# STATISTICS OF BRITISH INDIA

## PART I.—INDUSTRIAL

### CONTENTS

#### INTRODUCTION

SUMMARY TABLE .....	PAGES
---------------------	-------

1 and 2

#### FACTORIES AND OTHER LARGE INDUSTRIES

SUMMARY of CONTENTS and EXPLANATORY MEMORANDUM .....	3 and 4
--	---------

##### No. of TABLE

1. ABSTRACT STATEMENT of INDUSTRIES in BRITISH INDIA and the LABOUR EMPLOYED in them, from 1905 to 1909—

NUMBER of FACTORIES (OWNED by GOVERNMENT and LOCAL BODIES) whether under the INDIAN FACTORIES ACT or not .....

5

2-A. NUMBER of INDUSTRIES in each PROVINCE in BRITISH INDIA from 1905 to 1909—

NUMBER of FACTORIES (OWNED and WORKED by COMPANIES or INDIVIDUALS) —

(I) WORKED by MECHANICAL POWER .....

6 to 9

(II) NOT WORKED by MECHANICAL POWER .....

10 to 13

2-B. NUMBER of PERSONS EMPLOYED in the INDUSTRIES in each PROVINCE in BRITISH INDIA, from 1905 to 1909—

NUMBER of FACTORIES (OWNED and WORKED by COMPANIES or INDIVIDUALS) —

(I) WORKED by MECHANICAL POWER .....

14 to 17

(II) NOT WORKED by MECHANICAL POWER .....

18 to 21

3. NUMBER of FACTORIES in BRITISH INDIA INSPECTED, average daily NUMBER of OPERATIVES EMPLOYED, THE MANNER in which FACTORIES were WORKED, and the HOLIDAYS given in them from 1905 to 1909—

BRITISH INDIA .....

22

BURMA .....

23

EASTERN BENGAL AND ASSAM .....

ib

BENGAL .....

24

UNITED PROVINCES of AGRA AND OUDH .....

ib

AJMER-MERWARA .....

25

PANJAB .....

ib

NORTH-WEST FRONTIER PROVINCE .....

26

BOMBAY .....

ib

CENTRAL PROVINCES and BERAR .....

27

MADRAS .....

ib

4. NUMBER of ACCIDENTS in FACTORIES from 1905 to 1909 .....

28

5. NUMBER of PERSONS CONVICTED in respect of OFFENCES against the FACTORIES ACT, from 1905 to 1909 .....

29

#### BREWERIES

SUMMARY of CONTENTS and EXPLANATORY MEMORANDUM .....	30
--	----

##### No. of TABLE

1 STATEMENT of the PROGRESS of the BREWING INDUSTRY, from 1877 to 1909; and detailed STATEMENT of the PRODUCTION of BEER and the number of persons employed in each brewery in 1907, 1908 and 1909 .....

31

#### COTTON MILLS

SUMMARY of CONTENTS and EXPLANATORY MEMORANDUM .....	32 to 34
--	----------

##### No. of TABLE

1. ABSTRACT STATEMENT of the PROGRESS of the COTTON SPINNING and WEAVING INDUSTRY in BRITISH INDIA, from 1878-79 to 1909-10 .....

35

## FACTORIES AND OTHER LARGE INDUSTRIES

[TABLES Nos. 1 TO 5, PAGES 5 TO 29]

*[Compiled from the provincial annual reports on the working of the Indian Factories Act furnished by Local Governments and Administrations and special returns of large industries. The term "Factory" means, according to the Indian Factories Act, any premises (other than indigo-factories or premises situated on, and used solely for the purposes of, a tea or coffee plantation) wherein is carried on, for not less than four months in the whole in any one year, any process for, or incidental to, making, altering, repairing, ornamenting, finishing or otherwise adapting for use, transport, or sale any article or part of an article; and wherein steam, water or other mechanical power is used in aid of any such process; and wherein not less than fifty persons are on any day simultaneously employed in any manual labour in, or incidental to, any such process.]*

*N.B.—Statistics of the industries in the Native States which have hitherto been incorporated in this section have been excluded this year in accordance with the decision of the Government of India that the volumes constituting the Statistics of British India should be restricted to a presentation of statistics relating to British India only.*

The tables in this section in the years prior to 1906 were included in two different sections, namely, Factories and Industrial Labour. The tables relating to Industrial Labour appeared, however, to overlap to a certain extent with those given in tables 1 and 2 under the head "Factories" and they have, consequently, been combined. The other tables concerning Factories, namely, tables 3, 4 and 5, remain unchanged. Tables Nos. 1 and 2 present a classified abstract of the different industries in India and the labour employed in them in each year from 1905 to 1909. Table No. 1 contains factories owned by Government and local bodies, whether they are worked by mechanical power or not, while table No. 2 contains not only factories owned by companies or individuals which come within the scope of the Indian Factories Act, but also all works, employing an average daily number of 50 persons or more, where no mechanical power is used. The factories worked by mechanical power and those not so worked are shown separately.

From the reports on the working of the Indian Factories Act it appears that in 1909 there were within the scope of the Act 95 factories belonging to the State and to local bodies, such as municipalities and port trusts. Among these there were 15 printing presses, 17 railway workshops, 9 canal and engineering workshops, and a considerable number of military arsenals and factories. Besides these 95 factories there were 22 more concerns which did not come within the operation of the Indian Factories Act.

Factories worked by mechanical power and owned by companies or individuals numbered 2,449 concerns as against 2,415 in 1908, the more important of these being :

Cotton gins and presses . . . . .	1,105
Cotton mills . . . . .	222
Rice mills . . . . .	210
Saw mills . . . . .	102
Jute presses . . . . .	146
Jute mills . . . . .	59
Iron and brass works and foundries . . . . .	82
Railway workshops . . . . .	58
Flour mills . . . . .	34

These represent about 82 per cent of the total number of factories worked by mechanical power. The factories created by the cotton industry exist principally in Bombay and those relating to the jute industry in Bengal and Eastern Bengal and Assam; while rice mills and saw mills are naturally mostly in Burma. Cotton gins and presses increased from 732 in 1905 to 900 in 1906, 976 in 1907, 1,081 in 1908, and 1,105 in 1909, the greater part of the increase occurring in the Central Provinces including Berar where the number of cotton presses rose from 240 in 1905 to 326 in 1906. This increase does not, however, represent any sudden outburst of industrial activity but is due to the registration of numerous small gins and presses in the Berar Division which had previously not been brought under the operation of the Act. Of the other factories there are none largely assigned to any particular industry.

There were also 53 factories not worked by mechanical power, including 26 jute presses and 9 printing presses.

The daily average number of persons employed in the factories worked by mechanical power and those not so worked was 925,379 against 898,469 in 1907 and 907,049 in 1908; of which the number employed in the factories under the Act was 785,910 as against 729,778 and 766,150 in 1907 and 1908, respectively, viz. :—

Adults { males . . . . .	619,015
females . . . . .	114,455
Children { males . . . . .	43,454
females . . . . .	8,986

Of this total 309,680 (being 39 per cent) were employed in factories in Bengal and 227,359 being 29 per cent in Bombay, these two provinces employing over two-thirds of all the factory labour of India.

**FACTORIES AND OTHER LARGE INDUSTRIES—*continued***

- There were 4,036 accidents reported in 1909, 123 of them being attended with fatal results. Of these 52 occurred in Bengal and 30 in Bombay. Bengal, also, has the largest number of serious accidents, namely, 386 against 178 in Bombay, 125 in Burma, 68 in the Central Provinces and Berar, and 48 in the United Provinces. Much the largest number of minor accidents—1,395 out of a total of 3,016—occurred in Bombay, where cotton mills and presses predominate.

There were 58 convictions in respect of offences against the Factories Act in 1909; 20 for the employment of persons in contravention of the Act, 18 for neglect to fence machinery, 2 for neglect of ventilation and cleanliness, 13 for neglect to send notices or returns, and 5 for neglect to keep the prescribed register of children.

## BREWERIES

(TABLE I, PAGE 31)

*(Compiled from special official returns)*

There are 24 breweries in India, of which one did not work. Seventeen are private property and seven are owned by six joint-stock companies with a nominal capital of Rs. 29,06,000, of which Rs. 24,35,200 was paid up at the end of 1909-10. Twelve of the breweries are located at stations in the Himalayas from Murree to Darjeeling. The largest brewery is the one at Murree, the Bangalore, Kasauli, and Poona breweries standing next in the order shown.

Production was largest in 1902, since when it has tended to decline, while imports of foreign beer have increased proportionately; in the year 1907, the process was reversed, internal production having advanced slightly and imports decreased, but in 1908 the production again receded. In 1909, both production and imports have further contracted.

The quantity in gallons of beer brewed in India and imported compare as follows:—

	Brewed in India	Imported
1905	5,994,955	4,626,608
1906	5,599,930	5,153,751
1907	5,610,121	4,805,640
1908	5,185,619	4,384,938
1909	4,824,050	4,286,811

A substantial quantity of beer brewed in India is consumed by the British troops in India. In 1907 the Army Commissariat purchased some 38 per cent of the total production and the average purchases in the five years 1903—1907 amounted to 2,633,616 gallons yearly. From the 1st January 1908 the contracts with Indian breweries for the supply of malt liquor to British troops have been discontinued, each British regiment being left free to make its own arrangements to obtain the necessary supply; as a consequence, the figures of Army consumption are no longer readily available.

## COTTON MILLS

[TABLES 1 TO 7, PAGES 35 TO 49 ]

(Compiled from special official returns which, as regards the production of yarn and woven goods, are based on returns made under the Cotton Duties Act, II of 1896, by the millowners)

*N.B.*—Statistics relating to cotton mills in the Native States which have hitherto been incorporated in this section have been excluded this year in accordance with the decision of the Government of India that the volumes constituting the Statistics of British India should be restricted to a presentation of statistics relating to British India only.

The Indian cotton industry dates as far back as 1851, when the first mill was started, but complete statistics were not reported until 1879-80. The following statement shows quinquennial averages from that year to 1909-10, and the figures in brackets represent the variations for each period, the average of the quinquennium from 1879-80 to 1883-84 being taken as 100: (Sterling capital has been converted into rupees at the average rate of exchange of the period)—

	No. of mills at work	Nominal Capital (in lakhs of Rs.) as far as reported	Number (in thousands) of		
			Persons employed	Looms	Spindles
1879-80 to 1883-84 . . . . .	60 (100)	642.2 (100)	49.4 (100)	13.8 (100)	1564.9 (100)
1884-85 to 1888-89 . . . . .	88 (147)	849.5 (132)	72.1 (146)	16.8 (122)	1997.9 (128)
1889-90 to 1893-94 . . . . .	116 (193)	1069.7 (166)	104.3 (211)	20.9 (151)	3069.5 (196)
1894-95 to 1898-99 . . . . .	143 (238)	1400.2 (218)	137.6 (278)	33.8 (245)	3829.9 (245)
1899-1900 to 1903-04 . . . . .	180 (300)	1574.6 (242)	159 (322)	38.8 (281)	4751.9 (303)
1904-05 to 1908-09 . . . . .	198 (330)	1726.8 (269)	199.9 (405)	55.8 (404)	5237.7 (334)
1909-10 . . . . .	216 (358)	1897.2 (295)	215.4 (436)	74.6 (541)	5773.8 (369)

It will be seen that the number of persons employed and of looms and spindles in operation have increased to a larger extent than the amount of nominal capital, which, however, has not been reported from many private mills.

At the end of 1909-10 there were in British India 216 cotton mills, containing 74,585 looms and 5,773,824 spindles. Of this number, 95 were exclusively spinning mills; 16 were exclusively weaving mills; and in 105 both spinning and weaving were carried on. They employed a daily average number of 215,419 persons: 145,264 men, 37,245 women, 16,583 young persons, and 16,327 children. Of the 211 mills shown against 1908-09, in Table No. 1, one with 317 looms and 19,051 spindles was destroyed by fire in the course of that year. Six new mills with 82,888 spindles were started during 1909-10, thus raising the grand total to 216.

The nominal capital of the mills, as far as this information has been furnished, is R18,97,22,553, including the sterling capital of £200,000, the whole of which is paid up; of the rupee capital, R16,76,03,972 is paid up. There are, further, rupee debentures to the value of R1,78,30,691 issued by 35 companies. Twelve mills also out of the 34 worked by private proprietors have not reported the capital employed by them, and for these about 16 millions of rupees would seem to be a fair estimate. The aggregate of the nominal capital and debentures is thus nearly 207.5 millions of rupees, and of this 186.5 millions of rupees or £12.43 millions is paid up.

The mills are located as follows:

	Number	Nominal Capital (Rs)		Number	Nominal Capital (Rs)
Bombay, city . . . . .	83	R8,04,73,080	United Provinces—contd.		
" Ahmedabad . . . . .	53	2,60,06,575	Mirzapur . . . . .	1	10,00,000
" elsewhere . . . . .	26	1,82,00,750	Lucknow . . . . .	1	3,50,000
Bengal, all near Calcutta . . . . .	12	{ 1,22,75,000 } { £200,000 }	Moradabad . . . . .	1	5,00,000
Madras, city . . . . .	4	29,50,500	Panjab : Delhi . . . . .	4	25,50,000
" elsewhere . . . . .	7	62,90,133	" Lahore . . . . .	2	18,40,000
United Provinces of Agra and Oudh			" Amritsar . . . . .	1	7,00,000
Cawnpore . . . . .	4	78,00,000	Central Provinces : Nagpur . . . . .	2	76,87,500
Agra . . . . .	4	38,00,000	" elsewhere . . . . .	4	41,42,015
Aligarh . . . . .	2	16,17,000	Berar : Badnera . . . . .	1	5,50,000
			" Akola . . . . .	1	7,50,000
			Ajmer-Merwara . . . . .	2	13,40,000

The Bombay Presidency possesses 75 per cent of the mills, 74 per cent of the spindles, and 84 per cent of the looms.

COTTON MILLS—*continued*

The total production of yarn in the mills in British India, as far as reported, and the figures of exports, are as follows (lbs) :

	Nos. 1 to 25	Above No. 25	Total Production	Total Exports
Average, 1896-97 to 1900-01 . . . . .	423,906,808	20,082,852	443,989,750	198,002,463
, 1901-02 to 1905-06 . . . . .	537,379,018	39,935,969	577,314,987	270,818,888
In the year 1906-07 . . . . .	581,378,006	40,175,309	620,553,315	250,618,971
, 1907-08 . . . . .	556,615,699	57,156,377	613,772,076	223,274,006
, 1908-09 . . . . .	571,959,196	57,928,885	629,886,081	242,764,993
, 1909-10 . . . . .	542,863,305	50,343,550	593,206,855	233,818,800

In the last decade the annual outturn of yarn has exceeded 500,000,000 lbs in every year except 1900-01 when famine in India and the collapse of the Chinese markets restricted production. In the following year there was a rapid recovery, but the years 1902-03 to 1904-05 were marked by stagnation. In 1905-06 the production, stimulated by the cheapening of raw material and generally favourable conditions in the Chinese market, reached 655 million lbs—the highest figure touched. The general improvement was fairly well sustained in each of the next three years, the outturn having exceeded 600 million lbs. But the results of the working in 1909-10 reveal a contraction of some  $36\frac{1}{2}$  million lbs as compared with the production of the preceding year.

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 74 per cent of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras each produced nearly 7 per cent, while Bengal and the Central Provinces produced nearly 6 and 5 per cent respectively. Elsewhere the production is as yet very limited.

There was a continued increase in the production of yarn of counts higher than No. 25, till 1908-09, but in 1909-10, the production decreased from 58 to 50 million lbs, which represents about 8 per cent of the whole production. In Bengal, the United Provinces, and the Panjab the mills spin hardly any yarn above No. 25, yarn of that count and lower numbers representing some 99 per cent of the whole production. In Bombay, however, the spinning of the higher counts (above No. 25) is about 10 per cent of the whole, and in Madras it is about 6 per cent, and in the Central Provinces 4 per cent. Using Egyptian and other imported cotton, the Bombay mills are now spinning in appreciable quantity yarns of No. 40 and upwards. The production of the finer yarns—Nos. 31 to 40—decreased last year to 15·6 million pounds from 20 million lbs in 1908-09.

It is interesting to note that the imports of yarn from the United Kingdom and other places are about 6 per cent of the total production in British India. The figures are (lbs) :

	Nos. 1 to 25	Above No. 25	Total Imports
Average, 1896-97 to 1900-01 . . . . .	5,654,194	38,315,540	43,969,734
, 1901-02 to 1905-06 . . . . .	3,571,768	29,095,637	32,667,405
In the year 1906-07 . . . . .	2,538,580	32,070,882	34,609,463
, 1907-08 . . . . .	2,380,441	31,426,613	33,807,054
, 1908-09 . . . . .	4,095,323	34,248,186	38,343,509
, 1909-10 . . . . .	2,425,118	33,826,279	36,251,397

The production of woven goods in the mills in British India, as far as reported, has been as follows (lbs) :

	Grey	Other kinds	Total
Average, 1896-97 to 1900-01 . . . . .	80,557,484	11,295,460	91,852,949
, 1901-02 to 1905-06 . . . . .	109,884,271	25,009,554	134,893,825
In the year 1906-07 . . . . .	129,599,268	29,402,197	159,001,465
, 1907-08 . . . . .	147,598,175	33,671,044	181,269,219
, 1908-09 . . . . .	147,243,046	36,920,560	184,163,606
, 1909-10 . . . . .	167,244,239	48,116,365	215,360,604

### COTTON MILLS—concluded

The weaving mills were less affected than the spinning mills by the high price of raw cotton in 1903-04, for there was a considerable advance in the price of cloth, both the home and the foreign demand being good, and in the following year these high prices were still realised when the prices of raw cotton had fallen to normal levels, in consequence the production increased by about 12½ per cent in 1903-04, and by 15·8 per cent in 1904-05. In the two following years the rate of increase was less rapid, but in 1907-08, 1908-09, and 1909-10 the total output reached 181, 184 and 215 million lbs, an advance of 14·2, and 16·8 per cent respectively.

Weaving is concentrated in the Bombay mills to an even greater degree than spinning, the mills of that province producing about 85 per cent of the whole quantity woven in British India. The United Provinces and the Central Provinces produce about 5 per cent each, and Madras about 4 per cent. The goods woven are mainly grey (unbleached) goods, these representing about 78 per cent of the whole production.

The most important kinds of grey goods woven in the mills are specified below (in lbs.) :

	Average 1896-97 to 1900-01	Average 1901-02 to 1905-06	1906-07	1907-08	1908-09	1909-10
Shirtings and longcloths	26,775,437	38,611,145	41,521,058	46,484,095	47,401,198	54,964,685
Dhutis	17,430,468	25,448,365	34,638,079	45,977,971	44,003,687	46,986,827
T-cloths, domestics, and sheetings.	17,619,727	19,376,545	22,637,974	23,111,493	23,539,216	27,820,977
Chadars	9,059,381	13,628,457	15,479,529	14,470,120	12,836,749	17,144,741

The proportion of woven goods other than grey goods was highest in Madras, where last year it was about 59 per cent. In the Central Provinces the proportion was about 30 per cent and in Bombay nearly 22 per cent.

Figures of imports are not readily comparable with figures of production, because the former are recorded in yards and the latter up to the year 1906 have been recorded in lbs, with the exception of grey goods : the figures of grey and bleached goods are as follows (in millions of yards) :

	Imported	Produced	Percentage of production to importation
Average 1896-97 to 1900-01	1654·21	319·55	19·3
Average 1901-02 to 1905-06	1741·6	457·38	26·3
In the year 1906-07	1793·45	571·82	31·9
" 1907-08	1987·31	650·05	32·7
" 1908-09	1520·03	654·99	43·1
" 1909-10	1729·87	725·74	41·9

The yardage of coloured piece goods from April 1906 was (in millions of yards) :

	Imported	Produced	Percentage of production to importation
1906-07	524·75	110·03	21
1907-08	544·41	128·13	23·5
1908-09	472·48	138·17	29·2
1909-10	462·83	183·92	39·7

## COTTON MILLS

## No. 1

*ABSTRACT STATEMENT of the PROGRESS of the COTTON SPINNING and WEAVING INDUSTRY in  
BRITISH INDIA since the year 1878-79*

	Number of mills in existence	Capital (as far as known) R and £	NUMBER OF		
			Persons employed	Looms	Spindles

## JUTE MILLS

(TABLES 1 AND 2, PAGES 51 TO 53)

*(Compiled from special returns received from Local Governments)*

The record of the jute industry, as disclosed by these tables, is one of uninterrupted progress. The following statement shews quinquennial averages from the earliest year for which complete information is available ; and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100. It will be seen that the number of looms and spindles in operation have increased to a very much larger extent than either the number of mills at work or the amount of nominal capital employed.

	No. of mills at work	Nominal Capital (in lakhs of Rs.)	Persons employed	Number (in thousands) of	
				Looms	Spindles
1879-80 to 1883-84	21 (100)	276.7 (100)	38.8 (100)	5.5 (100)	88 (100)
1884-85 to 1888-89	24 (114)	341.6 (126)	52.7 (136)	7 (127)	138.4 (157)
1889-90 to 1893-94	26 (124)	402.6 (149)	64.3 (166)	8.3 (151)	172.6 (196)
1894-95 to 1898-99	31 (148)	522.1 (193)	86.7 (223)	11.7 (213)	244.8 (278)
1899-1900 to 1903-04	36 (171)	680 (251)	114.2 (294)	16.2 (295)	334.6 (380)
1904-05 to 1908-09	46 (219)	960 (355)	165 (425)	24.8 (451)	510.5 (580)
1909-10	60 (286)	1,151 (425)	204.1 (526)	31.4 (571)	645.9 (734)

The production of the mills has increased to a still greater extent. The following figures shew the exports of jute manufactures and the declared values for the quinquennial periods. The combined value of gunny bags and gunny cloth exported by sea in 1909-10 is nearly fourteen times as great as the average value of the exports in the period 1879-80 to 1883-84.

	Jute manufactures		
	Gunny bags in millions of number	Gunny cloths in millions of yards	Value in lakhs of Rs.
1879-80 to 1883-84	54.9 (100)	4.4 (100)	124.9 (100)
1884-85 to 1888-89	77 (140)	15.4 (350)	162.9 (130)
1889-90 to 1893-94	111.5 (203)	41 (932)	289.3 (232)
1894-95 to 1898-99	171.2 (312)	182 (4,136)	518 (415)
1899-1900 to 1903-04	206.5 (376)	427.2 (9,709)	826.5 (662)
1904-05 to 1908-09	257.8 (469)	698 (15,864)	1,442.7 (1,154)
1909-10	364.4 (664)	940.1 (21,366)	1,709.6 (1,369)

The exports of raw jute have also been marked by increases from year to year though the improvement has not been so rapid as in the case of manufactures. There was, however, a slight decrease in the exports for 1909-10 as compared with the figures for the preceding quinquennial period :—

	Jute, raw, in millions of cwt.
1879-80 to 1883-84	7.5 (100)
1884-85 to 1888-89	8.9 (119)
1889-90 to 1893-94	10 (133)
1894-95 to 1898-99	12.3 (164)
1899-1900 to 1903-04	12.7 (169)
1904-05 to 1908-09	15.09 (201)
1909-10	14.6 (195)

The price of raw jute reached its highest point in 1906-07, the rate being Rs. 65 per bale; in 1907-08 it dropped to Rs. 42 per bale, and the fall was accentuated in 1908-09 and 1909-10 the price having declined to Rs. 36.4 and Rs. 31 per bale respectively. The following are the quinquennial average prices per bale (400 pounds) of ordinary jute calculated from the price current published by the Bengal Chamber of Commerce :—

	Price of jute ordinary, per bale of 400 lbs.		
	Rs	a.	p.
1879-80 to 1883-84	23	8	0 (100)
1884-85 to 1888-89	23	3	2 (99)
1889-90 to 1893-94	32	6	5 (138)
1894-95 to 1898-99	30	12	0 (131)
1899-1900 to 1903-04	32	1	7 (137)
1904-05 to 1908-09	44	13	6 (191)
1909-10	3	0	0 (132)

The average prices of gunny cloth have been as follows :—

	Price of Hessian cloth 10 $\frac{1}{2}$ oz. 40" per 100 yds.		
	Rs	a.	p.
1879-80 to 1883-84	10	7	11 (100)
1884-85 to 1888-89	8	0	7 (77)
1889-90 to 1893-94	10	6	6 (99)
1894-95 to 1898-99	9	11	8 (93)
1899-1900 to 1903-04	10	2	10 (97)
1904-05 to 1908-09	11	14	1 (112)
1909-10	9	3	6 (88)

## JUTE MILLS

## PAPER MILLS

[TABLES 1 AND 2, PAGES 55 AND 56 ]

(Compiled from special official returns)

*N.B.*—Statistics of the paper mill at Gwalior which have hitherto been incorporated in this section have been excluded this year in accordance with the decision of the Government of India that the volumes constituting the *Statistics of British India* should be restricted to a presentation of statistics relating to British India only.

The number of paper mills at work in British India in 1909 was eight, three in Bengal, four in the Bombay Presidency, and one in the United Provinces. The estimated capital of these mills was about R50 lakhs. The value of the output reported rose from R74 lakhs in 1908 to R77·5 lakhs in 1909, the largest production in any single year on record.

The competition of cheap wood-pulp paper imported from Europe has checked the development of paper making by older methods in India, and the most successful mills are those which have Government contracts for the supply of cheap foolscap, blotting paper, notepaper, and envelopes. In 1905 the value of the paper manufactured in India and that imported were nearly R52 lakhs and R70 lakhs respectively. In 1909 the corresponding figures were R77·5 and R100 lakhs, the value of the imports having increased in the meantime by 43 per cent, while the internal production has increased by 49 per cent.

The values of country-made and imported paper during the last five years were as follows :

	Produced in Indian mills R	Imported R
1905	51,86,729	69,95,655
1906	62,70,088	77,59,290
1907	71,24,268	94,34,865
1908	74,26,057	94,25,025
1909	77,53,327	1,00,02,675

## WOOLLEN MILLS

[TABLES 1 AND 2, PAGES 58 AND 59]

(Compiled from special official returns)

**N.B.**—Statistics of the Woollen Mills in the Mysore State which have hitherto been incorporated in this section have been excluded this year in accordance with the decision of the Government of India that the volumes constituting the Statistics of British India should be restricted to a presentation of statistics relating to British India only.

Of the five woollen mills of British India, one went into liquidation at the beginning of 1908, and of the remaining four, three represent a paid-up capital of R36,50,000 (£243,333), while the capital of the fourth, a small private mill at Bombay, is not stated. Two of the mills, those at Cawnpore in the United Provinces, and at Dhariwal in the Panjab, have between them a paid-up capital of 30 lakhs (£200,000) or 82 per cent of the whole, and produce 89 per cent of the total outturn of the Indian mills. They weave cloth for the use of the army and police, and articles of superior quality generally, using for the high class goods Australian wool either pure or mixed with Indian wool.

There was a net increase during the year under review both in the number of looms and spindles. The year 1905 was a record year in respect of both the quantity and the value of the goods produced. In 1906 and 1907, owing to the high price of wool, there was a considerable shrinkage in production; a distinct recovery is revealed by the statistics for 1908, the figures surpassing even the record of 1905; and though no advance on those figures was made in 1909 still it may be noted that the output of the mills this year was larger than in any other preceding year.

The quantity of woollen goods imported into India is very much greater than the production of the Indian mills. Piece-goods and shawls from the United Kingdom and Germany make up the bulk of the imports. The values of country-made and imported woollen goods compare as follows:

	Produced in Indian mills	Imported
	R	R
1905	40,96,865	2,50,10,895
1906	33,73,252	2,00,08,545
1907	32,75,260	2,62,24,800
1908	42,85,988	3,11,74,770
1909	39,99,129	2,01,84,915

There are in various places factories for the weaving of carpets and rugs, and of *pattu* and *pashmina*, but though these industries are in the aggregate extensive, they are individually small, and weaving is done in hand-looms.

The exports of woollen goods from India consist almost entirely of carpets and rugs, of which about three-fourths go to the United Kingdom and the greater part of the remainder to the United States. The value of Indian carpets and rugs exported during the last five calendar years is as follows:

	R		R
1905	17,87,340	1908	23,13,195
1906	20,62,845	1909	20,47,690
1907	23,76,840

## MINERAL PRODUCTION

[TABLES 1 TO 4, PAGES 63 TO 68]

N.B.—Statistics of the Mineral Production in Native States (the Nizam's Territory, Mysore, Rajputana, the Central India), which have hitherto been incorporated in this section, have been excluded this year, in accordance with the decision of the Government of India, that the volumes constituting the *Statistics of British India* should be restricted to a presentation of statistics relating to British India only.

The minerals for which figures are recorded in these tables are those comprised in Group I of the minerals dealt with in the Records of the Geological Survey of India, that is, those minerals for which approximately accurate and full returns are obtainable.

*Salt*.—Statistics are supplied annually by all Local Governments and Administrations. Full details of the production and consumption of salt and the administration of the Salt revenue are contained in Part IV (b)—Finance and Revenue—of “Statistics of British India”.

*Coal*.—The figures are compiled chiefly from the Statutory returns of the output furnished to the Chief Inspector of Mines in India by the Managing Agents of mines regulated by the Indian Mines Act, VIII of 1901. Details regarding the coal mining industry in British India are given separately in section relating to Coal Mines (pages 69 to 93 of this part).

*Gold*.—The figures are supplied by the Director, Geological Survey. The Governments of the Panjab, the United Provinces, and Burma include the production of gold in their annual statements of mineral production.

The only mine in British India from which gold was produced in 1909 was the one in the Dharwar district of Bombay, the output being 5,616 ounces valued at £21,331. In Madras, gold mining was carried on in the North Arcot district from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. Prospecting operations are now being carried out in the Anantapur district. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount has steadily increased year to year and reached 8,445 ounces in 1909. The small quantity of gold produced in the Panjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. The average earnings of the workers are very small, and the gold thus won is used locally for making jewellery.

*Petroleum*.—Returns of production are supplied by the Local Governments of Burma, Eastern Bengal and Assam, and the Panjab. Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java, and Borneo. The other area is on the west, and includes the Panjab and Baluchistan, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil fields are found in the Irrawaddy valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and in 1886, prior to the annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The output of the field rose to 10 million gallons in 1894, and to 40 million gallons in 1902. Since then progress has been more rapid and the output in 1909 was over 187 million gallons. The Yenangyat field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. For some years progress was slow, but in 1903 the production reached 22 million gallons. Since then the output has decreased and was only 6 million gallons in 1909. Singu now holds the second place among the oil fields of India. Petroleum was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons, but it dropped to 37 million gallons in 1909. Several of the islands off the Arakan coast are known to contain oil deposits, but their value is uncertain. 25,000 gallons were obtained from the Eastern Barongo Island near Akyab, and about 39,000 gallons from Ramri Island in the Kyaukpyu district during 1909. The existence of oil in Assam has been known for many years and an oil spring was struck near Makum in 1867. Nothing more, however, was done until 1883, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 3½ million gallons.

On the west, oil springs have been known for many years to exist in the Rawalpindi and other districts in the Panjab. The total output of the province in 1909 was 720 gallons only. In Baluchistan, geological conditions are adverse, and though some small oil springs have been discovered, attempts to develop them have not hitherto been successful.

The consumption of kerosene in India (excluding Burma) is rapidly increasing and has risen from 76 million gallons in 1898 to over 145 million gallons in 1909. The enormous increase in the output of the Burma oil fields has reversed the position held by foreign and Indian oil in the market. In 1908-09, however, the proportion of foreign oil consumed was a little higher than that of Burma oil as a result of a contraction in her shipments concurrently with a large increase in imports from foreign countries but in 1909-10 Burma oil regained its position. Taking the total consumption of 1898 as equal to 100, the following figures shew the increase of consumption in the last twelve years. The figures in italics shew for each year the percentage of the total oil consumed during the year supplied by Indian produce and imports of foreign oil, respectively:—

## MINERAL PRODUCTION—continued

	Production (a)		Coasting Imports from Burma	Net Imports from Foreign countries of foreign oil	Exports by sea of Indian kerosine to foreign countries (excluding Burma)	Supply available for con- sumption in India (excluding Burma)	Index Number of column 6, taking the figures of 1898-99 as 100	Percentage of Indian oil con- sumed	Percentage of Foreign oil con- sumed

**Chromite.**—The exploitation of the chromite deposits in Baluchistan, which were discovered by the Geological Survey of India in 1901, was begun in 1903. In 1906 the output amounted to 4,375 tons, in 1907 to 7,274 tons, valued at R1,45,485, in 1908 to 4,135 tons, valued at R82,700 and in 1909 to 4,325 tons, valued at R86,500. At present the ore is raised entirely for export.

**Diamonds.**—In 1909, 111 carats were obtained from Banaganpalli, Karnul district, Madras.

**Graphite.**—Attempts to raise the mineral in Madras have not passed beyond the prospecting stage.

**Iron-ore.**—The iron-ore raised in Bengal amounts to 88 per cent of the reported total for British India. Elsewhere in British India, namely, in the Central Provinces, Madras, Burma, and the Panjab, operations are carried on a very small scale for use in the small native furnaces. The value reported for the ore raised in Bengal works out to an average of R2·8 per ton. Elsewhere the ore is of richer quality and is raised at places distant from the railway and the ports. The reported values are therefore higher and an average value of R4 per ton has been adopted in the table since 1904 for all ore raised outside Bengal.

**Jadestone.**—The substance which passes as jadestone is mainly the mineral jadeite, which occurs in an altered igneous dyke intruded in serpentine in the Myitkyina district of Upper Burma. It is worked in an unadministered tract, and there are no reliable figures of production. The figures given in the tables are those of the exports by sea from Rangoon, together with the exports overland to China.

**Magnesite.**—It is worked only in the Chalk Hills near Salem in the Madras Presidency.

**Manganese ore.**—This industry commenced some eighteen years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. Since 1904, when the total output was 138,626 tons, the progress of the industry has been remarkable owing to the high prices prevailing. In 1905 production reached 217,176 tons, the following year it was more than doubled (475,110 tons), and in 1907 the figures again rose to 753,241 tons. In 1909, on account of the fall of prices the output fell to the still very high total of 592,500 tons. The ore raised in the Central Provinces is of a very high grade, ranging from 50 to 54 per cent of the metal, and in consequence of its high quality is able to pay the heavy tax of freight over 500 miles of railway, besides the shipment charges to Europe and America, for the whole of the ore is exported to be used principally in steel manufacture in the United Kingdom, Germany, and the United States.

The largest proportion of ore is raised in the Nagpur and the Balaghat districts, the Bhandara district ranking next. Mining operations are also in progress in the Chhindwara district, in the Panch Mahals of Bombay, and the Vizagapatam district in Madras. The fall in prices in the latter part of 1907 produced by 1909 an almost complete cessation of mining for lower grades of ore at mines far removed from railways. Owing to an excess of production over exports the stocks on the mines at the end of 1908 stood at the high total of nearly 300,000 tons. The total value of each year's production of Indian manganese ore has been arrived at by taking the export value per ton in that particular year. The whole of this was not realised in 1907, 1908, and 1909.

### MINERAL PRODUCTION—*concluded*

owing to actual exports being much less than the production. It is expected to be realised in succeeding years as the stocks are reduced.

*Mica*.—The chief centres of production are the Nellore district in Madras, and the Hazaribagh and Gaya districts of Bengal. Prospecting has been carried on in various districts of Madras, the Central Provinces, Upper Burma, and Assam. The quantity of mica produced in 1906 (46,780 cwts) showed a very large advance on the average of the preceding five years (21,000 cwts). In 1908 it was 47,309 cwts, but in 1909 it fell to 31,032 cwts.

*Rubies*.—The figures in the tables represent the quantity and value of the rubies raised by the Burma Ruby Mines, Ltd., in the Ruby Mines district of Upper Burma. There are no statistics available of the quantity and value of rubies raised by Indian miners in the district. Rubies are also found in the Mandalay and Myitkyina districts, but the production is on a very small scale. The large decrease in output and value in 1908 was due to a slump in the ruby market, but there was a slight recovery in value in 1909.

*Salt-petre (Nitrate of Potash)*.—This article, which is largely produced for export, was in former years of much greater importance than now, the diminished demand for gunpowder and for the preservation of food, with the competition of the nitrates, having operated to prevent an expansion of the exports. It is most largely produced in Bihar, whence the article is sent to Calcutta for export after refinement. The production of refined salt-petre in 1908-09 was 457,889 cwts but it fell to 369,273 cwts in 1909-10.

*Tin-ore*.—Tin-washing is carried on in the Tenasserim Peninsula, chiefly by Chinese immigrants in an uncertain and unsystematic way.

---

## MINERAL PRODUCTION

1908 . . . . .	215,513	6,60,627	457,889	58,81,012	1,908	1,65,230
1909 . . . . .	268,304	8,79,731	369,273	45,69,755	1,672	1,44,681

(a) These figures represent exports in each official year

(b) At R4 per ton (value at the pit's mouth)

(c) The figures previous to 1900 represent exports in each official year

(d) The figures from 1901 relate to official years. The figures of value from that year have been calculated on the wholesale price of saltpetre at Calcutta.

## COAL MINES

[ TABLES 1 TO 13, PAGES 75 TO 93 ]

*(Compiled chiefly from the statutory returns of the output and of the labour employed furnished to the Chief Inspector of Mines in India by the Managing Agents of Mines regulated by the Indian Mines Act, VIII of 1901)*

*N.B.*—Statistics of the coal mines in Native States (Rajputana, Central India, and Hyderabad), which have hitherto been incorporated in this section, have been excluded this year, in accordance with the decision of the Government of India, that the volumes constituting the *Statistics of British India* should be restricted to a presentation of statistics relating to British India only.

## PRODUCTION

Table No. 1 shows the quantity of coal produced in each province in British India in each year from 1878 to 1909. In 1878 the total amounted to 1,015,210 tons. In 1908 the output was 12,149,020 tons or about 12 times as much but the progressive record of twenty-four successive years was broken in 1909 when the production was reduced to 11,294,227 tons, though it exceeded the output of 1907 by some 768,000 tons. Some further deduction should perhaps be made if the amount, which actually came into sight commercially, is to be arrived at correctly, for the value of considerable quantities of second class coal for which there has been practically no market during the past two years has had to be written off altogether in the books of the companies concerned.

In 1878 the only fields worked were the Raniganj and Giridih fields in Bengal and the Mohpani field and the Warora mine (shut down in 1906) in the Central Provinces. The fields which have been worked in the quinquennium ending 1909 are the following: they have been classified according as they belong geologically to the Gondwana system of strata or to tertiary (or cretaceous) beds:—

<i>Gondwana Coal Fields</i>	<i>Tertiary Coal Fields</i>
<b>BENGAL—</b>	<b>BALUCHISTAN—</b>
Bokaro-Ramgarh	Khost
Daltonganj	Sor Range, Mach, etc.
Giridih	
Jharia	<b>BURMA—</b>
Rajmahal	Upper Chindwin
Raniganj	
	<b>EASTERN BENGAL AND ASSAM—</b>
	Makum
	Maolong, etc.
	<b>NORTH-WEST FRONTIER PROVINCE—</b>
	Hazara
	<b>PANJAB—</b>
Mohpani	Attock District
Pench Valley (Chhindwara)	Mianwali District
Wardha Valley (Ballarpur, Warora)	Salt Range or Jhelum
	Shahpur „

The Raniganj field in Bengal held the first place as regards production up to 1905, but now stands second, its yield in 1909 having been 4,034,812 tons or 35·7 per cent of the year's total production. Jherria, which was opened in 1893, assumed the lead from Raniganj in 1905 and it has succeeded in maintaining it since, although its output contracted from 6,458,643 tons (53·2 per cent of the total production) in 1908 to 5,832,672 tons (51·6 per cent of the total production) in the year under review. Of the remaining fields in Bengal, the production of the Giridih field in 1909 aggregated 702,811 tons or 6·2 per cent of the total. It may be of interest to record that during the year under review some 18 ovens for the recovery of bye-products were installed on this field. The products recovered are tar and ammonia, the latter being converted into ammonium sulphate. The Daltonganj field was opened in 1901; it yielded 84,290 tons in 1909. The quantity so far won from the other two fields—the Rajmahal and the Bokaro-Ramgarh—is limited. Work was started on the former in 1899 and its output in 1909 was some 1,900 tons; as to the latter, mining was begun in 1908 and its yield in 1909 was 4,326 tons. These six coal-fields produced nearly 94 per cent of the coal raised in British India in 1909.

Outside Bengal, the only mines belonging to the Gondwana system are those at Mohpani, Warora, Ballarpur, and the Pench Valley in the Central Provinces. The Mohpani mine was opened in 1860 and the Warora mine in 1871. The Mohpani mine now worked is not the original one of that name of 1860 ; but a new one on which operations were begun in 1892. The old mine was abandoned in 1902 after all the available coal —some 460,000 tons in the aggregate—had been won from it. The new Mohpani mine has been worked by the Great Indian Peninsula Railway Company since 1904 and its output has risen considerably during the last three years ; in 1909, it amounted to 60,667 tons. The Warora mine was the first colliery worked by Government ; its production touched the highest point (153,336 tons) in 1902, when its resources began sensibly to fail ; and a serious subsidence in 1906 only antedated its inevitable abandonment. Operations were then transferred to

### COAL MINES—*continued*

the Ballarpur mine where the work of extraction began seriously in 1908. The output that year was 45,000 tons; in 1909 it was almost doubled. The Pench Valley field was opened up in 1905; its yield has risen from 1,104 tons in 1905 to 92,196 tons in 1909; but further development hinges upon the completion of the broad gauge railway connection between Itarsi and Nagpur.

Turning to tertiary or cretaceous coal beds, the most important of these are in Assam, where the Makum coal-fields have been worked since 1882. Next in rank of importance come the Khost mines in Baluchistan and the Dandot mines in the Punjab; both have been worked now for 23 years, but their production in 1909 was only 40,237 tons and 24,629 tons respectively.

Table No. 2 shows, in respect of each mine for which separate reports have been received since 1905, the production for ten years from 1900 to 1909 as also the year (so far as it has been possible to fix the date) in which the mine was opened. It will be seen that there are a few mines still working in the Raniganj field which were opened before 1860; and the Deshargarh, Sibpur, Sodepur, and Boria mines in the Raniganj field and the Kurhurbari and Serampore mines in the Giridih field, which have each a production of over 100,000 tons, are more than 30 years old. The great majority of the mines now at work, however, are less than 20 years old; but it is worthy of note that some 16 of them yield over 100,000 tons annually.

### IMPORTS

Table No. 3 shows the quantities of foreign coal imported into British India from the principal countries during the last twenty years. For the earlier decennium quinquennial averages have been given. The figures represent private merchandise only and do not include Government stores, the imports of which amounted to 29,567 tons in 1909 as against 6,198 tons in 1908 and 1,219 tons in 1907.

The greatest quantity imported in any one year of the series was some 820,000 tons in the year 1894, valued at R1,47,00,000. In 1896 there was still an import of nearly half a million tons, but in 1900 the figure had fallen to 135,649 tons. The statistics for the next five years are marked by somewhat considerable fluctuations, but since 1905 the record has been one of continued expansion. The arrivals in 1909 amounted to 490,421 tons, an increase of 105,098 tons or 27 per cent over the figure of the previous year. Bombay has naturally been always the largest importer and in 1909 Madras was the second. The United Kingdom has always supplied by far the greatest part of the imported coal. On the average of the twenty years of the series, Australia holds the second place and Japan the third with respective shares of 31,161 tons and 20,906 tons respectively. In 1907 Natal went ahead of Japan and has held that position since. Imports from other countries during the year 1909 were the largest on record.

In the year of review, the United Kingdom sent 311,213 tons in place of 173,465 tons in the previous year. But the imports from Australia, which in the previous year aggregated 129,699 tons, dropped owing to the strike in New South Wales to 54,792 tons, which is yet the next highest total on record after that of 1908. The Natal trade was marked by a brisk development from 16,548 tons in 1907 to 71,831 tons in 1908. The expansion was maintained in 1909 with a further increase of some 20,000 tons. Japan has since 1906 lost its hold altogether on the Indian market; the recorded imports in 1909 were 11,413 tons as contrasted with 2,960 tons in 1908.

### EXPORTS

Table No. 4 shows the total quantity of Indian coal exported from British India during the last twenty years and the share taken by each of the principal importing countries. As in the case of statistics of imports, quinquennial averages only are given for the earlier decade. Bunker coal is not included in this statement which relates only to coal shipped as private merchandise to foreign ports. The exports rose in proportion to the expansion in production up to the year 1906, since when there has been a progressive decline in the ratio. On the average of the five years 1900 to 1904, the exports were 7·8 per cent of the total production of coal in British India, but the exports of the following five years 1905 to 1909 averaged 7·2 per cent of the production. Almost all the coal shipped as private merchandise from India is sent from Calcutta. Ceylon and the Straits Settlements are the two principal markets for Indian coal, and of the total quantity shipped in 1909, 55 per cent was declared for Ceylon and 23 per cent for the Straits. In the three years 1905 to 1907 Indian coal took the place of Japanese coal in Hongkong for reasons which are now ancient history; but only 2 tons were exported in 1908 and no shipments took place in 1909. On the other hand, Sumatra took more coal from India and is now her third-best customer (taking 14 per cent of the total). In the year under review Australia entered the market as a buyer owing to the strike at home and took some 31,536 tons; a figure which might have been very greatly exceeded had more enterprise been shown, and more care taken as to the quality of the earlier consignments. From 1902 till 1906 total exports increased rapidly till they reached 1,002,951 tons. Then there came a fall to 658,145 tons in 1907 which was ascribed to increased industrial activity in the country; about the same quantity was exported in the following year, but the further curtailment of 95,000 tons, which occurred in the shipments of 1909, cannot unfortunately be associated with any such favourable causes for it is well known that there was accumulation of stocks of all but the very best qualities at the collieries.

COAL MINES—*continued*

## DISTRIBUTION AND CONSUMPTION

Table No. 5 shows the total available supply of coal in India after deducting net exports from production; in 1909 the figure stood at 11,796,595 tons.

Tables Nos. 6 and 7 are intended to give an idea of the distribution of coal produced in the country and coal imported from abroad, and of the agencies by which it is distributed. Calcutta uses Bengal coal exclusively. Bombay City gets its supplies by sea from Bengal and from foreign countries in the proportion of 2 to 1, partly for its own consumption and partly for diffusion throughout the Bombay Presidency, which also receives considerable quantities by rail from Bengal and Hyderabad. Sind and Madras import most of their coal by sea, but the latter presidency also draws part of its supply from Hyderabad. Eastern Bengal and Assam, the United Provinces, and the Central Provinces, import the bulk of the coal they require by rail and river from Bengal. Half the coal consumed in the Panjab comes direct from Bengal, and the other half mainly through Karachi. Burma derives its supply almost wholly from Bengal.

Table No. 8 shows the supply available in the cities of Calcutta and Bombay and in each province.

The following statement gives an estimate of the coal consumed during 1909 in different industries and other forms of consumption, but the figures can only be regarded as approximate, and in the case of some of the heads they represent a very rough estimate:—

	Tons
Railways (including railway workshops)	3,785,000
Port Trusts	109,000
Bunker coal	989,000
Inland steamers	500,000
Jute mills	703,000
Cotton mills	862,000
Iron and brass foundries	528,000
Tea gardens	100,000
Consumption at collieries and wastage	1,131,000
Other forms of industrial and domestic consumption	3,140,000
 TOTAL	 11,797,000

*Consumption on Railways.*—Table No. 9 shows the total consumption of Indian and foreign coal and of wood on all the railways in India in each of the last twenty years. At the beginning of this period the total consumption of coal was about 858,000 tons, of which foreign coal constituted nearly one-fourth. Ten years later the total consumption was 1·64 million tons, and Indian coal represented nearly 95 per cent, thus marking a rapid and vigorous displacement of foreign coal. In 1909 the total consumption was about 3·77 million tons and Indian coal represented nearly 98 per cent. Still it has to be recorded that foreign coal as a factor in railway consumption has assumed larger dimensions during the last two years than in any year since 1899; perhaps the higher prices which ruled for Indian coal during the greater part of that period and the relatively inferior quality of some of the coal placed on the market influenced the railways to resort to foreign coal. The railway consumption of Indian coal averaged 37 per cent of the total quantity of coal produced in British India in the ten years ending 1899, and 32 per cent in the ten years ending 1909. The consumption of wood as fuel on railways has not decreased to such an extent as might have been expected during this period, still the decrease has been progressive and in 1909 the quantity used was 127,114 tons as compared with 326,252 tons in 1890. This amount may be regarded as equivalent to 50,846 tons of coal, reckoning 2½ tons of wood as equal to 1 ton of coal. Wood is still used largely on the Madras and Southern Mahratta, Burma, Rohilkhand and Kumaon, and South Indian Railways.

The consumption of coal in relation to the total mileage of Indian railways is compared with that of certain foreign countries in the following statement:—

	Total mileage of railways	Total consumption of coal in tons	Consumption of coal per mile in tons
India	31,490	3,765,314	120
United Kingdom	23,205	12,922,808	557
§ Japan	5,069	1,027,000	203
§ Russia in Europe.	33,424	3,065,000†	92
§ Russia in Asia	6,419	1,156,000†	180

*Port Trusts.*—The figures of consumption have been kindly supplied by all the Port Trusts.

*Bunker coal.*—The shipments of bunker coal from Calcutta are far in excess of those of any other port. They have increased steadily in each of the last twenty-two years, but in 1909 there was a set back, the figures being 888,540 tons as against 1,058,302 tons in the preceding year. For the other ports exact figures have not been recorded. Indian coal is consumed on steamers of almost all the lines that touch at Indian ports. In some cases it is mixed with Welsh coal, but more often it is used unmixed. There are indications that Welsh coal, which is understood to have some 20 per cent more burning power than Indian coal, is in increasing demand at Bombay.

*Inland steamers.*—The chief steamer companies of Bengal, Assam, and Burma have kindly supplied statements of their coal consumption. The total reported figure comes to just under 500,000 tons a year; but there are of course a great many smaller companies and steamers in these provinces, as well as in other parts of India, whose consumption it has not been possible to ascertain.

§ Statistics of Japan and Russia are for 1907 and 1906 respectively, later figures not being available.

† Excluding coke.

COAL MINES—*continued*

*Jute and Cotton mills.*—The Secretary, Indian Jute Mills' Association, has kindly furnished figures of coal consumed in the Jute Mills working in Bengal. In the case of cotton mills, 52 out of 240 have been good enough to send reports. In the case of mills which have furnished no returns, estimates have been made on the basis of the number of looms and spindles at work.

*Iron and Brass foundries and Tea gardens.*—The figures are rough estimates based on returns kindly furnished by a few firms. On many tea estates wood is the only or chief fuel employed.

*Other forms of industrial and domestic consumption.*—There are no means at present of framing an accurate estimate of how the balance of about 3 million tons is consumed. Cotton Presses (969) and Jute Presses (141) no doubt account for a considerable proportion. Excluding indigo factories and premises used solely for the purposes of tea and coffee plantations, there were, in addition, many other factories worked by steam and a considerable number of other concerns too small to be included in the factories' return. Many of those, no doubt, used fuel other than coal wholly or in part, but it is clear that the greater portion of the balance of about 3 million tons of coal must be debited to industrial consumption and only a small part to domestic consumption, chiefly in and about Calcutta.

## VALUE AND PRICES

The value of the coal produced in India is reported annually by mine owners. The figures represent the actual or estimated wholesale price of coal at the pit's mouth. The average value, as thus defined, of all the coal produced in each province in British India in each of the last twenty years is given in Table No. 10. It ranged from R3-4 in 1890 to R3-6 in 1909 per ton. The lowest value, namely, R2-6 per ton, was reached in 1904 and 1905.

With the above average value may be compared the following values at the pit's mouth of coal in foreign countries (the figures represent the average of recent years):—

	R a. p.		R a. p.
United Kingdom	6 0 6	Germany	7 2 9
France	8 13 0	United States of America	4 6 6
Australia	5 0 0	Japan	6 8 3

In comparing the average value of the coal raised in different countries, it must be remembered that this value is affected by many circumstances, such as the quality of the coal, the machinery in use, nearness to the surface, quality of the soil, etc., besides the differences in the cost of labour. In India, the coal now being worked is near the surface, and labour is cheap; as a consequence, Indian coal has a lower value at the pit's mouth than the coal of any other country. After India, the value is lowest in the United States. Of the principal coal-producing countries in Europe, the United Kingdom has the lowest average value at the pit's mouth; and Australia has the lowest average value of all places in the British Empire except India. As regards the relative quality of the coal raised in some of the above named countries, the result of a railway test made in 1909 with first class Bengal coal, Natal coal, and Australian coal may be of interest. Bengal coal ran 26 lbs per train mile, Natal 27 lbs, and Australian 30 lbs.

Table No. 11 shows the comparative average prices per ton of Bengal coal at Calcutta and of Indian and Welsh coal at Bombay and Karachi since 1899. The figures are taken in the case of Bombay from the Bombay Market Report and in the case of Calcutta and Karachi from the *Prices Current* of the respective Chambers of Commerce. In order to get an idea of the comparative prices of Bengal coal in the principal centres of industry in India, the freight has to be added to the f.o.r. prices. The freight per ton of coal for full waggon loads at owners' risk (owners to load and unload) from the Raniganj field is as follows:—

To	R a. p.
To Calcutta	2 4 0
„ Jubbulpur	6 15 0
„ Cawnpore	6 4 9
„ Delhi	8 4 0
„ Lahore	10 1 0
„ Karachi	12 14 0
„ Bombay	11 4 0

The average freight per ton of coal by sea from Calcutta during 1909 was as follows:—

To	R a. p.
To Bombay	about 4 11 9
„ Madras	2 12 0
„ Karachi	4 11 10
„ Rangoon	2 11 0

## CAPITAL EMPLOYED

The total amount of capital employed in the coal-mining industry cannot be stated, as reports are received from Joint Stock Companies only, and the capital employed by private individuals and syndicates is not known. There were 119 Joint Stock Companies at work in Bengal on the 31st March 1910. These Companies produced

COAL MINES—*continued*

82 per cent of the total output of the Bengal coal-fields in 1909. Outside Bengal, there were only eight Joint Stock Companies at work in that year. Only five of the Companies at work on the 31st March 1910 have a paid-up capital of £15,00,000 (£100,000) or more, viz.:—

	R
The Bengal Coal Company	30,00,000
“ Barakar ”	26,25,000
“ Equitable ”	20,00,000
“ East Indian Coal Company (a)	17,99,925
“ Bokaro and Ramgarh Collieries	18,00,000

## LABOUR

Table No. 12 shows the total number of men, women, and children employed in coal mines in British India during each of the last twenty years. This number represents the “average daily attendance” throughout the year, and is obtained by dividing the total number of attendances by the number of working days in each year. From the point of view of labour, coal mining will no doubt remain for years to come the predominant source of employment among all mining industries. The 109,291 persons, who were employed in mines in British India in 1909, were distributed among the various provinces as follows:—

	Men	Women	Children	Total	Per cent of total
Bengal	64,238	35,807	2,208	102,253	93·6
Central Provinces	2,260	624	27	2,911	2·7
Eastern Bengal and Assam	1,226	540	29	1,795	1·6
Panjab	1,205	..	18	1,223	1·1
Baluchistan	1,076	..	29	1,105	1
North-West Frontier Province	4	..	..	4	..
<b>TOTAL</b>	<b>70,009</b>	<b>36,971</b>	<b>2,311</b>	<b>109,291</b>	<b>100</b>

The statement is generally made that compared with the collier in other chief coal producing countries the efficiency of the Indian coal miner is relatively low. The following statement which gives the output per person employed (1) above and below ground, and (2) below ground, only, in certain specified countries seems to confirm the contention:—

	Above and below ground	Below ground only
	Tons	Tons
United Kingdom	271	336 in 1908
Germany	246	327 ” ”
France	189	259 ” ”
Belgium	160	219 ” ”
India	103·3	161·6 ” 1909

These comparisons have some interest, but they cannot be supposed to give an accurate idea of the relative efficiency of the labour in the countries named. For not only do the conditions of the work below ground vary very greatly, but the proportion of persons employed above and below ground is different in different countries. In the United Kingdom in 1908 the workers below ground were 80 per cent of the total number employed, while in the same year in India, where mining operations are much nearer the surface, they were 63 per cent. Furthermore, any comparison is unduly favourable to India because the “total” number of workers, whether below or above ground, represents the average daily attendance throughout the year as explained above. Thus, if there are 100 persons attached to a mine in India each of whom takes one day’s rest in five, the “total number” is put down in the returns as 80. The English figures, on the other hand, represent the total number of miners and other persons employed, and do not make any allowance for absence on working days.

So far as the statistics of British India itself are concerned the output in 1909 per person employed is compared in the statement below with the results of the immediately preceding five years:—

	Above and below ground	Below ground only
	Tons	Tons
1904	92·3	136·2
1905	96·4	143·5
1906	101·1	151·0
1907	102·5	159·4
1908	101·2	159·4
1909	103·3	161·6

The greater proportionate rise in the second column suggests increased use of machinery in the workings.

The Indian miner is still to some extent a miner by caprice, and in a year of agricultural prosperity the scarcity of labour becomes acute. Epidemics amongst the workers, particularly of cholera, are not infrequent

(a) The Company was registered in England

## COAL MINES—concluded

and the shortage is likely to be accentuated as the workings get deeper. The use of electricity on the coal-fields is extending—though capable of yet further utilization—particularly for haulage and pumping, and the employment of mechanical coal cutting appliances will be necessary where the seams are narrow and at a distance from the surface.

The death-rate in India is low, for coal mining is still in the elementary stage and the workings, with a few exceptions, are comparatively shallow. The average annual death-rate per 1,000 persons working daily above and below ground since 1901, when the Indian Mines Act came into force, is .86 which compares very favourably with the rates obtaining in other countries. The average rates are:

United Kingdom . . . . .	1.30	France . . . . .	1.83
Belgium . . . . .	1.02	Germany . . . . .	2.12
United States of America . . . . .	3.44	Japan . . . . .	2.56

But if the death-rate is calculated on the quantity of coal produced, the results are less satisfactory, due no doubt to the low output in India per person employed. The death-rate per 1,000,000 tons of coal raised has averaged 9.3 in British India since 1901. The corresponding average figures for other countries are:—

United Kingdom . . . . .	4.6	France . . . . .	9.7
Belgium . . . . .	6.3	Germany . . . . .	9.7
United States of America . . . . .	6.6	Japan . . . . .	24.8

The Chief Inspector of Mines is disposed, however, to regard the rates for India as still much too high and he observes in his report for the year 1909:—

“There is no questioning the fact that greater discipline would very substantially lessen this loss of life. A glance at the list of falls of roof and side shows very clearly that the Indian miner has a great deal to learn in the way of taking care of himself, and, he must be taught how to do it.”

## COMPARATIVE STATISTICS.

In view of the fact that Japan and India are rivals in some of the markets of the Far East and also produce coal on much the same scale, the figures given in table No. 13 have special interest. In the first period of the quinquennial average of the series the production of coal in Japan was about  $\frac{3}{4}$  million tons more than that of India. Since then the production of Japan has gone ahead and now exceeds that of India by nearly 2,863,000 tons.

As regards foreign import trade, India, as already noted, diminished her imports steadily till four years ago, since when a revival has set in.

Imports into Japan, under normal conditions, have been inconsiderable in comparison with India and are now nearly 130,000 tons. Production in Japan has always exceeded the requirements of home consumption, leaving a considerable surplus for export; while India has little to spare, her net exports being only nearly 74,000 tons. The quantity left for home consumption was about the same (10.8 million tons) in both countries in 1907. In 1908 India retained about half a million tons more than Japan, but in 1909, on the contrary, Japan retained about a quarter of a million tons more than India.

In the absence of information about consumption of coal in Japan for the year 1908 and 1909, the figures reported in 1907 have been retained. Excluding bunker coal the internal consumption of coal in Japan was estimated at 8,011,471 tons for the year 1907, divided as follows:—

	Tons
Railways . . . . .	1,047,182
Production of salt . . . . .	659,927
Factories . . . . .	4,136,413
Other forms of consumption . . . . .	2,167,949

These figures may be compared with estimates of the consumption of coal in India given on page 71. The freight per mile for coal carried by Indian railways to the places mentioned on page 72 is 2 pies per ton per mile, except in the case of Howrah (close to Calcutta) where the rate comes to  $3\frac{1}{2}$  pies per mile. The freight for coal on Japanese railways is 3 pies per ton per mile with an additional charge of annas 5 per ton for the use of coal waggons.

## COAL MINES

No. 1

*STATEMENT showing the QUANTITY (in tons) of COAL PRODUCED in each PROVINCE in BRITISH INDIA in each year from 1878 to 1909*
