PREFACE

This Research Project on the Scheduled Castes was entrusted to the author by the Indian Council of Social Science Research. The author is grateful to the ICSSR for entrusting this project to him and for the financial assistance in carrying out the project and its publication. The ICSSR is not in any way responsible for what is contained in this Report. The author is grateful to the M. S. University of Baroda for publishing this Study in the Economics Series. Shri Ashim Mukherji worked as Research Assistant in the Project. I am thankful to him for his assistance in compilation of the data. Thanks to Shri C. N. Kachhia for the efficient and expeditious typing.

BARODA, 24th January, 1976

V. N. KOTHARI

The publication of this study was supported financially by the Indian Council of Social Science Research. However, the responsibility of the facts stated, opinions expressed, or conclusions reached in the study entirely rests with the author and the Council accepts no responsibility for them.

CHAPTER I

Introductory

The Constitution of India has accorded a special status to the Scheduled Castes and the Scheduled Tribes. It enjoins the state to take specific measures to remove the social and economic handicaps from which they have been suffering during the long history of India.

The scheduled Castes, which constitute the Fourth Caste Group in the caste system of India are undoubtedly economically backward. This study pertains to the Scheduled Castes in the State of Gujarat. The 1961 Census had provided special tables for the Scheduled Castes and the Scheduled Tribes. This study is based on the 1961 Census data for Gujarat. The objective of the study is to throw light on the economic profiles of the Scheduled Castes in Gujarat on the basis of the 1961 Census data. Though the analysis primarily relates to the Scheduled Castes, at points it will be necessary to refer to the Scheduled Tribes also.

It may be useful to discuss the analytical framework at the outset. The economic problems of the special groups may arise from the following three sources:—(1) lack of economic motivation, (2) lack of ability and (3) denial of opportunities. This type of distinction is important in view of the different policy implications with respect to each group of operative factors.

How do these factors actually operate? Let us take the motivation first. Abesence or feebleness of motivation for improvement in the standard of living may be manifested in the attitude towards work, saving, pattern of consumption and marriage and family size. In case of groups which are weak in motivation one would observe a backward bending supply curve of labour, a higher incidence of absenteeism, relative immobility, improvidence and lack of saving habits, wasteful and harmful consumption pattern and the prevalence of early marriages, high birth rates and larger families.

Next to economic motivation, these groups may be lacking in abilities to make headway economically. They may be lacking in education, skills, land or equipment.

Finally, there may be motivation as well as ability but the market may be operating in a discriminating manner against them. Between two equally acceptable candidates a backward class candidate may be at a disadvantage in the employment market either because of absence of connections or because of prejudice or downright social prohibitions. 'Artisans may be suffering from weak market connections. They may not be able to sell their products directly to the customers. They may have difficulties in obtaining credit, raw materials and technical help.

It will thus be seen that in some cases there may be need to change the motivation while in other cases disabilities such as those relating to skill, education, equipment etc. may have to be removed. In still others it may be necessary to remove the market imperfections. Of course, in any given situation, the three factors namely, lack of motivation, lack of abilities and market discrimination and imperfections would be intricately interwoven with each other. For instance, the fact that the market has been operating in a discriminatory manner against a particular group for a long period, might weaken in due course its motivation as well. Further, the Census data cannot be expected to answer the Questions of the type mentioned in the earlier paragraphs. All the same, it is useful to examine the Census data keeping in mind the above framework.

CHAPTER II

Scheduled Castes Population

In this chapter we shall discuss the various demographic characteristics such as the size, sex ratio, age structure and rural-urban location etc. Table I shows the Scheduled Castes and Scheduled Tribes population in relation to total population in different States of India for the year 1961. Scheduled Castes population of India in 1961 was 64 million as compared to 30 million Scheduled Tribes population in a total population of 439 million. Thus the Scheduled Castes constituted 14.7% of the total population as compared to 6.8% Scheduled Tribes. Thus nearly one out of every five Indians belonged to Scheduled Castes or Scheduled Tribes. Total population of Gujarat was 20.6 million. Out of these, 1.4 million belonged to Scheduled Castes and 2.8 million belonged to Scheduled Tribes. Proportion of Scheduled Castes and Scheduled Tribes to total population in Gujarat thus came to 6.6% and 13.4% respectively. So in case of Gujarat also, we find that one out of every five belonged to Scheduled Castes or Scheduled Tribes. However, there the similarity ends. In case of India, in a total of 94 million population of Scheduled Castes and Scheduled Tribes, nearly 2/3rd belonged to Scheduled Castes and 1/3rd belonged to Scheduled Tribes. In Gujarat exactly the reverse was the case; 1/3rd belonged to Scheduled Castes and 2/3rd belonged to Scheduled Tribes. If one were to go by the preponderance of the type of population, Gujarat may be branded as a Scheduled Tribes problems state, meaning thereby that merely from the point of view of the numbers involved the problems of Scheduled Tribes would predominate over the problems of Scheduled Castes.

Relative Numbers

We can go a little further into the matter. Here below are given the ratios of Scheduled Castes population to Scheduled Tribes population in 1961 in each of the 15 States of India. (Union Territories are not considered here as they are too small in size as compared to the States). A ratio exceeding I would imply that the Scheduled Castes outnumber Scheduled Tribes, and conversely if the ratio is less than I. By this strict arithmetical criteria, we may say that in as many as 10 States Scheduled Castes outnumbered Scheduled Tribes.

TABLE I
Scheduled Castes and Scheduled Tribes Population in India and the States, 1961 Census. (Figures in 000's)

| | Total Popula- tion | Scheduled Castes Popula- tion | Column 3 as % age of Column 2 | Scheduled Tribes Popula- tion | Column 5 as % age of Column 2 |
|------------------------|--------------------------|--|-------------------------------|--|--|
| 1 | 2 | 3 | 4 | 5 | 6 |
| India | 4,39,235 | 64,417 | 14.7 | 29,879 | 6.8 |
| Andhra Pradesh | 35,983 | 4,974 | 13.8 | 1,324 | 3.7 |
| Assam | 11,873 | 733 | 6.2 | 2,065 | 17.4 |

| Punjab | 20,307 | 4,139 | 20.4 | 14 | 0.1 |
| Rajasthan | 20,156 | 3,360 | 16.7 | 2,351 | 11.7 |
| Uttar Pradesh | 73,746 | 15,400 | 20.9 | _ | |
| West Bengal | 34,926 | 6,890 | 19.7 | 2,054 | 5.9 |
| Delhi | 2,659 | 342 | 12.9 | _ | |
| Himachal Pradesh | 1,351 | 370 | 27.4 | 108 | 8.0 |
| Manipur | 780 | 13 | 1.7 | 249 | 31.9 |
| Tripura | 1,142 | 120 | 10.5 | 360 | 31.5 |
| Dadra and Nagar Haveli | 58 | 1 | 1.7 | 51 | 87.9 |
| Pondicherry | 369 | 57 | 15.5 | - | _ |
| Nagaland | 369 | | | 343 | 93.0 |
| Andaman and Nicobar | 64 | e | _ | 14 | 21.9 |
| Laccadive etc. | 24 | _ | | 23 | 95.8 |
| Goa | 627 | | _ | _ | _ |
| N.E.F.A. | 337 | _ | | 5 | 1.5 |

| State | Ratio of Schedued Castes Population to Scheduled Tribes Population |
|-----------------|---|
| Andhra Pradesh | 3.8 |
| Assam | 0.4 |
| Bihar | 1.5 |
| Gujarat | 0.5 |
| Jammu & Kashmir | (No Scheduled Tribes) |
| Kerala | 6.7 |
| Madhya Pradesh | 0.6 |
| Madras | 24.1 |
| Maharashtra | 0.9 |
| Mysore | 16.2 |
| Orissa | 0.7 |
| Punjab | 295.6 |
| Rajasthan | 1.4 |
| Uttar Pradesh | (No Scheduled Tribes) |
| West Bengal | 3.4 |

However our interest is not in numbers as such. What we are interested in are the policy implications. There are bound to be competing claims for scarce resources. The relative numbers would be quite decisive in the allocation of resources among competing claimants. In this regard, the States which have the ratios near about 1 are likely to face complicated practical problems of settling the claims of the Scheduled Castes vis-a-vis the Scheduled Tribes. We may take for instance the ratios of 0.7 to 1.5 as the range, where in the claims of the Scheduled Castes and the Scheduled Tribes would be evenly balanced, while the ratios of 1.6 and above would indicate a balance favouring Scheduled Castes and the ratios of 0.6 and less would indicate a balance in favour of Scheduled Tribes. In this way Andhra Pradesh, Jammu & Kashmir, Kerala. Madras, Mysore, Punjab, Uttar Pradesh and West Bengal are found to be decisively Scheduled Castes predominance States. On the other hand, Assam, Gujarat and Madhya Pradesh are Scheduled Tribes predominance States. In Bihar, Maharashtra, Orissa and Rajasthan the scales are evenly balanced. In these states there may be problems of Scheduled Castes Versus the Scheduled Tribes. 1

¹ For a somewhat similar analysis see, Brij Raj Chauhan, "Scheduled Castes and Scheduled Tribes", Economic and Political Weekly", January 25, 1969, Vol. IV, No. 4,

Intensity of Scheduled Population Problems

The above discussion merely throws light on the relative numbers. It does not tell us anything about the intensity with which the problems are likely to be felt. This would depend on the percentage of Scheduled Castes and Scheduled Tribes population in each State. Here below, we show the relevant information.

| State | Percentage of Scheduled Castes and Scheduled Tribes to total population |
|-----------------|--|
| India | 21.5 |
| Andhra Pradesh | 17-5 |
| Assam | 23.6 |
| Bihar | 23.1 |
| Gujarat | 20.0 |
| Jammu & Kashmir | 8,0 |
| Kerala | 9.8 |
| Madhya Pradesh | 33.7 |
| Madras | 18.8 |
| Maharashtra | 11.7 |
| Mysore | 14.0 |
| Оrissa | 39.9 |
| Punjab | 20.5 |
| Rajasthan | 28.4 |
| Uttar Pradesh | 10.9 |
| West Bengal | 25.6 |

The share of Scheduled population ranged from 8 per cent in Jammu & Kashmir to 39.9 per cent in case of Orissa. If we take the national average of 21.5 per cent as the dividing line, then, Assam, Bihar, Madhya Pradesh, Orissa, Rajasthan and West Bengal have the problem of Scheduled Population in an acute form, in the sense that in these states the proportion of Scheduled population is higher than the national average.

The problem may be analysed further, whether particular States have the Scheduled Castes problem or Scheduled Tribes or both combined. Here below we cross classify the 15 States according to the percentage of Scheduled Castes and Scheduled Tribes in Total population.

| Scheduled Castes | Scheduled Tribes | 0%-9.9% | 10% - 14.9% | 15% and above |
|---------------------|---------------------|--------------------------------|-------------|---------------|
| 0%-9.9% | , | Jammu and Kashmir Kerala | Gujarat | Assam |
| | | Maharashtra | | |
| 10%-14.9% | | Andhra | | Madhya |
| | | Pradesh | | Pradesh |
| | | Bihar | | |
| | | Mysore | | |
| 15% and abov | e | Madras | Rajasthan | Orissa |
| | | Punjab | - | |
| | | Uttar | | |
| | | Pradesh | | |
| • | | West Bengal | | |

If we consider the proportion of less than 10 per cent as a moderate and a proportion of 15 per cent and above as a high degree of problem, we find that Madras, Punjab, Uttar Pradesh and West Bengal had a high degree of problem of Scheduled Castes. Andhra Pradesh, Bihar and Mysore had a medium degree problem of Scheduled Castes. Jammu and Kashmir, Kerala and Maharashtra had only moderate degree problem of either Scheduled Castes or Scheduled Tribes. Gujarat had a medium degree problem of Scheduled Tribes while Assam had a high degree problem of Scheduled Tribes. Rajasthan had a high degree problem of Scheduled Tribes while Madhya Pradesh had a high degree problem of Scheduled Tribes combined with medium degree problem of Scheduled Tribes combined with medium degree problem of Scheduled Tribes combined with medium degree problem of Scheduled Tribes.

It may be noted that the proportion of Scheduled Castes to total population varied very widely among the States. It ranged all the way 5.6% in Maharashtra to 20.9 per cent in West Bengal. Gujarat is a State with one of the lowest percentage of Scheduled Castes population.

Scheduled Population and State Per Capita Income

A point of some interest is the relationship between State Per Capita Income and the proportion of Scheduled Castes and Scheduled Tribes population. Do we find that the States with higher proportion of Scheduled Castes and Scheduled Tribes population have lower per capita income? Table II shows the relevant data. The r^2 is (-).08, which is rather small. The sign is however negative indicating that a higher proportion of Scheduled population is associated with a lower per capita income.

TABLE II

Per Capita Income (1960-61) and Percentage of Scheduled Castes and Scheduled Tribes Population in Different States of India (1961)

| State | Per Capita Income 1960-61 (Rs.) | Rank according to per capita income | Percentage of Scheduled Castes and Scheduled Tribes to total population | Rank according to Scheduled Castes and Scheduled Tribes. | Ratio of Population other than Scheduled Castes and Scheduled Tribes to Scheduled Castes and Scheduled Tribes. | Column 2×Column 6 (Rs.) | Rank according to Column 7. |
|--|--|---|---|--|---|--|--|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| Andhra Pradesh Assam Bihar Gujarat Kerala Madhya Pradesh Madras Maharashtra Mysore Orissa Punjab Rajasthan Uttar Pradesh West Bengal | 289 328 222 403 326 293 343 479 313 268 441 272 292 462 | 11 6 14 4 7 9 5 1 8 13 3 12 10 2 | 17.5 23.6 23.1 20.0 9.8 33.8 18.8 11.7 14.0 39.8 20.5 28.3 20.9 25.6 | 11 5 6 9 14 2 10 13 12 1 8 3 7 | 4.7 3.2 3.3 4.0 9.2 2.0 4.3 7.5 6.1 1.5 3.9 2.5 3.8 2.9 | 1,358 1,050 733 1,612 2,999 586 1,475 3,593 1,909 402 1,720 680 1,110 1,340 | 7 10 11 5 2 13 6 1 3 14 4 12 9 |
| All-India | 336 | | 21.5 | | 3.7 | 1,243 | |

Note:—Per Capita Income figures have been obtained from Table 5, P. 57 of Estimates of State Income by National Council of Applied Economic Research, New Delhi.

A related point is the capacity of different states to alleviate the conditions of the Scheduled Castes and Scheduled Tribes. In so far as the Scheduled population is to be helped by the Non-Scheduled population, a smaller proportion of the Scheduled population would indicate a more favourable situation. In fact one can work out the ratio of the Non-Scheduled population to the Scheduled population. Larger ratio would mean that per head of Scheduled population, a large number of Non-Scheduled population is available from whom the resources can be tapped for helping the Scheduled population. Thus a ratio of 2 would mean that there are 2 Non-Scheduled persons per scheduled person. However, the extent of help that can be rendered to the Scheduled population depends not only on the relative numbers of Non-Scheduled population but also on their economic condition. We should therefore multiply the ratio by the per capita income, Column 7 in Table II shows the size of economic resource potential available (per head of Scheduled Population) from which the resources can be tapped. Column 7 is a rough measure of the economic capacity of each State to help its Scheduled population. Here it is interesting to see that the two States, namely Orissa and Madhya Pradesh with the highest responsibility in regard to Scheduled population, have the lowest economic capacity. On the other hand, Kerala and Maharashtra with the lowest responsibility in this regard have the highest economic capacity. Actually, the rank correlation coefficient between rank of 14 States according to the proportion of scheduled population and according to economic capacity is found to be -0.9. This means that the States, which are more hard pressed with the problems of the Scheduled Castes and Scheduled Tribes population are less endowed to tackle the same, with their own resources.

District-wise Distribution

Coming to districtwise details for Gujarat, as shown in Table III we find that only in Surendranagar and Ahmedabad Districts did the ratio of Scheduled Castes population to total population exceed 10 per cent. In Bhavnagar, Panchmahals, Surat and Dangs the Scheduled Castes population formed less than 5 per cent of the total. In rest of the Districts the proportion ranged beween 5 to 10 per cent. We thus find that the proportion of Scheduled Castes population in most of the districts was near about the State average.

TABLE III

Scheduled Castes and Scheduled Tribes Population in the
Districts of Gujarat, 1961

| District | Total Population | Scheduled Castes Population | Scheduled Tribes Population | Percentage Share in Scheduled Castes Population | Percentage Share of Scheduled Castes Population |
|---------------|---------------------|-----------------------------------|-----------------------------------|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 |
| Jamnagar | 8,28,419 | 50,295 | 3,410 | 3.7 | 6.1 |

| Amreli | 6,67,823 | 46,045 | 187 | 3.4 | 6.9 |
| Junagadh | 12,45,643 | 85,488 | 6.803 | 6.3 | 6.9 |
| Kutch | 6,96,440 | 63,101 | 32,471 | 4.6 | 9.1 |
| Banaskantha | 9,96,144 | 95,219 | 52,685 | 7.0 | 9.6 |
| Sabarkantha | 9,18,587 | 78,486 | 1,28,085 | 5.7 | 8.5 |
| Mehsana | 16,89,963 | 1,46,074 | 4,125 | 10.7 | 8.6 |
| Ahmedabad | . 22,10,199 | 2,26,963 | 12,215 | 16.6 | 10.3 |
| Kaira | 19,77,540 | 1,16,072 | 17,480 | 8.5 | 5.9 |
| Panchmahals | 14,68,946 | 51,846 | 5,03,214 | 3.8 | 3.5 |
| Baroda | 15,27,326 | 90,519 | 3,27,992 | 6.6 | 5.9 |
| Broach | 8,91,969 | 44,759 | 3,70,971 | 3.3 | 5.0 |
| Surat | 24,51,624 | 84,375 | 12,24,959 | 6.2 | 3.4 |
| Dangs / | 71,567 | 261 | 66,233 | 0.0 | 0.4 |
| Gujarat Total | 2,06,33,350 | 13,67,255 | 27,54,446 | 100.0 | 6.6 |

Although for the State as a whole, the Scheduled Tribes population exceeded the Scheduled Castes population by a ratio of 2:1, it is interesting to note that it is only in six districts that the scheduled Tribes population exceeded the Scheduled Castes population. These six districts alone accounted for as much as 95 per cent of the Scheduled Tribes population of the State. In the remaining eleven districts, the Scheduled Castes population exceeded the Scheduled Tribes population. In as many as seven out of these eleven districts the Scheduled Tribes population was less than 10,000. Thus while the Scheduled Tribes population presents a highly localized problem, the Scheduled Castes population presents a highly dispersed phenomenon. The Scheduled Castes are a minority every where.

CHAPTER III

Demographic and Cultural Characteristics

Sex Ratio;

We shall now discuss the sex ratio, age structure, civil condition, urbanization and literacy and education level. Table IV shows the Scheduled Castes, Scheduled Tribes and other population in Gujarat by sex and three broad age groups. The data relating to age for the Scheduled Castes are available for only three broad groups and that considerably limits the scope for analysis. Coming to the sex ratio, we find that there were 933 females per 1000 males

TABLE IV
Scheduled and Non-Scheduled Population of Gujarat by Age and Sex, 1961

| Age G | roup | Gujarat Total Population | Gujarat Scheduled Castes | Gujarat Scheduled Tribes | Gujarat Popula- tion other than Scheduled Castes and Tribes |

| | | their age | their age | their age | |

among the Non-Scheduled population. The sex ratio among the Scheduled Castes was 972 and it was 970 among the Scheduled Tribes. For the Non-Scheduled population the sex ratio improved with each age group. It was 917 for the age group 0-14, 940 for the age group 15-44 and 95% for 45 and above age group. In case of Scheduled Castes the improvement in the sex ratio was very remarkable. For the three age groups it was 917, 1010 and 1037. This extraordinary improvement in the sex ratio needs an explanation but no explanation readily offers itself.

Age Structure:

The age structure of the Scheduled Castes population and the Non-Scheduled population of Gujarat is shown below:

| Age Group | Scheduled Castes (Per cent) | Non-Scheduled Population (Per cent) |
|--------------|-------------------------------|-------------------------------------|
| 0-14 | 43.7 | 42.4 |
| 15 - 44 | 42.7 | 42.8 |
| 45 and above | 13.6 | 14.7 |
| | 100.0 | 100.0 |

The similarity in the age structure is obvious. Attention may however be drawn to somewhat higher proportion of children among the Scheduled Castes population and somewhat lower proportion of persons 45 and above as compared to the Non-Scheduled population.

Marital Status

Civil condition or the marital status is an important cultural characteristic. From an economic point of view also it is an important characteristic in as much as it has a direct bearing on the birth rate. Keeping this in mind, we have shown in Table V, Number of females in the age groups 0-14 and 15-44 who are classified as 'never married'. Among the Non-Scheduled population as well as the Scheduled populations in Gujarat child marriage has almost disappeared. Among the Scheduled Castes females in the age - group o - 14, as many as 96 per cent were reported 'never married'. What was true of Gujarat as a whole, was true for individual districts as well except Kaira which reported only 80 per cent Scheduled Castes females below 14 as 'never married'. Among the Scheduled Castes in Kaira district the custom of Child marriage seems to be prevalent. In this respect, Gujarat Scheduled Castes seem to be ahead of their counterparts in the rest of India. The proportion of 'never married' females among the Scheduled Castes females below 14 years in India was 90 per cent as compared to 96 per cent in Gujarat. While it is true that the Child marriage has almost disappeared among the Scheduled Castes in Gujarat, they still tend

to marry earlier. This is borne out by the lower percentage of 'never married' Scheduled Castes females in the age group of 15-44. Only 6 per cent of the Scheduled Castes females 15-44 years were 'never married' as compared to 10 per cent among the Non-Scheduled females.

Urbanization:

Scheduled Castes were considerably less urbanized than the general population as can be seen from the following table. Except in Assam, in all the states the percentage of Scheduled Castes in urban areas to urban population was lower than the percentage of Scheduled Castes in the total population. In Gujarat the percentage of Scheduled Castes among the urban population was only slightly lower than their percentages in the total population. For India as a whole, the percentage of Scheduled castes population was 14.7 per cent but the percentage of Scheduled Castes in urban areas to total urban population was only 8.7 per cent. Alternatively we may say that while 18 per cent of the Indian people were living in urban areas, among the Scheduled Castes only 10.7 per cent were living in urban areas. In Gujarat however, the corresponding figures were 25.8 per cent and 24.4 per cent. Thus the rate of urbanization among the Scheduled castes for India as a whole was considerably lower than that among the overall population but for Gujarat it would appear to be on par with the general population. The matter however is of such importance that, we should go a little deeper. However, before going further we may complete our observations on table VI. We can give a more precise expression to the rates of urbanization of the Scheduled Castes as compared to the rates of urbanization of the total population. We may call this the relative rate of urbanization of the Scheduled Castes and it is shown in Column 6 of the table. It is obtained by dividing the percentage of Scheduled Castes in urban areas to urban population by the percentage of Scheduled Castes to total population or by dividing the percentage of Scheduled Castes residing in urban areas by percentage of total population residing in urban areas.

Relative Rates of Urbanization:

The relative rate of urbanization of Scheduled Castes in India was 0.59, that is, 40 per cent less than the general population. In concrete terms this would mean that had the rate of urbanization for the Scheduled Castes been of the same order as it was for the general population, there would have been 11.6 million Scheduled Castes people residing in urban areas in 1961 as against only 6.9 million enumerated in urban areas i.e. 4.7 million more than those actually enumerated in urban areas. However, in case of Assam the rate of urbanisation was greater for the Scheduled Castes. For Gujarat the relative rate was 0.95. For all the other States the relative rates of urbanization were lesst han 0.80, with the lowest relative rate of 0.41 obtaining in West Bengal.

TABLE VI
Scheduled Castes Population in Urban Areas, Percentage Distribution,
India and States, 1961

| State 1 | Percent total population in urban areas | Percent of Scheduled Castes to total population | Scheduled Castes in urban areas | Percentage of of Scheduled Castes in urban áreas to total population of Scheduled Castes in each case | Relative* Rate of urbaniza- tion of Scheduled Castes |

| Urban | 42,789 | 36,147 | 78,937 | 845 | 3,647 | 3,222 | 6,870 | 883 | 8.7 |
| Total | 2,26,293 | 2,12,942 | 4,39,235 | 941 | 32,917 | 31,500 | 64,417 | 957 | 14.7 |
| Gujara | t | | | | | | | | |
| Rural | 7,830 | 7,487 | 15,317 | 956 | 518 | 515 | 1,033 | 994 | 6.7 |
| Urban | 2,804 | 2,513 | 5,317 | 896 | 176 | 158 | 334 | 898 | 6.3 |
| Total | 10,634 | 9,999 | 20,633 | 940 | 694 | 674 | 1,367 | 971 | 6.6 |

From this it would appear that Gujarat Scheduled Castes are almost as much urbanized as the general population of Gujarat. However, the matter needs further probing. Total population includes Scheduled Castes and Scheduled Tribes. Therefore, proper comparison is between rates of urbanization among Scheduled Castes, Scheduled Tribes and Population other than Scheduled Castes and Scheduled Tribes. Here below are shown the per cent of urban population among different sections of the population in India and Gujarat.

| | | Percent Residi | ing in Urban Areas |
|----|---|----------------|--------------------|
| | | India | Gujarat |
| ı. | Total population | 18.0 | 25.8 |
| 2. | Scheduled Castes | 10.7 | 24.4 |
| 3. | Scheduled Tribes | 2.6 | 5.0 |
| 4. | Population other than Scheduled Castes and | . • | .* |
| • | Scheduled Tribes | 20.7 | 29.3 |
| 5. | Relative rate of urbanization | | , , |
| - | of Scheduled Castes i.e. 2 ÷ 4 | 0.52 | 0.83 |

The relative rates of urbanization come down to 0.52 and 0.83 for India and Gujarat respectively. In case of Gujarat, what originally appeared to be an insignificant difference in the rate of urbanization, does turn out to be a significant difference when the comparison is made with the population other than Scheduled Castes and Scheduled Tribes. If the Scheduled Castes in Gujarat had the same rate of urbanization as the Non-Scheduled population there would have been 401 thousand Scheduled Castes people residing in urban areas of Gujarat as against 334 thousand actually enumerated, i.e. there would have been 67,000 more Scheduled Castes persons in urban areas.

Urbanization, Caste and Education:

Urbanization is an important social, cultural and economic phenomenon. From the point of view of the problem at hand, the phenomenon of urbanization is important in as much as in urban areas the discrimination based on castes is likely to be less severe. Also urban areas are centres of growing economic opportunities and seats of high productivity activities. Finally, many of the legislatively protected jobs are to be found in the urban areas. One of the possible explanations for the lower rates of urbanization among the Scheduled Castes can be that there is much greater illiteracy among them which precludes them from availing of the opportunities in the urban areas. Is this the sole explanation for the lower rates of urbanization of the Scheduled Castes? To what extent are the lower rates of urbanization of the Scheduled Castes due to higher rates of illiteracy among them and to what extent are they due to the lower rates of urbanization prevailing among different educational levels? Table VIII shows percentage of each educational category residing in urban areas for India and Gujarat and for Scheduled Castes and Scheduled Tribes and for Non-Scheduled population. It will be seen that both for the Non-Scheduled population (i.e. population other than Scheduled Castes and Scheduled Tribes) and the Scheduled Castes population, for India as well as for Gujarat, rates of urbanization were higher, higher the level of education. Thus for the Non-Scheduled population for India, 14.5 per cent of the illiterate persons were found to be staying in urban areas. Corresponding figures for the literate, primary and Matriculates and above were 29.3 per cent, 42.8 per cent and 70 2 per cent respectively. For Gujarat Non-Scheduled population, the pattern was the same, except that the percentages were a little higher in each case. What is of significance, is the lower rate of urbanization among the Scheduled castes in India for all educational categories and in Gujarat for all educational categories except illiterate persons. The relative rates of urbanization of Scheduled Castes people in India did not differ significantly from one educational level to another. Thus the relative rate of urbanization of illiterate among the Scheduled Castes in India was 0.64. The corresponding figures for the Literates, Primary and Matriculates were 0.64, 0.66 and 0.60. This means that whatever the literacy

TABLE VIII

and educational status of a scheduled Castes person in India, his chances of being urbanized were 2/3rd of the chances of the non-Scheduled person being urbanized. It would appear that literacy and education either did not change the willingness to migrate or did not remove other disabilities or did not diminish the degree of discrimination.

However, for Gujarat Scheduled Castes the relative rates of urbanization were much higher. Actually, for the illiterates the rates of urbanization did not differ as between the Scheduled castes and the Non-Scheduled castes. The relative rates of urbanization of the Scheduled Castes were lower for the Literates, Primary and Matriculates and above.

Now we are in a position to answer the Question, as to what extent is the lower rate of urbanization of Gujarat Scheduled Castes due to their lower level of literacy and education. To what extent can this be attributed to other factors? We can answer this question in the following manner. Suppose the Gujarat Scheduled castes had the same rates of literacy and education as the Non-Scheduled population but their rates of urbanization were unchanged, what would have been the percentage of Scheduled population in urban areas? In the Non-Scheduled population, 65.8. per cent were Illiterate, 10.8 per cent were Literate without educational level, 21.7 per cent were primary educated and 1.8 per cent were matriculates and above. Apply to these percentages, the rates of urbanization obtained for the Scheduled Castes. The rates of urbanization among Scheduled Castes were 21.8 per cent for Illiterate, 28.9 per cent Literate, 36.0 per cent for Primary educated and 75.0 per cent for Matriculates and above. Thus if the levels of literacy and education of the Scheduled Castes were to improve upto the level of the Non-Scheduled population, but the rates of urbanization of the Scheduled Castes were to remain unchanged, the overall urbanization per centage of the Scheduled Castes in Gujarat would move up from 24.4 per cent to 26.7 percent which is still lower than the 29.3 per cent obtained for the Non-Scheduled population. This would mean that approximately 32,000 more persons belonging to Scheduled Castes would have moved to the urban areas if they had comparable levels of literacy and education. But even then their rate of urbanization would be lower by 2.6 per centage points as compared to the Non-Scheduled population. To put it in absolute terms this involves 35,000 Scheduled Castes people. To conclude then, the rate of urbanization of the Scheduled Castes is 24.4 per cent as compared to 29.3 per cent among the Non-Scheduled population. That is, it is lower by 5 per centage points. Only half of this difference can be attributed to lower levels of literacy and education among the Scheduled Castes. A similar calculation for India shows that the rate of urbanization for the Scheduled Castes would improve from 10.7 to 13.5 per cent while it was 20.7 per cent for the Non-Scheduled population. Thus in case of India lower level of literacy and education seem to explain-only 1/3rd of the difference of the rate of urbanization among the Scheduled Castes and the Non-Scheduled population. appears that in the Gujarat the literate and the educated Scheduled Caste people suffer less handicapsin the matter of opportunities in the urban areas as compared to what they have to suffer in India as a whole.

Literacy:

We now proceed to an examination of the prevalence of literacy and educational attainments of Scheduled Castes. Literacy is an important cultural characteristic. From an economic point of view literacy is an important attribute in favour of upward mobility. Table IX shows the educational cattainments of the Scheduled Castes, Scheduled Tribes, Total Population and Non-Scheduled population for India and Gujarat by sex and for rural and urban arcas. Here below we show the percentage of population Literate and Above,

T = Total

Percentage

| | | Literate and Above |
|----|----------------------------------|--------------------|
| 1. | India Total Population | 24.0 |
| 2, | India Scheduled Castes | 10.3 |
| 3. | India Scheduled Tribes | 8.5 |
| 4. | India Non-Scheduled Population | 28. 0 |
| 5. | Gujarat Total Population | 30.5 |
| 6. | Gujarat Scheduled Castes | 22.5 |
| 7. | Gujarat Scheduled Tribes | - TI.7 |
| 8. | Gujarat Non-Scheduled Population | 34.2 |

From the above figures we are able to see the well-known phenomenon that the Scheduled castes are considerably less literate than the overall population. However, the contrast becomes even sharper when we compare the Scheduled Castes population literacy rate with that obtaining among the Non-Scheduled population.

A point of greater interest is the gap in the literacy rate between the Scheduled Castes and the Non-Scheduled population. The relative rate of literacy is found by dividing the literacy rate of Scheduled Castes by the literacy rate of Non-Scheduled population. For India and Gujarat the figures are as follows:

| | Relative Literacy Rate |
|---|---------------------------|
| India Scheduled Castes Gujarat Scheduled Castes | 0.37 0.66 |

So far as Gujarat is concerned, the gap in the literacy rate between the scheduled castes and the Non-Scheduled population is considerably narrower than that obtaining for India as a whole.

As between males and females and rural and urban areas the relative rates were as shown below:

| | | Relative Li | teracy Rat | es |
|--------------------------|-------|-------------|------------|-------|
| | Males | Females | Rural | Urban |
| India Scheduled Castes | 0.43 | 0.21 | 0.40 | 0.44 |
| Gujarat Scheduled Castes | 0.75 | 0.48 | 0.72 | 0.61 |

The above figures show that disparities in levels of literacy are the widest in case of females. However, in Gujarat the disparity was narrower than for India Another thing brought out is that the relative literacy rate, of Scheduled Castes, contrary to expectations, was lower in case of Urban Gujarat as compared to rural Gujarat.

Table X shows the data relating to literacy among the Scheduled Castes

TABLE X

Literacy Among the Scheduled Castes in the Districts of Gujarat, 1961
(Figures in 000's)

| District | Schedul | Scheduled Castes Population | | | Literates and Above | | | Percentage Literate | | |
|---------------|---------|-----------------------------|---------|-------|---------------------|---------|-------|---------------------|---------|--|
| Districts | Males | Females | Persons | Males | Females | Persons | Males | Females | Persons | |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | |
| Jamnagar | 25 | 25 | 50 | 5 | | 6 | 20.0 | _ | 12.0 | |
| Rajkot | 36 | 35 | 71 | 8 | 1 | 9 | 22.2 | 2.9 | 12.7 | |

| Bhavnagar | 25 | 26 | 51 | 7 | 1 | 7 | 28.0 | 3.8 | 13.7 | |
| Amreli | - 23 | 23 | 46 | 6 | 2 | 8 | 26.1 | 8.7 | 17.4 | |
| Junagadh | 43 | 42 | 85 | 7 | 1 1 | 8 | 16.3 | 2.4 | 9.4 | |
| Kutch | 31 | 32 | 63 | 5 | 1 | 6 | 16.1 | 3.1 | 9.5 | |
| Banaskantha | 49 | 47 | 95 | 8 | 1 | 9 | 16.3 | 2.1 | 9.5 | |
| Sabarkantha | 40 | 38 | 78 | 11 | 1 | 13 | 27.5 | 2.6 | 16.7 | |
| Mehsana | 73 | 73 | 146 | 31 | 14 | 45 | 42.5 | 19.2 | 30.8 | |
| Ahmedabad | 120 | 107 | 227 | 51 | 16 | 67 | 42.5 | 15.0 | 29.5 | |
| Kaira | 60 | 56 | 116 | 27 | 9 | 36 | 45.0 | 16.1 | 31.0 | |
| Panchmabals | 27 | 25 | 52 | 8 | 1 | 9 | 29.6 | 4.0 | 17.3 | |
| Baroda | 46 | 44 | 91 | 20 | 7 | 27 | 43.5 | 15.9 | 29.7 | |
| Broach | 23 | 22 | 45 | 11 | 3 | 14 | 47.8 | 13.6 | 31.1 | |
| Surat | 38 | 46 | 84 | 20 | 13 | 34 | 52.6 | 28.3 | 40.5 | |
| Dangs | - | | | - | | | | | | |
| Gujarat | 693 | 674 | 1367 | 234 | 72 | 307 | 33.8 | 10.7 | 22.5 | |

in the districts of Gujarat: The districts of Saurashtra, Kutch, Banaskantha, Sabarkantha, and Panchmahals had lower rates of literacy than the overall rate obtaining for the state as a whole for the Scheduled Castes. Mehsana, Ahmedabad, Kaira, Baroda, Broach and Surat were much better off. Jamnagar, Rajkot, Surendranagar, Bhavnagar, Junagadh, Kutch and Banaskantha were particularly backward with less than 15 per cent literacy.

Education Level

Table IX presented earlier shows the education level attained by the population. Here below are shown the number of Persons per 1000 population belonging to different education level.

| | Scheduled Castes | | Non-Scheduled Population | |
|----------------------------------|------------------|---------|-----------------------------|---------|
| • | India | Gujarat | India | Gujarat |
| Illiterate | 897 | 775 | 720 | 658 |
| Literate without Education Level | 75 | 94 | 173 | 108 |
| Primary or Junior Basic | 25 | 128 | 83 | 217 |
| Matriculates and Above | _ 3 | 3 | 23 | 18 |
| | 1000 | 1000 | 1000 | 1000 |

The striking fact brought out above is that the mere figures of literacy or illiteracy understate the educational differences. Thus while the rate of illiteracy among the Scheduled Castes in India and Gujarat is greater than that prevailing among the Non-Scheduled population, there are extra ordinary differences in regard to different levels of education. As one moves up the educational level the differences become sharper. Thus those who had completed the primary stage, numbered 25 in a Scheduled Castes population of 1000 in case of India as against 83 in case of 1000 Non-Scheduled Castes population. The chances of a Scheduled Castes person having completed the primary education were a little less than 1/3rd obtaining for the Non-Scheduled population. In case of Gujarat the respective numbers were 128 and 217, indicating that in Gujarat the Scheduled Castes person had a little higher than 1/2 the chance of completing Primary education as compared to the Non-Scheduled population. In case of Matriculation and above, in Gujarat as well as India there were only 3 persons in 1000 who had completed that stage among the Scheduled Castes as against 18 and 23 respectively among the Non-Scheduled population. Thus in India a Scheduled Caste person had only 1/8th chance of completing Matriculation as compared to a Non-Scheduled person. In Gujarat the chance was 1/6th. Thus as we move up, the system seems to be operating with greater severity against the Scheduled Castes in Gujarat as well as India, though in case of Gujarat this severity is less than that obtaining in case of India as a whole. Of course, whether this is due to their poverty or due to their Caste status is rather difficult to ascertain on the basis of the scanty data that we have.

Another feature brought out by the table is that although Gujarat has a higher level of literacy, the proportion of Matriculates and above is lower than that obtaining for India, the figures being 18 per 1000 in Gujarat and 23 per 1000 for India. This would mean that the educational pyramid in case of India has a narrower base but wider top as compared to Gujarat. Gujarat pyramid tapers off much more quickly. The retention rate of the Gujarat system is somewhat lower than that obtaining for India.

We may also try to measure the education level by estimating the number of years of schooling embodied per person. For instance, we may say that an illiterate person represents zero year of echcoling. Let us assume Literate to have 2 years of schooling. Primary or Junior Basic may be taken to represent 6 years of schooling because this level would also include some who have gone beyond the primary level but have not been able to complete the matriculation. Matriculates and above may be taken to have 12 years of schooling as some of them would also have undergone college education. On this basis we get the following estimate of the number of years of schooling per person:—

| | Years of Schooling Per Person |
|----------------------------------|----------------------------------|
| India Scheduled Castes | 0.34 |
| India Non-Scheduled Population | 1.12 |
| Gujarat Scheduled Castes | 0.99 |
| Gujarat Non-Scheduled Population | 1.73 |

The Scheduled castes in Gujarat are in a much better position as compared to the Scheduled Castes elsewhere in India though they are still unfavourably placed as compared to the Non-Scheduled population.

A problem from the policy point of view may arise whether the government should spend its resources on widening the base of literacy among the Scheduled Castes or it should concentrate its effort in retaining in the educational system those who have already completed their primary education. It is a moot question. What is more desirable? To reduce the disparities in the rates of literacy prevailing between the Scheduled and the Non-Scheduled population or to reduce the disparities in the rates of matriculates and above?

Full Time Students

We have above discussed the existing situation. Can we say something about future? The Census provides information regarding the Non-Working Population. One of the categories shown there relates to full-time students. On this basis, we can possibly say something about the likely changes in the education level among the Scheduled Castes. Table XI shows the relevant data.

TABLE XI

Full-Time Students Among Total Population, Scheduled Castes and Scheduled Tribes, India and Gujarat, 1961

(Figures in 000's)

| | | Total Non-Working Population | | | I | Full-Time Students | | |

| Population | T | 4,948 | 7,211 | 12,159 | 1,688 | 794 | 2,482 | |

TABLE XI (Contd.)

| 1 | · | 2 | 3 | 4 | 5 | 6 | 7 | _ |
|-----------------------------|-----|-------|----------|--------|-----------|-----|-------|---|
| Gujarat | R | 242 | 319 | 562 | 66 | 22 | 88 | |
| Scheduled | U | 96 | 128 | 224 | 31 | 12 | 43 | |
| Castes | T | 338 | 447 | 785 | 97 | 34 | 131 | |
| Gujarat | R | 584 | 690 | 1,275 | 114 | 35 | 149 | |
| Scheduled | U | _ | | | | | _ | |
| Tribes | T | 584 | 690 | 1,275 | 114 | 35 | 149 | |
| Gujarat Total Population | R | 2,675 | 3,921 | 6,594 | 876 | 363 | 1,240 | |
| other than Scheduled Castes | U | 1,351 | 2,153 | 3,504 | 601 | 361 | 962 | |
| and Scheduled Tribes | T | 4,026 | 6,074 | 10,099 | 1,477 | 725 | 2,202 | |
| | R = | Rural | U = Urba | | T = Total | | | - |

Here below are shown the percentage of full-time students to the Non-working population.

| | Males | Females | Persons |
|----------------------------------|-------|---------|---------|
| India Scheduled Castes | 18.1 | 3-4 | 9.2 |
| India Non-Scheduled Population | 33.2 | 9.0 | 18.2 |
| Gujarat Scheduled Castes | 28.7 | 7.6 | 16.7 |
| Gujarat Non-Scheduled Population | 36.7 | 11.9 | 21.8 |

It can be seen that the percentage of full-time students to the non-workers among the Scheduled castes is lower than among the Non-Scheduled population in India as well as Gujarat, among males as well as females. But the disparity was much less in case of Gujarat. The precise extent to which the relative disparity existed in what one might call the schooling rates (that is percent of full-time students among non-workers) can be found out by dividing the percent of full-time students among the Scheduled Castes by the percent of full-time students among Non-Scheduled Population. The relative schooling rates are shown below:

| | Relative | Schooling | Rates | |
|--------------------------|----------|-----------|-------|--|
| | М | F | P | |
| India Scheduled Castes | 0.55 | 0.38 | 0.51 | |
| Gujarat Scheduled Castes | o.78 | 0.64 | 0.77 | |

The Gujarat Scheduled Castes are likely to reduce the educational disparities much sooner than their counter parts elsewhere in India.

That there is likely to be a substantial reduction in the disparities in literacy and education level prevailing between the Scheduled Castes and Non-Scheduled population can be seen from a comparison of the relative literacy rates with the relative schooling rates. The existing schooling rates indicate the levels of education that will be obtained in the long-run.

| • | M | F | P | R | U | | |
|--------------------------|-------------------------|---------|--------------|----------|------|--|--|
| | Scheduled Castes, India | | | | | | |
| Relative Literacy Rates | 0.43 | 0.21 | 0.37 | 0.40 | 0.44 | | |
| Relative Schooling Rates | 0.55 | o.38 | 0.51 | 0.54 | 0.57 | | |
| | S | chedule | d Castes | s Gujara | t | | |
| Relative Literacy Rates | 0.75 | 0.43 | o. 66 | 0.72 | 0.61 | | |
| Relative Schooling Rates | 0.78 | 0.64 | 0.77 | 0.84 | 0.70 | | |

The schooling rates are higher than the literacy rates in each case, that is in case of males, females, persons and rural as well as urban areas. The only puzzling aspect that calls for comments is the lower relative schooling rates in urban areas of Gujarat as compared to the rate prevailing in the rural areas of Gujarat.

CHAPTER IV

Economic Characteristics

From the Census it is possible to get the following information about economic characteristics. In the first place, the worker rate can be found out. Secondly, the industrial distribution of the workers is available. Data relating to the special occupations of the Scheduled Castes are also available. Finally, the size distribution of the cultivating units is available.

Worker Rate :

Table XII shows the Number of workers in India and Gujarat among the total population and among the scheduled castes. Among the Scheduled Castes the percentage of workers is somewhat higher than among the population as a whole. This is true for India as well as Gujarat. The difference is entirely due to the higher worker rate among the Scheduled Castes females. In Gujarat the worker rate among the Scheduled castes males is somewhat lower than in the total population.

TABLE XIIScheduled Castes Workers by Sex, India and Gujarat, 1961
(Figures in 000's)

| | To | Castes P | es Population | | | |
|--------------------------------|--------|----------|---------------|---------|---------|---------|
| , | Males | Females | Persons | s Males | Females | Persons |
| India | | | | | | |
| Total Population | 226293 | 212942 | 439235 | 32916 | 31500 | 64417 |
| Workers | 129017 | 59402 | 188417 | 19498 | 10820 | 30318 |
| Percentage of workers to total | 57.0 | 27.9 | 42.9 | 59.2 | 34.4 | 47.1 |
| Gujarat | | | | | | |
| Total Population | 10634 | 9999 | 20633 | 694 | 674 | 1367 |
| Workers | 5686 | 2789 | 8475 | 355 | 227 | 582 |
| Percentage of workers to total | 53.5 | 27.9 | 41.1 | 51.2 | 33.7 | 42.6 |

Industrial Distribution:

The industrial distribution of the workers, throws considerable light on the economic opportunities available to the Scheduled Castes. Table XIII shows the industrial distribution of the workers. Here below we present, the data in terms of Primary, Secondary and Tertiary Sectors. The Primary Sector includes cultivators, agricultural labourers and mining, quarrying, livestock, forestry etc. The Secondary Sector includes household industry, manufacturing other than household industry and construction. The Tertiary Sector includes trade and commerce, transport, storage and communications and other services.

| | Percentage | Workers in | Sectors |
|---|--------------|------------|----------|
| | Primary | Secondary | Tertiary |
| India Scheduled Castes India Non-Scheduled Population | 75.1 69.6 | 10.4 | 14.5 |
| Gujarat Scheduled Castes Gujarat Non-Scheduled Population | 55-9 | 22.7 | 21.3 |
| | 65-4 | 15.6 | 18.9 |

The most striking fact brought out by the figures is that while the industrial distribution of the Non-Scheduled Workers for India and Gujarat was very similar to each other, the same was not the case in regard to the Scheduled Castes Workers. Three-fcurth of the Scheduled Castes workers in India were engaged in Primary Sector as compared to only 56 per cent among Scheduled Castes Workers in Gujarat. The shift towards the Non-Agricultural sector among the Scheduled Castes Workers was more pronounced in Gujarat.

Secondly, the proportion of the Scheduled Castes workers engaged in Secondary and Tertiary Sectors was lower than the proportion of the Non-Scheduled Workers in case of India. Thus 13 per cent of the Non-Scheduled Workers were engaged in the Secondary Sector and 17.6 per cent in the Tertiary Sector in India. As against this the percentage for the Scheduled Castes in India were 10.4 and 14.5 respectively. In case of Gujarat exactly the reverse position was obtained. The percentage of the Scheduled Castes workers in the Secondary and the Tertiary Sectors exceeded the percentage of the Non-Scheduled workers in these sectors, and rather by a wide margin in case of the Secondary Sector.

At first sight it would appear that the Scheduled Castes in Gujarat were doing better than the Non-Scheduled population when judged by the sectoral distribution of the working force. A larger percentage of the Scheduled Castes workers were engaged in the Secondary and the Tertiary Sectors. However, if we recall the figures given in chapter 3 relating to the rate of urbanization, the

advantage is seen to be illusory. For, a larger percentage engaged in the Secondary and the Tertiary Sectors would lead one to expect a higher percentage residing in the urban areas. However we have seen that as against 29.3 per cent Non-Scheduled population residing in urban areas in Gujarat, only 24.4 per cent of the Scheduled Castes population in Gujarat was staying in the urban areas. There is thus a paradox. The proportion of Scheduled Castes workers in the Secondary and the Tertiary Sectors was higher than that obtaining for the Non-Scheduled Workers but their rate of urbanization was lower than the Non-Scheduled Population.

The paradox can be explained as follows: The predominance of the Non-Agricultural occupations among the Scheduled Castes worker in Gujarat has not led to their greater urbanization because these occupations happen to be village-based, low productivity and traditional. Thus a look at Table-XIII shows that in the household industries, 11.5 per cent of the scheduled castes workers in Gujarat were engaged as against 7.3 per cent among the Non-Scheduled workers in Gujarat. The predominance of the Secondary Sector among the Scheduled castes in Gujarat is largely attributable to the Household industries and only to a small extent to the manufacturing other than household industries.

The percentage of Scheduled Castes workers in manufacturing other than household industries was 8.8 per cent as compared to 7.2 per cent in case of Non-Scheduled population. This excess of Scheduled Castes in the modern manufacturing sector is a favourable factor in Gujarat and stands in contrast to India where the percentage of Scheduled castes workers in manufacturing other than household industries was only 2.8 as compared to 5 per cent among the Non-Scheduled Workers. This greater orientation of the Scheduled Castes towards manufacturing industries, even though largely of household character, in Gujarat is a distinct characteristic to be noted.

In the Tertiary Sector we find that the percentage of the Scheduled Castes workers engaged in trade, transport and communications was very small. 'Other Services' accounted for 19.3 per cent of the Scheduled Castes workers as against 10.4 per cent of the Non-Scheduled workers in Gujarat. However, we know that most of these services are poverty induced such as sweeping and scavenging or menial jobs in the offices or hospitals.

Agricultural Labourers

We have not commented so far on the Primary Sector. 151 thousand Gujarat Scheduled Castes workers were cultivators and 168 thousand were agricultural labourers. The agricultural labourers thus outnumbered the cultivators and constituted 28.9 per cent of the Scheduled Castes workers. It may be observed that here the interests of the Scheduled Castes and the Scheduled Tribes in Gujarat coincide in as much as these two groups account for more than half of the agricultural labourers in Gujarat.

Cultivators :

Only 26 per cent of the Scheduled Castes workers in Gujarat were found to be cultivators. The cultivators were mostly small cultivators as can be seen from the following distribution of 1000 cultivating households in Gujarat by size of their landholding. Only 1/5th of the Scheduled Castes cultivating households had holding of 10 acres or above as compared to 2/5th among the total population.

| Size of Cultivating Holding | Gujarat Total Population | Gujarat Scheduled Castes |
|--------------------------------|-----------------------------|-----------------------------|
| Less than I Acre | 32 | 88 |
| 1.0-2.4 Acres | 142 | 264 |
| 2.5-4.9 Acres | 178 | 219 |
| 5.0-7.4 Acres | 153 | 145 |

| 10.0-12.4 Acres | 94 | 64 |
| 12.5-14.9 Acres | 37 | 21 |
| 15.0-29.9 Acres | 175 | . 89 |
| 30.0-49.9 Acres | 73 | 25 |
| 50.0 + Acres | 23 | 4 |
| Unspecified | 4 | 6 |
| Total | 1000 | 1000 |

CHAPTER V Profiles 1971

The study relates to 1961. However, recently some of the 1971 Census results have become available. Not all aspects are available in as much details as the 1961 Census results. It is therefore possible to give only some broad idea of two or three aspects covered above. Table XIV shows the relevant data for Gujarat.

It can be seen that the Scheduled Castes population has increased by 33.5 per cent during the decade 1961-71 as compared to 28 per cent increase recorded by the Non-Scheduled population. The Gujarat population growth during 1961-71 was faster than the rest of India, and the Scheduled Castes population growth was even faster than the Gujarat rate. A concentrated effort at population planning is called forth.

In 1961, 214 per cent of the Scheduled Castes population was residing in the urban areas. This ratio increased to 27.2 per cent. Similarly the Gujarat Scheduled Castes literacy rate increased from 22.5 per cent in 1961 to 27.7 per cent in 1971.

Of course, the general population also recorded an increase in the rate of urbanisation and the rate of literacy. We may therefore, see, what happened

TABLE XIV

Total Population, Scheduled Castes Population and Scheduled Tribes

Population, Gujarat, 1971. (Figures in 000's)

| | Total Population | Scheduled Castes | Scheduled Tribes | Total Popula- tion other than Scheduled Castes & Tribes |
|------------------------------|---------------------|---------------------|---------------------|---|
| ĭ | 2 | 3 | 4 | 5 |
| Males | 13802 | 936 | 1897 | 10969 |
| Females | 12895 | 889 | 1837 | 10169 |
| Persons | 2669 7 | 1825 | 3734 | 21138 |
| Percent variation in Popula- | | | | • |
| tion 1961-71 | + 29.4 | + 33.5 | + 35.6 | + 28.0 |
| Urban Population | 7496 | 497 | 227 | 6772 |
| Per cent | 28.1 | 27.2 | 6.1 | 32.0 |
| Literacy Rate | 85.8 | 27.7 | 14.1 | 40.3 |

to the relative rates of urbanization and literacy of the Scheduled Castes in Gujarat. The figures are given below:

| | 1961 | 1971 |
|-------------------------------|------|------|
| Relative Rate of Urbanization | 0.83 | 0.85 |
| Relative Literacy Rate | o.66 | 0.69 |

Thus it will be seen that the relative rates of urbanization and literacy have somewhat improved during the decade.

APPENDIX NOTE

Sources of Data

- 1. Various volumes of the Census of India 1961 are the major source of data for the tables presented in this Report.
- 2. For all data relating to the Scheduled Castes and the Scheduled Tribes for 1961, reference may be made to Census of India 1961 Vol. I-India-Parts V-A & V-B for India and to Census of India 1961 Vol. V-Gujarat-Part V-A for Gujarat. These volumes give special tabulation for the Scheduled Castes and the Scheduled Tribes. •
- 3. For the population as a whole, the sources are Census of India 1961 Vol. I-India-Part II-A (i) General Population Tubles-Parts II B (i) and II B (ii) and II B (iii) General Economic Tables and Census of India 1961 Vol. V-Gujarat-Part II-A General Population Tables and Parts II-B (1) and II-B (2)-General Economic Tables.
- 4. Data for Table XIV have been obtained from Census 1971, Series 5 Gujarat Pocket Book of Population Statistics.
