $\mathrm{R}_{125}$ ( $(£ 8$ to $\notin 8-6-8$ ) in the year under review. Consequently, exports of teak decreased by $31^{\circ} 2$ per cent in quantity and $34^{\circ} 5$ per cent in value, the total being 27,220 cub. tons and $R_{40}{ }^{\circ}$ lakhs ( $£ 268,000$ ) as against 39,539 cub. tons and $R 6135$ lakhs ( $£ 400,000$ ) in $1907 \cdot 08$. Against this contraction of R21 ${ }^{1}{ }^{15}$ lakhs ( $\left(£_{141}, 000\right.$ ) is to be set a small increase of $\mathrm{R}_{4^{\prime} 77}$ lakhs ( $£ 32.000$ ) in the internal demand, bringing the total shipments from Burma to I ndia proper to Rio3.6 lakhs ( $£ 690,000$ ) in place of $R 98.83$ lakhs ( $(6599,000$ ) in $1907-08$.

Wool represents about 31 per cent of the value of Indian raw materials exported. The Indian statistical year opened just after the great collapse in wool prices took place. Karachi quotations which had stood at R21 to R23 ( $£ 1-8-0$ to $£_{1} 10-8$ ) in February 1908 were at $\mathrm{R}_{17}$ to $\mathrm{R}_{19}$ ( $\mathrm{E}_{1-2}-8$ to $£_{\mathrm{I}}-5-4$ ) in April, ranged about a rupee lower till December, and then responded tardily to the recovery that had appeared in western markets. There the range of prices was roughly from one penny to two pence per lb lower in 1908 than in 1907 ; but a much more serious drop was only avoided by concerted measures on the part of dealers. The extent to which an industry is ridden by its machinery is shown by the fact that, in spite of the dullness of trade, the total consumption in Europe and America is estimated as $2,110,000$ bales, or not quite 4 per cent less than the $2,195,000$ bales of 1907. The exports of wool from India increased from $39^{\circ} 8$ million lbs to $43^{\circ} 4$ million lbs, while, the value declined from R210.39 lakhs ( $£ 1,402,600$ ) to R208. 37 lakhs ( $£ 1,389,000$ ). The increase of 9 per cent in quantity was thus accompanied by a decrease of nearly a per cent in total value, the average value having therefore fallen by 944 per cent. The United Kingdom took almost the same value of wool as in 1907-08:i.e., R204:68 lakhs ( $£ \mathrm{x}, 364,500$ ) in place of $\mathrm{R}_{2} 20484$ lakhs ( $£ 1,365,600$ ) in $1907 \cdot 08$. The
exports to the United States folloned the trend of their receipts from othe countries and remained at a very low level-R2.69 lakhs ( $£ 18,000$ ); while shipments to Japan reached an almost negligible level at $\mathrm{R}_{3} 6,000 \quad\left(£_{2,400}\right)$. A good deal of the wool dealt with in these figures comes from beyond the land frontiers of India; but in addition to it there are re-exports of wool received by sea. These in $1908-09$ fell from $R_{3}{ }^{\prime}{ }^{\circ} 6$ lakhs ( $£ 218,400$ ) to $R_{27}{ }^{\circ} \mathrm{S}^{\prime}$ I lakhs ( 6186,000 ) in value.

Other principal raw materials exported have, in the last three years, been as follows:

|  | 1906-07 |  | 1907-08 |  | 1908-09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | 6 | R | 6 | R | $E$ |
| A nimal bones | 55,45,241 $=$ | 369,683 | 54,45.034= | 362,002 | 51,78,520= | 345,235 |
| Bristles and fibre | 17,68,930 | 117,929 | 15,44,535 | 102,969 | 20,52,121 | 136,803 |
| Caoutchuuc | 11,18,487 | 74,566 | 5,78,397 | 38,560 | 3,19,039 | 21,269 |
| Hemp | 68,73,395 | 4,8,226 | 80,63,544 | 537,570 | 59,68,378 | 397,892 |
| Horn and hornmea | 16,91,532 | 112,769 | 16,49,769 | 109,985 | 15,64,058 | 104,271 |
| Lac (stick and seed) | 12,86,24 ${ }^{\text {c }}$ | 85.749 | 20,59.704 | 137.314 | 5:88,612 | 39.24 1 |
| Mica | 38,24,938 | 254,999 | 34,22.420 | 228,161 | 19,02,505 | 126,834 |
| Oil-cake, (fodde and manure) | 75,99,121 | 506,608 | 75,17,393 | 501,160 | 89,64,1 18 | 597,608 |
| Rice-bran | 49,35,551 | 329,031 | 87,82,418 | 585,495 | 64,01,973 | 426,798 |

Of these, oilcakes form the most important item and one that shows not only continued growth but vitality under adverse conditions, some of which may be gathered from the paragraphs relating to exports of oilseeds. The increase recorded is one of R14.47 lakhs ( $£ 95,500$ ) or $19^{2} 2$ per cent. Rice-bran drops to second place in order of importance, having receded by R23.8 lakhs ( $\mathcal{E}_{158,700 \text { ) }}$ or 27.1 per cent from the extraordinarily high total recorded in 1907-08. Hemp also shows a very heavy decline of R20.95 lakhs ( $£ 139,700$ ) or 26 per cent of its last year's value. The trade in Bones fell by R2. 66 lakhs ( $\mathrm{E} 17,700$ ) or 49 per cent, and that in Horns by R86,000 ( $\left(5,733\right.$ ) or $5^{\circ} 2$ per cent. On the other hand, there was a rise of $R_{5}{ }^{\circ} 8$ lakhs ( $£ 34,000$ ) in the value of Bristles exported, leaving the figure however, still below that for $1905 \cdot 06$.

The others form a group of articles in which typically modern industries are interested. Mica, which had developed greatly under the stimulus of activity in the electrical industry, dropped by $\mathrm{RI}_{5}{ }^{\circ}$ lakhs ( $\mathrm{fror}, 300$ ) or $44^{\circ} 4$ per cent on the cessation of that stimulus. Crude Lac, being also concerned in the electrical industry and in others equal!y sensitive to trade depression, collapsed by R14.71 lakhs ( $£ 98,000$ ) or $7 \mathbf{1 . 4}$ per cent. The chapter upon exports of manufactured lac may be referred to. The decline in Caoutchouc, at the rate of $44^{\circ} 8$ per cent, is only a continuance of what has been recorded in the two preceding years; and it brings this article to a point which-if permanent-might be regarded as its statistical eclipteric so far as this paragraph is concerned.

## ARTICLES MANUFACTURED AND PARTLY MANUFACTURED

The statement below shows for the past five years the comparative value of each principal class of manufactures, the unit in all cases being 1,000:

The heavy decline in Jute goods is the most striking feature of this statement. It amounted to $R 256^{\circ} 16$ lakhs ( $£^{1}, 708,000$ ) or $1+$ per cent. Cotton yarn and goods, on the other hand, show a smart recovery of $\mathrm{R}_{77} .06$ lakhs ( $6_{5}{ }^{1} 3,700$ ), or $7^{2} 2$ per cent, maiuly atributable to the good trade done in yarns for China. Tanned hides and skins also show a total better by R22.88 lakhs ( $£ 152,500$ ), but in neither of these cases is the level of two years ago exceeded or equalled. Coir is the only other article in which a gain is to be recorded. Lac shows a drop of R11413 !akhs ( 6761,000 ); and it may be mentioned that this is accounted for by the heavy fall in values and not by any shrinkage in the quantities handled. It is interesting to remember that candles are manufactured in India as well as imported, and that the homemade article tends to displace the other. Thus an increase or decrease in imports is commonly found to accompany an increase or decrease in exports. In $1906-07$ the exports declined by R2.33 lakhs ( $£ 15.500$ ), while imports declined by R1.35 lakhs ( $£ 9,000$ ). In $1907 \cdot 08$ they increased by R1. 27 lakhs ( $£ 8,500$ ), while imports increased by $\mathrm{R}_{1} \cdot 54$ lakhs ( $£ 10,300$ ). In the year under review the exports have fallen by $\mathrm{R}: 8_{1}$ lakhs ( $£ 12,200$ ), while imports have fallen by $\mathrm{R}_{1} \cdot 14$ lakhs ( $£ 7,600$ ). Woollens, though showing a decline of $R_{2} \cdot{ }_{15}$ lakhs ( $£ 14,300$ ), still stand at a creditable level having regard to the retrospect of the trade. This cannot be said of Silks; but the year was one of extraordinary depression in the silk trade throughout the world. It should be remembered, in drawing any conclusions from the figures, that there ares .fie accounts many manufactured and partly manufactured articles which are not included in this group. They are from their nature, more properly included in the other groups of articles. For instance, milled-rice, wheat-flour, coffee, and tea are included in the group. "Articles of Food and Drink"; machinery is included in the group, "Metals", saltpetre in "Chemicals", opium and tobacco in "Narcotics ", indigo in "Dyes," and vegetable and mineral oils under the group, "Oils". The group, "Articles manufactured and partly manufactured ',contains such manufactured and partly manufactured articles as cannot be included under one or other of the main groups of articles.

Cotton manufactures represent $3{ }^{1} 5$ per cent of the total value of Indian manufactures exported and 7.7 per cent of the whole export trade. If the industry had depended on the Indian market alone, it would have fared ill in 1908-09. For business was weighted by the shortage of crops, by high prices of food grains, and by the fact that all marriages, with their attenclant ceremonies and gifts of cloth, were postponed because the year was regarded as inauspicious. In the chapter on General Summary of trade, a rough estimate is made of the sum represented by the rise in prices of food grains. In spite of the movement for the preference of indigenous manufactures, it does not appear that these felt the pinch of hard times less than the imported goods. The looms were kept at work ; the cloth market became choked; and there were accumulated large stocks which even abatement of price failed to liquidate. In 1907, when a shortage of yarn existed in Europe, occasion was taken to put Indian products on the market. A good business was done and it was seen that the trade is one that will last if treated with reasonable consideration. It is strongly asserted that many Indian shippers did not so treat it but were at least careless about count, reeling, etc. In the face of the collapse in the Western yarn market, it is impossible to say how far the conduct of these Indian shippers contributed to the temporary cessation of the shipments to Europe. But its cessation would have been much
more seriously felt, had not the situation been saved by the appearance of a timely demand from China. It was known that stocks in that country had reached a low ebb; and when assurance of good crops was obtained the repairing of the deficit throughout a vast territory gave rise to very active purchases. These conditions were stimulated by the continuous fall in the tael exchange which stood at R189t ( $\mathrm{E}_{12} 12 \mathrm{~s}$. 4d.) per 100 taels at the beginning of April 1908,
 ( $6 \times 2$ ios. $4 d$.) by 25 th June, then fell away steadily verging on R 176 ( $£ 1114 s .8 d$. ) at the end of September, dropping heavily to Ri7it ( $£ 1188.4 d$.) in the first week of November, touching its lowest point at R; $66_{\frac{1}{1}}^{\frac{1}{4}}(\mathrm{E}$ is is. 8 s .) at the beginning of December, and at last moved slowly upwards to Rif8 ( $\mathrm{E}_{11} 1$ 17s. $4^{d}$.). These conditions, both as regards bareness of market and as regards the unfavourable hardening of exchange, prevailed at the close of the statistical year. That the prospect, though possibly less bright than it seemed at the best season of 1907, is not regarded by the share market as discouraging is shown by the following fact. A calculation based upon the share values of fifty spinning and weaving companies shows the value per Rioo of share capital to have been $\mathrm{R}_{11} 8$ ( $£ 717 \mathrm{~s}$. $4 \dot{d}$. ) at the end of March 1909 as compared with $\mathrm{R}_{11}(£ 7$ 18s. $8 d$. ) a year earlier. The joint-stock capital engaged in the industry is R14.93 crores ( $_{9} 9^{\circ} 95$ millions) as compared with R $\mathrm{R}_{14}{ }^{\circ} \mathrm{O}_{3}$ crores ( $£ 9.35$ millions) in ${ }^{1} 907-08$. In the same period the number of hands employed has grown from 220,363 to 231,758 , the number of mills from 223 to 225 , the number of spindles from $5,695,994$ to $5,875,798$, and the number of looms from 65,307 to $72,93 \mathrm{I}$. The average production of yarn per mensem has grown from $53,191,260 \mathrm{lbs}$ to $54,798,763 \mathrm{lbs}$. The rates of increase have therefore been as follows: Capital 6.4 per cent, labour $5^{\circ} 2$ per cent, spindles $3 \cdot 1$ per cent, looms iry per cent, and production of yarn 3 per cent.

The following statement shows for each of the last five years the spinning and weaving plant in position, the production of yarn and of cloth, and the average monthly production per spindle and per loom :

|  | - | Spindles | $\underset{\text { Yarn }}{\text { production }}$ | Average monthly production per spindle | Looms | $\begin{aligned} & \text { Cloth } \\ & \text { production } \end{aligned}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | No. | Ibs | lbs | No. | lbs | lbs |
| 1904-05 |  | 5,130,832 | 578,381,275 | 94 | 45,950 | 158,746,555 | 288 |
| 1905-06 |  | 5,229,098 | 680,918,851 | 10.8 | 50,910 | 163,880,194 | 268 |
| 1906.07 |  | 5,480,524 | 653,700,460 | 9.9 | 58,240 | 165,767,858 | 237 |
| 1907-08 |  | 5,696,994 | 638,295,115 | $9 \cdot 3$ | 64,330 | 18¢1,051,729 | 245 |
| 1908.09 |  | 5,875,798 | 657,585,159 | $9 \cdot 3$ | 72,931 | 192,364,697 | 220 |

The following statement shows the quantilies and values of yarn and piece-goods exported in the last five years, the unit being $\mathbf{1 , 0 0 0}$ :

The yarn produced includes the indigenous yarn subsequently woven into cloth. It will be seen that the production of yarn was less by 3.4 per cent than in $1905-06$ but greater than in any other jear and 3 per cent greater than in 1907-08.

The total increase in production was $19,290,000 \mathrm{lbs}$, and the activity of the export business is shown by the fact that $19,893,300 \mathrm{lbs}$ more were shipped than in the previous year. The exports still fall far short of the records of some earlier years but they mark an improvement of 9.2 per cent on that of 1907.08 . The production of cloth exceeded the record figures for $1907-08$ by $16,063,000$ yards or 2 per cent; but only $3,861,000$ yards of this were added to the previous year's figure of shipments, and the total compares ill with the statistics of such years as 1904-5.6.

In value, yarn represents $83^{\prime} 9$ per cent of the total exports of cotton goods; and it has shown a net increase of $\mathrm{R}_{7} 075 \mathrm{j}$ lakhs ( $£ 471,700$ ) or 7.9 per cent to Rg68.05 lakhs ( $£ 6,453,700$ ). The exports to China represent $88 \cdot 2$ per cent of the total value as against 74 per cent in 1907.08 and they showed an advance of R187:54 lakhs ( $£ 1,250,000$ ) or $128^{\prime} 1$ per cent to $R 854^{\circ} 09$ lakhs ( $£ 5,694,000$ ). The quantity of yarn shipped from the United Kingdom to the Further East in the calendar year 1908 was $11 \cdot 5$ millions of lbs as against $10 \cdot 1$ millions of lbs in 1907.

On the other hand; India's exports of yarn to countries other than China fell aray by Ris6.79 lakhs ( $£ 778,600$ ) to Ri13.96 lakhs ( $£ 759,700$ ). The figures relating to the Straits Settlements shared this deuline and fell by $\mathrm{R}_{5} .46$ lakhs ( $£ 36,400$ ) to $\mathrm{R}_{24} 98$ lakhs ( $£ 166,500$ ).

The trade with the Levant and Black Sea which in 1907.08 had been brought to $8,944.280$ lbs with a value of $R_{37} 35$ lakhs ( $£ 249,000$ ) receded to $7,450, \mathrm{c}_{4} 6 \mathrm{lbs}$ with a value of $\mathrm{R}_{2} 888$ lakhs ( $£ 192,200$ ). Turkey in Europe, which had taken $1,925,784 \mathrm{lbs}$ in $1907-08$, reduced its demand to $454,240 \mathrm{lbs}$ with a value of Rr.53 lakhs ( $£ 10,200$ ) ; and the shipments to Egypt fell off from $3,017,176 \mathrm{lbs}$ to $2,089,420 \mathrm{lbs}$ with a value of $\mathrm{R} 8 \cdot 2$ lakhs ( $£ 54,700$ ).

The trade with Europe, to which allusion has already been made and which showed promise in $1907-08$, fell away from $29,171,357$ lbs to $5,006,346 \mathrm{lbs}$; but the better class of spinners seem confident that it will emerge apain when the China demand abates and conditions in Europe become less depressed.

In value, the increase in exports of piece-goods was one of 4 per cent or R6.62 lakhs ( $£ 44,100$ ) to R170 ${ }_{36}$ lakhs ( $£_{1,135,70 n \text { ), the specific value }}$ apparently declining by $\mathrm{I}^{\cdot 1}$ per cent.

Grey goods represent 37.3 per cent of the piece-goods; and in that branch the trade increased by 10.5 per cent in quantity and 6.5 per cent in value, bringing the total to $43,572,079$ yards and $R 6_{3} \cdot 61$ lakhs ( $£ 424,000$ ) with a specific value $3^{\circ} 6$ per cent lower than in the previous year. The shipments of grey goods to China advanced from 926,170 yards and $R_{1} \cdot 19$ lakhs ( $£ 8,000$ ) to $3,647,394$ yards and $R_{4} \cdot 93$ lakhs ( $£_{3} 2,900$ ), the increase being $293 \cdot 8$ per cent in quantity and 314.9 per cent in value. In 1908 the shipments of plain cotton cloth from England to the Further East amounted to 609 million yards as compared with 596 millions in 1907. But the principal foreign markets for Indian cloth are East Africa (with $15,092,964$ yards), Asiatic Turkey ( $8,809,347$ yards), and Aden ( $7,954,014$ yards).

The decline in coloured goods was continued, though it amounted only to 4 per cent, and the total of $34, r 78,000$ yards was little lower than the figure of a year earlier.

Dyed and printed cloths go mainly from Madras and Bombay to the Straits, Ceylon, and the Philippines; and the shipments in 1908-09 from the two
 ( $£ 84,000$ ) respectively.

The shipment of Indian piece-goods by sea from Bombay Presidency to other provinces declined by $27,050,000$ yards or 113 per cent to $211,951,000$
 ( $£ 2,351,000$ ).

Prices in $1907-08$ had held fairly good with T-cloths moving from 9 annas (or pence) to $9_{1} \frac{1}{2}$ annas (or pence) and with 20 twist averaging $6 \frac{1}{6} \frac{1}{4}$ annas (or pence) in April 1908 and $6 \frac{5}{3}$ annas (or pence) in March 1909. In the year under review, however, the price of cloth was weak. T-cloths opened at $9 \lambda_{12}^{\lambda}$ annas (or pence) and closed at $8 \frac{3}{8}$ annas (or pence), but 205 yarns advanced from $6 \frac{1}{8}$ to $6_{6}^{2 \frac{3}{4}}$ annas (or pence).

Jute manufactures, in the three years ending 1907-08, represented 41.2 per cent of the total value of exports of Indian manufactured articles. In 1908-09 this percentage rose to 42.9 per cent; but it will be seen that this is due to the contraction recorded in other lines.

The year was marked by a heavy drop in the prices of the raw material and of manufactured products. This was due, not only to the general decline in mercantile activity and to the presence of heavy stocks in some of the most important markets, but to the shortage in Indian grain and seed crops and the consequent decrease in the demand for bags. Spinners abroad made considerable purchases of raw jute on the lower level of prices in expectation of a recovery that did not appear; and many Calcutta producers of cloths looked also for a rise and stood out of some important markets only to ind, later on, that their Dundee competitors had seized such opportunity as existed. But in Dundee as in Calcutta the year has been one of short business and poor returns. There have been repeated endeavours to concert a movement for short-time ; but in Calcutta these were frustrated by the abstention of those mills which were well placed in respect of purchases and sales. The average price of jute bags (A. T. $2 \frac{1}{4} \mathrm{lbs}$ ) in Calcutta in $1907-08$ was R29-1I-O ( $£ \mathrm{I}$ 19s. 7 d .) per 100 . In $1908-09$ it was R24-11.6 ( $£ 1$ i2s. $11 \frac{1}{2} d$ ). Those relating to Hessian cloth
 1908-09 R ro-15-9 ( 145 s. $7 \frac{3}{4} d$ ). The opening, closing, highest, and lowest rates during the year under review were as follows:

Under such conditions the pressure of increased manufacturing power was naturally felt. The following statement shows the growth in the number of spindles and looms in position in India in the last six years :

|  |  |  | Spindles |  | Loons |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Number | Percentage increase | Number | Percentage increase |
| 1903-04 |  | - | 376,718 | $6 \cdot 96$ | 18,400 | $7 \cdot 04$ |
| 1904-05 |  | - | 409, 170 | 8.61 | 19,991 | $8 \cdot 65$ |

In 1884 when the Indian Jute Mills Association was formed, the number of joms was only 6,337 . If reference be made to the article that deals with

Imports of Machinery, it will be seen that there are some indications of a check. The eflect of the year on the industry may to some extent be gathered from the fact that, at its close the average value per R100 ( $£^{6} 13$ s. $4^{d}$.) of share capital in Jute Mills was found to have a value of R129 ( $£ 8125$.) , as compared with R131 ( $£ 8$ 14s. 8 $\%$ ) a year before.

The following statement shows for the last five years the value of the exports of various classes of goods, the unit being 1,000 :-

|  |  | 1904-05 | 1905-06 | 1906.07 | 1907.08 | -1908-09 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Bags | No. | 20:,436 | 233,326 | 257,683 | 293,029 | 300,906 |
|  | . 2 R | 4,75,54 | 6,07,84 | 7,34,72 | 8,47,5 | 7,76,65 |
|  | ( | 3,170 | 4,052 | 4,898 | 5,65 | 5,178 |
| Cloth | Yards | 575.512 | 658,671 | 696,068 | 789,856 | 769,799 |
|  | . 2 R | 5,11,61 | 6,30,50 | 8,25,87 | 9,69, 29 | 7,89,02 |
|  | (£ | 3,411 | 4,203 | 5,506 | 6,462 | 5,260 |
| Value of all sorts | $\left\{\begin{array}{l} R \\ E \end{array}\right.$ | $\begin{array}{r} 9,93,89 \\ 6,626 \end{array}$ | 12,44,80 | 15,71,62 | 18,29,76 | 15,73,60 |
|  |  |  | 8,299 | 10,477 | 12,198 | 10,491 |

The exports of Bags increased by $7,877,000$ or 2.7 per cent in number; but as regards value there was a contraction of $\mathrm{R} 70^{\circ} \mathrm{S} 6$ lakhs ( $£ 472,400$ ) or $8^{\circ} 4$ per cent, the difierence between these rates arguing a fall of in per cent in specific value. This is the first year since $1901-02$ in which a decline has taken place.

In Cloth the results were even worse, for we find a decline of more than 20 million yards or $2 . \Xi$ per cent in quantity as well as one of $\mathrm{R} 180^{\circ} 27$ lakhs ( $£_{1,201,800 \text { ) or } 18.6 \text { per cent in value. Here the fall in specific value would }}^{\text {a }}$ appear to be about 16.5 per cent. It is interesting at this point to revert to the fact that the specific value of raw jute fell by 12.4 per cent.

The largest single buyer of jute fabrics from India is the United States which takes her supplies mainly as cloth. The value of her purchases in 1908-09 was $\mathrm{R}_{3}{ }^{22} \cdot 95$ lakhs ( $\mathscr{C}_{3}, 486,000$ ) as compared with R664.64 lakhs ( $£ 4,43^{1}, \mathrm{coo}$ ) in the pievious year, which marks a drop of 21.3 per cent. Of this total $\mathrm{R} 54^{\circ} 06$ lakhs ( $£ 360,400$ ) is accounted for by bags, that figure being, however, $3^{2} \cdot 3$ per cent less than in 1907-08. Australia is the largest single purchaser of bags; and although the value receded by $7 \cdot 1$ per cent to $\mathrm{R} 158^{\circ} 62$ lakhs $=£ 1,057,500$ (which is much the same figure as was recorded two years ago), the quantity taken was only $20^{\circ} 4$ per cent more than in 1907 -08. Shipments to the United Kingdom fell from R $109 \cdot 11$ lakhs ( $£ 727,400$ ) to R ${ }^{6} 614$ lakhs ( $£ 641,000$ ), the decline being nearly 12 per cent. Those to Germany also fell off from R 26.32 lakhs ( $£ 175,500$ ) to R 23 '93 lakhs ( $£ 159,500$ ). Egypt's demand grew by 23 per cent, from $R_{42^{\circ}} 33$ lakhs ( $£ 282,000$ ) to $\mathrm{R}_{52 \cdot 12}$ lakhs ( $£ 347,500$ ), but that of Turkey in Europe shrank to $\mathrm{R}_{4} \cdot 54$ lakhs ( $£ 30,300$ ) in place of R6'r lakhs ( $£ 41,000$ ) in 1907-08. Turkey in Asia with $\mathrm{R}_{15}{ }^{\circ} 76$ lakhs ( $£ 105,000$ ) also showed a heavy decrease. Argentina takes her supplies mainly as cloth of hessian quality for manufacture into grain bags and the value of her purchases in 1908-c9 was R225 lakhs ( $£ 1,500,000$ ) as compared wih $R_{240}{ }^{\circ} 9$ lakhs ( $£ 1,606,000$ ) in the previous year. Chile, on the other hand, buys nitrate bags ready made of sacking quality and in $!\subseteq 07-08$ she figured for $\mathrm{R}_{5} 8.53$ lakhs ( $£ 390,000$ ) under this head. In the year under review the value dropped by $20^{\prime} 4$ per cent to $R_{46} 56$ lakhs ( $£ 310,400$ ), and Peru also figures at the reduced total of R8.65 lakhs ( $£ 57,700$ ) in place of $\mathrm{R}_{10} 46$ lakhs ( $£ 69,700$ ) in 1907 -08. China more than doubled her low demand of the previous year, but only approached her normal deriand at $\mathrm{R}_{44} \cdot 4$ lakhs ( $£^{2} 96,000$ ). This movement was accompanied
by a contraction of the Straits Settlements figures by some 28 per cent to $\mathrm{R} 44^{\circ}{ }^{5} 6$ lakhs ( $£ 297,100$ ). That figure, as representing the trade of a distributing centre, may be regarded in relation to those for other points in the same region. Indo-China, with a total of 33.48 lakhs ( $£_{223} 3,000$ ), showed a decline of 18.7 per cent ; while direst consignments to Java rose by 18.4 per cent to R 25.9 lakhs ( $£ 173,000$ ) and those to Siam by $54^{\prime} 6$ per cent to R27.6 lakhs ( $£ 184,000$ ). The decline in the shipments to West Indies is less marked, but brings their figure to $R_{31}{ }^{\circ} 0_{3}$ lakhs ( $£ 207,000$ ) in place of $R_{35} \cdot 16$ lakhs ( $£ 234,400$ ) in 1907-03. The drop in those to Cape Colony on the other hand is heavy, namely, from R ${ }_{17}{ }^{\circ} 02$ lakhs ( $£_{11} 3,500$ ) to R12.26 lakhs ( $£ 81,500$ ); and Natal shows the same rate of consumption and decline in receding from R16.93 lakhs ( $£ 113,000$ ) to Ri2.2I lakhs ( $£ 8 \mathrm{I}, 400$ ).

The decrease in the exports of cloth is one of $20,057,000$ jards and R 180.37 lakhs ( $£_{\mathrm{I}, 201,800 \text { ); and the totals are less than those in the pre- }}$ vious year by 2.5 per cent in quantity and 18.6 per cent in value. Of the total, the United States took 65 per cent with a value of $R_{4} 68.89$ lakhs ( $£ 3,126,000$ ) in place of $\mathrm{R}_{5} 84.85$ lakhs ( $£_{3}, 899,000$ ) in the previous year. The shipments to the Argentine fell off from R240'91 lakhs ( $£ 1,606,000$ ) to R225 \% lakhs ( $£ 1,500,000$ ) ; while Uruguay took $\mathrm{R}_{13} \cdot 39$ lakhs ( $£ 89,000$ ) in place of $\mathrm{R}_{10} 89$ lakhs ( $£ 72,600$ ) in 1907.08 . Consignments to the United Kingdom, which are largely for distribution, have receded considerably in the last two years after a marked rise, and now have a value of $R 29^{\circ} 3$ lakhs ( $£ 195,000$ ), which is $42^{\circ} 6$ per cent less than in 1907-00. Australia, which in that year took R 30.66 lakhs ( $£ 204,400$ ) in cloth in addition to her bags, has reduced her requirements to $\mathrm{R}_{26}{ }^{\circ}{ }^{\circ} 2$ lakhs ( $£_{\mathrm{r}} 76,000$ ), and the direct trade with China now amounts to only $\mathrm{R}_{3}{ }^{\prime} 74$ lakhs ( $£ 25,000$ ).

In exports of Silk manufactures there has been a reaction of 11.8 per cent; and their total value is only R 7.33 lakhs ( $£ 49,000$ ) in place of $R 8^{\prime} 3^{3}$ lakhs ( $£ 55,400$ ) in $190 \%$.08. The goods are chiefly tissues woven in Bengal from indigenous silks. Elsewhere the industry is conducted mainly for the Indian market ; and its abstention from exportation does not necessarily indicate inactivity. Its scattered and unorganised condition does, however, prevent its commanding attention commercially; and it is satisfactory to note that some success is attending such essays in co-operation as that made by the Benares Silk Weavers' Co-operative Central Association.

Exports of Woollen manufactures represent only 9 per cent of the exports of Indian textile goods. Their total in $1908-09$ is less by 7.9 per cent than in the previous year, and has a value of $R_{25}{ }^{\circ} 05$ lakhs $(£ 167,000)$ as compared
 total ; and their value of R22'46 lakhs ( $£ 149,700$ ) shows a fall of 8 per cent as compared with R24.4 lakhs ( $£ 163,000$ ) in $1907-08$. The greater part of this shrinkage of $\mathrm{R}_{\mathrm{I}} 94$ lakhs $(: \in 13,000)$ is accounted for dy the continued drop in the demand from America which has recently been resorting more to the Levantine markets. The share of the United States is now only $R_{3} \cdot 6_{1}$ lakhs ( $£ 24,0=0$ ) as against $R_{4}: 72$ lakhs ( $£ 31,500$ ) in 1907-08; but the United Kingdom, though taking carpets to the value of $\mathbb{R}_{1727}$ lakhs ( $£ 115,000$ ) and so doing the bulk of the trade, has also reduced her purchases by R97,000 ( $£ 6,467$ ). Piece-goods and other miscellaneous manufactures fell away by 7.5 per cent, that is to say, from $R_{2} \cdot 79$ lakhs ( $£ 18,600$ ) to $\mathrm{R}_{2} \cdot 58$ lakhs ( $£ 17,200$ ). The imports of woollen yarns declined by $24,124 \mathrm{lbs}$ and by $\mathrm{Rr} \mathrm{I}^{\prime} 74$ lakhs ( $£ 11,600$ ) ; while
it may be noted that the production in the Indian woollen mills has been as follors in the last three years, the anit being $\mathbf{1 , 0 0 0}$ :

|  | 1906 | 1907 | 1908 |
| :---: | :---: | :---: | :---: |
| Quantity lbs | 2,827 | 2,9+5 | 3,416 |
| Value $\cdot{ }_{R_{34}, 82}=\left(£_{232}\right)_{R_{34,13}}=\left(£^{227}\right) R_{44,00}=\left(£^{293}\right)$ |  |  |  |

The exports of Apparel declined from $\mathrm{R}^{20 \cdot 24}$ lakhs ( $\left(6135,000\right.$ ) to $\mathrm{R}_{16}{ }^{\circ} 71$ lakns ( $£ 111,400$ ), the decline being one of $R_{3} \cdot 53$ lakhs ( 623,500 ) or 174 per cent. Boots and Shoes, which form the most important sub head in this class, declined from $R_{5} \cdot 57$ lakhs ( $£_{3} 7,000$ ) to $R_{4} \cdot 56$ likhs ( 630,400 ). Reexports of foreign boots and shoes amounted to $\mathrm{R}_{34,000}\left(£_{2,267}\right)$ as compared with $R_{35,304}\left(£^{2,354}\right)$ in 1907.08 .

Coir-The trade in coir-matting and other manufactures of coir is almost entirely in the hands of Madras, and the steady gronth in the exports has been accelerated in 1gu8-og. Their value amounted in 1908-c9 to R62.75 lakhs ( $£ 4!8,300$ ), of which the United Kingdom took R:9.52 lakhs ( $6,100,000$ ), Germany R15.3 lakhs ( $£ 102,000$ ), Holland R 3.94 lakhs ( $£ 26,300$ ), Eelgium R $5^{\circ} \% 6$ lakhs ( $£ 38,400$ ), France $R_{5} \cdot 33$ lakhs ( $£ 35,500$ ), and the United States R 6.52 lakhs ( 643,500 ).

Hides and skins, tanned, on the average of the three years ending $1907-08$, represented 30 per cent of the total value of all hides and skins exported. The depression of trade had largely affected the world's leather business in 1907, but 1908 saw a certain revival and the imports of leather into the Lnited Kingdom in that year showed an increase of 9.9 per cent in quantity and 64 per cent in value. The total exports of tanned hides and skins in 1908.09 rose from $R_{3} 89.97$ lakhs ( $£^{2}, 599,800$ ) to $R_{112} \cdot 85$ lakhs ( $\int_{2, i 52,300}$ ). The increase is ascribable entirely to the tanned hides section which, as may be seen from the statement below, increased in quantity by 39,627 cuts or $30^{\circ} 1$ per cent, and in value by R $34^{\prime \prime} 11$ lakhs ( $(627,400$ ) or ${ }^{2} 3.3$ per cent, the rise in specific value being $r^{\circ} 7$ per cent, and the average value R81.57 ( $£ 5-8-9$ ) per cwt against R $80 \cdot 22$ ( $£ 5-6-11 \frac{1}{2}$ ) in the previous year. On the other hand, the exports of tanned skins receded by 9,245 cwts and R11.22 lakhs ( $£ 74,800$ ), the decline being 6.1 per cent in quantity and $3^{\circ} 9$ per cent in total value, which marks a rise of 2.3 per cent in specific value. The average value in this class was Rig: 68 ( $£ 12-15 \cdot 7$ ) per cwt as against $\mathrm{R}_{18} 7^{\circ} 4$ ( $£ 12-9-10$ ) in the previous year. It is necessary, however, to remind readers that these two classes of hides and skins comprise many diverse descriptions and qualities and that these vary in relative quantity from year to year, so that it is not permissible to regard the fluctuations in average value with such reliance as is warranted in the case of a single article or a homogeneous and constant group.

The following is a statement of the total exportation in the two classes in the last six years, the unit being $\mathbf{1 , 0 0 0}$ :

|  | Tansed Hides |  |  | Tanned Skins |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ${ }_{\text {Cwt }}$ No | R | $£$ | Cwt | No | $\boldsymbol{R}$ | $\notin$ |
| $1903-04$ | - $103=1,569$ | $61,46=$ | 410 | 162 | 18,526 | 2,48,43 | 1,656 |
| 1904-05 | - 123 1,826 | 82,52 | 550 | 1:39 | ${ }^{1} 5,493$ | 2,02,65 | 1,351 |
| 1905.06 | - 202 2,917 | 1,54,80 | 1,032 | 139 | 16,884 | 2,11,04 | 1,407 |
| 1905.07 | - 220 3,278 | 1,72,96 | 1,153 | 150 | 18,097 | 2,72,16 | 1,814 |
| 1907-08 | - 1321,894 | 1,05,52 | 703 | 152 | 18,427 | 2,84,45 | 1,896 |
| 1908-09 | . 1712,483 | 1,39,63 | 931 | 143 | 17,859 | 2,73,23 | 1,822 |

In tanned hides Madras predominated and exported $84^{\circ} 6$ per cent of the total weight, while Bombay's share vas 14.3 per cent. In tanned skins also these provinces almost monopolised the trade with $80 \cdot 1$ per cent and 18.4 per cent, respectively.

In the absence of a protective tariff, the United Kingdom continues to take the greater part of the tanned hides and skins; though the movement in the United States for reduction of the import duties has received a fresh impulse from the general revision of the tariff. In hides, Britain's share of the total has advanced from $95^{\prime} 9$ per cent to $97^{\circ} 2$ per cent, and the total quantity of her purchases from $126,1,2 \mathrm{cwts}$ to $166,414 \mathrm{cwts}$ in 1908-09. In skins, her demand has amounted to $112,992 \mathrm{cwts}$ in place of $\mathbf{1 2 2 , 4 7 9 \mathrm { cwts } \text { , and her share has fallen }}$ to $79^{\circ} 3$ per cent as compared with her participation of $80^{\circ} 7$ per cent in the larger total of the previous year. The United States have taken $20,259 \mathrm{cwts}$ of skins in place of $19,309 \mathrm{cwts}$ in the previous year. This quantity represents $14^{.2}$ per cent of the $t$ talal in this class.

Lac is an article associated with the electrical industry and with the manufacture of high-class varnishes, of hats, and of records for gramophones and talking machines. Several of these are new industries ; and the manufacture of varnish had received a stimulus from the boom in the motor trade. Consequently the demand for lac increased greatly in recent years and the price rose rapidly. But since the articles in question are of the nature of luxuries, their reaction on the collapse of trade has been the more marked and the price of lac has fallen away enormously.

The following statement shows the prices per cwt, in Calcutta:

The average price therefore was $35^{\circ} 9$ per cent lower than in 1907-08.
The crop in 1908 was exceptionslly large and the following statement of exports will show that it went forward in large quantities in spite of unattractive prices. Strictly, only the manufactured articles, shell and button lac, should be discussed in this section; but since it is really a raw material, it is interesting to collate the figures relating to the two branches of the trade.

A given quantity of seed or stick lac such as is exported may be taken as yielding about fifty per cent shell or button lac.

The exports of Shellac increased by 16 fer cent in quantity but fell off by $25^{\circ} 8$ per cent in the total value, which discrepancy argues a drop of $36^{\circ} \mathrm{I}$ per cent in specific value. Bottoal lac, on the other hand, contracted by 20.5 per cent in quantity and 502 per cent in total value, so that the fall in its specific value
tallies approximately with that found in respect of shellac. On the average of the last three years the two classes of manufactured lac represent respectively $8_{3} \%$ per cent and in per cent of the total. Together they increased in quantity by ${ }^{\prime}{ }^{\circ} 5$ fer cent in the year under review and fell by 28.8 per cent in value. On the other hand, the exports of the crude material, stick lac and seed lac, dropped by 62 per cent to a level lower than has been seen since 1904.05; and the still greater drop of 7.4 per cent in total value marks a loss of nearly 25 per cent in specific value. Here again it may be reiterated that the valuation of exports not subject to duty is apt to be loose.

The United States maintain their position as the princifal buyer of shellac and button lac but with a total value of only R1irita lakhs ( $£ 7+0,800$ ) as compared with R134.45 lakhs ( $£ 896,300$ ) in 1907.08 . The United Kingdom
 while Germany took $\mathrm{R}_{57} \cdot 31$ lakhs ( $\mathcal{K}_{3} 82,100$ ) in place of R98.58 la!:hs $\left({ }_{\delta} 657,200\right)$ in 1907.08 . The shares of these three countries were therefore 39.8 per cent, $27^{\circ}$ i per cent, and $20^{\circ} 5$ per cent, respectively.

General distribution of the export trade-The shares borne by the principal countries of destination in the exports of merchandisc from India in the last five years have been as follows:-

|  |  | 1904.05 <br> Percent | 1905-06 <br> Per cent | 1906-07 <br> Per cent | 1907.08 <br> Per cent | 1908.09 Per cen |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1. United Kingdom |  | 27.5 | 25.3 | 27.1 | 25.9 | 24 |
| 2. China |  | 12.6 | 13.5 | 10.9 | $8 \cdot 6$ | 12 |
| 3. Germany |  | $9 \cdot 3$ | $9 \cdot 3$ | 114 | 117 | 10 |
| 4. United States |  | $6 \cdot 3$ | $8 \cdot 2$ | 9 | $7 \cdot 8$ | $8 \cdot 8$ |
| 5. France |  | 6.2 | 6 | 6.5 | 6.6 | 6.4 |
| 6. Japan | - | $6 \cdot 3$ | 6.3 | $4^{11}$ | 5: | $4 \cdot 8$ |
| 7. Belgium |  | $5 \cdot 4$ | $4 \cdot 1$ | $4 \cdot 2$ | $5 \cdot 3$ | 4 |
| 8. Ceylon | - | 3.2 | 3.5 | 3.7 | 3.6 | 3.9 |
| 9. Straits Settlements |  | 4.1 | 4 | 3.8 | 39 | 3.5 |
| 10. Italy . | - | 2.8 | 3 | $3 \cdot 3$ | $3 \cdot 2$ | 3.3 |
| 11. Austria-Hungary |  | 3 | 3 | $3 \cdot 5$ | 37 | 3.1 |
| 12. Egypt | - | 0.8 | 1 | $1^{\prime}$ : | 17 | $2 \cdot 4$ |

The total value was $\mathrm{R}_{149} \cdot 82$ crores ( $£ 99.88$ millions) in place of $\mathrm{R}_{173}{ }^{\circ} 4^{8}$ crores ( $£ 11565$ millions) in $1907-08$.

The share of the United Kingdom has declined nearly 2 per cent, mainly as a consequence of the smell shipments of cotton, wheat, and seeds. Her total fell from R $444^{\prime} 9$ crores ( $£ 29$ '93 millions) to $\mathrm{R}_{3} 6.07$ crores ( $£ 24.05$ millions). Germany shows an even greater deciine, having taken exports only to the value of $\mathrm{R}_{15}$ crores ( $£ 10$ millions) in place of $\mathrm{R}_{20} 24$ crores ( $£ 13.49$ millions) in $1907-08$. But some goods for Germany are shipped to Belgium, and for this reason it is well that the latter's diminished total of R 6 crores ( $£ 4$ millions) in place of $\mathrm{Rg}^{\prime} 15$ crores ( $£ 6^{\prime} \mathrm{I}$ millions) in $1907-08$ should mentally be bracketed with that for Germany. The large exports of yarn and opium to China helped to
 millions) and to augment her percentage; while jute goods account to a considerable extent for the decrease of the United States from R13.52 crores ( $£ 9^{\circ} \circ$ or millions) to $\mathrm{R}_{13} .21$ crores ( $£ 8.81$ millions), though their share rose by 1 per cent. The short shipments in oilseeds contributed to the fall from Rir. 5 crores ( $£ 767$ millions) to R9.59 crores ( $\kappa_{6} 6.4$ millions) shown by the exports to France, and those of rice to Japan for the drop of her total to R $7_{7} 17$ crores ( $£ 4.78$ millions) in place of $R 8.87$ crores ( $£ 5 \cdot 91$ millions) in 1907.08 .

Exports to Ceylon were R5.82 crores ( $£ 3.83$ millions) as compared with R6. 25 crores ( $£ 4.17$ millions) in 1907-08, while those to the Straits Settlements fell from $R 6 \cdot \delta_{2}$ crores ( $£ 4.55$ millions) to $R_{5}{ }^{\prime} 26$ crores ( $£ 3^{\circ} \cdot 51$ millions). Italy's total was $\mathrm{R}_{5}{ }^{\circ} \mathrm{O}$ chores ( $£ 3.35$ millions) in place of $\mathrm{R}_{5} .54$ crores ( $£ 3^{\circ} 7$ millions) in 1907-08. Austria-Hungary dropped from R6.35 crores ( $£ 4.23$ millions) to $\mathrm{R}_{4} \cdot 65$ crores ( $£ 3^{\circ} \cdot \mathrm{I}$ millions), but Egypt with R $\mathrm{R}_{3} 63$ crores ( $£_{2}{ }^{\circ} \mathbf{4}^{2}$ millions) in place of $\mathrm{R}_{1} \cdot 86$ crores ( $(\mathrm{f} \cdot 24$ millions) in the previous year showed an advance which may be reduced on receipt of advices as to the ultimate destinations of cargoes sent to that country "to await orders."

## TRADE ACCORDING TO COUNTRIES

The following statement shows in thousands of rupees and of pounds sterling the value of the trade of British India in private merchandise with various main divisions of the world :

|  |  | 1906.07 |  | 1907.08 |  | 1908-09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $r_{\text {R }}$ | 6 | $\overbrace{R}$ | $\pm$ | $\overbrace{\text { R }}$ | $£$ |
| Europe |  | 1,91,91,07 $=$ | 127,941 | 2,09,57,49= | 139.717 | 1,76,84,20 | 117,895 |
| Asia . | - | 58,97,88 | 39.319 | 63,07,3 I | 42,049 | $6 \pm, 89,28$ | 41,262 |
| America |  | 21,87,35 | 14,582 | 21,42,16 | 14,28! | 20,68,23 | 13,788 |
| Africa and jacent island | ad- | 8,49,2S | 5,662 | 9,05,92 | 6,039 | 10,8 1,15 | 7,207 |
| Australasia . | . | 3,6r,78 | 2.412 | 4,01,19 | 2,675 | 4,03,18 | 2,688 |
| Total | - | 2,84,87,35 | 189,916 | 3,07,14,07 | 204,761 | 2,74,26,04 | 182,840 |

The trade with Europe (which now represents 64.5 per cent of the total as compared with $68^{\circ} 2$ per cent in the previous year) declined by R 32.73 crores ( $£^{21,822,000}$ ) or $15^{\circ} 6$ per cent. That with Asin fell by Rri8.03 lakhs ( $£ 787,000$ ) ; but as the decline in other directions was relatively greater, her share in the total rose from $20^{\circ} 5$ per cent to 22.6 per cent. America stands third in order of importance, having accounted for $7^{\circ} 5$ per cent of the total trade; and here the decline amounts to only R 73.93 lakhs ( $£ 493.000$ ) or 3.4 per cent. Trade with the United States represents 80 per cent of the American total. Africa on the other hand showed an improvement of $R_{175}{ }^{\circ} 23$ lakhs ( $£ 1,168,000$ ), while Australasia added nearly R2 lakhs ( $£ 13,000$ ) to her steadily increasing record. Of the trade with Europe, R81.47 lakhs ( $£ 543,000$ ) or 46 per cent were exports, while F 95.37 lakhs ( $£ 635,800$ ) or 54 per cent consisted of imports The trade with Asia consisted of $70^{\circ} 7$ per cent exports and $29^{\circ} 3$ per cent imports. Exports to America represented $84^{\circ} 2$ per cent of the American total. Africa took twice as much and Australasia three times as much as they severally supplied.

Trade with the United Kingdom fell from Ri3,2,39 lakhs ( $£ 88,260,000$ ) to $R_{11,273}$ lakhs ( $£ 75,157,000$ ), the reduction being $R_{I, 956}$ lakhs ( $£ 3,100,000$ ) or 14.8 per cent. Her share in the total trade was 411 per cent and her share in the trade with all British Possessions was $74^{\circ} \mathrm{r}$ per cent.

The trade with British Possessions other than the United Kingdom was $\mathrm{R}_{3} .945^{\prime} 55$ lakhs ( $\left(26,303,700\right.$ ) in place of $\mathrm{R}_{3}, 990^{\circ} 59$ lakhs ( $£ 26,504,000$ ). That figure forms 14.4 per cent of the total trade and marks a fall of $I_{1}$ per cent as compared with the previous year.

The trade with all British Possessions represented 55.5 per cent of the whole trade and declined by ${ }^{11} 7$ per cent : that is to say from R17,229.6 lakhs

Trade with foreign countries represented $44^{\circ} 5$ per cent of the whole trade and declined by $9^{\circ} 5$ per cent : that is to say from R ${ }_{1} 3,44_{4}{ }_{4} 6$ lakhs ( $£ 89,8 ; 6,400$ to Ri2,20599 lakhs ( $£ \mathrm{~S}_{\mathrm{I}, 3} 30,000$ ).

The following statement shows India's trade with each principal country in the last three years, the unit being one thousand-

Until the system of recording imports according to countries of true origin and exports in accordance with final destination has been in force for some y ears and has rendered retrospect possible, some of the figures in the foregoing statement must be taken with reserve.

It will be seen that China has resumed the second place in the list, the increase in her total being $R_{3} 09 \cdot 6_{3}$ lakhs ( $£_{2}, 06_{4}, 000$ ). This is largely due to the revival of her demand for lindian yarns, and the paragraphs relating to exports of cotton goods may be referred to for fuller particulars. The trade which, under the present system, is attributed to Germany consists of 75.3 per cent exports and $24^{\circ} 7$ per cent imports. It fell by $R_{54} 6_{11}$ lakhs ( $£ 3,66^{1}, 000$ ) and $95^{\circ} 7$ per cent of that fall is to be ascribed to exports. Exports and imports enter into the trade with the United States in proportions of $80^{\prime} 2$ per cent and 19.8 per cent respectively; and the decline in the total is a relatively small one of R 28.48 lakhs ( $£ 190,000$ ). France takes $84^{\circ 2}$ per cent exports against $15 \cdot 8$ per cent imports, and her total trade with India receded by $R 215^{\circ} 43$ lakhs ( $£ 1,436,000$ ); while Belgium showed a contraction of $R_{324} \cdot 27$ lakhs ( $£ 2,162,000$ ). Holland, which like Belgium probably gets the credit for a certain amount of German trade, lost $\mathrm{R}_{120} 95$ lakhs ( $£ 806,300$ ) of the figure for the previous year. Japan's total fell by $\mathrm{R}_{1} 7 \mathrm{~F}^{\circ} 37$ lakhs ( $£_{1}, 162,500$ ), in spite of large pu:chases of Indian cotton; and Java also shows a decline in spite of her heavy shipments of sugar.

## CUSTOMS REVENUE

The Tariff Schedule showing valuation of commodities for the assessment to import duty underwent the usual revision in December 1908 and came into force on the ist January ig09. The list of cotton goods recognised as piecegoods was revised at the same time and valuations of Indian cotton goods for Excise purposes were fixed.

No important cbange in Custons procedure was made during the year; but orders were passed regarding (a) the importation of cocaine, (b) remission of countervailing duty on Russian sugar, (c) exportation of Malwa opium by sea Irom Bombay, (d) exemption from duty of oilseeds imported by sea from Native States, (e) exemption of certain military band instrument and acces sories.

The gross revenue from imports fell from R 603.38 lakhs ( $£ 4,022,500$ ) to $\mathrm{R}_{598}$. 08 lakhs ( $£ 3,987,000$ ), the drop being one of $\mathrm{R}_{5} \cdot 3$ lakhs ( $£ 35,000$ ) or o.9 per cent. Refunds and drawbacks amounted to R1I 12 lakhs ( $£ 74,000$ ) in place of R9.42 lakhs ( $£ 62,800$ ) in 1907-08. Net revenue therefore declined from $R_{593}{ }^{9} 6$ lakhs ( $£ 3,959,700$ ) to $R_{5} 86 \cdot 96$ lakhs ( $£ 3,913,000$ ). This represents a reduction of $R 7$ lakhs ( $£ 46,600$ ) or $1-2$ per cent. Revenue from salt is not included in these figures, for it is not treated as a Customs receipt. It amounted to $\mathrm{R}_{13} 6.68$ lakhs ( $£ 9 \mathrm{r} 1,200$ ) against Rizo 7 lakhs ( $£ 879,000$ ) in the previous year.

The following statement shows the revenue derived in the last three years from the principal dutiable articles:

| Arms Ammunition. <br> Articles of food and drink- | 1906-07 |  | 1907-08 |  | 190S-09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Iron and steel | 8,14,554 | 54,304 | 10,46,999 | 69,800 | 10,32,494 | 68,833 |
| Silver | 40,79,319 | 271,955 | 51,70,203 | 344,680 | 63,64,131 | $42+275$ |
| Oils- |  |  |  |  |  |  |
| Petroleum | 37,77,026 | 251,802 | $44,63.468$ | 297,565 | 53,25.734 | 355,049 |
| M/anufactures of cotton- |  |  |  |  |  |  |
| Piecegoods: grey (un* bleached) | 64,10,439 | 427,363 | 66,97,608 | 446,507 | 52,20,078 | 348,005 |
| $\begin{aligned} & \text { Piecegoods: white } \\ & \text { (bleached) } \end{aligned}$ | 25,73,117 | 171,541 | 40,77,896 | 271,860 | 27,12,401 | 180,827 |
| Piecegoods: coloured | \3,48,458 | 223,230 | 38,04,353 | 253,62+ | 33,13,966 | 220,931 |
| Hosiery and all other manufactu ed cotton goods | 5,81,492 | 38,766 | 6,09,082 | 40,605 | 5,65,92: | 37,728 |

The gross revenue derived from these twenty-six articles is $\mathrm{R}_{534^{\circ} 5^{1} \text { lakhs }}$ ( $£ 3.56_{3,400}$ ) or $\delta 9.4$ per cent of the total.

The import duty on Cotton fabrics is $3 \frac{1}{3}$ per cent ad valorem, and the total revenue realized under this single head was $\mathrm{R}_{11} 18 \cdot 12$ lakhs ( $£ 787,000$ ) as against $\mathrm{R}_{15 \mathrm{I}} \mathrm{S}$ S lakhs ( $£ \mathrm{t}, 012,600$ ) in 1907.08 . This is equal to $19^{\circ} 7$ per cent of the whole Customs Revenue as compared with 252 per cent in the previous year. The decline points to the danger of narrowing the basis of revenue. The receipts on account of Excise duty on cotton fabrics on Indian manufacture increased from $\mathrm{R}_{34}$ lakhs ( $£ 226,700$ ) to $\mathrm{R}_{35^{\circ} 44}$ lakhs ( $£ 236,000$ ). This, however, falls outside of Customs Revenue proper.

The export tariff schedule is limited to rice and rice-flour, the duty on which is levied at the rate of three annas per maund of $82 \frac{3}{7} \mathrm{lbs}$. The net revenue from this source in $1908-09$ was $R 80{ }_{4}$ laklis ( $£ 536,000$ ) as compared with $99^{\circ} 74$ lakhs ( $£ 664,900$ ) in $1907 \cdot 08$, which marks a fall of R19.34 lakhs ( $£ 129,000$ ) or $19^{\prime} 4$ per cent.

A duty known as the Tea Cess, at the rate of a quarter of a pie ( $\frac{1}{18}$ of a penny) per lb . has been levied since 1903 on all Indian tea exported. The .sum realised is paid to a committee constituted to receive ard expend the proceeds on measures for promcting the sale and consumption of Indian tea. The col-. lections in the first five years averaged $R_{3,06,394}\left(£_{20,426)}\right.$ per annum. In . 1908-09 they rose to $\mathrm{R}_{3,1} \mathbf{7 , 0 5 8}\left(\mathfrak{6}^{21,137}\right)$.

## GOLD AND SILVER

The gold produced in India is all shipped to England for assay; and although it is not necessarily all exported in the same year in which it is produced, it is permissible to deduct its value from the total exports to find the true re-exports. The balance of the imports after deduction of these re-exports represents the value of gold absorbed by the country. The following statement is framed to show these factors in thousands of rupees and of pounds sterling :

It will be seen that the imports of gold which had averaged nearly $\mathrm{R}_{19^{\circ}}{ }^{2}$ crores ( $£ 12,800,000$ ) in the previous five years fell to R8.4 crores ( $£ 5,600,000$ ). This is the lowest figure since $1902-03$. Production remained practically constant.

Deducting that production from the gross exports of $R_{4} 4048$ lakhs ( $£ 2,699,000$ ), we find that the re-exports, which had averaged $\mathrm{R}_{5} .33$ crores ( $£ 3,553,000$ ) in the previous five years and $R_{3+} \cdot 36$ lakhs ( $£ 229,000$ ) in the last two years, rose greatly as compared with this last average, while still falling far short of the quinquennial average. The absorption is thus seen to be only $\mathrm{R}_{7} 75$ crores ( $£ 5,000,000$ ) as compared with a quinquennial average of $R_{13} 87$ crores ( $£ 9,247,000$ ) and with an average of about $\mathrm{R}^{\prime} 9^{\circ} 3$ crores ( $£ 12,866,000$ ) in the last two years.

The descriptions of gold imported and exported during the year were as follows, the unit being 1000 :

On account of Government, there mas practically no import of gold in the year under review, but $\mathrm{R}_{3} 5 \circ 07$ lakhs ( $£ 240,400$ ) were exported on Government account, while in the previous two years $1906-07$ and $1907-08$ there had been no exports and only R6. 26 lakhs ( $£ 42,000$ ) and $R 1 \cdot 8$ lakhs ( $£ 12,000$ ) were imported.

Stated in ounces, the net imports and production of gold have been-

|  |  |  |  |  |  | Production | Net-Imports |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |$\quad$ Total

The value of the Imports, Exports, and Net imports of Silver during the last five years was as follows, the unit being $\mathbf{1 , 0 0 0}$ :

It may be stated here that India is not a silver-producing country and therefore this absorption of the metal is represented in the ordinary way, that is to say, by the difference between the imports and exports which is designated Net Imports. The imports of silver were greatly restricted during the year and amounted to Ri,433.99 lakhs ( $£ 9,560,000$ ) as compared with the unprecedented

 April to July and October to December 1906, and from March to October 1907. The exports were larger by about R21 to 23 lakhs ( $£ 140,000$ to $£_{153,333}$ ) than in the preceding two years. The descriptions of silver imported and
exported during the year were in thousands of ounces and of rupees and pounds sterling :

|  |  | Imports |  |  | Exports |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 02. | R | $£$ | oz. | R | $£$ |
| Bullion (bar) | 81,689 | $13,44,81=$ | 8,965 | 838 | 15,03 $=$ | 100 |
| Government of India rupees. | 3,317 | 88,51 | 590 | 4,407 | 1,17,5 | 783 |
| Other coins (mostly British Dollars) | 43 | 67 | 5 | 6,064 | 94,61 | 631 |
| Total | 85,049 | 14,33,99 | 9,560 | 11,309 | 2,27,15 | 1,514 |

The exports consist chiefly of Government of India rupees, which circulate extensively in Ceylon, Mauritius, Arabia, Zanzibar, the East African Coast, and the Ports of the Persian Gulf.

The net imports of silver amounted to $R 1,206 \cdot 84$ lakhs ( $£ 8,046,000$ ), which is about a half of those in $1906-07$ and two-thirds of the $1907-08$ net imports.

The silver coinage struck in the Indian Mints during the last five years was, the unit being $\mathbf{1 , 0 0 0}$ :

|  |  |  |  |  |  | $\mathbf{R}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | $\ldots$ | Oz. <br> (approximate) |  |
| $1904-05$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $11,37,04=$ | 7,580 |
| $1905-06$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $20,00,14$ | 13,334 |
| $1906-07$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $26,08,57$ | 17,390 |
| $1907-08$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $18,11,57$ | 12,077 |
| $1908-09$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $2,85,36$ | 1,902 |

The last column shows the approximate quantity of the coinage calculated at the rate of 8 tolas per 3 ounces. The net imports of silver stated in thousands of ounces were in the same period:

## BALANCE OF TRADE

The figures appended show in thousands of upees and of pounds sterling the excess of exports over imports, including both merchandise and treasure, by sea in each of the last five years :

In the same years tie drawings of the Council Bills by the Secretary of State, including those on account of the Gold Standard Reserve, but deducting sterling bills sold in India, have been as follows in thousands :

In the five years ending 1908-09, the average excess of exports over imports including Government transactions was $\mathrm{R}^{1,927} 19$ lakhs ( $£ 12,848,000$ ), which represenis in per cent of the average value of exports. In the same period the average drawings of the Secretary of State, as above defined, were $R_{3.550} 60$ lakhs ( $£ 23,729,000$ ), being $20^{\prime} 2$ per cent of the average value of exports. This sum exceeds the average excess of exports over imports by $\mathrm{R}_{1,623.41}$ lakhs ( $£ 10,823,000$ ).

Excluding Government transactions the average excess of exports over imports was $R_{3,237} \cdot 20$ lakhs ( $£ 21,58 \mathrm{x}, 000$ ), which is equal to 18.9 per cent of the average value of exports. This excess is greater by $\mathrm{R}_{1,310} \mathrm{O}_{1}$ lakhs ( $£ 8,733,000$ ) than the excess found when Government transactions are included but less by R $\mathrm{R}_{1} 3_{4} \mathrm{Cl}^{2}$ lakhs ( $£^{2}, 090,000$ ) than the average amount of drawings as calculated above.

The trade figures given above are incomplete inasmuch as they relate only to the registered trade of British Indian ports. They exclude the value of Government of India securities transferred between India and England, these transfers constituting a not unimportant factor in the balance of trade equation. They also exclude both the absolutely indeterminable volume of private remittances to and from India and the not very inconsidérable value of precious stones and pearls re-exported chiefly from Bombay through the medium of the post office. The unregistered trade also consists largely of trade carried on chiefly by native craft from ports in the Native States on the west coast of India with the Persian Gulf, Arabia, and Ceylon, which is only in part registered and tabulated. To this should also be added the trade of the French and Portuguese Settlements. Some idea of the volume of the trade so excluded may be gathered from the appended figures as far as available at present, the unit being 1,000:

|  | 1905-06 |  |  |  | 1906.07 |  |  |  | 1907.08 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Export |  |  | port | Expo |  | port |  | xport |  |
| French Settle ments | R | $\pm$ | R | E | R | $£$ | R | £ | R | E | R | $£$ |
|  |  |  |  |  |  |  |  |  |  |  |  |  |
| Portuguese Settlements. | 3.10 | 21 | 3.69 | 25 | 2.27 | 15 | 9.14 | 61 | $2 \cdot 67$ | 18 | 4.24 | 28 |
| ravancore | 31.21 | 208 | 12.96 | 86 | 27.53 | 183 | 12.56 | 84 | 24 | 2 | 12.87 | 8 |
| Kathiawar | 9.89 | 66 | 3.61 | 24 | 9.33 | 62 | $4 \cdot 76$ | 32 | 8.97 | 60 | 7.27 |  |

## BANK RaTES AND EXCHANGE

The fluctuations of the money market will be understood from the discount rates charged by the Presidency Banks, and from the rates of Exchange on demand bills, which are quoted below :

## SHIPPING

While the net decrease in the value of imports and exports of merchandise by sea amounted to 10 . 7 per cent of the total for the previous year, there was a decrease of 6.4 per cent in the tonnage of shipping that entered and cleared at Indian ports. The following statement gives the numbers and tonnage of steamers and sailing vessels with cargoes and in ballast which entered from and cleared to all countries:

|  | No. | Tons | Average tonnage |
| :---: | :---: | :---: | :---: |
| $1904-05$ | 9,798 | $13,8 S_{1}, 336$ | 1,417 |
| 1905.06 | 9,269 | $12,598,321$ | 1,359 |
| 1906.07 | 9,329 | $13,775,436$ | 1,477 |
| $1907-0 S$ | 9,312 | $14,239,180$ | 1,529 |
| 1908.09 | 8,001 | $12,910,823$ | 1,614 |

Of these, $9 S^{\circ} \cdot 2$ per cent represented steam tonnage. The total number of steamers that entered and cleared was 5,272 with an aggregate burden of $12,680,836$ tons as against 5,929 and $13.957,229$ tons in the previous year. The average tonnage per steamer increased from 2,354 to 2,405 tons The rate of increase was about 2.2 per cent.

The average tonnage per sailing ship increased from 83 to 84 tons.
The entries from and clearances to the United Kingdom were 2,871,129 tons as against $3,119,233$ tons in $1307-08$, and this reduced quantity represented 22.2 per cent in place of $21^{\prime} 9$ per cent of the total tonnage.

Entries from and clearance to British Possessions other than the United Kingdom decreased from $5,603,697$ tons to $5,85,424$ tons, whirh represent $4^{\circ} 2$ per cent of the total, as against $39^{\circ} 2$ per cent in the previous year. The tonnage from and to the British Empire therefore am nunted to 62.4 per cent of the whole in place of $6 \cdot 3$ per cent.

The tonnage under the British flag, including the Indian register, represents about 796 per cent of the whole, while that registered under the English $M$ erchant Shipping Act was nearly 76.1 per cent.

The number of vessels under foreign flags which entered and left Indian ports was 989 with an aggregate turden of $2,490,242$ tons, as against 1,065 in 1907-08 with an aggregate of $2,620,675$ tons.

The numbers of vessels under the principal flags are given below:

|  |  | 1904.05 | 1905-06 | 1906.07 | 1907.08 | 1908-09 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| British . |  | 5,633 | 4,838 | 4,918 | 4,785 | 4,238 |
| German |  | 339 | 387 | 371 | 375 | 437 |
| Austro-Hungarian |  | 156 | 162 | 159 | 157 | 156 |
| Norwegian |  | 141 | 174 | 195 | 188 | 106 |
| Japanese |  | - | 2 | 83 | 123 | 79 |
| Italian |  | 74 | 85 | 27 | 79 | 76 |
| French |  | 94 | 105 | 67 | 61 | 55 |

## FREIGHTS

The freight market throughout the world has been extraordinarily dull during the past twelve months. The depression was so general and the competition so keen that all special features were obliterated. Having regard to the contraction in India's export trade, it is natural that the rates quoted in Indian ports should have been from 2 s . to $3^{\text {s. . lower than in } 1907 \text {, as shown in the }}$
following statement. The rates quoted are minimum quotations for London in March of each year ; and it will be seen that in March 1909 rates were practically the same as a year before, except that the Karachi wheat quotation was $3^{s}$. better, while cotton from Bombay to Liverpool was is. lower:

## FRONTIER TRADE

The bulk of India's Foreign Trade is seaborne, the valuc of the trade across the land frontiers being equal, on the average of the last three years, to about $4^{\circ 8}$ per cent of the trade carried by sea. In this Review, it is treated as supplemental to that trade, and is not included in the main totals discussed in the earlier chapters. Although the frontier trade is relatively small and exhibits a certain decline in the year now under review, it shows on the whole a progressive tendency, part of winich may be due to improved methods of registration.

The grand total of merchandise and treasure imported and exported in successive years is shown in the statement below. It will be sten that in tgo8-09 the total was greater by $\mathrm{R}^{\prime} 93^{\circ} 92$ lakhs ( $£^{\prime}, 292,800$ ) than the average of the previous five years, but less by R29:18 lakhs ( $£ 194: 500$ ) than in $1907-08$. The decline on the period of twelve months was therefore less than 2 per cent.

|  |  |  |  |  | $R$ | $f$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $1903-04$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $10,98,81,553$ | $f$ |
| $1904-05$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $12,16,15,211$ | $8,107,680$ |
| $1905-06$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $13,72,04,999$ | $9,146,999$ |
| $1906-07$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $14,13,90,673$ | $9,426,045$ |
| $1907-08$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $: 5,54,10,102$ | $10,360,674$ |
| $1908-09$ | $\cdot$ | $\cdot$ | $\cdot$ | $\cdot$ | $15,24,92,089$ | $10,166,132$ |

Excluding treasure, we give below the figures relating to merchandise only and their distribution according to frontiers and principal countries, the unit being $\mathbf{1 , 0 0 0}$ :

|  |  | 1906-07 |  | 1907-08 |  | $1908-09$ |  |

## NORTH-WESTERN FRONTIER

Persia-The rebate of freight granted by certain Indian railways upon goods for Persia was in force during the year under review, and has been extended for a further period of three years. But there has been in operation a number of unfavourable conditions; and it is satislactory to notice that the decline of $\mathrm{R}_{3} 6,000\left(\oint_{2,400}\right)$ represents only about 4 per cent on the figures of the previous year. The principal imports were, as usual, sills manufactures; but the decline in these continued, the total being $R_{1,25,602}(£ 8,373)$ as compared with $R_{1,47,012}$ ( $£ 9,801$ ) in $1907-08$. On the other hand the land imports of precious stones and pearls unset, which had vanished in $1906-07$ and has been negligible in 1907.08, reappeared with a vilue of $\mathrm{R}_{35,3} \mathrm{~S}_{9}\left(£^{2}, 359\right)$ as compared with the $\mathrm{R}_{4} 6.500(\AA 3,100$ ) recorded three years ago. Cotton manufactares were formerly the chirf item of export; but the value declined from $R_{2,70,428( }(£ 18,029)$ to $\mathrm{R}_{1,84,455}$ ( $£ 12,297$ ); while leather assumed the first place with $\mathrm{R}_{2,02,421}$ ( $£ 13,495$ ) in place of $R 1,25,435(£ 8,362)$. Indigo, which had rallied in 1907.08 to a total of $\mathrm{R}_{1,56,067}\left(£ 10,404\right.$ ), fell away to $\mathrm{R}_{1,04,015}(£ 6,934)$.

Afghanistan-Both imports and exports declined, the former from Rg6.53 lakhs ( $£ 643,500$ ) to R 85.57 lakhs $(£ 570,400)$ and the latter from R118.54 lakhs ( $£ 790,200$ ) to R114. 6 lakhs ( $£ 76_{4}, 000$ ). The resultwas a total of R200.21 lakhs ( $£ 1,334,000$ ) in place of $\mathrm{R}_{215} 507$ lakhs ( $£ 1,433,800$ ), the difference being one of $\mathrm{R}_{15}$ lakhs ( $£ 100,000$ ) or 7 per cent. The total trade with Kabul fell fron Rg8,62,145 ( $£ 657,400$ ) to $R 85,77,764$ ( $£ 571,800$ ), which marks a decline of $\mathrm{R}_{12,84,3} \mathrm{I}_{1}\left(£ 85,625\right.$ ) or $1_{3}$ per cent. Imports from Kabul, with a total of $R_{30}$ lakhs ( $£ 200,000$ ) in place of $R_{32} \cdot 85$ lakhs ( $£ 219,000$ ), declined by $\mathrm{R}_{2} \cdot \varepsilon_{5}$ lakhs ( $£ 19,000$ ) or 9 per cent. A'nong imports from Kabul, the principal item, namely, fraits and nuts, amounted to R11 75 lakhs $^{( } £ 78,300$ ) in place of $\mathrm{R}_{11} \cdot 8$ lakhs ( $£ 78,600$ ) in $1907-08$; but Hides and skins fell away from $\mathrm{R}_{4} \cdot 1$ lakhs ( $£ 26,700$ ) to $\mathrm{R}_{1} \cdot 38$ lakhs ( $£ 9,200$ ). On the other hand ghi (clarified butter) advanced to $\mathrm{R}_{3}{ }^{\circ} 97$ lakhs ( $\left(£_{2} 6,400\right.$ ) as compared with $\mathrm{R}_{3}{ }^{\circ} 55$ lakhs ( $£ 23,600$ ) in the previous year. Drugs and medicines had a value of only R2.74 lakhs ( $£ 18,200$ ) in place of $R_{3} \cdot 28$ lakhs ( $£ 21,900$ ). Live animals fell from RI. 83 lakhs ( $(12,200$ ) to R1.34 lakhs ( $£ 8,900$ ), and wool from Rr 64 lakhs ( $£ 10,900$ ) to $\mathrm{Rr}^{\circ} \circ \mathrm{og}$ lakhs ( $£ 7,200$ ). Among exports to Kabul, cotton manafactures retain the first place, but with totals in all cases diminished. Foreign yarns fell from $\mathrm{R}_{3} \cdot 12$ lakhs ( $£ 20,800$ ) to $\mathrm{R}_{2} \cdot 4$ lakhs ( $£ 16,000$ ) and Indian yarns from Rr'43 lakhs ( $£ 9,500$ ) to R $98,680(£ 6,579)$; while the decline in foreign piece-goods, which had reduced the total to R $\mathrm{R}_{1} \cdot 76$ lakhs ( $£_{21 I}$, 700 ) in 1997-08, continued and breught it in $908-09$ to R27'17 lakhs ( $£ 181,000$ ), Indian piece-goods sharing the depression and failing from $R 8.69$ lakhs ( $£ 57,900$ ) to $\mathrm{R}^{\circ}{ }^{\circ} 09$ lakhs ( $£ 33,900$ ). Thus cotton manufactures account for a total contraction of R9.35 lakhs ( $£ 62,300$ ) and the other principal articles show the same downward tendency. Sugar declined from $\mathrm{R}_{2} \cdot 37$ lakhs ( $£ 15,800$ ) to $\mathrm{R}_{2} \cdot 23$ lakhs ( $£ 14,800$ ), metal and manufacture of metals from R2.28 lakhs $(£ 15,200$ ) to $\mathrm{R}_{1} \cdot 95$ lakhs ( $\mathrm{E}_{1} 1,000$ ), and Tea from $\mathrm{R}_{3} \cdot 76$ lakhs ( $£ 25,000$ ) to $\mathrm{R}_{2} \cdot 84$ lakhs ( 618,900 ). Indian tea represented 76 per cent of the total value and declined from $\left.R_{2,0}\right)_{, 434}\left(\oint_{1}, 829\right)$ to $R_{1}, 6_{7}, 698\left(£_{1,180}\right)$; while foreign tea fell from $R_{1,68,328}\left(£_{11,222}\right)$ to $R_{1,15,966( }\left(£_{7,731)}\right)$ In Indian tea therefore the decline was 20 per cent, while that in Foreign tea amounted to 31 per cent. The average value of the Indian tea was 49 annas (or pence) per pound, and that for foreign tea was $11 \% 19$ annas (or pence) per
pound. In this quarter, the trade in leather goods resporded to the lower prices and increased from RI•79 lakhs ( $£ 11,900$ ) to R2.88 lakhs ( $£ 19,200$ ). The total trade with Kandahar amounted to R114.43 lakhs ( $£ 762,800$ ) as compared with $\mathrm{R}_{116} 65$ lakhs ( $£ 776,300$ ) in 1907 -08. The imports from Kandahar were represented by $\mathrm{R}_{5} 5 \cdot 67$ lakhs ( $£ 370,100$ ) in place of $\mathrm{R}_{3} \cdot 68$ lakhs ( $£ 424,500$ ) in the previous year. Of this woolrepresents $\mathrm{R}_{3} 1^{\prime} 76$ lakhs ( $£ 211,700$ ) as against $\mathrm{R}_{33} 34$ lakhs ( $£ 222,200$ ) in 1907 -03, while Fraits and nuts figure at $\mathrm{R}_{13} 8$ lakhs ( $£ 92,000$ ) as compared with R16.87 lakhs ( $£ 112,500$ ) in the previous year. Gram and pulse at R1•89 lakhs ( $£ 12,600$ ) and Ghi at R1. 33 lakhs ( $£ 8,800$ ) both show ill in comparison with the respective figures of R2. 32 lakhs ( $£ 15,400$ ) and $R_{2} \cdot 29$ lakhs ( $£ 15,200$ ) recorded twelve months ago. Exports to Kandahar recorded a further advance from R $5^{\prime}{ }^{\prime} 77$ lakhs ( $£ 351,800$ ) to $R_{5} 8.76$ lakhs $(£ 391,700$ ), the increase heing attributable entirely to foreign piece-goods. These exhibit the only substantial increase that is to be recorded the figures being $\mathrm{R}_{3} 0^{\circ} 62$ lakhs ( $£ 204,000$ ) as compared with $\mathrm{R}_{22} \cdot 4$ lakhs ( $£ 149,300$ ) in $1907-08$. But against this increase of R8.22 lakhs ( $£ 54,800$ ) is to be set a decline of $\mathrm{R}_{1} \cdot 46$ lakhs ( $£ 9,700$ ) in Indian cotton goods, which fell from Rioo4 lakhs ( $£ 66,900$ ) to R8. 58 lakhs ( $£ 57,200$ ). Sugar increased from R2.6I lakhs ( $£ 17,400$ ) to $\mathrm{R}_{2} \mathrm{~g}^{8} 8$ lakhs ( $£ \mathrm{I} 9,800$ ); but leather goods for Kandahar fell away from $R_{2} \cdot 77$ lakhs ( $£ 18,400$ ) to $R_{2} \cdot 12$ lakhs ( $£ 14,000$ ).

Dir, Swat, and Bajaur-The total trade with these territories amounted to $\mathrm{R}_{112} \mathbf{4}^{2}$ lakhs ( $£ 749: 400$ ) in place of $\mathrm{R}_{129}{ }^{\circ} 53$ lakhs ( $£ 863,500$ ) in 1907-08. The imports, which had in two successive years ad vanced to $\mathrm{R}_{5} 8.54$ lakhs ( $£ 390,000$ ), receded to R 4587 lakhs ( $£ 305,800$ ), the shrinkage being one of R12.67 lakhs ( $£ 84,400$ ). Ghi, which forms some 30 per cent of the whole, accounts for R59 lakhs ( $£ 30,3010$ ) of this contraction and fell from R19.64 lakhs ( $£ 130,900$ ) to $\mathrm{R}_{13} .74$ lakhs ( $£ 91,600$ ). Imports of grain at $\mathrm{R}_{14}{ }^{\circ} 58$ lakhs ( $£ 97,200$ ) showed a marked drop from $\mathrm{R}_{2} \mathrm{ol}$ lakhs ( $£ 133,000$ ) of the previous year, and consisted mainly of husked rice ( R 6.39 lakhs $=£ 4^{2}, 600$ ) and unhusked rice ( $\mathrm{R}_{2} \cdot 45$ lakhs $=£ 16,300$ ). The arrivals of hides and skins fell back to $\mathrm{R}_{5} \cdot 27$ lakhs ( $£ 35,000$ ) from R8.28 lakhs ( $£ 55,200$ ) recorded a year before; while timber recovered to $\mathrm{R}_{3}{ }^{\prime} 98$ lakhs ( $£ 26,500$ ) from $\mathrm{R}_{2} \cdot 62$ lakhs ( $£ 17,400$ ) to which it had fallen in 1907-08. On the other hand, the exports to these countries declined from R70'99 lakhs ( $£ 473,000$ ) to $\mathrm{R} 66 \cdot 56$ lakhs ( $£ 443,700$ ) the principal item -namely cotton piece-goods - having fallen from $\mathrm{R}_{37} 68$ lakhs ( $£^{251,200}$ ) to R ${ }_{3}{ }^{2}$ 6I lakhs ( $£ 217,400$ ). Of this, R23.54 lakhs ( $£ 156,900$ ) represented foreign goods, and Rg. 07 lakhs ( $£ 60,400$ ) was of Indian origin. Twist and yarn amounted to the same total as was recorded two years ago, namely, R8.87 lakhs ( $£ 59,000$ ), of which $R 6.24$ lakhs ( $£ 41,600$ ) was foreign and $R_{2} \cdot 6_{3}$ lakhs ( $£_{17}, 500$ ) Indian; while salt had a value of $R_{3} \cdot 6_{3}$ lakhs ( $£_{24,200 \text { ), raw }}$ cotton R 2.53 lakhs ( $£ 16,800$ ), and sugar R2.73 lakhs ( $£ 18,200$ ). Exports of tea amounted to Rr'3I lakhs ( $£ 8,700$ ) in place of RI'II lakhs ( $£ 7,400$ ) in the previous year. Indian tea, with a total of $168,784 \mathrm{lbs}$ and $R 61,500$ ( $£ 4,100$ ), showed a quantitative advance on the $166,88 \mathrm{olbs}$ of the previous year but a substantial loss of value as compared with $R 6_{4,992}(£ 4,333)$ then recorded. Foreign tea increased from $75,936 \mathrm{lbs}$ to $113,79^{2} \mathrm{lbs}$ and from. $\mathrm{R}_{4} 6,200$ ( $£ 3,080$ ) to $R 69,250$ ( $£ 4,617$ ). All the tea exported was green tea, but the proportion of Indian tea in the whole has fallen to 46 per cent in place of 59 per cent in the previous year, while its average value is returned as $5^{\circ} 8$ annas (or pence) per pound as compared with an average of 9.7 annas (or pence) in the case of the foreign parcels.

Ladakh - Ladakh is a junction for trade between India and Western Tibet on the one hand and Yarkand and Kashgar on the other. 'Yrade with Ladakh is of a small volume; and the year under review showed a decline of Rr $_{1} \sigma_{3}$ lakhs ( $£ 10,800$ ) or 37 per cent, the total value being $\mathrm{R}_{2} \cdot 73$ lakhs ( $£ 18,200$ ) against $R_{4} 3^{6}$ lakhs ( $£ 29,000$ ) in the previous year. Imports decreased from $\mathrm{R}_{3} \cdot 07$ ( $\left(20,400\right.$ ) to $\mathrm{Ri}^{\prime} \cdot 36$ lakhs ( $£ 9,000$ ), while exports improved from Ri•29 lakhs ( $£ 8,600$ ) to R1•37 lakhs ( $£ 9,000$ ). Charas represents nearly 61 per cent of the totalimports, but it decreased from $1,540 \mathrm{cwts}$ and $\mathrm{R}_{1} 68$ lakhs ( $£ 11,200$ ) to 932 crits and $R 83,000$ ( $£ 5,533$ ). Imports of raw silk amounted to only 50 crts with a value of $R_{30,000( }\left(£^{2}, 000\right)$. On this, as on other frontiers, cotton piece-goods (almost entirely foreign) continue to form the chief item of exportation; and of these Ladakh took 25 per cent more in quantity and 37 per cent more in value than in the previous year, the value being $\mathrm{R} 77,170$ ( 65,145 ).

## NORTHERN AND NORTH-EASTERN FRONTIER

Nepal and Tibet are the only two States or countries on this frontier which can be said to have any trade of importance with India.

Nepal.-The trade with Nepal increased from $\mathrm{R}_{493^{\circ} 07}$ lakhs ( $£ 3,287,000$ ) in 1907 -08 to R508.64 lakhs ( $£ 3,390,900$ ) in 1908 -09. The imports at $\mathrm{R}_{341} \mathrm{H}^{8}$ ldkhs ( $£^{2,276,000 \text { ) were almost the sume as in the previous year ; while }}$ exports, which expanded from R151.75 lakhs ( $£ 1,011,600$ ) to R167. 16 lakhs ( $£ 1,114,400$ ), account for almost the whole of the increase. In the year under review, the trade with Nepal represented 37 per cent of the whole frontier trade of India as against $3^{5}$ per cent in 1907.03. The principal articles of trade and their values on the last two years are shown in the subjoined table :

| Imports to India- |  |  |  | $\ldots$ |
| :---: | :---: | :---: | :---: | :---: |
|  | ' ( $£ 9,200$ ). Or ' |  |  |  |

| Sugar | 8,45,800 | 56,387 | 8,05,478 |  |

Among the major artilles of import, the only ones that show increases are linseed, cattle, raw jute, and hides and skins; while rice and paddy, which hold the premier place, both show considerable declines. These two items, which in the previous year represented some 48 per cent of the total imports, have fallen to 20 per cent. They account for a drop of 25 lakhs ( $£ 166,600$ ), the fall in quantity being 11 per cent and that in value amounted to 13 per cent. The total quantity imported fell from $2,837,000$ to $2,546,000$ cwts. Rape and mus-
tard seed show little change, while linseed marks an advance. The imports of cattle from Nepal into Bengil represent 79 per cent of the total imports of cattle by land into India ; and the number and value expanded in 1908 -09 from 48,382 with a value of $R_{19,23,000( }(128,200)$ to 115,196 with a value of $R_{32}, 53,000$ ( $£ 216,867$ ). The expansion was greater in number than in value, the average price per head having subsided from $\mathrm{R}_{39}$ ( $£ 2$ I2s.) to $\mathrm{R}_{2} 8$ ( $\mathrm{f}_{1-17-4 \text { ). Nepal }}$ is the only country from which India imports jute; and of recent years the production has increased. The importation in the year under review has expanded by $5{ }^{\circ} 4$ per cent in quantity (that is, from 277,155 to $292,27^{2}$ cwts) and by $4 \%$ per cent in value, the average declared values in the last two years being $\mathrm{R}_{7} 3$ annas ( 9 s .7 d .) and $\mathrm{R}_{7} 2$ annas ( $g s .6 d$.) per cwt respectively. Imports of oilseeds improved by 8 per cent in value. Besides the articles enumerated above, there are several of which the value is considerable, as for example railway materials and dyes of $R_{4} \cdot 19$ lakhs ( $£ 27,900$ ) and $R_{2} \cdot 77$ lakhs ( $£ 18,400$ ) respectively, and timber of R6.7 lakhs ( $£ 44,600$ ).

The exports to Nepal increased from R151•75 lakhs ( $\mathrm{E}_{1,011,600 \text { ) to }}$ R $167 \cdot 16$ lakhs ( $£ 1,114,400$ ). Cotton piecegoods, as usual, head the list; and in this department there is a substantial increase of about $\mathrm{R}_{7}$ lakhs ( $£ 46,0 n 0$ ). Yarns, which are mostly of foreign origin, showed a small improvement; and the value of metal exports increased by $\mathrm{R}_{1} 73$ lakhs ( $£ 11,500$ ). Salt declined by Rrig lakhs ( $f, 13,200$ ) or 18 per cent in value; and spices and sugar also are on a lower level than in the previous year.

Sikkim and Bhutan-The trade with Sikkim continued to increase and advanced from R16.21 lakhs ( $£ 108,000$ ) to Rifo3 lakhs ( $£_{11}{ }_{3}, 500$ ), while the decline in trade with Bhutan is also progressive, the total having fallen from R $5 \cdot 96$ lakhs ( $£ 39,700$ ) to $\mathrm{R}_{5} \cdot 66$ lakhs ( $(£ 37,700$ ). The two together showed a net improvement of some R ${ }_{52,000}\left(£_{3}, 467\right.$ ) or 2.3 per cent. Sikkim supplied grain to the value of $R_{5} \cdot 19$ lakhs ( $£_{34}, 600$ ) as against $R_{3} \cdot 89$ lakhs ( $£ 25,900$ ) in the previous year, while her trade in fruit, etc., fell from $R_{r} 4_{4}$ lakhs ( $£ 9,500$ ) to $\mathrm{R}_{51}, 000$ ( $£ 3,400$ ). The greater part of import from Bhatan consists of timber ; and this, at $\mathrm{R}_{22,250}\left(£_{1,48}\right)^{2}$ ), showed small advance on the figures of 1907.08 , while her contribution of fruits, etc., had fallen from R67, 50 ( $£ 4,477$ ) to R46,21I ( $£ 3,081$ ). The exports to Bhutan developed slightly, the total value being R2.66 lakbs ( $(17,700$ ) as compared with $R 2^{\circ} 54$ lakhs ( $£ 16,900$ ) in 1907.08 . Of these, the most important item was cotton piecegoods and yarn (chiefly the former and of foreign manufacture) with a value of $\mathrm{Rr}_{\mathrm{r}} \mathrm{O}_{3}$ lakhs ( $£ 6,800$ ), silk manufactures $\mathrm{R}_{37,000( }\left(£_{2,467}\right.$ ), and spices $R_{28,000 ~(~}^{6} 1,800$ ). The exports to Sikkim on the other hand receded from $\mathrm{R}_{7}{ }^{\circ} 9$ lakhs ( $£ 53,200$ ) to $\mathrm{R}_{7} 7_{1}$ I a hs ( $£ 50,700$ ) and consisted chiefly of grain $\mathrm{R}_{1} \cdot 82$ lakhs ( $£ 12,000$ ), cotton piecegoods and yarn (chiefly

Tibet-Trade with Tibet has to contend with various difficulties, the most obvious of which relates to communications. It had shown some development in 1907-08, but in $1908-09$ its value declined from $R_{40} 21$ lakhs ( $(668,000$ ) to $R_{39} 7^{8}$ lakhs ( $£ 265,200$ ), the decrease being $R_{43,000}\left(£_{2}, 867\right)$. The trade consists of 44 per cent exports and 56 per cent imports. The net contraction in 1908-09 is more than accounted for by the latter. Exports to Tibet increased by about 3 per cent (from R16.88 lakhs $=£ 112,500$ to Rif42 lakhs $=£ 116,000$ ), the principal articles being as usual otton piecegoods with a value of $R_{4} \cdot 5$ lakhs ( $£ 30,000$ ) in place of $R_{4}$ lakhs ( $£ 26,600$ ) in the previous year and yarn with a value of $R_{35,506}\left(£_{2,367}\right)$ as compared with $R_{59,455}\left(£_{3,964}\right)$. Other
articles of relative importance were grain to the value of $\mathrm{R}_{2}{ }_{4}{ }^{6}$ lakhs ( $£ 16,400$ ) in place of $R_{2} 61$ lakhs ( $£ 17,400$ ) ( 38 per cent of this being rice), coral Ri•4t lakhs ( $£ 9,600$ ), woollen manufactures $\mathrm{R}_{2} \cdot 36$ lakhs ( $£ 15,700$ ), and metals $R_{5} 1,000$ ( $£ 3,400$ ). Imports declined from $\mathrm{R}_{2} 3^{\circ} 3^{2}$ lakhs ( $£ 155,400$ ) to $R_{22} \cdot 35$ lakhs ( $£ 149,000$ ), the decrease being R $97,000(£ 6,467$ ) or 4 per cent. The staple of this trade is wool, and it showed a decline of 4.8 per cent in quantity (from $51,3+8$ to $4^{8,82 S}$ cwts) and $4^{+5}$ per cent in value from R1479 lakhs ( $£ 98,600$ ) to R14 12 lakhs ( $£ 94,000$ ). Other principal articles were : borax $\mathrm{R}_{2} 6_{7}$ iakhs ( $£ 17,500$ ), salt $\mathrm{R}_{97}, 000$ ( $£ 6,400$ ), and horses, ponies, and mules, only $R_{30,000( }\left(£_{2}, c o 0\right)$ in place of $R_{52,000}\left(£_{3}, 46_{7}\right)$ recorded in the previous year.

## EASTERN FRONTIER

Western China-The trade with Western China really means the trade of Bhamo with Tengyueh in Yunnan. Its expansion continues, and the total value increased from $\mathrm{R}_{57} 97$ lakhs $\mathrm{E}_{6} 86,400$, to $\mathrm{R}_{59}$ :11 lakhs ( $£ 394,000$ ). Imports represent 29 per cent of the whole and declined from R16.95 lakhs ( $£: 13,000$ ) to R.6.86 lakhs ( $£ 112,400$ ) ; while Exports increased by 3 per cent. Among imports Rawsilk fell away from $\mathrm{R}_{3} \cdot 91$ lakhs ( $£ 26,000$ ) to $\mathrm{R}_{3} \cdot 68$ lakhs ( $£ 24,500$ ). Imports of opiam amounted to R1.5I lakhs ( $£ 10,000$ ) as in the previous year. Hides of cattle decreased from $\mathrm{R}_{3} \cdot 15$ lakhs ( $£_{21,000}$ ) to $\mathrm{R}_{2} \cdot 1+$ lakhs ( $£ 14,200$ ) and lac from R $72,000(£ 4,800)$ to $\mathrm{R}_{3} 8,000$ ( $£ 2,533$ ); while imports of orpiment increased from Ri. 44 lakhs ( $£ 9,600$ ) to R1. 64 lakhs ( $£ 10,900$ ) and live animals from $R_{2} \cdot 22$ lakhs ( $£ 14,800$ ) to $R_{2} \cdot 39$ lakhs ( $£^{1} 5,900$ ). Exports to Western China increased from $\mathrm{R}_{4} 1^{\circ}{ }^{\circ}$ 2 lakhs ( $£_{273,400 \text { ) }}$ to R42.26 lakhs ( $£^{281: 700}$ ). Of this sum cotton yarns (all of Indian manufacture) formed 46 per cent as against 53 per cent in the previous year, their value having fallen from R21.75 lakhs ( $£ 145,000$ ) to R1965 lakhs ( $£ 131,000$ ). On the other hand, cotton piece goods (all of foreign manufacture) advanced from $R_{5} 11$ lakhs ( $£ 34,000$ ) to R99? lakhs ( $£ 66,000$ ). The other principal items of export were raw cotton R2.75 lakhs ( $£ 18,300$ ), jadestone $R 1.98$ lakhs ( $£ 15,200$ ), provisions R2.16 lakhs ( $£ 14,400$ ), and salt RI•36 lakhs ( $£ 9,0 c 0$ ). Exports of petroleum decreased by 21 per cent and fell back from $\mathrm{R}_{57,000}\left(£_{3}, 800\right.$ ) to R 45,000 ( $£ 3,000$ ).

Shan States (North and South)-These States are British territory under local Chiefs; but for convenience of registration they are treated as foreign, and two-thirds of the trade across the Eastern statistical frontier relates to them. The trade as a whole decreased by R90,000 ( $£ 6,000$ ), that is'to say, from R 266.61 lakhs ( $£ 1,777,400$ ) to $R 265^{\circ} 7^{2}$ lakhs ( $£ 1,771,400$ ). Of this total 54 per cent or R142.73 lakhs ( $£ 951,500$ ) consisted of exports and 46 per cent or R122.99 lakhs ( $£ 819,900$ ) of imports. The total trade with the Northern Shan States improved by R8.33 lakhs ( $£ 55,500$ ) to R ${ }_{153} .99$ lakhs ( $£ 1,026,600$ ), while that with the Southern Shan States fell off by R9'23 lakhs ( $£ 66_{1}, 500$ ) to R111 73 lakhs ( $G ; 44,800$ ). The trade with the Northern ShanStates consists of R8:12 lakhs ( $£ 540,800$ ) imports and R 72.86 lakhs ( $£ 485,700$ ) exports. Imports showed a total increase of R12.05 lakhs ( $£ 80,300$ ) or 17 per cent, to which contributions were made by leaf-tea with R12.42 lakhs ( $£ 82,800$ ) against R1006 lakhs ( $£ 67,000$ ), teak with Rı'49 lakhs ( $£ 69,900$ ) against $\mathrm{R}_{7} \cdot 25$ lakhs ( $(48,300$ ), and husked rice with R10.26 lakhs ( $£ 68,400$ ) against R8.3' lakhs ( $£ 55,400$ ); while lac declined from R: 74 lakhs ( $£ 11,600$ ) to R1•23 lakhs ( $£ 8,200$ ) and letpet (pickled tea) from R23.86 lakhs ( $£ 159,000$ ) to ${ }^{2} 3^{\circ} 59$ lakhs ( $£ 5: 5,200$ ). The Exports consisted mainly of cotton
piecegoods (almost entirely foreign) with a value of R21.52 lakhs ( $£ 143,000$ ) as against $\mathrm{R}_{1} 6^{\circ} 99$ lakhs ( $£ 113,000$ ) in 1907-08, yarn (mostly foreign) Rirl 39 lakhs ( $£ 75,900$ ) against Rio lakhs ( $£ 66,600$ ), provisions (of which seven-eighths was fish) RII'I4 lakhs ( $£ 74,200$ ) against $R 8.88$ lakhs ( $£ 59.200$ ), salt $R_{3} \cdot 6_{3}$ lakhs ( $£ 24,200$ ) against $R_{3} \cdot 2$ lakhs ( $£ 21,300$ ), iron $R_{2} \circ_{3}$ lakhs ( $£ 13,500$ ) against $R_{3} 4$ lakhs ( $£ 22,600$ ), ive animals $R_{2} \cdot 86$ lakhs ( $£ 19,000$ ) against R2.62 lakhs ( $£ 17,400$ ), and opium $R_{7,500}(£ 500)$ as compared with $\mathrm{R}_{5} 2,500$ ( $£ 3.500$ ) in 1907-08, one lakh ( $\mathcal{E}^{6,667}$ ) in 1906.07 , and two and a half lakhs ( $£ 16,667$ ) in $1905-06$.

Trade with the Southern Shan States on the other hand consisted of $R_{41} \cdot 86$ lakhs ( $£ 279,000$ ) imports and $\mathrm{R}_{6} 6.87$ lakhs ( $£ 465,800$ ) exports, as compared with R 46.63 lakhs ( $£ 310,800$ ) and R 74.34 lakhs ( $£ 495,600$ ) in the previous year. Imports showed a decline of R4.77 lakhs ( $\mathcal{6} 3 \mathrm{~B}, 800$ ). Teak at $R_{5} \cdot 62$ lakhs ( $£ 37,400$ ), potatoes at $R_{2} \cdot 42$ lakhs ( $£ 16,100$ ), and hides at
-. $\mathrm{R}_{79,000}(65,267)$ all showed decline, while there was improvement in cattle with R6.48 lakhs ( $(43,200$ ), horses, ponies, and mules with R 2.47 lakhs ( $£ 16,400$ ) and fruits and vegetables (other than potatoes) with $R_{5}$ lakhs ( $£ 33,333$ ). Exports declined by an almost equal amount, namely R4.47 lakhs ( $£ 29,800$ ). The most important article again is cotton piece goods (mainly foreign), the value of which increased from $R_{33} 74$ lakhs ( $£ 224,900$ ) to $\mathrm{R}_{35^{\prime}} 66$ lakhs ( $£ 237,700$ ), which is $5^{1}$ per cent of the whole exports. Among other items the following showed minute increases: betelnuts with $R_{3} \cdot 6_{3}$ lakhs ( $£ 24,200$ ) in place of $R_{3} \cdot 62$ lakhs ( $£ 24,000$ ), and yarn (mostly Indian) with R2. 53 lakhs ( $£ 16,800$ ) in place of $R 2,52$ lakhs ( $£ 16,800$ ), while decreases occurred in provisions (principally fish) with $\mathrm{R} 6 \cdot \mathrm{I}$ lakhs ( $£ 40,600$ ), manfactured silks with $R_{3} \cdot 5^{6}$ lakhs ( $\mathscr{L}_{2} 3,700$ ), and metals with $R_{1} \cdot 7^{2}$ lakhs ( $\mathscr{E}_{11}, 400$ ) of which iron constituted about one lakh ( $£ 6,667$ ).

North and South Siam-The total trade with these two territories amounted to R 48.68 lakhs ( $£ 324,500$ ) , as compared with $R_{4} 8.24$ lakhs ( $£_{321} 1,6$ no ) in 1907.08. The trade with North Siam is three times as great as that with South Siam. It amounts to nearly $\mathrm{R}_{3} 6$ lakhs ( $(240,000$ ) and shows a decrease of about R2 lakhs ( $£ 13,333$ ) on the figure for the previous year. It consists of 53 per cent imports and 47 per cent exports. The Imports declined from R20.04 lakhs ( $£ 133,600$ ) to R 18.84 lakhs ( $£ 125,600$ ), for lower amounts were recorded not only for teak with $\mathrm{R}_{12} .8_{3}$ lakhs ( $£ 85,500$ ) in place of $\mathrm{R}_{13} .0_{3}$ lakhs ( $£ 86,800$ ), but for cattle at $\mathrm{R}_{5} \cdot 04$ lakhs ( $£ 33,600$ ) and for other live animals at only $\mathrm{R}_{34,000( }\left(£_{2,267}\right)$. The Exports showed a smaller decrease from Ri7.81 lakhs ( $£ 118,700$ ) to R17.15 lakhs ( $£ 114,300$ ). Cotton piece goods (almost all foreign) increased from $R_{3} \cdot 56$ lakhs ( $£ 23,700$ ) to $R_{3}{ }^{\prime} 76$ lakhs ( $£ 25,000$ ), while manufactured silk dropped from $R_{3} \cdot 47$ lakhs ( $£ 23,100$ ) to R2. 33 lakhs ( $6 \times 5,500$ ). Yarns (mostly foreign) with an increased value of $R_{3} \cdot 28$ lakhs ( $£ 21,800$ ) also exceeded that of silks, while apparel declined from R2. $3^{6}$ lakhs ( $£ 15,700$ ) to R2' 8 lakhs ( $£ 14,500$ ). Trade with South Siam amounted to R12.69 lakhs ( $£ 84,600$ ), which is about R2 lakhs ( $£ 13,333$ ) better than in 1907-08. It consists of 6 I per cent imports and 39 per cent exports. Imports rose from R $\mathrm{R}_{4} 93$ lakhs ( $£_{5} 3^{2,800}$ ) to $\mathrm{R}_{7} \cdot 8$ lakhs $\left(£_{5} 2,000\right)$ and were, practically, made up of manufactured silk at $R 5.02$ lakhs ( $f_{33} 3,400$ ) and live animals at R2.62 lakhs ( $£_{1} 7,400$ ). Exports at $R_{4} \cdot 89$ lakhs $\left(£_{32}, 600\right)$ showed a decline, the only considerable items being manufactured silk with a value of R82,000 ( $£ 5,467$ ), apparel with a value of $R 21,000$ ( $£ 5,400$ ), and chinaware

Karennee-The trade with Karennee is less than $\mathrm{R}_{20}$ - lakhs ( $£ 133,333$ ) and shors continuous decline, amounting in the year under review to $I_{4}$ per cent. It consists of $S_{5}$ per cent imports and 15 per cent exports. The imports declined
 of teak with a value of $\mathrm{R}_{1} 3 \cdot \delta_{1}$ lakhs ( $\mathrm{E}_{1} 92,000$ ). Among exports the only considerable item was betelnuts Ri'Ig lakhs ( $£ 7,900$ ).

The relative importance of the various articles of trade in the commerce of India with transfrontier countries is shown below. The values are stated in units of $1,000-$

| units of 1,000 | IMPORTS |  |  |  | EXPORTS |  |  |  |

| Wool | 56,54 | 377 | 54,07 | 360 |  |  |  |  |
| Woollen goods | 2,45 | 16 | 1,82 | 12 |  |  |  |  |

Since the total value of imports in 1908.09 was R8.29 crores ( $£ 5.527,000$ ), the centesimal ratio borne to that total by any of the above sums of Indian money may be found approximately by dividing it by 830 . In exports the divisor would be 696 .

The appended statement shows in thousand the measure in which the variou; provinces participated in the total of the trans-frontier commerce. Here the divisor for 1908 -og must be $\mathbf{1 , 5 2 5}$.

## COASTING TRADE

Merchandise shipped from one part of India to another appears first under exports and again under imports, so it might be expected that the total of the
two would be approximately double the dimensions of the single transaction. But half of the sum of the total exports and total imports under Coasting Trade would not represent even approximately the true scnpe of the trade, for the figures comprise such exchanges with ports in Indian Native States and Foreign Settlements as appear in the statistics of British India only as imports or as exports. It has therefore been the practice to state in this Review the net value of the coasting trade as arrived at by adding, to the value of the imports into British ports from other British ports, the sum of the imports and exports in the trade between British and non-British ports in India. The value so calculated in respect of 1908.09 is, for merchandise, R $\mathrm{R}_{57}{ }^{\circ} 5$ crores ( $£ 38,433,000$ ) as against $R_{5} 8 \cdot 8$ crores ( $£ 39,200,000$ ) in the previous year, the decrease being $\mathrm{R}_{1} \cdot 15$ crores ( $£ 766,000$ ) or 2 per cent. Food grains represented 29.3 per cent of the total with a value of $\mathrm{R}_{1} 69$ crores ( $£ 11,267,000$ ), the increase being R1:32 crires ( $£ 880,000$ ). Of the total value of food grains, rice represented $\mathrm{So}^{+}+\mathrm{p}$ rcent. Details regarding the distribution of this trade are given in that article in the section relating to exports which deals with the rice trade as a whole. It need ouly be mentioned here that the total exports from Burma to Indian ports amounted to $1,157,000$ tons which marks an increase of 178,000 tons on the figures of the previous year. The exports of mineral oil from Burma to Indian ports declined from 72 to $70^{\circ} 5$ million gallons. The quantity taken by Calcutta for distribution by sea to other ports decreased from 37.4 to 35.2 million gallons, the direct shipments from Burma to other provinces being : -Bombay 109 million gallons, Madras 109 millions, Eastern Bengal and issam 7.9 millions, and Sind 2.9 millions. In regard to mineral oil also, details are given in the appropriate part of the section relating to exports. Burma's predominance as a source of rice and mineral oil for Indian consumption makes her total coasting exports equal to $+1 \cdot 5$ per cent of the coasting exports of all British India. The coastal exports of jute bags from Calcutta decreased in value from R2355 lakhs ( $£ 1,570,000$ ) to R191. 6 lakhs ( $£ \mathrm{I}, 277,000$ ) and in quantity from so to 75 million bags. Of these Bombay took 186 million bags, Burma $37^{\circ}$ : million bags, Madras 10.5 millions, and Sind 7 millions. The expansion in the coastal shipments of Bengal coal was one of 248,000 tons, bringing the total to $2.4^{f_{1}}$,ooo tons. Shipments of Indian-made cotton piece goods from the Bombay Presidency to other parts of India had in the previous year amounted to 239 million yards with a value of $R_{3} 87 \cdot 6$ lakhs ( $£_{2} 2,5^{8} 4,000$ ); but the year under review was a bad one both on account of the poverty of the crops and because it was regarded as inauspicious for certain ceremonies conducive to trade in cloth. The total therefore declined to 211.9 million yards with a value of $R_{352} 7$ lakhs ( $£_{2,351,000}$ ), the decrease being 27 million yards or 113 per cent in quantity and $R_{34} 9$ lakhs ( $\delta_{232}, 000$ ) or 9 per cent in value. The apparent increase of 2.4 per cent in average value in the presence of a general decline in prices shows that the trade in inferior description suffered heavily. The following figures show the distribution of these shipments from Bombay in the last two years, and indicate the extent to which the respective purchasing provinces curtailed their demand:

|  |  | 1907.08 |  |  | 190S-09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | yds. | R | $E$ | yds. | R | t |
| Bengal | . $86,119,516$ | 1,53,61,431 | $=1,024,095$ | 62,450,735 | 1,22,05,119 | $=813,674$ |
| Sind | . 136,126,905 | 2,03,80, 266 | 1,358,684 | $130,577,509$ | 1,98,48,717 | 1,323,248 |
| Madras | . 3,87!,686 | 5, 2,872 | 34,191 | 2,753,556 | 5,18,526 | 34.568 |
| Burma | . $9,889,5^{8} 7$ | 18,49,122 | 1 23,275 | 9,990,695 | 18,73,618 | 124,908 |

Coastal!shipments of raw cotton from Bombay, which in the previous yea stood at 230,576 crts and R60'92 lakhs ( $£ 406,000$ ), decreased to 137,880 crts and $R_{34} \cdot 33$ lakhs ( $£^{228,800}$ ) in 1908-09. Bengal taking only 52,468 cwts in place of 118.977 , while Kathiawar raised its demand from $20,10+$ to $38,7,60 \mathrm{cwts}$. Sind also shipped less, almost the whole of its 159.958 cw ts going to Bombay, $\mathrm{l}_{\text {ess }}$ some $2,900 \mathrm{cwts}$ for Bengal.

## RAILWAY GOODS TRAFFIC

This is a valuable indicator of the volume of total trade. The following statement reflects the shortage of export crops and the contraction in import trade. It shows (in thousand of unit) the ton-mileage of goods traffic on the principal railmays of India during the last five years:

|  |  |  |  |  |  | Increas | $+$ | Decrea | - |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Units |  | Units |  | Per |  |
| 1904 | - | - | - | - 8,969,140 |  |  |  |  |  |
| 1905 | . | . | - | - 9,260,752 | $t$ | 291,612 | or | $+3 \cdot 2$ | per cent |
| 1906 | - | - | - | . 10,052,132 | $+$ | 791,380 | " | $+8.5$ | , |
| 1907 | . | - | - | . 11,103,514 |  | 1,051,382 | ' | $+104$ | * |
| 1908 | - | - | . | - 10,199,399 | , | 904,115 | " | -8.1 | " |

For the first time since 1896 there was a falling off in these figures. The figures below show the number of goods wagons at work in India at the close of each of the last five years and the additions made in each year :

The total increase in the period of four years is therefore 25.6 per cent. Comparison of this percentage with the increase of 13.7 per cent in the ton mileage shows a decrease in the ton miles per wagon from 82,658 to 74,821 , the decline being one of 9.5 per cent. But such a comparison serves no very useful purpose when the statistics discussed relate to a period so abnormal as the last year.

Reference may be made to the article dealing with imports of Railway Material.

## PRICES

Prices-Appended is a chart illustrating graphically the index numbers covering a period of 48 years from 1861 to 1908 . They represent the simple averages of the variations in Indian Rupee Prices, as far as available, of 39 staple commodities imported into, exported from, and consumed in India. These variations are obtained by expressing the price of each article in each year as a percentage of the price for the year 1895 , which latter price is represented by 100 , and are combined in the manner explained in the margin of the chart.

VARIATIONS IN INDIAN RUPEE PRICES EXPRESSED IN INDEX NUMBERS.

Nork.-All figures relating to agriculture and oommerce in Indie are subject to violent fluctuations from year to year, according as the rainfall ia good or bad; and the period to which these tables relate includes several years of great scarcity.
From a curve that reproduces very violent flactuations, it is most difficult to derive any sense of the general tendency to be disclosed. For this reason it is desirable that index figures relating to Indian trade and agriculture should be taken on the average of each group of five yeari. The ordinary method is to set down the arerage for the five years as the figure for the mesial year of the group. Each such arerage contains only one-fifth or say $20 \%$ of the gear for which it is set down, and four-fifths or $80 \%$ of the other years; and these latter are therefore dominant in its constitation. In this way it sometimes happens that the presence of say a famine year in a five years' group results in the ordinary areraged curves shewing a fall where in the actua's there was a rise. The general character of the curve is thus lost; and for these reasons the index numbers and averages in the following tatles are taken on a special system adapted to Indian conditions. The aotuals for the five years are added together with a further five times the actual for the mesial year. There are thus ten parts present, of which six are supplied by the mesial year; and one-tenth of this total is an average containing $6 \%$ actual. In this way the true oharacter of the curve from year to gear is retainel, while a nioly smoothed curve is obtained.

## CONTENTS

## NOTE

All sums of money in this review are stated in rupees and their equivalents in pounds sterling.

For 1898-99 and subsequeut years a pound sterling is equivalent to $\mathrm{R1} \mathrm{\%}$. The rupee is divided into sixteen annas and the anna into twelve pies. The anna is, at the stated rate of Exclange, equal to one penny.

A sum of R1,00,000, ordinarily termed a lakh, is equivalent to $£ 6,666$ 13s. $H$. ., and a crore of rupees, which is 100 lakhs, is equal to $£ 666,666138 . \pm d$. The simplest method of conversion is to multiply the number of rupees by 2 and put a decimal point to the left of the unit figure and then divide by 3 , the quotient being the sterling equivalent in pounds and decimals. If it is desired to reduce these decimal figures to shillings and pence, the first two decimal figures should be divided by 5 to furnish the number of shillings, and the remainder to two places divided by 4 to find the number of pence.

Weights in this review are generally stated in lbs, ewts, and tons, and the following glossary explains the vernacular or other special terms and weights and measures, which have been used.

Bubal.-deacia dialica.
Bajra.-A millet (Pennisetum typhoideun).
Bale fof wotton or jute) -400 lbs aroirdupois $=3.5719 \mathrm{cwt}$. or $1 \mathrm{cwt} .=28$ bale.
Ber.-Xizyphus juiuha.
Biri-Razar-made cigarette of indigenous leaf.
Candy (of wheat - 6 tiblbs. avoirdupois.
Case , of $z$ tins of Krrosene). - 65 lb . avoirdupois.
Charus.-A preparation of hemp.
Chusum.-Waste silk.
Chest (of opium) - 110 lbs. avoirdupois.
Copra.-The dried kernel of the coroanut.
Ghi.-Clarified butter.
Gur or jaggery.-Sugar, raw.
IIookith. - IIubble bubble.
Jacar or cholam.-The great millet (Andropugon Sorgham).
Letjet.-Pickled tea (Burma).
Mahua, nowa or nowra.-Bassia Lalifolia.
Manmi, Imperial. - 10 sers or $52 \frac{3}{\%}$ Hs. avoirdupois. ${ }^{\circ}$
" Factory-ili los. avoirdupois.

Pical.-133ł 11se avoirdu 018.
Rayi.-A millet (Elensine coracana).
Sails-Bankers.
Sann. - Hemp fibre.
Sce. $-2 \frac{2}{35}$ lbs. adroirdupois.
suadeshi-Country-made.
Thanalpet-Cigar wrappers (Burma).
Til or jinjili-An oilseed (Sesamum).
Tola.-8 oz or 180 grains 'troy.
.Fist -3.6 lbs avoirdupois (Burma).

This. Map of India is intruded to illustrate the principal sources of sperifue products. The principal areas of production of the staple crops of British Imdin, wamely rice, wheat, wilseds, su!arcane, tea, coffee, cotton, and jute are indiceted bil hatehines-horizontal, vertical and diagonal-in two rulours, hank amd rid: amd the loration of the principal coal-fields is marked with Whrli dots. For want of data, no information is gicen as regards Sative Stutes, and the districts in which the aren under the selected crop is less than 10 per cent of the total croped area hare been i!nored. The chief Railway s!etems are indicated b! thin black lines.

## REVIEW

OF THE

## TRADE OF INDIA

For the official year ending March 31, 1910

The commercial prosprerity of India is primarily contingent upon her harvests and therefore upon her export trade, but this again involves dependence to a considerable but ever increasing extent upon the conditions prevailing in international markets. The statistics for the official year 1908-09 irvealed a deplorable weakness in almost every direction ; and with an import market slatted, high prices of food grains, and a general feeling of insecurity created hy the slow recovery of credit in Europe and America, such small improvement as was effected was unable to impress itself upon any of the trade returns. The record for the year 1909-10 marks in almost every respect an appreciable adrance upon its predecessor, though it should be regarded mather as a year of further recuperation than of development, and aroiding the tendency to interpret increases of values as increases of volume, it will be found that, although all unhealthy symptoms have not yet been eliminated, India after an umusually prolonged prriod of trade sickness may be regarded as almost convalescent.

The begimning of the year under review happily synchronised with a marked improvement in foreign trade. The statistics for the calendar year 1909 show remarkable advauces in the total value of imports into the United Kingdom, France, Germany, Belgium, and the United States of America, and except in the case of the last named, the sum of the exports is also considerably hisher. In the United Kingdom business was generally good except in Lancashire, and as evidence of the improrement effected it may be noticed that the capital raised for new joint stock enterprises in London in the first quarter of 1910 amounted to nearly $£ 100$ millions. The new Tariff legislation in the United States was completed in August and has proved in sevemal respects more favourable to the foreign importer. Amongst other events of commercial interest in other parts of the world were the prolonged coal strike in Australia in a year otherwise remarkably free from disputes between capital and labour, the Eight ILours Mines Bill, the effect of which upon the South Wales coal trade it is ton early yet to forecast, the rubber and oil booms, and the new Patent and Trades Marks Acts in Japan. The persistence of depression in neveral quarters, however, in the fae of apparently favourable conditions indicates that consumption is still well within the world's capacity of supply and the characteristic optimism of New York very nearly precipitated a crisis in April in a speculative endeavour to anticipate a boom.

In India the monsoon was exceptionally farourable in 1909 and the increase in total estimated outturn exceeded 14 per cent in the case of jute, 92 per cent in the case of cotton, 26 per cent in that of wheat, 43 per cent in the case of rice, and 24 and 44 per cent in the two principal classes of oilseeds. Some of these crops do not enter into statistical consideration in this review, but the cumulative effect is gencrally refleoted in the returns. An extreme shortage in the visible supply of wheat was being proclaimed from the house tops in Wall Stroet just when an ample Indian harvest was on its way from the threshing floor to Karachi, and the contraction in the Egyptian cotton yield following unfavourable estimates of outturn from the United States came most opportunely for thoso who neither weave nor spin and emabled the cultivators of the

Decean to unload uron a rapidly rising market an unusually early and abundant crop. The counterattractions of the Manchurian soy bean were not able to make good the shortage in the Argentine crop of oilseeds, and the prices of linseed and cotton seed both adranced considerably. The Burma rice market mas exceptionally brisk, the level of prices though lower being far from unremunerative, and the tea and hide trades both benefited from a larger volume of business at ligher specific ralues. The indigo and coffee industries continue under a cloud, and though there has been some rubber exploitation during the year and though much is expected of the cultivation which has begun on the Malabar coast and in Burma particularly, it is douhtful whether India will ever achiere prominence as a producer in this field.

Regarded as a whole the export trade was unusually active, particularly in the last four months of the year, and the high prices of wheat, cotton, and oilseeds not only directly benefited the cultivators in almost every province but serred to replenish automatically the stocks of gold in the country which had been depleted by the abnormal imports and the $A$ merican banking crisis in 1907-0s. Cnfortunately the improvement in economic conditions was practically confined to raw produce in foreign markets. The high prias of cotton diverted supplies from the Bombar mills at a time when they were almost bare of stocks, and a farourable monson had encouraged expectation of an abundant supply of cheap raw material. The market for yarn was slow to respond to the enhanced cost of the staple and the demand for piecegools was curicusly uneren and the lerel of prices disappointingly low. There was one very serious failure in August and towards the close of the year the Bombay owners affected to be further disturbed by the prospects of Factory legislation, scarcity of labour, and the effects of the new silver duty. On the other side of India the jute industry continued to suffer from an ageravated form of prostration which wasintensified by a premature abandonment in September last of the short time morement. Though the raw material was abundant and cheap, the mills complained that the large volume of business carried through was generally unremunerative, particularly for Hessians, and the trend of prices since the close of the year has been further downward. The Calcutta market was also affected by the paralysis in the Bengal coal trade, which but for the strike in New South Wales would have touched the very nadir of depression, and by the absence even of any speculative recovery in shellac from the low level of prices touched in the previous year.

In the matter of imports the record is also somewhat unsatisfactory, as in all those lines which are regarded as indices of returning indusirial activity the recovery has only been partial and incomplete. The value of metals and manufactures and of all kinds of machinery has again fallen, the Railway indents were smaller, and the increasing imports of sugar from the Dutch Indies in spite of the rise in prices are hardly a matter for congratulation when the acreage under cane in India largely exceeds that of any other country in the world. The fall in values in 1908 had left considerable stocks of depreciated piecegoods in the Indian market, particularly in Bombay and Madras, and so long as these remained unassimilated buyers were encouraged to hold out for prices, which, having regard to the present values of raw material, were altogether unremunerative to importers who were also faced with increased competition on the part of local manufacturers in certain prominent lines.

As regards the future, present conditions augur further trade improvement in Europe and America in the next twelve months, but for India the restoration of industrial activity; and the development of those internal exchanges, which have been so conspicuously in defect during the last three years, can only be assured by a continuance of general agricultural prosperity.

## GENERAL SUMMARY OF TRADE

In the appended statement the value of the foreign trade by sea of India for the year ending the 31st March 1910 is compared with that in each of the preceding two years. The values are stated in thousands of rupees and of pounds sterling, of both merchandise and treasure, excluding Government transactions.

The increases or decreases under these several heads in the year under review are shown below as compared with the two previous years:-

The grand total of imports and exports combined was, therefore, f 318.6 orores ( $£ 232.4$ millions) as against $\mathrm{R} 302 \cdot \mathrm{S8}$ crores ( $£ 201.92$ millions) in 1908-09, the increase being one of R 45.72 crores ( $£ 30.48$ millions) or $1 \tilde{0} \cdot 1$ per cent. This sum includes $\mathrm{R} 3 \cdot 39$ crores ( $£ 2 \cdot 26$ millions) of foreign merchandise re-exported, but excludes some $\mathbb{} \ddagger .67$ crores ( $£ 3.8$ millions) on Government account, of which $\mathrm{R2} 295$ crores ( $£ 1.96$ millions) of material were imported for State Railways. Compared with 1907-08, the increase is R 3.08 crores ( $£ 2$ millions) or nearly 1 per cent.

## IMPORTS

The total value of imports was $\mathrm{Rl} 54 \cdot 48$ crores ( $£ 102.99$ millions) as against R143.9 crores ( $\mathcal{L} 0593$ millions) in the previous year, the advance being R10.59 crores ( 87.06 millions) or $7 \cdot 4$ per cent. This represents $23 \cdot 1$ per cent of the grand total increase in trade.

Imports of merchandise, howerer, fell asain from R191•26 crores ( $\mathcal{E S 0} \cdot 8 \mathrm{~s}$ millions) to R117.06 crores ( $£ 78.0 \pm$ millions) or by $\mathrm{K} 4 \cdot \mathrm{O}$ crores ( $£ . \mathrm{S}$ millions) or 3.5 per cent.

The largest class of imports is that of Articles manufactured and partly manufactured. It formed about 51 per cent of the total imports and the aggregate total ralue rose from R 59.25 crores ( $£ 39.5$ millions, to P 59.81 crores ( $£ 39.9$ millions), the small net increase being R55.56 lakhs ( $£ 370,400$ ) or about 1 per cent. Cotton piecegoods and manufactures recovered slightly from a heary decline in 1905-09, the ralue being increased by 1213559 lakhs ( $£ 90 \pm, 000$ ) or 3.6 per cent from R 38.01 crores ( $£ 2.34$ millions) to n 30.57 crores ( $£ 26.25$ millions). Grey goods with a value of 41752 crores ( $£ 11 \cdot \mathrm{GS}$ millions), representing about $44^{\circ} \mathrm{J}$ per cent of the imports of cotton goods, sherred an adrance of fl 2.33 crores ( $£ 1.55$ millions) or 153 per cent. But Coloured and white goods and yarn fell by R66.0S lakhs ( $£ 440,500$ ) and f $32 \cdot 93$ lakhs ( $£ 219,500$ ), respectively. Woollen manafactures also declined from $\mathrm{f} 2 \cdot 91$ crores ( $£ 1 \cdot 9 \pm$ millions) to $\mathrm{R} \cdot 0 \mathrm{~S}$ crores ( $\mathrm{E} 1 \cdot 4$ millions)-a difference of $\mathrm{AS} 2 \cdot 98$ lakhs ( $£ 553,200$ ). There were increases under glass and glassware ( $\mathrm{Z} 10 \cdot 74$ lakhs $=£ 71,600$ ) and paper and pasteboard (RS.67 lakhs $=£ 57,800$ ).

The class next in importance is that of Metals and manufactures thereof the total ralue of which fell from F 29.96 crores ( $£ 19.97$ millions) to R20.03 crores ( $£ 17.35$ millions) or by 13.1 per cent. Railway plant and rolling stock with a total ralue of $\mathrm{f} 5 \cdot 43$ crores ( $£ 3 \cdot 62$ millions) constituted a decline of Al. 99 crores ( $£ 1.33$ millions). Machinery and millwork also shewed a fall of Pl .54 crores ( $£ 1.03$ millions), the ralue being f 5.07 crores ( $£ 3.33$ millions) against A 6.62 crores ( $£ 441$ millions) in 1908.09 . The total ralue of Metals also fell from Al 13 crores ( $£ 8.67$ millions) to P 12.77 crores ( $£ 8.51$ millions), the net decrease being $\mathrm{H} 23 \cdot 64$ lakhs ( $£ 157,000$ ), of which Iron and steel accounted for $\mathrm{f}=0.3$ lakls ( $£ 135,300$; and Copper RT:79 laklis ( $£ 51,900$ ). Hardware and cutlery also fell by flo 9.4 lakhs ( $£ 106,200$ ) to H 2.77 crores ( $£ 1 \cdot 84$ millions).

Under Articles of food and drink, representing alsout 16.2 per cent of the total imports, there was a decrease of fi5 679 lakhs ( $£ 378,600$ ) or 2.9 per cent, the total ralue be:ng Fl 18.96 crores ( $£ 12.64$ millions) as against fl9:53 crores ( $£ 13.02$ millions). The imports of Sugar and Provisions adran : d by $\mathrm{R}(61: 54$ lakhs ( $£ 410,300$ ) and Z 8.55 lakhs ( $£ 57,000$ ) respectively. Tiese increases were more than counterbalanced by a total decline of R 03.4 lakhes ( $£ 622,700)$ under Grain and pulse, composed of R39 laths ( $\mathrm{C} 2(00,000$ ) in wheat, $\mathrm{R} \equiv 7.37$ lakhs ( $£ 182,000$ ) in rice, and $\mathrm{H} 17 \cdot 13$ lakhs ( $£ 1 \mathrm{f}, 200$ ) in pulses. Spices also declined ly Ps 61 lakhs ( $£ 57,(000)$ to $\mathrm{Pl} 1 \cdot 29$ crores ( $£ 853,000$ ).

Raw materials, etc., show a nominal risc from thive crores ( $£ 3.19$ millions; to E 48 crores ( $£ 3.2$ millions). Appreciable increases of R 28.98 lakhs ( $£ 193,200$ ) under Precious stones and pearls unset and R12.91 lakhs ( $£ 86,000$ ) under Ivory were neutralized by decreases under Cotton, raw ( $\mathrm{H} .9 \cdot 45$ lakbs $=£ 129,700$ ), Coal and coke ( $\mathrm{R} 10 \cdot 78$ lakhs $=£ 71,900$ ), Timber (R6.35 lakhs $=£ 42,300$ ), and Silk and Seeds slightly over 4 lakhs each.

Chemic als, drugs and medicines, etc., advanced by $14.9 \cdot 28$ lakhs ( $\mathcal{E} 98,0(00)$, of which drags and medicines contributed R17.30 lakhs ( $£ 115,8(0)$ ), tobacco R15.4 lakhs ( $£ 103,000$ ), chemicals $\mathrm{m} \% \cdot 77$ lakhs (£38,500), mineral dyes E 6.71 lakhs ( $£ 44,700$ ), and other dyes R 4 lakhs ( $£ 30,000$ ).

The impuris of Oils declined by R81 lakhs ( $£ 540,000$ ) to $\mathrm{Z} 3 \cdot 35$ crores ( $£ 2.23$ millions), mineral oils with a value of $\mathrm{R} 3 \cdot 15$ crores ( $£ 2 \cdot 1$ millions) being responsible for $\mathbf{H 7 6} 35$ lakhs ( $£ 509,000$ ) thereof.

Imports of Treasure rose from $\mathrm{P} 2 \mathrm{e} \cdot 63$ crores ( $£ 15 \cdot 1$ millions) to $\mathrm{Z} 37 \cdot 42$ crores ( $£ 2495$ millions) or hy 60.9 per cent, due to increased imports of gold amounting to $\mathbf{R 1 6} \cdot 61$ crores ( $£ 11.07$ millions), while silver declined by Al 182 crores ( $£ 1 \cdot 21$ millions).

## EXPORTS

'The value of exports, representing 55.7 per cent of the total trade, amounted to $\mathrm{R104} \cdot 12$ crores ( $£ 12941$ millions) as against Rl 158.08 crores ( $£ 105.90$ millions) in the preceding year. The increase here was $¥ 35 \cdot 13$ crores ( $£ 23 \div 2$ millions), being 768 per cent of the total increase in the trade and an adrance equivalent to $22 \cdot 1$ per cent on the exports for 1908-09.

The exports of Indian Merchandise formed 52.9 per cent of the total trade and 04.9 prer cent of the total exports as compared with 49.5 and 94.3 per cent respetively in 1008-09. The total value rose from Pl 149.86 crores ( COO 9 millions) to R1S. 4 b crores ( $£ 129.89$ millions), the increase being R3 $1 \cdot 15$ crores ( $£ 23$ millions) or 23 per cent.

There have been increases in all classes, but the most considerable are those of R16.5 crores ( $£ 11$ millions) under articles of food and drink and of R1( $\because-5$ crores ( $£ 10 \$ 5$ millions) under raw materials and unmanufactured articles. The latter is the largest class representing 45.3 per cent of the total exports of Indian merehandise as against 448 per cent in 1908-00 and achievel a total value of $\mathrm{f} 83 \cdot 17$ crores ( $£ 55 \cdot 65$ millions) equivalent to an adrance of 2.12 per cent upon the figures of the previous year. This increaso was more than accounted for by raw cotton with a total value of f31 25 crores ( $£ 20.85$ millions), the highest value ever recorded-exceeding by $\mathbf{~} 111.51$ crores ( $£ 7 \cdot 67$ millions) or $58 \cdot 2$ per cent that of $1908-09$ and by $\mathrm{R} 5 \cdot 57$ crores ( E 3.71 millions) or 21.7 per cent that of $1007-08$-and by seeds with a total value of R 18.73 crores ( $£ 12 \cdot 49$ millions) which was larger than in the previous year by $\mathrm{f7} 705$ crores ( $£ \pm 7$ millions) or 60.4 per cent and by Zl .91 crores ( $£ 1 \cdot 27$ millions) or $11 \cdot 3$ per cent than the record year of $1907-08$. These two items represent $37 \%$ and 22.4 por cent respectively of the total class. Raw jute, the values of which were on a par with those of raw cotton in the previous year, droppeel to R15.09 crores ( $£ 10.06$ millions), showing a fall of P 4.75 crores (. $\mathcal{E} \cdot 10$ millions) equivalent to 23.9 per cent. Raw hides and raw skins showed increases of $\mathrm{R} 3 \cdot 1 \mathrm{1S}$ lakhs ( $£ 228,000$ ) and $\mathrm{R} 97 \cdot 08$ lakhs $(\mathcal{L} 617,000)$ respectively. Both combined exceeded the figure of $1908-09$ by R1•3l crores $(\mathcal{E} 83,000)$ or 15.7 per cent and that of $1907-08$ by R 2.60 crores ( $£ 1.73$ millions) or 36.8 per cent. Raw Wool also adranced by 77740 lakhs ( $£ 516,000$ ) to $\mathrm{Re} \cdot 86$ crores ( $£ 1.91$ millions) and Coal and coke by Fl 16.63 lakhs ( $£ 110,900$ ) to $\mathrm{fC} \mathbf{7} \cdot 14$ lakhs ( $£ 417,(000)$.

Articles of food and drink, representing 26.6 per cent of the exports of Indian merelandise, made as already noted $a$, remarkable adrance of R16.5 orores ( $£ 11$ millions). The largest increase is of R11•4 erores ( $£ 7 \cdot 63$ millions) under wheat and whentflour with a total of R13.3 crores ( $£ 8.86$ millions).

The exports of Rice show a more modest advance of k 2.35 crores ( $£ 1 \cdot \mathrm{~b} 7$ millions), the total value being $\mathrm{f} 18 \cdot 2 \cdot \mathrm{t}$ crores ( $£ 12 \cdot 16$ millions), which
is, howerer, less than the total in 1907-0S by $\mathrm{Al} \cdot 09$ crores ( $£ 1 \cdot \pm$ millions). Other noticeable increases in this class occurred under Tea, over Xi 1.31 crores ( $£ 573,000$ ), haring maintained about the some figure in the previous two years, and food grains other than rice and wheat $\mathrm{Rl} \cdot 21$ crores ( $£ 807,000$ ), the total ralue being very close to that of $1907-08$. There was a marked decline of \# 29.36 lakhs ( $£ 195,700$ ) under Coffee, though Fruits and vegetables advanced by fot 19 lakhs ( $£ 160,800$ ) to R93 70 lakhs, ( $£ 694,700$ ), and Provisions and Spices improred to the extent of fl 2.57 lakhs ( $£ 53,800$ ) ard $\mathrm{Rl} 2 \cdot 31$ lakhs ( $£ 59,000$ ), respectirely.

The next important class is Articles manufactured and partly manufactured, representing about 21 per cent of the total exports of Indian merchandise. The total ralue rose by $\mathrm{Al} \cdot 41$ crores ( $£ 9 \pm 0,000$ ) or $3 \cdot 8$ per cent to $\mathrm{R} 38 \cdot 06$ crores ( $£ 25.37$ millions). In this class Jute manafactures made good half the set-back of the prerious rear by a recovery of $\mathrm{Rl} \cdot 36$ crores ( $£ 006,700$ ), the total ralue being R17.1 crores ( $£ 11 \cdot 4$ millions), which represent 44.9 per cont of the total class. Cotton manufactures made steady progress with a total of R11.91 crores ( $£ 7 \cdot 9 \pm$ millions), showing an increase of $\mathrm{F} 37 \cdot 84$ laklis ( $£ 252,000$ ) as against $\mathrm{P} 77 \cdot 05$ lakhs ( $£ 514,000$ ) in 1908-09. Of this increase piecegoods accounted for Z 33.79 lakhs ( $£ 225,300$ ), yarn R 285 lakhs ( $£ 19,000$ ), and other manafactures $\mathrm{Zl} \cdot 19$ lakhs ( $£ 7,930$ ). Coir advanced by R10 11 lakhs $(£ 67,400)$ to $\mathrm{f} 72 \cdot 86$ laklis ( $£ 456,000$ ). There was a heary decline of f 20.7 t lakhs ( $£ 138,000$ ) in tanned skins, with a small increase of $\mathrm{f} \mathbf{4} \cdot 75$ lakhs ( $£ 31,600$ ) in tanned hides-the two combined showing a value of f 3.97 crores ( $£ 2.65$ millions) as compared with $\mathrm{R}+13$ crores ( $£ 2 \cdot 75$ millions) in 1908-09. Lac showed a slight improrement of $\mathrm{Al} \cdot 20$ lakhs $(\mathbf{£ 8 , 0 0 0}$ ), with a total of $\mathbf{8 2 \cdot 7 5}$ crores ( $£ 1.83$ millions) as against f 3.88 crores ( $£ 2 \cdot 50$ millions) in 1907-08.

Chemicals, drugs, etc., declined by $\mathrm{Z} 21 \cdot 27$ lakhs ( $£ 142,000$ ) to $\mathrm{Pl1} \cdot 26$ crores ( $£ 7 \cdot 51$ millions) as against R11. 47 crores ( $£ 765$ millions) in 1908.00 . The heariest fall was in indigo, the trade in which is declining year by year. The total value of $\mathrm{f} 35 \cdot 18$ lakhs ( $£ 234,500$ ) only represents a percentage decrease of 28.3 . Other losses were $¥ 26 \cdot 21$ lakhs $(£ 11,400)$ under saltpetre and $¥ 3 \cdot 56$ lakhs ( $£ 23,700$ ) under opium, the total value of which was R 9.31 crores ( $£ 6.21$ millions). Tobacco and Myrobalans showed an increase of about $\mathbb{Z 2}$ ? lakls ( $£ 17 \cdot 000$ ) each.

In exports of Oils there was a marked rise of $\mathrm{f} 26 \cdot 42$ lakhs $(£ 176,000)$, which was divided between mineral oils $\mathbb{Z 7} 11$ lakhs ( $£ 47,400$ ) and paraffin wax $\not \approx 18 \cdot 03$ lakhs ( $£ 120,000$ ). The total value amounted to $\mathrm{Al} \cdot 21$ crores ( $£ 806,600$ ) and exceeded the record total of $1903-04$ by nearly $\not \approx 18$ lakhs (£120,000).

The increase in the exports of Metals and manafactures thereof was F20.62 lakhs( $£ 137,000$ ) or $22 \cdot 9$ per cent, with a total of R1•11 crores ( $£ 740,000$ ), which was, however, less than in 1907-08 by R11'18 lakhs'( $£ 74,500)$. Manganese ore rose by $\mathrm{f} 3 \cdot 13$ lakhs ( $£ 20,900$ ) to $\mathrm{F} 79 \cdot 10$ lakhs ( $£ 527,000$ ), other metals contributing the balance.

Exports of Treasure amounted to R6:39 crores ( $£ 4 \cdot 26$ millions), of which gold was worth H 33 ?3: crores ( $£ 2.23$ millions) and silver R3.04 crores ( $£ 2.02$ millinns). Gold produced in Indian mines was exported in the form of bar in London for assay to the value of $\mathrm{R} 3 \cdot 25$ crores ( $£ 2 \cdot 17$ millions) as against $\mathrm{R} 3 \cdot 17$ crores ( $£ 2 \cdot 12$ millions) in $1908-09$. This represents 97 per cent of the exports
of this metal. The silver exports consisted liefly of Government of India rupees and British dollars for circulation in Hongkong, Ceylon, Arabia, Bahrein Islands, Mauritius, and East Africa.

## RE-EXPORTS

The re-exports of foreign merchandise showed a rise of A 21.79 lakls ( $£ 145,300$ ) or 6.9 per cent, the value being $\not 73.39$ crores ( $£ 2.26$ millions), which represents nearly 2 per cent of the total exports. The largest single item in this class is, as usual, Cotton manufactures, which rose by $\not 78 \cdot 56$ lakhs ( $£ 57,000$ ) to $¥ 1 \cdot 21$ crores ( $(807,000$ ). Sugar also accounted for an increase of A 482 lakhs ( $£ 32,100$ ) with a total value of $\mathbf{\# 1 6} 56$ lakhs ( $£ 110,400$ ). Metals and hardware slightly improved by $\not \approx 1 \cdot 63$ lakhs ( $£ 10,900$ ), bringing the total to $\mathrm{R} 2 \mathbf{5} \cdot 60$ lakhs ( $£ 170,700$ ). Raw wool also rose by $\mathrm{Z} 89,000$ ( $£ 5,900$ ) to $\mathrm{R} 28 \cdot 80$ lakhs ( $£ 102,000$ ) and Apparel by $\mathrm{Z} 67,700(£ 4,500)$ to R15•71 lakhs ( $£ 10 \cdot \mathbf{4}, 700$ ). Provisions showed a decline of $\mathrm{Rl} \cdot 36$ lakhs ( $£ 9,100$ ) with a total of P 16.96 lakhs ( $£ 113,000$ ). There were also declines of nearly R2 lakiss ( $£ 13,300$ ) each under carriages and carts and tea, the aggregate values being $\mathbf{f} \cdot \mathbf{4} \cdot \mathbf{6 1}$ lakhs ( $£ 30,700$ ) and $\mathbf{R} 3 \cdot 61$ lakhs ( $£ 24,000$ ) respectively.

## IMPORTS OF MERCHANDISE

The volume of this trade forms about $33 \cdot 6$ per cent of the whole. The much iuflated trade of $1907-08$, valued at Zl 29.89 crores ( $£ 86.6$ millions), declined in the following year by R 8.63 crores ( $£ 5 \cdot 75$ millions) or 6.6 per cent, and in the year under review receded to R117.06 crores ( $£ 78.04$ millions), showing a decrease of $\mathrm{P} \cdot \mathbf{1} \cdot 21$ crores ( $£ 2.81$ millions) or 3.5 per cent as compared with 190809. The total is still much larger than in any year before the record year of 1907-08.

The appended statement compares the value of the imports in 1909-10 with the annual value in each of the preceding four years, as also the average value of the last quinquennial period with that of the preceding five quinquennial periods, in thousands of rupees and of pounds sterling. The last column shows the centesimal variations, the average value of the period ending 188480 being taken as 100 .

The principal articles of import into India and their values during the last three years are stated below with 000 's omitted, the porcentage of increase or
decrease in their ralues in 1909-10 as compared with the previous sear being set against each :

From the abore it appears that only in grey cotton piecegoods, sugar, tobacco, drugs and medicines, and precious stones and pearls was there any appreciable expansion of business. The most noticcable declines are thoss under cotton yarn and coloured piccegoods, railway material, machinery and millwork, mineral oil, woollen manufactures, salt, and raw cotton. Further it should be noted that the increase in the value of sugar and tobaceo is due to increased prices, and not increased volume. The prices of woollen manufactures, coal, timber, and salt fell during the year.

The value of the trade in each of the classes under which articles are grouped in the accounts was in thousaulls of rupers and $£$ slerling:

## I.-ANIMALS, LIVING

This head is comparatively unimportant, consisting chiefly of horses imported from Australia for the army, hacks, carriage horses, polo ponies, and a few high pricel thoroughbrels. The imports of horses has steadily declined in recent years-from $\mathrm{R55} \cdot 48$ lakhs ( $£ 369,800$ ) in $1904-05$ to $\mathrm{R} 28 \cdot 43$ lakhs ( $£ 190,000$ ) in 1008-09, though in the year under review the value rose to f33.02 lakhs ( $£ 220,100$ ) or by 16.2 per cent, but the average value fell from RH 4 H ( $£ 2912 \mathrm{~s}$.) to R 4.37 ( $£ 2938$.) peranimal. The number of horses brought to Bombay from the Persian Gulf is also declining.

The trade in other animals is insignificant, but about 500 mules were imported for Government purposes from China.

## II.-ARTICLES OF FOOD AND DRINK

The values during the last three years of the principal articles in this group lave been-

Fruits and vegetables.-The total value of this trade was R13.26 lalchs ( $£ 88,400$ ), agninst R10.96 lakhs ( $£ 73,000$ ) in 1908-00, showing an increase of
 expansion of the trade in othersorts, which include fresh fruits and vegetables, such as mangosteens and pine apples from the Straits. The fall of fas,000 ( $\mathfrak{C} 3,570$ ) undor copra was partly componsated for by a rise of $\mathrm{P} 43,500$ ( $\mathfrak{E 2 , 0 0 0 \text { ) under coconnuts. }}$

Grain and Pulse.-This trade in normal years is of no importance, for India in such years does not need to import food grains from external sources. The temporary expansion of this trade in 1908-00 contracted again in the year of report with a total of $21,77 \pm$ tons, valued at R 29.96 lakhs ( $£ 199,700$ ), as against $0 ., 400$ tons, walued at R123.36 lakhs ( $£ 822,400$ ), in 1908-09. The most noticeable decrenses are under wheat and wheat flour from 35,509 tons and
 $30,98 \mathrm{~s}$ tous and R.I $1 \cdot 06$ lakils ( $£ 293,700$ ) to 13,170 tons and R16.69 lakhs ( $£ 111,300$ ), and pulses from 20,827 tons and R21 2 S lakhs ( $£ 141,200$ ) to 4,240 tons and R.1.15 lakhs ( $£ 27,700$ ).

Liquors. - Of the three main divisions, malt liquors, spirits, and wines, the quantities and values of imports are stated below for each of the last three years (000's omitled) :-

|  |  | 1007-08 |  |  | 190S-09 |  |  | 1009.10 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | galling | 1k | 0 | gallona | 12 | \& | gallona | R | 8 |
| Malt Lituura | 4,880 | 61,30- | - | 4.807 | 58,51- | 390 | 4,136 | 54,73= | 367 |
| Spirita. | 1,160 | 1,10,44 | 736 | 1,083 | 1,12,68 | 751 | 1,704 | 1,10,30 | 73 |
| Winon - | 167 | 98,16 | 191 | 338 | 27,31 | 159 | 830 | 86,43 | 170 |
| Total | 0,806 | 2,00,49 | 1,836 | 6,3087 | 1,08,50 | 1,923 | 36,237 | 1,91,48 | 1,276 |

The total ralue is $\mathrm{Rl} 191 \cdot 49$ lakhs $(£ 1,276,600)$. It will be seen that there has been a decline in total ralues of R9 lakhs ( $(\mathbf{~} 60,000)$ during the triennium, the fall in the current year being R7 lakhs ( $£ 46,600$ ).

The enhanced rates of duty on all fermented liquors, spirits, and wines, enacted by the Indian Tariff (Amendment) Act, VIII of 1910, which came into force so late as the 2 2th February last, had but little effect on the trade of the year, though Calcutta reports the bonding of some 20,000 gallons in March.

The imports of malt liquor, of which about 90 per cent is brewed or bottled in the United Kingdom, hare again fallen, the deeline in 1909-10 being one of 113,000 gallons or $2 \cdot 6$ per cent in quantity and $\mathrm{R} 3 \cdot 78$ lakhs ( $£ 25,20(1)$ or 6.5 per cent in ralue, which represents a diminution of $\Omega 1$ per cent in the specific value.

The production of Indian brewed beer has also diminished in recent years, falling from 6.47 million gallons in 1902 to 5.18 millions in 1908 and 482 millions in 1909.

The consumption of beer has steadily fallen since the duty was raised from one to tro annas a gallon in January 1908. The arerage annual consumption for the six years ending in December 1907 was $10,509,473$ gallons. In 1908 the total was $9,070,557$ gallons and in 1909, 9,110,861 gallons only, and with the duty now standing at three annas, there is likely to be a further fall'The work of the Army Temperance Association among British troops, who may be assumed to be responsible roughly for about half of the total consumption, and the contraction of trade in cheap beer for native consumption manufactured in Bangalore and the Nilgiris owing to excise restrictions and reduction of shops, are other factors operating in the same direction.

The following statement shows the totals in gallons of all spirits, including liqueurs and methylated and perfumed spirits, iripported from the several principal countries, contrasted with the quantity issuivd from distilleries in India, in each of the last three years:

With reference to the indigenous production of spirits, it should be remembered that there has recently been a great extension of areas served by distilleries at the expense of outstills, whose produce was not brought to account, and therefore the large increase in output is more apparent than real and has not been made at the expense of imported liquor.

The imports of all sorts of spirits increased by 22,436 gallons or 1.3 per cent in quantity, but decreased in value by $\mathrm{f} 2 \cdot 38$ lakhs $(£ 15,900)$ or $2 \cdot 1$ per cent. The fall in specific value is one of $3 \cdot 4$ per cent. The enhancement of import duty under the recent Act has not effected hitherto any restriction in the imports.

The quantities of the principal descriptions of potable spirits imported in the last three years were (in gallons) :-

Three quarters of the Brandy imported come from France. The only whisky which is not from the United Kingdom is from Germany and Belgium. The United Kingdom and Holland share the gin trade, and Rum comes principally in casks from Jara. The potable spirits in the omnibus heading "other sorts" are chiefly Jara arrack and white and rectified spirit, mainly from Germany, which are generally used for methylating and compounding, and Colombo arrack for potable purposes.

Under imports of Wines, there was an inconsiderable increase of 777 gallons or $\cdot 2$ per cent in quantity, the total being 335,001 gallons, while the value declined by R 85,505 ( $£ 5,726$ ) or 31 per cent to R20 45 lakhs ( $£ 176,300$ ). The average value per gallon fell from R8-1-4 (10s. 9d.) to R7-12-11 $\frac{1}{2}$ ( 10 s.jd.) or by 3.3 per cent.

Provisions.-This is a composite head, consisting of several items of a very comprehensive character, though of comparatively small amount. The head Fruits and vegetables, for instance, represents a value of $\mathrm{RS} 5 \cdot 4$ lakhs ( $£ \mathbf{L} 69,600$ ) ngainst R834 lakhs (£556,200, in 1908-09, and consists mainly of Almonds and dates, but includes many other dried, salted or preserved fruits and vegetables also. The largest single item under Prorisions is Dates, which advanced in value from $\mathrm{R} \cdot \mathbf{1 6 \cdot 3}$ lakhs ( $£ 308,500$ ) to R 548 lakhs ( $£ 365,300$ ) and in quantity from 817,662 to $010,097 \mathrm{cwts}$, representing an increase of 18.4 per cent in value, $11 \cdot 4$ per cent in quantity, and about 6 per cent in specific value. The head salted fish declined from f 27.50 lakhs ( $£ 183,900$ ) to f 26.97 lakhs ( $£ 170,800$ ), of which dry salted fish accounted for R20:76 lakhs ( $£ 151,000$ ), in the year of report. The import of foreign Biscuits has practically maintained the level of $1908-09$ at R28.15 lakhs ( $£ 187,700$ ) in spite of increasing manufacture of country biscuits. Canned and bottled provisions show no advance upon the figures of 1908-09, the value amounting to R32.1.4 lakhs ( $£ 21 \cdot 1,300$ ), and Farinaceous foods declined from $\mathbb{Z} 32 \cdot 14$ lakhs ( $£ 214,300$ ) to R31: 33 lakhs ( $£ 210,200$ ). Milk, condensed and preserved, improved ly Re9 lakhs ( $£ 19,330$ ) to Rive 62 lakhs ( $£ 170,500$ ). The last but not least comprehensive head of provisions "other sorts," which include beche de mer, butter, fishmaws, ghi, jams, lard, pickles, sago flour, besides a number of unspecified items, represents a value of R 41.91 lakhs ( $\mathcal{£} 279,430$ ) as against $\mathrm{R} 38 \cdot 20$ lakhs ( $£ 255,000$ ) in 1908-09.

The total value of the whole class rose from $\mathrm{R} 2 \cdot 81$ crores ( $£ 1.87$ millions) to Z 2.9 croros ( $£ 1.03$ millions) or by $\mathrm{Z8} 855$ lakhs ( $£ 57,000$ ) which is equivalent to 3 per cent. The sources of supply aro the United Kingdom ( $40 \cdot 2$ per cent of the total), the Persian Gulf ( $25 \cdot 1$ per cent), and the Straits ( $17 \pm \pm$ per cont).

Salt.- The imports of salt during the year under review show a marked decline, which is not, however, to be attributed either to decreased consumption
or to any actire boyeot，but to the carrying orer of heary stocks from 1908－09． The quantities and values for the last fire years have heen as follows：－

|  |  | Tons | f | £ |
| :---: | :---: | :---: | :---: | :---: |
| 1905－06 | － | ＋64，581 | 65，71，570 | ＋35，195 |
| 1906－0i | ． | 467，919 | （6， 017,390 | 445，159 |
| 1907－03 | － | 555，654 | 50，21，150 | 531，716 |
| 1908－09 | ． | 558，557 | 8，4，07，593 | 560，507 |
| 1909－10 |  | 493，415 | 65，5i，972 | 159，190 |

The decrease in 1909－10 is one of 90,439 tons and R15．19 lakhs（ $£ 101,300$ ）， and the fall in spec．fic ralue is equivalent to $3 \cdot 2$ per cent．The consumption of salt has steadily risen with the reduction of the duty．Since 1007－0s，when the present rate of duty $\mathrm{Pl}(1 s .4 d$ ．）per maund was adopted，the total has risen from $1,54 \overline{7}, 601$ to $1,680,726$ tons in 1909－10．Low prices，cheap freights，and a somewnt artificial preference in certain centres for Spanish salt led to great competition and a large increase in the imports in the years 1907－05 and 1905－09 and introduced to India sereral fresh sources of supply．In 1909－10 arrived the first shipment from Massowah in Italian East Africa．The distribu－ tion of the import trade during the past three years has been as fullows：－

|  |  |  | $\begin{gathered} 1907-03 \\ \text { Tuns } \end{gathered}$ | $\begin{aligned} & 1908+49 \\ & T_{i n} \end{aligned}$ | $\begin{gathered} 1: \times 9 \cdot 10 \\ \text { Tons } \end{gathered}$ |

Spanish and German salt lave benefited from exceptionally low freights， which alone enabled the latter to undersell Liverpool salt in the liangoon market．

The price of Liverpool salt $e x$ warehouse in Calcutta stood at R． 43 （ $£ 2178$ ． 41．）per 100 maunds in April 1909，and fell to I234（ $£ 2$ Es． 4 （ll．）in July．At the end of JLarch 1910 the price was R 38 （ $£ 2108.8 d$ ．）as compared with R37 （ $£ 298.4 d$ ．）for Spanish salt．

The stocks of imported salt in Calcutta were reduced during the twelve months from 130,000 to 96,000 tons，and the actual consumption of foreign salt was the highest on record．

Spices．－The aggregate quantity of spices imported into India during 1009－ 10 increased by 5.2 per cent from $130,353,527$ to $137,116,069 \mathrm{lls}$ ，lut there was a fall in specific value of 10.5 per cent，and the total values recorded this year are $\mathrm{B128} 76$ lakhs（ $£ 858,400$ ）against $\mathrm{P137} 4$ lakhs（ $£ 016,000$ ）in 1908－09． The principal item，Betelnuts，represents 68.4 per cent of the total with the record figures of 54,521 tons and R 88.02 lakhs（ $£ 586,800$ ）against 48,900 tons and R80．78 lakhs（ $£ 538,500$ ）in the previous year，showing an increase of $11 \cdot 4$ per cent in quantity and 9 per cent in value．Increased imports are attribu－ ted in part to the damage done to the crop in Eastern Bengal by the cyclone of October last．The Straits supplied 87 per cent and Ceylon 12 per cent of the quantity imported，and of the receiving ports Calcutta took 63 per cent and．

Madras 213 per cent. Direct imports from the Dutch East Indics have practically ccased. The trade in cloves, coming principally from Zanzibar and Pemba and imported into Bombay, amounted to 3,762 tons with a value of HOl.10 lakhs ( $£ 161,200$ ), marking an advance of 162 per cent in quantity, but a decline of 16.3 per cent in specific value. Pepper, imported chiefly from the Straits, showed a great decline from 4,305 tons and $£ 19.96$ lakhs ( $£ 133,000$ ) to 1,610 tons and R6.07 lakhs ( $£ 16,500$ ).

Sugar.-'The world's sugar trade during the twelve months under review was marked by a steady rise in prices due to a general shortage of the beet crop as a result of the bad weather on the Continent, which increased production in Cuba, the West Indies, and Java was not expected to make good. Ten years ago bufore the Brussels Convention and the abolition of the bounty system the proluction of beet sugar was about double than that of cane, but in 1900 it is calculated that the cane crops of the world amounted to about 8 million tons, excluding India, as compared with about 6 million tons of beet. The combined total is below the estimated world's annual consumption of $14 \frac{3}{3}$ million tons, and provel insullicient for the requirements of the campaign. In March 1910 stocks were much lower than twelve months earlier; and the recent floods in Germany and elsewhere are likely to affect the next beet harvest and maintain prices at or about their present level. The average price per cwt of ss per cent leect, f. o. b. Hamburs, in the last five years has been as follows:-

The price on the 2jth March 1910 was 14s. 7 d.
He following table shows the arrival of cane and beet sugar in the last five years, shipments being assigned as far as possible to the countries in which the sugar was produced:

The imports of sugar of both linds together rose aguin by 172,500 ewts

millions). The rates of increase were $4 \pm$ per cent in quantity and 5.5 per cent in ralue, the specific value marking a net increase of one per cent per unit.

In cane sugar the increase was one of $1,557,60 \mathrm{~S}$ cwts or 17.8 per cent in quantity and R163.91 lakhs ( $£ 1,093,000$ ) or $19 \pm \pm$ per cent in value, the rise in specific ralue being 1 \& per cent. Cane sugar now represents quantitatively $92 \cdot 3$ per cent of the total sugar imports and $91 \cdot \mathrm{~S}$ per cent of the values.

The imports of beet sugar contracted by $1,084,807$ ewts or 55.8 per cent in quantitr and by $¥ 106 \cdot 99$ lakhs ( $£ 713,000$ ) or 54.2 per cent in value, the increased percentage in specific value being $3 \cdot \pm$ per unit. The recovery made in 1908-09 mas not maintained in the year of report, though the volume of imports was slightly larger than in 1907-0s. The average declared value per errt was R10-S ( $14 s$ ) as compared with $\mathrm{Pl} 10-2$ ( $13 s \mathrm{G} d$ ) in 1908-09.

The chief sources of supply of cane sagar continue to be Java and Mauritius. Jara represents a combination of cheap Oricutal labour with the latest methods of scientific manufacture, and is fortunate in finding a dumping ground so conreniently close as India for her surplus products, more particularly as the recent resuscitation of the Formosan industry by the Japanese, and the free import of sugar from the Philippines into the United States of America allowed under the Parne tariff are bound to restrict her activity in the Further East. It is interesting to speculate when India's absorption of refined sugar is likely to reach saturation point.

In the supply of refined sugar Java is resjonsible for no less than 69 per cent of the total arrivals, haring shipred $7,510,561 \mathrm{cw}$ es as compared with $5,355,309 \mathrm{c} \mathrm{\pi ts}$ or $5 \pm$ per cent in 1908-09. Mauritius comes second at a respectful distance with $2,414,097$ cwts or $22 \cdot 2$ per cont as against $2,480,086$ ewts or 25.1 per cent in the previous year, though her crop was the largest on record. She is, except for the Bombay market, at a great disadvantage as compared with Jara in the matter of freights, and a large part of her exportable surplus was attracted to Europe by the ligh prices prevailing there.

In beet sugar Austria-Hungary continues to retain the dominant place with $765,516 \mathrm{cwts}$, being 7 per cent of the total imports, and Germany comes next with 86,807 erts or less than one per cent. A more regular distribution of the Java supplies, the stadeshi preference for canc sugar, and the shortage of the Continental crop were special causes affecting the volume of beet absorption in 1909-10.

Java continues to supply practically the whole of the imports of unrefined sagar, but the imports owing to the accumulation of stocks in 1908-00 were much below the figure for that year except in Madras where a short supply of palmyra jaggery created a distillery demand. The total quantities reccived were 224,678 cwts, valued at $720 \cdot 58$ lakhs ( $£ 137,200$ ), as compared with 716,123 cwts, valued at $\mathbf{7 6 4} 92$ lakhs ( $£ 432,800$ ), for the previous twelve months.

The Indian sugar crop, which came into commercial consideration during the statistical year, was that harvested in 1009-10, and it may be of interest to compare the estimated acreage and production in British India according to the annual forecast with those of the previous five years. The yicld, which represents gur.or molasses and not refined sugar, is calculated to exceed by 13.5

- per cent the figures of $1908-09$ as the season in the chief reporting provinces was very favourable, but it will be seen that the outturn per acre is equivaleut to only one ton, a; compared with $4 \cdot 13$ tons for the last Java crop. In

Hadras the average outturn is assumed to be nearly 2 tons, but in the United Provinces, which includes over 50 per cent of the total average, the estimate is -95 ton. The area under sugar in Native States so far as ascertainable is in the neighbourhood of 100,000 acres, which if the same percentage is adopted would bring the total outturn in the Indian Empire for 1909-10 to 2,225,000 tons, exclusive of palin sugar.

India's potentialities as a sugar producer are hampered by the small and scattered nature of the holdings, the impracticability, except perhaps in new assignments such as the Canal Colonies, of concentrating cultivation round a central factory, and the peculiarities of demand which as to four fifths of its volume is restricted to molasses and low grade sugars, produced by wasteful and primitive methods and commanding prices out of all proportion to their refinery values. A great deal has been done on the other hand by the provincial Agricultural Departments in the matter of supply of seed canes to the cultivators, and the India Sugar League was founded in the course of the year to organize and develop the industry as far as possible from the manufacturer's point of view.

Calculta's share of the total imports amounted to 42.9 per cent, Bombay following with 28.9 per cent and Karachi coming third with 21.3 per cent, langoon and Madras account for 4.5 and $2 \cdot 2$ per cent respectively.

The prices per cwt of beet and Java sugar at the chief ports of imports in the months of April and November 1909 and January and April 1910 were as fullows :-

Tea.-The sen-lorne imports of foreign tea, which includes tea from Ceylon, after two years of considerable increases, declined by 17.3 per cent in quantity to $\mathbf{3 , 6 7 9 , 5 8 7} \mathrm{lbs}$, and in value by 18.5 per cent to $\mathrm{Al7} 58$ lakhs ( $£ 117,000$ ). Thie loss was shared almost equally by Ceylon and China, and the average value fell to 7 annas 8 pies ( $7 \frac{3}{9} d$ ) per lb as compared with 7 annas 9 pies $\left(7 \frac{3}{4} d\right)$ in 190s.09. China imported only $1,172,047 \mathrm{lbs}$ of green tea, valued at $¥ 6.32$ lakhs $(\mathcal{L 1 2 , 1 3 0}$ ) against $1,495,585 \mathrm{lbs}$, valued at R8 12 lakhs ( $£ 5 \pm, 200$ ), in the previous year, but her share of black tea increased by 5.3 per cent in quantity and 8.2 por cent in value. Estimates of re-exportation must be taken with some resorve for it is known that, more especially on the land routes, foreign and Indian tea is not always accurately distinguished. The re-exports by sea in $1900-10$ amounted to $: 187,378 \mathrm{lbs}$, to which $365,232 \mathrm{lbs}$ are to be
added as exports across the land frontiers. Of the total of $852,610 \mathrm{lbs}$ thus arrived at, which represents 19.7 per cent of the imports both by land and sea, black tea accounts for $720,502 \mathrm{lbs}$.

On the average of the last five years it would appear that some $5 \cdot 2$ million lbs of foreign tea are yearly retained for consumption in India, as will be seen from the appended statement:-

|  |  |  | $-\underbrace{\text { SEA-BOBNE }}_{\text {Re-export }}$ | Nict import <br> lbs | lbs | ontien |  | Notimport both by land end sce <br> lbs |

The imports from the Northern Shan States into Burma account for practically the whole of the land supplies. The figures for 1909-10 were $2,930,000 \mathrm{lbs}$.

## MI-METALS AND MANEFACTCRES OF METALS

Hardware and catlery form 10.6 per cent of the total value of imports of metals and manufactures of metals. From the following statement it wili appear that their values declined by $\not \mathrm{Z15} 9 \pm$ lakhs $(£ 106,200)$ or 54 per cent :

|  | 1907-08 |  | 1908-00 |  | 1903-10 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \# | 2 | R | $\boldsymbol{£}$ | 7 | $\boldsymbol{£}$ |
| Catlery | 18,29,627 = | 121,973 | 17,51,714* | 116,781 | 14,77,396 $=$ | 98,493 |
| Agricaltural implernenta | 13,27,478 | 88,498 | 9,96,489 | 66,133 | 9,16,850 | 61,123 |

| Totar | 3,16,54,563 | 2,110,304 | 2,92,58,182 | 1,950,516 | 2,76,64,574 | 1,811,298 |

In Catlery there was an appreciable decline of $\mathbf{7 2} \mathbf{2 7 4}$ lakhs ( $£ 18,300$ ) or 15.8 per cent, which may be ascribed to accumulation of stocks in previous years. The steady decline in the values of Agricaltural implements imported from R13.27 lakhs ( $£ 88,500$ ) in 1907-08 to R9 17 lakhs ( $£ 61,100$ ) in the year of report is ascribed in part to the indifference of manufacturers in Europe, particularly in the United Kingdom, and their failure to satisfy the special conditions of the Indian market in respect of cost and design and in part to the greater attention given to this class of business by manufacturers in India. In the Canal Colonies of the Panjal, there is a not inconsiderable and steadily increasing demand for labour-saving appliances in all stages of agricultural operations. A great expansion in the imports of machinery of all kinds, and of agricultural and industrial in particular, may be anticipated to result from the forthcowing Allahabad Exhibition. The next head, other implements and tools has remained very steady for the past three years: the figures for 1009-10 showing only a slight setback from those of 1903-09. Enamelled ware further
doclined by R $5 \cdot 14$ lakhs ( $£(54,300)$ to R12.80 lakhs ( $£ 85,700$ ). Compared with the imports of 1907-08, the decline was R11.03 lakhs ( $£ 77,500$ ) or $47 \% 5$ per cent. The decline is probably more attributable to a fall in prices of brass and copper, of which domestic utensils are made, than to any marked increase in the use of aluminium ware. The sources of supply are Austria-Hungary ( 68.6 per cent), Germany ( 10.2 per cent), and the United Kingdom ( 10.7 per cent), the respective percentages for $1908-09$ being $63.2,23.6$ and $11 \cdot 7$ of the whole trade: The trade in Sewing machines has assumed respectable dimensions, the value of imports being R15.42 lakhs ( $£ 102,800$ ), which is 26.3 per cent more than in 1908-09. In Southern India they are now a common feature of every considerahle lazaar. The most important item is the composite head other sorts, the value of which ( $\mathrm{R} 2 \cdot 0 \mathrm{j}$ crores $=£ 1 \cdot 36$ millions) represents 78.1 per cent of the hadware class. The total marks a deoline of R10.34 lakhs ( $£ 68,900$ ) or 4.8 per cent from the figures of the previous year. This head includes, amongst many other unspecified items, Lampware, the trade in which shews steady progress. The value rose by P 3.36 lakhs ( $£ 22,400$ ) or 13.8 per cent to K 27.77 lakhs ( $£ 18 \cdot, 100$ ), which is an advance upon the highest figures previously recorded, viz., R2688 lakhs ( $£ 179,000$ ) in 1907-08. The increase is no doubt due to the increasing consumption of mineral in preference to vegetable oils among the common people. The Tnited Kingdom claims $32 \cdot 8$ per cent of this trade, while Germany, the United States, and Austria-Hungary supply to the extent of $21,20 \cdot 8$, and 19.3 per cent respectively.

Taking the whole trade in Hardware and cutlery, the United Kingdom accounts for R1 $81: 43$ lakhs ( $£ 1,209,600$ ), shewing a decrease of R13:58 lakhs ( $£ 00,500$ ) or 7 per cent, which is 65.6 per cent of the total against 66.6 per cent in 1008-09. Germany's share represents 13.2 per cent, a slightly higher level than in 1908-00, though the value diminished by R1.22 lakhs ( $£ 8,100$ ) or $3 \cdot 2$ per cent to $\mathrm{R} 36 \cdot 43$ lakhs ( $£ 2.42,900$ ). Belgium has slightly lost ground with a percentage of 5.7 against 6.2 in the previous year, the decline in value being one of R2.1 lakhs ( $£ 14,000$ ) or 11.7 per cent to R15.91 lakhs ( $£ 106,000$ ). Austria-Mungary and the Tnited States are two other countries chiefly interested. The share of the former has fallon from 6.5 to $0 \cdot 2$ per cent, while that of the latter has increased from 5 to 0.3 per cent.

Metals. -The imports of foreign metals represent 10.9 per cent of the total value of imported merchandise. Both the quantity and value receded from $652,25 \cdot t$ tons and P 13 crores ( $\mathcal{E S} 67$ millions) to $64+7,730$ tons and $\mathrm{H} 12 \cdot 77$ crores ( $\mathrm{C} \cdot 51$ millions), the decline being one of $7,55 \pm$ tons or $1 \cdot 1$ per cent in quantity and of $¥ 23 \cdot 64$ lakhs ( $(\mathcal{E} 57,600)$ or 1.8 per cent in value. This represents a loss of less than one per cent in specific value in the aggregate, but it covers considerable fluctuations in the prices of the different articles comprising the group.

The following table shows the variations in total quantity and ralue, and in specific valuc, of the principal metals imported during the year :

These rariations, as might be expected, do not correspond very closely with those calculated upon the arerage London quotations for the standard lines in each metal, but they shew roughly the trend of prices during the year.

Brass is in scarcely less demand than copper in India for domestic utensils, more particularly when the price of the latter is high. The year under revier opened with considerable accumulations of stock, and imports declined from $24,579 \mathrm{cwts}$ and $\mathrm{R} 13 \cdot 38$ lakhs ( $£ 50,200$ ) to 16,500 cwts and R9.33 lakhs $(£ 62,200)$, a fall of 31.6 per cent in quantity and 30.2 per cent in value The rise in specific ralue is one of $2 \cdot 1$ per cent.

Copper represented, as in the year 1905-00, nearly 21 per cent of the total ralue of all metals imported. In contrast to the extraordinary fluctuation in 1907, the price of copper G. M. B. during the last two years has remained remarkably steady, ranging between $£ 5710$ s. and $£ 611$ lus. per ton in the rear under rerier. In June and again in January under the stimulus of a reported big amalgamation of interests in America and negotiations to restrict production, orer $£ 61$ was touched, but the year closed with falling rates and the arerage monthly quotation is lower than in 1908-09. With such stable conditions prerailing, the quantity of copper imported only shews a fractional increase orer that of the previous year, while the ralue declined by 2.9 per cent. Wrought copper represents $87 \cdot 2$ per cent of the total quantity, that is to say, 441,615 cwts with a ralue of $\mathrm{R} 2 \cdot 32$ crores ( $£ 1 \cdot 55$ millions) as compared with $444,98 \pm$ ents and $\mathrm{Z} 2 \cdot 46$ crores ( $£ 1 \cdot 64$ millions) in 1908-00. This represents a decline of nearly one per cent in quantity and 5.8 per cent in value, equiralent to a fall in specific ralue of $5 \cdot 1$ per cent. Unwrought copper adranced at the same time by $26 \cdot 4$ per cent to $63,973 \mathrm{cwts}$ and by 25 per cent to R 31.92 lakhs ( $£ 212,800$ ), the average value having fallen from R50 6 as. 1 pie ( $£ 3$ 78. 2 d.) to f 49 13as. 3 pies ( $£ 368.5 \mathrm{~J}$.) per cwt. The imports from Japan represent $8 \mathbf{7} \cdot 6$ per cent of the total.

The extraction of copper ore in India continues negligible, the reported production in 1909 amounting to $\bar{i}$ tons only as against 11 tons in 1908.

The Iron and Steel trades continued disappointingly inactive during the first six months of the year under review, and the price movements were within comparatively small limits until, with a slight improvement in trade conditions in August, some speculative inflation was engineered in America, where the new Tariff further encouraged the expectation in other markets of increased orders from the States by a reduction of import duty. At the close of the year there was considerable accumulation of stocks in America, but in the United Kingdom an increased export demand, particularly from South America, and some renewal of activity in the ship building trade improved prospects. The world's production of pigiron in 1909 is estimated at 62 million tons as compared with 54 million tons in 1908 and 60 million tons in 1907. The price per ton of Cleveland warrants in the United Kingdom averaged 498. $4.5 \mathrm{~s} d$. in 1909 against 508. $3 \frac{1}{2} d$. in 1908. In April 1910, however, the price was $518.7 d$. as against 478. 6d. in April 1909.

The price of iron bar (Swedish rolled) in Calcutta averaged f88-10 (11s. 6d.) per cwt against $\not 78-6$ 11s. $2 d$.) in 1908. The variations in prices corresponded very closely with $t$.ose prevailing in Europe.

The following statement shows the total quantities and valucs of the
imports of iron and stecl scparately and conjointly in each of the last fire years, (000's omilted) :-

The distinction between iron and steel in certain lines of goods presents considerable difficulties and has the further disalvantage of obscuring the statistice regarding the trade as a whole in certain articles which are made alternatively of either. The imports of iron increased by 20,851 tons and those of steel declined ly 29,530 tons. The share of iron in the total value of the last three years has been 51,53 , and 50 per cent.

The average value per cwt of iron declined from R9-1-6 (12s. $1 \frac{1}{2} d$ ) to RS-12-9 (11s. 9d.) and that of steel from R6-2-1 (8s. $2{ }_{2}{ }^{2}$ d. $)$ to R6-0-10 ( $\mathrm{s}_{\mathrm{g} .}^{\mathrm{g}} \frac{0}{7}$ d.).

From the slatement below it will be seen that the arrivals from the United Kingdom increased by $2 \cdot 4,683$ tons or $7 \cdot 1$ per cent and now represent $61 \cdot 4$ per cent of the total quantity imported as compared with 56.5 per cent in 1008-09.

In sheets and plates the decline was one of 6,104 tons. In tin plates the United Kingdom las a market in itself and there is a small adrance in quantity of 1,300 tons and in value of $\mathrm{R} 2 \cdot 42$ lakhs ( $£ 16,000$ ), which involves a fall in specific value of 9 per cent. The imports of galvanized iron sheets were encouraged by a fall in prices due to the breakdown in the autumn of a big suppliers' combine, and both Calcutta and Madras record large increases under this hend. Beams, etc., show a decline of 10,381 tons which is almost entirely accounted for ly smaller shipment from the United Kingdom. In pipes and tubes Great Britain contributed $\mathrm{P} 49 \cdot 64$ lakhs ( $£ 331,000$ ) and the United States $\mathrm{PR1} \cdot 7 \cdot 4$ lakhs ( $£ 98,300$ ). In angle, channel, etc., the trade is evenly divided between. Great Britain and her chief competitors. Nails come mainly from Germany and Belgium.

Bengal imported R2s.9 laklis ( $£ 193,000$ ) more under iron, but $\mathrm{Z} 3 \cdot 36$ lakhs (£22,400) less under steel, than in 1908-09. Bombay shows an advance of R3.60 lakhs ( $£ 21,1,600)$ under iron, but her import of steel declined by R19.8t lakhs ( $£ 132,300$ ). Sind nlso imported $\mathrm{R} 3 \cdot 11$ lakhs ( $£ 20,700$ ) of iron and R4. 30 lakhs ( $\mathcal{L} 28,700$ ) of steel less than in the previous year. The imports of steel into Burma also declined by R0.63 lakhs ( $£ 64,200)$ or 21 per cent. Madras imported iron worth R10.26 laklis ( $£ 68,400$ ) less than in 100S-09.

As a producer of pig iron India has not yet made a rery great adrance. The Bengal Iron and Steel Company have, howerer, for a number of years successfully operated tro (and at times three) blast furnaces at Barrakar, producing foundre iron to the extent of 35,634 tons in 1909 as against 39,000 tons in 1905.

Substantial progress has been made with the great works of the Tata Iron and Steel Company at Sakchi in Bengal, but actual manufacture has not ret begun. Orders hare, however, alveady been placed for rails, sleepers, fish plates, trarelling cranes, stone crushers, cte., and the Government of India hare undertaken to purchase anmualls for a minimum period of 10 years from the Company at least 20,000 tons of steel rails for the Govermment or State Railwars onlr, subject to the Gorernment specifications being complied with and prices comparing farourably with those at which similar rails could be delivered c. i. $f$. if imported into India.

Lead.-Though the price of lead continues steady at rates one-third lower than those which obtained in 1907, the imports into India have never again touched the lerel of 1905-06. The quotation for English pig lead in March 1909 was £13-15-0 and in March 1910 some three shillings lower-the highest and lowest rariations in the interral being $£ 11-3-9$ in January and £12-18.9 in August.

In the rear under reriew the total imports into India fell from 138,287 erts, ralued at $\mathrm{R} 19 \cdot 36$ lakhs ( $£ 129,100$ ), to $130,940 \mathrm{cwts}$, valued at R1S.44 lakhs ( $£ 122,930$ ). The decline is one of 1.7 per cent in quantity and 4.8 per cent in value and equiralent to a decline of $3 \cdot 1$ per cent in specific ralue, i.e., from $\mathrm{Rl4}$ ( $18_{8 .} 8 d$.) to R13-9 (18s. 1 d.) per ewt.

The Cnited Kingdom, which now almost monopolises the trade in sheets for tea chests, supplied $58,659 \mathrm{cwts}$ valued at RS 36 lakhs ( $£ 55,700$ ) as against $46,576 \mathrm{crrts}$ ralued at $\mathrm{F} 7 \cdot 57$ lakhs ( $£ 50,500$ ) in 1908-09. The total quantity increased by 7 per cent, but there was a decline of 06 per cent in the arerage value per unit. The price of British sheets fell from R16-4 (£1 1s. $8 d$.) to $\mathrm{Al} 14-4$ (198.) per crrt.

Tin.-The Malay Archipelago continues to be the principal producer, and India draws about 90 per cent of her requirements from the Straits. The imports slightly improved during the year from 37,142 cwts and $\mathrm{P} .42 \cdot 46$ lakhs ( $£ 283,100$ ) to 38,621 cwts and A 4417 lakhs ( $£ 294,500$ ), showing an increase of 4 per cent both in quantity and value, the average value per crit remaining steady at $\nexists 114-\mathrm{s}$ annas ( $£ 7128.5 d$.), while the price in London ranged between $£ 13128$. and $£ 153108$. per ton during the year. There was a larger import from the Straits of unwrought block tin of $34,650 \mathrm{cwts}$ with a value of $\mathrm{P} 39 \cdot 13$ lakhs ( $£ 260,800$ ) as against 32,842 cwts with a value of $\mathbf{R 3 7} 75$ lakhs ( $£ 251,600$ ) in 1908-09.

The quantity of tin raised in 1909-10 in the Mergui and Tavoy districts in Burma was 84 tons, valued at $\mathrm{P} 1,44,681$ ( $£ 9,645$ ), as compared with 9.4 tons, ralued at $\mathrm{Zl}, 63,497$ ( $£ 10,960$ ) in 1909-00, and 75 tons, valued at $\mathrm{R1}, 72,830$ ( $£ 11,522$ ), in 1907-08. The figures do not suggest any substantial development of the industry. The ore was exported to the Straits Settlements for treatment.

Other metals which have not been enumerated above are German silver valued at R18.08 lahhs (£120,500), Quicksilver at R3:50 lakhs (£23,700), zine $\mathrm{B} 17 \cdot 42$ lakhs ( $£ 116,100$ ), and metal, unenumerated, at R17.21 lakhs ( $£ 115,000$ ), the last slewing an increase of $\mathbf{R 4} 47$ lakhs ( $£ 31,800$ ) accounted for by increased imports of aluminium into the Madras Presidency from

2,275 cwts and R1.91 lakhs ( $£ 12,700$ ) in 1908-00, to 4,177 cwts and R3:46 lakhs ( $\mathfrak{E} 23,000$ ) in 1009-10. Aluminium manufactures are lecing popularized for a varicty of wes and the increased imports are attributed to a fall in the price of the metal in the United Kingdom.

Machinery and millwork (excluding that for railways) represents nearly 20 per cent of the total value of imported metals and manufactures thereof and 4.3 pre cent of the imports of all merchandise, but there has been a decline in the year under review under every important sub-head and the total for the group is only R 507 crores ( E 335 millions) as compared with R 6.63 crores ( $\mathrm{Et} \cdot \mathrm{f}$ millions) in 1908.00.

Textile machinery, which continucs to hold the first place and represents $42 \cdot 4$ per cent of the whole, receded hy R $72 \cdot 45$ lakhs ( $£ 483,000$ ) or $2 \cdot 2$ per cent to R21.J16 lakhs ( $\& 1,431,4(4)$ ), steam engines and their component
 machinery by R37: lakhs ( $£ 21,500$ ) to R31\%J lakhs ( $£ 211,700$, mining machinery by 12.90 lakhs ( $(53,300)$ to $\mathrm{R7} \cdot 37$ lakhs ( $£ 19,100$ ), and the unspecified head other sorts hy R17\%is lakhs ( $£ 318,500$ ) to Pl 16979 lakhs ( $£ 1,132,(1000)$.

The United Kinglem continues to dominate the market, the supply therefrom being $936 \mathrm{p}^{\mathrm{k} \cdot \mathrm{r}}$ cent of the tutal. The C'nited States and Germany supplied respectively 3 and $1 \cdot \frac{1}{1}$ per cent.

Bombay's share comes to $\mathrm{Xl97} \cdot 73$ lakhs $(£ 1,318,200)$ or 39 per cent, Bengal's to R10. lahhs ( $£ 1,213,500$ ) -the lowest value recorded since 1003-
 per cent. The other provinces shew increased absorption, Burma taking
 per cent, and Eastern Bengal and Assum RJ.02 lakiss ( $£ 33,500$ ) or about one per cent of the total.

Under textile machinery the imports to Bombay amounted to R113.07 lahhs ( $£ 753,500$ ) only in phee of R135•33 lakhs ( $£ 0002,200$ ) in 190500. The decrease is aseribed to a temporary eessation in extensions and renewals of existing machinery on account of the unsettlement caused by the Dwarkadas Dharamsey failure. Bengal, which stood first in 1905.00 with $\mathrm{F} 139 \cdot 26$ lakhs ( $\mathcal{C O 2 S}, 100$ ), accounts for $¥ 25010(\mathrm{CJ} 66,000$ ) only in the year under review, the decline under imports of machinery for jute mills being one of $\mathrm{R} \pm \mathrm{S}$ lakhs ( $£ 320,000$ ), while the extrene depression prevailing in the coal market accounts for a fall of 1219 lakhs ( $£ 127,000$ ) in the imports of mining machinery. Madras increased her share from R10.88 lakhs ( $£ 72,500$ ) to R13:75 lakhs ( $C 01,000$ ), owing to the construction of new spinning mills at. Coimbatore
 Under other sorts of mochinery are incluled beltings, printing and typecasting machines, tea garden machinery, oil and gas engines, steam crames, machinery for railway workshops, and hydratic presses. Imports of tea gavelen machinery into Bengal deelined by K 3 lakhs ( $£=0,000$ ), but those for Eastern Beugal and Assam showed an improvement. The increase in Burma and Sind was mainly due to the importation of hydraulic cranes for the Port Trust wharves at Rangoon and Kamehi.

Railway Material forms 20.9 per cent of the total value of metals and manufactures imported during 1009-10. The progressive expansiou in the imports of railway material, which was noticed in previous reviens, received a
temporary check. The total imports of material for both State and nonState railways have been in the last five years as foliows (in lakihs of rupees and thousands of pounds sterling):

The decline in the past twelve months was one of R35J.9 laklis ( $£ 2,373,000$ ) or $29 \cdot 8$ per cent, due to the suspension of various extensions on account of a lean financial year. These figures include R32S•1S lakhs ( $£ 2,188,000$ ) for rolling stock, as against focilt2 lakhs ( $£ 4,313,000$ ) in 1908-09.

In the twelse months 851.96 additional miles of railway were opened, while 2,598 miles were under construction or sanctioned on the last day of March 1910. On the same date, the total length of open lines in India amounted to 31,614 miles.

In 1900-10 the return on capital expenditure on Railways amomed to 45 per cent as compared with $3 \%$ per cent in $1908-09$ and $\$ 7$ per cent in $1907-0$ s. The Railway programme for $1910-11$ amounts to $£ 10,860,700$, namely, $£ 7,875,800$ for open lines including rolling stock, $\mathfrak{E} 2,12 \ddagger, 200$ for line's under construction, and $£ 566,700$ for new lines.

## IV-CHEMICALS, DRLGS, MEDICINES, NARCOTICS, DIEING; and taNNiNg materials

Chemicals.-The total value of chemicals imported into India in 1009-10 was $\mathrm{P} 80 \cdot 46$ lakhs ( $£ 33 \mathrm{G}, 400$ ) as against R7.1.7 laklis ( $£ 495,000$ ) in 1008-09. The increase was slared by sulphu ic acid and soda con pounds. A lower lerel of prices stimulated imports of the later: Bicarbonate of soda adranced from $\mathbb{Z} 3.90$ lakhs ( $£ 26,600$ ) to R4•S lakhs ( $£ 39,300$ ). Caustic soda also improved from $\mathrm{R} 7 \cdot 30$ lakhs ( $£ 4 \mathrm{~S}, 700$ ) to R $7 \cdot 90$ lakhs ( $£ 52,700$ ). This trade is growing to meet the demands of soap and match factories. Soda other sorts, showed a remarkalle increase from Rs .01 lakhs ( $£ 33,400$ ) to Pl 10.09 lakhs ( $£ 73,200$ ). Sulphuric acid rose from $61,000 \mathrm{cwts}$ and R 57 j lakhs ( $£ 38,400$ ) to $74,4.40$ ewts and $\not \mathrm{7} 7$ lakhs ( $£ 16,600$ ), lut in the absence of any exact figures as to indigenous manufacture, this adranec does not necessarily argue increased industrial activity. All acid factorics in India have to import the sulphur necessary from abroad, chiefly from Sicily. The total imports of sulphur for all purposes in 1900-10 amounted to 73,531 cwts, valucd at 83.75 lakhs ( $£ 25,000$ ), as compared with 68,582 ewts valued at $73 \cdot 13$ lakhs ( $£ 22,870$ ) in 1908-00. Disinfectants also improved, though slightly, from R3.03 lakhs ( $£ 20,200$ ) to $73 \cdot 18$ lakhs $(£ 21,200)$.

The following chemicals shew declines-Bleaching materials from Rt:5 lakhs ( $£ 30,400$ ) to $\mathrm{F} 3 \cdot 86$ lakhs ( $£ 25,700$ ), Cyanide of Potassium from $\mathrm{H} 3 \cdot 16$ lablhs ( $£ 21,100$ ) to R $3 \cdot 06$ lakhs ( $£ 20,400$ ), and Calcium carbide from Rl $\cdot 64$ Jakhs ( $£ 10,900$ ) to Fi 111 lakhs ( $£ 7,400$ ). The omnilus heading Chemicals, other sorts, represents this year 32.6 per cent of the total in place of $35 \% \mathrm{per}$ cent in 1908-00, the value receding from R20.42 lakhs ( $£ 170,100$ ) to , $\mathrm{x} 26 \cdot 27$ laklis ( $£ 175,100$ ).

Drugs and Medicines.-The total value of Drugs and menficines imported into India advanced by R17•37 lakhs ( $£ 115,800$ ), or nearly 24 por cent.,
to $200 \cdot 10$ lakhs ( $\mathcal{E} 601,300$ ), which is the largest total previously recorded in any one year excepting 1907-03, when the value attained to R90.92 lakhs ( $C 600,100$ ). Of this total about 58 per cent is represented by proprietary and patent medicines and other sorts of drugs and medicines, of which values only are recorded in the accounts.

The imports of camphor, mostly from Hongkong and Japan, rose from $1,093,368$ to $1,4.57,919 \mathrm{lbs}$ and the value from R 11.61 lakhs ( $£ 77,400$ ) to R1512 lakhs ( $£ 100,800$ ), the advance being one of $364,550 \mathrm{lbs}$ or 33.3 per cent in quantity and of R3:31 lakhs ( $\left.£ 33,4^{\prime}\right) 0$ ) or 30.3 per cont' in value, which is equivalent to a decline of $2 \cdot 4$ per cent in specific value. The price of camphor has undergone great vicissitudes in recent years. It ruled high prior to 1007 owing to the Japancse attempting to make a monopoly of the exports from Formosa, but the competition of synthetic camphor from Germany and a revival of the Chinese camphor trade brought prices down to what may be considered bottom levels. There was very little adrance in the year under review, the quutation for Japanese 1 oz . tablets in London being 18. Ed. in March 1910 as against 18. $7 \frac{1}{2} d$ twelve months ago, and it is doubtful whether synthetic camphor can be profitably manufactured at this competitive rate. Low prie's account for the exceptionally large imports of refined eake into Bombay. The average declared value per lb was $\mathrm{fl}-1$ (18. ol .) asainst R1-0-7 (1s. 4! d.) in 100s-00.

The imports of quinine rose by nearly 50 per cent to $120,112 \mathrm{lbs}$ and R9. 37 lakhs ( 602,500 ), there being a rise of nearly one per cent in specific value. Java controls this market, and as supply has overtaken demand, prices during the year fell to the lowest level yet reached. The Governments of Bengal and Madtas supplement the production from Darjeeling and the Nilgiris by imports from the Dutch Indies vini Amsterdam.

The figures of bark and sulphate produced in India in the past three years have been as follows:-

|  |  | Salphate of cuiuine <br> man factored in |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Bark | Bengal | Nadr:ss |

The demand for this febrifuge in India and particulanly in the United Provinces and Eastern Bengal is responding in the. most marked way to the efforts made hy Govermment to popularize its use.

Proprietary and patent medicines increased from R 17 S1 lakhs ( $\{119,000$ ) to R23.09 lakhs ( $£ 151,000$ ). Assafœetida was imported to the extent of R $3 \cdot 11$ lakhs ( $£ 20,700$ ) as against $\mathrm{Hi} \cdot 67$ lakls ( $£ 11,100$ ) in 1908-09, and other sorts also ruse from $\mathbb{R 2 6} \because 23$ lakils ( $£ 175,000$ ) to $\mathbb{f i g} 659$ lakhs ( $£ 100,600$ ).

Imports of cocaine amounted to $2,07.4$ ounces ralued at $\mathrm{R9}, 062$ ( $£ 60.4$ ) against 1,993 ounces valuch at $\mathrm{P} 13,383$ ( $£ 592$ ) in 1908-09. The 'cocaine habit' is said to be spreading in Burma, and the seizure by the Customs House at Rangoon of over 1,300 o\%. during the year suggests that there is a good deal of smugroling and illicit trado in the drug in that province.

Dyes.-Tho imports of aniline and alizarine dyes, of which a dedine was noticed during 1908-09, mado a marked recovery in the year under revierr,
and exceeded the record figures for 1907 -0s. The quantity rose by 150 per cent from 11,932,409 to $13,7 \pi 5,957$ lbs - of which 50.8 per cent is represented by aniline-and the value by 5.3 per cent from $R=0 \cdot \pm$ lakhs ( $£ 536,500$ ) to R $87 \cdot 19$ lakhs ( $£ 581,300$ ). lncreased imports are ascribed to the developments in the dyeing industry in this country-in Madura, for example, where Manchester carns are imported and dyed in preference to purchasing the dyed imported yarns. The arerage declared value per lb of aniline roso from 12 annas ( $1 s$ ) to 12 annas $S$ pies ( $1 s 0_{3}^{2} d$ ), while that of alizarine declined from 8 annas $S$ pies ( $\left.\delta_{3}^{3} d\right)$ to $S$ aunas 4 pics ( $\left.\varepsilon_{5}^{1} d\right)$. The source of supply of these products is chitfly Germany, though a large proportion is imported through Antwerp (Belgium), and Bombay continues the principal port of entry, her share being nearly $7 \bar{i} 5$ per cent of the total.

Cochineal declined by R97,G4) ( $£ 6,510$ ) to R1.57 lakhs ( $£ 12,500$ ) in ralue and in quantity by 455 per cent from 4,477 to $0,30 \mathrm{ewts}$. Gambier made a considemble adrance from $\mathrm{KJ} \cdot 19$ lakhs ( $\ddagger 34,600$ ) to KT 709 lakhs ( $£ 47,300$ ), aud saffron showed a small increase of $1231, \mathfrak{T} 06$ ( $\mathfrak{C} 2,110$ ). The imports of synthetic indigo have progressed from R97,539 ( $£ 6,500$ ) in 1907-08 to $\mathrm{F} \cdot \mathrm{O} 5 \mathrm{~J}$ lakhs ( $\mathrm{E} 17,000$ ) in 1909-10.

Tobacco.-The duty on this article was enhanced by let VIII of 1910 from the general rate of 5 per cent ad calorem to specitic rates, on the analogy of those obtaining in the L'nited Kingdom, with effect from the 25 th February. The change came too late to make any marked impression upon the trade statisties of the gear under review, though several large consiguments received thereafter, which have swelled the import figures, were bonded and subsequently reshipped to China. In Calcutta, for example, out of .16 million cigarettes bonded in March, duty was paid upon $6 \frac{1}{2}$ milions only and the balance re-exported.

The imports of tobacco increased by $1,71,7,293 \mathrm{lbs}$ or 319 per cent
 lakhs ( $£ 632,100$ ). Of the total imports of tni $\mathrm{Of}_{0}$ ( 85 J per cent is represented by cigarettes. The decline which - ( $£ 4,70$ Yded in the previous review in the imports of foreign ciserace andtas temporarily arrested. The quantity increased from $2,905,692 \times 80^{\circ} 3,053,746 \mathrm{lbs}$ or ly 3 per cent and the value from R 57.79 lakhs ( $£ 355,300$ ) to R 64.09 lakhs ( $\mathfrak{f} 433,300$ ) or 12.5 per cent, specific value showing a percentage increase of 9.2 per cent, which is probally due to a larger proportion of the better class cigarettes in the total, for the bazaar was being catered for with productions which were being sold wholesale at rates varying letween $\mathrm{H1} 1-2$ to $2(18$ ( $f l$ to $288 d)$ per thousand.

It is estimated that the total imports represent 1,228 million cigarettes as compared with 1,400 millions in 1907-08 and 1,200 millions in 1908-09, but the much larger imports of ummanufactured foreign leaf suggest that the deciine is to some extent made good by manufacture in India. The opinion is commonly held that in Northern India there is a general tendency now-a-days to alandon the hookah in favour of the cigarette or the biri. The l'eninsular Tobacco Company's factory at Monghyr (formerly at Karachi) is said to have turned out 750 million cigarettes last year, and the Rangpur 'Tobacco Company's factory dealing with bengal tobacco has a potential capacity of outturn of a million cigarettes a week.

There are, it has been calculated, nearly $1,100,000$ acres under tobacco in India, Jut the qualities produced are for the most part of very inferior descrip-
tions, and the attempts made by Government, notally in Bengal, to acclimatise high class exotic varieties have not hitherto been rery successful. One effect of the new tobaceo duties should be to encourage the opening of cigarette factories depending entirely for their supplies upon indigenous leaf, and under the stimulus of higher prices cultivators may be expected to pay more attenfinn to the drying, fermentation, and other processes preparatory to sale.

Of the total values the United Kingdom accounted for R 45 evg lakhs ( $\mathcal{E 3} 2 \mathrm{~F}, 000$ ) and the C'nited States R11:37 lakhs ( $£ 75,800$ ), but these do not correctly represent the proportion of English and American made cigarettes imported. The imports from Erypt, whence only better class cigarettes are ohtained, were ralued at $\mathrm{R} 4 \cdot 33$ lakhs ( $£ 28,000$ ) as compared with R $3 \cdot 83$ lakhs i $£ 25,500$ ) in 1:09-09. The imports from the Further East aggregated $\mathrm{R} 17,000$ ( $\mathrm{C} 1,100$ ). Aden is coming forward as a cigarette manufacturing dequit. Of her total exports last year of $15,000,000$ cigarettes, a large proportion came to Bombay.

The average value per ll, from the principal sources was, Egyptian R6-7-3
 Al-1.t-t ( $2_{s} \mathrm{~b}_{\mathrm{j}}^{1}$ d . A pound represents about 400 cigarettes of low quality and 300 of the superior grades. The consumption of the latter and of the better tolaccos is not likely to be affected by the new duty.

There was a large increase in the imports of unmanafactured leaf from 1,210,6.40 lbs and Pift5 lakhs ( $£ 43,000$ ) to 2,703,20.4 lbs and R11.66 lakhs ( $\varepsilon 77,700$ ), due to larger imports of low grade tobacco from Ceylon and the United States. The leaf imported from Sumatra and Borneo is chiefly used as "wrappers" for Trichinopoly cheroots, the "fillers" being made of Indian grown tobacco.

Cigars are mainly imported from Holland ( $\mathrm{R1} 1,30,297=£ 8,686$ ), Belgium ( $\mathrm{R} 61,0 \mathrm{SS}=\mathrm{E} .4,132$ ), and the United Kingdom ( $\mathrm{R} 70,641=£ \pm, 709$ ). Imports of Manila cigary ria Hongkong amounted to $17,011 \mathrm{lbs}$, valued at R 65,475 ( $£ 4,365$ ), besides a direet import of $8,570 \mathrm{lbs}$, valued at $\mathrm{R} 27,608$ ( $£ 1,841$ ), from the Philippines.
v.-OILS

The trade in oils represents about 3 per cent of the total ralue of merchandise imported into India.

Under this head the only item of importance is mineral oils with a total value of R31.t5s lakhs ( $£ 2,007,000$ ) as compared with f 390.91 lakhs ( $£ 2,006,000$ ) in 1908-09. Of this Kerosene oil accounts for nearly 80 per cent of the total, though the imports declined from 53.58 to 6405 million gallons and from $\{2333 \cdot 25$ lakhs ( $£ 2,221,700$ ) to R251•11 lakhs ( $£ 1,674,000$ ). The figures very nearly reached the level of 1907-0s. The decline may be ascribed partly to the carry over of heavy stocks from the preceding year, but seems to be due chiefly to the intervention of sereral new competing interests from Burma which wero not restricted by understandings with older participants either as to their sphere of operations or seale of prices.

The discovery of oil at Maikop (in the Caucasus), the successful proving of the Red Saa Oilfield, and the conflict of interests in Mexico between the Pearson and Waters Pierce groups temporarily made the industry a speculative melium on the London Stock Exchango only less active than rubber, and this activity finds a parallel in Burma, where during the last two years no fermer than seven new compraies have been floated.

The following statement shows the quantity and raluo of kerosene imported in each of the last three years, together with the imports into India proper from Burma, the unit being 1,000:-

|  | Qrantity |  |  | Valuo |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

From the foregoing table it will be seen that, excluding Burma's internal consumption of indigenous oil, which is not ascertainalle, India in the last three years absorbed on an arerage some 140 million gallons of kerosene per annum. Burma contributed 50.8 per cent of the total imports as against 42 per cent in the prerious year and the coasting trade was in excess of the previous year's figures by 30 of per cent. These figures are interesting when $t$ is remembered that her oil production probably represented in 1909 no more than 4 per cent of the world's total.

The imports of foreign kerosene oil declined by $19: 53$ million gallons or $23 \cdot 4$ per cent, and the specific ralue by 1.8 per cent, while the quantity shipped from Burma to India proper increased by $24 \cdot 2$ per cent.

The direct imports from the United States have been unaffected by the general decline. She has maintained the first place amongst the countries supplying foreign oil, accounting for 64.4 per cent of the total imports, in place of 40.5 per cent in 1908-09. She increased her shipments by 7.3 .4 million gallons or 21.6 per cent in quantity and by $\mathrm{P} 0 \cdot 43$ lakhs ( $£ 63,000$ ) or 56 per cent in ralue, the decline in specific value being 13.2 per cent.

Borneo and Sumatra with Singapore as an entrepot, if grouped together, take the second place as a source of supply of kerosene to India. The import from this region amounted to 18.25 million gallons or $28^{\circ} \mathrm{J}$ per cent of the total. As compared with 1908-09, this shows a decline of $8 \cdot 12$ million gallons or 30.8 per cent in quantity and of $\mathbf{R} 28.35$ lakhs ( $£ 189.000$ ) in value.

The shipments from Roum ania and Russia depend so entirely upon the requirements and conrenience of the two leading oil corporations that no importance attaches to the decline in imports from these sources. The Russian imports amounted in the year under review to $3 \cdot 3$ million gallons or 5.1 per cent of the total trade. The decline was one of 3.7 million gallons or 52.8 per cent in quantity and of F 13.1 lakhs $(£ 87,300)$ in value. The arrivals from Roumania fell from 16.28 million gallons and 753.99 lakhs $(£ 359,900)$ to $1 \cdot 23$ million gallons only, valued at $73 \cdot 84$ lakhs $(£ 25,600)$. In the twelve months a large proportion of Roumanian oil has been diverted to the United Kingdom.

In 1909-10 Bulk oil amounted to 47.83 million gallons, representing 74.7 per cent of the whole. Of this the United States contributed 55.3 per cent, Sumatra, Borneo and the Straits together 35.2 per cent Russia $6 \cdot 9$, and Roumania $2 \cdot 6$ per cent.

The imports of $\mathbf{C}_{\text {ase oil }}$ aggregated 16.22 million gallons or 25.3 per cent of the total foreign imports, the United States supplying $91 \cdot 4$ per cent, and Borneo and the Straits the remaining $8 \cdot 6$ per cent.

The following are the average prices of the principal descriptions of kerosene sold in Calcutia during the last three years:

The prices of the high grades of American and Sumatra oil, representing about 5 per cent of the total volume of trade, were well maintained in the year under review, but for the lower grades increased competition led to vigorous rate cutting with a general fall in values and some congestion of supplies. The duty on imported kerosene oil was raised from 1 anna to $1 \frac{1}{2}$ annas per gallon under Act VIII of 1010 towards the close of the year, but it would be premature to predict its effect on the trade, while the question of a corresponding excise duty upon Burma oil is still under consideration.

Cuder "other mineral oils," a head which includes fuel and lubricating oils and paraflin wax, imported during 1909-10, there was an increase of $15 \%$ per cent from 10.35 to 11.05 million gallons. The expansion is due in part to heary consignments of batching oil for the jute mills round Calcutta and in part to an anticipated increase in railway requirements, and the year closed with considerable accumulation of stocks both at Budge Budge and up country. Burma's exports of lubricating oil to India proper increased by $1,469,613$ galluns or 46 per cent to $4,665,030$ gallons.

The imports of fuel oil from Borneo ( $83 \cdot 5$ per cent) and the Straits as entrepot ( $16 \cdot 5$ per cent) receded from 2.01 to $1: 48$ million gallons with a value of $\mathrm{Rl} \cdot \mathrm{vS}$ lakhs ( $£ 10,500$ ). Of this Bombay took 673,162 gallons, Madras i63,807 gallons, and Bengal $24.4,351$ gallons.

The impurts of paraffin wax amounted to $14,530 \mathrm{cwts}$ as compared with 2,236 cwts in 1008-00. The coastwiso imports from Burma amounted to 2,000 owts ouly.

There has been a stady decline in the imports of vegetable oils, especially in cocoanut oils, imported from Ceylon and the Seychelles, the trade in which is now almost negligible, having fallen from R 2 S .06 lakhs ( $£ 103,100$ ) in 1907-08 to $\mathrm{R} 72,247(\mathcal{L}, \mathrm{Sl}(6)$ in 1909-10. The value of linseed oil imported

## VI.-RAW MATERLALS AND UNMANUPACTURED ARIICLES

Coal represents $15 \cdot 1$ per cent of the value of raw materials imported into India as against $17 \cdot 2$ per cent twelvo months ago. This is not due to any recovery of the internal markets by comintry coal, but marks, it is to be feared, restricted industrial activity in several branches of trade. Incia's imports declined from 455,806 tous, valued at $\mathrm{R} 82 \cdot 25$ lakhs ( $£ 548,300$ ), to $\pm 28,585$
tons, ralued at $\mathrm{R} \boldsymbol{2} \mathbf{2} \cdot 61$ lakhs ( $£ \pm \$ 1,100$ ). The decrease in quantity is one of 6 per cent and in ralue 11.7 per cent. The United Kingdom has an increasing share of the trade, her shipments amounting to 301,500 tons as compared with 200,139 tons in $1905 \cdot 09$, which partly made up the shortage in consignments from Australia which fell from 145,796 to 27,189 tons. The Natal trade continucs to expand, the figures for the year under review being 78,5 © 9 tons as compared with 71,367 tons in 190s-00. The shipments of Japan coal continue insignificant. The imports of British coal as Government stores amounted to 26,365 tons as against 18,122 tons in $1008-00$ and 1,477 tons in 1907-0s.

The figures given below are taken from the Bombay market report to illustrate comparative prices per ton of Cardiff, Bengal (Desherghur), and Natal coal at that port during the last three years :-

Cotton.-The imports of cotton fell off from 120,457 ewts with a value of 7 53.03 lakhs ( $£ 353,500$ ) in $1905-09$ to 93,994 ewts, valued at 12335 5 lakhs ( $£ 223,000$ ), in $1909-10$. It is difficult to reconcile the decline of 150 per cent in the specific value per unit with the rise which took place last year in the price of this staple owing to the shortage in the American and Egyptian crops, execpt upon the supposition that buying in the higher counts was so restricted that the usual proportion of fine qualitics does not come into statistical consideration.

The importation was equal to 15 per cent of the tutal mill consumption in the year endius September 1900. Assuming that the 50,767 ewts received from the United Kingdom were of American origin, the total with the small direct shipments of 243 cwts from the United States represents $\mathbf{0} 43$ per cent of the total importation as compared with 70 per cent in $1908 \cdot 00$. Persia sent 19,028 cwts in place of 6,572 cwts in 1908-00, but Egypt supplied 10,017 cwts only as against 25,436 cwts in the previous year. The consignments aggregating $6,3 \pm 7 \mathrm{ewts}$ from Belgium, which last entered this market in 1904.05 when there was an import of 9,189 ewts, were of American waste.

Precious stones and pearls, unset.-The figures as recorded in the trade accounts cannot le considered complete as it is well known that large quantities of precious stones, and pearls in particular, are imported and exported in such a manner as to escape registration. The variations in recorded values introduced another element of inaccuracy. There was in the year under review some revival in this trade, and the total value of the imports advanced from R5l.62 lakhs ( $£ 34.4,100$ ) to $\mathrm{R} 80 \cdot 6$ lakhs ( $£ 537,300$ ) or by $56 \cdot 1$ per cent. The imports from Bahrein Island, Arabia, the Persian Gulf, and Aden, which consist chiefly of pearls, account for R 70.11 lakhs ( $£ 500,700$ ) or 03.2 per cent of this total. The trade in rubies continued dull throughout the year and the balance of receipts over expenditure was not sufficient to enalle the Burma Ruly Mines Co. to pay its outstanding royalties to Government. In regard to the production of precious stones or gems in India, this Company's operations, for which alone reliable statistics are available, shew during 1909210,375 carats of rubies won valued at $\{9,31,806$ ( $£ 63,454$ ), 14,396 carats of sapphires,
ralued at R12,021 (C801), and 40,239 carats of spinels worth 78,566 (£571), as compared with 165,804 carats of rubies of a value of $\operatorname{Pi} 7,02,325(£ 46,821)$, 16,399 carats of sapphires worth $\operatorname{R8} 8,898$ (£593), and 28,910 carats of spinels valucd at $\mathrm{P} 7,579$ ( $£ 505$ ) in 1008. At Boulogne synthetic rubies and sapphires are now being manufactured on a commercial sate ly the Bernueil process. The ralue of diamonds obtained from the mines in Central India amounted to 117 carats valued at $\mathrm{P} 10,329(\mathcal{E} 1,059)$ in 1909 as compared with 140 carats valued at R14,105 ( $£ 010$ ) in 1908.

Silk.-As in 1009-00, the low level of silk prices throughout the world seems to have stimulated imports. In quantity the increase was one of 7.5 per cent from $2,168,458 \mathrm{lbs}$ in $1908-00$ to $2,330,185 \mathrm{lbs}$ in 1909-10, but the ralue fell ly t.l per cent from $\mathrm{fl101}$ S9 lakhs ( $\mathcal{L} 679,200$ ) to P 977 lakhs ( $£ 651,300$ ), Which involves a decline of 10.8 per cent in specific ralue. Bombay's share amounted to R 7983 lakhs ( $£ 532,200$ ) and that of Burma to R17.51 lakhs (.c117,000). Dircet imrorts from China increased by 155 per cent from $1,74,520 \mathrm{lhs}$ in $1908-09$ to $2,050,430 \mathrm{lhs}$ in 1900-10 which is 88 per cent of the total, but shipments from the Straits fell by 23.8 per cent from 251,182 to $101,431 \mathrm{lhs}$, representing 82 per cent of the total imports.

Wood. -The imports of wood unmanufactured, consisting chiefly of timber, declined by R6.58 lakhs ( $£ .43,900$ ) or 8.9 per cent to $\mathrm{P} 67 \cdot 16$ lakhs ( $£ 4.4,700$ ), due chicfly to a further contraction in the foreign supplies of teak, which have been more than made good, as the following table shews, by coastwise imports from Rangoon. As, however, the chief importers hare sources of supply in Siam as well as Burma, no particular satisfaction can be attached to the figures.

|  | Foreign laports by ma |  |  | Ccastwise imports from Burma |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | cub. tons | R | $\varepsilon$ | cub. tons | R | $\pm$ |
| 1905-00 | 71,670 | 62,17,000 $=$ | = 41 1,000 | 55,637 | S2,51,000 $=$ | 550,000 |
| 1906-07 | . 61,090 | 00,71,000 | +45,000 | 93,191 | 59,15,000 | 594,000 |
| 1007-03 | 62,910 | 55,40,000 | 355,000 | 105,092 | 1,01,96,000 | 6s0,000 |
| 1908-09 | 19,965 | +i,79,000 | 310,000 | 125,75s | 1,1,4,37,000 | 762,000 |
| 1909-10 | 41.493 | 40,87,000 | 273,000 | 127,478 | 1,20,94,000 | 805,000 |

The imports of Teak declined from 49,905 culb. tons and $R .47 \cdot 79$ lakhs ( $£ 318,600$ ) to $4+1,493$ cub. tons and $¥ 1.10 \cdot 07$ lakhs ( $£ 273,100$ ), representing 01 per cent of the whole. The decrease is one of 10.9 per cent in quantity and 143 per cent in value equiralent to a fill in average value of 3.7 per cent. Of this Siam supplied 35,515 cub) tons valued at $\mathrm{F} 33 \cdot 11$ lakhs ( $£ 220,700$ ) or $80 \cdot 8$ per cent, and Java 8,753 cub. tons and $77 \cdot 65$ lakhs ( $£ 51,000$ ) or $18 \cdot 6$ per cent. On the other hand, the trade in timber other than teak has adranced from 42,400 cub. tons and P 2455 lakhs ( $£ 163,700$ ) to 4,686 cub. tons and P25.02 laklis ( $£ 160,800$ ), representing a rise of 54 per cent in quantity and 2 per cent in value, with a fall of $3 \cdot 3$ per cent in specific value. The rise mas due to larger shipments from Australia, chiefly in the form of railway sleepers, which amounted to 8,010 cub). tons valued at $\mathrm{F5} 577$ lakhs ( $£ 38,500$ ), as against 0,319 cul. tons valued at $\mathrm{P} \cdot \mathrm{f} \mathbf{4} \mathrm{CO}$ lakhs ( $£ 31,000$ ) in 1908-09. But imports from the Straits declined to $11,319 \mathrm{cub}$. tons with R5.7 lakhs ( $£ 38,000$ ) and from the United States of America to $7,457 \mathrm{cub}$. tons worth R2: 89 lakhs ( $£ 19,300$ ), while Norway supplied only 2,112 cub, tons ralued at $\mathrm{R} 1 \cdot 66$ lakls ( $(£ 11,000)$ as compared with 2,530 cul). tons and R1.93 lakhs ( $(£ 12,800)$ in 1908-09. The last Forest Administration report of the Punjal) drew attention to the remarkable
fact that imported Norregian planks can compote successfully with the local Himalaran timbers eren in a station so reunote from a port as Dharmsala.

Ivory. -Of other ram materials imported Ivory needs special mention as its ralue rose from R15.15 lakhs ( $£ 101,000$ ) to R2S.07 lakhs ( $£ 157,000$ ) in addition to $£ 2 \cdot 91$ lakhs ( $£ 19,400$ ), the ralue of ivory manufactures, chicfly bangles and rings for the Hindu women of Cutch and Kathiawar. Bombay is the chief port of entry for tusks and it is interesting to record that the Delhi trade prefers African to Indian irory as being less liable to cracks and discolouration.

## UII.-ARTICLES MaNUFACTURED aND Partly MANUFACtURED

Cotton goods maintain their position of preponderance amons imports of manufactured articles. On the arerage of the last three years they represent no less than 66.4 per cent of the total values of this class and about 34 per cent of the total ralues of all the imports. In the year under review the Lancashire, American, and Continental markets continued in a state of great depression, spinners and manufacturers alike being affected by discouraging and irregular demand and an extraordinarily narrow margin between the prices of raw material and of the finished products. The number of spindles in Lancashire, which totalled about 114 millions in 1901, had gromn in 1900 to $131 \frac{1}{2}$ millions, the growth in nine years being one of $25 \cdot 3$ per cent. The increase in looms in the same period has been eren greater, and the trade stagnation during the year under review was largely due to the accumulations of persistent orer-production. As regards the Indian trade, prices continued low and unremunerative to importers, and the expectations of large clearances consequent on a farourable monsoon were hardly realised, though there were occasional interludes, chiefly in Bengal, of brisk trading, and the year closed with stocks appreciably lower than twelve months earlier. An expansion in the shipments of Indian piecegoods by sea from Bombay to other provinces should not be taken to imply any marked revival of the suadeshi movement.

The aggregate value of the imports of cotton yarn and of woven and other cotton goods in the last five years has been as follows, the unit leing 1,000:

The increase in 1909-10 was one of $\mathrm{Zl} \cdot 36$ crores $(£ 906,000)$ or 3.6 per cent
In yarns, however, there was a quantitative decline of $1,238,195 \mathrm{lbs}$ or $2 \cdot 9$ per cent, though the imports into Bombay were over 3 million lbs in excess of those for 1908-09. The total values fell by $\mathrm{f} 32 \cdot 93$ lakls ( $£ 219,500$ ) or 9 per cent, the decline in specific value being equivalent to 6.3 per cent. The quantities imported in each of the last five years are shown below in millions of pounds :

The United Kingdon supplied 91 per cent of the yarn imported, but her total decreased from $37,395,000$ to $36,651,000 \mathrm{lbs}$. Of this total undyed yarn represents about 601 per centand with some development of the dyeing industry in the country this proportion is likely to be increased in future yars. The United Kinglom supplied 98 per cent of the undyed and 80 per cent of the dyed yarns.

A comparison is made below of the imports of coarse, medium, and fine rarns with the production of similar descriptions hy Indian mills. The high prices of American and Egyptian cotton no doubt explain the sethack in the local manufacture of higher counts during the last twelve months.

Cotton fabrics represent 30.8 per cent of the total value of private merchandise imported as compared with 28.3 per cent in 1908-09. The total value rose from $\mathrm{R} 3,436 \cdot \mathrm{JS}$ lakhs ( $£ 22,910,500$ ) to $\mathrm{f} 3,605 \cdot 09$ lakhs ( $£ 24,034,000$ ), the increase being one of Al 165 5 2 lakhs ( $£ 1,123,500$ ) or nearly 5 per cent. Some descriptions of cotton goods are not statistically recorded in yards. It is therefore convenient when considering changes of specific ralue to confine the calculation to piece-goods. The imports of these amounted to $2,192,698,317$ yarls and R3,358.01 lakhs ( $£ 22,590,100$ ) against $1,992,513,453$ yards and R $3,221 \cdot 01$ lakhs ( $£ 21,479,400$ ) in 1908-09. The adrance amounts to $200 \cdot 18$ million yards and R166:59 lakhs ( $£ 1,110,600$ ), which figures represent an advance of 10.1 per cent in quantity and 5.2 per cent in total ralue, accompanied by a decline of 19 per cent in specific ralue. These ratios vary in respect of diverse classes. For example, the specific ralue of grey goods declined by 2.8 per cent, coloured goods by 4.7 per cent, and white goods by 4.3 per cont.

The following statement shows in millions of yards the relative importance of these three classes in the course of the last twenty-one years :-

|  | $\begin{gathered} \text { Groy } \\ \text { (anbleacheit) } \end{gathered}$ | $\begin{aligned} & \text { White } \\ & \text { (blenched) } \end{aligned}$ | Coloured, printed or dyed | Percentage <br> of grey in <br> tota |

| 1001-05 " 1008-09 | 1,230.71 | $578 \cdot 66$ | $515 \cdot 4$ | 53 |
| In the year 1009.10 | 1,236:83 | 493.04 | 469.S3 | 56.4 |

Grey goods advanced by 18.6 per cent and white goods by 3.2 per cent, while coloured goods declined by $2 \cdot 1$ per cent. Bengal took as much as $951,831,331$ yards of grey goods or 76.9 per cont of the total as compared with $731,835,000$ yards and $70 \cdot 2$ per cont in 1908.09.
fact that imported Normegian planks can compete successfully with the local Himalaran timbers eren in a station so remote from a port as Dharmsala.

Ivory. -Of other ram materials imported Ivory needs special mention as its ralue rose from Rl5. 15 lakhs ( $£ 101,000$ ) to EPS 07 lakhs ( $£ 157,000$ ) in addition to $玉 2 \cdot 91$ lakhs ( $£ 10,400$ ), the value of ivory manufactures, chiefly bangles and rings for the Hindu women of Cutch and Kathamar. Bombay is the chief port of entry for tusks and it is interesting to record that the Delli trade prefers African to Indian irory as being less liable to cracks and discolouration.

## rit.-articles manufactured and partly manufactured

Cotton goods maintain their position of preponderance among imports of manufactured articles. On the arerage of the last three years they represent no less than 66.4 per cent of the total ralues of this class and about 34 per cent of the total ralues of all the imports. In the jear under review the Lancashire, American, and Continental markets continued in a state of great depression, spinners and manufacturers alike being affected by discouraging and irregular demand and an extraordinarily narrow margin between the prices of raw material and of the finished products. The number of spindles in Lancashire, which totalled about 114 millions in 1901, had grown in 1909 to $131 \frac{1}{9}$ millions, the growth in nine years being one of $i 5 \cdot 3$ per cent. The increase in looms in the same period has been eren greater, and the trade stagnation during the year under review was largely due to the accumulations of persistent orer-production. As regards the Indian trade, prices continued low and unremunerative to importers, and the expectations of large clearances consequent on a favourable monsoon were hardly realised, though there were occasional interludes, chiefly in Bengal, of brisk trading, and the year closed with stocks appreciably lower than trelve months earlier. An expansion in the shipments of Indian piecegoods by sea from Bombay to other prorinces should not be taken to imply any marked reviral of the suadeshi movement.

The aggregate value of the imports of cotton yarn and of woven and other cotton goods in the last five years has been as follows, the unit leing 1,000:

|  | Yarn |  | Woven and other goods |  | Total |  | Proportion of total i-nports of uerchandiso |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  |  | $671,876=100$ |  | $695,887=190$ |  | $663.529=100$ |

Cotton fabrics represent 30.8 per cent of the total ralue of private merchandise imported as comparel with 28.3 per cent in 1908-09. The total value rose from $\mathrm{R} 3,436 \cdot 5 \mathrm{~S}$ lakhs ( $£ 22,910,500$ ) to $\mathrm{R3} 3,605 \cdot 09$ laklis ( $£ 24,034,000$ ), the increase being one of fl 16952 lakhs ( $£ 1,123,500$ ) or nearly 5 per cent. Some descriptions of cotton goods are not statistically recorded in yards. It is therefore convenient when considering changes of specific ralue to confine the calculation to piecc-goods. The imports of these amounted to $2,192,698,317$ yards and R3,358-51 lakhs ( $£ 22,500,100$ ) against $1,992,513,453$ yards and R $3,221 \cdot 91$ lakhs ( $\mathcal{C} 21,470,400$ ) in 1908-09. The adrance amounts to $200 \cdot 18$ million yards and R1G6:50 lakhs ( $£ 1,110,600$ ), which figures represent an adrance of 10.1 per cent in quantity and 5.2 per cent in total ralue, accompanied ly a decline of 49 per cent in specific ralue. These ratios rary in respect of diverse classes. For example, the specific value of grey goods declined by $2 \cdot 8$ per cent, coloured goods by 4.7 per cent, and white goods by 4.3 per cent.

The following statement shows in millions of yards the relative importance of these three classes in the course of the last twenty-one years :-

|  | $\begin{gathered} \text { Grey } \\ \text { (anbleached) } \end{gathered}$ | White (bleached) | Coloured, <br> pristed <br> or dyed | Percentage <br> of grey in total |
| :---: | :---: | :---: | :---: | :---: |
| Averago 1589-90 to 1593-9t | 1,298 $\cdot 17$ | 368.68 | 374.17 | 62 |
| " 1894-95 „ 1868-95 | 1,209.77 | 418.59 | 351.49 | 61 |
| " 1800-1900 „ 1903-04 | 1,204:53 | 469.69 | $480 \cdot 57$ | 57 |
| " 100+05 , 1008-09 | 1,230.71 | $572 \cdot 60$ | $515 \cdot 4$ | 53 |
| In the year 1000.10 | 1,230.53 | 193.04 | 462.83 | 56.4 |

Groy goods advanced by 18.6 per cent and white goods by 3.2 per cent, while coloured goods declined by 2.1 per cent. Bengal took as much as $951,831,331$ yards of grey goods or $70 \cdot 9$ per cent of the total as compared with $731,835,000$ yards and $70 \cdot 2$ per cent in 1908.09.

The following statement shows in millions of yards figures for the past two years relating to the principal descriptions of imported goods belonging to these three classes under the present srstem of classification :

Among grey goods the total marks a return almost to the figure of 1907-08 but dhutis and saris have prospered at the expense of longeloth and inconets. In white goods the figures for 1909-10 are very much bolow those for 1907-08. Nainsooks bave made some recovery but there has been a further fall under longcloth and jaconets. As regards coloured and printed goods the decline in total ralues continues. The totals for cambrics and shirtings are larger than the figures for $1907 \cdot 08$. Chintzes have again fallen.

The following table compares the production of Indian mills with foreign imports in 1909-10, in millions of yards:-

There has been some increase in recent years in the output of dhutis, longeloth, and shirtings, but jaconets and cambrics are two prominent import lines which have not been challenged by local manufacturers. Indian bleached
goods are an almost negligible item and in dyed goods the disparity is very marked and the qualities produced are much below the Lancashire standard.

The extent to which the cotton goods of the three main classes are derived from the United Kinglom is noted below in millions of yards:-

|  | 1907-08 |  | 1808.09 |  | 1909-10 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | From United Kingdon | Total |  | Total | $\begin{gathered} \text { from } \\ \text { United } \\ \text { Kingdom } \end{gathered}$ |
| Cinbleacked goods | 1,258.79 | 1,2+7.38 | 1,0+2.28 | 1,032.62 | 1,230.83 | 1,22.1.61 |
| Bleached " | 733.52 | 721.99 | 477.7.5 | $466 \cdot 19$ | 493.0 b | 453.29 |
| Coloured " | $5 \cdot+4+1$ | $517 \cdot 8$ | $472 \cdot 48$ | 441.99 | 462.82 | 432-87 |

Great Britain therefore supplies 99 per cent of the greys, 98 per cent of the whites, and 93.5 per cent of the coloured goods. All of these percentages are practically the same as recorded in the last year but lower than those recorded in 1907-08.

Besides these there are some subsidiary classes of goods imported, the principal deseriptions of which and the value of the respective trades were in thousands:-

|  |  | 1907 .us | 1508.69 | 1909-10 |
| :---: | :---: | :---: | :---: | :---: |
|  |  | R $£$ | $\boldsymbol{R}$ £ | R £ |
| Handlatehiefs and shawls |  |  |  |  |
| in the priece | - . | $10,59=270 \cdot 6$ | $14,95=299 \cdot 7$ | $32,44=216 \cdot 3$ |
| Itosiery | - | 67,27 +18.3 | 63,45 423 | $69,92 \quad 466 \cdot 1$ |
| Sewing thread | - | 2S,16 158.7 | 28,17 187-3 | 29,80 190 |
| Other manufactures | - | 91,9.4 625 | $7 \mathrm{~s}, 00 \quad 520 \cdot 6$ | S4,43 563 |

This branch of the trade therefore showed a net advance of 221.02 lakhs ( $£ 12,800$ ) or 1 per cent. The United Kingdom supplies 80.8 per cent of the handierchiefs and shawls and 86 per cent of the sewing thread. But of the total it dues only $4 \cdot 7$ per cent, seeing that the considerable trade in hosiery is practically monopolised by Japan and Coutinental countries. Japan supplied hosiery to the value of $\mathrm{P} 45 \cdot 41$ lakhs ( $£ 302,700$ ) against $\mathrm{R} 35 \cdot 34 \mathrm{lakl}_{s}$ ( $£ 235,600$ ) in 190S-00; and goods to the value of $\mathbb{7} 46,000$ ( $£ 3,100$ ), which came ria IIongkong and the Straits, were probably also of Japanese origin. Germany's share in this trade fell from R11 $\cdot 16$ lakhs $(£ 74,400)$ to $\mathrm{Rl} 0 \cdot 12$ lakhs ( $£ 67, \mathrm{j} 00$ ).

Sill good s.-The outturn of raw silk in China and Japan was very large, and with a falling-off in the American demand, prices fell in spite of the shortage in Continental supplies caused by the destruction of the silk filatures at Messina. Business in French and Italian silk fabrics was dull throughout the year and this reacted on the Indian trade. The imports of sills goods fell short of the previous year's level by $\mathrm{Z1} 4 \pm$ lakhs $(£ 9,600)$ or 6 per cent, the total valuc being $¥ 222660$ lakhs ( $£ 1,511,300$ ), which represents 5.1 per cent of the total textile manufactures. Of this silk 1 iecegoods increased in value from R 1450 lakhs ( $£ 970,400$ ) to $\mathrm{F} 153 \cdot 67$ lakhs ( $£ 1,024,500$ ), representing 678 per cent of the whole. This increase of RSS.11 lakhs ( $£ 5.4,000$ ) was made up ly larger consigmments from China to the extent of R49 lakhs ( $£ 32,700$ ), from France Rtlakhs ( $£ 26,700$ ), and from Japan $\mathfrak{z l}$ b lakhs ( $£ 10,000$ ), the United Kinglom reducing her shipments by $\mathrm{f} 2 \cdot 12$ lakhs ( $£ 14,100$ ) to R3 10 lakhs ( $£ 20,700$ ) and the Straits from R82,092 ( $£ 5,473$ ) to R71,451 ( $\in 1,763)$. The imports from the Far East represented 91.3 per
cent of the total. There were also imports coastwise of Rt 57 7 lakhs ( $£ 32,000$ ) mostly from Persia and Siau. The competition of mercerized cotton goods is already being sererely felt in this market. Sill goods mixed with other materials had a corresponding fall of $\mathrm{RS} \cdot 2$ lakhs ( $£ 54,700$ ), contributed by Germany R3•09 lakhs ( $£ 20,600$ ) and by France R3•63 lakls ( $£ 24,200$ ). Silk yarn, noils, and warp declined by $\mathrm{Rl} \cdot 91$ lakhs ( $£ 12,700$ ) to $\mathrm{R} 36 \cdot 75$ lakhs ( $£ 245,000$ ), while other sorts rose from $\mathrm{RT1,302}$ ( $£ 4,760$ ) to $\mathrm{R} 1,27,282$ $(£ S, 4 S 5)$. Bombay shares 70 per cent of this trade, Burma 22.4 per cent and Bengal 5.6 per cent ouly.

Woollen goods-There was a considerable set-back in the imports of woollen manofactures into Iudia in 1909-10, due to trade depression and the legacy of large stocks which heary speculative purchases of the previous two years had bequeathed. The total value declined by 25.5 per cent from x 201.00 lakhs ( $£ 1,9 \pm 0,600$ ) 'to $£ 205 \cdot 11$ lakhs ( $£ 1,387,400$ ). Of the decrease of £82.9S lakhs ( $£ 553,200$ ), piecegoods accountel for R47•35 lakhs ( $£ 315,000$ ), shawls for $\not \approx 32 \cdot 41$ lakhs ( $£ 216,100$ ), and carpets and rugs and yarn and knitting wool for $\mathrm{Z} \cdot(02$ lakhs ( $£ 13,500$ ) and $\mathrm{R} 2 \cdot \mathrm{~S} 2$ lakhs ( $£ 18,500$ ) respectively. Piecegoods, which stood at nearly 20 million yards in the previous tro years, receded to 15.85 million yards. The decline was one of 10.9 per cent in quantity and 25.3 per cent in ralue, representing a fall of 6.8 per cent in the arerage value per yard. The imports from the United Kingdom declined by Pive. 03 lakhs ( $£ 146,500$ ) or $17 \cdot 2$ per cent to R105.76 lakhs ( $£ 705,000$ ) and from Germany by $\mathrm{R} 17-26$ lakhs ( $£ 115,100$ ) or 42 per cent to $\mathrm{A} 23 \cdot 82$ lakls ( $£ 158,500$ ), bringiug the shares of the two countries respectively to $75 \%$ and 17 per cent of the trade. The extraordinary expansion under the head of shawls noticed in the last two reviews was reduced by $58 \cdot 1$ per cent in quantity and by 61.3 per cent in value to $8.19,555$ pieces and $\mathrm{F} 20 \cdot \pm 7$ lakhs ( $£ 136,500$ ). The average value per piece declined from R2-9-8 ( $38.5 \frac{2}{3} d$.) to Pa -6-6 (38. $2 \frac{1}{2} d$. ). Germany held this market to the extent of 964 per cent of the total number and of 80 per cent of the total values, but Cawnpore and Bangalore ara competing with shawls woven from Indian wool decidedly superior in quality to the general level of foreign imports, and Mr. Chatterton has also successfully woven shawls from imported wool on the Salem fly shuttle hand-loom. The trade in woollen hosiery improved by $\mathrm{P} 30,131$ ( $£ 2,629$ ) and the United Kingdom did 87.7 per cent in this line of business. In yarn and knittingwool the trade has declined by $130,555 \mathrm{llos}$ and $\mathrm{Z} 2 \cdot 82$ lakhs ( $£ 18,800$ ), though Germany maintained her preponderance in this market.
Other manafactured goods.-Of these the following are the most
important:

| Apparel including buots and shoes | 1908-09 |  | 1909.10 |  | $\begin{aligned} & \text { Increase }(t) \\ & \text { or }(t) \\ & \text { deotcese }(-) \end{aligned}$ |

Of these the largest item is Apparel, which shows a contraction of R $3 \cdot 59$ lakhs ( $\{23,900$ ) or $1 \cdot 5$ per cent. It is a composite head, consisting of haberdashery and millinery worth R09 42 lakhs ( $£ 662,800$ ) or 42 per cent, drapery and uniforms t 57.05 lakhs ( $£ 380,500$ ) or 2.4 per cent, boots and shoes $\mathrm{R} 37: 31$ lakhs ( $\mathcal{E} 219,000$ ) or 157 per cent, and gold and silver thread R36.l5 lakhs ( $\mathcal{C} \cdot 41,000$ ) or $15 \cdot 2$ per cent, of the total. The share of the United Kingdom is $\boldsymbol{5} / \mathrm{per}$ cent, France, Austria-Hungary, and Germany suppiying to the extent of $15,9 \cdot 5$, and 7 per cent, respectively. Jewellery and gold and silver plate increased by R $3 \cdot 3 \mathrm{l}$ lakhs ( $£ 22,270$ ) or $15 \cdot 3$ per cent. Leather and manufactures of leather showed a decline of R3.11 lakhs ( $£ 20,700$ ) or $8 \cdot 6$ per cent, while tanned hides and skins showed a marked adrance. The imports of umbrella fittings increased by $5 \pm$ per cent, while umbrellas declined by 87 per cent having to contend now with indigenous manufactures.

The next important class is glass and glassware, the import of which adranced by R11.f lokhs ( $£ 77,000$ ) or 9.9 per cent, which is more than accounted for by larger imports of glass bangles, the value of which exceeded the total of tho precious year ly R14:37 lakhs ( $£ 90,000$. Glass beads and false pearls declined, howerer, hy 2636 lakhs ( $£ 42,000$ ). Austria-Hungary did 30.7 per cent, of the business, Germany 19 per cent and United Kingdom and Belgium about 14 to 15 per cent each. Glass-making in India is still in the experimental stage, but the Madras Glass Works, Ltd., which has been giren a fuel subsidy ly the Local Government, has started the manufacture of soda water bottles and glass tiles. Umballa, Gwalior, Jubbulpur, and Benares are other centres where glass-making has begun or is about to begin on a large scale.

Toys and requisites for games showed an adrance of $\mathrm{f} 3 \cdot 33$ lakhs $(£ 22,200)$ or $10 \cdot 6$ per cont, though the soveral firms in the Punjab specializing in these lines are doing a large business.

Instruments and apparatus hold the third place in the list with R108. 42 lakhs ( $£ 522,821$ ), showing a decline of $12 \cdot 4$ per cent. Electrical instruments represent 40 per cent of the total and the United Kingdom supplies 90 per cent of this class. The decline under musical instrumenta
mas one of R 6.6 lakhs ( $£ 44,000$ ) or $2 \mathbf{2} \cdot 2$ per cent and under scientific instruments of $R \pm 32$ lakhs ( $£ 2 S, 500$ ) or $13 \cdot 5$ per ceut. Typewriters also showed a decrease of $\mathbb{F} 2 \cdot 16$ lakhs ( $£ 14,400$ ), while photographic instruments and clocks and watches remained practically at the lerel of the previous year with R8.2 lakhs ( $£ 54,500$ ) and R1S 54 lakhs ( $£ 123,600$ ) respectively.

Imports of paper and pasteboards increased by RS.67 lakhs ( $£ 57800$ ) or $9 \cdot 4$ per cent to R101•30 lakhs ( $£ 605,300$ ); of which printing paper and writing paper and envelopes represent respectirely 32.8 and 25.2 per cent. The paper-making industry of India continues to stagnate, there being only nine mills at work with a nominal capital of R5l-5 lakhs ( $£ 343,300$ ), which in 1909 produced 56.92 million lbs of course papers, ralued at R79.12 lakhs ( $£ 507,500$ ). If, howerer, the Mitsu Bishi Co. proves successful in the manufacture of paper of all grades from bamboo pulp, the supply of raw material, in regard to which Indian mills are at present at a great disadrantage, should be solred in perpetuitr. Stationery increased by $\mathrm{P} \pm 4 \mathrm{~S}$ lakhs ( $£ 20,900$ ) or $10 \cdot 2$ per cent. Books and printed matter (chiefly educational), including maps and charts, also declined br $6 \cdot 3$ per cent. Printing and lithographic materials were imported to the extent of AS 93 lakhs ( $£ 50,500$ ), showing a decline of 17 per cent.

Building materials declined br 71 per cent to R.57.20 lakhs ( $£ 381,300$ ), of which cement was ralued at $\mathrm{R} 35^{\circ} 3 \pm$ lakhs ( $£ 295,600$ ). The manufacture of cement in India has proved profitable, and is likely to derelop. Paints and colours were also ralued at R57.29 lakhs ( $£ 382,000$ ), showing a decline of 3.9 per cent. Imports of Cabinetware and furniture were valued at R17:55 lakhs ( $£ 117,000$ ), besides wood worth R 8.64 lakhs ( $£ 57,600$ ). Earthenware and porcelain adranced by $\mathrm{fl} 1 \cdot 20$ lakhs $(£ 8,000)$ or 2.8 per cent to Al 3.57 lakhs $(£ 290,500)$, to which Chinese and Japanese ware worth $\mathrm{Pl} \cdot 73$ lakhs ( $£ 11,500$ ) may be added.

Carriages and carts showed a small decline of $\mathbf{~ P 1} 1 \cdot 25$ lakhs ( $£ 53,300$ ) or $1 \cdot 4$ per cent. The ralues of motor cars and motor cycles, which are includedi in this head and have been separately enumerated from April 1905 were $\mathrm{R} 47 \cdot 57$ lakhs ( $£ 317,100$ ), being $52 \cdot 2$ per cent of the total, as against国 $43 \cdot 1 \pm$ lakhs ( $£ 257,600$ ) in 1908-09. The total imports during the past five years amounted to P 231.06 lakhs ( $£ 1,500,400$ ). The slare of the United Kingdom as the country of export was about 86 per cent, but this does not probally represent the correct proportion of British-made to foreign-made cars.

The import trade in matches continues to expand in spite of efforts to manufacture them in rarious parts of India. Sweden contributed 29 per cent and Japan (with Singapore as entrepot) 41 per cent of the total, the former exceeding the previous year's total loy 43.4 per cent and the latter loy 67.5 per cent. Austria-Hungary's share is now only 9.7 per cent and her imports declined by $14 \cdot 7$ per cent.

The arrivals of soap have increased in value by 13.8 per cent to P 46.37 lakhs ( $£ 3,09,100$ ). The manufacture of soap in India, however, has made considerable progress and the highly scented swadeshi products are creating a greatly extended demand for the article among classes who were bitherto content with soap nut or Fuller's eart

The increase in wooden tez chest for shipment of leaf was only $1 \cdot 1$ per cent, though the exports of tea rose by 6.6 per cent. The popularity of patent boxes, however, shows no sign of abatement.

Under the head of parts of ships the increase was one of $\mathrm{P1} 173$ lakhs ( $£ 11,500$ ) or 4.6 per cent.

Arms and ammunition declined ly R3•2L lakhs ( $£ 21,000$ ) or 10 per cent, of which R2.11 lakhs ( $£ 1.4,000$ ) occurred under dynamite and other explosives, there being smaller imports for mining purposes.

Government stores. -The imporls of Government stores remain to be scparately considered, though with a few exceptions they constitute actual commercial transactions. They amounted to R5:09 crores ( $£ 373$ millions) as against $\mathrm{R} 7 \cdot 51$ crores ( $£ 5$ millions) in 1008-00.

The bulk of the imports is material for State Railways ralued at R2.05 crores ( $£ 1.97$ millions), leing 53 per cent of the total in place of 60 per cent in 1908.00. The imports of other descriptions of stores fell from fl 290 crores ( $£ 1.09$ millions) to $\$ 2.64$ crores ( $£ 1 \% 6$ millions), the decline heing one of R35.22 laklis ( $\mathcal{E} 234,800$ ) or 12 per cent. The chief items are Metals (RJ0.C5 lakhs = $£ 337,700$ ), Hardware and cutlery (R35.02 lakhs= $\mathfrak{L 2 3 3 , 5 0 0}$ ), Machinery and millwork ( $\mathrm{R} \cdot \mathbf{7} \cdot 73$ lakhs $=£ 151,900$ ), Instruments, etc. (R16•60 lakhs $=£ 110,700$ ), Arms, etc. ( $\mathrm{Z} 11 \cdot 13$ lakhs $=£ 74,200$ ), Chemicals, drugs ( R10.79 lakhs $=£ 72,000$ ), and paper (R10.23 lakhs $=$ £6S,200).

The share of the CVnited Kingdom was R 533 crores ( $£ 3.55$ millions), being less by R 1.75 crores ( $£ 1,105,000$ ) or 25 per cent than in 1008-00. This is $05^{\circ} 3$ per cent of the total.

## EXPORTS OF IMPORTED GOODS

The following statement shows the value of the exports by sea of imported goods in each of the last five years with areages for the preceding three quinquennial periods:

|  |  | R | £ |
| :---: | :---: | :---: | :---: |
| Arerage, 1s90-91 to 1591-95 | - | 1,55,97,100 $=$ | 2,926,200 |
| 1505-9t to 150:-1900 | - - | 3,83,32,000 | 2,392,400 |
| lou0-01 to 1901-05 | - - | 3,22,06,500 | 2,147,100 |
| In the year 1905-06 | - - | 3,52,58,100 | 2,352,500 |
| 190ti-07 | - - | 3,48,40,400 | 2,32:,700 |
| 1907-0s | , | 3,76,73,400 | 2,511,600 |
| 1905-09 | - | 3,17,07,300 | 2,113,800 |
| 1900-10 | $\cdots$ | 3,38,86,400 | 2,259,100 |
| A verage, 1905-06 to 1909-10 | - - | 3,46,79,100 | 2,311,900 |

On an average the value of the re-exports represents about 2 per cent of the total exports of merchaudise and 3 per cent of the imports from which they were derived. In 1801-05 the value of re-exports amounted to R5.05 crores ( $£ 2.70$ millions), but there has been some recovery since $1002-03$ when the total was only Re 23 crores ( $£ 1.05$ millions).

- Bombay and Karachi continuo to monopolise about 90 per cent of this trade. The share of Bombay itself amounted to R 263 crores ( $£ 1.75$ millions) or about 78 per cent against $\mathrm{R} 2 \cdot 30$ crores ( $\mathrm{Cl} \cdot \mathrm{5} 3$ millions) or 73 per cent in 1908-09.

The trade consisis chiefly in Cotton manufactures, the value of which was $\mathrm{fl} \cdot 2 \mathrm{l}$ crores ( $£ 807,000$ ), showing an increase of ff 5 ob lakhs ( $£ 57,000$ ) or 76 per cent. This represents nearly 36 per cent of the total re-exprorts as in 1908-09, against $39 \cdot 4$ per cent in 1907-08 and $37 \cdot 7$ per cent in 1906-07. Piece goods roso from R101.03 lakhs ( $\mathcal{L} 676,900$ ) to R107.02 lakhs ( $£ 713,500$ ), of which Coloured goods contributed $785 \cdot 38$ lakhs ( $£ 500,000$ ) against $\mathrm{R} 79 \cdot 60$
lakhs ( $£ 531,000$ ) in 1905-09. White goods maintained their position but Grey goods declined by $\mathrm{fll}, 300$ (£2,750) to RT 90 lablls (£53,300) For these goods India is an entrepòt for Persia ( $\mathrm{R} \supseteq \mathrm{t} \mathbf{5 0}$ laklis $=£ 163,000$ ), East Africa ( $\mathrm{R} 19 \cdot 36$ lakhs $=£ 129,000$ ), Arabia (R15 $\because 1$ lakhs $=£ 101,400$ ). Bahrein lslands (fill.9S lakhs=£i9, 000 ), Aden (R051 lakhs= $\mathcal{E} 63,400$ ), Asiatic Turker ( $\mathrm{F} /-56$ lakhs $=£ 50,400$ ), and Ceylon ( R 6.00 lakhs $=£ .46,000$ ). Yarns, which had fallen to R566 lakhs ( $£ 37,600$ ) in $1908-00$, very nearly approached the figure for $1907-08$, namely, about P0 lakls ( $£ 60,000$ ), Persia alone taking $\mathrm{R}=03$ lakhs $(\underline{£} \mathbf{7}, 000)$ against $\mathrm{R} \pm 13$ likhs ( $£ 27,500$ ) in 1908-00.

The re-exports to Western countries are comparatively small. The Tnited Kingdom takes about 22 per cent of the total, and the chief commodity is raw wool, which coming from Afghanistan and Tibet is re-exported from Karachi. This trade adranced quantitatively from $4,094,593$ to $5,154,040 \mathrm{lls}$.

Other items but of minor importance are Provisions which declined from R1S 33 laklis ( $£ 129,000$ ) to R16:96 lakhs ( $£ 113,000$ ), Sugar which mate a large recorery from $\mathrm{Rl1} \cdot 33$ lakhs ( $£ 78,200$ ) to R 16.56 lakhs ( $£ 110,400$ ), and Apparel which rose by $\mathbb{Z 6 7 , 7 0 0 ~ ( ~} £ 4,500$ ) to $\mathrm{F} 15 \cdot 71$ lakhs ( $£ 104,700$ ) Metals ( $\mathrm{F} 1 \pm 68$ lakhs $=£ 98,000$ ), Hardware and cutlery ( i 210.03 laklis= $£\left(3,000\right.$ ), and Jetliwery and plate ( $\mathrm{R} 5 \cdot 36$ lakhs $=£_{55,700 \text { ) nearly main- }}$ tained the lerel of the previous year. Carriages and carts declined by
 increase of over a lakh anil a third ( $£, .00$ ) and Shells and cowries one lakh ( $£ 6,600$ ) aid Silk $\mathrm{R} 89,000$ ( $£ 6,000$ ).

Foreiga tea, chiefly r-exported to Asiatic Turkey and Persia, dropped from 833,996 lbs and $\mathrm{f} 5 \cdot 10$ lakhs ( $£ 36,000$ ) to $457,375 \mathrm{lhs}$ and 7361 lakhs ( $£ 24,000$ ), the decline being one of 41.5 per cent in quantity and 33.1 per cent in value.

## EXPORTS OF INDIAN MERCHANDISE

The Exports of Inc*: n Merchandise in 1909-10 represented nearly 95 per cent of the total exports and 60.5 per cent of the total trade in merchandise, the percentages of the previous year being $9 \pm 3$ and $54 \cdot 6$ respectively. Their total value was $\mathrm{P} 184 \cdot 3 \mathrm{t}$ crores ( $£ 122 \cdot 89$ millions) as compared with $\mathrm{R} 149 \cdot 86$ crores ( $£ 99.9$ millions) in 1908-09. The increase was therefore one of $\mathrm{R} 31 \cdot 48$ crores ( $£ 23$ millions) or 23 per cent over the exports of 1908-09 and of P 10.75 crores ( $£ 7.16$ millions) or 6.2 per cent over the record year of 1907-08.

The appended statement shors the progress made in the past thirty years, the unit being 1000, as in the case of imports. It shows also the percentages of increase or decrease and the centesimal variations based on the first quinquenial period of $1880-81$ to $188 \pm-85$.

|  | \# | $\varepsilon$ | Percentage, <br> Iucrease (+) <br> or Decrease ( - ) | Contesimal variationa |
| :---: | :---: | :---: | :---: | :---: |
| Arerage, 1580-81 to 1854-85 | 79,44,53 $=$ | 64,987 | - | 100 |
| 1585-58 to 1888-20 | 88,75,15 | 63,275 | $+11.7$ | 112 |
| 1540-91 to 1594-95 | 1,01,43,44 | 65,467 | $+14 \cdot 3$ | 128 |
| $1595-86$ to 1892-1900 | 1,03,64,93 | 6.7,243 | +2.2 | 130 |
| ". 1900-01 to 1201-55 | 1,31,00,38 | 87,396 | $+26.4$ | 165 |
| In the year 1905-06 | 1,58,18,92 | 105,459 | $+20.7$ | 198 |
| 1906-07 | 1,73,08,20 | 115,388 | $+9 \cdot 4$ | 218 |
| 1907-05 | 1,73,59,07 | 115,727 | +0:3 | 218 |
| $1905-0!9$ | 1,49,55,73 | 90,90.5 | $-137$ | 189 |
| " 1909-10 | 1,81,33,73 | 122,892 | $+23$ | 232 |
| Average, 1905-06 to 190\%-10 | 1,67,81,13 | 111,87.4 | $+28.1$ | 211 |

The average of the last five years corresponds approximately to the advance under imports.

The principal articles in the export trade are stated below with their values in thousands of rupees and of pounds sterling. Percentages of increase or decrease in 1909-10 as compared with the previous year are noted against cach.

|  | 1907.08 |  | 1918.98 |  | 199.10 |  | Porcentages |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | $\boldsymbol{\Sigma}$ | R | 2 | 7 | $\Sigma$ | Increase | Decrease |

| 10. Opium | 8,67, \% | 5,782 | 9:4,82 | 6,293 | 9,31,36 | 6,209 | - | 0.4 |
| 11. Wool, raw | 2.10,38 | 1.403 | 2.08,37 | 1,389 | 2,85,77 | 1,905 | 2 | - |
| 12. Lac | 4,08,31 | 2,772 | 2,70,47 | 1,863 | 2,77,17 | 1,848 | - | 0.8 |
| 13. Pulse, milletn, and cerrain | 2,M2,41 | 1,49 | 81,72 | 545 | 2,92,96 | 1,353 | 1483 |  |
| 14. Oils | 8, 52 | 572 | 94.46 | 630 | 1,20,86 | $8{ }^{6}$ | [8] |  |
| 15. Cufice | 1,11,45 | 7.4 | 1,20,00 | 927 | 1,09,64 | 731 | - | 1 |
| 16. Proviniona | 75,46 | 503 | 76.11 | 517 | 88,68 | 591 | 16.3 |  |
| 17. Spicen | 32.70 | 301 | 58.53 | 390 | 70.85 | 472 | 21 |  |
| 18. Wuord and timber | 22.69 | 551 | 57,62 | : 8 | 69,83 | 465 | 21.2 | - |
| 19. Silk, raw | 63.78 | 42 | [4, 05 | (3i) | 50,76 | 338 | - | 6.1 |
| 20. Indik | 6,73 | 4 | 49,05 | 337 | 35,18 | 235 | - | 283 |

The most interesting features of the above list, which shows adrances in most cases, are the high percentage of increases under wheat and wheat flour, pulses and millets, seeds, cotton raw, and wool raw, while the only noticeable decreases are under jute raw, indigo, and coffee.

The following statement shows the values ( 100 's onitled) of the trade in each of the seven major classes, under which articles are grouped in the accounts in each of the last three years:

|  | 191908 |  | 1908 (9) |  | 1909-10 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | £ | H | $\boldsymbol{\Sigma}$ | \# | £ |
| I. Animals living | $21,59=$ | 14.4 | 15,86 | 106 | 19,49 | 130 |
| II. Articles of food and drink | 44,73,17 | 20,621 | $32,54,09$ | 21,694 | 49,03,76 | 32,692 |
| III. Metals and manufactures | 1,21,89 | 812 | 90,09 | 601 | 1,10,71 | 738 |
| IV. Chemicals drugs, medicines, narcotics, and dyeing and tanning materials . | 11,03,78 | 7,359 | 11,47,29 | 7,649 | 11,26,02 | 7,507 |
| V. Oils | 85,82 | 572 | 94,44 | 630 | 1,20,56 | 806 |
| VI. Raw materials and unmanufactured articless | 76,23,00 | 50,820 | 67,18,55 | 4, 4 , 710 | S3,46,84 | 55,646 |
| VII. Articles manufactured and partly manufictured | 39,29,51 | 26,119 | 313,65,41 | 21,436 | 38,06,03 | 25,374 |

Classes II (articles of food and drink) and VI (raw materials and unmanufactured articles) show abnormal increnses of 50.7 and 24.2 per cent respectively.

## I.-ANTMALS, LIMING

This is a small and insignificint class, the total ralue being $\mathrm{Pl} 9 \cdot 40$ lakhs ( $£ 130,000$ ) as against R1586 lakhs ( $£ 105,700$ ) in 1908-09. Exports are chiettr made up of shipments of cattle from Southern India to Ceylon and the Straits, but a feature of the rear's trade was that 1,300 bulls and cows ralued at玉 $\because 2$ S lakhs ( $£ 15,000$ ), including some fine specimens of well-known Indian breeds, were exported from Bombay to Brazil.

## II.-ARTICLES OF FOOD AND DRINK

This class shows a net increase of R165 crors ( $£ 11$ millions), of which the head grain and pulse accounted for fis 01 erores ( $£ 10$ millions), but the abnormal conditions prevailing in 1005-09 vitiate comparisons with the figures of that rear. Compared with the totals of $1907-08$, the inerease under this head was only $\mathrm{A} \geqslant 07$ crores ( $£ 1 \% 35$ millious), male up of about $\mathrm{R} \& 12$ crores ( $£ \mathfrak{Z} \mathfrak{7} \overline{5}$ millions) under wheat with a set ofl of $\mathrm{R} 2 \cdot 09$ crores ( $£ 1 \cdot \mathrm{t}$ millions) under rice. Cocoanut kernel or copra marks an alvance of $\mathrm{R} 21 \cdot 19$ lakhs ( $£ 143,000)$ and Provisions and Spices about R12 lakhs ( $\mathcal{E S} 5,000$ ) cach. Tea improred by Pl 131 crores ( $£ 573,000$ ) or 12.7 per cent. The only noticeable decline was under coffee from $\mathrm{R1} 130$ crores ( $£ 927,000$ ) to Rl 1 crore ( $£ 733, \mathrm{n} 00$ ), a fall of R 29.36 lakhs ( $£ 105,700$ ) or 21.1 per cent.

Coffee.-The exports of coffee are dwindling steadily, and in the year under reriew represent only $2 \cdot 2$ per cent of the total exports of articles of food and drink. The bogey of the Sao Paolo "valorization" scheme with nearly six million bags of coffee still to be liquidated continues to paralyse the market in futures, but a temporary improvement in spot prices took place when the apprehensions of a coffee duty attracted large imports into the United States of America. The visible supply of coffee at the close of the statistical year was a little higher than twelre months carlier, but if the new Brazilian crop prores to be one of only $11 \frac{1}{2}$ million bags, the statistical position of the industry should materially improve. The figures of Indian exports, quantities and ralues, for the list five years are as follows :-

| 1905.06 | - |  |  | $\underset{i_{1}}{\text { Cowts }}$ |  | £ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | - |  |  | ur | 19 |
| 1906-07 | . |  |  | $2{ }_{2}$ | s made in | 601,319 |
| 1907-05 |  |  |  | 24 imp |  | $71: 3,013$ |
| 1905-09 |  |  |  | 302,022 | 1,38,99,792 | 920,653 |
| 1809-10 |  |  | - | 232,645 | 1,00,64,037 | 730,936 |

The decrease in 1900-10 is one of 23 per cent in quantity and $21 \cdot 1$ per cent in value. This is the third successive year in which the specific value has risen, but there is some doubt as to how far the declared values of duty-free exports can be relied upon as there are general complaints of inferior quality on the part of home buyers. Though the statistical year closes before the coffec scason in Southern India is quite complete, the results so far as known are except for a few special Jysore marks, no more hopeful than they were a year ago. The shipments of coffee to the United Kingdom rose from 44 per cent to 47.3 per cent, though sle acts almost entirely as a distributing agent for America. The direct shipments to France, which is a consumer chiefly of lower
mrades and " native" (i.e., cherry dried) coffee, fell from 43 to 33 per cent. In Germany the duty has been raised again from 40 to 00 marks per 100 kidos and consumption is said to have fallen by 20 per cent.

Fruits and vegetables.-The value of the exports advanced by $\mathrm{P} 2 \pm 12$ laklis ( $\mathcal{E 1} 60,500$ ) or $3: 7$ per eent to R $23 \cdot 7$ lakhs ( $£ 624,700$ ). The chicf item of this class has reerntly heen Copra (the dried kernel of the cocoanut), which from the reonomic point of view should more properly be grouped with oilseeds. The trade in copra, which is cxpanding steadily, is directed chiefly from the ports on the west coast of the Madras Presidency to the Continent. The exports amounted to 534,011 cwts valued at R 7448 lakhs ( $£ 490,500$ ) as compared with 305, 126 ewts and R52.00 lakhs ( $£ 353,000$ ) in 1908-00, the increase being one of 139,888 cwts and R21•19 laklis ( $£ 43,300$ ) or $35 \cdot 2$ per cent in quantity and 10.5 per cent in value, which represents a rise of 4 fer cent in specific value. The table below shows in detail the exports of the sereral products of the cocoanut palin to foreign countries during the past two years:

The bulk of the trade goes to France, Germany, and the United States of America.

The value of cocoanut oil in connection with soap-making has long been recognizel, but it is likely to be exploitel revy largely in the future in the production of ghi sulstitutes and edible fats. The only factory for these purposes in India at present is situated at Pondicherry.

Fresh vegetables, chicfly potatoes and onio re also an important item, and account for a further increase of $\mathfrak{2 2} 2 \boldsymbol{7 2}$ lakhs ( $£ 18,100$ ) in this class. The bulk of them are exported to Ceylon and the Straits.

Rice. - Exports of rice in 1900-10 represented $54 \cdot 3$ per cent of the total value of food grains exported from India, against 85.6 per cent in the previous $y$ year, and 99 per cent of tho ralue of all Indian produce exported as compared with 10.6 per cent in 1908-09.

The chief features of the Indian rice trade during the year under review were a phenomenal crop in Burma and the two Bengals, some shortage in Southern India, which attracted coastwise consignments, ehicfly of unhusked rice (paddy), to the Madras Presidency, a further adranee in foreign exports, and a slightly lower range of prices.

The total rice crop with which this roview is chiefly concerned was estimated at $27,021,450$ tons as compared with $19,0.18,905$ tons in the prerious year. Lower prices for jute encouragod increased acreage under rice in the two Bengals. The exports, foreign and constwise, from Burma before the close of the oflicial year aro calculated to represent 45 per cent of the available surplus as against 38 por cent twelvo months earlier.

The following siatement shors in thousands the quantity and value of the exports ahmead during the past five years:-

After three years' continuous contraction the exports to foreign countries rose br nearly 30 per cent or 445,000 tons, but the fall in specific ralue is one of $11 \pm$ per cent. The arerage price in Calcutta for Balam rice No. 1 fell from RS-4-3 (lls. $0_{1}^{2} d$.) to R6-3-1 (Ss. 3 ? $d$.) and for Ngatsin rice in Rangoon from $\mathrm{P} 4-1 \mathrm{t}-\mathrm{S}$ ( 6 s. $\mathrm{C}_{3}^{2} d$.) to $\mathrm{Rt}-2-3$ ( $5 s .6 \frac{1}{4} d$.) per cwt, the percentare decreases being $2 \pm 9$ and $15 \cdot 8$, respectively, on the records of the prerious year. The new Burma crop came into sight commercially in December, and the price in
 twelre months earlier. Burma's quantitative share of the exports to foreign countries rose from $\bar{i} .4$ to 70.2 per cent of the total exports from British India.

Cerlon continues the largest single purchaser of Indian rice. In the year under reriew the shipments amounted to $30.4,905$ tons, valued at R3.5.4 crores (£2.36 millions), as compared with 255,181 tons in 1905-09. The Ceylon Customs returns for the calendar year 1909 show that the imports of rice from India proper amounted to $204,7 \pi \mathrm{C}$ tons, against 23,181 tons from Burma, but the former figures include considerable consignments from Rangoon which hare been parboiled in Calcutta and re-shipped to ColomboThe exports of unhusked rice amounted to 40,446 tons as compared with 28,700 tons in 1908-09.

In riew of rumours that Japan intends to grant Korea a preferential tariff, the steady decrease in the last fire years in the former's purchases of Indian rice, and considerable expansion in exports from the latter, have attracted attention. But there have been special reasons why Burma during the three years 1906-07 to 1908-09 focussed her activities upon the coasting at the expense of the foreign trade, and the table below shors that Japan is making heroic efforts to become self-supporting in the matter of her rice supply.

The Far Eastern market is still of small dimensions, but it is satisfactory to record that a lower range of prices enabled Burma rice to assume a greater prominence in Jara and the Straits Settlements. The rice crop in Indo-China was smaller than usual, and the scarcity in Southern China drew off a large part of it.

The exports of Indian rice to the Straits amounted to 202,656 tons as compared with 152,253 tons in 1908-00. The practice of shipping rice to Port Said "for orders" and then forwarding it to destination not at first disclosed, continues, and vitiates to a considerable extent the accuracy of the statistics relating to exports to Western countrics. Revised figures for 1908-09 shew that Egjpt should be oredited with 91,717 tons only of 264,190 tons for which she figured originally in the accounts, the balance being distributed among some countrics in Europe and the Levant. There is a considerable trade in Ballam and parboiled rice done chiefly through the agency of Bombay saits and Arab traders with Zanzibar, Muscat, and other ports in the Persian Gulf, Arabia and Aden. The export figures for the last two years hare been in tons:

The direct exports of rice to Germany amounted to 333,480 tons valued at R 27901 lakhs ( $£ 1,560,000$ ) as compared with $22 \pm, 450$ tons valued at $\mathrm{R} 218 \cdot 21$ lakhs ( $£ 1,405,000$ ) in 1909-0n, and she retains her place as the chicf occidental consumer. The United Kingdom also showed an increase from 127,71.5 tons and R119 G6 lakhs ( $£ 95,000$ ) to 143,122 tons and R127.24 lakhs ( $£ 845,300$ ), and shipments to Austria-Itungary rose from 124,088 tons and R1l0.92 lakhs ( $£ 739,500$ ) to 155,437 tons and R14561 lakhs ( $£ 990,700$ ).

Wheat.-The interest of the statistics relating to wheat suffers to some extent from the fact that they deal with ancient history in as much as it is not the crop which has just been harvested but the penultimate one which affects the returns.

Wheat is larvested in India in April and May. In 1907-08 the season for sowing was unfavourable, and the rainfall insufficient for a good harvest. In the result the total area under wheat contracted from 29 to 22 million acres, and the estimated outturn from $8 \frac{1}{3}$ to 6 million tons. Famine conditions prevailed over a considerable part of Northern India, and the exrortable surplus was reduced to 110,000 tons as compared with 850,000 tons in the previous year, and $1,213,000$ tons, the average of the previous five gears.

In 1008-09 the season was not altogether propitious, as the Punjab crop suffered considerably from excessive rain both at sowing time and in the third week of April when on the threshing floor. The total area sown was, however, some 3 million acres in excess of that for 1907-0S and the outturn was estimated at $7 \frac{1}{3}$ million tons.

The following table shows the outturn and the total exports (quantities and values) for the past five years:

| Ontturn | Uarvest year 1005 |  | 1006 | 1007 | 1908 | 1909 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Tuna | 7,582,010 | $8,670,140$ | 8,991,700 | 6,106,700 | 7,597,500 |
|  |  | 1905-06 | 1096-07 | 1007-08 | 1908-09 | 1909-10 |
| ExportaQuantity | - " | 037,623 | 801,443 | 880,459 | 109,757 | 1,050,674 |
| Value |  | R8,53,43,996 | 7,25,44,650 | 8,68,50,850 | 1,94,00,737 | 12,70,90,854 |
|  | $\cdot \boldsymbol{*}=$ | £5,680,699 | 4,886,810 | 5,723,957 | 893,985 | 8,572,726 |
| Percentago of exporta to outturn |  | 12.1 | 9.8 | 10.4 | 1.8 | 13.8 |

These figures are of considerable statistical interest. Eliminating the altogether abnormal year 1008-09, it will be observed that the variation in total outturn (basel upon forecasts which have been accepted as reasonably
accurate by the trade) and proportionate exports is not nearly so great as ! sometimes been assumed.

The Indian crop comes on the market in the interval between tho Antipodean harrests of South America and Australia and those of norlhern latitudes, when adrantageous prices are procurable, as the first shipments reach the Tnited Kingdom, when home stocks are practically exhausted. The cultirators in the Panjab are generally anxious to realise in order that ther mar pay off adrances and Gorernment dues and to aroid the risk of loss by weerils from storage in the monsoon, and the demands of exporters are therefore generally satisfied at the beginning of the season. The rush of wheat to the ports and to Karachi in particular is, as the following talle shows, confined, in a normal rear, to May, June, July, and August and the shipments from December ontrards are small in rolume.

|  |  | $\begin{gathered} 1965-06 \\ \text { Tuns } \end{gathered}$ | $\begin{aligned} & 1906-07 \\ & \text { Tons } \end{aligned}$ | $\begin{gathered} \text { 190T-as } \\ \text { Tuna } \end{gathered}$ | $\begin{gathered} 1 \mathrm{Mn9-10} \\ \text { Tons } \end{gathered}$ | $\begin{aligned} & \text { Arerage } \\ & \text { Tons } \end{aligned}$ | Fitcentage of tutal |

| February | . | - 3,254 | 36,297 | $4 \leq 2$ | 17,057 | 14,272 | 15 |
| March | - | - 7,290 | 66,473 | 1,930) | 52,515 | 32,051 | 25 |

The crop harrested in April 1908 was so small and wheat prices in India so high that the statistics of exports for the year 190s-09 have been disregarded altogether. India was fortunate in finding a very considerable shortage of wheat in Europe when a new export season began in April 1909 and her shipments in June and July were not only exceptionally heary, but were male at rates which, thanks to the almost complete absorption of the unusually small harvest of the previous year, must have proved highly remunerative to the growers. In July the world's visible supply had fallen to $7,000,000$ quarters, and prices held until well into August when a fine North American and a phenomenal Russian harvest came into sight and gave quotations a set-lack which is strikingly reflected in the curtailed exports from India in September. Prices at Karachi sagged and though there was a temporary recovery in January the Jarch rate was some five and a hali rupees a candy lower than twelve months earlier.

The following table shews the average monthly prices of Indian wheat in Karachi and British wheat in London during the twelve months. The average declared value calculated on the exports from all ports anounts to $\mathrm{R} 6-0-9$ pies (88. $0_{4}^{\frac{3}{4} d}$.) per cwt, or 358 . $\delta d$. per qr.

The remarkably fine erop recently harvested is expected to yield $0,557,000$ tons of what from $27,765,500$ acres, but the high prices realized last year have enabled cultivators to hold up very large quantities of grain in the Punjab, and the export trade hitherto has been abnormally sluggish, a situation to which of course the superstitious anticipation of a failure of the monsoon has largely contributed.

As regards the distribution of the trade during the year under review, the United Kingrlom took 885,496 tons or $8 \mathrm{~L} \cdot 3$ per cent. of the total exports of wheat as arainst 103,527 tons in 1908.09 and 771,525 tons in 1907-08. Belgium and Germany, which did not take a single ton in the previous year, absorbed 120,724 and 8,287 tons against 70,433 and 685 tons respectively in 1907-05. Frauce also took 17,718 tons against 402 tons in 1908-09 and 15,909 tons in 1907-05. 93,571 tons were shipped to Egypt "for orders" and the exports have been adjusted and credited to the countries of final destination.

Though the exports of wheat flour were somewhat restricted in 1908-49 by the shortage of the erop and high internal prices, they, in the year under review, partially made good the decline noticed in last review and amounted to $3.5,0.5$ tons valued at R:9038 lakhs ( $£ 306,000$ ), shewing a rise of 16.4 per cent in quantity and 139 per cent in value, but a slight fall of 2.3 per cent in specific value. This trade was, as usual, mainly directed to the Turkish ports on the l'ersian Gulf (R1362 lakhs $=£ 00,800$ ), Ceylon (Ri0.69 lakhs $=$

 $=\mathcal{L} 21,200$ ), and Persia and Egypt with about $\mathbb{\& 2} \cdot 17$ lakhs ( $£ 14,500$ ) each. The shipments were confined to the ports of Bombay ( 61 per cent), Karachi ( 2 s per cent), and Calcutta ( 10.5 per cent).

The trade in Food grains other than rice and wheat, which was greatly contracted in 1905-09, fully recovered and assumed the dimensions of the previous year. The expansion was one of 164,955 tons or $201 \cdot 4$ per cent, the betal quantity being 246,836 tons against 81,881 tons in 1908-09. The value rose by 1453 per cent from RS1.72 lakhs ( $£ 545,000$ ) to $\mathrm{F} 202 \cdot 96$ lakhs ( $£ 1 \cdot 35$ millions). The most astonishing increase is under gram with a total of 53,497 tons and R.5.00 lakhs ( $£ 306,(\mathrm{COO}$ ) against 7,578 tons and 7875 lakhs ( $\mathcal{L} 8,300$ ), the percentiages being 606 in quantity and 425.6 in value, Jawar and Bajra, which amounted to $22,97 \pm$ tons with a value of $\mathrm{fl} 9 \cdot 61$ lakhs ( $£ 130,700$ ) in $1905-00$, advanced by 80 per cent to 41,317 tons valued at R31 lakis ( $\mathcal{L} 207,000$ ), while pulse, which was the largest item in the group in 1908-00 with a total of 36,777 tons and $\mathbf{7 . 4 1 \cdot 2 0}$ lakhs ( $£ 275,000$ ), returned 76,450 tous and R71:12 lakhs ( $£ 476,000$ ), showing an increase of nearly 108 per cent in quantity and 73 per cent in value. Barley was exported to the cxtent of 22,444 tons valued at Z 18.39 lakhs ( $£ 122,600$ ), shewing increased percentages of $138 \cdot 2$ in quantity and $125 \cdot 6$ in value over the figures for 1908-00, but in 1907-05, which was an abnormal year, the totals were 81,887 tons and fi00:78 lakhs ( $£ 105,200)$. The increase under the head "other sorts" was one of 47,095 tons in quantity and $32 \cdot 15$ lakhs ( $(£ 214,500$ ) in value, of which the United Kingrlom alone took over P 31 lakhs ( $£ 207,000$ ).

Provisions. -The value of provisions exported is comparatively small, but in the year under review it rose from $\mathrm{R} 76 \cdot 11$ lakhs ( $£ 507,400$ ) to $\mathrm{R} 88 \cdot 6 \mathrm{CS}$ lakhs ( $£ 591,2001$ ) or by R12.57 lakhs ( $£ 84,000$ ) equal to $16 \cdot 5$ per cent. Ghi or clarified butter is the principal item with a value of B 24 S 3 lakhs ( $£ 165,500$ ), which is slightly better than in the previous year, but 7 per cent less than in

1907-0s. It is chicfly exported to the Straits Settlements, Ceylon, and Natal for the Indian emigrants in those Colonies. The dechared values in 1907-08 worked
 rear and there mas a further fractional decline in 1909-10. Next in importance is Dry fish, salted and unsalted, the value of which adranced by $\mathcal{P Q} 25 t$ lakhs ( $£ 17,000$ ) or 135 per cent to R 21.29 lakhs ( $£ 142,000$ ), the proportion of salted fish to unsalted being about four to one. Fruits and vegetables, dried, salted or preserred, accounted for R14 93 lakhs ( $£ 90,500$ ) against R11 $\cdot 17$ lakhs ( $£ \mathbf{~} 9,500$ ) in 1908-09, and Fishmaws and sharkfins for f13:59 lakhs ( $£ 90,600$ ) against $\mathrm{R} 9 \cdot 36$ lakhs ( $£ 62,400$ ), the former showing an increase of $30 \div 2$ per cent and the latter $4 \cdot 1$ per cent over the value of $1908-09$.

Spices. The export trade in Spices made a further recovery during the year under rerier, the total ralue rising by Rl 231 lakhs ( $£ 52,000$ ) or 21 per cent to $\begin{array}{ll}70 \\ 0 & 85 \\ \text { lakhs ( } £ \pm 72,300 \text { ), but the totals are still below those for }\end{array}$ 1905-06. Pepper continues the most important item in the group. The exports, almost entirely from ports on the Test Coast, rose from $\mathrm{F} 22 \cdot 5$ laklis ( $£ 150,000$ ) in $190 \mathrm{~S}-09$ to $\mathrm{R} 29 \cdot 5$ lakhs ( $£ 197,000$ ), or 31 per cent, but there was a slight fall in specific ralue. Chillies, in mhich the Madras Presidency does the bulk of the trade, with a total of $\mathrm{R1} 19 \pm 2$ lakhs ( $£ 129,000$ ), recorded an adrance of玉. 236 lakhs ( $£ 15,500$ ) or $13 \cdot 8$ per cent. in spite of diminished volume. Ginger, chiefly exported from Madras and Bombar, shewed an improrement of $\mathrm{Al} \cdot 61$ lakhs ( $£ 10,700$ ), the total of $\mathrm{F} 16 \cdot 12$ lakhs ( $£ 107,500$ ) representing an adrance of $11 \cdot 1$ per cent upon last year's figures. Cardamoms adranced in value by ¥1•53 lakhs ( $£ 10,200$ ) to F 45 5 lakhs ( $£ 30,500$ ).

Tea.-The Indian tea trade continues its career of prosperity. As regards the crop the outturn mas, owing to drought in some of the tea-riowing dis. tricts, somemhat in defect until September, but in the last three months of the season the weather was remarkably favourable for growth, particularly in Assam, and the crop exceeded all records, though there was some shortage from the Terai. Prices were maintained at an unusually steady level, the common grades of tea fetching during the year 1 anna 6 pies ( $1 \frac{1}{2} d$.) above the closing rates of the prerious year, and the average price of tea sold at Calcutta auctions marks an advance of 13 per cent over last year's figures. The following table shows the quantities in thousands of lls of tea exported to the principal countries during the past three years:

| Countries of final deatination |  | 1907-08 |  | 100E-00 |  | 1900-10 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | lba | Percentage | lbs | Percentage | lbs | Percentage |
| United Kingdom | - • | 169,315 | 74.6 | 177,369 | 75.8 | 189,234 | 75.9 |
| Russia . | $\cdot$. | 19,183 | 8.4 | 19,351 | $8 \cdot 3$ | 24,011 | 9.6 |
| Canada | . | 4,981 | $2 \cdot 2$ | 8,158 | 3.5 | 8,046 | 3.5 |
| Australia |  | 10,402 | $4 \cdot 6$ | 8,195 | 35 | 8,161 | $3 \cdot 3$ |
| China |  | 7,278 | $3 \cdot 2$ | 5,789 | $2 \cdot 5$ | 6,208 | $2 \cdot 5$ |

The trade with Russia is of growing interest and importance. Whe demand includes all grades, and the bulk of the shipments go via Colombo and Vladivostok and thence by Trans-Siberian Railway. According to the new system of seaborne trade accounts in which the country of final destination is
recorded for all exports, the total quantity shipped to Russia amounted to $21,011,260 \mathrm{lhs}$, of which $11,727,45 \mathrm{llbs}$ would under the old system have been credited to Ceylon and 1,923,009 lbs to Germany (Hamburg). These figures do not include brick tea for the Hankow market, (the exports of which, credited to China in the table aloove, exceeded 6 million lbs) much of which finds its way eventually into Russia.

The exports to Australia during the last two years have decreased, but those for Canada and the United States show a satisfactory increase in spite of the disorganisation of trade caused by rumours of a proposed import tax on tea entering the United States. The offtake to Continental ports was smaller, also to Bombay and Persian Gulf ports, probably owing to the political disturbance in Persia, and higher prices may have to account for shorter shipments to Turkey, Africa, ete. The duty in Germany, which had been reduced in 1906 to 112 p per th , was raised again with effect from the 1st August 1909 to $5 \frac{1}{2} d$ per lb , and this is bound to cause a set-back in the consumption of Indian tea $i^{n}$ that country, though it has only affected slightly the figures for the year under review.

The following figures illustrating the transactions on the Calcutta market duriug the past three years shew that although there was some increase in the volume of direct shipments to foreign ports, the percentage of exports to the United Kingdom to total exports shews a fractional adrance.

|  |  | Total quantity <br> olld | Average prico | Dust oold on account of gardens | Average prico | Quantity er Calcutta auctions consumed locally | Direct shipments to forcign markets | Percentage of shipments to United Kingdom to total shipments from Calcatta |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1t, | A. P. | lbs | 1. P. | lbs | 1bs | lbs |
| 190\%-0 | - | - 69,371,755 | 611 | S,505,130 | 66 | 2,51.1,820 | 53,758,290 | 69-1 |
| 1506.19 | - | - 68,94,7:35 | 0117 | 1,003,550 | -1 11 | 1,895,006 | 52,758,197 | 69.8 |
| 10.59 .10 | - | - $70,045,7(10$ | 610 | 4,4,6, (1)5 | 55 | 2,504,13S | 55,55.1, 21 | 69.8 |

Some leading brokers think it probable that if larger supplies of certain grades had been on offer, a more extensive foreign trade might have been done without sacrifice of price and corresponding relief would have been given to Mincing Lane. It will be scen that the arerage price in the Calcutta sale room was nearly an anna per lb higher than in 1908-09, but fractionally lower than in 1907.0 S . The average London price in 1909 was $8 \cdot 3 d$ as compared with $7 \cdot 9 l$ in 1908 and $8 \cdot 2 d$ in the previous year.

The output of Ceylon tea does not yet seem to have been affected by rubber production and the exports from Java are steadily increasing, though the volume of her total exports is at present only one-eighth of those from India. The shipments to Holland and the United Kingdom in 1909 amounted to $20 \frac{1}{3}$ and $12 \frac{1}{2}$ million lbs respectively, and the statistics do not support the apprehensions which have beon expressed in some quarters that the Australian market is to be mado Java's principal objective. The figures for 1909 amounted to 701:000 lbs only, as compared with $335,100 \mathrm{lbs}$ in 1908 and 725,000 lbs in 1907.

The recent extensiou of the Port Commissioners' warchouse at Kidderpore hats given increased facilitics for blending and repacking at the Docks.

Tho trade in green tea shows again a marked decline, aud while the prices for black tea remain at last year's level, there is no inducement to growers to manulacture the other.

From a study of the ratios of area and production of tea in Iudia during the last twenty-five yeurs it would seem that, while the former has soarcely
doubled itself, the latter is uearly four times as great, which points to better methods of cultiration and better work on the plantations, but also suggests that no rers great further increase of production should bo anticipated and that therefore there is no immediate danger of supply outrumning demand and again depressing tea prices.

The following figures show the quantity and value of tea exported from India during the last fire gears:

The figures for 1909-10 represent a record both in quantity and value. The increase is one of 15.45 million pounds or 6.6 per cent in quantity and of \#131.37 lakhs ( $£ 875,800$ ) or $12 \cdot 7$ per cent in ralue, the rise in specific value being 6.8 per cent.

The export trade is practically confined to two ports, Calcutta shipping 71.8 per cent and Chitagong 20.8 per cent, the balance being distributed between Tuticorin, Cochin, and Calicut in the Madras Presidency. There is likely, howerer, to be a derelopement in the despatches from these latter as tea cultiration extends in Southern India, where in sereral planting districts alone or in conjunction with rubber, it is superseding old-established coffce. Shipments from the Madras Presidency in 1909-10 amounted to $17,001,516 \mathrm{lls}$, Which is equivalent to half the total exports from Java.

The receipts into the treasuries in the several provinces on account of the Tea Cess Fund during 1009-10 were reported to be $\mathrm{R} 3,33,706$ ( $£ 22,217$ ) as against $\not \approx 3,17,058$ ( $£ 21,137$ ) in 1908-09. The bounty on green tea has been, at least temporarily, suspended.

The recorded exports of green tea during the past three years have been-

## III.-METALS AND MANUFACTURES

The exports of metals and manufactures thereof still occupy a very modest position, representing less than one per cent of the total exports (excluding treasure). Manganese ore is the only item of importance and that of recent expansion, the increasing exports of which have swollen the total values of the class from $\mathrm{R} 58 \cdot 26$ lakhs $(£ 388,400)$ to over $110 \cdot 7$ lakhs ( $£ 738,000$ ) in the past quinquennium.

The total quantity of Indian metals exported increased from 450,050 to 525,959 tons and the value from $\mathbb{H 8 5} \cdot 17$ lakhs ( $£ 567,800$ ) to $\mathrm{R} 106 \cdot 27$
lakbs $£ 708,500$ ), the pereentages of increase being 16.9 in quantity and 24.8 in value. These figures are not of much significance as the values of the difforent descriptions of metals included in the head vary so much and the declared values of free exports are not so accurate as in the case of dutiable articles. For instance, brass and copper (wrought), which represents only 3.2 per cent of the total exports of Indian metals, had an average value of
 R79-6-5 ( $£ 5-5-10 \frac{1}{2} d$ ) in 1007-08, while the specific value of manganese ore representing $74 . t$ per cent of the total against $89 \cdot 2$ per cent in 1908-09, fell from 14.2 annas (or pence) in 1907-08 and 13.87 annas (or pence) in 1908-09 to 1264 annas (or pence) in the year under review. The demand for manganesc ore is intimately contingent upon activity in the iron and steel trades. The Caucasus was formerly the chief source of the world's supply, but the war with Jipan encouraged the exploitation of all available sources in India, and the exports from this country rose from 180,9.15 tons in 19) 1 -05 to 316,604 tons in $1900-00$ and 492,903 tons in 1906-07. Just when Russia had come forwarl again as a competitor, the American crisis in 1907 paralysed for a time the iron and steel trades, and several of the new manganese concerns found themselves in a rapidly falling market saddled with heary stocks won by clumsy and costly methods and containing low percentages of the metal. Revival of demand has helpel to clear these stocks very considerably during the past eighteen months, if at prices which can have given little profit to the exporters, but the market outlook is now decidedily more hopeful. The quantity of ore exported from India rose from 439,013 tons in 1908-09 to 500,346 tons in $1909-10$ or by $14 \cdot 2$ per cent, while the value advanced from 127507 lakhs (£506,500) to $\mathrm{X79} 1 \mathrm{l}$ lakhs ( $£ 527,300$ ).

These figures do not include the heary shipments, chiefly from mines in British India, through the Portuguese port of Marmagoa.

Of the total the United Kingdom took 165,903 tons or 33.1 per cent, where the manufacture of ferro-manganese has recently developed considerably, while the United States received $1.18,910$ tons or $29 \cdot 7$ per cent, Belgium coming next with 103,035 tons equivalent to 20.7 per cent, and France standing fourth on the list with 64,805 tons or $12 \cdot 9$ per cent.

The omnibus heading "Other sorts" shows a value of $\mathrm{f} 23 \cdot 8$ lakhs ( $£ 159,000$ ), which is four times as much as the value of $1908-09$ and $73 \cdot 1$ per cent more than in 1907-08. The motals comprised under the head are mainly :-

The increased exports of lead from Burma account for an increase of R13.58 lakhs ( $£ 00,000$ ) under that head. The ore comes from the Bawdwin mines in the Northern Shan States, and is smelted in Mandalay before shipment to Europe. In 1909, 5,888 tons of ore valued at $\not 211,03,094(£ 73,600)$ were won as compared with only 320 tons valued at $\operatorname{R62}, 400(£ 1,160)$ in 1908.

## IV.-CHENICALS, DRUGS, NARCOTICS, AND DYEs

Saltpetre and borax practically represent all the chemicals exporte ${ }_{d}$ from India, and of these Saltpetre is considerably the more important, though the trade is fluctuating and non-progressire. The cause of decline in the year under rerien is said to be the lower prices prevailing for nitrates and smaller shipments to Europe and the United States consequent thereon. The quantity exported fell from 400,271 to 358,232 cwts or by 10.5 per cent and the ralue from $£ 4535$ lakhs ( $£ 302,300$ ) to $\mathrm{R} 30 \cdot 14$ lakhs ( $£ 261,000$ ) or ly 13.7 per cent. This marks a decline of 3.5 per cent in average value per unit.

The trade in Borax, which is receired by land from Tibet, is also fluctuating. The exports amounted to 5,976 erts with a ralue of $\mathrm{Pl} 1 \cdot 12$ lakhs ( $£ 7,500$ ), being more than double the trade of $1905-00$. The specific value, howerer, declined by 2 per cent from R19 2as 3 pies ( $£ 15 s \operatorname{lil}_{1}^{1} d$ ) to R1S 12as 4 pies ( $£ 15{ }_{5} 8 \frac{1}{3} d$ ) per crit.

The exports of Chinchona bark hare not get made good the decline recorded in 1905-09. The quantity amounted to $359,200 \mathrm{lbs}$, ralued at RE6,796 ( $£ 5,756$ ), as compared mith $312,037 \mathrm{lbs}$, valued at $\mathrm{RG} 7,030$ ( $£ 4,469$ ), in 1908-09, and in spite of the competition of Jara bark which is said to yield a higher percentare of sulphate, the specific value has adranced from 3.4 annas (or pence) to 357 annas (or pence) per lb . It mostly goos from Nadras to the United Kinglom.

Opium.-The opium trade during the latter half of the year was distinguished by a remarkable and unprecedented advance in prices which continued until May 1910. In 1908-09 the arerage price for a chest of Malwa opium was $\mathrm{Pl} 1,297$ ( $£ 86984 d$ ) and for Bengal $\mathrm{Rl} 1,3 \mathrm{~S}_{\mathrm{t}}$ ( $£ 92584 d$ ). Prices kept in the neighbourhood of $\mathbb{R 1 , 6 0 0 - 1 , 7 0 0 ( £ 1 0 6 1 3 s ~} 4 d$ to $£ 113688 d$ ) from August until January when there was a sharp rise to $\mathbb{R 2 , 0 1 4}$ (£136 js $_{8} 4 \mathrm{~d}$ ) and at the March auction Behar opium fetched $\mathbb{P 2 , 3 5 0}$ ( $£ 15613 s 4 d$ ) and Benares opium R2,308 ( $£ 1531784 d$ ), while business was done in Malwa opium in Bombay at $\mathrm{Z} 2,700$ ( $£ 180$ ) per chest.

The area under poppy in the Bihar and Benares Agencies has been further concentrated and reduced from 384,016 to 359,375 acres. The number of chests of Bengal opium offered for sale in 1909 was 43,200 as compared with 46,800 in 1908, and the figures for 1910 and 1911 are 39,600 and 31,440 chests respectively.

The following statement shows the quantities of opium exported from Bengal and Bcmbay respectively in each of the last five years, together with the total value in thousands and the average prices:

|  |  | Exports |  |  |  |  | Average price per chext |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Bengal chests | Bombay chests | Total chesta | Valce |  | Bengal |  | Bombay |  |
|  |  |  |  |  | R | $\varepsilon$ | R | $\boldsymbol{L}$ | R | $\boldsymbol{E}$ |
| 1905-06 |  | 48,833 | 14,113 | 62,036 | 9,47,18 | 6,315 | 1,438 = | 96 | 1,736 | 116 |
| 1916-07 |  | 53,588 | 12,386 | 66,274 | 9,30,79 | 6,205 | 1,381 | 92 | 1,501 | 100 |
| 190\%-08 | - | 47,44) | 16,320 | 63,760 | 8,67,25 | 5,782 | 1,347 | 90 | 1,399 | 93 |
| 1908-09 | d | 44,970 | 21,987 | 66,957 | 8,31,02 | 6,233 | 1,440 | 83 | 1,388 |  |
| 1009-10 |  | 43,465 | 12,726 | 68,191 | 9,31,56 | 6,269 | 1,678 | 105 | 1.930 | 98 |

In the year under review there was a total decline of 10,766 chests or $16 \cdot 1 \mathrm{per}$ cent in quantity and of R3.50 laklis ( $£ 23,700$ ) or 38 per cont in value and the average declared value rose liy 184 per cent. In Bombay, the port of shipment for Malwa opium, there war a fall of 9,201 chests or $42 \cdot 1$ per cent, but the average declared value rose by 39 per ceat. The exports from Bengal also declined by 1,505 chests or 3.3 per cent, but the average value per unit increased by 12.7 per cent to 71,578 (£105 48), which closely approximated to the record figure for 1001-05. As regards the distribution of this trade, the direct exports to Hongkong fell by 6,008 chests or 10.2 per cent to 30,050 chests and to the Treaty Ports of China by 5,282 chests or 33.4 per cent to 10,512 chests. Shipments to the Straits Settlements amounted to 11,140 chests, of which 1,527 clests were re-shipped to $\$ 1 a m$ and 9.42 chests to Sumatra, while 2,413 chests were destined for China.

Tobacco. - The figures of export during each of the last three years are given below:

|  |  | Unmanufactured |  |  | Manufactured |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Cwts | 12 | $\hat{\chi}$ | Cwis | 訧 | $£$ |
| 1907-05 |  | if6,110 | 18,07,563 | 20,504 | 12,807 | 11,24,223 | 74,949 |
| 1905-09 |  | 93, 11 ! | 11,75,127 | 78,552 | 13,076 | 11,42,95 | 76,197 |
| 1909-10 |  | 9 $4,9 \mathrm{al}$ | 13,32,516 | S5,53 4 | 14,189 | 12,25,776 | 81,718 |

The total exports of tobacco of all descriptions amounted to 109,150 ewts valued at R205:58 lakhs ( $(\mathcal{C 1 7 0 , 0 0 0 )}$ as against 100,490 cwts valued at $\mathrm{R} 23 \cdot 21$ lakhs ( $£ 155,000$ ) in $1908-00$. The increased consumption of Indian leaf for factory-made cigarettes and liris accounts for the decline in the exports of unmanufactured tobacco since 1907-08.

In unmanufactured descriptions the slight advance of 1.7 per centin quantity and 13 per cent in value upon the figures for 1908-09 leares the totals very far below those of the previous year. The average value rose by 11.2 per
 leaf goes to Aden ( $\mathrm{R} 7 \cdot 12$ lakhs $=\mathcal{C} 47,500$ ), the Straits ( $\mathrm{R} 2 \cdot 87$ lakhs $=£ 19,100$ ), France ( $\mathrm{R} 1 \cdot 8.5$ lakhs $=£ 12,300$ ), Holland ( $\mathrm{R} 70,830=£ 4,722$ ), and Ceylon (R30, $\mathrm{S} 95=£ 2,060$ ), and is intended not so much for manufacturing purposes as for consumption in the howkah.

In manufactured classes, mostly of cigans, the increase was 8.5 per cent in quantity and $7 \cdot 2$ per cent in value, the fall in arerage value being 1.1 per cent. Of these the principal customers are the Straits ( $\mathrm{R} 7 \cdot 1$ lakhs $=£ 47,800$ ), the United Kinglom (R2'28 lakhs= $£ 15,200$ ), Siam ( $\mathrm{R} \ddot{3} 9,170=£ 2,010$ ), and Gilraltar ( $\mathrm{P} 34,998=£ 2,333$ ).

Since the close of the year the duty on imported unmanufactured leaf has affected the export trade in Indian cheroots which have wrappers of "Sumatra" or Borneo tobacco. Arrangements are, however, in progress for their manufacture for the foreign (chiefly, London and South African) markets in bond, and meanwhile the leading Madras firm interested has transferred the export branch of its factory from Dindigul to Pondicherry. "Burma" cheroots, made for tho most part of "lanka" tobacco from the Godavery and Vizagapation districts of the Madras Presidency rolled in Rangron, are unaffected by the new tariff.

Indigo.-There is little satisfaction to be extracted from an examination of the statisties relating to natural indigo. The crop usually comes on the market in December and the export season completed before the end of the
statistical rear. The final forecast for 1909-10 shemed an increase of 2.3 per cent in area and of 2 per cent in estimated outturn as compared with the preceding season, but this should not be taken as an indication of any industrial reriral howerer small, for the Bengal crop was 20 per cent in defect, the deficiencr of minter rain affected the sowings in February, and the heary rainfall at the end of August destroved the hopes of a good return from the second cuttings. The Bihar outturn in fact is the lowest on record. The official estimate of rield was $11,400 \mathrm{cr}$ ts and the trade estimate $10,700 \mathrm{crts}$. In spite of erery discouragement, homerer, research work still continues and the results of Baron Schrottky's experiments with a new ferment food and a second steeping hare already been tested on a commercial scale. It is argued that the price of synthetic indigo is very near the cost of production, and that, if an increased volume of indigotin is extracted from the plant by a process not proportionately more expensire than those at present employed, the natural product will be able to compete more successfully with the artificial. The introduction of the Jara Natal plant has reduced cultiration expenses and in a grod season the gield per acre shorts material adrance. The following statement shors the exports of indigo in 1909-10 and the fire previous years together with approximate quotations of arerage price per cort in London:

|  | $\underset{\text { From }}{\text { Calcutt }}$ | Prom Madras ports | From other ports | Total | Valne |  | Arerage prico per owt in London |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwis | Cwts | Cw ${ }^{\text {s }}$ | Cwts | $R$ | 6 | 2 | 8. | $d$. |
| 1904-05 | 30,029 | 11,901 | 7,322 | 49,252 | 83,46,0 | 56,000 |  | 12 | 0 |
| 1903-0i | 19,062 | 7,756 | 4,268 | 31,186 | 58,64,000 | 391,000 | 19 | 7 | 4 |
| 1506-07 | 19,209 | 11,159 | 4,634 | 35,102 | 70,05,000 | 467,000 | 20 | 6 | 0 |
| 1907-08 | 16,627 | 10,619 | 5,244 | 33,490 | 63,73,000 | 425,000 |  | 1 | 4 |
| 1908-09 | 17,698 | 4,636 | 2,612 | 24,946 | 49,05,000 | 327,000 |  | 10 | 8 |
| 1909-10 | 11,221 | 3,655 | 3,185 | 18,061 | 35,18,000 | 234,400 | 20 | 1 | 4 |

Fourteen years ago the total was 169,525 crts, ralued at $\mathbf{R} 4.37$ crores ( $£ 2.91$ millions). Although fine qualities were scarce, the level of prices in Calcutta in 1909-10 was slightly higher than in the previous year. They opened at an average of Rl 153 ( $£ 1048$.) per factory maund, which is equal to R 238 ( $£ 15$ $178.4 d$. ) per cwt, and closed at an average of $\nexists 162$ ( $£ 10168$.). The average prices for the season works out at R157 ( $£ 1098.4 d$.) per factory maund. In the distribation of exports the most striking decline is in the figures for the United Kingdom, which have fallen by no less than $7,344 \mathrm{cwts}$ or $71 \cdot 9$ per cent to $2,865 \mathrm{cwts}$ and the Continent of Europe reduced its demand from 4,506 to 3,243 cwts. The general quality of the crop being poor and the Eastern demand considerable, business with Russia viâ the Black Sea fell short of the principal dealers' anticipations. Shipments to Egypt, chiefly "for orders," amounted to $2,586 \mathrm{cwts}$ against $3,351 \mathrm{cwts}$ in 1908-09, but the demand in Asiatic Turkey was stronger, the figures being $4,387 \mathrm{cwts}$ against $3,309 \mathrm{cwts}$ in the previous year. In Persia also, where the prohibition of the synthetic substitute is tending to become operative, the advance is from 1,170 to $2,730 \mathrm{cwts}$ and there is a small but steady Japanese demand. She took 1,012 cwts against 804 cwts in 1908-09, but the United States imports fell from 1,295 to 1,027 cwts

Other dyeing and tanning materials.-Until 1907-08 indigo represented more than half the total value of dyeing and tanning materials exported, but has fallen in the last two years to 38 and 31 per cent, while the trade in Myrobalans, which remains remarkably steady now, represents 53 per
cent of the whole. The table gives details of the exports for the past three years:

|  | 1007-08 |  |  | $\underbrace{1208-09}$ |  |  | 1909-10 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwts | H | 2 | Cwts | A | 2 | Cwts | 7 | 2 |
| Myrobalans | 1,493,296 | 58,95,916 | 303,016 | 1,466,810 | 57,20,302 | 391,353 | 1,467,104 | 60,10, 413 | 400,027 |
| Indigo | 32,490 | 63,72,74 | 424,843 | 24,049 | 49,01,701 | 326,936 | 18,061 | 35,18,154 | 234.514 |
| Turmerio | 82,944 | 0,01,081 | 66,072 | 01,416 | 0,59,666 | 63,978 | 79,934 | 8,00,525 | 53,368 |
| Catch | 91,690 | 14,47,591 | 00,505 | 62,812 | 0,25,242 | 61,683 | 40,712 | 6,74,086 | 44,939 |

Of tanning materials Myrobalans form by far the most important material, but though exports do not show expansion, the specific value rose by 4.9 per cent. The exports of Turmeric, after considerable advances in the preceding two years, fell by 126 per cent in quantity and 16.6 per cent in value, marking a fall of 46 per cent in specific value. The trade in Cutch has been steadily declining siuce 1903-01 and the exports in 1909-10 represent no more than a third of the values of that year's trade. Compared with 1908.09 , the decline was one of $35 \cdot 2$ per cent in quantity, $27 \cdot 1$ per cent in value, equivalent to a rise of $12 \cdot 4$ per cent in specific value, but the year closed with a stronger demand and some auticipation of a revival of prices.

## V.-OILS

This is a major head of little importance, forming less than one per cent of the total value of exports of merchandise from India.

The total values under this class, which comprises animal, essential, mineral, and vegetable oils, showed a substantial increase by $\mathbb{Z 2 0} 42$ lakbs ( $£ 176,000$ ), or 28 per cent, to R 120.86 lakhs ( $£ 505,700$ ), which exceeds the record figures ( $\mathrm{Z} 100 \cdot 31$ lakhs $=£ 668,700$ ) for $1004-0.5$.

Animal oils shew a marked contraction from 69,186 gallons valued at ¥30,193 ( $£ 2,613$ ) to 40,861 gallons valued at $\mathrm{f} 31,991$ ( $£ 2,133$ ).

Under essential oils, lemon grass oil exported from the Madras Presidency is by far the most important, amounting to 11,815 gallons valued at Pl 80 lakis ( $£ 12,600$ ). The arerage value works out as in 1908-09 at $\mathcal{P 1 6}$ ( $£ 1$ 18. 4 d.) per gallon, as compared with f 38 ( $£ 2$ 10s. 8d.) in 1906.07 and 72.4 (£1 128.) in 1907-08.

The exports of mineral oil advanced from $1,836,557$ gallons, valued at $\mathrm{Zl} \cdot 83$ lakhs ( $£ 12,200$ ), to $4,651,205$ gallons, valued at $\mathrm{Z} 8 \cdot 94$ lakhs ( $£ 59,600$ ), of which Burma exported 780,552 gallons ( $\mathrm{R} 3 \cdot 93$ lakhs $=£ 26,200$ ) of kerosene oil and $3,852,160$ gallons ( 24.95 lakhs $=€ 33,000$ ) mainly, fuel oil contracted for, in part, by the British Admiralty. The trade is much more important commercially than the totals suggest. In the last two years seven new companies have been floated to further exploit the oil deposits of Burma, with an aggregate nominal capital of $\mathrm{f} 340 \mathrm{lakhs}(£ 2,267,000$ ). The immediate destinations of kerosene oil were Singapore ( $49.4,32.4$ gallons) and the Federated Malay States ( $201,9+4$ gallons), but the former is only a port of transhipment. The coastal exports of Burma oil to India proper rose from 67.32 million gallons in $1908-09$ to $84 \cdot 28$ million gallous. The declared values per gallon of kerosene remained stationary at 8 annas (or pence), but of other mineral oil rose from 1 anna 7 pies ( $1 \frac{7}{1}, d$. ) to 2 annas 1 pie ( $2 \frac{1}{1} \frac{1}{2} d$ ) per gallon. The corresponding prices per gallon of the vegotable illuminants most commonly used by the people are given below :

Vegetable oils constitute statistically the most important sulb-head, the ralues representing about 54 per cent of the total. In 1009-10 the total increased from R $63 \cdot 71$ lakhs ( $£ 42.4,700$ ) to R65.04 lakhs ( $£ 433,600$ ) or by $2 \cdot 1$ per cent. There was a decliue both under castor and cocoanut oil. The former declined be 156 per cent to Rlo.0S lakhs ( $£ 50,500$ ) and the latter ly 6.6 per
 laths ( $£ 265,500$ ), respectively, in 1905-09. Castor oil is chiefly exported from Calcutta to Australasia, the Straits, and the Ťited Kingdom, and cocoanut oil, largely used in soap manufacturing, mainly from Madras to Germany, the Tnited States of America, and the United Kingdom. The price of cocoanut oil rose from $£ 30$ to $£ 40$ a ton during the year, owing to shortage of copra and the increasing consumption of the better class of oils for the production of edible fats. The trade in linseed oil, which was much contracted owing to the failure of the crops in the two previous years, showed great improvement-the total ralues rising from R $6,605(£ 4,307$ ) to $R 5 \cdot 14$ lakiss ( $£ 34,300$ ). It is shipped chiefly from Bengal to Japan ( 85,000 gallous), China ( 75,000 gallons), Australasia ( $\mathbf{7}, 000$ gallons), and the Tnited Kingdon ( 10,000 gallons). The rise in specific ralue was in sympathy with the strong upward movement in linseed. The exports of mostard and sesamum oils also adranced by 19.2 and $22 \cdot 5$ per cent to $\mathrm{F} 4 \cdot 45$ lakhs ( $£ 29,870$ ) and $\mathrm{R} 3 \cdot 86$ lakhs ( $£ 25,730$ ) respectively. The former is chiefly exported from Bengal to Natal ( 05,000 gallons) and Mauritius ( 126,000 gallons), and the latter from Bombay and Madras to Mauritius ( 100,000 gallons), Arabia ( 56,000 gallons), and Ceylon ( 41,000 gallons).

The exports of ground nut oil hare expanded during the last two years, the totals in 1908-09 being 93,080 gallous and in 1000-10 91,955 gallons as compared with only 16,608 gallons in $1906-07$ and 7,814 in 1905-06. There are considerable exports of nuts coastwise from Burma to Bengal, part of which re-appear as foreign exports in the form of oil, and though the methods of extraction employed in Madras are generally primitive, considerable quantities of oil are shipped to Burma from that Presidency.

The trade in paraffin wax refined from the oil in Rangoon is rapidly expanding. In a single year it has increased from $02,8.16$ cwts with a value of R21.99 lakhs ( $£ 146,600$ ) to 173,211 cwts with a value of R 10.02 lakhs, ( $£ 267,000$ ), due to larger shipments to the United Kingdom, South Africa, Australasia, Japan, and East Africa. 42,256 cwts of candles valued at R13.20 lakhs ( $£ 88,000$ ) manufactured from Burma petroleum were exported during the twelve months, the principal markets being China and the Straits, but Australia and the Philippines took considerably larger supplies than in 1908-09.

## VI.-RAW MLATERIALS

Coal.-The export trade in Coal continues exceedingly unenterprising, and even the dislocation caused by the prolonged strike in Australia was not taken full advantage of, the quality of some of the coal shipped leing so bad as to seriously prejudice further demand. The export of coal in 1909-10 represented no more than 8 per cent of the export of raw materials and $\cdot 36$ per cent of the exports of Indian merchandise, the average for three years ending 1000-10 representing 78 and 35 per cent respectively. The quantity of coal and coke exported in 1909-10 was 758,828 tons as compared with 571,582 tons in 1908-09 an increase of 32.8 per cent. There was a corresponding increase in value from $\ddagger 50.51$ lakhs ( $£ 337,000$ ) to $\mathrm{Z} 67 \cdot 14$ lakhs $(£ 447,600)$ or $32 \cdot 9$ per cent.

The Irroluction of Indian coal during 1900 is estimated at $11,870,114$ tons as against 12,760,635 tons in 1908.

The following table shows the supply of coal retained for internal consumption exclusive of previous stocks in the ports of Calcutta and Bombay and in each province during 1900 :

|  | Production <br> tn5 | Impurts (by sea, rail and river) tons | Exports (by nea, rail and river) tons | Balunce for internal consumption tons |
| :---: | :---: | :---: | :---: | :---: |
| Calcuta | ... | 4,372,22S | 3,664,355 | 707, $\mathrm{S}+3$ |

| Sind and British Baluchistan . | 52,44 | 577,043 | 332,615 | 296,580 |
| Madras | $\ldots$ | 612,802 | 14+712 | 498,090 |
| Eastern Bengal and Assam $\quad$. | 305,56:3 | 351,030 | 22,952 | 633,617 |
| United Provinces | ... | S51,598 | 7, 55. | S74,04t |
| Panjab including North-West Vrontier Province | 37,30 | 637,599 | 1,2i3 | 673,965 |
| Central Provinces and lerar | 235,100 | 202,606 | 12,132 | 42S,27. |
| Burma | ... | +29,112 | 79 | +29,033 |
| Rajputama and Central | 132,905 | 2 19,590 | 64,537 | 317,7.4 |
| Nizam's Territory | +12,592 | 6,090 | 301,03s | 1.17,941 |
| Mysure | ... | 106,410 | 7 | 106,403 |
| Kashmir | ... | 3,565 | 6 | 3,562 |
| Tutat. | 11,570,114 | 111,097,774 | 11,241,592 | 10,726,306 |

49 per cent of the coal exported ( 370,570 tons as against $35 \pm, 355$ tons in 1908-09) was declared for Ceylon, and exports to the Straits, representing nearly 23 per cent, rose from 107,015 to $173,21 \pm$ tons, while those to Sumatra fell from 85,535 to $7 \varepsilon, 583$ tous and to Aden from 11, $2 \cdot 24$ to 3,460 tons. Australia absorbed $1 \geqslant 1,006$ tons as compared with 2,500 tons in 1907-08, there having been no export in 1908-09.

Calcutta was the port of shipment for all exports except 457 tons from Bombay and 4 tons from Burma. Shipment of bunker coal for use in steamers declined from $1,000,443$ to $803,3 \geqslant 0$ tons, aud shipments coastwise to other Indian ports lell to $2,077,081$ tons, a decrease of $38-1,22$ S tons on the figures of 1008-00, partly due to reduced consignments to Bombay, where Welsh coal is in increasing demand, and partly due to increased despatches by rail direct from pit's mouth to consumers to reduce loss by pulverization. Nadras mills have contracted for 150,000 tons in this way. The fact that Bengal coal travels badly perhaps explains why the Ceylon and Mauritius Governments have both declared a preference for Natal coal. The total despatches by rail amounted to 740,000 tons, and lyy river to 145,000 tons.

A Railway test mado during the year under review with shipments of first class Bengral coal, of Natal coal, and of Austrabian coal gave the following result: Bengral coal ran 26 lbs per train mile, Natal 27 lbs por train mile, and Australian 30 lls por train milo.

The prices of first class Jherria Bengal coal per ton in wagon during the last fire official years hare been as follows:-

|  |  | Lumist |  |  |  | Highest |  |  |  | Averge |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Ra. |  | $s$. | d. | $\boldsymbol{R}$ a. | $p$ | s. | $d$ |  | $a$. | $p$. |  |  |
| 1903-06 |  | 24 | 0 | 3 | 0 | 312 | 0 | $=5$ | 0 |  |  | 6 | 3 | $6 \frac{1}{4}$ |
| 1906-07 |  | 3 S | 0 | 4 | s | 60 | 0 | 3 | 0 | 4 | 5 | 5 | 5 | $9 \frac{8}{18}$ |
| 1907-08 |  | 50 | 0 | 6 | S | 6 S | 0 | S | S | 6 | 0 | 0 | S | 0 |
| 190¢-09 |  | $\pm 0$ | 0 | 5 | $\pm$ | S 8 | 0 | 11 |  | 5 | 7 | S |  |  |
| 1909-10 |  | 212 | 0 | 8 | S | 312 | 0 | 5 | 0 | 8 | 0 | 10 |  | $0{ }_{6}^{8}$ |

The lerel of prices was lower than it has been for four years and sceond class coals are practically unsaleable. More than half the Coal Companies registered paid no dividends during the twelve months and the share transactions were on an exiguous scale and confined to a very small range of stocks.

Esports of coke amounted to $1,83 \pm$ tons in place of 1,656 tons in 190800, the bulk of which went to Cerlon and the Straits Settlements.

Cotton.-On the arerage of the three years ending 1905-09 raw cotton represented 30 per cent of the total value of raw materials exported from India. In the year under reriew the proportion rose to the extraordinary figure of 37.5 per cent.

The statistics for the first half of the year represent the exports of the 1905-09 crop and those of the last half year the shipments of the new crop which began to come into commercial consideration in Bombay in October last. The following table intends to exhibit the exports for each crop separately :

The American crop of 1908-09 amounted to the record figure of $13,850,000$ bales, but in the early summer of 1909 misgivings began to be felt about the crop of 1909-10, which were no doubt aggravated by the tactics of bull operators in America. From July onwards the price of American cotton rose rapidly and the rates for the raw material in other parts of the world advanced in sympathy. In August it became clear that the Egyptian crop, of which the highest hopes had been formed, was also going to be short, but the season in India was exceedingly favourable and the new crop, which was not only very large but also was harvested somewhat early, came into sight in Bombay at the psychological moment. The Indian cultivator and exporter have therefore had a bumper year, but the millowner has had to face increased cost of raw material without proportionate rise in the sale value of his yarn and cloth.

Japanese buyers were very active at the beginning of the season and the bulk of the shipments as usual was divided between the Far East and the Continent. The seaborne trade statistics do not support the allegation sometimes advanced that India exports raw cotton and repurchases it as yarn, for the countrics, which participate in the former market, send practically no yarn to this country. It is of interest to record that a trial consignment
of Indian cotton went during the year under review via the United Kingdom to Carolina, the very centre of the Sea Island cotton trade. Promising experiments are being made in Tinnevelly with Cambodia cotton, but no Egyptian cotton was grown in Sind.

The following are the prices of middling upland American cotton at Liverpool in the last three years stated in pennies and decimals of a penny per lls:-

|  |  |  | 1907.08 | $1908-09$ | 1909.10 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| At Liverpool- |  |  |  |  |  |
| Opening | . | . | 5.9 | 5.77 | 5.07 |
| Highest | . | . | 7.57 | 6.7 | 8.5 |
| Lowest | . | . | 5.66 | 4.8 | 4.93 |
| Closing | . | . | 5.69 | 5.05 | 8.5 |
| Average | . | . | 0.62 | 5.49 | 5.5 |

Prices of good Broach in Bombay during the last three years were as follows in annas and decimals of an anna per lb: -

|  |  |  |  | $1907-08$ | 1908.09 | 1909.10 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| At Bombay |  |  |  |  |  |  |
| Opening | . | . | . | 5.14 | 5.33 | 4.9 |
| Ilighest | . | . | . | 5.59 | 5.33 | $\mathbf{6 . 7 3}$ |
| Lowent | . | . | . | 5.04 | 4.41 | 4.9 |
| Closing | . | . | . | 5.14 | 4.94 | 6.78 |
| Arerage | . | . | . | 5.37 | 4.68 | 5.82 |

In India the mill consumption decreased by about 283,300 cwts or by $4 \cdot 6$ per cent from $6,164,800$ to $5,881,500$ cwts. This figure allows for wastage and is equiralent to $1,646,800$ bales of 400 lbs each.

The following figures give a summary of export trade in the last fire years, the unit being 1,000:-

It will be seen that there was a rise of 31.2 per cent in quantity and 58.2 in value, the advance in specific value being nearly 21 per cent.

The statement below shows the final destinations of the cotton exported during the past three years, the unit being 1,000:-

The shipments to Japan rose by over 1 million cwts or 47.2 per cent, Austria-Hungary almost doubled her takings, and there were considerable advances in the shipments to all the other countrios in the list,

Hides and skins, raw.-The exports represented 5.2 per cent of the entire exports of the Indian produce. Tiken together the number of raw hides and skins amounted to $3 \$ 3$ millions, ralued at R9.G5 crores (CO.43 millions), as compared with 33.5 millions, ralued at $\mathrm{R} \cdot 34$ cmres ( $£ 5.56$ millions!, in 190s-09.

The following statement shows the exports from India for the last five reas, the unit being 1,000:-

|  | Mides |  |  |  | Skins |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cres | No | f | $\pm$ - | Corts | No | R | £ |
| $1005-46$ | 944 $=$ | 11,533 | 5.23,38= | 3,489 | $5: 39=$ | 31,521 | $4.86 .49=$ | 3.213 |
| 1900 - 7 | 1,091 | 12.917 | 6, 40,90 | 4.273 | 4i4 | 36.850 | 4.58 .49 | $\underline{2.990}$ |
| 190-48 | G0 | 8,278 | 4.31,98 | 2, 630 | 310 | 17.202 | 2.73.20) | 1,821 |
| 1908-09 | 765 | 9,651 | 4.78 .48 | 3,190 | 4i) | 23,810 | 3.55,38 | 2369 |
| 1909-10 | S3\% | 10,049 | 5,12,100 | 3,418 | 610 | 23,233 | 4,52,40 | 3,016 |

The exports of raw hides rose by 9.4 per cent in quantity and $7 \cdot 1$ per cent in ralue, the arerage deelared value per cwt falling by 41 per cent from玉62-S-9 ( $£ 4-3-4_{4}^{3} d$ ) to $\mathrm{R} 61-3-\mathrm{S}\left(£ \pm-1-7{ }_{3}^{\circ}, 7\right)$. This is difficult to reconcile with the trend of prices on the Continent. The arerage weight of a raw hide was 9.3 lbs as against 8.9 lbs in 1908-09.

Germany is the principal customer for India's raw hides, taking 335,801 erts or $40 \cdot 5$ per cent worth $\mathrm{P} \cdot 03$ crores ( $£ 1.35$ millions), while the exports to the Tnited States of America in 1900-10 amounted to 73,011 ents, ralued at $\mathrm{A} 3 \pm 6 \mathrm{~S}$ lakhs ( $£ 231,200$ ) as compared with $85,976 \mathrm{crts}$ and R 40.6 lakhs ( $£ 270,700$ ) in 1908-09.

Exports of raw skins, mostly goat skins, increased by 30 per cent in quantity and 27.3 per cent in ralue, the arerage value per cwt declining by $2 \cdot 2$ per cent. There was an increase of 9.5 per cent in the average weight. The trade, which had been depressed since the financial crisis in America at the end of 1907 , has more than recorered its normal dimensions in the year under reriew, for Chrome leather tanning in the United States of America has affected the demand for Madras regetalle tannages and encouraged larger exports of raw goat skins from other parts of India.

The proriucial distribution of the trade in this class of exports was Calcutta $69 \cdot 3$ per cent, Bombay 12, Sind $7 \cdot 3$, Burma $6 \cdot 6$, and Madras $4 \cdot 8$.

The principal countries participating in the shipments during 1909-10 were, in uni/s of $1,000:-$

|  | Hidea |  |  | Skins |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | £ | per cent | R | 5 | per cent |
| Germany | 2,03,23 $=$ | 1,355 | 3.6 | 2,46 = | 16 | $\cdot 5$ |
| Austria-Hongary | 91,33 | 608 | $17 \cdot 8$ | 1,66 | 11 | 4 |
| Italy . | 68.44 | 456 | 13.3 | 3, $\because 3$ | 21 | $\cdot 7$ |
| Spein | 45.03 | 301 | 8.8 | 2,32 | 16 | -5 |
| United States of America | 3:68 | 231 | 6.7 | 3,58,94 | 2,393 | 793 |
| United Kingiom | 32,10 | 214 | 6.3 | 32.61 | 216 | 7.2 |
| France | 13,02 | *7 | 2.5 | 26,70 | 178 | 5.9 |
| Holland . . . | 9,06 | 60 | 18 | 12,51 | 83 | $2 \cdot 8$ |

The hide market is essentially international in character. The prices for hides in India showed an upward tendency from May onwards, and the passing of the Payne-Aldrich Tariff in August, which removed the 15 per cent adral $v e m$ duty on raw hides entering the United States of America, further hardened prices by stimulating Continental competition for Indian exports. It seems to be generally assumed that hide prices are now permanently established on a higher basis, and the export duties adumbrated in France and Australia to check the diversion of hides to America will, if they materialize,
only further strengthen the general demand. Buffalo hides "arsenic slaughtered," which were quoted at $\mathrm{f7} 7(984 d)$ per 20 lbs in April, touched R9 (12s) in January, but fell back to R8 ( $1088 d$ ) in March. The latter rates were a rupee ( $184 d$ ) higher than in the corresponding month of 1908-09. Similarly, cow hides "North Western arsenic commissariat slaughtered" were quoted at R 20 (£1 6s $8 d$ ) in November, rose to R 22 ( $£ 1984 d$ ) in December, and maintained at R 25 ( $£ 11384 d$ ) from January until the close of the year, a rate R2 ( $288 d$ ) to R3 (48) ligher than that obtained twelve months earlier.

Jute.- Raw jute has in the current year been supplanted by raw cotton as the most important single article of exportation. In 1909-10 the exports of raw jute, which in 1906-07 represented 32.9 per cent of the total value of Indian raw produce, in 1907.0823 .6 per cent and in 1908-09 29.6 per cent, fell to 18.1 per cent.

In a normal year practically the whole of a season's jute comes into commercial consideration in one official year, but in accordance with the custom of the trade, the figures of home consumption and of exports in the table below are for the twelve months ending June 30th. The estimates of area and outturn are from the Government final forecasts. The figures for the last five years, have been as follows:

| Harvest. | Area Acres | $\begin{gathered} \text { Onttorn } \\ \text { Bales } \\ \text { (of } 400 \mathrm{lbs} \text { ) } \end{gathered}$ | Statistical year | Estimated <br> Indian conenmption Bales (of $4,0 \mathrm{lbs}$ ) | $\begin{gathered} \text { Exporta } \\ \text { Bales } \\ \text { (of } 400 \mathrm{lbs} \text { ) } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1005 | 3,128,000 | 8,088,000 | 1905-06 | 4, 040,000 | 4,202,000 |
| 1906 | - 3,453,000 | 9,127,000 | 1906-07 | $3,432,0110$ | 4,580,900 |
| 1907 | - 3,974,000 | 9,518,000 | 1907-08 | 3,763,000 | 4,300,500 |
| 1008 | - 2,557,000 | 6,390,000 | 1908-09 | 3,696,200 | 4,655,600 |
| 1909 | - 2,776,000 | 7,207,000 | 1909-10 | 4,992,900 | 4,016,000 |

The country consumption of jute outside the mills is assumed to be in the neighbourhoor of 5 lakhs of bales a ycar. Adding this to the total of the last two columns in the table above and comparing the figures thus obtained with those of the forceasts, it will be found that an excess of nearly 7 lakhs of bales in 1905-06 is made by an adverse balance of approximately the same amount in 1900-07. In 1907-08 the aggregate total is only 85 lakhs of bales as compared with the forecast estimate of 98 lakhs, but there was a very large quantity held up at the end of that season, variously estimated at from 10 to 25 per cent in the principal jute-growing districts, owing to the sudden fall in prices, and the carry-over may be as much as 12 lakhs of bales. The harrests of 1908 and 1909 were clearly much underestimated. With the credit balance above assumed from the 1907-08 season, there are large differences of 12 and 17 lakhs of bales still to be accounted for. In 1908 the harvest was unusually late and the outturn much better than seemed probable when the final forecast was issued, and this made good some portion of the deficit. There has been a disposition in some quarters to regard the assumed "normal" outturn of three bales to the acre as below the mark, but the acreage figures contain much greater possibilities of error, and to the extent that they depend upon comparisons with those of previous years, a mistake once made is the more easily perpetuated. The total acreage in 1909 may have been correctly gauged as approximately the same as in 1008, but if the shrinkage in the latter year due to the fall in prices and the counter attractions of rice growing was
orer-estimated, the calculation of outturn for both seasons is affected. The trade is probably correct in assuming that the area under jute in 1908 exceeded three million acres.

The folloring statement shors the price of jute per bale of 400 lbs in each of the fire prerious years and the first reek of each month of 1909-10:

Prices fell steadily from March until July, when they touched bottom level at Z 30 ( $£ 2$ ) per bale, but in August and September upon reports from the jute growing districts of restricted sowings and inclement weather there was a slight recovery. Prices dropped, however, again in December, as the full extent of the new crop began to come into sight, and the year closed with buyers offering $\mathbb{Z 3 2}$ ( $£ 2288 d$ ) per bale. The average rate for Calcutta shipments during the year was P 35 ( $£ 2688 d$ ) as compared with fl 38 ( $£ 21088 d$ ) in 1909-09. There were renewed complaints from Dundee of watering by native balers and heary allowances were also claimed in respect of quality, and sinse the year closed the 'guarantee' clause in respect of 'substitute' marks has caused a deadlock in that considerable branch of business.

A record of the export trade which is maintained in cwts (l iwt $={ }^{2} 28$ of a bale) for the last five official years is shown in the following statement, the unit being 1,000:

In 1909-10 the quantity exported was less by $3,271,540$ owts or 18.3 per
 or 23.9 per cent, the decline in specific value in 1909-10 being 7 per cent.

During the year under review the United Kingdom tock 5,952,049 cwts or 712,813 cwts less than in 1908-09, her share being $40 \cdot 7$ per cent of the whole. Germany took $3,264,600$ cwte or $22 \cdot 3$ per cent of total exports, which is 425,637
cwts less than in the previous year. The United States' demand fell from $3,336,060$ to $1,428,615 \mathrm{cwts}$ or 9.8 per cent as against 18.7 per cent of the total in 1908-09. France took $1,666,283$ cwts or $11 \cdot 4$ per cent, Italy 726,089 cwts or 5 per cent, Austria-IIungary 703,446 cwts or 4.8 per cent, "and Spain $442,468 \mathrm{cwts}$ or 3 per cent, of the total.

Calcutta shipped $91 \cdot 5$ per cent and Chittagong 8 per cent of the total as compared with $88 \%$ and 11.1 per cent respectively, the balance of less than one per cent being accounted for by shipments of Bimlipatam jute (Hibiscus Cannalinus) from Madras ports.

Seeds, a class which consists almost entirely of oil-seeds,* are from a commercial point of view only less important than food grains and cotton, and represent $22 \cdot 4$ per cent of the entire exporis of Indian raw produce. In 1000-10 the volume of trade amounted to $27,146,688 \mathrm{cwts}$ valued at $\mathrm{R18} .73$ crores ( $£ 12 \cdot 18$ millions) as against $16,2 \cdot 42,695$ cwts of the value of $\mathrm{Zl11} \cdot 68$ crores ( 87.8 millions) in 1908-00. This marks an abnormal increase of $10,003,093$ cwts or $67 \cdot 1$ per cent in quanity and of 77.05 crores ( $£ 47$ millions) or $60 \cdot 4$ per cent in value, and a slight decline of 4.2 per cent in specific value. 'The Indian oil-seeds crop of 1907-08 which came into statistical consideration in 1908.09 suffered so greatly from adverse seasonal conditions that it is preferable to compare this year's figures with those for the previous normal year 1907-08, in which 23,184,819 cwts valued at R16.81 crores ( $£ 11.2$ millions) were exported, the rise in 1909-10 being one of $3,961,869 \mathrm{cwts}$ or $17 \cdot 1$ per cent in quantity and $\mathrm{fl} \cdot 91$ crores ( $£ 1 \cdot 27$ millions) or $11 \cdot t$ per cent in value. The volume exceeds by one per cent the enormous figures for $1001-0$ j and the prico per unit has risen about 30 per cent since then.

The total figures for the last five years are shown below, the unit being 1,000:-

|  |  | Cuts | $R$ | £ |
| :---: | :---: | :---: | :---: | :---: |
| 1005-06 |  | 17,576 | 10,60,92 = | 7,073 |
| 1006-07 | - | 19,736 | 13,02,17 | 8,681 |
| 1007-08 | . | 23,185 | 16,81,52 | 11,210 |
| 1008-09 |  | 16,243 | 11,67,81 | 7,785 |
| 1000-10 | - | 27,1.17 | 18,72,62 | 12,484 |

The quantities and values of the principal descriptions of seeds exported are shown below, the unit being 1,000:

|  | 1907-08 |  |  | 1008.09 |  |  | 1909-10 |  |  | Percentage (ralues) to exports of |

|  |  |  |  |  |  |  |  |  | Total | 81.7 |

The provincial distribution of this trade is of interest. Bombay shipped $13,973,530 \mathrm{owts}$ or $51 \cdot 5$ per cent with a value of $\nexists 9 \cdot 09$ crores ( $£ 6 \cdot 06$ millions), Sind $5,161,008$ owts or 19 per cont with a value of Z 3.55 crores ( $£ 2.37$ millions), Bengal 4,400,413 cwts or 16.2 per cent with a value of $\mathrm{f3} \cdot 47$ crores ( $£ 2 \cdot 31$
millions), and Madras $3,330,19 \mathrm{~S}$ erts or $12 \cdot 3$ per cent, ralued at $\mathrm{R} 2 \cdot 49$ orores ( $£ 1 \cdot 66$ millions). The percentages of increase were 53.7 in the case of Bombay, $206 \cdot 1$ in Sind, 464 in Bengal, and 54 in Madras.

The largest item in the class is rape and mustard. The crop ( 683,000 tons) of the season 1907-0S was much below the arerage and exports during 1905-09 were consequently restricted. The season 1908-00 was farourable and both the area and outturn greatly exceeded the totals of the previous year. Abundant supplies in India and the continued competition of Japanese seed and oil lowered prices, the decline in specific ralue declarel being one of 17.7 per cent, while the quantitative expansion in exports was as much as 139 per cent. The nem crop of $1909-10$ was estimated at $1,222,700$ tons as against 957,500 tons in the preceding year, the increase being 235,200 tons or $23 \cdot 8$ per cent, which affords prospects of even larger exports in the current year, but at a lower range of prices. The largest buyers of rapesced are Belgium ( $\mathrm{f} 16 \cdot 06$ lakhs $=£ 1,113,700$ ), Germany ( $\mathrm{fl} 13 \mathrm{~S}^{2} \cdot 2$ lakhs $=£ 021,300$ ), France ( $\mathrm{m} 95 \cdot 65$ lakhs $=£ 637,700$ ), and the United Kingdom (R35.98 lakhs $=£ 239,900)$.

The trade in Linseed, which was greatly restricted last year owing to poor crops in 1907-0S, rerived in 1909-10, the exports shewing a rise of 45.7 per cent in quantity and 53.6 per cent in ralue, which resulted in an adrance of 5.4 per cent in specific ralue. The hardening of the price of linseed in spite of increased supplies of the Manchurian soya bean has been one of the features of the year's trade. The total receipts of seed in Great Britain in 1909 amounted to $1,700,000$ quarters only, as compared with the normal absorption of about $2,000,000$ quarters, in spite of larger shipments from India. Russian exports were in defect, as well as those from the Argentine, and the latter's exportable surplus in the current year is likely to be much lower than the original estimate. The rise in price in London for linseed oil spot per ton of over $£ 16 \mathrm{i}$. 3 cr extent independent of the rise in the price ( $£ 2688 a$ ) complaiu crushers have found soya bean crushing so much more remu lowances complai there is an actual shortage of supplies. The Imperial forectowances $009-10$ gare an estimated outturn of 427,600 tons as against 297,700 tons $1908-09$ and 163,500 tons in 1907-08. Linseed goes chiefly to the United Kingdom ( $7158 \cdot 40$ lakhs $=£ 1,056,000$ ), France ( $\mathrm{Z} 01 \cdot 98$ lakhs $=£ 613,200$ ), Italy ( Z 44.32 lakhs $=£ 295,500$ ), Belgium ( $\mathbb{R} 39 \cdot 43$ lakhs $=£ 263,000$ ), and Germany ( $\mathbb{Z} 31 \cdot 25$ lakhs $=£ 208,300)$.

The sesamum crop of the season 1909-10 amounted to 516,000 tons, or 58,700 tons more than in the previous year, and the exports increased by 80 per cent in quantity and 63.5 per cent in value, which implics a fall of $9 \cdot 2$ per cent in specific value. Sesamum goes mainly to France ( $\mathbb{Z 1 1 4 . 8 7}$ lakhs $=£ 765,800$ ), Belgium ( $\mathrm{H} 66 \cdot 25$ lakhs $=£ 441,700$ ), Austria-Hungary ( $\mathrm{R} 37 \cdot 22$ lakhs $=£ 248,100$ ), and Germany ( $\mathrm{R} 21 \cdot 78$ lakhs $=£ 145,200$ ), Italy and Egypt coming last with $\mathrm{Zl7} \cdot 30$ lakhs ( $£ 115,300$ ) and $\mathbf{~} 4.62$ lakhs $(£ 30,800)$ respectively.

Cotton seed has beaten the previous record of 1906-07. The largest quantity exported in any single year was $5,649,817$ cwts in the year under review, and the value advanced from $\mathrm{R131} \cdot 27$ lakhs ( $£ 875,100$ ) to $\mathrm{Z} 203 \cdot 18$ lakhs ( $£ 1,354,500$ ), representing an increase of 53.4 per cent in quantity and 54.8 per cent in value. Apprehension of a serious shortage of raw material as the
result of a small cotton crop further stimulated speculation in America and a 'corner' in Egypt raised prices considerably higher than the statistical advance of less than one per cent in specific value suggests. The United Kingdom took $5,402,815$ ewts or $95 \cdot 6$ per cent of the total, France 184,024 cwts or $3 \cdot 2$ per cent, and Egypt a negligible quantity of 555 cwts. In addition to the above totals it is believed that the volume of exports viá Marmagoa was very considerable.

There were some small and intermittent shipments of cotton seed oil reported, but in the absence of an established demand at remunerative rates for the cake either as a cattle-feed or manure this line is not likely to be persevered with. An attempt is being made at Cawnpore to create a demand for the oil as a ghi substitute, and successful experiments with cotton seed flour in conjunction with wheat for bread making are reported from America.

The exports of Castor seed rose by $15 \cdot 2$ per cent in quantity and $19 \cdot 1$ per cent in ralue, there being a rise of $3 \cdot 4$ per cent in specific value. The United Kingdom took more than half of the total, P 68.23 lakhs ( $£(54,000$ ), Belgium R18•55 lakhs ( $£ 123,700$ ), France R16:56 lakhs ( $£ 110,400$ ), Italy R15.42 lakhs ( $£ 102,800$ ), and Germany coming last with $\nexists 5 \cdot 46$ lakhs ( $£ 36,400$ ).

The exports of poppyseed rose by 8 per cent in quantity but fell by 2.5 per cent in value, there being thus a fall of 9.7 per cent in specific value. The chief purchasers are France ( $\mathrm{R} \cdot \mathbf{5} \cdot 78$ lakhs $=£ 305,200$ ), Belgium ( $\mathrm{R} 21 \cdot 7 \mathrm{I}$ lakhs $=£ 145,000$ ), and Germany ( $\mathrm{R} 11 \cdot 25$ lakhs $=£ 75,000$ ).

The trade in groundnuts (known as pea-nuts in America) has shewn a marked revival from $1,781,8: 49$. ewts and $\mathbb{Z 1 3 5} .05$ lakhs ( $£ 900,300$ ) to $3,243,16 \mathrm{c}$ cwts and $\mathbf{R 2 4 7}$ lakiss ( $£ 1,647,000$ ). The exports thus increased by 82 per cent in quantity and 8.9 per cent in value, the specific value remaining practically constant. The Indian crop of the season 1009.10 was returned at 413,700 tons of nuts in shell as against 484,700 tons in the previous season. Besides the direct exports from India noticed above, the French port of Pondicherry conducts a large proportion of the business in groundnuts as will be seen from the appended figures as far as available now :

The destination of India's exports is chiefly Marseilles which accounted for $82 \cdot 1$ per cent of the trade last year, owing to increasing demands upon France - for the oil from the United States.

Under other seeds, mowra and tea are importznt. The former was valucd at R .4671 lakhs ( $£ 311,100$ ) and the latter at $73 \cdot 72$ lakhs ( $£ 25,000$ ). Nearly all the mowra sced went to Germany, France, and Belgium, and of tea seed Calcutta shipped 1,083 cwts and 1,066 owts to Java and Ceylon respectively.

Silks.-The prico of raw silk from April until Decomber continued very low owing to uncertainty as to the terms of the new American tariff, the exceptional crops in Asia gencrally, and particularly in Japan, and the stagnation of trade in the United States. Tusser silks alone continued firm. The year's trading has established that, in spite of the large European consumption, Japan as producer and America as consumor are the dominating factors in the market. The prices in London of Japan silk continued firm at 168 cd per lb until Fobruary, whon it declined to $16 \mathrm{~s} 3 d$-a quotation
which is still naintained. The production of artificial silk on a commercial scale, chiefly from cotton cellulose, is inerasing, the estimated world's output in 1009 being $3,000,000$ kilos as compared with $23,500,000$ kilos of natural silk.

India now occupies a very modest position as an exporter, and her outside requirements are slightly greater than her shipments, though the latter in the year under review advanced from $1,533,64 t$ to $2,075,612 \mathrm{lbs}$ or by 13.2 per cent. The ralue, however, receded from f 5405 lakhs ( $£ 360,300$ ) to R 50.76 lakhs ( $£ 335,400$ ), or by 61 per cent, which is equivalent to a fall of about 17 per cent in specific ralue. In reeled mulberry silk there was a rise of 1.9 per cent in arerage value, but exports declined by $15 \cdot 2$ per cent in quantity from 565,403 to $479,647 \mathrm{lbs}$ and by 13.5 per cent in value from $\mathrm{f} 45 \cdot 13$ lakhs ( $£ 300,900$ ) to $\mathrm{R} 39 \cdot 04$ lakhs ( $£ 260,300$ ). Bengal's consignments of reeled silk, both mulberry and wild, dropped from $453,128 \mathrm{lbs}$ and $\mathrm{f} 3 \pm 06$ lakhs ( $£ 227,000$ ) to $319,702 \mathrm{lbs}$ and R 23.01 lakhs ( $£ 153,400$ ), the arerage ralue per ${ }^{1} \mathrm{~b}$ being $777-3-2\left(9 s 7 \frac{1}{6} d\right)$. Bombay's trade was reduced to a negligible quantity ( 100 lbs ralued at $\mathrm{R} 300=£ 20$ ). The decline in the Bengal trade was one of 29.4 per cent in quantity and $32 \cdot 2$ per cent in value.

The destinations of reeled silk (mulberry and wild) exported during the last three years were as follows :-

|  | 1907.08 |  |  | 1908-09 |  |  | 1909-10 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | lbs | 17 | 6 | $\overbrace{\text { lbs }}$ | R | 6 | lbs | R | 6 |

The exports of waste silk (chasam), of which nearly 40 per cent was wild silk, increased in quantity from $1,182,691$ to $1,455,5.48 \mathrm{lbs}$ and in value from Z 7.67 lakhs ( $£ 51,000$ ) to R 10.06 lakhs ( $£ 67,000$ ). The average declared value per lb was therefore 10.8 annas (or pence) as compared with 10.4 annas (or pence) in 1908-09.

The exportation of Cocoons, of whicl $54 \cdot 25$ phaient was wild, rose to
 in the previous year. The average value is $15 \cdot 96$ annas (or pence) as against $15 \cdot 45$ annas (or pence) per lb in 1908-09.

Teak timber-The trade has not yet recovered from the depression of 1908-09. The exports of teak advanced, it is true, by 30.9 per cent from 27,214 to 35,628 cubic tons and in value by $34 \cdot 9$ per cent from R $40 \cdot 19$ lakhs ( $£ 268,000$ ) to $\mathbb{Z} 4 \cdot 2 \pm$ lakhs ( $£ 361,600$ ). The increase is one of 8,414 cubic tons and \#14.05 lakhs ( $£ 93,700$ ). Continued short supplies in Europe have driven up prices, however, to a level which has curtailed considerably the employment of the timber for naval construction and threatens to extinguish this special demand altogether. The average price in Calcutta of teak (selected Indian, 1st class) per ton of 50 cub. ft. advanced from $\mathrm{R120-Zl} \mathrm{I25}$ ( $£ 8$ to $£ 8688 \mathrm{~d}$ ) to \#124-Z120 (£8 58 $4 d$ to $£ 8128$ ) during the year of report. The increase in the shipments coastwise from Burma to India proper bas been elsewhere referred to.

The value of Sandalwood, which reached f12.07 lakls ( $£ 80,500$ ) in 1907.08, bas declined from R10.35 lakhs ( $£ 69,000$ ) in 1908-09 to $\mathrm{f7} \cdot 46$ lakhs ( $£ 50,000$ ) in 1909-10, Germany and France taking respectively R1.78 lakhs ( $£ 11,800$ ) and $\nexists 77,000(£ 5,130)$ as against $\mathbb{Z 3} \cdot 77$ lakhs $(£ 25,100)$ and $\nexists 2 \cdot 38$. lakhs ( $£ 15,800$ ) in 1908-09. In the former country the extraction of sandal
oil has proved so unprofitable that several firms have given up the business altogether. Other countries interested are the United States ( $\mathrm{P} 2 \cdot 14$ lakhs $=£ 14,300$ ), the United Kingdom ( $\mathrm{R} 90,000=£ 6,000$ ), and Egypt ( $\mathrm{R} 75,000$ $=£ j, 000)$. The bulk of the exports are from Mysore. The Mysore Darbar in 1908-09 derived no less than $\mathrm{P} 10 \cdot 53$ lakhs $(£ 70,200)$ from the sales of sandalwood.

Wool.-The world's woollen trade has recorered more quickly than the cotton trade from the results of the American panic in 1907. The price of the raw material has not advanced disproportionately to that of manufactures, but both have risen steadily in spite of a record Australian 'clip,' as the result of increased consumption on the Continent and a particularly strong American demand. The exports of wool from India increased from $43 \cdot 4$ to 59.8 million lbs and the value rose from $\AA 208 \cdot 37$ lakhs ( $£ 1,380,000$ ) to $\mathbb{Z 2 8 5 \cdot 7 7}$ lakhs ( $£ 1,005,100$ ). The increase is one of 38 per cent in quantity and of nearly $37 \cdot 1$ per cent in total value, the average value having fallen slightly owing to abundance of supplies. The United Kingdom took $7277 \cdot 63$ lakhs ( $£ 1,851,000$ ) against $\mathrm{R} 20 \mathrm{t} \cdot 68$ lakhs ( $£ 1,364,500$ ) in 1908-09. The United States took $\not \mathrm{f6} 9$ lakhs ( $£ \pm 6,000$ ) against $\mathcal{R} 2 \cdot 60$ lakhs ( $£ 18,000$ ) in $1908 \cdot 09$, while shipments to Japan are negligible. Some of the wool dealt with in these figures comes from begond the land frontiers of India; but the bulk of arrivals from Afghanistan viá Chaman and Killa Abdullah are recorded on shipment at Karachi as reexports. In 1009-10 the total re-exports by sen were $5,154,040 \mathrm{lbs}$ valued at fie $8 \cdot 8$ lakhs ( $£ 102,000$ ) against $4,904,593$ lbs valued at $\mathbb{7} 27.91$ lakhs ( $£ 186,000$ ) in 1908-09, of which practically the whole was consigned to the United Kingdom. There was, it will be seen, a slight rise in specific value. Ihe price of wool in Karachi was $\not \mathrm{Z18}(\mathfrak{£ 1 4 s )}$ per maund in April 1909 and $\not \approx 24$ ( $£ 1$ 128) per maund in March 1910.

The exports of principal raw materials other than those noticed in the foregoing paragraphs hare been in the last three years as follows:

|  | 1007-08 |  | 1903-09 |  | 1909-10 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | £ | 12 | ¢ | 7 | £ |

| Ricebran | 87,82,418 | 585, 195 | 64,01,973 | 436,798 | 66,65,7 79 | 44,385 |
| Juleatono | 9,84,845 | 65,656 | 10,68,951 | 71,323 | 10,72,369 | 71,491 |

Of these oilcakes, ricebran, hemp, and animal bones are relatively the most important items. The exports of oilcalses, both for fodder and manure, declined by $7 \cdot 4$ per cont from $\mathbf{R 8 9} \cdot 64$ lakhs ( $£ 597,600$ ) to R83 lakhs ( $£ 5.53,000$ ). Fodder oilcako, which chiefly goes to the United Kingdom, Germany, and Ceylon, amounted to $1,430,141$ cwts valued at $754 \cdot 83$ lakhs ( $£ 305,500$ ) against $1,457,115$ ewts valued at R58.04 lakhs (£301,000) in 1908-00, marking a fall of 1.8 per cent in quantity and 6.5 per cent in value. Oilcakes of eastor and groundnut seeds for manurial purpose foll by $13 \cdot 7$ per cent in quantity and $9 \cdot 1$ per cent in value to $39,24 j$ tons with a valuo of f 28.17 lakhs ( $\mathrm{E} 187,800$ ). Ceylon and the United Kingdom took over f0 lakhs ( $£ 60,000$ ) each, and Germany ¥3.01 lakhs (£24,000). Ricebran increased by $\mathrm{f} 2 \cdot 64$ lakhs $(£ 17,600)$ or $4 \cdot 1$
per cent to $\mathrm{E} 66 \cdot 66$ lakhs $(£ \pm 4,400)$, but complaints of adulteration affected the lerel of prices. Hemp, chiefly S:mn, maintained the level of the previous year with a ralue of R 59.5 T lakhs $(£ 397,000)$, of which the United Kingdom took R31.59 lakhs ( $£ 210,100$ ) and Belgium RS' 6 lakhs ( $£ 58,500$ ). Animal bones, which are also: shipped for manurial purposes chiefly to Belgium, France, Australasia, the United Kingdom, and Germany, amounted to Ra3.09 lakhs ( $£ 355,000$ ), showing an increase of $\mathrm{Rl} \cdot 9$ lakhs $(£ 12,700$ ) or 3.6 per cent orer the figure for 190S-09.

The trade in horn and hornmeal rose by f 3.74 lakhs ( $£ 25,000$ ) or 23.9 per cent. The rolume of bristles and fibre also increased by $\mathrm{R} 2 \cdot 60$ lakls ( $£ 17,700$ ) or 13 per cent to $\mathrm{R} 23 \cdot 1 \mathrm{~S}$ lakhs ( $£ 154,500$ ). This head is almost entirely made up of pigs' "bristles," the trade in which is divided betreen Bengal ( R 6.37 lakhs or $£ 42,500$ ) and Bombay ( $\mathrm{Rl} \cdot 98$ lakhs or $£ 13,200$ ), and palmera fibre, mostly exported from Madras Ports (R14:75 lakhs or £95,300).

From an industrial point of vier the remaining three articles, viz., mica, lac, and caoutchouc, deserre special notice. The exports of mica, which hare dereloped in connection with electrical industries, rose by 7,571 ewts or $28 \cdot 7$ per cent and by $\mathrm{f} 4 \cdot 22$ lakhs ( $£ 28,100$ ) or $29 \cdot 2$ per cent to 33,063 cwts and $\mathrm{P} 23 \cdot 2 \mathrm{~F}$ lakhs ( $£ 155,000$ ). The average ralue fell from $\mathrm{P} 72-1-5$ ( $£ 41681 \frac{1}{2} d$ ) to R6S-7 annas ( $£ 41183 d$ ) or by 5 per cent. The value of crude lac, which is also concerned in the electrical industry, dropped by $\mathbf{\# 3} 5$ lakhs ( $£ 23,300$ ) or 59.4 per cent to F 2.38 lakks ( $£ 15,900$ ), the quantity showing a decrease of $1,160 \mathrm{cwts}$ or 13.5 per cent. The declaral ralue fell from $\mathbb{Z 6 8 - 3}$ annas ( $£ 410811 d$ ) to $\mathrm{R} 31-1 \pm-5$ pies ( $£ 2286{ }_{2}^{1} d$ ) or by 53.2 per cent. In caoutchouc the quantity declined by 18 per cent to 1,011 cwts, but the ralue rose by $59 \cdot 8$ per cent to R $5 \cdot 10$ lakhs ( $£ 31,000$ ), marking a rise of 94.8 per cent in specific ralue, i.e. from P162-7 annas (£10 16s 7d) to to $\mathrm{Z} 316-8$ annas ( $£ 212^{28}$ ) per cwt. This is in sympathy with a great rise in price of Para rubber which governs this market.

The exports of Jadestone mostly to Hongkong continue steady at $\mathrm{Pl} 10 \cdot 72$ lakhs ( $£ 71,500$ ), though there was a decline of 18.8 per cent in specific value.

## VII-ARTICLES MANUFACTURED AND PARTLY MANUFACTURED

The statement below shows for the past three years the comparative values of each principal class of manufactures, the unit in all cases being 1,000:

The most noticeable variations have already been noted in the general summary of trade on page 6. The suhjoined paragraphs attempt a detailed examination of the trade in these articles. It should not be assun.ed that this class is a complete measure of India's industrial export, as many articles, which are manufactured or partly manufactured, are included in special classes of the trade accounts. For example, milled rice, wheat flour, coffce,
and tea, come under "Articles of fool and drink," indigo under "Dyes," and vogetable and minemal oils in the group "Oils."

Cotton manufactures represent 31.3 per cent of the total value of Indian manufactures exported and 65 per cent of the whole export trade. At the beginning of the official year the outlook was not on the whole discouraging. The China yarn market was fairly brisk, and the internal demand for cloth owing to a busy marriage season after an unpropitious year promised well and both weavers and spinners might have anticipated a fair margin of profit, had there not been an altogether unprecedented rise in the price of the raw material. In August the Dwarkadas insolvency coming upon a dull market and risiug prices for raw cotton threatened to cause a panic in Bombay, and though the exceptional volume of the new Indian crop afforded some relief, spinners complained that prices of yarn did not respond proportionately to those for the raw material and forward sales even at unremunerative rates were restricted as buyers regarded them as inflated. Some negotiations were made with a view to working short time in Bombay but the number of competing interests were too great to enalle any formal agreement to be arrived at.

In the following table an attempt is made to illustrate the advance in the price of raw cotton in India and in Liverpool comparel with the rates prevailing for yarns and piecegoods in Bombay; but it must be remembered that spinners have generally bought cotton some time before at lower rates than prevail when their yarn or cloth is for sale and calculations made on a rising market are liable to be fallacious if this interval of time is forgotten.

The Indian mill industry is still suffering from the effect of bumper profits in 1904-05. The number of mills has increased in the last three years from 293 to $2: 36$, of spindles from $5,690,994$ to $6,068,464$, and of looms from 65,307 to 78,808 . The average production of yarn per mensem, howerer, has fallen from $53,191,2(60$ to $52,280,373$ lhs. The joint stock capital engaged in this industry is now Ri5.29 crores ( $£ 10.19$ millions) as compared with fly 03 crores ( $£ 0 \cdot 35$ millions) in 1907-08. Capital has increased by 9 per cent, spindles ly $6 \%$ per cent, and looms by 908 per cent, while the production of yarn has decreased by 1.7 per cent.

The following statement shows for each of the last five years the sjimning and weaving plant in position, the production of yarn and of eloth, and the average monthly production per spindle and per loom:-

|  | Spindles | Yarn production | Arerage mouthly production por spiadlo | Looms | Cloth production | Average monthly pruduction per luom |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No | 1 lb | lbs | No | lbs | Jtha |
| $1005 \cdot 10$ | 8,2:3,10) ${ }^{2}$ | 680,918,581 | $10 \cdot 8$ | 60,910 | 163,8\%0,19 5 | 268 |
| 1808-07 | 6,480,60.4 | 053,700,480 | $0 \cdot 9$ | 58,210 | 165, 567,858 | $3 \mathrm{B7}$ |
| 100\%-09 | 5,646,90] | (688,3:15,115 | $9 \cdot 3$ | 6.4,330 | 189,431,7:9 | 2.45 |
| 1908.00 | 6,875,708 | -657,685,169 | $9 \cdot 3$ | 72,031 | 192,36.4,497 | 221 |
| $1000 \cdot 10$ | 0,068,8.18 | 627,86.1,470 | 8.6 | 78,898 | 3:8,723,237 | 2.42 |

There is some unavoidable overlapping in the figures in this table because some of the yarn produced in Indian mills is afterwards woven into cloth.

The total decrease in garn production was 30.2 million lhs, while the production of eloth exceeded the record figures for $1907-08$ by $155,036,000$ rands or $19-2$ per cent. Of the total production the Bombar mills are responsible for nearly six-serenths.

In the last three rears the number of looms in Japan has increased from 9,250 to 11,029 , the output for 1909 being $45,500,000 \mathrm{lbs}$ in roumd figures, which gires an arerage output per loom per month of 344 llh .

The following statement shows the quantities and ralues of yarn and pieceroods exported in the last fire rears, the unit being 1,000:

If the internal absorption were known to be greater, the falling percentages of exports to total production would not proroke comment, but there is reason to think that the risible supplies of both yarn and piecegoods have increased during the last trelre months and serve to keep prices down at their present unremunerative level.

The exports of yarn fell by 3.4 per cent, while those of piecegoods increased by 20.7 per cent, and in ralues yarn (which represents 81.5 per cent of the whole) rose by R $2,55,5 S 7(£ 19,039)$ or $\cdot 3$ per cent to $R 970 \cdot 01$ lakhs ( $£ 6,473,000)$. The exports to China represent $87 \cdot 2$ per cent of the total value as against $85 \cdot 2$ per cent in $1908-09$, and in spite of a brisk demand the values fell by
 quantity of rarn shipped from the Tnited Kingdom to the Further East in the calendar year 1909 was 6.88 million llss as against 8.99 million lbs in 1908.

On the other hand, India's exports of yarn to countries other than China rose by R10 31 lakhs ( $£ 69,000$ ) to R121:27 lakhs ( $£ 828,500$ ). But the figures relating to the Straits Settlements, which shew an increase of $\mathrm{fl} \cdot 6$ lakhs ( $£ 30,670$ ) to R 29.58 lakhs ( $£ 197,000$ ), cannot be accurately distributed.

The trade with the Lerant and Black Sea, which in 1908-00 had amounted to $\overline{7}, 450,54(\mathrm{llh}$ with a value of R 28.83 lakhs ( $£ 102,200$ ), expanded further to $80051,912 \mathrm{lbs}$, valued at R 31.38 lakhs ( $£ 229,200$ ), but against this must le set off a decline in the shipments to Turkey in Europe from 4.54,2.10 Hes with a value of R1:53 laklis ( $£ 10,200$ ) in $1908-09$ to 52,810 ibs, valued at R21,216 ( 11,414 ). Egypt took $2,000,916 \mathrm{lls}$, as against 2,059,420 llss in the previous trelve months.

The trade with Europe has fallen from $20,171,357 \mathrm{llb}$ in 1907.08 to $5,006,3 \cdot 16 \mathrm{lb}$ in $1908-09$ and to $1,782,010 \mathrm{lbs}$ in 1909-10, and is not likely to recover while the price of the raw material continues so high.

As regards piecegoods the increase in value was one of 19.8 per cent or \# 33.79 lakhs ( $£ 220,300$ ) to Z 20415 lakhs ( $£ 1,361,000$ ), the specific vaiue declining by 46 per cent.

Grey goods represent 37.7 per cent of the value of piecegoods; and in that branch the trade increased by 216 per cent in quantity and 21 per cont in value, bringing the total to $52,970,078$ yarls and H 76098 lakhs ( $£ 513,200$ ) with a
a specific value of :s per cent lower than in the previsus year. The shipments of grey grools to China adranced from $3,647,304$ yards and $2 \mathrm{f} 40 \cdot 3$ lakhs ( $£ 32,900$ ) to $5,253,114$ yards and R711 lakhs ( $£ 47,600$ ), the increase being 449 per cent in quantity and $4: 8$ per cent in value. In 1909 the shipments of plain cotton cloth from England to the Lurther East amounted to 70505 million yards as compared with $645 \cdot 14$ million yards in 1908. The principal foreign markets for [ndian cloth are East Africa (19,423, 8 (6 yards), Asiatic Turkey ( $8,(034,4,534$ yards), and Aden ( $8,227,013$ yards).

Coloured goods ruse to $40,512,913$ yatch, the increase being $6,605,207$ yards or 10.5 per cent.

Dyed and printed cloths go mainly from Madras and Bombay to the Straits, Ceylon, and l'essia; and the shipments in 1909-10 from the two prorinces named had a value of R 50.63 lakhs ( $£ 500,000$ ) and R $30 \cdot 20$ lakhs (£2(62,000) repuctively.

The constwise shipment of Indian piece gosds from Bombay to other provinces rose from $211,951,000$ to $250,080,000$ yards or 21 per cent, the increase in value being $1^{4}$ per cent from R $352 \cdot 7$ lakhs ( $£ 2,351,000$ ) to R 4179 lakhs ( $\mathcal{L}, 751,000$ ).

Prices of T eloth in 1909-10 were slightly below those for the previous year, ranging from $s_{8}^{3}$ annas (or pence) per 1 bin Ipril to $^{9}$ aunas (or pence) in Janmary. Prices of twist 20 per 1 l were considerably higher, the average
 (or pence) in $A_{p}$ ril 1909!.

Jute manufactures continue to fill a very prominent place in the export trale. In $1905-19$ ) they representel 43 of the total value of exports of Indian manufactures. In 190!-10 the percentage rose to 4.9 per cent, though the year was markel ly a further heary fall in the price alike of the raw material and of the mill products. The erection of new and the extension of old factories with the resultant increases in output has not been altogether a healthy growth, and another contributory cause of the present stagnation would seem to lie in the inceresed outturn of reaw jute, which in the three years ending 1905-09) exceeded by some 2 lakhs of bales the aggregate estimated world's absorption for that period. The enormons increase of acreage in 1907.08 was due to the encouragement given to the cultivators by the high prices of the two previous sesoms, and there aro grood reasons for thinking that the fall in 1008-09 was not anything like so great as is shewn in the final furecast of that year, though the price of raw jute had dropped considerably in the meantime.

After eighteen months of curtailed production the Caleutta mills prema. turely, as it would seem, resumed full time on the 1st October, when the Un ted States market began to shew activity and the new Tariff encouraged certain chasses of importations by reductions of duty. But the outlook soon changed and before the close of 1909, s0 per cent of the mills were willing to return tr a 0 -day week. The shortage in the Argentine wheat crop was not made groia by any increased demand for bargiug oilseols, and though a fitful and interm ${ }^{-}$ tent demand enatled some of the mills to keep their stucks low, elearance were for the most part effected at unremmerative motes and the acilud vou... .. trade done would be most mislealing as an index of commercial prespre: A five day week has been agreed to again from the beginning of September until March 1911, but moro heroic measures will probably be necessary before the industry recovers its formor buoyaney.

The following statement shows the growth in the number of spindies and looms in Indian mills in the last six ycars:

|  | Spindess |  | Loums |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Number | Percentage increser | Nunter | Fercentage in:reass |
| 1904505 | +09.170 | S.6] | 19,091 | \$.65 |
| 1905-00 | 453,165 | 10:75 | $21,0 \leq 0$ | 995 |
| 19060 | 520,304 | 14.54 | 25,234 | 15 |
| 1907-13 | 563, ${ }^{\text {a }}$ | S.08 | 27,:+4 | $7 \cdot 75$ |
| 190-0.0? | 607.35s | 5-02 | 20,505 | $8 \cdot 37$ |
| 1909-10 | 606,845 | $9 \cdot 71$ | 32,459 | 991 |

In 18St, when the Indian Jute Mills Association was formed, the number of looms was only 6,337 . The effect of continued depression on the industry mar, to some extent, be gauged by a comparison of the arerage value per R100 ( $\mathfrak{f} 613 \mathrm{~s} .6 \mathrm{l}$. ) of share capital of 3 S representative jute mills. In 1907-0s,
 the rear under review it had fallen to Plll ( $£ 7 \mathrm{lts}$. Sd.).

The following statement shows the value of the exports of various classes of goods, for the last five rears, the unit leing 1,000 :

| Bags |  | 1905.06 | 1:0j-07 | 1907.03 | 19880\% | 1909-10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | 233,3:6 | 257,653 | 293,029 | 300.906 | 364,369 |
|  | - \# | 6,07,54 | 7,34, ${ }^{\text {a }}$ | 8,47.51 | 7,76,65 | 8,60,74 |
|  | =¢ | 4,053 | 4,595 | 5,650 | 5,175 | 5,739 |
| Cloth | ${ }^{\text {Yards }}$ | 655.671 | 696, vis | 789,854 | -69,799 | 910,101 |
|  | , \#t | 6,30.50 | S,25, 57 | 9,69,29 | 7,59,02 | $8,43,08$ |
|  | ( $=$ ¢ | 4203 | -5,506 | 6,462 | 5,260 | 5,621 |
| Falue of allsorts | f成 | 12,44,50 | 15, 11,62 | 18,9,9,76 | 15,73,60 | 17,09,65 |
|  | $\underline{=}$ | 8,299 | 10, 177 | 12,195 | 10,491 | 11,398 |

The exports of lags increased by $63,463,000$ or $21 \cdot 1$ per cent in number, and the value by 12551 lakhs ( $£ 500,600$ ) or 10.5 per cent, the deline in specific ralue being $8 \cdot 5$ per cent.

In Clotin the quantitative increase was one of 170 million yards with a fall in specific ralue of 12.5 per cent, whereas the fall in specific value of raw jute exported was only 7 per cent.

The Cnited States continues to be the largest single buyer of Indian juto fabrics, the bulk of her purchases being in the form of cloth. In 1909-10 she took goods to the value of R617.15 lakhs ( $£ 4,114,300$ ) against $\mathrm{Z} 522 \cdot 95$ lakhs ( $£ 3,456,300$ ) in $1908-09$ equivalent to an increase of 15 per cent. Australasia puiclased bags to the value of R195.04 lukhs ( $£ 1,300,300$ ), an increase of 23.5 per cent in value and 36.6 per cent in quantity upon tho figures for 1908-09. Shipments to the United Kingdom fell from R96.14 lakhs ( $£ 641,000$ ) to R $80 \cdot 19$ lakhs ( $£ 534,600$ ), a decline of nearly 16.4 per cent, and those to Germany fell from R23.93 lakhs ( $£ 159,500$ ) to $\mathbf{\# 1 7} 41$ lakhs ( $£ 116,900$ ). The Egyptian and Turkish demand also decreased. Chile took bags chiefly for the nitrate trade valued at R71.12 labhs ( $£ 474,000$ ), an increase of nearly 53 per cent upon the figures for the previous year. $\Lambda$ remarkable development was in the China trade, the value of shipments thither increasing from $\mathbb{P H} 4 \cdot 4$ lakhs ( $£ 296,000$ ) to $\mathrm{HR} 81 \cdot 15$ lakhs ( $£ 541,000$ ) in connection with the soybean trafic ; but the Straits Settlements figures show a further contraction. Other features of the distribution were increased direct consignments to the West Indies, Java, Cape Colony, and Natal, and decline in those to Indo-China and Siam.

In the exports of cloth the United States took 70 per cent, and consign. ments to the United Kingdom, which are largely for distribution, have recovered
somewhat after a year of slender demand. The value of purelases from the Argentine shows a further fall. In 1907-08 the total was $\mathbb{7 2 4 0 . 9 0}$ lakhs ( $£ 1,606,000$ ) and in 1908-09 2225 lakhs ( $£ 1,500,000$ ). The figures for 1900-10 were only $\mathrm{F172} 28$ lakhs ( $£ 1,148,500$ ). The Australasian requirements were further reduced to $\mathrm{R} 23 \cdot 41$ lakhs ( $£ 150,000$ ), while shipments to China direct rose from $\mathrm{F} 3 \cdot 74$ lakhs ( $£ 25,000$ ) to H 6.39 lakhs ( $£ 42,600$ ).

Sills goods.-The exports of silk manufactures showed a percentage in. crease of $11 \cdot 5$ and amounted to $\$ 8.17$ lakhs ( $£ 54,500$ ), which is still below the level of 1907-08. They consist chiefly of tissues woven in Bengal and Burma from indigenous silks. Elsewhere the trade is concentrated upon internal demand, and at certain centres, such as Madura and Benares, is benefiting from better organization and improved commercial methods.

Woollens.-The export trade in woollen manufactures represents nearly one per cent of the exports of Indian textiles. The value declined by a lakh ( $£ 6,666$ ) to $\mathrm{KP} \cdot 40 \mathrm{O}$ lakhs ( $£ 160,400$ ). Carpets and rugs form 88.5 per cent of the total exports and their value fell by 5 per cent to R 21.34 lakhs ( $£ 142,300$ ). The contraction was due to reluced supplies to the United States and the United Kingdom, accounting for a loss of about P66,500 (£.4,433) each. The share of the United Kingdom, which is the principal purchaser of these goods, was $\$ 16.61$ lakhs ( $: 110,700$ ) or 77.8 per cent, while that of the United States was $\mathrm{R} 2 \cdot 0.1$ lakhs $(£ 10,600)$ or 13.8 per cent.

It is satisfactory, on the other hand, to be able to record steady progress in the outturn of Indian woollen mills during the last four years, as the following table shows:-

Apparel.-The total exports of Apparel showed a small decline of ¥24,237 ( $£ 1,616$ ) or $1 \cdot 4$ per cent and amounted to $\mathrm{Zll} \cdot 47$ lakhs ( $£ 109,800$ ). This head includes Boots and shoes, the trade in which has been steadily declining, the value amounting to $123: 18$ lakhs ( $£ 23,200$ ) as against fl 456 lakhs (£30,100) in 1908-09. Re-exports of foreign boots and shoes, which were imported to the extent of $¥ 27731$ lakhs ( $£ 248,700$ ), amounted to ¥ 35,237 ( $£ 2,349$ ) only as compared with $\not \approx 34,000$ ( $£ 2,267$ ) in 1908-09.

Coir.-The exports of coir matting and other manufactures of coir, the trade in which is almost wholly confined to the Malabar Coast, continue their steady growth. The value amounted in 1909-10 to 7772.86 lakhs ( $£ 485,700$ ), showing an increase of $\mathrm{F} 10 \cdot 11$ lakhs $(\mathbb{L} 67,400)$ or $16 \cdot 1$ per cent over the 1008-09 figure. Of this Germany took $H 21 \div 45$ lakhs ( $£ 143,000$ ), as against R15.3 lakhs ( $£ 102,(000)$ in $1908-09$, the United Kingdoin $¥ 18.76$ lakhs ( $£ 125,000$ ), the United States 12643 lakhs ( $£ 43,000$ ), Holland $\mathrm{R} 6 \cdot 16$ lakh ( $£ 41,000$ ) as against 73.94 lakhs ( $\{9(6,300)$ in $1908-00$, Belgium 76.01 lakhs ( $£ 40,000$ ), and France R503 lakhs ( 1039,500 ).

Hides and skins, tanned, on the average of thre years ending 1909-10 remesented $35 \cdot d$ per cent of the total value of all the hides and skins exportel. Tho leather trade in 1009 continued fairly brisk, though prices by no means corresponded with the high rates provailing for raw hides. As regards India the total exports of tanned hides and skins taken together fell
 exports of tanned hides increased by $8,1.57$ ewts or 5 per cent in quantity and in ralue by 4.75 lakhs $(£ 31,700$ ）or 34 per cent，but the specific value fell br $1 \cdot 3$ per cent，the average ralue being 1250.51 （ $£ 5-7-1 d$ ）per curt as
 on the other hand，again receded，the decline being one of 12,922 ewts or 86 per cent in quantity and $\mathrm{F} 20 \% \mathrm{t}$ lakhs（ $£ 138,300$ ）in value，there being a slight rise in specific value of $1 \cdot 1$ per eent，and the aremure value per ewt
 hides and skins comprise，howerer，so many different descriptions and qualities rarying from year to year that fluctuations in arerage value cannot be regarded with as much reliauce as would be justitied in the case of a single article or a homogencous and constant group．

The following is a statement of the total exprets of the two classes in the last five years，the unit being 1，0：10：－

|  | Tansed Hides |  |  |
| :---: | :---: | :---: | :---: |
|  | Cris So | R | 6 |

| 143 | 17，5；9 | 2，73，23 | 1， S 2， |
| 130 | 16，297 | －2，53，49 | 1，8－3 |

In tanned hides Madras continues to predominate，and her share of total weight exported was orer $8 t$ per cent．Bombay was responsible for practically the whole of the balance．

In tanned skins the share of these two provinces wats 80.4 and 17．t． per cent respectively．Madras tannages command better prices than Bombay， but there is a growing tendency on the part of luyers in Europs to obtain untanned shins as far as possible，owing to the unevenines of Indian con－ signments generally．

The United Kingdom continues to take the greater part of both classes． Her share of the total hides declined from $97 \cdot 2$ to 95 per cent though the quantity increased from 166，414 cwts in 1908－09 to 170，3．15 cwts in 1909－10． In skins her pereentage of the total fell to $77 \cdot 9$ per cent with $101,513 \mathrm{c} \mathrm{\pi ts}$ against 112,902 cuts in the previous year．The United States took $15,659 \mathrm{cwts}$ of skins as compared with $20,259 \mathrm{cwts}$ in the previous year，

Lac．－This market is highly speculative，and violent fluctuations in price are by no means uncommon，though in 1909－10 prices remained at bottom levels practically throughout the year，as the following talle of prices per ewt．in Calcutta for shellac $\hat{y}$ shows：－

The average price was no less than $32 \cdot 8$ per cent lower than in 1908－1 9 ．
India has almost a monopoly of the supply of this article，which is required chicfly for the manufacture of high class varnishes and for insulating purposes in the electrical industry．The more scientific cultivation and harvesting of the crop las been engaging the attention of the Forest Department for several ycars， but unfortunately mueh of the lac comes from forests in Native States where no suitable agency for conservancy or expansion exists．It is also capable of
development as an agricultural product on "ber" or " babul," and some experiments in this direction have been made in Bihar. Stick and seed lac represent the raw material, of which shellac and button lac are the manufactured products, but the distinction lectween the two classes is somewhat unreal and the trade is not so distinct as to justify separate treatment. The figures of quantities and values exported during the last three years are as under:-

|  | 1907.08 |  |  | 1018-09 |  |  | 1009-10 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cwta | $k$ | 6 | Cwis | $k$ | $\ldots$ | Cwts | $k$ | 6 |
| Shellac . | 278,189 | 332.38167 | $=2.215,878$ | 322,9:3 | 2,46,51,3017 | =1,643,400 | 461.056 | $246,42.640=$ | 1,612,843 |
| Button Ine | 39,512 | [4, 80, 459 | 319.632 | 31.415) | 23.33005 | 155,534 | 49.45 | $25.40,259$ | 169,350 |
| Tutal | 317 | 3,74,18.but | 2529,010 | 3-5,3t8 | 2.6086 .312 | 1.798.9:4 | 510511 | $2,71,82,899$ | 1,812 193 |
| $\underset{\substack{\text { Stick } \\ \text { land }}}{\text { aerd }}$ | 20.7.6 | 20,09.50.5 | 137314 | 8,6:3 | 5,88.612 | 30.241 | 7.450 | 2.38319 | 15,888 |

It may be assumed that a given quantity of stick and scel lac yields in the factory hall that quantity of shellac and button lac. The crop which came into sight commereially in 1909 was considerably larger than in 1908, and the statement above shows that the export business was larger in rolume but with a lower range of prices than that of the previous year. The conclusions deduced from the declared vaiues in the case of exports not sulject to duty are somewhat unsafe, and it would appear that the declines in specific ralue which are lased on the totals above given are rather over than under the mark. Taken together the two chasses of manufartured lac increased in quantity by 461 per cent but in value ly only $7 \mathrm{p}^{\mathrm{wr}}$ cent. The proportion of shellac and button lac is on the arerare respectively $81 \div$ and 9.3 per cent of the general total. The volume of stick and seed lae taken together fell by 13.5 per cent and the value by $59 \%$ per cent, equivalent to a loss in specific ralue of 532 per cent.

The principal customers for shello and button lac are the Cnited States with a total of R12 298 lakhs ( $£ 520,000$ ) or 452 per cent, the Tnited Kingdom R 67.76 lakhs ( $£ 151,700$ ) or $9 \pm 9$ jer cent, and Germany f 46.08 lakhs ( $£ 307,000$ ) or 17 per cent.

## TRADE ACCORDING TO COUNTRIES

Appended is a table showing the value in lakhs of rupees and thousands of pounds sterling of the trade in merchandise only (excluding Government transactions) of British India with (1) the Cnited Kingdom, (2) other British Possesions, and (3) Foreign countries separately, during each of the past two years, and the centesimal precentages:

|  | i908.00 |  |  | 1909-10 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Fureigin countries | 86,88'37 | 57,093 | 56.8 | 106,68.65 | 71,12. ${ }^{\text {d }}$ | 568 |
| Tutal | 153,03'8 | 102,018 | 100 | 187,72:59 | 125,150 | 100 |
| Total importa and esporty |  |  |  |  |  |  |
| Unital Kingdom | 112,7.401 | 75,110 | $41 \cdot 1$ | 122,61.5t | 81,414 | 4.8 |
| Other British Ponsessions | 39,40.36 | : 46,309 | 14.4 | 41,046 $1.11,19 \cdots 0$ | 27, 04,081 | 16.3 |
| Fureign countrios | - 122,00 | 81,303 | 4.5 | 111,12:20 | 1,3,081 | 5 |
| Total | 27.4,29.37 | 182,862 | 100 | 40.4,78.34 | 203,189 | 100 |

The total thade with the United Kingdom alranced from R112.7.4 crores ( $£ 6510$ millions) to $1: 21$ crores ( $£ 51 \% 4$ millions), the increase being one of fg 9.57 crores ( $£ 65 \mathrm{~s}$ millions) or 5.7 per cent. The import values declined by fa -72 crores ( $£ 1,513,000$ ) or 3.6 per cent, while the export ralues increased by Rlit 59 crors ( $£ 5.39$ millious) or 341 per cent, the centesimal proportion rising from $\geq+1$ to 263 per cent. Her aggregate share in the total trade fell from $41 \cdot 1$ to $40 \cdot 2$ per cent.

The trade mith British Possessions other than the United Kingdom amounted to $\mathrm{R} 41 \cdot 0 \mathrm{c}$ crors ( $£ 2736$ millions) as compared with $\mathrm{R} 30 \cdot 46$ crores ( $£ 26.31$ millions) in 1905-09. This forms 135 per cent of the total trade, marking an adrance of R159.2t lakhs ( $£ 1,055,000$ ) or 4 per cent orer the figure for the previous year. There was a decline of R717 lakhs ( $£ 478,000$ ) or 7 per cent under imports but a rise of $R 293 \cdot 97$ lakhs ( $£ 1,033,100$ ) or 7.8 per cent under exports. The centesimal rariations are respectively $\mathrm{S} \cdot 1$ and $10 \cdot 9$ per cent, as against $\mathrm{S} \pm$ and $.19 \cdot 1$ in 1905-09.

The trade with all British Possessions represented 53.7 per cent of the whole trade against 55.5 per cent in $1905-00$, though the values rose by 7.5 per cent from R152\% 20 erores ( $£ 101 \not 17$ millions) to R163.66 crores ( $£ 109 \cdot 1$ millions).

The trade with Foreign countries amounted to R141•12 crores ( $£ 91.08$ millions), representing au incease of R19.03 crores ( $£ 12 \cdot 69$ millions) or 15.6 per cent as compared with 190 S .09 . This represents 40.3 per cent of the total trade, in place of 44.5 per cent in the prerious year. Imports declined by R77.07 lakles (£513, 500 ) or 2.1 per cent, but exports rose by P 19.80 crores ( $£ 1321$ millions) or 29.8 per cent, the respective proportions being about the same as in the previous year, namely, 29 and 57 per cent.

The following statement shows India's trade, import and export separatelr, with each principal country other than the United Kingdom, for which figures have been giren above, during the past year, in lakis of rupees and thousands of pounds sterling:

The above figures have been arrived at by the old method of compilation which assigns imports to the country of shipment and exports to the country of discharge declared in the shipping bills, but statistics under the new method in which the country of origin and country of final destination govern the distribution of imports and exports respectively are now available for
the years 1907-08 and 1908-09. Juiging from them the accuracy of the old method is only affected to a vory small degree. Subject to the reservation that the imports from Belgium include a considerable volume of trade with Germany which is shipped from Antwerp, and that the distinction between exports to Hongkong and to China may perhaps not have been always correctly observed, the tables above may be regarded as giving a fairly accurate picture of the distribution of India's foreign trade.

The outstanding feature of the import trale for 1009-10 is the advance of Jara, whose increased consignments of sugar have raised her pereentage of the total from 5.1 to 0.8 per cent, and advanced her place in the list in the space of the last 4 years from fifth to second. The shares of the United States and Japan havo increased from 2.7 and 1.7 to 3.1 and $2 \cdot 1$ per cent respectively. Among Continental countries the combined share of Germany and Belgium shows a fractional decline, and that of Austria-Hungary has fallen from $3 \cdot 2$ to 2.3 per cent. Russia, which stood tenth five years ago with 1.7 per cent, is now represented ly 1 per cent owing to the contraction in her petroleum trade.

U'nder exports, Japan lias gained R $5 \cdot 35$ crores ( $£ 3.57$ millions) with larger shipments of raw cotton, while China lost P 47 lakhs ( $£ 313,000$ ). Their respective shares amounted to $\mathrm{Rl} \cdot \mathrm{j} \mathrm{f}$ crores ( $£ 3 \cdot 36$ millions) and R18.6 crores ( $\mathcal{E} 9 \cdot 4$ millions) in $1009-10$ as compared with $\mathrm{f} 7 \cdot 19$ crores ( $£ .8$ millions) and R1s.13 crores ( $£ 12 \cdot 09$ millions) in 190S-09. Though inereased shipments of jute manufactures and raw hides and skins to the United States of America raised the volume of trade from fl 13.23 crores ( $£ 8.82$ millions) to $1: 1432$ crores ( $£ 9.55$ millions!, her share of the total declined by nearly 1 per cent to 76 per cent. The exports to Belgium and Germany taken together adranced from 14 to 15 per cent with R 28.13 crores ( $£ 18 \% 75$ millions) as against R21-57 crores ( $£ 1438$ millions) in 1908-09.

Taking both imports and exports together, Germany has assumed the first plaee with 7.2 per cent of the total trade, and the new system of registration will further confirm her predominance. Egypt, owing to the elimination of shipments 'for orders' from tho statistics, has dropped bolow Australia, Mauritius, Holland, South America, and Turkey.

## TRADE ACCORDING TO PROVINCES AND PORTS

The import and export trade in merchandise only of each maritime province with forvign countries during the past year is stated below in lakhs of rupees an! millions of pounds sterling, together with the proportionate share (preremit) of each province in the total trade :--

India porsesses a very long seaboard, bul very fow natural harbours, and hence the otherwise astouishing fact that over 90 per cent of her foreign trade passes through five ports, two of which are actually situated at some distance from the sea.

The distribution of thade portwise during the last two gears is given below in iakhs of rupees and thousands of pounds steriing:

|  | 1908-09 |  |  | 1909.10 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 7 | \& | per cent | ft | \& | per cent |
| Caleatta | 1,10,47.99 $=$ | i3,653 | $40 \cdot 3$ | 1,16,50.85 $=$ | i7,672 | 33:2 |
| Bombay | £0,50.51 | 55,003 | $30 \cdot 1$ | [95,07-42 | 63,353 | $31 \cdot 2$ |
| Karachi | 19,92:90 | 13,251 | 7.3 | 81,59•55 | 21,260 | 10.5 |
| Rangoon | 20,23:57 | 14,S24 | s. 1 | $22,71 \cdot 32$ | 15,140 | 74 |

| Other Madras ports | 14,50.17 | 9,665 | $5 \cdot 3$ | 15, 3 23 45 | 10,156 | 5 |
| Chittagong . | 5,83•39 | 3,556 | 19 | $4,90 \cdot 10$ | 3,267 | $\cdot 6$ |
| Total | ,25-16 | 150,157 | 95.6 | $\overline{3,00,07 \cdot 95}$ | 0,0 | 95 |

## CUSTOMS REVENUE

The Tarif Schedule fixing the values of tariff-ratel articles for the assessment to import duty was as usual rerised in December 1909 and the new schedule came into force on the list January 1910.

The valuations of Indian cotton goods for excise purposes were also rerised at the same time.

The leading erent in the Customs Administration of the year was the passing of the Indian Tariff (Amendment) Act, VIII of 1910, for the purpose of enhancing the general revenues. Tnder this Act, which came into force on the 25th February 1910, the duty on all sorts of liquors and on petroleum was raised, unmanufactured tohacco was made dutiable, special rates were imposed on silrer and on both manufactured and unmanufactured tobacco, and alkaloids of opium were made subject to the same duty as opium.

No important changes in Customs procedure were niale during the year, but orders were passed regarding (a) the remission of countervailing duty on raw sugar produced in or exported from Chile to British India, and (b) free admission into British India of samples and patterns brought by commercial travellers from the United Kingdom.

The gross revenue from imports, excluding salt, fell from R $\overline{0} 98$ crores ( $£ 3.98$ millions) to RJ.9 crores ( $£ 3.93$ millions), the luss being one of \#8:5 lakhs ( $£ 56,700$ ) or 14 per cent.

Refunds and drawbacks anounted to R9•28 lakhs ( $£ 61,800$ ) as against ㅍil 48 lakhs ( $£ 69,800$ ) in 1908-09, representing a reduction of $11 \cdot 1 \mathrm{per}$ cent.

The net revenue therefore receded from R 5.87 crores ( $\mathbf{E 3 0 2}$ millions) to \#5•8 crores ( $£ 3.87$ millions), showing a decrease of R7.3 lakhis ( $\{49,000$ ) equiralent to 1.2 per cent.

Appended are the figures of revenue derived from the principal datiable articles under each class in the last three years:

| Chemicals, drugs, narcolics, and dycs- | 1007-08 |  | 1908-09 |  | 1909-10 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 12 | $\boldsymbol{L}$ | R | $\boldsymbol{E}$ | 2 |  |
| Drugn, medicinen, and narcotics <br> Chemicals | 8,05,162 | $=53,677$ | 7,08,515 | $=47,101$ | 0,47,022 | 63,135 |

| Paper and pastebard | $5,60,167$ | 37,313 | 5,30,883 | 35,319 | 5,75,312 | 38,35 |
| Silk and articles made of silk | 15,53,361 | 103,557 | 16,88,643 | 113,3\% | 16,54,723 | 110,515 |
| Wiorlleng gindt . . | $13,54,039$ | 12, 610 | 14,69,588 | 97,973 | 10,33, 671 | 68,815 |

The gross revenue derived from the above mentioned twenty-six articles during 1909-10 was $\mathrm{R} 5 \cdot 1$ croves ( $£ 3 \cdot 4$ millions) or $86 \cdot \pm$ per cent of the total.

The countervailing excise duty of $3!$ per cent on cotton fabrics manufactured in Indian mills yielded $740 \cdot 05$ laklhs ( $£ 267,000$ ) as compared with $\mathrm{R} 35 \cdot 16$ lakhs $(£ 236,000)$ in the previous year.

The duty on salt yielded R141 lakhs ( $£ 0 \pm \pm, 500$ ) as compared with R137 lakhs (. 0011,000 ) in 1005-09.

The export tariff schedule is as usual confined to rice, lusked or un* husked, including rice flour, but noi including rice bran and rice dust. The duty lovied therembler is at the rate of 3 annas per maund. The net revente from this source was KlO 0.01 lakhs ( $£ 680,000$ ) as compared with P .504 lakhs ( $L 536,000$ ) in the previous year, an advance of $\mathbb{R 2 1}$. 61 lakhs ( $£ 14,000$ ) or $\mathbf{2 6 \cdot 9}$ per cent.

## GOLD AND SILVER

The movement of gold during the year is one of the most interesting features of the taide retarns.

- The following table shows the value in thousands of rupees and of pounds sterling of the imports, exports, and absorption of gold in the last five yeurs:

As explaned in prerious reriews, India's absorption of gold has been arrived at by deducting the re-exports from the imports, for all the gold produced in Indian mines is immediately shipperd to England for assay, and does not swell the stocks of metal or enter into commercial consideration in this country.

The financial crisis in America in 1907 was essentially due to a failure of crelit and it was followed by a drain of gold from Europe which is reflected in the statistics of British India from 190s-09, when the imports of gold which had areraged over $19 \div$ chores ( $£ 12,500,000$ ) in the previous quinquennium dropped to $8 \pm$ crores ( $£ 5,600,000$ ). In 1903-10 the imports into Bombay alone ouly just fell short of 20 crores ( $£ 13.33$ millions) and the total imports into British India exceeded 25 crores ( $£ 16.66$ millions), the highest total ever recorded. The morement appears to hare been automatic and non-speculative ior the absorption, as the table below shews, took place chiefly in the last four months of the rear, when the offerings of Council Bills and Telegraphic Transfers proved altogether insufficient to finance the heary rush of exports, and the Exchange Banks were obliged to import large quantities of sovereigus, from England and Egypt in particular, to meet the current demands of trade.

|  | k | £ |
| :---: | :---: | :---: |
| April to July 1909 | 3,26,28,940 | 2,175,263 |
| August to Norember 1909 | 3,99,38,523 | 2,1055,921 |
| December 1903 to March 1910 | 17,65,35,331 | 11,759,059 |
| Total | 24,93,04,09 | 16,620,273 |

Tie figures of production remain practically steady, but the reeexports, which totalled orer 10 crores ( $£ 7 \cdot 1$ millions) in 1905-06, fell froin RS7•22 lakhs ( $£ 581,000$ ) in $1905-09$ to Zl 1000 la'khs ( $£ 67,000$ ) in 1900-10. The absorption of gold amounts to $£ 24 \cdot 93$ crores ( $£ 16.6$ millions) as compared with an average of $\mathrm{fl} 1 \mathrm{~V} \cdot 69$ crores ( $£ 8.46$ millions) for the preceding quinquennial periul, and m 7.5 crores ( $£ 5.02$ millions) in the previous year.

The descriptions of gold imported and exported during the year were as follows, the unit being 1,000:

|  | Imports |  |  | Exports |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Oz. | \# | $£$ | Oz . | H | $£$ |
| Bullion (bar, ingots and other uncoined gold) | $1,706$ | $10,92,80=$ | 7,285 | 579 | $3,25,53=$ | 2,102 |
| Sorereigns and otber British coin | 2,347 | 13,86,14 | 0,241 | 7* | 4,19 | 28 |
| Other coined gold | 42 | 24,16 | 161 | 4* | 2,13 | 14 |
| Total | 4,005 | 25,03,10 | 16,657 | 590* | 3,35,15 | 2,231 |

On Government account the imports of gold amountel to $121,35,000$ ( $£ 9,000$ ), and the exports to $\mathrm{Z} 30,000$ ( $£ 2,000$ ) only, as against R15 (£1) and $¥ 36$ lakhs ( $£ 240,000$ ) respectively in 1908-09.

The production of gold in cach of the last five ycar's is noted below in ounces:

[^14]The value of the imports, exports and net imports or silver during the last five yea:s was in thousunds of rupecs and of pounds sterling as under:

|  | 1 Inpurts |  | Exputs |  | Niet Inporis |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | fl | . $\downarrow$ | 1t | 1 | 1 l | $t$ |
| 1905-01; | - 16,90,20 | 11,26s | 1,17,90= | ibs | 15,72,30 | 10,482 |
| 190c-07 | - 26,01,64 | 17,364 | 2,01,09 | 1,361 | 2 $2,00,55$ | 16,003 |
| 1907-05 | . 21,53,19 | 14,355 | 2,06,36 | 1,376 | 19, 46,53 | 12,979 |
| 1905-09 | - $14,33,90$ | 0,560 | 2,27,15 | 1,51 + | 12,00,51. | S,0.46 |
| 1909-10 | . 12,49,24 | S,32s | 3,01,75 | 2,03: | 9, 11,4 ? | 6,206 |

As India is not a silver-producing country, the figures of net imports represent the ar ount absorbed in India. The imports were further restricted to R12.40 crores ( $£ 8.33$ millions) as compared with an average of R10.3 crores ( $£ 1287$ millions for the preceding quinquemial period, $R 1434$ crores ( $£ 056$ millious) in 1908-09, and R 21.53 crores ( $£ 4435$ millions) in 1907-08.
 ( $£ 650,900$ ) than in 1008-09 and 1007-08 respectively, and the principal destinations were:-

The descriptions of silver imported and exported during the year were (000's omitted) -

Goverament of India rupees are sent for circulation in the Babrein Islands, Ceylon, Arabia, Mauritius, and the East African Coast.

The net imports of silver amounted to $\mathrm{R} 9 \cdot 4.4$ crores ( $£ 6 \cdot 29$ millions) which is about three-fourths and a half of the net imports in 1903-09 and 1007-08 respectively.

In the following table the value of the silver coinage struck in the Indian Mints during the last five years is converted into ounces at the rate of 8 tolas $=3 \mathrm{oz}$., and set against the net imports of silver, and the total values of all receipts at the Mints of old rupees and aative coins for re-coinage.

The average price of silver in London in 1909 was 231 lowost figure ever reached in the moncy market-against $21_{3}^{\frac{1}{3}}, l$ in 1908 and $301_{6}^{3} d$ in 1907. The mates fluctuated between $21 \frac{1}{18} d$ and $23_{10}^{1} d$, the former
ruling on the 5th May and the latter on three dates, namely 4 th Mareh, 26th and 30th October-a range of $1_{4}^{3} d$ only against $4_{1}^{2} d$ in 1908 and $s_{10}^{3} d$ in 1907. On the 95 th February 1910 when the new Indian duty of $t$ amnas an ounco became operative the price sarsed from $2 d$ to $23_{5}^{7} d$, and to $23_{10}^{3} d$ on the lat March, but by the 9 -nd March the quotation was again -4 d, and on the 3! st March was $\frac{3}{10} d$ higher.

## BALANCE OF TRADE

The subjoined figures show the excess of exports over imports, including both merchandise and treasure, by sea in cath of the last five years - the unit being 1,000-

|  |  | Including Goverdment transactions |  | Excludin: Gorcrument transactions |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | R | £ | R | ¢ |
| 1905-06 | - - | 33,54, 05 | $=22,360$ | 41,10,24 | $=29,4+1$ |
| 1906-07 | - . | 20,92,59 | 13,051 | 47,12,62 | 31,+17 |
| 1907-05 | . | 4,11,13 | 2,741 | 20,05,57 | 13,392 |
| 1905-09 | - | 7,91,11 | 5,291 | 15,03,71 | 10,05S |
| 1909-10 | - $\cdot$ | 34,03,61 | 23,691 | 39,63,56 | 26,12\% |

In the same period the drawings of Council bills by the Secretary of State, including those on account of the Guld Standard lieserve, lut deducting sterling bills sold in India, have been as follows:

|  |  | £ | $\begin{aligned} & \text { Rase of } \\ & \text { exchange } \end{aligned}$ | R |
| :---: | :---: | :---: | :---: | :---: |
| 190506 | - . | : $31,5077,000$ | 16.013 | 17,22, 13, 1000 |
| 1906-07 | - • | 33,432,000 | 160)t | $4!3,4,75,000$ |
| 1907-05 | - . | 15,237,000 | 10.03 | 22, $11,34,000$ |
| $1305-09$ | - - | 5,927,000 | 15.90 .4 | S,91,11,000 |
| 1909-10 | - - | 2i,941,000 | 16.0.42 | 40,30,58,000 |

Though the inclession of the imports of treasure somewhat obscures the effect, the tigures in these two tables illustrate graphically enough the restoration of the balance of trade in India's favour during the last twelve months, and are an indication of her return to comparative prosperity after two lean years.

In the five years ending 1909-1) the average excess of exports over imports, inclading Gorernment transuctions, was $\mathfrak{R 2 0} 011$ crors ( $£ 13 \cdot 11$ millions), which represents $11 \cdot 2$ per eent of the average value of exports. In the same period the average drawings of the Secretary of State, as above defined, were Z 33.83 crores ( $£ 22.62$ millions) being 18.8 per cent of the average value of exports. This sum exceeds the average excess of exports over imports by $\mathrm{f} 13 \cdot 72$ crores ( $£ 0 \cdot 14$ millions).

Excluding Government transaclions, the average excess of exports over imports was $\mathrm{f} 33 \cdot 22$ crores ( $£ 22 \cdot 15$ millions), which is equal to 18.7 per cent of the average value of exports. This excess is greater loy 221311 crores ( 88.74 millions) than the excess found when Government transactions are included but less by R61 lakh ( $£ 100,000$ ) than the average amount of the Secretary of State's drawings as stated above.

As explained in previous reviews, the trade figures given above relate ouly to the resgistered trade of British Indian ports. They are incomplete inasmuch as they exclude (1) the value of Government securities transferred between India and England, (2) the indeterminable volume of private remittances to and from India, (3) the not inconsiderable value of precious
stones and pearls re-exported liy pared post, and (i) the trade partly unregistered carried on chiefly by native calt from ports in Native States on the West Coast of India with the Persian Gulf, Arabia and Ceylon. To this last item the trade of the French and Portuguee Settlements should also be added. The figures pertaining to these States and posesessions as far as available are given below ( 000 's omitted):

|  | - | 1916007 |  |  |  | 1507-08 |  |  |  | M18-09 |  |  |  |

## BANK RATES AND EXCHANGE

It has been remarked as a feature of Indian banking during the past year that lower mates of interest generally prevailed than in 1909-09. The bank rate in the ilree Presidency towns was 7 per cent at the leminning of April, but the money market soon became canier and the rate fell steadily until July when 3 per cent was reached both in Calcutta and Bombay. The Bank of Bengal rate was raised on the $: 30$ h September to 4 per cent, to 5 per cent on the 11th November, and to 6 per cent on the 9th December. The Bombay rate of 3 per eent continued from the 15th July to 3rd Norember but had reached 0 per cent by the 2.5th Norember. The Madras rate was generally about one per cent higher than the Bengal ard Bombar rates.

When the year 1008.09 closed, trade conditions were rapilly returning to equilibrium, though exchange was firm at $1 s 3_{3}^{29} d$ only. Before the end of April the rate had returned to parity for the first time for sixteen months, but in May it stood a point lower, and when in August the balance of trade set temporarily arainst India, it fell below gold export point. The Comptroller Geneml threrupon offered to sell sterling bills on London at $1 s 3_{\frac{3}{5}}^{9}{ }_{9}^{d} d$ which almost immediately arrested the slump and by the 23 rd September exchange was again at $1_{s} \pm d$. From October onwards there was no further fall and Council bills were sold at priees ranging from par to $\frac{1}{8} d$ abore. The lowest rate touched was $1_{s} 3_{8}^{7} l l$ on the 31 st August and the highest rate $1 s 4_{8} d$ on the 17th November 1909.

The fluctuations of the money market may be understood from the discount rates month by month of the Presideney banks, and from the rates of exchange on demand bills shown below: -

## SHIPPING

In 1908-09 a riduction in the tonnage of shipping whieh entered and cleared at Indian ports was a striking commentary upon the diminished rolume of exports and general trade staguation prerailing. In 1909-10, however, the reriral of trade is refleeted in an increase of $7 \cdot 7$ per cent, and as the figures represent the maximum carring capacity of the ressels and not tho actual weights of eargoes, they tend in a yeac of prosperity to approximate more nearly to the actual rolume of trade than in a year of depression.

Below are giren the number and tonnage of steamers and sailing vessels with carges and in ballast, which entered from and cleared to foreign countries:

|  | No. | Tons | Avirige tomman |
| :---: | :---: | :---: | :---: |
| $190.5-60$ | 9,269 | 12,595,3:1 | 1,35:9 |
| 1900-0 | 9,3:9 | 13,775, $4: 6$ | 1.4i7 |
| 190ヶ-99 | 9,312 | $14,239,1 \div 0$ | 1,5:9 |
| 1905-199 | S.unl | $12,910, \div 3$ | 1,1i1 |
| 1909-10 | 5,042 | 14,597, 191 | 1,in) |

Of these totals steam tonnage represents $98 \cdot 6$ per cent. The total number of steamers that entered and cleared was 5,790 with an argregate burlen of $14,391,405$ tons as against 5,272 and $12,650,836$ tons in the previous year. The arerage tonnage per steamer increased from $2,40.5$ to $2,45,5$ tons, the rate of increase being 3.3 per cent, and the arerage tonnage per sailine ship also increased from 54 to 91 tons.

The number and tomnage of ressels entered and cleared at the chief $\mathrm{p}^{\mathrm{krt}} \mathrm{t}$ from and to foreign countries in the past two years are slimw below:

|  | 1-196-00 |  |  |  |  | 1909-10 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Steam |  | Sailing |  |  | Stram |  | Sailing |  |  |
|  |  |  | No. | Ting |  | No. | Tuns | No. | Tunn |  |
| Bornbay | - 1,161 | 3,161,150 | 35 | 40:378 | $2 \cdot 5$ | 1,318 | 3,532,625 | 293 | 29,616 | 20.4 |
| Calcotta | - 1,919 | 2,95,2,751 | 17 | 5,457 | 218 | 1,14,9 | 3,23:1973 | 18 | $2, \times 64$ | 221 |
| Pangoon - | - 533 | 1,203643 | 6 | 8,120 | 4.4 | 632 | 1,631,439 | 7 | 12,100 | 113 |
| Karachi | $\therefore 62$ | 478.511 ! | 85 | 3-712 | 8.4 | 738 | 1.545318 | 302 | 28,64: | 11.1 |
| Madras | .1 $\because 74$ | 811,143 | 11 | 1,n4: | 87 | 218 | 73:,216 | 10 | !17 | $i \cdot 1$ |
| Chittagon: | 4.4 | 117,278 |  |  | -8 | 37 |  | 1 | 160 | 7 |
| Total | - 3.701 | 5,219,10! | 946 | 91,219 | 65.6 | 4,182 | 10,832,392 | 691 | 71,105 | 7.47 |

The tonnage under the British flag, registered under the English Merchant Shipping Act, was nearly 78 per cent, and including the Indian register, represented about 80 per cent of the whole.

The number of vessels under foreign flags which entered and left Indian ports was 1,086 with an aggregate burden of $2,787,871$ tons as against 989 with ain aggregate of $2,490,242$ tons in 1908-09.

The number of vessels under the principal flage given below shews that
the employment of German aud Austrian vessels in the Indian trade is increasing, while those of Norway and France have declined during the last five years.

|  | 1005-06 | 19C6-0: | 1007.08 | 1008-00 | 1909-10 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| British | . 5,796 | 5,657 | 5,659 | 4,949 | 5,495 |

| Italian | - 85 | 77 | 79 | 76 | $8!$ |
| Dutel | . 21 | 84 | 50 | 43 | 75 |
| Japanese | 2 | 83 | 123 | 79 | 63 |
| Fiench | 105 | (i) | 61 | 55 | 56 |

## FREIGHTS

The appended freight quotations are for each staple article and Indian port of shipment and relate to the month in which the shipments are heaviest. Freights were dull in the early part of the year, but a considerable demand for forward freights in anticipation of good harvests began in October, and until the end of March the market displayed great activity, but after the year had closed once more entered the doldrums. It will be seen that the rates tabulated below are from 28.6 d . to 58 . higher than in 1908 except in the case of tea at Calcutta and cotton at Bombay where no variation took place.

## FRONTIER TRADE

The trade across the land frontiers of India is equiralent to less than five per cent of her scaborne trade. The statistics of this trade, which are supplemental to those given in the Goneral Summary on page 3 of this lieview, have become more complete and more reliable in recent years with improved methods of registration, but valuations continue difficult, and in the case of treasure delfective and unreliable. Subject to these reservations, the total volume of trade has reached dimensions which justifies its analysis in some detail. The values of imports and exports of merohandise and treasure separately are shewn below in thousands of rupees and of pounds sterling :-

From the abore it will be seen that, though the total trade exhibits a very small increase in the year under review, the trade in merchandise declined by fir 73 lakhs ( $£ 125,000$ ) to $\mathrm{Z} 1,327 \cdot 28$ lakhs $(£ 8,8.48,500)$.

The general character of the trade carried on across the Indian frontiers will be inferved from the appended list in which are cutered the principal articles imported and exported and their values in the last year：

| Imports | 1909－10 |  |  | 1999－10 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

The registration of movement of gold and silver across the frontier is so notoriously unsatisfactory on account of the absence of trust worthy declarations that it will be convenient to notice only the figurcs which relate to merchan－ dise，when considering the geographical distribution of the trade．This is indi－ cated below，in respect of the principal countries proceeding from west to east along the line of frontier，the unit being 1，000：

## NORTH-WESTERN FRONTIER

About 27 per cent of the whole frontier trade crossed this frontier last year.

Khelat.-The trade declined considerably, owing to diminished imports of wool from $\not \approx 5 \cdot 17$ lakhs ( $£ 3 \cdot 4,500$ ) to $\mathrm{R} 2 \cdot 2$ lakhs ( $£ 1 \mathrm{r}, 700$ ). The principal exports are piecegoods worth H365 lakhs ( $£ 24,300$ ).

Persia. -The route to Persia from Quetta by way of Nushki and Scistan develops slowly and has not yet quite fulfilled expectations, though various concessions in respect of railway rebates, drawback of import duty, and transport, have been granted to stimulate trade. The total volume increased by $\mathrm{f} 2 \cdot 9 \mathrm{~b}$ lakhs ( $£ 19,600$ ), or 31 per cent, to R12.49 lakhs ( $£ 53,300$ ). Silk and raw wool contributed fle 63 lakhs ( $£ 10,800$ ) and $\mathrm{Rl} \cdot 00$ lakhs ( $£ 7,000$ ), respectively, to the total imports of f.t. 9 lakhs ( $£ 32,700$ ). Owing to the mines at Nishapur having been closed, there was a fall in the imports of turquoises. The largest items of export are leather ( $\mathrm{R} 2 \cdot 31$ lakhs $=£ 15,400$ ), piecegoods ( $\mathrm{R} 1 \cdot 96$ lakhs $=£ 13,070$ ), and indigo ( $\mathbb{E 1} \cdot 63$ lakhs $=\mathfrak{E 1 0}, 800$ ), chiefly from Sukkur and Multan, which is preferred to the synthetic article in Khorasan.

Afghanistan.-The trade with Afghanistan passes through several rontes, but the most important are the Khyber Pass in the Peshamar District, the Khajuri Kach route in the Wano Agency, and the Bolan Pass route. The trade has recently improved with the abolition of certain export duties by His Majesty the Amir. The concessional relate of $\frac{9}{3} \mathrm{r}$ ds the freight over the N.-W. Ry. has been extended to Afghan trade which passes through Nushki and does not break bulk at that station. The total trade increased by $\not \approx 7.96$ lakhs $(£ 53,000)$ to f200.17 lakhs ( $£ 1,357,800$ ), of which imports represented 46 per cent. The trade with Kandahar and Herat amounted to R121.21 lakhs (£ $£ 08,000$ ). More than half the value of imports (RG5.14 lakhs $=£ 434,300$ ) is accounted for by wool ( R 3553 lakhs $=£ 237,000$ ), and fruits and nuts contributed P 10.47 lakhs ( $£ 129,800$ ), the trade in both these articles being larger by f 3.79 lakhs ( $£ 25,300$ ) and $\mathrm{P5} 57$ lakhs ( $£ 37,800$ ), respectively, than in 1908-09. Under exports the chicf items are cotton piecegoods (mostly foreign) $\mathrm{A} 33 \cdot 53$ lakhs ( $£ 223,500$ ) against $\mathrm{R} 39 \cdot 2$ lakhs ( $£ 261,300$ ) in 1905-09, drugs $\mathrm{Z} \pm 62$ lakhs ( $£ 30,800$ ), grain and pulse $\mathrm{Z} 2 \cdot 00$ lakhs ( $£ 13,000$ ), and sugar f 3.28 lakhs ( $£ 1,900$ ). Kabul and Ghazni shared fS 6.96 lakhs ( $£ 579,700$ ) of the total trade, of which 35.1 per cent represents imports. The imports of fruits and nuts decreased by R 3.01 lakhs $(£ 20,000)$ to $\mathrm{RS} \cdot 7 \mathrm{l}$ lakhs $(£ 55,300)$, the decrease being uttributed to the diversion of trade to the Bolan Pass and Quetta. The trade in grain and pulse ( $\mathrm{R} 08,944=£ 6,600$ ), opium ( $\mathrm{R} 87,120=£ 5,808$ ), and drugs, mostly asafuetida, (R2• 4 lakhs $=£ 17,000$ ) was also contracted. Increases under imports are noticed under ghi ( $\mathrm{R} 4 \cdot 49$ lakhs $=£ 29,900$ ) in spite of the imposition of an embargo upon the export of this article, live animals ( $\mathbb{R} 2.71$ lakhs $=£ 18,000$ ), timber ( $\mathrm{R} \div 53$ lakhs $=£ 17,000$ ), due to larger demand and higher prices obtainable in British territory, hides and skins ( $\mathrm{R} 2 \cdot 27$ lakhs $=$ £15,100), and wool (R1•18 lakhs=£7,900). Cotton piecegoods, mostly forcign (R20.82 lakhs=£199,800), leather goods (R5•19 lakhs =£34,600), sugar ( $\mathrm{R} 4 \cdot 1$ lakhs $=£ 27,300$ ), and tea ( $\mathrm{R} 2 \cdot 98$ lakhs $=£ 19,900$ ), figure largely under exports and increases under the last three itoms indicate increased prosperity in Afghanistan. The head " manufactured articles of merchandise unspecified" includes mateh hoxes and soap.
 Sikkin of live animals, ghi, and raw wool were neutralized by a heary docline in grain and palse, timber, and hides and skins. Undor exports the increase of $\mathrm{Pl} \cdot 63$ lakhs ( $£ 10,500$ ) was made up of grain and pulse, cotton piecegoods, metals, oils, provisions, sugar, and tobacco. Diminished trade in Indian piecegoods, ponies, musk, ghi, wax, timber, and blankets accounts for a decline in imports from Bhutan, and under exports the marked decreases are under cotton piecegoods, rice, raw silk silk goods, betel-nats, sugar, and tobacco. The once important lac trade of Bhutan has collapsed owing to lower prices, and the gradual decline in the exports of rice indicates an expansion of area and good harrests in the hills.

## EASTERN FRONTIER

Western China_-The direct trade with Western China is mainly from Bhamo through the treaty port of Tengrueh in Iumnan. The trade last year declined owing to the outbreak of plague in Mandalay. The principal articles of imports are animals, hides and skins, provisions, opium, raw silk, and orpiment or yellor arsenic. Of these the last three show decreases. Exports also declined by fi 64 lakhs ( $£ 10,900$ ), mostly under raw cotton, cotton yarn, and salt, though provisions, jadestone, and woollen goods slinwed an aggregate increase of nearly R3 lakhs ( $£ 20,000$ ).

Shan States (North and South).-Most of the trade with the Shan States should be classed as internal trade, for these States are British territory administered under local chiefs, but some trade pases through them to China and Siam. The import trade of Northern States shows a great progressive adrancement, while the export trade is declining. The former rose from $\mathrm{A} 81 \cdot 12$ lakhs ( $£ 540,500$ ) to Rl 103 SG lakhs ( $£ 692,400$ ) and the latter fell from $\mathrm{RT} 2: 86$ lakhs ( $£ 456,000$ ) to R 6504 lakhs ( $£ 45.5,600$ ). The largest increase is one of x 26.85 lakls ( $£ 179,000$ ) under imports of metals, which mainly represents the ralue of lead ore extracted from the Bawdwin mines by the Burma Mrines, Limited. Pickled tea (letpet) adranced by $\mathrm{P} 3 \cdot 71$ laklis ( $£ 24,700$ ) to $\mathrm{R} 27 \cdot 3$ lakbs ( $£ 182,000$ ). Opium rose by R64,000 ( $£ 4,260$ ) to R1.09 lakhs (£7,2G0). Horses and ponies, hides and skins, and seeds also showed some adrancement. Rice fell by Ry'30 lakhs ( $£ 35,700$ ) to R 49 lakhs (£32,700), lac decreased by $\mathrm{f} 69,138$ ( $£ 4,609$ ) to $\mathrm{R} 53,782$, ( $£ 3,585$ ), tea by R 50,000 ( $£ 3,300$ ) to fill 91 lakhs ( $£ 79,100$ ), teak timber ly P2. 42 lakhs $(£ 16,100)$ to R8.07 lakhs ( $£ 53,800$ ), and jadestone by $\mathrm{P} 42,000(£ 2,800)$ to Rl.06 lakh ( $£ 7,000$ ). The unspecifice "all other unmanufactured articles" include thanatpet (cigar wrappers) worth $\nexists 167$ lakhs ( $£ 11,130$ ). Exports of cotton yarn and piecegoods declined by E 3.71 lakhs ( $£ 24,700$ ) and $\mathrm{Al} \cdot 72$ lakhs ( $£ 11,400$ ) to P 7.68 lakhs ( $£ 51,200$ ) and R19•70 lakhs ( $£ 132,000$ ), respectirely. Animals, apparel, and railway materials also declined. But increases are noticed under grain and pulse, iron, petroleum, fish, dry and wet salted (nyapi), betel-nuts, silk goods, and tobacco. It is believed that a considerable volume of piecegoods, twist and yarn and salt find their way to China.

Both the:import and export trade of the Southern States show steady progress. Imports rose by F 6.66 lakhs ( $£ 44,400$ ) to $\mathrm{f} 48 \cdot 52$ lakhs ( $£ 323,400$ ) and exports by $\mathrm{F} 4 \cdot 71$ lakhs ( $£ 31,400$ ) to $\mathrm{F} 74 \cdot 09$ lakhs ( $£ 497,000$ ). Imports of horses and ponies, hides and skins, and teak timber improved considerably, but cattle, potatoes, other sorts of fruits and vegetables including
oranges and garlic, and stick lac fell in value. Diminished trade in stic lac is due partly to the dullness of the foreign markets and partly to the recel imposition of an export duty of Fl 10 per 100 viss of the crude article exporte from Rangoon in lieu of licenses for Forest extraction. The rains made th season a favourable one for floating teak and the amount extracted is th largest on record. In the exports the most noticeable increases are umde cotton yarn and piecegoods, apparel, betel-nuts, iron, and oils. 'th chief articles comprised in the decrease are silk goods.
'The values of the principal articles of the combined trade with the Shar States are shown below in thousands of rupees and of pounds sterling :-

Siam (North and South).-The trade with Siam across the frontier is much smaller than the trade by sea. There was an increase of $\mathrm{P} 44,918$ ( $£ 2,99 \pm$ ) under imports, and of $\mathrm{P} 2 \cdot 4$ lakhs $(£ 16,000)$ under exports, the total values being $\mathrm{R27} \cdot 00$ lakhs ( $£ 180,600$ ) and $\not \approx 24 \cdot 43$ lakhs ( $£ 162,800$ ) respectively. The principal articles of trade are given below is units of 1,000 :

Imports of animals (mostly elephants) and timber from North Siam represent over 95 per cent of the total. Both these articles made good the loss of the provious years. Silk goods account for the decrease in total imports from South Siam owing to an overstocked market. In exports to North Siam cotton yarns and piecegoods, metals, fish, dry and wet salted, and silk goods contributed to the increases. No important variations are noticed in exports to South Siam except in silk goods and metals.

Karennee.-Imports advanced by R5.89 lakhs ( $£ 39, \mathbf{2} 00$ ) to R21•S lakhs ( $£ 142,000$ ), due to increased imports of teak timber and elephants via Toungoo and the newly opened stations at Leiktho. The volume of exports remained steady at Rथ08 lakhs ( $£ 10,800$ ).

## COASTING TRADE

As explained in previous reviews, the correct value of the coasting trade is arrived at by adding to the value of the imports into British ports from other British ports, the sum of the imports and exports in the trade between British ports and those in Foreign possessions or Native States, such as Marmagoa,

Pondeherry Alleprey, and Karikal. The value so calculated for the year of revier is, for merchandise. Ras 15 crores ( $£ 35 \%$ millions) as against R $5 \bar{\circ} \cdot 6 \bar{y}$ crores ( $£ 35 \cdot 43$ millions) in 1908.09, shewing an increase of R53 lakhs ( $£ 353,010$ ) or not quite one per cent.

Burma's share of the coasting exports of all British India comes to about $t 0$ per cent and the principal articles in this trade are rice, mineral oil, and teakrood. Rice represeuted 80.6 per cent of the tetal ralue of all food grains, riz, R1506 crores ( $£ 10.0 \pm$ millions) against R10.0 crores ( $£ 11 \cdot 27$ millions) in $1908-00$, shewing a decrease of $\mathrm{Z1} \cdot \leqslant 4$ crores ( $£ 1 \cdots 3$ millions) or $10 \cdot 9$ per cent and representing $25 \cdot 8$ per cent of the total as against 29.3 per cent in 1908-00. The totil exports of rice from Burma to Iudian ports amounted to $1,038,000$ tons, which was less by 119,000 tons than in $1908-00$. The mineral oil exported from Burma to Indian ports adranced from 70.5 to 58.9 million gallons. Bengal accounted for 475 million gallons against $35 \cdot 2$, Madras 15 against 109 , Eastern Bengal and Assam S.2 against $7 \cdot 9$, Bombay 11.3 against 109 , and Sind $3 \cdot 2$ against $2 \cdot 9$ million galluns in 190S-09. Other details have already been siven in the sections dealing with foreign imports and exports. As regards the exports of teakwood from Burma coastwise, the total value of which last year amounted to dill3 lakhs ( $£ 753,000$ ), Bengal twok R 41 lakhs $(£ 273,000)$ against P 40 lakhs ( $£ 267,000$ ) in 190S-09.

Bengal naturally monopolises the exports of Jate bags and cloth and coal to other prorinces. But, as in the case of foreign exports, the coastal exports of jate bags from Calcutta further declined in quantity from 75 to 73.5 million bags and in ralue from P1916 lakhs ( $£ 1.28$ millions) to R181.1 lakhs ( $£ 1 \cdot 23$ millions). Burma took $36 \cdot 5$ million bays against $37 \cdot 8$, Bombay $19 \cdot 2$ against $18 \cdot 6$, Sind 9.2 against 7 , and Madras 6.9 against 10.0 million bags in 1908-09. But the coastal exports of ganny cloths from Calcutta increased in quantity from 18 to 29 million yards and in value from R 21.7 lakhs ( $£ 145,000$ ) to $\mathrm{E} 29 \cdot 2$ lakhs ( $£ 195,000$ ). As the coal market was dull, the coastal shipments of Bengal coal contracted from 2, 461,000 tons and H2.2 lakhs ( $£ 1 \cdot 52$ millions) to $2,077,000$ tons and H 101 lakhs ( $£ 1 \cdot 27$ millions), showing a decline of $3 \subseteq 4,000$ tons and P 37 lakhs ( $£ 247,000$ ).

The Bombay Presidency is the chief centre both for manufacture and distribution of Indian-made cotton piecegood; and the exports amounted to 256 million yards, ralued at $\mathrm{R} 4 \cdot 17$ crores ( $£ 2.78$ millions), against $211 \cdot 9$ million yards, valued at P 3.52 crores ( $£ 2.35$ millions) in $1908-00$, the measure of inprovement being 44.1 million yards or 20.8 per cent in quantity and RGE lakhs $(£ 433,000)$ or 18.4 per cent in value. The decline in specific value was, howerer, one of 2.1 per cent. The provincial distribution of these shipments from Bombay in the last two years is shown below:

|  | 1908.f3 |  |  | 1009-10 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Yaris | If | 1 | Yards | 和 | 2 |
| Siud | 130,577,505 | 1,98,48,717 | 1,323,218 | 160,588,572 | 2,61,88,586 | $=1,7 \cdot 15,006$ |
| Bragal | 62,450,735 | 1,22,6,5,110 | 813,67.1 | 68,181,7\%7 | 1,23,77,632 | - 8 825,175 |
| Barma | $9.959,645$ | 18,72,918 | 121,8:81 | 11,321,017 | 10,15,616 | 134,37.4 |
| Mautas | 2,752,550 | 5,18,524 | 34,5\%8 | 2,532,760 | 4,63,530 | 30,00\% |

Raw cotton is also an important item in the coasting trade of Bombay. The shipments from Bombay, (chicfly to Bengal and Madras), amounted to 176,544 cwts and R49•28 lakhs ( $£ 328,000$ ) against 197,880 cwts and R34:33 lakhs (£228,800) in 1908-09. Karachi also shipped 333,204 cwts, value R10t lakhs ( $6693,(00)$, almost the whole leeing destined for Bombay.

Madras iniported grain and pulse worth R 589 lakhs ( $£ 3.93$ millions) against R362 lakhs ( $£ 241$ millions) in 1908-09, owing to unfavourable seasonal conditions in parts of the Presidency. Her chicf exports were ground-nut seeds and oil, the value of which declined by f 43.83 lakhs ( $£ 292,200$ ) and f22.91 likhs ( $£ 152,700$ ) to R17•81 lakhs ( $£ 118,700$ ) and $\mathbb{Z} 16$ lakhs $(£ 106,600)$ respectively.

## RAILWAY GOODS TRAFFIC

The railway goods trafic returns are a fairly reliable barometer of India's mercantile activity. It is the normal movement of goods to and from the ports and between the chicf trade centres which dominate the statistics, for when famine conditions prevail the grain movement to areas of scarcity is at such reduced rates that the lines do not bencfit proportionately. The following statement shows the total earnings for goods trafic on the railways of India during the last five years:-

|  |  | 7 | £ |
| :---: | :---: | :---: | :---: |
| 1005 | - . | 26,20,78,000 | $=17,471,567$ |
| 1906 | . . | 27,59,69,000 | 18,397,933 |
| 1907 | - . | 29,24,27,000 | 19,495,133 |
| 1908 | $\cdots \quad$. | 26,92,06,000 | 17,547,067 |
| 1909 | - . | 2S,12,47,000 | 18,749,800 |

The falling-off in 1008 was due to the scarcity prevailing in the first six months of that year and reflected both a slortage of exports and contraction in the import trade. There was a satisfactory recovery, though below the level of 1907, in the last calendar year.

The figures below show the number of goods wagons at work in India at the close of each of the last five years and the additions made in each year :-

In this period the increase in goods traffic rolling stock has been one of 37,026 wagons or $3: 1$ per cent.

From the statistics of twenty-one leading railways the average charge for freight works out at $1 \cdot 38$ pies per ton mile. The units of ton mileage during the past five years have been as follows:

Tho principal commodities carried during the last two calondar years have been (in tors): -

It will be noticed that there is very little variation under any of the heads except coal and coke, food grains, cotton, jute, and oilseeds.

## PRICES

The following table* shows the course of Indian Rapee prices of thirty wine commodities imported into, exported from, and consumed in India, during the last fire rears, as compared with the standard year 1s73. The figures represent simple percentages of the arerage prices as far as arailable, obtained br expressing the price of each article in each year as a percentage of the price for the year 1873 , which latter price is represented by 100 .

Certain articles which appear to hare something in common have been grouped together with the following result :-

The general arerage is drawn from all thirty-nine descriptions which are treated as of equal value, and is the simple arithmetical mean as shown above.

## CLIMATIC CONDITIONS

It is necessary to keep constantly in mind that the trading power of India depends primarily on the success of its crops. But produce is in some important instances exported in the official year following that in which it was grown. In the notes relating to such descriptions of produce, reference to the weather of the previous season is, therefore, requisite. The following notes, however, summarise the weather record of the season 1910-11. They are founded on weather reports that accompanied the several crop forecasts.

The rains and the great agricultural operations which so vitally depend upon them, have been on the whole most satisfactory. The timely and welldistributed winter rainfall had brought fine crops to harvest in the spring of 1910. When the hot weather came on, conditions were normal. Towards the close of April 1910, good rain was recoived in Eastern Bengal and Assam and parts of the Panjab. May was dry in the United Provinces, but showery in Bengal and the North-West Frontier Prorince, though the fall was generally defective. Eastern Bengal and Assam had copious rain in that month. The monsoon arrived much before its usual time in Bengal, Eastern Bengal and Assam, and the Central Provinces, butit was rather late in the Panjab. The Bombay monsoon started on the due date and spread with much rigour, so that the area affected by it was never in danger. Moderate to heary rain fell in most of the provinces during the month of June. In July, though heary floods affected the autumn crops in Bengal and Eastern Bengal and Assam, the rain was about 16 per cent short of normal fall and its distribution was unequal. The deficiency was serious in the United Provinces, which obtained less than two-thirls of their proper supply, in Rajputana, the western portion of the Central Provinces, Malabar, and Lower Burma. In other parts of India, particularly Madras, the average was exceeded and at places the falls were almormally heavy. Matters for a tumo were critical, especially in the United Provinces. But the bountiful rain that fell in August restored the prespects, and favourable conditions again assorted themselves.

Heavy rain fell in September in Bengal, the Central Provinces, the United Provinces, Burma, and parts of tho Panjab. The beginning of October was marked ly heavy rain, but the latter part of it was practically rainless in several provinces. Excessivo rain again fell in the middle of November in the Central Provinces and the United Provinces, but this facilitated the sowing of wheat. Excopt in Bengal, the weather in December was dry almost everywhere. In the fourth week of the month intense cold accompanied with scvere frost caused injury to the sugarcane crop in the Panjab. The record of the winter showers has been gonorally satisfactory. In January good rain was received in

Bengal, the Central Prorinces, the United Prorinces, the Panjab, and the NorthWest Frontier Prorince; but cloudy weather in the United Provinces and frost, hail, fog, and cloude weather in the Central Provinees did some injury to the spring crops. In the beginning of February severe cold and frost affected cotton and wheat crops in parts of Bombar and Sind. On the wholo seasonal conditions were fairly farourable during the year.

The net effect of these conditions may be gathered from the following estimates of rield of the principal crops as compared with similar statintics for the two previous reas :-

Since some of the produce exported in 1910-11 was derived from crops grown in 1909-10 it is necessary to show the rariations for two years. The percentage increase ( + ) or decrease ( - ) in the area and outturn of the crops, as compared with the prerious year, was as follows: -

A calculation based on the arerage monthly prices of the seven principal food grains current in India during the five years 1903-1907 yields index numbers as follows:-1906, 118; 1907, 122; 1908, 154; 1909, $126 ; 1910$, 108. A further investigation as to the effect of these variations in price, when applied to the estimated normal consumption of food grains per head of the population, shows that in 1910-11 the sum saved as compared with 1909-10 and so made available for other purchases was about Zc 63.23 crores ( $£ 42,153,300$ ), whereas the total value of the imports was $\mathrm{R} 169 \cdot 06$ crores ( $£ 112,706,700$ ) and the increase in the value of total imports was P 14.58 crores ( $£ 9,720,000$ ). But this does not represent the full increase in purchasing power. Most of the consumers of food grains are cultivators and profited by the favouralle crops while in some cases accepting lower prices for their produce.

In India it is impossible to make a gencral valuation of the agricultural produce seeing that the data are not available. But in respect of cotton, jute, rice, wheat, tea, linseed, rape and mustard, sesamum, and groundnut a rough computation may be attempted. The prices used in this computation are tho average wholesale prices ruling at certain principal marts in India. In respect of groundnuts it has been necessary to accept the declared valucs of exports in the absence of any other regular quotations. The calculation does not show the farm values; but for comparative purposes it has some interest. In 1909-10 not only were the outturns much greater than in 1908-09, but the prices of some
of the products (e.g., cotton and tea) were substantially better. In 1910-11 there was in some cases a diminution of outturn, but with the exceptions of rice, wheat, and certain oilseeds this was more than recouped ly the rise in values, while the increase in the prices of cotton, jute, and linseed added largely to the collective value of the selected crops. A calculation, restricted to the specified crops and based on the crop estimates and official price records, has been carried out. It suggests that the aggregate value of the said crops has been approximately as follows in the last five years : $-1906-07, \mathrm{R} 4215$ crores (£281,000,000) ; 1907-08, ㄱ.420.2t crores (£280,160,000); 1908-00; $\quad$ P461.93 crores ( $£ 307,053,333$ ) ; 1900-10, $75551 \cdot 84$ crores ( $£ 367,803,333$ ); and 1910-11 7513:52 crores ( $£ 342,346,667$ ).

## GENERAL SUMMARY OF TRADE

In the year under review India participated fully in that revival of trade which has been more or less general throughout the world. Disturbing influences have been present in sereral countries. The United 8tates has not shaken off the sequele of the catastrophe of 1907, and trade there has been dull and hesitating throughout the year. The high cost of living has been felt by the industrial classes in the United States and on the European Continent, while France and Italy further suffered from bad crops and diminished purchasing power.

While the great advance in prices in 1909 was not an element of health, since it was due to shortage of cotton and food stuffs, that which took place in 1910, though only amounting to about one half of the rise in the previous year, resulted largely from real improvement in demand. The most important feature, however, was the sustained high cost of cotton, while the period covered by the Indian official year was remarkable for the climax in rubber, for its subsequent deeline to about half of the maximum attained, and for the booms in tin and in coffec.

There has been dissatisfaction among the industrial population in several countries; and the United Kingdom had serious labour troubles, of which the more important were those affecting coal-miners in Northumberland and South Wales, cotton operatives in Lancashire, and shipbuilders under members of the Employer's Federation. Other sinister influences were the death of King Edward and the occurrence of two general elections. But England's harvest was fairly grod in spite of excessive rain. There was an unmistakeable im. provement in the iron trade in spite of the lock-out in shipbuilding; and although cotton spiming was seriously depressed, looms were very active in the latter part of the year. The woollen trade has thriven and one of the fatures of the year was the further activity of the tin-plate industry. In effect, the foreign trade of the United Kingdom has attained a figure that exceeds that recorded in the "hoom" year 1907. It will be scen from the following summary that the actual and centesimal increase in the external trade of England has exceeded that in the other principal countries, and that India has surpassed the mother country in the rate of inerease.

Tlie imports into the United Kingdom rose from $£ 624.4$ millions to $£ 678 \cdot 1.4$ millions, exports from $\mathfrak{L} 378 \cdot 18$ milliuns to $£ 430 \cdot 59$ millions, and the total
 of $£ 53.74$ millions, $\mathcal{L} 2241$ millions, and $£ 106 \cdot 15$ millions, the rates of progress being 8.6 per cent, 13.9 per cent and 10.6 per cent respectively.

The total in 1907 was $£ 1,066 \cdot 83$ millions. The imports into the United States were $£ 5531$ millions or $£ 15 \cdot 21$ millions more than in 1900 . The exports
 lions was $£ 457$ millions ( 67 per cent) more than in the previous year. Germany recorded imports $£ 423 \cdot 25$ millions and exports $£ 36 ; 13$ millions, with a total of $£ 70041$ millions, which marks an increase of $£ 1605$ millions ( 6.3 per cent) made up of $£ 4.0 \pm$ millions in imports and $£ 12.01$ millions in exports. Austria-Hungary imported gools worth $\mathrm{C} 11 \mathrm{~s} \cdot \mathrm{ff}$ millions which was some £ $£ .03$ millions more than in 1909 ; while her exports adranced ly $£ 3.07$ millions to $£ 0969$ millions, and the total trade rose hy 3.4 per cent, namely, from £211.04 millions to $£ 21815$ millions. France increased her imports from $£ 249.84$ millions to $£ 270 \cdot 39$ millions and her exports from $£ 225 \cdot 72$ to $£ 240.23$ millions, the total trade being thus £コ10.G2 millions as compared with £178:56 millions, which marks a gain of $6 \cdot 7$ per cent. Belgium's total trade adranced br nearly $7 \cdot 8$ per cent from $£ 245 \cdot 47$ millions to $£ 26152$ millions.

India's imports in 1910-11 rue from $£ 102.99$ millions to $£ 12.71$ millions, her exports from $£ 16952$ millions to $£ 1417$ millions, and her total trade from $£ 232 \cdot 51$ millions to $£ 256 \cdot 88$ millions, which last figure represents an increase of $£ 24.37$ millions or about 10.5 per cent.

India's grand total of Exports and Imports stated in Indian currency was R $385 \cdot 32$ crores as against $\mathrm{R} 345 \cdot 76$ crores in 1909-10, the increase being one of £ 36.56 crores or $10 \div 5$ per cent. The total includes some $\mathrm{R} \pm 26$ crores ( $£ 2,840,000$ ) of foreign merchandise re-exported but excludes about $\mathbf{P} 4: 35$ crores ( $£ 2,900,000$ ) of stores imported by Government, of which $\mathrm{P} 1.9 \pm$ crores ( $£ 1,293,300$ ) represent material for State Railwars. The highest total on record in any prerious year had been as follows:-

|  |  |  | \# | £ |
| :---: | :---: | :---: | :---: | :---: |
| Total | - . | 1909-10 | 345,76,20,000 | 232,505,000 |
| Esports | - | " | 194,27,54,000 | 129,519,000 |
| Imports |  | " | 154,48,36,000 | 102,959,000 |

Exports represented 56.12 per cent of this grand total and amounted to f.216.25 crores ( $£ 14,166,700$ ), as against $\mathrm{f} 104 \cdot 28$ crores ( $£ 120,520,000$ ) in the prerious year. The increase here was $\mathrm{Z} 21 \cdot \partial 7$ crores ( $£ 14,617,000$ ) and this represented 60.12 per cent of the total increase in trale and 11.31 per cent on the export figures for 1909-10.

Imports bad a total value of $\mathbf{7 1 6 9} 06$ crores ( $£ 112,708,000$ ) as against R154:48 crores ( $£ 102,089,000$ ) in $1909-10$, the alvance here being R14:58 crores ( $£ 9,720,000$ ) or $9.4 \pm$ per cent.

Exports of Indian Merchandise represented 53.17 per cent of the total trade, as against 52.9 per cent in 1909-10. These exports rose from 71845 crores ( $£ 123,000,000$ ) to $\mathrm{H} 204: 87$ crores ( $£ 136,580,000$ ), which implies a rise of R 20.37 crores ( $£ 13,080,000$ ) or 11.04 pur cent. This accounts for 55.73 per cent of the total increase in the year's trade.

Re-exports of Foreign Merchandise advanced from R3.39 crores ( $£ 2,200,000$ ) in $1909-10$ to A .126 crores ( $£ 2,840,000$ ) in $1910-11$, the increase here being A 57.24 lakhs ( $£ 581, \mathrm{f} 00$ ) or $25 \cdot 7$ p per cent. An exceptional feature here was the large re-exportation of cane sugar to the United Kingdom and other countrics.

The movements of Treasure merit special mention, the large imports of gold in the later months being specially intoresting.

In the following statement the value of the sea-home trade of India for the year 1010-11 is summarised and compared with the value of the trade in each of the two preceding years. Government transactions both in merchandise and in treasure are excluded. The unit in every case is $\mathbf{1 , 0 0 0}:-$

The increases or decreases under these several heads in the year under review are as follows, as compared with the two previous years:-

|  |  |  | $1909 \cdot 10$ |  |  | 08.09 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\cdots$ | $\boldsymbol{\Sigma}$ | Percent | $\bigcirc$ | $\boldsymbol{£}$ | Per cent |
| Erport - |  |  |  |  |  |  |  |

Bengal's share of the total morement of merchandise was 37.5 per cent as against $38 \cdot 3$ per cent in 1900-10. Her aggregate rose from R116.94 crores ( $£ 77,060,000$ ) to R 126.87 crores ( $£ 84,580,000$ ), the advance being R 9.93 crores ( $\mathrm{C}(6,620,000)$ or se per cent. The increase in oxports was one of R8.01 crores ( $£ 5,310,000$ ) or 1.1 . per cent, bringing the total to $\mathrm{R} 78 \cdot 33$ crores ( $£ 52,220,000$ ) in place of $\$ 70 \cdot 32$ crores ( $£ \cdot 16,580,000$ ) in $1909 \cdot 10$. The total imports of $\mathrm{R} 4 \mathrm{~S}^{\circ} 54$ crores ( $£ 33,360,000$ ) marked an increase of $\mathrm{Zl} \cdot .92$ crores ( $£ 1,280,000$ ), or 411 per cent, as compared with the provious year.

Eastern Bengal and Assam returned a total trade of R5.04 crores ( $£ 3,360,000$ ), which consisted of 1254 lakhs ( $£ 360,000$ ) imports and R 4.5 crores ( $£ 3,000,000$ ) exports. The comprative figures recorded for the new province, therefore, show an incronse of R12 lakh ( $£ 80,000$ ) or 2.4 per cont.

Bombay, which did $32 \cdot 6$ per cent of the total trade in place of $31 \cdot 2$ per cent in 1900-10, shows an increased aggregato of R110.30 crores
 here being one of R15\% crores ( $\mathrm{E} 10, \underline{2} 00,000$ ) or 16.1 per cont. Her exports adranced by $\mathrm{F} 5 \cdot 19$ crores ( $£ 4,903,300$ ) to R 63.01 crores ( $£ 12,020,700$ ) and
 pereentare increase in these two ases were 13.5 per cent and $19 \cdot 5$ per cent respectively.

- Sind's thatal morement of merchandise marked a slight adrance from R 3006 crores ( $£ 1,373,300$ ) to R 32.65 croves ( $£ 1,786,700$ ) in the year under reriew and consisted of $\mathrm{R} 21 \cdot 15$ crores ( $£ 14100,000$ ) in exports and R11:53 crores ( $£=, 686,000$ ) in imports. Her share in the total trade of the country receded to $9 \%$ per cent, as a result of the greater activity elsewhere. It slightly exceeded the shares of Burma and of Madras; and this was due mainly to her still considerable export trade in produce. That export trade
 imports, howerer, amounted to All 53 crores ( $£ 7,686,700$ ) in place of R8.07 crores ( $£ 6,6 \pm 6,700$ ) in 1909-10.

Madras returns a total trade of P 317 ? crores ( $£ 21,1+6,700$ ), which is greater by $\mathrm{R} \cdot 7 \pm$ crores ( $£ 1, \mathrm{~S} 2(6,700$ ) or 9.4 per cent than in the previcus year. Her exports increased by $S$ per cent to $\mathrm{R} 21^{\circ} 0 \mathrm{~S}$ croves ( $£ 14,053,3^{\prime} \%$ ), and her imports by $1 \geqslant 3$ per cent to $\mathrm{P} 10.6 \$$ crores ( $£ 7,003,300$ ).

Burma returns a total trade of R 3179 crores ( $£ 21,193,301$ ), which is greater by $\mathrm{f} \pm 85$ crores ( $£ 3,233,300$ ) or 15 per cent than in the previous year. Her exports improved by 3497 crores ( $£ 3,313,30 i 1$ ) or 309 per cent to $\mathrm{P} 21: 03$ crores ( $£ 14,020,000$ ) ; while her imports fell by R12.0S lakhs ( $£ 80,500$ ) or 111 per cent to $\$ 1076$ crores ( $£ 7,173,310$ ).

While Bombay's imports increased by 10.8 per cent, thense of Sind hy $15 \cdot 6$ per cent, and those of Madras ly $1 \cdots 3$ per cent, Bengal's figures progressed ly only 41 per cent; Eastern Bengal and Assam showed a decrease of 58 per cent, and Burma recorded a decline of 1.1 per cent.

The Exports of Indian merchandise form $60: 52$ per cont of the sum of imports and exports, and 97.06 prer cent of the fotal exports ats arainist giot per
 ( $£ 136,380,000$ ) as against R154: crores ( $£ 123,000,000$ ) in 1900-10; the

Raw materials and unmanufactured articles form wiper cent of the total as again.t 453 per cent in 1909-10. The total value under this head was
 the increase being $\mathrm{A} 10 \cdot 58$ crores ( $87,053,300$ ) or 12 ( 65 per cent. The principal itens are raw cotton, seeds, and raw jute which constitute respetively $37 .-6$ per cent, 26.7 fer cent, and $16 \%$ per cent of the total in this class. In cotton the advance was due entirely to the rise in price and amounted to $\mathrm{P} 3 \cdot 67$ crores ( $\{2,446,700$ ) or 117 per cent, ercating the record total of $1235 \cdot 10$ crores ( $£ 23,400,000$ ), though the quantity was less than in 19\%0-10. Seeds at R2512 crores ( $\mathcal{E} 6,746,7(50)$ estal) ished another record, and marked an advance of $P .640$ crores $(\$ 4,266,700)$ or $34 \cdot 18$ per cent. The development in Raw Jute amounted only to alout R.40 lakhs ( $£ 266,700$ ) or 2665 per cent. Raw hides alvanced by $¥ 27$ lakhs ( $£ 180,000$ ) or 5.2 $\mathrm{p}^{\text {per }}$ eent and stood at Ra 540 crores ( $\mathrm{E} 3,000,0(0)$ ). The highest figure recorled under this head was R6t crores in 1900-07. Raw skins showed a further decline of $\mathbf{~} 92.72$ lakhs ( $£ 618,100$ ) or 20.5 per cent which brought them back to $\mathrm{B} 3 \cdot 60$ crores $(£ 2,400,000)$ or nearly where the trade stood two years ago.

Exports of Indian manufactures represent about $\mathbf{1 8 . 0 5}$ per cent of the total exports. Their value declined from R 3800 crores ( $£ 25,373,300$ ) to $\mathrm{R} 30^{\prime} 08$ crores ( $£ 24,653,300$ ), the loss heing $\mathrm{R1} 1.08$ crores ( $£ 720,000$ ) or 2.84 per cent. In this class Jute goods represented nearly if per cent of the total and continued to hold the lead with a diminished value of Pl 6.99 crores ( $\mathcal{E} 11,326,700$ ), less by R10.2 lakhs ( $\mathcal{E} 68,000$ ) or 6 per cent than in 1909-10. Cotton goods declined by a net R $90 \cdot 30$ lakhs ( $£ 602,400$ ) or 76 per cent to R11.01 crores ( $£ 7,3 \cdot 10,000)$ which is 45 per cent lower than the figure of two years ago. The decline is accounted for by the fall of R10s.5 lakhs ( $£ 723,300$ ) in yarns, partly offset by rises of FlC 23 laklis ( $£ 108,200$ ) in piece-goods and of R1 01 lakhs ( $£ 12,700$ ) in other cotton goods. Exports of lac, which have been comparatively weak since 1907-08, receded by R64 lakhs ( $£ 426,700$ ) or $23 \cdot 3$ per cent to $\mathrm{f} 2 \cdot 11$ crores ( $£ 1,406,700$ ) Exports of Hides and skins, raw and tanned, fell by Ro 4 lakhs ( $£ 360,000$ ) or 3.97 per cent, bringing the total from $\mathrm{R} 13 \cdot 62$ crorcs $(£ 9,080,000)$ to Pl 13.08 crores ( $£ 8,720,000$ ). Tanned hides, at $\mathrm{R1} 1 \cdot 27$ crores ( $£ 816,700$ ), showed a loss of R16.97 lakhs ( $£ 113,100$ ), but tanned skins at R 2.82 crores ( $£ 1,580,0 \cup 0$ : gained $\mathfrak{1 2 0 \cdot 1 7}$ lakhs ( $£ 104,500$ ).

Articles of food and drink constitute some 27 per cent of the total exports. They show an alvance of R 6.34 crores $(£ \pm, 226,700)$ or 1292 per cent, bringing the total value up to $\{555.37$ crores ( $£ 35,913,300$ ) as compared with P 4904 crores ( $\{32,693,300$ ) in 1909-10. Of this class Rice represented $41 \because G$ per cent and stood at R23.23 crores ( $£ 15,486,700$ ) as against $\mathrm{R} 18 \cdot 24$ crores ( $£ 12,160,000$ ) in 1909-10, the advance bein: R4.90 crores ( $£ 3,326,700$ ) or $27 \cdot 3 \mathrm{t}$ per cent. Wheat and wheat flour at $\mathrm{R} 13 \cdot 59$ crores ( $£ 9,060,000$ ) showed an increase of R2S.68 lakhs ( $£ 191,200$ ) or $2 \cdot 16$ per cent, and represented 245 per cent of the total class Other food grains at R1.76 crores ( $£ 1,173,300$ ) showed a decline of $\not \approx 26.38$ lakhs ( $£ 175,900$ ) or 13 per cent. All other articles of food and drink markel increases. Tea ro:e by R70: lakhs ( $£ 179,700$ ) to R 12.12 crores ( $£ 8,280,000$ ), Coffee rose by R23 322 lakh ( $£ 156,800$ ) to $\mathrm{R1} \cdot 33$ crores ( $£ 886,700$ ), Fruits and vegetables by R7.92 lakhs ( $£ 52,800$ ) to R1.02 crores ( $£ 680,0,00$ ), Provisions by R 13.65 lakhs ( $£ 01,000$ ) to $\mathrm{RI} \cdot 02$ crores ( $£ 680,000$ ), and Spices by $\mathrm{Z} 10 \cdot 09$ lakhs ( $£ 67,300$ ) to RSO 04 lakhs ( $£ 530,600$ ).

Exports of Metals and manufactures thereof in 1909-10 represented 0.6 per cent of the total exports; but in 1910-11 the percentage exceeded 0.7 as the value under this head adranced by R3 483 lakhs ( 32,200 ) or $31 \cdot 46$ per cent to R1•45 crores ( $£ 006,700$ ). Of this increase Mianganese Ore, with

Chemicals, drugs, etc. with a marked alvance of R3. 76 crores ( $£ 2,506,700$ ), stand now at R15.02 crores ( $£ 10,013,300$ ) as against R11 26 crorcs ( $£ 7,506,700$ ) in 1909-10.

Export of Oils form a less important item with a total of $\mathrm{Fl} \cdot 60$ crores ( $£ 1,066,700$ ) ; but this is a record and shows a net advanco of R39.22 lakhs ( $£ 261,500$ ) as compared with 1900-10. Mineral Oil (including wax) at R $78 \cdot 02$ lakhs ( $£ 626,100$ ) increased by R $29 \cdot 06$ lakhs ( $£ 199,701$ ) or 61 per cent; and vegetable and other oils at RS1-16 lakhs ( $£ 541,100$ ) roce hy R9. 26 lakhs ( $£ 01,700$ ).

In Re-exports of Foreign merchandise, which represent $2 \cdot 0.4$ per cint of the total exports, the total value was $R \cdot t \cdot 26$ crores $\left(\mathcal{E}_{2}, 8: 40,000\right)$ as against

(EDS1,600) or 9574 per cent. The larest single iteme in this class is, as usual, Cotton manofactures (including twist and yarn) with a total of Rl.61
 croms ( $£ \subseteq 60.000$ ) of 1909-10. Metals and hardware showel a further incrase of f 973 lakhs $\mathrm{f} 64,00(0)$, hringing the total to li35 31 lakins ( $£ 235,600$ ) in place of R95. 6 lakhs ( $£ 100,700$ ) in 1900-10. Raw wool roce by R 68,000 ( $£ 4,500$ ) to R294S lakls ( $£ 196,500$ ), Provisions ly 13339 laklis ( $£ 22,600$ ) to $\mathrm{R} 2 \cdot 36$ lakhs ( $£ 135,000$ ). Apparel hy R3 lakhs ( $\mathcal{E} 20,000$ ) to R18 7 lakhs
 ( $£ 90,200$ ). Sugar, with a total ralue of $\mathrm{R} 32+11$ lakhs ( $£ 210,100$ ), marked an adrance of R1585 lakhs ( $£ 105,700$ ), or nearly 96 per cent, as a result of reexportations of Jara and Mauritius sugars in response to hish prices in England.

## IMPORTS OF MERCHANDISE

This section of India's sea-borne trade forms about $33 \cdot 1$ per cent of the whole. Its ralue in 1909-10 was R117.06 crores ( $£ 98,010,000$ ) , but in the year under rerier it mose to Pl 129.36 crores ( $£ 56,240,000$ ). The advance of Hil 23 crores ( $£ 5,200,000$ ) represents 10 J per cent of the previous years ficures; but the total is still short by R 53 lakhe ( $£ 353,300$ ) of that recorded in 1907-0s. The following statement compares the value of the imports in 1910-11 with the arerage ralues for each quinquennial period from 1850-81 to 1909-10 and with the single year 1900-10 (the unit being 1,000). It shows also the centesimal variations, the arerage annual total ralue from 1550-81 to $1554-85$ being taken as 100 .

The ralue of each of the seven classes in which the articles are grouped was, in thousands of rupees and of pounds sterling:-

Of these, the class Articles manufactured and partly manufactured contributes the largest sum. In 1908-09 it formed nearly 48.8 per cent of the total, and in 1900-10 aloout 51 per cent. In 1910-11 the percentage rose to 53.5 and the aggregate in this class advanced from $\mathbb{R} 99.81$ crores $(£ 39,873,300)$ to $\mathrm{R} 69 \cdot 15$ croves ( $£ 46,100,000$ ). The advance of $\not \mathbf{7 9} \cdot 34$ crores ( $£ 6,226,700$ ) represents 15.6 per cent on. the previous year's figures, but the total still falls short of that for $1007-08$ by some $\mathbb{7 7 4}$ lakhs ( $£ 493,300$ ). The total increase in Cotton goods within that class amounted to P 5.47 crores ( $£ 3,646,700$ ) or 13.9 per cent, bringing the total value up from $\mathrm{f} 30 \cdot 37$ crores ( $£ 26,2 \cdot 16,700$ ) to R 448 l crores ( $£ 29,893,300$ ). Grey goods with a value of $\mathrm{R17} 69$ crores ( $£ 11,703,300$ ) represent $39 \cdot 5$ per cent of the cotton goods; and the increase of $717 \cdot 12$ lakhs ( $£ 116,100$ ) in this class represents an advance of about 1 per cent. White goods, on the other hand, rose to R055 crores ( $£ 4,366,700$ ), the increase here being Zl 186 crores ( $£ 1,2 \pm 0,000$ ) or $2 \pm 3$ per cent. Coloured goods, at $\mathrm{Pl1} \cdot 76$ crores ( $£ 7,8 \cdot 10,000$ ), showed an advance of $\mathrm{P} 3 \cdot 08$ crores ( $£ 2,053,300$ ), while yarns, at $\mathrm{Z} 3 \cdot 14$ crores ( $£ 2,093,300$ ), showed a decline of $¥ 18 \cdot 24$ lakhs ( $£ 121,600$ ). Silk and woollen goods also show increases of P.49777 lakhs ( $£ 331,800$ ) and $¥ 93 \cdot \overline{8} 6$ lakhs ( $£ 6: 25,700$ ), resprectively. Apparel rose to $\mathrm{A} 3 \cdot 1$ crores ( $£ 2,066,700$ ) and made an alvance of $\mathrm{R} 71 \cdot 63$ laths ( $£ 477,500$ ) in value. Other notable advances in this class were $\mathrm{P} \because 8 \cdot 20$ laklss ( $£ 188,600$ ) in glass and glassware and R 36.62 lakls ( $£ 244,100$ ) in carriages.

The third class, Metals and mınufactures thereof, comes next in importance. Its total value rose from $\mathrm{R} \because 6.03$ crores $(£ 17,353,300)$ to H 26.81 crores ( $£ 17,573,300$ ), the net increase being one of $\mathrm{R} 77 \cdot 66$ laklhs ( $£ 517,700$ ) or nearly 3 per cent; but owing to the larger increases under some other heads, its sinare of the total deolined from 22.2 per cent to 20.7 per cent. Railway plant, with a total of $\mathrm{R} 4 \cdot 25$ croves ( $£ 2,833,300$ ), showed a decrease of $\nexists 119 \cdot 52$ lakhs ( $£ 706,800$ ) ; and there was a decline of R 33.03 lakhs ( $£ 220,200$ ) under machinery. The total value of metals rose from $\mathrm{Pl} 12 \cdot 77$ crores $(£ 8,513,300)$ to R1.t. 10 crores ( $£ 9,6(0,000$ ), the net gain being R1•72 crores ( $£ 1,146,700$ ). This resulted from increases of R1.07 crores ( $£ 713,300$ ) or 40.3 per cent under copper and of RCO.39 lakhs ( $£ 102,600$ ) or 156 per cent under steel. Hardware and cutlery advanced by HzS 05 lakhs ( $£ 387,000$ ) to R 3.35 crores (£2,233,300).

In the sccond class, Articles of food and drink, which represent about $16 \cdot 1$ per cent of the total imports of merchandise, there was an increase amounting to $\mathrm{H1} .92$ crores ( $£ 1,280,0) 0$ ) or 10.1 per cent, which brought the total to R 20.88 crores $(£ 13,920,000)$. Of this increase $85 \cdot 6$ per cent or \#l $\cdot 6 \cdot 4$ crores ( $£ 1,093,300$ ) was contributed by sugar with a total of $\mathrm{\# l} 3 \cdot 17$ crores ( $£ 8,780,000$ ), which is $1 \not \pm 2$ per cent more than in 1909-10. The imports of wheat dwindled to $\mathrm{R5} 5,000$ ( $£ 333$ ) and rice not in the husk to $\mathrm{R7} \cdot 85$ lakhs ( $£ 52,300$ ). Provisions rose to $¥ 3.03$ crores ( $£ 2,020,000$ ), the increase being $\mathrm{fl} 3 \cdot 06$ lakhs ( $£ 87,100$ ), and spices rose by $\mathrm{R} 25 \cdot 41$ lakhs $(£ 160,400)$ to $\mathrm{R1} \cdot 54$ crores ( $£ 1,026,700$ ).

Chemicals, drugs, etc. showed a net decline of $\mathrm{f} 0 \cdot 19$ lakhs ( $£ 43,300$ ) which resulted from a fall of $\mathrm{P} .45 \cdot 68$ lakhs $(£ 301,500)$ under Tobacco, counterbalanced to a large extent by the increases under the other heads, the largest increase occurring under mineral dyes which moved from $\mathrm{f} 57 \cdot 19$ lakbs (£u81,300) to H102.71 lakhe ( $\mathcal{E} 684,700$ ).

The growth in the imports of oils was maintained, the total rising by R25:7 lakhs ( $£ 1 \div 1, \mathcal{E} 00$ ) to $R 3.61$ crores ( $£ 2,406,700$ ). This increase proceeded solely from the arrirals of mineral oils from the Tnited Kinglom, Sumatra, and Russia, which showed at R3.39 crores ( $£ 2,260,000$ ) an advance of R24.20 lakhs ( $£ 161,700$ ), aided in part by a rise of $\mathrm{Rl} \cdot \mathrm{bl}$ lakhs $(£ 10,100)$ or $7 \cdot 4$ per cent in other oils.

In Raw materials at $\mathrm{R} \ddagger 62$ crores $(£ 3,050,000)$ there was a net decline of $\mathrm{R17} \cdot 65$ lakhs ( $£ 117,600$ ). This was mainly due to contractions of R2.12 lakhs ( $£ 1 \pm, 100$ ) in precions stones, of $\mathrm{Rl} \ddagger 31$ lakhs ( $\mathcal{L} 05,400$ ) in raw cotton, of f15•3S lakhs ( $£ 102,500$ ) in conl, and of $\mathrm{R} 12 \cdot \pm 7$ lakhs ( $£ 53,100$ ) in raw silk, against increases of R 13.07 lakhs ( $£ 57,100$ ) in timber and of R5.28 lakhs ( $£ 35,200$ ) in wool.

## ARTICLES OF FOOD AND DRINK

These represent about 10.1 per cent of the total imports. The ralue during the last three years of the principal articles in this group has been :-

Sugar represents 63.06 per cent of the total value of imported articles of food and drink, as against 60.77 per cent in 1909-10; and it confirms yearly its position as the second article in order of importance in any class of imports The arritals now amount to 739,000 tons and some $£ 578$ millions.

At the close of the previous financisl year, the world's sugar prices had attained a rery high level as a consequence of the shortage in the beet crop. The arerage price of first products beet, f. o. b. Hamburg, in the three previous years had been $108.3 \frac{1}{3} d$. per ewt. In March 1910, first products beet, f. o. b. Hamburg, stood at 14s. 6d.; and this rate advanced during the summer months to about 148. 9d., which held good till an exceptionally large beet crop began to be foreseen in the end of August. The estimated crop of beet sugar in the three years ending 1908 had averaged $6,679,000$ tons. In 1909 it was estimated at $6,138,000$ tons, while that of 1910 is expected to be about $8,000,000$ tons. On appearance of the new crop preliminary estimate of about $7,700,000$ tons, the price went back to $118.9 \frac{3}{4} d$. Up to that time Continental refiners dependent on beet were at a disadvantage in competition with those in England, whose fiscal system enabled them to draw supplies from the copious cane crops; and speculative holders of old crop beet in Germany incurred heavy losses on the fall which brought the rate to 98 . $5 \frac{1}{4} d$. in October and to $88.11 \frac{3}{4} d$. by the end of the calendar year. Between January and March of the current year, interest was as usual centred largely on the Cuban outturn, which is considerably below that of the previous year but abore the average; and at the end of March the price of beet sugar ( 88 per cent Hamburg) stood at 98.9 d .

In India one of the features of the year was the extent to which sugar from Java and Mauritius was re-exported to England and other countrics during the summer months in response to the high rates then obtainable.

These re-exports amounted to 320,285 cwts and $\mathbb{R 2} 2 \cdot 41$ lakhs ( $£ 216,100$ ) as compared with 165,854 cwts and f16:56 lakhs ( $£ 110,400$ ) in 1909-10.

The Indian cane crop gathered in the beginning of 1910 had been a good one. Though the contraction of area in that part of the crop which is recorded had proceeded at the rate of 3.4 per cent, the estimated yield showed an increase of 252,400 tons or 13.5 per cent. The good prices induced further planting in 1910, and the recorded part of the new crop is expected to give about $2,226,400$ tons of unrefined sugar-an increase of 99,300 tons or 47 per cent. The crop in all India is probably about $2,900,000$ tons, to which palm sugar must be added.

In India the pricts of beet sugar were highest in the two first months of the official ycar, the rates being about $\mathrm{Fl1-12-0}$ ( $158.8 d$.) per cwt in Calcutta and P12-10-0 (168. 10d.) in Bombay. In Calcutta, however, R12(168.) was touched in June, when prices in Bombay had bogun to recede. There was no marked decline till the new crop began to come into sight in October; but, upon this, rates lapsed to R10-1-8 (13s. $8 \frac{2}{3} \mathrm{~d}$.) in Calcutta and $\mathrm{F10-8-0}$ (14s.) in Bombay. The fall was accentuated in November and December, R9-8-5 (128. 8 $8_{12}$ d.) being reached in Calcutta and $\not 29-13-0$ ( $138.1 d$.) in Bombay. The presence of the good internal crop at that season contributed to the weakness; and this, together with a temporary disorganisation of the distributing trade as a result of the heary losses incurred by dealers, led to the accumulation of large sugar stocks in ports of arrival. After the opening of the new year there was a slight recovery sympathetic with the views taken in Europe regarding the shortage in Cuban supplies. The official year closed with beet at f29-14-0 (13s. 2l.) in Calcutta and fi9-12-0 (13s.) in Bombay. The course of Java sugars was very similar, though naturally the break in their prices on the announcement of the large bect crop in the autumn was rather
 fl2-10-0 (16s. 10d.) in Bombay; and while June showed a rise in the former, there was a decline in the latter. The prices before the collapse were R11-6-5 ( $158.2{ }_{12}^{5} d$. ) and $\ddagger 11$-11-0 ( $15 s .7 d$.) in September. By November they were at fro-8-5 ( $12 \mathrm{~s} .8_{1,}^{5}$ d.) and R9-12-0 (13s.); and the official year closed at R9-12-6 ( $138.0 \frac{1}{2} d$.) and $\mathrm{A} 9-10-0$ (12s. 10d.) respectively. Mauritius sugar No. 1 in Bombay was at $\mathrm{¥l12}$ (16s.) in April 1910, declined on arritals to $\mathrm{Pl1-6} 0$ ( $158.2 d$. ) in August, broko to $\mathrm{R} 10-8-0$ (14s.) in September, $\mathrm{Al} 9-12-0$ (13s.) in October, and R9-8-0 (12s. 8d.) in November and closed the year at this rate.

The arrivals of bect and of cane sugar in each of the last five jears are shown in the following statement (in cwts). These statistics assign shipments to the countries in which the sugar was produced.

The chief sourees of cane sugar are Jara and Mauritius, while in respect of beet sugar Austria has uniformly retained the first place.

Accepting the estimate of the arailahle cane sugar of all India at 2,033,100 tons, we may regard her as the largest single producer and her shave in the world's total cane sugar as $3 \pm$ per ecnt. Cane sugar-India's incluted-represents about 52 per cent of the rorld's total sugar supply; yet India buys about 9.9 per cent of the cane sugar external to India, and cane sugar forms 91 per cent of the sugar imports into this country. These facts are so striking that it is well to show here the jearly progress in each of the two classes absolutely and in relation to the total.

In the three years ending $1205-06$ cane represented 71.9 per cent of the total and beet $2 S \cdot 1$ per cent.

The imports of sugar of both kinds together expanded hy a further
 per cent in quantity and 13.3 per cent in valuc, marking a rise of 7 per cent in the arerage ralue per unit.

The imports of cane sagar expanded by $1,587,300$ cwts or 149 per cent, and in consequence of a rise of some 1 per cent in the specific value, the total ralue showed an improvement of R1G 235 lakhs ( $£ 1,0 \mathrm{~S}_{2}^{2}, 300$ ) or 161 per cent. The greater part of the increase in quantity is traccalle to the expansion in the shipments from Jara and Mauritius to India.

Beet sugar showed a decline of $13 \cdot 1,229$ ewts or 10.6 per cent in quantity and of $\nexists 15.94$ lakbs ( $£ 106,300$ ) or 17.7 per cent in value, marking thereby a decrease of $2 \cdot 4$ per cent in specific value.

In refined sugar, Java greatly surpasses any other source of supply. Her aggregate was $8,357,457 \mathrm{cwts}$ as against $7,510,501$ cwts in 1900-10; and Mauritius, another cane country, came scond with $2,900,765$ ewts against 2,414,007 ewts in 1909-10. Austria, though taking the first place as a source of beet, comes third in refined sugar with 701,714 cwts, while Germany's contribution was only 9,972 cwts. Three years ago refined sugar formed 88 per cent of the imports from Java. Now it forms 91 per cent; and this is in keeping with the reinarkable trend towards superior sugars shown by the Java industry in recent years.

The power of India to absorb immense quantities of crystallised sugar, in addition to the cruder sugar of her own production, becomos increasingly striking year by year. The year under review has established a fresh record not only in total quantity but in the measure of increase That this should have occurred in a year of abnormally high prices shows that the demand for crystallised sugar is strong. It sugye.ts a degree of preference that may well account for the continuous decline in the acreage under cane in this country. Ten years ago imported sugar formed only 5.9 per cent of India's sugar supply: now it forms more than. 20 per cont of it. $\Lambda$ verage imports in the three years ending 1809-1900 represented only 1.96 lbs
and annas 2.82 per head of the population. In 1910-11 they represent 6.79 lbs and annas 8.04 per head. It is important to ascertain whether this large increase in imports has been associated with decline in internal production. In the three years ending 1809-1000 the total imports of sugar averaged 200,800 tons. In the three years ending 1900-10 they averaged 507,800 tons, the increase being 397,000 tons. In the same period the acreage of sugar in recorded tracts of British India has declined on such a scale that the available sugar from these limited sources has fallen by about 409,000 tons. It is impossible to say whether the approximation of these two figures is fortuitous or how far or in what sense the two phenomena are related as cause and effect. But as time goes on the conviction gains ground that the decline in Indian cultivation is real and continuous, and that there is probably a nexus between it and the growth of imports. Price recorls show that in sixteen years the prices of foodstuffs in India have risen ly 32 per cent. The price of Indian crude sugar known as gur has risen only 26 per cent. In other words sugar has not fully shared in the appreciation of other foodstuffs, and it is dificult to dissociate this fact from the circumstance that the world's price of, say, Java sugar has declined in the same period by 25 per cent. It is recognised in the first place that the sparse distribution and defective cultivation of cane in India together with the petty scale and inefficient methods of the indigenous industry are the antitheses of the practice, exemplified by the "central factories" that have been gradually adopted in competing countries, and in the second place that they result in losses possibly sufficient to account for the discrepancy of cost. The creation of a centralised industry in Formosa in a few years has been watched closely, and the year under review saw the realization of the result foreshadowed in the Review for 1908-09, namely, the saturation of the Japan markets with Formosan sugar and the diversion towards India of the Java sugar that formerly went to Japan. The problem of saving the threatenel Indian industry is attracting attention. The Government of India are, considering the expediency of employing an eminent expert or experts to report upon the question.

Provisions-This term, as applied to foreign merchandise, covers a number of heads, and several of these are of a very comprehensive character, though representing small amounts. The total value is R302.94 lakhs ( $£ 2,019,600$ ) us against R259•88 lakhs ( $£ 1,932,500$ ) in 1909-10. This represents $14 \cdot 5$ per cent of the value of all articles of food and drink imported, and shows an increase of R13.06 lakhs ( $£ 87,100$ ) or 4.5 per cent. Dried fruits consist mainly of almonds and dates, but comprise many other fruits imported in small quantitics. The total of dried fruits is $\mathrm{R} 0 \cdot \mathbf{i} \cdot 48$ lakhs ( $£ 629,900$ ) as against RS50.4 lakhs ( $£ 569,600$ ) in 1009-10. The largest single item is dates, which has progressed in total value from $\mathrm{F} \dot{5} \cdot 8$ lakhs ( $£ 365,300$ ) to R 61.08 lakhs ( $£ 407,200$ ), but there was a small decline in quantity recouped by a rise of 11.5 per cent in the specific value. Almonds show a recorery of $\mathrm{Z} 2 \cdot 66$ lakhs ( $£ 17,700$ ) from R 1991 lakhs ( $£ 132,700$ ) to $\mathrm{Z22} \mathrm{\cdot 57}$ lakhs ( $£ 150,500$ ). The trade in salted fish, which aggregated $\mathfrak{Z 2 6} 67$ labhs ( $£ 179,800$ ) in 1909-10, declined to R17.60 lakhs ( $£ 117,900$ ) in the year under review; and the continuous development in the importation of biscuits was maintained with a rise from $\mathrm{R} 28 \cdot 15$ lakhs ( $£ 187,700$ ) to $\mathrm{Z} 32 \cdot 48$ lakhs ( $£ 216,500$ ). Other important itoms which show progressive trado are oanned provisions and farinaceous foods, each of which exceeds f 33 labhs ( $£ 220,000$ ), and preserved mille with a value of $\mathrm{R} 20 \cdot 49$ lakhs ( $£ 176,600$ ). The comprehensive category of "other sorts", which had risen in 1009-10 from $¥ 238 \cdot 26$ lakhs ( $£ 255,100$ ) to

R4191 lakhs ( $£ 979,400$ ), dereloped again to R45•11 lakhs ( $£ 3^{\prime \prime}(0,700$ ), the further progress being one of $7 \cdot 6$ per cent.

Liquors are statistically distinguished as malt liquors, spirits, and wines. The last year has seen a small recorery in malt liquors which constitute the first clas in rolume but the second in ralue. In spirits there were declines both in quantity and ralue, while the quantitative decrease in wines was attended by a small rise in ralue. The following statement summarises the trade of the last three years:

The total ralue, $\mathrm{Z} 159 \cdot \$ 2$ lakhs ( $£ 1,205,500$ ), represents 9 per cent of the imports of articles of food and drink, and is less by fle66 lakhs ( $£ 11,100$ ) than in 1909-10.

In Malt-liquors the expansion of $1 \cdot t$ per cent is common to quantity and ralue. From the Cnited Kingdom came $85 \cdot 8$ per cent of the whole, as against 89 per cent in 1909-10; winle the share of Gurmany rose from 9.4 to 9.8 per cent with an increase of 5 per cent in her total quantity; and other foreign countries supplied $1 \pm$ per cent in place of $1 \cdot 6$ per cent.

These import figures do not represent the consumption of malt liquors in India, seeing that in 1910 Indian breweries produced $4,191,493$ gallons against $4,824,050$ gallons in 1909. This marks a decline of 632,557 gallons in Indian production and brings the total decline in the last five years to $1,105,137$ gallons or $25 \cdot 1$ per cent.

The factor of indigenous production is even more dominant in respect of spirits. The following statement shows the totals in gallons of all spirits including liqueurs and methylated and perfumed spirits, imported from the several countries in the last tbree years; and, below the totals, are noted the quantities of spirit issued from Indian distilleries.

But in 1906-07 the total imports were $1,488,361$ gallons with a value of f 98.69 lakhs ( $£ 657,900$ ), so it cannot be said that the contraction in the year under review is due to the enhancement of the import duty under the Act of 1906. The contractions of 156,980 gallons in quantity and of $¥ 2.98$ lakhs ( $£ 19,900$ ) in value are equivalent to $9 \cdot 3$ per cent and $2 \cdot 7$ per cent, respectively, and the difference marks an advance of 7 per cent in the specific value exclusive of duty.

The quantities of the principal descriptions of potable spirits imported were (in gallons) :-

|  |  |  | 1908-09 | 1909-10 | 1910-11 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Whisky | - . | - | 681,401 | 644,946 | 698,342 |
| Brandy | . . | - | 376,475 | 374,210 | 359,815 |
| Gin | - | - | 84,160 | 80,811 | 72,185 |
| Rum | - - | - | 64,144 | 69,479 | 39,306 |
| Other sorts | - . | - | 174,731 | 160,634 | 106,121 |
|  | Total, | . | 1,350,011 | 1,330,080 | 1,214,769 |

The potable spirits of "other sorts" are chicfly potato spirits from Germany ( 34,108 gallons), sundry spirits from the United Kingdom (11,992 gallons), rum from Java ( 8,189 gallons) and China ( 9,335 gallons), and arrack from Ceylon ( 0,472 gallons).

The total quantity and value of wines imported were 331,514 gallons and R27.03 lakhs ( $£ 180,200$ ) as against 338,501 gallons and $¥ 26.45$ lakhs $(£ 176,300)$ in 1909-10. Thus thre was a contraction of 6,987 gallons or 2 per cent in quantity, but the value advanced by 2 per cent, marking thereby an improvement of $4 \cdot 6$ per cent in the arerage value, which is now $788-2-6$ (10s. 1012 $d$.) instuad of P 7 -12-6 ( 10 s .10 d .) per gallon in 1909-10.

The growth in the Imports of spices is well maintained and amounts to some 1.4 .4 per cent in quantity and 19.7 per cent in total value, which now stands at $\mathrm{R} 15 \cdot 4 \cdot 17$ lakhs ( $£ 1,027,800$ ). Betelnats, with a quantity of $\mathbf{6 2 , 6 3 3}$ tons as against 54,521 tons in 1909-10, showed a value of 710782 lakhs ( $£(18,800$ ), which is higher by 22.5 per cent than in 1909-10. Of this article 88.5 per cent came from the Straits Settlements, 64.o per cent being landed in Calcutta and 19.5 per cent in Madras. The trade in Cloves which come principally from Zanzibar, declined from 3,762 tons valued at f f24:19 lakhs ( $£ 101,300$ ) to 3,247 tons valued at $\mathrm{f} 22 \cdot 05$ lakhs ( $£ 147,000$ ). This represented a decline of 13.7 per cent in quantity and 9 per cent in value, attended by an increase of 56 per cont in specific value.

Grain and pulse-Imports under this head are usually indicative of the degree of shortage in Indian crops; and the decline apparent in the figures for the past year as shown below is a matter for congratulation:-

|  |  | 1908-09 | 1909-10 | 1910-11 |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Tons | Tons | Tons |
| Rice | - • | 32,739 | 18,679 | 6,266 |
| Wheat | - . | 28,9.18 | 389 | 50 |
| , flour | - . | 6,651 | 2,371 | 2,591 |
| Pulse . | . $\cdot$ | 20,527 | 4,240 | 1,057 |
| Gram | - . | 133 | 57 | 28 |
| Barley | - . | 2 | 3 | 18 |
| Jawar and bajra | . . | 448 | 2.48 | 121 |
| Oats - | - | 181 | 3,442 | 667 |
| Other sorts | - . | 5,476 | 345 | 63 |
|  | Total | 95,400 | 24,774 | 11,156 |

The total imports decreased from 24,774 tons valued at $\mathbf{7} 29 \cdot 96$ lakhs $(£ 109,700)$ to 11,156 tons valued at Zl 4.62 lakhs $(£ 97,500)$. The most noticeable decroases aro under rice not in the husk: from 13,170 tons and $\not \approx 16.69$ lakhs ( $£ 111,300$ ) to $6,2.42$ tons and 7785 lakhs ( $£ 5 \overline{2} 2,300$ ), oats: from 3,442 tons and $\nexists 3 \cdot 53$ lakhs ( $£ 23,500$ ) to 667 tons and $\mathrm{R} 69,400(£ 4,600)$, and pulse: from 1,240 tons and $\mathbf{R t} \cdot 15$ lakhs ( $\mathbf{£ 2 7 , 7 0 0 )}$ to 1,057 tons and $\mathrm{R} 1 \cdot 18$ lakhs £7,900).

Rice was imported chiefly from the Straits Settloments, the receipts from that source amounting to 6,175 tons as compared with 9,496 tons in the previous rear. Imports of pulse became almost negligible. The following statement shors the imports of the principal kinds of grain and pulse into Bengal and into Bombar during the last two years, in tons -

Salt represents 3.1 per cent of the value of articles of food and drink imported. The quantity and ralue have been as follows in the last five years:-

|  |  | 1906-07 | 1907-08 | 1905-09 | 1909-10 | 1910-11 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Quantity | tons | 464,949 | 55s,654 | 5¢¢,S¢7 | 193, ガ | +50,375 |
| Value (unit | Rs. 1,000$)$ | 66,77 | S0,21 | 91,07 | (68,59 | 70,47 |
| Sterling (\% | \& 1,000 ) | 4,45 | 5,35 | 5,60 | 4,79 | 4, 0 |

Thus in 1910-11 the decrease in quantity was one of 17,073 tons or 3.5 per cent, while the ralue showed an adrance of $\mathrm{RI} \cdot 50$ lakhs ( $£ 10,600$ ) or 2.3 per cent. This difference marks an adrance of 6 per cent in the value per unit.

The duty on salt, which for prorinces other, than Burma was Rs 2-8-0 (38. 4 d.) per maund up to 1902-03 (Burma haring always enjoyed the rate of Re. 1 (18. $\frac{4}{d .}$ ) now universal in India,) was in that year reluced to Rs. 2 (2s. $8 d$. ) and consumption grew by 3 per cent to $1,346,830$ tons. In 1903-01, although the duty remained unchanged, the consumption grew by $2 \cdot 0$ per cent, and!in 1904-05 it adranced by 4 per cent on reduction of the duty to lis. 1-8.0 (28.) In 1905-06 no further reduction was made, and the consumption receded by 1.4 per cent. In 1906-07 the present rate of Re. 1 ( $18.4 d$. ) per maund was adopted, and the following figures show the increases since that date:-1906-07,+5 per cent to $1,458,635$ tons; 1907-08, +4 per cent to $1,547,601$ tons; 1908-09,+2 per cent to $1,580,230$ tons; $1900-10,+5$ per cent to 1,588,356 tons ; 1910-11 (estimated), +6 per cent to 1,076,769 tons.

The year's trade has been good, and prices of Liverpool salt ex-warehouse in Calcutta have averaged about Rs. 45-6-8 per 100 maunds ( 9112 . per cwt) as against R.s. $38-1-4$ ( $8 \frac{1}{2} \mathrm{~d}$ per cirt) in the previous year. The quotation was Rs. 38 ( $£ 2108.8 d$.) in April 1910, Rs. 48 ( $£ 348$.) in Junc, Rs. 47 ( $£ 328.8 d$. ) in August and in October, Rs. 49 ( $£ 3$ 58. 4d.) in December and January, and Rs. 43 ( $£ 2178.4 d$.) in March-this being the rate that was in force in April 1909.

The year was remarkable for the discovery and flotation of a new process of salt manufacture of which great things are expected in spite of the large improvements and economies recently made in ordinary methods of production.

Tea-The imports of tea advanced from $3,679,587$ llbs to $4,625,327 \mathrm{lbs}$ in quantity and from $\mathrm{Zll} \cdot 58$ lakhs $(£ 117,200)$ to $\mathrm{P} 20 \cdot 75$ lakhs ( $£ 138,300$ ) in value. The increase is therefore one of $25 \cdot 7$ per cent in quantity and 18 per cent in value. This marks a fall of 6.2 per cent in the average value per unit. which was 7 annas 3 pies ( $7 \frac{1}{4} d$ ) per lb . The total increase was derived trom China, her contribution rising from 1,523,966 lbs to $2,518,021 \mathrm{lbs}$ or $\mathbf{6 5} \mathbf{2}$ per cent. Of this $1,489,541$ lbs were green tca which showedan expansion of
about 27 per cent. Black tea also increased by 192 pur cent to $1,028,480 \mathrm{lbs}$. Shipments from Ceylon, on the other hand, declined by $217,638 \mathrm{lbs}$ or 14.8 per cent to $1,250,263 \mathrm{lbs}$. Estimates of re-exportation must be taken with some reserve, for it is known that, more especially on the land routes, foreign tea is not always accurately distinguished from Indian tea. But if the figures be accepted as correct, $667,306 \mathrm{lbs}$ were re-exported by sea and $178,080 \mathrm{lbs}$ by land, making a total of $5.55,386 \mathrm{lbs}$ of which 96 per cent was black tea. On the average of the last five years, it would appear that some $5 \cdot 66$ million lbs of foreign tea are yearly retained for consumption in India.

Fruits and vegetables-The total value of this trade is Pl 1.42 lakhs $(£ 98,100)$ as against $\mathrm{P} 13 \cdot 26$ lakhs $(£ 58,400)$ in 1909-10. Cocoanats declined from R $5 \cdot 2 \mathrm{t}$ lakhs ( $£ 34,000$ ) to $\mathrm{R} \downarrow \cdot 66$ lakhs ( $£ 32,400$ ); while Copra-which is strictly a raw material for the oil industry and from which butter substitutes are now being male in Southern Iadia-dropped to Pl13,500 (£900) from Rl.03 lakhs ( $£ 6,900$ ). Other sorts expanded from $\mathcal{R 6} 69$ lakhs ( $£ 46,600$ ) to R972 lakhs ( $£ 61,800$ ).

## metals and mandfactures of metals

Hardware and cutlery form 12.5 per cent of the total value of imports of metals and manufactures of metals. From the following statement it will appear that their value has advanced by $\not 758.05$ lakbs ( $£ 387,000$ ) or 21 per cent:-

| P | $1 / 13-09$ |  | 1909-10 |  | 1910-11 |  |

| Unspecitiol harlmare | 2,14,91,357 | 1,433,757 | 2,04,57,451 | 1,363,830 | 2,36,47,445 | 1,576,496 |
| Tutal | 2,92,58,183 | 1,950,5\$6 | 2,70,64, 674 | 1,84,293 | 3,34,69,113 | 2,231,274 |

The healing comprises articles of so heterogeneous a nature that it is impossible to show briefly in what measure any general variation in the specific value of metal articles has contributed to the fluctuation in the statistics. Enamelled ironware is an item of peculiar interest as it is a substitute for the distinctive Indian vessels of copper and brass. During the years when the prices of these metals were very high, the importation of enamelled ware made great progress, and in 1907-08 the total value rose to $\mathrm{R} 2 \mathrm{t} \cdot 49$ lakhs ( $£ 163,200$ ). But the popular proference for the more familiar material reposes partly on certain ritual observances of cleanliness, and it was marked by the prompt contraction in the imports of enamelled ware in 1908-09 when copper had returned to a moro normal level. That contraction continued in 1909-10, but in 1910-11 the upward movement was resumed, and the total value rose by R6. 17 lakhs ( $£ 41,100$ ) or 48 per cent to $\mathrm{Pl9} 03$ lakhs ( $£ 126,900$ ). It will bo seen elsewhere that this was accompanied by an increase of 40 per cont in the imports of wrought copper. Austria occupies the premier place in the trade in enamelled ware, and has done 7.49 per cent of the whole business instuad of $68 \cdot 7$ per cont in 1909-10. Germany holds the second place and with 13.3 per cont in place of 19.2 per cent in 1900-10. Sewing machines now constitute the largost homogeneous item in this class of imports and their value advanced by $\mathbf{R 8} 49$ lakhs ( $£ 56,600$ ) or 55 per cent. The value of

Agricultural implements is still short of the level at which it stool three years ago, but it shows a gain of 21.09 lakhs $(57,300)$ or $11.91^{\text {m.r cent on the figure }}$ for 1909-10, while Other implements and tools have entablishel a record with an incrase of P 3.03 lakhs ( $£ 20,200$ ) or $19 \cdot \mathrm{~S}$ per cent. The progress in Cutlery amounts to $43 \%$ per cent or $\mathrm{P} 6 \pm 40$ lakhs ( $£\{3,100$ ) ; and the $\mathrm{R} 31 \cdot 9$ lakhs ( $£ 21,300)$ by which the ralue of anspecified hardware has developed is 15.6 per cent of the prerious year's figures. This residual heading covers lampware. This now has a ralue of A 34.03 lakhs ( $£ 226,900$ ) which exceeds the R27.77 lakhs ( $£ 185,100$ ) of the previous year by $\mathrm{R} 6 \div 6$ lakhs ( $£ 41,700$ ) or 20.5 per cent. The growth in this item, like that in enamelled ware, indicates a certain departure from traditional practice among the people. The suphriority, cheapnes, and wide distribution of kerosene have led to an almost general abandonment of regetable illuminants, and it scems probable that a trade might now be created in cooking lanips costing about R ( ( $2 s$. S $d$.). Wuch of the croking by the common people in India is done with dried cow-dung as fucl. This leads to the destruction of manure, the preservation of which becomes increasingly important, and it is stated by penons in daily touch with the arricultural clasises that the people themselves are not blind to the waste involved. But so far no suitable cooking lamp seems to have been put suceessfully on the market.

The share of the United Kingdom in Hardware and cutlery trale, while showing centesimally a decline from $65 \cdot 6$ per cent to 60 per cent of the total, adranced absolutely by E 19.33 labhs ( $£ 125,900$ ) or 10.7 per cent to $\mathrm{R} 200 \cdot 76$ lakhs ( $£ 133,800$ ). Gérmany's share improved relatively from 13.2 per cent to 143 per cent of the total and alsolutely by R11.6 lakhs ( $£ 67,300$ ) or 31.8 per cent to f. 4.03 lakhs ( $£ 320,200$ ). Although greater aceuracy has been attained in ascribing goods to their countries of origin, it is probable that part of the shipments from Belgiam really emanated from Germany. The two countries conjointly showed a share of 22 per cent as compared with 10 per cent in 1909-10, and their total advanced by $\mathrm{R} 21 \cdot 41$ lakhs ( $£ 142,700$ ) to ¥73\%t lakhs ( $£ 191,600$ ). Austria-Hungary, on the other hand, increased her share by 45.9 per cent or P 7.87 lakhs ( $£ 52,500$ ) to R 25.01 lakhs ( $£ 166,900$ ), and now does $7: \overline{\mathrm{E}}$ per cent of the total. The United Stentes of America accounts for $\$ 22171$ lakhs ( $£ 144,700$ ) and shows an increase of $\mathrm{f} \pm 31$ lakhs ( $£ 28,700$ ) or 24.8 per cent over its contribution in 1909-10. Its share to the total represents 6.5 per cent as against 6.3 per cent. in the previous year.

Metals represent $11 \cdot 2$ per cent of the total value of imported merchandise. In 1909-10 the quantity had fallen to $6.14,730$ tons and the value to $\mathrm{F} 12 \cdot 77$ crores ( $£ 8,513,300$ ). In the year now under review the quantity advanced to 636,727 tons (i.e., by 8 per cent), and the total value rose to fl 1.49 crores ( $£ 9,660,000$ ) or by 13.5 per cent, together with a rise of 5 per cent in the specific value per ton. The figures are the largest on record. The rise in specific value is accounted for by the fact that development took place mainly in metals of relatively high value. Indeed most of the increase of $717{ }^{\circ}$ lakhs ( $£ 1,146,700$ ) was contributed by copper which showed figures greater by Hl 107 lakhs ( $£ 713,500$ ). Tin showed an increase of $\mathrm{R1} \cdot 2 \overline{2}$ lakhs ( $£ 83,300$ ) and quicksliver brought in another increment of $\mathrm{Z2} 2 \cdot 38$ lakhs ( $£ 15,900$ ). The total quantity and value of iron remained little changed, but steel showed a gain of E 60 lakhs, $(£ 400,000)$.

Copper represents about 25.6 per cent of the total value of imports of metal in 1910-11, against 20.7 per cent in 1909-10, 21 per cent in 1908-09, 156 per cent in 1907-08, and 13.8 per cent in 1906-07. The commolity is one of peculiar importance in India since most of the domestic vessels of the people are made of copper or brass, and departure from this usage is rendered difficult by certain ritual observances of cleanliness. With a world's proluction increased by 11 per cent and 16 per cent in successive years, bringing the total to 852,950 tons in 1910 against 839,425 tons in 1909, with the sources of supply supplemented by new discoreries, with disturbed trade conditions and a flagging demand, more particularly in the United States, the price of standard copper, which touched $£ 111$ in 1907, has, during tho year under review, remained at normal levels. In London it recorded an average of £j7 3s. $3 d$. per ton against £55 17s. $3 d$. in 1909 and $£(000$. $5 d$. in 1908; and probably the fall would have been greater but for constant rumours of agreements to reduce production. Standard copper (cahh) was sold in London at $£ 621_{\mathrm{s} .} .3 \mathrm{~d}$. at the beginning of January 1910, but this rate was not scen again, while the lowest rate accepted was
 the Indian year with £5ч Ss. 9d. The prices of copper braziers during the year 1910-11 averaged $\mathrm{R} 53-11-8$ ( $£ 3 \mathrm{lls}$. $7 \frac{2}{3} \mathrm{~d}$.) per cwt in Bombay, in place of R55-14-0 ( $£ 3$ 148. 6d.) in the previous year ; and in Calcutta the averages hare been : -1909-10, R51-11-7 (£3 9s.) and 1910-11, R51-8-2 ( $£ 388 .{ }_{8}^{1}$ d.). The figures appear to confirm the opinion hazarded in the review for 1903-09 that the price levels then reached were about normal; and the imports of the yellow metals, which during the period of inflated prices were to some extent displaced by enamelled ware, now resume their function as one of the gauges of Indian prosperity. The imports amounted to 732,914 cwts with a value of R 371 lakhs ( $£ 2,473,100$ ) as compared with the previous year figures of $506,099 \mathrm{cwts}$ and $\{264 \cdot 35$ lakhs ( $£ 1,762,300$ ). There has thus been an increase of 44.6 per cent in the quantity of copper imported and one of 40.3 per cent in the value, the difference between these rates indicating a fall of 3 per cent in the average value per unit. Wrought copper represents 86.8 per cent of the total quantity of copper imported, and it accounted for 86 per cent of the entirc growth in the trade. It increased by 44 per cent in quantity and by 40 per cent in value, the fall in specific value here agreeing nearly with that for all copper. The actual figures are 636,084 cwts with a value of - R323.97 laklis ( $£ 2,159,500$ ) as compared with 441,615 cwts and $2231 \cdot 96$ lakhs ( $£ 1,546,400$ ) in 1909-10. Unwrought copper advanced by 49 per cent in quantity and by 45 per cent in value, the average value haring fallen from P4993 (£36s.7d.) to $\mathrm{R} 48 \% 53$ ( $£ 3 \mathrm{4s} .8 \mathrm{~d}$.) per owt. Copper ore exists in soveral parts of India but the production continues negligible.

Brass-The quantity of brass imported is only equal to about 2.5 per cent of the quantity of copper imported. The imports of brass advanced from 16,500 cwts to 18,593 cwts and from $\mathrm{P} 9 \cdot 33$ lakhs $(\mathfrak{E} 62,200)$ to $\mathrm{R} 10 \cdot 51$ lakhs ( $£ 70,100$ ), the increase being one of 1,793 cwts or 10.7 per cent in quantity and of R 1.18 lakhs $(£ 7,900)$ or 12.7 per cent in value, due in part to a rise of 1.8 per cent in the specific value per unit. The greater increase in the figures relating to copper seems to indicate a continuance of the people's proference for the latter.

Iron and Steel-The year under reriew disappointed makers of iron and steel, but was better than 1901 or 1909. Good expectations were formed at the beginning of 1910, and in that year prices touched their highest in January. But before the Indian official year had opened, it was realised that there was something wrong with the American revival, and rates began to flag. The slackness of business in the United States and the abortiveness of the demand for Cleveland iron from that quarter contributed to the depression. The calendar year saw large additions to stocks of Clereland iron, and these ir December were estimated at about 520,000 tous. One of the most important constituents of the iron and steel trade,-and a valuable gauge of trade activity as a whole-is shipbuilding; and it is worthy of notice that whereas the average addition to tonnage (excluding warships) in the ('nited Kingdom in the ten years ls9S to 1907 was $1,466,397$ tons, it dropped in 1905 to 929,660 tons and in the last two years has stood at 991,066 and $1,1 \downarrow 3,169$ tons respectively. In 1910 the shipbuilding industry was deranged by the boiler-makers' dispute which lasted from September to December; but at the end of the year the tonnage under construction was greater by 215,129 tons ( 24 per cent) than at the end of 1909, a feature of the new business being extended construction of tank steamers in anticipation of expansion in the bulk oil trade.

In the early months of 1911 there has leen an improvement; and some branches of business are really actire. The world's production of pig iron in 1910 has been eatimated at 65 million tons as against $60,336,000$ tons in 1909. The extent of expansion in the three principal countries may be seen from the following statement (in tons) :--

|  |  | 1908 | ]ب99 | 1910 |
| :---: | :---: | :---: | :---: | :---: |
| United States |  | 15,936,000 | 25,795,471 | 27,29, 545 |
| Germany |  | 11,513,500 | 12,019,534 | 13,648,634 |
| United Kingdom |  | 9,300,600 | 8,672,349 | 9,500,000 |
|  | Total | 37.049,500 | 47,517,674 | 50,797,183 |

The price of Cleveland warrants in the United Kingdom averaged 508.58 . per ton in 1910 against $498.4 \frac{5}{8} / 4$. in 1909 . In April 1910 the price was $518.7 \frac{18}{} d$. It fell to 498 . in July, recorered to 508 . in September, and closed at $48_{8}$. $10 \frac{1}{2} d$. The arerage export value (f. o. b.) of pig iron for the year was 68s. $2 d$. as against 648. 7d. in 1909.

The price of Iron bars (Swedish rolled) in Calcutta averaged R8-11-8 ( $118.7_{3}^{2} d$. ) per cut in 1910-11 against $\mathrm{R} 8-10-0$ ( $11 \mathrm{~g} .6 d$.) in 1909-10, the rates having stood at Z 8 -12-0 ( 11 s .8 d .) for the greater part of the year.

The following statement shows the total quantities and values of the imports of iron and steel distinctly and conjointly in each of the last five years (Unit $=1,000$ ) :-

|  | dron |  |  | Stet |  |  | Total |  |  |

It becomes increasingly difficult to distinguish iron from steel in cortain lines of goods, and their separation has the disadvantage of obscuring the
statistics regarding the trade as a whole in specific articles made alternatively of either substance. But the particulars as stated alove show iron to have exceeded steel by $\mathrm{P} 49 \cdot 2$ lakhs ( $£ 328,000$ ), though its quantity was smaller by 83,000 tons. The imports of iron declined by 2,443 tons in quantity (about 1 per cent) and by $\mathrm{Pll} 1,326$ ( $£ 755$ ) only in value ( 02 per cent), while steel rose in quantity by 43,110 tons ( 13.5 per cent) and in value by R 60.39 lakhs ( $£ 102,600$ ) equal to 15.6 per cent. The share of iron in the total values of the last three years has been 53 per cent, 56 per cent, and 53 per cent.

In a class of goods so composite and comprehensive, it is not permissible to assume that the quantitative relations of one description to another are constant or that the price movements of the various descriptions are uniform. For this reason there would be little real use in bringing out the variations in the average value per cwt of total arrivals.

From the statement below it will be seen that the share of the United Kingdom in the total quantity of the trale fell from 61.4 per cent to 59.9 per cent, and this in spite of the fact that she increased her shipments from 370,064 tons to 385,155 tons. In iron the figures receded from 222,977 to 216,372 tons but in stecl there was an expansion from 147,087 to 168,783 tons. Germany and Belgium, on the other hand, supplied 228,782 tons in all, against 209,202 tons in 1900-10, and while their steel shipments advanced from 166,886 to 182,576 tons, those in iron also developed from 42,316 to 46,206 tons. It may be explained that Germany and Belgium are bracketed because considerable quantities of Germany's products are shipped from Belgium, and that it is not yet possible to assign exactly to each source such proportion of the trade as is derived from it.

Bars, of which four-fifths are stecl, constitute the largest item; and of this Germany and Belgium between them do about 87 per cent. In this article .there was an increase of 23,151 tons or 18 per cent. Sheets and plates are mainly of steel, and the development here is one of 895 tons. But this is more than accounted for by the adlition of 8,673 tons in the shipments from the United Kingdom, the difforence of 7,633 tons having come out of the olare of Germany and Belgium. The value per cwt of sheets and plates imported from Germany and Belgium rose from $\mathrm{Pr} 5-\mathrm{S}-2$ ( $7 \mathrm{~s} .4_{8}^{2} d$ ) in 1909-10
to RJ-10-0 ( Fs .6 Gd .) and the aremge ralue of lititish sheets improved from
 next importance; and, as it relates to a branch of manufacture which has been singularly prosperous in 1910, it is interesting to find that it shows an adrance of 3,100 tons or 213 per cent. Most of this trade is done hy the C'nited Kingdom and emanates from a small and well organized group of manufacturers; but Germany and Belgium, which two yeass ago contributed 2,046 tons and raised their total to 2,853 tous in 1909-10, sent only 557 tons in the year under rerier. In tinned plates, which are also the product of a very prosperous British indastry, the Cnited Kingdom continues to hare its own way; and the total shows an improrement of 1,157 tons. Comparison of the rates of progress in quantity and in ralue points to a growth of $\$ \cdot 1$ per cent in specific value. Beams, etc. shem an adrance of $\overline{7}, 5 \mathrm{~S}_{2}$ tons; and here the United Kinglom records an adrance of $\mathbf{5 , 9 1 7}$ tons, and Germany and Belgimu of 1,065 tons. Pipes and tabes form another branch of trade in which Britain is supreme. The total declined from 37,519 to 33,929 tons of which the C-nited States supplied $13 \cdot 2$ per cent. The decline of 3,500 tons is made up of $2.51 S$ tons ( $\$ \cdot 1$ per cent) in shipments from the United ningdom and $1,0-9$ tons ( $16 \cdot 5$ per cent) in arrivals from other countries. The total sum was R55.75 lakhs ( $£ 371,700$ ) of which the United Kingdom did $\mathrm{P} 42 \cdot 42$ lakhs ( $£ 292,500$ ), Belgium $\mathrm{R} 30,000$ ( $£ 2,000$ ), and the Tnited States R11 0 S Lakhs ( $£ 73,900$ ). In angle, channel, etc. the share of the Tnited Kingdom amounted to 17,063 tons or 63 per cent of the total, while Belgium contributed 10,095 tons or 37 per cent. The total shows an increase of 5,630 tons and R 575 lakhs ( $\mathbf{E} 35,500$ ). In the trade in hoop iron Britain's share was CG per cent and the trale as a whole increased by $\overline{0}, \overline{7} 13$ tons and $\mathfrak{R} 7 \cdot 14$ lakhs ( $£ \pm \mathbf{7}, 600$ ). Nails come mainly from Germany and Belgium ; and the trade continues to grow without Britain's being able to secure even a proportional expansion in her shipments.

Lead was one of the metals that took part in the extraordinary adranco in prices in 1907. In April of that year it stood at $£ 19$ 12s. $6 d$. per ton, but ly March of the following year it had fallen to $£ 13158.0 d$. In 1908-09 it varied rom £12 $78.6 d$. to $£ 1478.6 d$., and in 1909-10 it began at $£ 1458$. and closed at $£ 13$ 108. In the year under review tho range of prices has been narrower, the lowest having been £12 13s. and the highest about $£ 13108$. in March 1911. The arrivals of lead aggregated 136,001 cwts with a ralue of R179 lakhs ( $£ 119,300$ ), and were larger than the figures of the previous year by 055 cwts or $\cdot 4$ per cent in quantity, while the value declined by $\mathrm{R} 53,917$ ( $£ 3,504$ ) or $2 \cdot 9$ per cent. This contrast marks a fall of 3.3 per cent in specific ralue, i.e., from \#13-9-3 ( $188.1_{4}^{1} d$.) to R13-1-10 ( $178.5_{8}^{5} d$. ) per cwt. The United Kingdom sùplied lead sheets for tea chests to the value of $\mathrm{R} 7 \cdot 17$ lakhs ( $£ 47,800$ ), as compared with R8.36 lakhs ( $£ 55,700$ ) in 1909-10 ; while imports of this class from foreign countries showed a small advance at $\mathrm{R} 75,202$ ( $£ 5,013$ ). There is thus a net decline of $\mathrm{Z} 48,878(£ 3,258)$ or 5.8 per cent in value and of 6,082 cwts or 10.3 per cent in quantity. The average value of the British sheet rose from Hil4-4-0 (198.) to $\mathrm{Z15-10-6}\left(£ 108.10 \frac{1}{2} d\right.$.) per cut, while that of the foreign

Tin has been the subject of some of the most marked price movements of the year. The dullness in copper confirms the belief that the activity in tin does not result from any great activity in those industrics in which the two
metals are commonly associated. But the prosperity of the British tin-plate trade has certainly accounted for much of it. About half of the world's supply is derived from the Straits, and the limited number of sources renders tin a favourable sulject of speculation. During 1910 this fact was exploited by certain strong groups with considerable success. Prices have ruled high throughout the year. In London, Straits tin in April stood at $£ 152$ per ton which was $£ 18$ higher than in April 1009. In May the price receded, but in July the upward movement was resumed. The price touched $£ 204$ on the 30th January 1911. At the end of February it was $£ 18758$. and at end of March 1911 it was $£ 18010 \mathrm{~s}$. This marks a gain of $£ 31 \mathrm{js}$. on the twelve months and the price now is practically on a level with the £200 recorded in 1907 and within sight of the $£ 615$ recorded in 1906. Recent alvices report a considerable further adrance. India draws her supplies from the Malay Archipelago; and in 1910-11 her demand showed a small expansion from 38,621 ewts with a value of $\mathrm{Rt4} 17$ lakls ( $£ 291, \bar{\sigma}(0)$ to 38,720 cwts with a value of $\mathfrak{X} 45 \cdot 42$ lakbs ( $£ 302,800$ ). The quantity thus increased by only 0.28 per cont while the total value advanced by $2 \cdot 5$ per cent. From the discrepancy a rise of $2 \cdot 5$ per cent in specific value may be deduced, and this only feebly reflects the great rise in average prices of tin in London. Unwrought tin from the Straits was also imported to the extent of 33,351 ewts with a value of $\mathrm{Z} 40 \cdot 69$ lakhs ( $£ 271,300$ ), which shows a quan. titative drop of some 1,300 ewts from the 31,650 cwts of the previous year, though there is an advance of $\mathrm{P} 1 \cdot 56$ lakhs ( $£ 10,400$ ) in value on the $\mathrm{Z} 30 \cdot 13$ Jakhs ( $£(60,900)$ of 1000-10.

The quantity of tin raised in the Mergui and Tavoy districts in Burma was 109 tons valued at $\mathrm{R} \cdot 0 \mathrm{O}$ lakhs ( $£ 13,700$ ) as compared with $8 \pm$ tons valued at R1:15 lakhs ( $£ 0,700$ ) in 1909-10. The increase is one of 29.8 per cent in quantity, $41 \pm$ per cent in value, and 8.7 per cent in specific value. The ore was exported to the Straits for treatment.

Machinery in 1910-11 represented only 17.6 per cent of the total value of imported metals and manufactures thereof and only 3.7 per cent of the imports of all merchandise. For the second year in succession there has been a decline in the arrivals of machinery; and in Iudia this is an important fact. Growth was continuous up to 1908-09; and up to that time textile machinery held the first place. In 1908-09 it was a subject of congratulation that the growth should have continued in spits of the general business depression that arose in 1907-08, but in 1900-10 that depression took effect unmistakably in all classes of machinery. In the year now being revierwed, textile machinery is the only head under which the upward movement has not been resumed; and the decline in this class is so gront as to have more than counterbalanced the substantial developments in other descriptions. The total value of all classes of machinery has receded from R 506.07 lakhs ( $£ 3,373,500$ ) to R473.04 lakhs $(£ 3,153,600)$, the deeline being P 33.03 lakhs $(£ 220,200)$ or 6.5 per cent. For the first time the value of textile machinery cedes the premier place to the composite healing of other sorts, and it shows a total value of only R163:96 lakhs ( $£ 1,093,100$ ) in phace of R215.15 lakhs ( $£ 1,434,300$ ) in 1909-10 and $\mathrm{Z} 287 \cdot 60$ lakhs ( $£ 1,017,300$ ) in 1908-09. This discloses a drop of no less than R51.10 lakhs ( $£ 341,300$ ) or 23.8 per cent on the twelve months, and the total is the smallest recorded sirco 1905-06 when the item was first distinguished. The diminution results from the depression in the cotton and jute industries. Bengal, as the seat of the latter, took textile machinery to
the ralue of $\mathrm{R} 77 \cdot 5$ lakhs ( $£ 516,700$ ) against $\mathrm{RS5} 504$ lakhs ( $£ 506,000$ ) in the prerious year, the diminution being R75b lakhs (£50,200) or 8.9 por cent. Bombar, which has many advantages in enton and none in jute, imported textilu machinery only to the value of R76:53 lakhs ( $£ 510,200$ ) against R 113.07 lakhs $(£ 753,500)$ in $1909-10$. The contraction is one of f 36.54 lakis ( $£ 3 \pm 3,600$ ) or 3.3 per cent, and the total is not much more than halt of that recorded in 1907-0s. Madras, which is also concerned mainly with the cotton industry, shows likewise a diminished total of P7\% 56 lakhs ( $£ 50,400$ ) against R1375 lakhs ( $£ 91,700$ ) in the previous year. Sind, which in 1909-10 figured at $\mathrm{A} 3 \cdot 3$ lakhs ( $£ 29,000$ ) in the accounts, has diminished her imports of textile machinery to $\mathrm{R} 2 \cdot 36$ lakhs ( $\mathfrak{E l j}, 7(00)$. Bengal's share of the total of all descriptions of machinery is 40.2 per cent, and represents a sum of fl 190.02 lakhs ( $£ 1,266,500$ ) as compared with H 182.02 lakhs ( $£ 1,213,500$ ) in 1909-10, the adrance being RS lakhs ( $£ 33,350$ ) or 44 per cent. Notable among the increases recorded by Buggal were RG lakhs ( $£ 40,000$ ) in electrical machinery, largely for the Tata Iron Works, and R3 lakhs ( $£ 20,000$ ) in tea machinery required for one of India's most prosperous industries. Bombay, on the other hand, took less by R21.65 lakhs ( $£ 14,300$ ) or 11 per cent, her total being f 17605 lakhs ( $£ 1,173,900$ ), in place of $\not \approx 197.73$ lakhs ( $£ 1,315,200$ ) in 1939-10. The provinces outside Bengal and Bombay reduced their business from Pl 12632 lakhs ( $£ 542,100$ ) to $\mathrm{Z106.9.4}$ lakhs ( $£ 112,900$ ) and their deficiency of $\mathrm{R19} 38$ lakhs ( $£ 129,200$ )-equal to $15 \cdot t$ per cent of the prerious year's record-together with that of $\mathrm{P} 21 \cdot 65$ lakhs ( $£ 1 \not 14,300$ ) in the share of Bombay, swamped Bengal's moderate increase. In steam engines the recovery to $\mathbb{Z 9 2}$ lakhs ( $£ 5 \pm 0,700$ ) does not bring the figure to the level of two years ago ; but both in electrical and mining machinery the totals of $\mathrm{f} 39 \cdot 59$ lakhs ( $£ 263,900$ ) and f 13.83 lakhs ( $£ 92,200$ ) are the best on record. The comprehensive heading of other sorts, though its P 173.66 lakhs ( $£ 1,157,700$ ) constitutes the largest item, is still short by nearly P .4 t lakhs ( $£ 293,300$ ) of the value in $1908-09$. It comprises agricultural machinery to the value of $\mathrm{F} 81,600(£ 5,440)$.

Railway material forms 15.8 per cent of the total value of metals and manufactures imported in 1910-11. For the second year in succession this branch of imports has declined. The movement in the last five years is shown in the following statement, the unit being 1,000:-

The decline of Z 220.47 lakhs ( $£ 1,460,800$ ) marks a fall of 26.28 per cent. More than half of it is accounted for by rolling stock, the value of which receded from $\mathrm{P} 328 \cdot 18$ lakhs ( $£ 2,187,900$ ) to $\mathrm{Z} 200 \cdot 27$ lakhs ( $£ 1,335,100$ ). Material for private lines shows a value of $\mathrm{R} 42 \mathrm{i}: 53$ lakhs ( $£ 2,830,200$ ) against R544:06 lakhs ( $£ 3,627,100$ ) in 1909-10, the contraction amounting to 22 per cent. Government railways imported materials to the value of R 19 4 07 lakhs ( $£ 1,293,800$ ) against R295001 lakhs ( $£ 1,906,700$ ) in the previous year. Here the contraction of R100.94 lakhs ( $£ 672,000$ ) marks a fall of 34.2 per cent. During the twelve months 785 miles of railway were opened, while

2,765 miles were under construction or sanctioned in April 1911. At that date the total length of line opened in India was 32,399 miles.

In 1910-11 the return on the capital expenditure on railways amounted to 4.7 per cent as compared with $4: 5$ per cent in $1909-10$ and 3.7 per cent in 1908-09. The net revenue from railways in 1910-11 was $£ 13,805,700$ as against $£ 12,445,400$ in the previous year ; and the expectation for 1911-12 is $£ 13,063,600$. The Budget for $1910-11$ had provided $£ 10,866,700$ for development; but of this only $£ 8,325,100$ was spent, and the railway programme for 1911-12 has a Budget grant of $£ 9,500,000$, composed of $£ 6,357,400$ for open lines including rolling-stock, $£ 2,382,600$ for lines under construction, and £760,000 for new lines.

## CHEMICALS, DRUGS, MEDIOINES, NARCOTICS, DYEING AND TANNING MATERIALS

Chemicals-The value of the imports of chemicals in 1910-11 was R87 61 lakbs ( $£ 584,100$ ) as compared with $\mathrm{R} 80 \cdot 46$ lakhs ( $£ 536,400$ ) in the prerious year. Bleaching materials showed an advance from $\mathrm{F} 3 \cdot 86$ lakhs ( $£ 25,700$ ) to R 3.93 lakhs ( $£ 26,200$ ). Calcium carbide increased from fil 11 lakhs ( $£ 7,400$ ) to $\mathrm{fl} \cdot 16$ lakhs ( $£ 7,700$ ). Cyanide of Potassiam contracted from R 3.06 lakhs ( $£ 20,400$ ) to Z 2.85 lakhs ( $£ 19,000$ ), while the imports of Disinfectants improved from $\mathrm{Z} 8 \cdot 18$ lakhs $(£ 21,200)$ to $\mathrm{Z} 3 \cdot 55$ lakhs $(£ 23,700)$ and those of Caustic soda from $¥ 7.9$ lakhs ( $£ 52,700$ ) to $\mathrm{A} 8 \cdot 42$ lakhs ( $£ 56,100$ ). Bicarbonate of soda showed a decline at R4:19 lakhs ( $£ 27,900$ ) in place of $\mathrm{R} 4 \cdot 8 \cdot \mathrm{l}$ lakhs $(£ 32,300)$ in 1909-10, while soda, other sorts, increased from Zll 0.99 lakhs $(£ 73,300)$ to $\mathrm{Z13} 69$ lakhs ( $£ 91,300$ ). Sulpharic acid
 ( $£ 19,300$ ). The comprehensive heading Chemicals, other sorts, this year represents 32.5 per cent of the total in place of 32.7 per cent in 1909-10. Its total value advanced from $\mathbf{R 2 6} 27$ lakhs $(£ 175,100)$ to R 28.49 lakhs (£189,900).

Drugs and medicines-The market in chemicals and drugs has been firm throughout the year. Prices on the average are higher than they were a year ago. There have been some substantial advances; and those declines that have taken place have been for the most part small and have related to unimportant articles. The total value of drugs and medicines imported was f08.51 lakhs ( $£ 656,900$ ) as compared with $\not 790 \cdot 19$ lakhs ( $£ 601,300$ ) in 1909-10, the advance being m 8.35 lakhs ( $£ 55,700$ ) or $9 \cdot 3$ per cent. Imports of camphor receded from $1,457,918 \mathrm{lbs}$ to $1,251,313 \mathrm{lbs}-14.2$ per cent - in quantity and from $\mathrm{P} 15 \cdot 12$ lakhs ( $£ 100,800$ ) to R13.91 lakhs ( $£ 92,700$ ) 8 per cent-in value. Thus there was a rise of 7.1 per cent in the average value in the year under review. The maker of synthetic camphor has been less in evidence in the last two years, from which it might be argued that the present prices do not offer a profit on cost of manufacture. The exports of camphor from Formosa in 1909 were $6,670,660 \mathrm{lbs}$ in place of $2,764,733 \mathrm{lbs}$ in the previous year, the quantity having therefore advanced by 151 per cent. In spite of this the price of camphor, Japanese 1 oz. tablets, in London, which stood at 1s. 7d. per lb in March 1910, advanced to 1 s $9 \frac{1}{2} d$ by the end of March 1911. Quinine is virtually controlled by Java, although there are still manufacturers who stand out of the ring. The sales of Cinchona bark at Amsterdam in

1910 amounted to $8,574,000$ kilos with a quinine content of 516,639 kilos, against $8,134,000$ and $494,95 S$ kilos in 1900 . In India the drus is admitted free of duty. The improved production leads to a gradual decline in prices; and these receded by about s per cent in 1910. German brands of sulphate were quoted at $6 \frac{5}{8} i$. to $7 \frac{1}{4} d$. per oz. in $A$ pril 1910, but the rate began to flarg in July and by December the quotation, which still holds good, was $61 d$. to $69 d$. The arerage price bas been $6 \cdot 5$ to 7 d . against 6.5 to $7 \cdot 25 \mathrm{~d}$. in 1000-10. This is the lowest average on record. These facts are gone into at greater length than is warranted by the statistical ralue of the drugs, because they have peculiar interest for India in sereral aspects. The imports of quinine adranced to $128,149 \mathrm{lbs}$ and F 10.95 lakhs ( $£ 73,000$ ) in place of $120,112 \mathrm{lbs}$ and ; $; 2037$ lakhs ( $£ 62,500$ ) in 1909-10. The progress therefore was one of 6.7 fer cent in quantity and 16.5 per cent in ralue, indicating a rise of 9.5 per cent in the specific ralue. Proprietary and patent medicines expanded from ¥ 23.09 lakhs ( $£ 153,900$ ) to R 25.31 lakhs ( $£ 168,700$ ) or by 9.6 per cent and other sorts from $\mathrm{F} 33 \cdot 6 \mathrm{C}$ lakhs ( $£ 2.4,500$ ) to R $37 \cdot 6$ lakhs ( $£ 250,700$.

Tobacco-The imports of tobacco in $1910-11$ had a value of PR1914 lakhs $(£ 327,600)$ as compared with F 94.82 lakhs $(£ 632,100)$ in the previous year. Of this 73.8 per cent is represented by cigarettes. The trade of the year was quite abnormal, haring been disorganised by the high duties in force from the 25th Februa ry 1910 to 1st April 1911. For some time the trade in cheap imported cigarettes was stopped; but energetic steps were taken to replace them with cigarettes made in India from country leaf. In cigarettes, the year's figures show a decline from $3,083,7.16 \mathrm{lbs}$ to $1,106,756$ lbs and from $\mathrm{Z} 64 \cdot 99$ lakhs ( $£ 433,300$ ) to $\mathrm{Z} 36 \cdot 28$ lakhs ( $£ 241,900$ ). The loss is thas $64 \cdot 1$ per cent in quantity and 442 per cent in value; and this would appear to indicate that the shrinkage was more marked in the inferior than in the better qualities. In normal times the low quality cigarettes appear to represent 96.7 per cent of the whole. The contraction of imports probably took effect principally in these lower qualities, secing that it is only in respect of them that a competitive indigenous industry exists and seeing that the foregoing analysis of the figures points to such a conclusion. Accepting this assumption as well founded, and accepting as correct the result of certain investigations made in 1908 regarding the weights per thousand cigarettes in different classes, the number of cigarettes imported must have been some $441,000,000$ as against $1,228,000,000$ in 1909-10. This represents some 2 cigarettes per annum per head of the population of British India. Of the total of f 36.28 lakhs ( $£ 241,900$ ), $\mathbf{~} \mathbf{~} 31 \cdot 12$ lakhs ( $£ 207,500$ ) came from the United Kingdom,玉53,000 ( $£ 3,530$ ) from the United States, and R5,500 (£307) from Further East. The $\nexists 3 \cdot 93$ lakhs $(£ 26,200)$ from Egypt represents a difforent class of article which was apparently proof against the higher duty. The average value per lb for each of the sources enumerated was-British $\mathrm{f} 3-2-1$ (4s. $2_{18}^{1} d$. ), American P1-6-4 (18. $10 \frac{1}{3} d$. ), Egyptian fle-9-3 (88. $9 \frac{1}{8} d$. ), and Eastern R6-11-8 ( $88.11 \frac{2}{8} d$.). The duty was subsequently reduced by one-third from the lst April 1911.

Dyes-The imports of aniline and alizarine dyes advanced from 13,775,957 lbs to $15,072,340 \mathrm{lbs}$ in quantity and from $\mathrm{R} 87 \cdot 19$ lakhs ( $£ 581,300$ ) to \#102.71 lakhs ( $£ 684,700$ ) in value. This marks an improvement of 9.4 per cent in quantity and 17.8 per cent in value, together with a rise of about 8 per cent in the average value per unit, which is now 10 annas 10 pies ( $105 d$ ) as against 10
annas 5 pies ( $10 \frac{5}{12} d$.) per lb in 1909-10. This does not necessarily mean that the price of these dyes rose generally, for there are many grades whose prices diverge widely and which are imported in varying relative quantities. These products come chicfly from Germany. The reports of the great manufacturing companies there indicate continued prosperity and foreshadow increased activity, more particularly as regards synthetic indigo. Bombay continues to be the principal port of entry, about $\mathbf{7 7}$ per cent of the imports having been received there. Imports of aniline accounted for the entire expansion referred to above. The quantity increased from $6,999,096 \mathrm{lbs}$ with a value of $\mathrm{f52} 08$ lakhs ( $£ 347,200$ ) to $9,201,012 \mathrm{lbs}$ with a value of $\mathrm{A} 70 \cdot 92$ lakhs ( $£ 472,800$ ). There was therefore an increase of 31.5 per cent in quantity and 36.2 per cent in value, with a rise of average value by 3.6 per cent, namely, from 11 annas 11 pies ( $11 \frac{1}{1} \frac{1}{2} d$ ) to 12 annas 4 pies ( $18.0 \frac{1}{3} d$ ) per 1 lb . Alizarine contracted at the rate of 13.4 per cent in quantity and 9.5 per cent in value, which brought the total figures to $5,568,32 \mathrm{llbs}$, with a value of $\mathrm{\#} 31 \cdot 78$ lakhs $(£ 211,900)$ in place of $6,775,961$ lbs with a ralue of $\mathrm{f} 35 \cdot 11$ lakhs ( $£ 234,100$ ). The average value per lb rose from 8 annas 4 pics ( $8 \frac{1}{3} d$ ) to 8 annas 8 pies ( $8 \frac{2}{3} d$ ).

## OIL

The import trade in oils represents about $2 \cdot 8$ per cent of the total value of merchandise imported into India.

The imports of mineral oils in 1910-11 had a total value of $\not \approx 338 \cdot 81$ lakhs $(£ 2,258,700)$ as against $\nexists 314 \cdot 55$ lakhs $(£ 2,097,000)$ in 1909-10. Of the total quantity imported in 1910-11, 70 per cent was kerosene, which by itself amounted to 56.6 million gallons with a value of $\mathrm{R} 238 \cdot 48$ lakhs ( $£ 1,589,900$ ) as compared with 64.05 million gallons with a value of $\mathrm{f} 251 \cdot 11$ lakhs $(£ 1,674,100)$ in 1909-10. Thedecrease was $11 \cdot 6$ per cent in quantity and 5 per cent in value.

The following statement shows the quantity and value of kerosene imported in each of the last two years. The imports into India proper from Burma are added at the foot. The unit in every case is $\mathbf{1 , 0 0 0}$ :

|  | Quantity |  | Value |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The year's trado has beon notable for the rate war which broke out in August botween tho Standard and Shell interests and involved Burman companios. The popular belief is that the conflict resulted from over-production,
from the appearance of new competitors, and from consequent jealousy regarding supposed or expected encroachments on the spheres of conventional rights of the repective companies. The aggregate reduction of rates from the 15 th August to the end of March ranged approximately from 9 to 19 per cent. This, of course, does not mean that the loss over the trade of that period amounted to 9 to 19 per cent; for the fall of prices was gradual and irregular. It is more difficult to ascertain whether the reduction of price has induced expanded consumption. Opinions on the subject differ, and comparison with past years is ritiated by the heary speculative buring that took place during the six weeks' rate war in March-April, 1909. But, if an average be struck on the two years 1909 and 1910, we find a reekly consumption of about 330,000 units of two tins, or eight gallons, against which it has been estimated that the consumption for the first 17 weeks of 1911 has been at the rate of about $35.4,000$ units. There hare been rumours of peace, and, after the closing of the financial year, recoreries of rate were noticcable in some quarters; but the flotation of new companies not only in India but elsewhere complicates any proposals for agreement. In India alone serenteen new companies were registered in 1910-11 for the production of petroleum, eight with rupec capital and nine with sterling capital, the total figure representing about $\mathrm{PJ} \cdot 63$ crores or $£ 3,753,400$. It cannot be asserted that saturation point has been reached; but on the whole, it is surprising that the low rates prevalent since dugust 1910, did not more greatly stimulate consumption, and the inference probably is that there is a limit to the supply available at low prices. The quantity is less by something like $26,083,000$ gallons than was recorded in 1908-09, but that year's trade, as has already been stated, was largely swelled by speculative purchases during the short rate war that occurred towards its close.

From the figures given above it will appear that, excluding Burma's unascertainaìle internal consumption of indigenous oil, India has, on the average of the last two years, absorbed kerosene at the rate of 1.16 .9 millions of gallons per annum. The decrease in the total imports from foreign countries in 1910-11 was 7.45 million gallons or 116 per cent, while the increase in visible consumption was 3.14 million gallons or 2.2 per cent.

In 1909-10 Burma Oil formed 56 per cent of the total visible consumption, and her share seems to have advanced to 62 per cent as a result of an expansion in her shipments concurrently with a heavy decline in imports. The advance in shipments from Burma to India was one of 13 per cent in quantity and 31 per cent in value.

The share of the United States in the visible consumption in the last two years was 26 per cent; and her share in the forcign imports of the year under review is 62.4 per cent as compared with 614 per cent in 1909-10. In 1910-11 she decreased her shipments by $5,967,553$ gallons or 144 per cent and by a sum of $\mathbb{R} 24^{\prime} 62$ lakhs ( $£ 164,100$ ).

It would probably be well to group Borneo, Sumatra, and (as entrepôt) the Straits Settlements; and if this be done the group takes second place, contributing 11.5 per cent of the visible consumption in the last two years and 27.3 per cent in the imports of 1910-11. It is impossible to say as yet how much of the shipments by way of the Straits Settlements came from each of the other sources in this group; so no purpose would be served by specific analysis. The decline in receipts from this group of sources was $2,813,772$
(gallons in quantity ( 15.4 per cent), but the value increased by 75.65 lakhs £37,700).

The share of Russia in the visible consumption is 3.9 per cent and in the last year's imports 10.3 per cent. Her improvement was one of $2,538,200$ gallons or 78.8 per cent and of P 10.06 lakhs ( $£ 67,100$ ). Russia's contribution was $5,8 \pm 1,088$ gallons and $\mathrm{f} 23 \cdot 93$ lakbs ( $£ 159,5(0)$ against $3,303,788$ gallons and $\mathrm{Al} 13 \cdot 87$ lakhs ( $£ 92,500$ ) in 1909-10.

In 1909-10, Roumania sent 1.23 million gallons of kerosene oil, while in the year under review she does not flgure at all.

Bulk oil formed 78.2 per cent of the total foreign imports, in place of 74.7 per cent in 1909-10, the total quantity received in this form being $44,258,781$ gallons as against some $47,830,000$ gallons in 1909-10 and 61,030,000 gallons in 1908-09. Of the total, America supplied 52 per cent, Russia $13 \cdot 2$ per cent, and Sumatra, Borneo, and the Straits together 34.8 per cent.

The remaining 21.8 per cent of the whole was Case oil The quantity was $12,338,953$ gallons, and of this America supplied 99.6 per cent and Sumatra, Bornco, and the Straits 0.15 per cent. The increase in the price was due to the enhancement of duty on kerosene oil towards the close of 1909-10.

The following are the average prices of the leading descriptions of kerosene during the last three years as given by the Chambers of Commerce:

|  | 1908-09 |  |  |  |  | 1909-10 |  |  |  | 1910-11 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Bornco Cobra |  | 310 | 5 | 4 | $10{ }_{1}{ }^{\frac{8}{8}}$ | Bornco - | 100 | 3 | 6 | 36 | 3 | 4 | 61 |
| Sumatra-Silver-light - per caso |  | 50 | 1 | 6 | $81 \frac{1}{1}$ |  | 110 | 6 | 98 | 513 | 6 | 7 | 912 |

Imports of fuel oil, on the other hand, made a striking advance from $1,481,424$ gallons to $7,102,008$ gallons with a value of $\mathrm{P} 8 \cdot 2 \pm$ lakhs ( $£ 54,900$ ). The causes of so large an increase in this particular year may remain the subject of conjecture. Of this 43 per cent came from Borneo and 47.7 per cent from he Straits as entrepot. Bombay, which in 1909-10 took 673,162 gallons, increased this by 403 per cent in 1910-11 and took $9 t 4,327$ gallons. Madras also took 278,769 gallons more than in 1909-10, and her total rose to $8.12,666$ gallons as compared with 563,807 gallons; while Bengal made a great stride with $1,527,555$ gallons against 244,351 gallons in the previous year. Karachi has oeased to import, while Burma for the first time appeared as buyer and took $3,787,460$ gallons valued at $\mathrm{R} 4 \cdot 2$ lakhs ( $£ 28,000$ ).

Imports of other mineral oils, mainly for lubricating, advanced from $11,9: 16,392$ gallons to $15,951,710$ gallons or 33.5 per cent, and imports from Burma into India proper increased by $6 \cdot 4$ per cent to $4,63 \pm, 800$ gallons.

## RAW MATERIALS

Coal ropresents $12 \cdot 1$ per cent of the value of raw materials imported into India. Judged by the standards of five years ago, the importation of coal might
be held to hare been fairly active in 1910-11, but for the second year in succession the figures show a decline. The coal trade in England had difficultios to face in 1910. Labour troubles of a serious bind were encountered. Industrial revial was disappointing in its dimensions. The high price of cotton limited the activity of the mills in England; but this tended to maiutain export prices at a moderate level. In spite of high quotations during the strike period, the arerage value of coal exported from the United Kingdom in 1910 was only 11 s . $7 \leq d$. per ton f.o.b. as against 11s. $2 \frac{1}{3} d$. in 1909 and $12 s$. $7 \frac{3}{4} d$. in 190S. The export business was less active than in the previous year ; and it is probable that the enormous increase in American production together with a substantial increase in the output in Germany contributed to the contraction. The quantity shipped from England and Scotland (including coal for the use of ships in forcign trade) was $84,046,05 \mathrm{~s}$ tons as compared with $85,408,17 \pm$ tons in 1900. India's imports declined from 42S,535 tons with a value of Rs 72.61 lakhs ( $£ 454,100$ ) to 334,269 tons with a ralue of $\mathbf{~} 57 \cdot 23$ lakhs ( $£ 351,500$ ). The decrease in quantity is therefore 22 per cent and in value $21 \cdot 2$ per cent, the average value having apparently adranced by only 1 per cent. The decline in quantity is one of 94,266 tons and is largely associated with the smaller imports from Natal whose share fell away by some 62,715 tons or $79 \cdot 8$ per cent to $15,85 \pm$ tons. The United Kingdom does 77 per cent of the whole with $25 \mathrm{~S}, 2 \pm 1$ tons having a value of \# 45.25 lakhs ( $£ 301,700$ ), as compared with 301,509 tons in 1900-10 valued at \{ $53 \cdot 44$ lakhs ( $£ 356,300$ ). Australia does 13.3 per cent of the total, with 44,505 tons in place of 27,191 tons; while Japan supplied 13,629 tons in place of $\mathbf{5 , 5 2 3}$ tons in 1900-10. Import: of British coal by Gorernment amounted to 10,287 tons valued at F 2.71 lakhs ( $£ 18,100$ ). Particulars regarding production of Indian coal are given in the article relating to exports of coal.

The imports of cotton declined from $93,90 \pm$ cwts and $\mathfrak{Z 3 3} 58$ lakhs $(£ 223,900)$ to 45,291 cwts and $\mathrm{R} 19 \cdot 28$ lakhs ( $£ 128,500$ ). These figures mark a decline of 48,703 ewts or 51.8 per cent in quantity and $\mathbf{A 1 4} 3$ lakhs $(£ 95,300)$ or 426 per cent in value, the average value per unit having advanced by $19 \cdot 1$ per cent.

The extraordinarily high price of raw cotton resulting from shortage in the American and Egyptian crops greatly restricted the use in India of such long staple foreign cottons as are wanted for the production of high count yarns. These are used in the manufacture of finc cloths and muslins for consumption in India; and the industry is largely conducted by hand weavers who are not financially strong enough to take the risk of dear material ; so the importation of foreign cottons in 1910-11 declined by more than half, and the quantity was equal to only 8 per cent of the total mill consumption of cotton in 1010. It may probably be assumed that the 17,058 cwts received from the United Kingdom were of American origin; and this, with the $2,400 \mathrm{cw}$ ts shipped direct from the United States, brings their aggregate to 43 per cent of the total importation. Egypt sent only $7,093 \mathrm{cwts}$ in place of $10,017 \mathrm{cwts}$ in the previous year and $25,436 \mathrm{cwts}$ in 1908-09; while Persia supplied 5,325 cwts against 19,028 cwts in 1909-10.

Precious stones and pearls, unset-The figures as recorded in the trade accounts probably bear no close relation to the true imports. It is well known that large quantities of pearls are both imported and exported in such a manner as to escape record. This is not peculiar to India, but the fact remains
that the valuos under the heading of precious stones fluctuate greatly and are not amenable to verification. In the year under review the world's trade in gems was still dull as a consequence of the comparative stagnation of demand in the United States; and the depression has been reflected in the Indian trade excopt as regards pearls. In 1909-10 the total recorded value rose from \#nyl 62 lakhs ( $£ 344,100$ ) to R 806 lakhs ( $£ 537,300$ ), and in 1910-11 it has fallen to $\mathrm{f7} 78: 18$ lakhs ( $£ 523,200$ ) or by 26 per cent. The net decline is about $\mathrm{X} 2 \cdot 12$ lakhs ( $£ 14,100$ ). The source of the largest single supply is Bahrein which sent gems to the value of f 41.02 lakhs ( $£ 273,500$ ) in place of P 38.31 lakh (£255,400) in 1909-10. Next comes Persia with R11.92 lakhs ( $£ 79,500$ ) in place of $\mathrm{R} \pm 9$ lakhs ( $£ 32,700$ ) and Arabia with R1l.03 lakis ( $£ 73,500$ ) in place of R20.65 lakhs ( $£ 177,700$ ). Receipts from Italian East Africa amounted to $\mathrm{R} 5 \cdot 02$ lakhs ( $£ 33,500$ ) instead of $\mathbf{~} 2 \cdot 45$ lakhs ( $£ 16,30$ ) ). Aden's contribution fell from R5.25 lakhs ( $£ 35,000$ ) to $\neq 4 \cdot 72$ lakhs ( $£ 31,500$ ). Asiatic Turkey sent goods to the value of $\mathrm{A} 4 \cdot 26$ lakhs ( $£ 28,400$ ) against $\mathrm{f} 2 \cdot 66$ lakhs (£17,700), United Kingdom $\neq 14,489$ (£966) in place of $\not \approx 2,299$ (£153), and Austria-Hungary $\mathrm{Pl} 14,462$ (£964) in place of $\mathrm{fl} 13,467$ (£898). Diamonds are found in Central India and Madras and rubies in Burma. Of the former the ascertained production fell from $\mathbb{Z 4 1 , 7 7 2}(£ 2,785)$ in 1907 to fl 14,103 (£040) in 1908 ; and in 1909, 147 carats valued at $\not \approx 16,329$ ( $£ 1,089$ ) were obtained.

Of rubies (including a small proportion of sapphires and spinels) the output is larger, having been as follows in the last five years:

These last figures mark an expansion of nearly $1 \cdot 4$ per cent in quantity and of 3 per cent in value.

Silk-India imports more silk than she exports, though the disparity has diminished in the year under review. The imports decreased from $2,330,185 \mathrm{lbs}$ to $2,121,799 \mathrm{lbs}$ and from $\mathrm{F} 97 \cdot 7$ lakhs ( $£ 651,300$ ) to $\mathrm{Z} 85 \cdot 23$ lakhs ( $£ 56 \mathrm{~S}, 200$ ). The decrease of $208,356 \mathrm{lbs}$ marks a drop of $8 \cdot 9$ per cent in quantity; and the decline of $\mathrm{R} 22 \cdot 47$ lakhs $(£ 83,100)$ in the total value is equal to $12 \cdot 8$ per cent on the previous year's figure, so there was a fall of $4: 3$ per cent in specific value. Of the total of $\not \mathbf{8} 8 \cdot 23$ lakhs ( $£ 568,200$ ), Bombay took $\mathrm{R} 70 \cdot 75$ lakhs ( $£ 471,700$ ) and Burma $\mathrm{F14} 18$ lakhs ( $£ 94,500$ ). Direct imports from China, at $1,831,489$ lbs , were smaller than the previous year's figures by $218,950 \mathrm{lbs}$ or 10.7 per cent; while those from the Straits Settlements, in rising from 191,431 to $199,2 \cdot 44 \mathrm{lbs}$, established an advance of 4 per cent without very greatly exceeding the figure attained two years ago.

Wood-The imports of unmanufactured wood (which includes timber, firewood, and ornamental wood) improved from $\mathrm{R} 67 \cdot 16$ lakhs ( $£ 447,700$ ) to $\mathrm{R} 80 \cdot 45$ lakhs ( $£ 536,300$ ). The difference of $\mathrm{Pl} 13 \cdot 29$ lakhs ( $£ 88,600$ ) represents 19.8 per cent on the previous year's figure. Of this net increase R13.07 lakhs ( $£ 87,100$ ) is due to the recovery of the trade in timber from fict lakhs ( $£ 440,000$ ) to $¥ 79 \cdot 07$ lakhs ( $£ 527,300$ ) and from 89,179 cubic
tons to $106, \mathrm{~S}_{2} 25$ cubic tons. The average ralue of timber remained unaltered, as the adrance of 198 per cent was common to both quantity and value. Teak now represents 60 per cent of the whole, in place of 65 per cent two years ago and 61 per cent in 1900-10. The figures are 51,291 cubic tons and R $45 \cdot 23$ lakhs ( $£ 321,500$ ) in place of 4,493 cobic tons and 240.97 lakhs $(£ 293,100)$ in $1909-10$. The increase is one of 22 per cent in quantity and 177 per cent in ralue. The returns received purport to show that India proper also imported from Burma a quautity of teak greater by 12,500 cubic tons and by some R10.11 lakhs ( $£ 107,400$ ) than in 1909-10; but the correctness of these figures is under enquiry. Of the increased foreign imports, Sian supplied about 90 per cent, and most of the rest came from Java. Timber other than teak also was imported in larger quantities, and the figures stood at 52,534 cubic tons and $\mathrm{R} 30 \cdot 84$ lakhs ( $£ 205,600$ ) in place of $4 \&, 656$ cubic tons and \# 25.03 lakhs ( $£ 166,900$ ). The increase being $17 \cdot 6$ per cent in quantity and 23.2 per cent in value, there was apparently a rise of 15 per cent in the specific ralue. The imports from the United States of America advanced from 7,457 cubic tons with a ralue of $\mathrm{R} 2 \mathrm{S9}$ lakhs $(£ 19,300)$ to $11, \mathrm{G} 4 \mathrm{f}$ cubic tons ralued . at $\mathrm{F} \pm 63$ lakhs $(£ 30,900)$.

## MANCFACTCRED ARTICLES

Cotton Goods-On the arerage of the last three years, cotton goods hare represented $6 \pm 9$ per cent of the total value of manufactured articles imported. The year under revier brought some relicf to the cotton industry in Europe which had been greatly depressed in 1009, a short-time agreement having been in force from July 1909 to April 1910. The improvement of demand, which had set in by the opening of the Indian financial year, was felt in England earlier than in competing countries. But the high price of cotton, hy entailing high prices for yarns, repressed activity in the more primitive weaving countries; but it told most sererely on the spinning industry, which was further disorganised by a labour dispute that affected 100,000 people and resulted in a stoppage for one week in September. Towards the clove of 1910 some improvement appeared even in spinning, while looms have been extraordinarily active for some months. Data relating to the raw material and its prices will be found in that section which relates to exports of raw cotton. That on exports of cotton manufactures gives facts about the Indian cotton industry. After the close of the financial year, April 1911 saw a further strong advance in ready cotton prices; and with forward business in new crop American passing at substantially lower rates, forward purchasers of cotton manufactures became increasingly cautious. But with a productive capacity adapted to the maximum activity of demand, the world's cotton industry must drag till cotton prices are definitely established on a more moderate level. The number of cotton spindles in the world in 1907 was supposed to be alout 114 millions. The number rose to 129 millions in 1908, to $131 \frac{1}{2}$ millions in 1900 , and to $134 \frac{1}{k}$ millions in 1910. The growth in the four years has been about 18 per cent The growth in ten years has been about 27.3 per cent. In the samo period the United Kingdom had added some $7,897,000$ or $17 \cdot 4$ per cent to its spindles. The effect of the conditions indicated is reflected by the fact that an analysis of the returns of 100 companies in England shows an average dividend of 58 per cent in 1910 against $7_{8}^{7}$ per cent in 1909, 11.2 por cent in 1908, and 2.46 per cont in 1907. The values of shares of 115 textile concerns in England as quoted by
the Manchester Guardian showed an average gain of 2.05 per cent on the 24th Fel,ruary 1511, as compared with the same date in 1910.

The purchasing power of India gained largely in 1910, and in spite of the extraordinarily high prices of cotton goods a very large business mas done in imported cloths. At the end of the financial year a considerable volume of goods was still to be delivered at high rates and the lower prices being quoted for new crop cotton inspired some anxiety as to realisation of the business.

The British exports of yarn in 1910 were $191,694,500 \mathrm{lbs}$ with a value of $£ 13,344,315$, as compared with $215,223,400 \mathrm{lbs}$ with a value of $£ 11,822,145$. The decrease in quantity is one of $23,52 \mathrm{~s}, 900 \mathrm{lbs}$ or 10.9 per cent, while the ralue increased by $£ 1,522,200$ or 12.9 per cent. British exports of piece goods rose from $\mathbf{5 , 7 2 2 , 1 5 8 , 1 0 0}$ yards and $£ 68,279,389$ to $6,018,454,400$ yards and £78,717,100, the increase being $296,296,300$ yards and $£ 10,437,717$. The aggregate inerease in the value of Britain's exports of cotton goods was thus $£ 12,470,827$ or $13 \cdot 3$ per cent on the figure for the previous year.

The argregate value of the imports into India of cotton yam and of woven and other cotton groods in the last six years has been as follows, the unit being 1,000 :

|  | Yarn |  | Woven and other goods |  | Total |  | Proportion of total importa of merchandise |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 2 |  |  | \% |  |  |
| 1905-06 | 3, $22,5 \cdot 1=$ | 2.383 | $39,01,77=$ | 26,012 | $43,44,31=$ | 28,295 | 41 per cent |
| 10063.07 | 3,22,32 | 2,149 | 37,69,43 | 25.129 | 40,91,75 | 27,278 | 38 |
| 1907-08 | - 3,69,33 | 2,462 | 44,34,93 | 29,566 | 48,01,25 | 33,028 | 37 |
| 1908.09 | - 3,64,88 | 2.432 | 3.4,36,58 | 23,911 | 38,01,46 | 25,3.43 | 31 |
| $1909 \cdot 10$ | - 3,31,96 | 2,313 | 36,05,09 | 24,034 | 39,37,05 | 26,247 | 34 |
| 1910-11 | - 3,13,73 | 2,091 | 41,70,30 | 27,802 | 44,84,03 | 29,893 | 35 |

The increase in 1910-11 was therefore one of $\nexists 5 \cdot 47$ crores ( $£ 3,646,700$ ) or 13.9 per cent.

In Yarn there was a fall of $7,796,803$ lbs or $19 \cdot 3.4$ per cent in quantity and of 1218.23 lakls $(£ 121,500)$ or 5.5 per cent in total value, the specific valuc having thus increased by 147 per cent. The trade depends to a great extent on the handloom weavers who are often indebted, and the high level of prices has been a grave incubus. In view of the possibility of a decline of prices the question of late deliveries has been engaging attention. The quantities imported in each of the last six years are shewn here in millions of pounds:-

It may be added that on the average of the five years ending 1909-10 the quantity of imported yarn retained for consumption in India has been about $34,287,000 \mathrm{lbs}$ per annum, and that this represents about 7.9 per cent of the mill-made yarn used in India, the local mills supplying the balauce of about $400,563,000 \mathrm{lbs}$.

In 1910-11 the United Kingdom supplied 91 per cent of the yarn imported, and her total declined by $19 \cdot 2$ per cent to $29,606,500 \mathrm{lbs}$ as against $36,651,200 \mathrm{lb}$ s in 1909-10. Japan supplied $316,117 \mathrm{lbs}$ or about 1 per cent of the total as agrainst nil in the previous year. Of the total, undyed yarn now forms 56 per cent with a total of $18,234,000 \mathrm{lbs}$ and R181• 45 lakhs ( $£ 1,200,000$ ), while dyed yarn stands at $11,270,000 \mathrm{lbs}$ and R132:25 lakhs ( $£ 881,700$ ). Of the
former, $97 \cdot 2$ per cent came from the Tuited Kinglom, while the principal other sources mere Japan, the Straits Settlements, and China. The United Kingdom also supplied 53.2 per cent of the dyed yarns, of which goods 1.8 per cent came from Austria, 6.3 per cent from Itals, 2.4 per cent from Belgium, and 5.8 por cent from Holland. The arrirals of 40 s mulo contracted from $10,03 \mathrm{t}, 610 \mathrm{lbs}$ with a value of $\mathrm{RG} \cdot \mathbf{7} \cdot 11$ lakhs $(£ 44,400)$ to $6,753,970 \mathrm{lbs}$ valued at R 53.63 lakhs ( $£ 357,500$ ).

It is interesting to compare the imports of coarse, medium, and fine yarns with the production of similar descriptions by the Indian mills. (Unit $=\mathbf{1 , 0 0 0}$ lbs) :

It is worthy of note that the decline in imports of fine jarns was not accompanied by an increase in the imports of Egyptinn or American cottons suitable for the local production of such yarn or by a great increase in the mill production of such yarn. On the contrary, the imports of foreign cottons declined greatly; but the production figures given above show that there was some expansion in the local spinning of 26 s to 40 s .

Cotton fabric represent 32.2 per cent of the total value of private merchandise imported as compared with 30.8 per cent in 1909-10. The value increased from $\mathrm{P} 3,605 \cdot 09$ lakhs ( $£ 21,033,000$ ) to $\mathrm{R} 4,170 \cdot 3$ lakhs ( $£ 27,802,000$ ). The increase was one of R 565.21 lakhs ( $£ 3,768,100$ ) or 15.6 jer cent. Some descriptions of cotton goods are not stated in yards. It is therefore convenient, in ascertaining the changes of specific value, to confine the calculation to piecegoods only. The imports of these amounted to $2,308,128,000$ yards and R3,900.21 lakhs ( $£ 26,001,400$ ), against $2,192,698,000$ yards and $¥ 23,388 \cdot 5$ lakhs ( $£ 22,590,000$ ) in 1909-10. The improvement amounts to $115 \cdot 43$ millions of yards and $\neq 511 \cdot 71$ lakhs ( $£ 3,411,400$ ), which figures represent advances of $\mathbf{6} \cdot \mathbf{2}$ per cent in quantity, $15 \cdot 1$ per cent in total value, and 9.3 per cent in specific value. These ratios vary in respect of diverse classes. For example, the specific value of grey goode rose by 10.5 per cent, and coloured goods by 6 per cent, while the increase in that of white goods was 4.4 per cent.

The following statement shows in millions of yards the relative import. ance of these three classes in the course of the last twenty-two years. It will
be noticed that the grey goods class is lower, and white and coloured goods are higher, than any of the earlier figures recorded :

| Average, 1859-90 |  |  |  | $\underset{\substack{\text { Grcy } \\ \text { (unbleached) }}}{\text { and }}$ | White (bleached) | Coloured, printed or dyed | Fercentaga of grey in total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | to 1803-04 |  | 1,223.47 | 368.63 | $374 \cdot 17$ | 62 |
| ," | 1884-95 | , 1808-99 |  | 1,209.77 | 418.59 | $351 \cdot 49$ | 61 |
| " | 1599-1900 | , 1903-04 |  | 1,204.53 | $469 \cdot 69$ | $430 \cdot 57$ | 57 |
| , | 1901-05 | , 1008-09 |  | 1,230.71 | $572 \cdot 66$ | $515 \cdot 44$ | 53 |
| 1909-10 | - . | . . |  | 1,2.36.83 | 493.04 | $462 \cdot 83$ | 56.4 |
| 3010-11 | . | - . |  | -1,130.08 | 586:32 | 591.53 | 49 |

Grey goods declined by 8.6 per cent, while white goods advanced by 19 per cent and coloured goods by 27.8 per cent. Bengal took only $828,228,700$ yards of grey goods or $73 \cdot 3$ per cent of the total, as compared with $951,831,000$ yards and 77 per cent in 1909-10.

The following statement shows in millions of yards figures for two years relating to the principal descriptions of imported goods belonging to these three class: $s$ under the present system of classification :

It will be seen that among the grey goods, the most important groups, execpting jaconets, stow marked eontraction. In white grods there was improrement in all clases except dhutis, saris, and searres; and some of the increases wero large. Among coloured and figured goods, dhutis also fell away, while the others, with the exception of a minute fall in chadars, were substantially hetter.

The production in Indian wearing mills, ahout which particulars are given in the chapter upon exports of cotton manufactures, consists chicfly of unbleaclied shirting, dhutis, T. cloths, domesties, and chaidars. The continued increase amounted in the rear under reriew to $16,119,000 \mathrm{lbs}$ or 701 per cent. The rardage of grey and bleached pieceroods increased from $771,130,100$ yards to $\mathrm{S}^{\cdot} \mathrm{f}, 539,000$ rards, the adrance being $55,409,000$ yards or $7 \cdot 10$ per cent. The reight at the same time rose from $178,505,000 \mathrm{lhs}$ to $191,015,000 \mathrm{lhs}$, which latter figure is equal to 78.03 per cent of the total weight of all woven cotton goods imported.

The extent to which the cotton goods of the three main clasess are derived from the Cnited Kingdom is indicated below in millions of yards:

|  | 1908-03 |  | $1209-10$ |  | 1010.11 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Tutal | From <br> Cnitod <br> Kinguom | Tutal | From Cnited <br> Kinglom | Total | Fiom Cnited Kinglom |
| Coble ${ }^{\text {ched }}$ gonds | 1,042:29 | 1,033.62 | 1,23i963 | 1,20+6t | 1,1:30.05 | 1.11893 |
| Bla -had | 477.75 | 460.19 | 493.01 | 4.359 | 5-i.5s | 57553 |
| Culoured | 472.45 | +41.99 | $112 \cdot 32$ | 1432.97 | 5!1-53 | 557.09 |

Britain therefore supplies 99 per cent of the greys, 98.1 per cent of the whites, and $9 t \cdot 2$ per cent of the coloured goods. The percentages recorded in 1900-10 were 09 per cent, 05 per cent, and 93 - per cent rejpectively.

Besides these, there are some subidiary classes of gools imported, the principal descriptions and values of which were (in thousands) :-

This branch of the trade therefore showed a net rise of R 5351 lakhs ( $£ 356,700$ ) or $2.4 \cdot 7$ per cent. The United Kingdom supplies 83.8 per cent of the handkerchicfs and shawls and 88 per cent of the sewing threal. But of the total it does only 45.3 per cent, seeing that the considerable trade in hosiery is practically monopolised by Japan and Continental countries. There is a striking increase in Japan's trade in hosiery which grew to R6908 lakhs ( $£ 460,500$ ) against R. $55 \cdot 41$ lakhs ( $£ 302,700$ ) in 1900-10; and goods to the value of $\mathrm{P} 43,000$ ( $£ 2,900$ ) which came via IIongkong and the Straits were probally also of Japanese origin. Germany, however, participates in this trade to the extent of $\mathrm{R} 9 \cdot 32$ lakhs $(£ 62,100)$.

Silk goods-The imports of silk goods represent 54 per cent of the total imports of textile manufactures. It is satisfactory to note that progress in this trade has been fairly continuous for some years a nd became aceentuated in 1919-11. Since 1905-06 the total value has in sucecssive years been as follows :P190) 15 lakhs ( $£ 1,267,700$ ); \#182.5 lakhs ( $£ 1,216,700$ ) ; R213.40 lakhs ( $£ 1,423,300)$ ) ; R228.14 lakhs ( $£ 1,520,900$ ) ; f226669 lakhs ( $£ 1511,300$ ) ; and in

1010-1.1, R276•46 lakhs ( $£ 1,843,100$ ). The net increase is thus $49 \cdot 77$ lakhs (£331,800) or 21.9 per cent. Of this, piecegoods represent 7178.93 lakhs ( $£ 1,102,900$ ) or 61.7 per cent of the whole, the increase in this case being R25. 26 lakhs ( $£ 168,400$ ), equal to 16.4 per cent on the previous year's figure. This increase is largely accounted for by that of $\nexists 12 \cdot 49$ lakhs ( $£ 88,300$ ) or $13 \cdot 5$ per cent in the consigaments from the predominant shipper, Japan, which sent goods to the value of $¥ 10496$ lakhs ( $£ 699,700$ ) in place of $\mp 92 \cdot 47$ lakhs ( $\mathcal{E}(16,500)$ in 1009-1:. The imports from China have shown an adrance of ¥25:16 lakhs (£36,400) and stand at $\mathrm{Z} 52 \cdot 56$ lakhs ( $£ 350,400$ ). Those from the Straits Settlements rose from $\mathrm{R71}, 451(£ 4,763)$ in 1909-10 to $\mathrm{R} 90,745(£ 6,050)$ in 1910-11. The Eastern section of the trade constituted by these three sources now represents $88: 5$ per cent of the whole. Goods of silk mixed with other materials adranced from R $34: 85$ lakhs ( $£ 232,300$ ) to $\mathbf{7 5 5} 577$ lakhs (£3기,800), the increase being $\mathrm{P} 20 \cdot 92$ lakbs ( $£ 139,500$ ) or 60 per cent. Other sorts consist mainly of warps and yarn imported for the production of textiles for the Indian market; and these increased from $\mathrm{F} 36 \cdot 75$ lakhs ( $£ 245,000$ ) to $\mathrm{P} 40 \cdot 63$ lakhs ( $£ 270,900$ ), the expansion amounting to a sum of $\mathrm{P} 3 \cdot 88$ lakhs ( $£ 25,900$ ) or 10.5 per cent.

Woollen goods constitute 5.9 per cent of the increased total value of textiles imported into India. In spite of high price levels, the trade in India shared the prosperity that has marked this branch of commerce throughout the world in 1910-11. The total value of imports rose from R 2 C 8.11 lakhs ( $£ 1,387,400$ ) to $\mathrm{R} 301 \cdot 97$ lakhs ( $£ 2,013,100$ ), or by $45 \cdot 1$ per cent. Of the net increase of $\mathrm{P} 93 . \mathrm{S6}$ lakhs ( $£ 625,700$ ), nearly the whole may be ascribed to piecegoods which advanced in quantily from 15,849,751 yards to $24,319,524$ yards and in value from $\mathbb{R 1 3 9 \cdot 7}$ lakhs ( $£ 931,300$ ) to $\mathbb{R 2 1 6 . 3 9}$ lakhs ( $£ 1,4 \cdot 4,600$ ). The expansion in piecegoods is therefore one of 53.4 per cent in quantity and 55 per cent in value, arguing a rise of 14 per cent in specific value. The share of the United Kingdom in this branch of the trade advanced from R105.76 lakhs ( $£ 705,100$ ) to $\mathrm{Fl} 158: 56$ lakhs ( $£ 1,057,100$ ), or by $£ 52.8$ lakhs (£352,000), and of Germany from f 23.82 lakhs ( $£ 158,500$ ) to $\mathrm{R} 40 \cdot 24$ lakhs ( $£ 268,300$ ), the increass being $\mathrm{f16} 42$ lakhs ( $£ 109,500$ ). The increase in the one case was 50 per cent; and in the other was 69 per cent, bringing the shares of the countries respectively to 73.3 per cent and 18.6 per cent of the whole. In shawls too there was a substantial advance of $\mathrm{f} 9 \cdot 52$ lakhs ( $\mathcal{L} 63, \dot{5} 00$ ) or $46 \cdot 5$ per cent, bringing the total value to $R 29 \cdot 99$ laklis ( $£ 199,900$ ) in place of $\mathrm{R} 20 \cdot 47$ lakhs ( $£ 136,500$ ). The number of shawls imported rose from $8.19,355$ to $1,100,357$ which is still far short of the record of 1908-09. The average value per shawl in these successive years was $\mathrm{fl} 2-9-8$ ( 3 s 5 $\frac{2}{3} d$ ), f 2-6-6 (3s. $2 \frac{1}{1 j}(l)$ ) and $22-8-4$ (3s. $\left.4 \frac{1}{3} d\right)$. Gormany supplied 885,651 or $7 \cdot 4$ per cent of the total number. Woollen hosiery advanced from $371,09 \mathrm{lbs}$ to $375,437 \mathrm{lbs}$ in quantity, but the value declined from $\mathrm{Z10.09}$ lakhs ( $£ 67,300$ ) to R 10.06 lakhs (£67,100). The United Fingdom supplied $321,706 \mathrm{lbs}$ and $\nexists 8 \cdot 62$ lakhs ( $£ 57,500$ ) or $85 \cdot 7$ por cent of the total. Yarn again advanced from 627,175 lond R12.7d lakhs ( $£ 51,900$ ) to $911,629 \mathrm{lbs}$ and $\mathrm{R} 20 \cdot 60$ lakhs ( $£ 137,700$ ) and of this Germany supplied no less than 74 per cent.

Other mannfactured goods-Of these the following aro the most im-portant:-

Every subhead in this group, with the exception of "parts of ships" and "tea chests," is marked by an advance. The largest item among these is the composite one Apparel which shows an advance of $\mathrm{P71} 63$ lakhs ( $\mathcal{E} 477,500$ ) or $30 \cdot 1$ per cent. Glass adranced by $\mathrm{R} 28 \cdot 29$ lakhs ( $£ 188,600$ ) or 22 per cent, and retains second place; while carriages and carts, with a rise of \# 36.62 lakhs $(£ 244,100$ ) or 40 per cent, have attained the same level of ralue as was reached by glassware in 1909-10. Most of the increase is derived from Motor cars and motor cycles at $\mathbf{~} 773 \cdot 2.4$ lakhs ( $£ 188,300$ ), which marks an increase of $\not \approx 25.67$ lakhs ( $£ 171,100$ ) or $5 t$ per cent. Cycles improved by R1• lakhs ( $£ 9,300$ ) or $5 \cdot 4$ per cent to $\mathrm{f} 27 \cdot 44$ lakhs ( $£ 182,900$ ). Paper and pasteboard gained ground at the rate of 11.5 per cent or ly f11.62 Jakbs ( $£ 77,500$ ) ; and of this increase the major part of $¥ 7753$ lakhs ( $£ 50,200$ ) was accounted for by writing paper with an augmented total of R33.06 lakhs ( $£ 220,400$ ). Matches have bettered their position by about 3 per cent. Building materials, it is true, show an advance of $\nexists 12.87$ lakhs ( $£ 85,800$ ) or $22 \cdot 5$ per cent, but the heading is a composite one. The itom of Books and printed matter, with an increase of $\mathrm{R2} 23 \mathrm{lakhs}(£ 15,500)$ or 6.1 per cont, has now taken a place among those of the first magnitude. Electrical apparatus with an advance of 18.5 per cent, Earthenware with an advance of 6.5 per cent, Soap with one of $15 \cdot 9$ per cent, and Stationery with one of $9 \cdot 1$ per cent are among the most steadily progressive of the lines; and each has a value of about half a crore. Steady progress is shown also by the smaller items of Umbrellas (with an increase of $10^{\circ} 5$ per cent) and Umbrella fittings (with one of 36.3 per cent). Scientific instruments are more fluctuating ; but this yoar they show again an advance of 16.1 per cent. Paints, etc. also form a rather uncertain item, but in 1910-11 they developed by no less than 10.2 per centLeather shows a healthy progress of $12 \cdot 6$ por cont ; hut Jewellery and plate
are stagnant. Tea chgstg also are practically unchanged; while there is a drop of no less than 74 per cent in the imports of ships and parts of ships This, however, is a notoriously variable item; for when river steamers are being imported in parts by one or other of the steamer companies large sums appear in the statistics, and when the programme is complete a marked fall takes place. The imports in 1909-10 were the highest on record; and in the year under review the decline amounted to $\mathrm{f} 29 \cdot 46$ lakhs ( $£ 196,400$ ). Burma's share deolined from $\mathrm{f} 32 \cdot 8$ lakhs ( $£ 218,700$ ) to f 6.58 lakhs ( $£ 43,900$ ) and Bengal's from $\mathrm{F} 5 \cdot 12$ lakhs ( $£ 34,100$ ) to $\mathrm{R} 60,000$ ( $£ 4,000$.)

The principal articles of importation into India and their values in each of the last three years are shown in the following statement, the unit being 1,000:-

The most important feature here is the advance of some $\not 25 \cdot 47$ crores $(£ 3,647,000)$ or 13.9 per cent in cottonmanufactures. But the increase of 14.3 por cent in Sugar, which confirms it in its position as the second article in order of importance, is even more striking as occurring in a country that is itself the largest producer of sugar in the world. There are notable advances also in iron and stool, in hardware and outlery, in woollons, in copper, and in apparel.

The Sources of imported merchandise have so far limen assumed in the Indian trade accounts to be those countrics from which the eronds were shipped in such ressels as landed them in India. In the case of tranhipment careo, tho port of such transhipment appeared as the port of orimin unles a throurh Bill of Lading has been granted at the port of original shipment. When such through Bill of Lading has been granted, the country of first shipment is assigned as the country of origin. Arrangements now in foree furnish statistics by which the true countries of origin are more enrrectly shown; hut retrospective figures on that basis hare not ret become arailahle; and for the purpose of comparison it is necessary as yet to use the statistics constituted on the old hasis. According to these statistics the ralue of imports has in the last five years been appropriated to the rarious principal countries in the proprortion slown below:

The total value was R 129.36 crores ( $£ 56,2 \cdot 40,000$ ) against P 117.00 crores ( $£ 78,040,000$ ) in 1909-10. The United Kingdom with a largely increased total of $\mathrm{Z} 79 \cdot 03$ crores ( $£ 22,696,700$ ) has lost a part of its lead as a con. sequence of still greater expansion in the trade with foreign countries. Jara with its enormous shipments of sugar has assumed the second place with X9.01 crores ( $£ 6,000,700$ ) against $\mathrm{R7} 02$ (rores ( $£ 5,290,000$ ) in the previous year. Belgium, with $25 \cdot 77$ crores ( $£ 3,846,700$ ) against P. E 60 crores ( $£ 3,0 \cdot 40,000$ ), and Germany, with R5-15 crores ( $£ 3,433,300$ ) against $\mathrm{m} 4 \cdot 16$ crores ( $£ 2,773,300)$, are in the third and fourth places ; but it is known that the system of registration fails to distinguish in all cases those German gools that are shipped from Belgium. Conjointly the two countrics did 8.5 per cent of the trade against 7.5 per cent in $190 \mathrm{~g}-10$. The United States has fallen back to the fifth place with R3•49 crores ( $£ 2,320,700$ ) against $\mathrm{R} 3 \cdot 67$ crores ( $£ 2,446,700$ ) in the previous year. Austria-Hungary has improved her position with $\mathrm{Z} 3 \cdot 16$ crores ( $£ 2,106,700$ ) in place of f 2.72 crores $(£ 1,813,300$ ) in 1909-10. The trade with the Straits Setilements has increased from $\mathrm{Hz} 2 \cdot 90$ crores ( $£ 1,973,300$ ) to $\mathrm{R} 2 \cdot 99$ crores ( $£ 1,993,300$ ). Mauritius, the second great source of imported cane sugar, also increased her trade from $\mathrm{H} 2 \cdot 49$ crores ( $\mathbf{x 1 , 6 6 0 , 0 0 0}$ ) to R3.02 crores ( $£ 2,013,300$ ). Japan's trate with India in respect of imports advanced from $\mathrm{R} 2 \cdot 48$ crores ( $£ 1,053,300$ ) to R 3.34 crores ( $£ 2,220,700$ ) ; China shipments also advanced from $\mathbf{H 2} 2.26$ crores ( $\{1,500,700$ ) to $122 \cdot 45$ crores ( $£ 1,633,300$ ). The share of France exhibits an expansion from R1.7.t crores
( $£ 1,160,000$ ) to R 2.08 crores ( $£ 1,386,700$ ), but the net increase here shown is less than one-third of the gross increase in her purchases of Indian wheat alone. The share of Italy with R151.78 lakhs ( $£ 1,011,800$ ) shows an improvement of m38.98 lakhs ( $£ 259,900$ ), and Russia comes last with a total of $£ 25.96$ lakhs ( $£ 173,100$ ) in place of Z 14.86 lakhs ( $£ 90,100$ ) in the previous year.

Imports of Government stores are not included in the foregoing figures. Theg amounted to $\mathrm{P} 435 \cdot 15$ lakhs ( $£ 2,901,000$ ) as compared with 7559.08 lakhs ( $£ 3,727,200$ ) in $1900-10$. Of this total, $¥ 415.9$ lakhs ( $£ 2,772,700$ ) came from the United Kingdom as against $¥ 533 \cdot 11$ lakhs ( $£ 3,554,100$ ) in 1909-10. The share of the United Kingdom therefore declined by $\mathrm{fl17} 721$ lakhs ( $£ 781,400$ ) or 22 per cent; but it represented 95.6 per cent of the whole, as against $95 \cdot 4$ per cent in the previous year.

Material for State Railways amounted to $\mathbf{Z 1 9 4 . 0 7}$ lakhs ( $£ 1,293,800$ ) or 446 per cent of the total, while in the prerious year the figure was R 295.01 lakhs ( $£ 1,966,700$ ) and 52.8 per cent. Imports of other descriptions of stores fell from R264.07 lakhs ( $£ 1,760,500$ ) to R 241.08 lakhs ( $£ 1,607,200$ ), the difference being R 22.99 lakhs ( $£ 153,300$ ). It may be said that all these stores, with unimportant exceptions, really represent commercial transactions.

Imports of material for railways, State and non-State, have in the last three years been as follows:-1908-09, R1,193.94 lakhs (£7,959,600) ; 1909-10, ¥ $530 \cdot 07$ lakhs ( $£ 5,593,800$ ) ; 1910-11, $\mathrm{P} 618 \cdot 6$ lakhs ( $£ 4,124,000$ ). In the same period the share of the United Kingdom in the total import trade, including Government stores, has been--1908-09, 64:5 per cent; 1909-10, 64 per cent; 1910-11, 6y. 2 per cent.

## EXPORTS OF IMPORTED GOODS

In the last three years, the value of the re-exports by sea has been on an arerage 2 per cent of the total exports of merchandise, and has represented 29 per cent of the imports from which they were derived. The development of direct communications between rarious parts of the world tends to diminish the trace of entrepots, so a fairly continuous decline in this branch of India's trade might be looked for. From 1595-96, when the figures stood at $\nexists \pm .72$ crores ( $£ 2,605,800$ ), up to $1008-00$, when they reached $\mathrm{f} 3 \cdot 17$ crores ( $£ 2,113,300$ ), such a decline took place; but there were slight revivals in 1907-08 and 1009-10, and in the year under review the figures recovered further to $\mathrm{R} 4 \cdot 20$ crores $(£ 2,840,000)$. The following statement records the extent of the trade in each of the last two years with arerages for three quinquennial periods:-

The chief ports of Western India continued to do the larger part of this trade. But their share of the total declined from 89.1 per cont to $88 \cdot 2$ per cent. Re-exports from Bombay increased by 23.9 per cent, that is, from $R 263.38$ lakhs ( $£ 1,755,900$ ) to $\mathrm{R} 32 \mathbf{6} \cdot 29$ lakhs ( $£ 2,175,300$ ). Those from Calcutta increased from $\mathrm{Pl6} \cdot 62$ lakhs $(£ 110,800)$ to R 24.77 lakhs $(£ 165,100)$, the rise being 49
per cent. The grater part of the reexportation is in manufactured goods from Western countries. Cotton goods continue to constitute the most important clas and represented 375 per cent of the total asagainst $35 \cdot 8$ per cent in 1909-10.
 the incrase being R $59 \cdot 37$ lakhs ( $\mathfrak{L}_{2}^{2}(0,500$ ) or $: 32 \cdot 10$ per cent. Piecegoods
 ing fiss 75 lakhs ( $£ 25.300$ ) or 362 per cent. Of these, grey goods advanced from fis lakhs ( $£ 53,300$ ) to R0 42 lakhs ( $\mathcal{L} 62,500$ ), white goods from R13.61 lakhs ( $£ 90,900$ ) to R1S 19 lakhs ( $£ 120,500$, and coloured goods from RS5.3s lakhs ( $£ 569,200$ ) to R115 $\because 3$ lakhs ( $£ 5 S 5,2(0)$ ). Re-exports of yarn fell from玉9 lakhs ( $£ 60,000$ ) to $\mathrm{f} 5 \cdot 39$ lakhs ( $£ 55,900$ ). Persia is usually the chicf buyer of foreign rarns from India; but that country was disturbed in 1910-11 and she took only $\mathrm{f} \mathbf{6} 42$ lakhs ( $£ 42, \mathrm{Sn} 0$ ) of these goots in place of 127.02 lakhs $(£ \pm 6,500)$ in 1909-10. There was a substantial rise in metals, bringing the total from R14.6S lakhs ( $£ 97,900$ ) to R 20.75 lakhs ( $£ 135,500$ ) ; but this is almost the same as was recorded in $1907-05$ and much less than the 220.73 lakhs ( $£ 195,200$ ) in 1906-07. Apparel recorered ly R3 lakhs ( $£ 2(0,000$ ) to R1s. 7 lakhs ( $£ 124,700$ ). The re-exports of sugar Tere swelled by exceptional re-hip. ments of cane sugars to sereral countries in response to the high prices there; and the total ralue rose from R16 56 lakhs ( $£ 110,400$ ) to R $32 \cdot 41$ lakhs ( $£ 216,100$ ), the increase being R15.85 lakhs ( $£ 105,700$ ) or 957 per cent. Oils, thourh still falling short of the totalin 1907-08, mose from R 70,17 - ( $\mathbf{E t}, 678$ ) by 112 per
 showed a development of 36.9 per cent ; but it must be remembered that in 190708 the quantity hal been $991,300 \mathrm{ll} \mathrm{s}$. Persia has ceded her premier place in this trade in recent rears, and in $1910-11$ took only $85,77 \mathrm{lbs}$ in licu of 121,611 lbs in the previous jear. Asiatic Turkey now takes the first rank with 322,250 lbs instead of $182,944 \mathrm{lbs}$; and Muscat increased her demand from $60,78 \mathrm{llbs}$ to $67,816 \mathrm{lbs}$. Re-exports to Russia dropped from $29,462 \mathrm{lbs}$ to $8,832 \mathrm{lbs}$.

Re-exports to Western countries are comparatively small, hut the share of the United Kingdom at RS5:5 lakhs ( $£: 50,000$ ) as against Rit.48 lakhs ( $£ 196,500$ ) in 1909-10, represents 20 per cent of the whole as against 22 per cent. The chief commodity is raw wool, which comes jartly ly the land frontices and is exported mainly from Karachi ; and this article, which had shown substantial diminutions in the two prerious years, rose from $5,15,4,040 \mathrm{llis}$ valud at R28.8 lakhs ( $£ 192,000)$ to $5,754,632 \mathrm{lbs}$ with a value of t 29948 lakhs ( $£ 106,500)$. The following aricles showed increases as detailed: Hardware and cutlery, f3 63 lakhs (£24,200); Silk, raw and manufactured, flic,200 ( $£ 3,100$ ); Drugs, Medicines, and Narcotics, $725 \cdot 5$ lakhs ( $£ 36,700$ ) ; Provisions, H 339 lakhs ( $£ 22,600$ ); Glass and glassware, A 88,000 ( $£ 5,867$ ); Earthenware
 carts, $\mathrm{P} 74,000$ ( $£ 1,933$ ); and Machinery and millwork, $\mathrm{PC2},(000$ ( $£ 4,133$ ).

## EXPORTS OF INDIAN MERCHANDISE •

Exports of Indian merchandise in 1910-11 forined 97.96 per cent of the total exports and about $60 \cdot 2$ per cent of the total trade in merchandise. Their total value was $\mathrm{R} 201 \cdot 87$ crores ( $£ 130,580,000$ ) as compared with R181\% crores ( $\mathbf{x} 123,000,000$ ) in 1909-10. The advance was therefore one of $220 \cdot 37$ crores $(£ 13,580,000)$ or $11 \cdot 04$ per cent, and the total is the largest on record. The
following statement shows the progress made in the past 20 years, the unit being 1,000:

|  |  | A |  | £. | $\begin{aligned} & \text { Percentage } \\ & \text { Increase ( }+\left(\begin{array}{l} \text { ) } \\ \text { or Decrease }(-) \end{array}\right. \end{aligned}$ |

Raw cotton has largely exceeded any other item in the last two years, and its total of this year is the largest on record since 1866-67. It increased by $\mathrm{f3} 367$ crores ( $£ 2,4.46,700$ ) or 11.7 per cent. Of this, 18.4 per cent was due to higher prices, and the same factor had much to do with the contraction of f 90.36 lakhs ( $\mathcal{L} 602,400$ ) or $7 \cdot 6$ per cent in the exports of cotton manufactures. The net rise in cotton and its products is thus $¥ 276.66$ lakhs ( $£ 1,844,400$ ) equal to 6.4 per cent on the figures for the previous year. In seeds the increase has been remarkable. It has amounted to $\mathrm{P} 639 \cdot 70$ lakhs ( $£ 4,264,700$ ) of whic̣h 17.4 per cent is due to increase of price; and the total is the largest figure liitherto recorded. Raw jute, though still far short of the record figure of 1900-07, showed an increase of R 4017 lakhs ( $£ 267,800$ ) or 2.6 per cent; but, as jute manufactures declined by $R 10 \cdot 2$ lakbs ( $£ 68,000$ ) or 6 per cent, the aggregate of the two classes showed a gain of about R30 lakhs ( $£ 200,000$ ). Exports of Rice were higher than they have been at any time since 1901-02, and rose by $\mathrm{P} 498 \cdot 8$ lakhs ( $£ 3,325,300$ ) or 57.34 per cont. Wheat and wheat flour figured at $£ 13 \cdot 59$ crores ( $£ 9,060,000$ ), having gained 1R28.68 lakhs ( $£ 191,200$ ); and the class Pulses, millets, and cereals not specified, dropped by 13 per cent, or P 26.38 lakhs ( $£ 175,900$ ), to F 17658 lakhs ( $£ 1,177,200$ ). There was a contraction of $¥ 54$ lakhs $(£ 360,000)$ or $3 \cdot 97$ per cent $i^{n}$ the important class of Hides and Skins. In addition to the articles specified in the foregoing list, there are others which in recent years have generally attained some importance. These are Manures with a total of $\nexists 102 \cdot 92$ lakhs
( $£ 6 S 6,100$ ) ; Fodder, bran, and cattlefood with a diminished value of R122.36 lakhs ( $£ \subseteq 15,7(0)$; Indian metals and manufactures thereof with a value of
 ( $£ 163,600$ ) ; and raw hemp aud Conl and coke at $R(61 \div 17$ lakhs ( $£ 109,500$ ) and R7592 lakhs ( $£ 519,500$ ) respectively. Fraits and vegetables, having nearly doubled its total in the single gear, attained a level (R101•03 lakhs = $£ 676,500$ ) that would, if sustained, command a place in the tabular statement; but it will drop when copra is relerated to the clearinous class. Saltpetre, haring remained at about h.45•35 lakhs ( $£ 302,300$ ) in 100S-00, made a notable drop to $\mathrm{R} 37 \cdot 22$ lakhs ( $£ 245,100$ ). The net increase of P 39.22 laths ( $£ 261,500$ ) in oils is derived from the expansion of 29906 lakhs ( $£ 190,700$ ) in mineral oils (including wax) and of R9.20 lakhs ( $£ 61,700$ ) mostly in vegetable oils. It represents $3 \boldsymbol{2} \cdot \pm$ per cent on the firures for 1909-10. Essential oils rose by 2307 lakhs ( $£ \because 0,500$ ) and castor oil by
 Mustard oil rose by $\mathrm{Zl} 1 \cdot 53$ lakhs ( $£ 10,20(1)$, Linseed oil by $\mathrm{IR} 1 \cdot 25$ lakhs, and other sorts of oils by R1. 47 lakhs ( $£ 9,5(0)$.

The statement below shows for three years the value in thousands of rapees and of pounds sterling of the trade in each of the four principal classes under which articles are grouped in the accuunts:-

| Articles of food and drink |  | 2 | $=$ | 3: | ,01= |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Chemicals, drugs, medicines, narcotics, and dreing and tanning materials |  |  |  |  |  |  |
| Raw materials and unmanufactured articles. | 67,18,55 | 4,790 | ¢3,62,71 | 55,751 | 91,21,55 | 6z,801 |
| Articles manufactured and partly manofactured | 36,65,41 | 24,436 | $3 \mathrm{~s}, 06,03$ | 25,37 ! | 36,97,55 | 2.1,653 |

## AFTICLES OF FOOD AND DRINK

These represent 27 per cent of the total exports. There was a net increase of $\mathbb{Z} 63 \pm$ crores ( $£ 4,226,700$ ) or $12.9 \%$ per cent in valuc, the total being $\Psi 55.37$ crores $(£ 36,913,300)$ as agaiust $\mathrm{R} 49 \cdot 0.6$ crores $(£ 32,693,300)$ in 1909-10. The largest single increase was that of $\mathbf{~} 4.99$ crores ( $£ 3,3 \cong 6,700$ ) in ri which advanced to P 23.23 crores ( $£ 13,186,700$ ) from R182. 4 crores ( $£ 12,160,010$ ) in $1909-10$, the increase lueing one of 27.34 per cent. Wheat and wheat flour at $\$ 13 \cdot 59$ crores ( $£ 9,060,000)$ improved by fl 28.68 lakhs ( $£ 191,200$ ) or $2 \cdot 16$ per cent. Other food grains at $\mathbf{~} 71 \% 6$ crores ( $£ 1,173,300$ ) fell away by $\mathrm{F} 26: 38$ lakhs ( $£ 175,900$ ). Tea rose ly R70.9 lakhs ( $£ 172,700$ or $6 \cdot 1$ per cent to R 12.42 crores $(\& 8,28), 000)$. Coffee rose by $\mathrm{F} 23 \cdot 52$ lakhs (£156,800) or 21.5 per cent to R1:33 crores ( $£ 886,700$ ). Fruits and vegetables rose by $\not 77.92$ lakhs ( 252,800 ) or 8.46 per cent to 71.02 crores (£680,0). 0). Provisions advanced ly $1213 \cdot 65$ lakhs ( 591,000 ) to $\mathrm{Rl} \cdot 02$ crores ( $\mathcal{E} 680,000$ ), and spices by fl 10.09 lakhs ( $£ 67,300$ ) to R80.94 lakhs ( $£ 539,600$ ).

Coffee--The exporis of coffee represent some 2.4 per cent of tho total exports of articles of food and drink. The year has been a remarkable ono in the coffee markets of Europe, and the general tone has somewhat resembled
that during the boom of 1886 to 1888 . In the first balf of 1910 the European markets stiffened, and in the second half marked strength was developed. Specu. lation re-appeared in the trade; but it reposed upon a genuine increase in demand together with a considerable shortage in the Brazilian crop and an expectation of shortage in the Indian supplies. The promoters of the valorisation scheme in Brazil have been greatly helped by successive shortages, and although the Trust still carries some $6,310,323$ bags, the value of the stock at present rates is some $£ 20,000,000$, whereas the stock of $7,531,955$ bags taken over by them in 1908 had a value of only $£ 15,768,175$. From the stock in question the Trustees propose to issue only $1,200,000$ bags in the current year; and a further factor in strong prices has been the greater steadiness in exchange with Brazil. In spite of the expected shortage in supply, both Brazil and India sent larger quantitics than in the previous year, and the total imports into the United Kingdom rose from $819,558 \mathrm{cw}$ ts to $933,128 \mathrm{cwts}$ in 1910. But the prices rose by 158 . or 208 . per cwt in the twelve months, bringing rates to about $60 s$. to $70 s$; and not only did this result in lower consumption figures, but continuance of the conditions together with keener competition from tea is likely to prevent recovery. Brazilian coffee now constitutes some two-thirds of the world's supply and dominates the trade. It is satisfactory to find that India has been able to market a substantially larger quantity in the year under review.

It will be seen from the following statement of India's exports of coffee in the last five years that her shipments in 1910-11 showed some recovery from the low level of 1009-10, but still fall short of the figures of certain earlier years. This is no doult traceable to the diminution in the acreage under coffee in India, and this again to the discouragement of planters by the low prices obtainable in successive years.

The increase of 17.02 per cent in quantity is accompanied by an increase of 21.5 per cent in value, which evidences a rise of 3.8 per cent in specific value, so far as declared values of duty-free exports can be relied on. This appears to show that Indian coffee has not fully shared in the average rise of prices.

Whereas the United Kingdom is usually the largest buyer of Indian coffee, with France a close sccond, the latter country has in the past year taken the first place and increased her purchases to 128,200 owts or 47.1 per cent of the whole, while Britaiu's share has dropped to 80,599 cwts or less than 30 per cent. But much of the best coffeo that goes to England is re-shipped to other countries. Since the comprchensive heading other countries shows an advance of some 18,128 cwts or 75.3 per cent, there is here no statistical evidence that Indian coffee is less consumod in the mother country, but the statistics of the United Kingdom show that the quantity entered for consumption diminished in 1910.

Fruits and vegetables-The progres in the exports of fruits and veretables has been marked in recent years ; and in 1910-11 it brought the figures
 being one of $\mathrm{R} 7 \cdot 92$ lakhs ( $£ 52,500$ ) or $8 \cdot 46$ per cent. The principal article in this clas is Copra which would probably be better grouped with other materials for the oil industry, as is done in certain forcign countries. It now represents 776 per cent of the total value of the class, and figures at
 lakhs ( $£ \pm 96,500$ ) in 1900-10. The decline in quantity was one of 158 per cent, but the total ralue rose by nearly 6 per cent marking an alvance of 25.8 per cent in specific ralue. In the other articles falling under this head there was an increase of $\mathrm{R} 3 \cdot 4 \mathrm{~S}$ lakhs ( $£ 23,200$ ).

Rice formed 60.2 per cent of the total value of food grains from India in 1910-11 as against $5 \pm 3$ per cent in 1909-10; and it represented $11 \cdot 3$ per cent of the ralue of all Indian produce exported, as compared with 09 per cent in the previous year.

The rice crops of 1909-10 and of 1910-11 both contributed to the exporis of the latter sear. The former was estimated at $27,500,500$ tons and the latter at $27,701,450$ tons as compared with $22,217,650$ tons on the arerage of the previous five seas. The arailable surplus therefore exceded the normal by a large figure. But in practice the exportable surplus is diminished ly exceptional general prosperity and enhanced consuming power amons the people ; and this factor has been present in sereral recent years. Jany districts of India, which a few years ago rejected Burma rice as unwholesome for the reason that it has to be cooked somewhat differently from Indian rice, learned the peculiar methods during times of shortage and have accepted this grain as useful. This means that in the erent of future shortage of food grains in India proper, her demand for Burma rice will be more ready than formerly; and the market will have to tike this factor into account ; but it will be seen below that abundant crops in India, together with a high level of prices maintained ly the strong Chinese demand, led to reduction in the burmese exports to India proper.

The following statement shows in thousands the quantity and value of the exports abroad during the last five years :-

The exports to forcign countries therefore increased in 1910-11 by 440,000 tons and H 4.09 crores ( $£ 3,326,700$ ) or ly $22 \cdot 4$ per cent in quantily and 27.34 per cent in value. This marks a rise of 411 per cent in specific valuo. Most of the rice exported is from Burma, and the averaro price of Ngatsain rice in Rangoon rose from $\mathrm{Rt} 4-2$ ( $58.6 d$.) to $\mathrm{Rt} 4-\mathrm{j}-9$ ( $58.10 d$. ) per cwt or by 5.3 per cent. On the other hand, the average price in Caleutta for Ballam rice No. 1, which was 166-3-4 (88. 3d.) per cwt in 1909-10, was 7 fj -11-1 (7s. 7cl.) or 8.3 per cent lower in 1910.11 . Since the new Burma crop appeared on the market in December 1910, the price in Rangoon has ranged about R.t-6-8 (5e. 11d.).

Burma's share of the exports to foreign countries was in quantity 765 per cent of the total exports from British India, as compared with 75.2 per cent in the previous year.

The decline in Burma's shipments of rice to India proper is striking. In 1910-11 they anounted to $550,3 t 0$ tons. This constitutes a dirop of 47 ner cent $a^{n}$ nd restores the trade very much to the level that prevailed up to 1905.00 . The following statement shows the distribution of Burma's coastwise exports among the various provinces of India :-

|  | $\begin{gathered} 1906-07 \\ \text { Tons } \end{gathered}$ | $\begin{gathered} \text { 1907-08 } \\ \text { Tons } \end{gathered}$ | 1908-69 Tons | $\begin{gathered} 1909-10 \\ \text { Tons } \end{gathered}$ | $\begin{aligned} & \text { 1910-11 } \\ & \text { Tons } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Bengal | 270,040 | 431,301 | 550,957 | 271,422 | 50,312 |
| Eastern Bengal and Assam | 239,000 | 142,341 | 21,456 | 7,250 | 18,526 |
| Bombay | 114,634 | 206,395 | 243,095 | 202,650 | 190,297 |
| Sind |  | ... | 91 | ... . | ... |
| Marlras | 172,772 | 173,733 | 322,611 | 503,391 | 270,939 |
| Travancore | 10,513 | 25,856 | 18,928 | 42,261 | 15,204 |
| Other Non-British Ports | 10 | ... | ... | 11,312 | 5,032 |
| Total | 812,975 | 979,626 | 1,157,168 | 1,03S,286 | 550,340 |

Bengal took less than a tenth of what she took in the time of shortage two years ago. Bumbay's figure has returned to normal lerel from which it never very greatly departed. Bengal together with Eastern Bengal and Assam imported rice to the value of only P 72 lakhs ( $£ 180,000$ ) instead of F 308 lakhs $(£ 2,053,300)$ in the previous year.

Ceylon is the largest single purchaser of Indian rice, and took 361,809 tons of a value of $\mathrm{R} \cdot 43$ crores ( $£ 2,866,600$ ) as against 301,965 tons in 1909-10 with a valuc of $\mathrm{R} 3 \cdot 54$ crores $(£ 2,360,000)$. There was thus an increase of $18 \cdot 6$ per cent in quantity and one of $21 \cdot 2$ per cent in value. The discrepancy indicates a rise of 2 per cent in specific value, which may be compared with the rise shown by the total exports.

Japan's purchases from India are very much less than formerly, and the trade, which a fow years ago areraged some 337,000 tons, now stands at 61,617 tons, though this is an improrement on the 13,06S tons of 1909-10.

The strong demand from China which resulted from famine in Southern China in the earlier part of 1910 and in Kiangsu and Anhui towards the end of the year, was sustained except in November and December. It contributed largely to the strength of prices and indeed caused some embarassment in the Rangoon trade in the early months of the year. In 1908.09 the exports to China from Indian ports amounted to 2,763 tons with a value of A 2.02 lakhs ( $£ 13,500$ ). In 1909-10 they rose to 6,858 tons and $R 405$ lakhs ( $£ 27,000$ ); but in 1910-11 they leaped to 38,214 tons and $\mathrm{R} 30 \cdot 22$ lakhs ( $£ 201,500$ ), which marks increases of 31,356 tons or 457 por cent in quantity, of $\mathrm{R} 26 \cdot 17$ lakhs ( $£ 17.5,500$ ) or 646 per cont in value, and of 33.9 per cent in specific value. The exports ly way of the Straits Settlements are always much larger than the direct shipments to China, and in the past year they showed an increase even greater than that found in the China figures. The total amounted to 291,715 tons and $\mathfrak{R 2 6 0} \cdot 12$ lakhs ( $£ 1,734,100$ ) as against 202,641 tons and $22171 \cdot 23$ lakhs ( $£ 1,1: 1,500$ ) in 1909-10, the increases being 44 per cent in quantity, $51.9 \mathrm{pe}_{\mathrm{r}}$ cent in value, and 5.5 per cent in specific value. The $S^{t}$ raits draw
large supplies from other souress, one of the most important being Bangkok; but, while Bangkok in 1910 exported considerally moro than in 1009, her consignments to Singapore were less, namely, 373,743 tons against an arerage of 391,249 tons in the two previous years.

Java increased her demand from 103,005 tons and RS7.36 lakhs ( 5582,400 ) in 1909-10 to 257,467 tons and Re47\%7 lakhs ( $\mathcal{E 1} . \operatorname{Col}, 900$ ) in 191\%-11. There was thus an increase of 150 per cent in quantity, 155 per cent in value, and $1 \pm 3$ per cent in specific ralue.

The practice of shipping rice to Egyp " for orders," and then forwarding it to destination not at first known, ritiates to some extent the figures relating to exports to western countries. For example, Eerpt at fint flyured for 350,917 tons in the accounts of the previous year, but on re-aljustment this has been reduced to 79,009 tons, the halance of 271,005 tons laving been distributed among other countries. So the following figures must be recognised as incomplete. Among occidental buyers of Indian rice, Germany retains the fint place but the trade contracted from her record of 333,503 tons and R2.79 crores ( $£ 1, \mathrm{S60}, 000$ ) to 207,650 tous and $\mathrm{Rl} \cdot 81$ crores ( $\mathcal{C 1}, 220,700$ ). The United Kingdom, on the other hand, increased her demand from 143,112 tons and $\mathrm{Al} \cdot 27$ crores ( $£ 846,700$ ) to $176,50 \downarrow$ tons with a value of R15t crores ( $£ 1,006,700$ ). Austria-Hangary, which held third place list year, retains it with a diminished quantity of $141,00 \pm$ tons valued at Pl 122 crores ( $£ 513,300$ ) in place of the 155,437 tons and $\mathrm{R} 1 \cdot 40$ crores ( $£ 093,300$ ) recorded in 1900-10.

The exports of rice in the hasks declined from 40,496 tons with a value of玉 $23 \cdot 89$ lakhs ( $£ 159,300$ ) to 34,695 tons valued at R21•16 lakhs ( $£ 141,100$ ); of this Ceslon took $3 \pm, 537$ tons included in the figures quoted above.

Wheat-On the arerage of the five years ending 1009-10, wheat represented 27.28 per cent of the value of all exports of food grains from India and 4.58 per cent of the total ralue of Indian merchandise exported. In 1910-11 it represented 33.6 per cent and 6.32 per cent respectively.

The world's wheat trade in 1910 was disturbed and the fluctuations in price were marked. Bad reports of the Argentine crop hardened prices in January; and in the end Argentina exported only about $8,239,220$ quarters as against $10,997,320$ quarters in 1909 and $17,000,000$ quarters in 1908. Franco's crop was badly injured and she had to import largely. But Russia had producel some 97,650,000 quarters in 1909 and her crop in 1910 was about $96,610,000$ quarters. The United States and Canada also had full crops, though at one time they were bally threatened by drought; and the Australian crop of 1009-10 was the largest on record, namely, about $11,250,000$ quarters. The sum of the world's wheat crops in cereal year was estimated at $452,000,000$ quarters, and, as this exceeded expectation by about 7 per cent, prices tended downwards. The Gazette average price of British wheat was 318. 8d. per quarter in 1910 as against $368.11 d$. in 1903. The available information aloout crops in the ground seems to point to amples supplies and moderate rates.

Wheat in India is harvested in $\Lambda$ pril to June. The statistical year begins with April. Therefore the trade statistics of 1010-11 relate to the crop statistics of 1909-10. That year was on the whole exceptionally favourable to the crop, and the increase in area and outturn would have been greater but for the good demand for other staples. The area under wheat increased by $1,372,400$ acres or 7.6 por cent as compared with the previous year,
though it was very little better than the average of the previous fire years. But the outturn exceeded that of the previous year by 26.3 per cent and the average of the five years by 14.9 per cont. The following statement shows the Indian exports for 1910-11 in comparison with the crop data for 1900-10, and the average exports in the five years ended 1909-10 in comparison with the average crop data for the five years ended 1908-09. Comparison is also made between the figures for the year under review and those for the last preceling year ; and in every case the percentage ratio of increase or decrease is brought out, the average of the earlier period or year being taken as 100 :--

|  | 1 | 2 | ; 3 | 4 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Average of <br> \| previuus <br> five years | $\begin{gathered} \text { Previous } \\ \text { year } \end{gathered}$ | Year under review (b) | Ratio of Col. 3 to |  |
|  |  |  |  | $\begin{gathered} \text { Col. } 1 \\ \text { (per cent) } \end{gathered}$ | $\begin{aligned} & \text { col. } 2 \\ & \text { (per cent) } \end{aligned}$ |
| Area, thousands of acres | 26,603 | 26,149 | 28,017 | 105.32 | 107.11 |
| Outturn, thousands of tons | 7,673 | 7,617 | 9,591 | 125.0 | 125.92 |
| Irrigated area, thousands ot acres (a) | 8,532 | 8,592 | 8,90S | 1044 | 103.7 |
| Exports, thousands of tons | 756 | 1,050 | 1,266 | $167 \cdot 46$ | 120.57 |
| Exports, thousands of rapees | 7,68,46 | 12,70,91 | 12,95,82 | 16862 | 101.96 |
| A vernge export value, rupees per ton | 101.65 | 121.04 | $102 \cdot 36$ | $100 \cdot 7$ | 84.57 |
| Imports, thousands of tons | 15 | $\cdot 39$ | . 05 | $\cdot 33$ | $12 \cdot 52$ |

It will be secn that the exports of wheat rose to $1,266,151$ tons, as compared with $1,050,574$ tons in the previous year and with 755,952 tons on the arerage of the five years ending 1909-10. The value of these exports is estimated at R12.90 crores ( $£ 8,640,000$ ), as compared with $\mathrm{Rll} 2 \cdot 71$ crore $_{s}$ ( $£ 8,473,300)$ in 1909-10. The United Kingdom took 78 per cent of the total exports or 987,599 tons with a value of $\{10 \cdot 14$ crores ( $£ 6,760,000$ ) in place of 885,490 tons and $810 \cdot 69$ crores ( $£ 7,126,700$ ) in 1909-10. France's harvest was damaged by rain, and the wet condition of the grain, when garnered, created a special demand for the dry Indian wheats for mixing. She took 10.8 per cont of India's shipments; and this amounted to 136,413 tons with a value of Rl 37 crores ( $£ 913,300$ ) in place of 17,718 tons ralued at $\mathrm{R21} 7 \pm$ lakhs ( $£ 141,000$ ) in the previous year. Belgium, on the other hand, reduced her demand from 120,724 tons and $R 1 \cdot 46$ crores ( $£ 973,300$ ) to 50,287 tons and RCO 081 lakhs ( $£ 405,400$ ), which forms 47 per cent of the whole quautity exported. It is necessary to explain, however, that these figures are imperfect $i_{n}$ so far as a certain eloment of error still attends the practice of declaring exports to Egypt "for orders" and using the ports of that country merely as a distributing point. Although some 58,816 tons are now assigned in the returns to legypt, the verified quantities for that destination in the twa prerious years were found to have an arerage of less than 35 tons.

Some foreign wheat is imported into India every year. In times of short. age it is taken in considerable quantities even by Indian ports from which grain is commonly slipped. But in 1910-11 only 50 tons were imported.

[^15]The exportation of whent flour fiom Indiais not a very profitable busines as a rule ; and even in good years the trade shows only moderate expansion. In $1910-11$ it dereloped to 40,250 tons with a value of R63.14 lakhs ( $£ 420,900$ ), as compared with 35,054 tons and R 59.3 S lakhs ( $\mathfrak{E} 395,900$ ) in 1909-10. The experts go mainly to Aden, Asiatic Turkey, Mauritits, East Africa, the Straits and Cerlon.

The whent erop of 1010-11 now being handled has an estimated area of $29,554,500$ acres, and the outturn is computed at $9,900,500$ tons. This shows an adrance of $2,032,600$ tons or 25 s per cent on the average crop of the five years ending 190s-09. Although the crop is late, it is beliesed to be the largest on record. Most of it has been harrested before the time of issuing this heview; and a considerable part of it has been shipped.

Food grains other than rice and wheat did not share the progress displayed by the principal cereals. They showed instad a contraction of 21,44 tons or $5 \%$ per cent, the total being 225,392 tons against 210,836 tons in the prerious year. The ralue fell from R202.96 lakhs ( $£ 1,353,100$ ) to R1765s lakhs ( $£ 1,177,200$ ). The difference represented a shrinkage of 13 per cent, showing a decline of 4.7 per cent in specific value. Pulse is the most important item and it dereloped br 62.6 per cent in quantity and 41.6 per cent in ralue, the total being 124,253 tons and R101•15 lakhs ( $\mathcal{E} 671,509$ ) in place of $\mathbf{7 6 , 4 5 0}$ tons and R7149 lakhs ( $£(\overline{7} 6,100$ ) in 1909-10. Exports of gram fell from 53,497 tons and R 4590 lakhs ( $£ 306,600$ ) to 45,372 tons with a value of $\mathrm{R} 30^{\circ} \cdot 2 \mathrm{~S}$ lakhs ( $£ 241,900$ ), the decline being $15 \cdot 2$ per cent in quantity and $21 \cdot 1$ per cent in ralue. Jawar and bajra fell ly $37 \cdot 2$ per cent from 41,317 tons to 25,953 tons, and Barley receded by $40 \cdot 5$ per cent to a total of 13,346 tons iu place of 22,444 tons in the previous year. Other sorts fell by no less than 69.06 per cent with a total of 16,435 tons in place of $\mathbf{5 3} 3,125 \mathrm{tons}$ in 1909-10.

Provisions-The ralue of the exports of provisions is small, being only about R 102.33 lakhs ( $£ 652,200$ ) as compared with R85 68 lakhs ( $£ 591, £ 00$ ) in 1909-10. But it is well maintained and shows an advance of $1213 \cdot 65$ laklis ( $£ 91,000$ ) or $15 \cdot \pm$ per cent. The principal article is ghi or clarificd butter, which advanced to $\mathrm{R} 27 \cdot 94$ lakhs $(£ 186,300)$ by R $3 \cdot 11$ lakhs ( $£ 20,700$ ) or 12.5 per cent. Fish, on the other hand, continued its upward movement, though at a diminished rate, and recorded a total of $\mathrm{R} 27 \cdot 31$ lakhs ( $: 182,100$ ) as again:t \#21-29 lakhs ( $£ 141,900$ ) in 1909-10.

Spices-Exports of spices improved from KT 0.85 lakhs ( $\mathcal{L} 172,300$ ) to R 80.94 lakhs ( $£ 539,000$ ). The R1000 lakhs ( $£ 67,300$ ) so gained represents an increase of $1 \pm 25$ per cent. Pepper, with a sum of 73.43 lakhs (£22s,700), continues to be the most important item: and its fotal value rose by $1 \mathrm{l} \% \mathrm{~s}$ lakhs ( $£ 32,000$ ) or 1626 per cent, while its specific value rowe ly 8.04 per cent. Chillies, with a total value of R 195 lakhs ( $£ 130,000$ ), recorded an advance of
 Ginger at R21.04 lakhs ( $£ 140,300$ ) showed an improvement of 14.49 lakhs $(£ 32,800)$ or 30 per cent, while its specific value rose hy 22.7 per cent.

Tea represents 806 per cent of the total value of Indian merclandise exported and $2 \cdot 4$ per cent of the exports of articles of food and drink.

The development of the Indian tea trade is maintained; and the year under review has been on the whole the most prosperous on record. In Europe the demand has developed, and consumption in the United Kingdom in 1910 was estimated by the Board of Trade at $286,954,138$ liss as compared with $283,550,846$
lhs in 1009. The stock of all teas in the United Kingdom on the 31st December 1010 was only $120,687,000 \mathrm{lbs}$ as against $132,693,000 \mathrm{lbs}$ a year before. The imports of all teas into the United Kingdom in 1910 were $332,433,661$ lhs as compared with $341,658,1: 57 \mathrm{lls}$ in the previous year ; and the imports of Indian toas fell from $183,414,000$ lbs to $180,670,000 \mathrm{lls}$ as a result of the larger resort to direct shipments from Calcutta. Imports from Ceylon also declined from $117,283,745 \mathrm{lbs}$ to $107,679,479 \mathrm{lbs}$, and the average sale price was $8 \cdot 19 \mathrm{~d}$. per lb in place of $8 \cdot 14 d$. in the previous year. The popularity of Java teas increases. The imports of Jaras into the United Kingdom increased from 23,538,789 lbs to $25,110,493 \mathrm{lbs}$; and 135,506 packages were disposed of by public sale at an average of $7 \cdot 59 \mathrm{~d}$. as against 124,412 packages and $7 \cdot 43 d$. in 190). The consumption in England of teas of all kinds in 1910 was estimated at 286,954,138 lhs or 6.31 llss per head of the population. Although the average price of all Indian teas sold in London on garden account in 1910 remains at the 830d. recorded in 1009, there has been a perceptible strengthening of values in medium and inferior descriptions. This is a feature that commonly appears when first prices have reached a point at which the retailer of packet teas finds difficulty in maintaining his blend without charging the consumer more. This consideration led blenders in the United Kingdom to use a larger quantity of China teas which are cheaper and of which something like $10,283,000 \mathrm{lbs}$ were entered into consumption. The quality of the China crop was not good.

The following are the exports from several competing countries in 1910 as compared with those in $1909:-$

|  |  | $\begin{aligned} & 199 \\ & \text { lbs } \end{aligned}$ | $\underset{\mathrm{lbs}}{1910}$ |
| :---: | :---: | :---: | :---: |
| From China | . . | 199,792,400 | 206,810,133 |
| From Cerlon |  | 192, $\leqslant$ ¢ 6,500 | 182,070,100 |
| From Jara | - . | 36,679,003 | 40,693,185 |

The season was favourable in India, outturn and average prices together establishing a record. The Calcutta market opened strong in May, declined in September, but hardened markedly as it became apparent that demand had been underostimated and that the less favourable weather conditions in later months were restricting outturn. Prices were highest at the end of December but dropped in the last quarter of the financial year. A leading firm reports the arerage prices obtained in Calcutta in the last three years to have been: 1908-09, $\Lambda$ s. $5 \cdot 11 \cdot 7 \mathrm{p}$. (5d.) ; 1909-10, As. 6-10p. (65 d) ; 1910-11, As. 7-0.8p. ( $7_{18}^{1} d$.). The prospects of the trade have nerer been better than at present.

The following statement shows the increase in area and outturn in the last five years :

|  |  | Ares | Increnss | Production | $\begin{array}{c}\text { Increase } \\ \text { acres }\end{array}$ |
| :---: | :---: | :---: | :---: | :---: | ---: |
|  |  |  | acres |  |  |$)$

It must, however, be added that the expectation of outturn has been greatly exceeded in the jear under review; and the actual increase in 1910 is shown by the trade to have been something like $4,500,000 \mathrm{lbs}$ or 1.9 per cent.

Of the 564,088 acres in $1910,4.42,582$ acres or 78.5 per cent were situated in Eastern Bengal and Assam, which, with Bengal proper, represented nearly

So. 9 per cent of the whole, the balance being diviled between Northern India with $17,2 \leq 1$ acres, Southern India with 19,000 acres, and Burma with 1,605 acres. The inctease in acreage since 1005 is one of 68 per cent, while that in outturn is estimated at 1500 per eent. It is, howerer, impossible to eheck the estimates of production satisfictorily, because of the unaseertainable nature of the internal consumption, which is believed to exceed seven million pounds. The deliveries from Caleutta auctions for Indian consumption have been 6,230,600 lbs.

The joint-stock capital engaged in the industry amounts to $£ 10,881,370$.

This gires an arerage capital of $£ 305$ per acre as the mean of the last three rears; but it takes no account of the large but unknown quantity of prirate capital.

The ralue per P 100 of joint-stock capital, as calculated on the prices of the shares of 69 companies quoted in the Calcutta market was R112 in March 1910 and of 52 companies R145 in March 1911.

The labour emplosed is returnel as 510,563 permanent and $80,7.15$ temporary, making a total of 600,605 hands or 1.07 hands per acre.

The following figures show the quantity and ralue of tea exported from India in the last fire rears:-

The figures for 1910-11 establish a record both in quantity and total value, although the specific ralue adranced by 4.03 per cent. The increase is 4.89 million pounds or 2 per cent in quantity and f 70.9 lakhs ( $£ 479,700$ ) or about 6.06 per cent in total raluo.

The direct shipments to foreign markets rose from $55,55 \cdot 1,721$ lbs to $60,029,136 \mathrm{lbs}$. The quantities of tea exported to the principal countrics have been as follows in thousands of pounds. The figures relate to countries of final destination. The proportion in which each participated is indicated by percentages.

| Othe Countric: |  |  | 2,593 | $1 \cdot 1$ | 2,247 | - | 2,037 | 1 |

The feature of the year was the great increase in direct shipments from India to foreign markets. This resulted in a reduction of $6,205,000 \mathrm{lbs}$ or 33 per cent in the shipments to the United Kingdom, Russia is the largest foreign buyer. The official stalistics according to countrics of final destination show an increase of $7,110,000 \mathrm{lbs}$ or 296 per cent in the shipments to Russia; but this does not include shipments for the Hankow brick-tea market which are largely destined for Russia and which amounted to some $7,000,000 \mathrm{lbs}$ in the year under review. Certain firms in the trade, regarding all shipments to Colombo, Hankow, and Shanghai as destined for Russia, consider that in the year under review that country really took some $40,000,000 \mathrm{lbs}$ of Indian tea. Australia's purchases increased by about i.6 per cent and those of Canada declined by about 6.6 per cent.

The following statement shows in annas (or pence) and decimals thereof the average prices per $l b$ of the three descriptions of tea most largely sold at public auction in Calcutta in the last five years:-

The arerage price obtained in last season was about $6 \frac{3}{4}$ annas (or pence) against 6 annas (or pence) in 1909-10.

## metals and manutactures

On the average of the last three years, the exports of Indian Metals and Manufactures thereof have represented only 0.6 per cent of the total exports of Indian merchandise; and that they do not in the year under review represent more than 0.7 per cent, is due to the adrance in exports of other goods, for the exports of metals increased in 1910-11 from 10,519,772 cwts to $12,0.45,653$ ents (say 602,283 tons) and the ralue from Fl 106.27 lakhs ( $£ 708,500$ ) to R1.40.2.t haks ( $£ 934,900$ ). The advance of $14 \cdot 5$ per cent in quantity was therefore accompanied by one of 32 per cent in total value. But the several descriptions are so diverse in value per unit, and their quantitative relations to each other vary so widely from year to year, that the collation of the figures of quantity and value tells us little, more particularly as the declared values placed upon free exports are not always accurate. For example, manganese ore, which this year as well as in the previous year represents $95 \cdot 1$ per cont of the quantity of all Indian metals exported, constitutes in the year under review $74 \cdot 4$ per cent of the ralue and has a declared valuo of only 12.83 annas (or pence) per cwt, while copper and brass (wrought), which represent only 04 per cent of the total quantity, forms 2.9 per cent of the total valuc, and has an average value of fisj-5-3 ( $£ 513 s .9 d$.) per cwt.

Manganese ore is wanted mainly for the manufacture of steel, and its exportation has grown not only with the reviral of trade in general but with the wider substitution of steel for iron. The quantity increased from 500,344 tons to 572,979 tons and the value from $\mathbf{1 2 7 9 \cdot 1}$ lakhs ( $£ 527,300$ ) to $\mathrm{f} 91 \cdot 9$ lakhs ( $£ 612,700$ ). The advance was therefore $14 \cdot 5$ per cent in quantity and $16 \cdot 2$ per cent in value and 1.5 per cent in specifio value. Of the total, the United

Kiugdon took 159.608 tons or 390 per cent, while Belgium increased its purchases to $13 \overline{6}, 680$ tons. The Enitad States tnok 130, S.in tons or 22.8 pur cent and France came fourth with a demand for 100,300 toms. 'Lhe value of
 lakhs ( $£ 155,700$ ) in the precrious rear. This comprises pig iron $\mathrm{R} 3,40,635$ ( $£ 22,702$ ), chromite $\mathrm{R} 1,05,062$ ( $£ 7, \mathrm{COt}$ ), wrought iron $\mathrm{P} 1,45,567$ ( $£ 9,70.1$, old iron $\mathrm{Rl} 19,025$ ( $£ 7.935$ ), tin $\mathrm{Rl} 1,67,805(. £ 10,520)$, and lead pig R2S,46,045 (£189,736).

## CHEMIC.ILS, DRUGS, NARCOTICS, AND DYES

Saltpetre, together with Borax, practically represents the exports of chemicals from India. For the stcond rear in succession, the trade shows a decline, and the exports amounted to 327,057 ewts with a ralue of R 37.22 lakhs ( $£ 249,100$ ), as against $35 \mathrm{~S}, 232$ cwts with a value of $\mathrm{m} 30 \cdot 1 \mathrm{f}$ lakhs $(£ 260,900)$ in 1909-10. The quantitative contraction of 9 per cent in conjunction with a decrease of 49 per cent in the total value marks a rise of 4 per cent in arerage ralue per unit, although the average price of Nitrate of Soda in London in 1910 was about 5 per cent less than in 1900.

Borax, which in London has been quict but steady throughout the rear, was exported to the extent of only $\mathbf{5}, 232$ cwts, valued at R91,2s1 ( $\mathcal{L} 6,085$ ), as against $5,976 \mathrm{~cm}$ ts and $\mathrm{P} 1,12,1 \leqslant 1$ ( $£ 7,479$ ) in 1900-10.

The opiom trade is disorganised by the gradual dissolution of its China branch. It suffers not only from progressive compulsory restriction of its operations and from instability of conditions in China, lut from violent fluctuations of price resulting in some cases indirect interference by the Chinese authorities with the local trade. The restriction of the Indian exports to China has been rigidly enforced; but as China has been receiving opium apparently from other sources, shipments from this country for Clina are now made under certificate of origin and destination. The very great increase in the price of Persian opium suggests that means are found of introducing it into China. Cnder the new agreement made on the 8th May 1011, it is provided that the Gorernment of India slall issuc certificates for 30,600 chests of Indian opium in 1011 and reduce the annual quota progressively until the trade is extinguished in 1917, which date may be anticipated under conditions defined. There are also to be special reductions in each of the next three years. The British Government consents to a large inerease being made in the consolidated Chinese import duty simultancously with the imposition of an equivalent excise on Chinese opium ; and China binds herself not to impose such additional duties on the wholesale trade as were recently imposed in Canton. With measures of such importance in the air, the trade has leeen subject to rumours and to violent fluctuations of price. During the year under review, Malwa opium touched $\mathrm{fl}, 000$ ( $£ 267$ ) per chest at the top and $\mathbf{R 2 , 0 5 0}$ (£137) at the bottom.

The following statement shows the actual quantities of opium exported from Bengal and Bombay respectively in each of the last five years, together with the total value in thousands and the average prices:-

On the average of the five years ended 1909-10, Bengal shipped $75 \cdot 4$ per cent of the total. In the year under review, her share rose to 84.5 per cent. Bengal's trade shows a decline of 14.6 per cent in quantity with an increase of $81 \cdot 2$ per cent in the value per unit, while Bombay records a quantitative contraction of no less than 46.6 per cent and a rise of $63.8^{\circ}$ per cent in the arerage value. The total exports sliowed a contraction of 12,270 chests or 21.8 per cent in quantity together with an expansion of $\mathrm{R} 345 \cdot 04$ lakhs ( $£ 2,300,300$ ) or 37.05 per cent in value, which marks a rise of no less than 75.3 per cent in specific value. The average value per chest was $\mathbb{R 2}, 906$ ( $£ 194$ ) against R1,657 (£110) in 1909-10. Exports to Hongkong fell by 10,562 chests or $34 \cdot 1$ per cent to 20,394 chests, and those to the Straits Settlements declined by 2,002 chests or 17.07 per cent to 9,138 chests. Shipments to China exclusive of Hongkong and Macao increased by 417 chests or 4 per cent to 10,929 chests.

The course of the export trade in Malwa opium for China is shown by the following figures:-

The area under poppy in the Bihar and Benares Agencies has been further reduced from 363,072 to 362,504 acres. The number of chests of Bengal opium offered for sale in 1910 was 39,600 as comprared with 43,200 in 1909, and with 46,800 in 190S; and the figures for 1911 and 1912 are 31,440 and 26,520 chests respectively.

Tobacco-The internal trade in Indian tobacco received a fillip from the high tobacco duty in force from the 25th February 1910 to 1st April 1911. Progress is being made in the adoption of improved methods of cultivation and preparation, and in the employment of Indian leaf in cigarette factories in this country. The area under tobacco in British India and Native States is bolicved to be about $1,100,000$ acres.

The following are the figures of the export trade for the last three years :-

|  | Uumanufactured |  |  | Manufatured |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathrm{Cuts}^{\text {che }}$ | It | ${ }^{\text {e }}$ | $\bigcirc$ | \# | $\pm$ |
| 1908.09 | 93,41+ | 11,78,727 $=$ | 78,582 | 13,077 | 11,42,954= | 76,197 |
| 1909-10 | 94,961 | 13,32,516 | SS, 33. | 14,159 | 12,25,776 | 81,718 |
| 1910-11 | 157,281 | 20,16,230 | 134,415 | 15,08S | 11,73,699 | 78,2.77 |

In unmanufactured descriptions, therefore, there was an expansion of 65.6 per cent in quantity and 51.3 por cent in value, which argues a fall of 8.6 per cent in the specific value. In the manufactured classes, there was an advance of about 6.3 per cent in quantity but a decline of 4.2 per cent in value, the fall in average value being about 10 per cent. Of the total value under this head, 957 per cent is ropresented by cigars; and of these the largest purchasers are the Straits Settlements and the United Kinglom. Most of the ummanufactured leaf goes to the Straits, to Aden, to China, and to Holland, and much of it is of the description consumed in the hookah or narghili, so that neither in kind nor in value is it strictly comparable with
the leaf proklued in other countries for manufacturing purposes. The tota exports of tobace of all descriptions amounted to 172,360 ewts in phe of 109,150 cwts, and to R31.9 lakhs ( $£ 212,700$ ) in place of R 25.58 lakh ( $£ 1-0,500$ ) in 1900-10.

Indigo usually comes on the market in December; and most of the export are effected before the end of the statistical year. The crop of 1910 showed : continuation of the contraction in area; but a fairly satisfactory yicld was or the whole obtained. There was a good deal of disappointment with the outtur of the Jara-Natal seed, and it is believed that this may have been due 1 neglect of the principle that fresh seed should he imported frequently. Th outturn was estimated at some 3 per cent less than in 1009.

The low yield is reflected in the reduced exportation; hut prospects ar orershadowed by the prognostication of a rate-war between powerful competi tors in the German synthetic indigo trade and by the menace of lowe prices to be met. The accounts of the next crop are for the most part goon both as regards quantity and quality.

The following statement shows the exports of indigo in 1910-11 and the fire prerious year, together with approximate quatations of average price in London. The exports in the record year 1595-96 were 187,337 ewts ant R $5 \cdot 35$ crores ( $£ 3,566,700$ ).

|  | From Calcatia <br> cots | From <br> Matras ports <br> cwis | From other purts ent, | To'al <br> cwts | $\underbrace{\text { Value }}$ | Avernse price per cwt |  |  |

The declines in quantity and value respectively have heen as follows. It ten years, 83.4 per cent in quantity and 84.3 per cent in value ; in five year 45.7 per cent in quantily and 42.8 per cent in value. In the year undes review, the rate of decline in quantity has been 6.2 per cent and in value $4 \cdot$ per cent, showing a recovery of 1.6 per cent in specific value.

Prices in Calcutta opened at an averago of Hilto ( 59 13s. d.ll.) pe factory maund of 72 lbs , which is equal to $£ 1508.9 \mathrm{~d}$. per cort, and closed at an average of R135 (£9) or R10 (138. 4 (1.) less than at the beginning. Thu
 maund.

Exports to the United Kingdom improved by dil per cent to 2,082 ewts and the Continent of Europe increased its demand from 3,243 to 4,002 ewts This represents a net expansion of 1,609 ewts for Europe. Shipments to Egyp at $3,232 \mathrm{cwts}$ as against $2,586 \mathrm{cwts}$ in $1909 \cdot 10$, were 25 per cent more ; ane those to the United States advanced from 1,027 ewts to 1,31 j cwls. Bu Asiatic Turkey took only 2,671 cwis in place of $\mathrm{f}, 387 \mathrm{cw}$ ts in the previon year. The demand in Persia, which fluctutes greatly and has in the pas year been sulject to the general conditions of disturbance in that country, hat contracted from $2,730 \mathrm{cwts}$ to $1,504 \mathrm{cwts}$. The equally erratic demand fron Japan has dropped suddenly from 1,012 ewts to 68 cwts.

Other Dyeing and Tanning materials-The following statement shows the exports of the principal articles in this class in the last three years:-

Of these, Myrobalans is by far the most important. The exports of this article advanced by 13.1 per cent in quantity and by 18.3 per cent in value with a rise of 2.8 per cent in specific value as declared. In recent years a practice has sprung up of separating the seeds from the myrobalan proper, and there has come into existence a certain trade in these seeds or kernels which are rich in oil. Cutch after a heavy decline in the previous year rose by 123.5 per cent in quantity and 147.7 per cent in value, the total still being short of that for earlier years; but the exports of Turmeri while declining by 10.1 per cent in quantity showed an increase of 75 per cent in value, resulting from a rise of 19.6 per cent in specific value.

## orls

Oils form only 8 per cent of the total value of exports of merchandise from India. They comprise animal, essential, mineral, and vegetable oils. In no department of trado has a more remarkable advance in prices been developed in a recent series of years. The causes are in dispute; but the chief among them are the many improvements in the processes of refining for alimentary purposes, while a contributory factor has been the large decline in American supplies of edible hog products said to amount to about 75 per cent. For the four years in succession, a substantial increase has taken place in the value which now reaches $\mathrm{P} 160 \cdot 08$ lakhs ( $£ 1,067,200$ ) in place of Pl 20.86 lakhs ( $£ 805,700$ ) in 1909-10. The rise is one of $\mathrm{f} 39 \cdot 22$ lakhs ( $£ 261,500$ ) or $32 \cdot 4$ per cent. Vegetable oils usually form by far the most important class, but in 1910-11 they constituted only 444 per cent, with mineral oils (including wax) at 49.3 per cent of the class total. Their value increased from P 65.04 lakhs ( $£ 433,600$ ) to R 71.02 lakhs ( $£ 473,500$ ) or by 9.2 per cent. Cocoanut oil makes the largest figure with a total of $\mathrm{P} 34 \cdot 9$ lakhs ( $£ 232,700$ ) in place of $\mathrm{f} 37 \cdot 63$ lakhs (£250,900) in 1909-10. This marks a decrease of $7 \cdot 3$ per cent; the year was a favourable one in home markets with prices hardening from £40 to $£ 43$. Castor oil, as a consequence of a shortage of the raw material in the world's markets, advanced by 39.9 per cent to F 16.9 lakhs ( $£ 112,700$ ) ; while the total of linseed, mustard, and sesamum oils rose from Rl 13.49 lakls ( $£ 89,900$ ) to R15.91 lakbs ( $£ 106,070$ ) or by 18 per cent. The article of next importance in this class is paraffin wax which usually represents about 26 per cent of the total and now stands at $241,505 \mathrm{cwts}$ or 34 per cent with a value of $855 \cdot 2$ lakhs ( $£ 368,000$ ) in place of 173,211 cwts with a value of $\mathrm{P} 40 \cdot 02$ lakhs $(£ 266,800)$ in 1909-10. Shipments of parafin candles, on the other hand, rose by $14 \cdot 4$ per cent to $5, \$ 14,650 \mathrm{lbs}$ with a value of $\mathrm{Zl} 15 \cdot 36$ lakhs ( $£ 102,400$ ). Essential oils, which usually figure at about 6 per cent of the whole, have risen from fl 653 lakhs ( $£ 43,500$ ) to R 96 lakhs ( $£ 64,000$ ). Mineral oil has in Indian commerce such an importance as is not indicated by its export statistics, but this declined to $2,584,604$ gallons with is value of $223 \cdot 72$ lakhs (E158,100-about three times as much as provious year's yalue, Mineral oil fell by $2,066,601$ gallons or, 444
per cent in quantity but its ralue rose by R1: 78 lakhs ( $£ 08,500$ ) or 165.3 por cent, the discrepancy being due to an unprecedented predominance of the highly ralued article, petrol. But figures of internal production and consumption, which are giren more appropriately in the article relating to imports of petroleum, will show that this contraction of exports is far from being attributahle to any deterioration in the kerosene trade as a whole.

## RAW MATERIALS

Coal-On an arerage of the three years ending 1909-10, coal has represented $\cdot 78$ per cent of the exports of raw materials and $3 \overline{5}$ per cent of the exports of Indian merchandise. In 1910-11 these pereentages adranced to -82 per cent and 35 per cent respectively.

The annual production of British Indian coal in the five years ending 1885 areraged $1,205,238$ tons. A further 575,587 tons or so is produced in Native States. In the quinquennum ending 1595 , the production of British Indian Coal areraged $2,460,605$ tons, and in that ending 1905 it averaged $7,001,2 \boldsymbol{2} 2$ tons. In 1907, it mas $10,526,46 S$ tons and in 1908, 12,149,020 tons. In 1909 it was $11,294,297$ tons; and in 1910 improred to $11,357,710$ tons.

In the quinquennium ending 15St-55, the exports of Indian coal areraged 159 tons per annum. In the quinquennium ending $159+-95$ the arerage had risen to 30,509 tons. In that ending with $1901-05$, it became 517,117 tons. In that ending 1909-10, it was 705,958 tons. In 1900-10 alone it was $758,8 \mathbf{8}$ tons with a value of $\mathrm{PC7} \cdot 1 \mathrm{l}$ lakhs ( $£ 417, \mathrm{C} 00$ ) ; and in $1910-11$ it rose to 859,601 tons ralued at A 77.01 lakhs ( $£ 513,400$ ). This is roughly about 9 per cent of the production. It marks an increase of 17.2 per cent in quantity and 14.7 per cent in ralue, the arerage value per ton being R8-10-6 (118. 6d.).

On a dull market, inferior coals were neglected both by consumers and producers; prices were poor for the greater part of the year; and soon after they had shown a little strength, the better employment of tonnage throughout the world produced in coastal freights an increasing stringency that gradually became prohibitire.

Among the external buyers of Indian coal, Ceylon retains the first place, with a quantity of 511,848 tons in place of 370,570 tons in the previous year. Shipments to the Straits Settlements also improved and amounted to 223,320 tons in place of 173,214 tons in 1909-10; the increase representing nearly 29 per cent. Sumatra increased her demand from 78,883 to $111,60 \downarrow$ tons; while Aden trok 7,383 tons in place of 3,460 tons, and East Africa 4,905 tons in place of nil, in the previots year. The total exports of coke amounted to only 1,528 tons in place of $1,83 \pm$ tons in 1009-10, and most of this went to tho Straits Settlements.

Calcutta was the port of shipment for all the exports except 20 tons from Eastern Bengal and Assam, 600 tons from Bombay, and 91 tons from Mrudras. With the rise of 130,773 tons in exports abroad, is to be recorded an increase of 133,400 tons in the shipments from Calcutta to other Indian ports. The total in the latter case was $2,210,517$ tons in place of $2,077,081$ tons in 1909-10, which marks an advance of $\mathbf{6} 4 \mathrm{y}$ per cent. Of the total, Bombay took 990,872 tons or 44.8 per cent in place of 869,087 tons in the previous year, and this in spite of depression in the cotton industry seated there. Shipments of bunker coal from Calcutta for use of steamere were 870,130 tons against 893,320 tons in 1809-10,

The prices of first class Jherria Bengal coal per ton in wagon have been as follows in the last three years:-

Cotton-On the average of the three years ending 1909-10, raw cotton represented 33.87 per cent of the total value of Indian raw materials exported. In 1910-11 the production rose to 37.25 per cent.

The crop that mainly furnished the exports under review was that of 1900-10. It was estimated at 20.52 million acres as compared with about 20 millions in 1908-09, and the official estimate of outturn was $4,716,000$ bales of $400 \mathrm{lbs}(16,842,857 \mathrm{cwts})$ as against $3,691,000$ bales ( $13,182,143 \mathrm{cwts}$ ) in the prerious year. Doubt is thrown upon that estimate by its comparison with the sum of net exports and estimated internal consumption on a basis arrived at in agreement with the Bombay Cotton Trade Association, Limited. The factor of extra-factory consumption involved in that calculation is conjectural and probably somewhat too large; and it is generally believed in the trade that the estimate of the cotton crop of 1909-10 approached accuracy pretty closely. The crop of $1910-11$ was reported last February at about 21.95 million acres with a yield of $4,385,000$ bales or $15,660,714$ cwts. The average yield would appear to be only 80 lbs per acre, and this is about $42 \cdot 2$ per cent of the yield commonly obtained in America.

The World's crop in 1909-10 is believed to have been $19,329,000$ bales against $22,403,000$ bales in the the previous year and $20,975,000$ on the average of the previous five years. The shortage was therefore $3,074,000$ bales or 13.7 per cent compared with the figures for 1909-10.

The Amorican crop in the last three years has been estimated as follows by the Ceusus Bureau (in cwts):-

| 1908 | 1909 | 1810 |
| :---: | :---: | :---: |
| $50,561,873$ | $59,964,870$ | $46,367,004$ |

That now being marketed is expected to be about $54,000,000$ cwts.
The Egyptian crop in the season ending with August 1910 turned out to be only about $4,422,000$ cwts in place of $5,970,000$ cwts in the prerious year. That for 1911 is expected to be about $6,191,000$ cwts.

The following are the prices of middling upland cotton at Liverpool in the last three years, stated in penuies and decimals of a penny per lb :-

The average price of middling American at Liverpool in 1910 was $8 d$. per Ib as compared with 6.34d. in 1909 and $572 d$. in 1908.

It will be noticed that the rango of price in the past year has been much narrower than in 1909-10 but that the arerage is higher by $2 \cdot 46 d$. or 4.4 .73 per cent. The extraordinarily high level at which prices were maintained renders 1910 a rery remarkable year in the cotton trade. Niddling American in Lierpool was at $5 \cdot 05 d$. per 1 lb on the 7 th January 1910 as compared with $50.01 d$. a year before; and fine Broach was at $7_{5}^{3} d$. as compared with $4_{4}^{3} d$. a year before. Nothing has been more remarkable than the close approximation that has existed between the quotations for Middling American and fine Broach which ordinarily stand wide apart. Indeed there were occasions when they wero quoted on a parity. Prices for American were weaker in April and touched $7 \cdot 87 d$.; and again from September to December rates varied between $7 \cdot 62 d$. to $\mathrm{S} \cdot 18 d$., and the quotation closed at $7 \cdot 7 \mathrm{~d}$. on the 31st March.

The price of good Broach at Bombay in the last three years was as follows in annas and decimals of an anna per lb :-

The increase in average price is 15 per cent; but this arerage is calculated without regard to the varying quantities marketed at the several seasons. The Bombay market opened at a level not again attained till December. Rates were relatirely weak in July and again in September ; but towards the end of October the hardening became unmistakeable and was maintained up to middle of January, after which time there was a slight decline.

Tider the conditions indicated, the textile industry throughout the world has undergone a strain of unprecedented severity. Some relief came to the weaving section in the last quarter of 1910 ; but spinners have suffered gravely and increasingly up to the time of writing. The values of the shares of 115 textile concerns in England as quoted by the Manchester Guardian showed an average gain of 2.05 per cent on the 24 th February 1911 as compared with the same date in 1910; and Tattersall calculates that on the working of the last threo years and six months the accounts of sixteen spinning mills, after allowing for interest on loans, show a profit of 747 per cent per annum on share capital and a profit of 5.62 per cent per annum on share and loan capital combined.

The consumption in Britain in the cotton year ending the 31st August $19: 0$ is estimated at $3,340,000$ bales as compared with $3,004,640$ bales in the previous year. The potential consumption of the mills of the world at the present time is believed to be about $20,000,000$ bales, and the United States Bureau of the Census has estimated the actual consumption in the cotton yoar ending the 31st August 1910 at 18,321,000 bales, or $91 \cdot 6$ per cent of its capacity. The decline in British consumption was something over 7 per cent; and though trade is improving in some respects it does so slowly in the face of a possible decline in prices when the next $\Lambda$ merican crop begins to come into sight. In India, on the other hand, the mill consumption decreased ly about 180,400 cwts or 3 per cent, from $5,937,600$ cwts to $5,737,200$ cwts. This latter figure allows for wastage and is equivalent to $1,612,000$ balcs of 400 lbs .

The following figures give a summary of the export trade in the last five years, the unit being 1,000:-

It will be seen therefore that there was a decline of 5.89 per cent in quantity but a rise of 11.7 per cent in value, the ostensible rise in specific value being $18 \cdot 7$ per cent.

The statement below shows the destinations of the cotton exported during the same period, the unit as before being 1,000:-

|  | $\begin{gathered} 1906-07 \\ \text { Cowt } \end{gathered}$ | $\begin{gathered} \text { 1907-08 } \\ \text { Cwts } \end{gathered}$ | $\begin{gathered} 1808-09 \\ \text { Cwts } \end{gathered}$ | $\begin{gathered} 1909-10 \\ \text { Cwts } \end{gathered}$ | 1910-11 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Japan | 1,729 | 2,245 | 2,223 | 3,297 | 2,705 |
| Germany | 1,663 | 1,880 | 1,137 | 1,327 | 1,388 |
| Belgium | 1,102 | 1,254 | 956 | 1,075 | 1,030 |
| Italy | 874 | 1,060 | 851 | 936 | 1,067 |
| France | 560 | 625 | 456 | 499 | 484 |
| United Kinglom | 458 | 453 | 388 | 541 | 579 |
| Austria-Hungary | 619 | 622 | 380 | 694 | 663 |
| China | 166 | 135 | 216 | 347 | 137 |
| Spain | 139 | 157 | 107 | 115 | 208 |

The shipments to Japan therefore fell by 592,000 cwts or 18 per cent, whereas Germany increased her demand by 61,000 ewts or 4.6 per cent. The United Kingdom took some 38,000 cwts more than in 1909-10; and indeed it is understood that the consumption of Indian staples in the United Kingdom in 1910 was about 271,000 bales as compared with 163,000 bales Brazilian, African, etc. Italy's progress in the use of Indian cotton is noticeable, and reproduces a feature shown by the exports of jute to that country.

Hides and skins represent 4.4 per cent of the entire exports of Indian produce. The imports of dry hides into the United Kingdom from all source ${ }_{s}$ in 1910 amounted to 516,941 cwts with a value of $£ 1,855,911$, against 468,993 cwts in 1909 with a value of $£ 1,602,094$; and as the receipts of wet hides were heavier, the aggregate value of the two classes was about $£ 484,500$ more than in the previous year. The value of hides and skins imported into America is estimated at $£ 17,939,200$ as against $£ 21,598,100$ in 1909 . The exports of raw hides from India, however, rose by only 1.8 per cent in quantity and 5.3 per cent in value, there being a rise of 3.4 per cent in the average value per cowt which is recorded at $763-5-5$ ( $£ 44 \mathrm{~s}$. 5 d .) in 1910-11. These facts should be read in conjunction with the notes about tanned hides and skins. The average weight of a raw hide was 9.47 lbs in place of 9.33 lbs in 1909-10. Exports of raw sking decreased by 10.8 per cent in quantity and 20.5 per cent in value, there being a fall of about 10.9 per cent in average value per cowt. There was an increase of 8.2 per cent in the average weight in this class and this is possibly due to the fact that while prices for light skins lost anything from 33 to 50 per cent, those for skins that yield heavy leather held their ground in point of price. The number of raw hides and skins together amounted to $33 \cdot t$ millions in place of $38 \cdot 3$ millions in 1909-10, and the total value to 28999.42 lakhs ( $£ 5,996,100$ )
in place of R965.12 lakhs ( $£ 6,434,100$ ). Of the total weight, Calcutta shipped $7 \pm 2$ per cent. The United States took 32.7 per cent of the total with a value of R 2S1-11 lakhs ( $£ 1,5 \mathrm{~T} \cdot \mathrm{I}, 100$ ) which marks a decline in spite of the removal of the 15 per cent import duty in that country. Germany increased her demand and came second with R $290 \cdot 1$ lakhs ( $£ 1,467,300$ ). Italy took R91.09 lakhs ( $£ 607,300$ ); Austria-Hungary R110 85 lakhs ( $£ 730,000$ ) ; Spain Pl $41 \cdot 45$ lakhs ( $£ 2 ; 0,300$ ); France $\mathbf{R}+2 \cdot \leqslant 1$ lakhs ( $£ 285,400$ ); and the United Kingdom R51.31 lakhs ( $£ 342,000$ ) which marks a decline of 20.5 per cent. In skins also, the Cnited States hold the first place, since they take three-fourths of the total, while the Cnited Kingdom takes only about 8 per cent.

The following statement of the exports for the last six years enables the reader to follow the course of the trade, the unit being 1,000 :-

The price of hides in India has been rariable during the year, but closes without substantial change from the levels of twelve months ago. Buffalo was quoted at $\mathrm{P} 8-4$ (118.) per 20 lls in April, rose to f 9 (128.) in June and closed at Z 8 ( 108.8 d .) in March as in the previous year. Cow hides showed a weaker tendency, and opening at $22 \pm$ ( $£ 1$ 12s.) closed on rupee down at Z 23 ( $£ 1$ 108. $8 d$. ), which is Z 2 ( $28.8 d$. ) less than in March 1910. Concerted restriction of outturn by Austrian tanners has considerably reduced the price of Indian kips.

Jate represents 16.4 per cent of the exports of raw materials. In this class it is surpassed by raw cotton and by oilseeds; but trade in the two textile staples is supplemented by very large shipments of yarns and fabrics.

So far as the western markets are concerned, the year 1910 will be remembered as unfortunate and perplexing. The movement of prices has been marked. First marks jute in Dundee was quoted at £14-2-6 per ton in January 1910, went to $£ 14-7.5$ in March, and receded to $£ 14$ in April and May. This quotation remained nominal through June. At the end of July the quotation was £13-15-0 but in August it was at $£ 15$. In the second week of September the publication of the district reports carried it to £18, and £19 was done; but on the appearance of the Directors' forecast, the price receded quickly to £16-7-6. Speculation brought it up to $£ 21-5-0$ in November, but by the end of the ycar it declined to $£ 19$ or $£ 20$.

The trade has been difficult throughout the year. Abortion of the revival that seemed to be foreshadowed in the United States in the beginning of 1910 has kept the market in a state of uncertainty ; and the demand has not been proportionate to the apparent volume of the agricultural produce to be handled throughout the world. The world's annual demand for jute is estimated variously from $8,000,000$ to $8,200,000$ bales of 400 lbs . India is virtually the sole
producer, and the following statement compares the crop statistics with the trade movement of the last five years, the unit being 1,000:-

|  |  | $\begin{gathered} \text { Area } \\ \text { Acres } \end{gathered}$ | $\underset{\substack{\text { onturn }}}{\mathrm{O}_{\mathrm{ctumn}}}$ |  | Estimated exportable sarplus cwt |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1906-07 | - . | 8,48s | 32,598 | 12,586 | 20,012 |
| 1907-08 | - . | 3,974 | 35,064 | 13,439 | 21,625 |
| 1808-09 | . | 2.857 | 22,539 | 13,036 | 9,503 |
| 1909-10 | . | 2,877 | 25,738 | 16,382 | 9,356 |
| 1810.11 | : | 2,938 | 28,329 | 16,368 | 11,961 |

In addition to the mill consumption in India, there is the extra-factory consumption in India, which is conventionally estimated at 500,000 bales. But this estimate is conjectural. Certain further particulars about consumption are given in the chapter on the exports of jute manufactures.

The following statement shows the exports of the past five years, the unit being 1,000:-

|  |  | Quantity | Centisimal variations | Value |  | Average value per crit |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | R | $\underbrace{-}$ | $\sim_{R}{ }^{\text {A }}$ |  |
| 1906-07 | - | 15,970 | $+10.3$ | 26,83,87 | -17,892 | 16.81 | 22.4 |
| 1907-08 |  | 14,192 | -11.1 | 17,97,28 | 11,882 | 12.66 | 16.8 |
| 1908-09 |  | 17,580 | +26 | 19,83,45 | 13,223 | 11.09 | 14.8 |
| 1909-10 |  | 14,60s | -18.3 | 15,08,83 | 10,059 | 10.38 | 13.77 |
| 1910-11 |  | 12,732 | -12.8 | 15,49,00 | 10,327 | $12 \cdot 17$ | 10.23 |

It will be seen that the quantity exported was less by $1,875,903$ cwts or 12.8 per cent, while the value increased by $\mathrm{R} 40 \cdot 17$ lakhs $(£ 267,800)$ or nearly 2.7 per cent, which argues a rise of 17.8 per cent in specific value. As compared with the record year of 1908-09, the decline is one of $5,147,443 \mathrm{cwts}$ or $2 \cdot 8$ per cent in quantity and about 21.9 per cent in value.

The following statement shows the average price in Calcutta of jute (II. group) per bale of 400 lbs in each of the five previous years and in the first week of each month of the year under review :

The decrease in the average price is therefore about 10 per cent.
During the year under review, the United Kingdom took 4,694,493 cwts or $1,257,050$ owts less than in 1909-10, her share being $36 \cdot 8$ per cent of the
 rious year, and her share is 23.4 per cent. France with $1,448,630$ cwts, or $11 \cdot 5$ per cent of the total, took $217,04 \pm$ cwts less, while the United States reduced her demand by 141,450 cwts and took $1,257,135$ cwts or 10.1 per cent. Austria-Hungary, on the other hand, increased her receipts from $703,4+46$ to S06,066 cmts, and Italy from 726,059 to $820,475 \mathrm{cwts}$, their respective shares being 6.3 and 6.5 per cent of the total.

Calcutta shipped 91.2 per cent of the total as compared with 91.5 per cent in 1909-10; while Chittagong supplied $8 \cdot 3$ per cent against 8 per cent in the previous year. The balance o per cent was shipped from Madras.

The share of seeds in the total ralue of raw proluce exported (excluding such as falls under the head of food and drink) has, in the last two years, been successively $17 \cdot \pm$ per cent and 29.4 per cent. In $1910-11$ it rose to 26.7 per cent. The year's trade has been extraordinarily good, as a result of large Indian crops synchronising with shortages in other important countries. Prices in Europe were high berond precedent. A strong speculative rise was forced in the early part of the year when the serious shrinkage in the Argentine production became known; and, after a collapse on realination a further rally resulted from the injury to the North American crop and carried linseed ralues to the highest point in November and December. Linseed is the most important, and it is believed that the world's production in 1910 was the smallest since 1901. In argentina alone the shortage is believed to have been nearly 400,000 tons. It is not surprising therefore that the competition of the soy bean was swamped for the time. The imports of that seed into the Cnited Kingdom rose from 416,181 to 421,531 tons; and the bad condition of many of the arrivals somewhat abated the popularity of the material. The following statement shows the exports of oilseeds from India in each of the last five years, the unit being $\mathbf{1 , 0 0 0}$

The quantities and values of the principal descriptions of seeds exported are shown below, the unit being 1,000 -

Both quantity and value are by far the largest on record. In quantity the increase has been one of $3,836,217 \mathrm{cwts}$ or 14.13 por cent, and in value it is no less than PR639.7 lakhs ( $£ 4,264,700$ ) or $34 \cdot 2$ per cent. It exceeds the previous record (that of 1904-05) by some 4,109,101 cots and R1,071.24 lakhs ( $£ 7,141,000$ ).

The article "copra" might reasonably be grouned with these, as it is really a material for the extraction of oil. It is discussed under "Fruits," and was exported in $1910-11$ to the extent of 449,627 cwts with a value of P 78.92 lakhs (£526,100).

Linseed grocs chiefly to the Onited Kingdom ( $\mathrm{f} 294 \cdot 22$ lakhs $=£ 1,961,500$ ), France ( Rl 14576 lakhs $=£ 971,700$ ), Germany ( $\mathrm{R} 63 \cdot 17$ lakhs $=£ 421,100$ ), and Italy ( $\mathrm{R} \cdot 49.59$ lakhs $=£ 330,600$ ). The largest buyers of rapeseed are Germany (R138.19 lakhs $=£ 921,300$ ), Belgium ( $\mathrm{fl} 127 \cdot 09$ lakhs $=£ 8 \pm 7,300$ ), and France (R11l-48 lakhs $=£ 743,200$ ). Sesamum goes mainly to France, Belgium, Italy, and Austria-Hungary ; Poppyseed to France and Belgium; Castor and Cotton seeds to the United Kingdom, and Groundnuts to France.

Of the total exports of oilseeds, Bombay shipped 54.9 per cent with a value of $\mathrm{Rl}, 300 \cdot 17$ lakhs ( $£ 8,667,800$ ) : Bengal 19 per cent with a value of $\mathbb{R} 608$ lakhs ( $£ £, 053,300$ ) : Madras $10 \cdot 1$ per cent or $\mathfrak{7 2 5 1} \cdot 57$ lakhs ( $£ 1,677,100$ ); and Sind $15^{\circ}$ per cent or $¥ 34415$ lakhs ( $£ 2,294,300$ ). The rate of increase was 21.8 per cent in the case of Bombay and 33.8 per cent in that of Bengal ; while the shipments from Sind and Madras declined by 6.8 and 5.6 per cent respectively.

In Linseed India no longer holds the dominant position it formerly enjoyed. The worlu's production in 1910 was about $2,125,550$ tons, and of this India produced about 20 per cent, Argentina about 28 per cent, Russia about 31 per cent, and North America about 21 per cent. The Indian crop in 1900-10 was estimated at 427,800 tons against 297,700 tons in the previous year ; and the exports show an increase of 136,692 tons and $7446 \cdot 49$ lakhs ( $£ 2,976,600$ ), the improvement being 58.5 per cent in quantity, 113.7 per cent in value, and $3: 8$ per cent in specific value. The average price in London rose to $658.1 d$. per 410 lbs . The prospects of the trade are extraordinarily good and the new crop is estimated at 557,800 tons.

Rapeseed, which is generally less important to commerce than linseed, came into unusual prominence in 1910 through crushers' being driven into this market by the extraordinary prices of linseed and cotton seed. Rapeseed prices fluctuated less than these, but they were on a high plane and averaged 40 s . $3 d$. per quarter, though the highest rate was seen at the beginning of the year. The spring crop of 1009-10 was estimated at $1,270,300$ tons as compared with 987,000 tons in the previous year, and that for $1910-11$ is reported as yielding $1,260,200$ tons or 10,100 tons less than in 1909-10; but the esport declined slightly, the specific value remaining virtually unchanged.

Sesamum is most largely consumed in India when there is a shortage in rapesecd; but, in the presence of good crops of both, the exports of sesamum increased by some 13,142 tons or 8.8 per cent, while the total value rose by 20.5 per cent, marking a very substantial improvement in price. The crop of 1900-10 reaped in the beginning of 1910 was about 560,800 tons; and that now being marketed is about 511,600 tons or 49,200 tons less.

Cotton seed represents 9 per cent of the exports of seeds and 2 . 44 per cent of the total value of raw Indian produce exported. Indian sced was in good supply, the yield from the crop of 1009-10 being estimated at about $1,905,000$ tons, while that of $1910-11$ is expected to give some $1,827,100$ tons. With the large contraction in American and Egyptian supplies, prices in England were very strong. They opened at $£ 6$ 10s. per ton and, after the drop on
ralization of speculative holdings in April-May, touched $\mathfrak{E O}$ 18s. $9 d$. before formard quotations for the new crop iuduced a fall. The exports in tho official rear rose by 330,409 crts or $5 \cdot 8$ per cent in quantity and by 1226.35 lakhs $(£ 175,700)$ or 13 per cent in value, the specific value showing an improrement of 6.6 per cent. In the last two years, tho United Kinglom has taken about 96 per cent of the whole quantity of cotton seed exported.

Poppyseed feels the competition of cotton seed so far as it is possible for tro seeds to compete which require different machinery. The area under poppy in India is being steadily reduced in pursuance of the opium poliey of Government, bot high prices for other seeds and the deficiency in the world's olive crop stimulated exports so that they rose by 1 per cent in quantity and 10.4 per cent in ralue, there being thus a rise of $9 \cdot 5$ per cent in the specific value.

Castorseed exports rose by 13 per cent in quantity and $30 \cdot 9$ per cent in value. The rise in specific ralue was thus about 10 per cent.

The business in Groundnuts has shown a marked reviral since the introduction of descriptions that resist disease. Five ycans ago the quantity shipped was only $1,725,000 \mathrm{crts}$ against $3,600,000 \mathrm{cwts}$ recorded in the past year. The growth in exports in 1910-11 has amounted to 13.5 per cent in quantity and 23.7 per cent in total ralue. A considerable proportion of the exports of groundnuts from India is shipped from the French port of Pondicherry and so escapes registration in the trade of India. In the last three years, the exports by that route hare been as fullows:

|  |  |  | Tons | $\boldsymbol{R}$ | $\boldsymbol{E}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $1907-08$ | - | - | 35,982 | $59,44,000=$ | $8!0,000$ |
| $1908-09$ | - | - | 50,066 | $81,17,000$ | 511,100 |
| $1909-10$ | - | . | 90,042 | $1,25,43,000$ | 836,200 |

Silk is an article whose trade reflects with some truth the prosperity of Western countries; and in 1910 it shared in the trade revival in Europe and in the sluggishness discorered by the United States. These latter usually take about one-third of the world's supply and are resorting more freely to Far Eastern sourges which furnish the world with some two-thirds of its silk. On the whole, the year was a satisfactory one except in Italy. Tho world's production was about 5 per cent less than in 1908 and 1909, but it was adequate to the demand; and prospects are considered good. An average, struck on nino standard quotations in Europe at the end of 1909 and a year later, shows a gain of 7.3 per cent. Italian silk is less in favour in the United States and failed to share in the rise of price, but Shanghai silk, on the average, gained about 10.2 per cent and Cantons about 10.7 per cent. Inclian silks are on a much lower plane of popularity; and the exports of raw silk declined from $2,075,612 \mathrm{lbs}$ to $1,8.17,401 \mathrm{lbs}$ and from P P 50.76 lakhs ( $\mathrm{C} 338,400$ ) to 7250.55 lakhs ( $£ 337,000$ ). This decline sweeps away most of the improvement that had been shown in the previous year. It represents 11 per cont in quantity and 0.4 per cent in value, the rise in specific value being 11.9 per cont. Reeled mulberry silk, which in 1909-10 stood at 479,647 lbs with a value of \# 39.04 lakhs ( $£ 260,300$ ), rose by 1.4 per cent in quantity and 2.4 per cont in value to $496,213 \mathrm{lbs}$ with a value of Z 40 lakhs ( $£ 260,700$ ), which shows a rise of $1 \cdot 1$ per cent in specific value. Bengal consignments of reeled silk (mulberry and wild) rose from $310,702 \mathrm{lbs}$ and R 23.01 lakhs ( $(15153,400$ ) to $327,947 \mathrm{lbs}$ and $\mathrm{A} 23 \cdot 13$ lakhs $(£ 154,200)$, the average value por lb being
n7-0-10 (9s. $5 d$ ). Bombay's trade, which had only amounted to 100 lbs in 1909-10, disappeared. The alvance in Bengal's case is one of 2.6 per cent in quantity and 52 per cent in value.

The distribution of the exports of reeled silk (mulborry and wild) was as follows:-

The exports of waste silk (chasam) - 31.2 per cent of which was wild silk -decreased from $1,485,548 \mathrm{lbs}$ to $1,144,003 \mathrm{lbs}$; but its average value improved, since the total value declined only from fl 10.06 lakhs ( $\mathbf{( 6 7 , 1 0 0 )}$ to fl 8.64 lakhs ( $£ 57,600$ ). The average declared value per $1 b$ was 12.08 annas (or pence) as compared with 10.8 annas (or pence) in the previous year. The exportation of cocoons (of which 24.5 per cent were wild) rose from $88,929 \mathrm{lbs}$ and n885,718 ( $£ 5,015$ ) to $209,273 \mathrm{lbs}$ and $\mathrm{R1}, 62,100(£ 10,807)$ in 1910-11.

Teak timber-The timber trade throughout the world has shown at last a certain recival after long dullness. There has been an improvement both in the quantities moved and in the rates obtained. The English demand for teak developed moderately, and part of the advance in values is due to conditions of concession and of extraction in State preserves. The average price in Calcutta per ton of 50 cubic feet was fl 122 to fl 127 ( $£ 82 s .8 d$. to $£ 89 \mathrm{~s} .4 \mathrm{~d}$.)

 retrospect of these figures is interesting because teak is a timber closely associated with ship-building. Ship-building activity is a gauge of general commercial activity, and we find here that teak prices were strong when general trade was good. The exports of teak increased by 49 per cent in quantity and 60.2 per cent in value, the total being 53,088 cubic tons and $\mathfrak{R} 66.92$ lakhs ( $£ 579,500$ ) as against 35,628 cubic tons and 254.24 lakhs ( $£ 361,600$ ) in 1009-10. Together with this expansion of Rs. 32.68 lakhs ( $£ 217,900$ ) in exports abroad, we may consider the increase of $\mathfrak{7 6 . 9}$ lakhs ( $£ 46,000$ ) in the shipments from Burma to India proper which amounted to ¥ $120 \cdot 2$ lakhs ( $£ 801,000$ ) in place of R 113.3 lakhs ( $£ 755,000$ ) in 1909-10.

Wool represents about 3 per cent of the value of Indian raw materials oxported. Karachi quotations had stood at R18 ( $£ 14 \mathrm{~s}$.) per maund of 82 lbs in April 1909 and at 224 ( $£ 1$ 12s.) from November 1909 to March 1910, with a twelve months' averagn of $\mathrm{R} 21-13-1$ ( $£ 19 s .1 d$.). April 1910 opened with fl23 (£i 10s. 8d.) and, after touching Z 25 ( $£ 1$ 13s. 4d.) in December to February, the rate in March 1011 was again 224 ( $£ 1$ 12s.). In Westorn markets, prices were steady in 1910; but since August they have developed some weaknoss which has beon more marked since Docember. There was a free demand as a result of the exceptional activity of the woollen industry in the United Kingdom, but the shrimkage in the Uuited States' participation in the year's trade has reflectod the unsatisfactory commercial position in that country. The exports of wool from India receled from 59.8 million 1 bs to 58.3 million los, and the value declined from Fl 285.77 lakhs ( $£ 1,005,100$ ) to Z 283.63 lakhs ( $£ 1,800,900$ ). The decrease of $2 \cdot 54$ per cent in quantity and of $\cdot 7$ per
cont in ralue shows that tho areage value rove by 2 per cent. The United Kingdom took nearly 99 per cent of the exports, her valuo boinf fl 280.1 lakhs ( $£ 1,567,300$ ) in place of 12277 (63 lakhs ( $£ 1,5.50,900$ ) in 1909-10; but the United States took wool ouly to the value of $\mathrm{Rl} \cdot 10$ lakhe ( $£ 7,000$ ) against R6.9 lakhs ( $£ 46,000$ ) in 190:-10. Japan as a buyer has dimpeared altogether. A good deal of the wrool dealt with in these firures comes from beyond the land frontiers of India; but the figures do not include reexports of wool received by sea. These in 1910-11 rose from Riss lakhs ( $£ 192,000$ ) to R29. 49 lakhs ( $£ 196500$ ) in ralue.

Other principal raw materials exported hare, in the last three years, been as follows:-

|  | 190§-03 |  | $1910 \cdot 10$ |  | 1910-11 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | R | $\boldsymbol{P}$ | f | - | R |  |
| Animsl bones | 51,78.520= | 315.235 | 64,11, $112=$ | 30.1109 | 81,25 107= | 301,695 |
| Bristles and fibro | 20,52,121 | 136,4is | 23.18.532 | 151.503 | 2 $1, \mathrm{~m}$, 551 | 110, 137 |
| Caoatchonc | 3,19,189 | 21, 263 | 6, $0: 10.94$ | 33938 | 15, 96,78 | 103.850 |
| Hemp | 53,65.378 | 307,8:2 | 59,56.9\% 8 | 3:7,123 | 61,47.287 | 40,819 |
| Horn and hornmeal. | 15,64.059 | 104,271 | 19,38,3:6 | 129 29, | :3, 15.013 | 165,930 |
| Lac (stick and reed) | 5, 8,618 | 39,211 | 2,35,319 | 15.5-4 | 3,51. 119 | 23,34 |
| Yica | 19,02.515 | 12, 534 | 2328.75 | 15,078 | -3,31,703 | 189,959 |
| Oilcake (fodder and |  |  |  |  |  |  |
| manare) | 89,64,118 | 85\%,6.9 | $83, \mathrm{~m}, 150$ | 653,3,5 | \$3.03.906 | 659,598 |
| Eice-bran | 64,01,973 | 403,2:3 |  | 814,3-5 | 6, \%, 14,78 | 451 |

Of these, oilcakes form the most important item and one that shows continued growth. The increase recorled is one of $\mathrm{R} 03,1: 2(26,2,2)$ or $1 \cdot 12$ per cent. Rice-bra occupies the second phace, and has adranced by R1-45 lakhs ( $£ 9,700$ ) or 2.2 per cent. Hemp shows a rise of I 1.9 lakhs ( $£ 12,700$ ) or 3.2 per cent. The trade in Bones maintains the level of previous years at
 per cent, and Bristles and fibre, ctc. advancel hy $1259,019(\mathcal{L} 5,568)$ or 3.8 per cent.

The others form a group of artiches in which typically modern industric ${ }_{s}$ are interested. rose by R51 lakhs ( $\{31,000$ ) or $21 \cdot 9$ per cent in attendance on that activity in the electrical industry which is reflected in the machinery returns. Crude Lao is also concerned in the electrical indutry and in others that have been recovering from trade depresion, and its figures rose by $\mathrm{Pl} \cdot 12$ lakhs ( $£ 7,500$ ) or $46 \cdot 9$ per cent. The chapter upon exports of manufactured lac may be referred to. The development is Caoutchouc was remarkable and amounted to R10. 87 lakhs ( $£ 72,500$ ) or $21 \cdot 3$ per cent.

## articles manufactured and partly mantfactured

The statement below shows for the past five ytars the comparativo value of each principal class of manufactures, the unit in all cases being $\mathbf{1 , 0 0 0}$ :

|  |  | 1100-07 |  | 1907-08 |  | 1913.09 |  | 1009 -10 |  | 1910-11 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | - | $\underline{2}$ |  | $\boldsymbol{\chi}$ | $R$ | $\underline{L}$ | K |  | $R$ |  |
| Jate gocin . Cotton yarn and gucds. |  | 15,71,62 | 10,477 | 18,20,59 | 12,148 | 15,514,60 | 15.191 | 17,0, 0 , ${ }^{\text {a }}$ | 11,398 | $16,009,4$ | 11,720 |

| Woollons | - | 22,93 | 153 | 27.10 | 141 | 2;,05 | 167 | 48,06 | 110 | 27,08 | 181 |
| Apparel | - - | 10,57 | 13) | 20,24 | 1:5 | 16.71 | 111 | 115,67 | 110 | 10,13 | 127 |
| Candea | * | 14.21 | 95 | 15,48 | 103 | 13.65 | 01 | 13,20 | 88 | 15,30 | 102 |
| dik | - - | 6.86 | 46 | 8,31 | 15 | 7.33 | 40 | 8,17 | 5.5 | 7,69 | 51 |

These represent 18.05 per cent of the total value of all exports. Jate goods constitute the principal item and its total has declines by P10.2 lakhs ( $\mathcal{E} 68,000$ ) or 6 per cent. The effects of dear cotton appear in the shininkage of ship-
ments of cotton yarn and goods by no less than R90.36 lakhs ( $£ 602,400$ ) or 76 per cent. Tanned hides and skins improved by $712 \cdot 2$ lakhs ( $£ 81,300$ ) or 3.07 per cent; but Lac declined by 764 lakhs $(£ 426,700)$ or 23.3 per cent and Coir by $\not \approx 3.32$ lakhs ( $£ 22,100$ ) or $4: 56$ per cent. Candles are manufactured in India on a considerable scale, and the exports increased in 1910-11 by $\mathrm{R} 2 \cdot 15$ lakhs $(£ 14,300)$ or 16.3 per cent. Indian woollens profited by the boom that has occurred in the world's woollen trade in the past year, and the value of the exports rose by $\nexists 3.02$ lakhs ( $£ 20,1 \mathrm{CO}$ ) or 126 per cent; but silks show a small decline of $£ 48,300$ ( $£ 3,200$ ). It should be remembered, in drawing any conclusions from the figures, that there are in the accounts many manufactured and partly manufactured articles which are not included in this group. They are, from their nature, more properly included in the other groups of articles. For examples, milled-rice, wheat-flour, coffee, and tea are included in the group, " Articles of Food and Drink ;" machinery is included in the group, "Metals," saltpetre in "Chemicals," opium and tobacco in " Narcatics," indigo in "Dyes," and vegetable and mineral oils under the group "Oils." The group, "Articles manufactured and partly manufactured" comprises such manufactured and partly manufactured articles as cannot be included under one or other of the main groups of articles.

Cotton manufactures represent 29.8 per cent of the total value of Indian manufactures exported and $5 \cdot 4$ per cent of the whole export trade. The ruling factor in the trade in 1910-11 was the ligh price of cotton, and this subject is gone into fully in the section relating to exports of raw cotton. Otherwise, conditions were favourable; for successive harvests had been abundant and had been marketed at high rates. The General Summary contains a rough indication of the extent to which the purchasing power of the people had probably improved. But the high rates for yarns imposed risk as well as an immediate burden on the hand-treaver to whom yarn is a raw material ; and the thrifty Indian people naturally purchased no more cloth than was indispensable. The spinuing section of the industry fared very ill in India as in all other countries. While concerted short-time failed, large curtailment of production was in fact brought about by enforced stoppage; and at one time there were some twentytwo mills shut down in Bombay alone. A calculation, based on the outturn of jarn in the twelve months in relation to the number of spindles in position, shows that the activity of the whole industry was about $69: 53$ per cent of its capacity. But for the wearing sheds, many other mills would have been closed; but the demand for Indian cloths was good-especially in the latter part of the year-and those concerns that had looms as well as spindles were able to work to a profit or at least without loss. The year's experience has in fact thoroughly justified the recommendations that have been pressed upon Indian mill masters to increase their wearing power. The yarn trade with China was handicapped not only by the high prices but by severe famine in some parts of that country. Noreover the tael exchange was on the whole on a higher level than in the previous year and was harder torwards the end of the year than at the beginning. It opened at about 7176 ( $£ 11$ 148. $8 d$.) por 100 tacls, touched $\mathrm{Pl79}$ ( $£ 1118 \mathrm{~s}$. $8 d$.) on the 14th May, and Zl 181 ( $£ 12$ 1s. 4 d.) on the 12th June, dropped back to K 177 ( $£ 111 \mathrm{l}$ s.) by the 6 th August, then climbed to R1S1 ( $£ 12$ 1s. 4.d.) on the 17th September. In October a rapid advance took place and R190 (£12 13s. 4 d.) was touched on the 19th October, but from that time to the end of the year a decline set in and on
a small recorery in March the rate closed at R179 ( $\mathcal{C 1 1} 15 s$. Sd.). Thero is nc immediate prospect of cheap cotton, and the outlook of the spinning industry remains poor ; but some gauge of the public estimation of the position is afforded by the fact that a calculation based upon the share values of fifty spimning and wearing companies shows the ralue per Zl 100 of share capital at the end of March in each of the last four years to have been as follows: 1903, R119
 ( $£ 618 \mathrm{~s} . \mathrm{Sd}$.). The joint stock capital engaged in the industry is R16.20 crores ( $£ 10, \mathrm{~S} 40,000$ ) as comparel with $\mathrm{R} 15 \cdot 4$ crores ( $£ 10,203,300$ ) in 1000-10. In the same period, the number of mills has grown from 233 to 243 , the number of spindles from $6,111,535$ to $6,275,271$ and the number of looms from 79,300 to $\$ 3,693$, but the number of hands employed has fallen from $231, S 50$ to 230,506 . The arerage production of yarn per mensem has declined from $50,250,373 \mathrm{lbs}$ to $50,692,155 \mathrm{lls}$. The rates of increase have therefore been as follows: Capital 53 per cent, spindles 2.7 per cent, and looms 5.5 per cent, while labour and production of yarn declined by 5 per cent. and 3.04 per cent, respectively.

The following statement shorss for each of the last fire years the epinning and wearing plant in position, the proluction of garn and of cloth, and the arerage monthly production per thousand spindles and per loom:-

|  | Spindles | $\underset{\text { pr.duction }}{\mathrm{Y}_{\mathbf{a r n}}}$ | Aremp: moithly prodution ITT 1, in spiniles | Leoms | Cluth pradaction | Aritace monthy jutlom |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No | Tbs | 11. | So | 1:a | lbs |
| 1905-55 | 5.480,524 | 653.7 mm .460 | 110.058 | 6¢. 26 | 165, 00.650 .98 | 237 |
| 1917-03 | 5,634,094 | 635,295,115 | 9, い | ( 8.330 | 190, | 245 |
| 1913.69 | 5,875,798 | 6:7,56.,169 | 9,370 | 720.31 | 10,964,47 | $2: 0$ |
| 199-10 | 6,111,635 | 027,3\%4, 516 | $8, \cdot 6$ | 89,300 | : $2 \times .7$ | 250 |
| 1910-11 | 6,275,271 | 6us, 3 6,253 | 8.97 | 53, \% 3 | est,5y, sim | 24.4 |

The production per 1,000 spindles and Irer lorm in the year under review was 69.53 per cent and $71 \cdot 10$ per cent respectively of the estimated productive capacity.

The following statement shows the quantities and values of yarn and piecegoods exported in the last five years, the unit being 1,000 :-

|  | Yam |  |  | Pincego.d* |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 bn | $\boldsymbol{R}$ | $\underline{L}$ | Ynil4 | $R$ | $\varepsilon$ |
| 1950-07 | 243,517 | 10,39, $\cdot 5$ | $=0,931$ | 76,8\%9 | 1,65,37 | $=1,1 \mathrm{n}$ |
| 18977-18 | 215,578 | 8,97,31) | 6,982 | 74,128 | 1,63,75 | 1,092 |
| 1908-09 | 235,459 | 9,68,65 | 6,454 | 77,119 | 1,20,36 | 1,130 |
| 1999-10 | 227,364 | 9,70,91 | 6,473 | 0.4,137 | 2,04,15 | 1,361 |
| 1910-11 | 183,425 | 8, $+2,10$ | 5,749 | 09,750 | 2,20,30 | 1,469 |

The Yarn produced includes the indigenous garn subsequently woren into cloth. The power-spun yarn retained for consumption in India averages about $435,000,000 \mathrm{lbs}$ in normal years, but in 1010-11 it seems to havo increased to some $444,000,000 \mathrm{lbs}$. Of this about 92 per cent is usually Indian yarn and 8 per cent imported. It has been seen that the production of yarn was less by 3.0 t per cent than in 1009-10. The total decrease in production was $19,058,000 \mathrm{lbs}$; and the depression of the export business is shown by the fact that $43,030,000 \mathrm{lbs}$ less were shipped than in the previous year, the decline being 19.3 per cent. The production of cloth shows progress fully commensurate with the additions to plant. The total is the largest on record, and the increaso amounts to $\mathbf{7 5 , 4 6 0 , 0 0 0}$ yards or 7.8 per cent. But the increase in exports is only $5,653,000$ yards, showing the quantity consumed in India itsclf to have grown by some 69,807,000 yards.

In valuo, yarn represents 78.3 per cent of the total exports of cotton goods; and it has shown a net decline of $\mathrm{mi} 108 \cdot 5$ lakhs ( $£ 723,300$ ) or $11 \cdot 2$ per cent to 78862.41 lakhs ( $£ 5,7 \cdot 19,400$ ). The exports to China represent $85 \cdot 6$ per cent of the total value as against 87.2 per cent in 1909-10; and they showed a decrease of $¥ 108 \cdot 7$ lakhs ( $£ 724,700$ ) or $12 \cdot 8 \pm$ per cent to Z 737.94 lakhs ( $£ 4,919,600$ ) The quantity of yarn shipped from the United Kingdom to the Further East in the calcndar year 1910 was 2.5 millions of lbs as against 6.88 millions of lbs in 1009.

India's exports of yarn to countries other than China fell away by $2,476,875 \mathrm{lbs}$ in quantity, but increased by fi9,085 ( $£ 1,272$ ) to $\mathrm{Zl} 124 \cdot 46$ lakhs ( $£ 820,700$ ) in value. The figures relating to the Straits Settlements shared this decline and fell by $\mathrm{P} 5 \cdot 47$ lakhs ( $£ 36,500$ ) to $\mathrm{X} 2 \pm \cdot 11$ lakhs ( $£ 160,700$ ).

The trade with the Levant and Black Sea amounted to $7,550,040 \mathrm{lbs}$ valued at $\mathrm{q} 35 \cdot 59$ lakhs ( $£ 237,300$ ), as against $8,084,942 \mathrm{lbs}$ valued at f 34.38 lakhs (£220,200) in 1909-10. Turkey in Europe took 105,600 lbs valued at R45,065 (£3,004), against $52,840 \mathrm{lbs}$ and $\mathrm{f} 21,216$ (£1,414) in 1909-10. The shipments to Egypt advanced from 2,096,916 lbs to $2,967,696 \mathrm{lbs}$ with a value of R14.46 lakhs ( $£ 90,400$ ). It may be mentioned that in 1910 Egypt's imports of cotton yarns from England declined by $900,600 \mathrm{lbs}$; her imports from British Oriental Possessions (really India) increased by 1,406,500 lbs and surpassed the arrivals from England by some $831,000 \mathrm{lbs}$. Shipments to Europ ${ }_{e}$ have fallen from $1,782,910 \mathrm{lbs}$ to $1,263,777 \mathrm{lbs}$.

In value the increase in exports of piece goods was one of 7.9 per cent or Fl 6.23 lakhs ( $£ 108,200$ ) to $\mathfrak{Z 2 2 0 . 3 9}$ lakhs ( $£ 1,469,300$ ), the specific value rising by 1.9 per cent.

Grey goods represent 38.4 per cent of the piece goods in value and 56.4 per cont in quantity; and in that branch the trade increased by 6.4 per cent in quantity and $10 \cdot 1$ per cent in value, bringing the total to $56,379,644$ yards and R8t.75 lakhs ( $£ 565,000$ ), with a specific value $3 \cdot 4$ per cent higher than in the previous year. The shipments of grey goods to China receded from 5,283,414 yards to $\mathbf{1 , 0 2 0 , 9 0 8}$ yards and from $\mathbb{Z 7} \cdot 14$ lakhs ( $£ 47,600$ ) to $\mathbb{Z 2} 266$ lakhs ( $£ 17,700$ ), the decrease being 63.6 per cent in quantity and 62.7 per cent in value. In 1908, the shipments of plain cotton cloth from England to the Further East amounted to 430.1 million yards as compared with 596 millions in 1909, but the principal foreign markets for Indian grey cloth are East Africa (with 18,359,832 yards), Asiatic Turkey (18,873,752 yards), and Aden ( $8,083,713$ yards).

The rise in coloured goods was continued, but it amounted only to 5.2 per cent, and the total of $42,968,502$ yards was little higher than the figure of a year earlier.

Dyed and printed cloths go mainly from Madras and Bombay to the Straits and Coylon; and the shipments in 1910-11 from the two ports named had a value of $¥ 90 \cdot 86$ lakhs ( $£ 605,700$ ) and $¥ 41.68$ lakhs ( $£ 277,900$ ) respeotively.

The shipments of Indian piece goods by sea trom Bombay Presideney to other parts of India declined by $8,381,000$ yards or 3.2 per cent to $247,699,000$ yards, while the value advanced by $\nexists 1.8$ lakhs ( $£ 12,000$ ) or 46 per cent to $\nexists 419$ lakhs $(£ 2,793,000)$. The despatches by rail from the Bombay port were 11 6,516 ewts as compared with 180,241 cwts in 1909-10.

Prices in 1909-10 had held failly gool, with T. cloths moving from $8_{8}^{8}$ annas (or pence) to 9 aunas (or pence), and with 20 s twist areraging $00_{0}^{27}$ annas (or pence) in April 1909 and 70 ? annas (or pence) in March 1910. In the year under review, howerer, the price of cloth was high. T. cloths opened at $9 \frac{1}{8}$ annas (or pence) and closed at $10 \frac{1}{2}$ aunas (or pence) ; and 20 s yarns adranced from 88 to 880 annas (or pence).

Jute manufactures, in the three jears ending 1900-10, represented 41.8 per cent of the total value of exports of Indian manufactured articles. In 1910-11 this pereentage rose to 40 ; but it will be seen that this is due to the contraction recorded in other lines.

High prices for the rair material together with a sluggish American demand not fully accounted for by the enlanced rates or hy American crop statistics hare rendered 1910-11 a bad year for makers of jute gools. The facts relating to the raw material will be found in the article that deals with exports of raw jute. Escepting to those mills that wore peculiarly fortunate in the ir purchases, manufacture has been unprofitalle, heary lesse; havo been incurred, and restricted production has been in many cases unarodable as the leser of two evils. These conditions were not peculiar to India, but were experienced by Dundee and in the Cnited States. The arerage price of jute bags (A.T. $2 \ddagger$ lbs) in Calcutta in 1900-10 was $\mathrm{Pl} 23-10-2$ ( $£ 1$ 11s. 9 d d.) per 100. In 1010-11
 yards were as follors :-in 1900-10, R0-7-1 (12s. 7d.) and in 1010-11, H2-8-3 (12s. Edd.). The opening, closing, highest and lowest rates during the year under review were as follows:--

The increased production renders it more and more difficult to secure remunerative rates.

The following statement shows the growth in the number of jute spindles and looms in position in India in the last six years:

|  | 8pindief |  | Loons |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Namber | $\begin{gathered} \text { Percentnge } \\ \text { incrense } \end{gathered}$ | Number | l'ercentage |
| 1905-06 | 453,168 | 10.75 | 21,980 | 0.08 |
| 1908-07 | 520,504 | 1.46 | 25,284 | 15 |
| 1207-08 | 562,274 | 8.02 | 27,214 | 7.75 |
| 1908-08 | 607,3;5 | 8.02 | 20,525 | 8.37 |
| 1808-10 | 645,882 | 0.34 | 31,418 | $0 \cdot 1$ |
| 1910-11 | 713,336* | $10 \cdot 15$ | 34,773* | 10.68 |

In 1884 when the Indian Jute Mills $\Lambda$ ssociation was formed, the number of looms was only 6,337 . If reference be made to the article that deals with imports of Machinery, it will be seen that a cheek has been put on extensions, and the position of the indusiry may be partly gauged by the fact that the value per fl 100 ( $\mathbf{2 6} 138.4 d$.) face valuo of share capital invested in jute mills has in recent years been as follows:-1907-08, R131 ( 18 14.8. 8d.) ; 1908-09, ㄱ129 (£8 128. 0d.) ; 1909-10, Zl116 (£7 14s. 8d.) ; 1910-11, 目114 (£7 12s. 0d.)

- $\Delta$ pproximate.

The following statement shors for the last five years the value of the "xports of various classes of goods, the unit being 1,000 :-

| Bags |  | 1906-07 | 1007-18 | $1908-60$ | 1903-10 | 1910-11 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | 257,653 | 293,029 | 300,908 | 364,369 | 360,880 |
|  | - $\left\{\begin{array}{l}\text { 艮 }\end{array}\right.$ | 7,31,72 | 8,47,51 | 7,76,65 | 8,60,74 | 8,56,40 |
|  | (2) | 4,898 | 5,650 | 5,178 | 5,738 | 8,709 |
| Cloth | (Yards | 696,068 ${ }^{\circ}$ | 789,856 | 769,799 | 940,101 | 955,301 |
|  | - $\boldsymbol{H}$ | 8,25,87 | 9,69,29 | 7,89,02 | 8,43,08 | 8,35,76 |
|  | (2 | 5,508 | 6,462 | 5,260 | 5,621 | 8,572 |
| Value of all sorts | f袁 | $15,71,62$ | 18,29,76 | 15,73,60 | 17,09,65 | 16,99,45 |
|  | $\left\{{ }^{2}\right.$ | 10,477 | 12,193 | 10,491 | 11,398 | 11,330 |

The exports of Bags decreased by $3,489,000$ or 96 per cent in number and by $\mathrm{f} 4 \cdot 34$ lakhs ( $£ 28,900$ ) or 5 per cent, the difference between these rates arguing a rise of 5 per cent in specific value.

In Cloth, the results were scarcely better; for though we find a rise of more than $15,000,000$ yards or 1.6 per cent in quantity, there was a fall of fl 732 lakhs ( $£ .48,500$ ) or 9 per cent in value. Here the fall in specific value would appear to be 2.4 per cent. It is interesting at this point to advert to the fact that the specific value of raw jute rose by 17.8 per cent.

The largest single buyer of jute fabrics from India is the United States which takes her supplies mainly as cloth. The ralue of her purchases in 1910-11 was R $607 \cdot 24$ lakhs ( $£ 4,048,000$ ) as compared with $\mathrm{R} 617 \cdot 15$ lakhs ( $£ 4,114,000$ ) in the previous year, which marks a drop of 1.6 per cent. Of this total, R $51 \cdot 41$ lakhs ( $£ 3 \pm 2,700$ ) is accounted for by bags, that figure being, howerer, 9 per cent less than in 1909-10. Australia, including New Zealand, is the largest single purchaser of bags; and the shipments to that destination, at nearly $78,000,000$ with a value of $\mathbf{R 2 1 8} \cdot 09$ lakhs ( $£ 1,453,900$ ), expanded by 14.8 per cent in quantity and 11.8 per cent in value. Shipments to the United Kingdom fell from n 80.19 lakhs ( $£ 534,600$ ) to x 73.88 lakhs ( $£ 492,500$ ), the decline being nearly 8 por cent. Those to Germany also fell off from $\mathbf{f 1 7} 41$ lakhs $(£ 116,000) t, \mathrm{R} 13 \cdot 5$ lakhs $(£ 90,000)$; and in this connection reference should be made to her reduced purchases of the raw material. The decline in shipments to Egypt is less marked, but brings her figure to $745 \cdot 6$ lakhs ( $£ 301,000$ ) in place of $\mathbf{R 4 6} 07$ lakhs ( $£ 307,100$ ) in 1909-10; Turkey in Europe increased her demand by $\mathbf{Z 2} 208$ lakhs ( $£ 13,900$ ) to Z 6.97 lakhs
 an increase. Argentina takes her supplies mainly as cloth of hessian quality for manufacture into grain bags; and the value of her purchases in 1910-11 was \#146.63 lakhs ( $£ 977,500$ ) as compared with $\mathrm{Zl} .72 \cdot 28$ labhs ( $£ 1,149,500$ ) in the previous year. Chile, on the other hand, buys nitrate bags ready made of sacking quality. In 1909-10 she figured for $\mathrm{A} 71 \cdot 12$ lakhs ( $£ 474,100$ ) under this head; and in the year under reriew the value rose by 9 per cent to $\mathrm{P} 77 \mathbf{7 5}$ lakhs ( $£ 517,000$ ). Peru also figures with an inproved total of $\mathrm{f9} 9.18$ lakhs ( $£ 61,200$ ) in place of $\mathrm{P6} 673$ lakhs ( $£ 4 \pm, 900$ ) in 1909-10. Ohina's demand shrank from ASI 15 lakhs ( $£ 541,000$ ) in 1909-10 to A 38.67 lakhs $(£ 257,800)$ in 1910-11. This movement was accompanied by a contraction of the Straits Settlements figures by some 6.8 per cent to $\mathrm{R} 31 \cdot 9$ lakhs ( $£ 212,700$ ) and by a drop of nearly 75 per cent in those relating to Japan, which took only $\mathrm{P} 4: 73$ lakhs ( $£ 31,500$ ) in place of R18.63 lakhs $(\{124,200)$ in the previous year. The figure relating to the Straits Settloments
as representing the trade of a distributing ecotor, may be looked at in relation to these for other points in the same resion. Indu-China, with a total

 to Siam be $50 \%$ per cent to f 36 tc lakles ( $\mathfrak{E} 013.100$ ). The decline in the shipments to West Indies is less makeyl hut hings their figure to R30. 1.0 lakhs ( $£ 263,000$ ) in place of 124053 lakhs ( $£ 270,200$ ) in 1900-10. The figures relating to Cape Colony, at R15G2 lakhs ( $£ 104,100$ ), shows a small decline on the previous year's figures, while Natal record an adrance of R3.8 lakhs ( © 2-, 300) to R 21.91 lakhs ( $£ 14 \mathrm{C}, 300$ ).

The export trade in Cloth rose to $050,900,797$ yards, with a diminished
 694 per cent with a value of P55.j-53 lakhs ( $\mathcal{E 3}, 705,500$ ) in place of R $560 \%$ thens ( $£ 3,735,000$ ) in the previous year. The shipurnts to the Arentine fell off from P17228 lakhs ( $£ 1,145,500$ ) to R116(6:3 lakhs ( $£ 077.500$ ) ; while Truguay took only $\mathrm{IT} \boldsymbol{7} \mathbf{C G}$ lahhs ( $£ 51,000$ ) in place of f 9.96 lakhs ( $£ 66,400$ ) in 1900-10. Consignments to the United Kinglom have picked up in the last two years, and now amount to R42.4t lakhs ( $£ 283,000$ ), which is 150 per cent more than in 1909-10. Canada increased her demand by $\mathrm{f} 9 \cdot 11$ lakhs ( $£ 60,700$ ) to $\mathrm{P} 20 \cdot 11$ lakhs ( $£ 174,100$ ). Australia and New Zealand with an amount of R295 lakhs ( $\mathcal{E} 197,000$ ) shows an adrance of P 6.09 laths ( $£(10,600$ ) or 2 C per cent on $1909-10$, while the direct trade with China now amounts to R.P35 lakhs ( $\mathcal{E} 29,000$ ).

In exports of Silk manufactures there has been a decline of 59 per cent and their total ralue is only $\mathrm{R} 760 \mathrm{lakhs}(£ 51,300)$ in place of $\mathrm{RS} \cdot 17$ lakhs ( $£ 54,500$ ) in 1000-10. The goods are chicfly tisues woven in Bengal from indigenous silks. Elserhere the industry is conducted mainly for the Indian market; and the absence of exports does not necessarily indicate inactivity. Its scattered and unorganised condition docs, however, prevent its commanding attention commercially.

Exports of woollen manufactures represent only 95 per ecnt of the exports of Indian textile goods. Their total in 1910-11 is more by 12.0 per cent than in the prerious year, and has a value of R27.05 lakhs ( $\mathcal{L} 180,501$ ) as compared with R 24.06 lakhs ( $£ 160,400$ ). Rugs and carpets form $00 \cdot 1$ per cent of this total ; and their ralue of R 2.439 lakhs ( $£ 162,600$ ) shows a rise as 1.43 per cent as compared with $\mathrm{R} 21 \cdot 34$ lakhs ( $£ 142,300$ ) in 1900-10. The greater part of this expansion of P 3.00 lakhs ( $£ 20,400$ ) arises from larger demand from the Tnited Kingdom, which took R19.66 lakhs ( $£ 131,100$ ) in place of R16.0 lakhs ( $£ 110,700$ ) in 1909-10. America has recently been resorting more to tho Levantine markets, and her share is now only R2.61 lakhs ( $£ 17,400$ ) as against R29tlakhs ( $\{19,600$ ) in 1909-10. Piecegoods and other miscellaneous manufactures fell away by 1.5 per cent, that is to say, from R2.72 lakhs ( $£ 18,100$ ) to $\mathrm{R} 2 \cdot 68$ lakhs ( $£ 17,900$ ). The imports of woollen yarns rose by $284,454 \mathrm{lbs}$ and by f77.92 lakhs ( $£ 52,800$ ); while it may he noted that the production in the Indian woollen mills has been as follows in the last three years:-

The exports of Apparel advanced from R16. 47 lakhs ( $£ 109,800$ ) to $\mathrm{Pl} 19 \cdot 13$ laklis ( $£ 127,500$ ), the rise being one of $\mathrm{Z2} 266$ lakhs ( $£ 17,700$ ) or $16 \cdot 15$ per cent. Boots and shoes, which form the most important sub-head in this class, declined from $\mathrm{R} 3 \cdot 48$ lakhs ( $£ 23,200$ ) to $\mathrm{R} 3 \cdot 4 \mathrm{lakhs}(£ 22,700)$. Re-exports of foreign boots and shoes amounted to $\mathrm{R} 27,100(£ 1,807$ ) as compared with R135, 237 ( $£ 2,349$ ) in 1909-10.

Coir - The trade in coir-matting and other manufactures of coir is almost entirely in the hands of Madras, and the steady growth in the exports has received a check in 1910-11. Their value amounted in 1910-11 to P 6954 lakhs ( $£ 163,600$ ) as against P72.86 lakhs ( $£ 185,700$ ) in 1909-10, and of this Germany took $\not 222.76$ lakhs ( $£ 151,700$ ), the United Kingdom Pl7 lakhs ( $£ 113,300$ ), Holland 76.45 lakhs ( $£ 13,000$ ), Belgium R5•78 lakhs ( $£ 38,500$ ), France R5\% 5 lakhs ( $£ 37,100$ ), and the United States f 421 lakhs ( $£ 28,100$ ).

Hides and skins, tanned, on the arerage of the three years ending 1910-11, represented 311 per cent of the total value of all hides and skins exported. The leather trade has been subject to several disturbing conditions in recent years, the most potent being the high price of raw materials and the refusal of consumers to pay better rates for the finished article. The disparity complained of was somewhat diminished in 1910. The imports of leather into the United Kingdom in 1010 showed an increase of 0.9 per cent in quantity and 2.7 per cent in value. The total exports of tanned hides and skins from India in 1910. 11 rose from F 396.86 lakhs ( $£ 2,645,700$ ) to R 409.06 lakhs ( $£ 2,727,100$ ). The increase is ascribable entirely to the tanned skins section which, as may be seen from the statement below, increased in quantity by 11,055 cwts or 84 per cent, and in value by $\mathrm{Z} 29 \cdot 17$ lakhs ( $£ 191,500$ ) or $11 \cdot 55$ per cent, the rise in specific value being $2 \cdot 9$ per cent. The average value of skins was A197-12-9 (£13 3s. 9 d .) per cwt as against ¥192-3-8 ( $£ 12$ 16s. $4 d$. ) in 1909-10. On the other hand, the exports of tanned hides receded by 27,987 cwts and $\not \approx 16.97$ lakhs ( $£ 113,100$ ), the decline being 15.6 per cent in quantity and 11.8 per cent in total value, which marks a rise of 46 per cent in specific value. The arerage value of hides was RSt-3.0 (£5 12s. 3d.) per cot as against R80-8.2 (£õ 7s. $4 d$.) in the previous year. It is necessary, however, to remind readers that these two classes of hides and skins comprise many diverse descriptions and qualities, and that these rary in relative quantity from year to year, so that it is not permissible to regard the fluctuations in arerage value with such reliance as is warranted in the case of a single article or a homogencous and constant group.

The following is a statement of the total exportation in the two classes in the last six years, the unit being $\mathbf{1 , 0 0 0}$ :

|  |  | Tamadi Hides |  |  |  | Tanned Skins |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Civts | No. | H | £ | $\stackrel{\text { Cwts }}{ }$ | No. | fr | $\pm$ |
| 1005-06 | - | 203 | 2,017 | 1,54, $80=$ | 1,032 | 139 | 16,58. | 2,11,0.4 = | 1,407 |
| 10116-07 |  | 230 | 3,378 | 1,72,90 | 1,153 | 150 | 18,097 | 2,72,16 | 1,814 |
| 1907-08 | - | 133 | 1,80.6 | 1,05,52 | 703 | 153 | 18,427 | 2,84,45 | 1,806 |
| 1008-09 |  | 171 | 2,481 | 1,39,133 | 931 | 143 | 17,859 | 2,73,23 | 1,832 |
| 1009.10 |  | 179 | 2,473 | 1,41,37 | 963 | 131 | 16, 287 | 2,52,49 | 1,683 |
| 1010-11 |  | 151 | 1,713 | 1,37,40 | 8.9 | 1.12 | 18,03.4 | 2,81,66 | 1,878 |

In tanned hides Madras predominated and exported $82 \cdot 3$ per cent of the total weight, while Bombay's share was 17.3 per cent. In tanned skins also those provinces almost monopolised the trade with 82 per cent and 15.4 per cent respectively. .

The Cnited Kinglom continues to take the greater pati of the tamel hides and skins. In hides, Britain's shate of the total has adranced from 95 per cent to 976 per cent ; but the total quantity of her purchases contracted from 170,34.5 ewts to 147,006 ewts in 1910-11. In skins her demand has amounted to 115,174, certs in phace of 101,513 cwts, and her sharo has alvanced to 800 per cent as compared with 77.3 per cent in the previons year. The United States have taken 12,795 ewts of skins in place of 15,659 ewts in the previous year. This quantity represents 9 per cent of the total in this class.

Lac is an article associated with sereral industrics of recent and rapid development. Consequently the demand for the artiche has increased greatly, but the sources and the rolume of the supply of the raw material are so uncertain and changeable that the trade remains speculative and some of the industries concernel are related to luxury and are sensitive to unfavourable trade conditions. In April 1907 the price of shellac in Calcutta was R156-S-5 ( $£ 10$ ss. $\mathrm{S}_{\mathrm{y}}$ d.) per cwt. The followings statement shows the prices per cut in the last two years:-

The arerage price therefore was $10{ }^{2 \mu}$ er cent higher than in 1909-10 and only $45 \cdot 2$ per cent of the average ( $\mathrm{R} 107 \cdot 1 \cdot 10=£ 738.0_{5}^{5}(\mathrm{~d}$. ) recorded in $1907 \cdot 0 \mathrm{~s}$.

The crop of 1010 was short of that gathered in 1909 but larger than those of the two previous years. The raw material is more firmly held than formerly; and although manufacture offered a small profit in the earlier part of the year it was unremunerative in the second half. The following statement shows the shipments of the past two yeass. Strictly, only the manufactured articles, shell and button lac, should be disensed in this section; but since these are really raw materials, it is interesting to collate the figures relating to the two branches of the trade.

|  |  | 1650000 |  |  | 15ime 10 |  |  | 1010-11 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Cote | H | 2 | Crtin | 12 | $\boldsymbol{L}$ | CWen | 16 | 2 |
| Shellas | - | 322,953 | 2,46,51,377 | $=1,663,400$ | 461,035 | 2,40,42.8い | 1,412,943 | 357,940 | 1,92,9:2,2;7 | 1,2\%0,151 |
| Hutton lac | . . | 31,415 | 23,33,005 | 155,536 | 49,453 | 25,40,200 | 11;3,3\%0 | 31,278 | 15,87,205 | 105, $\mathrm{H14}$ |
| Total | - | 354,3;3 | 2,69,84,312 | 1,708,050 | 510,511 | 2,71,82, 510 | 1,813,103 | 389,2:8 | 2,18,70,472 | 1,391,065 |
| Stick and s | ed lac | 8,(3) | 5,88,51] | 39,241 | 7,470) | 2,38,319 | 15,8:8 | 0,622 | 3,50,110 | 23,381 |

A given quantity of stick lac such as is experted may be taken as yielding less than fifty per cent shell or button lac. It is understood that considerable procress is being made in the procestes of manufacture, in the use of solvents some of which climinate the undesiralle dye-matter, in the application of centrifugal separation and in the recovery of lac from waste. The exports of Shellac declined by $22 \cdot 4$ per cent in quantity and liy 21.7 per cent in the total value, which diserepancy arrucs a minute recovery in specilic value. Button lac contracted by 367 per cent in quantily and 375 per cent in total value, the fall in its specific value being $1 \cdot 2$ per cent. On the arerage of the last three years the two classes of manufachured lac represent respec. tively about 91 per cent and 9 per cent of the total. In the yoar under review
they fell together by 23.7 per cent in quantity and 23.2 per cent in valu On the other hand, the exports of the crude material, stick lac and seed lac dropped by $11 \cdot 4$ per cent to a level lower than has been seen since 1904-05; but the increase of 47 per cent in total value marks a rise of nearly 65.8 per cent in specific value. But this may well be accounted for by the presence of a larger proportion of seed lac as compared with stick lac, seeing that stick yiclds only about 65 per cent of seed and is priced accordingly.

The United States maintain their position as the principal buyers of shellac and button lac but with a total value of only P 86.76 lakhs ( $£ 578,400$ ) as compared with $\mathrm{R} 122 \cdot 98$ lakhs ( $£ 819,900$ ) in 1909-10. The United Kingdom reduced her demand from R 6775 lakhs ( $£ 451,700$ ) to $\mathrm{R} 56 \cdot 4$ lakhs (£376,000), while Germany took f 33.83 lakhs ( $£ 225,500$ ) in place of f 46.08 lakhs $(£ 307,200)$ in $1909-10$. The shares of these three countries in the trade were therefore 41.6 per cent, 27 per cent, and 16.2 per cent respecttively.

General distribution of the export trade-The shares borne by the principal countries of destination in the exports of merchandise from India in the last five years have been as follows :-

|  |  |  | $\begin{aligned} & 1906.07 \\ & \text { per cent } \end{aligned}$ | $\begin{gathered} 1907-08 \\ \text { per cent } \end{gathered}$ | $\begin{gathered} 1905-00 \\ \text { per cent } \end{gathered}$ | $1909 \cdot 10$ per ceut | $\begin{aligned} & 1010-11 \\ & \text { per ceut } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Egrpt . | - | - | $1 \cdot 1$ | $1 \cdot 1$ | $1 \cdot 6$ | $1 \cdot 0$ | $2 \cdot 8$ |

The total value in 1910-11 was $\mathfrak{R 2 0 4} 87$ crores $(£ 136,580,000)$ in place of R184.5 crores ( $£ 123,000,000$ ) in 1909-10, the increase being about 11 per cont. Although exports to the United Kingdom rose from $\mathbb{R 4 8} \cdot 68$ crores ( $£ 32,453,300$ ) to $\mathrm{R} 50 \cdot 96$ crores ( $£ 33,973,300$ ), the increase was only at the rate of $4 \cdot 7$ per cent with the result that her share in the total fell by $l^{\prime} 5$ per cont. Germany's share also declined in spite of the fact that her total increased from $\mathrm{R17} 89$ crores $(£ 11,926,700)$ to R18.51 crores $(£ 12,340,000)$. But some goods for Germany are shipped to Belgium, and for this reason it is well that the latter's increased total of $¥ 10 \cdot 77$ crores $(£ 7,180,000)$ in place of $\mathrm{P} 10 \cdot 1 /$ crores ( $£ 6,780,000$ ) in 1900-10, should be bracketed mentally with that for Germany. The large exports of opium and rice to China and the higher prices of the former holped to raise her total from R18•4S crores ( $£ 12,320,000$ ) to $\mathrm{R} 19 \cdot 15$ crores (£12,766,700), but her percentage declined by 7 ; while hides and skins account to a considerable extent for the decline of the United States from H1 $4 \cdot 31$ crores ( $£ 0,540,000$ ) to $\mathrm{Z13} \mathrm{\cdot 35}$ crores ( $£ 8,400,000$ ) with a resultant loss of 1.2 per cont in her share. The large shipments of wheat and oilseeds accounted for the rise from Pll 9.9 crores ( $£ 7,960,000$ ) to R15.57 crores ( $£ 10,380,000$ ) shown by the exports to France; and those of food graius and skins to Japan helped to raiso her total to $\# 12.92$ crores $(£ 5,613,300)$ in phace of

R19.6 crores ( $C 8,400,000$ ) in 1909-10. Exports to Ceylon were 3 S crores $(£ 5,333,300)$ as compared with 12685 crores ( $\mathfrak{E} 1,58:, 000$ ) in 1000-10, and thoee

 ( $£ 4,000,000$ ) in 1900-10. Austria-Hungary adranced from R64 48 erores ( $£ \&, 320,000$ ) to R 705 crores ( $\mathcal{E}, 700,000$ ), but Egypt, with $125 \cdot 63$ crores ( $£ 3,756,700$ ) in place of R1•S crores ( $£ 1,200,000$ ) in the previous year, showed an adrance which may be reduce 1 on receipt of alviees as to the ultimate destinations of cargees sent to that country "to await orders".

## TRADE ACCORDING TO COUNTRIES

The following statement shows in thousands of rupees and of pounds sterling the ralue of the trade of British India in private mereh ndise with the sereral main dirisions of the worh : -

|  | 1815-19 |  | 1940.11) |  | 1:1011 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Total | (2, $4,29,37$ | 182, 53 | 3, $14,08,20$ | 203.245 | 3,32, 19,3-5 | 23: 2,613 |

The trade with Earope (which now represents $6 \pm$ per cent of the total as compared with $6 \pm 6$ per cent in the previous year) incereaced by R10.49 crores ( $£ 12,903,400$ ) or 90 per cent. That with Asia roee lig R06l.34 lahhs ( $£ 6,405,900$ ) or by $13 \cdot 3$ per cent; and as this rate of increase is the highest rearded, her share in the total rosy from $23 \cdot 5$ per cent to $2 t \cdot 3$ per cent. America stands third in order of importance, having accounted for $6 \cdot 2$ per cent of the total trade; and here there is a decline of R1024l lakhs ( $£ 652,700$ ) or 4.6 per cent. Trade with the United States represents $80 \cdot 5$ gur cent of the American total. Africa, on the other hand, showed an improvement of fl 480.77 lakhs ( $£ 3,245,100$ ), while Australasia added nearly R Cl lakhs ( $£ 106,700$ ) to her steadily inceasin; rearl. Of the trade with Europe, R21176 crores ( $£ 7,810,000$ ) or 54 per cent were exports, while R08 9 crores ( $£ 3,503,300$ ) or 46 per cent consisted of imports. The trade with Asia consisted of 73 per cent exprorts and 27 per cent imports. Exports to America represented 83.4 per cent of the $\Lambda$ merican total. Africa took nearly thrice as much and Australasia thece and a hale times as much as they severally supplied.

Trade with the United Kingdom rose from R12,262 lakhs ( $\mathcal{L} 51,716,700$ ) to R13,085, lakhs ( $£ 87,233,300$ ), the increase being pse3 lakhs ( $£ 5,166,600$ ) or 67 per cent. Her share in the total trade was 38.7 per cent and her share in the trade with all British Possessions was $73 \cdot \mathrm{p}$ per cent.

The trade with British Possessions other than the United Kingdom was $\mathrm{A} \pm, 73015$ laklss ( $£ 31,531,300$ ) in place of $\mathrm{f} 4,10 \mathrm{~L} 76$ lakhe ( $£ 27,365,100$ ). That figure forms 14 per cent of the total trade and marks a rise of 15.2 per cent as compared with the previous year.

The trade with all British Possessions represented 52.7 per cont of the whole trade and inereased ly 8.8 per cent, that is to sing, from R16,366:9 lakhs ( $£ 109,112,700$ ) to R17,814.86 lakhs ( $\mathrm{E} 118,765,700$ ).

Trade with foreign countries represented $4.7 \cdot 4$ per cent of the whole trade, and increased hy 135 per cent : that is to say, from $\mathrm{R14}, 127.36$ lakhs ( $£ 01,182,400$ ) to R16,031449 lakhs ( $£ 106,806,600$ ).

The following statement shows India's trade with each principal country in the last three years, the unit being one thousand :-

| United Kingdom |  | C- $\sim^{\text {1908.09 }}$ |  |  |  | 1909-10 |  | 1910-11 |  |  |

The ssstem of recording imports according to countries of true origin and exports in accordance with final destination has been in force for some years and has rendered three years' retrospect possible, but some of the figures relating to 1910-11 in the foregoing statement are subject to rectification.

It will be seen that Germany is again in the second place with 7 per cent of the total. Her aggregate consists of 78.3 per cent exports and 21.7 per cent imports. The increase is $\mathrm{R} 161 \cdot 37$ lakhs ( $£ 1,075,500$ ), of which $61 \cdot 4$ per cent was contributed by the import section. China retains the third place with an increase of $\mathrm{R} 8 \cdot .98$ lakhs (£573,200). This is mainly due to an increase of R 233 lakhs ( $£ 1,553,300$ ) in opium plus f 26 lakhs ( $£ 173,300$ ) in rice, offset by declines of $\mathrm{Rl14}$ lakhs ( $£ 760,000$ ) in cotton goods and R 67 lakhs ( $£ 446,700$ ) in raw cotton. France added $\mathrm{R} 39 \pm 29$ lakhs ( $£ 2,625,600$ ) to her Indian trade, which consists of 88.2 per cent exports and 11.8 per cent imports, and so took precedence of the United States whose total declined by R107.5t lakhs ( $(5716,900$ ), the aggregate comprising $79 \cdot 4$ per cent exports and 20.6 per cent imports. Belgium showed an expansion of $\not \approx 180 \cdot 21$ lakhs ( $£ 1,201,400$ ). Hol-land-possibly as a result of more correct recording of German trade-lost R07.92 lakhs ( $£: 52,800$ ) of the figure for the previous year. Japan's total roso by $\mathrm{R117} \cdot 11$ lakhs ( $£ 780,700$ ) in consequence of increased demand for rice and pulse; and Java also shows a marked rise of $\nexists 317 \cdot 06$ lakhs ( $£ 2,113,700$ ) constituted by large exports of rice and pulse and heary imports of sugar.

## CUSTOMS REVENUE

The Tariff Schedule showing valuation of commodities for the assessment to import duty is revised annually in November-December and the revised
schedule comes into force on the 1st Jamuary. The list of cotton grody reconnised as piecogoods is revised at the same time amb ralnations of Indian cotion goods for Excise purposes are fixed.

The only important Customs measure instituted during the year was the Indian Tariff Amendment Aet, VI of 1911, hy which duty on tobaceo manufactured and ummanfactured was reduced ly one-third.

The gross revenue from imports increased from R 550 ov9 lakhs $(£ 3,930,600)$ to RSOS 59 lakhs ( $55,300,600$ ), the increase being one of R 219 lakhs $(£ 1,460,000)$ or $37 \cdot 1$ per eont. This is the largest sum of Customs Revenue on record. Refunds and drawbacks amounted to R10-0. lakhs ( $£ 70,300$ ) in phace of R9.2S lakhs ( $\mathcal{C 6 1 , S 0 0 )}$ ) in 1009-10. Net revenue
 This represents an increase of $\mathrm{R} \cdot 17 \cdot 7 \mathrm{t}$ lakhs ( $£ 1,451,600$ ) or 375 per cent. Rerenue from salt is not included in these figures, for it is not treated as a Customs receipt. It amounted to RI2S.00 lahlss ( $£ 550,000$ ) againct R1.41.67 lakhs ( $£ 044,500$ ) in the previous year.

The following statement shors the revenue derived in the last three years from the principal dutiable articles :--

The gross rerenue derived from these twenty-six articles is $7730 \cdot 21$ lakhs $(£ 4,868,100)$ or 90.3 per cent of the total.

The import duty on Cotton fabrics is $3 \frac{1}{2}$ per cent ad valorem, and the total revenue realized under this single head was $7141 \cdot 77$ lakhs $(£ 945,100)$ as against R123.85 lakhs ( $£ 825,700$ ) in $1909-10$. This is equal to 17.5 per cent of the whole Customs Revenue, as compared with 21 per cent in the previous year. The receipts on account of Excise duty on cotton fabrics of Indian manufacture increased from $\{40.06$ lakhs $(£ 267,100)$ to $\{42.69$ lakhs (£281,600). This, however, falls outside of Customs Revenue proper. The growth in revenue from spirits, sugar, and silver claims attention.

The export tariff schedule is limited to rice and rice-flour, the duty on which is levied at the rate of three annas (or pence) per maund of $82 \frac{2}{7} \mathrm{lbs}$. The net revenue from this source in 1910-11 was $\mathrm{Rl} 127 \cdot 68$ lakhs ( $£ 851,200$ ).

A duty known as the Tea Cess, at the rate of a quarter of a pie ( ${ }_{4}^{18}$ th of a penny) por lb has been levied since 1903 on all Indian tea exported. The sum realised is paid to a committee constituted to receive and expend the proceeds on measures for promoting the sale and consumption of Indian tea. The collection in the first five years averaged $\nexists 3,06,39 \pm$ ( $£ 20,426$ ) per annum. In 1910-11 they rose to $\mathrm{Z} 3,40,178$ (£22,678).

## GOLD AND SILVER

The total Imports of Treasure on private account rose from $\mathrm{R} 37 \cdot 43$ crores ( $£ 24,953,300$ ) to $\mathrm{Zl} 39 \cdot 70$ crores ( $£ 26,466,700$ ), and the expansion of $\mathfrak{Z 2} 2 \cdot 27$ crores ( $£ 1, \delta 13,300$ ) represented 6 per cent of the earlier year's figure. But whereas the imports of gold increased from R25.01 crores ( $£ 16,673,300$ ) to $\mathrm{R} 27 \cdot 89$ orores ( $£ 18,593,300$ ), thus marking an increase of $\not \approx 2.88$ crores ( $£ 1,920,000$ ) or $11 \cdot 5$ per cent, the arrivals of silver at $\mathrm{R11} \cdot 81$ crores ( $£ 7,873,300$ ) showed a decline of $R 60$ lakhs $(£ \pm 00,000)$ or 4.8 per cent.

In the five years ending 1909-10 gold represented 62 per cent, and silver 38 per cent, of the combined imports. In 1910-11 the proportions have been : gold $70 \cdot 2$ per cent and silver 20.8 por cent. The value of the combined Imports including Government transactions has been $\mathrm{R} 39 \cdot 77$ crores $(£ 26,513,300)$ which is greator than in the previous year by $\not \approx 2 \cdot 25$ crores $(£ 1,500,000)$ or 6 per cent.

The gold produced in India is all shipped to England for assay; and although it is not nocessarily all exported in the year in which it is produced,
it is permisible to deduct its ralue from the total exports to find the true reexports. The balance of the imports after deduction of these re-exports may be taken to represent the ralue of gold absorbed by the couniry. The following statement is framed to show these factors in thousands of rupees and of pounds sterling:-

It will be seen that the imports of gold, which had averaged nearly R17.5 crores ( $£ 11,600,000$ ) in the previous five years, rose to 12279 crores ( $£ 18,600,000$ ) in 1910-11. This is the highest figure ever recorded. The imports hare thus had an average montlly value of $\mathrm{f} 232 \cdot 42$ laklis ( $£ 1,549,500$ ). In the previous five gears the corresponding average was R14.7.7s lakhs ( $£ 971,900$ ). Taking this as 100 , we find that the figures for $1910 \cdot 11$ represent 159 per cent of the earlier average, and that in the successive months the rariations hare been as follows: April, 121 per cent; May, 131 fer cent; June, 99 per cent ; July, $4 t$ per cent ; August, 53 per cent ; Sepiember, 100 per cent; October, 77 per cent; November, 223 per cent; December, 174 per cent; January, 315 per cent; February, 266 per cent ; and March, 304 per cent. It will be seen that the increase has lately become accentuated markedly. Production remained practically constant. Deducting that production from the gross exports of $\{391-51$ lakhs ( $£ 2,610,300$ ), we find that the re-exports. which had averaged $\mathbb{R 2 4 7}$ crores ( $£ 165$ millions) in the previous five years and $\mathcal{Z} \$ 9.07$ lakhs ( $£ 324,000$ ) in the last two ycars, rose to R 68.91 lakhs ( $£ 559,000$ ). The apparent absorption is thus R 27.20 crores ( $£ 18.14$ millions), as compared with a quinquennial average of fl 15.02 crores ( $£ 10.01$ millions), and with an average of about R16.23 crores ( $£ 10.82$ millions) in the last two years.

The descriptions of gold imported and exported during the year 1910-11 were as follows, the unit being $1,000:-$

On Government account, there was no import or export of gold in the year under review, while in the previous year the imports on Government account had been $\mathrm{Rl} 1,35,000$ ( $£ 9,000$ ) and the exports $\ddagger 30,000(£ 2,000)$.

Stated in ounces, the net imports and production of gold have been :-

The value of the Imports, Exports, and Net imports of Silver on Goverument and private accounts combined during the last five years was as follows, the unit being 1,000 :-

|  | Luports |  | Exports |  | Net Importa |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |
|  | R | 2 | R | £ | R | $£$ |
| 1906-07 | . $26,04,64$ | 17,364 | 2,04,08 | 1,361 | 24,00,55 | 16,003 |
| 1007-08 | . $21,53,19$ | 14,355 | 2,06,36 | 1,376 | 18,46,83 | 12,979 |
| 190S-09 | . 14,33,99 | 9,560 | 2,27,15 | 1,014 | 12,06,84 | 8,046 |
| 1909-10 | . 12,49,24 | 8,328 | 3,04,75 | 2,032 | 9,44,49 | 6,296 |
| 1910-11 | . 11,88,10 | 7,921 | 3,21,31 | 2,142 | 8,66,79 | 5,779 |

India is not a silver-producing country and therefore the absorption of the metal is represented in the ordinary way, that is to say, by the difference between the imports and exports, which is designated Net Imports. The imports of silver on private account during the year amounted to $\mathbb{Z 1}, 181 \cdot 22$ lakhs ( $£ 7,874,800$ ) as compared with $\not 21,24085$ lakhs ( $£ 8,272,300$ ) in the previous year. The monthly average was f 98.44 lakbs ( $£ 656,200$ ), in place of $\mathrm{Z} 89 \cdot 38$ lakhs ( $£ 595,900$ ) in the previous five years. The older average was exceeded in all months except June, September, October, December, and January. The exports on private account were larger by about $\mathbb{Z l 5} .93$ lakhs (£106,200). They were heaviest in the four months, August, September, November, and February.

The sums represented by imports and by exports of silver on Government account were in the ycar under review $\not 76,87,800$ and $\not 789,310$ against 788,30,000 and 7227,100 respectively in 1909-10.

Including Government transactions the descriptions of silver imported and exported during the year 1910-11 are given below in thousands of ounces and of rapees and pounds sterling:

|  | Imports |  |  | Exports |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | oz. | R | 1 | oz. | R | $\mathcal{L}$ |
| Bullion (bar) | 67,781 | 11,43,17 | $=7,621$ | 200 | 3,86 | 26 |
| Government of India rupees | 1,590 | 42,43 | 283 | 8,068 | 2,14,91 | 1,433 |
| Other coins (mostly British Dullars) | 129 | 2,50 | 17 | 6,128 | 1,02,54 | 683 |
| Totat | 69,500 | 11,58,10 | 7,921 | 14,896 | 3,21,31 | 2,142 |

The exports consist chiefly of Government of India rupees, which circulate extensively in Ceylon, Mauritius, Arabia, Zanzibar, the East African Coast, and the Ports of the Persian Gulf.

The net imports of silver amounted to 12860.79 lakhs ( $£ 5,778,600$ ), which is about 918 per cent of the value recorded in 1909-10 and 73 per cent of the gross imports.

The silver coinage struck in the Indian Mints during the last five years was, the unit being $\mathbf{1 , 0 0 0}:-$

The last column shows the approsimate quantity of the coinage calculated at the rate of 8 tolas per 3 ounces. The net imports of silver, stated in thousands of ounces, were in the same period :-
1906-07 . . . . . . 118,198
1907-08 . . . . . . 97,915
1908-09 . . . . . . 73,740
1909.10 . . . . . . 61,015
1010-11. . . . . . 88, 104

## BALANCE OF TRADE

The figures appended show in thousands of rupers and of pounds sterling the excess of exports over imports, including both merchandise and treasure, by sea in each of the last five years:-

|  | Including <br> Government transactions |  | Excluding Government transactions |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 7 | 2 | 12 | 2 |
| 1906-07 | 20,92,59 | $=13,951$ | 47,12, 82 | 31,417 |
| 1907-08 | 4,11,13 | 8,741 | 20,08, 7 | 13,8:9 |
| 1908-09 | 7,94,11 | 5,20. | 15,05,71 | 10,058 |
| 1909-10 | - 34,19,5t | 22,797 | 3!, 49,47 | 26,530 |
| 1910-11 | - $42,55,58$ | 25,573 | 47,19,05 | 31,4ii) |
| Average of 5 years | - 22,00,65 | 1 1, 13 i 1 | 33, 45,75 | 22,372 |

In the same years the drawings of the Conncil Bills by the Secretary of State, including those on account of the Gold Standard Feserve, but deducting sterling bills sold in India, have been as follows in thousands :-

In the five years ending 1010-11, the averago excess of exports over imports including Gorernment transactions was R2,200.65 lakhs ( $£ 1.4,671,000$ ), which represents 11.7 per cent of the average value of exports. In the same period the average drawings of the Secretary of State, as aloove defined, were \# $3,238 \cdot 86$ lakhs ( $£ 21,661,000$ ), being 17.3 per cont of the average value of exports. This sum exceeds the average excess of exports over imports by ¥11,038.21 lakhs ( $£ 6,903,000$ ).

Excluding Government transactions the average excess of exports over imports was $¥ 3,38575$ lakhs ( $£ 22,571,600$ ), which is equal to $18 \cdot 1$ per cout of the average value of exports. This excess is greater by $121,185 \cdot 10$ lakhs ( $£ 7,000,700$ ) than the excess found when Government transactions are included and greater by $\mathrm{B} 146 \cdot 89$ lakhs ( $£ 007,600$ ) than the average amount of drawings as calculated above.

The trade figures given above are incomplete inasmuch as they rolate only to the registered trade of British Indian ports. They exclude the value of Government of India securities transferred between India and England, these transfers constituting a not unimportant factor in the balance of trade equation. They also exclude both the absolutely indeterminable volume of private remittances to and from India and the not very inconsiderable value of precious stones and pearls re-exported chicfly from Bombay through the medium of the Post Office. The unregistered trade also consists largely of the unrecorded portion of the trade carried on chiefly by native craft from ports in the Native States on the west coast of India with the Persian Gulf, Arabia, and Ceylon. The trade of the French and Portuguese Settlements may also be considered in this conncction as unrecorded Indian trade. Some idca of the
volume of the trade so excluded may be gathered from the appended figures as far as available at present, the unit being 1,000:

French Settle-
ments $\quad \cdot 16,81=112105,02=70015,40=103118,09=97420,62=137 \quad 170,25=1,135$

| Settlements 2,50 | 17 | 4,27 | 28 | 8,57 | 67 | 8,33 | 55 | 3,92 | 26 | 73 | 5 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Travancore | 24 | 2 | 12,87 | 86 | 3,10 | 56 | 8,93 | 5911,45 | 76 | 8,16 | 54 |
| Kathiawar | $.8,97$ | 60 | 7,27 | 48 | 13,93 | 93 | 5,14 | $3 \pm 17,46$ | 116 | 5,11 | $3 \pm$ |

## BANK RATES AND EXCEANGE

The fluctuations of the money market will be understood from the discount rates charged by the Presidency Banks, and from the rates of Exchange on demand bills, which are quoted below :-

## SHIPPING

While the net increase in the value of imports and exports of merchandise by sea amounted to 10.4 per ceut of the total for 1909-10, the increase in the tonnage of shipping that entered and cleared at Indian ports was only 2.7 per cent. The improvement in freights, which is shown clsewhere, is therefore comprehensible. The following statement gives the numbers and tonnage of steamers and sailing vessels, with cargoos and in bullast, which entered from and cleared to all countries:-

|  | No. | Tons | Average tonnage |
| :---: | :---: | :---: | :---: |
| 1006-07 | 0,329 | 13,775,436 | 1,477 |
| 1007-0S | 3,312 | 14,239,180 | 1,529 |
| 1908-09 | 8,001 | 12,910,S23 | 1,614 |
| 1900-10 | 8,042 | 1.4,597,091 | 1,815 |
| 1910-11 | 8,435 | 14,984,52S | 1,776 |

Of these, 98.5 per cont represented stcan tonnage. The total number of steamers that entered and cleared was 5,819 with an aggregate burden of $14,70.1,531$ tons as against 5,790 and $14,301,408$ tons in the previous year. The average tonnage per steamer increased from 2,485 to 2,537 tous. The rate of increase was about $2 \cdot 1$ per cent. The average tonnage per sailing ship decreased from 91 to $8 \pm$ tons.

Tho entries from and clearances to the United King dom were 3,103,788 ons as against $3,130,343$ tons in 1909-10; and this reduced quantity represented 30.7 per cent, in place of $21 . \pm$ per cent, of the total tomnage.

Entries from and clearances to British possessions other than the United Kinglom increased from $5,259,356$ tons to $5,673,067$ tons which represented 37.8 per cent of the total, as against 36 per cent in the previous year. The tonnage from and to the British Empire therefore amounted to $55 \cdot 5$ pur cent of the whole in place of $57 \cdot 4$ per cent.

The tonnage under the British flag, including the Indian register, represents about 80.5 per cent of the whole, while that registered under the English Merchant Shipping Act was nearly 682 per cent.
the number of resels under foreign flags which entered and left Indian ports was 1,046 , with an aggregate burden of $2,704,721$ tons as against 1,086 in 1909-10 with an aggregate of $2,787,871$ tons.

The numbers of ressels under the prineipal flags are given below :-

|  | 1000-017 | 190-4s | 14usios | 1:00-10 | 1910.11 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| British | 4,91s | 4,755 | 4,235 | 4,722 | b, 745 |
| German | $3 i 1$ | 375 | 437 | 455 | +16 |
| Austro-Hungarian | 159 | 157 | 156 | 200 | 205 |
| Norwegian . | 195 | 1:5 | 106 | 05 | 108 |
| Japanese | S3 | 123 | 79 | 63 | 77 |
| Italian | 77 | 79 | 76 | 81 | 84 |
| French | 67 | 61 | 50 | 56 | 56 |

## FREIGHTS

The freight market in 1910-11 was stronger and more active than it had been for some years; and such changes of rates as have taken place in homeward freights hare been in farour of owners. Coastal freights were also high and latterly became almost prohibitive in respect of coal. The following statement shows the rates per ton for London current at the several ports named during that month of the ycar in which shipments of the stated article of produce are usually the heaviest:-

## FRONTIER TRADE

The bulk of India's Foreign Trade is scaborne, and the value of tho Trade across the land frontiers is commonly equal to about 46 per cent of the trade carried by sea. In this Review, it is treated as supplemental of that trade, and is not included in the main totals discussed in the earlier chapters. Although the frontier trade is relatively small, it shows on the whole a progressive tendency, part of which may be due to improved methods of registration.

The grand total of merchandise and treasure imported and exported by land in successive years is shown in the statement below. It will be seen that in

1910-11 the total was greater by R183•46 lakhs $(£ 1,223,100)$ than the average of the previous five years, and by R134:55 lakhs ( $£ 897,000$ ) than in 1909-10. The increase in the period of twelve months was therefore greater than 8 per cent.

Excluding treasure, we give below the figures relating to merchandise only and their distribution according to frontiers and principal countries, the unit being 1,000:

| - |  | 1908-09 |  | 1909-10 |  | 1910-11 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## NORTH-WESTERN FRONTIER

Persia-The rebate of freight granted by certain Indian railways upon goods for Persia continued in force during the year under review. But the disturbed state of that country and the prevalence of robbery on the trade routes were repressive of business; and on the whole it is surprising that the decline should not exceed $R 14,000$ ( $£ 930$ ) or about 1 per cent on the figures of the previous year. The principal imports were, as usual, silk manufactures; but there was a heary re-action in this department, the total being $\operatorname{R1,29,962}$ ( $£ 8,664$ ) as compared with $\mathrm{fl} 1,62,877$ ( $£ 10,858$ ) in 1909-10. Cotton manufactures were formerly the chief item of export; and in these the value has increased from $\not \approx 2,19,174$ ( $£ 14,612$ ) to $\mathrm{R} 2,77,669$ ( $£ 18,511$ ); while leather declined from $\mathrm{R} 2,30,752$ ( $£ 15,383$ ) to $\mathrm{R} 1,99,437$ ( $£ 13,296$ ). Indigo showed a substantial advance from $\mathbf{7 1 , 6 2 , 9 0 3 ( £ 1 0 , 8 6 0 )}$ to $\mathbf{~} \mathbf{2} 2,39,673$ ( $£ 15,078$ ).

Afghanistan-Imports declined but exports increased, the former from f 95.66 lakhs ( $£ 637,700$ ) to $\mathrm{fl} 86 \cdot 89$ lakhs ( $£ 579,300$ ) and the latter from R112.49 lakhs ( $£ 749,900$ ) to R126.07 lakhs ( $£ 840,500$ ). The total trade with Kabul incroased from $\mathrm{Z86} 66$ lakhs (£ă79,700) to $\mathrm{R94} 54$ lakhs ( $£ 630,300$ ) which marks an advance of $\mathrm{E7} 758$ lakhs ( $£ 50,500$ ) or 8 per cent. Imports from Kabul, with a total of $¥ 27 \cdot 29$ lakhs ( $£ 181,900$ ) in place of $\nexists 30 \cdot 52$ lakhs ( $£ 203,500$ ), declined by $\mathrm{H} 3 \cdot 23$ lakhs ( $£ 21,500$ ) or 10 per cent. Among imports from Kabul, the principal item, namely, fruits and nuts, amounted to P 10.7 lakhs ( $£ 71,300$ ), showing a recovery from
the exceptionally low figure of RS74 lahhs ( $\mathcal{L} 58,300$ ) recorded in 1900-10; hut Hides and skins further declined from 22927 lakhs ( $\mathcal{L l} 5,100$ ) to Pl- S lahhs ( $£ 11,900$ ). Ghi (clarified butter) advanced to Rtyl lakhs ( $£ 51.400$ ) as compared with $R .4 \cdot 40$ lakhs ( $£ 29,000$ ) in the previous year. Drugs and medicines had a ralue of only fia 06 lakhs ( $£ 7,100$ ) in place of Re5t lakhs ( $£ 16,900$ ). Live animals fell from R2.71 laklis (. $\mathcal{L 1 8}, 100$ ) to R1S1 lakhs ( $£ 12,100$ ), while wool alvanced from Rl 1 ls lakhs ( $£ 5,900$ ) to R1•39 lakhs ( $£ 9,500$ ). Among exports to Kabul, cotton manafactares retain the first place. The total value of foreign yarns mese from R1.7t lakhs ( $£ 11,600$ ) to R1•7J lakhs ( $£ 11,700$ ), but that of Indian yarns fell off from R 50,000 ( $£ 5,300$ ) to 1255,000 ( $\mathfrak{L} 3,000$ ). In foreign piecegoods there was continued expansion which brought the total up from R 9.95 lakhs ( $£ 160,500$ ) to R3506 lakhs ( $£ 237,600$ ), while Indian piecegoods contracted from R\&\&t lahis ( $£ 32,000$ ) to R. $44 t$ lakhs ( $£ 29,400$ ). Thus the total expansion in cotton manafactures is only P1ù.06 lakhs ( $£ 67,100$ ). Sugar receded from R $1 \cdot 1$ lahhs ( $£ 27,300$ ) to £ $3 \cdot 45$ lakls ( $£ 23,0(0)$ ) and metals and manufactures of metals from R1 -63 lakhs ( $£ 12.200$ ) to P 179 lakhs ( $£ 11,000$ ), while tea advanced from R2.9S lakhs ( $£ 19,900$ ) to RJ•1G lakhs ( $£ 31, f(0)$ ). Indian tea represented 90 per cent of the total value and increased $\mathrm{f}_{\text {rom }}$ Plat lakhs ( Ell , (ion) to $\mathrm{F} \pm 63$ lakhs ( $£ 30,000$ ); while foreign tea fell from R1,21,466 ( $\mathfrak{C S} .295$ ) to $\mathbf{R 5 9}, \boldsymbol{7} 20$ ( $£ 3,515$ ). In Indian tea therefore the increase was R2 80 lakhs ( $£ 19,300$ ), while the decrease in foreign tea amounted to Ril,740 ( $£ \pm, 783$ ). The arerage ralue of the Indian tea was about 6 annas (or pence) per pound, and that for foreign tea was 14 annas (or pence). The remarkable increase in the trade in leather goods continued and brought the total value up from A 5.19 lakhs ( $£ 34, \mathrm{COO}$ ) to P 5.37 lakhs ( $(635,800)$. The total trade with Kandahar amounted to 12118.42 lakhs ( $£ 750,500$ ) as compared with玉 $121 \cdot 2$ lakhs ( $£ 908,000$ ) in 1909-10. The imports from Kandaliar were represented ly R 596 lakhs ( $£ 397,300$ ) in place of R $65 \cdot 14$ lakhs ( $\mathrm{E} 43.3,300$ ) in the previous year. Of this, wool represents only n 30 BO 1 J lakhs ( $\mathrm{C} 203,000)$ as against R 3550 lahls ( $£ 237,100$ ) in 1909-10, while Fruits and nuts figure at R18.4t lakhs (£122.900) as compared with R1947 lakbs ( $£ 129,800$ ) in the prerious year. Ghi, at R1.09 lakhs (£13,200), showed a sulstantial adrance on the R1.1 lakh; ( $£ 7,300$ ) of the previous year ; and the decline of grain and palse to $\mathrm{R} 31,(000(\mathcal{L} 2,100)$ is a healthy sign. Erports to Kandahar resumed their interrupted progress and advanced from Risoos lakhs ( $£ 373,700$ ) to R58.82 laklıs ( $£ 332,100$ ). Foreign piecegoo. 1 retain the first place, but their total of $\mathrm{f} 2 \mathrm{~L}: 31$ lakhs ( $\mathcal{E 1}(\mathrm{j} 2,100$ ) is substantially lower than the R2G.45 lakhs ( $£ 176,300$ ) recorded in the previous year and much lower than the R3062 lakhs ( $£ 204,100$ ) of 1908.09. Indian cotton goods recovered from Z 707 lakhs $(£ 17,100)$ to Z 8.63 lakhs (C̄̄7,500), which is little better than the figure of two ycars ago. Sugar increased from P3. 28 lakhs ( $£ 21,900$ ) to R4:23 lakhs ( $£ 28,200$ ), and the value of leather goods for Kandahar rose from R1: 88 lakhs (f10,500) to R2.07 laklis ( $£ 13,800$ ).

Dir, Swat, and Bajaur-After two lean years, the total trale with these territories advanced to $\mathrm{P} 129 \cdot 2$ lakhs ( $\mathbf{~} 854,700$ ) in place of R114.45 lakhs ( $£ 743,000$ ) in 1909-10. The imports alvaneed to $\mathrm{R5} 7.3$ lakhs (. 5382,000 ). The improvement in the value of imports from fial 13 lakhes ( $\mathrm{C} 340,30$ ) in the
previous year to $\mathbf{\AA 5 7 . 3}$ lakhs ( $£ 382,000$ ) was of a similar recuperative character. Ghi forms some 27 per cent of the whole, and its value rose from fl 13.83 lakhs (C02,200) to $115 \cdot 45$ lakhs ( $£ 103,000$ ). Imports of grain at $\mathrm{Xil1} \cdot 37$ lakhs $(£ 75,800)$ showed a marked drop from 71485 lakhs $(£ 90,000)$ of the previous ycar, and consisted mainly of husked rice ( 76.9 lakhs $=£ 46,000$ ) and unhusked rice ( $\mathrm{R} 3 \cdot 2 \cdot 4$ lakhs $=£ 21,600$ ). The arrivals of $\boldsymbol{h}_{\text {ides }}$ and skins advanced to fi9.65 lakls ( $£ 64,300$ ) from 176.63 lakhs ( $£ 44,200$ ) recorded a year before; while timber developed to $\not \approx 9.31$ lakhs ( $£ 62,100$ ) from F 6.61 lakhs $(£ 44,100)$. Exports to these countries also increased, the total rising from 263.31 lakhs ( $£ 422,100$ to R70.9 lakhs ( $£ 472,700$ ). The principal item-namely cotton piecegoods-advanced slightly from $\mathrm{f} 29 \cdot 26$ lakhs ( $£ 195,100$ ) to $\mathrm{R} 29 \cdot 81$ lakhs ( $£ 108,700$ ). Of this, $723 \cdot 11$ lakhs ( $£ 154,100$ ) represented foreign goods, and only Re. 7 lakhs ( $£ 4,700$ ) was of Indian origin. Twist and yarn amounted to R10 85 lakhs ( $£ 72,300$ ) of which $R 7.45$ lakhs ( $£ 49,700$ ) was foreign and 113 4 lakhs ( $£ 22,700$ ) Indian ; while salt had a value of $\mathfrak{f 3} 41$ lakth ( $£ 22,700$ ), raw cotton $\mathfrak{2 l} 2 \cdot 57$ lakhs ( $£ 17,100$ ), and sugar $\mathrm{A} 3 \cdot 42$ lakhs ( $£ 22,800$ ). Exports of tea amounted to $\mathrm{Zl} 1 \cdot 33$ lakles ( $£ 8,900$ ) in place of $\mathrm{Zl} \cdot 25$ lakhs $(£ 8,300)$ in the previous year. Indian tea, with a total of $312,256 \mathrm{lbs}$ and fl1,13,880 ( $£ 7,592$ ), showed a large advance on the 153,410 lbs of the previous year. Foreign tea decreased from $90,496 \mathrm{lbs}$ to $32,144 \mathrm{lbs}$ and from R 69,410 $(£ 4,627)$ to R19,500 ( $£ 1,300)$. The proportion of Indian tea on the whole has increased to 86 per cent in place of 45 per cent in the previous year, while its average value is returned as 5.8 annas (or pence) per pound as compared with an average of 0.7 annas (or pence) in the case of the foreign parcels.

Ladalkh-Ladakh is a junction for Indian trade with Western Tibet on the one hand and with Yarkand and Kashgar on the other. Trade with Ladakh is of small volume. The year under review showed an increase of RS 52,000 ( $£ 5,470$ ) or 40 per cent, the total value being ZR 288 lakhs ( $£ 19,200$ ) against $\mathrm{f} 2(01$ lakhs ( $£ 13,700$ ) in the previous year. Imports recovered from $\mathrm{fl} \cdot 33$ lakhs ( $£ 5,900$ ) to $\mathrm{Fl} \cdot 65$ lakis ( $£ 11,000$ ), while exports recovered from $\mathbf{f i} 3,000$ ( $£ 4,000$ ) to R1-24 lakhs ( $£ 8,300$ ). Charas (a preparation of hemp) represents nearly 57 per cent of the total imports. It decreased in quantity from 983 ewts to 859 cwts, but increased in value from $\mathrm{m} 53,000(£ 3,500)$ to $1204,000(\mathcal{E} 6,300)$. Imports of raw silk amounted to only 68 cwts with a value of $\mathrm{f} 37,000$ ( $£ 2,500$ ). On this frontier Borass is an important article of trade and its value in the year under review was fl , S.12 (E1S9). Cotton piecegoods (almost entirely foreign) continue to form the chicf item of exportation, the value being $\mathbf{1 7 5}, 520(£ 5,030)$.

## NOMTIERN AND NORTH-EASTERN FRONTLER

Nepal-Tho trade with Nepal is larger than that with any other transfroutier state. In 1010-11 it represented 36 per cent of the whole frontier trade of India, as against 34 per cent in 1909-10. It recovored from P 456.93 lakhs ( $£ 3,046,200$ ) in $1909-10$ to E 01684 lakhs ( $£ 3,445,600$ ) in 1910-11. The imports at R350.16 lakhs ( $£ 2,334,400$ ) showed an advance of some 1 R 48.37 lakils ( $£ 322,000$ ) or 14 per cent on the figure of the previous yoar; while exports expauded from R105.15 lakhs ( $£ 1,03 \pm, 300$ ) to 716668 lakhs $(£ 1,111,200)$, the increase being $\mathrm{fll} \cdot 53$ lakhs $(£ 76,900)$ or 7 per cent.

Sikkim and Bhutan-The trade with Sikkim slightly declined from R18.55 lakhs ( $£ 123,700$ ) to R18.48 lakhs ( $£ 123,200$ ), while there is a continuance of the decline in trade with Bhutan, the total having fallen from R3:51 lakhs ( $£ 23,400$ ) to $\not \approx 2 \cdot 87$ lakhs ( $£ 19,100$ ). The two together showed a net decrease of some $\nexists 70,000(£ 4,700)$ or 3 per cent. Sikkim supplied grain to the value of $\mathrm{R} 2 \cdot 33$ lakhs ( $£ 15,500$ ) as against $\mathrm{f} 3 \cdot 4$ lakhs ( $£ 22,700$ ) in the previous year, while her trade in fruits, etc. recovered from $\mathbb{Z 3 6}, 000$ $(£ 2,400)$ to $\nexists 1,20,000(£ 8,000)$. The greater part of the imports from Bhatan consists of timber; and this at $\mathrm{R} 10,752$ ( $\mathcal{F} 717$ ) showed a small decline on the figures of 1909-10, while her contribution of fruits, etc. had fallon from $\mathrm{P} 46,716$ ( $£ 3,114$ ) to $\mathrm{R} 26,996$ ( $£ 1,800$ ). The exports to Bhatan declined considerably, the total value being only $\operatorname{fi9} 9,679(£ 6,245)$ as compared with $\mathrm{Rl} \cdot 57$ lakhs ( $£ 10,500$ ) in 1909-10. . Of these, the most important item was cotton piecegoods and yarn (chiefly the former and of foreign manufacture) with a value of $\mathrm{R} .13,000$ ( $£ 2,870$ ), silk manufactures $\mathrm{f} 8,433$ (£562), and spices $\not 28,578$ ( $£ 572$ ). The exports to Sikkim, on the other hand, receded from $\mathrm{R9} \cdot 2 \pm$ lakhs ( $£ 61,600$ ) to $\mathrm{R} 8 \cdot 09$ lakhs ( $£ 53,900$ ) and consisted chiefly of grain valued at $\not \mathrm{A} 176$ lakhs ( $£ 11,700$ ), cotton piecegoods and yarn (chiefly the former) with a value of $\not 22$ lakhs ( $£ 13,300$ ), and salt $\not \approx 36,298$ (£2,420).

Tibet-Trade with Tibet has to contend with diverse difficulties, the most obvious of which relates to communications. In tro successive years it had declined from $\mathrm{f} 10 \cdot 21$ laikh ( $£ 268,100$ ) to $\mathrm{R} 26 \cdot 68$ lakhs ( $£ 177,900$ ); and the recovery to $\mathrm{f} 32 \cdot 79$ lakhs ( $£ 218,600$ ) recorded in the year under review has not made good that decline. The trade consists of 34 per cent exports and 66. per cent imports. Exports to Tibet increased by about 7 per cent (from fll 4.42 lakhs $=£ 69,500$ to $\mathrm{fl1} \cdot 21$ lakhs $=£ 74,700$ ), the principal articles being as usual cotton piecegoods, with a value of $\mathrm{f} 3 \cdot 43$ lakhs ( $£ 23,200$ ) in place of R 2.57 lakhs ( $£ 17,100$ ) in the prerious year, and yarn with a value of only fl, 390 ( $£ 93$ ) as compared with $\mathrm{Z5}, 157$ ( $£ 344$ ) in 1909-10. Other articles of relative importance were grain to the value of $\mathrm{Pl} \cdot 35$ lakhs $(£ 9,000)$ in place of R1 $\cdot 77$ lakhs ( $£ 11,800$ ), 40 per cent of this being rice, coral $\mathrm{Rl11}, 740$ ( $£ 783$ ), woollen manufactures $\mathrm{Z} 86,000$ ( $£ 5,730$ ), and metals $\mathrm{Z} 54,000$ ( $£ 3,600$ ). Imports adranced from $\mathrm{Al} 16 \cdot 26$ lakhs ( $£ 108,400$ ) to $\mathrm{ZR21} 58$ lakhs ( $£ 143,900$ ), the increase being $\not \mathbb{} 5 \cdot 32$ lakhs $(£ 35,500)$ or 31 per cent. The staple of this trade is wool, and it showed an increase of 28 per cent in quantity-from 29,158 to $37,806 \mathrm{cwts}$-and 22 per cent in value - from $\mathrm{R} 9 \cdot 36$ lakhs ( $£ 62,400$ ) to $\mathrm{Zll} \cdot 68$ lakhs $(£ 77,900)$. Other principal articles were Borax $\mathrm{R} 4 \cdot \mathrm{SS}$ lakhs ( $£ 32,500$ ), salt $\mathrm{R1} \cdot 11$ lakhs ( $£ 7,400$ ), and horses, ponies, and males $\mathbb{R} 37,000$ (£2,470).

## EASTERN FRONTIER

Western China-The trade with Western China renlly means the trade of Bhamo with Tengyueh in Yunnan. The total value increased from R 56.73 lakhs $(£ 378,200)$ to $\mathbf{~} 6466$ lakhs ( $£ 431,100$ ). Imports represent 28 per cent of the whole and increased from R16.12 lakhs ( $£ 107,500$ ) to R18.31 lakhs ( $£ 122,100$ ) ; while Exports increased by 15 per cont to $\mathrm{P} 46 \cdot 35$ lakhs ( $£ 309,000$ ). Among imports, Raw silk rose from $\mathrm{P} 3 \cdot 55$ lakhs ( $£ 23,700$ ) to $\mathrm{R} 4 \cdot 31$ lakhs ( $£ 28,700$ ). Imports of opium amounted to $\mathrm{P} 67,913$ ( $£ 1,527$ ) against R76,222 ( $£ 5,081$ ) in the previous year. Hides decreased from $\mathrm{R} 2 \cdot 52$ lakhs $(£ 16,800)$ to $\mathrm{R} 2 \cdot 17$ lakihs ( $£ 16,500$ ), and lac from $\mathrm{Rl} 19,770^{-}$( $£ 1,318$ ) to

Sikkim and Bhutan-The trade with Sikkim slightly declined from P18.55 lakhs ( $£ 123,700$ ) to R1848 lakhs ( $£ 123,200$ ), while there is a continuance of the decline in trade with Bhutan, the total having fallen from R3: 51 lakhs $(£ 23,400)$ to $\not \approx 2 \cdot 87$ lakhs ( $£ 19,100$ ). The two together showed a net decrease of some $\nexists 70,000(£ 4,700)$ or 3 per cent. Sikkim supplied grain to the value of $\mathrm{R} 2 \cdot 33$ lakhs ( $£ 15,500$ ) as against $\mathrm{f} 3 \cdot 4$ lakhs ( $£ 22,700$ ) in the previous year, while her trade in fruits, etc. recovered from $\mathbb{7 3 6}, 000$ $(£ 2,400)$ to $\mathrm{Zl} 1,20,000$ ( $£ 8,000$ ). The greater part of the imports from Bhatan consists of timber; and this at $\mathrm{R10,752}$ ( $£ 717$ ) showed a small decline on the figures of 1909-10, while her contribution of fruits, etc. had fallon from $\mathrm{P} 46,716$ ( $£ 3,114$ ) to $\mathrm{R} 26,996$ ( $£ 1,800$ ). The exports to Bhatan declined considerably, the total value being only $793,679(£ 6,245)$ as compared with $\mathrm{Rl} \cdot 57$ lakhs ( $£ 10,500$ ) in 1909-10. . Of these, the most important item was cotton piecegoods and yarn (chiefly the former and of foreign manufacture) with a value of $\mathrm{f} 43,000$ ( $£ 2,870$ ), sill manufactures $\mathrm{f} 8,433$ (£562), and spices $\not 28,578$ ( $£ 572$ ). The exports to Sikkim, on the other hand, receded from $\mathrm{R} 9 \cdot 2 \mathrm{~L}$ lakhs ( $£ 61,600$ ) to $\mathrm{f} 8 \cdot 09$ lakhs ( $£ 53,900$ ) and consisted chiefly of grain valued at $\not 71 \cdot 76$ lakhs ( $£ 11,700$ ), cotton piecegoods and yarn (chicfly the former) with a value of $\mathfrak{R 2}$ lakhs ( $£ 13,300$ ), and salt $\not \approx 36,298$ ( $£ 2,420$ ).

Tibet-Trade with Tibet has to contend with diverse difficulties, the most obvious of which relates to communications. In two successive years it had declined from $\mathfrak{7 l 0 . 2 1}$ laikhs ( $£ 268,100$ ) to $\mathbb{Z 2 6} 68$ lakhs ( $£ 177,900$ ); and the recovery to $739 \cdot 79$ lakhs ( $£ 218,600$ ) recorded in the year under review has not made good that decline. The trade consists of 34 per cent exports and 66. per cent imports. Exports to Tibet increased by about 7 per cent (from R10.42 lakhs $=£ 69,500$ to $£ 11 \cdot 21$ lakhs $=£ 74,700$ ), the principal articles being as usual cotton piecegoods, with a value of $\mathrm{F} 3 \cdot 43$ lakhs ( $£ 23,200$ ) in place of $R 2.57$ lakhs $(£ 17,100)$ in the previous year, and yarn with a value of only R1,390 (£93) as compared with $\mathrm{R5} 5157$ ( $£ 344$ ) in 1909-10. Other articles of relative importance were grain to the value of $\mathrm{Pl} \cdot 35$ lakhs $(£ 9,000)$ in place of R1•77 lakhs ( $£ 11,800$ ), 40 per cent of this being rice, coral $\mathbb{R 1 1 , 7 4 0 ~ ( £ 7 8 3 ) , ~}$ woollen manufactures $\mathbb{R 8 6 , 0 0 0}$ ( $£ 5,730$ ), and metals $\mathbb{R} 4,000$ ( $£ 3,600$ ). Imports adranced from $\mathrm{Z16} \cdot 26$ lakhs ( $£ 108,400$ ) to $\mathrm{R} 21 \cdot 58$ lakhs ( $£ 143,900$ ), the increase being $\not 75.32$ lakhs $(£ 35,500)$ or 31 per cent. The staple of this trade is wool, and it showed an increase of 28 per cent in quantity-from 29,158 to 37,806 cwts-and 22 per cent in value -from $\mathrm{R} 9 \cdot 36$ lakhs ( $£ 62,400$ ) to $\mathrm{Fl1} \cdot 68$ lakhs $(£ 77,900$ ). Other principal articles were Borax $\mathrm{R} 4 \cdot \mathrm{SS}$ lakhs (£32,500), salt R1•11 lakhs ( $£ 7,400$ ), and horses, ponies, and males $\mathbb{7 3 7 , 0 0 0}$ (£2,470).

## EASTERN FRONTIER

Western China-The trade with Western China renlly means the trade of Bhamo with Tengyueh in Yunnan. The total value increased from $\mathbb{R 5 6} \cdot 73$ lakhs $(£ 378,200)$ to $\mathrm{F} 64 \cdot 66$ lakhs ( $£ 431,100$ ). Imports represent 28 per cent of the whole and increased from R16.12 lakhs ( $£ 107,500$ ) to R18 31 lakhs ( $£ 122,100$ ) ; while Exports increased by 15 per cout to R $46 \cdot 35$ lakhs ( $£ 309,000$ ). Among imports, Raw silk rose from $\mathrm{R} 3 \cdot 55$ lakhs ( $£ 23,700$ ) to $\mathrm{R} 4 \cdot 31$ lakhs (£28,700). Imports of opium amounted to $\mathrm{P} 67,913$ ( $£ 4,527$ ) against R76,222 ( $£ 5,081$ ) in the previous ycur. Hides decreased from $\mathrm{R} 2 \cdot 52$ lakhs $\left(\mathcal{C 1 0 , 8 0 0 )}\right.$ to $\mathrm{R} 2 \cdot 17$ lalils ( $£ 16,500$ ), and lac from $\mathrm{R10,770}^{-}$( $£ 1,318$ ) to

R15,160 ( $£ 1.011$ ); while imports of orpiment increased from $121 \cdot 40$ lakhs ( $£ 0,700$ ) to $\mathrm{£1.76}$ lakhs ( $£ 11.700$ ), and live animals from 12271 lakhes ( $£ 18,100$ ) to Fa 287 lakts ( $£ 19.100$ ). Erports to Western China increased
 cotton yarns (all of Indian mamufacture) formed 46 per cent as against 39 per cent in the previous year, their value having increased from R 16.02 laklis ( $£ 106,500$ ) to R2134 lakhs ( $£ 112,300$ ). On the other hand, cotton piecegoods (all of foreign manufacture) decreased from R11.06 laklis (. $\mathcal{L} 9,700$ ) to P 10.65 lakhs ( $£ 71,2(0)$ ). The other principal items of export were jadestone R 6.24 lakhs ( $£ 41,600$ ), provisions $\mathrm{R} 2 \cdot 63$ lakhs ( $\mathcal{E} 17,500$ ), salt R $93,490(£ G, 233)$, and raw cotton $\mathrm{R} 33,600(\mathcal{E}, 210)$. Exports of petroleum increased from $\mathrm{P} 261,932(£ 4.129)$ to R62,801 ( $£ 4.191$ ).

Shan States (North and South)-These States are British tirritory under local Chiefs; but for convenience of registration they are treated as forcign, and more than two-thirds of the trade across the Eastern statistical frontior relates to them. The trade as a whole increased by $\mathrm{X}: 20 \cdot 17$ lakhs ( $£ 131,5(0)$ ), that is to say, from 2205.91 lakhs ( $£ 1,972, \overline{0}(0)$ ) to 1231605 lahhs ( $£ 2,107,2161$ ). Of this total, 46 per cent or R14.7 lahhs ( $E 06 \pm, 700$ ) consisted of exports and $5 \pm$ per cent or R171.3S lakhs ( $£ 1,1+2,500)$ of imports. The total trade with the Northern Shan States improved by R9•1 lakhs ( $\mathcal{E 6 0}, \mathrm{i} 00$ ) to R1s19 akhs ( $£ 1,212,700$ ), and that with the Southerin Shan States increased ly \#11.07 lakhs ( $£ 33,800$ ) to R13 $1 \cdot 15$ lakhs ( $£ 594,500)$. The trade with the Northern Shan States consists of R113.3ㅇ lakhs ( $\mathcal{E}, 55,500$ ) imports and
 lakhs ( $£ 63,100$ ), or 9 per cent to which contributions were male by leaf-tea With El 1422 lakhs ( $£ 94,800$ ) against R11.01 lakhs ( $£ 70,400$ ), teak with R10.59 lakhs ( $£ 70,600$ ) against R8.07 lakhs ( $£ 53,501$ ), and lac with Rl 19 lakhs ( $£ 7,900$ ) against $\mathrm{R} 5 \mathrm{t}, 000$ ( $£ 3,600$ ). Husked rice declined from $\mathrm{IR} 1:!1$ lakhs ( $£ 32,700$ ) to F 386 lakhs ( $£ 25,700$ ), and letpet (pickled tea) from Z27.3 lakhs ( $£ 182,000$ ) to R2. 05 lahhs ( $£ 160,300$ ). The exports consist mainly of cotton piecegoods (almost entircly foreign) with a value of R21:38 lakhs ( $£ 143,900$ ) as against fli970 lakhs ( $£ 131,900$ ) in 1909-10, yarn (mostly foreign) Z 7 Gt lakhs ( $£ 50,900$ ) ayaint R7G5 lakhs ( $£ 51,210$ ), provisions (of which about two-thirds was fish) fill 1.t lakhs ( $£_{74}, 300$ ) against $\mathrm{Z} 12 \cdot 2 \pm$ lakhs ( $£ 81,600$ ), salt $\mathrm{R} 3 \cdot 10$ lakhs ( $£ 21,300$ ) against $\mathrm{P} 3 \cdot 17$ lakhs ( $£ 23,100$ ), iron R3•11 lakhs ( $£ 20,700$ ) against fl2.95 lakhs ( $£ 19,700$ ), and live animals f 2.37 lakhs ( $£ 15,800$ ) against f 2.0 ; lakhs ( $£ 13,900$ ).

Trade with the Southern Shan States, on the other hand, consisted of R 58.05 lakhs ( $£ 387,000$ ) imports and $\mathrm{f} 76 \cdot 13$ lakhs ( $£ 507,500$ ) exports, as compared with $\mathrm{P} 48^{\circ} 52$ lakhs ( $£ 323,500$ ) and 127.559 lakhs ( $£ 497,300$ ) in the previous year. Imports showed an increase of R $0 \cdot 53$ lakhs ( $\mathcal{L G} 3,500$ ). Teak at $\mathrm{Z} 6 \cdot 7$ lakhs $(£ 44,700)$ and fruits and vegetables (other than potatoes) with \#3.77 lakhs ( $£ 25,100$ ) showed declines. There was improvement in potatoes at f 2.54 lakhs $(£ 10,000)$, hides at $\mathrm{f} 2 \cdot 31$ lakhs ( $£ 15,400$ ), cattle wilh P7 86 lakhs ( $£ 52,400$ ), and horses, ponies and mules with $125 \cdot 25$ lakhs ( $£ 35,000$ ). Exports increased by 121.64 lakhe ( $£ 10,300$ ). The most important article again is cotton piecegoods (mainly foreign), the value of which increased from Z 39 lakhs ( $\mathrm{E} 260,000$ ) to $\mathrm{P} 45 \cdot 36$ lakhs ( $\mathrm{C} 302,400$ ), this being 59 por cent of the whole exports. Anong other items the following have some importance betelnuts with $\mathrm{H} 4 \cdot 18$ lakhs ( $\mathbf{( 2 7 , 9 0 0}$ ) in place of
A.f:t lakhs ( $£ 29,300$ ), yarn (mostly Indian) with 71.95 lakhs ( $£ 13,000$ ) in place of $\mathrm{P} 3 \cdot 54$ lakhs ( $£ 23,600$ ), provisions (principally fish) with $\mathrm{R} 5 \cdot 56$ lakhs (£37,100), manufactured silks with $\mathrm{H} 3 \cdot 14$ lakhs ( $£ 20,900$ ), and metals with R1.77 lakhs ( $£ 11,800$ ), of which iron constituted about one lakh ( $£ 6,700$ ).

North and South Siam.-The total trade with these two territories amounted to P.46.26 lakhs ( $£ 308,400$ ) as comparcd with $\mathrm{P} 51 \cdot 53$ lakhs ( $£ 343,500$ ) in 1909-10. The trade with North Siam is about three times as great as that with South Siam. It amounts to $¥ 33$ lakhs ( $£ 220,000$ ) and shows a decrease of about F 7 lakhs ( $£ 46,700$ ) on the figure for the previous year. It consists of 47 per cent imports and 53 per cent exports. The imports declined from A 21 lakhs $\{£ 140,000$ ) to R15.67 lakhs ( $£ 101,500$ ), most of the contraction being accounted for by the figures for teak which fell from R1.1.12 lakhs ( $£ 9.1,100$ ) to $\mathrm{R} 9 \cdot 88$ lakhs ( $£ 65,900$ ). The other principal items were cattle at $\not \mathrm{Pl}_{4} 04$ lakhs ( $£ 26,900$ ) and other live animals at only R88,000 (£j, 870 ). The exports showed a smaller decrease from R19•46 lakhs ( $£ 129,700$ ) to $\mathrm{R17} 57$ lakbs ( $£ 117,100$ ). Cotton piecegoods (almost all forcign) decreased from R 406 lakhs ( $£ 27,100$ ) to $\mathrm{R} 3 \cdot 89$ lakhs ( $£ 25,900$ ), while manafactured silk dropped from $\mathrm{R} 2 \cdot 56$ lakhs $(£ 17,100)$ to $\mathrm{Rl} \cdot 87$ labhs (£12,500). Yarns (mostly foreign) with a ralue of $\mathrm{R} 2 \cdot 31$ lakhs ( $£ 15,400$ ) also exceeded that of silks, while apparel declined from $\mathrm{F} 2 \cdot 03$ lakhs ( $£ 13,500$ ) to R1'58 lakhs ( $£ 10,000$ ). Trade with South Siam amounted to $\nexists 13.03$ lakhs ( $£ 86,900$ ) which is about $\mathrm{R2} 2$ lakhs ( $£ 13,300$ ) better than in 1909-10. It consists of 6 j per cent imports and $3 \pm$ per cent exports. Imports rose from fl6. 09 lakhs ( $£ .40,600$ ) to f 8.68 lakhs ( $£ 57,900$ ) and were practically made up of menufactured silk at $\mathrm{R} 6 \cdot 14$ lakhs $(£ 10,900)$ and live animals at $\mathrm{Rl} \cdot 87$ lakhs ( $£ 12,500$ ). Exports at $¥ 4 \times 35$ lakhs ( $£ 29,000$ ) showed a decline, the only considerable items being jewellery, etc. with a value of $\mathrm{Zl} \cdot 16$ lakis $(£ 7,700)$, manafactured sills at $\{63,000$ ( $£ 1,200$ ), Metals $\mathbb{R} 60,000$ ( $£ 1,000$ ), cotton piecegoods $\mathrm{R} 31,000$ ( $£ 2,300$ ); and apparel $\mathrm{R} 31,000$ ( $£ 2,100$ ).

Karennee-The trade with Karennee has a total of about R2s lakhs ( $£ 160,000$ ) and seems to have resumed its downward course with a decline amounting in the year under review to 4 per cent. It consists of 87 per cent imports and 13 per cent exports. The imports declined from $\mathbb{Z 2 1} \cdot 3$ lakhs ( $£ 1 \cdot t 2,000$ ) to $¥ 20 \cdot 3$ lakhs ( $£ 135,300$ ) and consisted mainly of teak with a value of $\nexists 13 \cdot 76$ lakhs ( $£ 91,700$ ). Among exports the only considerable item was betelnuts ( $\mathrm{Rl} \cdot 01$ lakhs $=£(700$ ).

The relative importance of the various articles of trade in the commerce of India with trans-frontier countries is shown below. The valucs are stated in units of $\mathbf{1 , 0 0 0}$ :

|  | IMPORTS-Contimed |  |  |  | ExPORTS-continued |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Woollen goods | 1,50 | 12 | 2,23 | 15 |  |  |  |  |  |

Since the total value of imports in 1010-11 was $\mathrm{P} 9 \cdot 10$ crores ( $£ 6,127,000$ ) the centesimal ratio borne to that total by any of the above sums of Indian money may be found approximately by dividing it ly 910 . In exports the dirisor would be 743 .

The appended statement shows in thousands the measure in which the various prorinces participated in the tutal of the trans-frontior commero. Here the divisor for 1910-11 must be 1,662.

## COASTING TRADE

Merchandise carried by sea from one part of India to another appears first under exports and again under imports; so it might be expected that the total of the two would be approximately double the dimensions of the single transaction. But the figures comprise such exchanges with ports in Indian Native States and Foreign Settlements as appear in tho statistics of Brifish India only as imports or as exports. It has therefore been the practice to state in this Review the net value of the coasting trade as arrived at by adding, to tho value of the imports into British ports from other British ports, the sum of the imports and exports in the trade between British and non-British ports in India.

The value so calculated in respect of 1910-11 is for merchandise R 59.44 crores ( $£ 39,627,000$ ) as against Z 58.19 crorcs ( $£ 38,793,000$ ) in the previous year, the increase being $\mathrm{Al} \cdot 25$ crores ( $£ 833,000$ ) or $2 \cdot 1$ per cent. Food grains represented 18.3 per cent of the total with a value of $\mathbb{Z 1 0 . 8 5}$ crores ( $£ 7,233,000$ ), the decrease being $\nexists 4 \cdot 21$ crores ( $£ 2,807,000$ ). Of the total value of food grains, rice represented 73.5 per cent. Details regarding the distribution of this trade are given in that article in the section relating to exports which deals with the rice trade as a whole. It need only be mentioned here that the total exports from Burma to Indian ports amounted to 550,000 tons which marks a decrease of 498,000 tons on the figures of the previous year. The exports of mineral oil from Burma to Indian ports rose from 88.9 to $101 \cdot 9$ million gallons. The quantity taken by Calcutta for distribution by sea to other ports increased from 47.5 to $54: 8$ million gallons, the direct shipments from Burma to other provinces being : Bombay 17.5 million gallons, Madras 1.46 millions, Eastern Bengal and Assam 8.7 millions, and Sind 3.5 millions. In regard to mineral oil also, details are given in the appropriate part of the section relating to exports. Burma's predominance as a source of rice and of mineral oil for Indian consumption brings her total coasting exports to $31 \cdot 2$ per cent of the coasting exports of all British India in Indian merchandise. The coastal exports of jute bags from Calcutta increased in value from ¥181.1 lakhs ( $£ 1,227,000$ ) to $\mathrm{f190} 7$ lakhs ( $£ 1,271,000$ ), but in quantity they decreased from 73.5 to $72 \cdot 8$ million bags. Of these Burma took 37.9 million bags, Bombay 18.8 millions, Madras 5.4 millions, and Sind 8.9 millions. All but Burma also took large quantities ly rail. The expansion in the coastal shipments of Bengal coal was one of 133,000 tons, bringing the total to $2,210,000$ tons. Shipments of Indian-made cotton piecegoods from the Bombay Presidency to other parts of India had in the previous year amounted to 256 million yards with a value of $\mathrm{R}+17 \cdot 2$ lakhs ( $£ 2,781,000$ ) ; but in spite of the country's prosperity and the great activity of the weaving mills, the quantity available for shipment declined to 2.477 million yards with a value of ft 49 liakls ( $£ 2,793,000$ ), the decrease being 8.3 million yards or 3.2 per cent in quantity with an increase of $\mathrm{Zl} \cdot 8$ lakhs $(£ 12,000)$ or 4 per cent in value. The increase in average value per unit is apparently only 3.9 per cent and this suggests that high prices had relatively intensified the demand for the cheaper grades. The following figures show the distribution of the shipments from Bombay in the last two years, and indicate that Madras was the only province that increased her demand :-

Coastal shipments of raw cotton from Bombay, which in the previous year stood at $176,5 \cdot 44$ ewts and $\mathrm{P} .49 \cdot 28$ lakhs ( $£ 325,000$ ), increased to 181,322 cwts and $\mp 70 \cdot 66$ lakls ( $£ 471,000$ ) in 1910-11, Bengal taking 48,990 crits in place of $33,830 \mathrm{cwts}$, while Kathiawar lowered its demand from 67,410 to $33,595 \mathrm{cwts}$. Sind shipped more than in 1909-10, almost the whole of its 465,777 ewts going to Bombay, less some 1,600 owts for Bengal.

## RAILWAY GOODS TRAFFIC

This is a raluable indicator of the volumo of total trade. The following statement reflects the shortare of export crops and the contraction in import trade. It shows (in thousands of unit) the ton-milenge of goods traffic on the principal railwass of India during the last fire years:

The figures below show the number of gools wagons at work in India at the close of each of the last five years and the alditions made in each year :

The total increase in the periol of four years is therefore $20 \cdot 1$ pre cent. Comparison of this percentage with the inerease of $20 \cdots$ per cent in the ton mileage shows a sinultaneous decrease in the tom miles per wagon from $s(6,501$ to 80,727 , the decline being one of $7 \cdot 1$ per cent.

Reference may be made to the article dealing with imports of Railway Matcrial.

## PRICES

The following statement shows the conve of Indian Rupee Prices of thirtynine commodities imported into, exportel from, and comstmed in India, during the last five years as compared with the standrd yan 1573 . The figures represent simple percentages of the averares prices so far as available, obtained by expressing the price of each article in exch yur ats a pereentar, of the price for the year 1573, which latter price is represented by 100 .

Certain articles that appear to have something in common have been grouped together with the following result :-

|  | 1:nm; | $1 \leq H 7$ | 1948 | $\operatorname{lin} x)$ | 1910 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1. Food grains : - wheat, rice, jawar, bajra, barley, gram, and ragi | 1715 | 181 | $23 ;$ | 193 | 1:55 |
| 2. Other food :-ghi and salt | 82 | 96 | 04 | 81 | 00 |
| 3. Sugar and tea . | 68 | 78 | (*) | 78 | 85 |
| (1-3) Food | 133 | 1.1 | 11;7 | 1.15 | 127 |
| 4. Minerals :- Iron, colprer, spoiter, aud coal | 110 | 136 | 135 | 121 | 123 |
| 5. Textilea :-Cotun, silk, jute and wool | 123 | 127 | 118 | 9 | 118 |
| 6. Sundry materials:- Hiders and aking, indi $5^{\circ}$, kerosene, lac, saltfetre, and sceds | 130 | 1.43 | 138 | 127 | 131 |
| $(1-6)$ Materials | 127 | 135 | 121; | 11.6 | 120 |
| (i-fj) General average . . . | 129 | 137 | 139 | 12.4 | 123 |

The general average is drawn from all thirty-nine descriptions, which are treated as of equal value, and is the simple arithmetical mean as shown above.

[^0]:    - Inclusive of remittances of the Gold Reserve Fund

[^1]:    - Includes the production of two mills outside British territory which made no returns in previous years.

[^2]:    * Ircilusive of rimitan.ces to the Cold Reserve Fund

[^3]:    - The figures published in the review for the year $\mathbf{1 9 0 3 - 0 4}$ against silver were: imports $901{ }^{\circ} 3$ lakhs and exports $217 \times 7$ lakhs, but these were subsequently corrected to the figures shown above by transfercing large sums from the Government account to the record of private transactions and revaluing at bullion rates exports of Straits dollaes coined at the Bombay mint

[^4]:    - Imperfect, the production of two mills outside British India being excluded

[^5]:    - Includes the production of two mills outside Britisb territory which made no returne in nrauin...........

[^6]:    * Inclusive of drawings on account of the Gold Reserve Fund

[^7]:    - Inclusive of drawings on account of the Gold Reserve Fund

[^8]:    Footwotr.-All figures relating to ngrioulture and commerce in India are subject to violent fluctuations from year to year, nocording as the rainfall is good or bud; and the period to which these tables relate inchudes novernl yeurs of groat scaroity. From a curve hat reproduces very violent fluctuations, it is mose difficalt to derive nimy senso of the general tenclency to be chaciosed. For this reasen of each group of tive yeurs. Tho relating to Indinn trule and agriculture shou. onlinary method is to set down the average for the fyo year the vear for which it is set lown, and four-fifth or
