FOREWORD

In India, the process of urbanisation and concomitant growth of slums have been quite rapid particularly after independence. The urban population as percent to total population according to the 1981 Census was nearly 23 as against 20 as per the 1971 Census. Of the total urban population, nearly a fifth is estimated to constitute the slum population. The estimates worked out in the Sixth Plan, have shown that the slum population was around 33.1 million in 1985. The Town and Country Planning Organisation have estimated that the slum population would touch the 51.2 million mark by the year 1990. If the present trend of large scale migration of people from rural to urban areas continues the slum population may assume gigantic proportions by the turn of the present century.

There has been a greater awareness in recent years among the planners and administrators about the inhuman living conditions in slums. In fact a new strategy of upgradation of slums has been introduced since 1972 in the place of the slums clearance programme which used to inflict untold miseries on the slum dwellers. This new strategy called the Environmental Improvement of Urban Slums Scheme (EIUS) which is being implemented under the Minimum Needs Programme (MNP) provides essential facilities like potable water supply, street lights, approach roads, sanitation, community bath and latrines and drains to improve the living conditions in slum areas.

The Directorates of Census Operations had collected details relating to the civic amenities available in respect of the notified or officially recognised slums in Class I (Population 100,000 and above) and Class II (Population 50,000—99,999) towns of their respective States/Union Territories from the local bodies at the time of house-listing operations organised during 1979 in connection with the 1981 Census. But only 12 states, viz., Andhra Pradesh, Bihar, Gujarat, Haryana, Jammu & Kashmir, Karnataka, Madhya Pradesh, Maharashtra, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal besides Delhi had reported the existence of notified slums. In regard to Delhi, however, details on civic amenities available in slums

(iv)

were not available. The data collected on this aspect from the remaining above 12 states were presented in Statement IV-A of the concerned District Census Handbooks. In the present report an attempt has been made to present the data on civic amenities available in the notified slums of Class I and Class II towns in respect of 12 states together with a brief analytical note. The report, however, is not meant for giving an overall perspective of the magnitude and dimensions of the problems associated with the growth of slums but to provide especially to planners and administrators, an idea about the level of availability of amenities and services in different notified slums of Class I and Class II towns of different states. The data presented in this report will also be useful for making cross regional comparisons in regard to the availability of amenities in slums of Class I and Class II towns.

The data presented in this Report were compiled, consolidated and analysed by a team of research workers led by S/Shri M.M. Dua, Dy. Director and S.S. Bahri, Assistant Director under the overall supervision and guidance of the former Deputy Registrar General, Social Studies, Dr. N.G. Nag. Dr. K.P. Ittaman, the present Deputy Registrar General, heading Social Studies Division encouraged his colleagues to bring out this report quickly. The report was also finally edited by him. I am grateful to all of them as well as other members of the Social Studies Division who had laboured hard to bring out this report in its present form. I am also thankful to the Planning Commission for sanctioning the scheme 'Study on the Distribution of Infrastructural Facilities in different Regions and Levels and Trends of Urbanisation' (under which the present report has been brought out) for implementation during the Seventh Five Year Plan period.

ANALYTICAL NOTE

Negative Aspects of Urbanisation—A Study on the Civic and other Amenities available in Notified Slums of Class I and Class II Towns

Introduction

The general impression which one gets about a slum after looking at the meaning of the word in a dictionary is that it is a neighbourhood which is overcrowded, filthy, foul, neglected, sordid, dingy, etc. A closer look at this adjectival description will reveal that the term 'slum' can apply to just one dwelling as well as to a whole locality comprising a number of dwellings. According to the Slum Area (Improvement and Clearance) Act, 1956 enacted by the Union Government, slums have been defined as those areas where buildings are in any respect unfit for human habitation; or are by reason of dilapidation, over-crowding, faulty arrangement and design of such buildings, narrowness or faulty arrangement of streets, lack of ventilation, light or sanitary facilities or any combination of these factors, are detrimental to safety, health or morals.

Thus a slum may be described as a chaotically occupied, unsystematically developed and generally neglected area which is over-crowded with ill repaired and neglected structures. The area may have insufficient communication, improper sanitary arrangement and inadequate amenities that are necessary for the maintenance of physical and social health of human beings and the community. There may be a general absence of social services and welfare agencies to deal with the major social problems of persons and families.

"The slums have come to be known differently in different cities—Jhuggi-Jhoupri in Delhi, Zopadpatti in Bombay, Basti in Calcutta, etc. But the basic characteristics of any slum are the same, viz., dilapidation of structures, over-crowding, faulty arrangement of buildings and streets, lack of facilities, like, ventilation, light, sanitation, open space, community facilities, etc."¹ The growth of slums, therefore, should be considered as one of the negative aspects of urbanisation. In fact the growth of slums like mushrooms in towns and cities has become a world-wide phenomenon and today it is considered as a major bane to human society next only to population explosion.

Slums punctuate almost every city of the world. Few countries deny their existence. Some of the worst slums in the world are found in Indian cities. In the older Metropolises, like, Bombay, Madras, Calcutta and Delhi, the slums have become a chronic reality. One fifth of the world population lives in

India, one fifth of the Indian population lives in urban areas and one fifth of the Indian urban population lives in slums.

The growth of slums stems out of a rapid industrialisation and urbanisation leading to heavy influx of rural and labour class families to the city or town. This increases the inflow (immigrants) into the city to an appreciably high level. Growth of industry means requirement of more manpower. More manpower means more inflow of people into newly-industrialized areas. When a city is being built, the slums cannot be cleared as those who live in them are required for construction work. Many of those who come in search of jobs do not get very high wages, nor are they housing conscious. Low income and low priority of housing leads them to accept low standard housing. They end up with building up small huts. People in the low socio-economic levels are not civic minded. They are not concerned if slum conditions are created even in otherwise decent localities, nor do they feel about improving the conditions.

Some of the other major factors attributed to slum conditions are the absence of practical housing policies and programmes, half hearted measures for clearance or improvement of existing slums, non-implementation of town planning schemes, inadequate powers and legal and physical machinery for local authorities to enforce suitable standards, etc.

The Govt. of India had introduced a Slum Clearance and Improvement Scheme in the central sector in 1956 which was later transferred to the states in 1969, in the hope of securing better results through greater involvement of the State Governments. Three years later, when the thrust of official efforts changed from slum clearance to improvement of settlements, the Environmental Improvement Scheme (EIS) was started. This again, was in the central sector and covered cities, including the metropolises, each with a population of over one million. Later, this scheme became a state responsibility when it was clubbed with the Minimum Needs Programme (MNP) under the Fifth Five Year Plan. The original objective of the scheme got further diluted when in April, 1978, its scope was widened to take in all urban areas irrespective of the population involved. The long-term objective, as laid down in the Sixth Five Year Plan, had been to cover 100 per cent of the slum population by 1990 under the EIS. In the Seventh Plan (1985-90), it has again been emphasized that the EIS

¹Town and Country Planning Organisation, Ministry of Works and Housing, Govt. of India, A Compendium on Indian Slums, September, 1985, p. 6.

programme has to be continued with vigour and steps should be taken to provide security to the slum dwellers so that they may develop a stake in maintaining and improving their habitat. The scheme was also included in the 20 Point Programme of the Prime Minister.

Coverage of this Report

At the 1981 Census, it was decided to prepare an inventory of slums in Class I (Population 100,000 and above) and Class II (Population 50,000-99,999) towns of India, so as to help the planners to chalk out programmes required for providing civic amenities for the improvement of existing slums, as envisaged in the Minimum Needs Programme. The information on slums was collected in respect of such localities which are officially recognised as slums, whether actually notified or not. Sometimes, the states or local bodies do not formally notify slums under their jurisdiction but they maintain a list of such areas which are officially treated as slums. All such recognised slums had been considered alongwith the notified slums.

The details on civic amenities in notified slums of Class I and II towns were collected in Statement IV-A of Town Directory forming part of the District Census Handbooks of 1981 Census. The exercise was restricted to Class I & II towns only, as it was thought that the magnitude of the problems relating to slums is

greater in larger towns. There may be notified slums in smaller towns, but it was difficult to collect data in respect of such slums, particularly, the Census towns which did not have such local authorities as municipalities to provide the requisite information. The data on civic amenities in notified slums of Class I & II towns situated in 12 States which had reported to have notified slums in 1979 have been presented in this volume.

The states of Assam, Himachal Pradesh, Kerala, Manipur, Meghalaya, Nagaland, Orissa, Punjab, Sikkim and Tripura did not report any notified or recognised slums. With the exception of Delhi, no other Union Territory had recognised or notified slums. The slum-wise details on civic and other amenities in notified slums of Delhi were not available. In fact, the whole of the walled city of Delhi and its extensions were declared as slum under Section 3 of Slum Area (Improvement and Clearance) Act, 1956. This report, therefore, provides details on slums of Class I and II towns of 12 States only. These are Andhra Pradesh, Bihar, Gujarat, Haryana, Jammu & Kashmir, Karnataka, Madhya Pradesh, Maharashtra, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. Further, not all the Class I and II towns in these states reported existence of slums. In a few cases, the requisite data was reported to be not available. The total number of Class I and II towns and the number of towns reported to have slums or for which the required data were available are shown in the following Table 1.

TABLE 1 : *Towns having slums*

| Sl. No. | India/State | Size class of towns | Total No. of towns | No. and percentage of towns having notified slums |
|---------|----------------|---------------------|--------------------|---|
| 1 | 2 | 3 | 4 | 5 |

| | | II | 41 | 18 (43.90) |
| 11 | Uttar Pradesh | Total | 68 | 24 (35.29) |
| | | I | 30 | 14 (46.67) |
| | | II | 38 | 10 (26.32) |
| 12 | West Bengal | Total | 64 | 24 (37.50) |
| | | I | 24 | 12 (50.00) |
| | | II | 40 | 12 (30.00) |

In Andhra Pradesh, Warangal (Class I town), Chittoor and Jagtial (Class II towns) did not have any notified slums. The information was not made available in respect of Vijayawada, Bapatla and Chilakaluripet municipalities and Malkajgiri, Patamata panchayats, Rajahmundry (NM) and Secunderabad Cantonment.

In the State of Bihar, the local authorities and Country Planning Organisation of the State Govt. had not formally notified slums under their jurisdiction but they maintained lists of areas which were officially treated as slums.

In Gujarat, slums had been notified in respect of Ahmedabad City only. However, the data collected in respect of other Class I and II towns have also been incorporated.

In Haryana, all the cities except Yamunanagar were having slums. Among the 7 Class II towns, only 3 towns of Ambala Sadar, Kaithal and Rewari had slums areas.

In Jammu & Kashmir, both the Class I cities, viz., Srinagar and Jammu had slum areas. There is no Class II town in this state.

Among the 14 Class I towns of Karnataka, Shimoga is the only town which did not have any notified slum. Among the Class II towns of this state as many as 6 out of 16 did not have any slum areas.

Of the total 41 Class I and II towns in Madhya Pradesh, information was received from 38 towns. Bhilainagar, a Class I town, Jabalpur Cantt. and Damoh, the Class II towns did not have any notified slums.

In case of Maharashtra, the information was made available for 29 Class I and II towns out of a total of 54. In Rajasthan, slum areas existed in 6 Class I and II towns. In Tamil Nadu, there were notified slums in 13 out of 21 Class I cities and 18 out of 41 Class II towns. In Uttar Pradesh and West Bengal, the notified slums were reported for 24 Class I and II towns each.

In all, 55 per cent (269 out of 489) Class I and II towns in the above 12 States reported existence of notified or recognised slums. In Andhra Pradesh, Jammu & Kashmir, Karnataka and Madhya Pradesh, more than 75 per cent of the Class I and II towns had notified slums. In case of Gujarat, Haryana and Maharashtra, more than 50 per cent of Class I and II towns had slum areas. In Rajasthan, only about 29

per cent of towns with population 50,000 and above reported existence of notified slums.

In 69 per cent (138 out of 200) Class I towns, there were slum areas. In 8 states, namely, Andhra Pradesh, Bihar, Gujarat, Haryana, Jammu and Kashmir, Karnataka, Madhya Pradesh and Maharashtra, even more than 70 per cent of the Class I towns reported existence of slums. All the cities with more than 10 lakh population in India had notified slums. The slums have, thus, sprung up in cities (Population 1 lakh and above), as is expected, in most of the states. As against this, only 45 per cent of Class II towns (131 out of 289) in these states have reported existence of slums. Only in 4 states, namely, Andhra Pradesh, Gujarat, Karnataka and Madhya Pradesh, more than 45 per cent of the Class II towns reported existence of slums. In case of Bihar and Rajasthan, the percentage of Class II towns having slums was only 16 and 20 respectively.

For some of the Class I and II towns, slum-wise details on civic amenities were not reported. In such cases, the prescribed particulars on area, population and civic amenities have been given for a group of slums or the entire slum area in a town.

Statement on Civic and Other Amenities in Notified/Recognised Slums

In this volume, the data on slums have been presented in one main Statement. This Statement is similar to Statement IV-A of Town Directory presented in the District Census Handbook.

In Cols. 2-5 of the Statement on slums, the particulars of towns having slums are provided. In Column 2 of the Statement, the civic status of the town is given. For the civic status, the following codes have been used.

| | |
|----------|--|
| M. Corp. | Municipal Corporation/Corporation |
| M.C. | Municipal Committee/Municipal Town Committee |
| M | Municipality |
| C.B. | Cantonment Board/Cantonment |
| C.T. | Census Town |
| SADA | Special Area Development Authority |

In columns 3, 4 and 5, the location code of the town as used in 1981 Census, the population and area of town (in sq. kms.) respectively is noted.

The Statement provides the following particulars on slums:—

1. Name of slum (Column 6)
2. Area of slum (in sq. kms. up to 2 decimal places) (Column 7)
3. Approximate Population of the Slum (Column 8)
4. Availability of the following amenities in the slum:—

- (i) Paved Roads (in kms.) (Column 9)
- (ii) System of Sewerage (Column 10)
- (iii) Number of Latrines (Private and Community) (Columns 11-12)
- (iv) Method of disposal of night soil (Column 13)
- (v) Number of tap points/public hydrants installed for supply of protected water (Column 14)
- (vi) Electrification (No. of connections) (Column 15)

For the presentation of data on items 4 (ii), (iii), (iv) and (vi) above in the Statement, the following codes have been used:—

| Column Nos. of the Statement on slums | Item | Codes used |
|---------------------------------------|--------------------|--|
| 10 | System of sewerage | S (Sewer) OSD (Open surface drains) BSD (Box surface drains) SD (Syk drains) CD (Cesspool method) PT (Pit system) |
| 11 | No. of latrines | W (Water borne) Sr (Service) O (Others) |

| Column Nos. of the Statement on slums | Item | Codes used |
|---------------------------------------|----------------------------------|---|
| 13 | Method of disposal of night soil | HL (Head load) B (Basket) WB (Wheel barrow) ST (Septic tank) S (Sewerage) |
| 15 | Electrification | D (Domestic) R (Road lighting) O (Others) |

Brief Analysis of Data

As stated earlier, in all 269 Class I and II towns reported to have notified slums within their periphery in 1979. In these towns, 6741 slum areas existed. The average number of slums per town (in size class I and II) comes to 25. In 138 Class I towns, there were 5787 slums and on the average, 42 slums existed in each of them. In 131 Class II towns, there

were 954 slum areas, the average number of slums per Class II town comes to 7 only. The slums seem to be emerging at a faster rate in cities particularly on account of rapid increase in construction, industrial and allied activities in them. The state-wise details on the number of slums and the average number of slums in each size class of towns are provided in the Table 2 below:—

TABLE 2 : Total and average number of notified slums by size class of towns

| Sl. No. | India/State | Size class of towns | No. of towns having notified slums | No. of notified slums | Average number of notified slums in each size class |
|---------|-----------------|---------------------|------------------------------------|-----------------------|---|
| 1 | 2 | 3 | 4 | 5 | 6 |
| | India | Total | 269 | 6741 | 25 |
| | | I | 138 | 5787 | 42 |
| | | II | 131 | 954 | 7 |
| 1 | Andhra Pradesh | Total | 44 | 850 | 19 |
| | | I | 18 | 659 | 37 |
| | | II | 26 | 191 | 7 |
| 2 | Bihar | Total | 15 | 295 | 20 |
| | | I | 11 | 258 | 23 |
| | | II | 4 | 37 | 9 |
| 3 | Gujarat | Total | 22 | 302 | 14 |
| | | I | 8 | 197 | 25 |
| | | II | 14 | 105 | 8 |
| 4 | Haryana | Total | 11 | 117 | 11 |
| | | I | 8 | 103 | 13 |
| | | II | 3 | 14 | 5 |
| 5 | Jammu & Kashmir | Total | 2 | 12 | 6 |

| | | I | 13 | 256 | 20 |
| | | II | 10 | 55 | 6 |

Table 2 : Total and average number of notified slums by size class of towns--Concl'd.

| Sl. No. | India/State | Size class of towns | No. of towns having notified slums | No. of notified slums | Average number of notified slums in each size class |
|---------|----------------|---------------------|------------------------------------|-----------------------|---|
| 1 | 2 | 3 | 4 | 5 | 6 |
| 7 | Madhya Pradesh | Total | 38 | 416 | 11 |
| | | I | 13 | 233 | 18 |
| | | II | 25 | 183 | 7 |
| 8 | Maharashtra | Total | 29 | 1,478 | 51 |
| | | I | 22 | 1,392 | 63 |
| | | II | 7 | 86 | 12 |
| 9 | Rajasthan | Total | 6 | 141 | 24 |
| | | I | 4 | 136 | 34 |
| | | II | 2 | 5 | 3 |
| 10 | Tamil Nadu | Total | 31 | 1,222 | 39 |
| | | I | 13 | 1,114 | 86 |
| | | II | 18 | 108 | 6 |
| 11 | Uttar Pradesh | Total | 24 | 249 | 10 |
| | | I | 14 | 202 | 14 |
| | | II | 10 | 47 | 5 |
| 12 | West Bengal | Total | 24 | 1,348 | 56 |
| | | I | 12 | 1,225 | 102 |
| | | II | 12 | 123 | 10 |

From the above table, it may be seen that the average number of slums were higher in Class I and II towns of Maharashtra, Tamil Nadu and West Bengal when compared with the average for the above 12 states. The average number of slums were also higher in these three states when we consider only Class I towns. Further the average number of slums in Class I towns were far in excess of the average for Class II towns in all the 12 states.

As stated above, Class I towns had 42 slums, on an average. Among these, slums are seen to be far in excess in cities with population of 10 lakh and over. The nine such cities for which data were available had 3411 slums with an average of 379 slums per town. The slums were seen to be maximum in Calcutta (1015) followed by Madras (782), Bombay (619), Hyderabad (455) and Pune (327). When we exclude cities with population of 10 lakh and over, the average for the remaining Class I towns comes to only 18. Thus the problem of slums is of alarming

magnitude in metropolitan cities having population 10 lakh and over as compared to all other towns and cities.

Table 3 below provides information on percentage of slum population and area in Class I and II towns of each of the twelve states. The exact figures on population and area for each slum were not available. Thus, in the main statement (Col. 7 and Col. 8), only approximate area and population of the slums in 1979 are depicted. Further, while working out the percentage of slum population, the 1981 Census population of towns reporting the prevalence of slums in each size class has been taken into account.

The states which reported higher percentage of slum population than the all India average are Bihar, Madhya Pradesh, Maharashtra, Tamil Nadu and West Bengal. For West Bengal, the percentage of slum population was 28.34, being the highest followed by Bihar (25.92) and Maharashtra (22.24).

TABLE 3 : Proportion of slum population and area by size class of towns

| | | II | 10 | 8.41 | 14.61 |
| 12 | West Bengal | Total | 24 | 28.34 | 17.29 |
| | | I | 12 | 28.28 | 16.64 |
| | | II | 12 | 28.63 | 21.77 |

As compared to slum population of 15 per cent, the area of towns under slums was only 4.74 per cent. The states having higher percentage of area under slums than the India percentage are Gujarat, Madhya Pradesh, Uttar Pradesh and West Bengal. The percentage of area under slums is also the highest for West Bengal (17.29) followed by Gujarat (12.89) and Madhya Pradesh (8.94). The percentage of population and area under slums is slightly lower for Class I towns as compared to Class II towns at all India level and also in respect of a number of states. This is mainly because the denominators i.e. total population and total area of Class I towns reporting slums are heavy figures in comparison to those of Class II towns.

Among metropolitan cities, the percentage of population living in slums was the highest in Calcutta (30.26) followed by Greater Bombay (27.63), Pune (22.81), Madras (19.34), Hyderabad (15.59) and Nagpur (13.16). The percentage of area under slums was also the highest for Calcutta (5.90) followed by Madras (3.47) and Nagpur (1.22).

The density (number of persons per sq. km.) in slums, as shown in Table 4, is very high, being 20,994 persons per sq. km. for Class I and II towns. The general population density for this group of towns having slums was only 6.641 persons per sq. km. The density in slums in the case of Class I towns is 28,977

as against general population density of 7,254 and for Class II towns it is 7,156 against general population density of 4,298 persons per sq. km. This shows that the slums are densely populated as compared to other areas within the town. The density in slums is seen to be higher than the average density of 12 states in case of Andhra Pradesh, Bihar, Karnataka, Maharashtra, Rajasthan and Tamil Nadu. The same picture emerges in case of Class I towns also. In case of cities with one million population and above, the density in slums of Greater Bombay is the highest (1,074,484) followed by Pune (1,055,635), Calcutta

(162,866), Bangalore (123,015), Madras (107,411) and Kanpur (105,665). As already stated earlier, only approximate figures relating to the areas occupied by the slums and their population were reported by the local bodies. The density as worked out may not be correct to the last digit. It may only provide a rough idea about the over-crowded nature of urban slums. Each slum is spread into a fraction of a square kilometre in every town and as such, the total area of slums in each town is insignificantly small, resulting in high density.

Table 5 below provides information on availability of certain basic civic services, like, paved roads, community/private latrines, tap points/public hydrants and electric connections in notified slum areas of Class I and II towns. It may be seen from this table that about two-third of the notified slums in these towns had paved roads, just over one-half of them had tap points/public hydrants, electric connections and about one-third had the facility of community latrines/private latrines. Among these civic services, the problem of availability of community latrines is seen to be more acute. The community latrines, wherever exist, are generally poorly maintained and grossly inadequate. The public tap points/hydrants are also generally meagre with the result that one often comes across long queues of people standing near the hydrants in slum area for hours together waiting for their turn to come. The civic bodies should, therefore, pay more attention in providing the basic civic services and amenities to slum dwellers.

The slums of Class II towns are seen to be better placed so far as the availability of the above civic amenities are concerned. In fact, the problem is more acute in slums of cities (Class I) where about 85 per cent of the total number of slums (Class I and II towns) existed.

At state level, the percentage of slums having paved roads was higher in case of Andhra Pradesh, Jammu & Kashmir, Madhya Pradesh, Uttar Pradesh and West Bengal; community latrines, in case of Andhra Pradesh, Gujarat and Maharashtra; tap points/public hydrants in case of Andhra Pradesh, Bihar, Gujarat, Jammu & Kashmir, Madhya Pradesh, Maharashtra, Tamil Nadu and Uttar Pradesh; and electric connections in Andhra Pradesh, Bihar, Gujarat, Karnataka, Madhya Pradesh, Tamil Nadu and Uttar Pradesh; as compared to the percentage at all India level.

As may be seen from Table 6 below, a little less than one-fifth of the slums (Class I and II towns) in 12 states were having underground sewers and around fifty per cent, the open surface drains. The sewer system implies the conveyance of the sewerage and/or storm water to the point of disposal by underground pipes. Of the many types of sewerage/drainage systems, the sewers and open surface drains are widely prevalent in towns and also in their slums. About 20 per cent of the slums in Class I towns were having sewers as against only 3 per cent in Class II towns. The percentage of slums having open surface drains in Class I towns was 47.12 as against 55.87 in

Class II towns. The slums in Bihar, Jammu & Kashmir and Rajasthan were having open surface drains only and no other common system of sewerage existed in the slums of these three states. In Andhra Pradesh, Haryana, Madhya Pradesh, Maharashtra, Tamil Nadu, Uttar Pradesh and West Bengal, the underground sewers existed in slums of Class I towns only. The slums in Class II towns of these states, mostly had open surface drains. These open drains are generally filthy, hazardous to health and play havoc with the lives of slum dwellers particularly during rainy season when they overflow.

PT — Pit System

*Being the first system of sewerage in the slum noted in Col: 10 of the main Statement.

The information on the methods of disposal of night soil in slum areas of these 12 states was also collected. There are three systems of disposal of human waste, viz. (i) underground sewerage, (ii) sanitary water flush latrines with individual disposal systems, like septic tank, collecting well, etc. and (iii) dry type of latrines with manual scavenging. As is evident from Table 7, the underground sewers existed in 20.29 per cent of the recognised slums. The septic tank latrines were there in another 18.17 per cent of the slums. In dry type of latrines, the human excreta is removed by scavengers as head-loads in about 20 per cent of the slums, in baskets

with handle in 3.32 per cent of the slums and in wheel barrows in 20.98 per cent of the slums to the dumping grounds. There were no sewers in the slums of Bihar, Haryana, Jammu and Kashmir and Rajasthan and almost negligible in Madhya Pradesh. The slum areas where the practice of carrying night soil as head-load did not exist or was negligible are found in Andhra Pradesh, Gujarat, Jammu and Kashmir, Karnataka, Madhya Pradesh, Maharashtra and Tamil Nadu. This crude and old method, however, existed in more than 50 per cent of the slums in Bihar and West Bengal.
