REPORT ON AN ENQUIRY INTO WORKING CLASS FAMILY BUDGETS IN AHMEDABAD.

INTRODUCTORY.

The first enquiry into working class family budgets in Ahmedabad was conducted by the Labour Office in 1926 and its results were published in a special report in 1928. As conditions had altered materially since the publication of that report, it was decided to undertake a second family budget enquiry in Ahmedabad in 1933 after consulting both the Ahmedabad Millowners' Association and the Textile Labour Association who expressed themselves in favour of it. The enquiry was therefore commenced in October 1933 and completed in January 1935.

The actual investigation was conducted by the lady investigators of the Labour Office under the supervision of the Labour Officer at Ahmedabad by house to house visits to the homes of the workers. Information was collected from every 33rd tenement in the predominantly working class localities within the Municipal limits of Ahmedabad. If, however, the sampled tenement happened to be unoccupied or occupied by persons other than those belonging to the working classes such as traders, businessmen, lawyers, doctors, clerks, etc., or if the occupier of the tenement being a working class family refused to give information, budgets were collected from either the immediately preceding or the immediately following tenement if either of these tenements contained a working class family willing to give information. The Dheds and Waghris who live in particular localities in concentrated groups, segregated from other communities, especially caste Hindus, were also covered with a view to ensuring their proper representation in the enquiry. It was found that for purposes of the Municipal Census taken in 1932, buildings were numbered according to ownership and not according to tenements as in the 1921 census and the lady investigators had therefore to note down the numbers of the sampled tenements from the Municipal Assessment Registers while tracing the sampled tenements. The tracing of the sampled tenements was no easy matter, particularly when the tenements happened to be in some out of the way poles (lanes) and blind alleys. The schedule used for the enquiry (printed as Appendix A) follows very closely the general lines of the schedule adopted by the Labour Office for similar enquiries in the past.

As in the case of the 1932-33 Bombay family budget enquiry, the present enquiry was confined to working class families, the heads of which were in full-time regular employment; but there was no other

conscious selection of the families, either from the point of view of composition or income. The total number of budgets collected was 1,310 out of which 1,293 were, after scrutiny, accepted for final tabulation.

Before discussing the results of the present enquiry, the recent expansion of Ahmedabad as an industrial centre and the socio-economic problems arising out of it may briefly be reviewed here. This is all the more necessary because, Ahmedabad had to be excluded from the cities volume of the census of India, 1931, for reasons connected chiefly with the Civil Disobedience Movement and the results of the Municipal census of 1932 are available only in Gujarati.

RECENT RAPID INDUSTRIALISATION OF AHMEDABAD.

The population of the Municipal Borough of Ahmedabad at each of the census years since 1872 is shown below *:—

| | | | Population | Increase | | | |
|------------|-------|---------|------------|----------|----------------------------------|----------------------|--|
| . Census y | year. | Males. | Females. | Total. | over the previous census figure. | Percentage increase. | |
| , | | | | | | | |
| 1872 | | 63,269 | 62,437 | 125,706 | •••• | | |
| 1881 | | 66,688 | 67,499 | 134,187 | 8,481 | 6.7 | |
| 1891 | | 79,786 | 75,619 | 155,405 | 21,218 | 15.8 | |
| 1901 | | 101,540 | 93,954 | 195,494 | 40,089 | 25.8 | |
| 1911 | | 124,138 | 105,862 | 230,000 | 34,506 | 16.7 | |
| 1921 | | 153,274 | 117,501 | 270,775 | 40,775 | 17.7 | |
| 1932 | | 219,175 | 163,582 | 382,757 | 111,982 | 41.4 | |

The above table, which is self-explanatory, shows that the growth of Ahmedabad City has been continuous although the increase of 111,982 persons or 41.4 per cent. in the intercensal period 1921 to 1932 was unprecedented during the last sixty years. Between 1921 and 1932 there was an increase of 33,144 males and 26,096 females in the city proper and of 37,356 males and 21,663 females in the Puras or the extensions of the city outside the city walls, as is seen from the following further analysis of the population figures. It is noticeable that the rate of the growth of population is much greater in the *Puras* than in the city proper.

^{*}Extracted from The Consus of India, 1921, Vol. IX, Part II and the Municipal Census of July 1932.

| ; | Ma | de populatio | on. | Female population. | | | | |
|-------------|---------|--------------|---------------------------------------|--------------------|----------|------------------------------|--|--|
| _ | 1921 | 1932 | Increase (+) or decrease (—) | 1921 | 1932 | Increase (+) or decrease (—) | | |
| City proper | 101,325 | 134,469 | +33,144 | 84,227 | 110,323 | +26,096 | | |
| Puras | 46,325 | 83,681 | +37,356 | 31,352 | ·53,015· | +21,663 | | |
| Homeless | 5,624 | 1,025 | - 4,599 | 1,922 | 244 | — 1,678 | | |
| Total | 153,274 | 219,175 | +65,901 | 117,501 | 163,582 | +46,081 | | |

The table below is of interest as it shows the actual rise in population in the different wards between 1921 and 1932. It will be seen that among the working class wards, noticeable increases have occurred in the Puras, particularly in Pura I, Gomtipur and Asarwa, as was to be expected, because of the increase in the number of cotton mills, most of which are situated outside the city walls:—

| • | | Total Puras | | 77,677 | 136,696 | . 59,019 |

In the 1921 Census Report on cities of the Bombay Presidency, Vol. IX, Part I (page 65) the late Mr. Sedgwick, the Census Superintendent, observed: "In the sex distributions the recent rapid industrialisation of the city is clearly brought out. There is now an excessive disproportion of males. In this part of Gujarat the normal ratio is about 905 females to every 1000 males." The disparity has become further accentuated during the last 15 years more particularly in the puras where the bulk of the mill workers reside and the census figures show that whereas the number of females per 1000 males declined from 768 in 1921 to 749 in 1932 for the whole city, excluding cantonment, the 1932 figure for the city proper was 820 and for the Puras 634.

Age distribution is another good index for the study of the population of a city. Able-bodied persons are usually attracted* to the cities in the active wage-earning periods of life and the more industrialised a city becomes, the smaller is the percentage of persons in the highest and the lowest age-groups. The following table which compares the percentage population figures for three age-groups 0 to 15, 15 to 50 and

^{*}It is shown on page 9 that the percentage of working class families reporting Ahmedabad (City and district) as their place of birth recorded a marked decline from 41.51 in 1926 to 24.36 in 1933-35.

50 and over for the cities and the Presidency is of interest in this connection:—

| Age groups. | | nbay dency. | Bombay City. | | Ahmedabad. | | Poons. | | Sholapur. | |
|------------------------------|----------------|----------------|-----------------|---------------|----------------|----------------|----------------|---------------|----------------|---------------|
| · | 1921 | 1931 | 1921 | 1931 | 1921 | 1932 | 1921 | 1931 | 1921 | 1931 |
| 0—15 15—50 50 and over | 39 50 11 | 40 51 9 | 21 72 7 | 24 71 5 | 31 59 10 | 30 65* 5 | 33 56 11 | 35 57 8 | 36 53 11 | 37 55 8 |

^{*}Includes the figure of population aged 50, as that figure is not separately available in the 1932 Municipal Census Report.

Apart from the classification of the population by age and sex, it is also . essential for a proper understanding of the nature of the growth of population to have information regarding birthplace, occupations, housing etc. But, as is well known, the Civil Disobedience Movement greatly hampered the official census operations in Ahmedabad in 1931 and although a census was taken by the Ahmedabad Municipality in July 1932, the census tables published by the Municipality do not contain an analysis of the population by birthplace and occupations, although such information is usually published in official census reports; and as the information in the published tables is also at times inaccurate in important respects, it is not as useful as it otherwise might have been. Thus, although in the absence of these statistics it is difficult to deal with the character of the growth in the city's population during the last fifteen years, some guidance can be obtained on this question from the employment statistics published in the annual reports of the Factory Depart-These statistics show that over 90 per cent. of the factory workers in Ahmedabad are employed in cotton textile mills. below shows the trend of employment in the cotton mill industry in Bombay, Ahmedabad and other centres of the Bombay Presidency during the decennium 1926-1935.

The average daily number of operatives employed in the cotton textile mills in the Bombay Presidency from 1926 to 1935.

| | Year. | | Bombay. | Ahmedabad. | Other centres. | Total. | |
|-----------------------|-------|-----|---------|-------------------------------|----------------------------|----------------------------|-------------------------------|
| 1926 .1927 1928 | | | | 148,254 145,005 118,617 | 55,767 57,872 59,722 | 41,101 42,632 41,089 | 245,122 245,509 219,428 |
| $1929 \\ 1930$ | | •• | | 118,368 127,578 | 67,564 67,717 78,350 | 46,155 45,711 47,574 | 232,087 241,006 261,001 |
| 1931 1932 1933 | | • | | 135,077 139,963 105,488 | 82,922 84,466 | 47,423 45,537 43,627 | 270,308 235,491 245,900 |
| 1934 1935 | •• | • • | : | 110,011 133,577 | 92,262 97,218 | 48,890 | 279,685 |

The above table includes weighted averages of the workers employed on night-shifts also. The figures for Ahmedabad show an uninterrupted increase in employment and are in striking contrast with those for Bombay. As will be seen from the above table, the average daily number of cotton mill workers in Ahmedabad increased from 55,767 in 1926 to 82,922 or by 49 per cent. in 1932, and to 97,218 or by 74 per cent. in 1935. A part at least of the additional labour force employed by the industry must consist of immigrants and as some of them must have brought their non-working dependants with them, it is evident that a substantial portion of the excess over the natural increase in population is due to the growth of the cotton textile industry* and allied trades in the city.

Problems relating to housing, water-supply, sanitation, etc., arise in the wake of rapid industrialisation and they have not failed to appear in the case of Ahmedabad. The distribution of the water supply in Ahmedabad is very uneven and there is considerable scarcity of water in the working class areas, especially in the suburbs. It is understood that the Municipality is trying to remedy this state of affairs by constructing separate water works for the different suburbs. An even more important problem from the point of view of general well-being is, however, that of the suburban drainage.

RESULTS OF THE ENQUIRY.

Classification of budgets by (i) wards.

As in most industrial cities, so also in Ahmedabad, concentrations of working class families are more in evidence in some localities than in others. For instance, as the table below shows, Dariapur, Shahpur, Gomatipur, Asarwa, Jamalpur, Pura 1 and Pura 4 have returned considerably larger number of budgets than other localities such as Beherangour.

^{*} See the figures and discussion in paragraphs 190 to 192 on page 68 of the Census of India, 1921, Volume IX, Cities of the Bombay Presidency, Part I. There it is stated "almost one-third of the population is supported by cotton industries". The number of workers in cotton mills then stood at about 44,000, while it was nearly 83,000 in 1932 and 97,000 in 1935. This shows a rise of about 89 per cent. in cotton mill employment between 1921 and 1932 as against a rise of 41.4 per cent. in the general population during the same period. And the present enquiry shows that so far as working class families are concerned there are 2.47 dependents to every 1.58 earners.

| , Total | | 594 | 145 | 476 | 78 | 1,293 | 100.00 |

. (ii) Religion and Caste.

According to the Municipal population census of 1932, the distribution of the population by religion was as follows: 72.9 per cent. Hindus, 19.6 per cent. Muhammadans, 5.9 per cent. Jains, 1.0 per cent. Christians and 0.6 per cent. others. The present enquiry shows that so far as the working classes are concerned, 79.66 per cent. are Hindus, 18.41 per cent. Muhammadans, 1.31 per cent. Christians and 0.62 per cent. Jains. The following table which gives the classification of the budgets by religion and caste contains certain striking features. It shows, for instance, that among Hindus, while the Thakerdas and Patidars are numerically the most important castes which engage in industrial pursuits, the depressed classes such as vankars, mochis and chamars are no less important and taking the depressed classes as a whole, they form nearly 21 per cent. of the industrial population of Ahmedabad.

Classification of Budgets by Religion and Caste.

<sup>Out of the 237 families, 17 were Brahmins, 14 Patels, 14 Sutars, 12 Bhils, 12 Marwadis,
13 Banias, 10 Gosavis (including Sadhoos and Jogis), 9 Balais (Kolis), 9 Khatris, 7 Malis,
7 Ravals, 6 Kunabis and Kulwadis. The remaining 107 budgets were for families belonging to 52 different castes.</sup>

(iii) Birth-place.

With the expansion of Ahmedabad as a textile centre and with its lure of high wages there has been a steady influx of workers from outside Ahmedabad City and district who immigrate into the City in search of

employment. The classification of families by their region of origin shows that while 24 per cent. belong to Ahmedabad City and district, nearly 25 per cent. belong to Baroda State and a little over 17 per cent. come from other places in Gujarat. The 1926 enquiry, on the other hand, revealed that out of the families covered by that enquiry no fewer than 41.51 per cent. belonged to Ahmedabad City and district. The following table gives the details of the region of origin of the families covered by the enquiry:—

Classification of Families by Region of Origin.

| | Region of origin | | | | | | | | | |

| | | | | Total | | 1,293 | 100.00 | | | |

(iv) Industries and Occupations.

It has already been stated that of the total factory workers in Ahmedabad, over 90 per cent. are employed in cotton spinning and weaving mills. The present enquiry which covers not only cotton mill workers but also other manual workers, shows that no fewer than 82.75 per cent. of the budgets collected related to the families of workers employed in the cotton mill industry. The largest single group of cotton mill operatives for whom budgets were collected was weavers, who formed about 37 per cent. of the number of textile operatives.

^{*}This includes 18 folders, 17 peons and sepoys, 16 fitters, 10 carpenters and 157 other workers.

NATURAL FAMILIES AND JOINT HOUSEHOLDS.

As on the previous occasion, during the present enquiry also, families were classified separately into natural families and joint households. The definition of a natural family, namely, one which includes those who are generally recognised to have a right to be fed, housed and clothed by the head of the family, was the same as the one adopted during the first enquiry, but the results of the two enquiries reveal striking differences between the proportions of natural families and joint households. As

[†]This includes 10 carpenters, 9 bidi makers, 8 mukadams, 7 masons, 7 fitters, 6 wood cutters, 6 cleaners, 6 coachmen, 5 prons and 79 other workers.

the table below shows, of the 1,293 families covered by the present enquiry, 739 were natural families and 554 were joint households. Thus, 57.15 per cent. of the families were natural families and 42.85 per cent. were joint households. The corresponding percentages in the 1926 enquiry were 64.04 and 35.96 respectively. It would thus appear that during the last ten years the Ahmedabad working classes are leaning more towards the formation of joint households which is contrary to the experience of family life in urban areas inhabited by an industrial population. This tendency is particularly noticeable among cotton mill workers, 55.51 per cent. of whose budgets related to natural families and 44.49 per cent. to joint households as compared with 65 per cent. natural families and 35 per cent. joint households amongst workers engaged in other industries. One possible explanation of this tendency might, however, be that owing to the rapid expansion of the textile industry in Ahmedabad during the last decade there has been a tendency on the part of those engaged in cotton mills to bring their relatives from their native places and get them employed as wage earners in cotton mills, as can be seen from an all-round increase in the size of an average family from 3.87 persons in 1926 to 4.05 persons in 1933-35. Another striking feature of this table is that leaving aside the lowest income group, as the income increases the percentage of natural families decreases while that of joint households increases. These movements both in the downward and upward directions are very striking. Their true explanation can only lie in this that while low income frightens away relatives higher income attracts them. At the same time a joint household may in itself be a contributory cause of the higher income.

^{*}A natural family includes persons who, generally speaking, have a right to be fed, housed and clothed by the head of the family.

[†]A joint household is any group of relatives living together as one household.

LITERACY AMONGST THE HEADS OF FAMILIES.

The 1932 Census of Ahmedabad shows that 33 43 per cent. of the population over 15 years of age was literate while the remainder or 66 57 per cent. was illiterate. An analysis of the family budgets according to literacy amongst the heads of families shows that the percentage of literacy is 40 68 which compares favourably with the general percentage for the whole population. Two factors must, however, be considered while making such a comparison. First, that while the figure for the general population includes men and women, the figure for the families considered relates almost exclusively to men amongst whom, as is well known, literacy has spread very much more than amongst females. Secondly, it must be remembered that the families analysed are those mainly of workers employed in organised industries such as the cotton textile industry. At the same time the fact that over 40 per cent. of the heads of families of industrial workers are literate is encouraging.

The table below which analyses literacy amongst the heads of families by income groups shows that the percentage of literacy increases progressively with the increase in income, an interesting fact, although it might be unsafe to make any wide generalisation from it.

. Composition of the Family.

During the last ten years there has been a slight increase in the average working class family in Ahmedabad, the size having increased from 3.87 in 1926 to 4.05 in 1933-35. If the number of dependants living away from the family is included then the average size of the family has increased from 4.05 to 4.37. The average family consists of 1.43 men, 1.26 women and 1.36 children under 14, a total of 4.05 persons. The number of dependants living away from the family comes to 0.32 and thus the total size of the family for which the head of the family is responsible is 4.37 persons.

The average size of the family increases progressively with the income. That is not to say, however, that the families in the higher income groups are more fertile. In fact, with the increase in income the number of men in an average family appears to increase far more than either women or children. It is noticeable also that with the increase in income the average number of dependants living away from the family also increases. The true explanation of the table below, read with the table-containing figures of workers and dependants per family, would appear to be that while the size of the family increases with the income, the increase in the income is also due to the increase of the size of the family.

EARNERS AND NON-EARNERS BY AGE AND SEX.

The 1,293 families covered by the present enquiry contained 5,233 persons of whom 2,772 were males and 2,461 females. Out of these, 1,692 were male earners and 353 female earners. These 2,045 earners included 1,599 cotton mill workers of whom 1,352 or 84.5 per cent. were men, 225 or 14.1 per cent. women and 22 or 1.4 per cent. were children. The corresponding figures for cotton mill workers in the 1926 enquiry were 77.6 per cent. men, 20.7 per cent. women* and 1.7 per cent. children.

The table below which analyses earners and non-earners according to age and sex groups shows that in Ahmedabad there is very little child labour. In recent years, owing to the provisions of the Indian Factories Act the tendency all over the country has been to replace child labour by adult workers. This tendency is strikingly noticeable in the case of Ahmedabad where the number of children employed in factories in the year 1934 was only 38. An interesting feature of this table is that while male non-earners are mostly below 15, in the case of female non-earners a considerable proportion or 37 per cent. of them are to be found in the age groups 15 to 30; and that while among males of 15 years and over 91 per cent. are earners, amongst females above 15 years earners number only 21 per cent., the corresponding percentages for Bombay being 90 and 27 respectively as revealed by the 1932-33 Bombay Family Budget enquiry.†

Distribution of Persons covered by the Enquiry by Age and Sex distinguishing Earners from Non-earners.

| | | Ma | les | Fem | ales | Tota | Total | | |
|--|----|--|---|--|---|---|---|--|--|
| Age groups | | Earners | Non- earners | Earners | Non- earners | Earners | Non- earners | | |

| Total | •• | 1,692 | 1,080 | . 353 | 2,108 | 2,045 | 3,188 | | |

^{*}It is of interest to point out in this connexion that while women formed about 19 per cent. of the cotton mill workers in Ahmedabad in 1926, they numbered only about 11 per cent. among the cotton mill workers in 1935.

[†]See the Report on an Enquiry into Working Class Family Budgets in Bombay City, 1935 (page 9).

1,499 or 88 6 per cent. of the male wage-earners were in the age-groups 15 to 45 and 283 or 80 2 per cent. of the female earners fell within the age-groups 15 to 40. Of the adult females, nearly 60 per cent. (including 11 5 per cent. earners) were in the age-groups 15 to 30, 18 per cent. (including 6 per cent. earners) in the groups 30 to 40 while the remaining 22 per cent. (including 4 per cent. earners) were over 40.

Distribution of Families having Female Earners according to Caste and Income Groups.

| | | Number of families | | | | | |
|--|--|---|--|----------------------------|---------------------|--|--|
| Income groups | No. of budgets | Hindu | Depressed class | Muham- madan | Other | Total | |
| Below Rs. 20 Rs. 20 and below Rs. 30 Rs. 30 ,, ,, Rs. 40 Rs. 40 ,, ,, Rs. 50 Rs. 50 ,, ,, Rs. 60 Rs. 60 ,, ,, Rs. 70 Rs. 70 ,, ,, Rs. 80 Rs. 80 ,, ,, Rs. 90 | 40 208 309 302 176 86 71 49 52 | 3 24 50 26 29 12 6 3 | 12 26 33 38 10 8 10 3 | 2 9 8 4 3 1 | 3 1 1 | 3 38 88 68 71 26 15 14 3 | |
| | 1,293 | 153 (759) | 140 (271) | 28 (238) | 5 (25) | 326 | |

Figures in the brackets represent the total number of budgets collected for the respective castes.

The table above which classifies familes containing female workers, according to caste and income groups brings out two somewhat striking facts. Firstly, the small number of Muhammedan female workers is noticeable. This is due, however, to the prevalence of purdah among Muhammedan women. Secondly, it will be seen that as compared to Hindus, a very much larger proportion of females from the depressed classes are wage earners. It is understood that this is due largely to the fact that, especially among scavengers, it is customary for the man to pay a dowry to his wife's father at the time of his marriage which amount he usually borrows. After marriage he therefore expects the wife to work and repay the debt.

WORKERS AND DEPENDANTS.

Of the 4.05 persons in the family, 1.58 are earners and 2.47 dependants. Out of the 1.58 earners, 1.29 are males, 0.27 females and 0.02 children under 14. While with the increase in income the average number of male workers progressively increases, that does not happen so far as women workers are concerned. In fact, in the highest income group, the average number of female workers is lower than in the lowest income group, namely "below Rs. 20". As regards the number of working

children the figure is so negligible as not to require comment. The following summary table shows that while the average number of persons per family increased from 3.87 in 1926 to 4.05 in 1933-35, the number of earners per family declined from 1.66 to 1.58 and the number of dependants increased from 2.21 to 2.47 during the same period.

| • W | orkers in | the family | • | | 1926 enquiry | 1933-35 enquiry |

| Dependants | •• | •• | •• | | 2·21 | 2.47 |
| • | T | otal persons | in the family | •• | 3.87 | 4.05 |

Although the present enquiry was restricted to families the heads of which were in full-time regular employment, some of the families studied reported a number of their male as well as female members as being unemployed at the time of the enquiry. It will be seen from the table on page 14 that among the 9 per cent. adult male non-earners, about 4 per cent. were between the ages 15 and 25, two per cent, between 25 and 50 while 3 per cent. were 50 and over. The following table gives the average number of workers and dependants in families according to income groups.

Average Number of Workers and Dependants in the Family.*

| T | Avera | ge number f | Average number | Total | | |
|--|--|--|--|--|--|--|
| Income groups . | Men | Women | Children under 14 | Total | of depen- dants | Total |

^{*}Excluding dependants living away from the family.

An analysis of families according to the number of wage earners shows that in over 54 per cent. of the cases there is only one wage earner per family and in 34 96 per cent. there are two. The largest number of earners recorded in one family was six. It is of interest that the 1933-35 enquiry shows a rise of about 6 per cent. in families with one earner and a fall of about 5 per cent. in families with two earners. The position as regards families with more than two earners has remained, more or less, the same during the last ten years.

The object in compiling the following table which contains a classification of families by earning strength and the number of dependant children was to ascertain to what extent, if any, women workers have to support dependants. The controversy regarding "equal wages for equal work" is an old one and one of the grounds on which such a claim is preferred is that it is not only male workers who have to support dependants but female workers have also to do so. Whatever may be the facts relating to this matter in industrialised countries of the West, although the available literature on the subject throws little or no light on it, the following table appears conclusively to show that excepting in one case the adult female workers were either helpmates of their own husbands or relatives or were earning a wage to maintain themselves.

EARNERS IN NATURAL FAMILIES AND JOINT HOUSEHOLDS.

In a large majority or nearly 72 per cent. of the cases in natural families the head of the family is the only wage earner. In 21·24 per cent. of the cases both the head of the family and his wife are earners. It is a somewhat striking fact that these figures are appreciably different from those obtained as a result of the 1926 enquiry where the percentage of natural families in which the head was the only earner was 57·89 and where the head and wife were the only earners was 30·19. Presumably the fall in the number of cases where the wife helped her husband to supplement the family income is due to the fact, referred to already, that in recent years there has been in Ahmedabad, particularly in the cotton spinning and weaving industry, a tendency on the part of the employers to replace female labour by male labour. The table below which analyses earners in natural families by income groups shows that it is more in the lower income groups that there is a tendency on the part of the wives to help their husbands by seeking work in factories,

^{*}A natural family includes persons who generally speaking have a right to be fed, housed and clothed by the head of the family.

[†] Son or daughter means a male or female child over 14 years of age but unmarried.

[‡] Child means a child under 14 years of age.

^{**} Includes :--

¹ case of "Head, son and child": I case of "Head, son and daughter"; 1 case of "Head and 2 wives"; 3 cases of "Head and 2 sons"; 1 case of "Head, 2 sons and daughter"; and 1 case of "Head, wife, son and child",

A table similar to the one above has been compiled for households and is given below. A household is any group of people consisting of the head and other relatives and there is little wonder therefore that the analysis of households should show that in only 31.41 per cent. of the cases the head only was the earner. In a joint household brothers often live together with their families and it is therefore found that in 31.95 per cent. of the cases the two earners were the head and one adult male. In joint households where there are many persons to be looked after the women are usually fully occupied with their domestic duties and it is therefore found that in only 7.22 per cent. of the cases were both the head and his wife wage earners.

^{*}A joint household is any group of relatives living together as one household. † Includes :-

INCOME OF THE FAMILY.

The following table gives the classification of the budgets by income groups. In the 1926 enquiry, budgets relating to families whose monthly incomes were found to be Rs. 90 and over were excluded from the tabulations; but, as pointed out in the introductory section, no such conscious selection has been made in compiling the tables of the present enquiry. It is seen that out of the 1,293 budgets, 60.87 per cent. fall within the income groups Rs. 30 to Rs. 60. The percentage of budgets falling within these income groups during the 1926 enquiry was about the same being 64.11. So far as distribution of income is concerned, therefore, there appears to have been little change during the last decade.

³ cases of "Head and child"; 3 cases of "Head, 2 adult males and 1 adult female"; 3 cases of "Head, wife and child"; 4 cases of "Head, wife and 2 adult males"; 2 cases of "Head, 1 adult male and child"; 1 case of "Head and 3 adult males"; 4 cases of "Head, wife, 1 adult male and 1 adult female"; 1 case each of "Head, 1 adult male, 1 adult female and child"; "Head, 2 adult males and 2 children"; "Head, 2 adult males and child"; "Head, wife, 1 adult male and child"; "Head, 3 adult males, 1 adult female and child"; "Head, 1 adult male and 2 adult females"; and "Head, 3 adult males and 1 adult female".

Labour Office Departmental Enquiry into wages and The 1934 unemployment in the Bombay cotton textile industry showed that while the average daily earnings of cotton mill workers in Bombay City declined from Rs. 1-4-8 in July 1926 to Rs. 1-1-2 in December 1933 or by 16.94 per cent, those of cotton mill workers in Ahmedabad advanced from Rs. 1-4-10 in May 1926 to Rs. 1-6-0 in December 1933 or by $5\cdot6$ per cent. This rise was mainly due to the increase in the rates of wages of 5 per cent. in the weaving department and of 8 per cent. in the spinning department granted since January 1930 by an award of the Umpire. But as the present enquiry shows though the increases continued practically till the end of the period covered by this enquiry, they are not reflected in the figures of family income owing partly to the decrease in the number of families with more than one earner from 51.61 per cent. in 1926 to 45.55per cent. in 1933-35 and the consequent reduction in the average number of workers per family from 1.66 to 1.58. Thus, the average monthly income of working class families in receipt of incomes below Rs. 90 per month works out to Rs. 43-5-0 in 1933-35 as compared with Rs. 44-7-2 (including estimated rents of owned or rent-free tenements) in 1926. has already been pointed out, the average daily number of women employed in the cotton mill industry in Ahmedabad was only about 10,300 out of a total of 97,218 workers in 1935 as against about 10,600 out of a total of 55,767 workers in 1926. It is also seen that out of the 1,599 cotton mill workers covered by the present enquiry only 225 or 14.1

per cent. were women as compared with 20.7 per cent. women amongst the cotton mill workers in the 1926 enquiry. Thus, while the women's and children's contribution to the family income and also the income from supplementary sources were comparatively less in 1933-35, men's contribution was greater partly because of the slight increase in the The monthly income of number of male earners in the average family. an average working class family comes to Rs. 39-13-8 for natural families, Rs. 54-14-9 for households and Rs. 46-5-0 for all families. The corresponding figures for the cotton mill industry alone are Rs. 41-0-6. Rs. 56-8-8 and Rs. 47-14-11 respectively. It must however be pointed out here that the agreement reached between the Millowners' Association and the Labour Association at Delhi on 13th January 1935 withdrew the increment in wages granted in 1930 by a uniform reduction of 61 per cent. on the earnings of all time and pieceworkers, subject to a minimum limit in case of the weavers with effect from January 1935 from which month, the hours of work in factories were also reduced by law from 60 to 54 per week, and this must have resulted in a corresponding reduction in the figures of family income given above.

INCOME FROM SUPPLEMENTARY SOURCES.

Information was obtained as regards the additional sources of income of the family. As the table below shows, only in 11 out of 1,293 or 0.85 per cent. cases was agriculture shown as the source of additional income of the family. In 84 cases or 6.50 per cent. of the total, the source of additional income was boarders and lodgers. In 30 or 2.32 per cent. cases, the families were receiving house rent, and the income from this source exceeded Rs. 40 in one case; while in 34 or 2.63 per cent. cases the families supplemented their income by selling milk, domestic service, etc.

^{*} Includes one case of a married daughter and one case of a servant.

[†] Includes cases of selling milk, pensions, religious ceremonies, domestic work, etc.

BOARDERS AND LODGERS.

Among the 84 cases of families taking in boarders and lodgers, in 30 cases the income from this source amounted to between Rs. 5 and Rs. 10 and in 28 cases between Rs. 10 and Rs. 20. The practice of taking in boarders and lodgers does not appear to be so common among working class families in Ahmedabad as it is in Bombay. Thus, while according to the 1932-33 Bombay family budget enquiry, about 28 per cent. families in Bombay took boarders and lodgers, the present enquiry shows that the percentage of such families in Ahmedabad was only 6.5 in 1933-35, the average number of boarders per family being 0.07 in 1926 and 0.09 in 1933-35 as compared with 0.52 in Bombay in 1932-33. This may be due partly to the practice among groups of single workers in Ahmedabad of sharing a room and cooking their own food or taking it in a vishi (hotel) where they are charged about Rs. 9 to Rs. 11 per month or about 2 to 2½ annas per single "plate". The following table gives the classification of families according to the number of boarders and lodgers:-

Classification of families according to number of boarders and lodgers.

The table below gives the comparative analysis of the average monthly income of working class families during 1926 and 1933-35. It is seen that the income from supplementary sources formed only 3 per cent. of the total family income in 1933-35:—

| | Average m | onthly earn | ings of | | 192 | 6 . | 1933–35. |

| | • | Total mor | nthly income | | 44 7 | 2† | 46 5 0 (100·0) |

EXPENDITURE OF THE FAMILY.

It has already been stated that the average monthly income of working class families in Ahmedabad is Rs. 46-5-0, the average monthly income of natural families being Rs. 39-13-8 and of households Rs. 54-14-9. In the case of natural families as also of households and therefore in the case of all families, the average monthly expenditure is less than the average monthly income, the average surplus in the case of all families being Rs. 5-9-2 per month. It will be seen from the following table that as the income increases the expenditure also increases. Except in the first two income groups, however, that is "Below Rs. 20" and "Rs. 20 and below Rs. 30" the average monthly expenditure is less than the average monthly income. While this is the case so far as all budgets are concerned, in the case of natural families only the lowest income group fails to balance its budget, while in the case of households the first three lowest income groups are unable to balance their monthly budgets.

^{*} Including estimated rents for owned or rent-free tenements.

[†] Average for families getting up to Rs. 90 per month.

Average monthly income and expenditure—By income groups.

As already stated 1,070 or 82.75 per cent. of the total families covered by the enquiry were of cotton mill workers. The average monthly family income of cotton mill workers in Ahmedabad in 1933-35 was Rs. 47-14-11. But, as will be seen from table 7 in the Appendix, amongst cotton mill workers, natural families in the income classes below Rs. 30 and joint households in the income classes below Rs. 40 are not able to balance their budgets even in the restricted sense of meeting only the day-to-day expenditure other than that incurred on account of the repayment of debts, celebration of festivals, marriages, etc.

The expenditure of families on the important groups of commodities and services comprising a family budget is shown in the following table according to income classes:—

^{*}Relating only to those items of monthly family expenditure which were included in the budgets and excluding instalments and interest paid on account of loans, occasional expenditure on feativals, marriages, etc.

The following table contains a comparison of the group of expenditure figures yielded by the present enquiry with those of the 1926 enquiry and also the 1932–33 Bombay enquiry:—

| | | Average | monthly expendit | ure.*- |
|--|------|--|---|--|
| Groups. | | Ahmed | labad. | Bombay. |
| | - | 1926. | 1933–35. | 1932–33. |
| Food Fuel and lighting Clothing, footwear, etc. Bedding and household necessar House-rent Miscellaneous* | ries | Rs. a. p. 22 12 7 2 12 4 3 11 6 0 7 4 4 9 11 5 0 0 | Rs. a. p. 20 1 5 2 11 4 3 11 6 0 2 5 4 7 6 9 9 8 | Rs. a. p. 21 6 10 3 4 4 3 9 0 0 1 0 5 14 3 11 12 4 |
| Total monthly expendit | ure | 39 5 8 | 40 11 10 | 45 15 9 |

^{*} Excluding instalments and interest on account of debts, occasional expenditure on festivals, marriages, etc.

. It is clear from the above figures that although the number of persons in the family, including boarders, increased from 3.94 in 1926 to 4.14 in 1933-35, the expenditure on food per family decreased during the period from Rs. 22-12-7 to Rs. 20-1-5 and the per capita expenditure from Rs. 5-12-6 to Rs. 4-13-7, the per capita figure of food expenditure for Bombay being Rs. 5-1-3 in 1932-33. This is as it should be—assuming that in 1926 the worker could afford to buy his food requirementswhen it is remembered that the prices of food articles in Ahmedabad in 1933-35 were about 40 per cent. lower than in 1926-27. The reduction in the expenditure on food owing to the fall in prices shows that the workers are able to buy all the food that they require. The expenditure on fuel and lighting was practically the same as in 1926 as the working classes are now using charcoal also along with firewood. Similarly the fact that the expenditure on clothing did not show any reduction in spite of a fall of about 30 per cent. in the prices of articles of clothing indicates that the working classes are dressing better than ten years ago. It is also worth noting that "clothing, footwear, etc.", and "bedding and household necessaries" are the only groups on which the average working class family in Ahmedabad spends more in comparison with working class families in Bombay. The small decrease in the current expenditure in Ahmedabad on bedding and household necessaries as also on "house-rent" in the above table is only apparent and not real as the 1933-35 figures relating to these groups refer to the actual expenditure incurred on these items during the month of the enquiry and do not take into account the estimated value of all bedding articles owned by, or the estimated rent of the owned or rent-free tenements' occupied by the families as was done in the 1926 enquiry. In fact, although the prices of most of the commodities and services have appreciably gone down during the last ten years, as shown in the section on housing, working class rents in Ahmedabad have continued to rise and a special rent* enquiry conducted by the Labour Office in Ahmedabad between July and November 1930 showed that the average rent for the 133 tenements selected by the lottery method from amongst the 872 tenements covered by the 1926 enquiry had risen during the interval by about 7 per cent. The above table also shows that in 1933-35 the Ahmedabad workers were in a position to nearly double their

^{*} See page 324 of the January 1937 issue of the Labour Gazette.

expenditure on the "Miscellaneous" items. The percentage distribution of expenditure on the various groups of articles and services by families in the different income groups was as follows:—

Group Percentage Expenditure of Families by Income Groups.

| | Limits of monthly family income. | | | | | | |
|-----------------------------------|----------------------------------|-----------------------------------|-----------------------------------|-----------------------------------|-----------------------------------|--|--|
| | Below Rs. 20. | Rs. 20 and below Rs. 30. | Rs. 30 and below Rs. 40. | Rs. 40 and below Rs. 50. | Rs. 50 and below Rs. 60. | | |

| | Limits of monthly family income—contd. | | | | | |
|------------------------------------|--|-----------------------------------|-----------------------------------|------------------------|--------------|--|
| | Rs. 60 and below Rs. 70. | Rs. 70 and below Rs. 80. | Rs. 80 and below Rs. 90. | Rs. 90 and over. | All incomes. | |
| Number of budgets | 86 | 71 | 49 | 52 | 1,293 | |
| Food | 51:36 | 49.68 | 48.42 | 48.44 | 49.31 | |
| Fuel and lighting | 6.29 | 6.21 | 5.98 | 5.41 | 6.65 | |
| Clothing, footwear and umbrellas. | 9.20 | 8 · 75 | 8.92 | 8.67 | 9.12 | |
| Bedding and household necessaries. | 0.29 | 0.19 | 0.72 | 0.34 | 0.37 | |
| House rent | 8.80 | 9.89 | 6.95 | 7.92 | 10.87 | |
| Miscellaneous | . 23.66 | 25.28 | 29.01 | . 29-22 | 23.28 | |
| Total | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | |

It will be seen that nearly half the expenditure is on food, about 7 per cent. on fuel and lighting, 9 per cent. on clothing, 11 per cent. on house-rent and about 24 per cent. on miscellaneous items. The following table which compares the above percentage distribution of expenditure with that of the 1926 enquiry and also of the 1932–33 Bombay enquiry shows that except in the matter of housing conditions, which have been described later on in a separate section, there has been an appreciable improvement in the standard of living of the Ahmedabad workers.

Percentage Expenditure on the Main Groups.

| | <i>a</i> | | | Ahmedabad Working Class Family Budgets. | | Bombay Working Class |
|-----------------------------------|----------|-------|------|--|----------|-------------------------------|
| | Groups. | | | 1926. | 1933–35. | Family Budgets 1932-33. |
| | | | - | | | |
| Food | | •• | | 57.90 | 49.31 | 46-60 |
| Fuel and Lighting | •• | |] | 7.04 | 6-65 | 7-11 |
| Clothing, Footwear and Umbrellas | | | | 9.45 | 9.12 | 7.75 |
| Bedding and household necessaries | | | 1.16 | . 0.37 | 0.13 | |
| House-rent | • • | • • | | 11.74 | 10-97 | 12.81 |
| Miscellaneous | •• | •• | •• | 12.71 | 23.58 | 25-60 |
| • | | , | | | | ļ |
| , | | | Ì | | | • |
| | | Total | •• | . 100.00 | 100.00 | 100.00 |
| | | | | | · | |

It is clear from the above figures that while the expenditure on food was 57.90 per cent. in 1926, it formed only 49.31 per cent. of the total expenditure in 1933-35. The difference in the expenditure on fuel and lighting, clothing, bedding and household necessaries and on house-rent was not very material, thus leaving a greater margin in the hands of the workers for spending on sundries. And consequently, the expenditure on the miscellaneous group increased from 12.71 per cent. in 1926 to 23.58 per cent. in 1933-35.

EXPENDITURE ON FOOD.

The average monthly expenditure on food per family comes to Rs. 20-1-5 or 49.31 per cent. of the total expenditure. As shown in table X in the Appendix, as income increases, the per capita expenditure on food increases owing to the usual tendency among families with higher incomes to purchase more of the nutritive, and comparatively expensive foods such as milk, milk-products, etc. It is also interesting to note that with a fall of about 40 per cent. in the prices of food articles, the average working class family which now spends on its foodgrain requirements only Rs. 7-12-0 as compared with Rs. 13-3-5 in 1926, has increased its monthly expenditure on "other food" articles from Rs. 9-9-2 to Rs. 12-5-5.

Detailed figures of expenditure on different articles of food given in table XI in the Appendix will show that of the 1,293 families studied, no fewer than 1,203 or 93 per cent. reported expenditure on rice. is not to say, however, that rice is the principal or staple food of the Ahmedabad workers, most of whom generally take wheat or bajri bread, i.e., rotis or rotlas in the morning together with some dal or vegetable, and either bread or khichdi-which is made by cooking rice and pulse together-in the evening. The pulse commonly used for khichdi is either turdal or mugdal. Wheat rotis are more popular while bajri rotlas are consumed either by way of change or by persons who cannot afford to buy wheat. Thus, 1,111 or 86 per cent. families reported expenditure on wheat and only 414 or 32 per cent. on bajri. In this connection it may be stated that amongst cereals* wheat appears to be richest in proteins and bajri richest in fats. Pulses are used in khichdi or for making-curries. Among other articles of food, "ghee and butter" and vegetables occupy a prominent place and account for 6:46 and 4.87 per cent. respectively of the total expenditure, the actual monthly expenditure of an average family on these items being Rs. 2-10-1 and Rs. 1-15-9 respectively. Salt, condiments, spices and gingily oil are also in almost universal use. The expenditure on milk and butter which stood at Rs. 0-13-10 or 2.20 per cent. in 1926 was found to be Rs. 1-4-4 or 3.12 per cent. in 1933-35 although the price of milk had declined appreciably during the interval. Tea purchased outside and refreshments accounted for Rs. 1-14-11 or 4.74 per cent. of the monthly expenditure. The total expenditure on the "other food" group amounted to 30.28 per cent. of the total family expenditure as compared with 24 33 per cent. in the 1926 enquiry.

FUEL AND LIGHTING.

Firewood is ordinarily used as fuel though families in the higher income groups are gradually taking to the use of charcoal also. As for lighting, the fall in the price of kerosene oil has enabled many families, to use

^{*}See the article on "The Food of the Worker" in the April 1925 issue of the Labour Gazette (page 837).

kerosene in much larger quantities than in 1926 by either diminishing the quantity of castor oil used for the purpose or by discarding it altogether.

CLOTHING.

As in the previous enquiry, the monthly expenditure on clothing was arrived at by ascertaining the clothing articles being used by the family, their prices and their approximate duration. The monthly expenditure on the group was found to be about 9 per cent. of the total monthly expenditure. The clothing articles ordinarily used by male workers consist of a dhoti among Hindus and a vijar or a lungi among Muhammadans, a pahiran or a shirt, a waist-coat particularly among Muhammadans, and a cap or a feta; while the use of coats, though increasing, has not yet become universal. It is also customary among Ahmedabad workers to wear shoes. The Hindu women usually wear skirts, saris and cholis.

As regards bedding, almost all working class families in Ahmedabad possess one or more charpoys or cots which are often kept outside the tenements for want of enough accommodation in their overcrowded rooms.

Housing.

Although the population of Ahmedabad increased by 1,11,982 persons or 41.4 per cent. during the intercensal period 1921-1932, the number of residential buildings increased from 40,519 in 1921 to 43,822 in 1932, i.e., by 8 per cent. only and the number of occupied tenements from 70,876 to 97,297, i.e., by 37 per cent. This shows that although Ahmedabad is now following the practice in Bombay of providing chawls* containing accommodation for a large number of families under a common roof, the increase in the number of tenements in Ahmedabad is not keeping pace with the rapid rise in the city's population. Thus, while the 1932 population of the city proper and the Puras was 32 and 76 per cent. higher than that in 1921, the addition to the number of tenements in the city and the Puras was only 24 and 67 per cent. respectively during the same period. The total number of tenements increased by 26,421— 12,046 in the city proper and 14,375 in the Puras—and out of these no fewer than 19,020 or 72 per cent. were single room tenements. The wards which recorded a comparatively large increase in tenements were Dariapur No. 1, Shahpur No. 2, Jamalpur No. 1 and Raikhad within the city proper and Pura I, Shaher Kotda, Gomatipur and Asarwa

^{*}Mr. Sedgwick stated in the 1921 Census Report (Census of India, 1921, Vol. IX, Part I, Chapter VII, page XX) that "the word chawl is not of certainty understood or much used at Ahmedabad; and the figures under this item are not correct"; but even though the Census figures showing 30 chawls in 1921 and 657 chawls in 1932 may not be quite accurate, there could not be any doubt that the number of chawls has considerably increased in Ahmedabad since 1921.

outside the city walls. The following table shows the class of accommodation available in Ahmedabad.

| | , | City pro | per. | Puras. | | |
|---------------------|-------|-----------------|-----------------------|-----------------|------------------|--|
| Tenements having | | 1921. | 1932. | 1921. | 1932. | |
| One room | | 20,805 (42) | 28,330 (46) | 18,38I (87) | 29,876 (84) | |
| Two rooms | • | 13,854 (28) | 16,952 (28) | 1,981 (9) | 4,010 (11) | |
| Three rooms | •• | 5,542 (11) | 6,3 81 (10) | 462 (2) | 850 (2) | |
| Four rooms and over | | 9,375 (19) | 9,959 (16) | 476 (2) | 939 (3) | |
| | - | <u></u> | - | | | |
| • | Total | 49,576 (100) | 61,622 (100) | 21,300 (100) | 35,675 (100)_ | |

Note.—The figures in bracket denote percentages.

In 1932, nearly 46 per cent. of the tenements in the city proper were single-roomed, 28 per cent. were two-roomed, while the remaining 26 per cent. had three or more rooms each. The Puras are mostly populated by the working classes and it is not surprising that an overwhelming majority (84 per cent.) of the tenements in the Puras are single-roomed tenements.

The census statistics do not contain details regarding the state of housing in Ahmedabad, but the following table which shows the number of tenements of various kinds and the population occupying them, as also the average number of persons per room in each kind of tenement in 1921 and 1932, may be of interest:—

| Tenement classif number of roo | | number ments. | Total n | | Average number of persons per room. | | |
|-----------------------------------|---------|--------------------------|------------------------|------------------------|-------------------------------------|-------|------------|
| | | 1921. | 1932. | 1921. | 1932. | 1921. | 1932. |
| One room | | . 39,186 | | 133,069 | 209,972 | 3.30 | . 3.61 |
| Two rooms | ٠. | . (55) 15,835 (22) | (60) 20,962 (22) | (52) 55,058 (21) | (55) 79,403 | 1.74 | . 1.89 |

| Four rooms | • | . 5,021 (7) | | | 22,373 (6) | 1.07 | 1.23 |
| Five rooms | • | 1,813 | (2) | . (3) | 11,355 (3) | 0.02 | 1•04ع خ |
| Six rooms and over | • | 3,010 | 4,177 (4) | 17,505 (7) | 27,657 (7) | •• | • |
| · | Total . | 70,876 | 97,297 (100) | 250,087 (100) | 381,488 (100) | •• | •• |

Note.—The figures in bracket denote percentages.

Out of the 97,297 tenements in Ahmedabad in 1932, 58,206 were single-room tenements. The percentage of one-roomed tenements increased from 55 in 1921 to 60 in 1932 and that of the population living in them from 52 to 55. The average number of persons per single-room tenement was 3 39 in 1921 and 3 61 in 1932. This means that a larger proportion of the population is living in one-room tenements and that single-room tenements are becoming more and more crowded. The conditions in tenements having two or more rooms have also definitely worsened, thus showing that even the middle classes in Ahmedabad are worse off in the matter of housing than in 1921 although it must be stated that the new buildings recently constructed by several middle class co-operative housing societies amidst congenial surroundings, such as on the Ellis Bridge side, provide decent accommodation for families who can afford to pay comparatively high house-rents.

The results of the present enquiry indicate that the percentage of working class families living in single rooms in Ahmedabad increased from 72 93 per cent. (and 74 77 per cent. if huts are included) in 1926 to 76 26 per cent. in 1933-35 and that 22 or 2 2 per cent. of the families occupying single rooms were sharing a room with other families or single men. It is also seen that while the percentage of total two-roomed tenements in the city remained stationery at 22 both in 1921 and 1932, the percentage of working class families living in them has increased from 18 in 1926 to 20 in 1933-35. The percentage of three and more-roomed tenements occupied by the working classes has, however, gone down from 7 to 3 71. The following table gives the classification of families according to income groups and the class of tenements occupied by them.

Analysis of families according to Income Groups and Class of Tenements.

| Income groups. | . No | Number of families living in tenements having | | | | | | | |
|--|-------------------------|---|----------------------------|----------------|---------------|-------------------|--------------------------------|--|--|
| | One room. | Two | Three rooms. | Four rooms. | Six rooms. | Unspe- cified. | | | |

| All incomes | 986 | 258 | 37 | 9 | | 1 | 1,293 | | |
| Percentage to total | . 76.26 | 19.95 | 2.86 | 0.70 | 0.15 | 0.08 | 100.00 | | |

Note.—In 22 cases, one-room tenements are shared with other families or single men and in one case a three-room tenement is shared with single men.

The table below which analyses tenements according to the number of occupants shows that 18.91 per cent. of the tenements were occupied by two persons each, 25.14 per cent. by three persons each, 21.75 per cent. by four persons each while the remaining 34.20 per cent. tenements were each occupied by more than 4 persons. It also shows that the percentage of tenements containing 5 or more persons increased from 30.85 in 1926 to 34.20 in 1933-35 and that there are a number of cases in which a single room is occupied by even eight or ten persons.

^{*} Excludes 22 one-roomed tenements and one three-roomed tenement shared by more than one family and one tenement for which complete information was not available.

As regards house rents, 45 or 3.48 per cent. of the families studied paid no rent. This is mostly due to the prevailing practice of providing mill sepoys or jamadars with rent-free tenements, though in a few cases the rent was reported as "nil" because the tenements were newly constructed by families who had not paid any municipal taxes up to the time of the enquiry. As will be seen from table XII in the Appendix, 138 or 10.67 per cent. of the families were living in tenements owned by themselves and most of them fall into the category of families spending monthly below Rs. 2 for their accommodation as they had to pay only the municipal taxes or site-rents. 8.59 per cent. of the families were paying rents between Rs. 3 and Rs. 4, 48.18 per cent. between Rs. 4 and Rs. 6, 13:30 per cent. between Rs. 6 and Rs. 7 and 11:29 per cent. were paying rents of Rs. 7 and over. The latter figure includes a few cases of rents of tenements let out on the hire-purchase system. The following table gives an analysis of the actual monthly rents paid by working class families in Ahmedabad for their accommodation.

The frequency distribution of rents paid by families according to income groups, given in the following table, shows that the expenditure on rent increases with the increase in the family income. This tendency becomes clearly marked if cases up to Rs. 2 per month, which mostly relate to rent-free or owned tenements are omitted from consideration.

Rents in Ahmedabad appear to have gone up during the last decade in spite of the general slump in prices and the consequent fall in the cost of living. In the majority of cases the rent paid is between Rs. 4 and Rs. 7. The average rent is Rs. 4-12-1 for one room tenement, Rs. 6-9-3 for two-room tenements, Rs. 8-15-2 for three-room tenements, Rs. 11-9-4 for four-room tenements and Rs. 14 for six-room tenements. It will also be seen from the above table that the percentage of families paying rents of Rs. 4 and over increased from 67.42 in 1926 to 72.77 in 1933-35 while the percentage of those paying rents of Rs. 6 and over rose from 19.95 to 24.59 during the same period. A further analysis of the rent figures shows that the rents for the different classes of tenements have gone up as under:—

| | · | | | | Average 1 | ental in |
|--------------|---------|-----------|---------------|---|-----------|-----------|
| | Class o | f tenemen | - - | | 1926 | 1935 |
| | | | | | Rs. a. p. | Rs. a. p. |

| Two-roomed | . • • | | •• | | 5 9 6 | 6 9 3 |
| Three-roomed | | | • • | | 6 15 5 | 8 15 2 |
| Four-roomed | •• | | |] | 10 9 10* | 11 9 4 |
| Six-roomed | •• | •• | •• | | 10 9 10 | 14 0 0 |
| | | | All tenements | | 4 9 11 | 5 2 8 |

*For tenements with four rooms and over.

This rise in the rents of all types of tenements is in consonance with the conditions of increased overcrowding in the city referred to already. It is also seen that the average number of persons per one-roomed tenement increased from 3.74 to 3.93 and that for all tenements rose from 3.87 to 4.09 between 1926 and 1935. Another and more accurate index to overcrowding is furnished by the average floor space which is available per person in the family. The results of this enquiry show that the average floor space available per person decreased from 47.36 square feet in 1926 to 43.94 square feet in 1933.35, for all tenements and from 38.29 to 37.97 square feet in the case of one-roomed tenements. The inadequacy of this floor space becomes at once apparent when it is remembered that a one-room tenement, in addition to serving as a living-room and bedroom for about four persons, serves also as a kitchen, a store-room, a bath-room, etc. Conditions become much worse during the monsoon when the workers cannot use the outside open space so

very freely as in the fair season. The following table gives the details regarding the average monthly rent for different types of tenements and the floor space available per room and per person.

Classification of Tenements by Number of Rooms and Floor Space

| Class of tenements | Number of | Average | Average number of persons | Approximate average floor space per | | |

^{*}Excluding 23 tenements shared by more than one family and one tenement for which complete information was not available.

- (a) Average for 871 tenements.
- (b) Average for 962 tenements.
- (c) Average for 188 tenements.
- (d) Average for 257 tenements. (e) Average for 17 tenements.
- (f) Average for 35 tenements.
- (g) Average for 3 tenements.(h) Average for 1 tenement.
- (i) Average for 1,080 tenements.
- (j) Average for 1,265 tenements.

Three hundred and fifty nine or nearly 28 per cent. of the tenements had verandahs in front of them. The verandahs are used for sleeping by the male members of the families or for hanging children's cradles, etc.

Nearly 79 per cent. of the working class tenements in Ahmedabad belong to private landlords, about 11 per cent. are owned by the workers themselves, while approximately 9 per cent. of the tenements have been provided by millowners or other employers of labour. The private landlords have not only tried to meet the growing demand for working class accommodation in Ahmedabad by building one-room tenements approximately $12' \times 12'$ in size—72 per cent. of the intercensal increase in tenements was in one-room tenements only—but they have also let out many old and dilapidated tenements, some of which are not really fit for human habitation. In the absence of any authoritative enquiry, it is not possible to give the exact number of such tenements; but it is

[†]The figures of average rents given in this column have been worked out by excluding rent-free or owned tenements, tenements shared by more than one family and also one tenement for which complete information was not available. The average rents for the tenements given in column (3) of the above table (i.e. including the rentfree and owned tenements come to Rs. 4-5-3 per one-roomed tenement, Rs. 5-0-3 per two-roomed tenement, Rs. 4-13-1 per three-roomed tenement, Rs. 4-8-11 per four-roomed tenement, Rs. 10-3-4 per six-roomed tenement and Rs. 4-7-11 per tenement for all the 1,269 tenements combined.

Association, as the result of an enquiry it made in 1927, declared that 16,000 tenements were unfit for human habitation. The Royal Commission on Indian Labour described working class housing conditions in Ahmedabad in the following terms: "The areas occupied by the working classes in Ahmedabad present pictures of terrible squalor. Nearly 92 per cent. of the houses are one-roomed; they are badly built, insanitary, ill-ventilated and overcrowded, whilst water supplies are altogether inadequate and latrine accommodation is almost entirely wanting. Resulting evils are physical deterioration, high infant mortality and a high general death-rate. Thirty-five of the textile mills have provided chawls for about 16 per cent. of their employees, but in only one or two cases is the accommodation of a reasonable standard and sanitary arrangements are frequently inadequate." (Page 277 of the Labour Commission's report.)

Public attention became particularly focussed on the bad housing conditions in Ahmedabad after the floods of July 1927, which destroyed several thousand houses.

Some of the recent attempts made to improve industrial housing in Ahmedabad may be briefly mentioned here. The Ahmedabad Municipality decided in November 1931 to make a beginning in providing housing accommodation for the poorer classes by raising a loan of Rs. 4,50,000 which was to be financed from the proceeds of a proposed increase in the terminal tax on cotton and iron, and it subsequently acquired a piece of land in the Jamalpur Town Planning Area for the construction of model houses for the poor. Meanwhile, the Ahmedabad Millowners' Association gave an undertaking to Government in 1933 to erect 1,000 tenements for mill workers within a period of three years and Government therefore withheld sanction to the Municipality's proposal, for an increase in the terminal tax. The Municipality has, however, recently constructed a block of about 100 tenements for the poorer classes.

The Ahmedabad Mills which had provided 3,708 tenements* for their workers in 1931, have built 719 additional tenements since 1933, including 435 constructed by the Ahmedabad Mills' Housing Society and 284 by individual mills. The tenements in the Mills' Housing Society's chawls which are situated at Rakhial, Asarwa and Amraiwadi consist of a room 13' × 11', a kitchen 5' × 11' and an open verandah 7' long with Manglore tile roofing and are let out at a uniform monthly rent of Rs. 4 each.

^{*}See the article on Mill chawls in Ahmedabad published on pages 58-66 of the September 1931 issue of the Labour Gazette. Information regarding housing collected in the course of the General Wage Census of May 1934 showed that out of the 79 mills (including six small factories other than cotton mills), 40 reported that they had provided housing accommodation for the benefit of their employees. The total number of tenements provided was 3,368, excluding huts, in addition to the 1,200 tenements provided free of rent to watchmen, peons, malis, etc., by about 77 mills. Ten mills reported that they were charging rents below economic value and 24 were charging economic rents. The most common rent charged was Rs. 4 to Rs. 5, the lowest and the highest rents reported being Rs. 1-1-0 and Rs. 8 per month respectively.

The Textile Labour Association has built about 65 tenements in the town planning area outside Shahpur gate with a view to providing a model for the Millowners, the Municipality and the Landlords. The site is named Kalyangaon* and the tenements consist of two rooms $14\frac{1}{2}' \times 10'$ and $11' \times 8'$, a kitchen $8' \times 7'$, a verandah $19\frac{1}{2}' \times 7'$ and a yard $19\frac{1}{2}' \times 18'$. The cost of construction was about Rs. 1,300 per tenement and the workers have to pay nearly ten rupees (including ground rent, taxes, maintenance charges, etc.) per month to become owners in about twenty-five years' time on the hire-purchase system.

Another housing scheme on a co-operative basis is a colony of twenty-two buildings, each containing two semi-detached dwellings built by the Vankar Co-operative Society and known as Priyatampur.† Each building covers, with its attached garden, some 500 square yards, that is, 250 square yards to each dwelling. The cost price of the land allotted to each dwelling is Rs. 400 and has already been paid off by the workers. The dwellings consist of two rooms $15' \times 10'$ and $10' \times 7\frac{1}{4}'$, a kitchen $7\frac{1}{4}' \times 7\frac{1}{4}'$, a front verandah $23' \times 8'$ and a side verandah $10' \times 8'$. The plinth is two feet above the ground level and the floors are paved with stone. The contractor waived his profit and as a result the cost of each dwelling worked out to only Rs. 800. The occupants pay a rent, on the hire-purchase system, of Rs. 10 per month in addition to interest on the borrowed capital, rates and maintenance charges, etc.

Despite these efforts, as already pointed out, owing largely to the brisk activity of the cotton mill industry in Ahmedabad and the improvement in the employment position, the problem of providing decent and sanitary working class housing accommodation in Ahmedabad appears to be getting more difficult day by day. No doubt new chawls are springing up, some of them displacing old dilapidated tenements, tin sheds or tenements of corrugated iron sheets; but the question of constructing self-contained dwellings with *nhanis* and proper drainage and sewerage facilities amidst clean and healthy surroundings does not appear to have received sufficient attention even in the new chawls.

MISCELLANEOUS EXPENDITURE

It has already been mentioned that the average monthly family expenditure on the "miscellaneous" group accounted for Rs. 9-9-8 or 23.58 per cent. of the total expenditure. The "miscellaneous" group includes all items of expenditure not included in any of the other important groups, namely, food, fuel and lighting, clothing, bedding and household necessaries and house-rent but excludes such items as interest on debts, occasional expenditure on festivals, marriages, etc., regarding which satisfactory information was not available in the budgets. Working class families are either not willing or not able to supply accurate figures of expenditure on certain other items like liquor and the information regarding the miscellaneous group cannot therefore be said to be as

^{*} For further details regarding this scheme, see pages 428-429 of the February 1933 issue of the Labour Gazette.

[†] For further details regarding this scheme, see pages 769-772 of the June 1933 issue of the Labour Gazette.

complete as in the case of the other groups. The table below gives the average monthly expenditure of families on miscellaneous items separately for all families and for families spending on the different items.

Expenditure on the Miscellaneous Items

^{*}Includes expenditure on tooth-sticks, tinning, toilet requisites, toddy, bhang or opium, other subscriptions, servants for looking after children, newspapers, flowers for opium, other subscriptions, servants for looking after children, newspapers, flowers for worship, snuff, education, luxuries and toys, repairs to house, gifts, etc.

The first thing that catches the eye in the above table is that the average monthly family expenditure on medical fees and medicines was only annas 2 pies 9; that only about 9 per cent. of the families reported

expenditure on this item in 1933-35 as compared with nearly 26 per cent. families in 1926; and that the expenditure incurred by families spending was Rs. 1-14-3 per month. This would appear somewhat strange in this mosquito infested city with its unsatisfactory housing conditions, in which during 1934-35 the death-rate was 38.58 per thousand on the census population of 1932. No doubt a large number of workers are taking advantage of the medical facilities which have been made available to the poor in the municipal and charitable dispensaries in the city and also by some of the mills and the Textile Labour Association* but even so the decline in the expenditure on this item is difficult to understand.

74.40 per cent. of the families reported expenditure on travelling to and from their native place. This is not surprising in view of the fact that, as already pointed out, over three-fourths of the industrial population of Ahmedabad is migratory in character and the workers therefore incur some expenditure for making periodical trips to their villages. The average monthly expenditure reported on this item was Rs. 1-0-10 for all families and for families spending Rs. 1-6-7.

It has been mentioned in the discussion of the composition of the family that the number of dependants living away from the family, for whose maintenance the head of the family is at least partly responsible, is 0.32. About 18 per cent. of the families reported expenditure on this account and the monthly remittance of these families was, on an average, Rs. 7-4-5.

A large majority of the workers live within a radius of about a mile or so from their place of work while some other workers prefer living in particular localities along with their relatives and friends even though the localities may be at some distance from the places where they work. The latter type of workers now find it convenient to use the recently developed bus services in the city for travelling to or from their places of work; but a small percentage of these workers, who cannot afford the bus fares, usually walk even three or more miles at a stretch to and from their place of work every morning and evening. The percentage of families reporting expenditure on travelling to and from the place of work was 12:22 and their expenditure on this item averaged Rs. 2-3-11 per month.

Nearly 66 per cent. of the families reported expenditure on pansupari. The average monthly expenditure of all families on pansupari was Rs. 0-11-2 while the average for the families spending on this item was Rs. 1-1-0. Smoking also appears to be very common among the working classes in Ahmedabad and no fewer than 81 per cent. of the families incurred expenditure on "bidis, cigarettes and matches" and about 24 per cent. on "gudakhu for hukka". The monthly expenditure on "bidis, cigarettes and matches" and on "gudakhu" averaged Rs. 1-4-1 and Rs. 0-2-8 respectively for all families and Rs. 1-8-9 and Rs. 0-11-2 respectively for families reporting expenditure on the items.

^{*}During 1934. in the Hospitals and Dispensaries maintained by the Textile Labour Association, 685 patients were admitted for indoor treatment and 59,968 was the aggregate number of the patient days. There is accommodation for 30 patients in all. Seventy-five operations were performed and there were ten maternity cases. (See page 25 of the Annual Report of the Textile Labour Association for 1934.)

As regards expenditure on liquor, only 20.03 per cent. of the families reported expenditure on that item in 1933-35 as compared with 26.26 per cent. in 1926. According to the 1926 family budget enquiry, the average monthly expenditure on liquor for families spending was Rs. 2-1-6 while the present enquiry gives a figure of Rs. 3-0-10. The information on this item is not very reliable and no generalisation is therefore possible as regards the drink habits of the working classes in Ahmedabad.

Only 28.69 per cent. of the families reported expenditure on amusements—usually cinema shows—the average expenditure for families spending being about annas 8 per month.

Two other items mentioned in the footnote to the above table call for comment, namely, expenditure on education and on newspapers. Primary education is free in the whole of the Municipal borough of Ahmedabad since 1st October 1922 and the local Textile Labour Association also spent on its educational work during 1934 about Rs. 53,000 including Rs. 15,000 received from the Millowners' contribution to the Tilak Swaraj Fund. The newspaper reading habit is gradually growing among the workers and the "Majoor Sandesh", the weekly organ of the Textile Labour Association had an average circulation of 16,500 copies per week during 1934.

INDEBTEDNESS.

During the first family budget enquiry in Ahmedabad it was not found possible to obtain details regarding the indebtedness of the working classes. It was, however, found even at that time that in spite of the fact that the average family was able to balance its budget and to show a small surplus, a large section of the working classes in that centre was heavily indebted, the amounts of debt varying from a few rupees to many times the monthly income. That enquiry also showed that the main cause of indebtedness was the social and the religious customs of the industrial classes.

During the present enquiry, special efforts were made to obtain data regarding indebtedness and these have been analysed in four separate tables. As in 1926, so also in the present enquiry, it is seen that the average family is not only able to balance its budget but to show a surplus amounting to about 12 per cent. of the average monthly income. This surplus, however, does not take into account items of expenditure such as interest on debts, occasional expenditure on festivals, marriages, etc.

Of the 1,293 families studied, 889 or 68.75 per cent. were indebted, the average indebtedness per family in debt being Rs. 322-5-7, the average debt for all families being Rs. 221-10-1 and the average monthly income per family being Rs. 46-5-0. The ratio of indebtedness to monthly income for families in debt comes to 6.96 while for all families it works out to 4.79. The indebtedness of indebted families with monthly incomes below Rs. 20" "Rs. 20 and below Rs. 30" and "Rs. 30 and below Rs. 40" works out to about 14, 10 and 8 times respectively the monthly

income. The ratio of indebtedness to monthly income would be still higher if some allowance is made for the reduction in the earnings of workers owing to the 6½ per cent. cut in their wages introduced in January 1935 when the hours of work were also reduced from 60 to 54 per week. The following table contains an analysis of indebtedness by income groups:—

Contrary to expectations it is seen that so far as families in debt are concerned, indebtedness increases progressively with the increase in the income and although in the first three income groups the ratio of indebtedness to monthly income for families in debt is somewhat higher, this ratio remains almost steady in the other income groups which seems to suggest that the extent of indebtedness is not very much affected by the increase or decrease in the regular income of the industrial classes. The following table compares the extent of working class indebtedness in Bombay with that in Ahmedabad as revealed by the results of the latest family budget enquiries conducted at these centres:—

| Income groups. | a working cla | Average indebtedness per indebted family in | |

мо-и Вк R 20-4

The above figures show that in the matter of indebtedness, the Ahmedabad worker is definitely worse off than his confrère in Bombay. 75 per cent. of the working class families in Bombay are indebted as compared with 69 per cent. families in Ahmedabad, the average debt for indebted families and for all families works out to about Rs. 175 and Rs. 130 respectively for Bombay as against Rs. 322 and Rs. 222 respectively for Ahmedabad. Considered in relation to the monthly income, the indebted family's liability in Ahmedabad is nearly twice as much as that of the indebted family in Bombay. The figures in the previous table become far more revealing when they are read in the light of the figures given in the following table which analyses the causes of indebtedness. It will be seen that in no fewer than 32.16 per cent. or nearly one-third of the cases, the cause of indebtedness was marriage. It is understood that in Gujarat the celebration of a marriage is a particularly expensive affair because of the system of paying a purchase price for the bride which in some cases amounts to a fairly big sum and a substantial portion of which is usually spent on the dinners and other festivities connected with the marriage. The next two most important causes of indebtedness relating to 17.62 per cent. and 17.28 per cent. cases respectively are sickness and unemployment. Although sickness and unemployment are reported to be the causes of indebtedness in such a large percentage of cases they are really not so important when it is seen that their actual effect on the monetary resources of the families studied are comparatively insignificant.

⁽¹⁾ In 644 cases one cause was shown.(2) In 215 cases two causes were shown.

⁽³⁾ In 26 cases three causes were shown.

⁽⁴⁾ In 3 cases four causes were shown. (5) In I case five causes were shown,

The total amount of debt of families covered by the enquiry comes to Rs. 2,86,569 of which about Rs. 1,47,660 or 51 53 per cent. had been incurred for purposes of marriage. "Funerals, caste dinners and anniversaries", "sickness and unemployment" and "old outstanding debts" accounted for 10 64, 10 64 and 6 75 per cent. respectively of the total indebtedness while the remaining debt was reported to have been incurred on account of house-building or repairs, day-to-day expenses, business, agriculture, standing surety for others and such other causes. The table below which gives the details regarding the extent of indebtedness by causes shows that out of the average debt of about Rs. 222 for all families, Rs. 114 was attributed to expenditure incurred on marriages while expenses connected with "sickness and unemployment" and "funerals, caste dinners and anniversaries" were responsible for indebtedness to the extent of nearly Rs. 24 each.

^{*}This includes Rs. 2,000 for marriage and building in one case, Rs. 1,900 for marriage and funeral in two cases, Rs. 1,600 for marriage and caste dinner in two cases, Rs. 1,300 for marriage and sickness in two cases, Rs. 700 for marriage and unemployment in one case, Rs. 700 for marriage, funeral and caste dinner in one case.

[†] This includes Rs. 1,446 for sickness and funeral in 13 cases and Rs. 650 for funeral and anniversaries in two cases.

[†] This includes Rs. 7,423 for sickness and unemployment in 94 cases, Rs. 450 for sickness and delivery in three cases, Rs. 350 for sickness and insufficient, income in two cases, Rs. 150 for sickness and "chaul" in one case and Rs. 100 for sickness, unemployment and ordinary wants in one case.

[§] This includes Rs. 200 for unemployment and insufficient income in one case and Rs. 60 for unemployment and credit purchases in one case.

^{||} This includes debts on account of arrears to shopkeepers, delivery, festivals, breaking marriage, education, religious ceremonies, litigation, fine imposed by community, breaking marriage, education, out wife, etc.

In a very large majority or 83 35 per cent. of the cases the security furnished was "personal". The other kinds of securities furnished were landed property, pawning of ornaments, passing of promissory notes, furnishing sureties, etc. In a few cases no security was furnished. The following table contains details regarding the nature of the security furnished by families in debt.

Nature of Security furnished by Families in Debt.

| . Nature of security. | | Natural families. | | Households. | | Total. | Per- centage to |
|-----------------------|-----|---|-----|-------------|-------|--------|-----------------------|
| Hastite di scottiny. | | Textile workers. Others. Textile workers. | | Others. | hers. | | |

| No security | • | .] 21 | 1 | 20 | | 42 | 4.79 |
| Tota | ıl. | 423 | 70 | 332 | 52 | 877* | 100.0 |

^{*}Excludes 12 cases in which information regarding the nature of security was not available.

The rates of interest on loans showed considerable variations and in the majority of cases varied from 12 to 25 per cent. Rates of $37\frac{1}{2}$ per cent. to 75 per cent. were also reported in not a few cases and sometimes the rates reported were as high as 150 per cent, per annum. Nor were the rates charged on loans against sound securities necessarily lower and there were cases in which rates of $37\frac{1}{2}$ per cent, per annum were charged against the security of ornaments. Loans taken from the bania who deducts one year's interest in advance and takes an agreement that the amount should be repaid in instalments within a year cost the worker a much higher rate than the apparent rate.

The problem of industrial indebtedness has been discussed at great length in Chapter XIII of the Report of the Royal Commission on Indian Labour which was published in 1931. A number of Indebtedness Acts have also been recently passed by the Central and Provincial Legislatures with a view to giving greater measure of protection to honest debtors

against money-lenders and decree-holders. The economic side of the problem has, however, not yet received the attention that it should. Much misunderstanding about the economics of the small-loan business is often caused by the usual comparison of the money-lenders' rates with those charged by banks, although there is very little in common between the two, as banks usually give large credits against sound security to people who are credit-worthy and the closing of many of their transactions therefore becomes merely a matter of form—in contrast to which every unsecured small-loan cash transaction of the money-lender presents an individual collection problem. Another aspect of the small-loan business is that while in the case of other businesses, the return on the investment generally increases in proportion to the turnover, a large number of clients in a small-loan business only increases the cost of a lender.

At present, only one cotton mill in Ahmedabad has provided a cooperative credit society for its workers. And although the need for such societies is all the greater in the case of the Ahmedabad workers who are heavily indebted, Ahmedabad is still somehow lagging behind the other industrial centres in the Presidency in the matter of adequate co-operative credit facilities for its working classes. The Payment of Wages Act, 1936, permits deductions for payments to co-operative societies approved by the Local Government and the deduction of the instalments of loans at the paydesk should enable such societies to charge a low rate of interest by reducing the possibility of bad debts to a minimum. ^{*} Relating only to those items of monthly family expenditure which were included in the budgets and excluding instalments and interest paid on account of loans, occasional expenditure on festivals, marriages, etc.

APPENDIX A.

(Information for use in the Labour Office, Secretariat, Bombay)

WORKMEN'S FAMILY INCOME AND EXPENDITURE

in the month of

193

Ward

Street

Tenement No.

Reference No.

- (1) Cause of migration
- (2) Is the head of the family literate?
- (3) Was each earner regularly and continuously employed during the month of enquiry? If not, please state the period and cause of each absence
- (4) How many children of school-going age are attending school?

For what reason are those of school-going age not attending school?

(5) General Remarks

District and Province of the place of birth Family income and Expenditure for Month of Name and address of the head of the family Religion and caste of family

193

Number and ages of persons in Family

| | • | | Children under 14 years. | | Relationship of each to | |
|---|--------|--------------|-----------------------------|---------|---------------------------------------|--|
| Men. | | Women. Male. | | Female. | the head of the family and age. | |
| Number of persons residing at above address | | | | | | |
| Dependents not living at above address | , , | | | , | • | |
| Number of boarders | | | į | | | |
| Number of lodgers | | | | | | |

Family income of those residing at above address during the 193 Month of

| Wage-earners. | | | Earnings in above month. | | | | | |

| Total fami (2) | amount of | | | | | | | |

(1) Occupations.—The description of the occupation should be as definite as possible. Thus cotton mill worker is too general. The particular occupation should be specified, for example, cotton weaver or cotton spinner, or again, not mechanic but fitter, blacksmith, etc. whatever it is. Give name of mill also.

(2) Family Income.—The monthly wages should include all bonuses regularly received, but overtime pay should be entered in the separate column provided. In the column for additional income should be entered any income which was received otherwise than in the regular course of employment, e.g. income from agricultural land, boarders, etc., receiver things in kind received from the village, etc. grain or other things in kind received from the village, etc.

Instructions for filling up form on pages 5 and 6.

List of articles.—All the articles used should be entered in column 1. The articles named are only inserted as samples.

Number of articles.—In column 2 should be entered the number of each article actually in use at the time of investigation, including changes of dress, possessed by the family.

Cost per article.—In column 3 should be entered the price per article when purchased. If similar articles were purchased at different prices, the prices should be entered separately and the number of articles at each price shown.

Total cost.—Column 4 will be obtained by multiplying the number in column 2 by the price in column 3.

Duration of articles.—In column 5 should be entered the total time which each article may be expected to last from the date of its purchase to the date when it is finally discarded as useless.

Cost per month.—Column 6 will be obtained by dividing the total cost in column 4 by the number entered in column 5.

Page 6
