No. P. 11 of 1930.

From

T. F. MAIN, Esq., O.B.E., B.Sc.,  
Director of Agriculture,  
Bombay Presidency, Poona ;

To

THE CHIEF SECRETARY TO GOVERNMENT,  
Revenue Department, Bombay.

Poona, 16th October 1930.

Sir,

I have the honour to submit herewith the Annual Season and  
Crop Report of the Bombay Presidency for the year ending  
31st July 1930.

I have the honour to be,

Sir,

Your most obedient servant,

T. F. MAIN,  
Director of Agriculture.

## SEASON AND CROP REPORT OF THE BOMBAY PRESIDENCY FOR 1929-30.

### CHAPTER I—CHARACTER OF THE SEASON.

1. **General.**—The agricultural season of 1929-30 was, on the whole, only moderate over a very large part of the Bombay Presidency. The special feature was the long break in the middle of the season following good rainfall in the beginning. In Gujarat after the middle of July there was little rain till the end of September with the consequence that the rice crop was more or less poor in middle parts while the good rains early in October helped the cotton and *jowar* crops to maintain their normal condition in parts of Surat and Broach districts. In Khandesh the long break had a bad effect upon the *kharif* crops, groundnut suffering most. In this tract the late rains were very deficient with the result that the *rabi* crops suffered seriously. In the South Deccan the season was unfavourable both for *kharif* and *rabi* crops owing to the unsatisfactory distribution of rainfall and the yields were far below normal. In the Karnatak the long break adversely affected the *kharif* crops but the *rabi* crop was normal. In the Konkan the *kharif* season was good in the North but not satisfactory in Ratnagiri and Kanara districts. In Sind the rainfall of the season was unparalleled. East Sind received 50 inches while the rest of the province received rainfall varying from 10 inches to 30 inches. Moreover, the river caused unprecedented floods which damaged life and property but served to leave sufficient moisture in the soil with the result that record areas were put under *rabi* crops.

2. **Distribution of Rainfall.**—Statement I (pages 36-37) compares the rainfall during the year under review with the average fall of rain at each representative station in the Bombay Presidency and Sind. The average rainfall figures for each station are, as during the last year, those supplied by the Indian Meteorological Department based on the rainfall statistics available up to and including the year 1920.

**Kharif Rains.**—In Gujarat, the *kharif* rains were above the average at Godhra (Panch Mahals) and Surat but below the average elsewhere. In the Deccan excepting Satara where they somewhat exceeded the average, the rains fell short of the normal at other places including the hilly tracts in the Division. In the Karnatak these *kharif* rains were slightly in excess of the normal at Bijapur and in the hilly tracts but were below the average elsewhere in the Division. In the Konkan excepting Karwar (Kanara) where they were appreciably above the average they were much below the usual amount at other places in the Division. In Sind the distribution of *kharif* rains was very uneven. In Karachi they were slightly below the normal while in the rest of the province they abnormally exceeded the average. Mirpurkhas (Thar Parkar) received more than twelve times the normal while the rainfall varied from double to five times the average in all other districts except Karachi.

**Rabi Rains.**—These were far short of the average in North Gujarat but nearly approached the average in the South of the Division. In the Deccan they were appreciably above the average at Nasik and somewhat above it at Satara but they were far short of the normal at the remaining stations of the Division. In the Karnatak with the exception of Bijapur where they were much above the average, these (*rabi*) rains were considerably below the normal everywhere else in the Division. In the Konkan they were above the average at all the district headquarter stations and at Karwar (Kanara) they exceeded more than double the average. In Sind the *rabi* rains were appreciably above the average at all places of the province except at Sukkur and Jacobabad (Upper Sind Frontier) where they were somewhat below normal.

**Hot Weather Rains.**—These presented no feature of special importance during the season under review.

**3. Nature of the Season in different Divisions.**—The following remarks will show in detail the nature of the season in each division of the Presidency including Sind.

**Konkan.**—The regular monsoon commenced as usual in the 1st week of June. At the outset the fall was very heavy everywhere especially in Kanara district where rice seed beds were washed away by heavy rains and germination also did not take place in places where the seed was placed. In some cases second sowing with sprouted rice had to be taken up. The rainfall in June continued to be heavy in Kanara and was found sufficient for field operations in Ratnagiri but in North Konkan it proved barely sufficient for the growth of the seedlings where transplantation of rice could not be undertaken. In Kanara there were heavy floods due to excessive rains and all field operations had to be suspended in the beginning of July. In Kolaba and Ratnagiri districts there were light showers which being seasonable helped the transplantation of rice under favourable conditions. In Thana district it had to be put off till August for want of moisture. The rainfall of July in this district was light and unusual. Rain in August also was received in light showers till the middle of the month but the heavy showers received during the third week of August and after very much helped to finish the transplanting of rice. Light rains in July and August proved detrimental to the growth of all *kharif* crops especially rice in Ratnagiri district. In the first fortnight of September there was practically a break but in the second there were light showers which were seasonable to all standing crops. In the districts of South Konkan, i.e. Ratnagiri and Kanara, heavy showers in the beginning of October proved useful for the late rice and *rabi* crops though they slightly interfered with the harvest of early rice and *supari* (betelnut) crops. In Kolaba and Thana although the fall of rain was below normal its distribution was favourable. In North Konkan the *rabi* season was marked with occasional showers out of which one that was received in the middle of December was heavy. On the whole the *rabi* season was not favourable due to the rains that were received late in October and November. This unusual fall kept

the fields moist till late in the season which delayed the sowings of *rabi* crops and also affected the yield.

As regards insect pests, there was rather a serious attack of *Kanne* pest in the coastal talukas of the Kanara district on paddy. Mango crop also suffered badly by an attack of hoppers. The mildew damage this year was negligible.

**Gujarat.**—The regular monsoon began in the third week of June as usual. *Kharif* sowings were soon undertaken everywhere except in parts of Ahmedabad where rainfall was rather scanty, and consequently sowings were undertaken about the middle of July. Rain in the first fortnight of July which was exceptionally heavy in the South Gujarat spoiled the growing crops in places which required resowings. From the middle of July to the end of September there were intermittent light showers all over Gujarat which were found quite insufficient for rice transplantation in many parts of the Division. In the first week of October there was good rain in South Gujarat which helped the cotton and *jowar* crops to come out normally. On the whole the rainfall was irregular and insufficient in many places, as a result of which rice crop failed practically in many parts of this Division, whereas the yields of *bajri*, *jowar* and maize in North Gujarat were only fair, while in the South cotton crop gave a normal yield. As the rains were scanty in the latter part of the monsoon the area under *rabi* crops was reduced to a great extent. Moreover due to locust fright the cultivators in many places harvested immature crops which deteriorated in value.

**Crop Diseases.**—There were locust swarms in North Gujarat in October and November which did some damage to standing crops. There was an unprecedented *Aphis* plague on Variyali (Fennel) crop in the Kaira district and the whole crop was nearly destroyed. The hairy caterpillars gave trouble in parts of Panch Mahals and Broach districts and destroyed the germinating crops in many places which had to be resown.

**North Deccan.**—Good beginning was made by the early start of the monsoon in this division and the rainfall was sufficient for sowing of rice and cotton. Sowings of other *kharif* crops were nearly completed by the end of June except *bajri*. After the middle of July there was a long break in the rains for about two months which had a very bad effect on the growth of various crops. In parts of Nasik district the cold wave damaged crops to some extent. Rains in the latter part of September helped the *rabi* sowings but the later rains being insufficient proved to be equally bad for the *rabi* crops. On the whole the season for this division may be described as follows:—There were heavy rains to start with, long break during the growing season and insufficient rains later on. This had a very bad effect on both the growth of the crops as well as their yield. The distribution of rains was uneven and irregular.

With regard to insect pests *wingless* hoppers appeared in Chandor and other talukas but no serious damage was done. Locusts appeared in parts of Nasik district and damaged *bajri* and young *rabi* crops to some extent.

**South Deccan.**—No ante-monsoon showers were received this year and hence no facilities for tillage in the beginning were available. Regular monsoon began late in some parts, i.e. during the second fortnight of June and in others during the first week of July. This was feeble at the outset. Sowings were however undertaken. There was a complete drought all over the tract except in Mawal from about the last week of July to the middle of September, which checked the growth of cotton and *bajri* crops. In the second fortnight of September good rain was received all over the division which saved the situation. *Rabi jowar* sowings were resorted to in October and the seeds germinated well. There were no rains in winter but the sudden fall in humidity in January affected the *rabi jowar* seriously in places. On the whole the season was unfavourable both for *kharif* and *rabi* crops and the yields of both were below normal.

**Insect Pests.**—The attack of *wingless* grasshoppers this year was of a less virulent type than last year.

**Karnatak.**—Good ante-monsoon and the early monsoon rains opened the *kharif* season with bright prospects in *Mallad* (West) and *Gadinad* (transition) tracts. In *Yarinad* (Eastern) tract the rains were scanty except in places and as a result the *kharif* sowings could not be started in many places. From the middle of July to September there was continuous break for about two months all over the division and as a natural sequence the *kharif* crops suffered badly in *Mallad* and *Gadinad* and withered in *Yarinad*. Cotton sowings were delayed and also the crop suffered further from continuous easterly winds. *Rabi* rains were on the whole good and considerably improved the situation. The yields of *kharif* crops and cotton were poor in general, whereas those of *rabi* crops approximated the normal. The season on the whole, especially the *kharif* season, was not so good as it was last year, and it was below normal. As regards crop pests, *kharif jowar* suffered from an attack of grasshoppers in many places but it was controlled by tarred tin sheet operations.

**Sind.**—The main seasonal factor in the Agricultural season of this province is the inundation of the river Indus. The river behaved most unusually in the season under review. It started with abnormal low levels and this state continued well into the early part of the season. In the middle of the season the river rose so high as to record the most unusual height of 63 feet at Attock and 17 feet 3 inches at Bukkur and caused serious floods in parts of Sukkur, Larkana, Nawabshah and Karachi districts. However, this state continued for a very short time and thereafter there was again a rapid fall with the result that many canals stopped flowing for a couple of weeks earlier than usual. The high level canals notably the Jamrao, however, continued to work very well in the *rabi* season and gave a water supply sufficient to mature *rabi* crops.

**Rainfall.**—This is normally very small but this year it was unparalleled within living memory. East Sind recorded as much as 50 inches while the rest of Sind received amounts varying from 10 inches to 30 inches. The effect of the extraordinary behaviour of the river and

heavy rainfall was that some area intended for cotton could not be sown and had to be put under *bajri*. Some fine varieties of the rice crop also had to be abandoned for want of timely water supply and had to be substituted by coarse varieties. Owing to floods, farm buildings in the countryside were destroyed and caused injury to livestock in places, and the crops in the lowlying fields were washed off. Cultivators, however, took advantage of this abundant moisture left in the soil for the growing of the *rabi* crops and record areas were put under them which came to maturity without mishap.

**Crop Diseases.**—The most serious pest was locust which did grave damage to crops. For two months continuously people had to combat this pest and they were encouraged in this by the district officials. Grasshoppers and boll worm were also active and the field rat was exceptionally destructive in damaging the wheat crop in parts of Hyderabad and Thar Parkar districts.

## CHAPTER II—AREA CULTIVATED AND UNCULTIVATED.

(Statement No. II, pages 38-43.)

**4. Number of Villages.**—The total number of villages in the Bombay Presidency Proper remained stationary (i.e. 22,898½) during the year under report. There were, however, some internal changes. Three villages in the Bombay Suburban district were correctly shown in the surveyed group this year from the unsurveyed group of statistics, and one village in the Murbad taluka of the Thana district was newly surveyed and consequently transferred from the class of "Unavailable Statistics" to that of "Available Statistics". In Ahmedabad district the total number of surveyed villages was reduced by one owing to the amalgamation of one village of the Dholka taluka with the adjoining villages of the same taluka. Against this there was an increase of one village in the Surat district due to correction of a mistake in the previous records.

In Sind, the total number of villages remained the same (5,388) as last year.

### Total Area and Reporting and Non-reporting Area in the Bombay Presidency Proper.

**5. Total Area.**—This showed a slight reduction of three thousand acres in the Bombay Presidency Proper, the whole of the decrease being in the Belgaum district owing to correct survey measurement of some inam villages in the Parasgad taluka of that district.

**6. Reporting Area.**—The total area for which statistics are regularly collected and reported in the Bombay Presidency Proper, showed a slight expansion of 7,000 acres. The most noticeable increase occurred in Kaira district (+ 4,000 acres) and in Poona district (+ 2,000 acres) as a result of more survey operations. The variations in other districts are small and call for no remarks.

**7. Non-reporting Area.**—The variations under this head generally correspond with those under the "Reporting Area", which have been noticed above.

### Total Area and Reporting and Non-reporting Area in Sind.

**8. Total Area.**—This remained stationary in the province.

**9. Reporting Area.**—The reporting area showed a reduction of about 42,000 acres in the province, the decrease being chiefly in the Larkana district (— 44,000 acres) due to survey measurements. Against this, there was a slight expansion of 3,000 acres in the Karachi district due to survey operations.

**10. Non-reporting Area.**—The decrease of 42,000 acres in the "Reporting Area" has already been noted under that head above. This decrease means a corresponding increase under the present head "Non-reporting Area".

**11. Estimates for Non-reporting Area.**—Estimates of the probable cropping of the areas for which statistics were not forthcoming, were as usual, received from all the District Officers.

**12. Cultivated (i.e. occupied) and Uncultivated Area.**—Details regarding these, as compared with the last year, are shown in Appendix A (page 26).

### Cropped Areas in the Bombay Presidency Proper.

**13. Gross Cropped Area.**—In the Bombay Presidency Proper the gross cropped area decreased by 240,000 acres or by 0·8 per cent. The most noticeable decrease occurred in Gujarat (— 172,000 acres) due generally to insufficient and irregular rainfall in many parts of the Division and in East Khandesh (— 46,000 acres), Bijapur (— 41,000 acres), Ahmednagar (— 27,000 acres) and West Khandesh (— 19,000 acres) districts, the decline in area was due either to deficiency or unsuitability of the sowing rains. Against this, there was some increase in the gross cropped area in the Poona (+ 36,000 acres), Nasik (+ 14,000 acres), Dharwar (+ 12,000 acres), and Ratnagiri (+ 9,000 acres) districts where favourable rains were received at the time of sowing.

**14. Twice Cropped Area.**—This showed a decline of 148,000 acres or 17·0 per cent. in the Bombay Presidency Proper. The decrease was specially marked in Gujarat (— 132,000 acres) and to a small extent in the Deccan (— 40,000 acres) except in Poona district where the increase in area was 55,000 acres. The decrease in the Konkan (— 33,000 acres) was mostly in the Thana district. In all cases the fall in the area may be attributed to the general deficiency of the late rains of the season.

**15. Net Cropped Area.**—This showed a reduction of 92,000 acres or 0·3 per cent. below last year's area in the Bombay Presidency Proper. In the Deccan, the decrease amounted to 51,000 acres, in Gujarat 41,000 acres, and in the Karnatak 37,000 acres due to deficiency or unsuitability of the sowing rains in many parts of these divisions. Against this, Konkan showed a rise of 37,000 acres, mostly in the Thana district, due to good rains received in the early part of the season.

**16. Cropped Areas in Sind.**—In Sind, on the other hand, the gross cropped area, the twice cropped area and the net cropped area showed a considerable expansion of 1,022,000 acres 119,000 acres and 903,000 acres or by 22·8 per cent., 26·2 per cent. and 22·4 per cent. respectively over the previous year, as record areas were put under *rabi* sowings on account of the ample moisture left in the soil by the heavy floods and rains during the season.

**17. Assessed and Unassessed Area.**—In the Bombay Presidency Proper, the assessed area expanded by 36,000 acres or by 0·1 per cent., the increase being chiefly noticed in the Thana district (+ 34,000 acres) while the unassessed area advanced by 12,000 acres or by 6·0 per cent., the increase being shared by almost all the districts in the Deccan.

In Sind the assessed area declined by 36,000 acres or by 0·4 per cent. while the unassessed area rose by 294,000 acres or by 71·0 per cent., as compared with the last year.

**18. Temporary Cultivation in Forest Lands and Culturable Waste.**—In the Bombay Presidency Proper, about 96,000 acres of Forest Lands were given out for temporary cultivation mainly in West Khandesh (34,000 acres), Poona (33,000 acres), Sholapur (20,000 acres), Ahmednagar (6,000 acres), Belgaum (2,000 acres), and Thana (1,000 acres) districts while about 81,000 acres of culturable waste mainly in West Khandesh (38,000 acres), Thana (13,000 acres), Nasik (12,000 acres), Belgaum and Ahmednagar (3,000 acres each), Ahmedabad, Broach, Poona and Kolaba (2,000 acres each), and Satara, Bombay Suburban and Kanara (1,000 acres each) districts were similarly dealt with.

### CHAPTER III—CROPPED AREA.

(Statement III, pages 44-65.)

**19. Variations in Cropped Area.**—The main features of the season and of the harvest have been described elsewhere in the Report. Appendix B (pages 28-29) shows the effect of the season under review on the areas sown as compared with the average and with the preceding year's area under the principal crops.

**20. Food Crops.**—In the Bombay Presidency Proper, the area under food crops, i.e. cereals, pulses, sugarcane and fruits and vegetables decreased by 112 thousand acres or by 0·6 per cent. below the previous year and by 173 thousand acres or 0·9 per cent. as compared with the average. Among the *kharif* crops, *bajri* showed a decline of 900 thousand acres or 22·2 per cent. below the previous year as a result of very scanty rains in the early part of the season over a large portion of the Deccan which is the chief *bajri* tract of the Presidency and also in many places in the Karnatak, while the area under rice also decreased by about 25 thousand acres or 1·3 per cent. as compared with the previous year chiefly owing to the unsuitability of rains at the time of sowing. Among the *rabi* crops *jowar* showed an expansion of 1,481 thousand acres or 20·6 per cent. over the previous year owing to the good late rains of the season but wheat and gram showed a setback of 275 thousand acres and 98 thousand acres or 16·7 and 16·5 per cent., respectively, below the

previous year due generally to the unsatisfactory character of the rains at the time of sowing. The area under sugarcane showed a slight extension of 3,000 acres or 4·9 per cent. over the previous year.

**21. Non-food Crops.**—The area under non-food crops which chiefly comprise cotton, tobacco and oil-seeds decreased by 128 thousand acres or 1·3 per cent. below the previous year but increased by 1,972 thousand acres or 26·5 per cent. as compared with the average. Cotton showed a reduction of 318 thousand acres or 6·6 per cent. below the previous year's area due to holding off of the rains at the time of sowing in the Deccan and the Karnatak while tobacco showed an extension of some 10 thousand acres or 6·8 per cent. over the previous year owing to good prices. Among oil-seeds the most noticeable increase was under groundnut (+ 68,000 acres) due to the popularity of the crop among the cultivators.

The net result of these variations in the food and non-food crops, as noticed above, was a decrease of 240 thousand acres or 0·8 per cent. below the total cropped area of the previous year, although there was still a rise of 1,799 thousand acres or 6·7 per cent. as compared with the average.

**22. Cropped Area in Sind.**—In Sind with the exception of cotton the area under almost all the crops, both food and non-food, showed a general increase over the previous year owing to the abundant rains received during the season and to the favourable inundation of the river. Thus, among food crops, wheat showed a rise of 268 thousand acres or 65·5 per cent., *bajri* of 252 thousand acres or 25·7 per cent., jowari of 135 thousand acres or 23·0 per cent., rice of 65 thousand acres or 5·5 per cent. and gram 51 thousand acres or 28·2 per cent. as compared with the preceding year, while among the non-food crops, oil-seeds showed an extension of 229 thousand acres or 74·8 per cent. over the previous year.

**23. Kharif and Rabi Seasons.**—The following table compares, as usual, the *kharif* and *rabi* seasons of the year under report, in the Bombay Presidency Proper, with those of the preceding two years :—

(Area in thousands of acres.)

Details	1927-28			1928-29			1929-30		
	Cereals	Pulses	Total cereals and pulses	Cereals	Pulses	Total cereals and pulses	Cereals	Pulses	Total cereals and pulses
	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres
Kharif	10,575	2,016	12,591	9,783	1,934	11,717	8,479	1,738	10,217
Rabi	6,326	800	7,126	6,599	807	7,406	8,168	663	8,831
Total	16,901	2,816	19,717	16,382	2,741	19,123	16,647	2,401	19,048

It will be seen from the above table that the *kharif* area during the year under report, showed a decrease of 1,500 thousand acres and 2,374 thousand acres when compared with the *kharif* area of the last year (1928-29) and the year previous to the last (1927-28) respectively. The

*rabi* area on the other hand showed an increase of 1,425 thousand acres and 1,705 thousand acres as compared with the last year (1928-29) and the year before last (1927-28) respectively. The net result of these variations was that the total area under cereals and pulses, decreased by 75 thousand acres and 669 thousand acres respectively below the area under these crops during the last year (1928-29) and the year preceding the last (1927-28).

**24. Variations under Principal Crops.**—The detailed remarks below explain the variations under the principal crops.

**Jowar and Bajri.**—The subjoined table compares the extent of cultivation of these staple grains in the different divisions of the Bombay Presidency.

(Area in thousands of acres)

Division	Jowar			Bajri		
	*Normal	1928-29	1929-30	*Normal	1928-29	1929-30
	Acres	Acres	Acres	Acres	Acres	Acres
Gujarat .. ..	610	540	597	426	287	309
Deccan .. ..	4,595	4,319	5,287	3,419	3,312	2,621
Karnatak .. ..	2,697	2,325	2,782	394	446	215
Total Bombay Presidency ..	7,902	7,184	8,666	4,239	4,045	3,145
Sind .. ..	598	586	721	1,029	979	1,231
Grand Total ..	8,500	7,770	9,387	5,268	5,024	4,376

\*Average of five years 1916-17 to 1922-23 excluding the two abnormal years 1918-19 and 1920-21.

It will be seen from the above table that the area under jowar (chiefly *rabi*) showed an expansion of 1,482 thousand acres and 764 thousand acres respectively over the previous year and the normal in the Bombay Presidency Proper. All the divisions contributed to the increase as a result of the favourable rains received in September-October which being both substantial as regards amount and well spread in their distribution stimulated the cultivation of the crops in all the *rabi* areas. The area under bajri, on the other hand, showed a reduction of 900 thousand and 1,094 thousand acres respectively below the previous year and the normal. The decrease was shared by all the divisions except Gujarat and was brought about by the scanty rains received in the early part of the season over a large part of the Deccan which is the chief bajri tract of the Presidency and also in many parts in the Karnatak.

In Sind, the area under both these crops expanded; that under jowar by 135 thousand acres and 123 thousand acres respectively over the

previous year and the normal and that under bajri by 252 thousand acres and 202 thousand acres respectively over the preceding year and the normal, as a result of the favourable inundation of the river at the time of sowing these crops.

**Rice.**—The area under rice in the Bombay Presidency Proper showed a curtailment of 25 thousand acres or 1·3 per cent. below the previous year. The decrease was shared by Gujarat (— 11,000 acres) by the Deccan (— 11,000 acres) and by the Karnatak (— 6,000 acres) and was generally due to the unsuitability of the rains at the time of sowing. Against this, there was a slight expansion in the Konkan (+ 3,000 acres) due to the favourable sowing rains.

In Sind, the area under this crop extended by 65 thousand acres or 5·5 per cent. over the previous year, the increase being contributed by all the districts in the Province, as a result of the favourable inundation of the season.

**Wheat.**—In the Bombay Presidency Proper, the area under wheat, dropped by 275 thousand acres or 16·7 per cent. below the previous year. The most marked decrease occurred in Gujarat (— 184,000 acres), Deccan (— 60,000 acres) and Karnatak (— 31,000 acres) also shared this decrease which was due partly to unsatisfactory late rains of the season under review and partly to more area being cultivated under jowar.

In Sind, on the other hand, the area under the crop rose by 268 thousand acres or 65·5 per cent. over the previous year. The increase was distributed in all the districts in the province as people took advantage of the moisture left in the soil by heavy floods and rains during the season and brought large areas under cultivation of this crop.

**Oilseeds.**—The area under oilseeds in the Bombay Presidency Proper, expanded by 24 thousand acres or 1·5 per cent. over the previous year and by 769 thousand acres or 87·2 per cent. as compared with the average.

In Sind also the area under the oilseed crops expanded by 229 thousand acres or 74·8 per cent. over the preceding year and 178 thousand acres or 49·9 per cent. when compared with the average.

The following table and succeeding remarks explain the variations under the principal oilseeds as compared with the previous year :—

Increase or decrease in thousand of acres as compared with the last year			
Oilseeds			
		Bombay Presidency Proper	Sind
		Acres	Acres
Linseed	.. .. .	+ 12	..
Sesamum	.. .. .	- 8	+ 2
Rapeseed and Mustard	.. .. .	- 9	+ 1·54
Groundnut	.. .. .	+ 68	..
Casterseed	.. .. .	- 10	+ 3

**Groundnut.**—When during the year 1928-29 the area under the crop rose to almost 10 lakhs of acres from  $7\frac{1}{2}$  lakhs of 1927-28, 6 lakhs of acres in 1925-26 and  $3\frac{1}{2}$  lakhs of acres in 1923-24, it was thought that the maximum limit of cultivation under this crop had probably been reached. The substantial advance of 68 thousand acres during the year under review, over the preceding year (1928-29) shows that this is not the case. How far the area under the crop will go on increasing will, of course, depend on the market prices and the character of the seasons during the next few years. One thing, however, is evident, viz., that the popularity gained by the crop in recent years was maintained during the year under report. Thus in the Karnatak the area under groundnut expanded by 32 thousand acres, in the Deccan by 22 thousand acres and in Gujarat by 14 thousand acres as compared with the previous year. The increase cultivation of groundnut is, in fact, one of the most striking agricultural changes in recent years.

**Sesame.**—The area under sesame, which is principally a *kharif* crop shows a net reduction of about 8 thousand acres in the Bombay Presidency Proper below the previous year. Karnatak (— 14,000 acres) and Deccan (— 4,000 acres) were responsible for the decrease owing to deficiency of rains at the time of sowing in many parts of both the divisions. Against this, there was an increase in Gujarat (+ 9,000 acres) owing to the excellent rains early in July.

**Linseed.**—The area under this oilseed, which is almost exclusively a rabi crop, showed an expansion of 12 thousand acres, as compared with the previous year, mostly in the Bijapur district where good rains received in September-October encouraged more cultivation under this crop. The variations in the case of other districts are small and call for no remarks.

**Rapeseed and Mustard.**—These oilseeds are of minor importance in the Bombay Presidency Proper. They showed a decrease of 9 thousand acres when compared with the previous year, mostly in the north Gujarat, owing to deficiency of rains at the time of sowing.

**Castorseed.**—The area under this oilseed decreased by 10 thousand acres in the Bombay Presidency Proper, below the previous year, almost the whole of this decrease occurring in the North Gujarat as a result of the unsuitability of rains at the time of sowing.

**Oilseeds in Sind.**—As regards oilseeds in Sind, the only oilseeds of any importance are rapeseed and mustard (which are by far the most important) and sesame; the area under other oilseeds such as linseed, groundnut, castorseed, cocoanut, etc., being quite negligible in the Province. The area under rapeseed and mustard expanded by 154 thousand acres, the increase being chiefly marked in the Nawabshah (+ 90,000 acres), Upper Sind Frontier (+ 56,000 acres) and Sukkur (+ 25,000 acres) districts as a result of the sufficient moisture left in the soil by heavy floods and rains during the season. Against this there was a decrease in Larkana district (— 18,000 acres) partly due to rotation and partly to stagnation of water in the fields on account of floods and

hill torrents caused by excessive rains. The area under sesame showed a slight increase of 2,000 acres due to good inundation of the season.

**Cotton.**—The area under cotton showed a reduction of 318 thousand acres or 6·6 per cent. below the previous year but an expansion of 624 thousand acres or 16·2 per cent. as compared with the average. The reduction in area was general in the Deccan (— 162,000 acres) and in the Karnatak (— 193,000 acres) due to holding off of rains at the time of sowing. Against this, there was some increase in Gujarat (37,000 acres) as a result of the favourable sowing rains.

In Sind also there was a decline of 68 thousand acres or 17·5 per cent. acres below last year's area under this crop, the decrease being general in all the three cotton growing districts in the province, viz., Thar Parkar (— 28,000 acres), Nawabshah (— 26,000 acres) and Hyderabad (— 13,000 acres) as a result of floods and heavy rainfall.

**Sugarcane.**—The area under this crop slightly rose by 3 thousand acres, from 61 thousand acres in 1928-29 to 64 thousand acres during the year under report. The increase occurred mostly in the Ahmednagar District of the Deccan owing to sufficient water supply at the time of planting.

In Sind, the area under sugarcane showed a very slight reduction of one thousand acres only in the Thar Parkar District.

**Tobacco.**—The area under this crop increased by 10 thousand acres or 6·8 per cent. over the previous year in the Bombay Presidency Proper, the whole of the increase occurring in the Kaira district (+ 18,000 acres) due to the favourable rains and good prices. Against this there was a decrease in the Belgaum district (— 6,000 acres) owing to insufficient rains at the time of sowing.

In Sind, tobacco occupies an insignificant position and does not deserve special mention.

**Fruits and Vegetables.**—These showed a setback of 40 thousand acres in the Bombay Presidency Proper, the decline being shared by Dharwar (— 21,000 acres), East Khandesh (— 18,000 acres) and Bijapur (— 6,000 acres) districts. In Sind also there was a slight reduction of 4,000 acres, the decrease being equally shared by Larkana (— 2,000 acres) and Upper Sind Frontier (— 2,000 acres) districts.

25. Appendix C (pages 30-31) shows as usual the distribution, in each district of the Bombay Presidency Proper and in Sind, of the principal food and non-food-crops in the percentage of the gross-area cropped.

#### CHAPTER IV—IRRIGATED AREA.

(Statement IV, pages 66-75.)

26. **Variations in Irrigated Area and Crops.**—Appendix D (page 32) exhibits variations under the several heads of irrigation and crops irrigated as compared with similar details of the previous year.

**27. Area Irrigated.**—In the Bombay Presidency Proper the area irrigated showed an increase of 89 thousand acres or 8·9 per cent. over the previous year, having risen from 1,000 thousand acres during the previous year (1928-29) to 1,089 thousand acres during the year under report. The increase was shared by the Deccan (+ 51,000 acres) and Gujarat (+ 40,000 acres) where, owing to the unfavourable character of the season, more necessity was felt to resort to irrigation sources.

In Sind, similarly, the irrigated area expanded by 302 thousand acres or 9·7 per cent. over the preceding year, the area having increased from 3,123 thousand acres during the preceding year (1928-29) to 3,425 thousand acres during the year under review. In Sind, the rise in the irrigated area was general and was due to the favourable inundation of the season.

### 28. Area Irrigated from different sources of Irrigation in the Bombay Presidency Proper.

**Government Canals.**—The area under Government Canals contracted by 25 thousand acres or 10·4 per cent. below the preceding year. The decline being shared by the Poona district (— 14,000 acres) in the Deccan, the Dharwar district (— 11,000 acres) in the Karnatak and the Ahmedabad district (— 9,000 acres) in Gujarat where owing to the favourable rains of the season the cultivators did not feel the necessity to resort to this source of irrigation. Against this there was a rise in the Ahmednagar district (+ 15,000 acres) where the late rains were very deficient.

**Private Canals.**—Irrigation from private canals also fell by 3 thousand acres or 4·2 per cent. mostly in Ahmednagar (— 6,000 acres) and Nasik (— 3,000 acres) districts in the Deccan. Against this there was a rise in the Satara district (+ 6,000 acres). In the Konkan, irrigation by private canals was increased by about 1,000 acres in the Kanara district while in Gujarat irrigation from this source remained practically absent.

**Wells.**—Well irrigation in the Bombay Presidency Proper considerably expanded by 106 thousand acres or 19·6 per cent. over the previous year, the increase being contributed by Sholapur (+ 39,000 acres) and Ahmednagar (+ 27,000 acres) districts in the Deccan, by Ahmedabad (+ 20,000 acres) and Kaira (+ 19,000 acres) districts in Gujarat and by Bijapur district (+ 6,000 acres) in the Karnatak, where owing to deficient rains in the middle of the season more necessity was felt to help the crops with well irrigation.

**Tanks.**—The area irrigated by tanks rose by 5 thousand acres or 4·1 per cent. above the previous year mostly in Gujarat (+ 4,000 acres) where, owing to insufficient rains during the latter part of the season people resorted more to this source of irrigation.

**Other Sources.**—Irrigation from "Other Sources" also showed an increase of 6,000 acres or 22·2 per cent. over the previous year. The increase was contributed by the Dharwar district (+ 2,000 acres) and Ahmedabad, Panch Mahals, Satara and Belgaum (+ 1,000 acres each) districts.

### 29. Area Irrigated from different sources of Irrigation in Sind.

**Government Canals.**—In Sind, which is mainly dependent for cultivation on irrigation, the area irrigated by Government Canals showed a considerable expansion of 161 thousand acres or 5·4 per cent. over the previous year, as a result of the favourable nature of the inundation during the year. The increase was general in all the districts of the Province, but was specially noticeable in the Nawabshah (+ 61,000 acres), Larkana and Sukkur (+ 31,000 acres each) and Thar Parkar (+ 21,000 acres) districts.

**Private Canals.**—There is hardly any cultivation worth the name under private canals in Sind except perhaps in the district of Sukkur. In this district too the area under this source of irrigation was curtailed from 11,000 acres in the previous year to 8,000 acres during the year under review.

**Wells.**—Irrigation by wells receded by 4,000 acres as compared with the previous year. It was due to the fact that rains of the season being abundant and the inundation of the river being good, cultivators did not feel any great necessity to resort to this labourious and expensive measure of watering their lands.

**Tanks.**—The area irrigated by tanks is quite insignificant in the Province not amounting even to a total of one thousand acres and does not justify any special mention.

**Other Sources.**—Irrigation from "Other Sources" considerably extended by 148 thousand acres above the previous year, the increase being specially noticed in the Upper Sind Frontier District (+ 110,000 acres) where owing to heavy hill torrents and floods considerable area was put under this head for the current year.

**30. Ratio of the Irrigated Area to the Net Cropped Area.**—This was 3·9 per cent. in the Bombay Presidency Proper and 69·5 per cent. in Sind.

### 31. Crops Irrigated (Bombay Presidency Proper).

**Jowar.**—The area under irrigated *jowar* expanded by 84 thousand acres or 39·6 per cent. over the preceding year. Mostly in the Deccan (+ 80,000 acres) owing to the necessity felt for helping this crop with irrigation in many parts of the South Deccan as a result of the deficiency of rains late in the season.

**Bajri.**—The total area under irrigated *bajri* remained stationary as compared with the proceeding year in the Bombay Presidency Proper though there were some internal variations in the Deccan districts. Thus Poona district showed a decline of 3 thousand acres under this crop but it was counterbalanced by an increase of an equal amount of area (3,000 acres) in the Sholapur district.

**Rice.**—Irrigated rice showed a curtailment of 10 thousand acres or 5·1 per cent. below the previous year. The decrease was shared by Dharwar (— 12,000 acres) and Ahmedabad (— 7,000 acres) districts. Against this there was an increase in the Kaira district (+ 8,000 acres) where owing to the indifferent rains the crop had to be helped with irrigation.

**Wheat.**—The area under irrigated wheat showed a decline of 10 thousand acres or 6·0 per cent. below the previous year, and was shared by Nasik (— 8,000 acres), Poona (— 5,000 acres) and Ahmednagar (— 4,000 acres) districts where *rabi* rains being adequate the crop did not require to be irrigated to the extent of the preceding year. Against this there was some increase in the Ahmedabad district (+ 4,000 acres) due to the scanty rains late in the season.

**Cotton.**—Irrigated cotton showed a small rise of 2 thousand acres or 5·9 per cent. over the previous year mostly in the Ahmedabad district (+ 5,000 acres) where it was found necessary to help this valuable crop with irrigation owing to deficiency of *rabi* rains. Against this there was a fall in the area in Sholapur district (— 3,000 acres) where owing to suitable rains the crop did not require any artificial water supply.

**Sugarcane.**—As already noted in the treatment of the crop in chapter III the area under this crop extended by about 2 thousand acres chiefly in the Ahmednagar district of the Deccan owing to sufficient water supply at the time of planting.

**32. Crops Irrigated in Sind.**—In Sind with the exception of cotton, which showed a setback owing to somewhat late inundation, the area under all the other crops increased due to favourable inundation of the river about their sowing time. The actual variations in the areas under the different crops as compared with the preceding year have been shown in Appendix D (page 32) of the Report and need not be repeated here.

## CHAPTER V—OUTTURN OF CROPS.

(Statements V and V-A, pages 76-77 and 78 to 92.)

**33. Yield of Principal Crops.**—Statement V (pages 76-77) shows the estimated yield of the principal kharif and rabi crops taking 100 as representing the normal. It is prepared from the district estimates which are returned in annas with twelve annas as representing a normal crop. The figures are therefore only approximate. The character of the season has already been described elsewhere in this Report.

### 34. Outturn of Crops in the Bombay Presidency in parts of the Normal. A—Kharif Crop.

**Jowar.**—Except Ahmedabad, Poona and East Khandesh where the outturn was rather low, i.e. being exactly one-half of the normal, and in Kaira, Surat, West Khandesh and Thana, it came to four-fifths of the normal, in all other districts of the Presidency it ranged between two-thirds to three-fourths of the normal.

**Bajri.**—Bajri yielded one-half of the normal in Poona and Sholapur and in Bijapur a little less than half the normal where the early rains were found unsuitable in the sowing season. In the rest of the districts in the Presidency proper the crop returned a yield from three-fifths to two-thirds of the normal except Kaira where it was much better, i.e. nine-tenths of the normal.

**Rice.**—Excepting at Broach where the yield of the crop was rather poor being one-fourths of the normal and in the Panch Mahals a little better, i.e. two-fifths of the normal, in all other districts of the Presidency the yield varied from one-half to a full normal crop except Kolaba in the Konkan where it was still better.

**Cotton.**—Cotton crop yielded two-thirds of the normal in all the districts of Gujarat division except in Ahmedabad where it was two-fifths of the normal; whereas in all other places in the Presidency it ranged from one-half to two-thirds of the normal with the exception of Ahmednagar district where it came only to one-third of the normal.

As a result of the deficiency of sowing rains and low prices for the crop last year, the area under cotton decreased generally in the Presidency. The total area in the Bombay Presidency including Sind, Western India States Agency and other Indian States stood at 7,265 thousand acres thus showing a fall of 779 thousand acres or 9·7 per cent. below the previous year 1928-29. The outturn also decreased by 168 thousand bales, i.e. changed from 1,476 thousand to 1,308 thousand bales or 11·4 per cent. below the preceding year (1928-29). Of this total outturn of 1,308 thousand bales, 459 thousand bales or 35·1 per cent. represented the yield of long stapled Broach, Dharwar and Kumpta varieties while the remaining 849 thousand bales or 64·9 per cent. belonged to short stapled varieties of Khandesh, Gujarat and Sind. As compared with the previous year the outturn of long stapled cotton rose by 21·8 per cent. while that of short stapled fell by 22·7 per cent.

**Sesamum.**—This oilseed yielded about one-third of the normal in Ahmedabad and two-fifths of the normal at Broach, Sholapur and Bijapur and in the remaining districts of the Bombay Presidency the yield varied from one-half to two-thirds of the normal except at Thana, Nasik and Kanara where the outturn was good and came to three-fourths of the normal while in Kolaba and Ratnagiri it was still better, i.e. a full normal crop.

#### B—Rabi Crops.

**Jowari (rabi).**—*Rabi Jowari* yielded from three-fifths of the normal to four-fifths of it in the districts of the Bombay Presidency Proper except at Ahmedabad and Ahmednagar where it was in a middling state, i.e. one-half of the normal.

**Wheat.**—The outturn of wheat varied between three-fifths of the normal to three-fourths of it in all the districts of the Presidency except in the Panch Mahals, Broach, East Khandesh and Ahmednagar where it came to a little less, i.e. about one-half of the normal.

**Gram.**—The yield of gram fell between 40 to 50 per cent. of the normal in the districts of Ahmedabad, Panch Mahals, Broach, East Khandesh and Bijapur. In the rest of the districts of the Deccan and Karnatak excepting those given above the yield ranged between three-fifths of the normal to two-thirds of it. In Konkan except Kanara where the yield was only two-thirds of the normal it was between three-fourths to a full normal crop.

**Tobacco.**—The yield of this crop was between three-fifths to three-fourths of the normal in all the districts of the Bombay Presidency Proper except Bijapur where it showed a reduction to one-half of the normal.

**Linseed.**—Except Ahmedabad where the yield was very poor being only one-sixth of the normal and the Panch Mahals where it came to a little better, i.e. one-third of the normal, in all other districts of the divisions of the Deccan and Karnatak where the crop is mainly grown the yield ranged from one-half to two-thirds of the normal.

**Rape and Mustard.**—The yield of the crop was only 40 per cent. of the normal in the districts of the Panch Mahals, Broach, Poona and Bijapur and in the rest of the districts of the Presidency where the crop is grown to an appreciable extent it ranged between 50 to 75 per cent. of the normal.

### 35. Outturn of Crops in Sind in parts of the normal.

#### A—Kharif Crops.

**Jowari.**—The yield of the crop was reported to be poor, i.e. only one-fourth of the normal at Nawabshah while in other districts of that Province it was varying from two-fifths to three-fifths of the normal.

**Bajri.**—The yield of the crop was only one-fourth in the case of Thar Parkar and Nawabshah districts whereas in Karachi it was a little better being one-third of the normal. In the remaining districts of the Province the outturn fell between two-fifths to three-fifths of the normal.

**Rice.**—Rice yielded about one-third of the normal at Nawabshah whereas in the remaining districts of the Province it ranged between one-half to two-thirds of the normal.

**Cotton.**—The yield of cotton was returned at only one-sixth of the normal in Hyderabad and in Nawabshah it was only one-fourth of the normal while in Thar Parkar it was a little better being two-fifths of the normal owing to suitable inundation. In other districts of the Province though the yield has been reported still better it is not significant as the total area there under the crop is too small.

#### B—Rabi Crops.

**Wheat.**—The outturn of wheat ranged between two-thirds of the normal to three-fourths of the normal in all the districts of the Province except Larkana where it came to a full normal.

**Gram.**—Except Nawabshah where the yield was reported to be one-fourth of the normal and Thar Parkar one-half of the normal, in the rest of the districts of the Province it fell between two-thirds to three-fourths of the normal.

**Tobacco.**—The outturn of tobacco was two-fifths of the normal at Karachi and Thar Parkar and one-half of the normal in Larkana and in the remaining districts of the Province it ranged between three-fifths to two-thirds of the normal.

**Rape and Mustard.**—The yield of this crop was only two-fifths of the normal at Hyderabad whereas in all other districts of the Province it varied between three-fifths to two-thirds of the normal except at Larkana where it came to four-fifths of the normal.

**36. Outturn of Sugarcane in the Bombay Presidency including Sind.**—In Gujarat Sugarcane returned a yield of two-thirds to three-fourths of the normal whereas in the Deccan and Karnatak it was a little better, being between three-fourths to four-fifths of the normal except in West Khandesh and Satara where it was reported to be a full normal. In Konkan, the yield was reported to be three-fourths of the normal in Kanara district where the area under the crop was substantial while in the remaining districts it varied between three-fourths to a full normal except in the Thana district where it came to only two-thirds of the normal.

In Sind, the outturn of the crop came to one-half of the normal in Thar Parkar and Sukkur district whereas in the remaining districts of the Province it ranged between two-thirds to three-fourths of the normal.

**37. Outturn in tons of food grain crops.**—Statement V-A (pages 78-92) compares the acreage under food grain crops (cereals and pulses) in the various divisions of the Bombay Presidency and their approximate outturn in tons during the year under report with similar statistics for the two preceding years. The following table sums up the result :—

Division	Area in thousands of acres			Outturn in thousands of tons		
	1927-28	1928-29	1929-30	1927-28	1928-29	1929-30
	Acres	Acres	Acres	Tons	Tons	Tons
Gujarat ..	2,486	2,325	2,089	674	734	542
Deccan ..	10,980	10,713	10,736	2,366	2,301	1,743
Karnatak ..	4,643	4,488	4,622	889	993	941
Konkan ..	1,607	1,598	1,601	710	686	665
<b>Total, Bombay Presidency.</b>	<b>19,716</b>	<b>19,124</b>	<b>19,048</b>	<b>4,639</b>	<b>4,516</b>	<b>3,891</b>
Sind ..	3,754	3,616	4,380	811	905	984
<b>Grand Total ..</b>	<b>23,470</b>	<b>22,740</b>	<b>23,428</b>	<b>5,450</b>	<b>5,421</b>	<b>4,875</b>

From the above table it will be seen that both the area and outturn of the food grains in the Presidency Proper fell below that of last year. The area receded by 0·4 per cent, and the outturn by 13·7 per cent, thus showing that the season under review was less favourable than its predecessor. In Sind on the other hand the area and outturn both showed

an expansion. The area rose by 764 thousand acres or 21·1 per cent. over that of the previous year and the outturn by 79 thousand tons or 8·7 per cent. over that of the preceding year.

This result was brought about by the large *rabi* crop made possible by the river floods and abnormal rains.

## CHAPTER VI—PRICES, TRADE AND STOCK.

(Statement VI, pages 94-95.)

**38. Prices of principal articles.**—Shows in detail the retail prices of the principal staples and of fodder ruling at harvest time at each district headquarter station in the Bombay Presidency and in Sind. The detailed remarks below explain the variations in the prices of the principal articles.

**Jowar.**—In the Bombay Presidency Proper, Jowar ruled dearer by three and a half seers per rupee at Ahmednagar and Satara and by three-fourths seer to one and one-fourth seer per rupee at Sholapur, Poona, Jalgaon (East Khandesh), Surat, Broach, Ahmedabad and Belgaum, while at Ratnagiri it ruled appreciably easier than last year. At the other stations in the Presidency, the price of Jowar was either stationary or showed but a small variation as compared with last year.

In Sind, the price of Jowar was almost stationary at Jacobabad (Upper Sind Frontier) and Nawabshah but it was dearer by one-fourth seer to three-fourths seer per rupee at Karachi, Hyderabad and Larkana. At Sukkur it ruled easier by one-third seer per rupee.

**Bajri.**—Bajri was dearer by two seers to two and three-fourth seers per rupee at Nasik, Ahmednagar, Poona, Satara and Thana. It was appreciably higher by three and one-fourth to three and three-fourth seers per rupee at Sholapur and Bijapur respectively. At the other stations of the Presidency the price of the article may be said to be generally stationary the variation in price from last year not exceeding one seer and a quarter per rupee either way.

In Sind, except at Karachi and Nawabshah where the price of Bajri was the same as last year it ruled dearer by one-fifth to three-fourth seer per rupee at Hyderabad, Thar Parkar and Larkana. It was cheaper by one-third to one-half seer per rupee at Sukkur and Upper Sind Frontier.

**Rice.**—The price of rice was generally stationary except at Kaira and Thar Parkar where it was cheaper by about a seer per rupee.

**Wheat.**—Wheat was cheaper by one and one-fourth seer to one and three-fourth seers per rupee at Ahmedabad, Kaira, Panch Mahals, Sholapur, Belgaum and Dharwar and by one-fourth to three-fourth seer per rupee at the remaining District Headquarter stations in the Presidency Proper.

In Sind, the price of wheat ruled easier by two seers to three and a half seers per rupee throughout the Province.

**Gram.**—In the Presidency Proper gram was almost stationary in price throughout the Konkan except at Ratnagiri where it was dearer by one-half a seer per rupee. At the other stations in the Presidency the prices showed slight variations of about one-half to three-fourth seers per rupee except at Panch Mahals in Gujarat where it was dearer by one and one-fourth seers per rupee. In Sind gram was sold cheaper by two-fifths of a seer to three and one-fourth seers per rupee throughout the Province except at Jacobabad (Upper Sind Frontier) where it was dearer by one-half a seer.

**Turdal.**—The price of Turdal was cheaper by one-fifth of a seer to one-half of a seer per rupee at Dhulia (West Khandesh), Poona, (East Khandesh) Jalgaon, and Kaira in Gujarat but was dearer by one-fourth of a seer to two-fifths of a seer per rupee at Broach, Ahmednagar, Sholapur and Dharwar, and by two and two-fifths of a seer per rupee at Bijapur in Karnatak.

In Sind mugdal is used in place of turdal and the price of this article was dearer by from one-fourth to one-third seer per rupee at Sukkur and Hyderabad but nearly stationary elsewhere in the Province except at Larkana where it was cheaper by one-fourth of a seer per rupee.

**Gul or Raw Sugar.**—The price of the article ruled easier by one-fourth to one and two-fifths of a seer per rupee at all the stations in Gujarat. In the Deccan and the Karnatak the price of the article ruled cheaper by one-fifth to two-fifths of a seer per rupee except at (East Khandesh) Jalgaon and Satara. In the Konkan the price of the article was almost stationary except in Kanara where it was cheaper by one and two-fifths of a seer per rupee.

In Sind, the price of the article was cheaper by one-half to one and two-fifths of a seer per rupee throughout the Province except at Jacobabad (Upper Sind Frontier) where it was dearer by three-fifths of a seer.

**Tobacco.**—Tobacco ruled easier, by a quarter seer per rupee at Godhra (Panch Mahals) by half a seer per rupee at Poona and by three-fourths of a seer per rupee at Ratnagiri while at Broach it ruled higher by a seer per rupee. At all other stations in the Presidency Proper, its price was either stationary or showed but very slight variations.

In Sind, with the solitary exception of Sukkur where it ruled easier by about three-fifths of a seer per rupee, the price of Tobacco was just the same at all the stations in the Province.

**Cotton.**—The variations in the area and outturn of this crop as compared with the last year have already been noted under the respective chapters and need not be repeated here. The following table compares

the prices of the article during the year under report with those of the previous year and the average of the preceding five years :—

Variety	Price per bale of 400 lbs.			Variations	
	Average of five years ending 1928	Average of the seven months ending 31st July		Compared with the average	Compared with the prices in 1929
		1929	1930		
1	2	3	4	5	6
	Rs.	Rs.	Rs.	Per cent.	Per cent.
Broach .. .. .	221	179	131	- 40·7	- 26·8
Khandesh .. .. .	203	139	105	- 48·3	- 24·5
Dharwar .. .. .	213	172	133	- 37·6	- 22·7

Converting the above figures into prices per khandi they are as follows :—

Variety	Price per khandy of 784 lbs.			Variations	
	Average of five years ending 1928	Average of the seven months ending 31st July		Compared with the average	Compared with the prices in 1929
		1929	1930		
	Rs.	Rs.	Rs.	Per cent.	Per cent.
Broach .. .. .	433	351	257	- 40·6	- 26·8
Khandesh .. .. .	398	273	206	- 48·2	- 24·5
Dharwar .. .. .	417	337	261	- 37·4	- 22·6

It will be seen from the above table that the prices of all the three varieties of cotton fell below those of the previous year as well as below the average prices during the preceding five years. These figures however do not fully reflect the intensity of the slump which has set in since the end of the 1929-30 season.

**Jowari Karbi.**—The price of jowari karbi was dearer at Kaira and Surat in Gujarat, Poona, Ahmednagar and Sholapur in the Deccan and Bijapur, Dharwar in the Karnatak. Elsewhere the price of the article was generally the same as last year except at Ahmedabad and (Kanara) Karwar where it was cheaper.

**Dry Grass.**—This was again somewhat dearer at Kaira and Surat, but in the other parts of the Bombay Presidency it was generally slightly cheaper than last year.

In Sind, jowari karbi was dearer at Hyderabad and easier at Jacobabad (Upper Sind Frontier) but at the other places in the Province, the price of the article ruled easier than last year. Dry grass was also cheaper than last year everywhere in the division except at Hyderabad.

## VII—AGRICULTURAL STOCK—CENSUS OF AGRICULTURAL STOCK.

39. The quinquennial census of the Agricultural Stock was held in January 1930 and the result of it is given at length in Statement VII (pages 100-113).

40. Appendix E (pages 34-35) summarises the total strength under each main head during the year under review (i.e. 1929-30) as compared with the last two censuses held in 1919-20 and 1924-25.

41. **Variations in total number of Cattle.**—The total number of cattle is now returned at 94·15 lakhs. This is 11·0 per cent. in advance of the figure for 1924-25 and 15·0 per cent. of that for 1919-20.

In Sind, the total number of cattle increased by 54 thousand or 2·3 per cent. and 561 thousand or 30·9 per cent. as compared with 1924-25 and 1919-20 respectively.

42. **Variations under principal heads.**—The following remarks explain the variations under the several heads.

43. **Plough Cattle.**—The number of these increased by 190 thousand or 6·1 per cent. in the Bombay Presidency Proper as compared with the number under this head in the cattle census of 1924-25. The increase has been contributed by all the districts in the Presidency except East Khandesh in the Deccan and may be attributed to the fairly good harvests and sufficiency of fodder crops as a result of the favourable nature of the seasons experienced during recent years and also due to the general agricultural prosperity during the last quinquennium which encouraged the cultivators to make new purchases. In the Bijapur district the increase under this head may be partly due to the activities of the Wilson Anti-famine Institute, while in the East Khandesh district the decrease may be traced to diseases.

44. In Sind, the number of plough cattle advanced by 8,000 or 1·4 per cent. as compared with that of 1924-25. With the solitary exception of the Sukkur district, where there has been a decrease of 25 thousand or 28 per cent. below 1924-25 chiefly due to exportation, all the other district in the Province showed an appreciable increase as a result of the comparatively favourable seasons experienced in the Province during recent years.

45. **Milch Cattle.**—The total number under this head in Bombay Presidency Proper showed an advancement of 390 thousand or 14·4 per cent. as compared with that in the previous census of 1924-25. The increase has been shared by all the districts in the Bombay Presidency Proper without exception and is the result of the favourable nature of the seasons coupled with the absence of fodder famines as well as of

any severe disease among the milch cattle during the last quinquennium. The tendency of the people to rear milch cattle on a large scale on account of the high prices commanded by milk and greater demand of its by-products in the market also contributed to the general rise in the number of milch cattle.

46. In Sind, the total number under this head increased by 16 thousand or 1·4 per cent. as compared with that in 1924-25.

The rise was contributed by all the districts in the Province except Hyderabad and Thar Parkar districts, where a fairly large number of milch cattle died in the heavy rains and floods during the year under review. The reasons attributed for the increase in the Bombay Presidency Proper are applicable to the increase in this Province also.

47. **Breeding Bulls.**—These show an increase of 4 thousand in number or 12·9 per cent. in the Bombay Presidency Proper as compared with the census of 1924-25. The increase was shared by all the divisions except Gujarat where the number decreased on account of foot and mouth disease among the breeding bulls in the Ahmedabad District. The general increase under this head suggests that the cultivators have now realised the importance of good breeding bulls and are paying more attention to this matter. It is also possible that some of this enthusiasm on the part of the cultivators is due to the work of the Agricultural Department.

48. In Sind, on the other hand, the total number of breeding bulls showed a set back of 4 thousand or 19·0 per cent. as compared with that of 1924-25, the decrease being marked mostly in the Hyderabad district, where much loss occurred during the heavy rains and floods.

49. **Young Stock.**—The number under this head showed an advancement of 302 thousand or 12·1 per cent. as compared with that in the census of 1924-25 in the Bombay Presidency Proper. The increase has been general in all the Divisions of the Presidency Proper and with the rise in "Milch Cattle" and "breeding bulls" the increase under this head is but natural. The favourable nature of the seasons and the absence of any fodder famine during the last quinquennium go a long way in accounting for this increase.

50. In Sind also the number of young stock showed an increase of 34 thousand or 6·1 per cent. as compared with the number under this head in 1924-25. All the districts in the Province except Sukkur contributed to this increase which may be attributed to the reasons already explained for the Bombay Presidency Proper.

51. **Horses and Ponies.**—The total number under this head declined by 7 thousand or by 5·5 per cent. as compared with that of the census of 1924-25. The decrease is chiefly due to the introduction, on a very large scale of the cheaper and speedier means of transport, such as motor cars and motor-lorries which are rapidly displacing carriage and riding horses.

52. In Sind also the number of horses and ponies decreased by 2 thousand or 2·6 per cent. as compared with that of 1924-25 due to the same reasons explained for the Bombay Presidency Proper.

**53. Sheep and Goats.**—The number of sheep in the Bombay Presidency Proper advanced by 211 thousand or 11·9 per cent. as compared with the previous census of 1924-25 and by as much as 542 thousand or 37·7 per cent. when compared with the census of 1919-20. Various reasons have been assigned for this increase the chief of which are :—

(a) Grazing facilities and absence of fodder famines during the last four years as a result of the comparatively favourable seasons experienced over a greater portion of the Presidency Proper and Sind ;

(b) The increasing tendency of the cultivators to rear sheep and goats, as their rearing is both inexpensive and profitable, their feeding charges being very small while at the same time the milk, wool, manure and mutton obtained from them brings in a substantial return ;

(c) The increased demand for wool as a result of the home-spun cloth movement. This movement having given a stimulus to the hand-loom industry and to the manufacture of country blankets (Kambli or Ghongdi) both for wearing as blankets and for use as coating, felt for caps, etc., a large amount of wool is always in demand and to supply it a large number of sheep are nowadays kept, as besides wool they give milk, mutton and manure at a comparatively low cost of feeding.

The number of goats, on the other hand, declined by 227 thousand or 8·7 per cent. as compared with the census of 1924-25 although it showed a rise of 942 thousand or 64·8 per cent. when compared with the census of 1919-20. The decrease may be traced partly to the increased number of sheep and partly to the increased consumption for human food.

**54.** In Sind both sheep and goats show a reduction of 41 thousand and 47 thousand or 6·6 and 3·1 per cent. respectively as compared with the previous census of 1924-25 though when compared with the census of 1919-20 they still show an increase of 19 thousand and 436 thousand or 3·4 and 42·4 per cent. respectively. The causes for this decrease may perhaps be attributed to the fact that the wandering tribes who kept large herds of sheep and goats did not stick to one place and also possibly to the increased consumption for human food.

**55. Ploughs and Carts.**—The total number of ploughs in Presidency Proper was 1,247 thousand and in Sind 336 thousand. This included 59 thousand and 7 thousand iron ploughs in the Presidency Proper and in Sind respectively. The total number increased by 77 thousand or 6·6 per cent. over the census of 1924-25 in the Bombay Presidency Proper and by 36 thousand or 12·0 per cent. in Sind. The total number of carts on the other hand declined by 14 thousand or 2·1 per cent. in the Bombay Presidency Proper but advanced by 4 thousand or 5·1 per cent. in Sind.

While the rise in the number of ploughs may be attributed to the increased agricultural activities both in the Presidency Proper and in Sind, the fall in the number of carts may be traced to the introduction, on a very large scale, of the faster means of transport such as motor

buses and motor lorries in the Presidency Proper. In Sind, however, where local conditions such as rough roads and sandy tracts do not permit the use of the latest means of transport (motors) these carts still hold their own as may be seen from the increase in their number from 78 thousand in 1924-25 to 82 thousand during the year under review.

**56. Crushers. and Oil-engines.**—The enumerations of these have been made for the first time during the present census and the statistics under these cannot, therefore, be compared as no similar figures are available for the past censuses.

### CHAPTERS VIII AND IX—CONDITION OF THE AGRICULTURAL POPULATION.

**57.** As already noted in Chapter I of the Report, the season under review was not favourable both in the Presidency Proper and in Sind. While the kharif crops were below normal, the rabi crops also did not give encouraging results. The net result was that there was a reduction of about 13 per cent. in the food produced in the Presidency Proper as compared with the previous year.

The prices of the agricultural produce ruled low in Gujarat, especially cotton and tobacco showing marked fall. In the Deccan and the Karnatak owing to irregularity of rains the yield of cotton, groundnut and gul was considerably below normal and the prices were low. In the Konkan the prices of agricultural produce have fallen in comparison with those of the previous year. In Sind notwithstanding the severe floods both the cropped area and the total produce increased on the previous year's figures and actually exceeded the figures for 1928-29 by 21·1 per cent. and 8·7 per cent. respectively, which year was described as one of the best within the last decade by the Deputy Director of Agriculture, Sind. Depression in trade however caused a fall in the prices of agricultural produce to a level much below the normal of the preceding two decades.

**58.** Wages remained generally the same as last year, viz. 1928-29 except in East Khandesh, Bijapur and in the case of migratory labour on the Deccan canals where they showed slight fluctuations. In Sind the agricultural labour on the whole was sufficient although wages ruled high.

**59.** The most important economic change which is taking place is the general heavy fall in prices which suggests that agriculture is entering upon a new period to be characterized by a lower price level than has prevailed in recent years. This in turn may be expected to bring about a general readjustment in the standard of living.

T. F. MAIN,

Director of Agriculture.
