## Introduction

The Ministry of Education and Social Welfare publishes the Statistics of education in India annually in their publications 'Education in India, Vol. I and Vol. II'. These publications give the statistics at the national and State levels, but do not provide district-wise statistics.

To fill up this gap, the National Council of Educational Research and Training brought out a volume entitled 'Educational Statistics: District-wise' giving the bench mark of educational data of various kinds for all districts for the year 1960-61. To make inter district comparison possible, some important indices such as enrolment ratios, percentages of trained teachers and per capita expenditure on education are also given. These comparative statements show a wide range of variation between the districts in every respect.

It had been decided to have a similar review of educational developments in the districts for the year 1965-66. Such periodic reviews are necessary for several reasons. For instance, they help to judge the effectiveness of the measures taken to correct regional imbalances at the district level. Secondly, such collection and publication of data on different aspects of education at the district level help in the preparation of educational development plans for the districts so that they can be adopted, as recommended by the Educational Commission, as the principal unit for administration, planning and development of school education.

The present volume gives data for each of the districts of Madhya Pradesh on number of educational institutions, pupils, teachers, expenditure etc, at all levels of education. It also gives the rates of growth in different sectors from 1960-61 to 1965-66 and some important indices of educational development. The Ministry takes this opportunity to express its appreciation of the co-operation and help received from the Director of Education, Madhya Pradesh and other educational authorities in the State.
