REPORT ON THE SEASON AND CROPS OF THE PUNJAB
FOR THE AGRICULTURAL YEAR ENDING 30TH
JUNE, 1956.

I. INTRODUCTION

Climatic conditions were generally favourable for the sowings of the crops. Excessive rains and flood in September and October, 1955, damaged the standing Kharif crops especially in the low-lying areas. Damage to standing Rabi crops in some districts of the State was also caused by hailstorms and cyclones in March and April, 1956. Harvest prices of all Agricultural commodities except American Cotton and Tobacco were higher during 1955-56 than the prices ruling in 1954-55 which is attributable to low production and no ban on the movement of agricultural commodities to the scarcity areas outside the State. The prices of Gur and American Cotton were more or less steady. Condition of cattle was generally satisfactory. High prices of Agricultural produce improved the economic condition of agricultural population which enjoyed good health. It also gave an impetus to the tendency of the Agricultural population to adopt mechanic system of Agriculture. The rates of Wages of Agricultural labour were slightly higher than those prevailing during the preceding year.

According to village papers, the geographical area of the State is 23,917,586 or 37,371 sq. miles.

The total number of villages in the State is 16,477.

The total reporting area is 19,278,866 acres and non-reporting is 4,638,720 acres (including mountain and forest tracts) for which no figures are available in village papers.

II. RAINFALL (TABLE I)

(i) *Seasons.*

(a) *Hot-Weather (March to May, 1955).*—Rainfall during the season was above normal in all the Districts of the State except Hissar, Rohtak, Gurgaon, Karnal, Simla and Amritsar, where it was below normal.

(b) *Monsoon (June to September, 1955).*—Rainfall was generally above average except that in the month of September, 1955, when it was excessive throughout the State.

(c) *Post-Monsoon (October to December, 1955).*—During October it rained excessively throughout the State while November remained dry. In December rainfall was below normal in all the districts.

(d) *Winter (January to February, 1956).*—The rainfall was generally below normal during this period.

(ii) *Effect of Rainfall and other weather conditions.*

(a) *Kharif Crops.*—Light to moderate rainfall in parts of all the districts was recorded in the month of March, 1955. Rainfall during April was above average in Rohtak, Karnal, Ambala, Hoshiarpur, Ludhiana, Amritsar and Gurdaspur, and below average in the remaining districts. During May, there was light to moderate rain throughout the State. In the month of June, the rainfall was above normal in Hissar, Rohtak, Gurgaon, Hoshiarpur and Ludhiana and below normal in the remaining districts. Rainfall during July, 1955, was above average in Gurgaon, Simla, Hoshiarpur, Ludhiana and Gurdaspur and below average in other districts. Supply of canal water was insufficient in all the canals except Eastern Canal where it was sufficient. Climatic conditions were favourable for the sowing of Cotton, Sugarcane, Rice and Maize crops, and generally unfavourable for other crops. In August, the rainfall was generally above average except in Gurgaon, Kangra and Jullundur districts where it was below average. It proved beneficial to standing crops. Excessive rains and floods in September and October, 1955, adversely affected the standing crops, especially in the low-lying areas. Canal supplies were sufficient in all the canals. The yield of Sugarcane and Rice was generally normal and that of other Kharif crops below normal.

Rabi Crops.—In October, 1955, the rainfall was excessive throughout the State. Weather during November remained dry. Rainfall during December was generally below normal. Supply of canal water was sufficient in all the canals for sowings.

Climatic conditions were generally favourable for the sowing of Rabi crops. As a result of flood of October the sowing of Rabi crops in low-lying areas was delayed. Rainfall during January, 1956, was generally below normal. Light rain also fell during February. In the month of March, it was above normal throughout the State except in Hissar District where it was below normal. Due to failure of winter rains, the Rabi crops received a set-back in the beginning, but were benefited by subsequent rains in March, 1956. The yield of Rabi crops is expected to be generally normal in irrigated and below normal to normal in unirrigated areas.

(iii) *Damage to crops.*—Excessive rains and floods in September and October, 1955, adversely affected the standing Kharif crops in an area of 1965 thousand acres.

Slight damage was also caused by hailstorms and cyclones to standing Rabi crops, during March and April, 1956.

III. CLASSIFICATION OF AREA (TABLE II.)

The total area of the State is classified as under:—

Serial No.	Classification	Area in 000 acres		
		1955-56	1954-55	Normal.
1.	Forest	796	789	758
2.	Barren and unculturable land and land put to non-agricultural use	7,320	7,298	7,058
3.	Culturable waste, permanent pastures and other grazing lands and land under miscellaneous tree crops and groves not included in area sown	1,680	1,776	2,002
4.	Current fallows and other fallows	1,147	1,309	1,785
5.	Net Area sown	12,975	12,746	12,168
Total area according to village papers.		23,918	23,918	23,771

The increase in forest area as compared with normal is due to the fact that Government declared Birs of Chhachhaurli in Jagadhri Tehsil and some canal area in Rupar Tehsil as protected forest.

The barren and unculturable land and land put to non-agricultural uses shows an increase in area when compared with the normal which is attributable to the inclusion of revised figures of 4,638,720 acres for uncadastrally surveyed areas instead of 3,896,960 acres reported in the year 1951-52 by the Kangra District.

The decrease under culturable waste lands and current fallows and increase in net area sown as compared with normal was due to the fact that more area was put under cultivation due to favourable climatic conditions at sowing time and irrigation facilities provided by the Government. The agricultural population was also allured to add to their area sown by the high prices of the agricultural produce.

The net area sown was 54 per cent of the total area in the State. The area under forest was 3 per cent, under culturable waste 7 per cent, under current fallows 5 per cent and under barren and unculturable land etc. 31 per cent of the total area.

IV. IRRIGATION (TABLE III-A)

The principal source of irrigation in the State is Government Canals. The total net irrigated area includes 63 per cent irrigated by Government Canals, 2

per cent by private canals, 34 per cent by well and nearly 1 per cent by tanks and other sources. Sinking of new wells and tube-wells for irrigation purposes continued during the year under review.

The total irrigated area has increased by 54,583 acres when compared with the irrigated area of the preceding year which is attributable to irrigational facilities provided by the Government.

The area irrigated by canals was reported as 4,406,245 acres by irrigation department whereas 37,75,000 acres by the Deputy Commissioners. The reason of the difference is that the latter figures represent the net canal irrigated area whereas the former cover the entire area watered by canals whether sown or not and also cropped area sown more than once in the same year.

The number of Government canals (Channels) during the year under report was 1,219 and their mileage (Canal miles) 9,554 as against 1,159 Channels and 9,114 miles during last year. The increase in Government canals (Channels) is the result of the Government Scheme under the 1st and 2nd Five-Year Plans.

As compared with last year, the number of wells decreased from 170,790 to 169,315 and tube-wells increased from 2,367 to 3,594. Increase in the number of tube-wells offsets the decrease in the number of working wells. Number of tube-wells has increased as a result of Government policy to advance loans for the purpose and secondly to tendency of the agricultural population to adopt the mechanic system of irrigation.

The irrigated area under principal crops as compared with normal was as under :—

Name of Crop	Area in acres	
	1955-56	Normal
Rice	429,885	399,309
Wheat	1,818,508	1,722,002
Barley	102,219	147,291
Jowar	174,168	142,631
Bajra	232,262	186,912
Maize	305,874	298,994
Gram	937,395	767,202
Mung and Mash	33,437	44,087
Massar	21,660	38,505
Sugarcane	272,460	261,045
Potatoes	11,388	10,944
Cotton Desi	167,053	209,609
Cotton American	620,802	319,335
Chillies	40,664	38,927
Fodder Crops	1,067,300	917,977

A comparison with the normal shows that the irrigated area under Rice, wheat, Fodder Crops, Jowar, Bajra Maize, Gram, Sugarcane, Potatoes, Cotton American and Chillies has increased while it has decreased under other crops. The increase under American cotton, Sugarcane, Chillies, Maize and Gram was owing to their attractive market rates. This increase caused simultaneous decrease of area under other crops.

The total gross irrigated area was 38 per cent of the total sown areas.

V. CROP ACREAGE (TABLE IV)

(i) The following table gives a picture of the sown and matured area of the State :—

Serial No.	Classification	Area in thousand Acres		
		Year under report (1955-56)	Previous year (1954-55)	Normal
1.	Sown Area ..	17,221	16,247	14,637
2.	Matured area ..	15,220	14,520	12,816
3.	Percentage of matured on sown area ..	88 %	89 %	88 %
4.	Failed area ..	2,001	1,727	1,821
5.	Percentage of failed area on sown area ..	12%	11%	12%

The sown area increased by 6 per cent and 18 per cent of the sown area of last year and normal respectively. The increase is attributable to favourable climatic conditions at sowing time and adequate supply of water.

The percentage of failed on sown area was one per cent more than last year which is insignificant.

(ii) The total sown area under different crop was as under :—

Serial No.	Crop	Areas in acres	
		1955-56	Normal
1	Rice ..	616,024	567,200
2	Wheat ..	3,755,992	3,182,100
3	Barley ..	388,502	436,300
4	Jowar ..	594,960	609,500
5	Bajra ..	1,801,857	1,980,800
6	Maize ..	813,544	772,800
7	Gram ..	4,408,809	2,929,300
8	Mung and Mash ..	214,125	227,800
9	Massar ..	83,876	100,400
10	Groundnut ..	98,234	92,300
11	Other Rabi oilseeds (Sarshaf, Taramira and Toria) ..	487,912	472,500
12	Sugarcane ..	352,313	344,600
13	Cotton Desi ..	205,666	245,200
14	Cotton American ..	636,419	321,000
15	Tobacco ..	5,763	5,000
16	Potatoes ..	14,554	14,200
17	Tea ..	8,938	8,900
18	Fodder Crops ..	2,237,379	1,970,800

The area under Wheat, Gram and Rabi oilseeds has increased causing decrease in area under other Rabi crops.

Rice, Maize, Groundnut and Sugarcane covered more area than the normal which is attributable to high prices of these commodities.

The considerable increase in the area under American cotton is also due to the inclination of the cultivators to sow this variety more owing to its high prices and propaganda of Cotton Extension Scheme.

VI. YIELD PER ACRE (TABLE V-A)

A statement comparing the yield per acre, during the year under report with the normals is given below:—

Serial No.	Crop	Current yield per acre in lbs.	Normal yield per acre in lbs.	Difference Minus (—) or plus (+) Col. 3 on col. 4
1	2	3	4	5
1	Rice unhusked ..	1,108	1,060	+5 per cent
2	Wheat ..	827	870	-6 per cent
3	Jowar ..	94	380	-75 per cent
4	Bajra ..	313	350	-11 per cent
5	Barley ..	859	730	+18 per cent
6	Maize ..	912	950	-4 per cent
7	Gram ..	654	620	+5 per cent
8	Sugarcane ..	2,777	2,620	+6 per cent
9	Cotton Desi ..	149	190	-2 per cent
10	Cotton American ..	197	220	-1 per cent
11	Rape (Sarshaf Taramira and Toria)	344	410	-16 per cent

The increase in the average yield of Rice and Sugarcane crops is due to excessive rains in September and October, 1955, which adversely affected and decreased the average yield of other Kharif crops particularly Bajra, Cotton and Jawaar.

The decrease in the average production of Wheat and increase in the average production of Gram is insignificant. The rains of March, 1956, proved beneficial for the maturing of Barley crop and resulted in increase in the average yield. Rape crop received a set-back by hailstorms and cyclones in March, 1956, in some districts which brought down the average yield of the crop.

VII. TOTAL OUTTURN OF CROPS (TABLE V-B)

The outturn of each principal crop during the year under report as compared with the normal is as under:—

Serial No.	Crop	OUTTURN IN TONS		Difference Minus (—) or plus (+) per cent
		current year, 1955-56	Normal	
1	Rice ..	304,800	315,700	-3 per cent
2	Wheat ..	1,506,400	1,258,800	+20 per cent
3	Jowar ..	24,900	60,400	-59 per cent
4	Bajra ..	251,800	259,900	-3 per cent
5	Barley ..	152,900	141,800	+7 per cent
6	Maize ..	331,400	325,800	+2 per cent
7	Gram ..	1,286,900	824,600	+56 per cent
8	Sugarcane ..	436,700	444,100	-2 per cent
9	Rape (Sarshaf, Taramira, Toria) ..	74,900	65,700	+14 per cent
10	Tobacco ..	2,100	1,800	+17 per cent
*11	Cotton Desi—Cleaned ..	78,200	112,400	-30 per cent
12	Potatoes ..	73,600	63,600	+16 per cent
*13	Cotton American—Cleaned ..	320,200	195,600	+64 per cent
14	Mung and Mash ..	15,200	27,800	-45 per cent
15	Massar ..	17,900	18,600	-4 per cent
16	Groundnut ..	31,200	28,300	+10 per cent
**17	Sesamum ..	58,400	125,400	-53 per cent
***18	Tea ..	2,940,600	2,097,500	+4 per cent

*Production is in bales of 392 Lbs each.

**Production is in terms of cwts.

***Production of tea is in lbs.

The difference in the production of Rice, Bajra, Maize, Sugarcane, Tea, Massar, Wheat and Barley as compared with the normal yield is insignificant, hence it requires no comments.

The decrease in the production of Jowar, Sesamum and Mung and Mash is attributable to excessive rains in September and October, 1955, the maturing time.

The increase in the production of American Cotton is due to increase in area under this variety of cotton and due to use of improved methods of cultivation. The decrease in the area and yield per acre under Desi Cotton is responsible for the decrease in its total production.

The increase in area of Gram, Tobacco and Groundnut resulted in increase in their production.

The increase in the production of Potatoes is owing to favourable weather conditions at the harvest time.

Favourable climatic conditions at the time of maturity of Rape (Sarshaf, Tara Mira, and Toria) crop in some districts and more area under the crop than the normal, increased the production.

VIII. FARM (HARVEST) PRICES

The average harvest prices of principal crops during the year under review as compared with the prices prevailing during the preceding year and the normal are given in the table below:-

Serial No.	Crop	Prices in 1955-56		Normal (Last five years) Average
		Rs A.	Rs A.	
1	Rice (Unhusked)	10 5	9 5	10 6
2	Wheat	14 1	11 7	13 6
3	Jowar	9 1	6 14	9 3
4	Bajra	9 10	8 9	10 6
5	Barley	9 8	6 6	8 15
6	Gram	9 10	6 13	11 9
7	Maize	10 7	9 2	10 14
8	Cotton Desi (unginned)	25 15	24 13	26 1
9	Cotton American (unginned)	31 11	32 0	35 8
10	Sugar (Raw)	13 3	12 13	16 7
11	Groundnut	13 5	13 2	16 7
12	Caster Seed	20 0	19 0	22 13
13	Linseed	20 2	15 8	19 15
14	Rape (Sarshaf, Tara-mira, Toria)	23 11	15 14	21 15
15	Mustard	21 7	17 2	22 9
16	Sesamum	26 0	22 12	29 11
17	Tobacco	53 13	55 3	51 7
18	Ginger	41 8	40 0	37 9

The above table shows that the harvest prices were generally high if compared with the normal prices and prices prevailing during

the preceding year. General rise in harvest prices is due to low production of principal agricultural crops, and increase in the population of the State. The value of agricultural produce of the below-noted crops during 1955-56 was Rs 158.47 crores:—

Serial No.	Crop	Value in lakh of rupees (Production x harvest price)
1	Rice (unhusked)	8.57
2	Wheat	53.17
3	Jowar	61
4	Bajra	6.60
5	Barley	3.96
6	Gram	33.75
7	Maize	9.43
8	Cotton Desi (unginned)	2.93
9	Cotton American (unginned)	14.64
10	Sugar (Raw)	15.69
11	Groundnut	1.13
12	Linseed	18
13	Rape	4.83
14	Mustard	b (b indicates less than 5,000 Rupees)
15	Tobacco	31
16	Sesamum	21
17	Potatoes	2.46
Total		1,58.47

The above-noted crops occupied 14,309,600 acres or 83 per cent of the total area sown viz 17,220,500 acres. Assuming that the average value of production per acre on the remaining 17 per cent of the sown area would be the same as for these crops, the total value of crops grown in Punjab will come to Rupees 190 crores 93 lakh as against 159 crores and 51 lakh rupees estimated last year.

The increase in the value is owing to general increase in Harvest prices during the year under report.

IX. AGRICULTURAL WAGES

The daily wages of Carpenters, Blacksmiths, Field labourers, other agricultural labour and herdsmen except that of cobblers increased from anna one to annas three as compared with the wages prevailing in the preceding year which is attributable to high prices of the agricultural produce.

Availability of agricultural labour was adequate throughout the State except in districts Rohtak and Hoshiarpur where some scarcity was felt. In these two districts generally the village labourers prefer to do self-cultivation as tenants than to work as labourers. At the time of Rabi harvest, District Hissar also faced scarcity of Labour.

The number of working hours which are generally 8 hours a day remained unchanged during the year under report.

X. LIVESTOCK, POULTRY, AGRICULTURAL MACHINERY AND IMPLEMENTS (TABLE VIII).

Supply of fodder was generally sufficient in the State during the year under report except in district Simla where it was imported from the adjoining districts of Himachal Pradesh. Condition of cattle was generally satisfactory. The diseases affecting Livestock and their mortality during 1955-56 were as under :—

(a) Diseases affecting Livestock and their mortality during 1955-56.

Name of disease	Affected	Died
Rinderpest	897	421
Haemorrhagic Septicaemia	9,902	9,535
Black Quarter	479	470
Surra	533	5
Foot and Mouth	10,007	27
Pleuro Pneumonia
Rabies	3	3
Mange	21	..
Other contagious Diseases	22,210	10,874
Other causes	12,484	3,929

(b) Diseases affecting Poultry and their mortality by each of them—

Ranikhet	261	261
Fowl Pox	13	12
Other causes

Prompt and timely remedial and preventive measures were taken by the Veterinary field staff by way of carrying out mass inoculations and vaccinations to check and control the various common contagious diseases of livestock and poultry. The table below gives the total number of inoculations and vaccinations carried out during the year 1955-56.

	Vaccinations	Inoculation	
Goat virus	1,432,399	Anti-Rinderpest Serum	12,076
H. S.	1,170,356	H. S. Serum	12,580
Black Quarter	34,775	Black Quarter Serum	3,183
Ranikhet	83,404		
Fowl Pox	6,519		
Contagious Pleuro Pneumonia	..		
T. B. Tested	..		
Equine Abortion	27		
Anti-rabic	..		

The production of Anti-rabic, Ranikhet, Goatis, Fowl pox, H. S. and T.B. tested diseases vaccines was continued as before at the Biological Projects Section of the Punjab College of Veterinary Science and Animal Husbandry, Hissar, during the year 1955-56.

Two hundred and fifty-seven cow bulls and 22 buffalo bulls were purchased by the District boards from the Veterinary Department during the year under report as against 450 and 72 respectively during the year 1954-55.

XI.—CONCLUSION

- (i) Health of agricultural population remained generally satisfactory and their economic position improved due to high prices of Agricultural produce.
(ii) The total remission and suspension of Land Revenue granted by the Punjab Government to agriculturists during the year 1955-56 were as below:-

Serial No.	Name of District	Amount of Remission	Amount of Suspension
1	Hissar	2,03,918	69,291
2	Rohtak	88,592	14,567
3	Gurgaon	1,33,192	6,774
4	Karnal	1,80,986	...
5	Ambala	1,28,184	44
6	Simla	1,103	...
7	Kangra	1,840	...
8	Hoshiarpur	1,85,674	...
9	Jullundur	7,94,903	...
10	Ludhiana	5,34,607	2,027
11	Ferozepore	2,69,104	...
12	Amritsar	9,46,440	954
13	Gurdaspur	7,23,316	27,861
Total		41,91,859	1,21,518

(iii) Agricultural deterioration by Water-logging.

(1) At present thur and sem girdawari is conducted in the following ten districts of the erstwhile Punjab State. The number of villages which were surveyed for the purpose during Rabi, 1956, as compared with the number surveyed in the preceding year is shown in the table below :—

Number of Estates under thur and sem Girdawari

Serial No.	Name of District	Rabi, 1955	Rabi, 1956	Difference
1	Amritsar	459	569	+110
2	Ferozepore	280	448	+168
3	Gurgaon	496	507	+11
4	Ambala	36	37	+1
5	Karnal	34	173	+139
6	Gurdaspur	44	81	+37
7	Ludhiana	37	49	+12
8	Hoshiarpur	18	18	..
9	Rohtak	117	176	+59
10	Hissar	17	18	+1
Total		1,538	2,076	+538

(2) There has been a marked increase in the number of villages affected by thur and sem in the districts of Amritsar, Ferozepore, Gurgaon, Karnal, Gurdaspur, Ludhiana and Rohtak. This is partly due to further spread of this evil in these districts and partly to the fact that thur had already appeared in some villages, but remained unrecorded by the Revenue Field Staff and consequently remained unreported.

(3) Total recorded thur has increased from 87,307 acres in Rabi, 1955 to 114,810 acres in Rabi, 1956 i.e. by 27,503 acres. The increase is appreciable in Amritsar, Ferozepore, Gurgaon, Karnal, Ludhiana, Rohtak and Hissar districts. These figures of Thur, however, do not represent a true picture of this evil on the spot. There is still scope for better recording, and efforts are being continued in that direction.

(4) Total recorded sem in the ten districts of the erstwhile Punjab State referred to above has increased from 14,779 acres in Rabi, 1955 to 17,210 acres in Rabi, 1956 i.e. by 2,431 acres. The main increase is in the districts of Ferozepore, Gurdaspur, Ludhiana, Rohtak and Hissar. This increase is due to the rise of Sub-soil water table on account of seepage from the canals or heavily irrigated fields and lack of effective drainage. As the soil sponge have already been saturated, the abnormally heavy rainfall in the beginning of October, 1955, caused further aggregation of this evil.

(5) Progressive total of the cultivated area gone out of cultivation and classed as 'Banjar' on account of spread of thur and sem since the commencement of thur and sem illawari has increased from 29,397 acres in Rabi, 1955 to 32,538 acres in Rabi, 1956, i.e. by 3,141 acres, (thur 2,491 acres, sem 650 acres.)

During the year under report the hill torrents in the Ambala District affected a considerable area of the agricultural land. To prevent this, steps are being taken to enforce closures in the affected area and encourage terracing and reclaiming of land. The problem of preserving the soil from erosion in the Hoshiarpur District is being tackled in its technical aspects by the Forest Department.

(Sd.) K. PARTAB SINGH,
Director of Land Records, Punjab.

SUMMARY TABLE A
CLASSIFICATION OF AREA
Area in thousands acres for 1955-56

Head of classification	1950-51		1951-52		1952-53		1953-54		1954-55		1955-56
