CONTENTS

	Page
Summary	324
Introduction	325
Review of literature	327
Experimental	331
Mechanics of a rigid wheel striking a solid obstruction.....	331
Kinematics of a rigid wheel rolling on a friable or granular medium	334
Motion of soil particles under a rigid transport wheel.....	340
Field investigations	342
Apparatus for studying rolling resistance and slippage of individual transport wheels.....	342
Wheels used in field trials.....	346
Volume weight soil sampler.....	347
Impact "penetrometer"	348
Trial field	348
Variable load studies	348
Effect of speed on rolling resistance.....	352
Repeated trials in the same track.....	353
Rolling resistance trials in field.....	354
On timothy meadow	354
On tilled soil	359
Soil uniformity trials	359
On sand	365
Standard deviation of rolling resistance and slippage determinations	367
Trials with 36 by 2.5-inch wheel and 1000-lb. load on various soil conditions	372
Correlation of rolling resistance with soil moisture, volume weight and "penetrometer" reading.....	374
Effect of area upon the supporting capacity per unit area	377
Discussion and interpretation of rolling resistance trials	379
Factors contributing to rolling resistance.....	380
Effect of load upon rolling resistance.....	380
Effect of wheel diameter upon rolling resistance.....	381
Effect of rim width upon rolling resistance.....	382
Wheel slippage	383
Suggestions for further investigations.....	383
Conclusions	384
Literature cited	386
