ECONOMICS OF BRITISH INDIA

BY

JADUNATH SARKAR, M.A.,
Professor, Patna College.

FOURTH EDITION,

Enlarged, re-written, and brought up to date.

1917.

M. C. SARKAR & SONS,
90/2, HARRISON ROAD, CALCUTTA.

First edition (143 pp.), *March, 1909.*

Second edition (304 pp.), *March, 1911.*

Third edition (336 pp.), *March, 1913.*

Fourth edition (384 pp.), *April, 1917.*

In this edition the book has been thoroughly revised, the statistics brought up to date, and a chapter on the economic effects of the war on India added. So rapid is the economic transformation of India going on before our eyes and so fast is the literature on various aspects of it growing up, that a general account of the subject requires to be mostly re-written every six years, and not only have new facts to be noted but even the old conclusions have to be greatly modified in the light of the new facts. Such a restudy has been attempted in the present edition. Throughout the book I have taken 1913-14, the last year of peace, as the standard of comparison and the basis of study. But the changes effected by the war have been duly noted in various places and studied together in the last chapter (X), which is altogether new; and the statistics of 1917 as far as available have been supplied. Among the more important additions are the inquiry into High Prices, the Report of the Royal Commission on Indian Currency (1914), recent developments of co-operation and our war finance and tariff changes.
