## INTRODUCTION

BY THE COMMITTEE ON RECENT ECONOMIC CHANGES

PRICES and price relationships almost completely dominate the economic life of the nation. Fundamental to human welfare as are the activities of production, distribution and consumption of goods, it is prices as a medium of control which, in their ceaseless changes and readjustments, stimulate or retard the very processes by which our industrial and commercial life is carried on, and govern the direction of human effort.

Yet not until recent years have economists and the business community fully realized the basic importance of the role played by prices, or clearly sensed the necessity of studying their behavior and influence in the cyclical course of our economic progress.

In 1927 Dr. Frederick C. Mills made an important contribution toward an understanding of the nature and function of prices in a volume entitled *The Behavior of Prices*, published by the National Bureau of Economic Research. In 1932 he made a further contribution in a second work entitled *Recent Economic Tendencies*, published in cooperation with the Committee on Recent Economic Changes. In the present volume, also sponsored by this Committee, Dr. Mills has rounded out this study of prices by carrying it through the recent period of recession and revival.

These three works, covering the relationship and movement of prices since the beginning of the century, represent

## INTRODUCTION

a monumental undertaking in economic research in which the Committee has been happy to participate. They form an objective exploration into the realm of prices and their nature and influence, by an economist aloof from the pressure and the prejudices of business or politics; and they comprise a record that doubtless will serve as source material for generations.

The present volume is of particular significance because it is an authentic record of price movements made concurrently during the course of a serious depression and the following period of revival. It is a revealing picture of the price mechanism as it has been affected by, and in turn has affected, the pattern of our economic life during a time of great stress.

For the scientific competency of the study and the character of the material presented, together with the interpretation placed upon it and the conclusions drawn, the National Bureau of Economic Research is solely responsible; but it is with genuine satisfaction that the Committee on Recent Economic Changes joins in presenting so carefully prepared and comprehensive a record as this volume represents. Herein will be found the complete 'working papers' on which the author's inferences and deductions have been based, together with an explanation of the statistical method used. These afford the reader an opportunity to check or challenge for himself the soundness of the interpretations, as well as the adequacy and acceptability of the data from which they have been made.

The great value of the work is that it makes available to the producer, the fabricator, the distributor, the consumer, the economist, the leaders of labor, and the agencies of government, a factual basis for a more intelligent attack on the fundamental problem of economic stability.

It is this aim that has motivated the Committee on Recent

## INTRODUCTION

vii

Economic Changes in all the studies it has sponsored or in which it has participated, as represented by the two-volume *Recent Economic Changes* (1929); *Planning and Control of Public Works* (1930); *Economic Tendencies in the United States* (1932); *Strategic Factors in Business Cycles* (1934); *Industrial Profits in the United States* (1934), and the present volume, *Prices in Recessions and Recovery*.

In this enterprise of observing and recording recent economic experience the Committee has had the generous support and encouragement of the Rockefeller Foundation, the Carnegie Corporation, the Economic Club of Chicago, and various socially-minded groups and individuals, which support is here gratefully acknowledged.

RELATION OF THE DIRECTORS,  
TO THE WORK OF THE NATIONAL BUREAU  
OF ECONOMIC RESEARCH

1. The object of the National Bureau of Economic Research is to ascertain and to present to the public important economic facts and their interpretation in a scientific and impartial manner. The Board of Directors is charged with the responsibility of ensuring that the work of the Bureau is carried on in strict conformity with this object.
2. To this end the Board of Directors shall appoint one or more Directors of Research.
3. The Director or Directors of Research shall submit to the members of the Board, or to its Executive Committee, for their formal adoption, all specific proposals concerning researches to be instituted.
4. No study shall be published until the Director or Directors of Research shall have submitted to the Board a summary report drawing attention to the character of the data and their utilization in the study, the nature and treatment of the problems involved, the main conclusions and such other information as in their opinion will serve to determine the suitability of the study for publication in accordance with the principles of the Bureau.
5. A copy of any manuscript proposed for publication shall also be submitted to each member of the Board. If publication is approved each member is entitled to have published also a memorandum of any dissent or reservation he may express, together with a brief statement of his reasons. The publication of a volume does not, however, imply that each member of the Board of Directors has read the manuscript and passed upon its validity in every detail.
6. The results of an inquiry shall not be published except with the approval of at least a majority of the entire Board and a two-thirds majority of all those members of the Board who shall have voted on the proposal within the time fixed for the receipt of votes on the publication proposed. The limit shall be forty-five days from the date of the submission of the synopsis and manuscript of the proposed publication unless the Board extends the limit; upon the request of any member the limit may be extended for not more than thirty days.
7. A copy of this resolution shall, unless otherwise determined by the Board, be printed in each copy of every Bureau publication.

*(Resolution of October 25, 1926, revised February 6, 1933)*

## FOREWORD

RECESSION, depression and recovery in the United States over the years 1929-1936 were marked by elements as diverse and complicated as any this generation has known. To the economic forces operative in the business cycles of less troubled eras were added various residual influences of the World War, including a notable breakdown of the basis of international financial and commercial dealings and accentuation of economic ills by nationalistic political developments. Finally, the application of a far reaching program of governmental action designed to aid economic recovery introduced still other factors. A cyclical pattern loose and irregular at best was modified in important respects by these novel influences.

In seeking to follow some of the strands that run through this complex web, no attempt is made at definitive appraisal of the forces at work. This report presents a monographic treatment of certain aspects of recession and recovery in the United States during the last seven years. Various measurements constructed by the National Bureau in connection with its continuing work are of some current interest to economists and others who follow economic movements. Discussion of these and related materials falls easily into half a dozen divisions, dealing with the background of the price recession of 1929, its world setting; and the fortunes of pri-

## FOREWORD

many producers, fabricators and consumers during the disturbed years from 1929 to 1936. Although no rounded survey of the situation as a whole is made, something of unity in the price history of these various groups is found in tracing the incidence of productivity changes in manufacturing industries and their relation to changing costs and prices. This topic is developed in the final chapter.

Members of the research staff and of the Board of Directors of the National Bureau of Economic Research have aided in the preparation of this report with suggestive comments and helpful advice. I am happy to express my thanks. To my associates Charles A. Bliss and Solomon Fabricant I am particularly indebted for counsel and criticism. And with deep appreciation I acknowledge the continuing assistance given me by Miss Maude Remey and Miss Mildred Uhrbrock in the many tasks connected with the preparation of this monograph.

F. C. M.

<sup>1</sup> The figures in this column indicate the number of months by which the price turns of specific commodities precede (-) or lag behind (+) the major turns of the general index of wholesale prices.

## APPENDIX II

### DISTRIBUTION OF WEIGHTS AND CLASSIFICATIONS OF COMMODITIES IN WHOLESALE PRICE INDEX NUMBERS OF THE NATIONAL BUREAU OF ECONOMIC RESEARCH

APPENDICES II and III of *Economic Tendencies in the United States* contained annual index numbers of wholesale prices for various commodity groups, with an explanation of the procedure employed. Appendices III and IV of this volume contain some additional group index numbers for the period 1913-29 and measurements for later years and months, together with some modifications of the earlier series. The increase in the number and character of the price series available for recent years has made it possible to enlarge the sample. At the same time, some changes have been made in methods of averaging and weighting.

The index numbers for the period 1913-29 are geometric averages of relative prices, unweighted except that important commodities have been represented by more than one series of price quotations. The annual and monthly index numbers for the period from 1929 to date are weighted arithmetic averages, or their aggregative equivalents. Weights are based on average quantities produced in 1927 and 1931, and on corresponding values. Certain commodity groups, notably foods, have been reduced in weight because of their relatively heavy representation in the index.

Price series used, their weights and the details of the classifications employed are indicated below. The weights given are average values of the quantities produced in 1927 and 1931, expressed as thousandths of the total value of all the commodities included in the index.

**DISTRIBUTION OF WEIGHTS AND CLASSIFICATIONS OF COMMODITIES  
IN WHOLESALE PRICE INDEX NUMBERS OF THE NATIONAL  
BUREAU OF ECONOMIC RESEARCH**

The complete titles of the various columns are as follows:

**Column**

- (3) Weight (aggregate weight placed equal to 1000)
- (4) Products originating on American farms
- (5) Products other than those originating on American farms
- (6) Foods
- (7) Non-foods
- (8) Producers' goods
- (9) Consumers' goods
- (10) Goods entering into capital equipment
- (11) Articles of human consumption
- (12) Building materials
- (13) Fuels used in production
- (14) Producers' goods destined for human consumption
- (15) Non-durable goods
- (16) Durable goods
- (17) Fuels used in production
- (18) Crops
- (19) Animal products
- (20) Metals
- (21) Non-metallic minerals
- (22) Forest products

<sup>1</sup> Computed by the National Bureau of Economic Research from data compiled by the U. S. Bureau of Labor Statistics. For the period 1913-29 the index numbers are geometric averages of relative prices, unweighted except that prices of important commodities have been represented by more than one series. The index numbers for the period 1929-35 are weighted arithmetic averages of relative prices. (See Appendix II for weights and classifications of commodities.)

It should be noted that new series of index numbers, originally computed on the 1929 base, and differing somewhat in respect of weights and commodities included from the index numbers first computed on the 1913 base, have been spliced with the older series to give the annual measurements presented in this table. This combination leads to certain minor inconsistencies among some of the group and subgroup indexes.

<sup>2</sup> The number of price quotations represented in the averages for the different commodity groups varies from year to year as more series have become available. The entries for 1913 and 1929 are minima and maxima, respectively, for the period 1913-29. The number of quotations used for the recent years is given in Appendix IV.

## APPENDIX III

 <i>1930</i>							

<sup>1</sup> Constructed by the National Bureau of Economic Research from data compiled by the U. S. Bureau of Labor Statistics. The index numbers are weighted arithmetic averages of relative prices. (See Appendix II for weights and classifications of commodities.)

The total number of price quotations used in the computation of these weighted indexes is 680; the duplication of price series in certain classifications makes the cross totals of these entries, by groups, greater than 680. An example of this duplication is the use of identical price quotations on flour in both the producers' and consumers' classifications. Whenever such duplication occurs, an appropriate adjustment in weighting is made.

548 PRICES IN RECESSION AND RECOVERY

NOTE ON APPENDIX V

CLASSIFICATION OF COMMODITIES IN CONSTRUCTION OF INDEX NUMBERS OF SIMILAR  
COMMODITIES IN RAW AND MANUFACTURED STATE, 1913-1935

Total materials, raw	Copper ingots
Foods, raw	Lead, pig
Textiles, raw	Zinc, slab
Metals, raw	Metals, processed
Hides and skins	Iron and steel, simple processed
Petroleum, crude	Copper products
Total materials, simple processed	Lead pipe
Foods, processed	Zinc, sheet
Textiles, finished	Bread and products
Metals, processed	1913-26: Bread (5 series)
Leather	1926-35: Bread (5), crackers (2), macaroni, pretzels
Petroleum products	Flour and grain mill products
Foods, raw	1913-26: Wheat flour (10), rye flour, bran, middlings
Grains	1926-35: 'Cereal products', bran, middlings; less 'Bread and products', 'Breakfast foods', rice (2), hominy grits
Milk, fluid	Grains
Livestock and poultry	1913-35: 'Grains'
Sugar, raw	Butter, cheese and processed milk
Cocoa beans (1926-35 only)	1913-35: 'Butter, cheese and milk' less milk fluid (3)
Foods, processed	Milk, fluid
Flour and grain mill products	1913-35: Wholesale price of milk at the farm, Bureau of Agricultural Economics
Butter, cheese and processed milk	Meat packing products
Meat packing products	1913-35: 'Meats', 'Hides and skins', lard, oleo oil; less goat skins
Sugar, granulated	Livestock and poultry
Cocoa, powdered (1926-35 only)	1913-35: 'Livestock and poultry'
Textiles, raw	Sugar, granulated
Cotton, raw	1913-35: Sugar, granulated
Wool, raw	Sugar, raw
Silk, raw	1913-35: Sugar, raw
Textiles processed, yarn	
Cotton yarns	
Woolen yarns	
Silk yarns	
Textiles, finished	
Cotton goods	
Woolen and worsted goods	
Silk hosiery	
Metals, raw	
Pig iron	

Cotton goods	
1913-26: 'Cotton goods'; less 'Cotton yarns'	1926-35: 'Petroleum products', cylinder oil, lubricating oil, (2), benzine; less 'Petroleum, crude'
1926-35: 'Cotton goods', cotton rope, cotton thread, cotton twine, cotton blankets, pillow cases, sheets, table cloths; less 'Cotton yarns'	Petroleum, crude
Cotton yarns	1913-35: Petroleum, crude (3)
1913-35: Cotton yarns (5)	Agricultural implements
Cotton raw	1913-26: 'Agricultural implements'
1913-35: Cotton (3)	1926-35: 'Agricultural implements'; less forks, hoes, hand rakes, shovels, spades
Woolen and worsted goods	Simple processed iron and steel
1913-26: 'Woolen and worsted goods', less 'Woolen yarns'	1913-26: 'Iron and steel', less 'Pig iron', iron ore (2), steel scrap
1926-35: 'Woolen and worsted goods', wool blankets; less 'Woolen yarns'	1926-35: Angle bars, bar iron (2), bars (4), steel billets, bolts (4), butts, castings, pipe (3), steel plates, steel rails, rivets (2), rods, sheets (3), skelp, spikes, strips, structural steel, terneplate, tie-plate, tin plate, wire (4)
Woolen yarns	Pig iron
1913-35: Woolen yarns (3)	1913-26: Pig iron (6)
Wool, raw	1926-35: Pig iron (7)
1913-35: Wool (9)	Iron ore and coke
Silk hosiery	1913-35: Iron ore (2), coke (2), steel scrap
1913-26: Silk hose (1)	Copper products
1926-35: Silk hose (2)	1913-26: Copper sheet, copper wire
Silk yarn	1926-35: Copper sheet, copper wire, copper rods
1913-26: Silk, spun (3)	Copper ingots
1926-35: Silk, spun (3), silk yarn (3)	1913-35: Copper ingots
Silk, raw	Lead pipe
1913-35: Silk (4)	1913-35: Lead pipe
Boots and shoes	Lead, pig
1913-35: 'Boots and shoes'	1913-35: Lead, pig
Other leather products	Zinc, sheet
1913-35: 'Other leather products'	1913-35: Zinc, sheet
Hides and skins	Zinc, slab
1913-35: 'Hides and skins'	1913-35: Zinc, slab
Petroleum products	
1913-26: 'Petroleum products', cylinder oil (2), lubricating oil (2); less 'Petroleum, crude'	

## 550 PRICES IN RECESSION AND RECOVERY

Fertilizers, mixed	Paper
1913-35: 'Fertilizers, mixed'	1913-26: Newsprint, wrapping paper
Fertilizer materials	1926-35: 'Paper and pulp'; less 'Wood pulp'
1913-35: 'Fertilizer materials'	
Automobile tires	Wood pulp
1913-35: 'Automobile tires and tubes'	1913-26: Wood pulp (2)
Rubber, crude	1926-35: Wood pulp (4)
1913-35: 'Rubber, crude'	Tobacco products
Linseed oil and meal	1913-26: Tobacco, plug, smoking
1913-35: Linseed oil, linseed meal	1926-35: Cigars, cigarettes, plug, smoking, snuff
Flaxseed	Tobacco, leaf
1913-35: Flaxseed	1913-35: Tobacco, leaf

## APPENDIX VI

### PHYSICAL OUTPUT, PRODUCTIVITY, SELLING PRICES AND PRODUCTION COSTS, MANU- FACTURING INDUSTRIES OF THE UNITED STATES, 1914-1933

*(All price and cost measurements relate to changes  
per unit of product)*

YEAR	PHYSICAL VOLUME OF PRO- DUCTION		OUTPUT PER WAGE EARNER <sup>1</sup>	SELLING PRICE	COST OF MATERIALS	COST OF FABRICA- TION PLUS PROFITS		OVERHEAD COSTS PLUS PROFITS
	1914	100.0				100.0	100.0	
1919	129.5	105.1	204.0	201.9	209.0	203.2	212.6	
1921	104.5	105.9	160.7	155.5	172.8	193.7	156.5	
1923	155.8	121.6	159.2	152.8	174.5	181.8	168.5	
1925	159.5	131.1	158.2	153.1	170.7	172.6	168.6	
1927	163.3	136.6	148.2	141.1	164.8	168.5	161.5	
1929	184.4	148.6	145.2	135.7	166.5	156.7	172.1	
1931	138.1	146.7	112.6	99.8	140.0	136.7	141.4	
1933	127.5	134.8	96.3	85.3	120.3	117.0	121.6	

<sup>1</sup> Because of pronounced changes in average working hours after 1929, an index of output per wage earner is not an accurate measure of changes in productivity for the period 1929-33. Following are measurements of output per man hour worked: 1929, 100; 1931, 113; 1933, 119.

## APPENDIX VII

### VOLUME OF PRODUCTION OF RAW MATERIALS

<sup>2</sup> Index numbers constructed by the National Bureau of Economic Research.

#### APPENDIX VIII-A

### NOTES ON SOURCES OF DATA AND CONSTRUCTION OF INDEX NUMBERS RELATING TO MANUFACTURING OPERATIONS

*Production:* Index numbers are constructed by the Division of Research and Statistics of the Board of Governors of the Federal Reserve System from 60 individual series of data representing the production of about 35 industries and estimated to represent, directly or indirectly, about 80 per cent of the total industrial production of the United States. The figures are reduced to a daily average output and are presented to show actual production. No correction for seasonal movements has been made in the index numbers here employed. The monthly average for 1923-25 is the base of the original index numbers. (*Federal Reserve Bulletin*, February 1927, p. 100.)

Reference is made in the text to the fact that during the spring and early summer rise of 1933 this index, which is rather heavily weighted by basic, semi-finished manufactures, exaggerated somewhat the increase in production of manufactures at large (see *Federal Reserve Bulletin*, August 1933, pp. 467-8; January 1934, pp. 2-3). For the present purpose a correction was made in this index, for the months of June-July 1933, to render it comparable with the more comprehensive index numbers of factory employment and pay rolls. The correction was based upon data for the following manufacturing industries: iron and steel, automobiles, cigars and cigarettes, cement, leather, boots and shoes, rubber tires and inner tubes, lumber, woolen and worsted goods, cotton goods, carpets and rugs, flour, meat packing, sugar refining, petroleum refining. For these industries, for which 'value added' in 1933 constituted 24 per cent of the total 'value added' by all manufacturing industries, measurements of production,

## 554 PRICES IN RECESSION AND RECOVERY

employment and pay rolls more comparable than those available for all manufacturing industries are to be had.

A revised index of the change in volume of production for all manufacturing industries from February–March to June–July 1933 was derived on the assumption that output per man hour changed in all industries, over this period, at the same rate as in the group of 15 industries. A second, independent revision was made on the assumption that labor cost per unit of product changed at the same rate in all manufacturing industries as in the smaller group. (In making these corrections, reduced weight was given to automobiles and cotton textiles, among the 15 industries, because of peculiarities of their behavior during the recovery.) The final correction, which indicates an advance of 45 per cent in volume of manufacturing production from February–March to June–July 1933, instead of 57 per cent, as shown by the original index, was secured by averaging these two revisions.

That the assumptions on which this correction is based are reasonable is indicated by application of the methods to other periods, not affected by the unusual circumstances of early 1933. From February–March 1933 to April–May 1935 an increase of 48 per cent in the output of manufactured goods is shown by the general index; an estimate based on the above methods indicates an increase of 49 per cent. From February–March 1933 to February–March 1936 an increase of 58 per cent is shown by the general index; an estimate based on the above methods indicates an advance of 59 per cent. In the present study correction was made only for the period February–March to June–July 1933.

*Number employed and pay rolls:* Index numbers are constructed by the United States Bureau of Labor Statistics. The basic data are supplied by representative establishments in 90 important manufacturing industries of the country. For December 1935 reports were received from about 24,000 establishments employing more than 4 million workers, whose weekly earnings were about 90 million dollars during the pay period ending nearest the 15th of the month. The employment reports received cover more than

50 per cent of the total wage earners in all manufacturing industries of the country. The three-year average, 1923-25, equals 100. (*Bulletin No. 610, "Revised Indexes of Factory Employment and Pay Rolls, 1919 to 1933"*, United States Bureau of Labor Statistics, pp. 2, 4; and *Monthly Labor Review*, December 1935.)

*Average hours worked per week:* The index numbers are constructed from data compiled by the United States Bureau of Labor Statistics. The reports come from a smaller number of establishments than are covered in the monthly survey of manufacturing industries, for not all reporting establishments furnish man hour information. The figures are presented for only those manufacturing industries (87 in December 1935) for which available information covers at least 20 per cent of all the employees in the industry.

*Prices:* Index numbers are computed by the National Bureau of Economic Research from wholesale prices compiled by the United States Bureau of Labor Statistics. The weighted index for manufactured goods includes 536 price series (see Appendix III). The average for the year 1929 is used as base. For the three earlier periods an average of the index numbers of the wholesale prices of semi-manufactured and finished goods, constructed by the United States Bureau of Labor Statistics, was used. In averaging, these were weighted 1 and 6, respectively.

For the present purpose the base of each of these index numbers has been shifted to February-March 1933.

*The index of changes in gross income* is the product of indexes of changes in physical volume of production (number of units produced) and in average selling price per unit. Thus, in deriving the gross income index for June-July 1933, on February-March 1933 as base, we have

$$1.45 \text{ (production index)} \times 1.09 \text{ (price index)} = 1.58.$$

In the tables these measurements are given in relative, rather than in ratio, form.

*The index of total employment (man hours)* is the product of

## 556 PRICES IN RECESSION AND RECOVERY

indexes of number of wage earners employed and of average number of working hours per week, per person.

*The index of average output per wage earner* is secured by dividing the index of physical volume of production by the index of number of wage earners employed.

*The index of average output per man hour* is secured by dividing the index of physical volume of production by the index of total employment (man hours).

*The index of average earnings per wage earner* is secured by dividing the index of total wage disbursements by the index of number of wage earners employed.

*The index of average hourly wages* for the period 1933-36 is secured by dividing the index of total wage disbursements by the index of total employment (man hours). We should note that a change in average hourly earnings may result from an actual change in wage rates, or from a shift in the relative proportions of men working at different rates, in the total labor force. An increase in the proportion of men receiving relatively high wages will raise the average, of course, without any modification of wage rates.

*The index of average hourly wages* for the period 1929-33 is obtained directly, by splicing the hourly wage index of the United States Bureau of Labor Statistics at 1932 to that of the National Industrial Conference Board, which covers the period 1929-1932. It should be noted that mutually consistent measurements relating to hours, hourly wages and average earnings per worker from 1929 to 1933 are not available. Different samples must be employed in the derivation of these measurements.

*The index of average labor cost per unit of product* is secured by dividing the index of total wage disbursements by the index of physical volume of production.

#### **APPENDIX VIII-B**

### **COMPARISON OF INDEX NUMBERS DERIVED FROM MONTHLY DATA OF MANUFACTURING OPERA- TIONS WITH INDEX NUMBERS BASED ON RECORDS OF THE CENSUS OF MANUFACTURES**

SUPPORTING evidence that the measurements given in the preceding pages are representative of the general movements occurring in manufacturing industries of the United States is furnished by a comparison, by Census periods, of index numbers derived from the monthly series here utilized with index numbers based directly upon much more comprehensive Census records. (See page 558.) For employment and pay roll statistics the series compared are not independent, prior to the 1931-33 period, since the monthly records of the Bureau of Labor Statistics have been adjusted to biennial Census records. This process of adjustment helps, of course, to validate the measurements for the earlier periods, which are given in the text.

In only four of the comparisons are there notable differences between the measurements drawn from Census records and those derived from monthly observations. Of these, two are of some concern in the present study. The monthly data on employment show a somewhat greater change, from 1931 to 1933, than do the more broadly based Census measurements. (This same condition, it may be noted, is found in the production records over times of rapid change, as from 1929 to 1931.) Again, the 1931-33 decline in realized prices, as defined by the Census records, appears to have been greater than the decline in the quoted prices collected by the Bureau of Labor Statistics.

It is difficult to gauge the possible effects of these conditions on the measurements relating to the 1933-35 recovery. The greater

<sup>1</sup> Weighted by value of product.

<sup>2</sup> Weighted by value added.

<sup>3</sup> For the last two periods the index given is that of wholesale prices of manufactured goods, constructed by the National Bureau of Economic Research.

steadiness of the figures for all manufacturing industries would tend to make total production, total employment and total pay rolls rise somewhat less rapidly than do production, employment and pay rolls relating to the sample available for monthly study. On the other hand, a tendency to underestimate the degree of advance in employment and pay rolls, during revival, arises from the use of a fixed sample in the Bureau of Labor Statistics compilations. For the results of the operations of new enterprises are

## APPENDIX VIII-B

559

necessarily excluded from such compilations. A comparison of Census records with averages of uncorrected monthly figures indicates that the negative bias is probably the more important, for employment and pay rolls. This would mean that the advance recorded in the various tables understates the actual advance of these series in 1933-35. Such bias as is present in the monthly production figures probably works towards an overstatement of the actual advance, because of the greater steadiness of the total. As regards prices, however, it is probable that actual realized prices have risen somewhat more rapidly than the quoted prices indicate.

In general, the above comparison of the two sets of basic data confirms the accuracy of the measurements based on monthly records. The fluctuations in the monthly records are probably wider (with the exceptions noted) than those that would be found in more broadly based index numbers, but the general directions of movement and the relations among the different measurements are definitely similar.

## APPENDIX IX

### EXCHANGE RATES AND THE MEASUREMENT OF CHANGES IN COMMODITY PRICES IN TERMS OF GOLD

IN PASSING from price index numbers in terms of national currencies to index numbers in terms of gold values, in Chapter IV, the national wholesale price series given in the *Monthly Bulletin of Statistics* of the League of Nations have been used, with adjustments for changes from 1929 gold parity revealed by the exchange rates of each country. Current issues of the *Monthly Bulletin* give the values of national currencies as percentages of gold parity in 1929, and these figures have been used in making the adjustment. The changes from 1929 gold parity prior to 1933 were computed from exchange rates in terms of United States dollars; since then by comparison with the French franc. Following is the method used in calculating exchange rates (*Statistical Year-Book* of the League of Nations, 1935-36, p. 231, note):

"Value of currencies as percentage of their gold parity in 1929: As a rule, the monthly average value of currencies, calculated on the basis of the official rates, is given as a percentage of the gold parity in 1929. For countries whose currencies are based on silver and for countries in which the gold standard was not restored during the post-War period, percentages are given in relation to the average rate of exchange in 1929. For countries which established a new parity during the period 1929-September 1931, this new legal parity has been taken as basis.

The gold value of currencies has been calculated as a rule according to the New York rates on the countries in question; since the depreciation of the U. S. dollar, the rates are recalculated in gold by means of the quotation of the French franc in New York. In certain cases, calculations are based on the London rates, or on the Basle rates, or on the rates in the country itself."

It is to be noted that "when different rates of exchange are quoted in respect of different kinds of transactions, the rate of the greatest turnover has been chosen" (*Monthly Bulletin of Statistics*, December 1935, p. 576, note).

The exchange rates used by the League of Nations for certain countries that have established exchange control are based upon official quotations. Some transactions for these countries, however, are effected at lower 'free' rates. In 1934 and the first part of 1935 the free market tended, in several countries, to gain in importance relatively to the official market, owing to a relaxation of control. In many countries it is impossible to determine the relative importance of official and free markets.

A comparison of the free (or special) and official exchange rates of certain countries follows: (*Statistical Year-Book of the League of Nations, 1935-36*, pp. 234-7).

**VALUE OF CURRENCIES IN DECEMBER 1935 AS PERCENTAGE  
OF GOLD PARITY IN 1929**

	OFFICIAL RATE	SPECIAL RATE	
Argentina	46.0	38.1	"Free"
Bolivia	38.3	9.9	"Export"
Brazil	41.6	27.3	"Free"
