Season and Crop Report of the
Bombay State

For the Year 1952-53

BOMBAY

PRINTED AT THE GOVERNMENT CENTRAL PRESS

Obtainable from the Government Publications Sales Depot, Institute of Science Building, Fort, Bombay (for purchaser: in Bombay City) ; from the Government Book Depot, Charni Road Gardens, Bombay 4 (for orders from the mofussil) or through the High Commissioner for India, India House, Aldwych, London, W.C. 2 or through any recognized Bookseller.

Price—Annas 14 or Is. 6(2),

No. Res/S. & C. R./9015 of 1955.

Poona 1, dated 10th Atfgtst, 1955.

From

DR. T. G. SHIRNAME. B.Ag. (Bom.), Ph.D. (Wales),
F.S.S.(Lond.),F.R,Econ.S.(Lond.),
Director of Agriculture, Bombay State, Poona.

To

THE SECRETARY TO GOVERNMENT,
Agriculture and Forests Department,
Bombay.

Sir,

I have the honour to submit herewith the Annual Season and Crop Report of the Bombay State, for the year ending 31st July. 1953.

Yours faithfully,

T.G. SHIRNAME,
Director of Agriculture.

SEASON AND CROP REPORT OF THE STATE OF BOMBAY FOR
THE YEAR 1952-53

SEASON AND CROP REPORT OF THE STATE OF BOMBAY
FOR THE YEAR 1952-53

CHAPTER I—SEASON.

The agricultural season of 1952-53 has been, on the whole, a disappointing one over the greater part of the State. Disappointment is more keenly felt as the season of 1951-52 was also not a satisfactory one. The season was characterised by inadequate rains with uneven distribution. This told adversely on the growth of crops which suffered considerably resulting in low average yields. The ante-monsoon rains were practically absent except for a few sporadic showers in the southern parts of the State. During the second week of June and whole of July, fairly substantial rains occurred over most of the Gujarat and the Konkan and the western areas of the Deccan and the Karnatak, but during the same period, the eastern parts of the Deccan and the Karnatak received only light- and scattered showers. The precipitation in August was only fair while the month of September also recorded only light showers. As a result, crops in many parts of the State and especially on the lighter soils in the eastern parts of the Deccan and the Karnatak suffered while in some parts almost failed for want of adequate soil-moisture. The situation in the Gujarat and the Konkan was comparatively better and the irrigated crops fared well. First fortnight of October, however, witnessed useful showers, but thereafter, there was practically no rain during the months of November and December. In January, light showers were received in parts of the Gujarat and in West Khandesh and Dungs districts in the Deccan. They, however, proved injurious to crops in parts of the Gujarat. There was no rain during February and March. The season under review, was thus, characterised by low rainfall which was generally far below the requirements of normal crop-growth and resulted in substantial reduction of crop yields. The situation in the Gujarat and the Konkan was comparatively better but over most of the Deccan, and in the eastern areas of the Karnatak, it was unsatisfactory on account of either deficiency or failure of rains. As a result, famine or scarcity conditions prevailed in the drought-affected areas and Government took suitable measures to meet the situation.

2. *Distribution of rainfall.*—Table I (pages 3S--42) compares the rainfall during the year under report with the normal rainfall at each headquarters station in the State. The figures of normal rainfall for each station were obtained from the India Meteorological Department. The following observations may be made from a study of this table.

Prc-monsoon rains.—The pre-monsoon rains exceeded the normal at Karwar (Kanara) in the Konkan, at Sholapur and Kaf.--ra (North Satara) in the Deccan., and at Belgaum, Bijapur and Dhanvar in the Karnatak, but were below the normal at Godhra (Panch Mahals), Dhulia (West Khandesh), Jalgaon (East Khandesh), Ahi.-iednagar, Poona and in the hilly tracts in the Deccan and the Karnatak. At other places viz. at all the district headquarters stations in the Gujarat except Godhra, at Thana, Alibag (Kolaba) and Ratragiri in the Konkan and at Ahwa (Dargs) and Nasik in the Deccan and at Kolhapur in the Karnatak, these rains were absent.

Monsoon rains.—The monsoon rains were above **the** normal at Mehsana, Himatnagar (Sabarkantha) and Ahmedabad in the Gujarat, at Satara (North Satara) in **the** Deccan, at Belgaum, Dharwar and in the hilly tracts in the Karnatak and about **the** normal at Thana in the Konkan. These rains **were** below **the** normal **at all** **the** other stations in **the** State.

Post-monsoon rains.—The post-monsoon rains **were** absent at **all the** stations in **the** Gujarat except at Amreli where they were below the normal. These rains exceeded the normal at Thana and Ratnagiri in the Konkan, while they were below **the** normal at Alibag (Kolaba) and Karwar (Kanara). They were below **the** normal at all the stations in the Deccan and the Karnatak except for Kolhapur, where they **Were** about **the** normal and **for** Belgaum in the Karnatak where they exceeded **the** normal.

Winter rains.— The winter rains were below the normal **at** Surat in **the** Gujarat, Karwar (Kanara) in the Konkan, Jalgaon (East Khandesh) and Ahwa (Dangs) **in** the Deccan and in the hilly tracts in the Karnatak but exceeded the normal at **all** the other stations in the Gujarat, at Dhulia (West Khandesh) in the Deccan and **at** Dharwar in the Karnatak. These rains were absent at all the remaining stations **in** the State.

Total rainfall for the season, 1952-53.—The total rainfall for the season 1952-53 exceeded the normal at Mehsana, Himatnagar (Sabarkantha) and Ahmedabad. in the Gujarat, Satara (North Satara) in the Deccan and Belgaum, Dharwar and in the hilly tracts in the Karnatak but Were below the normal at all the other stations in the State.

3. In the Gujarat, the rainfall in June and July was fairly substantial and during the above period, *kharif* sowings had either commenced or were in progress in many areas. Towards the end of July, as the rainfall proved heavy, the field operations were hindered in parts of Ahmedabad district and crops were reported lodged in parts of Panch Mahals district. Light to fair rains which occurred in August proved somewhat injurious to standing crops in parts of Panch Mahals district. In other parts of the division, the condition of standing crops was reported to be fairly good. Transplanting of paddy and interculturing operations were in progress." In September, useful showers occurred in Surat district but elsewhere the rainfall was practically absent. From October to the end of December, there was practically no rain, and standing *kharif* crops in many parts of the division showed signs of withering due to inadequate soil-moisture. The light showers of rain during the month of January, 1953, caused slight damage to cotton, *joicar*, tobacco and wheat in some parts and fodder lying in open fields was also affected in a few places in Amreli district. As regards incidence of crop pests and plant diseases, locust swarms were reported from many areas of the division. Hairy caterpillars affected wheat in some parts of Banaskantha district and paddy in some areas of Kaira and Surat districts. White ants on wheat, smut on *jowar* and mildew on cumin were observed in some parts of Banaskantha district. Powdery mildew was noticed on paddy in some areas of Kaira district and on cumin in parts of Mehsana and Ahmedabad districts. Wheat was affected by root-rot in Mehsana, by *aiternaria* in Kaira and Surat and by rust in Ahmedabad and Amreli districts. Attacks of army-worms, grass-hoppers, " katra " and flea-beetles were reported from some areas of Broach district. Army-worms on paddy, aphids, thrips and jassids on cotton, were observed in some areas of Surat district.

In the Konkan, pre-monsoon showers were light. From June to August when rainfall was from moderate to good, *kharif* sowings were in progress while the germination of sown seeds was reported to be fairly good. Transplanting of paddy was also commenced. During September and October, rainfall was light to fair and condition of the standing crops was reported to be fair, although need for more rain was felt. Harvesting of paddy was in progress. There was practically no rainfall during November and subsequent months. The swarming caterpillar on paddy was reported from a few talukas in Thana district, both in the seedbed and in the transplanted fields. At some places in the district, the crop was affected by blue beetles, rice case worms, grass-hoppers and bacterial disease. Control measures were promptly taken and the pests were brought under control.

In the Deccan, there were light pre-monsoon showers in parts of the division. In June, the rainfall was light to fair and *Jcharif* sowings were undertaken. However, more rain was needed for better germination of the seeds sown. July rains were fairly good and germinated crops were reported to be improving to some extent. Weeding and interculturing operations were in progress. More rains, however, were still required all over the division and particularly in the south-eastern areas where the growth of *kharif* crops was checked due to inadequate soil-moisture. From August to October, rainfall was light and the condition of *kharif* crops was reported to be unsatisfactory. *Rabi* sowing operations were also delayed for want of adequate rains. This was particularly so in the eastern areas of the division where even the standing *kharif* crops were actually withering and almost failed in some areas. Elsewhere, on account of prolonged drought conditions, *rabi* crops were also reported to be unsatisfactory and in many parts of the division, since the middle of August, scarcity conditions appeared and fodder and water supply was reported to be inadequate. As regards crop pests and plant diseases, pyrilla, top shoot-borers and stem-borers on sugarcane, thrips, boll-worms and aphids on cotton and aphids and caterpillars on lucerne were noticed in parts of Ahmednagar district. Caterpillars and jassids on cotton, caterpillars and stem-borers on paddy, aphids and mildew on peas, army-worms on *naclumi*, jassids and aphids on vegetables and virus attack on *bhendi* were observed in some areas of Poona district. Pyrilla and grass-hoppers on sugarcane, caterpillars and blister-beetles on *bajri*, aphids on groundnut and cotton, thrips on vegetables, downy-mildew on grapes, caterpillars on paddy, beetles and leaf-blight on cotton, aphids on lucerne and on vegetables and thrips on onions were noticed in some parts of Nasik district. Jassids, aphids and red leaf-blight on cotton were reported from parts of Sholapur district, while aphids on pulses and vegetables, *tambora* on potatoes, jassids on cotton, caterpillars on pulses, paddy and *bajri*, and stem-borers and army-worms on paddy were noticed in some areas of North Satara district. Flea-beetles on *rabi jowar* were observed in some parts of West Khandesh district.

In the Karnatak, there were light pre-monsoon showers. June rainfall was also light to fair and sowing of *kharif* crops was in progress but more rain was needed for the sowing operations. Substantial rainfall was recorded in July when sowing of *kharif* crops, transplanting of paddy and weeding and interculturing operations were in progress. Condition of *kharif* crops was reported to be fairly good. Rainfall during August and September, however, was light to fair, and the crops in the western tracts fared well, while those in the eastern parts suffered for want of adequate soil-moisture. Towards the end of September, sowing of *rabi* crops was also held up in some parts. There were good showers during October and the condition of all crops improved. After October, there was very little rain and while in some parts crop condition was reported to be fair, in other areas, crops were

Monsoon rains.—The monsoon rains were above **the** normal at Mehsana, Himatnagar (Sabarkantha) and Ahmedabad in the Gujarat, at Satara (North Satara) **in** the Deccan, at Belgaum, Dharwar and in the hilly tracts in the Karnatak and about **the** normal at Thana **in** the Konkan. These rains were below **the** normal **at all** the other stations **in** the State.

Post-monsoon rains.—The post-monsoon rains were absent **at all** the stations **in** the Gujarat except at Amreli where they were below the normal. These rains exceeded the normal at Thana and Ratnagiri **in** the Konkan, while they were below **the** normal at Alibag (Kolaba) and Karwar (Kanara). They were below the normal at all the stations in the Deccan and the Karnatak except for Kolhapur, where they **Were** about the normal and for Belgaum in the Karnatak where they exceeded **the** normal.

Winter rains.—The winter rains were below the normal at Surat **in** the Gujarat, Karwar (Kanara) in the Konkan, Jalgaon (East Khandesh) and Ahwa (Dangs) **in** the Deccan and in the hilly tracts **in** the Karnatak but exceeded the normal at all the other stations in the Gujarat, at Dhulia (West Khandesh) in the Deccan and **at** Dharwar in the Karnatak. These rains were absent at all the remaining stations **in** the State.

Total rainfall for the season 1952-53.—The total rainfall for the season 1952-53 exceeded the normal at Mehsana, Himatnagar (Sabarkantha) and Ahmedabad in the Gujarat, Satara (North Satara) in the Deccan and Belgaum, Dharwar and in the; hilly tracts **in** the Karnatak but were below the normal at all the other stations **in** the State.

3. In the Gujarat, the rainfall **in** June and July was fairly substantial and during the above period, *kharif* sowings had either commenced or were in progress in many areas. Towards the end of July, as the rainfall proved heavy, the field operations were hindered in parts of Ahmedabad district and crops were reported lodged in parts of Panch Mahals district. Light to fair rains which occurred **in** August proved somewhat injurious to standing crops in parts of Panch Mahals district. In other parts of the division, the condition of standing crops was reported **to** be fairly good. Transplanting of paddy and interculturing operations were in progress." In September, useful showers occurred in Surat district but elsewhere the rainfall was practically absent. From October to the end of December, there was practically no rain and standing *kharif* crops in many parts of the division showed signs of withering due to inadequate soil-moisture. The light showers of rain during the month of January, 1953, caused slight damage to cotton, *jowar*, tobacco and wheat in some parts and fodder lying in open fields was also affected in a few places in Amreli district. As regards incidence of crop pests and plant diseases, locust swarms **Were** reported from many areas of the division. Hairy caterpillars affected wheat in some parts of Banaskantha district and paddy in some areas of Kaira and Surat districts. White ants on wheat, smut on *jowar* and mildew on cumin were observed in some parts of Banaskantha district. Powdery mildew was noticed on paddy in some areas of Kaira district and on cumin in parts of Mehsana and Ahmedabad districts. Wheat was affected by root-rot in Mehsana, by *altmaria* in Kaira and Surat and by rust in Ahmedabad and Amreli districts. Attacks of army-worms; grass-hoppers, " katra " and flea-beetles were reported from some areas of Broach district. Army-worms on paddy, aphids, thrips and **jaaslds** on cotton, were observed in some areas of Surat district.

in the Konkan, auto-monsoon showers were light. From June to August when rainfall was from moderate to good, *kharif* sowings were in progress, while the germination of sown seeds was reported to be fairly good. Transplanting of paddy had also commenced. During September and October, rainfall was light to fair and condition of the standing crops was reported to be fair, although need for more rain was felt. Harvesting of paddy was in progress. There was practically no rainfall during November and subsequent months. The swarming caterpillar on paddy was reported from a few talukas in Thana district, both in the seedbed and in the transplanted fields. At some places in the district, the crop was effected by blue beetles, rice case worms, grass-hoppers and bacterial disease. (Control measures were promptly taken and the pests were brought under control.

In the Deccan, there were light pre-monsoon showers in parts of the division. In June, the rainfall was light to fair and *kharif* sowings were undertaken. However, more rain was needed for better germination of the seeds sown. July rains were fairly good and germinated crops were reported to be improving to some extent. Weeding and interculturing operations were in progress. More rains, however, were still required all over the division and particularly in the south-eastern areas where the growth of *kharif* crops was checked due to inadequate soil-moisture. From August to October, rainfall was light and the condition of *kharif* crops was reported to be unsatisfactory. *Rabi* sowing operations were also delayed for want of adequate rains. This was particularly so in the eastern areas of the division where even the standing *kharif* crops were actually withering and almost failed in some areas. Elsewhere, on account of prolonged drought conditions, *rabi* crops were also reported to be unsatisfactory and in many parts of the division, since the middle of August, scarcity conditions appeared and fodder and water supply was reported to be inadequate. As regards crop pests and plant diseases, pyrilla, top shoot-borer and stem-borers on sugarcane, thrips, boll-worms and aphids on cotton and aphid and caterpillars on lucerne were noticed in parts of Ahmednagar district. Caterpillars and jassids on cotton, caterpillars and stem-borers on paddy, aphid and mildew on peas, army-worms on *nachani*, jassids and aphid on vegetables and virus attack on *bhendi* were observed in some areas of Poona district. Pyrilla and grass-hoppers on sugarcane, caterpillars and blister-beetles on *bajri*, aphid on groundnut and cotton, thrips on vegetables, downy-mildew on grapes, caterpillars on paddy, beetles and leaf-blight on cotton, aphid on lucerne and on vegetables and thrips on onions, were noticed in some parts of Nasik district. Jassids, aphid and red leaf-blight on cotton were reported from parts of Sholapur district, while aphid on pulses and vegetables, *tambera* on potatoes, jassids on cotton, caterpillars on pulses, paddy and *bajri*, and stem-borers and army-worms on paddy were noticed in some areas of North Satara district. Flea-beetles on *rabi jowar* were observed in some parts of West Khandesh district.

In the Karnatak, there were light pre-monsoon showers. June rainfall was also light to fair and sowing of *kharif* crops was in progress but more rain was needed for the sowing operations. Substantial rainfall was recorded in July when sowing of *kharif* crops, transplanting of paddy and weeding and interculturing operations were in progress. Condition of *kharif* crops was reported to be fairly good. Rainfall during August and September, however, was light to fair, and the crops in the western tracts fared well, while those in the eastern parts suffered for want of adequate soil-moisture. Towards the end of September, sowing of *rabi* crops was also held up in some parts. There were good showers during October and the condition of all crops improved. After October, there was very little rain and while in some parts crop condition was reported to be fair, in other areas, crops were

withering due to inadequate soil-moisture. Fodder and water scarcity was experienced in parts of Bijapur district while fodder shortage was reported from parts South Satara, Belgaum and Dharwar districts. There was shortage of water for irrigation in some areas of South Satara district while shortage of drinking water was felt in parts of Kolhapur, Belgaum and Dharwar districts. As regards crop pests and plant diseases, grass-hopper trouble was reported from many areas of the division. Aphis was observed in some parts of Kolhapur and Belgaum districts and rust and grass-hopper attack on *jowar* was reported from South Satara district. *Kharif jowar* was affected by sugary disease in some areas of Belgaum district. Mealy bugs on sugarcane and stem-borers on *jowar* were observed in some parts of Kolhapur district while pod-borers on gram and rust on wheat were reported from some areas of Dharwar district.

CHAPTER II—AREA CULTIVATED AND UNCULTIVATED.

(Table Hi—pages 43-47)

(Summary Table A— page 25)

4. *Number of villages.*—During the year 1952-53, the number of villages in the State was 35,959 which was less by 95 as compared with the corresponding figure of the previous year. This decrease was mainly accounted for by Banaskantha, Baroda, West Khandesh and Nasik districts wherein 91 small villages were amalgamated into neighbouring bigger villages. Regarding the remaining four villages, the variation is due to wrong reporting by the concerned Collectors in the year 1951-52.

5. *Total area—Reporting and non-reporting areas.*—The total area, i.e. the geographical area of the Bombay State, was almost stationary being 70,794,500 acres during the current year as against 70,635,100 acres during the previous year thus showing a slight increase of 0.2 per cent.. This apparent increase was mainly due to an increase in acreage in Banaskantha and Sabarkantha districts of the Gujarat division. In Sabarkantha district, the total geographical area recorded an increase of 3.0 per cent, during the year under report as compared with the corresponding figure of the previous year and was mainly attributed to the large area under " non-reporting " category. Of the total area of the State, the reporting area was 64,395,500 acres and the non-reporting area, i.e. the area for which no returns exist, was 6,399,000 acres as against, the corresponding figures of 64,230,500 acres and 6,404,600 acres during the previous year. In Dangs district, although the details for the total area of 423,000 acres are available, details for the reported area of 43,000 acres are not separately available. Similarly, in West Khandesh district, out of 1,251,900 acres of " non-reporting " area, detailed classification into different categories is available for only 475,000 acres.

6. *Cropped areas.*—The gross cropped area in the State showed a slight increase from 43,182,100 acres in 1951-52 to 43,456,800 acres in 1952-53 or of 0.6 per cent.. The net cropped area also showed a slight increase of 1.3 per cent., it being 41,862,200 acres in 1952-53 as against 41,311,100 acres in the previous year. The acreage under " area sown more than once ", however, went down by as much as 14.8 per cent. or from 1,871,000 acres during 1951-52 to 1,594,600 acres during the year under

report. This decrease was mainly in the Gujarat, where the acreage went down from 797,100 acres in 1951-52 to 507,800 acres in the year under report or by 36·3 per cent, mainly due to shortage of rains. The area under forests showed only a slight increase of 76,100 acres or 0·7 per cent, it being 10,759,400 acres during 1952-53 as against 10,683,300 acres during the previous year. During the year under report, the acreages under "Barren and Unculturable land", "Permanent pastures and other grazing lands" and "Other fallow lands"—showed an increase over the corresponding figures of the previous year by 12·6, 0·9 and 6·9 per cent, respectively. On the other hand, the acreages under "Land put to non-agricultural uses", "Culturable waste", "Land under miscellaneous tree crops and groves not included in area sown" and "Current fallows" recorded a decrease of 28·8, 7·6, 4·4 and 26·6 per cent, respectively as compared with the corresponding figures of the previous year. Part of the wide disparity noticed between the corresponding figures of previous and the current year under different heads of land utilisation is attributed, by many of the reporting authorities, to the lack of correct understanding of standardised definitions of various terms and concepts and significance of different columns occurring in the report, on the part of the primary reporting agency.

CHAPTER III—IRRIGATED AREAS.

(Tables III-A and III-B—pages 48-77).

(Summary Tables B and C—pages 26-28).

7. *Sources of water supply.*—During the year 1952-53, the number of Government canals reported was 577 as against 513 reported in the previous year thus showing an increase of 12·5 per cent.. This increase was noticed mainly in the case of panch Mahals and Nasik districts and is explained as due to wrong reporting in the previous year. In Panch Mahals district some new canals were also constructed during the year under report. There was an increase of 34·2 per cent, in the mileage of these canals, it being 1,592' during the year under report as against 1,186 during 1951-52.. The number of private canals, however, showed a decrease of 7·2 per cent, from 8,341 in 1951-52 to 7,742 during the year under report, and was mainly noticeable in North Satara district where it went down from 6,693 during 1951-52 to 5,772 during the current year and was attributed to misreporting of figures during 1951-52. The mileage of private canals increased from 4,475 in 1951-52 to 4,757 in 1952-53 or by 6·3 per cent. The number of Government tube-wells showed a decline from 303 in 1951-52 to 61 during 1952-53 or of 79·9 per cent, and is accounted for by the decrease in Ahmedabad district where there was a fall from 270 to 32 owing to wrong reporting in the previous year. The number of private tube-wells was 9 during the year under report as against 11 during 1951-52. These six tube-wells, located in Amreli district, were reported by the Collector, to have been constructed 6 during the year under report. The number of Government masonry wells used for irrigation purposes only went down from 7,679 in 1951-52 to 6,844 during the year under report or by 10·9 per cent, while the number of Government non-masonry wells also showed a decrease from 4,388 in 1951-52 to 2,096 in 1952-53 or by 52·2 per cent.. This decrease in the number of Government non-masonry wells was noticed mainly in Kanara district where the number of such wells went down from 2,119 in 1951-52 to "nil" in 1952-53 and was explained by the

Collector as due to **Wrong** reporting of figures during the previous year. The number of private masonry wells and private non-masonry wells for irrigation purposes only—both showed a slight increase from 325,088 and 214,825 in 1951-52 to 325,589 and 218,216 during the year under report or of 0.2 and 1.6 per cent, respectively. The number of wells used for domestic purposes only rose from 180,927 in 1951-52 to 252,365 in 1952-53, thus recording an increase of 39.5 per cent, and was attributed mainly to the increase in the case of Nasik district from "nil" in 1951-52 to 42,102 during 1952-53. This large increase in Nasik district was reported to be due to the supply of correct information during the year under report. The number of wells not in use went up from 59,770 to 63,137 or by 5.6 per cent.. The number of wells having independent ayacutts went up by 29.6 per cent, or from 133,918 in 1951-52 to 173,537 in 1952-53. The number of wells supplementing recognised sources of irrigation was 34,277 during 1952-53 as against 33,625 during 1951-52, thus recording a slight increase of 1.9 per cent. The number of reservoirs and the number of tanks with ayacut 100 acres or more—both went down from 1,262 and 2,017 in 1951-52 to 1,168 and 1,289 in 1952-53 or by 7.4 and 36.1 per cent, respectively. The number of tanks with ayacut less than 100 acres, however, showed an increase of 14.7 per cent, or from 18,684 in 1951-52 to 21,426 during the year under report. The number of oil-engines showed a slight increase from 30,806 in 1951-52 to 31,354 in 1952-53 or by 1.8 per cent..

8. **Irrigated areas.**—The total irrigated area in the State showed an apparent decrease of 322,700 acres or 11.0 per cent, during 1952-53, in comparison with the corresponding figure of the previous year. The decrease was noticed mainly in the case of *kharif jowar*, *bajri*, cotton and groundnut and was of the order of 66.9, 62.9, 40.7 and 77.8 per cent, respectively.

During the year under report, the percentage of net area irrigated to the net cropped area was 5.7 as against 6.4 during the preceding year. The percentage of the total irrigated area to the total sown area went down from 6.8 in 1951-52 to 6.0 in 1952-53.

9. **Area irrigated under different sources of irrigation.**—The area irrigated by tanks and wells recorded an increase of 38,000 acres and 83,400 acres or of 22.1 and 5.6 per cent, respectively over the corresponding figures of the previous year. The area irrigated under Government canals, private canals and other sources, however, went down by 38,900 acres, 13,300 acres and 329,500 acres or by 8.3, 19.4 and 77.9 per cent, respectively, below the corresponding figures of 1951-52.

10. **Irrigated areas under food and non-food crops.**—The total area irrigated by all sources was 2,623,900 acres during the year under report as against 2,946,600 acres during the previous year, thus showing a decrease of 11.0 per cent.. The area irrigated under food crops during 1952-53 was 2,170,900 acres as against 2,406,400 acres during 1951-52, thus recording a decrease of 9.8 per cent.. Significant decrease was noticed in the case of, as stated earlier, *kharif jowar* and *bajri*—irrigated acreages under these crops having gone down by 66.9 and 62.9 per cent, respectively. The area irrigated under non-food crops also showed a decrease from 540,200 acres in 1951-52 to 453,000 acres in 1952-53 or by 16.1 per cent., this decrease being shared mainly by cotton and groundnut, the irrigated acreages under which went down by 40.7 and 77.8 per cent, respectively.

CHAPTER IV—CROPPED AREA.

(Tables IV-A, IV-B and IV-C—pages 78-144).

(Summary Table D—pages 29-32).

11. **Total area under crops.**—During the year under report, the gross cropped area of 43,456,800 acres showed a very slight increase of 274,700 acres or 0.6 per cent, over the corresponding area of 43,182,100 acres during 1951-52. Of the gross cropped area 13,591,600 acres were in the Gujarat, 2,378,500 acres in the Konkan and 11,141,300 acres in the Karnatak, the percentage increase over the corresponding figures for the previous year in each division being 2.7, 1.6 and 0.7 respectively. In the Deccan, however, the gross cropped area of 16,345,400 acres showed a decline of 1.2 per cent. For the State as a whole, food crops occupied 31,458,400 acres or 72.4 per cent., while non-food crops occupied 11,998,440 acres or 27.6 per cent, of the total area sown. During the year under review, the area under food crops showed an increase of 940,400 acres or 3.1 per cent, over the area of 30,518,000 acres during the previous year while the area under non-food crops went down by 665,700 acres or 5.3 per cent., it being 12,664,100 acres in 1951-52.

The table below gives the acreage under food and non-food crops in the four divisions of the State during 1951-52 and 1952-53 :—

(The acreage figures are in hundreds).

Division.	Food Crops.			Non-food Crops.		
	1951-52.	1952-53.	Percentage increase or decrease.	1951-52.	1952-53.	Percentage increase or decrease.
Gujarat	78,808	90,128	+ 14.4	53,533	45,788	—14.6
Konkan	17,863	18,036	+ 1.0	5,554	5,749	+ 3.5
Deccan	130,186	127,104	— 2.4	35,217	36,350	+ 3.2
Karnatak	78,333	79,316	+ 1.3	32,337	32,097	— 0.7
State	305,180	314,584	+ 3.1	126,641	119,984	— 5.3

It will be seen from the above table that under food crops, there was an increase of 1,132,000 acres or 14.4 per cent, in the Gujarat, 18,300 acres or 10 per cent, to the Konkan and 98,300 acres or 13 per cent, in the Karnatak. In the Deccan, however, there was a decrease of 308,200 acres or of 2.4 per cent. In the case of non-food crops, there was an increase of 19,500 acres or 3.5 per cent, in the Konkan and 113,300 acres or 3.2 per cent, in the Deccan. On the other hand, in the Gujarat and the Karnatak divisions, the acreages went down by 774,500 acres or 14.5 per cent, and 24,000 acres or 0.7 per cent, respectively.

12. **Food crops.**—Among the main food crops, as compared with the corresponding figures of 1951-52, the area under rice increased by 86,900 acres or by 2·8 per cent.. This increase was mainly accounted for by the increase in the Gujarat division. At the State level, the area under wheat showed a noticeable increase of 217,400 acres or of 13·7 per cent.. This was, again, mainly due to a very large increase in the Gujarat, where it went up by as much as 306,100 acres or by 91·6 per cent.. This increase was attributed to favourable rains (and the propaganda of G. M. F. measures). [It may be mentioned here that in the year 1951-52, due to the unfavourable season, there had been a large decrease in the acreage under wheat in the Gujarat, by as much as 58·4 per cent., as compared with the corresponding figure of 1950-51]. During the year under report, the total acreage under *kharif jowar* showed a slight increase of 107,300 acres or of 2·7 per cent.. The increase was noticeable in the Gujarat and the Karnatak while in the Deccan, the acreage under the crop showed a decrease. In the case of *rabi jowar* also at the State level, there was an increase of 487,400 acres or of 6·7 per cent.. This increase was shared by the Gujarat and the Deccan, the acreage in the Karnatak remaining almost constant. The area under *bajri* showed an increase of 6·4 per cent, or 420,400 acres. Most of this increase was in the Gujarat and it was reported to be mainly due to timely and adequate rains. The area under *ragi* showed an increase of 59,700 acres or of 8·3 per cent., this being shared by all the divisions except the Gujarat, although there was a comparatively large increase in acreage mainly in the Deccan. The area under maize showed a slight increase of 17,700 acres or of 3·1 per cent.. In the case of gram, at the State level, there was a decrease of 78,600 acres or of 10·7 per cent.. This decrease was mainly due to the noticeable decrease in the Deccan by 32·0 per cent, or by 143,000 acres. This decrease was reported to be due to scarcity of rains. In the case of the Gujarat, however, there was an increase of 74,900 acres or of as much as 189·1 per cent.. The remaining divisions viz. the Konkan and the Karnatak showed a slight decrease of 2·3 and 4·3 per cent, respectively. The area under *tur*, went down by 38,800 acres or by 5·7 per cent.. This decrease was shared by the Gujarat and the Deccan divisions where it was of the order of 8,100 acres and 36,100 acres or of 4·4 and 14·7 per cent, respectively. In the Karnatak division, however, there was a slight increase, while in the Konkan, the acreage remained almost constant. The area under sugarcane also went down by 13,400 acres or by 5·6 per cent.. This was mainly due to a decrease in acreage of 6,100 and 5,800 acres in the Deccan and the Karnatak respectively. The total area under *kharif* food crops, for the State as a whole, went up by 43 per cent., whereas the area under *rabi* food crops remained almost constant, showing only a slight increase of 0·7 per cent..

13. **Non-food crops.**—In the case of cotton, there was a fall in the acreage by 413,300 acres or by 10·7 per cent, mainly because of the tendency of the cultivators to grow more food crops and partly due to want of rainfall at sowing time. This decrease was shared by the Gujarat and the Karnatak divisions, where the acreages went down by 298,900 acres or 14·3 per cent, and 135,600 acres or 12·2 per cent, respectively. The Deccan division, however, recorded an increase of 21,200 acres or of 3·3 per cent.. The area under groundnut went down by 5·0 per cent, or by 151,400 acres. This was mainly due to decrease by 133,900 acres or 17·8 per cent, and 35,900 acres or 3·4 per cent., in the Gujarat and the Deccan divisions respectively. The Karnatak division, on the other hand, recorded a slight increase. The total acreage under sesamum also went down by 22,000 acres or by 5·8 per cent., again due to a decrease in the Gujarat and the Deccan where it went down by 16,300 acres or 6·2 per cent and 18,300 acres or 22·5 per cent, respectively. In the case of the

Karnatak, however, the acreage remained almost constant. The Konkan division, on the other hand, recorded an increase of 12,700 acres or of 192*4 per cent. This was mainly due to an increase of 12,200 acres in Katnagiri district. This sudden increase was attributed to more demand for the crop in the market. The area under tobacco recorded a large increase of as much as 113,600 acres or of 62.9 per cent. This increase was shared by all the tobacco growing divisions and was of the order of 75,200 acres or 84.5 per cent., 1,600 acres or 34.0 per cent, and 36,800 acres or 42.3 per cent, in the case of the Gujarat, the Deccan and the Karnatak divisions respectively. This increase in area was attributed to the high price of the commodity in the market. The total area under *kharif* non-food crops remained almost stationary recording a slight increase of 0.7 per cent. The area under *rabi* non-food crops, however, decreased by as much as 21.8 per cent, in comparison with the corresponding figure of the previous year.

14. On the whole, the gross cropped area during the current year remained almost stationary as compared with the corresponding figure of the previous year. The accompanying table gives the gross cropped area, the double cropped area, the net cropped area and the area under principal crops in the four divisions of the State during 1951-52 and 1952-53.

Total									

Regarding the outturn of crops, the situation in the Gujarat and the Konkan was comparatively better, but over most of the Deccan and in the eastern areas of the Karnatak, the season was definitely unsatisfactory on account of deficiency or failure of rains, resulting in reduced average yields and outturn.

The remarks in respect of major crops are given below:—

Rice.—In the Gujarat, the crop suffered to some extent due to inadequacy or failure of rains. The crop in the irrigated tracts fared comparatively better, but that in the dry areas mostly failed in many parts of the division. The crop in the Konkan progressed fairly well except in parts of coastal talukas, where it suffered due to insufficient rains. In the Deccan and the Karnatak, the crop suffered especially in the eastern areas due to long break in rains and this resulted in the reduction of yields. Attacks by army-worms and caterpillars were reported in the early stages of crop-growth in the southern part of Surat district. Swarming caterpillars and blue beetles, grass-hoppers and some bacterial diseases affected the crop in a few talukas of Thana district. Sporadic attacks of blue-beetles and army worms were reported from Kolaba district. Rat trouble was noticed in parts of Kanara district. Stem-borers affected the crop in some parts in Khandesh and Poona districts. Grass-hopper trouble was reported from places in Belgaum district. Heavy attacks of root-worms, shoot borers and blue-beetles were noticed in part of Dharwar district. The total acreage and the outturn of the crop, viz.

8,186,300 acres and 978,900 tons showed an increase of 2.8 per cent, and 20.8 per cent, respectively over the corresponding figures of the previous year of 3,099,400 acres and 810,600 tons.

Wheat.—In the Gujarat, the irrigated crop developed satisfactorily, while the dry crop suffered to a certain extent for want of late rains. In the Deccan, the crop remained stunted in growth in the western parts for want of sufficient soil-moisture, while in the eastern areas, it suffered heavily and almost failed in some tracts on account of drought conditions. In the Karnatak, the crop in the eastern areas suffered on account of scarcity conditions but that in the Western tracts and that grown on irrigation fared comparatively better. Rust affected the crop in some parts of Ahmedabad, Amreli and Surat districts. The acreage and the outturn of the crop went up from 1,590,300 acres and 238,000 tons in the previous year to 1,807,700 acres and 263,000 tons during the year under report or by 13.7 per cent and 10.5 per cent, respectively.

Kharif Jowai.—In the Gujarat, the crop suffered, to a varying extent in different parts of the division, due to failure or insufficiency of late rains. In the Deccan and the Karnatak, the crop growth was checked particularly in the eastern tracts on account of inadequate soil-moisture and as such **W B B** considerably affected in yield. Sugary disease was reported from some areas of Bijapur district and grass-hoppers from parts of South Satara and Dharwar districts. Aphis was also noticed in places of South Satara district. Although, for the State, the acreage under the crop went up from 3,978,400 acres in 1951-52 to 4,085,700 acres in 1952-53 or by 2.7 per cent., the outturn declined from 683,100 tons in 1951-52 to 607,500 tons or by 11.1 per cent, during the year under report.

Rabi Jowar.—In the Gujarat, the crop progressed fairly well, but it suffered in some areas due to insufficient soil-moisture. In the Deccan and the Karnatak, the crop in many parts, particularly in the eastern areas, was adversely affected on account of failure or inadequacy of late rains and returned poor yields in some tracts. Slight attack of flea beetles was reported from places in West Khandesh district and sugary disease was reported from some areas of Belgaum district. During the year under report, the area of 7,765,900 acres under the crop was more than that during the previous year, viz. 7,278,500 acres by 6.7 per cent., but the outturn went down from 660,200 tons of the previous year to 528,000 tons or by 20.7 per cent, during the year under report.

Bajri.—In the Gujarat, the crop progressed fairly well although it suffered in some areas due to insufficient rains. In the Deccan and the Karnatak, the condition of the crop was reported to be unsatisfactory in many areas especially in the eastern tracts due to inadequacy of soil-moisture. Stray attacks of blister beetles were reported from many places in Broach district. Mild sporadic attacks of grass-hoppers were observed in many parts of Bagalkot and Humrund talukas Bijapur district. The acreage and the outturn of the crop, which were 6,619,800 acres and 553,800 tons during the previous year, went up during the year under report by 6.4 and 2.9 per cent, or to 7,040,200 acres and 570,000 tons respectively.

Maize.—In the Gujarat, the distribution of rainfall was uneven in the major maize-growing district, viz. Panch Mahals, and this adversely affected the crop and reduced its yield. In other districts of the division, the season was comparatively better. In the Deccan and the Karnatak, the crop suffered in growth on account of deficient soil moisture and its yield was reduced, to a varying extent, in different parts of the divisions. Although the acreage under the crop.

went up from 563,800 acres during the previous year to 581,500 acres during the year under report or by 3.1 per cent., the outturn went down*from 122,400 tons in 1951-52 to 94,600 tons in 1952-53 or by 22.7 per cent.

Ragi.—The crop suffered to a varying extent in the State on account of deficiency of rainfall resulting in reduction of average yields. The increase in the total outturn in the State is due to the increase in area and also due to the fact that the previous year's season was very unfavourable for the crop. Slight attack of hairy caterpillars was noticed in some parts of Thana district. The area and the outturn during the year, viz. 780,500 acres and 191,500 tons, were more than the corresponding figures of the previous year of 720,800 acres and 162,300 tons by 8.3 and 18.0 per cent, respectively.

Gram.— In the Gujarat, the crop fared well, although in some areas it was adversely affected in growth on account of deficient soil-moisture. In the Konkan, the season was favourable for the crop. In the Deccan, in many parts, the crop suffered much due to failure of late rains and was thus adversely affected in yield. The crop in the Karnatak progressed well in the transition tracts, but suffered in the dry tracts due to inadequate rains. Attacks of pod-borers were reported from places in Belgaum and Dharwar districts. During the year under report, the area and the outturn of the crop of 656,900 acres and 59,100 tons were below the corresponding area and outturn of the previous year of 735,500 acres and 65,100 tons by 10.7 and 9.2 per cent, respectively.

Cotton.—In the Gujarat, the crop progressed fairly well. In the Deccan, the crop suffered due to drought conditions over most of the division. In the Karnatak also, the condition of the crop was only fair. The crop fared better in the transition tract, but its condition was unsatisfactory in the eastern areas due to insufficient soil-moisture. Slight attack of red leaf-blight was reported from some parts of Dharwar district. Although the acreage under the crop of 3,439,600 acres during the year under report was less than 3,852,900 acres of the previous year by 10.7 per cent., the outturn went up from 547,700 bales in 1951-52 to 641,600 bales in 1952-53 or by 17.1 per cent.

16. **Yield, per acre.**—During the year under review, State-wide crop estimation surveys were continued on ten principal crops, viz. paddy, *kharif jowar*, *bajri*, wheat, *rabijowar*, gram, cotton, tobacco, maize and groundnut, while that on *ragi* was continued in Ratnagiri and Dangs districts.

17. **Kharif crops.**—The State as well as divisionwise average yields per acre of *kharif* food crops based on crop estimation surveys are given below :—

Yield per acre.

Division.	Kice.			Kharif Jowar.			Bajri.

Deccan	550	634	-2.9	528	198	-62.5	196	129	-34.2
Karnatak	782	692	-11.5	511	480	-6.1	145	118	-18.6
State	586	688	+17.4	385	333	-13.6	187	181	-8.2

From the table it is seen that for rice, the average yield per acre for the State was 688 lb. as against 586 lb. during 1951-52. The increase in the Gujarat division from 86 lb. to 319 lb. or by 270.9 per cent, in 1952-53 was mainly because in 1951-52 the average yield had gone down by as much as 83.3 per cent, as compared with the figure of 1950-51. The average yield per acre of *kharifjowar* for the State as a whole was 333 lb. as against 385 lb. during the year 1951-52. The average yield went up in the Gujarat from 146 lb. in 1951-52 to 218 lb. in 1952-53 or by 49.3 per cent. The average yield, however, went down in the remaining divisions and particularly in the Deccan where it fell by 62.5 per cent, mainly due to inadequate soil-moisture. For *bajri* the State average yield per acre was 181 lb. as against 187 lb. during the previous year. The average yield for the Gujarat went up from 192 lb. in 1951-52 to 266 lb. in 1952-53 or by 38.5 per cent. In the Deccan and the Karnatak, however, the average yield went down from 196 lb. and 145 lb. to 129 lb. and 118 lb. or by 34.2 and 18.6 per cent, respectively.

The average yield per acre of *oftur* and sesamum (based on anna-valuation figures of the Revenue Department) for the four divisions of the State are as shown below :—

Division.	Yield per acre.					
	Tur.			Sesamum.		
	1951-52.	1952-53.	Percentage increase or decrease.	1951-52.	1952-53	Percentage increase or decrease.
	Lb.	Lb.		Lb.	Lb.	
Gujarat	300	307	+2.3	127	187	+47.2
Ksnkan	265	264	-0.4	204	221	+8.3
Deccan	425	369	-13.2	148	149	+0.7
Karnatak	482	462	-4.1	204	146	-28.4
State	407	384	-5.7	139	178	+28.1

For *tur* the average yield went down from 407 lb. in 1951-52 to 384 lb. during the year under report, the highest yield of 462 lb. being recorded in the Karnatak division against 482 lb. during the previous year. In the case of sesamum, the average yield went up from 139 lb. in 1951-52 to 178 lb. during the year under report, the highest average yield of 221 lb. being recorded in the Konkan division. The increase at State level was mainly due to the rise in the average yield for the Gujarat from 127 lb. in 1951-52 to 187 lb. during the year under report or by 47.2 per cent.

18. *Rabi crops*.—The State and divisionwise average yield per acre of rabi crops (based on crop estimation surveys) are as under:—

Division.	Yield per acre.					
	Wheat.			Rabi Jowar.		
	1951-52.	1952-53.	Percentage increase or decrease.	1951-52.	1952-53.	Percentage increase or decrease.
	Lb.	Lb.		Lb.	Lb.	
Gujarat	742	542	-27.0	285	445	+56.1
Konkan				640		
Deccan	291	225	-22.7	209	105	-49.8
Karnatak	157	192	+22.3	178	196	+10.1
State	335	326	-2.7	205	152	-25.9

From the table, it is seen that for 1952-53, the average yields per acre of wheat and *rabi jowar* for the State were 326 lb. and 152 lb. as against 335 lb. and 205 lb. respectively during the previous year. During the year under report the average yield of wheat in the Gujarat and the Deccan went down by 27.0 and 22.7 per cent, respectively as compared with the corresponding figures of the previous year. The Karnatak, however, recorded a rise in the average yield by 22.3 per cent. The average yield in the Gujarat was about thrice that in the Karnatak and about two and a half times that in the Deccan. In the case of *rabi jowar* the average yield per acre went down from 205 lb. in 1951-52 to 152 lb. during the year under report or by 25.9 per cent. The average yield went up in the Gujarat and the Karnatak by 56.1 and 10.1 per cent, respectively, but went down in the Deccan by 49.8 per cent, on account of failure or inadequacy of rains.

The average yield per acre of *rabi* crops, viz. gram (based on crop estimation surveys), linseed, rape and mustard (based on anna-valuation figures of the Revenue Department) for the four divisions of the State are given below:—

Division.	Yield per acre.								
	Gram.			Linseed.			Rape and Mustard.		
	1951-52.	1952-53.	Percentage increase or decrease.	1951-52.	1952-53.	Percentage increase or decrease.	1951-52.	1952-53.	Percentage increase or decrease.
	Lb.	Lb.		Lb.	Lb.		Lb.	Lb.	
Gujarat	175	274	+56.6	203			360	287	-20.5
Konkan	318	267	-14.7			
Deccan	223	186	-16.0	166	109	-34.3	164	190	+18.5
Karnatak	156	185	+18.0	161	156	-3.1	113	248	+14.1
State	198	202	+2.0	182	143	-11.7	328	269	-18.0

For gram, the State average yield per acre was 202 lb. as against 198 lb. of the previous year, thus showing an increase of 2 "0 per cent.. The average yield went up in the Gujarat and the Karriatak by 56 "6 and 18 "6 per cent, respectively, while in the remaining divisions, viz., the Konkan and the Deccan, it declined by 14•7 and 16 "6 per cent, respectively. In the case of linseed, the average yield per acre went down from 162 lb. to 143 lb. or by 11*7 per cent.. The average yield for rape and mustard also went down from 328 lb. to 269 lb. or by 18 0 per cent.

19. *Cotton, Sugarcane and Tobacco.*—The table below gives the average yield per acre of cotton (based on crop estimation surveys), sugarcane (based on annual valuation "Figures of the Revenue Department) and tobacco (based partly on crop es imation surveys in the major crop-growing districts and partly on **anna**-valuation Figures of the Revenue Department):—

Division.	Yield per acre.								
	Cotton.			Sugarcane.			Tobacco.		
	1851-52.	1952-58.	Percent- age increase or decrease.	1951-52.	1952-53.	Percent age increase or decrease.	1951-52. <i>i</i>	1952-53.	Percent- age Increase or decrease.
Lb. of lint.	Lb. of lint.		Lb. of gul.	Lb. of gul.		Lb. of dry leaf.	Lb. of dryleaf.		
Gujarat	52	99	+90-4	8,961	4,745	+19-8	596	602	+1-0
Eonkan				4,535	3,879	—14-5			
Deccan	84	44	—47-6	6,626	5,861	—11-5	429	569	+32-6
Karnatak	46	45	- 2 - 2	6,129	6,080	—0 8	389	438	+12-6
State	56	73	+30-4	6,272	5,865	—6-5	492	532	+ 8 1

The average yield per acre of cotton for the State was 73 lb. lint during the year under report, as against 56 lb. lint during the previous year. The average yield went up in the Gujarat by as much as 90•4 per cent, or from 52 lb. lint to 99 lb. lint. In the Deccan and the Karnatak divisions, however, the average yield went down by 47*6 and 2*2 per cent, respectively. The yield per acre of sugarcane for the State was 5,865 lb. (*gul*) during the year under report as against 6,272 lb. (*gul*) during the previous year. The average yield of tobacco was 532 lb. (dry leaf) as against 492 lb. (dry leaf) during 1951-52, thus showing an increase of 8 1 per cent..

20. *Cotton.*—During the year 1952-53, the total area and outturn of cotton were 3,440 thousand acres and 642 thousand bales as against 3,853 thousand acres and 548 thousand bales during the previous year. Although the acreage showed a decrease by 10*7 per cent., the outturn recorded an increase of 17"1 per cent.

The table below gives the total area and outturn of cotton in the different divisions of the State during 1951-52 and 1952-53 :—

(Area and outturn figures in thousands).

Division.	Area in acres.			● Outturn in bales of 392 lb. each.		
	1951-52.	1952-53.	Percentage increase or decrease.	1951-52.	1952-53.	Percentage increase or decrease.
Gujarat	2,098	1,799	—14.3	278	455	+ 63.7
Deccan	646	668	+ 3.4	139	75	—46.0
Karnatak	1,109	973	—12.3	131	112	—14.5
State	3,853	3,440	—10.7	548	642	+ 17.1

CHAPTER VI—PRICES.

(Table VI—pages 187-194).

(Summary Table F—page 34).

21. Table VI of the report gives the average prices, during the harvest period of the principal crops in different districts. The unfavourable character of the season resulted in low crop yields and the prices of agricultural produce continued to rule high. In order to implement the First Five Year Plan and to restore freedom of production and trade, it was realised that the existing price controls needed modifications. Accordingly, the policy of gradual relaxation of price control was adopted and attempts were made to minimise the irksomeness of controls without increasing the risk of encountering an undue rise in prices. This policy was directed particularly towards stabilising the food prices and assuring equitable distribution of food. Further relaxation of food control was to be considered in the light of the effects of the existing relaxation.

22. The major variations in the average harvest prices of principal commodities at the State level and in the different divisions as compared with the prices during the corresponding period of the previous year are summarised below :—

At the State level, the price of rice (paddy) was Rs. 15-1 per maund of 82 2/7 lb. being higher by 16.4 per cent, than that of the previous year. The rise was noted in all the divisions and was by 11.2, 15.6, 23.7 and 18.0 per cent, in the Gujarat, the Konkan, the Deccan and the Karnatak respectively. The price of wheat, viz. Rs. 18-2 per maund, was higher by 2.5 per cent, for the State, it being 3.8, 3.8 and 6.0 per cent., above last year's prices in the case of the Konkan, the Deccan and the Karnatak respectively. The price remained constant in the Gujarat division. The price of Rs. 12-15 per maund of *jowar* was higher by 17.6 per cent, when compared with the price of the previous year, having gone up by 9.9, 23, 34.9 and 10.3 per cent, in the Gujarat, the Konkan, the Deccan and the Karnatak respectively. The average price of Rs. 13/- per maund of *bajri* rose by 7.8 per cent, when compared with that of the previous year. The price decreased in the Gujarat and the Konkan by 0.5 and 1.2 per cent, respectively, but rose by 2.2 ?

and 1 "0 per cent, in the Deccan and the Karnatak respectively. The average price of Rs. 11-5 for barley ruled higher by 3 • 4 per cent, than that in the previous year. It increased by 3 • 8 and 7 • 9 per cent, in the Gujarat and the Karnatak respectively, but fell by 0-6 per cent. in the Deccan. The average price of Rs. 12-11 for *ragi (nach'ni)* was higher than that of the previous year by 21-6 per cent, for the State and by 12-5, 49-7, 8-6 and 11-2 per cent, in the Gujarat, the Konkan, the Deccan and the Karnatak respectively. The average price of maize, viz. Rs. 11-10 per maund, was higher by 13-4 per cent, and rose higher by 7-7, 23-2 and 10-3 per cent, in the Gujarat, the Deccan and the Karnatak respectively, while the price fell by 1-2 per cent, in the Konkan. The average price of kodra of Rs. 10 /- was lower by 3 • 6 per cent, and fell by 10-4 and 3-4 per cent, in the Gujarat and the Karnatak respectively. It, however, rose by 42-9 and 2-7 per cent, in the Konkan and the Deccan respectively. Among pulses, the average price of *turdal* at the State level, viz. Rs. 18-9, was lower by 0-3 per cent. It, however, rose by 2-9 and 0-6 per cent, in the Gujarat and the Deccan respectively but fell by 4-1 and 3-5 per cent, in the Konkan and the Karnatak respectively. The price of gram, viz., Rs. 20-10 per maund, was higher by 14-2 percent., having risen by 1-0, 25-6 and 18*5 per cent, in the Gujarat, the Deccan and the Karnatak respectively. The price of *gul*, viz. Rs. 16-13, was lower than that of the previous year by 0-7 per cent. It rose by 47-0 and 9-6 per cent, in the Gujarat and the Konkan respectively, but went down by 2-2 and 8-4 per cent, in the Deccan and the Karnatak respectively. The large increase in price of *gul* in the Gujarat (Amreli district) is reported to be due to shortage of stock of the commodity on account of reduction of area under sugarcane in the district and less arrival of *gul* from outside due to transport difficulties. The average price of groundnut, viz., Rs. 16-14 was lower by 6 0 per cent, than that of the previous year. It was 9-3, 2*3 and 8-5 per cent, lower in the Gujarat, the Deccan and the Karnatak respectively. The price of Rs. 75/- per maund of tobacco was lower by 48-3 per cent, having gone down by 67*6, 30-8 and 23-8 per cent, in the Gujarat, the Deccan and the Karnatak respectively. This abnormal fall in the price of tobacco may be attributed partly to the restrictions imposed on the export of the commodity which resulted in heavy depression in tobacco market. The average price of cotton, viz. Rs. 33-13, was lower by 3-7 per cent, at the State level. It decreased by 1-2-6 and 9-7 per cent, in the Deccan and the Karnatak respectively, but increased by 6-3 per cent, in the Gujarat.

23. The table below compares the prices of Broach and Jarila cotton ruling at Bombay during the year under review with those of the previous year and the average of the preceding five years:—

Variety of cotton.	Price per hand of 7841b.			Variations.	
	Average for the five years ending 1931.	1952.	1953.	Compared with the average price.	Compared with the price of 1952.
	Rs.	Rs.	Rs.	Per cent.	Per cent.
Broach	760	925	925	+ 21-7	<i>m.</i>
Jarila	636	820	820	+ 28-9	<i>Hit.</i>

The prices of cotton in the latter part of 1952 and till March, 1953, showed a downward trend due to less favourable business transactions. There was, however, been a rise of price from March, 1953, onwards and this was stated to be due to good demand for cotton and cotton textiles both at home and abroad.

In the sub-joined table, the prices of Jarila fine and Broach (Vijay) cotton ruling at Bombay have been given for the months for which the prices were available :—

(Price per *khandi* of 784 lb.)

Year and month.	Jarila (Fine) (Average price).	Broach (Vijay) (Average price).
	Rs.	Rs.

July 1953	706	818

CHAPTER VII-AGRICULTURAL WAGES.

(Table VII—pages 195-207).

(Summary Table G—page 35).

24. In this State, according to the Manual of Revenue Accounts, agricultural labour is classified under three categories viz., (a) skilled, (b) ordinary and (c) field labour. Skilled labour comprises carpenters, black-smiths, cobblers and the like, ordinary labour consists of load-carrying coolies, well-diggers, masons or carpenters' assistants, earth workers, etc., while the field labour includes ploughmen, sowers, reapers, weeders, transplanters, etc.. In the report (in Table VII—Agricultural Wages) in addition to the above three categories, one more is added, viz. herdsmen, whose main work is to collect livestock from different owners and to feed them in the fungle during the day and bring them back in the evening to the owners' place.

25. Table VII of the report gives districtwise **figure B** of wages of different **classes** of agricultural labour. A perusal of this table shows, that during 1952-53 agricultural season, owing to deficiency or failure of rains, there was no good demand for the agricultural labour. Hence the wages of agricultural labour showed a downward trend and in order to improve this situation, the unemployed labourers were employed in Government scarcity works such as construction or repairs of roads, tanks, etc.

CHAPTER VIII—AGRICULTURAL STOCK.

(Table VII—pages 208-212).

(Summary Table H—pages 36-37).

26. Table VIII gives the details of livestock, poultry and agricultural machinery and implements in the Bombay State as enumerated in the Census of Livestock held in January, 1951. The details were published in the Season and Crop Report for 1950-51 and the same figures and remarks are repeated in the present report and will be continued in the subsequent reports till the report of the next quinquennial livestock Census becomes available.

Cattle.—There is an increase in the number of cattle from 11,422,021 to 11,915,298 or of 4.3 per cent, over that of the preceding year. The number of breeding bulls over three years remained almost the same as in the previous year, while the number of other males over three years increased by 6.4 per cent. The number of breeding cows over three years, however, went down by as much as 34.1 per cent., as against which there was an increase in the number of other cows over three years by as much as 112.1 per cent. The number of young stock showed an increase of 4.3 per cent, over that of 1949-50.

Buffaloes.—The total number of buffaloes decreased from 4,293,336 of 1949-50 to 4,161,950 or by 3.1 per cent. The number of breeding bulls over three years showed a considerable drop of 68.2 per cent., while the number of other males over three years, breeding cows over three years and young stock also decreased by 10.0, 18.8 and 13.1 per cent., respectively. The number of other cows over three years, however, increased by 132.2 per cent..

Sheep and Goats.—While the number of sheep went down by 17.0 per cent., that of goats increased by 7.2 per cent., as compared with the corresponding number of the previous year.

Agricultural Machinery and Implements.—During 1950-51, the number of tractors in the State was 1,072. Unfortunately, data for earlier years are not available, but the recent drive for Grow More Food has definitely resulted in an increase in the number of tractors. The number of ploughs was 2,582,286, while the number of carts totalled 1,077,372.

CHAPTER IX - AGRICULTURAL OUTLOOK.

27. As described in Chapter I of the Report, the season under review was unsatisfactory over the greater part of the State. The average yields of principal crops were considerably lower than those of the previous year which themselves were low due to unfavourable agricultural season of 1951-52. The situation in the Gujarat

and the Konkan was comparatively better but over most of the Deccan and the eastern areas of the Karnatak, the season was definitely unsatisfactory on account of large deficiency or failure of rains. As a result, famine or scarcity conditions prevailed in the drought-affected areas and Government took suitable measures to relieve the situation.

28. The table below compares, for- the years 1951-52 and 1952-53, the acreage sown and the outturn of foodgrain crops in the State and in its different divisions:—

(Figures in thousands)

Division.	Area in acres.		Outturn in tuus.	
	1961-52.	1952-53.	1951-52.	1952-53.
Gujarat	7,707	8,815	826	1,251
Konkan	1,707	1,728	692	672
Deccan	12,529	-12,366	1,425	903
Karnatak	7,601	7,626	1,076	1,060
State	29,444	30,634	3,919	3,886

29. Consequent upon the shortage or failure' of rains during the season, the total output of principal crops was considerably reduced. The distressing situation resulting therefrom was redeemed, to some extent, by the intensive propaganda in furtherance of the Grow More Food Campaign carried out through the District Development Boards and the Revenue and Agricultural Departments. Land revenue and *tagai* recoveries were suspended in the scarcity affected areas and subsidies and *tagai* loans were granted on a liberal scale for the construction and repairs of wells, tanks, etc. Further assistance was also rendered to the cultivators by providing seeds of improved strains, manures, insecticides, fungicides, etc., and in the preparation of compost and farm yard manures. Japanese system of paddy cultivation was advocated and was successfully adopted in several places. Efforts, such as reclamation of *hrai lands*, were made to bring more land under cultivation of food crops.

The significant feature of the year was the implementation of the Five Year Plan which seeks to initiate a process of transformation of social and economic life of the rural areas and strenuous efforts were made towards the full execution of the Plan. The Community Development Projects sponsored with a view to lift the rural community to higher levels of economic organisation and arouse enthusiasm in it for new knowledge and improved ways of life, introduced a new era in the national reconstruction of the country and more particularly in the agricultural sector.

Despite these measures, owing to the unfavourable seasonal conditions, the crop yields were low and consequently shortage of food and fodder was keenly felt and Government declared existence of scarcity conditions in some parts and started relief works, to assist the agriculturists in such areas. However, the food supply to the population was ensured through a well-regulated system of rationing while the shortage of fodder was relieved to a great extent by importing fodder from outside the State and by opening Government Grass Depots and Cattle cr,mps in the scarcity affected areas. The activities in respect of Community Development Projects in various parts of the State also afforded considerable monetary relief to the cultivators.

30. The cattle health was generally satisfactory. Cattle diseases such as hsemorrhagic septicemia, rinderpest, foot and mouth prevailed but were brought under control by prompt and effective measures. These epizootics, however, had no noticeable adverse effect on the progress of agricultural operations.

31. The table below gives the average prices of the agricultural commodities prevailing at harvest time for the years from 1948-49 to 1952-53.

Prices in rupees per maund of 3,200 tolas except for cotton, the prices for which are recorded in rupees per khandi of 784 lb.

Commodity.	Centre.	1948-49.	1949-50.	1950-61.	1951-52.	1952-53.
		Rs. as. ps.	Bs. as. ps.	Bs. as. ps.	Bs. as. ps.	Be. as. ps.
A. Food crops:—						
Jowar	1. Sholapur ..	IS 5 4	13 5 4	11 8 0	11 0 0	11 1 4
Bajri	2. Naeik	20 0 0		11 0 0	11 0 0	12 8 4
Sice	3. Thana	20 0 0	20 0 0	20 0 0	20 0 0	18 2 0
B. Export Crops:—						
Wheat	1. Ahmedabad		20 2 4	20 5 4	20 8 0
Ground nut	2. Karad	20 0 0	20 0 0	13 5 4	12 4 11	IS 310
Cotton (Jarila)	1. Bombay ..	620 0 0	Per khandi, 620 0 0	865 0 0	820 0 0	820 0 0

The centres mentioned in the above table are representative markets and accordingly the prices of agricultural produce in these markets indicate the general tendency in the variations of prices of these commodities in the State.

CHAPTER X—CONDITION OF AGRICULTURAL POPULATION.

32. During the year under review, there has been no significant improvement in the economic condition of the rural population. The inadequacy or failure of rainfall resulted in low crop yields and created shortage of food and fodder particularly in the scarcity affected areas. The wages of agricultural labour were slightly lower than in the previous year. In order to mitigate the situation and to afford relief, Government started relief works such as construction of dams, repairs of roads, laige scale contour bunding, etc. But for the prompt relief measures undertaken by the Government in the famine-stricken areas, the condition of the rural

populatic-**D** in such areas would have further deteriorated. The prices of agricultural commodities continued to rule high but the benefits realised "by the agriculturists from the high prices of agricultural produce were counter-balanced by the continuance of the upward trend of prices of other commodities. Efforts were made to stabilise food prices and to ensure equitable distribution of food to the population. Stability of prices was sought to be ensured by having on hand sufficient supplies and building up a reserve. With a view to promote all round economic development of the population and as an aid to the general social recovery, Government started implementing the First Five Year Plan and started Community Development Projects in various parts of the State.

T. G. SHTRNAME,
Director of Agriculture,
Bombay State, Poona.

SUMMARY TABLE A.

CLASSIFICATION OF AREA.

[Figures in hundreds]

Heads of classification	1951-52		1952-63		Percentage increase or decrease
	Area	Percentage of total	Area	Percentage of total	
	i				
	Acres		Acres		
Total area (by Tillage papers)...	706,351		707,945		+0.2
Forests	106,883	15.1	107,594	16.2	+0.7
Barren and unculturable land	53,619	7.6	60,374	8.5	+ 12.6
Land put to non-agricultural use.	13,744	1.9	9,789	1.4	-38.8
Culturable waBte ...	31,639	4.5	29,234	4.1	-7.6
Permanent pastures and other grazing lands.	25,618	3.6	25,841	3.7	+0.9
Land under miscellaneous tree crops and groves not included in area sown.	6,582	0.9	6,293	0.9	-4.4
Current fallows	36,317	5.1	19,812	2.8	-26.6
Other fallow land	38,888	5.5	80,886	11.4	+ 6.9
Net area sown	413,111	58.6	416,622	59.1	+1.8

Tobacco	492	397	532	699+

* These outturn estimates are entirely based on the results of Crop estimation surveys conducted in the year 1952-53.

† These outturn estimates are obtained by using the results of Crop estimation surveys* for districts mentioned below against each crop; the anna-valuation and the Standard Normal Yield reported by the Collectors being used in the case of the remaining districts :—

Maize—Banaskantha, Sabarkantha, Panch Mahals and Baroda.

Ragi—Ratnagiri and Dangs.

Tobacco—Ahmedabad, Kaira, Baroda, South Satara, Kolhapur and Belgaum districts.

x Q 8727—8

N.A. = Not available.

Note—The figures for 1949-50 and 1950-51 are not strictly comparable except for the groups « total of Cattle and Buffaloes » partly due to the fact that the census enumeration forms utilised for 1951 Livestock Census differed from those used in 1949-50 Census and partly to the possible difference in the geographical coverage of the two censuses.
