## CONTENTS.

### Part I.—The making and using of index numbers:

	Page.
The aim and scope of the present bulletin.....	5
I. The history of index numbers.....	5-8
II. The difficulties of measuring changes in the level of prices.....	8-10
III. The characteristics of price fluctuations.....	10-24
IV. Varieties of methods used in making index numbers.....	25-93
1. The relations between methods and uses.....	25-27
2. Collecting and publishing the original quotations.....	27-30
3. Market prices, contract prices, and import-export values.....	30-33
4. Relative versus actual prices.....	34, 35
5. Base periods.....	36-44
6. The numbers and kinds of commodities included.....	44-71
7. Problems of weighting.....	71-80
8. Averages and aggregates.....	80-93
V. A comparison of the leading American index numbers for the years 1890 to 1913.....	93-112
1. Analysis of the similarities and differences.....	94-109
2. Critical evaluation.....	109-112
VI. Conclusions.....	112-114

### LIST OF CHARTS.

CHART 1.—Conspectus of yearly changes in prices, 1891-1893. (Based on Table 2.).....	15
CHART 2.—Distribution of 5,578 price variations (percentages of rise or fall from prices of preceding year).....	20
CHART 3.—Distribution of the price variations of 241 commodities in 1913 (percentages of rise or fall in price).....	22
CHART 4.—Index numbers made from the market prices and from the import or export values of identical lists of commodities. England, 1871-1902. (Based on Table 5.).....	33
CHART 5.—General-purpose index numbers including 25, 50, and 242 commodities. (Based on Table 8.).....	50
CHART 6.—Index numbers of the prices of 20 raw materials and of 20 products manufactured from them. (Based on Table 9.).....	56
CHART 7.—Index numbers of the prices of wool, cotton, hides, wheat, and pig iron in their raw, partially manufactured, and finished forms. (Based on Table 9.).....	57
CHART 8.—Index numbers of the prices of 19 mineral products and of 18 farm crops. (Based on Table 10.).....	59
CHART 9.—Index numbers of the prices of manufactured goods used for family consumption and for industrial purposes. (Based on Table 11.).....	62
CHART 10.—Index numbers of the prices of 25 food products and of 25 miscellaneous commodities. (Based on Table 15.).....	69
CHART 11.—A comparison of medians and arithmetic means of 145 commodities. (Based on Table 17.).....	89
CHART 12.—Dun's, Bradstreet's, and the Bureau of Labor Statistics' index numbers reduced to a common basis. (Based on Table 18.).....	99

**Part II.—Index numbers of wholesale prices in the United States and foreign countries:**

	Page.
United States:	
Index numbers of the United States Bureau of Labor Statistics.....	115-127
Index numbers of the United States Senate Committee on Finance.....	128-138
Index numbers of the Annalist.....	138-140

Index numbers of Einar Ruud.....	300-304
Russia:	
Index numbers of Ministry of Commerce and Industry, Petrograd....	305-309
Spain:	
Index numbers of Francisco Bernis.....	309-313
Conference on index numbers of the International Institute of Statistics, Sep- tember, 1911.....	313-319
Select bibliography of additional index numbers.....	319-324

## PART II.—INDEX NUMBERS OF WHOLESALE PRICES IN THE UNITED STATES AND FOREIGN COUN- TRIES.

### UNITED STATES.

#### INDEX NUMBERS OF THE UNITED STATES BUREAU OF LABOR STA- TISTICS.

##### PUBLICATION.

An index number is published in connection with the reports on wholesale prices issued by the Bureau of Labor Statistics of the United States Department of Labor at Washington. These reports are issued in bulletin form and appear annually.

##### HISTORY.

The publication of this index number was begun in 1902. Prior to that time the Department of Labor, now the Bureau of Labor Statistics, had conducted an inquiry into the course of wholesale prices from 1890 to 1899, the results of which were published in March, 1900.<sup>1</sup> The purpose of this inquiry was to continue, so far as practicable, the investigation made for the Senate Committee on Finance for the years 1840 to 1891 under the direction of Roland P. Falkner, statistician to the committee.<sup>2</sup> In the report of the Department of Labor alluded to, the index numbers appearing in the Senate Finance Committee's report were brought down to 1899, important changes with respect to the base period and the method of weighting being adopted. In 1902, however, when the material for the new report on wholesale prices was being assembled, it was found that many articles included in the report of the Senate Committee on Finance were either no longer manufactured or had ceased to be important factors in the market. On the other hand, a number of articles not shown in that report had become of such importance as to render necessary their inclusion in the new report. These facts necessitated the computation of a new series of index numbers based on the revised list of commodities. It was found, however, that prices of such commodities could be obtained for a period dating back to 1890, so that the new series of index numbers, as published in the 1902 report,<sup>3</sup> covered the 12 years from 1890 to 1901, inclusive. This series has been continued in subsequent wholesale-price reports.

<sup>1</sup> Bulletin of the Department of Labor, No. 27.

<sup>2</sup> Report from the Committee on Finance of the United States Senate on Wholesale Prices, Wages, and Transportation. Mar. 3, 1883. 52d Congress, 2d session, Report No. 1304.

<sup>3</sup> Bulletin of the Department of Labor, No. 39, March, 1902.

## SOURCE OF QUOTATIONS.

The commodities included in the reports have been selected, not only with regard to their representative character, but also with regard to their availability in the future in the continuation of the price record. Standard trade journals, reports of boards of trade, chambers of commerce, produce exchanges, and leading manufacturers or their selling agents are the usual sources from which the price quotations are obtained. It has been the aim to secure the quotations for the various commodities from their primary markets. At present about one-half of the quoted prices are those in the New York market. For grains, live stock, etc., Chicago prices are quoted; for fish, New York and Boston prices; for pig iron, Pittsburgh prices; for tar, Wilmington, N. C., prices; etc. The prices for textiles are those prevailing in the general distributing markets, such as New York, Boston, and Philadelphia; and where no market is mentioned it should be understood that the prices are for the general market.<sup>1</sup>

## BASE PERIOD.

In the compilation of the bureau's index numbers it was recognized that in reducing a series of actual prices to relative prices a base must first be chosen that represents, approximately at least, prices when business conditions are normal. This may be either a single quotation, the average price for one year, or the average for two or more years. If the price for a single year is chosen, it is essential that the year be a normal one, for if prices are high in the year chosen for the base any subsequent fall will be unduly magnified, while on the other hand, if prices are low any subsequent rise will be unduly magnified. For the reason that all commodities probably never present a normal condition as regards prices in any one year, it was decided that an average price for a number of years would better reflect average conditions and form a broader and more satisfactory base than would the price for any single year. The period chosen as this base was that from 1890 to 1899—a period of 10 years. In the cases of a few articles for which prices for the entire 10-year period could not be obtained, the average for such years prior to 1899 as were available was chosen as the base.\*

The relative prices included in the series have been calculated in the usual manner and represent the percentage which each monthly or yearly price is of the average price for the base period 1890-1899. The average price of every article for the base period is represented by 100, and the relative prices for each month or year show the percentage of rise and fall, from month to month or from year to year, of the prices of each single commodity, of each group of commodities, and of all commodities in terms of the average prices in 1890-1899.

<sup>1</sup> Bulletin of the United States Bureau of Labor Statistics, No 146, p. 27.

## PRICES: HOW SHOWN AND COMPUTED.

Weekly prices have been secured in the case of all articles which are subject to frequent fluctuations in price, such as butter, cheese, eggs, grain, live stock, meats, etc. In the case of articles whose prices are more stable, monthly prices have been taken. The majority of the weekly quotations show the price on Tuesday, but if for any reason the price was not obtainable on the particular day stated, the first available price thereafter has been taken. The quotations from trade and other journals, when credited to the first of each month, are not in all instances the price for the exact day stated. The prices are, however, the earliest prices quoted for the month in the journal to which the article is credited.

In many localities the price of bread per loaf is not affected by changes in the price of flour, but the weight of the loaf is changed from time to time. For this reason the relative prices of bread are computed on the price per pound and not per loaf.

The average price for the year is obtained by dividing the sum of the quotations for a given commodity by the number of quotations shown. For example, the sum of the 52 Tuesday prices of cotton for 1913 was \$6.6520. This total divided by 52 gives \$0.12792 as the average price for the year. When a range is shown the mean price for each date is found, and this is used in computing the yearly average as above described. It should be understood that, in order to secure for any commodity a strictly scientific average price for the year, one must know the quantity marketed and the price for which each unit of quantity was sold. It is manifestly impossible to secure such detail, and even if it were possible the labor and cost involved in such a compilation would be prohibitive. It is believed that the method adopted here, which is also that used in the construction of other index numbers, secures results which are quite satisfactory for all practical purposes.<sup>1</sup>

Net cash prices are shown for textiles and all articles whose list prices are subject to large and varying discounts. In the case of a few articles, however, the prices of which are subject to a small discount for cash, no deduction has been made. All rebates have been deducted.

## NUMBER AND CLASS OF COMMODITIES.

In the record of prices from 1890 to 1913, 234 series of quotations have been presented for the entire period and an additional 38 for some portion of the period. The number of commodities included in the report for 1913 was 252, classified as follows: Farm products, 20 articles; food, etc., 54 articles; cloths and clothing, 63 articles; fuel and lighting, 13 articles; metals and implements, 38 articles; lumber and building materials, 28 articles; drugs and chemicals, 9

<sup>1</sup> Bulletin of the United States Bureau of Labor Statistics, No. 149, p. 20.

articles; house-furnishing goods, 14 articles; and miscellaneous, 13 articles. It was recognized by the bureau that, in the computation of an index number of this character, it is important that the greatest care be exercised in the choice of commodities, in order that a simple average of their relative prices shall show a general price level, and it has been the aim to select only important and representative articles in each group. The use of a large number of articles, carefully selected, minimizes the effect on the general price level of an unusual change in the price of any one article or of a few articles.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

The following list, compiled from the 1913 report (pp. 33 to 82), shows the grouping and description of the articles:

##### *Farm products (20 articles).*

Barley: Choice to fancy malting, by samples.

Cattle:

Steers, choice to prime, corn fed.

Steers, good to choice, corn fed.

Corn: Contract grades, cash.

Cotton: Upland, middling.

Flaxseed: No. 1, cash.

Hay: Timothy, No. 1.

Hides: Green, salted, packers', heavy native steers.

Hogs:

Heavy (range of quotations for selected 260 to 300 pounds packing and fair to fancy heavy shipping).

Light (range of quotations for common to choice, light bacon, and fair to fancy selected butcher's).

Hops: New York State, prime to choice.

Horses: Draft, choice to extra.

Mules: Medium to extra (16 hands from January to second week in February, 16 to 16½ hands from third week in February to December).

Oats: Contract grades, cash.

Poultry: Live fowls (by freight), choice.

Rye: No. 2, cash.

Sheep:

Native wethers, poor to prime.

Western wethers, plain to prime.

Tobacco: Burley, dark red, good leaf.

Wheat:

No. 1, northern spring, cash.

No. 2, red winter, cash.

} Prices combined to form 1 series of quotations.

##### *Foods, etc. (54 articles).*

Beans: Medium, choice.

Bread:

Crackers, oyster, puff, in boxes.

Crackers, soda, in boxes, containing 3 dozen each.

Loaf (weight before baking, 16 ounces).

Loaf (weight before baking, 15 to 15½ ounces).

**Butter:**

- Creamery, Elgin.
- Creamery, extra.
- Dairy, New York State, tubs, finest.

**Canned goods:**

- Corn, Republic No. 2, fancy.
- Peas, Republic No. 2, sifted.
- Tomatoes, Arlington, standard, New Jersey, No. 3.

Cheese: New York State, full cream, large, colored, fancy.

Coffee: Rio No. 7, Brazil grades.

Eggs: New laid, State, Pennsylvania and near-by, range of hennery and fresh-gathered white.

**Fish:**

- Cod, whole fish, dry, bank, large.
- Herring, pickled, Newfoundland split, large No. 1.
- Mackerel, salt, large No. 3.
- Salmon, canned, Columbia River, 1-pound talls (Chinook fancy).

**Flour:**

- Buckwheat.
- Rye (range, in jute and in wood).
- Wheat, spring patents (range, in sacks and barrels).
- Wheat, winter straights (range, in sacks and barrels).

**Fruit:**

- Apples, evaporated, choice.
- Currants, uncleaned, in barrels.
- Prunes, California, 60s to 70s, in 50-pound boxes.
- Raisins, California, London layer.

Glucose: 42 degrees mixing.

Lard: Prime contract.

**Meal:**

- Corn, fine white.
- Corn, fine yellow.

**Meat:**

- Bacon, rough sides (short rib), smoked, loose.
- Bacon, short clear sides, smoked, loose.
- Beef, fresh, carcass, good native sides.
- Beef, fresh, native sides.
- Beef, salt, extra, mess.
- Hams, smoked, loose.
- Mutton, dressed.
- Pork, salt, mess, old to new.

Milk: Fresh.

Molasses: New Orleans, open kettle.

Poultry: Fresh-killed dressed fowls, western, dry packed, dry picked, fancy, 48 to 55 pounds to the dozen.

Rice: Domestic, choice, head.

Salt: American, medium.

Soda: Bicarbonate of, American.

Spices: Pepper, black, Singapore.

Starch: Corn, for culinary purposes, Sunbeam, 48 1-pound packages in box.

**Sugar:**

- 96 degrees centrifugal.
- Granulated, in barrels.

Tallow.

Tea: Formosa, fine.

Vegetables, fresh:

Cabbage, white (range of domestic-grown cabbage from native and Danish seed).

Onions.

Potatoes, white, ordinary to fancy.

Vinegar: Cider, Monarch, 40-grain, in 45-gallon barrels.

*Cloths and clothing (68 articles).*

Bags: 2-bushel, Amoskeag.

Blankets:

All wool, 11-4, 5 pounds to the pair.

Cotton, 2 pounds to the pair, 54 by 74 inches.

Boots and shoes:

Men's seamless Creedmores (split ties), first quality standard screw or pegged.

Men's vici calf shoes, blucher bal., vici calf top, single sole.

Men's vici kid shoes, Goodyear welt.

Women's solid grain shoes, leather, poliah or polka.

Broadcloths: First quality black, 54-inch, made from XXX wool.

Calico: American standard prints, 64 by 64, 7 yards to the pound.

Carpets:

Brussels, 5-frame, Bigelow.

Wilton, 5-frame, Bigelow.

Cotton flannels:

2½ yards to the pound.

3½ yards to the pound.

Cotton thread: 6-cord, 200-yard spools, J. & P. Coats.

Cotton yarns:

Carded, white, mule-spun, northern, cones, 10/1.

Carded, white, mule-spun, northern, cones, 22/1.

Denims: Amoskeag.

Drillings:

Brown, Pepperell.

30-inch, Massachusetts D standard, 2.85 yards per pound.

Flannels: White, 4-4 Ballard Vale, No. 3.

Ginghams:

Amoskeag.

Lancaster.

Horse blankets: All wool, 6 pounds each.

Hosiery:

Men's cotton half hose, seamless, fast black, 20 to 22 ounce, 160 needles, single thread, carded yarn.

Women's cotton hose, high-spliced heel, double sole, full fashioned, combed peeler yarn.

Women's cotton hose, seamless, 26-ounce, 17½ needles, single thread, carded yarn.

Leather:

Chrome calf, dull or bright finish, B grade (range of prices).

Harness, oak, 17 pounds and up, No. 1.

Sole, hemlock, Buenos Aires and Montevideo, middles, No. 1.

Sole, oak, scoured backs, heavy No. 1.

Linen shoe thread: 10s, Barbour.

Overcoatings:

Covert cloth, all wool, double and twist, 14-ounce.

Soft-faced, black, plain twill, 24-ounce.

Print cloths: 28-inch, 64 by 64.

Sheetings:

- Bleached, 10-4 Pepperell.
- Bleached, 10-4, Wamsutta S. T.
- Brown, 4-4 Indian Head.
- Brown, 4-4, Pepperell R.
- Brown, 4-4 Ware Shoals L. L., 4 yards to the pound.

Shirtings:

- Bleached, 4-4, Fruit of the Loom.
- Bleached, 4-4, Rough Rider.
- Bleached, 36-inch, Lonsdale.
- Bleached, 4-4, Wamsutta  $\frac{X^0}{XX}$ .

Silk:

- Raw, Italian, classical.
- Raw, Japan, Kansai, No. 1.

Suitings:

- Clay worsted, diagonal, 12-ounce, Washington mills.
- Clay worsted, diagonal, 16-ounce, Washington mills.
- Serge, 11-ounce, Fulton mills, 3192.
- Wool dyed blue, 55-56 inch, 15-ounce.

Tickings: Amoskeag, A.C.A.

Trouserings: Fancy worsted, worsted warp and filling, worsted back, 16½ to 17½ ounce.

Underwear.

- Shirts and drawers, merino, natural color, full-fashioned, 50 per cent wool, 24-gauge.
- Union suits, merino, natural color, 40 per cent wool, circular, 24-gauge, light weight.

Women's dress goods:

- Cashmere, all wool, 8-9 twill, 35-inch, Atlantic Mills, 3602.
- Cashmere, cotton warp, 9-twill, 4-4, Atlantic Mills, F.
- Cashmere, cotton warp, 4-4, Hamilton.
- Panama cloth, all wool, 54-inch.
- Poplar cloth, cotton warp and worsted filling, 4-4.
- Sicilian cloth, cotton warp, 50-inch.

Wool:

- Ohio, fine fleece (X and XX grade), scoured.
- Ohio, medium fleece (one-fourth and three-eighths grade), scoured.

Worsted yarns:

- 2-40s, Australian fine.
- 2-32s, crossbred stock, white, in skeins.

*Fuel and lighting (13 articles).*

Candles: Adamantine, 6s, 14-ounce.

Coal:

- Anthracite, broken.
- Anthracite, chestnut.
- Anthracite, egg.
- Anthracite, stove.
- Bituminous, Georges Creek, at the mine.
- Bituminous, Georges Creek, f. o. b. New York harbor.
- Bituminous, Pittsburgh (Youghiogheny), lump.

Coke: Connellsville, furnace.

Matches: Globe, No. 1, in cases.

## Petroleum:

Crude.

Refined, for export, in barrels, cargo lots, S. W., 110 degrees fire test.

Refined 150 degrees fire test, water-white, in barrels (jobbing lots).

*Metals and implements (38 articles).*

Augers: Extra, 1-inch.

Axes: Essex, pattern handled.

Bar iron:

Best refined.

Common to best refined, from mill.

Barb wire: Galvanized.

Butts: Loose pin, wrought steel, 3½ by 3½ inches.

Chisels: Extra, socket firmer, 1-inch.

Copper:

Ingot, electrolytic.

Sheet, hot-rolled (base sizes).

Wire, bare, No. 8, B. &amp; S. gauge and heavier (base sizes).

Door knobs: Steel, bronze-plated.

Files: 8-inch mill bastard, Nicholson.

Hammers: Maydole, No. 1½.

Lead: Pig, desilverized.

Lead pipe.

Locks: Common mortise, knob lock, 3½-inch.

Nails:

Cut, 8-penny, fence and common.

Wire, 8-penny, fence and common.

Pig iron:

Bessemer.

Foundry No. 1.

Foundry No. 2, northern.

Gray forge, southern, coke.

Planes: Sargent 414, jack plane.

Quicksilver: Jobbing lots.

Saws:

Cross-cut, Disston No. 2, 6-foot, Champion tooth.

Hand, Disston No. 7, 26-inch.

Shovels: Ames, No. 2, cast-steel, long-handle, round-point, back-strap, black.

Silver: Bar, fine.

Spelter (pig zinc): Western.

Steel billets.

Steel rails.

Steel sheets: Black, No. 27, box annealed, cold-rolled, United States standard.

Tin: Pig.

Tin plate, coke.

Trowels: Johnson's, brick, 10½-inch.

Vises: Solid box, 50-pound.

Wood screws: 1-inch, No. 10, flathead.

Zinc: Sheet, ordinary numbers and sizes, packed in 600-pound casks.

*Lumber and building materials (28 articles).*

Brick: Common red, domestic building.

Carbonate of lead: American, in oil.

## Cement:

Portland, domestic.  
Rosendale.

Doors: Western white-pine, 2 feet 8 inches by 6 feet 8 inches, 1 $\frac{3}{4}$  inches thick, 4-panel No. 2 O. G.

Hemlock: Base price, Pennsylvania and West Virginia stock.

Lime: Rockport, common.

Linseed oil: Raw, in barrels.

Maple: Hard and soft, 1-inch (4-4), firsts and seconds.

## Oak:

White, plain, mixed, rock, mountain or West Virginia stock, 1-inch (4-4) firsts and seconds.

White, quartered, Indiana, firsts and seconds, 6 inches and up wide, 10 to 16 feet long.

Oxide of zinc: American, extra dry.

## Pine:

White, boards, No. 2 barn, 10 inches wide, rough.

White, boards, upper, 1-inch (4-4), rough or dressed.

Yellow, flooring, long-leaf, B, heart-face, rift sawn, 1 $\frac{1}{4}$  by 2 $\frac{1}{2}$ -face (counted 1 by 3), D. & M.

Yellow, siding, long-leaf, boards, heart-face, 1-inch and 1 $\frac{1}{4}$ -inch.

## Plate glass:

Polished, glazing, area 5 to 10 square feet.

Polished, glazing, area 3 to 5 square feet.

Poplar: Yellow, 1-inch, firsts and seconds, 7 to 17 inches and up wide, rough.

Putty: Commercial (bulk).

Rosin: Common to good, strained.

## Shingles:

Cypress, best all heart, 5 inches wide, 16 inches long.

Red cedar, clear, random width, 16 inches long.

Spruce: 6 to 9 inch, cargoes, eastern.

Tar: Pine.

Turpentine: Spirits of, southern, barrels.

## Window glass:

American, single, AA, 25-inch.

American, single, B, 25-inch.

*Drugs and chemicals (9 articles).*

## Alcohol:

Grain, 190 proof, U. S. P.

Wood, refined, 95 per cent.

## Alum: Lump.

Brimstone: Crude, domestic.

Glycerin: Refined, chemically pure, in bulk.

Muriatic acid: 20 degrees.

Opium: Natural, in cases.

Quinine: American, in 100-ounce tins.

Sulphuric acid: 66 degrees.

*House-furnishing goods (14 articles).*

## Earthenware:

Plates, cream-colored, 7-inch.

Plates, white granite, 7-inch.

Teacups and saucers, white granite, with handles.

## Furniture:

- Bedroom sets, 3 pieces, iron bedstead, hardwood dresser and washstand.
- Chairs, bedroom, maple, cane seat.
- Chairs, kitchen, common spindle.
- Tables, kitchen, 3 $\frac{1}{2}$ -foot.

## Glassware:

- Nappies, 4-inch, common.
- Pitchers, one-half gallon, common.
- Tumblers, table, one-third pint, common.

## Table cutlery:

- Carvers, stag handles, No. 016, 8-inch.
- Knives and forks, cocobolo handles, metal bolsters, No. 210.

## Woodenware:

- Pails, oak-grained, 3-hoop, wire ears.
- Tubs, oak-grained, 3 in nest, C, 19, 21, and 23 inches in diameter.

*Miscellaneous (13 articles).*

- Cottonseed meal.
- Cottonseed oil: Prime, summer, yellow.
- Jute: Raw M-double triangle, shipment, medium grades.
- Malt: Western grade, standard.
- Paper:
  - News, wood, roll, contract.
  - Manila, wrapping, No. 1 jute.
- Proof spirit: Finished goods basis (whisky).
- Rope: Pure manila (base sizes,  $\frac{1}{8}$ -inch and larger to Mar. 10; thereafter  $\frac{1}{4}$ -inch and larger, three-strand).
- Rubber: Para Island, fine.
- Soap: Castile, mottled, pure.
- Starch: Laundry, 50-pound boxes, in bulk.
- Tobacco:
  - Plug, Climax, 12 pieces to the pound.
  - Smoking, granulated, Seal of North Carolina, 1-ounce bags.

## SUBSTITUTIONS AND ADDITIONS.

Since the issuance of the first wholesale price report covering the years 1890 to 1901 a number of changes have been made necessary in the character of the articles included. Certain articles no longer commercially important or for which satisfactory price quotations could no longer be obtained have had to be discontinued and other articles substituted therefor. Thus material changes in the description of 3 articles became necessary in 1902, of 2 articles in 1903, of 1 article in 1904, of 4 articles in 1905, of 6 articles in 1906, of 3 articles in 1907, of 19 articles in 1908, of 1 article in 1909, of 2 articles in 1910, of 4 articles in 1911, of 4 articles in 1912, and of 16 articles in 1913. For 7 of these articles the trade journals no longer supply satisfactory quotations; the manufacture of the particular grade of 15 previously quoted has been discontinued by the establishments heretofore furnishing quotations, and for 43 articles the substituted descriptions more nearly represent the present demands of the trade. In making these substitutions articles were supplied corresponding as closely as possible to those which were previously used.

In explanation of the method adopted for computing the relative prices of articles substituted for others the statement is made in the report for 1913 (p. 31) that in any year where it was found necessary to introduce an article to replace another the relative price assigned to the new article for that year was identical with the relative price already ascertained for its predecessor in the same year. In other words, it is assumed that if the price of a commodity in any year, as represented by the price of a particular grade of the commodity in question, be correctly expressed by the relative number assigned it, then its price in the same year may continue to be expressed by assigning this same relative number to a new grade of the commodity when substituted for the former grade.

In 1908 a number of articles (11) were added to the list of those previously included. For such articles no relative price based on the 1890-1899 period could be computed, owing to the impossibility of obtaining satisfactory prices for those years. However, it was deemed necessary to include these new commodities in the several group relatives for 1908. This was accomplished by dividing the 1908 price of each article in the group, both old and new, by its 1907 price and then computing the simple average of the percentages thus obtained. This last result, which represents the group index for 1908 expressed as a percentage of the 1907 group index, was then multiplied by the relative price of the group in 1907 to produce the group relative for 1908. Similarly, in succeeding years, the relative prices for individual articles in the current year, computed on the prices of the preceding year as a base, have been averaged and the result multiplied by the group relative for the preceding year to give the corresponding group relative for the current year. The general index number for all commodities in 1908 and in subsequent years has been computed in the same manner as explained above.

#### INTERPOLATION.

Prices have not been interpolated for periods when price quotations were lacking for any of the commodities for which index numbers have been computed, although whenever new commodities have been introduced or substituted for other commodities, the assumption is tacitly made that the price of the newly introduced article has changed by the same percentage as the group as a whole and that the price of every substituted commodity has varied exactly as the price of the old article varied up to the time when the substitution was made.

#### WEIGHTING.

In compiling the present series of index numbers weighting in its technical sense has not been attempted. Instead, it has been thought best to use simply a large number of representative staple articles, selecting them in such a manner as to make them, to a large

extent, weight themselves. Upon a casual examination it may seem that by this method a comparatively unimportant commodity—such, for instance, as tea—is given the same weight or importance as one of the more important commodities, such as wheat. A closer examination, however, will disclose the fact that tea enters into no other commodity under consideration, while wheat is quoted in the raw state and enters into the two descriptions of wheat flour, the two descriptions of crackers, and the two descriptions of loaf bread. This method is the one employed by Mr. Sauerbeck in his compilation of English prices.

## TESTING.

No formal comparison of the index number compiled by the Bureau of Labor Statistics with other index numbers has been made in any of the wholesale-price reports. Great care is exercised in the selection and compilation of the data on which the index is based and the percentage changes in prices recorded are therefore quite accurate.

## TABLES OF RESULTS.

The following table, which has been reproduced from the 1913 report,<sup>1</sup> shows the movement in wholesale prices for the period from 1890 to 1913 in each of the nine principal groups of commodities and the monthly variations from January to December, 1913:

## RELATIVE PRICES OF COMMODITIES, BY GROUPS, 1890 TO 1913, AND JANUARY TO DECEMBER, 1913.

(Base period, 1890-1899=100.)

Year.	Farm products.	Food, etc.	Cloths and clothing.	Fuel and lighting.	Metals and implements.	Lumber and building materials.	Drugs and chemicals.	Household goods.	Miscellaneous.	All commodities.
1890.....	110.0	112.4	113.5	104.7	119.2	111.0	110.2	111.1	110.3	112.9

INDEX NUMBERS OF THE UNITED STATES SENATE COMMITTEE ON FINANCE.<sup>1</sup>

## PUBLICATION.

The Committee on Finance of the United States Senate published in 1893 an exhaustive report in which the course of wholesale prices in the United States was shown by means of index numbers for the 52-year period from 1840 to 1891. The report was of a special character, involving an extensive research, and the price data contained therein have not been continued except in a modified form for subsequent years.

## HISTORY.

A Senate resolution of March 3, 1891, authorized the Committee on Finance "to ascertain in every practicable way, and to report from time to time to the Senate, the effect of the tariff laws upon the imports and exports, the growth, development, production, and prices of agricultural and manufactured articles at home and abroad." Pursuant to this resolution the committee undertook to ascertain through accurate and adequate statistics of prices and wages the changes which had taken place in the condition, as shown by the relative purchasing power of their earnings, of the great mass of people in the country for the preceding 50 years. The report of the committee submitted on March 3, 1893, contained a mass of statistics relating to wholesale prices compiled by the statistician of the committee, Roland P. Falkner. (See Report on Wholesale Prices, Wages, and Transportation, Part 1, Appendix A.)

A continuation of this series of prices has been published in Bulletin No. 27 issued by the United States Department of Labor (now the Bureau of Labor Statistics) bringing the data down to 1899. In this latter series, however, two important changes of method were introduced. The first was in adopting as a basis the average price for the nine quarters—January, 1890, to January, 1892, inclusive—in place of the single-date basis, and the second in departing from the simple average method of allowing to each article equal weight, and instead combining the index numbers of similar articles to form one index number, to be used as one article only in calculating the index numbers for groups and for all commodities.

Another presentation of the data for the years 1860–1880 in somewhat different form (by quarters) is contained in "Gold Prices and Wages under the Greenback Standard," by Wesley C. Mitchell.<sup>2</sup>

## SOURCE OF QUOTATIONS.

The wholesale price quotations included in the report were collected mainly by the United States Department of Labor through its corps of agents and experts. In some cases experts employed

<sup>1</sup> Report from the Committee on Finance of the United States Senate on Wholesale Prices, Wages and Transportation. Mar. 3, 1893. 52d Congress, 2d session, Report No. 1394.

<sup>2</sup> University of California Publications in Economics, vol. 1, Mar. 27, 1908.

directly by the committee furnished the data for the tabulation. As a rule, the prices were obtained first hand; that is, from records of actual sales. In the selection of articles for quotations the committee frequently consulted the representatives of leading industries.

"The greatest care was exercised to secure absolutely accurate statements, and the books of merchants and manufacturers were ransacked in order to obtain figures worthy of every confidence."<sup>1</sup>

#### BASE PERIOD.

It is explained that the year 1840 was not used as a base because a statement based on that year "would have rendered comparatively useless for purposes of comparison all the articles the quotations for which begin later than 1840."<sup>2</sup> For this reason the year 1860, which would include most of the figures presented, was considered preferable. Moreover, it was believed that "the year 1860 represents a period in our industrial development midway between the older methods of production that prevailed before the war and those which have come into use since that period. It is also a period of comparatively normal prices. The markets of the country had recovered from the crisis of 1857 and the disturbances of trade caused by the war had not yet taken place."<sup>3</sup>

Also, a single year, 1860, rather than the average for a period of years, was taken because "it was not always practicable to secure for the articles in question the average prices that would have covered the period immediately prior to 1860, while in the following year some prices already manifested the disturbances due to the unsettled state of national affairs"; 1860 possessed all the aspects of a normal year. "Its price varies little from that of 1859 or of 1858 on the one hand and of 1861 on the other. It is therefore quite as proper a basis of comparison as would be an average of these four years."<sup>4</sup>

#### PRICES: HOW SHOWN AND COMPUTED.

As a rule the prices used were actual prices obtained at certain dates. In a few cases average prices for the year were used, when such prices were considered representative. The index numbers were calculated on the basis of the January prices in each year where the prices were quoted by quarters. An exception was made to this rule in the cases of those articles for which the January price was not the representative price for the year, as for fresh vegetables, in which cases the most appropriate month was selected.

#### NUMBER AND CLASS OF COMMODITIES.

In all there were 230 series of quotations presented, covering the prices not only of food products and raw materials but also of a very

<sup>1</sup> Report from the Committee on Finance of the United States Senate on Wholesale Prices, Wages, and Transportation, Pt. I, p. 29.

<sup>2</sup> *Idem*, p. 28.

large number of manufactured articles. While all series of quotations did not cover the entire period, owing to the difficulty of obtaining for the earlier years prices of articles in use during the later years, prices for 85 articles quoted in 1891 were secured as far back as 1840, and for 223 articles as far back as 1860. Those articles which are articles of luxury only and whose price had increased so immoderately that they could not be said to enter into consumption in the same degree as formerly were omitted.

DESCRIPTION AND GROUPING OF COMMODITIES.

The 223 articles were grouped as follows:

- Food (53).
- Cloths and clothing (28).
- Fuel and lighting (10).
- Metals and implements (54).
- Lumber and building materials (35).
- Drugs and chemicals (18).
- House-furnishing goods (15).
- Miscellaneous (10).

Following is an enumeration of the articles appearing on pages 30 to 52 of Part I of the report:

*Food.*

Beans.

Bread:

- A ship bread.
- B ship bread.
- Boston crackers (two quotations).
- Navy ship bread.
- Oyster crackers.
- Ship biscuits.
- Soda crackers.

Butter.

Cheese.

Coffee, Rio, fair.

Eggs.

Fish:

- Cod.
- Mackerel, salt, shore, No. 1.
- Mackerel, salt, shore, No. 2.
- Mackerel, salt, shore, No. 3.

Flour, wheat.

Flour, rye.

Fruit:

- Apples, dried.
- Currants, Zante.
- Raisins.

Lard.

Lard, pure leaf.

Meal, corn, yellow, kiln-dried.

## Meat:

Bacon, clear.  
 Beef, loins.  
 Beef, salt, mess.  
 Beef, ribs.  
 Ham, sugar-cured.  
 Lamb.  
 Mutton.  
 Pork, salt, mess.

## Milk, fresh.

## Molasses:

New Orleans, prime.  
 Porto Rico, best.

## Rice, Carolina, prime.

## Salt:

Ashton's.  
 Ashton's Liverpool, fine.  
 Coarse, solar.  
 Fine, boiled.  
 Turk's Island.

## Spices:

Nutmegs.  
 Pepper, whole, Sumatra.

## Starch, corn (two quotations).

## Sugar:

Brown.  
 Cut.  
 Fair refining.  
 Refined, crushed, and granulated.

## Tallow, prime, city, in hogheads.

## Vegetables:

Fresh, potatoes, white (two quotations).

*Cloths and clothing.*

## Blankets, 11-4, 5 pounds to the pair:

Cotton warp, cotton and wool filling.  
 Cotton warp, all-wool filling.

## Broadcloths:

First quality, black, 54-inch, made from XXX wool.  
 Second quality, black, 54-inch, made from XX wool.

## Calico, Cocheco prints.

## Carpets:

Brussels, 5-frame, Bigelow.  
 Ingrain, 2-ply, Lowell.  
 Wilton, 5-frame, Bigelow.

## Cassimeres, all-wool:

3-4, 7-ounce, Harris double and twist.  
 3-4, 12-ounce, Harris double and twist.  
 3-4, 12-ounce, Harris silk mixed.  
 Fancy, 3-4, light weight.

## Checks, black and white, all-wool, 3-4, 7-ounce, Harris.

## Cotton, upland, middling.

Denims, Amoskeag.  
 Drilling, 30-inch, Pepperell.  
 Hides, dry, Buenos Aires.  
 Horse blankets, 6 pounds, all-wool.  
 Leather, harness.  
 Print cloths:  
     28-inch, 64 by 64, Metacomet.  
     28-inch, 7 yards to the pound, standard.  
 Shawls, standard, 72 by 144 inches, weighing 42 ounces, made of XX Ohio fleece wool.  
 Sheetings, brown, 4-4, Atlantic A.  
 Shirtings, bleaches, 4-4, New York mills.  
 Sole leather, first quality, medium weight, Buenos Aires.  
 Tickings, Amoskeag, A. C. A.  
 Wool, Ohio, medium fleece, scoured.  
 Wool, Ohio, fine fleece, scoured.

*Fuel and lighting.*

Candles, best adamantine.

Coal, anthracite:

    Chestnut.  
     Egg.  
     F. lump.  
     Grate.  
     Pea.  
     S. lump.  
     Stove.

Coal, bituminous.

Matches, 8-card.

*Metals and implements.*

Anvils, domestic.

Bar iron, best refined, rolled.

Butts, loose, joint, cast, 3 by 3 inch.

Copper, ingot.

Copper, sheet.

Door knobs, mineral.

Iron rods, for making common wood screws.

Iron wire, market, No. 10.

Lead, drop shot.

Lead:

    Pig (two quotations).

    Pipe.

Locks:

    Common mortise.

    Common rim.

Meat cutters, Hale's, No. 12.

Nails, cut.

Pig iron, No. 1, anthracite, foundry.

Pocket knives:

    Redwood, iron-lined handle, 2½-inch, 1 blade.

    Standard, black horn, brass G. S. handle, 3¼-inch, pen, 2 blades.

    Standard—

        Cocoa, brass G. S. handle, 3½-inch, 2 blades.

        Cocoa, brass G. S. handle, 3½-inch, 2 blades.

        Cocoa, iron-lined handle, 2½-inch, 1 blade.

        Cocoa, iron-lined handle, 3½-inch, 1 blade (two quotations).

## Pocket knives—Continued.

## Standard—Continued.

- Cocoa, iron-lined handle, 3½-inch, 2 blades.
- Cocoa, iron-lined handle, 3½-inch, 2 blades.
- Cocoa, iron-lined handle, 4-inch, 1 blade.
- Ebony, brass G. S. handle, 3½-inch, 2 blades.
- Ivory, brass G. S. handle, 3-inch, pen, 2 blades.
- Ivory, brass G. S. handle, 3½-inch, pen, 2 blades.
- Ivory, brass G. S. handle, 3½-inch, pen, 4 blades.
- Ivory, brass G. S. handle, 3½-inch, pen, 3 blades.
- Pearl, brass-lined handle, 3½-inch, pen, 3 blades.
- Pearl, silver-lined handle, 3½-inch, pen, 3 blades.
- Pearl, silver-lined handle, 3½-inch, pen, 4 blades.
- Redwood, iron-lined handle, 4-inch pruner, 1 blade.
- Redwood, iron-lined handle, 5-inch pruner, 1 blade.
- Stag, brass G. S. handle, 4½-inch, 3 blades.
- Stag, brass-lined handle, 3½-inch, pen, 3 blades.
- Stag, brass-lined handle, 3½-inch, pen, 3 blades.
- Stag, brass-lined handle, 3½-inch, 4 blades.
- Stag, brass-lined handle, 4-inch, 4 blades.

## Quicksilver.

## Rope:

- Manila.
- Tarred, American.
- Tarred, Russian.

## Saws:

- Circular, 52-inch, Disston's.
- Crosscut, 6-foot, Disston's.
- Hand, common, Disston's.
- Hand, standard, Disston's.

## Scythes.

- Shovels, Ames No. 2, cast-steel D handle, square-point, back-strap.
- Spelter, imported.
- Wood screws, 1-inch, No. 10, flat head, iron.

*Lumber and building materials.*

- Brick, common domestic building.
- Carbonate of lead, in oil.
- Cement, Rosendale.
- Chestnut, lumber, in the log, not sawed.
- Doors, pine, unmolded, 2 feet 4 inches by 6 feet 8 inches, 1½ inches thick.
- Hemlock, boards, first quality, 1-inch, not planed.
- Hemlock, lumber, in the log, not sawed.
- Lime, Rockland.
- Maple, boards, first quality, 1-inch, rough.
- Oak, boards, white, plain, first quality, 1-inch, rough.
- Oxide of zinc, American, dry.
- Pine, boards, white, clear, 1-inch, not planed.
- Pine:
  - Boards, white, clear, extra, 1-inch, not planed (2 quotations).
  - Boards, white, common, 1-inch, not planed (2 quotations).
  - Boards, white, culls, 1-inch, not planed.
  - Flooring, white, extra, 1-inch, not planed.
  - Lumber, in the log, not sawed.

## Plate glass, polished:

- Unsilvered, area 1 to 3 square feet.
- Unsilvered, area 3 to 5 square feet.
- Unsilvered, area 5 to 10 square feet.
- Unsilvered, area 10 to 40 square feet.
- Unsilvered, area 40 to 80 square feet.
- Unsilvered, area 80 to 100 square feet.

## Putty.

## Shingles, pine:

- 16 inches, XXX.
- 16 inches, extra XXX cut.
- 16 inches, extra XXX sawed.

## Spruce boards, 1-inch.

## Tar, Wilmington.

## Turpentine.

## Window glass:

- American, 10 by 14.
- French, 10 by 14, firsts, single.
- French, 10 by 14, thirds, single.

*Drugs and chemicals.*

- Alcohol.
- Alum, lump, crystal.
- Bichromate of potash.
- Blue vitriol.
- Brimstone, crude.
- Calomel.
- Copperas.
- Flaxseed.
- Glycerin, refined.
- Linseed oil.
- Mercury.
- Muriatic acid.
- Opium.
- Quinine.
- Soda ash.
- Sugar of lead:
  - Brown.
  - White.
- Sulphuric acid.

*House-furnishing goods.*

## Furniture:

- Chairs, bedroom, maple, cane seat.
- Chairs, kitchen, common, spindle.
- Tables, kitchen, pine, 3 $\frac{1}{2}$ -foot.

## Glassware:

- Bowls, 8-inch.
- Goblets, common.
- Pitchers,  $\frac{1}{2}$ -gallon.
- Sets, finished.
- Tumblers,  $\frac{1}{2}$ -pint.

## Pails, wooden:

- 2-hoop (2 quotations).
- 3-hoop.

## Tubs, wooden (4 quotations).

*Miscellaneous.*

Powder, rifle (2 quotations).  
 Rubber, Para.  
 Soap, castile, mottled, imported.  
 Starch:  
   Ontario.  
   Ordinary laundry.  
   Pearl.  
   Pure.  
   Refined.  
   Silver gloss.

## SUBSTITUTIONS AND ADDITIONS.

In the compilation of the index numbers no substitution of one grade or quality of an article for another grade or quality of the same article or for a different article previously included was made. In cases where quotations on a particular article could no longer be had, or where the article had ceased to be representative, it was discontinued and the index number was computed on the remaining articles. Additions to the list of articles were made from time to time as occasion demanded, such additions being carried into the index number for the year.

## INTERPOLATION.

Interpolation of prices was not resorted to in the preparation of the index numbers. In cases where prices for particular periods were lacking, the article in question was temporarily discontinued.

## WEIGHTING.

The committee calculated three distinct index numbers. The first was unweighted, while the second and third were weighted by assigning to each article an importance in the result equal to its importance in family consumption. The basis selected by the committee for determining this consumption was the Seventh Annual Report of the Commissioner of Labor, showing the values of various articles consumed by a large number of families which were considered typical of the expenditures of the mass of the people. This information is summarized in the following table showing the distribution of expenditure for 2,561 normal families.

DISTRIBUTION OF EXPENDITURE FOR 2,561 FAMILIES.

Group.	Per cent of expenditure for each purpose.	Proportions of 10,000.
Rent.....	15.06	1,506
Food.....	41.03	4,103
Fuel.....	5.00	500
Clothing.....	15.31	1,531
Lighting.....	.90	90
All other purposes....	22.70	2,270
	100.00	10,000

This table shows the main groups of family expenditures only, and these were not sufficiently specific for the purpose. In order to secure accurate and specific data as to the composition of these groups themselves, therefore, 232 special budgets of family expenses were collected. The table based on 2,561 families was then used to secure the proportion of the groups entering into consumption, while a table based on 232 families was used to secure the distribution of expenditure within the groups themselves. The figures thus secured, showing the relative weight in consumption of each article contained in the family budgets, were then applied to the various articles in the index numbers. Few articles were found, however, with identical descriptions, hence a method of grouping was resorted to. For example, two or more articles contained in the index numbers were often grouped to represent one article of the family budget, thus, "ham," "bacon," and "pork" were considered equivalent to the "hog products" of the family budgets, and an arithmetical average was made of the index numbers of these three articles, which was made the index number of hog products and given its appropriate weight. Briefly described, the method as applied to the food group was as follows: The figure denoting the importance of each article in the group in a given year was multiplied by its simple index number (or the average where two or more articles were grouped), and the sum of these products was divided by the total of the figures denoting importance for the weighted index number for the general group of food. This method was used in securing similar weighted index numbers for the other years of the period. It is seen that according to this method the same weights were used for each year of the period, although they were based on the consumption of families in 1891.

The following table shows the weighted relative prices or index numbers in 1891 for each of the groups considered, together with the total weighted relative price or index number:

RELATIVE PRICES OF ALL ARTICLES IN 1891, MEASURED BY CONSUMPTION.

(Base period, 1860-100.)

Group.	Importance.	Weighted index number.	Result.
Rent.....	1,506	100.0	1,506,000
Food.....	4,103	103.7	4,254,811
Fuel.....	500	98.1	490,500
Lighting.....	90	43.1	38,790
Clothing.....	1,531	75.1	1,150,029
All other purposes.....	2,270	95.3	2,164,096
Total.....	10,000	96.2	9,620,726

In the above table the weighted index numbers for the various groups were found in practically the same manner as has previously been described for food, except that rent and certain items entering

into the group "All other purposes" were considered to have remained unchanged. These were then multiplied by the figures denoting importance, and the sum of the products divided by the total of the figures denoting importance (10,000) to secure the weighted total of 96.2. The remaining years were treated in a similar manner.

The items of budget expenditure considered as remaining unchanged (rent, taxes, insurance, etc.), constituted 31.40 per cent of the total expenditure, leaving 68.60 per cent as affected by changes in prices. Another set of index numbers for such articles was made by the committee by assigning a total numerical weight of 6,860 to such articles and working out the index numbers on that basis. This resulted in a slightly different total index number.

## TESTING.

The accuracy of the results secured was tested by comparison of the index numbers with those of the London Economist and of Sauerbeck for England.<sup>1</sup>

## TABLES OF RESULTS.

The index numbers computed by the three methods, i. e., simple average, average of all articles weighted according to consumption, and average of fluctuating articles only, weighted according to consumption, are shown in the following table. The prices are in currency.<sup>2</sup>

RELATIVE PRICES IN EACH YEAR, 1840 TO 1891, FOR ALL ARTICLES GROUPED BY DIFFERENT METHODS.

Year.	All articles simply averaged.	All articles averaged according to importance, certain expenditures being considered uniform.	All articles averaged according to importance, comprising 68.60 per cent of total expenditure.	Year.	All articles simply averaged.	All articles averaged according to importance, certain expenditures being considered uniform.	All articles averaged according to importance, comprising 68.60 per cent of total expenditure.
1840	116.8	98.5	97.7	1866	191.0	160.2	187.7

#### INDEX NUMBERS OF THE ANNALIST.

##### PUBLICATION.

The *Annalist*, a magazine of finance, commerce, and economics, published weekly in New York City, has compiled an index number based on the wholesale prices of 25 food commodities in the United States. These articles are so selected as to represent a theoretical family food budget.

##### HISTORY.

The publication of this index number began with the first issue of the *Annalist* on January 20, 1913, and has been continued weekly since that date in connection with the exhibit of various other items of business activity appearing under the caption of "Barometrics."

##### SOURCE OF QUOTATIONS.

The prices used in the computation of the index number are those prevailing in the New York and Chicago markets.

##### BASE PERIOD.

The 10 years 1890-1899 constitute the base period used in computing the index number.

##### PRICES: HOW SHOWN AND COMPUTED.

During the period from May 19 to September 1, 1913, the *Annalist* published in each week's issue the mean price of each selected commodity during the preceding week, together with the relation

<sup>1</sup> Report from the Committee on Finance of the United States Senate on Wholesale Prices, Wages, and Transportation, Pt. I, p. 10.

of such price to the price for the base period 1890-1899. The sum of these relative prices, divided by 25 (the number of commodities), constitutes the index number for the week. In all other issues of the *Annalist* up to date no exhibit of wholesale prices is made in connection with the presentation of the index number.

#### NUMBER AND CLASS OF COMMODITIES.

As previously stated, 25 articles of food are included in the index. These are listed in the *Annalist* of May 19, 1913, and in subsequent numbers to September 1 of the same year, as follows:

Steers.	Flour, wheat, spring.
Hogs.	Flour, wheat, winter.
Sheep.	Corn meal.
Beef, fresh.	Rice.
Mutton, dressed.	Oats.
Beef, salt.	Apples, evaporated.
Pork, salt.	Prunes.
Bacon.	Butter, creamery.
Codfish, salt.	Butter, dairy.
Lard.	Cheese.
Potatoes.	Coffee.
Beans.	Sugar, granulated.
Flour, rye.	

#### DESCRIPTION AND GROUPING OF COMMODITIES.

The following description of the commodities included in the index number has been supplied by the publishers of the *Annalist*:

##### New York markets.

Codfish (Georges), corn meal, rice, beans, evaporated apples, California prunes, extra creamery butter, New York State dairy butter, cheese (New York State, whole milk, held), No. 7 Rio coffee, fine granulated sugar, fresh beef, dressed mutton, salt beef, salt pork, wheat flour (winter straights and spring patents), Middle West lard, and rye flour.

##### Chicago markets.

Good to choice steers, hogs (250-300 pound packers and fair to select butcher's), sheep (good to choice wethers), bacon (short, clear sides), white potatoes, and cash oats (2 white, 3 white, and standards).

#### SUBSTITUTIONS AND ADDITIONS.

The statement is made in the *Annalist* of October 13, 1913, that "a substitution has been made which affects the current numbers seven-tenths of 1 per cent." This was occasioned by the substitution of "good to choice steers" for "prime to fancy steers," as quotations on the latter grade had become nominal in the Chicago market. The entire index number was recast so as to conform to the change made in this respect. No additions to the list of commodities have been made.

## INTERPOLATION.

No prices have been interpolated, as far as the published information discloses.

## WEIGHTING.

The index number is unweighted and is obtained by computing the simple arithmetic mean of the relative prices of the different commodities.

## TESTING.

No test of the index number by means of comparison with other indexes or by other means is shown in any issue of the Annalist.

## TABLE OF RESULTS.

The course of the index number by years from 1890 to 1914 and by months during 1912, 1913, and 1914 is shown in the following statement furnished by the publishers of the Annalist:

## INDEX NUMBERS, BY YEARS, 1890 TO 1914, AND BY MONTHS, 1912, 1913, AND 1914.

(Base period, 1890-1899=100.)

## Yearly.

Year.	Index number.	Year.	Index number.	Year.	Index number.
1890.....	100.252	1899.....	93.348	1908.....	125.756
1891.....	119.488	1900.....	99.388	1909.....	133.962
1892.....	108.624	1901.....	104.656	1910.....	137.172

## INDEX NUMBERS OF BRADSTREET'S.

## PUBLICATION.

This "index"<sup>1</sup> represents the record of wholesale prices of staple articles in the primary markets of the United States and is now published every month. Formerly it was issued only every quarter.

## HISTORY.

Bradstreet's index had its beginning in the issue of September 21, 1895, of the periodical of that name, which presented a table of comparative prices of 110 staple articles for each quarter from October 1, 1890, to July 1, 1895, under the heading, "Five years' prices for 110 staple products."

The compiler evidently had in mind a record of price movements in the United States similar to that furnished by Sauerbeck's index of English prices, as he refers to it in the introductory paragraph as follows:

"In Sauerbeck's latest record of prices of staple products in the United Kingdom during the past 30 years it is shown that quotations for 50 selected articles by groups averaged lower in 1894 than in any of the 16 next preceding years, as well as lower than in the 11-year period from 1867 to 1877, which the eminent statistician selected as representing the normal and called 100."<sup>2</sup>

In explanation of the data presented in Bradstreet's the compiler says: "In the accompanying exhibit of comparative prices of staple articles at primary markets in the United States at quarterly intervals, beginning with the autumn of 1890, prior to the Baring crash, and ending with July 1, 1895, is furnished what should prove an opportunity for tracing the relative effects of panic and trade depression on the prices in different lines of business."<sup>2</sup>

In the issue of October 26, 1895, the report was extended to include prices for October 1 of that year and the statement made that "it will be recalled this work was first made public by Bradstreet's late in the summer with a comparison of quotations for more than 100 articles of merchandise and produce at quarterly intervals during the past five years."

Again in the issue of January 11, 1896, the author has this to say in discussing the compilation: "Perhaps the most elaborate exhibit which has been compiled of comparative prices of staple products, breadstuffs, live stock, provisions, fresh and dried fruits, hides and leather, raw and manufactured textiles, coal and coke, mineral and vegetable oils, building materials, chemicals and drugs, and others

<sup>1</sup> Not an index in the true sense of the word, being rather a number representing the aggregate of per pound prices of certain selected commodities.

<sup>2</sup> Bradstreet's, Saturday, Sept. 21, 1895, p. 504.

is presented in connection with this article. The quotations are given for quarterly periods during the past five calendar years, and probably few, if any, better outlines of the movement of quotations have thus far been presented."

The comparative prices continued to be presented on the first of each quarter until May 8, 1897, when in connection with "A study of prices" an index number was published for the first time.

The index as constructed was simply the sum obtained by adding the per pound prices of the different articles included. At first it was not expressed in dollars and cents, but as an abstract number. No attempt was made at weighting, nor was consumption taken into account, so that the result was "not an absolute indication of the price movement based on the proportions in which each of the products and articles are used, but a fair indication of the tendency." The author stated that only 97 articles were included in the index, but as actual prices were shown for 108 articles and only 10 articles were stated to be excluded it would appear that the index comprised 98 articles.

In the issue of June 11, 1898, actual prices were shown for 107 articles, quotations for onions being dropped, and the index number was revised to exclude the price of quicksilver. The only explanation given for this was: "It might be stated in passing that the lowering of the index number is accounted for by the deduction of the price of quicksilver." The index for the period October, 1890, to June, 1898, was thus recomputed by deducting the price of quicksilver; for instance, the old index for January, 1898, was 80,149 and the new one was 75,084; that is, the price of quicksilver on January 1, 1898 (\$0.5065 per pound), was deducted from 80,149, leaving 75,084 as the new index. There were still 10 articles, excluding quicksilver, not included in the index, but for which comparative prices were given.

Again on September 10, 1898, the index appeared with revised figures. This revision was due to the quotation of a different grade of hides. Previous to this time prices had been quoted for dry Buenos Aires hides, but for some reason not stated the new quotations were for No. 1 native steer hides. The difference between the prices of these two grades of hides in August, 1898, was \$0.0925, and this deduction from the former index for August (77,481) leaves 76,556 as the new index. This amount was deducted from every index figure already established as far back as October, 1890.

In the issue of October 12, 1901, the first group indexes were shown and consisted of the sum of the per pound prices for all of the articles included in the group. The sum of the 13 groups was the index shown for all commodities. The general index was expressed in dollars and cents and continued to be stated this way until April 9,

1904, when it was restated in dollars, cents, and fractions thereof. This was not a revision of the index, but simply a change in the method of pointing off. The index numbers for the groups had been expressed in this way for some time before this date. The index now began with January 1, 1892, instead of October 1, 1890, as formerly, and was computed upon the basis of the revision of September, 1898, until December 16, 1905, when a general index "revised to exclude some staples showing wide fluctuations" in price was published. It is not stated in connection with these figures what articles were excluded or on how many commodities the revised index number was based. The exhibit as published contained the index number by quarters from January 1, 1892, to October 1, 1898, and by months from January 1, 1899, to December 1, 1905, inclusive. No further revision of the index number appears to have been made.

#### SOURCE OF QUOTATIONS.

The source of these quotations is not disclosed, but it is stated that they are from primary markets.

#### BASE PERIOD.

No base period was selected in the compilation of the index number, the need of such being obviated by the method employed, which consists simply in adding together the prices per pound of the various selected articles at the date named.

#### PRICES: HOW SHOWN AND COMPUTED.

Prices are published each month for a selected list of representative commodities. These prices are shown for the first day of the current month and, for purpose of comparison, the first day of several preceding months and the first day of the corresponding month in the preceding year. No range of quotations is shown in any case, and it is evident that a single price has been used, but whether either extreme or the mean was taken it is impossible to determine with the source of quotations unknown. No yearly average actual prices are published.

In the issue of May 8, 1897, the price per pound of each article was shown as quoted on the first of April, the articles being grouped under the amount paid per pound. The list was prefaced by the following statement: "Bradstreet's exhibit of 98 staple, raw and manufactured articles, products, produce and live stock classified according to the cost of 1 pound of each on April 1, 1897." This exhibit was continued at intervals for about a year and then dropped. In many cases the figures appear to have been approximations. The list as published in Bradstreet's of July 10, 1897, follows. The prices are for July 1.

Cost per pound.

- \$.0007 Connellsville coke, southern coke.
- .001 Bituminous coal, brick, iron ore.
- .002 Anthracite coal.
- .003 Salt, southern pig iron, crude petroleum, rosin, lime, phosphate rock.
- .004 Bessemer pig iron, pine lumber, cotton seed.
- .005 Corn, eastern pig iron, tar, spruce, hemlock.
- .006 Steel billets.
- .007 Oats, barley, rye, potatoes, hay, sulphuric acid.
- .009 Steel rails, steel beams, refined petroleum.
- .015 Wheat, milk, peas, nails, alum, bicarbonate of soda.
- .02 Flour, molasses, beans, paper, caustic soda.
- .03 Hogs, lemons, hemp, jute, tin plates, cottonseed oil, turpentine, glass, flax.
- .04 Bees, sheep, bread, barreled beef, pork, lard, codfish, rice, linseed oil, raisins, lead, nitric acid.
- .05 Pigs, sugar, currants, borax, bacon.
- .06 Eggs.
- .07 Beef carcasses, mutton, coffee, olive oil, hops.
- .08 Horses, mackerel, cheese, cotton.
- .10 Hams.
- .11 Copper.
- .12 Castor oil.
- .14 Standard sheetings, cotton sheetings, tin, tobacco.
- .15 Butter.
- .175 Print cloths.
- .18 Tea, Buenos Aires hides, carbolic acid.
- .20 Hemlock hides, wool.
- .27 Union leather.
- .29 Oak leather.
- .31 Ginghams.
- .34 Alcohol.
- .50 Australian wool.
- .52 Quicksilver.
- .84 Rubber.

## NUMBER AND CLASS OF COMMODITIES.

In the beginning 110 articles were shown in the comparative table of actual prices, but now only 106 are included, and of these only 96 are included in the index. Oranges, naphtha, onions, and aluminum were the articles dropped from the table of comparative prices, but the reason for their discontinuance is not given. Two of these, onions and aluminum, were never included in the compilation of the index. Two articles that at first were included in the index are no longer included—namely, quicksilver and rubber—but these are still shown in the table of actual prices. When these articles were dropped the index was recomputed from that date to the beginning, necessitating a new index figure for every previous date. The list of articles includes both raw and manufactured commodities that are of general consumption in the United States.

## DESCRIPTION AND GROUPING OF COMMODITIES.

The articles on which the index is based are divided into 13 general groups, as follows: Breadstuffs, live stock, provisions and groceries, fresh and dried fruits, hides and leather, raw and manufactured textiles, metals, coal and coke, mineral and vegetable oils, naval stores, building materials, chemicals and drugs, and miscellaneous. Since October 12, 1901, an index has been computed usually for each of the different groups separately. The sum of the indexes for the 13 groups is the index for the whole number of articles. Index numbers for years are computed by averaging the 12 monthly totals.

The following list is an enumeration of the articles, under the various groups, for which actual prices are shown in the comparative price table. As before stated, only 96 of these 106 articles are included in the index as now compiled. This is the list and description of articles as printed in Bradstreet's of December 12, 1914:

*Breadstuffs (6 articles).*

Wheat, No. 2, red winter, in elevator.	Barley, No. 2 (Milwaukee).
Corn, No. 2, mixed, in elevator.	Rye, western.
Oats, No. 2, mixed, in elevator.	Flour, straight winter.

*Live stock (4 articles).*

Beeves, best, native steers (Chicago).	Hogs, prime (Chicago).
Sheep, prime (Chicago).	Horses, average, common to best (Chicago).

*Provisions and groceries (24 articles).*

Beef, carcasses (Chicago).	Cheese, choice, east factory.
Hogs, market pigs, carcasses (Chicago).	Mackerel, No. 1, bays (Boston).
Mutton, carcasses (Chicago).	Godfish, large dried.
Milk (New York).	Coffee, Rio, No. 7.
Eggs, State, fresh (New York).	Sugar, granulated.
Bread (New York).	Tea, Formosa Oolong, superior.
Beef, family.	Molasses, New Orleans, prime.
Pork, new mess.	Salt, fine domestic, sacks.
Bacon, short ribs, smoked (Chicago).	Rice, domestic, good.
Hams, smoked.	Beans (New York), choice marrow.
Lard, western steam.	Peas, choice (New York).
Butter, creamery, State, best.	Potatoes, eastern.

*Fresh and dried fruits (6 articles).*

Apples (State).	Lemons, choice.
Cranberries, Cape Cod, fancy.	Raisins, layer.
Peanuts, best Virginia, in hull.	Currants, new, dried.

*Hides and leather (4 articles).*

Native steer hides, No. 1.	Union, middlebacks, tannery run.
Hemlock, packer, middleweights, No. 1.	Oak, scoured backs, No. 1.

*Raw and manufactured textiles (11 articles).*

Wotton, middling uplands.	Silk, best No. 1, filature.
Wool, Ohio, and Pennsylvania X, washed (Boston).	Flax, New Zealand, spot.
Wool, Australian super combing, scoured.	Print cloths, 64s (Boston).
Hemp, manila.	Standard sheetings (Boston).
Jute, average of grades.	Ginghams, Amoskeag staple (Boston).
	Cotton, sheetings, southern, 3 yards.

*Metals (13 articles).*

Iron ore, old range, Bessemer, hematite.	Tin plates, American (Pittsburgh).
Pig iron, No. 1 foundry, eastern (New York).	Steel beams (Pittsburgh).
Pig iron, No. 2 foundry, southern (Birmingham).	Silver, commercial bars (New York).
Pig iron, Bessemer (Pittsburgh).	Copper, electrolytic (New York).
Steel billets, Bessemer (Pittsburgh).	Lead, pig, western (New York).
Steel rails, standard (Pittsburgh).	Tin, pig, spot (New York).
	Quicksilver (San Francisco).

*Coal and coke (4 articles).*

Anthracite, stove sizes (New York).	Connellsville coke, short ton, f. o. b.
Bituminous (Pittsburgh), f. o. b. Chicago.	Southern coke (Chatanooga).

*Mineral and vegetable oils (6 articles).*

Petroleum, crude, in barrels (New York).	Cottonseed, crude, prime (New York).
Petroleum, refined, in cases.	Castor, No. 1.
Linseed.	Olive, Italian, in barrels.

*Naval stores (3 articles).*

Rosin, good, strained (Savannah).	Tar, regular (Wilmington, N. C.).
Turpentine, machine, regular (Savannah).	

*Building materials (7 articles).*

Brick, Hudson River, hard.	Pine, yellow, 12-inch and under.
Lime, eastern common.	Timber, eastern spruce, wide random.
Nails, wire, from store, base prices.	Timber, hemlock, Pennsylvania, random.
Glass, window, 10 by 15.	

*Chemicals and drugs (11 articles).*

Alum.	Sulphuric acid, 66 degrees.
Bicarbonate of soda, American.	Phosphate rock, South Carolina, ground.
Borax, crystals.	Alcohol, 94 per cent.
Carbolic acid, in bulk.	Opium.
Caustic soda, 60 per cent.	Quinine, domestic, in bulk.
Nitric acid, 36 degrees.	

*Miscellaneous (7 articles).*

Hops, New York State, choice.	Paper, news, roll.
Rubber, upriver, Para, fine new.	Ground bone, fine, steamed.
Tobacco, medium leaf, Burley (Louisville).	Hay prime (New York).
	Cotton seed (Houston).

## SUBSTITUTIONS AND ADDITIONS.

Numerous changes in description of the articles have occurred from time to time, but only once, apparently, has a substitution been considered of enough importance to justify any change in the index. This was in the case of dry Buenos Aires hides, for which were substituted No. 1 native steer hides, when the index was recomputed back to the beginning.

## INTERPOLATION.

No method of supplying missing data is disclosed, if such has been found necessary.

## WEIGHTING.

Apart from the basic plan of expressing in terms of dollars and cents the value of 1 pound avoirdupois of each commodity, there is no attempt at assigning varying degrees of importance to the different articles included in the index.

## TESTING.

No test has been made of the index so far as known, other than a comparison in parallel columns of the numbers with those published by the London Economist, the Statist (Sauerbeck's), the Canadian Department of Labor, and La Réforme Économique for the same dates.

## TABLES OF RESULTS.

The following table, appearing in Bradstreet's issue of December 12, 1914, illustrates the manner in which the group index numbers for different dates are shown:

BRADSTREET'S INDEX NUMBERS FOR SPECIFIED DATES.

Commodity.	Dec. 1, 1913.	Aug. 15, 1914.	Nov. 1, 1914.	Dec. 1, 1914.
Breadstuffs.....	\$0.0947	\$0.1001	\$0.1116	\$0.1139
Live stock.....	.4480	.4860	.4415	.4220
Provisions.....	2.4513	2.5006	2.3753	2.3689
Fruits.....	.1380	.2305	.1736	.1648
Hides and leather.....	1.3500	1.4300	1.4175	1.4250
Textiles.....	2.5625	2.3704	2.1354	2.1392
Metals.....	.6720	.8707	.6279	.5830
Coal and coke.....	.0070	.0067	.0067	.0066
Oils.....	.3539	.3755	.3434	.3503
Naval stores.....	.0771	.0784	.0794	.0770
Building materials.....	.0821	.0822	.0816	.0821
Chemicals and drugs.....	.5867	1.0096	.8520	.9979
Miscellaneous.....	.3477	.3088	.2652	.2547
Total.....	9.2290	9.8495	8.8630	9.0354

For some years past a yearly index has been computed by averaging the 12 monthly indexes. The manner of presenting this information is shown by the following table, which is reproduced from Bradstreet's of December 12, 1914.

1914.....	\$8. 9035	1902.....	\$7. 8759
1913.....	9. 2076	1901.....	7. 5746
1912.....	9. 1867	1900.....	7. 8839
1911.....	8. 7132	1899.....	7. 2100
1910.....	8. 9881	1898.....	6. 5713
1909.....	8. 5153	1897.....	6. 1159
1908.....	8. 0094	1896.....	5. 9124
1907.....	8. 9045	1895.....	6. 4346
1906.....	8. 4176	1894.....	6. 6846
1905.....	8. 0987	1893.....	7. 5324
1904.....	7. 9187	1892.....	7. 7769
1903.....	7. 9364		

Ten-year average, 1902 to 1911, inclusive, \$8.3377.

Ten-year average, 1892 to 1901, inclusive, \$6.9696.

The index numbers computed from the wholesale prices of 96 articles on the first day of each month from January, 1903, to December, 1914, inclusive, are shown in the subjoined table, also reproduced from Bradstreet's issue of December 12, 1914.

BRADSTREET'S INDEX NUMBERS, JANUARY, 1903, TO DECEMBER, 1914, INCLUSIVE.

Year	Index number: First of each month.											
	Jan.	Feb.	Mar.	Apr.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.
1903.	\$8. 0789	\$8. 0824	\$8. 1300	\$8. 1247	\$7. 9667	\$7. 8751	\$7. 8706	\$7. 7473	\$7. 7583	\$7. 9083	\$7. 8871	\$7. 8383
1904.	7. 9885	8. 0973	8. 0882	7. 9690	7. 9852	7. 9677	7. 6318	7. 7623	7. 7846	7. 9213	8. 0015	8. 0579
1905.	8. 0827	8. 0805	8. 0979	7. 9996	7. 9700	7. 9073	7. 9160	8. 1111	8. 2785	8. 2298	8. 2097	8. 3014
1906.	8. 3289	8. 2415	8. 2321	8. 2987	8. 3054	8. 3203	8. 2836	8. 3376	8. 4528	8. 5589	8. 7509	8. 9023

### INDEX NUMBERS OF DUN.

#### PUBLICATION.

An "index" <sup>1</sup> number based on the wholesale prices of a large number of representative commodities in general use in the United States is published by the mercantile agency of R. G. Dun & Co., of New York City. The information appears monthly in Dun's Review, the weekly journal of finance and trade issued by the above-named company.

<sup>1</sup> Not an index in the true sense of the word, but a statement in dollars and cents of the per capita cost of a year's supply of certain commodities at each date named.

**HISTORY.**

The publication of this index number was begun in 1901 and covered a period of time extending back to 1860. From 1901 to 1907 periodical presentation of the index in Dun's Review appears to have been made. With the issue of May 11, 1907, however, its publication was discontinued and apparently was not resumed until May 9, 1914. The issue of the latter date contained data for the first five months of the years 1912, 1913, and 1914, respectively; but no attempt was made in this number to supply figures for all of the period intervening since 1907. Data for other months of 1912, 1913, and 1914 are shown in subsequent issues; and in Dun's Review of January 9, 1915, a presentation is made of the index number on the first of each month for the entire period from 1907 to 1914, inclusive, thus furnishing a continuous series since the inception of the undertaking.

**SOURCE OF QUOTATIONS.**

The price quotations on which the index number is based are those gathered by Dun & Co. in the principal markets of the country, New York and Chicago prices predominating.

**BASE PERIOD.**

Under the method followed in the computation of the index number no base period is employed, the index in the case of each article and group being the actual amount in dollars and cents required to purchase a year's supply for a single individual at the date named.

**PRICES: HOW SHOWN AND COMPUTED.**

With regard to the method of calculation, the following statement is reproduced from Dun's Review of May 9, 1914:

Quotations of all the necessaries of life are taken and in each case the price is multiplied by the annual per capita consumption, which precludes any one commodity having more than its proper weight in the aggregate. Thus, wide fluctuations in the price of an article little used do not materially affect the "index," but changes in the great staples have a large influence in advancing or depressing the total. \* \* \* The per capita consumption used to multiply each of many hundreds of commodities does not change. There appears to be much confusion on this point, but it should be seen at a glance that there would be no accurate record of the course of prices if the ratio of consumption changed. It was possible, however, to obtain figures sufficiently accurate to give each commodity its proper importance in the compilation. This was done by taking averages for a period of years when business conditions were normal and every available trade record was utilized, in addition to official statistics of agriculture, foreign commerce, and census returns of manufactures.

## NUMBER AND CLASS OF COMMODITIES.

The following excerpt from the same source shows what commodities are included:

For convenience of comparison and economy of space the prices are grouped into seven classes: Breadstuffs include quotations of wheat, corn, oats, rye, barley, beans, and peas; meats include live hogs, beef, sheep, and many provisions, lard, tallow, etc.; dairy and garden products embrace eggs, vegetables, fruits, milk, butter, cheese, etc.; other foods include fish, liquors, condiments, sugar, rice, also tobacco, etc.; clothing covers the raw material of each industry, as well as quotations for woolen, cotton, silk, and rubber goods, also hides, leather and boots and shoes; metals include various quotations for pig iron and partially manufactured and finished products, as well as the minor metals, tin, lead, copper, etc., and coal and petroleum; miscellaneous includes many grades of hard and soft lumber, lath, brick, lime, glass, turpentine, hemp, linseed oil, paints, fertilizers, and drugs.

The precise number of articles included in the index is not stated; but in Dun's Review of January 9, 1915, it is said that "about 200 products are taken."

## DESCRIPTION AND GROUPING OF COMMODITIES.

As previously stated, the commodities are divided into seven groups: viz, breadstuffs, meats, dairy and garden products, other foods, clothing, metals, and miscellaneous articles. No further description of the articles entering into the index is given.

## SUBSTITUTIONS AND ADDITIONS.

Additions to the list of commodities for which index numbers have been computed, or substitutions of a particular grade or quality of an article for another grade or quality of the same article, if any, are not shown in connection with any of the published data.

## INTERPOLATION.

So far as can be determined from the information at hand concerning the long period covered, no interpolation of prices has been made.

## WEIGHTING.

As stated in a preceding paragraph, weighting is accomplished by multiplying the price of each commodity, at the date named, by its annual per capita consumption "for a period of years when business conditions were normal,"<sup>1</sup> as nearly as could be ascertained by reference to reliable statistical records. It is stated in Dun's Review of January 9, 1915, that "while it is obvious that the consumption of some commodities has increased during recent years, it would defeat the purpose of the index to change the multiplier in any instance,

because there would no longer be a comparative record of the cost of the same quantities of the same articles back to 1860, as is now the case." The issue of September 7, 1901, states that "while the figures can not be considered exact, the approximation is sufficiently close to attain the desired result, and the ratio being constant the comparison with different dates shows to a cent the rise or fall in the cost of living."<sup>1</sup>

TESTING.

No comparison of the index number with those compiled by others has been made, nor have other means of testing been employed so far as can be determined.

TABLE OF RESULTS.

The following statistics, showing the trend of wholesale prices from January 1, 1860, to December 1, 1914, have been compiled from Dun's Review of May 11, 1907, and January 9, 1915:

WHOLESALE PRICES OF SPECIFIED COMMODITIES, JAN. 1, 1860, TO DEC. 1, 1914.

Date.	Bread-stuffs.	Meats.	Dairy and garden products.	Other foods.	Clothing.	Metals.	Miscellaneous.	Total.
1860, Jan. 1.....	\$23.652	\$10.064	\$14.189	\$8.978	\$22.094	\$26.082	\$16.572	\$121.621
1864, Sept. 1.....	46.138	17.790	29.426	29.562	91.667	61.964	38.191	\$12.737
1870, Jan. 1.....	29.076	15.255	21.178	16.240	32.986	27.682	23.056	165.473
1875, Jan. 1.....	28.048	11.932	17.832	14.548	25.718	22.833	18.669	137.578
1880, Jan. 1.....	22.955	8.206	14.007	11.573	22.673	25.002	16.983	122.679
1885, Jan. 1.....	16.342	9.432	14.304	8.996	18.081	15.065	14.245	98.465
1888, Jan. 1.....	18.565	8.920	15.030	10.340	15.140	17.330	14.577	99.902
1889, Jan. 1.....	18.185	8.705	14.670	10.480	15.170	17.350	14.496	99.076
1890, Jan. 1.....	18.765	7.630	12.675	9.935	14.945	19.240	15.111	90.191
1891, Jan. 1.....	19.725	7.810	15.270	10.215	14.135	15.875	14.217	98.247
1892, Jan. 1.....	17.700	7.895	13.180	9.185	13.430	14.665	23.767	88.822
1893, Jan. 1.....	15.750	9.315	15.290	9.595	13.900	15.985	14.320	94.155
1894, Jan. 1.....	13.530	8.655	13.945	8.945	12.880	14.565	13.512	86.032
1895, Jan. 1.....	14.311	8.359	12.190	8.907	11.896	12.026	13.007	80.992
1896, Jan. 1.....	11.380	7.549	10.989	8.898	12.787	12.803	13.403	77.780
1897, Jan. 1.....	11.729	7.327	10.456	8.170	12.407	13.014	12.389	75.502
1897, July 1 (low).....	10.587	7.529	8.714	7.887	13.838	11.642	12.288	72.455
1898, Jan. 1.....	13.511	7.336	12.371	8.312	14.654	11.672	12.184	79.940

<sup>1</sup> The issue of May 9, 1914, contains the statement that "Dun's index number does not propose to show the cost of living, because wholesale prices are taken and all luxuries omitted. Its economic value lies in showing the percentage of advance or decline from month to month."

## INDEX NUMBERS OF GIBSON.

## PUBLICATION.

This index of wholesale prices in the United States is published by Thomas Gibson, New York, every Saturday, in his weekly market letter.

## HISTORY.

In March, 1910, Prof. J. Pease Norton published a "report on a new method of compiling index numbers on the Sauerbeck selection of commodities modified with the Dun system of weighting," which was prepared for use in the weekly market report of Thomas Gibson.<sup>1</sup> The work was undertaken as a continuation of the Dun index, which had been suspended in May, 1907.

In this compilation 50 articles, divided into four general groups, were used instead of the much larger number included in Dun's index. The general food group was in turn divided into vegetable foods and animal foods. The descriptions of the 50 articles whose prices formed the index were the same as those used for these 50 articles in Bulletin of the United States Bureau of Labor, No. 75. The actual and relative prices for 1907 of these 50 articles appear to have been taken from the latter source. The plan followed in the compilation of this index was intended to be that used by Sauerbeck. It is claimed that no manufactured or derivative products are included, but that only primary commodities have been used.

Since November, 1912, only 22 articles, all of which belong to the food group alone, have been included in the index number.

## SOURCE OF QUOTATIONS.

As previously stated, the quotations used to join this index number with the one compiled by Dun were those published for January, 1907, in Bulletin of the United States Bureau of Labor, No. 75. The source of later quotations is not given.<sup>2</sup>

## BASE PERIOD.

The years 1890 to 1899 are used as the base period in the computation of the index number.

## PRICES: HOW SHOWN AND COMPUTED.

The actual prices of the articles are not shown for any period, the only data published in Gibson's weekly market report being the index for all commodities.

<sup>1</sup> See also article by Prof. Norton in Quarterly Journal of Economics, August, 1910, pp. 750-759. Published by Harvard University, Cambridge, Mass.

<sup>2</sup> It is stated, however, in the Quarterly Journal of Economics, August, 1910, p. 758 (footnote) that "Statistics collected from trade journals were used from January, 1900, to compute relative prices."

## NUMBER AND CLASS OF COMMODITIES.

As has been stated, when this index was first published it covered 50 articles from the farm, mines, and other sources, and included such as had been subjected only to an initial manufacturing process. Since November, 1912, it has been calculated on the food group alone, including 22 articles. It is stated that the articles covered are those essentially primary in their nature.

## DESCRIPTION AND GROUPING OF COMMODITIES.

The present list of articles is divided into two groups, as follows:

*Vegetable foods (13 articles).*

Wheat, contract price.  
 Wheat flour, spring patents.  
 Wheat flour, winter patents.  
 Barley, by sample.  
 Oats, cash.  
 Corn, No. 2, cash.  
 Corn meal, fine yellow.  
 Potatoes, white.  
 Rye, No. 2.  
 Sugar, 89°, fair refining.  
 Sugar, 96°, centrifugal.  
 Coffee, Rio, No. 7.  
 Tea, Formosa, fine.

*Animal foods (9 articles).*

Beef, steers (average of quotations for two grades).  
 Beef, fresh native sides.  
 Beef, salt.  
 Mutton, sheep (average of quotations for two grades).  
 Mutton, dressed.  
 Pork, hogs (average of quotations for two grades).  
 Bacon, short rib sides.  
 Hams.  
 Butter (average of quotations for three grades).

## SUBSTITUTIONS AND ADDITIONS.

Since the adoption of the present list there have been no additions of new articles nor substitutions in the place of those carried, so far as can be ascertained from the material published.

## INTERPOLATION.

Methods of supplying lacking statistical data, if resorted to, are not disclosed.

## WEIGHTING.

The weights assigned to the four groups formerly included in the index number were 50 for foods, 18 for textiles, 16 for minerals, and 16 for other commodities.

The weighting was accomplished by using a combination of figures from Dun's report and the material published by the

United States Bureau of Labor. The first operation was to secure an average of Dun's general index numbers for the years 1890 to 1899, which was found to be 0.843. The sum of the relative prices for all the articles in a group as published for January, 1907, in Bulletin No. 75 of the Bureau of Labor was then found. These relative prices were based upon the average for 1890 to 1899 as 100. The sum of these relatives was then divided by the average of the Dun number, 0.843. The quotient thus obtained was termed a multiplier. The total of the relatives of a group was then multiplied by this multiplier. The result divided by 100 was the index for that group, and the sum of the indexes for the four groups was the general index number.

The following statement explains the process of calculating the index by the above method:

## ILLUSTRATIVE EXAMPLE OF CALCULATING GIBSON'S INDEX NUMBERS.

Commodity.	Total relatives of the groups.	Multi- pliers.	Weighted product.
Foods.....	2422.1	1.9159	46,4050
Textiles.....	1264.9	1.6880	21,3010
Minerals.....	1324.8	1.4987	19,8548
Other.....	1408.7	1.8488	19,0005
Index number.....			106.5613

Since the reduction of the number of articles on which the index number is calculated from 50 articles of all classes to 22 food commodities, no explanation has been given concerning the method of weighting employed, so far as can be ascertained. It is stated, however, in Gibson's weekly market letter of January 11, 1913, and in subsequent issues that the index number is weighted according to Dun's method.

## TESTING.

The compiler of Gibson's index compares the result obtained under his method, 106.5613, with 107.2640, Dun's number for the same period. As a further test to show that figures compiled by this method would take the course of Dun's index number, the following figures are shown:

Date.	Gibson numbers.	Dun numbers.
January, 1907.....	106.56	107.26
February, 1907.....	108.01	107.37
March, 1907.....	109.58	109.91
April, 1907.....	110.55	(107.90)
May, 1907.....	113.41	(109.00)
1896.....	72.22	74.32

The compiler expresses the opinion that in April and May of 1907 the comparison of the two index numbers can not justly be made, inasmuch as it appears probable the Dun calculator changed his system of weighting for those months.

TABLES OF RESULTS.

The average yearly index numbers for the cost of foodstuffs, the only part of the original series now published, as computed by this process from 1890 down to the present time, are shown in the following table appearing in Gibson's weekly market letter of December 31, 1914:

AVERAGE YEARLY INDEX NUMBERS, 1890 TO 1914.

Year.	Average yearly index number.	Year.	Average yearly index number.	Year.	Average yearly index number.
1890.....	43.4	1900.....	44.2	1910.....	59.3
1891.....	50.8	1901.....	41.5	1911.....	56.9
1892.....	45.3	1902.....	53.5	1912.....	62.6
1893.....	46.0	1903.....	49.0	1913.....	58.1
1894.....	43.4	1904.....	48.3	1914.....	60.8
1895.....	42.0	1905.....	47.3		
1896.....	34.0	1906.....	49.8		
1897.....	34.7	1907.....	50.9		
1898.....	38.7	1908.....	54.2		
1899.....	41.6	1909.....	59.2		

Monthly averages for 1913 and 1914, also shown in the publication referred to above, are as follows:

MONTHLY AVERAGES, 1913 AND 1914.

1913				1914

## AUSTRALIA.

## INDEX NUMBERS OF THE COMMONWEALTH BUREAU OF CENSUS AND STATISTICS.

## PUBLICATION.

In December, 1912, a report entitled "Prices, Price Indexes, and Cost of Living in Australia," compiled by G. H. Knibbs, Commonwealth statistician, was published by the recently organized Labor and Industrial Branch of the Commonwealth Bureau of Census and Statistics at Melbourne as its Report No. 1. Both wholesale and retail prices, together with import and export index numbers for Australia, are among the subjects considered in the report.

This publication is the first of a proposed series designed to include topics covering general industrial conditions as well as prices. Its main object, as stated in the preface, is "to furnish information as to prices in past years in such a form as to be fully comparable with that which it is proposed to publish periodically in the future."

The continuation of these index numbers is to be found in Report No. 2, entitled "Trade Unionism, Unemployment, Wages, Prices, and Cost of Living in Australia, 1891 to 1912," under date of April, 1913.

## HISTORY.

The author of these reports, having studied the various systems of index numbers published in other countries, became convinced that the methods ordinarily followed were so defective as to be misleading. He believed that an accurate system of inquiry should be determined upon to secure reliable and satisfactory data on which to base index numbers, and further that a uniform method for the international study of prices as a basis for world index numbers should likewise be worked out by those economists interested in the subject. These conditions he undertook to meet.

## SOURCE OF QUOTATIONS.

At first an attempt was made to secure from market reports wholesale prices of a representative list of commodities for the capital towns of each State. This plan was abandoned when it was found to be impracticable owing to the lack of complete records and to the difficulty in obtaining comparable returns. Moreover, the compilation of figures for Melbourne alone involved so much labor that no attempt was made to complete any other city.

The figures for Melbourne were obtained mainly from market prices published in the ordinary press and in special trade reviews. Where there was any question as to the reliability of the quotations the figures were verified by "reference to well-known and important business firms dealing in the articles in question."

The prices quoted are taken from the following sources: Journal of Commerce, 1861, 1866, 1871, 1872, and 1883 to 1912; Australasian Trade Review, 1871 to 1882 and occasionally to 1892; Melbourne papers, 1873 to 1912; for meats, Gippsland Mercury, 1890 to 1892; for coal, Federated Steamship Owners, 1901 to 1912.

#### BASE PERIOD.

The basic period for the computations of the wholesale price indexes was the year 1911, the aggregate expenditure on all articles and on each group of articles in this year being taken as 1,000. To quote: "The index numbers show the amount which would have had to be expended in each of the years specified in order to purchase what would have cost £1,000 in 1911, distributed in purchasing the relative quantities (indicated by the mass units) of the several commodities included in each group and in all groups respectively."

#### PRICES: HOW SHOWN AND COMPUTED.

A table in the appendix to the first report shows the average annual wholesale prices in Melbourne of all commodities included in the investigation except meats from 1871 to 1912 (first 9 months only), inclusive. Complete 1912 data for all of the 80 commodities, except silk; and for 13 additional commodities, are contained in the appendix to the second report.

Prices for meat were not obtained for the years prior to 1884 and 1885 nor for the years 1886 to 1889, inclusive. The unit of measurement is given for each article and the price stated in shillings and pence. The articles for which prices are quoted are divided into eight groups. In most cases monthly prices were obtained, and from these the yearly averages were computed. For tea, coal, cotton, wool, and silk, however, monthly prices were not available, so that yearly averages based in each case on expert opinion<sup>1</sup> were secured.

The monthly quotations, from which the yearly average is computed, are not shown.

The group and general index figures for 1861 and 1866 are shown elsewhere in the report, but no actual prices are given for these years.

#### NUMBER AND CLASS OF COMMODITIES.

In the computation of index numbers for the years prior to 1911 (the base year) the aggregate expenditure on 80 commodities was used, while for 1912 the number of commodities included was increased to 92. The author states that the commodities included are generally in the nature of raw materials—that is, materials in which the labor cost is relatively low.

<sup>1</sup> Source of this expert opinion not stated.

There are no articles of clothing, boots or shoes, or furniture included. The reason assigned for their omission was the impracticability of obtaining periodic prices for predominant grades and qualities and of satisfactorily determining the relative importance in consumption of the various items, the author contending that the character of clothing and of furniture includes the element of change due to the influence of fashion, and that where incomes are limited economy strikes first at these articles.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

The 80 commodities used in computing the index numbers for years prior to 1911 are divided into 8 groups as follows:

- I. Metals and coal, 12 commodities.
- II. Jute, leather, etc., 9 commodities.
- III. Agricultural produce, 13 commodities.
- IV. Dairy produce, 7 commodities.
- V. Groceries, 21 commodities.
- VI. Meat, 5 commodities.
- VII. Building materials, 9 commodities.
- VIII. Chemicals, 4 commodities.

The list of articles, with their description or brand, the source of information, the unit upon which quoted, the quantities consumed, and the "mass unit"—i. e., the extent to which a commodity is used—are shown in detail on pages 162 to 164 of this bulletin.

In both reports index numbers are given for all groups taken as a whole and for each group. Under each group in the first report is shown the index number for a few individual articles of importance computed on the price in 1911 as the base, but no table is given showing an index for each of the 80 articles separately.

#### SUBSTITUTIONS AND ADDITIONS.

Cases of substitution of a particular grade or quality of an article for another grade or quality of the same article, if any, are not apparent in the tables, owing to the manner in which the information is presented. The author states, however, that "every care was taken to insure that the prices quoted for each article refer to a uniform quality" and that "special precautions were taken to insure substantial continuity of quality or grade."

In the computation of the index numbers for 1912 in the second report, as previously stated, the author added 13 articles and dropped raw silk, so that the index for 1912 covers 92 articles instead of 80, as formerly. The aggregate expenditure on these 92 articles in 1911 formed the base for the 1912 index. In group 3 the mass unit for hay was changed from 270 to 135, and oat chaff, a new article in this

group, was assigned a mass unit of 135, thus making the sum of the mass units used for hay and oaten chaff in 1912 equal the mass unit for hay in the earlier years. The 13 articles added are as follows:

GROUPS OF ARTICLES ADDED IN THE COMPUTATION OF THE INDEX NUMBERS FOR 1912.

Commodity.	Unit.	Mass unit.
Group I:		
Tinned plates, I. C. coka.....	Hundredweight.	60
Quicksilver.....	Pound.....	12
Group II:		
Twine, reaper and binder.....	Pound.....	150
Tallow, prime mutton.....	Ton.....	14
Group III:		
Chaff, good oaten.....	Ton.....	135
Malt, Victorian.....	Bushel.....	140
Onions.....	Ton.....	3
Group IV:		
Beeswax.....	Pound.....	40
Condensed milk, Baccus Marsh.....	Dozen pounds.....	160
Group VII:		
Slates, Welsh, 20 by 10.....	1,000.....	4
Group VIII:		
Caustic soda.....	Hundredweight.	7
Alum, lump.....	Hundredweight.	3
Cyanide potassium.....	Pound.....	570

NOTE.—Groups V and VI have no additions.

INTERPOLATION.

As already stated, prices for meats were not secured prior to 1890 except for 1884 and 1885. For the full period since 1871 the index numbers were accordingly worked out for the seven groups, excluding meats, and also for the period since 1890 for the eight groups, including meats. The figures for the general index for 1871 to 1889 (except 1884 and 1885) were then adjusted, on the basis of the results of succeeding years, so as to include meats. The exact procedure has not been disclosed.

WEIGHTING.

The system of weighting used differs materially from the system generally employed by compilers of index numbers. The author bases his index numbers on what he terms the aggregate expenditure method. By this method the cost of an unvarying bill of goods is calculated at the varying prices prevailing during different years. The extent to which a commodity is used is expressed by a number termed the "mass unit." The mass unit is developed from the figures which denote the quantity used or consumed, which latter amount has in general been obtained by adding to the production of each commodity in Australia the amount of imports and from this sum subtracting the amount of exports. The figures have, in general, been based on the average production and the average export and import returns for the five years 1906 to 1910, inclusive. No further explanation as to the source of his con-

sumption figures has been given by the author. Reference to the table on pages 162-164 of this Bulletin will indicate the manner in which the mass units were obtained. In this table the quantities consumed of the various commodities are expressed in thousands only. The mass unit is obtained in each case by dividing the figure denoting the quantity consumed by 10 and approximating the quotient. For instance, the average annual consumption of pig iron is stated to be 64 thousand tons, which is restated as a mass unit of 6½.

The mass unit having been established and the average yearly price for the year determined, the process then was to multiply the mass unit by the price. Thus, the price of pig iron was 81s. 2d. (\$19.48) for a ton in 1911. This price, 81s. 2d. (\$19.48), multiplied by the mass unit (6½) gives the aggregate expenditure on pig iron in 1911. This process was applied to each article of the metals group in 1911 and each of the years during the entire period (1890-1912), the sum of such products producing the yearly aggregate group expenditure. The same mass unit was used for all the years of the period. The index for a single group and for all groups was obtained by dividing the total expenditures of a given year by the total expenditures of the basic year, i. e., 1911, and the result multiplied by 1,000.

The following table illustrates the system of weighted index numbers used:

COMPUTATION OF INDEX NUMBERS—ILLUSTRATIVE EXAMPLE OF AGGREGATE EXPENDITURES METHOD.

Articles.	Unit.	Quantities consumed (in millions).	Prices.		Total expenditures (in millions).	
			1901	1911	1901	1911
Butter.....	Pounds.....	90	d. 15	d. 18	d. 1,350	d. 1,620
Bread.....	2-pound loaf.....	470	3	4	1,410	1,880
Mutton.....	Pounds.....	330	3	5	990	1,650
Milk.....	Quarts.....	300	4	5	1,200	1,500
Total.....					4,950	6,650

Thus 6,650 millions is the total expenditure for this group in 1911, which is the base or 1,000. To secure the index figure for 1901, the total aggregate number 4,950 millions for 1901 is divided by 6,650 millions, the base, which quotient multiplied by 1,000 equals 744 as the index for 1901. A similar process was used for each of the groups represented in the report. The author lays particular emphasis on the fact that his index numbers are reversible, by which he means that they may be recomputed with any other year than 1911 as the base and the results be as accurate as if that year had been taken as the base originally.

## TESTING.

The author tests his system of weighting by mass units instead of actual quantities consumed by a comparison of results obtained under the two methods by taking a list of prices from 1871 to 1911 for 73 articles, the year 1911 being used as a base. In the first instance the actual figures were used and in the second the mass units. The result in the first case was 1,194, and in the second 1,193, the slight difference thus shown appearing not to warrant the extra arithmetical labor required by the use of the actual figures instead of the rounded numbers or mass units.

He further tests his index numbers by a comparison with index numbers obtained by other methods. The following table illustrates this comparison:

PRICE INDEXES: EXAMINATION AS TO RELIABILITY OF VARIOUS METHODS.

	Aggregate expenditure method.	Weighted price-ratio method (geometric mean).	Weighted price-ratio method (arithmetic mean).	Un-weighted price-ratio method.
Index number for 1871, with 1911 (equaling 1,000) as base year.....	1,194	1,195	1,289	1,310

He considers the first two as valid but the last two as invalid for his use.

## TABLES OF RESULTS.

The following table shows the list of 80 commodities divided into 8 groups, with the brand, source of information, unit, quantities consumed, and mass unit in each case:

## MELBOURNE WHOLESALE PRICES, COMMODITIES INCLUDED, SOURCES OF INFORMATION, QUANTITIES CONSUMED, AND MASS UNITS.

## Group I.—Metals and coal (12 commodities).

Commodity.	Brand.	Sources of Information.	Unit.	Quantities consumed (in thousands).	Mass unit.

The author presents the following table of index numbers by quinquennial periods to show the average level of prices over periods of several years. The average for each 5-year period is 1000 and that for 1911 and 1912 is compared with this base. For instance, taking the average price level of 1871-1875 as 1000, that for 1911-1912 has fallen to 806, and taking that of 1876-1880 as 1000 that for 1911-1912 in comparison is 877. The other figures are to be read in the same manner.

INDEX NUMBERS FOR 1911-1912, WITH AVERAGE EXPENDITURE IN EACH SUCCESSIVE QUINQUENNIAL PERIOD AS BASE.

Base period (prices=1000).	I. Metals and coal.	II. Wool, leather, etc.	III. Agricul- tural produce.	IV. Dairy produce.	V. Groceries.	VI. Meat.	VII. Building materials.	VIII. Chemicals.	All groups together.
1871-1875..	672	792	841	1,087	678	.....	899	621	806

1901-1905..	1,098	1,224	1,137	1,089	1,089	833	1,214	1,091	1,115
1906-1910..	1,013	1,059	1,094	1,039	1,082	981	1,084	1,067	1,070

A table contained in the first of the two reports compares index numbers of wholesale prices in Australia with those of the United Kingdom, Belgium, Germany, Italy, France, Canada, the United States, and New Zealand. Complete data for all countries are shown for the years 1890 to 1911, inclusive. In the cases of the United Kingdom and the United States the comparison is extended back to 1840. This comparative table does not show, of course, the relative prices as published in the different countries, but as recomputed for each country on the base 1911 equals 1,000. The last column of the table contains figures computed by weighting the index number for each country by its relative population, thus supplying what the author says may be termed the world's index number.

#### AUSTRIA-HUNGARY.

##### INDEX NUMBERS OF DR. BÉLA VON JANKOVICH<sup>1</sup>

###### PUBLICATION AND HISTORY.

This index for the years 1867-1897 appeared under the title "Die Fluktuation der Waarenpreise im Grosshandel und die Schwankungen der Wechselkurse der oesterreich-ungarischen Papierwäuta in den Jahren 1867-1897" (The fluctuation of wholesale prices and the variation in the rate of exchange of the Austro-Hungarian paper values). It was printed in the Hungarian economic review entitled "Kozgazdasagi Szemle 1899."

It was continued to 1909 and reprinted in the Bulletin of the International Institute of Statistics, volume 19, Part III, page 136 et seq., in 1912 (*Bulletin de L'Institut International de Statistique*), under the title "Index Nummer von 45 Waaren in der oesterreich-ungarischen Monarchie, 1867-1909; System Sauerbeck, zum Teil vom Verfasser korrigiert" (Index number of forty-five articles in the

<sup>1</sup> Dr. von Jankovich was in 1911 professor of the theory of finance and credit in the University of Budapest (according to the *Minerva Yearbook of the Learned World*) and vice president of the Hungarian Chamber of Deputies.

Austro-Hungarian monarchy, 1867-1909, according to the system of Sauerbeck, with some corrections by the author).

Sauerbeck's method of computation was followed as closely as possible in order that the Austrian index might be comparable with Sauerbeck's index, since England throughout the period had a gold standard. Articles were also selected to correspond as closely as practicable with those entering into Sauerbeck's index.

#### SOURCE OF QUOTATIONS.

The sources of the actual prices vary, being mostly official and semi-official publications of Austro-Hungarian cities and Provinces.

#### BASE PERIOD.

The years 1867-1877 were used as a base for all articles except petroleum, for which 1873-1877 constitutes the base, and flax, for which 1874-1877 constitutes the base.

#### NUMBER AND CLASS OF COMMODITIES.

The index includes 45 articles. Actual as well as relative prices are shown for all articles except tea, but in a few cases the actual prices are not complete. Relatives are also shown for each of six groups into which the 45 articles are separated, and for the entire 45 taken together. The six groups are: Grains (1-8), animal products (9-15), colonial goods (16-19), minerals (20-26), textiles, raw materials (27-34), and miscellaneous (35-45).

#### TABLE OF RESULTS.

The following table summarizes the results of Dr. von Jankovich's compilations:

SUMMARY TABLE SHOWING INDEX NUMBERS FOR THE PRICES OF 45 ARTICLES IN THE WHOLESALE MARKETS OF AUSTRIA-HUNGARY.<sup>1</sup>

## INDEX NUMBERS OF MARIO ALBERTI

## PUBLICATION.

A volume entitled "Il costo della vita i salari e le paghe a Trieste nell' ultimo quarto di secolo" (The Cost of Living, Salaries, and Wages in Trieste During the Last Quarter of the Century), by Mario Alberti, was published in Trieste in April, 1911, under the direction of the Museo Commerciale, a nonofficial organization of that city.

A second volume, *Il movimento dei prezzi e dei salari a Trieste, 1911* (The Movement of Prices and Wages in Trieste, 1911), was published by the same author in 1912.

## HISTORY.

Mario Alberti in his two works has made a study of prices and has computed index numbers for certain commodities purchased by contract in Trieste.

In his cost of living study the author traces from the time of ancient Rome to the present the interest manifested in the question of the cost of living and the means adopted to study the movement of prices in various epochs and countries. Chapter IV of this work deals exclusively with conditions in Trieste. The volume on the movement of prices and wages also relates exclusively to Trieste.

## SOURCE OF QUOTATIONS.

The prices used in the tables of index numbers are contract or semi-wholesale prices quoted by the Istituto dei Poveri (Institution for the Poor) and by the Austrian Lloyd Steamship Co. Those for the Istituto dei Poveri extend from 1885 to 1911, inclusive, and for the Austrian Lloyd Steamship Co. from 1892 to 1911, inclusive.

## BASE PERIOD.

For the index numbers relating to the Istituto dei Poveri the year 1885, taken as 100, is used as a base. For those of the Austrian Lloyd Steamship Co. the years 1892-1896, taken as 100, are used as a base.

## PRICES: HOW SHOWN AND COMPUTED.

Tables are presented showing by years the average annual price of each commodity purchased by the Istituto dei Poveri and by the Austrian Lloyd Steamship Co. In addition, the simple index, the coefficient or weight attributed to the commodity, and the weighted index for the commodity are given. The totals for each year show the figures on which the simple index and the weighted index for all commodities taken as a whole are computed.

## NUMBER AND CLASS OF COMMODITIES.

The commodities included are:

(a) For the Istituto dei Poveri:

Bread.	Cheese.
Flour.	Meat.
Paste (macaroni, etc.).	Sugar.
Rice.	Wine.
Kidney beans.	Vinegar.
Potatoes.	Coal.
Oil.	Soap.

(b) For the Austrian Lloyd Steamship Co.:

Bread. <sup>(1)</sup>	Sugar.
Flour N. O. (national).	Wine, Dalmatian, in transit.
Paste (macaroni, etc.), national, fine.	Vinegar. <sup>1</sup>
Rice, fine, in transit.	Soap. <sup>1</sup>
Kidney beans.	Fresh butter.
Potatoes.	Coffee, Santos, in transit.
Oil, fine, in transit.	Milk.
Cheese, Parma, in transit.	Lard.
Beef (cow).	Eggs.
	Meal, yellow.

<sup>1</sup> Prices are average prices paid by the Istituto dei Poveri.

## SUBSTITUTIONS AND ADDITIONS.

For 1910 two sets of prices were used in the computation of the indexes. The report on the cost of living contained prices based on estimates, while the volume devoted to the movement of prices and wages contained prices based on actual expenditures. On page 21 of the latter the author states that for this reason "The index number for 1910 was newly calculated on the base of prices furnished by the Istituto dei Poveri."

## WEIGHTING.

The prices of the different articles are weighted by the use of coefficients which represent the relative amounts of the commodities consumed. These coefficients are shown for the tables relating to the Istituto dei Poveri in the following list:

Bread.....	26	Cheese.....	1-5
Flour, wheat.....	1	Meat.....	20
Paste (macaroni, etc.).....	4	Sugar.....	4
Rice.....	2.5	Wine.....	20
Kidney beans.....	2	Vinegar.....	3-5
Potatoes.....	10	Coal.....	50
Oil.....	2	Soap.....	1

The coefficients used in the tables for the Austrian Lloyd Steamship Co. are as follows:

Bread.....	26	Wine.....	20
Flour, wheat.....	1	Vinegar.....	3-5
Paste (macaroni, etc.).....	4	Soap.....	1
Rice.....	2.5	Fresh butter.....	2
Kidney beans.....	2	Coffee.....	1
Potatoes.....	10	Milk.....	30
Oil.....	2	Lard.....	2
Cheese.....	1-5	Eggs.....	50
Beef.....	20	Meal, yellow.....	1
Sugar.....	4		

## TESTING.

No comparison with other index numbers or other means of testing the accuracy of the results obtained has been attempted so far as the published information discloses.

## TABLES OF RESULTS.

The first of the three following tables shows the average price of each of 14 articles for the base year 1885; the coefficients used in computing the weighted index; the average price, the simple index and the weighted index for each of the 14 articles for the years 1910 and 1911, and the totals of the simple and the weighted indexes for those two years. The prices in the table are based on reports from the Istituto dei Poveri.

The second table shows the indexes, both simple and weighted, for the 14 articles taken as a whole, in yearly periods from 1885 to 1911, inclusive.

The third table shows the average prices for 1892-1896 of 19 articles (18 food articles and soap); the coefficients; the average price, the simple index and the weighted index for each article in the years 1910 and 1911; and the totals of the indexes for 1910 and 1911, respectively. The prices are based on the period 1892-1896, taken as 100, and were obtained from the Austrian Lloyd Steamship Co.

## BELGIUM.

## INDEX NUMBERS OF HECTOR DENIS.

## HISTORY.

Hector Denis, professor at the University of Brussels, is believed to be the author of the only series of index numbers of prices in Belgium that has been presented with any measure of continuity and completeness. This series has not, however, been published in uniform manner, but has appeared as a gradual development in various publications credited to its author. Even at the present time it does not seem to have reached its final form, since every succeeding presentation either alters or omits former tables or includes additional ones. The only exception seems to be a table of index numbers computed for 28 articles of export, which is given in 1911 in practically the same form in which it first appeared in 1895.

## PUBLICATION.

Among the publications of Prof. Denis in which his various tables of indexes appear are the Economic and Social Depression and the History of Prices (*La dépression économique et sociale et l'histoire des prix*), 1895,<sup>1</sup> and the Index Numbers of Moral Phenomena (*Les index numbers—nombres indices—des phénomènes moraux*), 1911.<sup>2</sup>

The most nearly complete examples of his indexes, however, are published in the Bulletin of the International Institute of Statistics, volume 19, Part III, pages 157-195, and are computed to include the years 1909, 1910, or 1911, as the case may be. Only two of the earlier tables appear in the bulletin. Of these the index numbers based on the 28 exports are continued to include the year 1910, as is likewise a comparative table that had appeared in his Index Numbers of Moral Phenomena. This comparative table is used by Prof. Denis to test his own general index for the 28 articles of export of Belgium. He reduced the general index numbers of France (Palgrave), Germany (Soetbeer), England (Sauerbeck), and the United States (Falkner-Hardy) to the common base 1867-1877, and presented them in parallel columns with his own for each year and for five-year periods from 1860 to 1893.<sup>3</sup> In the same publication the table appears a second time, but with data for each year from 1850 to 1910,<sup>4</sup> and without the reduction of the indexes to a common base. A second table of index numbers of exports, similar to but not identical with the one published in 1895 on the base period 1865, also appears in the bulletin. Separate tables of index numbers are also given for vegetable products, meats and butter, cereals, and other groups of articles.

## SOURCE OF QUOTATIONS.

Prof. Denis bases his computations for the index numbers appearing in his study of the economic and social depression on the quotations given in the tables of foreign commerce of Belgium (*tableaux du commerce extérieur de la Belgique*), i. e., on the prices used for fixing

<sup>1</sup> In this appear four tables of indexes. The first is an index for 28 exports yearly from 1850 to 1890, computed on the base period 1867-1877. The second index covers the same period of years and almost the same articles, except that some are grouped and one or two are added, the base period being the single year 1865. The third index is similar to the first, but is based on 22 imports. The fourth table presents the general index number for imports and also for exports for every year from 1865 to 1890, the period 1867-1877 again being used as the base.

<sup>2</sup> Published by the Royal Academy of Belgium in its *Mémoires*, second series, 4, Brussels, 1908-1911. Separate tables of price index numbers are given for cereals, beef, wheat, coal, and metals, all computed on the base period 1867-1877. A comparative table shows index numbers for the United States, Belgium, Germany, and England.

<sup>3</sup> This table is given on p. 176 of this bulletin.

<sup>4</sup> The general index computed for Belgium by Prof. Denis, which appears in this table, is printed on p. 176 of this bulletin for the years 1894-1910.

the customs values. Of these Mr. Armand Julin<sup>1</sup> remarks that he finds that the averages adopted by the commission for the official values correspond but remotely with the real fluctuations in prices. Therefore the accuracy of Prof. Denis's index numbers may appear rather doubtful. However, this criticism can apply only to the single original table of 28 exports that is continued to include 1910, since in the additional tables published in the bulletin of the International Institute of Statistics referred to above he states in a footnote that prices up to 1852 were taken from the secular almanac of the observatory (*l'Almanach séculaire de l'Observatoire*) and those for later years from the statistical yearbooks (*Annuaire statistiques*).

#### BASE PERIOD

For the base period Prof. Denis selected the years 1867-1877, as did Sauerbeck for England. His reason for such a choice appears to be the fact that during those years there were periods of both rise and depression in prices, while a later period would not include the economic depression that followed 1873 and an earlier one would cover a time of rising prices only.

#### DESCRIPTION OF COMMODITIES

The articles for which index numbers have been computed are not described specifically in the publications mentioned above, but it is stated in the one dealing with the economic and social depression that the 28 exports (whose indexes are continued to 1910) and the 22 imports (not computed after 1890) were selected with a view to including those most prominent, and that the total of 50 articles so selected comprises two-thirds of the total exports and imports of Belgium.

#### WEIGHTING.

The indexes are not weighted, and in his *Economic and Social Depression and the History of Prices* Prof. Denis justifies himself by stating that in spite of the use of weighted averages the variation in the curve of prices as shown in the diagrams accompanying that publication remain essentially the same and that therefore he has not abandoned the simpler method, but presents his indexes with the caution that the results are to be taken only as an approximation of the truth.

#### TABLES OF RESULTS.

Below follows the comparative table of general index numbers for several countries as it appears in his treatise on the Index Numbers of Moral Phenomena mentioned above:

<sup>1</sup> "The economic progress of Belgium from 1880 to 1908," in the *Journal of the Royal Statistical Society*, 1911, p. 208.

COMPARISON OF GENERAL INDEX NUMBERS FOR FRANCE (PALGRAVE), GERMANY (SOETBEER), ENGLAND (SAUERBECK), UNITED STATES (FALKNER-HARDY), AND BELGIUM (DENIS), REDUCED TO A COMMON BASE.

(Base period, 1867-1877=100.)

Year.	France (Palgrave).	Germany (Soetbeer).	England (Sauerbeck).	United States (Falkner-Hardy).	Belgium (Denis).
1860.....		94.6	99	72	103.6
1861.....		92	98	72	98.8
1862.....		95.3	101	84	99.9

1891.....			72	66.3	69.9
1892.....			68		66.5
1893.....			68		64.4

A continuation of the general index numbers for Belgium as computed by Prof. Denis in the above table appears on page 158 of volume 19, Part III, of the Bulletin of the International Institute of Statistics, as follows:

Year.	Index numbers.	Year.	Index numbers.
1894.....	59.0	1903.....	60.6
1895.....	61.5	1904.....	61.8
1896.....	61.0	1905.....	60.9
1897.....	56.0	1906.....	64.8
1898.....	58.5	1907.....	69.2
1899.....	61.8	1908.....	67.7
1900.....	63.4	1909.....	65.9
1901.....	63.1	1910.....	64.7
1902.....	64.0		

## CANADA.

## INDEX NUMBERS OF THE DEPARTMENT OF LABOR.

## PUBLICATION.

This compilation of wholesale prices for the Dominion of Canada is published yearly by the Department of Labor of Canada at Ottawa. Index numbers for each group of commodities and for its main subdivisions are also published monthly in the Labor Gazette, the official organ of the department of labor.

## HISTORY.

The first report on wholesale prices made by the Canadian Department of Labor was published in 1910 and covered the years 1890 to 1909, inclusive. The object in undertaking this work was to determine as accurately as possible the nature and extent of the general rise in wholesale prices which had occurred in Canada during recent years. Prior to the beginning of this work the Labor Gazette, the official organ of the department, had for some time published each month certain data regarding prices in connection with its review of industrial and labor conditions. The importance of the subject and the unsatisfactoriness of general statements in a matter of this kind led the department in 1910 to adopt a more comprehensive and systematic method of treating the subject of prices in the monthly summary and also to extend the inquiry into the wholesale prices of a selected list of representative staple commodities back over the preceding 20 years.<sup>1</sup> In subsequent annual and monthly reports the price data have been brought down to the present time.

## SOURCE OF QUOTATIONS.

It is stated that the practice followed throughout the investigation was "to collect and collate the best available published information and to submit the result for verification to long-established firms at the wholesale center in question." The daily press and weekly trade journals of Canada and the printed reports of exchanges, boards of trade, etc., are mentioned as the principal sources of data. When reliable printed matter failed, information was obtained from books of manufacturers and wholesalers.

A source used for verification purposes in the case of a few important raw materials imported by manufacturers direct from the primary markets of the world, and in which there is no wholesale trade in Canada, was the declared import values, which were divided by total quantities to show the average prices. Toronto and Montreal markets furnish the great mass of the quotations published in the reports.<sup>2</sup>

<sup>1</sup> Wholesale prices in Canada, 1890-1909, p. 2.

<sup>2</sup> *Idem*, p. 8.

## BASE PERIOD.

The base period selected for the computation of index numbers for practically all commodities is the decade 1890-1899. Two reasons are given for this selection: (1) The period was considered as representative of normal conditions as any available, containing a time of falling and a time of rising prices, and (2) direct comparison with the similar study of the United States Department of Labor was considered very desirable, and this was made possible by choosing the same base period.<sup>1</sup> In a few instances, owing to special reasons, a period other than the decade 1890-1899 has been chosen as the base.

## PRICES: HOW COMPUTED AND SHOWN.

In the first report the prices quoted are stated to be "for the most part those prevailing on the opening day of each month, though if, in particular cases, these were found to be abnormal, an average of the week was taken."<sup>2</sup> In the report for 1912 it is stated that the manner of quoting prices is the same as in the earlier reports except that for certain articles subject to rapid fluctuations (grains, live animals, certain meats, butter, eggs, potatoes, and fresh fruits—40 in all) weekly instead of monthly quotations were obtained.<sup>3</sup> This plan was continued in the preparation of the wholesale-price data for 1913.

Difficulty was encountered in obtaining quotations of a uniform quality of certain articles, particularly of manufactured articles, through a series of years. It is stated in the reports that wherever such articles are quoted, care has been taken to see that changes in quality are accounted for in the prices given.<sup>4</sup> In a few cases—as, for example, in the case of cotton goods—the prices published are not simple quotations on a single variety, but averages of a large number of varieties.

In the annual reports the actual prices are published for each commodity by months, or, in some cases, by weeks, and the average of these quotations is given as the price for the year. Index numbers are published in the annual reports for each commodity by years and in the *Labor Gazette* for each group and subgroup (56 items in all) by months currently. Index numbers do not seem to be published for single commodities by months. Many of the actual prices are stated in the form of a range of price, and apparently the mean is used for computations based on these figures.

Some commodities whose price is largely governed by seasonal conditions are quoted for only those months of the year when they are in season—as, for example, blue grapes, for which quotations are given only for September and October.

<sup>2</sup> *Idem*, p. 439.

<sup>3</sup> *Idem*, 1912, p. 2.

<sup>4</sup> *Idem*, 1890-1909, p. 439.

## NUMBER AND CLASS OF COMMODITIES.

The index number for the 20-year period 1890-1909 is based on 230 commodities so-called, some of these quotations being, however, as in the case of cotton fabrics, the average of a large number of varieties of the articles. In the first annual report (covering the year 1910) one quotation was dropped and six new quotations were added, thus making the number of commodities 235. In the second annual report (covering the year 1911) one quotation was dropped, but the entire number covered by the index was increased to 261. In the latter report the statement is made that it is hoped ultimately to include about 280 commodities. The total was increased to 272 in 1912 by the addition of nine new articles and additional series of quotations in the case of two articles previously included. No change in the list was made in 1913. The new articles have been included in the index numbers since 1910, so as to assist immediate comparisons, but no recalculation of the entire series of index numbers back to 1890 is to be made on the enlarged basis until the number of commodities is completed.<sup>1</sup>

In recent reports, prices for a number of articles which it is hoped ultimately to include in the index number are published in connection with prices for the 272 commodities included at present. Both raw materials and manufactured articles are included in the commodities used in computing the index number. Difficulties attending the employment of manufactured articles were recognized, but their inclusion on a conservative basis seemed imperative in selecting a sufficiently large number of representative commodities. With respect to the original number, 230, it was said that "the effect of tendencies incidental to the manufacturing process are present in about 40 per cent of the quotations."<sup>2</sup>

## DESCRIPTION AND GROUPING OF COMMODITIES.

The commodities for which index numbers have been computed are shown in the following list, which is taken from the report for 1913 (pp. 218-240).

## I. Grains and fodder.

Barley, Western.	Oats, No. 2, white, Ontario.
Barley, No. 2, Ontario.	Peas, No. 2, Ontario.
Bran.	Rye, No. 2, Ontario.
Corn, No. 3, yellow.	Shorts.
Flaxseed, No. 1, Northwestern.	Straw.
Hay, Montreal.	Wheat, No. 1, Northern.
Hay, Toronto.	Wheat, No. 2, white, Ontario.
Oats, No. 2, white, Western.	

<sup>1</sup> Wholesale Prices in Canada, 1912, p. 2.<sup>2</sup> Idem, 1890-1909, p. 438.

## II. Animals and meats.

Bacon, English boneless breakfast.	Hogs, dressed.
Beef, plate.	Lard, pure.
Beef, dressed, hind quarters.	Mutton, dressed.
Beef, dressed, forequarters.	Lamb.
Cattle, Western prime.	Pork, Canada, heavy short-cut mess.
Cattle, choice steers, Toronto.	Sheep, export ewes.
Fowls.	Turkeys.
Hams, city cured, medium.	Veal, dressed.
Hogs, selects.	

## III. Dairy products.

Butter, creamery, Montreal.	Eggs, storage, Toronto.
Butter, creamery solids, Toronto.	Milk, at Montreal.
Butter, dairy, prints, Toronto.	Milk, at Toronto.
Cheese, western colored.	Milk, at Victoria, B. C.
Eggs, fresh, Montreal.	

## IV. Fish.

Godfish, dry, f. o. b.	Lobster, canned.
Haddock, dry, f. o. b.	Mackerel, salted.
Halibut.	Salmon, B. C., canned.
Herring, salted.	Salmon trout, fresh.
Lobster, fresh.	Whitefish, fresh.

## V. Other foods.

## (a) Fruits and vegetables.

1. Fresh fruits.	2. Dried fruits.
Native—	Apples, evaporated.
Apples, good seasonable.	Currants, Patras.
Cherries.	Prunes, Bosnia.
Grapes, Blue.	Raisins, Sultanas.
Peaches, Leno covers, No. 1 fruit.	3. Fresh vegetables.
Pears, early, Bartlett's and winter.	Beans, hand-picked.
Plums, early, Lombards, green-gages.	Onions, Canadian Red.
Raspberries, red.	Potatoes, Montreal.
Strawberries.	Potatoes, Toronto.
Foreign—	Turnips.
Bananas, yellow.	Tomatoes.
Lemons, Messina and Verdelia.	4. Canned vegetables.
Oranges, navels and Valencia.	Corn, standards, 2's.
	Peas, standards, 2's,
	Tomatoes, 3's.

## (b) Miscellaneous groceries and provisions.

1. Breadstuffs.	1. Breadstuffs—Concluded.
Flour, straight rollers.	Bread, Victoria, B. C.
Flour, strong bakers.	Biscuits, soda.
Flour, winter wheat patents.	Oatmeal, standard.
Flour, Manitoba 1st patents.	Rice, Patna.
Bread, Toronto.	Tapioca, medium pearl.

## V. Other foods—Concluded.

## (b) Miscellaneous groceries and provisions—Concluded.

## VIII. Metals and implements—Concluded.

## (a) Metals—Concluded.

Silver.  
 Solder.  
 Spelter.  
 Steel billets.  
 Steel, cast.  
 Tin, ingots.  
 Zinc, sheets.

## (b) Implements:

Anvils, Wrights', 80 pounds and over.

## (b) Implements—Concluded.

Axes, standard.  
 Chains, coil.  
 Crowbars.  
 Grindstones, 40-200 pounds.  
 Horseshoes.  
 Mallets, carpenters' hickory.  
 Screws, bench wood.  
 Soldering irons.  
 Vises, Wrights'.

## IX. Fuel and lighting.

Coal, N. S., run of mines.  
 Coal, Crow's Nest Pass.  
 Coal, Pennsylvania anthracite.  
 Coke, Connellsville furnace.  
 Coke, Crow's Nest Pass.

Gasoline.  
 Coal oil, Canadian standard.  
 Coal oil, United States standard.  
 Calcium carbide.  
 Matches.

## X. Building materials.

## (a) Lumber.

Pine, all grades, Ottawa.  
 Pine, good sidings, Ottawa.  
 Pine, No. 1 cuts, Toronto.  
 Laths, pine, Ottawa.  
 Pine, shipping, culls, Ottawa.  
 Pine, box boards, Ottawa.  
 Hemlock, Ottawa.

Spruce, New Brunswick.  
 Shingles, New Brunswick.  
 Birch, Toronto.  
 Maple, Toronto.  
 Oak, Toronto.  
 British Columbia fir.  
 British Columbia shingles.

## (b) Miscellaneous building materials.

Brick, fire.  
 Brick, common building.  
 Cement, Canadian Portland.  
 Hinges.  
 Iron pipe.  
 Lead pipe.  
 Lime.  
 Nails, cut.  
 Nails, wire.  
 Pitch.

Plaster of Paris.  
 Red lead, dry.  
 Sash cord.  
 Sash weights.  
 Soil pipe, medium.  
 Tar.  
 Wire, copper.  
 Wire, iron.  
 Wire cloth.  
 Wire fencing.

## (c) Paints, oil, and glass.

Benzine.  
 Glue.  
 Linseed oil (raw).  
 Linseed oil (boiled).  
 Paris green.  
 Prepared paints.  
 Putty.

Rosin, white.  
 Shellac.  
 Turpentine.  
 Varnish.  
 Venetian red (dry color).  
 White lead.  
 Window glass.

## XI. House furnishings.

- |  |   |
|--|---|
| <p>(a) Furniture:</p> <p>Kitchen chairs (common spindle).<br/>         Kitchen tables (4-foot, with drawer).<br/>         Dining tables (hardwood, extension, 8-foot).<br/>         Sideboards (hardwood, with mirror 16 by 28).<br/>         Bedroom sets (dresser and stand, hardwood).<br/>         Iron beds, continuous pillars, 4-foot.</p> <p>(b) Crockery and glassware:<br/>         Tumblers, tank glass, <math>\frac{1}{2}</math>-pint.<br/>         Earthenware: White cups and saucers.</p> | <p>(b) Crockery and glassware—Concluded.<br/>         Earthenware: 10-piece printed toilet sets.<br/>         Earthenware: 97-piece printed dinner sets.</p> <p>(c) Table cutlery:<br/>         Knives, celluloid handle, medium size.<br/>         Silver-plated knives and forks, 6 pennyweight, medium.</p> <p>(d) Kitchen furnishings:<br/>         Pails.<br/>         Tubs.<br/>         Brooms.<br/>         Sadirons, Mrs. Potts.</p> |
|--|---|

## XII. Drugs and chemicals.

- |   |  |
|---|--|
| <p>Alcohol, 65 O. P.<br/>         Alcohol, wood.<br/>         Alum.<br/>         Bleaching powder.<br/>         Borax.<br/>         Brimstone.<br/>         Carbolic acid.<br/>         Caustic soda.</p> | <p>Copperas.<br/>         Glycerine.<br/>         Muriac acid.<br/>         Opium.<br/>         Quinine.<br/>         Soda ash.<br/>         Sulphuric acid.</p> |
|---|--|

## XIII. Miscellaneous.

(a) *Furs*.

- |  |   |
|--|---|
| <p>Mink, dark.<br/>         Muskrat, best fall and winter.</p> | <p>Raccoon.<br/>         Skunk, black Canadian.</p> |
|--|---|

(b) *Liquors and tobacco*.

- |  |   |
|--|---|
| <p>Hops.<br/>         Malt.<br/>         Whisky (Can. Club 20-8 up).</p> | <p>Ale and porter (draft).<br/>         Tobacco, smoking.<br/>         Tobacco, raw leaf.</p> |
|--|---|

(c) *Sundries*.

- |   |   |
|---|---|
| <p>Binder twine.<br/>         Gunpowder.<br/>         Paper, news print.<br/>         Rope.</p> | <p>Rubber, Para Island.<br/>         Soap.<br/>         Starch.</p> |
|---|---|

## SUBSTITUTIONS AND ADDITIONS.

In cases where new articles have been included in the index number an effort was made to secure a series of quotations back to 1890. In some cases this was not found possible, owing to "poverty of records, changes in industrial methods or consumption standards, etc." It is stated that no satisfactory solution of this problem has been found, but that "the method followed was to assign to the new commodity the index number of the commodity displaced or most nearly represented in the year in question. Thus the index number of the lowest

grade of pine lumber was assigned to hemlock in the year in which that article first makes its appearance in the quotations. In this way the new commodity creates a minimum of disturbance in the index number of the year in which it first occurs, whilst subsequent variations make themselves duly felt."<sup>1</sup> In the case of calcium carbide, an entirely new commodity introduced into the index in 1894, and the case of Crow's Nest Pass coal and Crow's Nest Pass coke, both introduced in 1899, the price first quoted was taken as 100, or the base, while in the case of cotton prints, introduced in 1893, the average price for the years 1893-1899 was taken as the base.

#### INTERPOLATION.

So far as can be determined, no price quotations have been interpolated. In the case of a few commodities, however, the statement is made that, owing to incomplete records, associated data have been drawn upon in calculating the base prices. Thus the price of flaxseed for the base period 1890-1899 was estimated from the price at Chicago from 1890-1910, as published in the reports of the United States Bureau of Labor Statistics, and the price at Winnipeg from 1906-1910. The base price of plate beef was in like manner "calculated from the percentages of cattle and beef prices from 1906 to 1911," while the base price of dressed veal is "based on the average prices of other meat products, 1890-1899."<sup>2</sup>

#### WEIGHTING.

The general index number is the simple average or arithmetic mean of the index numbers of the several commodities; i. e., the sum of the relative prices of the different commodities, divided by the number of commodities. Certain commodities are represented by more than one quotation and, as would happen in any extensive list including both raw materials and manufactured products, some commodities are represented indirectly more than once, as, for example, lumber, which is also represented by furniture. In the opinion of the compiler "an extended list of articles tends to weight itself."

#### TESTING.

With the object of testing the results obtained by the use of the simple arithmetical average of the index numbers representing the several commodities, a weighted index has been computed. This is based on the table prepared by the British Association for the Advancement of Science, a committee of which dealt exhaustively with the whole subject of index numbers in 1887-1890. The table follows.<sup>3</sup>

<sup>1</sup> Wholesale Prices in Canada, 1890-1909, p. 447.

<sup>2</sup> Idem, 1890-1909, p. 442.

<sup>3</sup> Idem, 1913, pp. 120, 130.

## BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE TABLE OF WEIGHTS FOR THE CONSTRUCTION OF AN INDEX NUMBER.

[The following explanation of the table is given in the Canadian report:  
The second column gives in round numbers (000,000's being omitted) the average national expenditure (in pounds) on each class of article at present and for the last few years, and presumably also for the immediate future the proportion at least, if not the absolute amounts, of expenditure. In the estimated amount of consumption allowance is made for the addition to the value made before the articles are in the form in which they are finally consumed.

In the third column these amounts (or proportions) are reduced to percentages (of the total amount expended on such articles).

In the last column the relative importance proposed to be assigned to each article in the index number is stated, mainly on the basis of the percentages in the third column, but with modifications so as to substitute even figures for the convenience of handling.]

Articles consumed or used up.	Estimated expenditure per annum on each article.	Percentage of each amount to total.	Relative importance proposed for each article in index number reduced to percentage.
<b>Breadstuffs:</b>			
Wheat.....	60	6.5	5
Barley.....	30	3.3	5

Ceoutchouc.....	5	0.5	1
			10
<b>Total.....</b>	<b>920</b>	<b>100.0</b>	<b>100</b>

1 This percentage does not agree with that found in the Canadian report, but is correct according to the expenditure given in the preceding column.

Slight modifications were made in the above table to meet the groupings adopted in the Canadian investigation and the different standards of consumption in that country. In the absence of statistics directly bearing on consumption standards in Canada, apart from statistics of import and export trade and of production, use was made of the special studies of family expenditures of the British, United States, and Massachusetts labor departments.

The following figures show the weighting used in the Canadian study:<sup>1</sup>

Group.	Weight.
Grains and fodder.....	18
Animals and meats.....	10
Fish.....	2½
Dairy produce.....	7½
Other foods.....	15
Textiles.....	8
Hides, leather, boots and shoes.....	2
Metals and implements:	
(a) Metals.....	8
(b) Implements.....	1
Fuel and lighting.....	10
Building materials:

## DENMARK.

## INDEX NUMBERS OF THE STATE STATISTICAL BUREAU.

## HISTORY AND PUBLICATION.

This series of index numbers is based on the values of Danish imports and exports. It was first compiled in 1907 by Michael Koefoed, chief statistician of the State Statistical Bureau of Denmark,

and since then has been published annually in the trade statistics of that country,<sup>1</sup> with a brief advance statement of it appearing in the journal of the statistical office.<sup>2</sup> It covers a period extending from 1876 down to the present time.

## SOURCE OF QUOTATIONS.

The index numbers are computed from average annual prices reported by various corporations, public authorities, and a considerable number of private business houses, upon the basis of which the customs officials determine the value of imported and exported commodities. For the four varieties of grains included in the index, the figures taken are the official Government prices.

## BASE PERIOD

The decade 1891–1900 constitutes the base period used in the computation of the annual index numbers.

## NUMBER AND GROUPING OF COMMODITIES.

From a list of about 100 commodities entering into the import and export trade of Denmark, there were selected for inclusion in the index 38 of the more important ones classified into three groups, as follows:

*Group I.*—Fats, oleomargarine, wheat flour, flaxseed, copra and palm kernel, rice, coffee (green), cacao bean, tobacco (raw), cotton, cotton yarn (undyed), tallow, copper (including brass, copper plates, and tin), and petroleum—in all, 14 commodities.

*Group II.*—Horses, eggs, salt herring, wheat, potatoes, wool, wool yarn (undyed), hides (raw), boots and shoes (not including those with silk tops), paper (writing and print), firewood bricks—in all, 12 commodities.

*Group III.*—Salt pork, meat (other than pork), butter, rye, barley, oats, maize, oil-meal cakes, sugar (3 articles or more—granulated, whiter than Dutch standard No. 18; rock sugar, etc.; also granulated, whiter than No. 9), lumber (rough, for ships, etc.), coal, bar and hoop iron—in all 12 commodities.

It is not possible to ascertain with any certainty the number and variety of articles included. The classification used in the administration of the customs laws determines the nature of the commodities which enter into this index number. A somewhat arbitrary method of combining articles has, therefore, been adopted. Thus, the articles coming under the single designation of "boots and shoes" apparently include all boots and shoes except those with silk tops; "sugar" includes two separate items in the tariff schedule and forms in reality three or more articles, while "paper" includes two kinds (writing and print) made up of various qualities combined for the purposes of collecting the customs duty.

<sup>1</sup> Danmarks værditabel og udførelsesstatistik 1906–1912. Udgivet af det Statistiske departementet. Copenhagen, 1907–1912. (Danmarks Statistisk Tabelværk. 5. række, Litra D.)

<sup>2</sup> Statistiske offentliggørelser, udgivet af det Statistiske departementet. Copenhagen, 1909–1914.

## WEIGHTING.

The system of weighting is unique. The commodities have been placed in three distinct groups, as already noted, and these three groups in their numerical order have been given the relative importance in the total index of 1, 2, and 3, respectively. No statement is made as to the reason why certain commodities were thrown into any particular group. An examination of the grouping of the commodities, however, leads to the inference that they were thrown into one group or the other on the basis of their relative importance in consumption.

## TABLE OF RESULTS.

No group index numbers are given, only a general index for all 38 commodities being published. This table follows:

## INDEX NUMBER OF WHOLESALE PRICES OF 38 IMPORTANT ARTICLES ENTERING INTO THE IMPORT AND EXPORT TRADE OF DENMARK, 1876 TO 1913.

## FRANCE.

## INDEX NUMBERS OF ANNUAIRE STATISTIQUE DE LA FRANCE.

## PUBLICATION.

The statistical annual (*annuaire statistique de la France*) published by the general statistical office of France (*statistique générale de la France*) in Paris, under the direction of the Ministry of Labor and Social Welfare, contains index numbers for a group composed of certain food commodities and for a second group comprising other commodities, such as mineral products, textiles, hides, oils, etc., for the years from 1857 to the present time.

In addition to these there are now shown in the report, for purpose of comparison, Sauerbeck's index number for the United Kingdom, as published in the Journal of the Royal Statistical Society, the index number for Hamburg, Germany, based on import values, the index numbers for the United States, published by the Senate Committee on Finance and by the Bureau of Labor Statistics, and

the one compiled by Jules Domergue for France and published in *La Réforme Économique*.

#### HISTORY.

Index numbers were first published in the *Annuaire Statistique* of 1904 (page 151\*). Previous to this date average wholesale prices for certain food commodities, for fodder, and for fuels had been shown, but no totals were made for these average prices, each of which represented data for one year. The prefatory note to the table appearing in the 1904 report states that the index numbers for France are based on the import values of 43 articles, the period 1867 to 1877 being taken as the base. In this table all commodities are divided into two classes—foodstuffs and miscellaneous materials. An index number is also given for all articles combined.

In the preparation of the 1907 report the period 1891–1900 was adopted as the base instead of the years 1867–1877 and, in accordance with this change, new index numbers were computed for all preceding years.<sup>1</sup> In 1912 a further change was made by the substitution for the years since 1905 of index numbers based on the average annual prices of 45 articles in interior markets of the country instead of the import values of 43 articles, as in former reports.<sup>2</sup>

#### SOURCE OF QUOTATIONS.

The index numbers for years prior to 1906 are based on data published by the customs administration showing the values of imports. These values were fixed by the board of appraisers (*commission des valeurs en douane*). Beginning with 1906, as has been stated, the index numbers are computed from the average yearly prices of the different articles in interior markets of France. These average prices are compiled mainly from records of transactions on the Paris Bourse and from periodicals.<sup>3</sup>

#### BASE PERIOD

Prior to the 1907 report the base period used was that of 1867–1877. In the 1907 report, as already stated, the base period was changed to 1891–1900 and recomputations of the index number for previous years were made.

#### PRICES: HOW SHOWN AND COMPUTED.

The prices shown in the reports are in all cases averages of those prevailing during the year. For years prior to 1906 these averages are based on values assigned to imported articles by officials of the customs service. The figures for years beginning with 1906 represent in each case the average of 12 monthly quotations in selected interior markets.

<sup>2</sup> *Idem*, 1912, p. 223<sup>a</sup>.

<sup>3</sup> *Idem*, pp. 88<sup>a</sup>, 89<sup>a</sup>.

## NUMBER AND CLASS OF COMMODITIES.

The index numbers for the years from 1857 to 1905, inclusive, are computed on the import values of 43 articles, while those for years since 1905 are based on the market prices of 45 articles. Both raw and manufactured commodities are included, the former predominating.

## DESCRIPTION AND GROUPING OF COMMODITIES.

The commodities for which average yearly prices are published in the *Annuaire Statistique* are shown in the following list appearing in the report for 1912 (pages 88\* and 89\*):

- |                                    |                            |
|------------------------------------|----------------------------|
| 1. Wheat.                          | 27. Cast iron (columns).   |
| 2. Wheat flour                     | 28. Cast iron (plates).    |
| 3. Rye.                            | 29. Copper (bars).         |
| 4. Barley.                         | 30. Tin.                   |
| 5. Oats.                           | 31. Lead.                  |
| 6. Maize (corn).                   | 32. Zinc.                  |
| 7. Potatoes.                       | 33. Coal.                  |
| 8. Rice.                           | 34. Cotton.                |
| 9. Beef (Villette).                | 35. Flax (raw).            |
| 10. Veal (Villette).               | 36. Hemp.                  |
| 11. Mutton (Villette).             | 37. Jute.                  |
| 12. Pork (Villette).               | 38. Wool.                  |
| 13. Beef (Halles Centrales).       | 39. Silk (raw).            |
| 14. Veal (Halles Centrales).       | 40. Hides (cattle).        |
| 15. Mutton (Halles Centrales).     | 41. Hides (horses).        |
| 16. Pork (Halles Centrales).       | 42. Tallow.                |
| 17. Salt meats.                    | 43. Rapeseed oil.          |
| 18. Butter.                        | 44. Linseed oil.           |
| 19. Cheese (soft).                 | 45. Alcohol.               |
| 20. Cheese (dry).                  | 46. Petroleum (refined)    |
| 21. Sugar (white, No. 3).          | 47. Soda (carbonate).      |
| 22. Sugar (refined, good quality). | 48. Soda (nitrate).        |
| 23. Coffee.                        | 49. Indigo.                |
| 24. Cocoa.                         | 50. Timber (Russian fir).  |
| 25. Bar iron (No. 2).              | 51. Timber (Austrian oak). |
| 26. Cast iron (pipes).             | 52. Rubber (Para, fine).   |

It is stated on page 223\* of the 1912 report that since 1905 the index numbers are computed on 45 of the above-named articles. It is not shown which articles are not included.<sup>1</sup> As previously stated, the commodities are arranged in three groups: Foodstuffs, miscellaneous articles other than food, and all commodities combined. No description of the articles appears in direct connection with the index numbers as published in the *Annuaire Statistique*.

## SUBSTITUTIONS AND ADDITIONS.

Except for the changes made in the preparation of the 1912 report, no additions to the list of articles or substitutions of one grade or

<sup>1</sup> See, however, page 191 of this bulletin for list of articles published in the *Bulletin de la Statistique Générale de la France*, October, 1912.

quality of an article for another have been made, so far as the printed information discloses.

## INTERPOLATION.

No prices have been interpolated, as far as can be ascertained from the reports.

## WEIGHTING.

The index numbers are unweighted.

## TESTING.

Other than the arrangement by which the index numbers are exhibited in comparison with other index numbers, by years, no testing as to accuracy of results is apparent from the information at hand.

## TABLES OF RESULTS.

The following table, showing the variation in the index number by years, from 1857 to 1913, inclusive, is reproduced from the *Annuaire Statistique* for 1912 (XXXII<sup>e</sup> volume, page 224\*):

FLUCTUATION IN WHOLESALE PRICES, 1857 TO 1913, BY YEARS.

Year.	Food.	Miscellaneous commodities.	Total.	Year.	Food.	Miscellaneous commodities.	Total.	Year.	Food.	Miscellaneous commodities.	Total.
1857....	136	105	169	1876....	135	151	144	1895....	97	93	94
1858....	117	180	152	1877....	144	146	145	1896....	90	91	91
1859....	121	176	152	1878....	135	132	133	1897....	94	90	92
1860....	130	183	100	1879....	137	125	130	1898....	98	93	95

1862....	131	179	158	1881....	133	128	130	1900....	95	121	110
1863....	125	185	159	1882....	130	125	127	1901....	97	111	105
1864....	122	184	157	1883....	122	122	122	1902....	95	109	103
1865....	118	179	147	1884....	109	114	112	1903....	95	110	104
1866....	127	167	149	1885....	110	110	110	1904....	85	110	103
1867....	131	157	146	1886....	103	106	106	1905....	102	115	109
1868....	137	155	147	1887....	100	104	102	1906....	100	123	115
1869....	133	153	144	1888....	104	109	107	1907....	107	132	121
1870....	137	167	148	1889....	107	113	111	1908....	106	115	112
1871....	148	157	153	1890....	105	115	111	1909....	106	117	112
1872....	138	170	159	1891....	109	110	109	1910....	111	127	120
1873....	141	173	159	1892....	109	103	106	1911....	122	128	126
1874....	136	185	147	1893....	110	90	104	1912....	127	134	131
1876....	130	153	143	1894....	104	90	96	1913....	119	136	128

An index number apparently based on the same 45 articles that are included in the *Annuaire Statistique* index is published in the quarterly bulletin which is also issued by the General Statistical Office of France (*Bulletin de la statistique générale de la France*). The list of articles as published in the bulletin for October, 1912, pages 22 to 25, is as follows: Wheat, wheat flour, rye, barley, oats, maize, potatoes, rice, beef (2 kinds), mutton (2 kinds), pork, salt meats, butter, cheese, raw sugar, refined sugar, coffee, cocoa, cast iron, bar iron, copper, tin, lead, zinc, coal, cotton, flax, hemp, jute, wool, silk, salted hides, skins, rapeseed oil, linseed oil, alcohol (90°), petroleum, soda carbonate, soda nitrate, indigo, lumber, and rubber.

The publication of this index number began with the April, 1912, issue of the bulletin and has been continued in each subsequent issue. For purpose of comparison the index numbers of the *Réforme Économique*, those of Sauerbeck, and those published in the *Economist* are shown in connection with it, all four being reduced to the common base period 1901-1910. The following table showing the manner in which the information is presented has been reproduced from the bulletin of January, 1914:

TABLE SHOWING FOUR INDEX NUMBERS FOR PURPOSES OF COMPARISON.

Year and month or quarter.	France.		England.	
	Statistique Générale.	Réforme Économique.	Sauerbeck.	The Economist.
<b>1913</b>				
December.....	112.9	114.0	114.2	111.8
November.....	114.7	115.0	113.4	113.5
October.....	114.4	116.0	115.1	114.5
Fourth quarter.....	114.3	115.0	114.2	113.8
Third quarter.....	115.1	114.5	115.7	115.0

Entire year.....	117.8	117.4	115.9	115.8

## INDEX NUMBERS OF THE STATISTIQUE GÉNÉRALE DE LA FRANCE.

## PUBLICATION AND HISTORY.

In 1911 the general statistical office (*statistique générale*) of the French Ministry of Labor and Social Welfare published a volume devoted exclusively to the subject of wages and the cost of living in France at different epochs. Under the cost of living topic is included a study of wholesale prices, contract prices, and retail prices, with index numbers for each class. Index numbers are also given for wages and for family budgets.

## SOURCE OF QUOTATIONS.

The prices published in connection with the data on the cost of living relate to the city of Paris. They were obtained from various sources and may be classified as follows:

1. Wholesale prices (current prices published by the Bourse de Commerce; import prices, as fixed by the board of appraisers of customs; prices of various articles in the municipal markets of Halles Centrales; and meat prices in the market of Villette).

2. Contract prices (prices paid for large quantities of supplies furnished on the basis of awards on competitive bids to the Department of Public Aid and to the Lycée Louis-le-Grand).

3. Retail prices (prices charged by the company stores of two railroad companies, by cooperative stores, and by a few large groceries).

**BASE PERIOD.**

In the computation of the index numbers the average of the prices for the years 1891–1900 was taken as the base, or 100.

**PRICES: HOW SHOWN AND COMPUTED.**

Only annual prices are shown in the various tables included in the report.

**NUMBER AND CLASS OF COMMODITIES.**

Table 2, on pages 44 and 45 of the report, contains 10 commodities for which index numbers are given for the years 1880 to 1909, inclusive. The articles are as follows:

Bread.	Oil (edible).
Butter.	Wine (ordinary).
Cheese.	Sugar, refined.
Potatoes.	Coal.
Rice.	Oil (illuminating).

For each of these articles separate index numbers are given for wholesale or import prices, for the prices paid by the Department of Public Aid, and for retail prices.

A continuation of this table on page 46 covers the period from 1867 to 1910, inclusive, and contains index numbers for the following articles:

Beef (steer). <sup>1</sup>	Beef (cow). <sup>2</sup>
Veal. <sup>1</sup>	Fresh meats of all qualities. <sup>3</sup>
Mutton. <sup>1</sup>	Bacon. <sup>4</sup>
Pork. <sup>1</sup>	Lard. <sup>4</sup>

On page 47 of the report is found a table of index numbers for the years 1875 to 1910, inclusive, in which the following articles are included:

Milk.	Vinegar.
Eggs.	Candles.
Coffee.	Petroleum (refined).
Salt.	

<sup>1</sup> Based on prices in the markets of Villette and Halles Centrales, respectively.

<sup>2</sup> Based on prices in market of Villette.

<sup>3</sup> Based on import prices and those paid by the Department of Public Aid, and by the Lycée Louis-le-Grand, respectively.

<sup>4</sup> Based on prices paid by the Department of Public Aid and on retail prices, respectively.

For all of these articles except eggs index numbers, based on import prices, are given in addition to those based on retail prices or prices paid by the Department of Public Aid, or both. In the case of eggs, the index numbers are computed from retail prices and from those paid by the Department of Public Aid and by the Lycée Louis-le-Grand, respectively. Prices paid by the last-named institution also furnish the basis for index numbers shown for vinegar and salt.

## TABLES OF RESULTS.

In the following table, which has been compiled from data published on pages 44 and 45 of the report, are shown index numbers covering the period from 1880 to 1909, inclusive, computed from the wholesale or import prices of 10 commodities in common use. The figures for refined sugar and illuminating oil are based on wholesale prices of the Bourse de Commerce of Paris. Those for wine are computed from prices published annually by the minister of finance in the Bulletin de Statistique et de Législation. The index numbers for the remaining articles are based on import prices. As stated in a preceding paragraph, the average of the prices for 1891-1900, taken as 100, constitutes the base.

RELATIVE PRICES OF COMMODITIES, 1880 TO 1909.

Year.	Bread.	Butter.	Cheese.	Pota- toes.	Rice.	Oil, edible.	Wine, ordi- nary.	Sugar, refined.	Coal.	Oil, illumi- nating.
1880.....	137	100	117	150	132	169	148	123	98	132
1881.....	135	100	117	142	129	169	156	114	100	133

1908.....	129	107	120	199	104	181	62	58	117	109
1909.....	130	106	128	199	100	192	70	60	128	106

The following table, reproduced from page 45 of the report, contains three series of index numbers representing in each case the average of index numbers computed for the 10 articles included in the pre-

ceding table. In addition to index numbers based on wholesale or import prices, similar data for contract prices paid by the Department of Public Aid and for retail prices are given in this table.

THREE SERIES OF INDEX NUMBERS COMPUTED FOR 10 ARTICLES, 1880 TO 1909.

Year.	Wholesale or import prices.	Contract prices paid by the Department of Public Aid.	Retail prices.	Year.	Wholesale or import prices.	Contract prices paid by the Department of Public Aid.	Retail prices.

## INDEX NUMBERS OF LA RÉFORME ÉCONOMIQUE.

## PUBLICATION.

This series of index numbers is based on wholesale prices in France and is published weekly in *La Réforme Économique*, a journal of social and political economy, of which Jules Domergue is the editor.

## HISTORY.

For a number of years prior to 1900 comparative prices for a varying number of commodities were published in this journal. In the earlier numbers the increase or decrease in prices of seven commodities as compared with the primary period (1890) was shown by means of a chart. In 1894 prices for corresponding dates in 1892, 1893, and 1894 were given, and for some articles an average monthly price was computed. In 1896 a weekly table of prices was presented for the first time, and on May 9, 1897, a series of tables was begun showing the average monthly prices of all the commodities used in the computation. Beginning with January, 1899, an annual average price was computed and published for the years 1890 to 1898, inclusive, and in addition current prices were compared with these by means of annual average prices. No comparison was made by means of index numbers, however, until 1900, when the method of presenting the variation in prices for stated periods was changed by showing in addition to the average price of each commodity the simple percentages of increase or decrease in the various commodities.

## SOURCE OF QUOTATIONS.

Actual commercial transactions are sought for in the collection of price data. The prices quoted are said to be those obtained from the records of licensed brokers (*courtiers assermentés*) and private brokers (*courtiers libres*) in different parts of Paris and in the departments; official quotations of the Department of Agriculture; prices obtained in the municipal markets of La Villette and Halles Centrales; quotations on importations as stated in the records of the Government warehouses in Paris and elsewhere; and official quotations of the price of bread furnished by the prefecture of the Seine.

## BASE PERIOD.

The year 1890 is used as the base period. Nothing is stated in connection with the figures, so far as can be ascertained, as to why this year was chosen in preference to any other year or period of years.

## PRICES: HOW SHOWN AND COMPUTED.

As has been stated, no comparison of prices was made by means of percentages until 1900. In that year, after noting the principal objections to an index number representative of the combined prices of all commodities for which prices are quoted, it was decided to construct an index for each article and an index for each group of articles, in addition to the index for the entire list. The prices used in the calculations were the average annual prices already published in *La Réforme Économique* for the period 1890-1895, the quarterly average prices for the years 1896-1898, and the average monthly quotations for the year 1899.

A special presentation of the price of cotton is made in the issue of September 23, 1900, showing for five grades the range of prices of this commodity from 1875 to September, 1900, with an index based on the price in 1875 (equal to 100). In the supplement to the issue of November 24, 1901, the average prices of wheat, sugar, wine, and alcohol for the periods 1884-1891 and 1893-1900 have been computed and the divergence in price between the two periods is shown. The prices for the year 1892 are not a factor in either period.

## NUMBER AND CLASS OF COMMODITIES.

In tracing this index number through the period elapsing since its inception, there is great difficulty in determining the number and class of commodities which have been included in the compilation. Between 1890 and 1899 prices and index numbers were shown for from 40 to 56 or even more articles, according to the system of counting and classification adopted. Thus the compiler evidently combined four kinds of meat (beef, pork, mutton, and veal) into one commodity, while from two to four kinds of wool, silk, or cotton were

each sometimes given a separate index number. From 1900 to date it would appear that approximately 48 articles make up the series of index percentages, although average annual wholesale prices are given for several additional articles.<sup>1</sup> After 1904 a statement printed on the cover page and called "La Thermomètre des Affaires en France" shows a separate index number for only 21 leading commodities, although the general percentage index number includes additional articles, as may be verified by actual arithmetical test.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

The classification of the various commodities has differed from time to time. The first summary table, presented in the issue of January 14, 1900, page 67, shows index percentages for 56 commodities (43 if certain grades of textiles and bar and structural iron are not considered separate commodities), classified in five main groups as follows:

*Food products.*—Wheat, flour, rye, barley, meats, wine, sugar, alcohol, coffee, butter, sirup, edible starches (*fecula*),<sup>2</sup> oleomargarine, tallow, lard, cocoa, rice, and bread.

*Textiles.*—Silk (2 grades), wool (raw and yarn), linen (raw and thread), cotton (raw and spun), hemp, jute.

*Agricultural products.*—Hides (raw), leather, oats, maize, fodder, fatty acids (3), rapeseed oil, linseed oil.

*Minerals and metals.*—Coal, petroleum, copper, tin, zinc, lead, steel, iron (2 grades), sheet iron.

*Miscellaneous.*—Rubber, sulphuric acid, hydrochloric acid, chloride of lime, carbonate of soda, sal soda, sulphate of ammonia, superphosphates.

In the issue of April 14, 1901, average annual wholesale prices are presented for all of these 56 commodities, while relative prices are shown for only 43 of them, divided into five groups as above, except that the fifth group is termed "Chemicals and fertilizers" but contains the same commodities as the group which is designated above as "Miscellaneous" commodities. Certain interchanges were also made as between "Food products" and "Agricultural products." This classification was continued until January, 1902, so as to include indexes for the year 1901.

In 1904 the list of commodities for which separate relative prices were presented was reduced to 21 commodities as follows: Wheat, meat, wine, sugar, alcohol, coffee, coal, petroleum, copper, tin, zinc, lead, steel, iron, silk, wool, flax, cotton, nitrate of soda, superphosphates, and sulphuric acid.

Beginning with the issue of December 10, 1905, a change was made in the form of classification, the articles being grouped as (1) agricul-

<sup>1</sup> *Annuaire Statistique de la France*, 1912, p. 223\*.

<sup>2</sup> The French term "*fecule*" includes such articles as potato flour, tapioca, sago, arrowroot flour, etc.

tural products and (2) industrial products. Under this classification average annual wholesale prices are presented for 21 articles in the first group, if forage is counted as one commodity and not as two, and wines as one instead of three, meats as one instead of four (beef, pork, veal, and mutton), and fatty acids as a single commodity instead of three; whereas if all these subdivisions are counted as separate commodities, the number would appear as 29. In the second group, that of industrial products, there are 28 or 40 commodities, according to the system of counting adopted.

For the above commodities general index percentages are given only for both groups combined, and not for each group separately or for each commodity. This plan of presentation has continued since 1905, although the commodities differ a trifle from year to year. As already stated a separate index number for 21 commodities is shown in "Le Thermomètre," which forms part of the cover page.

#### SUBSTITUTIONS AND ADDITIONS.

In the issue of *La Réforme Économique* for January 15, 1899, the average prices of raw and spun silk of several grades was included for the period of 1890-1898, and on February 12 of the same year average prices of iron (two grades), steel rails, sheet iron, bar copper, and tin (Banka) were added for the years 1890 to that date.

Two further groups were added on April 2, 1899. The first of these included wine, coffee (Santos, good average), hops (Burgundy), nitrate of soda, sulphate of ammonia, and superphosphates; the second, sulphuric acid 66°, hydrochloric acid 20-21°, chloride of lime 105-110°, carbonate of soda 90-92°, and caustic soda 80°, for manufacturing and laundry purposes. Quotations for hides, raw (three quotations), and tanned (four quotations) were added on April 23, 1899. The index for tanned leather does not appear after 1900, nor do those for cocoa, rice, rubber, oleomargarine, bread, lard, and fatty acids.

During the year 1902 percentage relatives for two articles were dropped from the list, and in the first issue of 1903 two more indexes were dropped. After 1905 no quotations appear for the following classes of wine: Alicante, Huelva, Aragon, Valence, and Haw. Apparently no adjustment of previous percentages have been made. No further change in the list of articles or method of presenting the variation of prices appears to have been made since 1905.

Oleomargarine did not figure in the index series until 1896, and it was dropped in 1900. Up to 1900 separate relative prices were calculated for two kinds of sugar, raw and refined; after that date only

one index is shown, although wholesale prices are quoted for both kinds. Apparently, however, the index percentage is based on the average of the prices shown for each kind. Similar changes have taken place in the coal index. Thus, four index percentages were presented up to 1900, but after that date only one is shown, which is based on the average wholesale prices of all four kinds.

In general, when any changes were made in the number or classes of commodities the index percentages were recomputed back to the base year, 1890.

#### INTERPOLATION.

No method of price interpolation has been resorted to, so far as can be determined from the information published in *La Réforme Économique*.

#### WEIGHTING.

No scientific method of weighting has been used, the arithmetic average alone being employed in the construction of the index numbers. The method of calculating the yearly general index for groups of commodities and for all commodities seems to be as follows: For the years already covered by the reports on wholesale prices, the sum of the average prices for the year of the different articles was divided by that of the basic year (1890). Thereafter, average monthly prices were obtained by getting the average of the weekly quotations made during the month as published in *La Réforme Économique*, and from these average monthly prices the yearly average price was computed, the yearly general index then being computed as before. The relatives for each article (when given), the index for each group, and the general index are in all cases simple percentages based on the prices of corresponding items for the corresponding period in 1890.

#### TESTING.

In the earlier years Sauerbeck's table of index numbers for England was occasionally given for comparison, and in the later issues it has appeared quite regularly. No other comparisons are made.

#### TABLE OF RESULTS.

The following table has been compiled from the numbers of *La Réforme Économique* published during the years 1892-1913. The items extending throughout the entire series of years are identical with those contained in the summary table showing index percentages for 21 commodities published regularly as a part of "*La Thermomètre des Affaires en France*," which forms the cover page of current numbers.

## INDEX NUMBERS OF ÉMILE LEVASSEUR.

## PUBLICATION.

This "Inquiry into the price of food commodities for a period of 25 years in 70 high schools of France" was published in the *Revue Économique Internationale*, Brussels, in May, 1909. Later in the same year, under the title of "Le coût de la vie," it appeared as a separate pamphlet, which also was published by the *Revue*.<sup>1</sup>

## HISTORY.

Toward the close of 1908 the minister of public instruction, at the request of Mr. É. Levasseur, addressed to the principals of 70 high schools of Paris and the Departments an inquiry concerning the prices of certain food products and of coal as paid by the schools since 1880.

The inquiry covered the years 1880, 1885, 1890, 1895, and each year from 1900 to 1908, inclusive.

The schools selected, exclusive of those of Paris and its suburbs, included some of the large and some of the small institutions in each of the nine agricultural sections of France.

Mr. Lucien March, chief of the general statistical office (*statistique générale*) of France, assisted in the work by assuming the responsibility for the calculation of the index numbers from the figures secured.

The author states that from the data received it was possible to secure a sufficiently exact report of the variation which the prices of commodities had undergone for a period of about 25 years.

## SOURCE OF QUOTATIONS.

The prices considered are contract or semiwholesale prices (*prix d'adjudication*) obtained from 70 high schools. The articles are 21 in number—20 food commodities and coal.

## BASE PERIOD.

The average price for the two years 1895 and 1900, taken as 100, is used as the base. The index numbers for the period 1880 to 1908 derived from the use of this base are shown in the following table, appearing on page 7 of the pamphlet:

Years.	Index numbers.	Years.	Index numbers.
1880.....	111.9	1903.....	99.9
1885.....	104.2	1904.....	99.9
1890.....	101.4	1905.....	98.0
1895.....	100.2	1906.....	98.8
1900.....	99.3	1907.....	103.1
1901.....	99.8	1908.....	106.5
1902.....	98.8		

<sup>1</sup> *Le coût de la vie. Enquête sur le prix des denrées alimentaires depuis un quart de siècle dans 70 lycées*, par É. Levasseur, membre de l'Institut, administrateur du Collège de France.

## DESCRIPTION OF COMMODITIES.

The articles selected for which É. Levasseur computed index numbers are the following:

Bread.	Oil (table).
Fresh meats (other than pork).	Eggs.
Fresh pork.	Milk.
Smoked pork (charcuterie).	Cheese.
Poultry and game.	Sugar.
Red wine.	Fresh fish.
White wine.	Salted fish and canned fish.
Bear. <sup>1</sup>	Codfish.
Cider. <sup>2</sup>	Potatoes.
Butter.	Coal.
Drippings and lard.	

## TESTING.

Mr. Levasseur verified his index numbers by comparison with index numbers for France, England, Germany, and the United States.

The variations as shown by the index numbers of prices in 70 high schools were verified by comparisons with the following:

(a) Index numbers relating to France only—

1. Statistics prepared by Mr. Lucien March, chief of the general statistical office of France, and published in the *Annuaire Statistique de la France*. These show a greater increase for all merchandise in general than for food commodities alone (except in 1895). The index numbers show a rapid increase since 1905.

2. Index numbers calculated by Mr. de Foville. These numbers were based on the difference between the rates of duty, and show prices to have been low in 1900, with an increase in all the following years, especially since 1903.

3. Index numbers calculated by Mr. Levasseur from the duties on 32 food commodities, corresponding closely to those of the high schools. These figures show a rapid rise in prices since 1903.

4. Index numbers calculated on the basis of current prices since 1882 by the purchasing agent of the southern railways. These index numbers verify (or confirm) the index numbers of the high schools of the southwest.

(b) Index numbers relating to foreign countries—

5. England—Sauerbeck's index numbers for 45 articles of general merchandise. These index numbers are published in the *Journal of the Royal Statistical Society*. Sauerbeck's index numbers for food commodities show, like those of the high schools, a slight fall in prices from 1900 to 1902 and also a marked rise in 1907 and 1908.

6. Index numbers computed in Germany for the city of Hamburg.

7. Index numbers computed by the United States Bureau of Labor

<sup>1</sup> Included in the calculation of index numbers in 1 instance only.

<sup>2</sup> Included in the calculation of index numbers in 3 instances only.

Statistics. These index numbers are for wholesale and retail prices, respectively.

In conclusion the author states that "these diverse statistics, despite the differences of detail, confirm the statistics of the 70 high schools and show clearly that the great changes in prices are not due to special or local causes, but to general causes, the results of which are felt at the time in all the great markets which are in constant commercial communication with each other."<sup>1</sup>

#### TABLES OF RESULTS.

The following table, reproduced from page 15 of the publication, shows the variations in the index numbers for food articles in the 70 high schools of Paris and suburbs and of the 9 agricultural sections of France, by years, division into large and small schools being made:

INDEX NUMBERS OF PRICES OF 20 FOOD COMMODITIES AND COAL IN 70 HIGH SCHOOLS OF PARIS AND ITS ENVIRONS AND OF THE 9 AGRICULTURAL SECTIONS OF FRANCE, WITH DIVISION INTO LARGE AND SMALL SCHOOLS.

(Average of prices for 1895 and 1900=100.)

## GERMANY.

## INDEX NUMBERS OF THE IMPERIAL STATISTICAL OFFICE.

## PUBLICATION.

This series of index numbers, which represents wholesale prices of commodities in German markets, is published yearly in the *Vierteljahrshäfte zur Statistik des Deutschen Reichs*, a publication of the Imperial Statistical Office, and appears regularly for each year in the first quarter of the succeeding year.

The first report, including index numbers, was published in 1905 and covered the years 1899 to 1904. The table of index numbers in late reports regularly covers the 10-year period ending with the date of the publication of the report.

## HISTORY.

Since the year 1879 the German Imperial Statistical Office has published monthly average wholesale prices of commodities of importance in German markets. These were shown in detail in the *Monatshefte zur Statistik des Deutschen Reichs* up to the year 1891, and from 1892 to the present time in the *Vierteljahrshäfte zur Statistik des Deutschen Reichs*.

The object of the price study, as stated at the outset, was the collection of reasonably accurate and adequate average prices representing fixed grades of important articles of the wholesale trade, with a view to the gradual assembling of really useful data for the observation of the movement of prices. It was not until the year 1905 that the publication of relative prices was begun. The official series of index numbers has been extended back only as far as the year 1899.

## SOURCES OF QUOTATIONS.

The number of markets represented in this study has been limited to those with permanent arrangements for furnishing reasonably accurate and representative quotations. The following sources of information, representing 30 wholesale markets, are acknowledged in the report for the year 1911: Chambers of commerce or boards of trade in Augsburg, Berlin, Bielefeld, Brunswick, Bremen, Breslau, Danzig, Dortmund, Frankfort on the Main, Halberstadt, Hamburg, Cologne, Königsberg (in Prussia), Krefeld, Landeshut (in Silesia), Leipzig, Lübeck, Magdeburg, Mannheim, Mühlhausen (in Alsace), Munich, München-Gladbach, Nuremberg, Posen, and Stettin; the administrations of municipal stockyards and slaughterhouses; the mill administration in Bromberg (for wheat flour from Berlin), the stock exchange in Düsseldorf, the board of directors of the stock exchange in the city of Essen, the United German Jute Manufacturers in Brunswick (for raw jute at Hamburg), the Königsberg

Commercial Association in Königsberg (in Prussia) (for petroleum at Danzig), the Merchants' Association at Lindau, the Royal Administration of Mines at Saarbrücken, and the Bureau of Trade Statistics at Hamburg.

From the beginning ordinary published market quotations have been avoided as representing fluctuations in quality and as not being scientifically constructed. The study has been restricted to prices secured currently from the above-named or similar sources.

#### BASE PERIOD.

The 10-year period 1889 to 1898 is taken as the base period. No reasons are assigned for this selection.

#### PRICES: HOW SHOWN AND COMPUTED.

Three tables show the prices involved in the computation of index numbers. The first shows average monthly prices for the current year, the second shows average yearly prices for the 20-year period ending with the current year, and the third shows relative prices for each year of the 10-year period ending with the current year.

All actual prices shown are averages. A tabular statement in the first report (February, 1879) gave for each of the 26 markets then included in the study the intervals at which prices for the Imperial Statistical Office were determined and the methods of determining the quotations. According to this statement the average actual prices represent great variations from market to market in the number of original quotations involved in the computation, some being based on daily determinations while others are based on weekly or even monthly determinations, and some representing a medium price or quality while others are averages of the prices of the highest and lowest or of the highest, medium, and lowest grades of the commodities reported.

A few series of index numbers represent interrupted series of actual prices and a few others represent series of actual prices whose comparability is broken within the period involved in the table.

#### NUMBER AND CLASS OF COMMODITIES.

From the beginning (1899) index numbers have been given in summary form for 44 quotations. Of this number three represent iron and two each represent coal and petroleum. Each of the other commodities is represented by a single quotation. The number of commodities is therefore 40. No index number for the total of the 44 quotations is published, nor are index numbers shown for groups of commodities.

Index numbers are given for 40 articles, representing the 235 quotations of the table of actual prices. The number was originally 238, the two Stuttgart quotations for cotton yarn and the Stuttgart

quotation for cotton goods having been dropped from both actual and relative tables.

The table of actual average yearly prices as published in 1913 contains 320 series of quotations, some of which are themselves calculations from more than one variety, as, for example, the first Mannheim quotation for barley. This table at present includes five commodities not represented in the tables of relatives, namely, raw sugar, refined sugar, molasses, cocoa, and rubber. The comparability of all series of sugar quotations has been interrupted by changes in tariff laws; there is no continuous series of yearly average prices on molasses for the base period, and the last two articles have been added to the list of commodities since the publication of index numbers was begun—cocoa in 1907 and rubber in the following year.

The commodities included are not classified into raw materials and manufactured products. The great majority are raw materials but a number are so-called semimanufactures (*Halbfabrikaten*).

Some commodities originally omitted from the list were considered desirable but were not included because satisfactory data could not be secured. The original number of articles (30) has been considerably increased, but still certain important articles, as, for example, lumber and flax, are not included even in the tables of actual prices.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

Index numbers are shown only for single commodities and not for groups.

The description of commodities in the table of index numbers as published in 1912 follows:

##### *Rye (1,000 kilograms).*

- Berlin, good, minimum 712 grams per liter [51.3 pounds per bushel].
- Breslau, medium grade.
- Danzig, goods for free exchange (*Ware z. freien Verkehr*).
- Frankfort on the Main, minimum 70 kilograms per hectoliter [54.4 pounds per bushel].
- Hamburg, Russian, in bond.
- Königsberg, good, 714 grams per liter [51.5 pounds per bushel].
- Leipzig, German, good.
- Lübeck, Russian, 71.3 kilograms per hectoliter [55.4 pounds per bushel].
- Mannheim, various origins, medium.
- Munich, Bavarian, best.
- Munich, Bavarian, good medium.

##### *Wheat (1,000 kilograms).*

- Berlin, good, minimum 755 grams per liter [54.4 pounds per bushel].
- Breslau, medium grade.
- Danzig, goods for free exchange.
- Frankfort on the Main, minimum 75 kilograms per hectoliter [58.3 pounds per bushel].
- Hamburg, Holstein, Mecklenburg.

Konigsberg, good, 749 to 754 grams per liter [54.0 to 54.4 pounds per bushel].  
 Leipzig, German, good.  
 Lindau, 78 to 79 kilograms per hectoliter [60.6 to 61.4 pounds per bushel], various  
 origins.  
 Mannheim, various origins, medium.  
 Munich, Bavarian, best.  
 Munich, good medium.

*Oats (1,000 kilograms).*

Berlin, good, minimum 450 grams per liter [32.4 pounds per bushel].  
 Breslau, medium grade.  
 Danzig, domestic.  
 Frankfort on the Main, good, native.  
 Konigsberg, good, 447 grams per liter [32.2 pounds per bushel].  
 Leipzig, German, good.  
 Lindau, Bavarian, 44 to 45 kilograms per hectoliter [34.2 to 35.0 pounds per bushel].  
 Mannheim, from Eaden, from Wurttemberg, medium.  
 Munich, Bavarian, best.  
 Munich, Bavarian, good medium.

*Corn (1,000 kilograms).*

Bremen, American, best, in bond.  
 Breslau, Russian, medium grade.  
 Hamburg, American, in bond.  
 Leipzig, various origins.

*Barley (1,000 kilograms).*

Breslau, medium grade.  
 Danzig, brewing, domestic.  
 Frankfort on the Main, brewing.  
 Konigsberg, 647 to 652 grams per liter [46.6 to 47.0 pounds per bushel].  
 Leipzig, German, good.  
 Lindau, Hungarian, 65 to 66 kilograms per hectoliter [50.5 to 51.3 pounds per bushel].  
 Magdeburg, Chevlier, good medium. (Not in 1912.)  
 Mannheim, from Baden, from the Palatinate, medium.  
 Munich, Hungarian, Moravian, etc., best.  
 Munich, Bavarian, best.  
 Munich, Bavarian, good medium.

*Hops (100 kilograms, without wrappings).*

Nuremberg, market.  
 Nuremberg, Wurttemberg.  
 Nuremberg, Hallertauer.  
 Nuremberg, Hallertauer seal.  
 Nuremberg, Spalt.

*Potatoes (1,000 kilograms, without sack).*

Berlin, early red, for distilling.  
 Berlin, early red, for food, assorted.  
 Breslau, good, Silesian, food.  
 Magdeburg, Saxon, for food.  
 Magdeburg, distilling.  
 Stettin, sorted, red, for food.  
 Stettin, sorted, white, for food.

*Butcher's meat.*

Beef (100 kilograms [220.5 pounds]) Berlin, slaughter weight.<sup>1</sup>  
 Pork (100 kilograms [220.5 pounds]) Berlin, slaughter weight.<sup>1</sup>  
 Veal (100 kilograms [220.5 pounds]) Berlin, slaughter weight.<sup>1</sup>  
 Mutton (100 kilograms [220.5 pounds]) Berlin, slaughter weight.<sup>1</sup>

*Rye flour (100 kilograms with sack).*

Berlin, No. 0/1, good average grade.  
 Danzig, No. 0/1, domestic price (*Inlandspreis*).  
 Cologne, No. 0/1.  
 Munich, No. 0.  
 Posen, domestic, No. 0/1.

*Wheat flour (100 kilograms).*

Berlin, No. 00, with sack.  
 Danzig, No. 00, with sack, domestic price  
 Cologne, Rhenish, No. 00, with sack.  
 Lübeck, German, No. 0, without sack.  
 Munich, Bavarian, No. 2, with sack.  
 Posen, domestic, No. 00, with sack.

*Butter (100 kilograms).*

Berlin, I quality.  
 Berlin, II quality.  
 Munich, finest Swiss.  
 Munich, mountain.

*Raw sugar (100 kilograms, net weight).<sup>2</sup>*

Brunswick, 88 per cent centrifugal, without sack, 3 months' time.  
 Halle, 88 per cent centrifugal, without sack, 3 months' time.  
 Magdeburg, I product, 88 per cent centrifugal, without sack, 3 months' time.  
 Stettin, 88 per cent centrifugal, without sack, 3 months' time.

*Refined sugar (100 kilograms).<sup>2</sup>*

Brunswick, without container in paper.  
 Magdeburg, I loaf (*Brot*), without container, in paper.  
 Stettin, I loaf (*Brot*), without container, in paper.

*Molasses (100 kilograms, net weight).<sup>2</sup>*

Magdeburg, for distilling.

*Potato alcohol, crude (100 liters), alcohol.*

Hamburg, with container.

*Rapeseed oil (100 kilograms).*

Berlin, crude, without container.  
 Danzig, crude, with container, export price.  
 Frankfort on the Main, with container.

<sup>1</sup> Slaughter weight (*Schlachtgewicht*) is the presumptive weight of the four quarters on which the price of the animal, without the deduction of the value of hide, head, feet, entrails, etc., has been apportioned.

Prior to July 1, 1897, quotations were not on slaughter weight. At the time the change was made it was stated that according to information from authoritative sources the quotations on slaughter weight are about 84 per cent higher than on dressed weight.

<sup>2</sup> Descriptions from table of actual prices. Article not included in table of relative prices.

Hamburg, crude, with container.  
 Cologne, crude, good and clear, with container.  
 Königsberg, crude, clear, without container.  
 Leipzig, crude, light color and clear, without container.  
 Mannheim, marketable, with container.

*Herrings (1 cask, 150 kilograms).*

Danzig, with container, Crown and full.

## SUBSTITUTIONS, ADDITIONS, AND OMISSIONS.

Within the period of 13 years covered by index numbers three series of relatives have been changed, namely, those for hides and skins, cotton yarn, and cotton cloth. The change in the series for hides and skins was occasioned by the substitution in 1909 of a new set of quotations for Frankfort hare skins (German and Russian) with no alteration in the description of the article and with some of the earlier actual average prices identical with the old figures. The data for six years of the base period are incomplete for the new series. No reason is assigned for the substitution of the new series and no explanation is given in regard to its source. The later series, being published in the 10-year table 1900-1909, does not include the first year for which index numbers have been regularly shown. Minor substitutions of varieties or brands which apparently do not affect prices are occasionally indicated in footnotes to the tables (e. g. the Mannheim quotations on oats as given in the tables published in 1912). Actual price series printed in "old-style" type on account of a break in the comparability of the figures are in a number of cases represented by relative series (e. g. the Cologne coffee quotations).

The changes in the series of index numbers for cotton yarn and for cotton cloth were occasioned by the discontinuance of quotations from the Stuttgart market. In this case new series of relatives with the Stuttgart quotations eliminated were constructed for the whole period covered by the index numbers. Series of actual prices with data lacking for one or more years are in several cases represented by series of relative prices.

Within the period which affects the index numbers only two new commodities, cocoa and rubber, have been added. In these cases, as in cases where new quotations are added for commodities already included, the actual price series alone is given.

## TABLE OF RESULTS.

The following table of index numbers is taken from more than one report, because no table of relations as published covers more than 10 years. In cases where the earlier and later series of index numbers are not the same both sets of figures have been copied.

## INDEX NUMBERS OF THE JAHRBÜCHER FÜR NATIONALÖKONOMIE UND STATISTIK.

## PUBLICATION.

Three general "indexes" and one table of index prices for which no general relative is computed, all based on German wholesale price statistics, are found in the *Jahrbücher für Nationalökonomie und Statistik*, which is published monthly at Jena, Germany. They are, as now published, the work of Dr. Johannes Conrad, a professor of the University of Halle, although in the years through which the index numbers have been carried, different persons have assisted in their compilation.

No distinctive name, so far as known, has become identified with any of the three, though they are variously spoken of as "Conrad's indexes" and the "*Jahrbücher indexes*," and are now and then referred to as the "*Hamburg indexes*."

These index numbers appear about two years late, and with some irregularity. Thus the figures for 1911 appeared in the August, 1913, issue and those for 1910 in the issue of July, 1912. Since 1887, however, presentation of the figures at some time during the year has been made. Each issue of the *Jahrbücher* reproduces the figures from the beginning, though those for the earlier years are grouped by periods in the later issues.

## HISTORY.

The following is a translation of the history of these price studies as given by Dr. Conrad in volume 17 of the *Jahrbücher*, third series, 1899, page 642:

In these *Jahrbücher*, in volume 3, 1864, appeared for the first time the results of an investigation into the course of prices, based upon the Hamburg quotations on imported goods subject to taxation. Prof. Laspeyres was the author. This study was based upon the one already made by Soetbeer which brought the data up to 1856, Laspeyres carrying the figures to 1862 for 48 articles. He compared the years 1851-1862 with both of the two preceding decades, taking the arithmetical mean of the prices, in order to demonstrate the alteration of prices in consequence of the gold importation resulting from the discovery of gold in California.

In the year 1874, in volume 23, Prof. H. Paasche, then a student, at my suggestion carried the investigation further upon the basis of the same materials but by a different method. Instead of computing the arithmetical mean he reckoned the quantities of 22 articles consumed by the population in the current year and multiplied the quantity of each article by the average price for the basic period (1847-1867) and by that for the current year, in order to get a more accurate relative.

Again in the year 1882 Richard van der Borght, now Prof. van der Borght, took up this computation according to the same principles and for the same articles and printed the results of his investigations in volume 5 (new series), 1882. However, he used other figures for the

consumption quantities, since statistics on this subject in the meantime had improved.

In the year 1887 we ourselves in volume 15 (new series) utilized the Hamburg quotations for an investigation of the price reduction in the eighties, and carried the data forward in the same manner. Since then we have annually compared the prices of the current year with those for preceding years, in order to determine how the movement of prices has further developed.

#### SOURCE OF QUOTATIONS.

Two of Dr. Conrad's indexes and one table of 47 articles for which a general index is not printed are based on the actual yearly average prices appearing in the publication entitled "Hamburg's commerce and shipping" (*Hamburgs Handel und Schiffahrt*), issued by the Hamburg Bureau of Trade Statistics (*Handelsstatistisches Amt*).

This publication contains actual prices, per 100 kilograms, net, stated in marks. The report for the year 1911 contains prices for 174 articles and subdesignations of articles. The price is that of sea-borne commerce declared at entry at the port of Hamburg.

In the first study published in the *Jahrbücher*, that appearing in volume 3, 1864, by Dr. E. Laspeyres, professor in the University of Basel, and entitled "Hamburg prices from 1851 to 1863, and the California and Australian gold discoveries since 1848" (*Hamburger Waarenpreise 1851-1863 und die californisch-australischen Goldentdeckungen seit 1848*), Dr. Laspeyres stated that the prices for the 48 articles used by him in preparing his relative had appeared every Friday since the year 1736 in the official "General price-current" (*Allgemeiner Preis Courant*). However, so far as known, no use of them for purposes of a relative had been made prior to Prof. Soetbeer's compilation beginning with 1831. In volume 23, 1874, Prof. Paasche stated that the current report on Hamburg's commerce and shipping for that year contained prices for more than 300 articles for the years 1847-1872. Prof. Soetbeer, in a study entitled "The movement of prices in the years 1886-1890" (*Das Niveau der Warenpreise in den Jahren 1886-1890*), published in the *Jahrbücher*, volume 58 (3d series, vol. 3), 1892, made the same statement for the years 1886-1888. In other words, no material change had occurred in the method of quoting Hamburg prices from 1847 to 1888.

During all these years Hamburg had been a free port, collecting duties on all goods entering the city, even if they came from other States of Germany, and therefore the prices declared at entry on all goods, whether received into the city by sea or river, by rail or wagon, appeared in the official price statistics. On October 15, 1888, however, Hamburg entered the German customs union (*Zollverein*). The following statement as to the effect of this change on the Hamburg quotations is abstracted from Prof. A. Soetbeer's statement in

the *Jahrbücher für Nationalökonomie und Statistik*, vol. 3, 3d series, 1892, pp. 590, 591:

With the entry of Hamburg into the German customs union the Hamburg trade statistics underwent a fundamental alteration which no longer permitted of a direct comparison with former years. The quotations upon articles of domestic commerce—i. e., articles received from neighboring German States—ceased, and quotations upon imports entering by sea only were available from that date. Therefore, for only those articles which had previously been exclusively or in overwhelming proportion brought in by sea were the figures after 1888 comparable. If the long series of preceding calculations of average yearly prices was not to be finally terminated and an entirely new series started, it would be necessary to make a complete revision and recomputation of the preceding tables and a new computation of average actual prices to include through the entire period from 1847 to 1888 only those articles which had been imported by sea.

The great importance of the Hamburg quotations as a basis for price statistics being generally recognized, and the great desirability of a continuous series from 1847 being evident, the director of the Hamburg bureau of trade statistics decided to make this recomputation. By means of subsidiary material, by use of the price declarations on exports by sea for the period 1847-1888, by the utilization of trustworthy market reports for the period, and in some degree by the use of expert estimates, the average actual prices were brought to the more restricted basis for the entire period.

Prof. Soetbeer concludes his discussion in these words: "These combined means—i. e., of recomputation—have cost much work and time, but one may with all good confidence put trust in them that in spite of all difficulties success has been attained in securing the continuity of this most important work on the movement of prices, which is not only desirable but necessary."

The effect of this change is discussed by Dr. Conrad in the *Jahrbücher* for 1893 (3d series, vol. 6, p. 695):

Unfortunately the first source—i. e., Hamburgs Handel und Schifffahrt—has undergone an alteration which has rendered necessary a reconstruction of the tables based upon it. Up to the year 1888 the prices were reckoned upon the customs declarations of goods entering by all means of transportation. As a result of the entry of Hamburg into the German customs union the customs declarations now embrace only goods imported by sea. As a result of this a comparison with preceding years could not be made with any accuracy. Now, however, the yearly average actual prices for 1847-1888 have been recomputed on the basis of 1888. This has been done by restricting the prices for 1847-1888 to those articles which were imported by sea. This reduced the number of articles upon which quotations were given from 320 to 180.

No changes of importance have taken place since Dr. Conrad's article was written. An average actual quotation is now carried for each of 171 articles and subdesignations of articles.

The fourth series of relative prices published in the *Jahrbücher* and prepared by Dr. Conrad is not based upon the famous Hamburg wholesale price quotations but upon official statistics of the German customs union. The history and source of this series are separately treated on page 232 of the present bulletin.

From this point it will be necessary to consider separately the three series of index numbers based on the Hamburg trade statistics which Dr. Conrad now presents annually in the *Jahrbücher*.

*Index numbers computed from prices of 39 selected articles.*

The first series contains relatives for each of 39 articles from 1871 to date and appears in current issues of the *Jahrbücher*. No general relative is now computed for this group. This is the table used in the Report from the Committee on Finance of the United States Senate, 1893.<sup>1</sup>

BASE PERIOD.

This table appears in the first study of this series, vol. 3 of the *Jahrbücher*, 1864, by Dr. E. Laspeyres in practically its present form. For 42 of the 48 articles then included in it the period 1831-1840 was used as a base. Relatives for 3 articles had 1841-1850 as a base, while for 3 articles 1851-1853 was the base. A general relative, not weighted, was computed with 1831-1840 as the base.

When the study of relative prices was resumed in the *Jahrbücher* by Prof. Paasche, volume 23, 1874, the period 1847-1867 was used as a base and the relative for each of 47 articles was computed, but as at present Prof. Paasche made no general relative for this table.

Of the three articles for which Dr. Laspeyres had been forced to use 1851-1853 as a base, Dr. Paasche dropped two (soda and Java coffee), while rapeseed appeared under a slightly different designation. He makes no comment as to how he adjusted it to the basis of 1847-1867.

Dr. Richard van der Borcht, by whom the work was continued in 1882, did not print this table at all. Its publication was resumed, however, by Dr. Conrad in volume 1, 3d series, of the *Jahrbücher*, 1891, with 1847-1870 as the base. This base has remained unaltered since that date.

PRICES: HOW SHOWN AND COMPUTED.

In the latest available presentation of the table, that published in June, 1914, relatives are shown by articles and decades from 1871 up to and including 1900. Relatives appear for 1901-1905, 1906-1910, and for each of the years separately from 1906 to 1912, inclusive. By the use of the tables in preceding issues, beginning with volume 1, 3d series, 1891, it is possible to get the decennial relative for each article since 1851-1860 and the yearly relative from 1886 to date, on

<sup>1</sup> Report from the Committee on Finance of the United States Senate on Wholesale Prices, Wages, and Transportation. Mar. 3, 1893. 52d Congress, 2d session, Report No. 1394. Pt. 1, pp. 297-301.

the present base. No yearly relatives are printed for the years 1864-1885, inclusive, and the yearly relatives for 1851 to 1863, appearing in the *Jahrbücher* (vol. 3, 1864) are, as already noted, on a different base. Their reduction to the present base has not been made except by decades.

Actual average prices are also shown in the June, 1914, issue of the *Jahrbücher* by zentners (50 kilograms) in marks, for 1847-1870, for the decades 1871-1880, 1881-1890, and 1891-1900, for the five-year periods 1901-1905 and 1906-1910, and by single years from 1906 to 1912. By the use of preceding issues, actual average prices by years are available, beginning with 1886.

A comparison with the official figures shows that from 1891 to date the actual prices of the table under consideration are those of Hamburgs Handel und Schiffahrt as now published in its current issue, reduced from the doppelzentner (100 kilograms) to the zentner (50 kilograms). The data for years prior to 1891, however, are not those shown in the current official publication but those published previous to the complete recomputation of the official figures, which was made after Hamburg entered the German customs union; in other words, Dr. Conrad's table of actual prices for years prior to 1888 has not been readjusted to the basis of 1888, as are the official quotations which are now published for Hamburg.

Two relatives are given for each article for the current year, namely, the per cent which the average price for that year is of the average price for 1847-1850 and for 1871-1880, respectively.

No general relative has ever been printed for this table except as it first appeared in 1864, although the Committee on Finance of the United States Senate in 1893 computed a relative for its own use.<sup>1</sup>

#### NUMBER AND CLASS OF COMMODITIES.

The table shown in the *Jahrbücher* for June, 1914, the latest available, embraces 39 articles. As originally computed by Dr. Laspeyres the table contained 48 articles, but Prof. Paasche in 1874 made a number of changes in his selection and reduced the number to 47. He brought the table from 1847 to 1872 to the basis of his selection, however, and since he computed no general relative, the changes were of no especial significance. As already stated, this table was not printed from 1874 until Dr. Conrad resumed it in 1891. (*Jahrbücher*, 3d series, vol. 1, pp. 916, 917.) In it he used the same 47 articles that Dr. Paasche had used.

In later issues of the *Jahrbücher* actual prices as well as relatives appear for all articles up to the year 1891, inclusive. In 1892, however, neither actual prices nor relatives were shown for raw sugar,

<sup>1</sup> Report from the Committee on Finance of the United States Senate on Wholesale Prices, Wages, and Transportation. Mar. 3, 1893. 52d Congress, 2d session, Report No. 1394. Pt. 1, pp. 297-301.

silk, flax, hops, rapeseed oil, horsehair, or butter, and no prices or relatives have appeared for these articles since that year, although they were not finally eliminated from the table until the issue of the *Jahrbücher* for July, 1911. No explanation of the change is made.

All the articles embraced in this table are either raw materials or semimanufactured materials.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

\* No description of the articles in this table has accompanied it after its first appearance in 1864. At that time Dr. Laspeyres gave a detailed description, but his list of articles is not the same as is used in later tables, and the time that has elapsed since its appearance makes his description of no great present significance. It is therefore not reproduced. It may be found in the *Jahrbücher*, vol. 3, pp. 89-92, inclusive.

As the table now stands, the description of articles is an exact copy of the description found in *Hamburgs Handel und Schifffahrt* with the following exceptions:

*Cotton*.—The table as published in the *Jahrbücher* merely says "cotton" (*Baumwolle*), but in the original table the boxhead reads "Cotton and cotton waste" (*Baumwolle und Baumwoll-abfall*). The actual prices are those of "Commerce and shipping" reduced to a basis of 50 kilograms.

*Coal*.—Dr. Conrad's designation is "Coal and coke" (*Steinkohlen und Koks*), but the official designation is "Coal" (*Steinkohlen*). Dr. Conrad's actual prices are the same as the official figures, reduced to zentners.

*Iron, English bar*.—This designation does not appear at all in the official Hamburg figures. "Bar iron from all sources" (*Stangen-Eisen im Ganzen*) and "English strap iron" (*Stangen-Eisen, englisch*) are quoted. Comparison of the actual prices, as quoted by Dr. Conrad in the *Jahrbücher*, shows that from 1881 to 1890 the quotation appearing under the heading "English bar" is "English strap iron." From 1891 to 1905 it is the quotation of the official figures for "bar iron from all sources." From 1906 to 1910 it is again the quotation for "English strap iron." So far as can be ascertained, no explanation of this irregularity is offered.

No grouping of commodities is made in the table. No general relative has been published since 1864. The relative for 1864 was not weighted.

*Index numbers computed from prices of 19 articles in 6 groups.*

A second table of weighted relatives for six groups containing 19 articles, together with a combined weighted relative for all articles, appears in current issues of the *Jahrbücher*. The weighted relative

for all articles is in each issue compared with a simple relative based on all the articles quoted in the official Hamburg prices for which the continuity of the quotations is such as to make them usable. This latter relative is discussed on pages 228-232 of this bulletin.

#### BASE PERIOD.

The weighted relative as now published is calculated on two bases for purposes of comparison: 1847-1880 and 1871-1880. The table also contains a relative for the years 1871-1880 with the period 1847-1867 as a base.

This table first appeared in Prof. Paasche's study published in vol. 23, 1874. At that time 1847-1867 was used as the base. This same period was used as the base period by Dr. van der Borcht in 1882, but he also made a relative for the years 1876-1880, with 1847-1875 as a base. When Dr. Conrad calculated this table in 1887 he reduced it to its present form.

#### PRICES: HOW SHOWN AND COMPUTED.

As the table is now published relatives are shown for the 10-year periods 1881-1890 and 1891-1900, for the 5-year periods 1901-1905, and 1906-1910, and for each year since 1905. By the use of preceding issues a yearly relative for the present 19 articles is available beginning with 1888 and also a relative by 5-year periods beginning with 1881-1885.

#### NUMBER AND CLASS OF COMMODITIES.

The first issue of the table embraced 22 commodities, all raw materials. As it now appears it contains 19 raw materials. The reduction from 22 to 19 articles really occurred in 1892, since in the table of actual prices from which the relatives were made no quotation has appeared for sugar, silk, or unforged zinc since 1891. The table, however, was preserved in its original form until vol. 31 of the Jahrbücher, 1906 (containing the relative for 1904), when the table was recast to include only the 19 articles now quoted. No explanation of the reason for the omission of the three articles noted above was made, but since they are not now quoted in Hamburgs Handel und Schiffahrt, their omission from the official statistics undoubtedly forced their omission also from Dr. Conrad's weighted relative.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

The articles used by Dr. Conrad are described in his table exactly as they appear in their original source (Hamburgs Handel und Schiffahrt), with four exceptions:

1. *Rice*.—The quotation on rice is that for all rice, without distinction of kind.

2. *Cotton*.—In the Jahrbücher the quotation under the heading "Cotton" (*Baumwolle*) is the price appearing in Hamburgs Handel und Schiffahrt under the heading "Cotton and cotton waste" (*Baumwolle und Baumwoll-abfall*).

3. *Fish oil*.—This article appears in the Hamburg tables merely as "Tran," in the Jahrbücher as "Fischtran."

4. *Coal*.—The quotation in Hamburgs Handel und Schiffahrt is for "coal and coke" (*Steinkohlen und Koks*), while in the Jahrbücher the heading used is merely "Coal" (*Steinkohlen*). The price, however, is that for coal and coke.

Actual average prices are also shown in current issues of the Jahrbücher by zentners (50 kilograms) in marks from 1847 to date.

The grouping of articles is as follows:

- I. Coffee, cocoa, tea, pepper, and rice.
- II. Cotton.
- III. Indigo, saltpeter, fish oil, and palm oil.
- IV. Iron (pig and cast), tin, copper, and lead.
- V. Coal.
- VI. Wheat, rye, barley, and oats.

#### WEIGHTING.

The index number under consideration was first weighted by Prof. Paasche according to consumption in the German Empire in 1874. He states that he determined the consumption quantities which he used by various means. For those articles which were not produced in Germany it was possible to get fairly accurate data from the import and export statistics of the German customs union. The articles which came to Germany exclusively by importation were coffee, cocoa, tea, pepper, rice, cotton, indigo, saltpeter, fish oil, and palm oil. Domestic production of sugar being at that time subject to a tax, it was possible to get accurate statistics of the consumption of sugar from the official imperial statistics (*Reichsstatistik*). The same was true of the mineral products, iron, zinc, tin, copper, lead, and coal. Prof. Paasche stated that the least satisfactory were his statistics for the consumption of grain. He found that it was absolutely impossible to make accurate tables of grain production, and he therefore used the figures of Hausner in his "Comparative European Statistics" (*Vergleichende Statistik Europas*), 1864.

The weighted relative was computed according to the method of Drobisch. To illustrate, the relative for each group for the year 1868 was computed as follows:

German consumption for that year of each article in the group was ascertained as indicated above. It was then multiplied by the average price for the base period, 1847-1867, and by the average price

for 1868. The sum of the products for 1847-1867 was then ascertained and likewise the sum of the products for 1868. The relative for 1868 was the ratio of the sum of the products for 1868 to the sum of the products for 1847-1867.

The relative for the entire table of 22 articles (now 19 articles) in six groups was made in the same way. That is, the sum of all the products for 1847-1867 was found and the sum of the products for 1868 was compared with it to get the general relative. Thus, the textile group consisted of cotton and silk. The average price of cotton for 1847-1867 was 26.83 thalers per zentner; for 1868, 25.92 thalers per zentner. The consumption of cotton in 1868 was 1,509,961 zentners. The average price of silk for 1847-1867 was 616.31 thalers per zentner; for 1868, 858.12 thalers per zentner. The consumption of silk for 1868 was 22,088 zentners. The relative for the group was therefore secured as below:

26.83 × 1,509,961 equals	40,512,254	
616.31 × 22,088 equals	13,613,055	
	<hr/>	
	54,125,309	
	<hr/>	
25.92 × 1,509,961 equals	39,138,189	
858.12 × 22,088 equals	18,954,155	
	<hr/>	
	58,092,344	
	<hr/>	
Relative for 1868 $\frac{1847-1867}{1868}$	5,809,234,400	equals 107
	<hr/>	
	54,125,309	

The sum of the 22 products for 1847-1867 was 954,341,370; for 1868 it was 1,130,430,232. The relative for the 22 articles for 1868 therefore was  $\frac{113,043,023,200}{954,341,370}$  equals 118.5.

The table was reweighted for each year from 1868 to 1872, inclusive, according to the consumption for that year.

When Dr. Richard van der Borcht computed this table in 1882, he followed the same method as Prof. Paasche, weighting anew for each year the figures for the years 1873 to 1880, inclusive. As to the source of his statistics of consumption he states that for grains, instead of using Hausner's results for the years 1873-1877, he substituted the figures of X. von Neumann-Spallart which had appeared in his "Review of International Traffic" in 1878. For the years 1878-1880 he used the imperial statistics of domestic grain production which had become available.

The estimates of consumption of other articles were all based on official imperial statistics (*Reichsstatistik*), including statistics of domestic production, and of export and import.

When Dr. Conrad computed the table for the years 1880 to 1886, inclusive (*Jahrbücher*, vol. 15, pp. 322-331), he used the consumption

statistics of 1880 for the entire table, having abandoned Dr. van der Borcht's method of weighting each year separately. Dr. Conrad has continued to weight this table according to the consumption statistics of 1880 to the present time.

So far as can be ascertained, the general relative for the entire 19 articles was weighted for all years prior to 1906, inclusive, as indicated in the preceding paragraphs. From 1907 to date, however, the general relative has been obtained by computing the simple arithmetical average of the relatives for the six groups.

#### TESTING.

It can not be said that any method of testing was applied to Dr. Conrad's weighted relative prior to 1889. From that year, however, the weighted relative has been compared to the unweighted relative for all articles with continuous quotations included in Hamburgs Handel und Schiffahrt. For 1889 this simple relative embraced 318 articles. It now includes but 157 articles. Dr. Conrad has also included in his periodical price studies since that date a relative based on the official imperial quotations (*Reichsstatistik*), and in addition has reprinted Sauerbeck's index as found in the Journal of the Royal Statistical Society, London. These various relatives he has utilized for comparison with his own work.

*Index numbers computed from prices of 157 articles.*

Beginning with volume 1, 3d series, of the Jahrbücher for 1891, Dr. Conrad's price studies have also included, as stated in the preceding paragraph, a simple relative for all the articles contained in Hamburgs Handel und Schiffahrt for which the quotations have been continuous. The relative is printed in the same table as the weighted relative described above and is used for purpose of comparison with it.

#### BASE PERIOD.

The base periods are the same as for the weighted relative already discussed. A relative for the years from 1871 to 1880, with 1847-1867 as the base, and two relatives for the years from 1881 to date are shown. Of the latter the first has as its base the period 1847-1880, while the second is computed upon 1871-1880 as a base.

#### PRICES: HOW SHOWN AND COMPUTED.

In the latest available issue of the Jahrbücher (June, 1914), relatives are shown for each of the decades 1881-1890 and 1891-1900, for the five-year periods 1901-1905 and 1906-1910, and for the years 1906 to 1912 separately. By the use of preceding issues it is possible to get a yearly relative beginning with 1886 and a relative by five-year periods beginning with 1881-1885.

## NUMBER AND CLASS OF COMMODITIES.

As now printed the index number includes 157 articles, largely raw materials, but including also some manufactured and semimanufactured articles, as varied in character as possible. A yearly relative on the present basis of 157 articles is available only from 1902 to date. This is occasioned by the fact that when the relative was recomputed on its present basis the years prior to 1902 were grouped.

When first computed for 1889 and preceding years 318 articles were included. The relative for 1891 and preceding years, which appeared in volume 5, third series, embraces 320 articles. However, by the time that Dr. Conrad prepared his relative for 1892 the recomputation of the Hamburg prices necessitated by the entry of Hamburg into the German customs union, to which repeated reference has been made, had taken place, and Dr. Conrad found it necessary to recompute his relative on the reduced basis of 163 articles.

Dr. Conrad's statement concerning this is as follows:

It became necessary for us to reduce the number of articles included in our computation of the arithmetical mean from 320 to 163 articles, and on this basis we have available figures from 1847 to date. This fact is bound to have an appreciable effect on our results. The decrease in prices as a result of this in recent times is rendered less important, while the rise in prices in the seventies compared to 1847-1867 becomes greater. Thus with the old list of articles the relative for 1871-1880, with 1847-1867 as a base, is 104. With the restricted list it is 111. With 1847-1880 as a base the average of 320 articles for the decennium 1871-1880 has a relative 79, but the relative for the new list of 163 articles is 95.

The difference is yet greater for the years 1890-91, for which the relative according to the old method on the base 1847-1880 was 74, but is now 95, and on the base 1871-1880 was 72 and is now 85 plus. The year 1392, so far as comparison is possible, with the base 1871-1880 would have shown a decrease of from 70 for 1891 to 68 for 1892. With the present list of articles, however, the relative for 1892 is 82.7 as against 87.4 for 1891.

This is a difference of about 15 per cent, arising from the fact that the prices of domestic products had decreased much more than the prices of those imported by sea. This difference will serve to warn against the putting of too great faith in these tables, for they show how results differ according to the number of articles considered and show how necessary it is to use as large a number of articles as possible.

With the publication of the relative for 1906 and preceding years in volume 34, third series, of the *Jahrbücher*, 1907, the number of articles was further reduced to 158 and the relative was recomputed from the beginning on the new basis. Dr. Conrad does not state what articles were dropped. When the index for 1907 was printed the number was still further reduced to 157, without recomputation, where it now stands.

## DESCRIPTION AND GROUPING OF COMMODITIES.

No list of included articles is printed in the Jahrbücher. The 157 articles, however, are from the following list of 174 articles for which average annual prices from 1850 to date appear in "Hamburgs Handel und Schiffahrt." The quotations for the articles marked with an asterisk (\*) are in some degree imperfect, and it seems safe to conclude that the excluded articles are among those so designated:

- |   |  |
|---|--|
| 1. Alces.   | 43. Woolen and half-woolen yarn.                                   |
| 2. Antimony.  | *44. Casings (i. e., for sausages).                                |
| 3. Oranges.   | 45. Yellow metal and brass.  |
| 4. Arrack.  | 46. Gin.   |
| 5. Asphalt.   | 47. Barley.  |
| 6. Balsam of copaiba.                               | 48. Plate glass.   |
| 7. Peruvian balsam.                                 | 49. Natural guano.   |
| 8. Cotton and cotton waste.                         | 50. Gum arabic.  |
| 9. Bay leaves.                                      | *51. Gum benzoin.  |
| 10. Tin plate.                                      | *52. Dammar.   |
| 11. Sheet iron.                                     | 53. Raw rubber.  |
| 12. Lead.   | 54. Copal.   |
| 13. White lead.                                     | 55. Gutta-percha and chicle.                                       |
| 14. Borax.  | 56. India-rubber shoes.  |
| 15. Bristles.                                       | 57. Dried and salted hides.  |
| 16. Cinchona bark.                                  | 58. Oats.  |
| 17. Cochineal.                                      | 59. Hemp.  |
| 18. Divi-divi.                                      | 60. Resin and galipot.   |
| 19. Iron wire.                                      | 61. Herring.   |
| 20. Pig and cast iron.                              | 62. Logwood.   |
| 21. Bar iron from all sources ( <i>im Ganzen</i> ). | 63. Yellowwood.  |
| 22. Strap iron, English.                            | 64. Redwood.   |
| 23. Sheet billets, Swedish.                         | 65. Ebony wood.  |
| 24. Iron rails and fishplates.                      | 66. Rosewood ( <i>Jacaranda</i> ).                                 |
| *25. Elephant's tusks and ivory.                    | 67. Corkwood.  |
| 26. Peas.   | 68. Mahogany.  |
| 27. Extract of logwood.                             | *69. Walnut wood.  |
| *28. Extract of redwood.                            | 70. Cedar wood.  |

 170. Wheat.  
 \*171. Woolen waste and shoddy.  
 172. Sheep's wool.  
 173. Tin.  
 174. Lemons.

<sup>1</sup> This term is not further defined in current issues. The word "Lichte," which in technical usage is equivalent to "Kerzen," appears without qualification. In the issue for 1889 it was defined as "Steirin-Lichte," i. e., composite candles; but it can not be safely inferred that at present composite candles only are included, since the technical term "Lichte" covers all sorts of candles, as tallow, paraffin, wax, etc.

## TESTING.

The only test of this relative so far as is shown in the Jahrbücher is its comparison with Dr. Conrad's weighted index, with Sauerbeck's index for England, and with that which Dr. Conrad bases on the German imperial statistics (*Reichsstatistik*).

*Index numbers based on prices of the German customs union.*

In addition to the three series of index numbers described in the foregoing paragraphs Dr. Conrad regularly includes in his annual study of prices a table of actual and relative prices derived from official quotations of the German customs union. This table first appeared in the Jahrbücher when Dr. Conrad took up the work of studying German prices, as published in the fifteenth volume of the new series, 1887 (forty-ninth volume of entire series). This index has usually appeared with those based on Hamburg prices, but in a few cases has been issued separately. In general it has appeared more regularly than the Hamburg index.

## SOURCE OF QUOTATIONS.

In the volume of the Jahrbücher in which this table first appeared Dr. Conrad merely states that "Table III, which follows, presents the movement of prices from 1871 to 1886, as they are so satisfactorily published in the official imperial statistics, and we compare the periods 1879-1882 and 1883-1886."

In the next issue, however, the table is credited to the "Monthly Statistical Journal of the German Empire" (*Monatshefte der Statistik des Deutschen Reichs*), and it continued to be so credited until the publication of the table for the year 1892 (Jahrbücher, 3d series, vol. 61, entire series, 1893). From that date to the present it has been from the "Monthly Statistical News of Foreign Commerce in the German Customs Union" (*Statistische Nachweise über den auswärtigen Handel des deutschen Zollgebiets*).

## BASE PERIOD.

As at present issued the index is computed upon two bases—1879-1883 and 1879-1889. The period 1879-1882 was the base as the table was originally printed. It was changed to 1879-1883 with the presentation of the table for the year 1888 (Jahrbücher, vol. 18, whole series vol. 52, 1889). The second index, with the base 1879-1889, was added when the table was printed for 1890 (Jahrbücher, 3d series, vol. 1, whole series vol. 56, 1891).

## PRICES: HOW SHOWN AND COMPUTED.

On the base 1879-1883 the table as now published<sup>1</sup> shows relatives by five-year periods from 1884 to 1913, inclusive, and annual relatives for years since 1908. By the use of preceding issues of the *Jahrbücher* an annual relative is available from 1888 to date, excepting for 1889 and 1902. For these years relatives were not computed, although the actual prices were available.

On the base 1879-1889 the table shows relatives by five-year periods from 1889 to 1913 and annual relatives from 1908 to date. By the use of preceding issues an annual relative is available from 1890 to date, except for 1889 and 1902, as noted above.

Actual prices are presented in the same way, and are available for every year of the period covered.

## NUMBER AND CLASS OF COMMODITIES.

The table as constructed embraces quotations on 33 articles. In this number are included two designations each for sugar, coffee, tobacco, and cotton yarn. However, for the years since 1909 the quotation on herring is lacking, while from 1907 to date no quotation on copper is shown. Therefore the relative as now printed is actually based on 33 articles from 1884 to 1906, 32 articles from 1907 to 1909, and 31 articles for years since 1909.

The relative, however, is not computed on 31 quotations but on 103, as for many articles several quotations are utilized in making up the average annual price on which the relative is based. There has been a slight variation in the number of quotations from time to time, but no change of any significance. As first issued the relative was based upon 96 quotations.

Of the 33 articles in the list some are raw materials, others are finished manufactures, while a few are semimanufactured products.

## DESCRIPTION AND GROUPING OF COMMODITIES.

The articles are not divided into groups. They are described as follows in the current issue of the *Jahrbücher*:<sup>2</sup>

1. Wheat, 14 quotations (1892 to date).
2. Rye, 14 quotations (1892 to date).
3. Barley, 15 quotations (1892 to date).
4. Maize, 5 quotations (1892 to date).

<sup>1</sup> *Jahrbücher für Nationalökonomie und Statistik*, 102. Band (III. Folge, 47. Band), Heft 6. Juni, 1914, p. 800.  
 Idem, pp. 799-801.

5. Oats, 14 quotations (1892 to date).
6. Wheat flour, 6 quotations (1892 to date).
7. Rye flour, Berlin.
8. Rapeseed oil, Berlin.
9. Potato alcohol, Berlin (1892-1903), Hamburg (1904 to date).
10. Raw sugar, Magdeburg.
11. Refined sugar, Magdeburg.
12. Coffee, Rio, good ordinary, Bremen (Sabanilla, 1896 to date).
13. Coffee, plantation, Ceylon, medium, Frankfort on the Main.
14. Rice, Rangoon table, Bremen.
15. Pepper, Bremen.
16. Herring, Norwegian, Hamburg (Scotch, 1904 to date).
17. Leaf tobacco, ordinary Kentucky, Bremen.
18. Leaf tobacco, second-grade Brazil, Bremen.
19. Cotton, middling upland, Bremen.
20. Wool, Berlin.
21. Hemp, Lübeck.
22. Raw silk, Milan organzine, Krefeld.
23. Cotton yarn, Nos. 40-120, Krefeld.
24. Cotton yarn, warp 16, Mühlhausen, in Alsace.
25. Cotton cloth, Mühlhausen, in Alsace.
26. Linen yarn, No. 30, flax yarn, Bielefeld.
27. Lead, 6 quotations.
28. Copper, Mansfeld, Berlin.
29. Zinc, 5 quotations.
30. Tin, 3 quotations.
31. Pig iron, Scotch No. 1, Hamburg (up to 1900, inclusive, Berlin).
32. Petroleum, Hamburg (up to 1900, Bremen), in bond.
33. Coal, Westphalian, Berlin.

#### SUBSTITUTIONS AND ADDITIONS.

Such substitutions as have been made are with respect to grade or place of quotation and are indicated in the description above. No additions to the list of articles have been made.

#### TESTING.

This relative is presented for purposes of comparison with the two other general relatives published currently in the *Jahrbücher*, namely: The weighted relative of 19 articles (based on Hamburg quotations) and the simple relative of 157 articles (also based on Hamburg quotations)\*.

Dr. Conrad also reprints Sauerbeck's index for comparison with his own, and in addition compares them with other studies which appear from time to time.

TABLES OF RESULTS.

The following tables, compiled mainly from the issue of the Jahrbücher for June, 1914, show the principal index numbers computed by Dr. Conrad:

RELATIVE PRICES OF 39 SELECTED ARTICLES (BASED ON HAMBURG TRADE STATISTICS), BY SPECIFIED PERIODS, 1871 TO 1910, AND BY YEARS, 1906 TO 1912<sup>1</sup>

(Base period, 1847-1870=100.)

Article.	1871-1880	1881-1890	1891-1900	1901-1905	1906-1910	1906	1907	1908	1909	1910	1911	1912

## INDEX NUMBERS OF OTTO SCHMITZ.

## PUBLICATION.

The data embodying the results of Mr. Schmitz's original study of the course of wholesale prices were published in book form in Berlin in 1903.<sup>1</sup> "Those from 1903 to 1906 are extracted from manuscript figures supplied by the author himself and in the possession of the Royal Statistical Society. As regards later years the index numbers have been taken from the supplement to the *Zeitschrift für Sozialwissenschaft* (Monatliche Übersichten über die allgemeine Wirtschaftslage); only the general index numbers for all articles and for one group (the metal group) are there given, however." (Great Britain. Report of an Enquiry by the Board of Trade into Working-class Rents and Retail Prices, 1912. p. 354.)

## HISTORY.

This study was undertaken in order to furnish a convenient means of measuring the fluctuations in German prices. It was considered highly desirable to construct an index covering a long period of years and reliable data from a single source were not available. By using two sources the author was able to cover the second half of the nineteenth century and to include six price waves, whose duration he fixes as follows:

- From 1849 to 1858.
- From 1858 to 1870.
- From 1870 to 1879.
- From 1879 to 1886.
- From 1886 to 1895.
- From 1895 to 1912.

## SOURCE OF QUOTATIONS.

The earlier series of index numbers (1851-1885) is based on quotations of the bureau of trade statistics at Hamburg.<sup>2</sup> Mr. Soetbeer, who used figures from the same source, says in regard to the way in which the quotations were obtained:

"Throughout this period (1847-1885) Hamburg was an important market for almost all raw materials. Moreover, it has been a free port, without duties or differential taxes. Commodities imported are declared in writing, with a statement of their weight and of their ordinary trade designations. Their value is stated separately for each commodity, either according to its price on 'Change that day, or if there were no quotations, according to the probable price plus the cost of importation. For consigned goods a careful estimate of

<sup>1</sup> Die Bewegung der Warenpreise in Deutschland von 1851 bis 1902; nebst zwei Ergänzungen: Bankdiskont, Goldproduktion und Warenpreisstand, der Weizenpreis, von 400 v. Chr. bis 1900. Von Otto Schmitz. Berlin, 1903. 443 pp.

<sup>2</sup> In regard to Hamburg Bureau of Trade Statistics see also pp. 220 and 221.

the prices sufficed, sometimes supplemented with a statement of their insured value. These declarations, which were carefully supervised, were then collected by the bureau of trade statistics, and tables were made out of the quantity and value of goods exported and imported."<sup>1</sup>

The later index number (1879-1902) is based on data of the Imperial Statistical Office, which publishes for each of the more important commodities several series of quotations representing a number of important markets and varieties. From these the author has selected as a basis for his index number a single series from a representative market, and in connection with the detailed description of the article has stated the manner in which prices are obtained for the Imperial Statistical Office at that market. These statements are retained with the descriptions as given herewith. Eleven markets are represented: Berlin and Bremen by 8 commodities each; Breslau and Hamburg by 3 each; and Danzig, Magdeburg, Krefeld, Bielefeld, Dortmund, Cologne, and Essen by 1 each.

In the few cases in which a hiatus occurs in the official series the source of the substituted data is stated in connection with the description of the commodity.

#### BASE PERIOD.

The average of the 10 annual prices as given by the Imperial Statistical Office for the first 10 years covered by its reports (1879-1888) was taken as the base for both series of index numbers. On the ground that the period was a time of quiet and normal business development and contained a period of falling prices, beginning in 1880, and a period of rising prices, beginning in 1885, the average price was considered comparatively normal and reasonably satisfactory as a basis.

The base period for lard is evidently the 9-year period, 1880 to 1888. The Imperial Statistical Office did not publish quotations on lard for 1879 and no other quotations were substituted.

#### PRICES: HOW SHOWN AND COMPUTED.

The various methods of determining monthly averages are given in the section on description and grouping of commodities. The simple average method is used in computing the various averages for the tables. All index numbers are printed with two decimals.

Data of the Imperial Statistical Office are in almost all cases shown separately from Hamburg data and in much greater detail. The principal table of the study shows for each article and group of articles the index numbers for each month, quarter, half year, and year from 1879 to 1900, while the corresponding table for Hamburg gives the index number for articles and groups by years only. Actual prices of the later series are shown by months and of the earlier by years.

<sup>1</sup> Bimetallism in Europe, by Edward Atkinson, p. 226.

## NUMBER AND CLASS OF COMMODITIES.

The index number based on the Imperial Statistical Office prices (1879-1902) represents 29 commodities, while the earlier number based on Hamburg prices (1851-1885) includes only 24 commodities—corn, linen yarn, petroleum, and one quotation each for iron and coal being lacking. The list of 29 commodities is the original list of the Imperial Statistical Office, with the following modifications: (1) Wheat flour, rye flour, refined sugar, cotton yarn, and cotton cloth are omitted as not being strictly raw materials. Linen yarn, however, is not omitted because the list does not include flax. (2) Two kinds of iron and two of coal are carried as separate commodities instead of one description for each group. (3) Lard and butcher's meat are added as being important commodities introduced early in the period covered by the figures of the statistical office.

For the years 1909 to 1912, inclusive, however, copper and one description of pig iron are excluded.

## DESCRIPTION AND GROUPING OF COMMODITIES.

The descriptions of commodities are based on the descriptions of the selected varieties as given by the Imperial Statistical Office and cover the years 1879-1902.<sup>1</sup> Concerning the descriptions for the period 1851-1885 the general statement is made that Hamburg quotations are for standards of quality similar to those of the Imperial Statistical Office.

The grouping of commodities appears in the list which follows. The description of the first commodity is given in full, but the descriptions of the others are somewhat abbreviated.

## Group I.—Grains.

1. *Wheat.*

Official Berlin quotations. The average monthly price is ascertained by the committee of senior merchants of Berlin on the basis of daily quotations based on hearings of the brokers. The early quotations are for 1,000 kilograms good, sound, yellow wheat of all origins, 71.3 kilograms per hectoliter. On October 1, 1887, the standard was fixed at a minimum of 71.5 kilograms per hectoliter, and since January 1, 1893, the quotation is for good, sound, dry wheat, free from musty odor (hard wheat excluded), of all origins, minimum 72.5 kilograms per hectoliter. In the author's judgment this repeated raising of the standard has exercised no demonstrable influence on prices.

A further rise in the standard grading weight to 75.5 kilograms per hectoliter on January 1, 1893, was caused by the introduction of the new grain tester and was of merely formal nature.

On account of the closing of the Berlin grain exchange there are no official quotations for wheat, rye, and oats from January 1, 1897, to April 1, 1899. Therefore the official Breslau quotations, suitably adjusted (*unter entsprechender Anpassung*), are used. For January, February, and March, 1899, information founded upon the daily publi-

<sup>1</sup> No detailed description is available after 1902.

cations of the central quotation office of the Prussian agricultural chambers was used since the standard of quality was the same. From April, 1899, the official Berlin quotations are again given. The index numbers calculated on the Breslau figures are printed in italics.

1879, duty free.

1880-1885, duty per 1,000 kilograms gross, 10 marks.

1885-1887, duty per 1,000 kilograms gross, 30 marks.

1887-1891, duty per 1,000 kilograms gross, 50 marks.

1891 and following, duty per 1,000 kilograms gross, 35 marks.

#### 2. Rye.

Official Berlin quotations. The monthly average price is ascertained as in the case of wheat up to October, 1887. The quotations are for 1,000 kilograms good, sound rye of all origins. The standard grading weight rose during the period from 65.9 to 67.8 kilograms per hectoliter without demonstrable influence on the price. In the absence of Berlin quotations for the period January, 1897, to April, 1899, the procedure was the same as in the case of wheat.

1879, duty free.

1880-1885, duty per 1,000 kilograms gross, 10 marks.

1885-1887, duty per 1,000 kilograms gross, 30 marks.

1887-1891, duty per 1,000 kilograms gross, 50 marks.

1891 and following, duty per 1,000 kilograms gross, 35 marks.

#### 3. Barley.

Breslau quotations. The price is ascertained every week day by the municipal market commissioner. The monthly average price is derived from the Breslau chamber of commerce. The quotation is for 1,000 kilograms medium heavy barley.

1879, duty free.

1880-1885, duty per 1,000 kilograms gross, 15 marks.

1885-1887, duty per 1,000 kilograms gross, 23 marks.

1887-1891, duty per 1,000 kilograms gross, 23 marks.

1891 and following, duty per 1,000 kilograms gross, 22.50 marks.

#### 4. Oats.

Official Berlin quotations. The monthly average price is ascertained as in the case of wheat. The quotation is for 1,000 kilograms good, sound oats of all origins. The standard grading weight has increased from 38.6 to 41.5 kilograms per hectoliter without demonstrable influence on the price. In the absence of Berlin quotations from January, 1897, to April, 1899, the procedure was the same as in the case of wheat.

1879, duty free.

1880-1885, duty per 1,000 kilograms gross, 10 marks.

1885-1887, duty per 1,000 kilograms gross, 15 marks.

1887-1891, duty per 1,000 kilograms gross, 40 marks.

1891 and following, duty per 1,000 kilograms gross, 28 marks.

#### 5. Corn (maize).

Bremen quotations. The price is determined every Saturday by the chamber of commerce through licensed brokers, and the monthly average price is derived from the medium prices actually paid. The quotations are for 1,000 kilograms mixed American corn of prime quality, in bond. On account of a shortage in corn, occasioned by poor crops in America, there are no quotations from April, 1882, to March, 1883. There are likewise no quotations from September to December, 1884, because

only La Plata and Danube varieties were in the market. Although corn is quoted in bond, duty rates are given for the sake of completeness.

1879, duty free.

1880-1885, duty per 1,000 kilograms gross, 5 marks.

1885-1887, duty per 1,000 kilograms gross, 10 marks.

1887-1891, duty per 1,000 kilograms gross, 20 marks.

1891 and following, duty per 1,000 kilograms gross, 16 marks.

**Group II.—Other products of agriculture and products of fishing.**

**6. Herrings.**

Danzig quotations. The monthly average price is ascertained on the basis of the prices actually paid every Saturday or on the last exchange day of every week as determined by the bourse commission. The quotations are for 1 cask of 150 kilograms gross, "Crown and full," in bond. The custom rate, which is given although the article is quoted in bond, is 3 marks per cask.

**7. Rapeseed oil.**

Berlin quotations. The monthly average price is ascertained as in the case of wheat. The quotations are for 100 kilograms good, raw rapeseed oil. Owing to the closing of the Berlin produce exchange, January, 1897, to December, 1898, Königsberg quotations were used for these two years and continued through 1899 and 1900. Since 1901 Berlin quotations have been used again. The relatives for 1897 and 1898 are printed in italics.

1879, duty per 100 kilograms gross, including container, 3 marks.

1880-1885, duty per 100 kilograms gross, including container, 4 marks.

1885 and following, duty per 100 kilograms gross, including container, 9 marks.

**8. Alcohol.**

Hamburg quotations. The average price is ascertained through the brokers by the chamber of commerce on the basis of prices actually paid and the average of the medium prices of every month. The quotation is for raw potato alcohol (per 100 liters pure alcohol) in bond. For the sake of completeness the customs rates so far as could be ascertained are appended.

January, 1879, to July, 1879, duty per 100 kilograms net, 36 marks.

July 5, 1879 to 1885, duty per 100 kilograms net, 48 marks.

1885-1891, duty per 100 kilograms net, 80 marks.

July 1, 1891, to July 14, 1900, duty per 100 kilograms net, 125 marks.

July 14, 1900, and following, duty per 100 kilograms net, 160 marks.

**9. Raw sugar.**

Magdeburg quotations. The average price is determined on the basis of the highest and lowest prices fixed on Friday of each week by commissions and commissioners of senior merchants. The quotations are for 100 kilograms first quality. The description was 96 per cent polarization until October, 1887, 92 per cent yield until February, 1897, and 88 per cent yield since that date. The first two descriptions are considered as corresponding fairly well. The difference in value between 92 per cent yield and 88 per cent yield is estimated at  $\frac{1}{2}$  mark, but this difference is not taken into account in calculating the index number. From September, 1888, the quotation includes customs duty and excludes excise tax, and the index number has been revised accordingly.

**10. Butcher's meat.**

Berlin quotations. Prices have been quoted regularly by the month since May, 1887. For the years 1881 to 1886 the yearly average prices were subsequently ascer-

tained and communicated by the Imperial Statistical Office in December, 1889. The price for 1881 is the average price for the months March to December. For 1879 and 1880 Hamburg prices form the basis of the index numbers.

The index number is based on the average of the quotations for beef, veal, pork, and mutton. The earlier quotations were for 100 kilograms.

Beef, dressed weight, average of the prices for second grade.

Pork, live weight, with 20 per cent tare, highest quotation for second grade.

Veal, dressed weight, lowest quotation for first grade.

Mutton, dressed weight, medium of the prices for first grade.

Since July, 1897, the prices for beef, veal, and mutton are for 100 kilograms, slaughter weight. Both dressed weight and slaughter weight are estimated on the presumptive weight of the four quarters on which the price of the animal has been apportioned, dressed weight with and slaughter weight without the deduction of the value of the hide, head, feet, entrails, etc. The price based on slaughter weight, according to information obtained by the Imperial Statistical Office from authoritative sources, is about 8½ per cent higher than the price based on dressed weight. In computing the index number, allowance has been made for this change in the manner of quoting.

#### 11. Lard.

Bremen quotations. The monthly average price is ascertained as in the case of corn. The quotations are for 100 kilograms refined American lard, Wilcox brand, in bond. The Imperial Statistical Office did not publish lard quotations until 1880. The prices for September, October, and November, 1888, and for January, 1892, were merely nominal, owing to lack of the commodity, but were included in the yearly average. Although lard is quoted in bond, the rate of duty, 10 marks throughout the period, is given.

#### Group III.—Colonial goods, etc.

#### 12. Leaf tobacco.

Bremen quotations. The monthly average price is ascertained as in the case of corn. The quotations are for 100 kilograms Kentucky ordinary, container included, in bond. Although the article is quoted in bond, the rates of duty are given.

In 1879 the duty on 100 kilograms net was 24 marks.

At present the duty on tobacco leaves, stems, and ribs, as well as tobacco sauce, is 85 marks.

At present the duty on stripped leaves and smoking tobacco is 180 marks.

#### 13. Coffee.

Bremen quotations. The monthly average price is ascertained as in the case of corn. The quotations are for 100 kilograms net, including sack, in bond. Prior to 1896 the quotations were for "Rio, good ordinary," and since January, 1896, for "Sabanilla, fair ordinary." The change was made because Rio, good ordinary, had become relatively of small importance in the Bremen market. Although quoted in bond, the duty rates are given.

Prior to July, 1879, duty per 100 kilograms net, 35 marks.

Since July, 1879, duty per 100 kilograms net, 40 marks.

#### 14. Rice.

Bremen quotations. The monthly average price is ascertained as in the case of corn. The quotations are for 100 kilograms Rangoon table rice, shelled, in bond. Although quoted in bond, duty rates are given.

Prior to July, 1879, the duty per 100 kilograms gross, 3 marks.

Since July, 1879, the duty per 100 kilograms gross, 4 marks.

*15. Pepper.*

Bremen quotations. The monthly average price is ascertained as in the case of corn. The quotations are for 100 kilograms, black Singapore pepper, in bond. Although quoted in bond, duty rates are given.

Prior to July, 1879, duty per 100 kilograms net, 39 marks.

Since July, 1879, duty per 100 kilograms net, 50 marks.

**Group IV.—Raw materials of the textile industry.***16. Cotton.*

Bremen quotations. The monthly average price is ascertained as in the case of corn. The quotations are for 100 kilograms middling upland, in bond, duty free.

*17. Wool.*

Berlin quotations. The monthly average price is ascertained on the basis of weekly quotations by the committee of senior merchants of Berlin after having heard the brokers. The quotations are for 100 kilograms North German sheep wool, medium grade, duty free.

*18. Hemp.*

Hamburg quotations. Quotations every Friday. The monthly average price is ascertained as in the case of alcohol. The quotations are for 100 kilograms Mexican, net, in bales of about 350 pounds, 7 pounds tare, in bond, duty free.

*19. Raw silk.*

Krefeld quotations. Quotations are ascertained on the second Monday of every subsequent month by a committee of merchants and manufacturers on the basis of local transactions and of the medium price. The quotations are for 1 kilogram Milanese organzine, classique, 18-20, duty free.

*20. Linen yarn.*

Bielefeld quotations. Quotations represent prices determined on the first and middle of every month by the secretary of the chamber of commerce on the basis of the prices obtained at the sales occurring at the spinning mills. The quotations are for 1 kilogram linen yarn, No. 30 (English number), medium price, between grades Ia and IIa, but for the sake of accuracy the author has given the yearly average price per 100 kilograms.

1879, duty per 100 kilograms gross, 3 marks.

**Group V.—Metals.***21. Foundry pig iron.*

Breslau quotations. Prices are obtained through private persons at the end of the month from the average of all the quotations for delivery on the last day of the month. The quotations are for 1,000 kilograms Silesian foundry pig iron at the foundry. The grade of Silesian foundry pig iron quoted at Breslau is lower than that quoted at Düsseldorf. Since 1897 other lower prices have been quoted for pig iron sold to points in Lower Silesia, but these have not been included in the index number.

Until June, 1879, duty free.

Since June, 1879, duty per 1,000 kilograms gross, 10 marks.

*22. Bessemer pig iron (from the Ruhr districts, Rhenish Westphalia).*

Dortmund quotations. Prices are determined at the end of every month by a committee of the chamber of commerce or the secretary of the chamber of commerce on the basis of schedules filled out by producers, consumers, and dealers and on the basis of the lowest and highest prices. The quotations are for 1,000 kilograms Bessemer pig iron from the districts of the Ruhr at the foundry.

Until June, 1879, duty free.

Since June, 1879, duty per 1,000 kilograms gross, 10 marks.

*23. Lead.*

Berlin quotations. The monthly average price is ascertained as in the case of wool. The quotations until May, 1899, are for 100 kilograms Tarnowitz lead, Saxonia brand, and since May, 1899, are for 100 kilograms Tarnowitz and Harz lead. For November and December, 1887, on account of the great fluctuation in prices, averages could not be given. Duty free.

*24. Copper.*

Berlin quotations. The monthly average price is ascertained as in the case of wool. The quotations are for 100 kilograms Mansfeld copper. For the year 1887 the Imperial Statistical Office, owing to the great fluctuation in prices, gives a nominal average covering only the months January to May. The author, convinced that this nominal figure was too low, computed an average for the greater part of the second half of the year on the basis of information which he himself obtained. Taking the average of the Imperial Statistical Office for the first five months and his own average as representing the last seven months, he obtained the average which he has used for the year. He states that this is the only case in which he has deemed it expedient to depart from the official figures, and in this case the low nominal figure of the statistical office would have affected the average for the base period sufficiently to have raised the total index number for the period 1889-1900 about 10 points (i. e., one-tenth of a unit. Index numbers are printed with two decimals). In March, 1899, when prices fluctuated greatly the monthly average price given in the tables is merely approximately correct. Duty free.

*25. Zinc.*

Cologne quotations. Quotations are obtained every Wednesday by Cologne wholesale establishments or the chamber of commerce. The information is based on the booking of sales and represents the prices paid by buyers—for the indicated grade of the commodity—settling their accounts regularly. The quotations are for 100 kilograms Rhenish crude zinc, brand "W H und S S." The price for March, 1889, is nominal, since there were no sales. Duty free.

*26. Tin.*

Hamburg quotations. Quotations are obtained every Friday. The average price is ascertained as in the case of alcohol. The quotations are for 100 kilograms Banca tin in blocks. Duty free.

**Group VI.—Coal and petroleum.***27. Ruhr anthracite coal.*

Essen quotations. Quotations are obtained once a month at the industrial exchange in Essen by an exchange committee of the chamber of commerce on the basis of the sales at all the mines in the district and on the basis of the highest and lowest prices. The quotations are for 1,000 kilograms anthracite coal at the mine. From May to August, 1889, there are no quotations on account of the strike. Duty free.

28. *Upper Silesia gas lump coal (Gas-Stückkohle).*

Breslau quotations. The price is obtained through private persons at the close of the month from the average of all quotations for delivery on the last day of the month. The quotations are for 1,000 kilograms. Upper Silesian lump coal for gas, f. o. b. mine. Duty free.

29. *Petroleum.*

Bremen quotations. The monthly average price is ascertained as in the case of corn. The quotations are for 100 kilograms American white refined, including container, in bond. From January 1, 1892, to July 1, 1893, hoghead duty amounting to about 0.95 marks per 100 kilograms net was charged. After the lifting of the hoghead duty, July 1, 1893, the quotation was again for the commodity in bond. Although quoted in bond, the duty rates are given.

From January, 1879, duty free.

From 1891, duty, 6 marks.

## SUBSTITUTIONS AND ADDITIONS.

The report includes parallel data from Hamburg and from the Imperial Statistical Office for the 7-year period 1879 to 1885. Hamburg index numbers were obtained by finding the average actual Hamburg price for the 7-year period and the average relative Imperial Statistical Office price for the same period. It was then calculated what Hamburg price corresponded to the index number 100 and on the basis of the resulting figure index numbers for the Hamburg quotations from 1851 to 1885 were computed.

In the case of a few commodities, breaks occur in the series of quotations. In the absence of Berlin prices Breslau prices have been substituted from January, 1897, to April, 1899, in the series for wheat, rye, and oats. These are said to have been "suitably adjusted" (*unter entsprechender Anpassung*) but the process is not described. Neither is the method of changing from Hamburg to statistical office prices of butcher's meat at the end of 1880 described. No actual prices are given for lard for the year 1879, and the index numbers for all months of that year are given as 100. This procedure is equivalent to the substitution of the average of the actual prices from 1880 to 1888 as the actual price for 1879. The base period for this commodity is therefore the 9-year period 1880 to 1888.

## WEIGHTING.

The total index is the simple arithmetic mean of the index numbers of the 29 articles. No system of weighting is used. The author holds that the simple average of wholesale prices of important raw materials roughly indicates the course of prices and that this is its only purpose. He does not think that manipulation on the basis of estimated consumption makes it a satisfactory index of the standard of life or increases its value as an index of price movements. He may be considered, however, to have weighted his own index, in a loose sense, for two of the 29 commodities are different varieties of coal and two others are separate varieties of iron.

## TESTING.

No test of the index number is made. A comparison is shown, however, with an index number derived from Soetbeer's figures for the total of the 24 articles in question, as follows:

Period.	Soetbeer.	Schmits.
1851-1855.....	117.18	117.32
1856-1860.....	123.35	122.06
1861-1865.....	121.46	120.68
1866-1870.....	120.98	119.62
1871-1875.....	135.66	130.75

## TABLES OF RESULTS.

The following table shows the index numbers for the total of all articles. The numbers from 1851 to 1878 represent Hamburg quotations for 24 commodities, while the numbers from 1879 to 1902 represent Imperial Statistical Office quotations for 5 additional commodities, or 29 in all. The statement is made that the addition of the 5 articles affects the index number only slightly.

## INDEX NUMBERS OF WHOLESALE PRICES IN GERMANY, 1851 TO 1912, ACCORDING TO OTTO SCHMITZ.

Year.	Total index number: 1879-1888 equals 100.	Year.	Total index number: 1879-1888 equals 100.	Year.	Total index number: 1879-1888 equals 100.	Year.	Total index number: 1879-1888 equals 100.	Year.	Total index number: 1879-1888 equals 100.	Year.	Total index number: 1879-1888 equals 100.
1851	100.60	1860	118.72	1869	120.14	1878	110.62	1887	90.98	1896	83.91
1852	103.33	1861	117.24	1870	117.32	1879	100.87	1888	96.07	1897	85.79
1853	118.91	1862	120.31	1871	123.02	1880	111.71	1889	100.87	1888	90.65
1854	131.79	1863	122.65	1872	136.12	1881	109.26	1890	107.54	1899	96.43
1855	131.96	1864	125.28	1873	141.56	1882	106.52	1891	104.75	1900	106.49
1856	132.59	1865	117.37	1874	130.60	1883	104.06	1892	95.46	1901	100.11
1857	132.78	1866	119.88	1875	122.41	1884	99.62	1893	92.21	1902	99.19
1858	112.08	1867	130.69	1876	119.52	1885	92.88	1894	83.79	1903	100.64
1859	114.10	1868	120.00	1877	119.86	1886	88.00	1895	83.55	1904	100.22

NOTES.—1. Index from 1851 to 1878 inclusive based on actual wholesale prices of the Hamburg Bureau of Trade Statistics; from 1879 to 1912 on actual wholesale prices of the Imperial Statistical Office of Germany.

2. The index numbers for the years 1909, 1910, 1911, and 1912 do not include two articles, copper and pig iron (one kind).

3. Index for 1851 to 1902 inclusive from "Die Bewegung der Warenpreise in Deutschland von 1851 bis 1902"; index for 1903 to 1912 inclusive from the British "Report of an Enquiry by the Board of Trade into Working-class Rents and Retail Prices, 1912."

The two series of index numbers for the 7-year period for which parallel data were available are:

Year.	Hamburg.	Imperial Statistical Office.
1879.....	104.47	100.87
1880.....	109.94	111.71
1881.....	110.19	106.26
1882.....	106.21	106.52
1883.....	104.52	104.06
1884.....	98.31	96.02
1885.....	90.69	92.88

A table of index numbers for each of the 29 articles, and a total index number, has been prepared for a series of 5, 10, and 25 year periods, as well as for the 22-year period 1879 to 1900. These are calculated on the basis of 1879-1888 equals 100. It is obvious that any one of these period indexes could be made the basis (100) of a new series of calculations for the different commodities if so desired.

## INDEX NUMBERS, BY PERIODS.

1851-1855	117.32	1876-1880	112.82	1851-1860	119.69
1856-1860	122.06	1881-1885	102.47	1861-1870	120.10
1861-1865	120.58	1886-1890	96.69	1871-1880	121.63
1866-1870	119.62	1891-1895	91.95	1881-1890	99.58
1871-1875	130.75	1896-1900	93.05	1891-1900	92.50
1851-1875	122.07	1876-1900	99.24	1851-1900	110.70
1879-1900=96.97					

In summary the author shows the price level of the latest decade included in the study, by means of cumulative figures, as follows: The index number for the period 1851 to 1900 is 110.70; for 1879 to 1900, 96.97; for 1891 to 1900, 92.50.

## INDEX NUMBERS OF ADOLF SOETBEER.

## PUBLICATION AND HISTORY.

Dr. Adolf Soetbeer, a German economist, published the results of a study of wholesale prices in Hamburg as early as 1858,<sup>1</sup> but his main contribution to the study of prices and the one that contains the index number which he continued until his death, in 1892, appeared in 1885, under the title "Materials toward the Elucidation of the Economic Conditions affecting the Precious Metals and the Question of Monetary Standards" (*Materialien zur Erläuterung und Beurteilung der wirtschaftlichen Edelmetallverhältnisse und der Währungsfrage. Berlin, 1885; 2. Aufgabe, Berlin 1886*). This publication has been translated into English, in full, by Prof. F. W. Taussig and the translation is included in the United States Senate Document No. 34 (pp. 57-258), 1st session, 50th Congress, 1887. Dr. Soetbeer added the index numbers for 1886 in the Hamburg Börsen-Halle, Nos. 181 and 182 (a translation of which also appears in Senate Document No. 34, pp. 271-276), and published the indexes for succeeding years up to 1890, inclusive, in his article on "The course of prices from 1886 to 1890" (*Das Niveau der Warenpreise in den Jahren 1886-1890*), which appeared in the *Jahrbücher für Nationalökonomie und Statistik*, 1892, 3. Folge, 3, pp. 588-596. The original tables compiled by Soetbeer show average prices and indexes for each individual article,

<sup>1</sup> Beiträge zur Statistik der Preise: I. Ueberblick der Durchschnitts-Preise verschiedener Handelsartikel nach den Angaben im Hamburger Börsen-Preis-Courante in den Jahren 1851-1857 unter Vergleichung mit den Durchschnittspreisen der Jahrzehnte 1831-1840 und 1841-1850; II. Zusammenstellung der jährlichen Durchschnitts-Preise für Weizen in Hamburg, Hannover, Braunschweig, Berlin, Frankreich und England während der Jahre 1851-1857. Hamburg, 1858.

for groups, and for five-year periods from 1851 to 1885. The table for 1886 omits some articles of minor importance but continues the data for the rest and for the groups—with the exception of the group of British exports. The article in the *Jahrbücher* continued the data to include 1890, by groups only, but stated that the figures for the individual articles were in the writer's hands in manuscript but would have to be reserved for future publication on account of lack of room in the *Jahrbücher*. Soetbeer's death in 1892 prevented the realization of his plan. Although his index numbers were not continued beyond 1891, two other important indexes have been based on Hamburg prices, namely, those of Dr. Heinz, published in *Hamburgs Handel und Schiffahrt* by the bureau of trade statistics of Hamburg and those of Prof. Conrad, of Halle, published in the *Jahrbücher für Nationalökonomie und Statistik*.<sup>1</sup>

#### SOURCE OF QUOTATIONS—BASE PERIOD.

Soetbeer used the average wholesale prices published by the bureau of trade statistics of Hamburg. These prices do not go back farther than 1847, since prior to that time no such statistical bureau existed. For that reason Dr. Soetbeer found it necessary to select 1847-1850 for the base period, although he himself states that he would have much preferred to use 1841-1850.

#### PRICES: HOW SHOWN AND COMPUTED.

The annual average prices were computed by a simple arithmetical process from the total quantity and total value of each article imported as recorded by the Hamburg bureau. Since the bureau of trade statistics entered the weight and kind of each article imported into Hamburg, and the price of each on the Hamburg exchange on the day of importation, this was most easy. When the price of an article was not quoted on the exchange, then the invoice value, plus freight, insurance, and other charges, was entered. As long as Hamburg was a free harbor and all goods entering the city in any manner whatever were recorded, these average prices were of the utmost importance. But when, in 1888, Hamburg joined the German customs union, and only articles entering by sea were required to be recorded, the figures for land importations could no longer be obtained with any accuracy, nor could those of articles entering by both land and sea. In consequence the quotations of the bureau of trade statistics, which up to that time had numbered over 300, now dropped to 163. Dr. Heinz, director of the Hamburg Bureau of Trade Statistics, undertook the task of going back over the records of the bureau to separate sea importations from land importations for Soetbeer's list of articles, so as to furnish reliable average prices on them for years up to 1891, inclusive. But after the death of

<sup>1</sup> For a description of these index numbers see pp. 219-222 of the present bulletin.

Soetbeer, in 1892, Dr. Heinz carried on this investigation for a different list of articles, selecting only such as presented data previous to 1888 that could also be quoted subsequent to 1888. This list contains only 70 of Soetbeer's 114 articles, but adds 110 new quotations. The average prices of these 180 commodities were carried back to 1850.

DESCRIPTION AND GROUPING OF COMMODITIES.

The 114 articles on which Soetbeer computed his index numbers were grouped as follows:

*I. Products of agriculture, etc. (20 articles).*

Wheat.	Potatoes.*
Wheat flour.	Hops.
Rye.	Clover seed.
Rye flour.	Rapeseed.
Oats.	Rapeseed oil.
Barley.	Linseed oil.
Malt.	Oil cake.
Buckwheat.	Raw sugar.
Peas.	Refined sugar.
White beans.	Spirits from corn or potatoes.

*II. Animal and fish products (22 articles).*

Beef.*	Leather.
Veal.*	Horsehair.
Mutton.*	Bristles.
Pork.*	Bed feathers.
Milk.*	Bones.
Butter.*	Buffalo horns.
Cheese.	Glue.
Tallow.	Eggs.*
Lard.	Herrings.
Hides.	Dried fish.
Calfskins.	Fish oil.

*III. Southern products (7 articles).*

Raisins.	Olive oil.
Currants.	Wine in casks.
Almonds.	Champagne.
Dried prunes.	

*IV. Colonial products (19 articles).*

Coffee.	Tobacco.
Cocoa.	Indigo.
Tea.	Cochineal.
Pepper.	Logwood.
Allspice.	Redwood.
Cassia bark.	Mahogany.
Rice.	Cane.
Sago.	Palm oil.
Arrack.	Ivory.

V. *Minerals and metals (14 articles).*

Coal.	Copper.
Pig iron.	Quicksilver.
Bar iron.	Sulphur, raw.
Steel.	Saltpeter, raw, Chile.
Lead.	Salt.
Zinc.	Lime.
Tin.	Cement.

VI. *Textile materials (7 articles).*

Cotton.	Silk.
Wool.	Cordage.
Flax.	Rags.
Hemp.	

VII. *Miscellaneous (11 articles).*

Guano.	Potash.
India rubber.	Soda.
Gutta-percha.	Tallow candles.
Rosin.	Tar.
Pearl ash.	Wax.
Pitch.	

VIII. *British articles of export (14 articles).*

Cotton yarn.	Linen, plain.
Piece goods, plain.	Linen sail cloth and sails.
Cotton piece goods, printed.	Woolen and worsted yarn.
Cotton stockings and socks.	Woolen cloths, etc.
Thread for sewing.	Flannels, etc.
Common glass bottles.	Worsteds.
Linen yarn.	Carpets, etc.

NOTE.—The prices of articles marked with an asterisk are the average of the prices paid by Hamburg institutions (hospitals, etc.) for large purchases.

## SUBSTITUTIONS AND ADDITIONS.

Although no substitutions or additions are mentioned specifically as having been made, the procedure of the Hamburg Bureau of Trade Statistics in securing its average annual wholesale prices, as described by Dr. Soetbeer, would readily admit of such being done. Dr. Soetbeer states<sup>1</sup> that since the quantities and kinds of many important articles undergo changes in the course of decades, it had seemed proper to the bureau to take no account of the different kinds of each article but to treat all kinds as one in order to get a general indication of the changes in prices. He also adds that to meet objections to his selection of articles for his compilation, he has carefully revised the list, so as to exclude those for which the Hamburg wholesale prices are not to be considered fairly indicative of prices in the general trade; that a number of very important articles were included for which the official statements give no figures and for which wholesale prices have been ascertained from the yearly accounts of large

<sup>1</sup> U. S. Senate Ex. Doc. No. 34 (p. 226), 50th Cong., 1st sess., 1887.

institutions at Hamburg, as in the case of meat, butter, milk, and eggs; that the prices of yarns and cloths which appeared in the earlier compilation were later excluded, since the indirect influence of the German import duties on the importation of cheaper grades prevents the prices from indicating the general range of prices of such articles, and that in their place have been given corresponding average prices of yarns and cloths exported from England, as well as the prices of some other articles of manufacture, all derived from the British trade statistics. Likewise, to incorporate the results of a thorough and detailed revision made by the Hamburg Bureau of Trade Statistics of its earlier price tables, it was necessary to make some slight changes in the figures for some articles in the second edition of the *Materialien* as compared with the figures for those same articles in the first edition. Since Soetbeer's tables were discontinued only six years after their first publication there was no occasion to resort to interpolation, and no trace of any is evident.

#### WEIGHTING.

Soetbeer's index numbers were not weighted, although the problem was recognized and met half way by his discriminating selection of articles and by his including more than one variety of a commodity in the list, as in the case of wheat, rye, sugar, etc.

#### TESTING.

To test his index Dr. Soetbeer constructed a comparative table showing the successive annual average prices from 1871 to 1890 of three different groups of Sauerbeck's articles as compared with three similar groups of his own, recomputing for this purpose his own index numbers on Sauerbeck's base period of 1867-1877. The comparisons are made, first, between the general index number for Sauerbeck's complete list of 45 articles<sup>1</sup> and his own index number for 100 articles; second, between the index numbers for their respective groups of agricultural products, which include 7 articles in Sauerbeck's list and 20 in Soetbeer's; and, third, between the index numbers for their respective groups of minerals and metals, consisting of 8 articles for Sauerbeck and 14 for Soetbeer. In the same article he makes a further test by contrasting his index number for 100 articles for the separate years from 1881 to 1890 with the index numbers for exports, for imports, and for both, which are published by the Imperial Statistical Office. For this comparison the base period 1881 of the bureau is used.

<sup>1</sup> See pp. 271-273 of this bulletin.

## TABLE OF RESULTS.

In his article on "The course of prices from 1886 to 1890"<sup>1</sup> Dr. Soetbeer presents his last published table, which gives his computations of index numbers for the 114 articles by groups, as follows:

## SUMMARY OF RELATIVE PRICES OF COMMODITIES FOR THE YEARS 1847-1890.

(Base period, 1847-1850=100.)

Year.	I. Agricultural products.	II. Animal products, etc.	III. Southern products.	IV. Colonial products.	V. Minerals and metals.	VI. Textile materials.	VII. Miscellaneous articles.	VIII. British exports.	I-VIII Total articles, 114.
1847-1850...	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00

## GREAT BRITAIN.

## INDEX NUMBERS OF THE BOARD OF TRADE.

## PUBLICATION.

The first report of this series contains the results of an investigation conducted by the Labor Department for years prior to 1902.<sup>2</sup> Since that year an annual report on the subject has been prepared and published by the Board of Trade in the January issue of The Labour Gazette, London.

## HISTORY.

The inquiry concerning the subject of prices had occupied the Labor Department for several years, and, on account of the great amount of public attention devoted to all questions affecting prices of commodities, it was decided in 1903 to publish the results up to

<sup>1</sup> Jahrbücher für Nationalökonomie und Statistik, 1892, p. 563.<sup>2</sup> Report on Wholesale and Retail Prices, 1902. Great Britain. Board of Trade.

1902 without delay. The first report in 1903 consisted of a series of comparative tables of actual wholesale prices covering the years from 1871 to 1902.

The index of wholesale prices was computed upon 45 selected articles. In respect to most of the articles the actual prices were carried as many years back of 1871 as was regarded safe, considering the nature of the data available. However, the index was not computed back of 1871, even where the actual prices of individual articles were secured for earlier years, as in the instance of bread in the city of London, where the price was carried back to 1758.

To show the average change of general prices, not only from 1871 to 1902 but extending over the whole of the nineteenth century, a chart was published covering the period from 1801 to 1902.

The statement showing the course of prices from 1801 to 1846 is based on Jevons' index number, from 1846 to 1871 on that of Sauerbeck, and from 1871 to 1902 on the Board of Trade index as shown in these reports.

#### SOURCE OF QUOTATIONS.

The data used in the original report were import and export average values, contract prices at hospitals and institutions, prices at markets, ascertained values of coal and iron in different districts used for the determination of wage rates, prices from private firms, associations, etc. The import values were based on the declarations of the importer, those for exports also being declared values, but the report states that various difficulties were encountered "in tracing back the average value of the same article throughout so long a period, arising to a large extent from changes in classifications."<sup>1</sup> The same system of declared values was in force throughout the period. The contract prices of certain articles for hospitals and asylums of the London County Council represent the prices paid, throughout the period, by a somewhat similar class of consumers. Market prices were compiled from official reports, newspapers, and market quotations. The ascertained values of coal and iron were from reports made by accountants for use in the determination of the general rate of wages by sliding scale or otherwise. In a few cases it was found necessary to secure quotations from the original sources and from private corporations. A memorandum states that it was proposed to use either import or export values according as the article was chiefly one of import or export, except for British corn, milk, potatoes, beef, mutton, and brick.<sup>2</sup>

#### BASE PERIOD.

The year 1871 was originally adopted as the base period, and from 1871 to 1906 the index was computed upon this base for the average

<sup>1</sup> Report on Wholesale and Retail Prices, 1902, p. 427. Great Britain. Board of Trade.

<sup>2</sup> *Idem*, p. 439.

price of all the articles. This was used as a standard until 1906, when 1900 was established as the base and the index for the 45 articles as a whole was recomputed on the new basis from 1871 to 1906. Since then 1900 has been used as the base period.

**PRICES: HOW SHOWN AND COMPUTED.**

In the original report the prices were shown as yearly actual averages for the separate articles. In succeeding reports up to 1905 the actual average prices were not shown, but the index numbers for the four groups and the general index number were published. Since 1905 no price data other than the general index number have been shown.

**NUMBER AND CLASS OF COMMODITIES.**

The list of articles covered by the reports numbers 45 and includes principally raw materials or materials at an early stage of manufacture. The January, 1914, issue of the Labour Gazette states that, in compiling the general index number, the index numbers for 47 separate articles were weighted in accordance with their estimated consumption. Counting milk, butter, and cheese as separate articles (heretofore counted one) probably accounts for the new number; however, no explanation is vouchsafed.

**DESCRIPTION AND GROUPING OF COMMODITIES.**

Below is shown the list of the 45 articles included in the group and general index, the weight allotted to each article, and the source of the quotations.<sup>1</sup>

*Group I.—Coal and metals (6 articles).*

Article.	Allotted weight.	Source of price quotations.
Coal.....	34	Export values of coal.
Pig iron.....	16	Export values of pig iron.
Copper (ore and regulus).....	5	Import values of copper regulus.
Crude zinc.....	1½	Import values of crude zinc.
Block tin.....	1½	Import values of block tin.
Lead.....	1½	Import values of pig and sheet lead.
Total.....	50½	

*Group II.—Textiles (raw materials—6 articles).*

Cotton, raw.....	38	Import values of raw cotton.
Wool, British.....	6	Export values of sheep and lambs' wool.
Wool, foreign.....	13	Import values of sheep and lambs' wool.
Jute, raw.....	3	Import values of jute.
Flax, raw.....	4	Import values of flax.
Silk, raw.....	9	Import values of silk.
Total.....	73	

<sup>1</sup> Report on Wholesale and Retail Prices, 1902, pp. xxxv-xxxvii. Great Britain. Board of Trade.

## Group III.—Food and drink (23 articles).

## A. Corn, etc.

Article.	Allotted weight.	Source of price quotations.
Wheat, British.....	14	Gazette average of British wheat.
Barley, British.....	17	Gazette average of British barley.
Oats, British.....	12	Gazette average of British oats.
Wheat, foreign.....	33	Import values of wheat.
Barley, foreign.....	5	Import values of barley.
Oats, foreign.....	4	Import values of oats.
Maize.....	8	Import values of maize.
Hops.....	4	Import values of hops.
Rice.....	1	Import values of rice.
Potatoes.....	33	Contract price, potatoes at St. Thomas' Hospital.
Total.....	131	

## B. Meat, fish, and dairy products.

Beef.....	52	Beef (live), 1st class, Metropolitan Cattle Market.
Mutton.....	31	Mutton (live), 1st class, Metropolitan Cattle Market.
Bacon.....	21	Import values of bacon.
Milk, butter, cheese, etc.....	45	Average price of milk at Bethlem Royal Hospital and St. Thomas's Hospital.
Eggs.....	5	Import values of eggs.
Herrings.....	7	Export values of herrings.
Total.....	161	

## C. Tea, tobacco, wine, and sugar.

Sugar.....	20	Import values of refined sugar.
Tea.....	8	Import values of tea.
Coffee.....	1	Import values of coffee.
Cocoa.....	1	Import values of cocoa.
Rum.....	1½	Import values of rum.
Wine.....	5	Import values of wine.
Tobacco.....	2	Import values of unmanufactured tobacco.
Total.....	38	

## Group IV.—Miscellaneous (10 articles).

Cotton seed.....	2	Import values of cotton seed.
Linseed.....	5	Import values of linseed.
Olive oil.....	1	Import values of olive oil.
Palm oil.....	½	Import values of palm oil.
Paraffin.....	½	Import values of paraffin.
Petroleum.....	2	Import values of petroleum.
Bricks.....	3	Price of stocks at Glasgow.
Hewn fir.....	23	Import values of hewn fir.
Caoutchouc.....	1½	Import values of caoutchouc.
Hides.....	8	Import values of hides.
Total.....	41½	
Grand total.....	506	

## SUBSTITUTIONS AND ADDITIONS.

Various difficulties, as was previously stated, were met in tracing average values throughout so long a period. Changes in classification were the cause to a large extent. The methods adopted in making substitutions are not fully explained. Apparently no new articles have been added since the publication of the first report.

## INTERPOLATION.

In the discussion of sources of information the statement is made that where the data related only to some of the earlier years of the period covered, or could not be continued to the present, they were omitted, and that when large gaps existed in the records it was the general practice as far as possible to start the table from dates subsequent to the gaps in order to preserve continuity.<sup>1</sup>

## WEIGHTING.

The method of weighting used in computing this index number was that based on the amount of consumption of the various articles in the United Kingdom. The consumption of an article is defined to mean any process by which the commodity is substantially changed in character. The original report in its explanation of the "consumption standard" states that "the theoretical basis of the consumption standard is the proposition that the true measure in the change of the value of money is the change in the amount of gold that must be paid by consumers throughout the country for all commodities in their finished state consumed by them per unit of time."<sup>2</sup> The value of the national consumption of the 23 raw materials which were derived almost entirely from foreign sources was taken to be the declared value of the imports less the declared value of the exports. The value of the consumption of the 22 remaining articles was the value of the quantity produced plus the value of the amount imported, if any, minus the value of the exports, if any. The results thus obtained represent the estimated value in millions sterling of the annual consumption of the articles. The millions sterling constitute the weights allotted.

The weights assigned to the various articles were placed against the percentage variations in prices. The percentage variations were computed for each year by using 1871 as the base, or 100. For example, the percentage price of coal in 1872 was 161.1 per cent, the price in 1871 being 100. This percentage multiplied by 34—the weight allotted to coal—produced 5,477.4, or what was termed the weighted percentage. The sum of the weighted percentages of all the articles in a group divided by the sum of the weighted percentages for the base period produces the index number for the group in the specified year. For example, the weights for the group of coal and metals were 5,950.0 for the base year, and for 1872 the total was 9,178.2, which divided by the figure for the base year equals 154.1, the published index number of the group for 1872. A continuation of this process produces the other group indexes and the general index for the 45 commodities is computed in like manner.

<sup>1</sup> Report on Wholesale and Retail Prices, 1903, p. 426. Great Britain. Board of Trade.

<sup>2</sup> *Ibidem*, p. 432.

## TESTING.

Some comparison of results was made with the results of other indexes. The principal test was made by using certain articles as given by Sauerbeck. These articles covered only 28 of the 45 price quotations in his report, but they formed nine-tenths of the total weight of the Board of Trade index number. These articles were used to form a special index number, making use of the weights allotted as above. The results are shown below.

COMPARISON OF A SPECIALLY WEIGHTED NUMBER FROM THE BOARD OF TRADE AND SAUERBECK'S NUMBER.<sup>1</sup>

Year.	Specially weighted number.	Sauerbeck's number.
1867.....	100	100
1868.....	100	99
1869.....	95	98
1870.....	94	96
1871.....	95	100
1872.....	107	109
1873.....	113	111
1874.....	104	102
1875.....	97	96
1876.....	96	95
1896.....	62	61

## TABLES OF RESULTS.

The principal table of the original report shows the index numbers for the four general groups, three subgroups under food and drink, and the index for all the 45 commodities.<sup>1</sup> This table is reproduced below and carried forward to 1905, the last year that the index was computed upon the basis of 1871 as 100.

BOARD OF TRADE INDEX NUMBERS, BY GROUPS, 1871 TO 1905.

(The index numbers are the sum of the weighted percentages divided by the sum of the weights.)

Year.	Index number for all the 45 commodities.	I. Coal and metals.	II. Textiles (raw materials).	III. Food and drink.			Total, group III.	IV. Miscellaneous.
				III A. Corn, etc.	III B. Meat, fish, and dairy produce.	III C. Sugar, tea, wine, and tobacco.

1898..	73.6	92.7	54.8	73.1	81.8	54.2	75.1	66.5
1899..	74.5	107.6	57.2	63.7	85.8	52.5	73.2	67.9
1900..	83.2	151.9	70.0	62.4	90.3	52.4	74.9	74.3
1901..	79.2	124.7	65.7	64.0	89.5	50.1	75.3	71.7
1902..	75.8	114.9	65.0	63.7	94.4	46.1	76.7	69.2
1903..	78.6	111.2	71.2	63.8	92.1	47.0	75.7	68.4
1904..	78.7	106.1	78.7	66.7	89.0	48.3	75.5	66.0
1905..	77.7	105.0	73.5	64.8	88.4	52.1	74.8	68.7

A second table, reproduced below, shows the index as now published, the price in 1900 being used as the base, or 100. No group index figures have been regularly published since the revision. The exact method of computation upon the new base period is not stated, but a note to the report for 1906, issued in January, 1907, states that "the index number has, however, now been recalculated with the year 1900 as its base year instead of 1871."<sup>1</sup> It is presumed that the calculation is made in the same way as in the original report.

INDEX NUMBERS OF THE ECONOMIST.

PUBLICATION.

This index represents the course of wholesale prices of commodities in the United Kingdom.

<sup>1</sup> The Board of Trade Labour Gazette, vol. 15, 1907, p. 4.

It is compiled and published each month in the *Economist*, London, the general results for each year appearing in the first issue of January of the following year.

#### HISTORY.

The object of this compilation originally was to throw some light on the relation between the gold supply and prices. In 1849 gold had been discovered in California and in 1850 in Australia, and the pouring of this gold into Europe seemed to be accompanied by a general upward movement of prices. It was to ascertain whether there had been such a movement and, if so, its extent that the *Economist* index numbers were developed.

In 1859 William Newmarch, then editor of the *Journal of the Royal Statistical Society*, published an article in that journal on the prices of the previous year, in which the prices of 19 commodities in the London market were expressed as percentages of the average of the prices of 1845-1850. These commodities were as follows: Coffee, sugar, tea, tobacco, wheat, butcher's meat, cotton, silk, flax and hemp (average), wool, indigo, oils (average of 3 varieties), timber, tallow, leather, copper, iron, lead, and tin. In 1860 and 1861 similar articles appeared in the journal, when in addition to these 19 commodities 3 others were added: Raw cotton, cotton yarn, and cotton cloth—all at Manchester prices. The prices of these 22 commodities were expressed in the form of percentages, but no general index number was constructed from them.

The *Economist* stated in its issue of February 20, 1864, in which it published for the first time its commercial history and review of the past year, that in the table of actual wholesale prices it was following the arrangement and method which were adopted by Tooke and Newmarch in their history of prices, and continued by Newmarch in the *Journal* for 1859, 1860, and 1861.

The first table in the *Economist* report of 1864 presented the actual prices in pounds sterling of 45 articles for the base period of 1845-1850 and for succeeding years down to 1862. The prices were for a given date, being either those for January 1 or July 1 for all years previous to 1863, for which year they were the prices for the 1st of each month.

The 45 articles were coffee, sugar (3 kinds), rum, tea, tobacco, butter, wheat, beef (2 kinds), mutton (2 kinds), pork, cotton, silk, flax, hemp, wool (4 kinds), dyes (2 kinds), oils (3 kinds), timber (2 kinds), tallow, leather, saltpeter, ashes, copper, iron (2 kinds), lead, steel, tin, raw cotton (3 kinds), cotton yarn, and cotton cloth (2 kinds). For a few of the articles the prices were not continuous throughout the period.

A second table was printed entitled "Proportionate results," being the percentage that the actual price of each article for the given date

was of the actual average price for 1845-1850. In this table, instead of 45 series of percentages, the number was reduced to 22. This number was made up of 37 of the 45 series of quotations under the heads of coffee, sugar, tea, tobacco, wheat, butcher's meat, cotton, raw silk, flax and hemp, sheep's wool, indigo, oils, timber, tallow, leather, copper, iron, lead, tin, raw cotton (cotton wool), cotton yarn, and cotton cloth. Of these 22 series of percentages, the 9 composed of more than one description or grade of the article were sugar (2 kinds), butcher's meat (2 kinds of beef and 2 of mutton), flax and hemp (2 articles), sheep's wool (4 kinds), oils (3 kinds), iron (2 kinds), raw cotton (3 kinds), cotton cloth (2 kinds), and timber (2 kinds).

The articles were divided into five groups as follows:

- I. Colonial and tropical produce (food).
- II. Wheat (England and Wales) and butcher's meat (New-gate market).
- III. Raw materials of manufacture.
- IV. Metals.
- V. Manchester markets.

The articles under the fifth head were raw cotton, cotton yarn, and cotton cloth.

During the years 1864 to 1867 the composition of these tables remained the same, except that in 1865 the percentage for raw cotton was computed upon one grade instead of three, as formerly.

The commercial history, published by the Economist, for 1868 gave for the first time the total index number. However, this was simply the total at each date of the 22 percentage columns, no general index being computed, and it was not until 1869 that the numbers were added together and divided by 22, the result thus becoming the "Economist" index number, which has been published year by year since that date.

It was announced in the Economist of February 4, 1911, that it was deemed desirable to change the basis upon which the index number had been calculated. This statement recited the intention of the publication to make this review of prices more far-reaching by embodying in the index quotations of some important articles which play a large part in modern commerce, and at the same time to retain its character as a wholesale market index number. On account of the inclusion of new articles, it became necessary to adopt a base period sufficiently recent to include standardized quotations of modern commodities.

It was stated that, owing to the fact that many commodities are now important in the business life that were not so regarded at the time of beginning the index, the list of commodities had been revised and the number increased. The result of this recasting was published in the issue of November 18, 1911, showing how the new

index number was made comparable with the old figures by dividing the total index number for the 44 commodities by two, thus reducing it to that of 22 articles as used formerly.

The chief change made is in respect of the coal and iron trades, which were formerly represented by one quotation only, but are now given a weight of 5 quotations out of 44. Quotations are added, for the first time, for barley, oats, potatoes, and rice among foodstuffs; Egyptian cotton and jute among textiles; iron bars, steel rails, and coal among minerals; and petroleum, oil seeds, rubber, and soda crystals in the miscellaneous group.

In order to show the relation between the percentage index as computed by the old method and the index number obtained by the new plan, the latter has been reduced to the same basis. The index number, however, is based on the prices of 44 articles, while the old percentage number was computed on but 22. They have been made comparable, as stated, by dividing the index number for the 44 articles by 2.

#### SOURCE OF QUOTATIONS.

The quotations used in compiling this index are market prices as published weekly in the *Economist*, which represent those of the London or Manchester markets.

#### BASE PERIOD.

As has been explained, the base period formerly was 1845-1850, but in November, 1911, it was announced that the base period had been changed to 1901-1905.

#### PRICES: HOW SHOWN AND COMPUTED.

As was previously stated, the quotations used are those published weekly in the *Economist*. The weekly prices for the selected articles are published each month in the discussion of the index number.

#### NUMBER AND CLASS OF COMMODITIES.

The original number of commodities, as has been stated, was 22. In 1911 the number was increased to 44. Raw, or what might be termed primary, commodities only are included in these quotations.

The following table, appearing in the *Economist* of November 18, 1911, shows the number of quotations for each commodity, comparing the old with the new base period:

NUMBER OF COMMODITIES: SERIES OF QUOTATIONS UNDER THE OLD BASIS OF 1845-1850, COMPARED WITH THAT UNDER THE NEW BASIS OF 1901-1905\*

Commodities.	Old basis quotation number.	New basis quotation number.	Commodities.	Old basis quotation number.	New basis quotation number.
Wheat and flour.....	1	3	Pig iron.....	1	1
Barley.....	1	1	Steel rails.....	1	1
Oats.....	1	1	Iron bars.....	1	1
Potatoes.....	1	1	Coal.....	1	2
Rice.....	1	1	Copper.....	1	61
Beef.....	1	1	Tin.....	1	1
Mutton.....	1	2	Lead.....	1	1
Pork.....	1	2	Timber.....	1	2
Sugar.....	1	2	Leather.....	1	1
Coffee.....	1	1	Oil.....	1	1
Tea.....	1	1	Oilseeds.....	1	1
Tobacco.....	1	1	Petroleum.....	1	1
Butter.....	1	1	Rubber.....	1	1

Flax.....	1	1	Soda crystals.....	1	1
Hemp.....	1	2			
Jute.....	1	1	Total.....	22	44
Silk.....	1	1			

DESCRIPTION AND GROUPING OF COMMODITIES.

The detailed table of prices week by week as published includes 33 series of quotations. The articles are arranged in four groups as follows:<sup>1</sup>

*Minerals (8 articles).*

Iron, Cleveland, No. 5, G. M. B.  
 Iron, common bars.  
 Iron, steel rails.  
 Coals, best steam Newcastle.  
 Copper, standard.  
 Tin, standard.  
 Lead, English pig.  
 Saltpeter, Bengal.

*Textiles (7 articles).*

Cotton, middling American.  
 Cotton, yarn, 32's, twist.  
 Wool, N. S. Wales, greasy, average.  
 Silk, Canton.  
 Flax, Riga Z.K.  
 Hemp, manila.  
 Jute, native firsts.

*Food products (9 articles).*

Wheat, Gazette averages (English grain).  
 Barley, Gazette averages (English grain).  
 Oats, Gazette averages (English grain).  
 Flour, town-made, household.  
 Beef, inferior.  
 Beef, prime.  
 Mutton, prime.  
 Potatoes, good English.  
 Rice, Rangoon.

<sup>1</sup> The Economist, July 4 1914, p. 8

*Miscellaneous (9 articles).*

Sugar, West India sirups.  
 Sugar, beet, German.  
 Tea, Congou, middling, common.  
 Tea, Congou, medium, good.  
 Coffee, Santos, good average.  
 Oils, petroleum.  
 Oils, olive, Levant.  
 Tallow, town.  
 Rubber, fine hard Para.

## SUBSTITUTIONS AND ADDITIONS.

It is stated that over so long a period of time some variations have inevitably arisen in the mode of quoting prices, but in all such cases the nearest approach possible has been made to a uniform quotation. The articles cited are raw cotton, tea, sugar, flax, and wool. It is further stated that in some cases, where it has been considered desirable to introduce a commodity to replace one no longer actively dealt in, the current price of the substituted article has been taken as equivalent to the same percentage of the basis price as was represented by its predecessor.

## INTERPOLATION.

The supplying of missing data, if such has been found necessary, has not been noted.

## WEIGHTING.

The index is computed by means of simple arithmetical average. Indirect weighting is attained by the selection of articles.

This method, as applied to the present index, has been frequently criticized because of the small number of articles included. An attempt to correct the fault of giving each article an equal weight was made by Mr. R. H. Inglis Palgrave, in 1886, in a memorandum to the Royal Commission on the Depression of Trade and Industry. The method used by him was to give each relative price an importance proportional to the consumption of the article, which was ascertained by adding to the production the imports and deducting the exports. He thus obtained a series of figures representing the importance, in each year, of the consumption of each commodity, and used these in connection with the Economist figures for the years 1865 to 1885 upon the basis, 1865-1869 equals 100. The data prepared by Mr. Palgrave in 1886 have not been continued for subsequent years (see Report of United States Senate Finance Committee on Wholesale Prices, Wages, and Transportation, 1893, Pt. I, pp. 228, 229).

## TESTING.

The testing of the accuracy of the results secured in this index is made by comparison with the results in other index compilations.

The table below shows a comparison by decades of the weighted and unweighted indexes of the Economist with those of Sauerbeck (an unweighted index) and the Board of Trade (a weighted one). The weights for the Economist index have been calculated on the basis of consumption in the country as estimated by the Board of Trade.<sup>1</sup> The decade 1891 to 1900 is considered as the base or 100.

INDEX NUMBERS OF THE LEVEL OF PRICES IN THE UNITED KINGDOM, BY DECADES, 1861 TO 1910.

(Base period, 1891-1900=100.)

Decade.	Economist.		Sauerbeck.	Board of Trade.
	Weighted.	Unweighted.		
1861-1870....	146	152	151	138
1871-1880....	121	131	144	138
1881-1890....	107	108	113	112
1891-1900....	100	100	100	100
1901-1910....	110	108	110	111

The Economist of August 26, 1911, presents as a test of the accuracy of its index a table to show that retail prices have pursued much the same course as wholesale prices. The following comparison is made of the Economist index with that of the Board of Trade for retail prices in London from 1895 to 1910, in each case the year 1900 being taken as the base.

COMPARISON OF WHOLESALE AND RETAIL PRICES, 1895 TO 1910.

(Base period, 1900=100.)

Year.	Economist index number on Jan. 1 of each year.	Board of Trade index number of retail prices in London.
1895.....	80	93.2
1896.....	88	92.0
1897.....	91	95.2
1898.....	85	100.8
1899.....	80	95.4
1900.....	100	100.0
1901.....	99	101.9
1902.....	91	101.6
1903.....	93	103.2
1904.....	103	104.3
1905.....	90	103.7
1906.....	109	103.2
1907.....	117	105.8
1908.....	108	108.4
1909.....	103	108.2
1910.....	112	109.9

#### TABLES OF RESULTS.

The following table, covering the period from 1851 to 1910, shows the total index number for the 22 commodities in the form in which it was published in earlier years.

July 1	96	104½			

<sup>1</sup> These data are taken from the Economist of Nov. 28, 1911, p. 1035.

The following table, reproduced from the Economist of December 5, 1914, shows the manner in which the information relative to the index number is now presented. The quarterly index figures represent the average of the figures for the months of the quarter. It will be noted that the method of grouping here employed is not the same as is used in the detailed table of prices.

## INDEX FIGURES BY GROUPS.

Date.	Cereals and meats.	Other food products (tea, sugar, etc.).	Textiles.	Minerals.	Miscellaneous rubber, timber, oils, etc.	Total.	Percentage change.

## INDEX NUMBERS OF AUGUSTUS SAJERBECK.

## PUBLICATION.

This index number represents the course of wholesale prices in the United Kingdom. Prior to 1910 statements were published only once a year. From January, 1910, to January, 1913, the general result was published each month for the preceding month, and the yearly résumé in March, in the Journal of the Royal Statistical Society, London, but since January, 1913, the information has appeared in The Statist, London. The general discussion of the results for the past year is now also published in the April number of the Journal of the Royal Statistical Society.

## HISTORY.

During 1885, or in the early part of 1886, Mr. Augustus Sauerbeck, a London wool merchant, prepared a paper upon the gold supply and its relation to prices, which was published in the September, 1886, *Journal of the Royal Statistical Society*.<sup>1</sup> In much of the discussion relating to the causes of an "extraordinary and almost unprecedented fall of prices" that had continued for 12 years, Mr. Sauerbeck recognized the lack of statistical information and prepared this paper in order to supply data upon the subject.

The work thus begun was continued by Mr. Sauerbeck until the end of 1912, when he relinquished the task and it was taken up by Sir George Paish, editor of *The Statist*.

## SOURCE OF QUOTATIONS.

The statement is made in the appendix to the first article that such of the prices from 1846 to 1885 as are not official returns were received from private firms or collected from the *Economist* and other publications. Further than this no information concerning the source of price quotations is given.

## BASE PERIOD.

The 11 years 1867-1877 are taken as the standard period. At the time the period was chosen the study covered the 40 years 1846-1885 and the base period included the years of the highest prices as well as a number of years of low prices. The index number for the 11-year-period was found to correspond exactly with the index number of the 25 years 1853-1877, so that "a comparison of the aggregate prices of all commodities in a certain year with the 11 years 1867-1877, is equivalent to a comparison with the whole 25 years 1853-1877."<sup>2</sup>

## PRICES: HOW SHOWN AND COMPUTED.

The prices upon which the index number is based are average prices for each year. The prices quoted in the report covering the years 1846-1885 are, with but few exceptions, "the average prices in each year, either those officially returned or the averages of the 12 quotations at the end of each month."<sup>3</sup> Where a range of prices is given the mean is taken between the highest and the lowest quotations. The prices as given in later reports are the averages of 12 monthly or 52 weekly quotations; in the case of potatoes, of 8 monthly quotations, January to April and September to December. These annual averages are shown in the tables by articles, as are also the corresponding relatives. The actual prices from which the yearly averages are computed are nowhere shown, but relatives based

<sup>1</sup> *Journal of the Royal Statistical Society*, September, 1886, vol. 49, p. 581.

<sup>2</sup> *Idem*, p. 592.

<sup>3</sup> *Idem*, p. 632.

on the quarterly averages are shown by groups of commodities, covering the period from 1884 to the present time.

The statement is made in the report of 1893 that all articles have been calculated at their actual prices and no corrections have been made for extraordinary fluctuations. The treatment of cotton prices at the time of the American Civil War is cited as an example.

The prices of all imported articles are quoted "in bond."

In the first report the general statement is made that in constructing his table of prices the author has on the whole been guided by the system adopted in the Economist reports on the course of prices.

#### NUMBER AND CLASS OF COMMODITIES.

The number of articles used directly in computing the index number was 43 from 1846 to 1866, 44 from 1867 to 1872, and 45 from 1873 to the present time. All are considered raw materials. In the original report the statement is made that only commodities were included which in the United Kingdom at that time represented a value of about a million pounds or more, counting both domestic production and imports. A few important articles, like wine, spirits, and tobacco, had to be left out, as no reliable data were obtainable.

Certain important commodities are represented by more than one of the 45 articles; for example, two varieties of wheat are quoted, and each variety is considered a separate article. The relative prices of certain others of the 45 articles, as for example coffee, were obtained by averaging two relatives representing different varieties or grades of the article. Thus in 1911, when the relative price of Ceylon coffee was 95 and of good Rio was 91, the relative used for coffee was 93, the average of these two. This method was followed in cases where the price of a single variety was not considered sufficiently representative of the article. The number of quotations, including these additional quotations used only indirectly in the computation of the index number in the report for 1911, was 57. The table of average actual prices, however, comprised 60 quotations, one each for tea, copper, and coal being shown in the actual price form without being represented in the index number. At the time the original report was published the series of quotations in the table of average prices comprised a total of 55.

An index number based on the prices of "the 31 principal commodities" from 1818 to 1845 was prepared by Mr. Sauerbeck and published in his original report. These commodities are not enumerated.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

The 45 articles are divided into six groups. The grouping is shown in the following table, which also shows the number of series of price quotations secured for each commodity, and the number of relative

prices for each commodity used directly in the computation of the index for the year 1911. The table has been compiled from data appearing in the Journal of the Royal Statistical Society, March, 1911, pages 415 to 420.

NUMBER OF SERIES OF PRICE QUOTATIONS SECURED AND NUMBER OF RELATIVE PRICES USED IN INDEX, BY COMMODITIES.

Commodity.	Number of series of quotations secured.	Number of relative prices used in index.	Commodity.	Number of series of quotations secured.	Number of relative prices used in index.
Wheat.....	2	2	Iron.....	3	2
Flour.....	1	1	Copper.....	2	1
Barley.....	1	1	Tin.....	1	1
Oats.....	1	1	Lead.....	1	1
Maize.....	1	1	Coal.....	3	2
Potatoes.....	1	1	Total minerals.....	10	7
Rice.....	1	1	Cotton.....	2	2
Total vegetable food.....	8	8	Flax.....	2	1
Beef.....	2	2	Hemp.....	2	1
Mutton.....	2	2	Jute.....	1	1
Pork.....	1	1	Wool.....	3	2
Bacon.....	1	1	Silk.....	1	1
Butter.....	1	1	Total textiles.....	11	8
Total animal food.....	7	7	Hides.....	3	1
Sugar.....	3	2	Leather.....	2	1
Coffee.....	2	1	Tallow.....	1	1
Tea.....	3	1	Oil.....	2	2
Total sugar, coffee, and tea.....	8	4	Linseed oil and linseed (flaxseed).....	2	1
Total food.....	23	19	Petroleum.....	1	1
			Soda crystals.....	1	1
			Nitrate of soda.....	1	1
			Indigo.....	2	1
			Timber.....	2	1
			Total sundry materials.....	16	11
			Grand total.....	60	45

A description of the various articles included in the six groups of commodities follows:<sup>1</sup>

*Vegetable food (8 price series).*

- |                             |                                      |

|--|---|

## SUBSTITUTIONS AND ADDITIONS.

The method of calculating the index adopted when it was deemed necessary to add or drop quotations for articles is not disclosed. No mention is made of the necessity of quoting other grades of commodities than those formerly quoted, but it is reasonable to believe that in a period of this length it has been found necessary to do so.

## INTERPOLATION.

It may have been impossible to secure complete statistical material during the full period, but, if so, the author makes no mention of the fact. Where prices were abnormal, as cotton during the Civil War in the United States, no corrections were made, quotations being used as found.

## WEIGHTING.

The index number is unweighted. The author has, however, given to certain important commodities a larger influence in computing the index number by quoting as separate articles several different varieties or grades of the same commodity. For example, English wheat and American wheat constitute two separate articles, as do prime beef and middling beef; also prime mutton and middling mutton. Similarly, sugar, iron, coal, cotton, wool and oil are each given double importance in the computation of the index.

## TESTING

Beginning with the index numbers of the year 1892<sup>1</sup> two tests were applied, the one consisting of weighting the relative prices according to the "money-values" of the commodities in accordance with their importance in the trade of the United Kingdom during the 3-year period 1889-1891; the second method consisting of weighting them according to their "mass-quantities" of other years. In the latter method the quantities of imports and exports of any one year are reduced to a nominal money value by multiplying the number representing the quantity of the article by the number representing the average prices of said articles during the years 1867-1877.

In his presentation for the year 1895<sup>2</sup> Mr. Sauerbeck used the geometric average<sup>3</sup> of Jevons and calculated by that means a total index for his 45 articles for the years 1880, 1894, and 1895, and compared it with his own arithmetic averages, both simple and weighted.

After 1907 the single test of weighting according to average "money-values" of the commodities for the 3-year period 1904-1906 was employed.

The author makes no direct statement in regard to the process of finding the nominal values of the several articles, beyond stating that one factor is the average price of the article during the base period 1867-1877. The other factor, or that quantity which represents the "importance in the United Kingdom" of the article, appears to be the average of the annual production plus imports for the chosen 3-year period. Due warning is given that this figure, which represents the total trade in the commodity including reexports, must not be considered as representing the actual consumption of the commodity in the United Kingdom.

A second test was in use up to and including the report for 1907. It is stated that the estimated actual values of the 45 articles consumed in the United Kingdom were obtained by taking the production on the basis of Mr. Sauerbeck's price and the imports at British Board of Trade values. The ratio of these actual prices to the nominal values on the basis of the average prices from 1867 to 1877 constituted a second weighted index. The explanation of this second test is not fully stated.

## TABLE OF RESULTS.

The principal table in this compilation shows the index number for the four general groups, and the grand total index. In addition there are three subindexes of food and an index of all materials contained

<sup>1</sup> Journal of the Royal Statistical Society, June, 1893, pp. 215-247, 254.

<sup>2</sup> *Idem*, March, 1896, pp. 193, 194.

<sup>3</sup> To find the geometrical mean, the logarithm is taken of the percentage figure of each article, the total of all logarithms is divided by 45—the number of articles—and the antilogarithm, the number corresponding to the average logarithm, is the geometrical index number. (Journal of the Royal Statistical Society March, 1896, p. 194.)

in the groups of minerals, textiles, and sundry materials. The following data, showing the variations in the group index numbers and in the general index, have been compiled from various issues of the Journal of the Royal Statistical Society.<sup>1</sup>

SUMMARY OF INDEX NUMBERS, 1846 TO 1913.

(Base period, 1867-1877-100.)

Date.	Food.				Materials.				Grand total.
	Vegetable food (corn, etc.).	Animal food (meat, etc.).	Sugar, coffee, and tea.	Total food.	Minerals.	Textiles.	Sundry materials.	Total materials.

## SUMMARY OF INDEX NUMBERS, 1846 TO 1913—Concluded.

Date.	Food.				Materials.				Grand total.
	Vegetable food (corn, etc.).	Animal food (meat, etc.).	Sugar, coffee, and tea.	Total food.	Minerals.	Textiles.	Sundry materials.	Total materials.	
1908.....	70	89	48	72	89	62	73	74	73
1909.....	71	89	50	73	86	64	76	75	74
1910.....	65	96	54	74	89	73	81	81	78
1911.....	70	90	61	75	93	76	81	83	80
1912.....	78	96	62	81	110	76	82	88	85
1913.....	69	99	54	77	111	84	83	91	86
Average:									
1902-1911.....	66	88	49	71	90	70	74	77	74
1890-1899.....	61	80	63	68	71	56	66	64	66
1878-1887.....	79	95	76	84	73	71	81	76	79

The general index was 83.5 for January, 1914; 83.8 for February; 82.8 for March; 82.3 for April; and 82.8 for May.

## INDIA.

## INDEX NUMBERS (RUPEE PRICES) OF FRED. J. ATKINSON.

## PUBLICATION AND HISTORY.

Index numbers of rupee prices in India for the years 1861-1895 were first published by Fred. J. Atkinson, Accountant General, United Provinces, India, in the Journal of the Royal Statistical Society for March, 1897. Those for the years 1896 and 1897 were presented in the Journal for June, 1898, and those for the years 1898 to 1901 in the number for March, 1903. In the number for September, 1909, they were brought up to the end of 1908.

In the March, 1907, issue Atkinson makes the following remarks introductory to his study:

The extraordinary fall in gold prices led to the preparation by several economists of figures detailing the course that prices had taken annually for many years back. No attempt has, however, hitherto been made to deal with the course of silver prices. The consequence is that various contradictory statements have been made on the subject at different times, and the general impression prevails, probably based on the declared values of exports from India, that silver prices have been practically stable for the past 25 years, and the inference drawn is that silver as a measure of value possesses qualities of stability which gold is declared not to possess. It is with the object of coming to some definite conclusion that the present figures have been worked out with considerable difficulty, and whether the conclusions arrived at hereafter are agreed to or not, the figures themselves will, it is hoped, prove useful to economists generally.

This paper deals only with silver prices in India—it would perhaps be more accurate to say "rupee prices in India"; but the rupee price represented the silver price up to the year 1893, and it seems probable that up to that time India practically fixed silver prices throughout the world. Since 1893, the year in which the mints were closed, the rupee and silver have diverged, and the prices given are rupee prices.

## SOURCE OF QUOTATIONS.

In preparing his index numbers, Atkinson, while adopting Sauerbeck's principles, did not base his figures on the prices of imported articles but on those of the native products of India. This was necessary, because the bulk of the trade of India is concerned with the products of the country, imports representing only some 8 or 9 per cent of the exported products. Moreover, a considerable portion of the articles produced are mainly for the purpose of export and are but little used by the natives of the country. It is evident, therefore, that prices must necessarily be affected rather by the production in common use than either by imports or exports.

Sauerbeck takes the majority of the prices he quotes from the London market. In India, however, the production and prices vary so greatly in different parts of the country that to take only one market, as Calcutta or Bombay, and treat every article as of equal or nearly equal importance would give a very inaccurate idea of the actual state of affairs. To avoid this, Atkinson prepared a statement based on the agricultural returns and financial and commercial statistics published by the Government of India, and the administration reports of the various native States, giving for the year 1893, with a fair degree of accuracy, the agricultural and manufactured products of India and the relative importance of each.<sup>1</sup>

Next, accepting the fact that India in its economic conditions represents a cluster of different countries, it had to be ascertained in what particular markets the prices of the various articles should be taken. Atkinson accordingly prepared a table showing the area of cultivation in 1893-94 of each product in each Province of India, and the price of each product was, as far as possible, taken in the Province or Provinces in which the area of its cultivation is greatest.

The prices taken were obtained from various sources; partly from the prices current which the chambers of commerce of Calcutta, Bombay, and Madras issue; partly from the publication "Prices and Wages of India," issued by the Government of India, and partly from private sources. A few only, when figures were not elsewhere obtainable, were taken from the export accounts. •

## BASE PERIOD.

In the first table of index numbers prepared in 1897 Atkinson took the year 1871 to represent the number 100. This year was selected because in it Sauerbeck's index number of gold prices was 100, and the price of silver was approximately the same (99.7). This selection had the advantage of permitting a ready comparison of the course of rupee prices with that of gold prices, which was useful in connection with the currency question. It is obvious, however, that prices of a

<sup>1</sup> See Journal of the Royal Statistical Society, March, 1897, Vol. LX, pp. 124 and 125.

single year can not be regarded as representing normal prices. As a matter of fact, rupee prices in 1871 were exceptionally low, and as the currency question had been settled, Atkinson in 1903 thought it best to use the average of the years 1868-1876, which may be regarded as fairly normal years, as the base period for another table of index numbers. Both tables, that with 1871 and that with 1868-1876 as the base period, were in 1908 brought up to date.

#### PRICES: HOW COMPUTED.

Briefly, the procedure adopted in preparing the index numbers was to ascertain the relative importance of each article as compared with the total value of all production in India as shown by the table of production for the year 1893. In computing the index numbers for each month and year for the whole of India, one or more prices at different important places of production were taken for each article in proportion to its relative importance to the whole. The general index number is based on the prices of 38 different commodities. Of these rice, representing three-tenths of the value of all products of India, was allotted 30 prices out of a total of 100 taken. Similarly wheat was allotted 5 prices and other grains 5, sugar 4, jowar 3, raggee, gram, bajra, and meat 2 each, and maize, barley, potatoes, spices, and ghee 1 each; making a total of 60 prices for food articles. For raw produce, seeds were allotted 4 prices, cotton 3, hides and skins 3, jute, indigo, opium, tobacco and timber 2 each, and tea, coffee, salt-peter, cutch, myrobalans, animal bones, coal, raw silk, and raw wool 1 each, making 29 in all. For manufactures, hides and skins were allotted 3 prices, cotton goods, jute goods, and oils 2 each, and silk piece goods and shellac 1 each, making 11 in all. Summarized, the division was:

	Prices.
Articles of food.....	60
Raw produce.....	29
Manufactures.....	11
Total.....	100

#### DESCRIPTION AND GROUPING OF COMMODITIES.

The individual commodities included in the general index numbers and the markets in which their prices were obtained are the following:

##### Articles of Food.

1-30. *Rice (15 prices)*.<sup>1</sup>—Monghyr, Calcutta; common, Bengal, eastern division; common, Calcutta; common, Patna; common, Bengal, Deltaic division; common, Bengal, Orissa division; common, Madras, southeast coast division; common, Madras, Salem; common, northwest provinces, eastern division; common, northwest provinces, central division; common, Burma, Rangoon; common, Burma, Tenasserim division; common,

<sup>1</sup> As rice is given an importance of 30 and only 15 prices were taken, each price has been doubled in computing the general index number.

central provinces, Nagpur; common, central provinces, Jubbulpore; and common, Hyderabad, Bolaram. The quotations used are those published in "Prices and Wages" and from prices supplied by dealers.

31-35. *Wheat* (5 prices).—Common, northwest provinces, Cawnpore; common, Punjab, Delhi; common, central provinces, Nagpur; first quality, Central India, Nussirabad; and flour, Bombay, Poona.

36-38. *Jowar* <sup>1</sup> (3 prices).—Bombay; Madras, Salem; and Hyderabad, Bolaram.

39-40. *Raggee* <sup>2</sup> (2 prices).—Madras, southeast coast division; and Mysore.

41-42. *Gram* <sup>3</sup> (2 prices).—Punjab, central division; and northwest provinces, central division.

43-44. *Bajra* <sup>4</sup> (2 prices).—Bombay, Deccan division; and Madras, Salem.

45. *Maize* (1 price).—Chota, Nagpur.

46. *Barley* (1 price).—Delhi.

47-51. *Other grains* (5 prices).—Arhar, Allahabad; arhar, northwest provinces, Sub-Montano division; mung, Dal, Lucknow; masur, Lucknow; and chenna, Cawnpore. This classification in the agricultural returns includes a large number of different varieties of minor grains and pulses grown in different parts of the country, though the northwest provinces are preeminent in their cultivation. Reliable figures could be obtained for only a few, and the figures for some of these are not complete. Arhar (*Cajanus indicus*), the most important of these minor pulses, for which two prices have been given, and mung (*Phaseolus mungo*) are represented by complete figures. The prices for masur (*Erva lens*) and chenna (*Cicer arietinum*), were supplied by the commissariat department and commence only from 1875 and are averages of the financial year.

52. *Vegetables* (1 price).—Potatoes, Bombay.

53-56. *Sugar* (4 prices).—Gurputty, Calcutta; Dhulloah, Calcutta; Jaggery, cane, Madras; and Jaggery, Palmyra, Madras. Prices for the two refined sugars have been taken from the Calcutta prices current, supplemented by prices supplied by Bisouath, Law & Co., and those for raw sugar from the Madras prices current. Considerable difficulty was experienced in the case of refined sugar, as indeed in most of the quotations taken from the prices current, by the changes in nomenclature, which in some cases meant a change in actual quality. To continue the same quality throughout the entire period involved a method of calculation of comparisons. The result, however, is said to be approximately accurate.<sup>5</sup>

57. *Spices* (1 price).—Ginger, export accounts. Prices taken from the export accounts.

58. *Ghee* <sup>6</sup> (1 price).—Bombay.

59-60. *Meat* (2 prices).—Mutton, Bombay; beef, Bombay.

#### Raw Produce and Materials.

61. *Tea* (1 price).—Taken from the export accounts.

62. *Coffee* (1 price).—Taken from the export accounts.

63-65. *Cotton* (3 prices).—Dharwar; Broach; and Dholera. All obtained from the Bombay prices current.

66-67. *Jute* (2 prices).—Picked; and double triangle M. From Calcutta prices current.

<sup>1</sup> A cheap Indian grain used in making a kind of unleavened bread.

<sup>2</sup> A cereal grass (*Eleusine Carocana*) largely cultivated for food.

<sup>3</sup> The chick-pea (*Cicer arietinum*) of the East Indies, there extensively used as food for men, horses, and cattle.

<sup>4</sup> The spiked or pearl millet (*Pennisetia spicata*) one of the commonest food cereals of southern Asia.

<sup>5</sup> Journal of the Royal Statistical Society, March, 1897, Vol. LX, p. 90.

<sup>6</sup> Butter clarified by boiling or heating and skimming or straining until it becomes a liquid or semiliquid oil, capable of being kept for many years. It enters into the composition of nearly everything eaten by the Brahmans.

68-69. *Indigo* (2 prices).—Bengal, good; and consuming. From Calcutta prices current.

70-71. *Opium* (2 prices).—Behar; and Malwa. From the monthly figures published by the Government of India.

72-73. *Tobacco* (2 prices).—Central India, Nussirabad; and Bombay.

74-77. *Seeds* (4 prices).—Linseed, bold; til; rape-yellow, mixed; and castor. The prices for linseed and rape were taken from the Calcutta prices current, those of til and castor seeds from the monthly figures published by the Government of India.

78-84. *Miscellaneous* (7 prices).—Saltpeter, 5 per cent refined; cutch,<sup>1</sup> Rangoon; myrobalans;<sup>2</sup> manure, animal bones; coal; raw silk, Surdales; and raw wool. The prices of saltpeter and raw silk were taken from the Calcutta prices current, those of cutch, myrobalans, and manure from the export accounts, and those of coal were furnished by the Bengal Coal Co.

85-87. *Hides and skins* (3 prices).—Raw hides, buffalo, Patna, slaughtered, arsenic; raw hides, cow, Burdwan, slaughtered; and raw skins, goat, Calcutta. Prices taken from the Calcutta prices current.

88-89. *Timber* (2 prices).—Bamboos, Calcutta; teak, Rangoon. The prices for bamboos are taken from the figures published in the Government of India publication "Prices and Wages." The prices on 1st of January of each year beginning from 1871 only are given. Monthly prices for the series of years were not obtainable. The prices for Rangoon teak were taken from the Calcutta prices current.

#### Manufacturers.

90-91. *Cotton goods* (2 prices).—Yarn 1/203, and T cloth, 44 inches. These are taken from "Prices and wages" and represent the prices as given to the Government of India by the Bombay Mill Owners' Association on 1st of January and July of each year.

92-93. *Jute goods* (2 prices).—Bags, No. 2 twill; and bags for California. Prices taken from the Calcutta prices current.

94-95. *Oils* (2 prices).—Castor and coconut. The prices for castor oil were taken from the Calcutta prices current. Those for coconut oil are from "Prices and wages" the prices on January 1 of each year beginning from 1871 only are given, and monthly prices not being obtainable.

96. *Silk piece goods* (1 price).—Corah No. 1, from the Calcutta prices current.

97-99. *Hides and skins* (3 prices).—Tanned hides; cow; tanned skins, goat; and tanned skins, sheep. Prices are taken from the Madras prices current.

100. *Shellac* (1 price).—First quality, orange; from the Calcutta prices current.

#### WEIGHTING.

As has been mentioned above, Atkinson has weighted his general index numbers by giving to each commodity included as many quotations as corresponded to its importance in the whole production value of India in 1893. Since 1893 changes have occurred and some of the articles included are of more and some of less importance now than they were then; for example, indigo has declined while coal and cotton goods have materially increased in importance. But all the changes combined, according to Atkinson, would not make any material difference in the percentages as computed. He also remarks

<sup>1</sup> An extract from the bark of the mangrove used in tanning and dyeing.

<sup>2</sup> Prune-like fruits of several tropical plants of the genus *terminalia*, used for tanning and calico printing.

that during recent years the trade descriptions in some cases and the quality in others of articles entered in the various chamber of commerce prices current, from which several prices are taken, have undergone a change and that it has been a matter of difficulty to fit the changes, with accuracy, to the previous order of things.<sup>1</sup>

## TABLE OF RESULTS.

In the table printed in the *Journal of the Royal Statistical Society* for September, 1909, pp. 500-502, Atkinson gives, in addition to the index numbers of 100 articles of Indian production, index numbers for 11 articles of import. These are taken from data published annually since 1905 by the Commercial Intelligence Department of India. Under the title "Variations in Indian Price Levels" this department has published index numbers prepared on different lines from the system adopted by Atkinson—39 articles only being taken, of which 11 are imported, and all articles being given equal weight. As imported articles are regulated by their gold price and as the individual articles are not weighted according to their importance, it is not surprising that the two sets of index numbers do not agree, though their general trend is practically the same. It having been suggested, however, that so far as the dweller in India is concerned the prices of imports now materially affect his annual expenditure, Atkinson shows in column 6 of his table the index number of 11 articles of import equated to 1868-1876, as given by the commercial intelligence department, and then adds the index numbers of these 11 articles of import to those of the 100 articles of Indian production to which his own index numbers relate, and shows the total index number in column 7 of his table. In column 8 are shown Sauerbeck's index numbers for gold prices; in column 9 the gold price of silver; in column 10 the gold price of the rupee; in column 11 index numbers of articles of export; in column 12 Sauerbeck's gold prices index number of the 11 articles of import shown in column 6; and in column 13 Sauerbeck's gold prices index number of 11 articles exported by India.

This table is reproduced below with the exception of the data contained in columns 12 and 13.

## ITALY.

## INDEX NUMBERS OF THE ANNUARIO STATISTICO ITALIANO.

## PUBLICATION.

Index numbers based on the prices of a limited number of commodities at wholesale are contained in the annual statistical report for Italy (*Annuario Statistico Italiano*), issued from the Office of the Director General of Statistics and Labor (*Direzione generale della statistica e del lavoro*).

## HISTORY.

Since 1886 the *Annuario Statistico Italiano* has presented tables showing fluctuations in the prices of a large number of commodities, both raw and manufactured, during a series of years. In the earlier reports these prices were shown for a period extending, in some

instances, back to 1862. In more recent issues the figures have been limited as a rule to the last five years preceding the date of publication.

Prior to 1912 no index numbers appear to have been computed, the data being given only in the form of actual average prices. In the report for 1912, however, was begun the publication of two series of index numbers based in the one case on the prices of a few articles of food furnished to the army, and in the other case on a larger number of articles of the same class supplied to 43 national boarding schools (*convitti nazionali*) of Italy. These index numbers were continued in the report for 1913.

#### SOURCE OF QUOTATIONS.

The price quotations on which the index numbers are based were furnished by the directors of the schools and by the minister of war (*ministero della guerra, direzione generale dei servizi logistici e amministrativi*).

#### BASE PERIOD.

The five years 1890-1894 constitute the base period in the series relating to the boarding schools. In the series for the army the relatives are based on the period 1900-1904.

#### PRICES; HOW SHOWN AND COMPUTED.

Only the average annual prices of the different commodities included in the two indexes are given in the reports. In several instances data for earlier years are lacking from the figures relating to the army.

#### NUMBER AND CLASS OF COMMODITIES.

The table of index numbers for supplies furnished to the army contains 8 commodities, while that for boarding schools contains 13 commodities. All articles belong to the food group.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

The following articles are included in the table of index numbers for the army: Corn, bread (ration), Italian paste, rice, beef (young steer), coffee (roasted), sugar, and wine. The list of articles supplied to boarding schools for which index numbers are shown includes bread, Italian paste, rice, beef, sausage, fish (in oil), eggs, butter, oil, milk, coffee, sugar, and wine. In the latter series the index for beef is based on the average of the prices paid for young steer flesh and veal in a single institution. No further description of the commodities is furnished.

#### SUBSTITUTIONS, ADDITIONS, AND INTERPOLATION.

So far as can be determined from the information at hand, no additions to the list of articles or substitutions of one grade or quality of an article for another have been made. No prices appear to have been interpolated.

## WEIGHTING.

All commodities are given equal weight in the computation of the general index number for each series.

## TESTING.

The accuracy of these index numbers is not tested by comparison with similar data or by other means, so far as the published results show.

## TABLE OF RESULTS.

The table following contains the index numbers for the 13 commodities furnished to boarding schools during the period 1890 to 1913, inclusive.

INDEX NUMBERS BASED ON PRICES PAID BY THE NATIONAL SCHOOLS (CONVITTI NAZIONALI) FOR COMMODITIES NECESSARY FOR THE NOURISHMENT OF THE PUPILS, 1890 TO 1913.

(Base period, 1890-1894=100.)

<sup>1</sup> The prices used represent the average prices paid for beef (steers) and veal in one school. *Annuario Statistico Italiano*, 1912, p. 138; 1913, p. 184.

## INDEX NUMBERS OF ACHILLE NECCO.

## PUBLICATION AND HISTORY.

A volume entitled "La Curva dei Prezzi delle Merci in Italia negli Anni 1881-1909" (The Price Curve of Commodities in Italy during 1881-1909), which was published in Turin by Achille Necco in 1910,<sup>1</sup> contains four series of index numbers based in each case on the import or export values of certain important articles of commerce. Comparative tables showing the price fluctuations in several countries on a common basis, that of the year 1881, are also contained in the volume.

A continuation of the two principal series of these index numbers has been published by Necco in *La Riforma Sociale* for 1911, pages 68-72, and 1913, pages 621-635; also in a special bulletin entitled "Prezzi della Merci in Italia nel 1912" (Prices of commodities in Italy during 1912), appearing in 1914. In the last-named publication which also was issued by *La Riforma Sociale*, the figures for 1910, 1911, and 1912 have been supplied.

## SOURCE OF QUOTATIONS.

The data used in computing the index numbers were those formulated by the commissione centrale dei valori per le dogane (central commission for customs valuation) and published in the reports of the Ministry of Agriculture, Industry, and Commerce.

## BASE PERIOD.

The values of imported and exported articles for the year 1881, taken as 100, constitute the bases on which the two principal series were computed. The other two series appearing in the first volume issued in 1910 are based on the method employed by Pantaleoni and have for the standard of measurement the values of imports and exports, respectively, in 1878.

## NUMBER AND GROUPING OF COMMODITIES.

In each of the two main series of index numbers the groupings adopted in the collection of the customs revenue have been followed. Within the 16 principal groups there are approximately 400 different articles, each of which in turn may comprise several varieties.

The 16 groups of commodities are as follows:

1. Spirits, beverages, oils.
2. Colonial products, spices, tobacco.
3. Chemical products, medicinal substances, resins, gums, etc.
4. Coloring and other materials for dyeing and tanning.
5. Hemp, flax, jute, and other fibrous plants.
6. Cotton.

<sup>1</sup> Società Tipografica-Editrice Nazionale (via Roux e Viarengo), Torino. The same information also was published as a supplement to *La Riforma Sociale*, Vol. XXI, September-October, 1910.

7. Wool, horsehair, and other hair.
8. Silk.
9. Wood and straw.
10. Paper and books.
11. Hides.
12. Minerals, metals and their manufactures.
13. Stone, earthen, glass, and crystal ware.
14. Cereals, flour, Italian paste, and vegetable products.
15. Animals and animal products.
16. Miscellaneous commodities.

The two index numbers of import and export values computed according to the method adopted by Pantaleoni are likewise based on commodities selected from the tariff schedules. There are 19 import and 12 export commodities as follows:

## Imports:

1. Petroleum, refined.
2. Coffee, raw.
3. Sugar, second grade.
4. Dyes, in dry state.
5. Cotton, raw.
6. Cotton cloth, unbleached.
7. Wool, natural or unwashed.
8. Woolen cloth (combed wool).
9. Woolen cloth (carded wool).
10. Hides of oxen and cows.
11. Leather.
12. Cast iron (in pigs or plates).
13. Bar iron and steel in sheets.
14. Copper, brass, and bronze.
15. Machinery (not specified).
16. Grain

## Imports—Concluded.

17. Cheese.
18. Dry goods, ordinary.
19. Dry goods, fine.

## Exports:

1. Wine in bottles.
2. Olive oil.
3. Boric acid.
4. Sulphate of quinine.
5. Soap (common).
6. Hemp, raw.
7. Silk, raw.
8. Straw braid for hats.
9. Sulphur, raw and refined.
10. Oranges and lemons.
11. Almonds (shelled).
12. Coral (polished).

## WEIGHTING.

In the computation of his two main series of index numbers Necco adopted the method employed by De Foville in following the changes in the import and export values of France from 1826 to 1880. It consists in weighting the prices of the first of any two consecutive years with the mass quantities of imports or exports of the second year. The price of the preceding year in any instance is multiplied by the mass quantity of the current year, giving what is termed the "provisional value." The price of the current year is then multiplied by the mass quantity to produce the "actual value." These provisional and actual values of the imports or exports are then summed and compared to ascertain the increase or decrease which has taken place in these values as between the two years under comparison. For example, it might be found that the import values of 1881 were 2 per cent lower than those of 1880; those of 1882, 4 per cent higher than those of 1881; those of 1883, 3 per cent lower than those of

1882; and so on. Assuming now that the import values of the year 1880 are taken as the base, or 100, the index for 1881 would be 98, since the import values in 1881 decreased 2 per cent from those of 1880. Again in 1882 the import values increased 4 per cent over what they were in 1881; that is, 4 per cent of 98, or 3.92. Therefore the index for 1882 is 98 plus 3.92, or 101.92. In like manner, since import values in 1883 were 3 per cent lower than in 1882, the index for 1883 becomes 97 per cent of 101.92, or 98.86.

It is seen that under Necco's system there is a constantly changing weight, namely, the quantity of an article imported or exported each year. No direct relationship exists between the index number of any one year and that of the basic year, since, as has been said, the relative importance of a commodity changes from year to year according to the quantity imported or exported, as the case may be.

Pantaleoni likewise employed a fluctuating weight in determining the relative importance of the commodities entering into his index number. Under his original plan there was determined each year the percentage which the value of each commodity imported or exported, as the case might be, formed of the total value of all imported or exported commodities. This figure was then used as a weight for each commodity included in the final index number. To simplify this rather laborious process from year to year, Pantaleoni suggested—and Necco followed the suggestion in extending Pantaleoni's indexes—that it would be advisable to ascertain the average import or export value of each commodity concerned over a period of years and then calculate the ratio between the average value of each commodity so ascertained and the total average value of all imports and exports over the same period and use the result as a weight for each commodity for each of the years involved in the period under consideration. Necco has done this for each of the three periods, 1890–1895, 1896–1901, and 1902–1908, in the case of imports and for each of the two periods, 1890–1898 and 1899–1908, in the case of exports.

The result of this method is that there is employed a constant weight over a limited number of years, a weight which may be termed the average importance of the particular commodity as determined by its proportionate value in the total import or export trade of the country, as the case may be.

#### TABLE OF RESULTS.

On page 32 of Necco's original work<sup>1</sup> are given the following index numbers for imports and exports, respectively. The first series in each case is Necco's own number computed according to the method of Benini. The two remaining series are those of Pantaleoni and

<sup>1</sup> *La Curva dei Prezzi delle Merci in Italia negli Anni 1881–1900.*

Benini reduced for the sake of comparison to a common-base period, that of the year 1881. Necco's figures for the years 1910 to 1912 have been supplied from the "Prezzi della Merci in Italia nel 1912," published in 1914.

## INDEX NUMBERS OF ITALIAN IMPORTS AND EXPORTS.

(Base period, 1881=100.)

## JAPAN.

## INDEX NUMBERS OF THE DEPARTMENT OF AGRICULTURE AND COMMERCE.

## PUBLICATION.

Wholesale prices, with index numbers for the same, are published annually in the reports issued by the Department of Agriculture and Commerce of Japan. These reports, which are printed in English as well as Japanese, contain various data of a statistical nature relating to the agricultural, mining, manufacturing, and other industries of the Empire and its dependencies. No text analysis is given of the tables included in the reports.

## HISTORY.

The quotations of prices, according to N. Hanabusa, director of the Japanese bureau of statistics, were not matters of record prior to 1886 except for the four standard commodities: Rice, barley, beans,

and sake, for which there were incomplete records for earlier years. The latest available report, issued in March, 1914, is the twenty-ninth of the series.

#### SOURCE OF QUOTATIONS.

Wholesale prices of the articles for which index numbers are compiled are obtained from the cities of six statistical divisions of the Empire by the Department of Agriculture and Commerce. No statement is made in the reports as to the methods of securing this information.

#### BASE PERIOD.

The base period for each year from 1901 to 1912, inclusive, is the year 1900 taken as 100. In each of the reports for this series of years, except the one issued in 1905, index numbers are computed for the years from 1900 to two years earlier than the date of publication. For example, the report published in 1908 contains index numbers for the years 1900 to 1906, inclusive. The latest report, issued in 1914, comprises index numbers for the years 1904 to 1912 only, 1900 being still retained as the base or 100.

The report of 1905, which is the earliest one available, uses the year 1887 as a base or 100 and shows average annual prices and index numbers for each year for the several commodities from 1887 to 1903 inclusive. In the case of a few commodities for which data for 1887 were lacking, a subsequent year was used as the base. There is no general index number in this volume for the groups of commodities as in those for succeeding years.

#### PRICES: HOW SHOWN AND COMPUTED.

Average annual prices are published for each commodity taken separately for all years subsequent to and including 1900. In the report of 1905 there is no grouping of the commodities, while in those for other years the commodities are divided into three main groups—food, clothing, and material.

Following the average annual prices of the different articles for the Empire as a whole, there is a table showing for each commodity the average monthly price and the average price for the year of that commodity in each of the principal cities of the several statistical divisions and in the country at large, all data being for the year prior to the one preceding the publication of the report.

#### NUMBER AND CLASS OF COMMODITIES.

Sixty-five commodities are quoted in the report for 1912, which is the latest year for which data are available. Leaf tobacco was not quoted after 1905, nor cut tobacco after 1907.

<sup>1</sup> Bulletin de l'Institut International de Statistique, tome XIX, 3<sup>e</sup> livraison, p. 227.

The 65 commodities, including both raw and manufactured articles, are as follows:

Rice, superior.	Calico.
Rice, medium.	Silk tissue, for lining.
Rice, inferior.	Kaiki silk.
Barley.	Petroleum.
Naked barley.	Coal.
Wheat.	Firewood.
Soy beans.	Charcoal.
Small red beans.	Rapeseed oil.
Salt.	Mino paper.
Soy (sauce).	Hanahi paper.
Miso (sauce, soy beans, rice, water).	Indigo (Japanese).
White sugar, domestic.	Balk (beam) pine.
White sugar, foreign.	Balk (beam) sugi.
Brown sugar, domestic.	Balk (beam) keyaki.
Brown sugar, foreign.	Balk (beam) fir.
Sake (rice liquor).	Plank, pine, 6 bu (.7155 inch) thick.
Tea.	Plank, sugi, 6 bu (.7155 inch) thick.
Bonito (fish), dried.	Plank, pine, 4 bu (.477 inch) thick.
Beef.	Plank, sugi, 4 bu (.477 inch) thick.
Eggs.	Log, pine.
Milk.	Log, sugi.
Umehoshi (pickled plum).	Shingles.
Takuwan (pickled radish).	Sleeper, chestnut.
Ginned cotton, domestic.	Sleeper, Hinoki.
Ginned cotton, foreign.	Pig iron, domestic.
Cotton yarns, domestic.	Pig iron, foreign.
Cotton yarns, foreign.	Nails, foreign.
Raw silk, superior.	Straw.
Raw silk, medium.	Hay.
Raw silk, inferior.	Dried sardine (for manure).
Hemp.	Herring (for manure).
Bleached cotton fabric, domestic.	Rapeseed cake.
Grey shirting, foreign.	

#### DESCRIPTION AND GROUPING OF COMMODITIES.

In the report for 1904 and in subsequent issues the commodities for which average yearly prices and index numbers are given are divided into three groups: (1) Food, etc.; (2) clothing; (3) materials. Under food the following articles are listed: Rice, barley, naked barley, wheat, soy beans, red beans, salt, sake, soy (soy-bean sauce), miso, tea, bonito (dried fish), beef, eggs, milk, umehoshi (pickled plum), takuwan (pickled radish), sugar (4 grades), tobacco (2 grades)—a total of 23 articles.

Under clothing are listed ginned cotton (2 grades), cotton yarns (2 grades), raw silk, hemp, bleached cotton fabric, gray shirting, calico, silk tissue, kaiki silk—11 articles in all.

Under materials are listed the following: Petroleum, coal, firewood, charcoal, rapeseed oil, paper (2 grades), indigo, beams (4 grades),

planks (4 grades), logs (2 grades), shingles, sleepers (2 grades), pig iron (2 grades), nails, straw, hay, manure (fish, 2 grades), rapeseed cake—altogether 29 articles.

As previously stated, leaf tobacco was discontinued after 1905 and cut tobacco after 1907.

#### SUBSTITUTIONS AND ADDITIONS.

So far as the reports show, no substitutions of a particular grade or quality of an article for another grade or quality of the same article or for a different article have been made at any time. Additions to the list of articles have apparently been made from time to time as data became available. In all such cases the average price for the earliest year for which data were available was taken as the base, or 100. No additions have been made since 1901, in which year logs (pine and sugi<sup>1</sup>) appear to have been included for the first time.

#### INTERPOLATION.

No interpolation of prices has been made in any of the reports so far as can be determined. In cases where prices for a particular month in a given locality were lacking, the averages for the year and for the country at large have been based on the data for the remaining months and localities.

#### WEIGHTING.

There is no attempt at weighting any of the commodities for which index numbers have been computed, apart from the inclusion in the tables of several grades of the more important articles.

#### TESTING.

No comparison of these index numbers with those for other countries has been made in the reports, nor have other means of testing their accuracy been employed, so far as the published results show.

#### TABLES OF RESULTS.

The index numbers for average wholesale prices of four staple articles, viz, rice, barley, beans, and sake,<sup>2</sup> from 1881 to 1909, inclusive, are shown in the following table published in the bulletin of the international statistical institute.<sup>3</sup> This table was compiled by the director of the Japanese imperial statistical bureau, Mr. N. Hanabusa, and is based on data collected annually during the months of March, June, September, and December from six principal cities of the Empire by the minister of agriculture and commerce. Only medium grades of the articles for which quotations were secured have been included in the compilation.

<sup>1</sup> A genus of evergreen trees of the pine family.

<sup>2</sup> A native beer made from rice.

<sup>3</sup> Bulletin de l'Institut International de Statistique, tome XIX, 3<sup>e</sup> livraison, p. 239.

## INDEX NUMBERS FOR FOUR PRINCIPAL COMMODITIES, 1881 TO 1909.

Year.	Rice.	Barley.	Beans (Japanese).	Sake (rice wine, clear).	General index.
1881.....	100	100	100	100	100
1882.....	84	88	102	89	90
1883.....	60	63	77	78	72
1884.....	52	59	61	75	64
1885.....	64	64	64	64	77
1886.....	56	55	57	80	66
1887.....	52	46	58	83	66
1888.....	48	41	57	78	61
1889.....	61	47	71	90	69
1890.....	90	72	78	85	83
1891.....	75	70	74	84	78
1892.....	77	64	72	84	78
1893.....	78	64	79	83	79
1894.....	91	72	81	91	87
1895.....	90	73	84	102	92
1896.....	103	71	93	118	103
1897.....	129	94	113	146	129
1898.....	145	117	119	170	147
1899.....	108	85	123	165	133
1900.....	126	84	115	192	147
1901.....	127	72	108	201	149
1902.....	133	81	104	201	150
1903.....	153	113	110	205	164
1904.....	143	137	147	208	172
1905.....	137	123	146	223	175
1906.....	155	85	139	239	189
1907.....	173	108	149	240	189
1908.....	167	113	134	253	192
1909.....	139	103	117	251	180

The following table, compiled from the 28th and 29th reports of the Japanese Department of Agriculture and Commerce, shows the index numbers for each of the three groups—food, clothing, and materials, and for the three groups combined, by years, from 1900 to 1912. The indexes for the groups as a whole apparently were obtained by taking the simple average of the index numbers for all articles included in the three groups reported.

## INDEX NUMBERS FOR THE THREE PRINCIPAL GROUPS OF COMMODITIES, 1900 TO 1912.

Years.	Food.	Clothing.	Materials.	All groups combined.
1900.....	100	100	100	100
1901.....	98	100	95	97
1902.....	102	98	92	97
1903.....	111	102	94	101
1904.....	124	109	95	108
1905.....	135	120	100	118
1906.....	129	123	101	114
1907.....	135	120	110	122
1908.....	136	120	113	122
1909.....	133	119	107	118
1910.....	132	124	110	130
1911.....	139	133	114	126
1912.....	154	130	119	138

<sup>1</sup> For index numbers of the separate commodities of each group see the statistical reports of Department of Agriculture and Commerce for 1911 and 1912.

## NETHERLANDS.

## INDEX NUMBERS OF THE NETHERLANDS STATISTICAL OFFICE.

## HISTORY AND PUBLICATION.

This index of wholesale prices has been prepared by the Netherlands Statistical Office and appeared for the first time in the monthly journal of that office in June, 1914.<sup>1</sup> It grew out of a compilation of tables on wholesale prices presented by the Statistical Office in its yearbook of 1913, and covered the years 1885 to 1913; it is being continued in the monthly journal of this same office.

## SOURCE OF QUOTATIONS.

Price quotations are reported from the different wholesale markets, the number and place of these markets not being specifically mentioned. Monthly price quotations are averaged annually.

## BASE PERIOD.

The base period is 1893, the average price of that year representing 100.

## NUMBER AND DESCRIPTION OF COMMODITIES.

There are twelve commodities for which separate index numbers are given; no general index for all commodities combined has been presented. A graphical presentation is shown for each of the commodities in four groups: (1) Wheat, maize, and rye; (2) crude grain alcohol, rapeseed, and flaxseed oil; (3) oleomargarine (best quality), coffee (Java), and beet sugar; (4) petroleum, tin (Banca), and refined grain alcohol.

## WEIGHTING.

A simple arithmetical average has probably been employed, no mention being made of any kind of weighting.

## TABLE OF RESULTS.

Index numbers for each of the twelve commodities are shown in the table which follows.

## NEW ZEALAND.

## INDEX NUMBERS OF JAMES W. McILRAITH.

## PUBLICATION.

This index, which is based on the wholesale prices of certain important articles in New Zealand from 1861 to 1910, was published by the Government of that Dominion in 1911 in "The Course of Prices in New Zealand," by James W. McIlraith. It is stated in the introduction to the volume that the author intends to continue the tables from year to year, the results to appear annually in the "New Zealand Official Yearbook."<sup>1</sup>

## HISTORY.

The report is the result of a post-graduate research in economics at Canterbury College. It has two main objects: (1) To measure the changes in the general level of prices, year by year, since 1860; and (2) to attempt to ascertain the causes of the changes in the local price level. In the absence of any official index numbers for New Zealand the study was undertaken in the hope that it would "help all engaged in the solution of those practical problems of social life in which the changes in the purchasing power of money are an important factor."<sup>2</sup>

## SOURCE OF QUOTATIONS.

The author states that prices for all imported goods and for a few colonial products have been obtained at Wellington, the geographical and political center of New Zealand, while for all the cereals (including flour) and for pastoral products he has used prices at Christchurch, a city in the heart of the agricultural district of New Zealand. He further states, however, that while it seemed inadvisable to use Wellington prices for certain articles for certain years and then to use the prices from some other city for the same articles for other years, the nature of things demanded that the principle of continuity must be subordinated to that of accessibility. The data contained in the report were secured mainly from Wellington and Christchurch newspapers: "The New Zealand Trade Review and Price Current" (Wellington), "The Press" (Christchurch), and "The Lyttleton Times" (Christchurch) being the principal sources of information.

## BASE PERIOD.

The base or standard period is the decade 1890-1899. The author at first felt inclined to use 1867-1877, because this would have enabled

<sup>1</sup> An examination of the yearbooks for 1911, 1912, and 1913, however, fails to disclose any data bearing on this subject.

<sup>2</sup> The Course of Prices in New Zealand, James W. McIlraith, p. 3.

him to compare his figures more directly with those of Sauerbeck, but he decided that the period was too early in the development of New Zealand and that the data were insufficient. He found the decade chosen a period of comparatively stable prices, the average being almost identical with that for the 20 years 1886-1905.

#### PRICES: HOW SHOWN AND COMPUTED.

Wholesale prices for the articles upon which the index number is based were taken quarterly, during the first week of January, April, July, and October, or as near as possible to those dates. The simple average of the four prices was taken as the average price for the year. From these averages the simple average for 1890-1899 was computed and was taken as the base, or 100, the prices for each of the years included in the report being reduced to percentages of this figure. For each year the percentages representing the prices of the several articles were then added together and the result divided by the number of articles. The resulting figure is the general index number for the year.

#### NUMBER AND CLASS OF COMMODITIES.

The index number from 1887 to 1910 is based on the prices of 45 commodities, both raw and manufactured. Previous to 1887, according to the tables, the number of articles included was smaller and varied from time to time, being lowest in 1861 and 1862, when only 33 articles were represented. Since 1875 the index number has in every year been based on 41 or more commodities. The author states that his aim has been to make the list include, as far as data were available, the articles of the greatest importance in the trade of the country. He considers his selection of commodities superior to the selections of Sauerbeck and the Economist, because in his judgment these indexes contain undue proportions of raw materials.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

Concerning nearly all of the 45 articles the statement is made that only the best grade is quoted. Further description of the articles, as far as given, appears in the following list which classifies the 45 commodities under 8 heads:

##### *Agricultural products (5 articles).*

Wheat, best on Christchurch market.	Oats, best on Christchurch market.	
Flour, best brands of New Zealand roller flour.		Oatmeal, first-class New Zealand manufacture.
Barley, best on Christchurch market.		

*Pastoral products (8 articles).*

Wool, best merino, greasy. <sup>1</sup>	Lamb, carcasses exported. <sup>2</sup>
Wool, best half-bred, greasy. <sup>1</sup>	Bacon, best New Zealand product.
Beef, best quality, Addington (Christ-church) sales yard.	Cheese, best New Zealand product.
Mutton, carcasses exported. <sup>2</sup>	Butter, best New Zealand product.

*Liquors (5 articles).*

Beer (ale), Bass's "Dog's Head."	Claret (in bond).
Whisky, Teacher's (in bond).	Brandy, Hennessy's (in bond).
Port, Superior (in bond).	

*Beverages (3 articles).*

Tea, Congou, fine.	Cocon, Van Houten's.
Coffee, ground.	

*Oils (3 articles).*

Kerosene.	Castor oil.
Linseed oil (boiled).	

*Minerals (6 articles).*

Iron, galvanized, "Orb" brand (26 gauge).	Zinc.
Iron, bar.	Wire, black fencing, No. 8.
Lead, sheet.	Coal, Newcastle (New South Wales), on ship.

*Materials (7 articles).*

Cement, Portland.	Hops, Nelson (New Zealand). <sup>3</sup>
Soap, New Zealand.	Soda, carbonate.
Matches, plaids.	Soda crystals.
Candles, Price's London Sperm.	

*Other foods (8 articles).*

Sugar, Auckland (New Zealand), refined No. 1. <sup>4</sup>	Sago.
Currants.	Salt, Liverpool, fine.
Sultanas (raisins).	Salmon, in tins.
Rice.	Pepper, white.

**SUBSTITUTIONS AND ADDITIONS.**

The substitution of one description of an article for another description can not, except in a few cases, be traced in the report, owing to the vagueness of the descriptive terms employed. It appears quite probable, however, from the extensive period of time covered by the tables that a considerable number of such substitu-

<sup>1</sup> The quotations are prices of New Zealand wool at the London wool sales, minus freight from New Zealand, as reported by the London agents of H. Watson & Co., one of the principal wool-broking firms in New Zealand.

<sup>2</sup> Prices are deduced from estimated values of carcasses exported, as published in the "Statistics of New Zealand."

<sup>3</sup> This kind is quoted in later decades; Kentish is quoted in earlier periods.

<sup>4</sup> Best imported sugar was quoted prior to the opening of the Auckland refinery.

tions must have been made. In a number of instances additions to certain groups of commodities have been made since the initial year of the series. In such cases the index numbers for the added articles have been carried into the total of index numbers for the year and this total divided by the number of articles to obtain the level of prices for that year.

#### INTERPOLATION.

Much difficulty was experienced in securing data for the earlier years covered by the report, and for years prior to 1875 there was an occasional quotation lacking which the author deemed it necessary to supply by an interpolated figure. He thus describes his method of interpolation.

"I examined the price of the particular commodity in preceding and succeeding years. If those prices showed a continuous rise or fall, that was strong evidence of the probability of the missing price being one of an uninterrupted series. To test this probability, I referred to similar products which would most likely vary in price in the same manner as the commodity whose price was missing; and if the price movement in these commodities was in the same direction as the movement in the latter one, I presumed that the missing price would most probably vary in the same manner as the price of the similar articles in the same year. This method was applied chiefly where there was a causal connection between the fluctuations in the prices of the two articles, e. g., where both were produced from the same raw material (as galvanized iron and bar iron), or where one was raw material and the other the finished product (as wheat and flour), or where the production of both would be affected by the same causes, as by drought (in the case of wheat and oats, mutton and beef)."<sup>1</sup>

All index numbers based on interpolated prices are inclosed in brackets.

#### WEIGHTING.

The author does not attempt to assign definite weights to all commodities. He has, however, quoted prices on more than one variety of certain articles considered as of great importance. He illustrates as follows: "Thus, I have taken three cereals, and to emphasize the importance of wheat I have taken flour as well. I have sought to give wool adequate representation by including two kinds, greasy merino and greasy half-bred. Iron is represented by bar iron and galvanized iron, while meat is represented in a similar manner by beef, mutton, lamb, and bacon."<sup>2</sup>

<sup>1</sup> The Course of Prices in New Zealand, James W. McIlraith, p. 29.

<sup>2</sup> Idem, p. 29.

## TESTING.

The tables of the report compare the index numbers derived by the author with—

(1) A series of index numbers based on the median instead of the simple arithmetic mean.

(2) The figures of the Economist and Sauerbeck reduced to the New Zealand basis: Annual average prices 1890–1899 = 100.

(3) Index numbers indicating the local movements in certain related phenomena, as, for example, the marriage rate, the bankruptcy rate, world gold production, and New Zealand gold production.

The third set of comparisons is made by single years; the first and second are made both by single years and by decades.

## TABLE OF RESULTS.

The first eight tables of the report show for the several groups of commodities and for each year the index numbers by articles, and also the prices from which the index numbers were computed.

The next table summarizes the data contained in the preceding tables by showing the index number for the total of all articles.

Other tables compare the New Zealand results with the figures of Sauerbeck and the Economist (1) in their original form, and (2) reduced to the New Zealand basis: Average annual prices 1890–1899 = 100.

Tables similar to these show index numbers for decades (e. g., 1861–1870, 1862–1871, 1863–1872, etc.) instead of for single years.

In the two succeeding tables are shown the New Zealand index numbers for farm products and for nonfarm products (1) by single years, and (2) by decades.

The remaining tables show for New Zealand (1) an annual index number of prices based on the volume of foreign trade and the tonnage of vessels carrying such trade, (2) an annual index number of prices based on the volume of foreign trade per head of population, (3) a comparison of index numbers of prices (*a*) of farm products and (*b*) of all commodities with the index numbers of the marriage rate and the bankruptcy rate, and (4) the index numbers (*a*) of the gold production of the world, (*b*) the gold production of New Zealand, and (*c*) the price of wheat. The last table also gives the New Zealand wheat yield per acre, in bushels.

The table showing the comparison of the index numbers for New Zealand derived by the author with those of Sauerbeck and the Economist reduced to the same base period, and also with index numbers based on the median, instead of the arithmetic mean, is reproduced herewith.

The author has this to say concerning the foregoing table: "A general review of this table shows a marked similarity in the movements of columns 1 and 3. The fluctuations in both columns are parallel, i. e., a rise or fall in both is synchronous. The index numbers are fairly even in both columns, and particularly so since 1872, the numbers in column 4—those calculated by the median—being on the whole slightly lower than those in column 1, thus indicating that exceptional variations have been of the nature of a rise more often than of a fall."

## NORWAY.

## INDEX NUMBERS OF EINAR RUUD.

## PUBLICATION AND HISTORY.

This index of wholesale prices, based on the prices of imports into Norway, was first published in 1911 in the official journal of the Norwegian Labor Office,<sup>1</sup> No. 9-10 of that year. It covers a period from 1880 to 1910, but whether or not it has since been brought down to date is not known, although the prices on which it is based continue to be published in the annual summary of commercial statistics issued by the Norwegian office of general statistics.<sup>2</sup>

<sup>1</sup> Sociale meddelelser (fortsettelse av maanedsskrift for socialstatistik) utgit av Socialavdelingen under Departementet for sociale saker, handel, industri og fiskef. Christiania, 1911-1915. 1ste aargang, Nr. 9-10, 1911, pp. 136-149.

<sup>2</sup> Norges handel, 1908- (Statistique du commerce de la Norvege pendant l'annee 1908-) Utgit av det Statistiske centr. bureau. (Norges officielle statistik, V, 37, 116.)

## SOURCE OF QUOTATIONS.

The summary of commercial and customs statistics alluded to presents the average annual prices of some 135 different commodities imported into the Kingdom each year, and from this list the compiler of the index has selected 39 articles for inclusion in his series. The prices of these articles are obtained from a number of manufacturers and wholesalers in different parts of the Kingdom.

## BASE PERIOD.

The base period chosen extends from 1891 to 1900. This period was selected, it is explained, because it contained both a rising and a falling tendency of prices, not only in Norway but also in foreign countries, and therefore, when taken as a whole, may be regarded as representing average market conditions.

## NUMBER AND CLASS OF COMMODITIES.

The 39 articles chosen from the larger list of 135 imports are divided into five groups: (1) Food commodities; (2) grains and flours; (3) imports from the East; (4) manufactured products; (5) miscellaneous. Group I includes beef, pork, cheese, oleomargarine, eggs, and potatoes; Group II, barley, oats, wheat, rye, also hulled and prepared barley and oats, and flour or meal ground from the above grains; Group III includes coffee, tea, sugar (two kinds, loaf and granulated), tobacco (smoking and chewing), and rice; Group IV is made up of wool yarn (plain and dyed), cotton yarn (single and several twist), cotton cloth or goods (three kinds, printed, dyed and bleached, and unbleached); and Group V includes petroleum, coal and coke, dressed skins or leather, pig iron, steel, bar and hoop iron, zinc, lead, and tin.

## WEIGHTING.

In the construction of the index a simple arithmetic average is employed, there being no weighting. The total index is the mean of the indexes for each of the five groups.

## TABLE OF RESULTS.

The following table, which appears in the journal of the Norwegian Labor Office for September and October, 1911 (No. 9-10)<sup>1</sup> shows in detail the main results of this series of index numbers, as published.

<sup>1</sup> Maanedsskrift for socialstatistik. Udgitt av det Statistiske Centralbyraa, 1ste aargang, Nr. 9-10, 1911, pp. 141-148.

## RUSSIA.

INDEX NUMBERS OF MINISTRY OF COMMERCE AND INDUSTRY,  
PETROGRAD.

## PUBLICATION.

The Ministry of Commerce and Industry of Russia publishes annually a "Summary of Prices for Commodities in Representative Russian and Foreign Markets," in which is included an index number based on the average annual prices of the various articles under consideration. Wholesale prices are used in this summary.

## HISTORY.

The history of the index number shown in connection with the prices can not be learned from the translations of the reports at hand.

## SOURCE OF QUOTATIONS.

Quotations of prices on Russian and foreign exchanges as printed in the bulletins of these exchanges are used as the original material for compilation. In the absence of exchange quotations for some of the articles, information has been secured from special periodicals such as: "Commerce and Industry," "Baltische Wochenschrift," "Iron and Coal Trades Review," etc. Prices for cereals in some markets, as well as data on freight charges and insurance premiums on cereal freight, are taken from the reports of the Bureau of Commerce in Cereals of the Department of Commerce which compiled them from telegrams of its special agents. They have been supplemented by quotations from the bulletins of local exchanges, and are to be found on the last pages of the 1908 report. Prices of dutiable foreign articles on foreign markets are given without the inclusion of the Russian customs duties; those articles the prices of which include customs duties are marked with a star. Prices on Russian markets are always given including custom duties.

## BASE PERIOD.

The average price for the ten-year period, 1890-1899, taken as 100, is used as a base.

## PRICES: HOW SHOWN AND COMPUTED.

The following is a translation of the introduction to the summary of 1908:

The present bulletin (1908) of wholesale prices contains data relating to the principal commodities in Russian and foreign markets and is compiled in the same way as the preceding issues. In addition to detailed prices for each month of the present year, the average prices for each of the preceding years—1907, 1906, 1905—are given, as well as the general average prices for the 5 years, 1900-1904, and the 10 years, 1890-1899.

In the summary table (see pp. ii-vii) average annual prices of the principal commodities in Russian markets for each year of a period of 19 years, 1890-1908, are shown. For each article included in this table the prices in one or two of the representative markets furnishing sufficiently accurate data are given. In order to minimize the influence of local conditions on the prices of the principal cereals, general average prices are quoted for several markets combined in the following three groups:

1. Markets in northern ports (Petrograd, Reval, Riga, and Libau).
2. Markets in southern ports (Odessa, Nicolaie, Taganrog, Rostov on Don, and Novorossysk).
3. Markets in central Russia (Moscow, Yelts, Samara, and Saratov).

For purposes of comparison of the average prices for the years 1890-1895 with those of the following years, the former have been converted from paper into gold values (1 ruble equals 1-15 imperial), taking as a base the average quotations for the corresponding years as follows:

	Rubles in gold.					
	1890	1891	1892	1893	1894	1895
100 rubles in paper money equals.....	108.86	100.14	94.58	97.91	100.53	101.22

#### NUMBER AND CLASS OF COMMODITIES.

Prices and index numbers were reported in 1912 for 66 commodities. Wholesale prices are used in the computation of the tables for all years. Both raw and manufactured articles are included.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

The 66 articles for which prices were secured in 1912 are combined in the following 7 groups or classes:

1. Cereals and by-products.
2. Cattle and cattle products.
3. Oils.
4. Spinning materials.
5. Minerals (including petroleum, etc.).
6. Drugs and chemicals.
7. Groceries.

The commodities quoted are as follows:

#### 1. Cereals and by-products.

Articles.	Markets of—
Rye.....	Northern ports and southern ports.
Wheat.....	Riga (Russian), southern ports, and central Russia.
Oats.....	Northern ports, southern ports, and central Russia.
Barley.....	Southern ports.
Corn.....	Odessa.

Articles.	Markets of—
Peas.....	Saratov and Rybinsk.
Buckwheat.....	Yelts.
Buckwheat groats.....	Moscow, large groats.
Millet.....	Moscow, from Orenburg and Ural.
Wheat flour.....	Moscow (highest quality in Saratov).
Rye flour.....	Moscow (sifted).
Bran.....	Libau, of wheat, medium; Rybinsk, of wheat.
Malt.....	Moscow, imported.

*2. Cattle and animal products.*

Large horned cattle.....	Petrograd, highest quality.
Small cattle.....	Petrograd, calves, hogs.
Meat.....	Petrograd, best quality, beef; Moscow, pork.
Hides, steer.....	Moscow, gray.
Lard.....	Petrograd, for gruel.
Butter.....	Moscow, fresh made of warmed cream.
Herring.....	Riga, Scotch.

*3. Oils.*

Flaxseed.....	Petrograd, 95 per cent.
Hempseed.....	Orel.
Sunflower seed.....	Saratov, for oil.
Linseed oil.....	Moscow.
Hempseed oil.....	Petrograd.
Sunflower-seed oil.....	Moscow.
Rapeseed oil.....	Warsaw, raw.
Olive oil.....	Petrograd.
Oil cake, flax.....	Riga.
Oil cake, hemp.....	Riga.

*4. Spinning materials.*

Flax.....	Riga, Livonian; Petrograd, from Vologda.
Hemp.....	Riga; Orel, pure.
Cotton.....	Moscow, from Fergan; of American seeds.
Cotton yarn.....	Petrograd, spool, No. 14-20.
Coarse calico.....	Petrograd, 16 verahok <sup>1</sup> wide by 585 arahin <sup>2</sup> long, 80 funt <sup>3</sup> in weight.
Wool.....	Moscow, medium quality.

*5. Minerals.*

Coal.....	Petrograd, from Newcastle; Rostov on Don, Anthracite.
Naphtha.....	Baker, near wells; Moscow.
Crude naphtha.....	Baker, near wells; Moscow.
Petroleum.....	Baker, on ships and in kettles; Moscow.
Cast iron.....	Petrograd, southern.
Iron.....	Petrograd, sheet iron, Russian bar.
Copper.....	Petrograd, foreign, in bars.
Tin.....	Petrograd, in bars.
Zinc.....	Petrograd, Silesian.
Lead.....	Petrograd, ordinary ingots.

<sup>1</sup> 1 verahok equals 1.76 inches.

<sup>2</sup> 1 arahin equals 0.77 yard.

<sup>3</sup> 1 funt equals 0.9 pound.

6. *Drugs and chemicals.*

Articles.	Markets of—
White lead.....	Petrograd.
Indigo.....	Moscow, from Bengal.
Dry paints.....	Moscow, blue.
White resin.....	Petrograd.
Tragacanth.....	Moscow, highest quality.
Borax.....	Petrograd, in crystals.
Vitriol.....	Petrograd.
Potash.....	Petrograd.
Soda (caustic).....	Petrograd.
Saltpeter.....	Petrograd, from Chile.
Sulphur.....	Petrograd, in lumps.

7. *Groceries.*

Salt.....	Rybinak.
Granulated sugar.....	Kiev, in territory of the Southwestern R. R.
Lump sugar, refined...	Kiev, lump.
Coffee.....	Petrograd, round, various qualities.
Tea.....	Moscow, from Kyakhta.
Rice.....	Odessa, Patua, highest quality.
Pepper.....	Petrograd, black, from Singapore.
Currants.....	Riga.
Almonds.....	Odessa, from Messina.
Hops.....	Riga, from Bavaria.

## SUBSTITUTIONS AND ADDITIONS.

No substitutions or additions have been made so far as the reports disclose, but certain commodities reported in 1908 were dropped in subsequent years. This changes the index number for the group affected and also the general index number.

Alcohol and woolen yarn were dropped in 1909. Tea in 1909-1912, inclusive, is reported in a different market and with a different unit of measure from that used in 1908.

In the group "Cattle and animal products" lard is given an average price of 6.90 for the year 1909 in the report for that year, while in all subsequent reports it is quoted at 6.60 for 1909. In the 1912 report new index numbers are published for the group embracing "Cereals and by-products" and for the "Groceries" group, also for all groups combined, owing to the substitution in some cases of other markets for those carried in reports for preceding years.

## INTERPOLATION.

If any interpolations of prices have been made, they are not called to the attention of the reader.

## WEIGHTING.

Whatever weighting there is consists in the use of a number of different descriptions of the same commodity.

TABLE OF RESULTS.

Index numbers for each of the 7 groups into which the total number of commodities is divided, together with a general index for the 66 commodities taken as a whole, are shown in the following table compiled from the 1912 report:

INDEX NUMBERS FOR 7 GROUPS OF COMMODITIES (66 ARTICLES) AND GENERAL INDEX FOR ALL COMMODITIES.

Year.	Cereals and by-products.	Cattle and cattle products.	Oils.	Spinning materials.	Minerals.	Drugs and chemicals.	Groceries.	General index for all commodities.
1880-1889.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
1890.....	108.2	99.3	102.0	100.9	109.8	103.0	113.3	105.4

## SPAIN.

## INDEX NUMBERS OF FRANCISCO BERNIS.

## PUBLICATION.

A series of index numbers based on food prices in Spain is found in *El Problema de las Subsistencias* (The Problem of the Food Supply), by Francisco Bernis, professor of political economy in the University of Salamanca, which was published in pamphlet form in 1911. The volume is divided into two parts, the first of which refers to prices of food commodities in general use, and the second to laws and regulations in regard to food commodities, their distribution and prices.

A general study of the variations of prices is included in the first part, but the information does not show whether wholesale or retail prices are considered.

## HISTORY.

The author of *El Problema de las Subsistencias* made a survey of the various attempts of the State to deal with the subject of the increased cost of living as it affected the working classes. The results

of this survey were published at the request of the Asociación de Patronos Mineros de Vizcaya, in order that this association might make a study of the strike in 1910 of the miners of that locality. The tables of prices and of index numbers contained material that was considered sufficiently comprehensive to be used as a basis for the work undertaken by the association.

#### SOURCE OF QUOTATIONS.

The data on which Bernis based his tables were taken from unpublished records of the chief statistician of Barcelona, and, in the absence of information of an official character, from the works of college directors and others who have made a study of the subject.

Some specific sources of information are as follows:

The Asociación de Patronos Mineros de Vizcaya published in 1907 a pamphlet in which appears a table of comparative prices of food-stuffs for 1903-1907. The document is entitled "El trabajo en las minas de Vizcaya."

El Instituto de Reformas Sociales issued a bulletin in 1904 relative to labor conditions in the mines of Vizcaya, which gives a table of comparative prices for 1893-1903.

The Camara Oficial de Comercio of Madrid, in its report entitled "Información publica sobre el problema de las subsistencias," 1905, presents a study of variations of prices for several years.

"El presupuesto de reconstrucción," by Garcia Alix, gives under the title of "Subsistencias" average prices for Spain.

#### BASE PERIOD.

The year 1901, taken as 100, is used as the base period.

#### PRICES: HOW SHOWN AND COMPUTED.

Prices are shown for yearly periods, and cover the years 1891 to 1908, inclusive. The compiler states that "the prices for forming my indexes are wholly those which I possess, though these had to be corrected and completed."<sup>1</sup> At times market prices were used when there were no others available.

#### NUMBER AND CLASS OF COMMODITIES.

The table of prices includes 13 articles of food, as follows: Wheat, potatoes, bread, rice, pulse (chick-peas), kidney beans, beef, mutton, pork, codfish, sugar, salt, and coffee.

#### DESCRIPTION AND GROUPING OF COMMODITIES.

There is no separation of the commodities into groups except in the case of meats, of which three kinds are listed. No description of the articles is given.

<sup>1</sup> El Problema de las Subsistencias, Francisco Bernis, p. 57.

## WEIGHTING.

Two index numbers are computed for all articles combined, one unweighted and the other weighted.

The weighting is accomplished by dividing the commodities into four groups, each of which represents a certain percentage of the whole number as regards importance in consumption. The four groups are as follows:<sup>1</sup>

	Per cent.
I. Wheat, potatoes, bread.....	30
II. Rice, pulse (chick-peas), kidney beans.....	30
III. Beef, mutton, pork, codfish.....	20
IV. Sugar, coffee, salt.....	10

The importance assigned to each of these four groups is based on an estimate of the relative values of the articles of food as consumed in the family of a laborer.

## TESTING.

The only test made of the index numbers is their comparison with index numbers for the United Kingdom, Germany, and France. Diagrams are added to show the variations of these index numbers during the same period of time.

## TABLES OF RESULTS.

The following table shows the variations in the weighted relative prices of the different food articles in Spain for the years from 1891 to 1908, inclusive. Weighted and unweighted price relatives for all commodities combined are also shown in the last two columns:

VARIATIONS IN WEIGHTED RELATIVE PRICES OF FOOD COMMODITIES IN SPAIN  
1891 TO 1908, BY YEARS.<sup>2</sup>

(Base period, 1901=100.)

Year.	Potatoes.	Wheat.	Bread.	Rice.	Pulse (chick-peas).	Kidney beans.	Beef.	Mutton.
1891.....	85.2	82.2	100.0	101.5	89.4	85.8	86.1	92.3
1892.....	77.5	96.3	120.0	102.3	76.5	85.3	80.9	94.1

1908.....	96.9	101.5	117.5	75.0	112.3	102.6	102.4

A second series of index numbers is contained in a pamphlet published by Bernis in 1914<sup>1</sup> as a contribution to the current literature on the economic condition of the working classes in Spain. Under the subject of cost of living (*el coste de la vida*) the author traces the movement of food prices through a period of years by means of index numbers based on commodities purchased by contract in certain charitable institutions of Salamanca.

The information was gathered directly from the records of the institutions and covered the years from 1892 to 1913, inclusive. The base period selected was the year 1901.

Average yearly prices, both absolute and relative, are shown for 17 articles, viz, flour, bacon, pulse (chick-peas), beef, potatoes, wine, codfish, vermicelli, rice, sugar, milk, vinegar, lard, oil, pepper, salt, and charcoal. There is no grouping of commodities and no description of kinds or grades is furnished.

Three general index numbers are published. The first two are un-weighted and were obtained by computing the arithmetic mean and the geometric mean respectively of the several price ratios based on the prices in 1901. In calculating the weighted index the relative price for each article on the 1901 base was multiplied by a figure denoting its importance in family expenditure, as determined by a study of 13 family budgets collected by the author, and the sum of the products thus obtained was divided by the sum of the weights. The 3 index numbers are as follows:<sup>2</sup>

<sup>1</sup> Estudios estadísticos. Contribución a la investigación de la situación económica de los trabajadores en España. Barcelona, Tipografía "La Académica" de Serra Hnos y Russell, Ronda Universidad, 8.

<sup>2</sup> Estudios Estadísticos, pp. 10-13.

(Base period, 1901=100.)

Year.	Arithmetic mean.	Geometric mean.	Weighted Index.

#### CONFERENCE ON INDEX NUMBERS OF THE INTERNATIONAL INSTITUTE OF STATISTICS, SEPTEMBER, 1911.

At the thirteenth session of the International Institute of Statistics held at The Hague, September 4 to 8, 1911, the section of economic statistics devoted a part of its time to a discussion of index numbers.<sup>1</sup> In order to secure a basis for a possible international study of the variations of prices and the increased cost of living, a circular had been sent to the members of the section in the various countries early in January of that year, requesting each to prepare a table of index numbers. A free translation of the circular reads as follows:

At the present time the high cost of living is disturbing many countries. Economists are endeavoring to ascertain how far the phenomenon may be attributed to unfavorable seasons, to the effect of labor and social legislation, to the supply of gold in the world, etc. But it is for statisticians primarily to measure and correlate the fluctuations in prices as far as possible. And since the thirteenth session of the International Institute of Statistics this year will bring together at The Hague specialists from many countries, it seems desirable to solicit from them answers to this question of universal interest.

We wish to request each of our colleagues to prepare a complete series of index numbers for the common period 1881-1910 (namely 30 years), and beg of them to send in with the results obtained a statement of what prices were used for the computations and what methods were employed. Of course, it is understood that whatever supplementary explanations may accompany the tables will be most welcome.

<sup>1</sup> Bulletin de l'Institut International de Statistique, tome XLX, 1<sup>e</sup> livraison, p. 66.

## FORM OF TABLE.

The average of the prices for the year 1881 being taken as 100, the general course of prices in the following years is as follows:

Year.	Index number.
1881.....	100
1882.....	
1883.....	
* *.....	* *
1910.....	

Signature: \_\_\_\_\_

Address: \_\_\_\_\_

When the section of economic statistics met on September 5, Mr. Waxweiler's report for Belgium was presented printed in completed form. The substance of all the papers received had been summarized by Mr. de Foville for the use of the section, and he also read the following list of index numbers submitted:

*Germany.*—Mr. Zahn (for Bavaria), Mr. Zimmermann (for Brunswick), Mr. Hartwig (for Lübeck).

*Austria-Hungary.*—Mr. Mario Alberti (for Trieste), Dr. von Jankovich.

*Belgium.*—Mr. Hector Denis, Mr. Armand Julin, Mr. Nicolai, Mr. Sauveur, Mr. Waxweiler (for Brussels).

*Denmark.*—Mr. Michael Koefoed.

*France.*—Mr. de Foville, Mr. Levasseur (for Lycées français), Mr. L. March.

*Italy.*—Mr. Achille Necco.

*Netherlands.*—Mr. Falkenburg (for Amsterdam), Mr. Methorst.

*Australia.*—Mr. Coghlan (for New South Wales).

*Canada.*—Mr. Godfrey.

*Japan.*—Mr. Hanabusa.

Since no papers were sent from England Mr. de Foville included in his summary the English index numbers of Sauerbeck and a few others.

When it was proposed to have these tables of index numbers printed in the Bulletin of the International Institute of Statistics and to take up their discussion at the next meeting of the institute after the members had had an opportunity to study the fluctuations of prices shown in the tables and possibly the causes that produced them, some discussion arose as to the period of years selected, the disparity appearing between similar tables by different authors, and the choice of wholesale or retail prices.

Upon the first point Mr. Denis (Belgium) objected to the year 1881 being taken as the beginning of the series of index numbers, particularly if the various tables constructed were to be used in attempting to get an insight into the possible causes of the fluctuation of prices. He summed up the periods of rise and fall of prices as evidenced in all tables of indexes and pointed out that 1881 was a year in the midst

of a period of depression of prices going back as far as 1874, and suggested that therefore the authors of the tables submitted be asked to lengthen their series by going back to an earlier date.

Mr. de Foville (France) justified the use of 1881 as the initial year upon two grounds: The period of 30 years thus included from 1881 to 1910 represents approximately the lifetime of a generation, and in going back even for so short a period it had been found difficult to secure the earlier data in many countries. Furthermore, 1881 is placed halfway between the extreme high level of prices in 1873 and the lowest depression following it in 1896.

No action was taken and Mr. Waxweiler (Belgium) raised the next question as to the disparity between similar tables. He noted that while the curves for the price of wheat in Belgium as presented by Mr. Sauveur and by himself are almost identical, those of meat are quite different<sup>1</sup> and that it might be desirable to have authors adjust such discrepancies before publishing the tables. But Mr. Sauveur explained the disparity in the indexes for meat by the fact that Mr. Waxweiler chose his prices from the purchases of charitable institutions in Brussels, whose consumption is exceptional in that it is confined to meat of first quality and does not include pork. Both of these meats are exactly the ones that presented the greatest fall in prices after 1881, while his own prices covered consumption of meat in general, which includes a large proportion of second quality meat as well as a large quantity of pork that is used particularly in country districts. He concluded by saying that the explanations added by the authors to their tables seemed sufficiently complete to clear up such points, but also called attention to the fact that some general rule ought to be followed by the authors of index numbers to insure the comparability of the statistics so gathered. It was finally voted to print the tables with such comments as their respective authors thought desirable to add in view of this discussion so that the minutes of the meeting of this section as printed in the bulletin would clear up the matter of the comparability of the tables even to the least experienced of readers.

The question of including retail as well as wholesale prices was brought up by Mr. Bowley, a member of the section, upon the ground that the fluctuations in retail prices for both long and short periods were less abrupt than those of wholesale prices. Mr. Lucien March (France) called to the attention of the member the extreme difficulty of identifying the class of articles sold at retail—a difficulty which existed even in wholesale trade as exemplified by the disparity pointed out by Mr. Waxweiler previously. He concluded with the statement that as long as the level of retail prices followed that of wholesale prices in general, it justified the exclusive use of the more easily

<sup>1</sup> See Bulletin de l'Institut International de Statistique, tome XIX, 2<sup>e</sup> livraison, pp. 209, 216, et 217.

ascertained wholesale prices. He added that in his opinion the task before the Institute was to compare the tables already prepared, to note the discrepancies that appeared, and to ascertain the reasons for such discrepancies so that the Institute would be in a position to prescribe the precautions that ought to be taken in comparing the prices of different countries or of different periods of time. With this the discussion of index numbers practically closed.

\* Among the tables of index numbers submitted to the meeting of the Institute in response to the request quoted, the following already existed in printed form and were not reprinted in the Bulletin of the International Institute of Statistics:

H. Denis.—Index numbers of moral phenomena.

A. Julin.—Indexes of the economic progress of Belgium from 1890 to 1908, which appeared in the *Revue des Questions Scientifiques*.

E. Levasseur.—Cost of living, which appeared in the *Revue Economique Internationale*.

M. Alberti.—The cost of living, salaries and wages in Trieste.

Irving Fisher.—The purchasing power of money.

A. Necco.—The course of prices of commodities in Italy.

A. Sauerbeck.—Prices of commodities in 1910, which appeared in the *Journal of the Royal Statistical Society*.

Réne Théry.—Variation of prices in India, which appeared in the *Économiste Européen*.

A brief description of the tables printed in Bulletin XIX of the Institute follows:

#### GERMANY.

##### Bavaria.

The course of prices in Bavaria, 1881-1910. By Dr. Fr. Zahn, director of the Royal Bavarian State Statistical Office. pp. 126-131.

Dr. Zahn utilizes the results of an investigation by the German Imperial Statistical Office concerning household budgets. Of the 19 articles that were thus found to represent a typical family budget, he expands flour into 2 independent varieties, meat into 3, and groups the rest into 7 articles, thus obtaining a list of 12 food articles instead of 19, but he retains the relative proportion of consumption for each as ascertained by the imperial office.

Three tables are presented by him:

1. Prices of food articles (12 as explained above) per pound (one-half kilogram). These actual average annual prices were obtained from the reports of the Bavarian Statistical Office.

2. The course of the cost of living in Bavaria, 1881-1910. The prices of Table 1 are here multiplied by the per cent of consumption in the typical budget for the respective food articles.

3. The general index number for each year is computed from the totals of Table 2 and for the base year, 1881.

##### Brunswick (city).

The course of prices in the city of Brunswick, 1881-1910. By F. W. R. Zimmermann, city treasurer. pp. 132-133.

The single table presented gives a general index number computed for the base year 1881 for each year from 1881 to 1910. The average annual prices used for this computation were obtained from the monthly average prices of the city for 14 food articles and straw and hay.

#### LÜBECK.

The course of prices in Lübeck, 1886-1910. By Dr. Hartwig, director of the statistical office of the free Hanse town of Lübeck. pp. 134, 185.

The table begins with the year 1886 because data previous to that were not available. Therefore the general index number had to be computed on the base 1886 instead of 1881 as requested by the Institute. Average annual prices are given for 27 food articles, 10 wholesale and 17 retail. The sources of quotations were various.

#### AUSTRIA-HUNGARY.

Index numbers of 45 commodities in the Austro-Hungarian Monarchy, 1867-1909 (according to the system of Sauerbeck, partially revised by the author). By Dr. Béla von Jankovich, vice president of the Hungarian Chamber of Deputies. pp. 136-156. These tables are discussed in detail on pages 166 to 168 of this bulletin.

#### BELGIUM.

Tables of index numbers. By Hector Denis, professor in the University of Brussels. pp. 157-195.

Besides the comparative tables and the tables of exports already described on pages 172 to 175 of this bulletin, more than 20 tables are presented to illustrate various places of economic history. These tables make no attempt to confine themselves to the period 1881-1910 or to the base period 1881, as requested by the circular of the Institute.

Paper on index numbers for Belgium. By Edmond Nicolai. pp. 195-200.

The paper presents a table and chart covering 40 articles placed in eight groups, with the various sources of prices designated in a separate column. Index numbers are given yearly from 1881 to 1910, both for individual articles and for groups; 1881 is used as the base.

Variation in prices in Belgium from 1881 to 1909. By Maurice Sauveur. pp. 201-209

The two tables of index numbers and chart submitted by Mr. Sauveur are based on the wholesale prices published in the *Annuaire Statistique de la Belgique*—official figures ascertained by the Department of Agriculture. The indexes are computed on the base period 1881. Table I presents yearly unweighted indexes of 18 articles—16 foods, and hay and straw. Table II groups these into cereals, vegetables, both groups combined, and meats; and weights the indexes for each group in proportion to the amount of home consumption.

Course of prices of 10 articles of current consumption in Brussels, 1881-1910. By Prof. E. Waxweiler, director of the Solvay Institute of Sociology. pp. 210-218.

Prof. Waxweiler prepared his two tables and six charts in strict conformity with the purpose of the International Institute in requesting such information, namely a possible international study of the causes of the increase in the cost of living. He used as a base the year 1881, computed indexes for the period 1881-1910, and selected such commodities as he considered most important of those available influencing the cost of living. His prices were taken from the accounts of a large charitable institution of Brussels and are the yearly average wholesale prices paid by that institution through public bids. The 10 commodities selected by him are meats, eggs, wheat, potatoes, butter, milk, linen cloth, cotton cloth, coal, and wood. Table I shows the average yearly prices and Table II the yearly index number of each commodity and also a general index number for each year. The charts present these index numbers graphically.

## DENMARK.

\* Variation of prices in Denmark from 1881 to 1910. By M. Koefoed, director of the Danish Bureau of Statistics. pp. 219-220.

The single table submitted shows only the yearly general index number from 1881 to 1910, 1881=100, of 38 commodities, unevenly weighted. For computing this index number the 38 commodities were arranged in three groups, according to their importance in commerce, and the prices of those in group 2 were multiplied by 2 and those of group 3 by 3. No prices are given, but they were taken from the *Statistique de l'Échange extérieur*.

## FRANCE.

Variation of prices in France from 1881 to 1910. By A. de Foville, member of the Institute of France and chief counsellor of the Government auditing department (*Cour des comptes*). pp. 220-222.

A double table of index numbers shows indexes for imports and for exports separately. These were computed from values calculated by the administration of customs (*Direction Générale des Douanes*). To ascertain the variation in the value of exports and imports the administration of customs first multiplied the total imports and exports, respectively, in any given year by the price for the previous year, then also by the price for the given year, and from the two computed the per cent rise or fall of the price of exports and of imports. These proportions form the basis for the table that appears, but no details of commodities, prices, etc., are given.

Wholesale prices in France (index numbers computed for the base period 1881). By Lucien March, director of the statistical office of France. pp. 222-223.

The table is computed for three index numbers—one for food articles, one for miscellaneous articles, and one for the two together, or a general index number. Forty-three articles were used, almost the same as those of Sauerbeck, but they are not specified. Sauerbeck's method of computation also was used and the prices are those fixed every year by the permanent commission on customs values.

## NETHERLANDS.

Variation of prices in Amsterdam from 1881 to 1911. By Ph. Falkenburg, director of the bureau of statistics. pp. 224-229.

A table of index numbers is presented for 23 food articles separately and an index number for each of three groups into which these are classified, as well as a general index number for all of them. The base period used is 1881. A second table gives the actual prices of these 23 food articles besides 10 other commodities. Both tables are based on the contract prices paid by the Amsterdam municipal hospitals.

Variation of prices in the Netherlands. By H. W. Methorst, director of the Central Bureau of Statistics of Netherlands. pp. 230-234.

Table I presents index numbers for eight food articles based on contract prices paid by two prisons, three workhouses, and an asylum for the insane. 1881 is used as the base, and the table covers the period from 1881 to 1911. Besides the separate index numbers for each article a general index is also given.

For Table II data previous to 1903 were not available. It covers the period from 1903 to 1911 and gives relative prices for four kinds of bread and a general index number for all. The base period is 1903 and the prices were obtained from bakeries in cities of 10,000 population or over.

Table III presents index numbers for 29 commodities from 1893 to 1911, based on retail prices of six cooperative societies. 1893 is used as the base.

## CANADA.

Variation of prices in Canada from 1890 to 1910. pp. 235-236.

Reliable data previous to 1890 could not be secured in Canada and the table of general index numbers presented is computed on the base period 1890-1899 and was

taken from the report of R. H. Coats of the Department of Labour as presented in the volumes entitled "Wholesale Prices in Canada, 1890-1909," and "Wholesale Prices in Canada, 1910."

#### JAPAN.

Statement of prices in Japan. By N. Hanabusa, director of the bureau of general statistics. pp. 237-243.

Table I gives average wholesale prices, index numbers, and a general index for four food articles—rice, barley, Japanese beans, and sake (rice wine)—for the years 1881-1909. 1881 is used as the base. The prices were taken from the figures obtained by the Ministry of Agriculture and Commerce in its quarterly investigations into prices in six large cities.

Table II gives average prices, index numbers, and a general index of 26 commodities selected from among 60 which the Ministry of Agriculture and Commerce reports regularly since 1886. The table covers the years 1886-1909. 1886 is taken as the base. A more complete account of the index numbers compiled by Mr. Hanabusa appears on pages 288 to 292 of this bulletin.

#### NEW SOUTH WALES.

Variation of prices in New South Wales. By T. A. Coghlan, general agent for New South Wales, p. 244.

The single table presents a general index number from 1860 to 1910 with 1881 as the base. No explanations accompany the table.

### SELECT BIBLIOGRAPHY OF ADDITIONAL INDEX NUMBERS.

[The publications that are starred were not available for reference either in the Library of Congress or in the library of the Bureau of Labor Statistics, and statements concerning them are based upon information found in the works of other authors.]

Avenel, Vicomte Georges d'. *Histoire économique de la propriété, des salaires, des denrées, et tous les prix en général depuis l'an 1200 jusqu'en l'an 1800.* Paris, 1894-1912. 6 vol.

"Apparently draws, very roughly, an average of the mass-quantities of goods purchasable with given amounts of silver at different epochs from 1200 to 1890."<sup>1</sup>

Barker, Wharton. *The course of prices.* (Published in *The American*. Philadelphia. 1896-1900.)

Beginning in January, 1896, quarterly index numbers and a general index are given for 13 groups of 100 articles, going back as far as the year 1891 and continued until October, 1900, shortly after which the publication of *The American* was discontinued. The prices of January 1, 1891, were used as base.

Bourne, Stephen. *On some phases of the silver question.* (Published in the *Journal of the Royal Statistical Society of London*, 1879.)

The chapter "On the fall of prices" presents a general index number for the 22 articles used by *The Economist*, but combines the four kinds of cotton into a single index and adds coal. The indexes are computed yearly from 1847 to 1879 for the base period 1845-1850.

On index numbers. (Published in the Reports of the British Association for the advancement of science for 1885 and 1888 and concluded in the *Journal of the Royal Statistical Society of London* in 1889.)

Yearly index numbers and a general index are given for the total imports and exports of Great Britain from 1876 to 1888, computed for the base year 1883. This base year was taken as equal to 1,000. The component parts of this 1,000 and of the index numbers for 1888 are shown in two tables, one for imports and one for exports.

<sup>1</sup> C. M. Walsh, *The Measurement of General Exchange-Value.*

Bulgaria. Index nombres des marchandises les plus importantes et des salaires des ouvriers, d'après leur prix dans les villes principales de la principauté. (Published by the Direction Générale de Statistique in the "Statistique des prix moyens des animaux domestiques, des principaux articles alimentaires et des salaires des ouvriers en Bulgarie pendant la période décennale 1893-1902. Sofia. 1906.)

Index numbers are given for 99 articles computed yearly from 1893 to 1902 for the base period 1888-1892.

— Annuaire statistique du royaume de Bulgarie. (Published by the Direction Générale de Statistique. Sofia. 1<sup>re</sup> année 1910. 2<sup>e</sup> année 1911.)

A yearly general index is given for 86 articles from 1899 to 1910, computed for the base 1894-1898.

Burchard, H. C. Tables are published in the Finance Reports of the Secretary of the Treasury, Washington, 1881, 1882, 1883, and in the Report of the Director of the Mint on the production of the precious metals in the United States in 1884.

In these reports a series of tables appears comparing the yearly average prices of over 80 articles in each of the years 1881, 1882, 1883, and 1884, with the average prices of each of the preceding years, respectively, and also with the average prices of the 56 years preceding 1881.

Calwer, Richard. Das Wirtschaftsjahr. Annual numbers. Jena. (These are published in two parts and several years late. The last year to appear is 1909, of which Part I was published in 1912 and Part II in 1914.)

Beginning with the year 1907, a permanent chapter is published on "Einkommen und Konsum. Waarenpreise." Three tables of index numbers are given for 17 articles of consumption in Germany. One shows the monthly index numbers for these articles for the year, another the general index computed as far back as 1895, and a third the yearly index for each article computed back to 1903.

\*Carli, G. R. Del valore e della proporzione de' metalli monetati con i generi in Italia prima delle scoperte dell' Indie col confronto del valore e della proporzione de' tempi nostri. —, 1764.

Prices of grain, wine, and oil in the year 1750 are reduced to proportions of those in the year 1500.

Commons, Prof. John R. Comparative prices, freight rates, stock quotations for the years 1876 to 1900, shown by percentages or index numbers. (Published in No. 1 of the Quarterly Bulletin of the Bureau of Economic Research. New York. 1900.)

Yearly index numbers are given for 66 articles individually and also as arranged in 5 groups and 10 subgroups from 1878 to 1900, computed for the base period 1878-1889.

— Wholesale prices by monthly and quarterly averages, 1896 to 1900 and 1878 to 1882. Shown by index numbers and diagrams. (Published in No. 2 of the Quarterly Bulletin of the Bureau of Economic Research. New York. 1900.)

Monthly index numbers are given for the same 66 articles from 1896 to 1900 and also by groups and subgroups, as above, and for the same base. Quarterly index numbers are given for the groups and subgroups only and for the years from 1878 to 1882 only.

Daggett, Elsworth. A quarter of a century of prices. Salt Lake City. 1896.

By the use of a "commodity unit" he computes yearly index numbers and a general index for 21 articles in the United States from 1870 to 1894, for the base period 1870-1872.

Drobisch, Moritz Wilhelm. Ueber die Berechnung der Veränderung der Waarenpreise und des Geldwerthes. (Published in the Jahrbücher für Nationalökonomie und Statistik. 1871.)

He illustrates his own method of computing index numbers by applying it to Hamburg prices of 26 articles for the years 1854 and 1867.

- \*Dutot, ———. *Réflexions politiques sur les finances et le commerce.* The Hague. 1738.  
Prices at the time of Louis XII and of Louis XIV are compared.
- \*Ellis, A. The money value of food and raw materials. (Published in the London Statist. June 8, 1878.)  
Index numbers are given for 25 articles for the years 1859, 1869, 1873, 1876, and the first quarter of 1878, computed for the base year 1869.
- Eulenberg, Dr. Franz. *Die Preissteigerung des letzten Jahrzehnts.* (Published in the *Vorträge der Gehe-Stiftung zu Dresden.* 4. Band, 1912.)  
Yearly index numbers and a general index are computed for 9 groups of 45 articles from the prices of the "*Vierteljahrsheft zur Statistik des Deutschen Reiches, 1912,*" from 1899 to 1911 and for the base period 1889-1898.
- Evelyn, Sir George Shuckburgh. An account of some endeavors to ascertain a standard of weight and measure. (Published in the *Philosophical transactions of the Royal Society of London, 1789, part I*; reprinted in the *Bulletin de l'Institut International de Statistique, 1887.*)  
Index numbers are given for wheat, butcher's meat, day labor, and 12 agricultural products at irregular periods from 1050 to 1800, computed for the year 1550 as base.
- Flux, A. W. Some old trade records reexamined: A study in price movements during the present century. (Published in the *Transactions of the Manchester Statistical Society.* London. 1898-99.  
General index numbers are given for the total export values and total import values of British products, for seven-year periods from 1798 to 1869, computed for the base year 1694. The same is done for France from 1873 to 1897 and for Germany from 1891 to 1897.
- \*Forbes, Francis B. The causes of depression in the cotton industry of the United Kingdom. London. 1886. (Occasional paper of the Bimetallic League, No. 3.)  
The period 1884-85 is compared with 1875-76 for 12 classes of exports and 7 of imports.
- Foville, Alfred de. *La mouvement des prix dans le commerce extérieur de la France.* (Published in a series of articles in the *Économiste Français, July 5, 19, Nov. 1, 1879, and Apr. 29, 1882.*)  
Index numbers are given for imports and exports of France from 1847 to 1880, computed for the base year 1862.
- Giffen, Sir Robert. Report to the Secretary of the Board of Trade on recent changes in the amount of the foreign trade of the United Kingdom and the prices of imports and exports. (Parliamentary Document. Session 1885, c. 4456.)  
Index numbers are given at irregular intervals of one to four years for 67 exports from 1840 to 1883 and for over 100 imports from 1854 to 1883, computed for the base 1861. These exports and imports include several varieties of many articles. Earlier and less complete forms of these tables appeared, also as parliamentary documents, in 1879 (c. 2247), 1880 (c. 2484), and 1881 (c. 3079).
- \*Hanauer, A. *Études économiques sur l'Alsace ancienne et moderne.* Vol. II. *Denrées et salaires.* Paris. 1878.  
The average of 10 articles purchasable with one franc in 1351-1375 is compared with that of 1851-1875 at 25-year periods from 1351 to 1875.
- Hansard, Luke. On the prices of some commodities during the decade 1874-1883. (Published in the *Journal of the Institute of Bankers.* London. 1885.)  
Yearly index numbers are given for 25 articles in Great Britain from 1874 to 1885, computed for the base year 1874.

Hooker, R. H. The course of prices at home and abroad 1890-1910. (Published in the Journal of the Royal Statistical Society. London. 1912.)

Various index numbers of Great Britain, United States, Germany, France, Belgium, and Italy are all reduced to the same base period, 1890-99, and a comparison is made between the resulting indexes for several groups of articles and also for 16 separate articles.

Hungary. Preisstatistik. (Published by the K n. ungarische statistische Zentralamt in "Ungarische statistische Mitteilungen. n. s. bd. 44. Budapest. 1913.)

In the neighborhood of 40 tables of index numbers of wholesale prices are included in this exhaustive study of prices. Many tables are computed for three different bases: 1867-1877, 1890-1899, and 1899-1903, and for five-year as well as for yearly periods, while in a few cases even monthly indexes are shown. Index numbers of the most important grains are given for the leading countries of Europe and the United States. For Hungary individual articles as well as a list of articles are given for the country as a whole and for different markets. General index numbers are also given for various countries for the several bases, usually based on existing price studies in those countries.

Inama-Sternegg, Dr. Karl T. M. von. Der R ckgang der Waarenpreise und die oesterreichisch-ungarische Handelsbilanz 1875-1888. (Published by the k. k. Statistische Zentral-Kommission in the "Statistische Monatschrift." XVI Jahrgang. 1890.)

Index numbers are given for 30 imports and 26 exports of Austria-Hungary from 1880 to 1888, computed yearly for the base period 1875-1879.

The same author also published a pamphlet "Beitr ge zur Geschichte der Preise," in which he describes the various tables of index numbers and prices that were submitted for exhibition in the exposition in Vienna in 1878.

India. Prices and Wages in India. Compiled in the office of the Director General of Commercial Intelligence. Calcutta. 1913.

Half-yearly and yearly index numbers are given for staple articles of import, 11 at Calcutta and 3 at Bombay, from 1873 to 1913, for the base 1873. The same is done for exports for prices selected mainly at Calcutta.

Another table compares the index of prices of 9 articles at Calcutta and London, yearly from 1888 to 1912, base 1873.

Index numbers are also given for 8 staple articles in Calcutta in January of each year from 1888 to 1913, base 1873.

Yearly index numbers are also computed for the prices of articles of consumption of troops at 16 stations in India from 1887 to 1912, base 1882-83, for each station and for each article.

\*James, Henry. The state of the nation. Causes and effects of the rise in value of property and commodities from the year 1790 to the present time. London. 1836.

Average prices of British produce from 1798 to 1823 as compared with 1694 are given.

Jevons, Prof. William Stanley. Investigations in currency and finance. London. 1909. (Reprints of various articles published earlier, including: A serious fall in the value of gold ascertained and its social effects set forth, 1863; The variation of prices and the value of currency since 1782, 1865; The depreciation of gold, 1869.)

Three sets of index numbers appear. One series gives yearly index numbers for 39 articles from 1845 to 1865, computed for the base period 1845-1850. The second gives yearly index numbers and a general index for 12 groups of 40 articles from 1762 to 1865, computed for the base 1782. The general index for these 40 articles is also given in 10-year periods from 1789 to 1869, but for the base year 1849. The third series gives a general index for 60 leading articles of commerce from 1847 to 1869, computed yearly for the base 1849.

Juergens, Carl H. Movement of wholesale prices in New York City, 1825-1863. (Published in the quarterly publications of the American Statistical Association. 1910-11.)

Yearly index numbers are given for each of 74 articles whose prices were taken from the report of the Secretary of the Treasury for June 30, 1863. A general index is also given for each year for the whole period covered, 1825-1863. The year 1860 is used as base.

Julin, Armand. The economic progress of Belgium from 1880 to 1908. (Published in the Journal of the Royal Statistical Society. 1912.)

In a presentation of a large number of index numbers that do not concern prices there appear also yearly index numbers for exports, imports, agricultural products, and several other articles from 1880 to 1908, computed for the base year 1884.

Levasseur, Émile. La question de l'or. Paris. 1858.

Yearly index numbers are given for 2 groups (8 articles) of exports and 3 groups (28 articles) of imports from 1847 to 1856, computed for the base 1826.

March, Lucien. Le mouvement des prix et l'activité productrice. (Published in the Bulletin of the Bureau de la Statistique Générale. Paris. 1911.)

In making a comparative table of general index numbers for France, Germany, England, and the United States he computes a yearly index for France of 43 articles out of Sauerbeck's 45 from 1840 to 1910 and for the base period 1891-1900.

Mulhall, Michael George. History of prices since the year 1850. London. 1885.

Several tables of index numbers are given. Yearly, 5-yearly, and 10-yearly index numbers are given for total imports, total exports, and both together from 1854 to 1884, base 1841-1850. Likewise 10-yearly indexes are given for each of 50 imports and 50 exports from 1850 to 1884, base 1854-1860. Another table shows 10-yearly index numbers for each of 7 agricultural products and 7 manufactured products from 1782 to 1884, base 1782-1790.

Netherlands. Prijzen van levensmiddelen te Amsterdam. Amsterdam. 1911.

(Published by the Bureau van statistiek in the "Statistische mededeelingen uitgegeven door het Bureau van statistiek der gemeente Amsterdam" No. 35.)

The contract prices paid by the municipal hospitals are used for computing the yearly index numbers of 26 articles from 1881 to 1911 for the base year 1881. A general index is also computed.<sup>1</sup>

Maandschrift van het centraal bureau voor de statistiek. 1913; 1914.

The series of index numbers published in the 1913 volume is based on the contract prices paid by 5 large institutions. Yearly indexes and a general index are given for 9 articles, computed for the base year 1881, from 1881 to 1912.

New South Wales. Index numbers of exports at Sydney, principal articles of domestic produce. Published in the Official Yearbook 1913.

Index numbers are given for two groups and also for the total of exports, computed yearly from 1901 to 1913, for the base year 1901. The monthly index numbers for this table are also given for the year 1913, and this latter table likewise appears in the Monthly Statistical Bulletin of New South Wales.

Palgrave, Sir R. H. Inglis. Currency and standard of value in England, France, and India, and the rates of exchange between these countries. (Published in the Third Report of the Royal commission appointed to inquire into the depression of trade and industry. London. 1886.)

The index numbers of the Economist are presented as reduced to the base 1865-1869 and computed for each article yearly and five-yearly from 1870 to 1886. The same is done for 22 articles in France, corresponding as nearly as possible to those of the Economist and computed from 1865 to 1885. Each of these series is then weighted to form a new table. The series for India gives yearly, five-yearly, and general indexes for 10 articles (also as arranged in three groups) from 1870 to 1884 for the same base 1865-1869.

<sup>1</sup> Compare pp. 293 and 294 of this bulletin.

Porter, George Richardson. *The progress of the nation, in its various social and economic relations, from the beginning of the nineteenth century.* London. 2d edition. 1847.

A monthly general index number is given for 50 articles in London, also for wheat separately, from January, 1833, to December, 1837. This is computed upon the prices of the first week in January, 1833, as base.

Powers, Le Grand. *Modern variations in the purchasing power of gold; an investigation into the extent and causes of recent price variations.* (Published in the fifth biennial report of the Bureau of Labor of the State of Minnesota. St. Paul. 1896.)

Index numbers are given for 16 articles of farm production for the years from 1862 to 1895, computed yearly for the base year 1872, and combined in a great variety of ways, i. e., by States, years, groups of articles, etc.

Rogers, J. E. Thorold. *A history of agriculture and prices in England from the year after the Oxford parliament (1259) to the commencement of the continental war (1793); compiled entirely from original and contemporaneous records.* Oxford. 1887. Vol. V.

The prices of 39 articles are compared for the periods 1541-1582, 1583-1702, 1583-1642, 1643-1702, the average prices of each period in turn being compared with those of the period immediately preceding.

Rumania. *Bulletin statistique de la Roumanie. La Statistique Générale.* Bucharest. 1911.

The rise and fall per cent of prices as compared with the period immediately preceding is shown semi-monthly, monthly, quarterly, semiannually, and annually from 1908 to 1911 for five grains.

Tyszka, Carl von. *Die Bewegung der Preise einiger wichtiger Lebensmittel, insbesondere der Fleischpreise in Deutschland und im Auslande, unter besonderer Berücksichtigung Englands.* (Published in the *Jahrbücher für Nationalökonomie und Statistik.* 3. F. 42. 1911.)

Index numbers are computed for 10-year periods for 10 articles (8 meats, wheat, rye) from 1881 to 1910, for the base 1891-1900. Other tables compare similar indexes for Berlin with those of London, New York, Paris, from 1895 to 1910.

United States. *Index numbers of production per capita and price of important farm products.* Published by the Department of Agriculture in *The Crop Reporter*, Washington. April, 1912.

These index numbers are not given in figures, but are represented by graphs. Yearly indexes for the total of 10 important crops are computed from 1866 to 1911 for the base period 1866-1908.

Walras, Léon. *Études d'économie politique appliquée.* Lausanne and Paris. 1898.

Yearly index numbers and a general index are given for 20 articles at Berne, Switzerland, from 1871 to 1884, computed for the base period 1871-1878.

Wasserab, Karl. *Preise und Krisen. Gekrönte Preisschrift "Über die Veränderungen der Preise auf dem allgemeinen Markt seit 1875 und deren Ursachen."* Stuttgart. 1889.

Index numbers are computed for 31 articles in Germany by comparing the average price of the period 1882-1885 with that of 1861-1870 as base.

Whitehead, Thomas Henderson. *The critical position of British trade with Oriental countries.* (Paper read before the Royal Colonial Institute, February 12, 1895, and reprinted from the proceedings of the Institute.)

On page 35 of this volume the author presents a table of yearly index numbers compiled by W. S. Wetmore, of Shanghai, from official returns, covering 20 staple commodities of China from 1874 to 1893, computed for the base year 1873.
