CONTENTS

	Page
Foreword.....	v
Introduction.....	1
Operative training content, interpretive science, and related information for special jobs in the enterprise of quality milk production:	
Job I. Maintaining general sanitary conditions on milk-producing farms.....	3
Job II. Maintaining sanitary conditions in barns and yards.....	4
Job III. Maintaining sanitary conditions in the milk house.....	5
Job IV. Preventing objectionable flavors and odors in milk.....	6
Job V. Cleaning and caring for general milk equipment.....	6
Job VI. Cleaning milking machines.....	8
Job VII. Keeping cows clean.....	8
Job VIII. Milking.....	9
Job IX. Pasteurizing milk in the home.....	10
Job X. Cooling, storing, and transporting milk.....	11
Job XI. Testing milk for bacterial content.....	12
Job XII. Testing milk for sediment.....	13
Job XIII. Testing milk for flavor and odor.....	13
Job XIV. Maintaining the health of the dairy herd.....	14
List of references on quality milk production.....	15
United States Department of Agriculture publications.....	15
Other publications.....	15
List of film strips on quality-milk production.....	15

FOREWORD

The importance of quality milk production from the standpoint of health is rather well recognized, due to the educational efforts of various organizations during the past few years. The economic benefits of quality milk production to the farmer, however, are not generally appreciated. Reports from the United States Department of Agriculture and other reliable sources indicate that enormous losses occur every year due to the fact that sanitary requirements have not been met by many producers. Systematic instruction for present and prospective farmers on this subject is, therefore, highly desirable.

This bulletin was prepared originally as a part of a nation-wide campaign for the production of quality milk. Its aim is to provide teachers of vocational agriculture with current, reliable subject-matter organized in teaching form, which will enable them to offer systematic instruction on certain quality milk jobs occurring in dairy enterprises.

The manuscript for this bulletin was prepared under the direction of J. A. Linke, chief, agricultural education service, Office of Education, by W. A. Ross, subject-matter specialist in agricultural education, with the assistance of Ernest Kelly, senior market milk specialist in charge of market milk investigations, and C. J. Babcock, market milk specialist, Bureau of Dairy Industry, United States Department of Agriculture.

J. C. WRIGHT,
Assistant Commissioner for Vocational Education.
