[Price—Rs. 2-4-0.]

NORTHERN CIRCLE.

No. 2241 of 1894-95.

FROM

R. C. WROUGHTON, ESQUIRE,
Deputy Conservator of Forests, Northern Circle;

TO

THE HONOURABLE MR. J. NUGENT,
Chief Secretary to Government, Revenue Department,
Bombay.

*Camp Wejalpur, Panch Mahals District,
4th December 1894.*

SIR,

I have the honour to submit, herewith, the Forest Administration Report of the Northern Circle for the Forest year 1893-94, together with its prescribed subsidiary statements.

I have the honour to be,

Sir,

Your most obedient Servant,

R. C. WROUGHTON,
Deputy Conservator of Forests, Northern Circle.

THROUGH THE COMMISSIONER, NORTHERN DIVISION.

INDEX.

FOREST ADMINISTRATION REPORT, NORTHERN CIRCLE, FOR 1893-94.

	Forms Nos. 46 to 65.	

FOREST ADMINISTRATION REPORT
 OF THE
NORTHERN CIRCLE, BOMBAY PRESIDENCY,
 FOR THE OFFICIAL YEAR 1893-94.

INTRODUCTION.

The Circle, during practically the whole year under report, was administered by Mr. F. R. Dasai, Deputy Conservator of Forests, Messrs. Greathead, Millett, Fisher and Wallinger being in charge of the several divisions and Mr. T. B. Fry, Deputy Conservator of Forests of the Working Plan Branch.

2. An area of 194 square miles was added to Reserved forest during the year. One hundred and eighty-seven square miles of this area were obtained by transfer of Protected forest, while the remaining 7 square miles represent the catchment area of the Tansa Lake in East Thána, which was acquired by purchase during the year.

3. The Forest Survey Party of the Government of India continued work during the year in the Thána Divisions, the forests of which are being surveyed on a scale of 8" = 1 mile.

4. The Working Plan branch continued their work in Thána, but were unable to get much ahead of immediate requirements in marking off compartments on the ground.

5. Protection, as judged by success in obtaining convictions in cases prosecuted, shows a slight falling off, but it is believed to be more in appearance than reality.

6. Protection from fire though not very successful was on the whole, especially in Thána, fairly satisfactory.

7. The financial results of the year constitute a record. The highest gross revenue ever collected, viz., Rs. 7,60,954, was obtained, while at the same time expenditure remained low. The actual net revenue amounted to no less than Rs. 4,96,007.

CHAPTER I.

EXTENSION AND CONSTITUTION OF STATE FORESTS.

(i).—ALTERATION OF AREA.

8. The changes made in the forest area during the year were as follows:—

Class of Forests.	Area on 1st July 1893.		Added during the year.		Excluded or transferred during the year.		Area on 30th June 1894.		Remarks.
	Sq.m.	a.	Sq.m.	a.	Sq.m.	a.	Sq.m.	a.	
Reserved	953	184	194	254	4	337	1,143	101	
Protected	601	80		155	121	445	599	
Leased	678	320		678	320	

9. In the Máhim (136½ square miles) and Dáhánu (17½ square miles) Ranges of the West Thána Division large areas of Protected forest were excluded by the Demarcation Officer. Of these areas, however, 57·7 square miles and 14·6 square miles were respectively selected for reservation and with 7·1 square miles added in East Thána (portion of Tansa catchment area) and 114·6 square miles added in the Jhálod and Dohad Ranges of the Panch Maháls Division (representing Protected forest excluded two years ago and notified under Section 4) make up the 194½ miles shown above as added to Reserved forest.

(ii).—FOREST SETTLEMENTS.

10. The only special Forest Settlement Officer during the year was Mr. Orr, I. C. S., in Thána; in the other divisions the work was done by Assistant Collectors in addition to their own duties.

East and West Thána.

11. Forest settlement has made steady progress during the year.
12. The demarcation and settlement of Máhim Range, West Thána, was approved and sanctioned by Government Resolution No. 4567, dated 24th May 1894, and that of 38 villages of Dáhánu Range (done by Mr. McIver) in the same division by Government Resolution No. 4619, dated 25th May 1894.
13. The demarcation of the remaining villages of the Dáhánu Range was completed by Mr. Orr during the year.
14. Mr. Orr, who was on leave when the year opened, on taking up work on 20th August 1893, set to work to arrange and classify the records so as to show exactly what remained to be done. Overdue settlement proceedings were then taken up in Bhiwndi (East Thána) and Bassein and Sálsette (West Thána) Ranges. A number of notifications of disforestation, for the most part representing not a real change of the forest area but a correction of errors in the records, were also published.
15. Lands acquired for forest in Bhiwndi, Váda and Kalyán (East Thána) were notified under Section 4.
16. Negotiations for the acquisition of land for forest, some of which had been in abeyance for 10 years, were resumed and brought to a definite conclusion.
17. Finally, under the orders of the Collector, the draughtsman and surveyors in the Forest Settlement Office, were employed, during the rains, in preparing maps of the settled Ranges, showing the forest boundaries on the scale of 2" = 1 mile.
18. The settlement of the Jawhár State boundary in 14 villages of the Dáhánu Táluka by Mr. Dunsterville though not forest settlement must also be recorded here, for Mr. Dunsterville's establishment was drawn from the Forest Settlement Office by order of the Collector.

Panch Maháls.

19. The draft notification under Section 19 in connection with the transfer to Reserved forest of the forest areas of Dohad and Jhálod, referred to in last year's report as having been submitted to Government for publication, was dealt with in Government Resolution No. 4909, dated 7th June 1894, which approved of the proposals made by which certain privileges already conceded were confirmed and certain others granted. The question of concessions of grazing and treatment of trees on waste lands outside forest was disposed of by the same resolution.

20. The following statement shows the position of forest demarcation and settlement in the Circle by detail of Ranges;—

Number.	Division.	Tálukas in which Forest Settlement and Demarcation has been completed.	Tálukas in which Forest Settlement and Demarcation is still to be completed.	Remarks.
1	East Thána	Bhiwndi, Kalyán, Mokháda, Váda.	Murbád, Shahápur.	
2	West Thána	Bassein, Máhim, Sálsette, part of Dáhánu.	Part of Dáhánu, Umbargaon.	
3	Surat	Mándvi, Balsár, Párdi, Chikhli, Bárdoli.	
4	Panch Maháls	Godhra, Kálol, Hálol, Dohad, Jhálod.	

21. The details of land acquired by purchase during the year, were as follows :—

Number.	Division.	Area acquired.	Price paid.	Rate per Acre.	Remarks.
		A. g.	Rs. a. p.	Rs. a. p.	
1	West Thána ...	0 10½	2 0 0	7 7 0	

22. There was no land obtained by exchange.

23. The following statement shows the cost of Forest Settlement Officers and their establishments for the several divisions :—

No.	Division.	FOREST SETTLEMENT OFFICERS.		OFFICE ESTABLISHMENTS.		Contingencies.	Total.
		Pay.	Travelling Allowance.	Pay.	Travelling Allowance.		
		Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.		
1	East Thána ...	9,220 0 0	1,817 11 0	5,265 5 2	1,249 4 3	511 18 8	18,064 2 1
2	West Thána ...			1,285 1 6	1,285 1 6
3	Surat	44 10 9	44 10 9
4	Panch Maháls
	Total ...	9,220 0 0	1,817 11 0	6,550 6 8	1,249 4 3	556 8 5	19,393 14 4

24. The expenditure incurred upon the formation and constitution of Reserved and Protected forests during the year has amounted to Rs. 22,217-14-4 :—

	Rs. a. p.
1. Salaries and travelling allowances of Forest Settlement Officers not charged to forests ...	11,037 11 0
2. Salaries and travelling allowances of establishments employed under Forest Settlement Officers and charged in forest accounts and the contingent expenditure of the latter ...	8,356 3 4
3. Demarcation of forest boundaries upon the ground by the construction of special forest boundary marks ...	2,822 0 0
4. Compensation for land and rights ...	2 0 0
Total ...	22,217 14 4

25. The work effected during the year by the expenditure detailed above comprises :—

- The settlement of 252 square miles at a cost of Rs. 77 per square mile.
- The demarcation of 139½ miles of forest boundary at Rs. 20-4-0 per mile.
- The purchase of 10¾ gunthas of land for forest reservation at Rs. 7-7-0 per acre.

26. The following statement shows the area to be examined, demarcated and settled in the Northern Circle :—

No.	Division.	Area settled.		Area unsettled.	
		Sq. m.	a.	Sq. m.	a.
1	East Thána ...	298	12	386	389
2	West Thána ...	247	450	254	242
3	Surat ...	68	477
4	Dáangs ...	678	320
5	Panch Maháls ...	333	410
	Total ...	1,626	389	640	631

(iii).—DEMARICATION.

27. The following statement shows the clearance of boundary lines and the erection of forest boundary marks performed during the year :—

No.	Division.	Length of Boundary demarcated.	Number of Cairns erected.		Amount spent.	Rate per Mile.	Remarks.
			Large.	Small.			
					Rs. a. p.	Rs.	
1	East Thána ...	10½	68	105	125 0 0	...	Besides 1,440 stones planted.
2	West Thána ...	41½	446	13	276 0 0	...	
3	Surat ...	17½	235	121	*2,822 0 0	...	* Include Rs. 1,333 on account of Dangs.
4	Panch Maháls ...	70½	3	74	515 0 0	...	Besides 1,447 tin plates were used as indicators of forest boundary.
	Total, 1893-94 ...	139½	752	313	3,738 0 0	26½	
	Total, 1892-93 ...	181	2,901	1,698	5,527 4 4	30½	

(iv).—SURVEYS.

28. Last year details of work done by the Forest Survey Party of the Government of India with cost, rates, &c., were given, but these were for the Survey and not for the Forest year.

29. The Superintendent writes that 51.21 square miles of detailed 8" topographical survey were completed up to 30th June 1894. The amount debited for forest survey is Rs. 11,727-2-3. This would give a cost rate of Rs. 229 square miles, but this cannot be correct. In fact the difference in the two years is a bar to the record here of any useful figures.

CHAPTER II.

MANAGEMENT OF STATE FORESTS.

I.—REGULATION AND MANAGEMENT.

(a).—WORKING PLANS AND THEIR CONTROL.

30. The Working Plans Division was in charge of Mr. T. B. Fry, Deputy Conservator of Forests, during most of the year under report. Mr. Millett, Deputy Conservator of Forests, holding charge in addition to his own duties from 5th August 1893 to 4th November 1893 during Mr. Fry's absence on privilege leave and again from 10th May 1894 to the close of the year on the transfer of Mr. Fry to the Southern Circle.

31. Mr. Fry, who was Working Plans Officer for the old Northern Circle, continued to be Working Plans Officer for the two Circles after their separation and up to 1st January 1893. From that date, under Government Resolution No. 10144, dated 28th December 1892, he became Working Plans Officer, Northern Circle. As, however, the Working Plans Branch of the Central Circle had not been organized, Mr. Fry's head-quarters were fixed at Poona and, under Government Resolution No. 8106, dated 4th November 1893, his services as well as those of his establishment were lent to the Central Circle up to the Christmas vaca.

tion. Nearly the whole of the working season, thus curtailed, was employed in laying out the coupes of the coming year, only the last few weeks being available for marking off coupes in advance in the Bassein Range.

32. There are theoretically 284 blocks in the two Thána Divisions, but for various reasons 11 of these are not to be worked in 1894-95. Consequently 273 coupes were laid out during the season ready for working in the coming season and 90 coupes were laid out in advance in a less detailed way (*i. e.*, with small cairns at the principal angles only) in 13 blocks of Bhiwndi.

33. The following statement shows the extent to which the paper Working Plan has been marked out and realized on the ground up to date:—

Name of Range.	Number of Blocks.	Total Number of Coupes.	Number of Coupes marked out.	Number of Coupes exploited.	Number of Coupes to be worked in 1894-95.	Number of Coupes marked for future exploitation.	Number of Blocks in which Coupes for future exploitation are laid out.	Number of Coupes yet to be marked out.	Remarks.
<i>East Thána Division.</i>									
Bhiwndi	20	800	198	138	20	40	13	602	
Kalyán	16	640	119	103	16	521	
Murbád	20	800	104	89	15	696	
Shahápur and Khardi ...	53	2,120	259	211	48	1,861	
Mokháda	12	480	60	49	11	420	
Váda	34	1,360	199	147	33	19	6	1,161	
<i>West Thána Division.</i>									
Sálsette	10	400	63	53	10	337	
Bassein	23	920	281	165	24	92	16	639	
Máhim	35	1,400	256	219	35	2	1	1,144	
Dáhánu	39	1,560	279	240	39	1,281	
Umbargaon	18	720	121	103	18	599	
Talasri Mokháda ...	4	160	19	15	4	141	
	284	11,360	1,958	1,532	273	153	36	9,402	

34. It will be seen that the work to date has been from hand to mouth and that only some 150 coupes have been marked in advance out of 9,402 requiring to be so marked. This is no doubt due to the short working season available so long as coupes had also to be marked in the Dekkhan Divisions. But it must also be remembered that under any circumstances the incomplete state of settlement and the want of sanction to the paper scheme would have prevented much more rapid progress. Forest settlement is, however, now complete in 6 Ranges and the work of laying out advance coupes can now be pushed on.

35. The following statement shows the employment of time by the Working Plans surveyors:—

Percentage of time employed in	1892-93.	1893-94.
Working days (field and office work) ...	51	64
Sundays, holidays and leave ...	14	23
Travelling	23	10
Illness and delays	12	3

The increase in the proportion of working days and the decrease under the last two heads is most satisfactory.

36. The following is a statement of the work performed by the Working Plans Officer and his establishment during 1893-94:—

No.	Range.	Total Forest area.	Number of Blocks per Range.	Number of Compartments actually laid out in 1893-94.	Average area of Compartments actually laid out.	Remarks.
		Acres.			Acres.	
<i>East Thána.</i>						
1	Kalyán ...	85,037	16	16	46	
2	Murbád ...	90,295	20	15	49	
3	Bhiwndi ...	47,868	20	20	48	
4	Mokháda ...	35,891	12	11	55	
5	Khardi ...	157,143	53	48	60	
6	Shahápur ...					
7	Váda ...	76,219	34	33	54	
	Total ...	442,453	155	143	54	
	*Total during 1892-93 ...	339,545	124	132	53	* Excluding Váda Range and including Talasri Mahál of the Mokháda Range.
<i>West Thána.</i>						
1	Sálsette ...	15,393	10	10	38	
2	Bassein ...	54,030	23	24	51	
3	Máhim ...	74,108	35	35	51	
4	Dáhánu ...	172,641	61	61	56	
5	Umbargaon ...					
	Total ...	316,171	129	130	49	† Including Váda Range and excluding the Talasri Mahál.
	†Total during 1892-93 ...	349,094	158	185	50	

37. It will be seen from the above that the area marked for exploitation falls short of the theoretical $\frac{1}{40}$ of the "Forest Area." In fact after deducting the unworkable or climatic forest the area which should theoretically come under the axe in the two Thána Divisions is just under 19,000 acres, whereas the actual area laid out for exploitation is a trifle under 14,400. This is due to the fact that much of the "Forest Area" is only provisional and will certainly in part be disforested ultimately, consequently the yield must, for safety's sake, be kept considerably below the paper possibility.

38. The expenditure on these operations is exhibited below, from which it will be seen that the cost per acre of laying out the compartments of the year under report is exactly the same as that of the preceding year:—

No.	Range.	Number of Compartments.	Defined by		Aggregate area of Compartments.	Cost.	Average cost per Compartment.	Average cost per Acre.	Remarks.
			Cairns.	Stones.					
					A. g.	Rs. a. p.	Rs. a. p.	Rs. a. p.	
<i>East Thána.</i>									
1	Kalyán ...	16	51	1,562	737 20	73 6 0	4 9 4	0 1 7	
2	Bhiwndi ...	20	16	1,229	962 10	65 11 0	3 4 4	0 1 1	
3	Murbád... ..	15	46	1,450	735 10	70 9 0	4 11 0	0 1 6	
4	Shahápur ...	48	160	4,428	2,885 2	222 8 0	4 10 2	0 1 3

	Total ...	3,367 6 7

(b).—PROTECTION OF FORESTS FROM INJURY.

(1)—General Protection and Breaches of Forest Law.

(a).—General Protection.

41. The protective establishment has remained unchanged during the year.

42. Reference was made last year (paragraph 62) to the weakness of the establishment for the work required of it. Nearly all the Divisional Forest Officers record a similar complaint this year and for the most part are supported by the Collectors as may be seen from the remarks recorded by the latter, in forwarding the divisional reports, which are given at length in the concluding chapter of this report (para. 121)

43. In the Dángs especially it is found most difficult to obtain recruits to fill vacancies as the pay is not considered sufficient to out-balance the deadly climate and the isolation from families and caste.

44. The other remarks recorded under this head last year hold good.

(b).—Breaches of Forest Law.

45. The following is a comparative statement of the cases tried before Magistrates for breaches of the Forest law during the year under report and the preceding year :—

No.	Division.	1892-93.		1893-94.		Percentage of failures.	
		Prosecu- tions.	Acquittals.	Prosecu- tions.	Acquittals.	1892-93.	1893-94.
1	East Thána ...	110	43	152	55	39	36.1
2	West Thána ...	108	17	62	31	15.7	50.
3	Surat ...	3	...	2
4	Panch Maháls ...	13	2	14	3	15.4	21.4
	Total ...	234	62	230	89	26.5	38.7

46. The number of cases, it will be seen, is almost the same as last year (though last year's figures were for 15 months), but the increased proportion of acquittals is to be regretted. The Divisional Forest Officer, West Thána, attempts an explanation which, however, is not accepted by the Collector. It must be remembered that the total number of cases is very small to give a

steady average and a very few actual extra acquittals make the proportional increase look enormous. I think that this is the real explanation of the fluctuation. This increase, however, coming in continuation of that reported last year, is unfortunate.

47. In the following statement comparison is made between the numbers of cases in which prosecutions were instituted for the two years 1892-93 and 1893-94 under the four different heads of crime, as prescribed by the Forest Department Code:—

No.	Division.	Injury to Forest by Fire.		Unauthorized felling or appropriation of Wood and minor Forest Produce.		Grazing without Permission or in Tracts in which Grazing is prohibited.		Other offences.		Total.	
		1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
1	East Thána ...	7	4	125	151	2	5	2	9	136	169
2	West Thána ...	2	2	97	60	5	1	8	9	112	72
3	Surat	2	1	...	1	1	...	3	2
4	Panch Maháls	1	11	14	1	2	12	17
	Total ...	9	7	235	226	8	9	11	18	263	260

48. The following table exhibits the nature and character of the offences tried by Magistrates during the year under report:—

No.	Division.	OFFENCES RELATING TO THE MISAPPROPRIATION OF				Total.
		(a) Timber.	(b) Firewood.	(c) Minor Forest Produce.	(d) Other offences.	
1	East Thána ...	81	43	22	6	152
2	West Thána ...	37	15	3	7	62
3	Surat ...	1	1	2
4	Panch Maháls ...	9	2	...	3	14
	Total ...	128	60	25	17	230

49. The classification of undetected cases is given below:—

No.	Division.	Injury to Forest by Fire.		Unauthorized felling or appropriation of Wood and minor Forest Produce.		Grazing without Permission or in Tracts in which Grazing is prohibited.		Other offences.		Total.	
		1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
1	East Thána ...	152	234	270	460	422	694
2	West Thána ...	177	126	128	119	29	4	334	249
3	Surat
4	Panch Maháls	26	27	26	27
	Total ...	329	360	424	606	29	4	782	970

50. The following statement shows the number of cases decided by Revenue officers under Section 43 of the Land Revenue Code, in the Thána District, as compared with that of the previous year:—

Number.	Divisions.	1892-93.					1893-94.				
		Number of Cases.	Value of Forest Produce.	Acquittals.	Convictions.	Amount of Fines.	Number of Cases.	Value of Forest Produce.	Acquittals.	Convictions.	Amount of Fines.
			Rs. a. p.			Rs. a. p.					Rs. a. p.
1	East Thána ...	12	49 7 0	...	12	50 1 0	10	50 3 0	...	10	50 0 6
2	West Thána ...	4	159 15 6	...	4	159 15 6	11	432 8 0	...	11	598 5 0
	Total ...	16	209 6 6	...	16	210 0 6	21	482 11 0	...	21	648 5 6

51. A comparative statement showing the number of cases compromised under Section 67 of the Indian Forest Act and those taken into Court, is given below :—

No.	Divisions.	Taken into Court.		Compounded under Section 67 of the Forest Act.		Total Number of Cases.	
		1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
1	East Thána	153	212	173	87	326	299
2	West Thána	121	84	122	77	243	161
3	Surat	3	2	17	7	20	9
4	Panch Maháls	14	18	107	73	121	91
	Total ...	291	316	419	244	710	560

52. The classification of the cases compounded during the year is as follows :—

Number.	Division.	OFFENCES RELATING TO THE MISAPPROPRIATION OF.				Total.
		(a) Timber.	(b) Firewood.	(c) Minor Forest Produce.	(d) Other offences.	
1	East Thána... ..	39	14	19	15	87
2	West Thána	50	...	26	1	77
3	Surat	4	3	7
4	Panch Maháls	54	14	...	5	73
	Total ...	147	31	45	21	244

53. In 46 cases the offence was treated as trivial and the offenders were merely warned; the number of similar cases last year was 72.

54. The following statement gives the details in respect of money paid as compensation for forest offences compounded under Section 67 of the Forest Act during 1893-94 :—

Number.	Division.	Number of Cases compounded and in which Compensation has been accepted.	Amount of Compensation.			Remarks.
			Rs.	a.	p.	
1	East Thána... ..	87	283	5	3	Rs. 93 were not recovered at the end of the year.
2	West Thána	77	313	6	6	
3	Surat	7	8	7	6	
4	Panch Maháls	73	153	0	0	
	Total ...	244	758	3	3	

55. The 244 cases of compounded offences are classified according to the amount of the fine paid in the following statement:—

No.	Division.	No. of Cases in which Compensation was fixed at Rupees																											
		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28
1	East Thána	51	10	1	4	3	5	2	...	1	2	2	...	2	...	2	1	87
2	West Thána	34	17	3	5	3	3	1	...	1	1	1	1	77	
3	Surat	8	3	1	7	
4	Panch Maháls	42	10	7	3	3	1	3	1	2	1	73	
	Total	130	40	12	12	9	9	6	1	1	2	3	1	3	...	2	3	3	...	3	1	2	1	...	244		

56. The information given in the following statement is in accordance with paragraph 11 of Government Resolution No. 1899, dated 15th March 1891:—

No.	Division.	Number of complaints disposed of under Section 67.	Number of cases in which Compensation has been accepted.	Number of appeals against the proceedings.	Manner in which the appeals have been disposed of.	Remarks.
1	East Thána	87	87	In 37 cases offenders were let off with a warning.
2	West Thána	114	77	
3	Surat	10	7	Do. 3 do. do.
4	Panch Maháls	79	73	Do. 6 do. do.
	Total	290	244	46

(b) (2)—Protection from Fire.

57. The results of the year's fire protection, as compared with those of the year 1892-93, are shown below:—

Number.	Division.	Forest Area placed under protection against Fire.		Acreage burned.		Percentage burned.	
		1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
		Acre.	Acres.	Acres.	Acres.	Acres.	Acres.
1	East Thána	451,956	451,907	18,515	17,700	4.09	3.9
2	West Thána	356,719	247,344	5,462	6,680	1.5	2.7
3	Surat	478,141	478,237	434,990	443,747	90.9	92.8
4	Panch Maháls	213,575	217,530	3,944	17,276	1.8	7.9
	Total	1,502,391	1,391,018	462,911	485,403	30.7	34.9

58. The areas recorded as burnt are much the same as those of last year, except in the Panch Maháls, where four times last year's area is reported to have been burnt in 1893-94. Mr. Fisher attributes this to more correct reporting of areas burnt. He writes: "The above figures are no doubt misleading and should be taken to indicate the submission of more complete reports of the areas burnt. There is no doubt that last year the area burnt was much under-estimated and often no reports at all were submitted. This matter having received special attention the system of reporting was much better carried out. Probably no greater area was burnt this year than last." The Collector, it will be seen (para. 121), does not attach much weight to this recorded opinion. I confess, I think, the reason advanced by Mr. Fisher is the true one for a large part of the difference, for there is no reason why the area burnt should have so largely increased, especially when, as stated by Mr. Fisher, his attention was specially directed to fire protection.

59. The Thána system of fire protection was in force during the year in Surat and the Panch Maháls.

60. It is satisfactory to be able to record that there is almost unanimous testimony to the general good-will of the villagers in assisting to extinguish fires.

61. The following is a statement showing the expenditure on burning fire lines and paying rewards to villagers, &c. :—

No.	Division.	Expenditure.		Remarks.
		1892-93.	1893-94.	
		Rs.	Rs.	
1	East Thána ...	1,576	1,520	
2	West Thána ...	2,029	2,520	
3	Surat ...	186	380	
4	Panch Maháls	69	
	Total ...	3,791	4,489	

• (b) (3).—*Regulation of Grazing and Protection from Cattle.*

62. In paragraph 97 of last year's report a mistake was made inasmuch as the introduction of the grazing rules in the Panch Maháls Division was said to be in contemplation whereas they had actually been introduced. With this exception that paragraph might stand in the present report.

63. Dr. Pollen, Collector of the Panch Maháls, writes ~~subtly~~ ^{subtly} both of the necessity and the actuality of the closure against ~~OFFENS~~ ^{OFFENS} in his district (*vide* para. 121). This failure was attributed in last year's report (para. 100) to the inefficiency of the establishment, and I think to this ~~inc.~~ ^{inc.} be added want of the organization of the forests. Both these adverse factors, it is to be hoped, will be removed in the near future.

64. The following statement gives the number of animals impounded for trespassing in the open and closed forests during the year :—

No.	Division.	From open Forests.		From closed Forests.		Total.	
		1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
1	East Thána ...	421	230	1,260	2,086	1,681	2,316
2	West Thána ...	67	161	1,598	1,280	1,665	1,441
3	Surat ...	314	1,070	927	1,869	1,241	2,939
4	Panch Maháls ...	1,464	661	226	1,980	1,690	2,641
	Total ...	2,266	2,122	4,011	7,215	6,277	9,337

There is an increase in the total of 50 per cent., chiefly in Surat and Panch Maháls, but in actual numbers the increase is not large, and at any rate in Surat, is declared by the Collector to be "not excessive." Dr. Pollen writes severely about the increase in his district; but with all due deference to his recorded opinion I would submit that a total of 2,641 animals impounded in a district with a forest area of nearly 150,000 acres cannot be called excessive. The now almost universally accepted opinion that the admission of cattle is detrimental to forest growth does not, however, seem to be accepted by Dr. Pollen.

Fencing.

65. No new fences were erected in the East Thána Division but the old ones were kept in repair.

66. In the West Thána Division the work left unfinished last year was completed and very little new work carried out. This latter was in the Bassein Range where altogether during the year 35,003 running feet of fencing was completed at a cost of Rs. 710.

67. No fencing work of any kind was done in the Surat Division, but in the Panch Mahals 60 acres were enclosed with wire, to form a plantation, at a cost of Rs. 449.

Civil Suits.

68. The appeal made to the High Court by the *Isáfaldár* of Amgaon in the Váda Range of the East Thána Division against the decision of the District Court in the suit referred to in para. 111 of last year's report was not heard before the close of the year.

69. An original suit against the Forest Department was filed in the District Court of Thána by one Jan Mahamed Allana of Bombay for the recovery of damages amounting to Rs. 1,750 on account of the exclusion of 11½ acres from the area of the coupe for 1890-91 at Kanher in the Bassein Range after its purchase by him. The suit was, however, compromised by payment of the claim under Government Resloution No. 8211, dated 10th November 1893.

Criminal Cases.

70. A forest guard, Vazirkhán Chándkhán, in the Kalyán Range, East Thána Division, was prosecuted for connivance in a theft of timber and was sentenced to two months' rigorous imprisonment, and the sentence was confirmed on appeal.

71. Another forest guard, Náráyan Balwant Khánolkar, in the West Thána Division, was prosecuted for an almost exactly similar offence, with the result that the convicting Magistrate sentenced him to pay a fine of Rs. 50, which sentence was upheld by the Appellate Court.

72. Both these men were of course dismissed and have since been gazetted as ineligible for any Government service.

IMPROVEMENT OF FOREST GROWTH.

(1).—*Natural Reproduction.*

73. Natural reproduction was reported by all the Divisional Forest Officers as fair during the year. In some places fires and grazing are said to have retarded it to some extent. No special cases are recorded from any division.

(2).—*Artificial Reproduction.*

74. In the two Thána divisions artificial reproduction by broad-casting of seed and transplantation of seedlings was confined to the exploited coupes. The results were fairly satisfactory. These cultural operations are partly done by forest guards and partly by paid labour.

75. The regular plantations in the West Thána Division at Deheri, Dáhánu and Persik, which are maintained for experimental and teaching purposes, showed fair results. They contain casuarina, sandal, date, Inga dulcis and other species.

76. The fodder reserves which are situated close to the B. B. & C. I. Railway line in the Máhim Range and which have hitherto been shown as plantations, because it was the custom for many years past to make plantations therein, were during the year finally classed as fodder reserves. These reserves from their situation will always return a far higher sustained revenue and a more urgently required produce yield under grass than they would under timber. Further attempts to produce forest growth in them is therefore deemed undesirable. The existing timber growth, which in places is considerable, will, however, be maintained.

77. In East Thána the small regular plantations undertaken in several places are said to have met with a modified degree of success.

78. In Surat, in addition to the regular transplanting operations in exploited coupes, the plantation near Tithal, referred to in paragraph 130 of last year's report, was continued and towards the close of the year was largely extended, but the results of this operation belong to next year's report.

79. In the Panch Maháls an area of 60 acres was fenced with wire and sown in furrows 3 feet apart, but unfortunately the early promise of this plantation was falsified owing to the area being traversed by fire.

80. A total of 39,555 acres was treated at a cost of Rs. 1,948 under the head of "Cultural Operations" and Rs. 325 were spent on regular plantation during the year.

(3).—*Early Thinning.*

81. No such operations were carried out in this Circle.

(4).—*Other operations for the improvement of the growing Stock.*

82. Creeper cutting by forest guards was carried out as usual, but these men have so much to do that not nearly enough of this work is done and the whole establishment have their hands so full with the yearly increasing work in connection with the coupes that it is impossible to make any organized attempt to do this work with this agency. In West Thána, however, an effort was made to clear away the "bindukli" (*Loranthus longiflora*, a species of mistletoe) by paid labour from the standards reserved in the coupes. This operation cost Rs. 108.

(5).—*Experiments.*

83. The Vejálpur nursery, near Tithal in Surat, reported under this head last year (para. 130), has been transferred to plantations and noticed above. No other experiment is reported as having been tried during the year.

(d).—*EXPLOITATION OF MAJOR FOREST PRODUCE.*

84. The Thána forests continue to be worked on a system of coppice with standards with a revolution of 40 years. The reservation of standards is theoretically made to depend on the local conditions. The operation, therefore, varies from coppice with a few reserves to a fairly heavy improvement felling. It is evident that the controlling officers can do little personally in selecting reserves, but as the executive subordinates gain experience and are more and more composed of trained men, this selection of standards in accordance with local conditions will become more and more an important factor in forest working. As far as possible, the trees are sold standing under a contract for each coupe, the price being fixed in a lump sum for each coupe by public sale. Coupes for which no price, or only an inadequate one, can be obtained are worked departmentally, when local conditions require that leaf manure and wood for local consumption should be supplied. In the 284 blocks into which the forest area of the two Thána divisions is provisionally divided, 276 coupes were laid out for exploitation during the year (coupes were not laid out in the other blocks because either they are classed as "climatic" and exempted from working or because owing to settlement in progress it was thought undesirable to work them). Of these, 126 were sold in each of the two divisions, but in addition to these, 40 coupes which had remained unsold in past years in East Thána were sold and exploited. The total area brought under the axe was 8,029½ acres in East Thána and 6,450 acres in West Thána.

85. In one block only in East Thána was it found necessary to exploit the coupe departmentally.

86. In the Surat Division exploitation was limited to the Dáangs leased forests in which 11,213 cubic feet of green teak were exploited by selection felling, these forests not yet having come under organization. In the rest of the division the forests were not worked, the demand being met from revenue lands outside forests.

87. In the Panch Maháls the forests were not worked, the material required to meet the demand being obtained from lands outside forest.

(e).—*EXTRACTION AND TRANSPORT OF MAJOR FOREST PRODUCE BY LAND AND WATER.*

88. There is nothing to be added to what was recorded under this head last year.

(f).—EXPLOITATION OF MINOR FOREST PRODUCE.

(1).—*Extraction of Fodder.*

89. Wherever there was a demand the grass of the reserves was sold standing and removed by the purchasers throughout the Circle, but the demand for the cut fodder from forest is nowhere great and the whole revenue from this source was only Rs. 19,677.

(2).—*Grazing.*

90. No trustworthy statistics of cattle grazed free and on payment of fee are available, nor can be until the grazing rules are made uniformly applicable to the whole Circle. The Divisional Forest Officers of East and West Thána agree in reporting that concessions of free grazing are too freely made by village officers, and even where the rules are in force they are too liberally construed. The result is a paltry revenue of Rs. 8,979 for the whole Circle and of Rs. 4,224 only for the two Thána divisions. The value of the revenue conceded it is impossible to calculate, but the amount mentioned in paragraph 145 of last year's report is certainly not an exaggeration.

(3).—*Miscellaneous Produce.*

91. The miscellaneous products exploited for sale from the forests of the Northern Circle are of no great moment. There is a little hirda (*Terminalia chebula*) in East Thána; but the concession of the right to hirda in occupied lands makes its exploitation most difficult owing to the facilities for theft thus caused. Hirda has been hitherto collected departmentally, but this year the farm was sold.

92. There is a certain demand in Bombay for leaves of apta (*Bauhinia racemosa*) for smoking and of *Borassus flabelliformis* for thatching, and these were farmed in the two Thána divisions. The collection of moho (*Bassia latifolia*) flowers is farmed in the Surat Division and the revenue may develop, but is small at present.

CHAPTER III.

GROSS YIELD AND OUTTURN OF FOREST PRODUCE.

DEPARTMENTAL OPERATIONS.

93. Timber and firewood was worked out during the year as follows :—

No.	Division.	Year.	IN CUBIC FEET.	
			Timber.	Firewood.
1	East Thána ...	1892-93 ...	32,550	20,376
		1893-94 ...	3,351	1,106
2	West Thána ...	1892-93 ...	1,245	4,714
		1893-94 ...	2,423	9,255
3	Surat... ..	1892-93 ...	77,685
		1893-94 ...	62,523
4	Panch Mahāls ...	1892-93 ...	4,070	10,700
		1893-94 ...	3,710	11,375
Total ...		1892-93 ...	1,15,550	35,790
		1893-94 ...	72,007	21,736

94. The chief difference from last year is in Thána where it was only found necessary to work one coupe departmentally owing to the satisfactory sale of the remainder.

95. As last year an abstract of the details given in Form 59 is given below:—

No.	Division	Balance on 1st July 1893			Outturn of the year			Total of Columns 5 and 8	Disposed of during the year			Balance on 30th June 1894		
		Timber	Fire-wood	Total	Timber	Fire-wood	Total		Timber	Fire-wood	Total	Timber	Fire-wood	Total
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
		C. ft.	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.
1	East Thána				3,351	1,108	4,457	3,477	3,279	1,108	4,385	72		72
2	West Thána	1,944	2,250	3,594	2,423	9,265	11,678	15,272	1,842	11,405	13,247	1,925	100	2,025
3	Surat	3,707		3,707	62,523		66,230	66,230	44,347		44,347	21,883		21,883
4	Panbh Mahala	820	2,300	3,120	3,710	11,376	15,085	18,205	3,744	8,320	12,064	786	5,355	6,141
	Total	5,871	4,550	10,421	72,007	21,786	93,749	104,184	53,212	20,831	74,043	24,666	5,455	30,121

96. The only figure in the above calling for remark is the large balance in Surat at the close of the year which represents the stock in the Wágrech Sale Depot near Billimora, Surat District, consisting of wood brought for sale from the Dángs.

REMOVAL OF PRODUCE BY PURCHASERS.

TIMBER AND FIREWOOD.

97. The exploitation of major produce by contractors under the Thána working scheme compared with that of 1892-93 was as follows:—

No.	Division	1892-93				1893-94			
		Number	Area	Receipts	Average price per Acre	Number	Area	Receipts	Average Price per Acre
				Rs.			Rs.		
1	East Thána	85	4,711½	92,551	19.4	146	8,029½	1,89,316	23.6
2	West Thána	140	7,321½	2,62,253	35.8	124	6,450	2,69,238	41.8
	Total	225	12,032½	3,54,804	29.5	270	14,479½	4,58,554	31.7

98. The rise in the sale rate per acre in both divisions is most satisfactory, especially when it is remembered that, as recorded elsewhere in this report, more than 20 of the coupes exploited this year were coupes for which no sale could be found in past years.

99. The gross produce yield of the coupes worked is estimated by the Divisional Forest Officers as follows:—

No.	Division	TIMBER IN CUBIC FEET.		Firewood, including Charcoal, in Cubic feet
		Teak	Jungle-wood	
1	East Thána	1,061,071	530,536	2,027,885
2	West Thána	1,149,958	489,916	1,841,200
	Total, 1893-94	2,211,029	1,020,452	3,869,085
	Total, 1892-93	1,660,165	943,487	3,616,843

100. This estimate, however, does not include the small branchage and dead wood which under concession of Government are removed by the local villagers. The amount of this small wood cannot be estimated, there being absolutely no data. A guess last year put it at 600,000 cubic feet. I should think this was rather under than over the mark.

101. The timber and firewood removed by purchasers in Surat was as follows:—

Year.	Timber.	Firewood.
	Cubic ft.	Cubic ft.
1892-93....	68,690	30,739
1893-94 ...	71,634	14,822

102. The whole of this timber was practically from the Dángs, less than 5,000 cubic feet being obtained in the rest of the Division, and of this 5,000 nearly 3,000 cubic feet came from the Mándvi Range. On the other hand the bulk of the 14,822 cubic feet of firewood came from Mándvi, only about 5,000 being exploited in the Dángs.

103. In the Panch Maháls the year's working compares with that of last year as follows:—

Year.	Timber.	Firewood.
	Cubic ft.	Cubic ft.
1892-93 ...	208,068	242,281
1893-94 ...	195,245	415,696

104. As last year the timber shown as exploited is the produce of Government land outside forest.

BAMBOOS.

105. The yield of bamboos is given in the following table:—

No.	Division.	BAMBOOS REMOVED, 1892-93.				BAMBOOS REMOVED, 1893-94.			
		Cart-loads.	Head-loads.	Number.	Amount realized.	Cart-loads.	Head-loads.	Number.	Amount realized.
					Rs.				Rs.
1	East Thána ...	1,086	6,386	288,673	9,004	40	7	228,890	815
2	West Thána ...	8,655	5,525	2,027,223	12,705	7,166	2,451	2,332,893	18,127
3	Surat	1,136,155	25,354	901,558	25,474
4	Panch Maháls ...	193	...	217,272	2,899	135	...	117,051	1,484
	Total ...	9,934	11,911	3,669,323	49,972	7,341	2,458	3,579,892	45,900

MINOR PRODUCE.

106. The following comparative statement gives the yield of minor produce for the year:—

Number.	Division.	1892-93.	1893-94.
1	East Thána ...	655	2,747
2	West Thána ...	2,475	2,436
3	Surat ...	2,103	2,162
4	Panch Maháls ...	2,371	583
	Total Rs. ...	7,604	7,928

FREE GRANTS OF FOREST PRODUCE.

107. The free grants of timber, &c., made under the authority of the Commissioner during the year, as compared with those of last year, are given below :—

Number.	Division.	1892-93.			1893-94.		
		Rs.	a.	p.	Rs.	a.	p.
1	East Thána ...	378	8	0	1,618	0	0
2	West Thána ...	49	12	0	30	0	0
3	Surat ...	703	0	0	473	0	0
4	Panch Maháls...	729	4	0	836	0	0
	Total ...	1,860	8	0	2,957	0	0

108. The large increase in East Thána is probably due to a grant made to the villagers of Dughád in the Bhiwndi Range whose houses were destroyed by fire.

CHAPTER IV.

FINANCIAL RESULTS.

109. The financial results of the year under report are a record. Last year Mr. Dasái considered them satisfactory though the gross receipts and net revenue were respectively less by Rs. 2,000 and 5,000 than those of 1890-91. During 1893-94 they are greater than the figures of 1890-91 by just over and just under $1\frac{1}{2}$ lakhs of rupees respectively.

110. The following statement gives the details by main heads of revenue and expenditure for 1892-93 and 1893-94 :—

Budget Main Heads.	1892-93.			1893-94.		
	Rs.	a.	p.	Rs.	a.	p.
RECEIPTS.						
I ...	50,554	2	9	26,602	7	1
II ...	5,67,576	14	8	6,75,989	11	10
III ...	2,071	6	2	3,089	0	3
IV... ..	1,569	4	2	36,709	15	11
V ...	13,676	14	5	18,562	10	4
Total, Receipts ...	6,35,448	10	2	7,60,953	13	5
Expenditure.						
<i>A.—Conservancy and Works.</i>						
A.—I ...	7,692	5	5	17,662	1	3
A.—II ...	12,040	1	0	12,366	8	6
A.—III ...	57	7	0	103	2	11
A.—IV		
A.—V ...	16,963	4	6	15,780	9	2
A.—VI ...	1,303	12	6	490	10	9
A.—VII ...	4,136	4	1	7,327	8	0
A.—VIII ...	70,783	2	4	33,473	9	10
A.—IX ...	762	8	2	5,842	10	10
Total, A.—Conservancy and Works ...	1,14,008	13	0	98,046	13	3
<i>B.—Establishments.</i>						
B.—I ...	1,30,544	2	9	1,39,194	10	2
B.—II ...	18,889	14	1	20,522	14	7
B.—III ...	5,843	9	1	7,182	2	0
Total, B.—Establishments...	1,55,277	9	11	1,66,899	10	9
Grand Total, Expenditure...	2,69,286	6	11	2,64,946	8	0
Net Revenue ...	3,66,162	3	3	4,96,007	5	5

111. From the above it will be seen that the gross receipts are $1\frac{1}{2}$ lakhs in excess of those of 1892-93. There was a decrease of Rs. 24,000 under I.—*Departmental Working*, which was much more than balanced by an increase of over one lakh obtained by the sale of coupes to contractors (II). This is in every way satisfactory as showing the steadily increasing demand for the standing coupes at enhanced rates which renders departmental working unnecessary. There was a large fluctuation under IV.—*Revenue from forests not managed by Government*. The amount credited in 1892-93, viz. Rs. 1,569, was obtained from shares of inám forests sold in Thána. In 1893-94 there was Rs. 1,702 revenue from this source in Thána, and the Government share of 3 inám villages in the Panch Maháls, of which the forests were sold during the year, amounted to Rs. 35,000.

112. The total expenditure shows a decrease of rather more than Rs. 4,000 over that of 1892-93. This, however, is made up of a decrease of nearly Rs. 16,000 under A.—*Conservancy*, and an increase of Rs. 11,600 under B.—*Establishments*. This increase is due chiefly to the pay of Mr. Duxbury who was attached to this Circle during the year, to promotions, &c.

113. The decrease under A, however, is more complicated. It is composed mainly of (1) an increase of Rs. 10,000 expenditure under A. I.—*Departmental Working* debited in the Surat Division during the year though belonging to 1892-93; (2) an increase of Rs. 5,000 due to Law Charges in West Thána (sanctioned in Government Resolution No. 8211, dated 10th November 1893), and (3) expenses on account of uniforms belonging to 1892-93, but debited during the year under report. This increase is more than balanced by a decrease of over Rs. 30,000 under A. VIII.—*Organization, Improvements, &c.* This decrease, however, is mainly due to the inflation of the expenditure under this head in 1892-93 on account of payments for Land Compensation in connection with the catchment area of the Tánsa Lake.

114. The following statement gives the financial results of the Northern Circle as now constituted for the past 10 years :—

	Receipts.	Expenditure.			Net Revenue.
		A.	B.	Total.	
	Rs.	Rs.	Rs.	Rs.	Rs.
1883-84...	4,83,560	1,00,631	65,392	1,66,023	3,17,537
1884-85...	4,98,329	1,78,621	80,624	2,59,245	2,33,925
1885-86...	5,25,484	76,742	1,42,953	2,09,695	3,15,789
1886-87...	4,43,157	89,724	1,44,507	2,34,231	2,08,926
1887-88...	4,73,104	85,645	1,45,407	2,31,052	2,42,052
1888-89...	5,78,425	88,924	1,47,364	2,36,288	3,42,137
1889-90...	5,96,066	93,419	1,45,341	2,38,760	3,57,306
1890-91...	6,37,408	1,04,809	1,39,880	2,44,689	3,92,719
1891-92...	6,14,270	93,399	1,30,089	2,23,488	3,90,782
1892-93...	6,82,884	1,38,639	1,96,486	3,35,125	3,47,759
1893-94...	7,60,953	98,047	1,66,899	2,64,946	4,96,007

Note.—The figures for the years 1883-84 to 1891-92 inclusive are for the financial year from 1st April to 31st March and those for 1892-93 and 1893-94 are for the forest year from 1st July to 30th June.

CHAPTER V.

FOREST ADMINISTRATION.

ADMINISTRATIVE CHARGE.

115. Mr. F. R. Dasái, Deputy Conservator of Forests, was in charge of the Circle practically for the whole year under report. He was relieved by under-signed on the 28th April 1894.

CONTROLLING CHARGES.

116. There was no change in the divisional charges during the year.

117. The various divisions were held by officers as follows :—

No.	Division.	Name of Officer.	Rank.	Designation.	Period of holding charge.	
					From	To
1	East Thána ...	C. Greatheed ...	Deputy Conservator of Forests, 3rd Grade.	Divisional Forest Officer.	1st July 1893	30th June 1894.
2	West Thána ..	G. P. Millett ...	Do. do. 4th Grade.	Do. ...	Do. ...	10th April 1894.
		T. B. Fry ...	Do. do. 2nd Grade.	Do. ...	11th April 1894	9th May 1894.
		G. P. Millett ...	Do. do. 4th Grade.	Do. ...	10th May 1894	30th June 1894.
3	Surat ...	W. A. Wallinger ..	Extra Assistant Conservator of Forests, 2nd Grade.	Do. ...	1st July 1893	Do.
4	Panch Mahals.	W. F. D. Fisher ...	Assistant Conservator of Forests, 2nd Grade.	Do. ...	Do. ...	4th September 1893.
		A. N. Master ...	Extra Assistant Conservator of Forests, 4th Grade.	Do. ...	5th September 1893.	5th October 1893.
		W. F. D. Fisher ...	Assistant Conservator of Forests, 2nd Grade.	Do. ...	6th October 1893	12th February 1894.
		F. R. Dasí... ..	Deputy Conservator of Forests, 1st Grade.	Do. ...	18th February 1894	28th February 1894.
		A. N. Master ...	Extra Assistant Conservator of Forests, 4th Grade.	Do. ...	1st March 1894	12th April 1894.
		W. F. D. Fisher ...	Assistant Conservator of Forests, 2nd Grade.	Do. ...	13th April 1894	30th June 1894.
5	Working Plans.	T. B. Fry ...	Deputy Conservator of Forests, 2nd Grade.	Do. ...	1st July 1893	4th August 1893.
		G. P. Millett ...	Do. do. 4th Grade.	Do. ...	5th August 1893	4th November 1893.
		T. B. Fry ...	Do. do. 2nd Grade.	Do. ...	5th November 1893.	9th May 1894.
		G. P. Millett ..	Do. do. 4th Grade.	Do. ...	10th May 1894	30th June 1894.

118. The following officers held charge of the sub-divisions during the year :—

No.	Division.	Name of Officer.	Rank.	Designation.	Period of holding Charge.	
					From	To
1	East Thána ...	A. N. Master ...	Extra Assistant Conservator of Forests, 4th Grade.	Shahápur Sub-Division Forest Officer.	1st July 1893	2nd September 1893.
		K. B. Phadke ...	Do. do. ...	Do. ...	3rd September 1893.	8th October 1893.
		A. N. Master ...	Do. do. ...	Do. ...	9th October 1893	26th February 1894.
		C. Greatheed ...	Deputy Conservator of Forests, 3rd Grade.	Do. ...	27th February 1894.	16th April 1894.
		A. N. Master ...	Extra Assistant Conservator of Forests, 4th Grade.	Do. ...	17th April 1894	30th June 1894.
		K. B. Phadke ...	Do. do. ...	Kalyán Sub-Division Forest Officer.	1st July 1893	8th May 1894.
2	West Thána ...	A. N. Master ...	Do. do. ...	Do. ...	9th May 1894	30th June 1894.
		V. D. P. Ribeiro...	Do. do. ...	Bassein Sub-Division Forest Officer.	1st July 1893	16th September 1893.
		Shaikh Hassan Allí Mahomed Allí.	Acting do. do. ...	Do. ...	17th September 1893.	16th November 1893.
		V. D. P. Ribeiro ...	Extra do. do. ...	Do. ...	17th November 1893.	30th June 1894.
3	Surat ...	C. G. Dalia ...	Acting do. do. ...	Surat Sub-Division Forest Officer.	1st July 1893	16th January 1894.
		W. A. Wallinger ...	Extra Assistant Conservator of Forests, 2nd Grade.	Do. ...	17th January 1894	16th February 1894.
		C. G. Dalia... ..	Acting do. do., 4th Grade.	Do. ...	17th February 1894.	30th June 1894.

119. Mr. G. R. Duxbury, Assistant Conservator of Forests, a new recruit from Cooper's Hill, was posted to this Circle and was attached to the Circle office from 29th November to 2nd January 1894. From 3rd January he was placed under Mr. Millet, Divisional Forest Officer, West Thána, where he continued up to 4th June 1894, when he was transferred to the Central Circle.

GENERAL REMARKS.

120. Both the Thána Divisional Forest Officers report extensive clearing of the land by occupants put into possession of the junglewood trees growing on their numbers. Mr. Silcock takes a hopeful view in his memorandum sending on the East Thána report which I hope may prove well founded; my own experience leads me to a much less sanguine view.

121. The following are the minutes recorded by the various Collectors in forwarding the forest administration reports of their districts :—

(1) Mr. Silcock's minutes on the West Thána report :

“ Mr. Millet has written an interesting report showing a record of good work during the year, but as undersigned is quite new to this district and the forest management therein, he is unable to criticise it in detail.

"2. It is satisfactory to find that the revenue is steadily increasing, while there is little or no friction with the people. It would be advisable, therefore, to somewhat increase the protective establishment, which is very heavily worked at present. The revenue can well afford a larger expenditure.

"3. From what undersigned has seen of the magisterial work of this district in connection with forest cases, and he has examined a large number since his arrival, he can hardly agree with Mr. Millett that failures of justice often occur. Mr. Millett naturally views all cases from the prosecutor's point of view, and hence his conclusion. The mere fact too that because certain people were willing to compound offences, it is proof positive that they had committed them is not a safe theory, as many will pay money to get off the inconvenience and expense of a prosecution even though they may be innocent.

"4. As regards the traffic in dead wood, notice has been issued that it must cease in the Salsette Taluka from November 1st. The experience gained in this taluka will be useful when considering the advisability of issuing a similar prohibition in other talukas. At present it might be a dangerous experiment to suddenly stop the trade in the whole district, and to make the prohibition effective would possibly require a considerable increase not only to the protective but also to the magisterial establishments of the district, and it is therefore better to proceed slowly.

"5. It is unfortunate that extensive fires in Bassein and Máhim should have occurred to spoil the fire record for the year, but deliberate incendiarism is very hard to prevent or detect; and as it appears very probable that these fires were owing to a revengeful spirit, they may be considered exceptional and that as a rule fire protection has been fairly satisfactory.

"6. As regards the extension of the grazing rules to the whole of the Division as recommended by the Divisional Forest Officer in paragraph 52 of his report, undersigned sees no reason why this should not be done; but he finds from this office records that for some reason unknown it was arranged that the rules were only to be introduced as an experiment in three talukas until the revision survey operations were concluded. How the revision survey can practically affect forest areas he does not understand, but he is not prepared to recommend the reversal of previous orders until he has had a more extended knowledge of the district and more especially until he sees how the rules have worked in the Kalyán and Bhiwandi Talukas of the East Thána Division. The amount of fees collected in West Thána is comparatively trifling and shows a great decrease on the previous year's figures, and in Bassein itself the decrease is equally marked."

(2). Mr. Silcock remarks on the East Thána Divisional Forest Officer's report:—

"It is satisfactory to find that in this Division as well as in West Thána the forest revenue is steadily increasing and it should be possible now to increase the protective staff, as this seems badly wanted judging from the remarks of the Divisional Forest Officer in the 15th and following paras. of his report,

"2. While it is a matter of regret that there should have been such a wholesale exploitation by the cultivators of their injáili woods it was a natural result of their getting possession of them for the first time, but there is no reason to think that now they have got used to the idea of ownership they will go on with reckless cuttings to their own eventual loss.

"3. There has been a marked increase in forest offences during the year, which is not a very satisfactory feature, the number of undetected offences being especially large, fires too show a great increase; but it is not understood how the occurrence of fires can have been affected by the Government Resolution on the Forest Report for 1890-91. That the villagers are of themselves prompt in turning out to extinguish fires is somewhat satisfactory; possibly in time they will see it is to their advantage to prevent them altogether.

"4. As regards grazing, it is not understood whether the whole Division is dealt with or only the talukas (two it is believed) in which the grazing rules are in force, and it would have been better had this been clearly shown. It would then have been possible to judge of the advisability of introducing the rules into the whole Division. It should not be impossible to carry out the test laid down in Rule XIII when anything wrong is suspected. It is not at all necessary that it should be done continuously and the time spent could not interfere much with the other forest duties while it might result in a considerable gain to Government. At present the revenue derived from "Grazing Fees" is very small for such a large Division.

"5. Mr. Greathead has evidently been active in his movements during the year and has exercised considerable supervision over his subordinates. His report is clear and concise, but a little more with advantage might have been said regarding the use or abuse of privileges in forests."

(3). Mr. Lely, Collector of Surat, remarks on the Divisional report of the Forest Officer, Surat:—

"It is satisfactory that gradual progress is being made in demarcating the forests by cairns and to a certain extent by wire fencing. It is due to the rayats that the limits beyond which trespass should be clearly defined.

"There has been a considerable expenditure on roads and buildings in the Dángs, but scarcely any in the Surat District.

"Prosecutions and compoundings under Section 67 have been, as Mr. Wallinger says, insignificant. The case in which the late Pátel of Tarsada is alleged to have been inadequately punished was not brought at the time to the notice of the District Magistrate. The proceedings have now been sent for. It appears however from the criminal calendar file that the fine inflicted was not Rs. 5 but Rs. 25.

"The chief trouble in this district is the frequency of fires. With the heavy destruction in the Dángs the undersigned is not specially concerned, but 11,491 acres burnt over in Mándvi out of a total reserved area of 41,164 acres cannot be considered "satisfactory." It is difficult to suggest a remedy that will at once be effective, but this much may at least be said that an essential preliminary is an increase in the protective establishment. This subject has been treated at length in this office No. 3398 of 10th Instant to the address of the Commissioner, Northern Division.

"Another means of stimulating the zeal of subordinates would be to authorize the Divisional Officer to give small rewards for special service. This system is found necessary in the police, and would be still more appropriate to a body of men who have to work hard at a distance from their homes under the depressing influences of isolation and bad climate. The personal recognition involved in a present of a rupee or two for some special merit would often encourage a man as much as a promotion which is not always possible. It would probably do much to improve the present low tone of the subordinate grades.

"The number of animals impounded shows a considerable increase but is not excessive.

"With regard to the proposed depôt at Surat, referred to in Mr. Wallinger's 69th paragraph, the undersigned was less anxious to see it established when it appeared by working out the figures that it would be impossible to supply firewood through it to the city of Surat so cheap as by private agency. As pointed out however by Mr. Wallinger, it would be a most valuable basis of operations for the forest timber trade and on this ground alone it is a pity that the Military authorities have raised exaggerated objections. Perhaps the matter may yet be reconsidered.

"With reference to the Divisional Officer's paragraph 76 there seems to have been some misunderstanding. The intention of the Collector is and always has been that the Forest Department as owner of toddy trees within their limits should levy a rent of one rupee per tree provided the lessee was a cultivator of the land or a licensed toddy retailer. The charges under the A'bkári Act would still remain to be collected. This arrangement is in accordance with the law and, in fact, is the only one practicable.

"The revenue returns are satisfactory, and on the whole the forest administration of the district has been successful."

(4). Mr. Cumine, Political Agent, Khándesh, remarks on the Administration Report of the Surat Division:—

"The part of it that concerns me is the part about the Dángs. I have not yet been in the Dángs at all. But from what Mr. Wallinger says it is evident that if the Dáng forests are to be conserved at all, more money must be spent on them. It is true that Mr. Wallinger on his part has, with the little money he had, done his best for us in the way of buildings and roads, though of course no real road could possibly be constructed, 16 miles in length, for Rs. 823. But I was not thinking of roads and buildings, nor of the money at Mr. Wallinger's command. I was thinking of increased establishment, of better paid establishment, of better protection from fire and cattle. If practically the whole area of Dáng forest is burnt over every year, as Mr. Wallinger says, and if forest fires really destroy seedlings to the extent that they are supposed to do, then the total destruction of the Dáng forests is only a question of time and not a very long time unless Government spend more money to try and prevent it. I cannot agree possibly because I do not know the Dángs—with what Mr. Wallinger says as to the good that would result to the Dáng people and the community generally from withdrawing most of the privileges at present allowed to the people. But with this exception all that Mr. Wallinger says about the Dángs is to be received with consideration as coming from one who has evidently devoted a deal of time and attention to that little-known country."

(5). Remarks on the Administration Report of the Panch Maháls Division:—

"If the forests of the Panch Maháls are not to be worked for many years to come, it is not understood why the Working Plans Officer should be hurried up here. Mr. Fisher says

this officer will be able to have his plans cut and dry, but it is just possible they may become unduly dried before they can be brought into operation with any advantage to the district.

"No doubt the demand for wood is steadily increasing; but judging from what he has seen of the jungles of the neighbouring States and the forest growth on waste lands in this district, it will, the undersigned thinks, be many a long year before the reserved forests of the Panch Mahals are called upon to supply the wants of the timber trade. In the meantime there seems no necessity to expose more Europeans to the climate which Mr. Fisher not unjustly describes as 'deadly.'

"Mr. Fisher suffered much in health and could not get on with the demarcation work satisfactorily. He should have had the services of a native assistant."

"Little information of any value or importance can be gathered from the comparative statement of forest offences, and the Collector doubts the explanations which Mr. Fisher gallantly attempts. The same remark applies to forest fires. The forest administration here has not as yet reached such a state of perfection as to render comparisons of this kind instructive.

"The grazing rules are, strictly speaking, not applicable to the Panch Mahals forests which are not yet being worked. One-third of the whole area is supposed to be closed and on the maps the closures look perfect enough; but in practice these closures have resulted in little or no benefit to the forests and inconsiderable annoyance to the people whose cattle have been freely impounded in places. The fact of the matter is the Panch Mahals forests (for the most part) do not suffer in the least from being open to grazing, and little or no difference is observable between the condition of the closed and that of the unclosed tracts. More than four times the number of buffaloes and twice the number of cows and bullocks were impounded this year, while the number of impounded goats—the real mischief workers—only slightly increased. The amount of discontent caused throughout the country-side can be gauged by a consideration of these figures, while the advantage to the forests can be aptly represented by the figure 0.

"Government in the Public Works Department have pronounced most positively and emphatically against the use of barbed wire (*vide* Resolution No. 195 C. W.—802, Public Works Department, of 29th May 1893), but the Forest Department here uses no other and Mr. Fisher, not without reason, strongly upholds its use. Goats have little regard for wire of any other sort.

"Into the technical part of Mr. Fisher's report it is not for the Collector to go, but he notes that, as usual miscellaneous items of land revenue tend to swell the nominal forest income.

"The financial results show the large surplus of Rs. 31,255-10-6, due chiefly to an important sale effected by the Deputy Conservator while on tour in this district.

"Mr. Fisher was as usual devoted to duty and has proved himself an able, energetic, and observant Forest officer. Although in common with all the European officers he suffered severely in health, he managed to make an extensive tour, and his keen interest in his duties and zeal for the good of his Department continued unabated throughout the year.

"The Collector viewed his transfer from this district with regret."

122. Mr. Dasji records the following memorandum of his tour of inspection:—

"It having been brought to my notice that better prices would be obtained at the annual sales of timber and other forest produce if they were confirmed on the dates advertised for receiving tenders and holding auctions, I went early in August to Thána and to Surat in September for the purpose of being on the spot to accept the most desirable offers.

"(2). I commenced my cold weather tour on the 5th November and went to Thána to be present at a meeting called at the instance of the Collector to discuss the working of the orders recently issued by Government regarding the disposal of reserved trees in varkas lands.

"(3). Leaving Thána on the 12th, I marched through a part of the Kalyán Range inspecting timber and cultural operations and reached Murbád on the 26th. At this camp I met Mr. Greathead, Divisional Forest Officer, East Thána, with whom some coupes in the neighbourhood were visited, as well as general questions of forest administration pertaining to his division were discussed. Mr. Duxbury, Assistant Conservator of Forests, a new recruit from Cooper's Hill, reported himself for duty on the evening of the 29th, and taking him with me I passed rapidly through the Shahápur and Khardi Ranges, inspecting the forests and depôts met with on the way and reached Kására on the Thal Ghát on the 8th December.

"(4). From the 10th to the 16th my camp was in the Mokháda Range. The office and heavy baggage were sent to Surya Mal by road *via* Khardi and Párali, when I reached this place after visiting Vehigaum, Khódalla, Koshimshet and Mokháda. A more careful inspection of the forests in this Range than I was able to make last season has convinced me that the Thána Working Plan is inapplicable to them and will have to be modified.

Until there are greater facilities for export, it must be altered to suit local conditions. During this visit I also satisfied myself that the proposal to construct a road from Mor-khadak in the Mokháda Petha to Trimbak in the Násik Collectorate will not benefit the forests at all as the line which it is to take will not tap any of the forests. An application, purporting to come from occupants, having roused my suspicions that it was not made in good faith, I took the opportunity of being on the spot to impress on the Revenue and Forest subordinates the necessity of keeping a sharp watch on the felling of reserved trees in varkas lands as I presume it is not the intention of Government that not over-scrupulous contractors on the Násik border should take undue advantage of their bounty to the rayats and enrich themselves at the expense of the State.

"(5). Camp moved to Váda on the 18th to Manor on the 20th, and reached Pálghar Station on the B. B. & C. I. Railway on the 22nd December.

"(6). After the Christmas vacation the office opened at Godhra in the Panch Maháls District, to which place it had gone by Railway in the meanwhile, and I marched through the forests of this Range and reached Jhálod on the 15th January. Here the Mahálkari brought to my notice that the sale depôt was inconveniently situated, and in his company I selected another site which is within municipal limits and consequently is more easy of access to the people than the old one, which is half a mile outside of the town. Camp moved to Gultora on the 19th where Mr. Fisher, Divisional Forest Officer, joined me. On the 23rd, ordering the camp to march to Himala in Dohad Táluka, I went to Limbdi to see the Collector of the Panch Maháls, Dr. J. Pollen, to discuss the forest business of the Collectorate and especially to come to an understanding in the matter of the disposal of teak trees in the inám lands of Khotada, Khamda, and Salya, in which Government is a co-sharer. The controversy had been of long standing and was intricate owing to the inámdárs having mortgaged their share to an influential Bohora in Godhra, and it was proposed that the Government share should also be sold to him for Rs. 20,000. On my advising the Collector that this price should not be accepted as I considered it inadequate, he left me to settle the matter at my discretion. Immediately on reaching Dohad, therefore, I called the inámdárs concerned and the mortgagee before me. The latter naturally held out as long as he could to his first offer of Rs. 20,000, but as I was quite confident that the Government share was at least worth Rs. 35,000, I stood firm and ultimately succeeded in getting him to agree to pay that price.

"(7). After seeing this business through, Mr. Fisher conducted me over the firewood felling operations which were in progress in the vicinity of Dohad in connection with the construction of the Godhra-Rutlam Railway, and as we were going to separate, he was seized with a persistent attack of fever. The Civil Surgeon having advised immediate change, I attached the Divisional Office to my own and allowed Mr. Fisher to proceed on a month's privilege leave to Bombay. With the two offices I then passed through the Kálol and Hálol Tálukas, reaching Kim in the Surat Division on the 27th February.

"(8). Unfortunately, at the very next camp, Úsked, on my way to Mándvi, I myself was prostrated by influenza, and as the attack did not appear to be a mild one, I went into Surat on the 9th March and was under medical treatment till the 16th March. Leaving Surat in a native boat on the following day I travelled by sea to Wagrech, arriving at this depôt on the 19th.

"(9). After the Easter vacation the office opened at Balsár and on the 28th I assisted the Divisional Forest Officer at the auction sale of the Dáng timber stored at the Wagrech depôt. Mr. Wallinger accompanied me back to Balsár and stayed with me the two following days for the purpose of conferring on the Dáng timber operations, the establishment of a nursery at Lilápur and other forest questions affecting his Division.

"(10). A relapse of the influenza having come on, I was not able to leave Balsár till the 12th March, on which date I received a letter from the Private Secretary to His Excellency the Governor that Mr. Wroughton had been appointed to the Northern Circle and would relieve me on return from furlough. Consequently I had to give up my intention of passing a fortnight in the Dángs and to keep along the railway line in the Umbargaon and Dáhanu Ranges, so as to reach head-quarters on or about the date of his expected arrival."

123. I took over charge of the Circle from Mr. Dasái on the 27th April at Báandra, and the office from that date remained at head-quarters. The offices of the East and West Thána, Working Plans, and Surat Divisions were, however, inspected in the interval before the close of the year.

124. It will be seen that each of the Collectors recognizes the good work done by the Divisional officer whose work has come under his notice. Mr. Dasái wishes special mention to be made of the good work done by Messrs. Millett and Wallinger.

125. All the extra Assistants are reported to have worked well. Mr. Phadke, however, has suffered considerably from fever, thus detracting from his efficiency.

126. During the year 3 Range Forest Officers retired from Government service on pension earned by long periods of approved service, *viz.* :—

Shekh Abas Shekh Alli Potrik, Ranger, Rs. 100, after 30 years' service, at the age of 60.

Wallabhram Mulji Bhat, Ranger, Rs. 50, on completing 30 years' service.

Bholanath Ranchordas, invalided after 27 years' service.

127. On the whole the Range Forest Officers have worked well during the year : the following are specially mentioned in the Divisional reports :—

1. Hasan Alli Mahomed Alli.
2. Mancharji Byramji.
3. Shekh Ahmed Nur Mahomed.
4. Sadashiv Pandurang Limaye.
5. Hari Anant Bhadbhade.
6. Ganesh Ramchandra Samant.
7. Shekh Usman Shekh Idrus.

128. In addition to the 2 men convicted of penal offences as mentioned in paragraphs 70 and 71, 15 Forest guards were dismissed during the year ; the reasons assigned being overstaying leave and general misconduct.

129. The Divisional office establishments are also reported to have worked well as has that of the Deputy Conservator under Mr. Shivram Bhikaji Rangnekar.

130. The mortality amongst the guards was rather heavier than last year. Twenty men are reported as having died in Thána and the Panch Maháls, of whom 3 died of cholera and 1 of snake-bite in East Thána, and 1 in East Thána and 7 each in West Thána and the Panch Maháls of fever. No deaths are reported from the Surat Division.

R. C. WROUGHTON,
Deputy Conservator of Forests, N. C.

Bandra, 15th October 1894.

R. C. WROUGHTON,
Deputy Conservator of Forests, Northern Circle.

REVENUE DEPARTMENT.

Ahmedabad, 24th December 1894.

Forwarded.

2. There were hardly any changes in the personnel of the forest administration, except that at the very end of the official year, Mr. Wroughton took over charge from Mr. Dasai. He has therefore had to write the account of Mr. Dasai's administration.

3. As shown in paragraphs 8 and 9, the area of reserved forest has been increased by the addition of 72.3 square miles and 114.6 square miles transferred from protected forest in the West Thána Division and the Panch Maháls and 7.1 square miles in East Thána.

4. Forest settlements have been carried on during the year. The statements in paragraphs 20 and 26 show that the work remaining is all in Thána, about one-half the area in West Thána, and a great deal more than half in East Thána still remains to be done. The area settled this year is only 252 square miles as compared to 364 of last year, while the cost per square mile has risen considerably from Rs. 55-14 to Rs. 77. No explanation of this is given.

5. No details are given this year of the work of the Forest Survey Party of the Government of India.

6. The statement (paragraph 33) gives a very clear view of the work of the Working Plans Officer, and is an improvement on the form adopted last year. The number of blocks in several of the ranges varies slightly, and the total number is 284 against the 282 of last year. Váda is now shown in the Eastern Division and the Talesri Mahál in the Western Division. The outturn of work was not bad, considering that Mr. Fry did not commence work in the Northern Circle till after Christmas. It is to be hoped that now that so much more of the area has been settled, there will be a marked improvement in the work of laying out advance coupes. There is no forecast of the time required to finish this work.

7. The Commissioner is of the same opinion as last year that the increase in forest revenue well justifies some increase in the protective establishment. Proposals for Surat and the Panch Maháls will shortly be submitted. It will be seen that all the Collectors of forest districts are agreed on the necessity for an increase in pay and numbers.

8. The breaches of forest law call for little notice. The number of offences is not at all high for so extended an area. The offences compounded under Section 67 only amounted to 244, and out of this in 170 cases compensation did not exceed Rs. 2. Fire protection has been very fair in Thána. The Panch Maháls show a decided increase in forest fires. In Surat though there is perhaps no increase, still Mr. Lely's remarks at page 22 deserve notice. The forest fires in Mándvi cannot be put down without a larger protective establishment. The satisfactory feature of the case is that the improvement in fire conservancy is marked in the really valuable forests of Thána.

9. The Commissioner agrees with Mr. Wroughton that the total number of cattle impounded is not large; but it is a question whether very much harm is done by grazing in a district like the Panch Maháls, where at any rate up to the present time the value of the forests is not very great.

10. Fencing ought certainly to be used more largely if funds admit, especially in the small and important grass plantations of which some exist in Surat.

11. Only two forest guards were tried and punished. This is decidedly satisfactory. From the further details in paragraph 128 it seems that the conduct of the forest guards was as good as can be expected for the pay they get; but the Deputy Conservator has made no remarks on the subject.

12. The amount of timber and firewood worked out by departmental operations is very small as compared to that removed by contractors, and so far as timber is concerned, is confined almost to Surat. In Thána, as explained at paragraph 84 of the Deputy Conservator's report, the coupe system is working well. It is satisfactory to notice that 40 of the less accessible coupes in Eastern Thána have been sold this year; and the statement at paragraph 97 shows a general improvement in the number of coupes sold, an increase of a lách of rupees in price, and a rise in the sale rate.

13. The very small sums—Rs. 8,979 and 7,928—realized from grazing and minor forest produce is in itself a proof that the working of the forests in this Circle is conducted with but little interference with the people. There is little to take away from the satisfaction with which the Deputy Conservator reports a record year both in gross receipts and in net revenue. It will be noticed that the net revenue which has as yet never reached four láchs, has now only Rs. 4,000 short of five. The figures of receipts and expenditure given in paragraphs 110 and 114 do not agree, apparently because those for 1892-93 in the former are for the forest year beginning with 1st July and ending with 30th June, while those in paragraph 114 for the same year included the period from 1st April 1892 to 30th June 1893. The concluding part of the footnote below the table in the latter paragraph does not correctly state the facts.

14. The extracts from the Collectors' reports do not raise many important points. It is satisfactory to note that the excellent feeling between the revenue and forest officers continues to prevail. Mr. Sinclair's retirement is an important fact in the history of Thána forestry; but the excellent work that he has done will live after him. Mr. Lely's proposals for small rewards to subordinates for special service is worth considering. Mr. Silcock in paragraph 4 of his West Thána report notices the steps taken to stop the traffic in dead wood from the 1st November 1894. This is an important point, but of course it does not come within the year 1893-94 and is therefore not noticed by Mr. Wroughton.

15. This report is silent on the subject of apportioning portions of forest for fuel and fodder reserves and for grass lands. But a good deal has been done in this direction in Surat since the close of 1893-94.

16. Mr. Dasai managed his circle very well during the year, and the Commissioner believes that his commendation of Messrs. Millett and Wallinger is well deserved.

17. A memorandum showing certain discrepancies in the report is appended.

G. B. REID,
Commissioner, N. D.

Discrepancies in the Report.

Para. 26.—The area settled is shown in the table as 1,626,389 square miles, whereas in Form 47, 1,269 square miles are entered.

Para. 27.—The figures in column 6 do not agree with those in columns 9 and 10 of Form 48. In the former, Rs. 3,738 are entered, whereas in the latter Rs. 2,910.

G. B. REID,
Commissioner, N. D.

CENTRAL CIRCLE.

No. 5138 of 1894-95.

FROM

THE HONOURABLE MR. A. T. SHUTTLEWORTH,
Conservator of Forests, Central Circle ;

TO

THE CHIEF SECRETARY TO GOVERNMENT,
Revenue Department,
Bombay.

*Camp Poona,
Dated 29th December 1894.*

SIR,

I have the honour to submit herewith the Forest Administration Report of the Central Circle for the forest year 1893-94, together with its prescribed subsidiary statements.

I have the honour to be,

Sir,

Your most obedient Servant,

A. T. SHUTTLEWORTH,
Conservator of Forests, Central Circle.

THROUGH THE COMMISSIONER, CENTRAL DIVISION.

INDEX.

FOREST ADMINISTRATION REPORT, CENTRAL CIRCLE, FOR 1893-94.

Chapter.	Subject.	Paras.
	INTRODUCTION	1—13
I.	EXTENSION AND CONSTITUTION OF STATE FORESTS—	
	(i) Alteration of Area	14—23
	(ii) Forest Settlements	24—36
	(iii) Demarcation	37—44
	(iv) Surveys	45—51
II.	MANAGEMENT OF STATE FORESTS—	
	I.—Regulation of Management—

	(b). Annual Plans of Operations	61
	II.—Working of the year—	
	(a). Communications and Buildings	62—64
	(b). Protection of Forests from Injury—	
	(1). General Protection and Breaches of Forest Law... ..	65—76
	(2). Protection from Fire	77—87
	(3). Regulation of Grazing and protection from Cattle... ..	88—102
	(c). Improvement of Forest Growth—	
	(1). Natural Reproduction	103—110
	(2). Artificial Reproduction	111—119
	(3). Early Thinnings	120
	(4). Other Operations for the improvement of the growing Stock	121—126
	(5). Experiments	127
	(6). Fencing	128
	(d). Exploitation of Major Forest Produce—	
	(1). Clear or Regeneration Fellings	129—134
	(2). Selection Fellings	135—136
	(3). Improvement Fellings	137—144
	(4). Coppice Fellings	
	(5). Unregulated fellings	145—146
	(e). Extraction and transport of Major Forest Produce by Land and Water	147
	(f). Exploitation of Minor Forest Produce—	
	(1). Extraction of Fodder	148
	(2). Grazing	149—160
	(3). Miscellaneous produce	161—164
III.	GROSS YIELD AND OUTTURN OF FOREST PRODUCE—	
	I.—Departmental Operations	165—170
	II.—Removal of Produce by Purchasers	171—182
	III.—Free Grants of Forest Produce... ..	183
	IV.—Produce removed by Right-holders and under Privileges.	184—186
	V.—Summary of Produce removed from the Forests	187
IV.	FINANCIAL RESULTS	188—205
V.	FOREST ADMINISTRATION	206—228
	General Remarks	229—235
	Forms Nos. 46 to 65

**FOREST ADMINISTRATION REPORT OF THE CENTRAL CIRCLE,
BOMBAY PRESIDENCY, FOR THE FOREST YEAR 1893-94.**

INTRODUCTION.

The constitution of the Central Circle has remained unchanged throughout the year: it contains 6 districts, *viz.*, Khándesh, Násik, Ahmednagar, Poona, Sátára and Sholápur; Khándesh being a very large district with wide stretching forests is divided into two forest divisions.

2. The area of country included within the Circle comprises 38,390 square miles, while the forest area at the commencement of the year stood at 5,913 square miles and 379 acres, and at the close of the year at 6,157 square miles and 352 acres.

3. The selection of lands for forest reservation has been completed in all the districts; and the settlement of the forests according to the prescriptions of the Indian Forest Act No. VII of 1878 has been accomplished, with the exception of 158 square miles and 314 acres of provisionally notified forest or waste lands which were still undergoing settlement when the year closed.

4. No necessity for granting new privileges in the forests has appeared during the year.

5. The administrative staff for directing and controlling operations consisted of 1 Conservator and 7 Divisional Forest Officers who are Deputy or Assistant or Extra Assistant Conservators according to their respective ranks in the Indian Forest Service or in the Provincial Forest Service when the year opened; and to this number a Divisional Forest Officer of Working Plans has been added during the year.

6. The demarcation of forest boundaries on the ground by the building of special forest boundary marks to be the outward visible sign of forest reservations has covered 1,030 linear miles with 21,592 pillars erected at a cost of Rs. 8,411, during the year.

7. The Forest Surveys have surveyed and mapped 186.26 square miles; on the 16", 65.01 square miles, on the 8", 112.65, and on the 4", 8.6 square miles scale respectively, at a total cost of Rs. 28,289 during the year.

8. The number of offence cases prosecuted during the year amounted to 1,437 against 1,402 of the previous year; while 926 cases were compounded under Section 67 of the Forest Act against 9,647 cases during 1892-93.

9. 294,769 head of cattle, consisting of 127,706 oxen, 13,099 buffaloes, 55 camels, 949 horses, 373 asses and 152,587 sheep and goats, were impounded for grazing illicitly in the forests during the year: the total shows a decrease when compared with the number impounded during the corresponding months of the preceding year. On the other hand, fee and free-grazing permits have been taken out by cattle owners for a larger number of animals than before. These results point to the grazing rules being better understood and appreciated by the people.

10. Fire conservancy has received continued and careful attention, and a very much smaller forest area has been traversed by fire this year than last. Forest guards have been vigilant and forest villagers have rendered willing and valuable assistance in attacking and extinguishing fires.

11. Reproduction, natural and artificial, has progressed satisfactorily as the rainfall of the year was seasonable and the protection of the forests against external dangers, save from cattle in the more exposed parts, has been effective.

12. The financial results are very good as the net revenue of the year has amounted to Rs. 3,01,039 against Rs. 2,35,503 of the year before, which represented 15 months.

13. The Honourable Mr. A. T. Shuttleworth, Conservator of Forests, First Grade, was in charge of the Central Circle throughout the year, and the names and rank of the principal Forest officer of each division during the period of this report are given below:—

No.	Division.	Name of Officer.	Rank.	Designation.	From	To	REMARKS.
1	East Khândesh ...	Mr. R. H. Mâdan ...	Extra Assistant Conservator, 1st Grade.	Divisional Forest Officer.	1st July 1893...	30th June 1894.	
		Mr. E. G. Oliver ...	Deputy Conservator, 4th Grade.	Do. ...	Do. ...	15th Nov. 1893.	
		" H. W. Keys ...	Do. do. ...	Do. ...	16th Nov. 1893...	30th June 1894.	
		" B. H. Dalal ...	Sub. <i>pro-tem.</i> Extra Assistant Conservator, 2nd Grade.	Sub-Division Forest Officer.	1st July 1893...	10th Jan. 1894.	
2	West Khândesh	" H. W. Keys ...	Deputy Conservator, 4th Grade.	Do. ...	11th Jan. 1894...	11th Feb. 1894.	
		" B. H. Dalal ...	Sub. <i>pro-tem.</i> Extra Assistant Conservator, 2nd Grade.	Do. ...	12th Feb. 1894 ..	10th April 1894.	
		" V. G. Tumné ...	Acting do. 4th Grade.	Do. ...	11th April 1894...	30th June 1894.	
		Mr. W. G. Bethan ...	Deputy Conservator, 2nd Grade.	Divisional Forest Officer.	1st July 1893...	13th April 1894.	
3	Nâsik ...	" L. S. Osmaston ...	Acting do. 4th Grade.	Do. ...	14th April 1894...	1st May 1894.	
		" F. B. Dasai ...	Deputy Conservator, 1st Grade.	Do. ...	2nd May 1894...	30th June 1894.	
		" W. R. Gaundé ...	Extra Assistant Conservator, 1st Grade.	Sub-Division Forest Officer.	1st July 1893...	12th Dec. 1893.	
		" V. G. Tumné ...	Acting Extra Assistant Conservator, 4th Grade.	Do. ...	18th Dec. 1893...	12th Jan. 1894.	
		" L. D. Joshi ...	Extra Assistant Conservator, 1st Grade.	Do. ...	18th Jan. 1894...	12th Mar. 1894.	
		" W. R. Gaundé ...	Do. do. ...	Do. ...	13th Mar. 1894...	12th April 1894.	
		" V. M. Tilak ...	Acting Extra Assistant Conservator, 4th Grade.	Do. ...	18th April 1894...	23rd May 1894.	
		" W. R. Gaundé ...	Extra Assistant Conservator, 1st Grade.	Do. ...	24th May 1894...	30th June 1894.	
4	Ahmednagar ...	Mr. S. Hornidge ...	Deputy Conservator, 4th Grade.	Divisional Forest Officer.	1st July 1893...	Do.	
		Mr. A. D. Wilkins ...	Do. 3rd Grade.	Do. ...	Do. ...	Do.	
		" L. D. Joshi ...	Extra Assistant Conservator, 1st Grade.	Sub-Division Forest Officer.	Do. ...	6th Jan. 1894.	
		" J. H. Clabby ...	Do. 3rd Grade.	Do. ...	7th Jan. 1894...	21st Mar. 1894.	
5	Poona ...	" L. D. Joshi ...	Do. 1st Grade.	Do. ...	22nd Mar. 1894...	19th June 1894.	Died on the 19th of June 1894.
		" A. D. Wilkins ...	Deputy Conservator, 3rd Grade.	Do. ...	20th June 1894...	30th June 1894.	
		" V. M. Tilak ...	Acting Extra Assistant Conservator, 4th Grade.	Do. ...	26th May 1894...	Do. ...	Additional Sub-Divisional Officers.
		" G. R. Duxbury ...	Assistant Conservator, 2nd Grade.	Do. ...	9th June 1894...	Do.	
6	Sâtâra ...	Mr. R. S. F. Fagan ...	Deputy Conservator, 3rd Grade.	Divisional Forest Officer.	1st July 1893 ...	Do.	
		" G. S. Hingé ...	Acting Extra Assistant Conservator, 2nd Grade.	Sub-Division Forest Officer.	Do. ...	Do.	
		Mr. J. H. Clabby ...	Extra Assistant Conservator, 3rd Grade.	Divisional Forest Officer.	Do. ...	20th Nov. 1893.	
7	Sholâpur ...	" E. G. Oliver ...	Deputy Conservator, 4th Grade.	Do. ...	21st Nov. 1893...	16th April 1894.	
		" W. R. Gaundé ...	Extra Assistant Conservator, 1st Grade.	Do. ...	17th April 1894...	16th May 1894.	
		" E. G. Oliver ...	Deputy Conservator, 4th Grade.	Do. ...	17th May 1894...	12th June 1894.	
		" C. M. Hodgson ...	Assistant Conservator, 1st Grade.	Do. ...	13th June 1894...	30th do.	
8	Working Plans ...	Mr. L. S. Osmaston ...	Acting Deputy Conservator, 4th Grade.	Do. ...	19th Dec, 1893...	30th June 1894.	

CHAPTER I.

EXTENSION AND CONSTITUTION OF STATE FORESTS.

(i). ALTERATION OF AREA.

14. The forests settled and constituted in the Central Circle under the Indian Forest Act, 1878, at the commencement and at the close of the forest year 1893-94 respectively, compare as appear in the following table:—

Divisions.	FOREST AREA ON 1ST JULY 1893.						FOREST AREA ON 30TH JUNE 1894.					
	Reserved.		Protected.		Total.		Reserved.		Protected.		Total.	
	Sq. miles.	Acres.	Sq. miles.	Acres.	Sq. miles.	Acres.	Sq. miles.	Acres.	Sq. miles.	Acres.	Sq. miles.	Acres.
East Khândesh ...	796	155	796	155	807	359	807	359
West Khândesh ...	1,102	454	177	435	1,280	249	1,578	485	1,578	485
Nâsik ...	1,279	129	1,279	129	1,279	129	1,279	129
Ahmednagar ...	834	311	11	124	845	435	835	250	11	124	846	874
Poona ...	741	228	741	228	708	224	708	224
Sâtâra ...	691	486	1	4	692	490	657	586	1	30	658	616
Sholâpur ...	277	613	277	613	278	85	278	85
Total ...	5,723	456	189	563	5,913	379	6,145	198	12	154	6,157	352

15. It will be seen that the total area of settled and declared forests in the Central Circle at the close of the year of this report is greater by 243 square miles and 613 acres than it was when the year opened.

16. In the Násik Division no change has occurred, and the area remains the same as it was; in the East Khándesh Division there has been a gain of 11 square miles and 204 acres; in West Khándesh Division of 298 square miles and 236 acres; in Ahmednagar Division of 579 acres; and in the Sholápur Division of 112 acres. On the other hand, in the Poona Division the area is less than it was by 33 square miles and 4 acres; and in the Sátára Division by 33 square miles and 514 acres; but this is owing entirely to the rectification of errors in surveying and of computation which were discovered by the revision revenue survey in the land measurements and calculations of the original survey.

17. While the "Reserved forests" have extended during the year by 421 square miles and 382 acres, the "Protected Forests" have diminished by 177 square miles and 409 acres. These results have come in some measure from the conversion of protected forests into reserved forests: altogether 177 square miles and 435 acres of protected forests have been converted into reserved forests; and 34 acres of protected forests have been removed entirely from forest conservancy management, and been made "Revenue waste," for purposes of cultivation or other uses. By rectification of areas 77 acres were added to, and 17 acres were reduced from, protected forests, during the year; and at the close of the year the only protected forests remaining in the Central Circle consist of 7,164 acres, equal to 11 square miles and 124 acres situated in the 8* marginally mentioned villages bordering the Syhadris in the Akola Táluka of the Ahmednagar District, and 670 acres equal to 1 square mile and 30 acres within the station limits of Mahábaleshvar in the Sátára District.

18. The alteration of areas described above has been wrought by the following changes:—

(a) Additions made during the year:

Division.	RESERVED FOREST.				PROTECTED FOREST.			
	By Notification under Section 19, Forest Act.		By rectification of area.		By Notification under Section 28.		By rectification of area.	
	Sq. m.	Acres.	Sq. m.	Acres.	Sq. m.	Acres.	Sq. m.	Acres.
East Khándesh ...	11	204
West Khándesh ...	501	82
Násik
Ahmednagar	579
Poona ...	1	490	25	75
Sátára	80	22	183	77
Sholápur	112
Total ...	515	217	47	258	77

(b) Exclusions made during the year :

Division.	RESERVED FOREST.				PROTECTED FOREST.			
	By Notification under Section 26.		By rectification.		By Notification.		By rectification.	
	Sq. m.	Acres.	Sq. m.	Acres.	Sq. m.	Acres.	Sq. m.	Acres.
East Khándesh
West Khándesh ...	25	1	177	435
Násik
Ahmednagar
Poona	57	59	512
Sátára ...	1	525	54	278	...	34	...	17
Sholápur
Total ...	26	583	114	150	177	469	...	17

19. The proportion which forests bear to the territorial area in the different districts contained within the Central Circle may be seen from the following :—

Districts..	Territorial area.	Forest area.	Percentage of Forests to area of District.	Population.	Acreage of Forest per head of Population.
	Sq. m.	Sq. m.			
Khándesh ...	10,907	2,386	21·87	1,460,851	1·04
Násik ...	5,940	1,279	21·53	843,582	0·97
Ahmednagar ...	6,645	847	12·74	888,755	0·60
Poona ...	5,369	708	13·18	1,067,800	0·42
Sátára ...	4,987	659	13·21	1,225,989	0·34
Sholápur ...	4,542	278	6·12	750,689	0·23
Total ...	38,390	6,157	16·03	6,237,666	0·63

20. The selection of lands for incorporation in the forest reservation of the Central Circle has been concluded, and the sanction of Government has been accorded to the forest conservancy project of every revenue sub-division in the different districts; and all that remains to be done now is to give the finishing touches to the work by acquiring, as opportunity may serve, such occupied lands as still remain to be obtained inside the sanctioned lines of the boundaries of forests; and therefore the figures appearing above may be taken to represent the practically maximum areas which will be found in forests for years to come in the different districts,

21. These figures may provoke reflection as to whether the State forests which have been formed are sufficiently extensive, and in their spread are suitably located in all directions to promote all the interests, and to maintain all the harmonies dependent upon an efficient system of forest conservancy management in a country circumstanced and conditioned as the Central Division of this Presidency, where the rainfall is at all times uncertain and capricious, and is confined to a short season, the remaining portion of the year being dry, and where there is a great demand for timber and firewood. There are practically no private forests left undestroyed in the Násik, Ahmednagar, Poona, Sátára and Sholápur Districts above the gháts, and there is a very noticeable absence of trees generally upon lands occupied for cultivation in the wide stretching champaign country of the eastern portion of the Deccan, including the whole of the Sholápur Collectorate. On the other hand the necessity for a very much larger supply of cheap fuel, and for a more general distribution of it, than is at present within the capabilities of the State forests in the champaign country in their position and their power as now existing, in order to lessen the consump-

tion of cowdung as fuel, and to permit of its more extended use for manuring fields of cultivation, is a question of the highest importance in the interests of agriculture. Moreover the influence on the climate of an extensive growth of trees for lowering the temperature and overcoming aridity; and for affording protection against winds and sun on the plains, is of equally great importance in the interests of the food supply for man and beast. The larger proportion of the forests in the champaign country of the Eastern Deccan contains very poor and hard soil: these lands had been entirely divested of all ligneous vegetation before they were placed under forest conservancy management, and it will take many years for firewood to be produced on them in such volume as to give an appreciable annual yield for the feeding of local supply. But the difficulty of obtaining more land possessing such good soil as is necessary for a quick growth of trees, and an early production of timber in these parts is seemingly insuperable; for it lies in the dearth of any suitable waste land, the property of Government; in the growth of population with a concurrently increasing demand for lands of good soil for purposes of cultivation; and in the heavy cost of acquisition of occupied lands, if acquisition were otherwise practicable. The forests on poor soil which may be taken at $\frac{3}{5}$ th of the forest areas of the Eastern Talukás cover uplands, watersheds and hill slopes; and have, in addition to supplying pasturage to the cattle of the country, important mechanical functions to perform; and they even now, when their reboisement is a long way off completion, arrest in large measure the off-flow of the rain water which falls upon them, storing it for a more gradual distribution in natural course; and they work, though still very imperfectly, as high level reservoirs for the natural irrigation of the country.

22. The forest conservancy project of every revenue sub-division which has been prepared by Revenue and Forest officers conjointly after very careful and detailed inspection of the ground with inquiries on the spot, and has been approved and sanctioned by Government, provides as perfect a system for the protection of hill slopes all over the country included in the Central Circle as could be devised, but several occupied holdings on the hill sides inside the forest boundaries, which honey-comb the reserves with patches of cultivation where they occur, still remain to be acquired.

23. In the Khándesh and Násik Districts especially, the forest reservations are as extensive and as desirably located as could be considered to be necessary on climatic, physical or other grounds; and very few, if any, occupied holdings remain inside the forest boundaries in these districts.

(ii). FOREST SETTLEMENTS.

24. The only work which remained to be done at the commencement of the year consisted of the settlement under the provisions of Chapter II, of the Indian Forest Act—

- (a) of such portions of the protected forests as are to be converted into reserved forests, and
- (b) of such occupied lands situated inside the forest boundaries as may become waste and available for afforestation or be acquired by payment of compensation or by giving other lands in exchange for them.

25. The following table shows the settlement work accomplished during the year:—

Divisions.		Square miles.	Acres.
East Khándesh	...	11	204
West Khándesh	...	501	32
Násik
Ahmednagar	579
Poona	...	26	565
Sátára	...	22	340
Sholápur	112
Total		562	552

26. The occupied lands situated inside the sanctioned forest boundaries which have been obtained by payment of compensation or by giving other lands in exchange for them are as under :—

Divisions.	By exchanges. Acres.	By PURCHASE.		Acreage rate.		
		Acres.	Payment.	Rs.	a.	p.
East Khándesh	593	2,050	3	7	3
West Khándesh	97	83	0	13	8
Násik		
Ahmednagar	252	104	505	4	13	8
Poona	467		
Sátára	1,363	32	10	0	5	0
Sholápur		
Total	2,082	826	2,648	3	3	3

27. The Forest Settlement Office of the *Khándesh District* is held by an Assistant Collector in addition to his own revenue and magisterial duties. Mr. C. G. Dodgson, I. C. S., was in charge from the opening of the year up to the 22nd February 1894, when he proceeded on leave, and the Collector of the district kept the office until it was taken over by Mr. J. H. DuBoulay, Assistant Collector, on the 16th March 1894, who continued to do duty as Forest Settlement Officer up to the close of the year. The settlement of the Nandurbár and South Pimpalner reserved forests was completed. Special forest boundary marks were erected, under the supervision of the Forest Settlement Officer, to demarcate the boundaries of the reserved forests in the Nandurbár Táluka, and in a portion of the Pimpalner Táluka also; 689 acres and 27 gunthas of occupied lands inside forest boundaries were acquired by payment of compensation, amounting to Rs. 2,133-5-4 in the Jalgaon, Sindkheda and Taloda Tálukas; 149 square miles and 183 acres of lands were provisionally notified under Section 4 of the Forest Act; 512 square miles and 236 acres of lands which had undergone settlement were notified under Section 19 of the Forest Act, and were declared to be reserved forest; and the protected forests remaining in the district were all disforested. Very excellent work has been performed during the year by Messrs. Dodgson and DuBouly, who deserve much credit.

28. In the Násik Collectorate, the Assistant and Deputy Collectors are ex-officio Forest Settlement Officers in respect of the tálukas in their respective revenue and magisterial charges. Settlement work is practically finished. Twelve acres and 17 gunthas of occupied lands inside the forest boundaries were acquired, and were provisionally notified under Section 4 of the Forest Act, preliminary to their settlement.

29. Ráo Bahádur Venkatesh Bápuji Vádekar, District Deputy Collector, has been holding the office of Forest Settlement Officer of the Ahmednagar Division in addition to his revenue and magisterial duties throughout the year: 579 acres of occupied lands inside forest boundaries have been acquired, have undergone settlement, and have been declared to be reserved forest, by notification published under Section 19 of the Forest Act; and 216 additional acres have undergone settlement, but have not yet been notified under Section 19. Copies of registers of all public and private rights affecting the reserved forests in all the tálukas have been prepared and supplied to the Divisional Forest Officer. Mr. Vádekar has done good service for the forest administration of the Ahmednagar District during the year.

30. The Forest Settlement Office of the Poona Division was in the charge of Mr. C. P. B. Wiltshire, I. C. S., from 1st July to 28th October 1893, and of Mr. H. W. J. Bagnell, during the remainder of the year: 466 acres of occupied lands inside of the forest boundaries have been acquired for afforestation by giving other lands in exchange for them: 1,130 acres and 10½ gunthas of lands

which have undergone settlement have been declared to be reserved forest under Section 19: these lands are situated in the Junnar, Mával, Indápur and Mulshi ranges: and 1,572 acres and 37 gunthas of proposed reserved forest were undergoing settlement when the year closed. Forest registers according to Symond's manual have been prepared for the villages of the Mulshi Peta, where the revision survey settlement has been introduced recently; and copies have been furnished to the Mahálkari and to the Divisional Forest Officer. The Forest register of the Purandhar Táluka has been drawn up and supplied to the Divisional Forest Officer: 56 acres and 34 gunthas of reserved forest in the Bhimthadi Táluka and 30 $\frac{3}{4}$ gunthas in the Haveli Táluka have been disforested. The Forest Settlement Officer has also been employed in arranging, in communication with the Divisional Forest Officer, a tripartite classification of the reserved forests of the district under "Forest Proper", "Fuel and Fodder Reserves" and "Pastures." Very good progress has been made by the Forest Settlement Officers in the Poona Division.

31. Mr. S. R. Arthur, I.C.S., was Special Forest Settlement Officer for the Sátára Collectorate up to the 27th March 1894, and on the 28th of that month he assumed charge of the Assistant Collector's revenue and magisterial duties, holding the Forest Settlement Office in addition thereto. The forest registers for the whole district have been completed, and a copy supplied to the Divisional Forest Officer: the survey numbers and areas of the revision revenue survey have been entered in these registers for all the tálukas save Jávli, of which the revision survey maps have not been issued yet: the preparation of this register has brought to light several errors in acreage in the original survey, the figures of which have been in use hitherto: these have now been rectified: it has also brought to notice that several survey numbers in possession of the Forest Department which had been notified, under Section 4, years ago, had not been notified under Section 19 subsequently, as no inquiry respecting rights affecting these lands had been undertaken: likewise that other survey numbers also in possession of the department had not even been notified under Section 4. These omissions have now been made good. 79 acres and 23 gunthas have been added by notification under Section 19 of the Forest Act to reserved forest in the Mahábaleshvar Range, after undergoing settlement, and 1,165 acres and 6 gunthas have been disforested under Section 26 of the Forest Act from reserved forest, and 34 acres and 2 gunthas from protected forest, for the reason that these lands were either outside the sanctioned forest boundaries, or were adjoining village sites or hamlets, and were not required for Forests. 4,054 acres 6 gunthas have been notified provisionally under Section 4 of the Forest Act during the year, and were with other lands which had been similarly notified previously, making up 11,067 acres and 27 gunthas altogether, still undergoing settlement proceedings when the year closed. 1,363 acres of occupied lands inside the forest boundaries have been obtained by the Forest Settlement Officer by giving other lands outside the forests in exchange for them; 32 acres and 20 gunthas in the village of Paneri in the Pátan Range were obtained by payment of Rs. 10 in compensation, and a sum of Rs. 69 was given to the occupants of some huts inside the Niwle Forest of the Shirála Range to compensate them for removing to another site outside the forests. The Forest Settlement Officer has also, during the year, completed inquiries, with the exception of one village, into the forest rights claimed by Inámdárs in alienated villages, and Government have passed orders upon them in 11 resolutions. Village Form No. 1 A showing for each village the survey numbers and acreage in forests and the rights in each number, has been prepared in duplicate for the whole district, and one copy is being sent to the Range Forest Officer for his use, and one to each village for record with other village forms. The revision revenue survey having been applied in 8 tálukas, lists of the revision survey numbers corresponding with the old survey numbers, which have been notified as reserved or protected forest, have been drawn up for publication in the *Government Gazette*. Mr. Arthur has, it will be seen, worked very industriously during the year towards completing the afforestation of lands according to the different projects for reservation which have been approved and sanctioned by Government, and towards securing a strictly legal settlement of reserved forests with complete and accurate records of the same, which will be of the

highest value for years to come ; and he has thus rendered very important service to the forest administration in the Sátára District.

32. Assistant and Deputy Collectors have been undertaking such forest settlement work as remains to be done in the Sholápur District, where a few occupied lands inside the sanctioned forest boundaries have still to be acquired : 148 acres and 19 gunthas were obtained, and provisionally notified during the year, of which 112 acres and 2 gunthas were settled and gazetted, and 36 acres and 17 gunthas were still undergoing settlement.

33. The following table shows the forest lands and waste lands, the property of Government which having been provisionally notified under Section 4 of the Forest Act were still undergoing forest settlement inquiries when the year closed in the different divisions :—

Division.	Square miles.	Acres.
East Khándesh	3	526
West Khándesh	145	297
Násik	12
Ahmednagar	216
Poona	2	293
Sátára	6	214
Sholápur	36
Total	158	314

All the forests which were under conservancy administration when the Forest Act came into force, and were declared by notifications published in the *Government Gazette* under Section 34 of the Indian Forest Act to be reserved or protected forest, as their cases required respectively, have undergone forest inquiry, settlement and record ; and no forest land of this class remains in the Central Circle in an unsettled condition.

34. No recommendations have been made by Forest Settlement Officers regarding concessions of *Privileges* upon the forests in favour of persons or communities or tribes ; and no new order has been passed by Government in the matter ; and no changes have been made in the " Privilege Codes " and rules of any division, during the year of this report.

35. The expenditure which has been charged in the forest accounts of the different districts on account of the cost of forest settlements during the year is shown in this table :—

Divisions.	OFFICE ESTABLISHMENT.		Contingencies.	Total.
	Pay.	Travelling allowance.		
	Rs.	Rs.	Rs.	Rs.
East Khándesh	3,425	726	410	4,561
West Khándesh				
Násik
Ahmednagar	180	90	159	429
Poona	1,132	410	348	1,890
Sátára	1,970	106	432	2,508
Sholápur
Total	6,707	1,332	1,349	9,388

36. The pay and travelling allowance drawn by the Forest Settlement Officers themselves are not charged in the forest accounts, but to their own department. Mr. S. R. Arthur was the only special Forest Settlement Officer, and he held this appointment, as has already been stated, up to the 27th March 1894, his salary

for that period, viz., from 1st July 1893 to 27th March 1894, amounted to Rs. 7,105 and his travelling allowance to Rs. 1,750. The cost of the establishments of the Forest Settlement Offices and of their contingent expenditure is only charged to Forests, and a sum of Rs. 9,388 has consequently been debited to A VIII (b).—Cost of Forest settlements.

(iii). DEMARCATION.

37. The demarcation on the ground of the boundary line of forests, by cutting lines clear of vegetation where required, and by erecting special forest boundary marks of a prescribed specification at visible distances, one from the other, to be the outward visible sign of forest reservation, was carried on in the several divisions to the following extent:—

Divisions.	Length of boundary demarcated in miles.	NUMBER OF SPECIAL FOREST BOUNDARY MARKS ERECTED.			Expenditure of the year.
		Large.	Small.	Total.	
East Khándesh	...	1	...	1	17
West Khándesh	300	296	2,500	2,796	1,020
Násik	343	4,264	7,775	12,039	5,192
Ahmednagar	68	1,054	13	1,067	555
Poona	49	781	...	781	471
Sátára	198	110	3,838	3,948	843
Sholápur	72	...	960	960	313
Total	1,030	6,506	15,066	21,592	8,411

38. A comparison between the progress made in this important work during 1892-93 and the year of this report is given below:—

Divisions.	DURING 1892-93.		DURING 1893-94.	
	Miles of boundary line demarcated.	Cost.	Miles of boundary line.	Cost.
		Rs.		Rs.
East Khándesh	4	58	...	17
West Khándesh	451	1,978	300	1,020
Násik	319	3,929	343	5,192
Ahmednagar	117	1,171	68	555
Poona	173	1,846	49	471
Sátára	528	1,583	198	843
Sholápur	133	517	72	313
Total	1,730	11,082	1,030	8,411

39. In the East Khándesh Division, a new masonry pillar was erected at a cost of Rs. 17-8-0 upon the frontier of the British village Charthane in the Edlabad Range and of Málgujari village of Jámti in the Central Provinces, to replace one which had seemingly been removed by the villagers of Jámti with the object of annexing a large triangular piece of forests measuring about 1,000 acres: some timber was felled and removed from this land, and the offenders were caught and were prosecuted, but they were discharged on the grounds of want of criminal intention. The boundaries of the forests in this division have been demarcated from end to end already by the Forest Settlement Officer, but the pillars are very far apart and beyond visible distance, one from the other, consequently intermediates have to be built, as the want of a clearer alignment has been felt. A sum of Rs. 95 was expended in repairing old pillars.

40. In the West Khándesh Division, the Forest Settlement Officer built 1,939 pillars on the boundaries of the forests in the Nandurbár and Pimpalner

Ranges at a cost of Rs. 814 during the year; and the Divisional Forest Officer built 857 new intermediates at a cost of Rs. 206 and repaired 1,120 old pillars at an expenditure of Rs. 261. It will take one or two more seasons for the Forest Settlement Officer to complete the demarcation on the ground of the whole of the boundary lines of the forests in this division: but the building of the intermediate pillars by the Divisional Forest Officer requires to be carried on with vigour.

41. In the forests of the Peint Taluka, below the gháts, in the Násik Division, the clearing of the forest boundary line is a heavy work, but it, with the erection of special boundary marks, was pushed on very energetically under the personal direction of an Extra Assistant Conservator; and in the months of April, May and June 1894, it was carried on as a relief work for forest villagers as there was some scarcity and dearness of food in parts of the Peint Taluka. In the Igatpuri, Yeola and Málegaon Ranges also demarcation received attention. The Collector has remarked that "Mr. Winter, the late Collector, brought to my notice the assistance Mr. Dasai had been in providing work in Peint. The people, however, did not avail themselves of the facilities offered to any great extent." Rs. 598 were expended in maintaining, by repairs to old marks, &c., the forest boundaries demarcated in previous years.

42. In the Ahmednagar Division, demarcation has been permitted to languish. Out of 829 forest villages, the demarcation of forest boundaries by special forest boundary marks has been completed in 132 only, leaving 697 yet to be undertaken; the forest boundaries in these villages are defined at present by the ordinary revenue survey boundary marks.

43. In the forests of the Ambegaon Range, considerable progress has been made in defining the forest boundaries, by marking them off so clearly that they must be seen when approached, and cannot be mistaken by any person: but in other ranges, the work has been delayed owing, the Divisional Forest Officer reports, to the absence of Range Forest Officers on leave through sickness, &c.

44. Less work was done in the Sátára and Sholápur Divisions also than should have been done; but here, as elsewhere, a comparison between the progress made this year and last is open to the correction, that the report for 1892-93 embraced a term of 15 months containing two hot seasons, while the present report for 1893-94 treats of 12 months only: further the work of erecting marks is carried on generally to a much greater extent in the months of April and May than at other times of the calendar year.

(iv). SURVEYS.

45. Forest surveys were undertaken during the year in the Ahmednagar, Poona and Sholápur Divisions by No. 17 Party of the Topographical Survey of the Government of India, known as the Bombay Forest Survey Party.

This party consisted practically of—

- 1 Superintendent.
- 1 Assistant Superintendent.
- 2 Sub-Assistant Superintendents.
- 2 Surveyors.
- 21 Sub-Surveyors.
- 1 Writer.
- 13 Temporary sub-surveyors with a number of peons and other inferior servants.

46. Colonel H. S. Hutchinson, I. S. C., Superintendent, was in charge of the party up to the 27th April 1894, on which date he was very unfortunately killed by a wounded tiger; and then Mr. C. E. Tapsell, Extra Assistant Superintendent, 5th Grade, held charge temporarily up to the 10th May, when Major J. R. Hobday, assumed the control of the party.

Colonel Hutchinson took the field about the 15th November 1893, and personally superintended the 16" detail survey in the Shrigondá Taluka of the Ahmednagar Division, where an area of 33.3 square miles was completed: he then visited other survey camps working in the Central Circle, and finally left for Kánára and the Southern Circle on the 10th February 1894.

Mr. Lawson, ex-Assistant Superintendent, 1st Grade, went out into the Karmála Táluka of the Sholápur District on the 8th November and conducted the 16" survey up to the 15th December, completing an area of 24 square miles, when he retired from the service on superannuation pension after a meritorious service of 31 years in his department.

Messrs. S. and C. Norman, Sub-Assistant Superintendents, 1st Grade, who were in charge of Nos. 2 and 3 camps respectively, each containing 7 plane tablers and 1 pupil, proceeded about the 13th November to complete the area remaining to be surveyed on the 8" scale in the Junnar Range of the Poona Division, and to survey the river side bábool reserves in the vicinity on the scale of 16"=1 mile. The area completed on the former scale amounted to 96.90 square miles, and on the latter to 7.70 square miles, giving a total outturn of 104.60 square miles, which was finished by about the 10th February. Colonel Hutchinson visited these camps on the 6th January, and remained till the completion of the work. No. 2 camp then moved down the Málsej Ghát in the Northern Circle and No. 3 camp proceeded to the Pen Táluka in the Kolába Division of the Southern Circle.

Surveyor Gopál Vishnu completed 200 square miles of advance triangulation in the Poona Division.

47. During the recess, *i. e.*, the "rainy season, a very large outturn of mapping has been executed in the head-quarters station, Poona: and these maps are accurate and well drawn maps of the country.

48. The details of the work of the forest year are as under:—

Divisions.	Description of work.	Scale.	Area in square miles.	Cost.
Ahmednagar ...	Detail survey	8"	17.13	737
	Do.	16"	27.71	4,037
Poona	Triangulation	4"	200.0	2,380
	Detail survey	4"	8.6	1,068
	Do.	8"	95.52	14,276
Sholápur	Do.	16"	11.10	1,999
	Detail survey	16"	26.20	3,792
	Total detail survey	186.26	28,289

and the cost rates of the different scales work out as under:—

4" scale	Rs. 84-9-8	per square mile.
8" "	134-13-7	" "
16" "	179-6-7	" "

49. A comparison of the outturn and of the cost of the forest surveys made in the survey years 1892-93 and 1893-94 respectively, is presented in the following figures:—

Year.	Triangulation.		DETAILED SURVEY.						Rate per square mile.		
	Area. Square miles.	Cost.	4" Scale.		8" Scale.		16" Scale.		4"	8"	16"
			Area. Square miles.	Cost.	Area. Square miles.	Cost.	Area. Square miles.	Cost.			
1892-93 ...	230	3,318	109	15,167	21.50	4,080	14 6 10	139 0 11	189 12 3
1893-94 ...	200	1,192	8.60	727.	112.85	15,214	65.0	11,662	84 9 8	134 13 7	179 6 7

50. It will be seen that the cost of the survey in the year of this report is less all round than it was last year; for triangulation the decrease comes to Rs. 8-7-5 per square mile, for topography on the 8" scale Rs. 4-3-4 and on the 16" scale Rs. 10-5-8 per square mile. This reduction though not inconsiderable

still leaves the cost of the work higher than it might possibly be, and probably the cause of this high rate may be in the manner in which the charges on account of No. 17 Party of the Government of India's Topo Survey are distributed and debited:

51. The scale on which revenue survey village maps are published is 8" = one mile: this scale is much too small for working the bábool reserved forests which consist of small blocks mostly on the banks of rivers and streams; even if the revenue survey maps furnished accurate skeleton plans of the survey numbers, comprising the river side bábool reserves, which they do not. The revenue survey maps do not aspire to show the topographical features of survey numbers, and they have consequently no claim to be a correct picture of the ground they are intended to show the outlines of. But these outlines or skeleton shapes are also very inaccurate and unsatisfying. The Forest Settlement Officer has reported that the *net difference* in the forest areas of the Haveli Range of the Poona Division, where there are many river side bábool reserves, between the measurements made by the old and the revision revenue surveys respectively, amounts to nearly 10,000 acres, and in every one of over 60 river side reserved forests in the valley of the Bhima in the Poona District which have been surveyed and mapped on the 16" = 1 mile scale by the forest survey, the work has shown a difference either more or less than the area given in the records of the revision revenue survey. The treatment of these reserved forests is necessarily of a very elaborate nature, requiring the use of large scale maps which are invaluable, if for nothing else, still for the proper protection of boundaries against encroachment; but they are essential to the preparation of the working plans of these areas, because the forest blocks are small in size, and under a rotation of 40 years the normal compartment and coupe area is very small. The forest blocks are small, because other lands are not available to increase their dimensions; and for a proper service of local supply large forest blocks are not desirable. The soil in them varies greatly in character: there is an irregular fringe on the river border of deep soil on which the bábool tree grows vigorously and is the predominating if not the only tree, and this is subjected to clear fellings, while the poorer soil on which the growth is more mixed is subjected to a different treatment: clear fellings of bábool are made because the tree in the Deccan has not been found to reproduce as well under cover as on open ground, and because reserves retained on foot interfere with the breaking up of the surface soil, by the plough for treatment for the purpose of reproduction from seeds: these fringes where the bábool tree predominates potentially are liable to submersion when the river rolls down in flood from the Gháts; and consequently to guard against scour and erosion, it is undesirable to have any large area denuded of the protecting ligneous vegetation. Maps are required to be of a large enough scale to show compartments of from one acre and upwards in size, with their variations of soil. These river side reserves protect the banks of the rivers against erosion; and they feed local supply in firewood, and at the same time provide fodder grass and grazing. Firewood in the treeless Deccan is Gold. The river side reserves in the Bhima valley furnish almost entirely the supply of firewood, required for the City of Poona, with its population of 118,790 souls; and the Military and Civil populations of Poona and Kirkee which are very large and which consume great quantities of firewood, and these river side reserves are also invaluable in the service of agriculture in the champaign country, inasmuch as they work towards the saving of cowdung for use as manure for the land instead of being put to an improper use, *viz.*, as a substitute for fuel, whereby the land is deprived of a fertilising power which is available on the spot, and this deprivation robs crops of their due increase, which reacts on the food supply of the country, and the profits of the cultivator, and thereby on the comfort and the contentment of the peasantry. Bábool is the best esteemed as well as the highest priced firewood in the City and Cantonment of Poona and the surrounding country. If the reserved forests in the plains on river sides were to be abolished, the City of Poona could not be supplied with firewood of such good quality, and with no firewood save at enormous cost, for the carriage of the woods inferior to bábool from long distances would raise the price of the article—this necessary of life—to such a pitch as to cause distress and outcry. The bábool, *Acacia arabica*, is *the tree* of the country. A single tree of consider-

able girth has been sold for Rs. 80 in the river side reserved forests of the Poona District: its timber is used largely for cart building, for the naves, spokes and felloes of wheels, and for the pole and body of the carts which carry all the traffic of the country side. The timber is used also for house-building, for farming and other implements, such as plough shares, oil and sugar presses, tool handles, &c. Its gum is used by the calico-printer and for other industrial as well as medicinal purposes, and is a substitute for gum arabic. Its bark is largely used by Indian tanners in the preparation of leather; also as a dye, and also medicinally. Its pod is in request as a tanning material as it contains a high percentage of tannin, and imparts a good and uniform color to leather; and it is also in great request for feeding sheep and goats, &c. Its leaves are used as a tan or dye, and they constitute an important fodder in times of scarcity as was appreciated in the Deccan Famine. The fresh foliage appears on the tree at the commencement of the hot weather just when other fodder plants fail; and when the country is parched up and sun-scorched, then the shade afforded by a bábool reserved forest in the very height of the hot season is wonderfully grateful to animals, and to human beings, all around being coverless and burning. The tree not requiring rain to burst out into green leaf gives it peculiar value in this respect. Its small branches and thorny twigs are employed to fence fields while crops are growing and ripening. In the management of the river side bábool reserved forests wide employment is given to unskilled village labour in felling, exploiting timber, carting it to markets, and in preparing the ground for reproduction, sowing, &c. During the year of this report in the Indápur Táluka, in the extreme east of the Poona Division, a coupe of $4\frac{7}{10}$ acres, containing 485 trees, sold on foot for Rs. 270, or more than Rs. 60 the acre. In the Sirúr Range the trees on $43\frac{8}{10}$ acres sold for Rs. 1,365: in the Haveli Range the trees on $18\frac{1}{2}$ acres realised Rs. 1,146. These prices will show the scarcity of timber in these parts, the great demand for it and the grand future before the forests in supplying local wants, if their productive capabilities are fully developed. The cost of the accurate forest survey maps of the river side bábool reserves prepared by the forest survey has been returned at Rs. 179-6-7. per square mile this year, and this rate works out to Re. 0-4-5 per acre—a cost incurred once and for all time. The revenue derived from grass or grazing, or bábool pods or thorns, or any minor product of these reserved forests in a single year, let alone the timber more than pays for the everlasting map. The service that these small reserved forests scattered over the face of a comparatively treeless cultivation country do, both directly and indirectly, to agriculture is so incalculably great, and their maintenance in the highest state of productiveness to the people and to the State, is so important as to justify the cost of the large scale survey maps, which have by experience been found to be necessary to their proper management, in view to the highest possible outturn of timber and other produce being worked up.

CHAPTER II.

MANAGEMENT OF STATE FORESTS.

I.—REGULATION OF MANAGEMENT.

(a).—WORKING PLANS.

52. Following the breaking up of the Northern Circle with the transfer of its Working Plans Division to the new Northern Circle, in January 1893 the necessity arose for forming a Working Plans Division for the Central Circle, but this could not be effected until Mr. L. S. Osmaston returned to duty from sick leave in December 1893, and an officer to organize an establishment became available.

53. In the meanwhile, Mr. T. B. Fry, Deputy Conservator of Forests, 2nd Grade, and Divisional Forest Officer, Working Plans, Northern Circle, was permitted by Government to reside in Poona during the rainy season of 1893, on the condition that "his services will be available during that period for such work in addition to the duties of his own office as the Conservator, Central Circle, may assign to him in connection with the preparation of working plans for the forests of the Central Circle": and accordingly the demarcation of compartments to be coupes of the season 1893-94 was undertaken by Mr. Fry's establishment under

his direction in the Haveli, Dhond, Sirúr, Bhimthadi and Indápur Ranges of the Poona Division; in the Shevgaon, Ráhuri, Kopargaon and Sanganner Ranges of the Ahmednagar Division; in the Igátपुरi Range of the Násik Division; and in the Karmála, Mádha and other ranges of the Sholápur Division. The surveyors were out on this demarcation from about the middle of July up to Christmas 1893, and Mr. Fry made a tour in the Sholápur District to supervise and direct during portions of November and December.

54. Mr. Osmaston was then attached to the Central Circle for duty on working plans after the Christmas vacation, but he was given no office or other establishments for working in the forests, however Mr. Osmaston accompanied the Conservator on tour in the Ahmednagar, Násik, the East and the West Khándesh Divisions, inspecting forest blocks and compartments under exploitation, gathering local knowledge, and collecting information and data for the preparation of working plans. On the 13th April, this officer had to take charge of the Násik Division on the departure of Mr. Betham on leave to Europe, and he held it till the 2nd of May following, when he was relieved by Mr. F. R. Dasai; and Mr. Osmaston then marched towards Poona inspecting the teak forests of the Ahmednagar and Poona Divisions by the way, and he likewise visited the ever-green forests on the Gháts in the Mával Range of the Poona District.

55. No elaborate working plans involving detailed enumeration surveys with the classification of trees, the calculation and determination of an annual yield in timber based on averages, which may turn out to be more or less approximate when put to the test of actual working, and on other mathematical theories of Forestry which may not come off under the touchstone of experience, have been attempted. But rough and ready projects are being drawn up for bringing the whole forest region of every division under systematic treatment, for its improvement, and at the same time to provide for meeting the demands of local supply as far as it is possible to do so, with due regard to a sustained yield, and to the maintenance and improvement of the factors of the localities. A system of numerous small forest blocks in a country such as the Central Circle is seemingly the best calculated to satisfy, in the greatest degree attainable, all that be reasonably expected and required of the forest management. A large number of forest blocks with one compartment in each, which is treated for the exploitation of timber and other produce, and for natural combined with artificial reproduction, furnishes many centres for the employment of unskilled village labour, and the utilisation of village transport for the conveyance of timber and other forest produce to their destinations when removed from the coupes. In every Deccan village there are carts and bullocks, and when the latter are not employed in agriculture their owners are very glad to secure their employment in traffic; and many coupes also provide as many centres for a much more general distribution of timber and other forest produce over the face of a district than could be secured by a few fellings of larger individual spread, but located at considerable distances apart. The working plans are based entirely on area, for it is not possible to foresee the future of the forests, such as they are, from their present condition and their past history. Briefly then the forests of every range which corresponds with a revenue sub-division, are being differentiated into as many small forest blocks as local circumstances and existing conditions may require; each of these forest blocks is considered to be a separate unit of working, and it is sub-divided into 40 working compartments, to be exploited in turn, if there is anything to fell and remove, and to be treated for regeneration alone during the first revolution, if there is nothing to fell and carry out. Cultural rules are prescribed for regulating the extent of the felling, and the selection of trees to be reserved within the compartment which is to become the coupe of the year, because in making fellings the nature of the soil, the climate, species, and even individual trees require to be considered in guiding the axe. The following are the rules in observance for the deciduous forests in which the teak tree predominates:—

(A). Quality of standard:

1st.—Trees to be marked in reserve should, if possible, not be less than 18 inches girth at breast-height; but may be of any greater size, provided they are healthy and likely to live through the rotation.

2nd.—Seedling trees are to be preferred as standards; otherwise coppice shoots from a small stool, straight clean-stemmed, and with a strong leader, should be chosen. If really promising young trees cannot be found, then the healthiest trees, those most likely to produce good seed, must be marked.

3rd.—As much as possible trees of various kinds should be reserved, but the most valuable kinds should be preferred.

4th.—If the existing crop is nearly pure teak, special care must be taken to reserve other kinds, even if good trees cannot be found; similarly, if teak is very scarce, even inferior teak trees should be reserved.

5th.—The quality of the trees to be reserved must be carefully considered; but on steep slopes, tops of hills, ridges, &c., whatever is available must be reserved.

6th.—Fruit trees, such as mango, mhowra, toddy-trees, temburni and apta trees, if sound and flourishing, should, as a rule, be reserved.

7th.—Very inferior kinds of trees which have no value as timber and very little as firewood should be kept as standards only when other kinds of trees are not obtainable.

(b). Number and Distribution of Standards :

8th.—All promising young trees of any valuable kinds under 12" girth at breast-height shall be preserved, and shall not be felled.

9th.—On flat, undulating, or gently sloping ground an average of 15 trees to the acre to be reserved.

10th.—On steep slopes up which a man can walk without much difficulty, an average of 20 trees to the acre.

11th.—On very steep slopes where a man must climb rather than walk, an average of 30 trees to the acre.

12th.—Crests of hills, ridges, precipitous upper slopes require protection, and all trees suitable for reservation should be kept.

13th.—Heads or commencements of water-courses require protection, and standards of all kinds should be reserved in clusters or groups in such places.

14th.—Along banks of rivers or large nálas, trees should be freely reserved up to a distance of about 20 yards from the edge of the bank.

15th.—Blanks within a coupe require special attention; all trees, however poor, within them must be preserved, as well as a fringe all round.

56. The suitability of the system to the trees to be found in the forests is one of the main points to be attended to, and in fixing the revolution at 40 years, as has been adopted generally for all the forests, due provision has been made for allowing a fair period of life-time to trees of all kinds in the forests. In Forestry trees, as a rule, are felled before they have reached the natural end of their life. In the case of river side bábool reserves in the Deccan, experience has shown that a tree attains a girth of 4 feet in about 40 years, and after this the tree begins to become unsound internally: therefore the bábool tree is subjected to a system of clear cutting, and the ground cleared is treated for artificial regeneration; or in other words, at the end of the rotation the wood is cleared off the area and the process of creation is recommended. In the mixed and deciduous forests where the teak trees predominate such trees as promise to outlive the rotation, or another period of 40 years, are reserved and are not felled; and thus a life-time of 80, 120, 160, or 200 years even may be given to an individual teak or other long-lived species under a treatment of the selection of the fittest at the time when the revolution brings a compartment to become the coupe of the year. In the region of heavy rainfall where the forests are ever-green only trees that are being suppressed, and those that have no future are removed, here the weight of rain water that falls on the ground is excessive,

and its eroding potentiality in descending steep hill slopes is a danger to be guarded against. A rotation of 40 years for a forest block gives a convenient arrangement for working the opening and closure of forests for grazing.

57. The new differentiations of forest blocks which have been made during the year may be returned as under:—

Divisions.	Area divided. Acres.	Number of blocks.
East Khândesh	41,270	9
Násik	97,025	23
Poona	116,711	64
Sátára	14,253	13
Sholápur	2,638	7
Total	271,897	116

And in addition thereto, the number of compartments which had their boundaries demarcated on the ground to become coupes of the year in forest blocks which had been formed before 1893-94 are as under:—

Divisions.	Number.	Area.	
		A.	g.
East Khândesh	2	88	0
West do.	31	7,765	0
Násik	50	4,819	17
Ahmednagar	30	1,307	9
Poona	51	188	14
Sátára	10	622	37
Sholápur	14	603	33
Total	188	15,394	30

58. The proportion of forests which has been blocked and is under systematic management is shown by the following figures:—

Divisions.	Forest Area.		Area differenti- ated up to end of 1893-94.		Area still remaining.		Percentage of forest under de- tailed treatment.
	Sq. m.	Acres.	Sq. m.	Acres.	Sq. m.	Acres.	
East Khândesh	807	359	69	453	737	546	8.66
West do.	1,578	485	88	444	1,490	41	5.63
Násik	1,279	129	178	0	1,101	129	13.91
Ahmednagar	846	374	67	40	779	334	7.91
Poona	708	224	220	270	487	594	31.07
Sátára	658	616	85	175	573	441	12.89
Sholápur	278	85	202	132	75	593	72.66
Total	6,157	352	911	234	5,246	118	14.79

59. The laying out of the boundaries of all these blocks upon the ground has not been attempted; and the laying out of the boundaries of their component compartments is a work that will take years to accomplish unless special arrangement is made by organizing large establishment of surveyors under the Divisional Forest Officer, Working Plans. At the most only one compartment

to become the coupe of the year for exploitation and subsequent treatment for regeneration can be laid out in the more accessible blocks of different ranges.

The more intense or detailed the management the greater is the call upon the intelligence, industry and activity of the Forest Staff, and as the essence of the working plans lies in the application of the cultural rules for selecting the trees to be reserved, and those to be felled, within a coupe, it naturally follows that where forest areas are very widespreading, a considerable establishment of specially trained foresters is required for the technical work of preparing the compartment of every forest block which is to become the coupe of the year. A forest guard recruited from the wild tribes, or from the more civilized classes of the peasantry of Western India, who has received no technical teaching, is quite unfitted to perform such work, and the consequence is that interests which are very valuable suffer for the paucity of educated men.

(b).—ANNUAL PLANS OF OPERATIONS.

61. The annual plans of operations were, as usual, drawn up by the Divisional Forest Officers and were submitted to the Conservator through the respective Collectors with the Budget appropriation statements, after the figures of the sanctioned Budget Estimates had been communicated, and they provided among other operations for the exploitation of timber and firewood by departmental operations as well as by purchasers and consumers at their own expense, for the departmental collection, and in some cases by purchasers, of the hirda fruit (*Terminalia chebula*); the collection of shikakai (*Acacia concinna*) by purchasers, the extraction of bamboos by contractors and by purchasers, and by consumers on permits; for the sale of grass to be exploited by hand; for grazing on auction sales by permit fees. Grazing to agricultural cattle was permitted free of charge, and the Bhil privilege-holders in the two divisions of Khándesh were allowed to cut and remove timber and bamboos and other forest produce from the Sátputa forests in the exercise of their conceded privileges, and under the arrangements of the annual plans of operations local demands were satisfied as far as possible, and the trade in timber, &c., was fed according to its demand and to the capabilities of the forests.

II.—WORKING OF THE YEAR.

(a).—COMMUNICATIONS AND BUILDINGS.

(a).—Roads.

62. The forests of the Circle are fairly well opened out by roads, and carts go mostly everywhere in the Deccan during the fair season. The hilly country of the Akráni is about the only large forest area which is not accessible to vehicular transport for the conveyance of timber, &c., and the Sátputa hill forests are not traversable in all directions by carts. But there is no great need for the Forest Department to undertake the construction of roads, which are costly to maintain. Forest officers have quite enough to do in looking after the general organization, and the conservancy and works of their forests, and the administration of their divisions. Where proposed roads are destined to be trade routes which serve for the carriage of timber, while being required mainly for provincial or local purposes, their construction is undertaken at the cost of the Provincial Budget or of the Local Funds by the Department of Public Works.

A road is under construction by the Executive Engineer of Khándesh between the Khándesh District and the leased Dángs which will serve for the conveyance of timber, &c., it crosses the Jákriabári in the Pimpalner Range. A sum of Rs. 20,057-6-10 has been expended upon it up to the end of the year of this report, of which Rs. 14,891-12-8 were spent during 1893-94. The length of ghát portion of the road is 2.06 miles, one mile of it was ready for consolidation by the end of March 1894, and another mile was expected to be completed by the end of the rainy season, and the line of road from the top of the Jákriabári to Wársá, a bazaár town where timber is sold, has been surveyed.

In the Násik Division the Executive Engineer has finally completed the Hasteh-Barhe road in the Peint Range which is now fit for vehicular traffic, and timber and bamboos come from the northern portion of the Peint Range into the Dindori and other markets above the Syhádris, in carts, along it by way of the

Nánashi Ghát. A survey of a proposed line of road from the 22nd mile of the Násik-Balsár road near the village of Ambegan to the Nánashi Ghát has been partially completed : this road also will serve for the carriage of timber, and the survey of a line for a road from Peint to the Nánashi Ghát *viâ* Jogmodi has been made roughly, but it requires revision.

In the Ahmednagar Division, progress has been made in two roads under construction by the Public Works Department, which will open out the rough forest country of Akola near the Syhádris, which is the hirda region of the Ahmednagar Division, to the following extent, during the year :—

1. Road from Jámgaon to Kotul, nearly completed, the estimate amounted to Rs. 28,594, the expenditure up to end of 1892-93 to Rs. 20,553, and the expenditure during the year to Rs. 7,327.

2. Road from Rundhá Khurd to Sámrad is nearly completed for a full length of 9 miles. The sanctioned estimate is Rs. 29,924, expenditure up to end of 1892-93 Rs. 20,409, and the expenditure of the year Rs. 8,254.

In the Poona Division, the Executive Engineer has partially surveyed a proposed line of road through the hirda region in the Ambegaon Range from the village of Dimbha on the Ambegaon-Manchar Road to Bhimáshankar on the edge of the Syhádris overlooking the Konkan. Hirdas are carried along this route to the Bombay market for export.

In the Sátára Division, a line of road from Karád to Salwa up the Vang valley, where there is a large area under teak, was surveyed at a cost of Rs. 225-1-4 by the Executive Engineer of Sátára.

The Divisional Forest Officer of West Khándesh spent a little money in improving the Kalambári, a forest export road in the Pimpalner Range, to facilitate the removal of teak timber which had been felled departmentally on the lands of Bhil settlements in the village Umarpátá.

A road for cattle to go to water was lined out and made through the closed forest of Tankli in the Nándgaon Range, at a cost of Rs. 43, by the Divisional Forest Officer, Násik.

(b).—*Buildings..*

63. The following were undertaken at the cost of the Provincial Service Budget by the Public Works Department at the instance of, and under the sanctions given by, the Conservator of Forests from the discretionary grant of Rs. 1,250 which had been placed at his disposal in Government Resolution No. 269A—1028, dated 5th July 1893, in the Public Works Department :—

No.	Executive Officer.	Nature and Locality of work.	Amount sanctioned.		
			Rs.	a.	p.
1	Executive Engineer, Khándesh.	(1). Additions and alterations to the Range Forest Office at Chálisgaon ...	437	2	3
		(2). Providing a window to the room in the Range Forest Office at Chopda ...	57	6	11
		(3). Providing a weather board in front of the Range Forest Office at Sháháda ...	15	15	10
		(4). Converting a building at Dhadgaon in the Akráni into a Range Forest Office ...	9	0	0
2	Do. Ahmednagar.	(1). Weather board to the Range Forest Office, Kopargaon ...	10	0	0
		(2). Alteration of the Range Forest Office, Akola ...	5	0	0
3	Do. Sátára ...	(1). A window in the Range Forest Office at Sátára ...	59	15	5
		(2). A room for the Range Forest Office at Waduz, Táluka Khatáv ...	495	14	4
Total ...			1,090	6	9

The undermentioned additional works were constructed by the Public Works Department for the Forest Department during the year, at the cost of the Provincial Service Budget or of funds transferred from the Forest Budget:—

A new Forest Depôt-house at the head of the Kondaibári, a steep ghát on the made road leading from Dhulia to the Surat District, was partially built, and a sum of Rs. 684-3-10 was expended upon it.

A record-room for the Divisional Forest Officer of Poona in the Haveli Māmlatdār's Kacheri compound in the City of Poona, was completed at a cost of Rs. 1,110 against an estimated sum of Rs. 1,287 sanctioned in Government Resolution No. 1248 of the 5th August 1892, in the Public Works Department.

The Executive Engineer, Sátára, built—

(1). A well in the forest rest-house at Lingmala at a cost of Rs. 394-11-5 against a sanction of Rs. 407.

(2). A Hirda Depôt-house was under construction at Helwak in the Pátan Range, and Rs. 506-5-9 were expended upon it out of a sanction of Rs. 2,109, to give permanent accommodation to 1 Round and 2 Beat guards, and for the collection and storing of hirdas; the Depôt Officer will live here in the hirda season.

(3). A Hirda Forest Depôt-house was nearly completed at Mahábaleshwar, Rs. 1,787-10-5 having been expended on it against a sanction of Rs. 2,109: this house will serve for the permanent accommodation of the Round and the 2 Beat guards of the Malcolmpeth Range; and during the hirda season the Depôt Officer will reside in it.

A good new building at Malcolmpeth, the station of Mahábaleshvar, was purchased for a Range Forest Office and to give permanent accommodation to the Range Forest Officer, 2 writer guards and one attendant guard, at a cost of Rs. 3,569, under sanction of Government Resolution No. ^{255 A}/₁₀₁₀, dated 23rd June 1894.

The construction of a forest rest-house at Lalling in the centre of a large area of Anjan (*Hardwickia*), forests which are being exploited under a working plans for the firewood supply of the town of Dhulia, the head-quarters of the Khándesh District, where there are several steam cotton factories which consume much firewood, was completed during the year by the Divisional Forest Officer, West Khándesh, at a total expenditure of Rs. 1,965, of which sum Rs. 1,254 were disbursed during the year.

64. The following table exhibits the expenditure incurred by the Divisional Forest Officers in building houses for the accommodation of forest guards, temporary depôt-houses, sheds or shantees for nákas, &c. :—

Divisions.			Amount.		
			Rs.	a.	p.
East Khándesh	370	0	0
West do.	1,455	0	0
Násik	110	0	0
Ahmednagar	29	0	0
Poona	80	0	0
Sátára	66	0	0
Sholápur		
Total			2,110	0	0

(b).—PROTECTION OF FORESTS FROM INJURY.

(1).—General Protection and Breaches of Forest Law.

65. The year opened with 122 cases awaiting trial in respect of which complaints had been laid by Forest officers before Magistrates: and during the year 1,536 new cases were presented before the criminal courts; making 1,658 cases

on the registers. Out of these, 1,437 cases were disposed of during the year, with the result that convictions were obtained in 1,142 cases, and 295 were discharged; 2,629 persons were convicted and punished, and 888 persons were acquitted. At the close of the year 221 cases were pending.

66. The year of this report treats of twelve months, while the Forest Administration Report of 1892-93 embraces a period of fifteen months, *viz.*, 1st April 1892 to 30th June 1893; and, therefore, the comparison between the number and the results of the number of cases tried in the two years respectively, presented in the statement below this requires to be corrected before it can be accepted as an accurate table for deduction:—

No.	Division.	1892-93.		1893-94.		PERCENTAGE OF FAILURES.	
		Prosecutions.	Acquittals.	Prosecutions.	Acquittals.	1892-93.	1893-94.
1	East Khándesh ...	71	15	62	8	21.1	12.9
2	West do. ...	80	13	78	3	16.2	3.8
3	Násik ...	136	42	87	28	30.0	32.2
4	Ahmednagar ...	188	37	219	43	19.6	19.6
5	Poona ...	618	201	492	131	32.5	26.6
6	Sátára ...	206	60	441	56	29.1	12.6
7	Sholápur ...	103	25	58	26	24.2	44.8
	Total ...	1,402	393	1,437	295	28.0	20.5

The classification of the cases prosecuted during 1893-94 in the several divisions is as under:—

No.	Division.	OFFENCES RELATING TO THE MISAPPROPRIATION OF				Total.
		(a) Timber.	(b) Firewood.	(c) Other minor produce.	(d) Other offences.	
1	East Khándesh ...	3	19	...	40	62
2	West do. ...	42	3	1	32	78
3	Násik ...	11	18	5	53	87
4	Ahmednagar ...	4	16	47	152	219
5	Poona ...	35	49	7	401	492
6	Sátára ...	39	56	32	314	441
7	Sholápur ...	1	3	37	17	58
	Total ...	135	164	129	1,009	1,437

There was no serious crime in the East Khándesh Division, but near the close of the year some illicit fellings were detected in the Pátna Reserve of the Cháligsaon Range; teak trees and large branch-wood of junglewood trees having been cut and stolen, the offenders were traced and detected, and are to be prosecuted. In the Kaliadoho reserved forest of the Yával and in the Jánori and Chinchali Forests of the Sávida Ranges, thefts of trees occurred, and damage was done to anjan, Hardwickia, reproduction by Bhil privilege-holders beholding saplings for the purpose of using their bark to tie bundles of grass. The number of cases sent for trial is less than of the preceding year of fifteen months, and was about the same as during the corresponding months of 1892-93; on the other hand, the number of acquittals shows a reduced proportion; and the Divisional Forest Officer reports that substantial punishments were given generally in the convicted cases. Two of the 8 acquitted cases were not tried at all, but were removed from the register by the Magistrate, because the offenders had absconded to the Nizám's Territory and could not be found.

West Khándesh with its wide spreading area of 1,579 square miles of forests had only 78 cases for trial, of which but 3 were acquitted. There were a few more cases than in the corresponding twelve months of the preceding forest year, and this increase is owing to the fact that cases which would ordinarily have been compounded under Section 67 of the Forest Act, and were too serious to let off with a mere warning, were taken before the Magistrates. The small percentage of acquittals points to the care and judgment with which cases were sent up for trial. In the 75 cases, in which convictions were obtained, 202 offenders were concerned, while 6 persons were affected in the 3 cases of acquittals. The protection of the West Khándesh Forests is said to have been good. The Collector has remarked that the result of forest prosecutions in the Khándesh District is a successful record.

In the Násik Division, there is a large decrease in the figures of the present year compared with those of last year and of about 30 per cent. when compared with the corresponding months of that year. 17 cases were pending when the year opened. 95 complaints were laid during the year, but 87 cases only were tried and concluded, in which 266 people were concerned, 28 of these cases, which is a very large proportion, affecting 95 people, were acquitted. The chief cause of failure has been "want of sufficient proof," which is always difficult to obtain in a forest case among villagers; 25 cases were pending at the close of the year.

In the Ahmednagar Division, 9 cases were awaiting trial when the year opened, and 243 new cases formed the subjects of complaints before the Magistrates during the year; but only 219 cases were disposed of, and 33 were still untried when the year closed: convictions were given in 176 cases, concerning 537 offenders, who were mostly fined, in sums which aggregated Rs. 1,812-8-0; imprisonments amounted to 1 month and 10 days in all; in the Párner, Karjat and Sangamner Ranges only was imprisonment awarded. No explanation regarding the large number of acquittals has been given by the Divisional Forest Officer, but the increase in the number of cases prosecuted is owing to cattle trespass cases having been sent up to the Magistrates for trial, instead of having been settled out of Court under Section 67 of the Forest Act, by the Divisional Forest Officer, as used to be done largely formerly. The 43 cases discharged concerned 149 persons.

Four hundred and ninety-two cases were sent up for trial in the Poona Division, of which 131 were acquitted. These figures show an improvement on those of the year before. The number of cases is less than during the corresponding months of 1892-93, and the percentage of failures has fallen from 32.5 to 26.6, but this proportion of acquittals is very high, seeing that in every case the Divisional Forest Officer considers the evidence carefully and gives in his own handwriting the order to prosecute; probably it is owing to prosecution witnesses forgetting facts, and diverging from their original statements; the decrease in the number of prosecutions is owing to the fact that the treatment of forest offences of cattle-trespass under Section 67 of the Forest Act was resumed by the Divisional Forest Officer in the month of February 1894 on receipt of instructions from the Collector, regarding the correct interpretation of the orders of Government in paragraph 6 of their Resolution No. 8626, dated 3rd November 1892. The more serious offences occurred in the Ambegaon and Junnar Ranges, and consisted of Dálhi cultivation inside the forests, tampering with boundary marks to conceal and assist encroachments made in forests, and illicit cutting of teak trees in the forests of Ghoda. In all these cases, where conviction was obtained, fitting punishment was given, rigorous imprisonment being awarded in addition to fines.

The number of cases prosecuted in the Sátára Division is more than double that of 1892-93, and this is explained by the Divisional Forest Officer as owing to his having sent all serious cases to be tried by Magistrates, instead of disposing some of them himself under section 67 of the Forest Act. Four hundred and forty-one cases were presented before the Magistrates for trial; and convictions were obtained in 385 of these; the acquittals numbered only 56, showing a diminished proportion compared with the results of the previous year. Adequate punishments were given, as a general rule, for wilful and deliberate offences.

The general protection of the Sholapur forests, seeing their scattered distribution, may be considered to be good, although petty thefts have occurred, and numbers of cattle were grazed illicitly despite impoundings—7 cases in which complaints had been laid were awaiting trial when the year opened; and 53 new cases were presented for trial during the year; making 60 cases in all: only 1 of these concerned timber, and 3 concerned firewood: 58 cases were disposed of before the 30th June 1894. In 32 cases involving 76 offenders convictions were obtained, and in the 26 cases discharged 58 persons were acquitted. There is a decrease of 45 in the number of cases prosecuted during 1892-93, but a period of 15 months was embraced in that year; however the number of prosecutions is less than during the corresponding 12 months preceding. The Collector has remarked "of the criminal cases only one was in my judgment really serious as showing a deliberate joint intention on the part of many persons to disregard forest rules."

67. The rewards paid to the officers and informers, through whose instrumentality conviction was obtained in cases tried by Magistrates according to the rules published in Notification No. 5587, dated 18th October 1879, under Section 75 of the Indian Forest Act which direct the payment of one-half of the proceeds of fines and confiscations under the Act, or a larger amount than one-half if the Magistrate who tries the case thinks fit, are shown in the following table:—

No.	Division.	Amount.	Remarks.
		Rs.	
1	East Khándesh	105	
2	West do.	429	
3	Násik	147	
4	Ahmednagar	561	
5	Poona	358	
6	Sátára	617	
7	Sholápur	285	
	Total	2,502	

68. The number of cases compounded during the year, together with the sums of money accepted and received by Divisional Forest Officers by payment of compensation under Section 67 of the Forest Act, compared with the figures of 1892-93, shows as under:—

Divisions.	1892-93. 1st April 1892 to 30th June 1893.		1893-94. 1st July 1893 to 30th June 1894.	
	Cases.	Compensation.	Cases.	Compensation.
East Khándesh	666	2,300	85	90
West do.	575	2,493	4	22
Násik	1,063	6,275	94	333
Ahmednagar	2,760	4,816	369	607
Poona	2,277	8,044	195	620
Sátára	741	1,254	83	61
Sholápur	1,565	1,837	96	57
Total	9,647	27,019	926	1,790

69. The classification of the cases compounded during the year gives the following distribution :—

No.	Division.	OFFENCES RELATING TO				Total.
		(a) Timber.	(b) Firewood.	(c) Other Minor Produce.	(d) Other Offences.	
1	East Khándesh ...	3	77	3	2	85
2	West Khándesh	1	1	2	4
3	Násik ...	18	61	4	11	94
4	Ahmednagar... ..	12	162	7	188	369
5	Poona ..	22	20	12	141	195
6	Sátára ...	5	26	20	32	83
7	Sholápur ...	7	18	36	35	96
	Total ...	67	365	83	411	926

There is a very large falling off of cases treated by Forest officers under Section 67 of the Indian Forest Act, 1878.

The decrease in the East Khándesh Division is attributed to no cases of cattle trespass having been treated under Section 67 of the Forest Act under order of Government Resolution No. 8626, dated 3rd November 1892; and to a falling off in the number of committed offences of breaches of the pass rules under Section 41.

The Divisional Forest Officer of West Khándesh explains as the result of a conjectural, and, as it now appears, a mistaken construction of Government orders on the subject, only 4 cases were compounded under Section 67 during the year as against 575 in 1892-93. In these 4 cases 19 persons were concerned; and compensation to the amount of Rs. 22 was accepted.

The large decrease in the Násik Division is owing to cases of cattle trespass having been sent up to Magistrates for trial instead of being compounded; 47 cases were thus prosecuted; also to many cases having been let off with a warning instead of being settled out of Court under Section 67 of the Forest Act as used to be done formerly.

In the Ahmednagar Division the power given to the Divisional Forest Officer to compound offences under Section 67 was exercised very sparingly. "The practice of compounding cases of cattle trespass was not followed during the year under the ruling contained in the 6th paragraph of Government Resolution in the Revenue Department, No. 8626, dated 3rd November 1892, and compoundings have occurred only in offences other than of cattle trespass which occurred during the year. Of the total 369 cases compounded under Section 67, 196 were brought over from the previous year and 173 occurred during the year under report, and all these latter cases were of offences other than those of cattle trespass and chiefly of the theft of wood."

The Divisional Forest Officer, Poona, explains the large decrease in the number of cases compounded during the year under report is due to the following causes :—

- (a) The powers of the Divisional Forest Officer under Section 67 of the Forest Act not having been resumed in connection of cattle trespass till very late in the year as explained.
- (b) To no cases having been compounded except those in which the Divisional Forest Officer was satisfied a criminal prosecution would hold good in the event of the offender refusing to accept the terms of compensation offered; for instance, cases of untended stray cattle tended by children were not to be dealt with under Section 67 of the Forest Act, unless some overt act could be proved against the owners implicating them in the offence.

- (c) To a large number of cases, mostly of so-called trivial cases of unauthorised cuttings and removal of forest produce being warned.

The Sâtara Divisional Forest Officer reports that the number of compounded cases has naturally fallen owing to the orders of Government to Divisional Forest Officer not to compound trivial offences, or grazing offences, or fire offences.

No case was compounded in the Sholâpur Division after December 1893 under what appears to have been a mistaken view of the orders of Government on the subject.

70. The classification of the sums of money accepted and received by Divisional Forest Officers under Section 67 in amounts of rupee one and upwards to the maximum permitted by the law is, as directed in Government Resolution No. 1899 of the 13th March 1891, in the Revenue Department, given in the following statement :—

No.	Division.	Number of cases in which compensation was fixed at Rupees,																								
		Rs. 1 and under.	Rs. 2 "	3 "	4 "	5 "	6 "	7 "	8 "	9 "	10 "	11 "	12 "	13 "	14 "	15 "	16 "	17 "	18 "	19 "	20 "	21 "	22 "	23 "	24 "	25 "

71. All the money which was accepted by Forest officers under Section 67 of the Forest Act in the several divisions by way of compensation for forest offences, and was received during the year, was credited, without any deduction having been made in respect of any rewards which may have been given to persons who may have contributed to the detection of the offenders in these cases, under Receipts V c. in accordance with the system of classification of forest accounts prescribed in the list published with Government Resolution, in the Revenue Department, No. 2420, dated 8th April 1891.

72. The following statement shows the amounts paid in rewards by Divisional Forest Officers in exercise of the power given to them by Government Resolution No. 8568, dated 16th December 1887, in the Revenue Department, in connection with cases compounded under Section 67 of the Forest Act, 1878, to the persons who had contributed to the detection of the cases :—

Divisions.	Number of cases compounded.	Number of cases in which rewards were paid.	Amounts of rewards.

74. An account of the cases prosecuted and of cases compounded by Divisional Forest Officers under Section 67 of the Forest Act, during the year of the report, and in the preceding year is given in the subjoined statement, as directed in Government Resolution No. 3527, dated 2nd May 1894, in the Revenue Department :—

No.	Division.	Taken into Court.		Compounded.		Total number of cases.	
		1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.

	Total ...	1,402	1,437	9,647	926	11,049	2,363

75. A great number of cases of forest offences which came up before Divisional Forest Officers for orders was let off with a warning in every division on account of their triviality, or because the offenders were young children, or because it was a first offence; and the following table, which is a complete register of forest offences of the year, shows the number of such offences,

together with the number of discovered offences in respect of which no offender was detected :—

Division.	Disposal of offences.				Total.
	Prosecuted.	Compounded.	Warned.	Offenders undetected.	
East Khandesh ...	62	85	28	35	210
West do. ...	78	4	237	124	443
Násik ...	87	94	936	159	1,276
Ahmednagar ...	219	869	2,775	145	3,508
Poona ...	492	195	1,680	332	2,699
Sátára ...	441	83	2,630	426	3,580
Sholápur ...	58	96	1,322	9	1,485
Total ...	1,437	926	9,608	1,230	13,201

In the warned list of the Poona Division, 86 cases were time-barred under the six weeks rule introduced by the Collector and District Magistrate, of which mention is made in paragraph 67 of the Administration Report of 1892-93. These 86 cases consisted of :—

Fire cases	1
Illicit fellings	6
Cattle trespassed	77
Other offences	2

The cases let off with a warning in the different divisions are sorted under the following headings :—

Divisions.	Classification of offences.				Total.
	Fires.	Illicit cuttings.	Cattle trespass.	Other offences.	
East Khándesh	10	...	18	28
West do. ...	2	68	58	109	237

Sholápur ...	1	272	394	655	1,322
Total ...	67	864	7,711	966	9,608

76. It cannot, possibly, be said that the returns given above show that the Forest Act is administered harshly by Forest officers, or that there is any extraordinary prevalence of forest crime. In a forest area of 6,158 square miles spread over 38,390 square miles of country, included in 7 divisions with 80 ranges, only 1,437 cases were prosecuted and 926 were compounded during the twelve months: these figures speak for themselves.

Upon the East Khándesh Divisional Report the Collector has remarked—
 “Mr. Madan has sent me regularly a return of cases compounded by him. He has worked the section with discretion I consider. The procedure proposed by the Legal Remembrancer is unworkable, in practice, in its entirety. Where Mr. Madan has departed from that procedure he has done so to save the suspected person trouble and delay.” And the Collector has likewise remarked
 “as the procedure suggested by the Legal Remembrancer for the compounding of forest offences is not workable, Section 67 of the Forest Act has been but very little used during the year. In the Western Division, only 4 and in the Eastern Division, only 113 cases were compounded. Returns of the cases thus compounded are sent to me regularly; and the section so far as it is used seems to be used with discretion.”

The Collector of Ahmednagar has recorded that "Trivial cases are being considerably treated."

The Collector of Sátára remarks: "Another matter requiring notice is the large increase in the number of forest prosecutions. This is a subject to which the undersigned has given a good deal of attention. He has tried several forest cases himself and he has examined the records of a large number on the files of the Subordinate Magistrates, and he is glad to be able to say that he has come across hardly any cases that ought not to have been taken into Court. Inadequate punishments continue to be inflicted by some of the Native Magistrates in forest cases, though, as Mr. Fagan says, there has been an improvement in that respect. It was noticed in many cases that there was undue delay on the part of the officers of the Forest Department in instituting prosecutions, complaints having frequently been laid six months or more after the offences were committed. It is believed, however, that something is being done by the Divisional Forest Officer to remedy this state of things."

The Collector of Sholápur has recorded: "Of the criminal cases only one was in my judgment really serious as showing a deliberate joint intention on the part of many persons to disregard forest rules. The policy of not using Section 67 at all was Mr. Oliver's. It has been condemned by Government in a recent Government Resolution. I consider myself that the section should be very sparingly used. There has, as the Conservator is aware, been much correspondence on the subject between his office and mine, and on all general principles I believe we are now at one."

(2). *Protection from fire.*

77. The following statement gives the results of "Fire Conservancy" in the several divisions during the year as compared with those of the preceding year, which, it should be remembered, included 15 months with two hot seasons, or periods of dry months, when forests are more liable to be fired than in the cold season:—

No.	Divisions.	Forest area placed under protection against fire.		Acreage burned.		Percentage burned.		Expenditure incurred in Rupees.	
		1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.

	Total ...	4,052,200	4,042,266	356,773	121,328	8.8	3.0	1,365	2,106

78. There has been a continued improvement in fire conservancy. The year was not a favourable one under climatic conditions for protection against fires, as there was no succession of rain-storms as in the year before at intervals, between November and June. No special measures, beyond burning of fire lines on the sides of cart roads, foot-paths, and rights of way and the outer boundary lines of reserved forests by forest guards, assisted here and there by hired labour, were adopted in the Deccan districts of Násik, Ahmednagar, Poona, Sátára and Sholápur. In the two Khándesh divisions more elaborate fire tracing was undertaken in the widespread forests of the Sátápuas and Akráni. The forest subordinates have been vigilant in descrying fires, and active and zealous in taking action to stop them and put them out; and forest villagers have co-operated readily and willingly in attacking fires, and also in clearing protective lines, save in one solitary instance which occurred in East Khándesh. As a rule, the forest villager understands the benefits of fire conservancy, and voluntarily lends a hand at fighting a fire.

79. In the East Khándesh Division there are 13 ranges; and in two of them, Sánda and Yával, whose forests cover the Sátápuas hills, where fires have

hitherto burnt far and wide year after year, there were no fires this year: the Páchora Range was likewise free of fire. Altogether 40 different fires occurred in the division, and the largest number was in the Edlabad and Chálsigaon Ranges, which had 8 each, burning 5,125 and 852 acres, respectively: in the Jalgaon Range there were 6 fires, which traversed 431 acres; in Jamner and Chopda, 4 fires each, burning 1,038 and 6,201 acres; in Amalner, 3 fires, which only burnt 395 acres; in the Bhadgaon, Bhusával and Ráver Ranges, 2 fires each, spreading over 210, 1,000 and 244 acres, respectively; and only one fire happened in the Brandol Range, where 175 acres suffered. The 40 fires burnt 15,671 acres of forests, or 3·03 per cent. of the forest area of the division. The Chopda Range had the largest spread of burnt forests. An exceptionally large fire raged for two nights and days in the Sápuda forests of this range, and it was extinguished only by great exertion, and willing assistance rendered by a large body of villagers from all the villages bordering the forest, who worked day and night under the direction of forest guards. The Divisional Forest Officer was present directing the attack on the fire. The Mámlatdár and the Chief Constable of Chopda gave very appreciable assistance by going from village to village, and sending village officers and villagers up into the hills to fight the fire. A strong gale of wind was blowing, which the fire was greatly the cause of, and the fire swept along with a fierce head of flame at a great rate, through a dense forest of bámboos, being fed by the deep layer of dead leaves, lying on the ground, which were as inflammable as tinder. The surface springs of water in the forest had dried up, and drinking water had to be brought in mussacks from the villages at the foot of the hills, 6 and 7 miles away, to quench thirst, which the heat of the flame, and the hard work of beating it down with branches, provoked. The Edlabad Range forests on the Hatti hills were fired several times through fires coming across the frontier from Nimar. Of the 40 fires of the year the persons who set fire to the forests were traced in 5 cases, two of these were settled by payment of compensation, and 3 were sent up for trial. A man who had deliberately fired the Kandan reserved forest in the Jalgaon Range, in order to ruin the purchaser of the grass against whom he had a grudge, was sentenced to rigorous imprisonment for 2 months; and adequate punishments were given in the other cases.

Nineteen persons who reside near the forests and are permitted to cut and remove timber and to pasture their cattle in the forests, and who refused to render assistance at the call of their village officers in extinguishing a fire in the Sávda Sápuda forests, last year, were prosecuted under Section 78 (a) of the Forest Act, and were fined in sums amounting to Rs. 51 by the trying Magistrate.

Fire lines were burnt along the external boundaries of the forests, and internal cross lines were likewise cleared; and the expenditure incurred on fires amounted to Rs. 300.

80. The forests of the West Khándesh Division are the widest of all the forests in the Circle, some are above the gháts, some are below, and others are the Sápuda and Akráni hills—the great divide between the Narbada river on the north and the Tápti river on the south. There are 10 large ranges in this division, and one only, Sindkhed, reported no forest fire. 108 fires are said to have occurred during the year, and to have travelled over 89,735 acres of forests. The Divisional Forest Officer is of opinion that the spread of the fires has been very much under-estimated, that double, if not three times the forest area entered in the returns, was burnt: and seeing that the fires occurred chiefly at the time when the mhowra tree (*Bassia*) was flowering, it would appear that the habit of clearing by fire the ground under mhowra trees in order to facilitate the collection of the fallen blossoms is the cause of a greater number of the fires. In 19 cases, the persons who set fire to the forests were discovered. 16 prosecutions were instituted and 16 convictions obtained. Fire lines were burnt externally and internally and forest subordinates, and forest villagers were vigilant in descrying fires, and were active and ready in proceeding to check and extinguish them. Sums aggregating Rs. 1,036 were expended on fire conservancy in this division.

81. In the Násik Division 112 forest fires were reported against 182 of the preceding 15 months, and they burnt 5,141 acres or 0·6 per cent. of the total

forest area. The fire discipline was good. Rs. 97 were spent in rewards and wages for protecting against fire, and putting out fires.

82. There are 11 ranges in the Ahmednagar Division, and fires were more prevalent in the Akola Range than anywhere else. 25 forest fires appeared in this range, and they are said to have burnt only 333 acres. The Karjat Range was free from fire, and the year's record of the whole division in fire discipline is seemingly good, for although 60 separate fires occurred, they were apparently discovered, and met so sharply, that only 1,104 acres suffered; 2 fires in Párner burnt 4 acres; 1 fire in Ráhuri burnt $\frac{1}{10}$ th of an acre; 1 fire in Nevása burnt 3 acres. No expenditure was incurred in burning fire traces.

83. The returns of the Poona Division show fire protection to have been on the whole good. There was no fire in the Indápur Range, and only 4 acres were burnt in Sirúr, 28 in Bhimthadi and 71 in Dhond. Altogether 5,293 acres of the forests of the division are returned as having been burnt by 161 separate and distinct fires. The Divisional Forest Officer is of opinion that the area traversed by fires has been under-reported. The largest number of fires, *viz.*, 33, occurred in the Mával Range, bordering the Syhádris, where 1,847 acres were burnt, but no less than 1,000 acres suffered in one village, Umbre Navlakh, the forests of which were fired on 4 different occasions, and there are strong grounds for suspecting that this was the work of incendiaries to spite the purchasers of grass. The chief cause of fires in ranges bordering the gháts is the careless burning of ráb on fields bordering the forest boundaries. Out of 7 cases of setting fire to forests which were prosecuted, convictions resulted in 4. At Kuhinde Budruk in the Khed Range one Benichand Báichand Guzar, of Wade, was convicted of setting the forest on fire and burning 25 acres, and was fined Rs. 15 by the Magistrate, and was made to pay Rs. 15 damages in addition to the fine. In the Mulshi Range, Laxman Janu was, on conviction, fined Rs. 10 for burning $1\frac{1}{2}$ acres. In the Mával Range, Tukáram bin Pádoji Shindé, who set fire to 90 acres in the Chandkhed, Bembadohol and Dhamni forests was fined Rs. 4 and Genu bin Malhári was fined Rs. 2 for firing 37 acres in the Naigaon and Chikhalsai forests. But the notable case of the year was that of Bálárám Bháorám Pardeshi, who was prosecuted by the Range Forest Officer of Khed, and convicted of setting fire to the Kuhinde forest, and was sentenced to 6 months' imprisonment with a fine of Rs. 100, but on appeal to the Sessions Court he was acquitted as reported in paragraph 75 of the Administration Report of 1892-93. Bálárám then brought a suit in the Civil Court against the Range Forest Officer for a vexatious and malicious prosecution; and Government in their Resolution No. 2916, dated 27th April 1894, sanctioned its defence being undertaken by the Government Pleader, with the result that the suit was dismissed by the Court.

84. There has been a small increase in the fires which occurred during the year of this report in the Sátára Division, over the fires of the dry season 1892-93, but still the proportion burnt, 0.9 of the whole forest region of the district, is inconsiderable. In certain parts of the ghát ranges of Jávli, Mahábleshvar, Pátan and Wái the forest fires are made purposely to force the growth of grass. 117 fires were reported during the year, and they burnt 3,927 acres. In 32 instances the person who set the forest on fire was discovered by the forest guards, 16 of the offenders being boys were let off with warning: in 16 cases prosecutions followed, of which 10 were convicted, 1 was acquitted and 5 were undisposed of by the end of the year.

85. There are 7 ranges in the Sholápur Division, in three of which, *viz.*, Sholápur, Pandharpur and Málsiras, no forest fire occurred: in the SÁNGOLA Range one fire burnt $1\frac{1}{2}$ acres: in the Mádha Range there were 2 fires burning 4 acres; in the Bársi Range 3 fires appeared, one came from the Nizám's territory into the Koregaon forest and burnt 279 acres. Another in the Yedshi forest is said by a committee of village elders to have been caused by friction, two trees rubbing together! the three fires burnt 382 acres; and in the Karmála Range 1 fire was caused by a woman carrying fire, 70 acres were burnt. She was not prosecuted. Altogether 7 fires occurred and 457 acres of forest suffered therefrom. The record is a good one, and speaks well of the vigilance of forest guards, and of the assistance given by villagers.

86. The entire area in charge of the Forest Department, whether it be legally constituted reserved forest or protected forest, or provisionally notified forest lands, is brought under fire protection directly it is placed in the care of the forest subordinates.

87. The Collector of Khándesh in forwarding the administration report of the East Khándesh Division remarks:—

“The area of forest burnt is returned at a much lower figure than last year. There is probably a good deal of guess work in these figures. But after making allowances for that it would really appear that considerably less forest has been burnt this year than last. The question then arises how far this is mere accident, and how far it is due to fire tracing. And when I see that only Rs. 299 were spent on fire tracing I don't think it safe to attribute it mainly to fire tracing. Fire tracing and prosecutions had no doubt something to do with it. But it does not appear safe to count on the improvement as a permanent one.”

and in forwarding that of the West Khándesh Division:—

“What Mr. Keys says about forest fires corroborates what occurred to me in reading Mr. Mádan's report, viz., that reliance cannot be placed on the figures of area burnt over, and that it must not yet be assumed that such fire tracing as is done has done much good.”

(3). *Regulation of Grazing and Protection from Cattle.*

88. Grazing is regulated under the rules published by Government with their Resolution No. 3595, dated 23rd May 1890, in the Revenue Department; and for this purpose the forest areas of every division are divided into two portions, the open and the closed; in the former grazing is allowed, but not in the latter. Some valuable kurans, or fodder grass reserves, are opened for a defined grazing season after the grass has been cut and exploited by hand from them, the right of grazing being sold by auction.

89. Agricultural and some milch cattle of forest villages are allowed to graze free of charge; but for other cattle fees, as a rule, are paid and grazing permits are taken out. In some divisions there is no close season against grazing in the forests situated within the region of heavy rainfall, viz., the moist forests bordering the Syhádri mountains; and the forests of Peint in the Násik District below the gháts are open all the year through, and all village cattle there are given free grazing. From the 15th August of one year to the 31st March of the next is generally observed as the grazing season in the Deccan forests beyond the line of heavy rainfall. In Khándesh, the close season against grazing extends from the 1st February to the 31st May. Sheep and goats are not allowed to graze in all open forests, but only in such forests as are specially open to these animals; and goats are in no case allowed in greater proportion than 1 goat to every 50 sheep. The harm that goats do effect upon the grazing of the areas they may be admitted to in this country is serious enough to warrant their absolute exclusion.

90. The following statement shows the distribution of the areas between closed and open to grazing in the several divisions of the Central Circle:—

Divisions.	Open.	Closed.	Total.	Remarks.
	Sq. Miles.	Sq. Miles.	Sq. Miles.	
East Khándesh ...	748	60	808	
West Khándesh ...	1,214	365	1,579	
Násik ...	811	468	1,279	
Ahmednagar ...	553	293	846	
Poona ...	344	364	708	
Sátára ...	485	174	659	
Sholápur ...	90	188	278	
Total ...	4,245	1,912	6,157	

91. To the villages inhabited by Kolis bordering the Syhádri in the region of heavy rainfall in the Khed, Ambegaon and Junnar Ranges of the Poona Division, as a special tribal concession, the grazing rules have not been extended,

and the right of grazing in the forests is sold nominally by auction yearly, but in reality there is no competition at all: the village officers are the habitual purchasers in every village, for no one bids against their offers which represent the price the village community is willing to pay; and since this tribal concession was made, the revenue derived from these sales has been a diminishing quantity, and it has been found that the villagers derive profitable trade from their privileges, for they let out grazing in the forests to professional graziers, and to people, other than Kolis, from the Konkan, and adjoining villages in the Deccan, charging them fees. The intention of the tribal concession was to provide grazing for the cattle belonging to the Koli villagers only on payment of such sum as they were willing to give; a quasi-commutation system; and thereby to relieve them of the restrictions of the grazing permit system, and of interference on the part of forest guards with their cattle so long as they kept to their open forests, and did not trespass into the closed forest. But as stated above, this liberal concession has been abused by the Kolis, who are making the moderate price to be paid by them a vanishing figure, and concurrently their profits, by letting out the grazing to foreign cattle, to be of annual increment, to the detriment of the forests which provide the grazing.

92. The duty of issuing permits for village cattle to graze on payment of fees is assigned to village officers, who are paid a percentage at the rate of Rs. 7-13-0, of which Rs. 4-11-0 goes to the Kulkarni and Rs. 3-2-0 to the Pátíl on the grazing revenue they collect. This work is said to have been performed unsatisfactorily; the village officers having neglected in many cases to issue permits, and not infrequently to have connived at wholesale illicit grazing. In the Sátára District, the Collector has accordingly empowered the Forest officer to issue grazing permits for village cattle where the village officers fail to do this work at proper time.

93. The following statement shows the number of cattle of different kinds impounded in the several divisions during 1893-94, under Section 69 of the Indian Forest Act, for being trespassed in closed forests as well as in open forests:—

Division.	Kind of forest area.	Cows and bullocks.	Buffaloes.	Camels.	Horses.	Asses.	Sheep.	Goats.	TOTAL FROM

94. In closed forests where cattle had no business whatever, 188,584 were caught when trespassed, and were impounded; of these, 82,008 or 43·4 per cent. were sheep and goats. This number is less by about 4,000 than were impounded from closed forests during the corresponding 12 months of the preceding forest year. From open forests 106,185 cattle were driven to the pounds, 70,579 being sheep and goats, equal to 66·4 per cent. of the whole. 55 camels were caught trespassed, one in the Poona forests and 54 in the forests of Shoálpur. During the corresponding 12 months of the previous year about 7,700 more cattle were impounded from open forest than in the year of the report.

95. In the East Khándesh division there has been a marked decrease in the number of cattle impounded when compared with the corresponding period of the previous year. This decrease is attributed chiefly to a smaller number of

animals having been impounded from the open forests owing to trespassers having been given the option of paying the legitimate grazing fees, especially in the earlier part of the grazing season, before their cattle were put in the pound and to their having generally accepted these terms. In no instance were the owners of cattle caught trespassed in closed or open forests let off with a simple warning, but in each and every case, save when grazing fees were taken on the detected animals, the cattle were driven to the pounds. No case of cattle trespass was compounded under Section 67 of the Forest Act; but a few cases in which offences had been repeatedly and deliberately committed were taken before the Magistrates for disposal after the cattle had been impounded.

The Collector has remarked on this subject when reviewing the Divisional Forest Report: "Mr. Mádan says there need be no apprehension of trespassing cattle being let off not merely without payment of compensation but without pounding. From what he says, however, I gather that there were cattle so let off. Some trespassing cattle were not taken to the pound and were not made to pay compensation, but had to pay merely the grazing fees. This is, I think, inadvisable, as if graziers who do not take out passes have not to pay more than graziers who do, then people are encouraged to graze their cattle without passes in the hope of escaping payment altogether."

96. In the West Khándesh Division 23,454 animals were impounded, of which 17,217 were caught in closed forests, 8,513 sheep and goats were among the number. This is a small increase on the impounding made during the corresponding 12 months of the year before. The Collector has remarked:—"More cattle have been impounded this year. But the people will not attend to rules unless they are made to suffer for transgressing them." The Collector has likewise remarked:—"Rigorous impoundings of trespassing animals is the only way of making the people conform to the rules and pay grazing fees which they ought to pay; and accordingly no trespassing animals were let off with a mere warning: all were taken to the pound."

97. The tale of impoundings in the Násik Division has fallen very considerably from the number of the corresponding 12 months of the previous year. Only 29,607 animals were impounded during the year of the report, of which 16,719 came from the closed forests; there were 17,663 goats and sheep put into the pounds or 59.6 per cent. of the whole number of impoundings. The cause of the decrease is that there were scarcely any impoundings for about six months, because the cattle found trespassed were driven out of the forests by forest guards, and their owners were warned and their names registered; but a different name was given each time for the owners of cattle caught trespassed, and, doubtless, there were many "pursers' names" amongst them, and cattle were deliberately driven into closed forests in the charge of small boys and old women, so that the persons found in charge of them could not be prosecuted before the Magistrates. In one case which came under the Conservator's notice the old woman and small boys admitted that the forest in which the cattle were found was closed forest, and that they were fully aware of this fact. The Collector remarks that "the working of the grazing rules is on the whole fairly well reported upon"; and it is possible that impounding has been less indiscriminate than formerly. In the whole district 124,775 head of cattle were impounded during twelve months, deducting therefrom 29,607 impounded by the Forest Department, it will be seen that the people themselves have impounded nearly one hundred thousand of cattle which were being trespassed on their own lands. This figure shows how habitual it is for the owners of cattle to allow their animals to forage on other people's property for their food, and how futile it is to adopt mild measures, such as warning owners and turning out cattle, in order to stop such dishonest practice. Villagers have other and stronger means in addition to impounding of putting pressure on their fellow men to keep their cattle from trespassing on to a neighbour's property and in spite of this the tale of private impoundings runs up to a large score.

98. In the Ahmednagar Division 94,998 cattle were impounded by Forest officers, and of these 61,091 were taken from the closed forests; there has been a decrease of about 7,000 head on the impounding of the corresponding 12 months.

of 1892-93. The reason is possibly owing to the action of forest guards in shutting their eyes to a good deal of cattle trespass in many cases and not owing to any actual decrease in the number of cattle trespassed. From the way in which wire-fenced plantations of the Forest Department have been treated in the Ahmednagar Division this year, it is impossible to believe that cattle owners in this district are forsaking their habit of driving their animals on to other properties than their own to graze. In some cases cattle owners have not gone beyond twisting together 2 or more of the wires of the wire fencing in order to make ways for cattle to get through. But they do not stop at such mild proceeding. At Bhálavni where there is a wire-fenced reserved forest under treatment for regeneration the villagers who own cattle, uprooted posts, breaking and cutting some of them in two, here and there, and they removed and appropriated wire in considerable lengths, and made wide gaps for cattle to enter into the plantation in many directions. The Pátíl and Kulkarni of Bhálavni village were suspended under the Collector's order for three months for the destruction of the wire fencing round the reserved forest.

The village officers of Chapadgaon in the Karjat Range were fined Rs. 25 by the Collector for tearing up the grazing permits which had been issued in respect of some cattle on the payment of the prescribed fees by their owners, and for impounding these cattle, and giving as the reason that the cattle had been grazed in the forest without permits.

Sometimes, though very seldom, forest guards impound cattle falsely, but when complained against an inquiry is always made, and they are prosecuted, if there should be a *prima facie* case against them, as was done to Bhiku Kashinath, Beat Guard in the Karjat Range; but more frequently do villagers bring in the Magisterial Courts false charges of illegal impounding against forest guards, as was done in the Akola Range this year, when four forest guards, Aba Deoji, Shankar Dewsing, Rájú Aminbhai and Dvárku Mahádeo were prosecuted on a complaint made by villagers and were acquitted. One Sakháram valad Vithoba, cultivator by caste, residing at Párner, and 8 other cultivators were charged before the First Class Magistrate with having endeavoured to cheat by representing to the villagers of Párner in the month of August 1893, that they had farmed from Government the grazing of the open portion of the Párner forest, about 1,800 acres, for the year, and they invited cattle owners to come to them at once and pay fees and take out permits. But their proceedings were brought to light almost immediately by three cattle owners who had been victimized, and made complaints in writing to the Mámlatdár of Párner, when the nine men were prosecuted, but for the want of sufficient and reliable evidence to sustain a conviction, the accused were discharged.

About 70,000 head of cattle were impounded altogether in the Ahmednagar District during the revenue year by the people for trespassing on to their properties, chiefly when the fields were growing corn. These figures show what a general custom it is to turn cattle out of villages intended to wander about in search of food, and how prone cattle owners are to trespass or pasture cattle, or to permit their cattle to trespass on lands which do not belong to themselves, and whereon they have no right of entry.

The Collector of Ahmednagar has remarked on cattle impounding thus:—

“The decrease occurs mainly in the cases of sheep and goats, and is probably due to nomad flocks having been kept from trespassing to the usual extent. There is a slight increase under the head of ‘cows and bullocks,’ and it is probable that the increase would have been much larger had forest officers in all cases done their duty. Cases are reported by the Divisional Forest Officer in which closed forests were found grazed down to the ground without an instance to show of a single bullock impounded. It is idle to seek for more elaborate reasons for the general decrease. The forest subordinates assign it to the rainfall which brought up grass in Malki numbers. Last year, the same reason was assigned for a vast increase in impoundings, but in that year the rainfall made the grass grow in the forests and thus placed temptation in the way of cattle.”

99. The number of cattle impounded in the Poona Division for illicitly grazing inside reserved forests amounted to 51,701, of which 33,321 were taken from closed forests, and these figures show that there were not so many cattle caught in the forests trespassing as during the previous year, nearly $\frac{2}{3}$ of the

animals were sheep and goats. In the Bhimthadi, Indápur and Sirur Ranges in the east of the district, where there is less vegetation than elsewhere, is cattle-trespass heavier than in the west, the region of a heavier rainfall. In the eastern talukás large flocks of goats and sheep are kept by professional graziers, and these animals do incalculable injury to the very much-required ligneous vegetation in these arid parts. Now that the pound fee for goats is to be raised from 1 to 4 annas, there will be a considerable decrease in the trespass of goats in future. On the other hand, there is an indication of an improvement on part of forest villages in understanding and conforming to the grazing rules, for the number of cattle for which grazing permits have been issued during the year of this report, both on payment of fees and for free grazing, is considerably in excess of the numbers during the preceding 15 months. Fee paid permits have been taken for 9,891 more cattle, while free permits have been issued to 8,047 more animals.

More cattle were impounded by the people themselves for trespassing on their lands than by the Forest Department from off forests: the number of private impoundings during the revenue year came to 57,725. The Collector has written as under:—

“Cattle trespass is an evil of much magnitude, and I do not think there is much hope of the number of animals impounded by the Forest Department decreasing to any very marked extent for some years to come. I have little doubt that cattle are occasionally allowed to trespass in forest limits, because these limits are not accurately known. I have still less doubt, however, that in the vast majority of instances the trespassing is deliberately caused, and that the extent to which it goes on is limited only by the capability of the local forest officials to make seizures. Given the actual presence of the forest guard and forest boundaries are respected: given his absence and the people graze their cattle wherever at the moment it best suits them.”

“The raising of the pound fee on goats is a measure of which the benefits to forest should be given. I regret to say that the Taluka Magistrates do not, as a rule, realize the necessity of punishing with some severity when cases of the deliberate grazing of goats and sheep in closed areas, even in newly planted up areas, are brought before them. They seem unable to look beyond the actual damage done, and to recognize that the consequential damage should be taken into account. I have repeatedly had to call their attention to the subject and with the raising of the pound fees it may be hoped that fewer trespasses will occur, and fewer prosecutions and that when prosecutions are instituted, the Magistrates will recognize that the cases are really of some importance or they would not otherwise have been put before them.”

100. In 1892-93 the number of cattle impounded in the Sátára Division during 15 months was—

From open forests	17,276
From closed forests	30,718
		Total ...	47,994

whilst in 1893-94, a period of 12 months, the number rose to—

From open forests	25,740
From closed forests	27,231
		Total ...	52,971

of which total sheep and goats represent 32,288 or 61 per cent. of the whole.

The Divisional Forest Officer remarks:—

“The number of impoundings has increased owing to the public understanding the desire of forest officials not to impound incessantly in accordance with Government wishes, but the Divisional Forest officer doubts any improvement taking place under this procedure of treating trespassing, which is the only serious difficulty in the conservancy of the Sátára forests.”

The Collector in forwarding the report remarks:—

“From the Collector’s point of view, the noticeable features in the year’s forest administration have been the decrease in the revenue from grazing and the increase in the number of animals impounded for trespassing in forest. As a report on the whole question of grazing in forests is shortly to be submitted in accordance with the orders of Government,

no full remarks upon it are necessary here. The undersigned may, however, safely express an opinion that there is something wrong either with the grazing rules themselves or with the manner in which they are worked."

101. The number of impoundings in the Sholapur Division has been fewer this year; 24,954 cattle were taken from closed forests to the pound and 4,860 from open forests, which is less than of last year by 6,249 from closed and 7,002 from open areas. When trespassing cattle were found in the forests for the first time their owners were warned, and the animals were driven out; often this was done for the 2nd time also: and it was only after repeated and deliberate infraction of the law that animals were impounded and action taken against their owners: 8,814 sheep and goats were among the number that found a temporary habitation in the village pounds. The Collector states that—

"The village officers have done their work in connection with the grazing rules well enough. The working of the cattle trespass arrangements is satisfactory."

During the revenue year 1893-94 the number of cattle impounded by the people themselves from trespassing in private lands amounted to 27,406. The Collector states that—

"the number of cattle impounded by the Forest Department shows a decrease, though not so large as in the previous years, the figures for 1891-92, 1892-93 and 1893-94 being 43,488, 34,838 and 32,641, respectively. (The revenue year is here meant.) This is satisfactory inasmuch as it shows that the recent orders of Government for the better administration of the Department have had their effect in lessening the undue harshness hitherto exercised at times by some of the forest subordinates, and in improving the tone of the subordinate service generally. The people too are gradually understanding and appreciating the good intentions of Government in organizing and extending the Department, and they therefore take more care to avoid intentional breaches of the rules of the Department."

102. In order to keep cattle out of forests under reboisement, such as exploited compartments, plantations, &c., fences are erected consisting of the crown branches of the felled trees. And wire fencing has also been put up round a few specially selected areas. Wire is obtained from the Telegraph Department when they have any to spare: and some has been purchased in the Bombay market during the year.

(c.) IMPROVEMENT OF FOREST GROWTH.

(1). *Natural Reproduction.*

103. The rainfall of 1893 was seasonable, there were rain showers during the month of May in the Deccan; and in June, July and August, the rain was both plentiful and favourable to the spontaneous germination of seeds and to the growth of plant life; and in October, November and December also rain came fitfully but timely to water the young seedlings, and give them strength to outlive their dormant season and the hot weather. Under Nature's bountiful care and favouring conditions the reproduction and the natural growth of trees in the forests has, during the year, been decidedly good.

104. In the East Khândesh Division the closed portion of the forests in the champaign country south of the Tápti river mostly shows a marked contrast to the open and heavily grazed open areas in their vicinity. In the Tamaswadi closed forest of the Bhadgaon Range all bare and open patches are rapidly closing up. In the Juwardi reserve the Anjan (*Hardwickia*) and other trees are overtopping the scrub in the ravines and sheltered places. In the Yával Range a profusion of young Anjan may be seen carpeting the forest ground along the base of the Sâtpuda hills; this may be owing in great measure to the very heavy seedling of the tree in the previous year. In the forests beyond the Suki river near Pal may be seen a remarkably dense and gregarious crop of Anjan saplings and seedlings, very tall and straight, and promising to turn into a very valuable timber forest hereafter. In the Jámner Range, the teak coppice of past year's fellings has attained a height of about 10 feet in the Gortala reserves; and excellent growth is to be seen in the Wagdhara forests in the teak exploited areas of last season. In the remote valley of Handya-Kundya on the way to Lakhri Hanuman in the Yával Sâtpudas teak is growing up very straight, tall and promising amidst dense clumps of Bamboos which shelter the trees from side light, preventing the formation of epicormic

branches. But in Kharia and other forests west of Vaijapur in the Chopda Sátputas, which are more accessible to Bhil privilege-holders, and are much preyed upon by them in consequence, Salai (*Boswellia*) has become so predominant, owing to its low commercial value, and the immunity it consequently enjoys at the hands of privilege-holders, that not only teak, but many other valuable kinds of trees, are disappearing entirely from these parts. Looking to the disproportionately worked and overworked condition of this and similarly circumstanced portions of the Sátputa forests through the promiscuous and indiscriminate fellings which have gone on in them for years past, at the hands of Bhil privilege-holders, it is important that early steps should be taken to systematize exploitations by applying to the forests the provisions of a Working Plan, in order to secure a sustained yield without exhausting particular parts of forests, or certain kinds of trees. The whole forests must be blocked and subdivided into compartments so as to restrict all exploitations by privilege-holders, as well as by permit-holders, to the compartment of the year in each forest block, or else nature will step in and put an end to the convenience of the Bhil by substituting commercially valueless trees for the better marketable kinds. Sentiment cannot prevail against Nature's laws, and *coûte qu'il coûte* the axe of the Bhil in the Sátputa forests must be brought under regulation, if the substance on which his privileges subsist is not, as is doing round Vaijapur, to fade away. A proposal for bringing these forests under Working Plans has been sent up to the Collector by the Forest officer. The flat lands on the southern bank of the Aner which forms the frontier boundary line against Holkar in the Chopda Sátputas, show a dense and vigorous self-sown growth of Temburni (*Diaspyros melanoxyton*) and other trees, including the teak.

105. In the Shirpur Sátputas and in the western forests of the West Khándesh Division the natural augmentation of the forest growth is very vigorous, pronounced, and striking to the eye, despite forest-fires. The contrast between these forests where grazing is very light, owing to their distance from civilization, and to the paucity of bovine cattle, and to the entire absence of that hereditary foe of the Forest officer, that death dealing locust of ligneous vegetation, the Goat, and forest elsewhere, where cattle are numerous on the hills, is marked. Seedlings everywhere of all kind of trees, covering the ground, and this the rule and not the exception. It tends to confirm the undeniable opinion, founded on wide experience, that excessive grazing is the bane of teak forests: take the Panch Mahál forests and the Deccan teak forests for examples: and it goes likewise to prove that cattle, more particularly when trooping in during the rains, work greater destruction of the regeneration in a forest than forest fires do. Large timber is a necessity in India, and these forests in the wilder parts of the country can be devoted to its production; and here the more vigilant forest guards, at all times active and keen and ruthless in protecting the natural reproduction against destruction from trespassing cattle, are *Felis tigris*, *Felis pardus*, *Felis jubata*, and *Cuon rutilans*. The Tiwas (*Dalbergia oojainensis*) is to be observed reproducing very freely in clumps of seedlings in Taloda, Sháháda and Pimpalner forests. The reproduction of teak (*Tectona grandis*) and the Anjan (*Hardwickia binata*) by stool shoots in the several compartments which have been exploited in many directions during years past, is excellent.

106. In the Násik Division, in the Peint forests and elsewhere, cattle and man not dominating, reproduction by nature is fresh and strong.

107. The rainfall in the Ahmednagar Division was, as in other divisions, plentiful and well timed, the average fall during the forest year measured about 26.86 inches; and healthy ambitious seedlings, from self-sown seeds, were seen in many forests of this district.

108. The formerly barren hills in the eastern portion of the Poona District are making a show very rapidly in reboisement. The ravines are filling up fast with young trees, and among others the Nim (*Melia azadirachta*) is very prominent. The results of forest conservancy are noticeable and encouraging on the lands of Nirgudi Pundodi and Madanvadi in the Indápur Táluka, within the arid belt. The valleys formed by the Malé and Amber streams are a sea of green; the growth on the banks of the streams, the lower ground, being

Bábool, and on the higher slopes chiefly Nim, while the plateau above is being covered very rapidly. This block in a few years will be a valuable timber reserve, and is worthy of a visit as affording evidence of what Nature under forest conservancy will do in the most unpromising places. A herd of wild cattle lives in this forest block which was open savannah land not very long ago. All along the bank of the Bhima away to the far east is a broad line of dark green Bábool reserves; while the hills, which constitute the divide between the Bhima and Nira rivers, is getting covered steadily, if slowly, with ligneous vegetation. In the teak belt the region of a fair and moderate rainfall thousands of teak and other seedlings may be seen at the end of the rains; here coppice shoots grow very vigorously, some of them 8 to 10 feet high before they have had two rains down pouring on them. In the moister region of the gháts the wild mango and the Jámbhul are coming on in great profusion, and the Hirda tree is steadily increasing in numerical representation: many thousands of self-sown seedlings are to be seen in the forests of Shridhar Pathar about 10 miles north-west from Karkála station on the Great Indian Peninsula Railway.

109. Regarding his division, the Forest Officer of Sátára reports:—

“In the west where cattle are few, and kumri, the great enemy of forests, has been stamped out, natural reproduction has realised the most sanguine hopes: whilst in the east where cattle, especially sheep and goats, overrun the country, natural reproduction is at an absolute standstill, except in a few specially guarded areas.”

It is folly to admit goats at all, and to allow the heavy and continued grazing by sheep of the forests on hill sides in the east of the division, the region of a light and very uncertain rainfall, where the preservation of such vegetation as exists requires to be carefully ensured, and the growth of new vegetation requires to be fostered in order to impound the rain fall and to protect against its off-flow on to the plains below. It is just in this portion of the division where the protection against cattle should be strong in the interests of the people themselves; and goats should on no account be permitted to go up on the hill slopes to work destruction. Experience has shown that the hill sides in the arid region which have been divested of all ligneous vegetation will recover themselves with the growth which was once their beauty and their power, if the animals that feed on plant life are kept off. Now the goat is not essential to the peasant cultivator, it does him more harm than it can do good, and it has no claim to “overrun” the forests which are under reboisement in the east of the Sátára Division; and every argument tells for the exclusion of the goat. This is evidenced by the closed forests, in the exploited compartments of the teak forests the reshoots here are very clean growing and vigorous; and the reproduction in the moist forests along the Syhádris is a sight to gladden the heart of a forester, and also of the Revenue officer who sees the promotion of agricultural prospects on the cultivated plains below the hills to depend upon, and to keep pace with, the rehabilitation of the natural reservoirs of the country, *viz.*, forests covering the steep slopes of mountains and hills where the head waters system of great rivers which flow across the continent and water hundreds of square miles of fields of waving corn are to be found, such as the great Krishna river which has its sources in the moist forests bordering the Syhádris in the Sátára Division.

110. In the Sholápur District also there is nothing to complain of nature in her work of reafforestation where cattle and man are not allowed to defeat her laudable efforts.

(2.) *Artificial Reproduction.*

111. As the forest year opens on the 1st July and closes on the 30th June following, the plantations and sowings are generally commenced at the very close of the year, so that the results of the sowings of the year as to whether seeds germinate, &c., are not and cannot be told in the report of the year.

112. The plantation and cultural operations undertaken during the year in the East Khándesh Division are given concisely in the following table:—

Ranges.				AREAS SPECIALLY TREATED BY HIRED LABOUR.				
				Pitted.	Dibbled.	Ploughed up.	Broad-casted.	Total.
				Acres.	Acres.	Acres.	Acres.	Acres.
Amalner	20	20
Bhadgaon	225	...	225
Bhusaval	622	622
Chálisgaon	150	...	150
Chopda	75	64	139
Edlabad	34	16	126	...	176
Erandol	15	...	82	200	297
Jalgaon	158	...	220	...	378
Jámner	23	23
Páchora	41	41
Ráver	24	24
Sávda	200	200
Yával	50	50
Total ..				575	40	803	927	2,345

All the exploited compartments which had been coupes of the year were sown up and, in addition to the above, forest guards made their own sowings and planting, as usual, without additional cost to Government.

113. In the West Khándesh Division 121 khandis of seeds of all kinds were collected by forest guards, chiefly consisting of teak (*Tectona grandis*), Tiwas (*Dalbergia oojeinensis*), Sissu (*Dalbergia latifolia*), Bia (*Pterocarpus marsupium*), Sadara (*Terminalia tomentosa*), Dhawda (*Anogeissus latifolia*), Khair (*Acacia catechu*): these were sown by the beat guards in shallow pits made inside their reserves and the inferior kinds of seeds were broadcasted. The nurseries at Dhulia and at Dahiwel were kept working as usual; and the total expenditure incurred on plantations and cultural operations amounted to Rs. 537.

114. In the Násik Division a large collection of seeds was made, and nearly 4,000 acres, including exploited compartments, were planted and sown; and an expenditure of Rs. 2,177 was incurred. The regular plantations at Satpur Páthardi and Ganga Kath in the Násik Range and of Sawandgaon in the Málegaon Range were maintained. Large collections of seeds were made by forest guards, who carried out their usual plantation works.

115. In the Ahmednagar Division the whole of exploited compartments in the Bábool reserves, measuring $160\frac{11}{20}$ acres in 5 ranges, were fully ploughed and sown with Bábool seeds obtained from Sind, together with indigenous Bábool seeds at a cost of Rs. 260-9-0. Nimb (*Melia azadirachta*) seeds were dibbled into the ground over $703\frac{7}{10}$ acres in 6 ranges, at a cost of Rs. 51-4-6, the seeds were sown at distances of 10 feet apart in blanks and open glades. In the 6 ranges of Nagar, Karjat, Shevgaon, Ráhuri, Sangamner and Akola, teak seeds were dibbled into the ground at distances of about 10 feet more or less over open patches, aggregating 1,337 acres, at a cost of Rs. 54-15-6. In forest lands opened to sheep grazing in the Nagar, Párner, Shevgaon, Nevása and Kopargaon Ranges, 1,006 acres were dibbled over with Tarwad (*Cassia auriculata*), and with seeds of other plants which sheep will not touch. 245,025 small holes were made in these lands, and seeds were put into them under the soil. 1,832 acres of rich black soil in the Nagar, Shrigonda, Karjat, Jámkhed, Shevgaon, Nevása, Ráhuri and Kopargaon Ranges were plentifully broadcasted with Bábool seeds by a gang of labourers; and the cost of this work amounted to Rs. 128-8-0. Some 3,916 pits were dug over blank places in the forests of the 4 ranges of Nagar, Shrigonda, Kopargaon and Akola and were sown at a cost of Rs. 11-8-6; and the germination has been good. In addition to these paid operations the forest guards of the division, each in his own beat, have, without any cost to Government,

(a) collected 177 khandis of seeds all kinds,

(b) sown seeds in 77,125 pits which they had dug over 182 acres of forest land,

(c) dibbled into the ground in 91,560 small holes seeds over a surface of 215 acres,

(d) broadcasted seeds over 12,003.

71½ khandis of seeds were collected by hired labour at a cost of Rs. 327-7-1 and 2½ khandis of seeds, Sal (*Shorea robusta*), Shivan (*Gmelina arborea*), and Anjan (*Hardwickia binata*) were imported from other districts.

The fixed plantations at Dongargan and Hanmantgaon were kept up during the year, a Máli being employed at each on Rs. 6 per mensem. Good all round work has been done in the forests of this division in furtherance of the regeneration of the forests. The results of the sowings and plantings which were made last year in exploited compartments and other areas are said to be generally satisfactory.

116. The forest guards in the Poona Division collected 112 khandis, 1 maund and 26½ lbs. of seeds in their beats spread over 11 ranges: it may be useful to explain that 28 lbs. make one maund and 28 maunds 1 khandi, and, in addition thereto, 69 khandis, 17 maunds and 15 lbs. of seeds were collected by hired labour at a cost of Rs. 370-9-0. The forest guards, without any cost to Government, made 89,905 pits, 12" x 12", over a total area of 544½ acres, in which mixed seeds were sown, and 2,482½ acres, chiefly in the eastern part of the district on hill slopes, were sown broadcast with seeds by forest guards; in some places the seeds were dibbled into the ground. Nim (*Melia azadirachta*), Sandalwood (*Santalum album*), mango (*Mangifera Indica*), teak (*Tectona grandis*), Jámbhul (*Eugenia jambolana*), &c., were thus sown.

The cultural works undertaken by hired labour under the direction and superintendence of the forest subordinates consisted of:—

Ranges.	Pitting.		Furrows ploughed area.	Broad-casted and dibbled area.	Total area sown.	Cost.		
	Pits.	Area.				Rs.	a.	p.

Total	700½	19,816½	6½	1,717	0	6

118. There are seven ranges in the Sholapur Division, and here the forest guards collected 74 khandis, 18 maunds and 7 lbs. of seeds; in addition to these 46 khandis, 20 maunds and 9 lbs. were collected locally by hired labour, and 1 khandi, 18 maunds and 4 lbs. were imported, so that 123 khandis, 1 maund and 6 lbs. were available for sowing and were duly sown in the following manner:—

All the exploited compartments which had served as coupes of the year were ploughed all over after the stumps of the felled Bábool trees had been dug out of the ground:—

Range.	Full ploughed area.	Pitted.	Broad-casted.	Dibbled.	Total.	Cost.
	Acres.					Rs. a. p.
Sholapur	41	6	342 $\frac{9}{10}$	123 $\frac{2}{5}$	513 $\frac{3}{10}$	44 15 0
Bársi
Mádha	335 $\frac{1}{4}$	335 $\frac{1}{4}$	335 0 0
Karmála
Pandharpur	1,101 $\frac{33}{40}$...	1,101 $\frac{33}{40}$	12 9 3
Sángola	229 $\frac{11}{40}$	20	249 $\frac{11}{40}$...
Málsiras	647 $\frac{11}{20}$	3 $\frac{3}{4}$	651 $\frac{3}{10}$	3 9 0
Total	376 $\frac{1}{4}$	6	2,321 $\frac{11}{20}$	147 $\frac{3}{20}$	2,851 $\frac{9}{20}$	396 1 3

The smaller kinds of seeds were broadcasted, while the larger kinds as Terminalia, Tectona, Mangifera were put under the soil. Each forest guard within his beat was required to prepare 100 pits for mangoes, 2' x 2', and 2,000 pits, one foot in diameter and one foot deep, for other seeds such as Bábool (Acacia arabica), Nimb (Melia azadirachta). The sowings are completed before the burst of the rains. Inspection shows that it is necessary for the range guards, Range Forest Officers and the Divisional Forest Officer to exercise close and searching supervision over this important branch of a beat guard's duty, lest he should let the work slide, a few guards have been detected in failing to dig pits, others in digging a fewer number than they are required to dig, and sometimes the pits are not of the proper dimensions. Each guard has to collect 1 khandi or 784 lbs. of seeds of all kinds in his beat, some of them try to shirk doing so. But on the whole the result of forest guards' sowings is fairly satisfactory; and some of them take a pride in showing their work, as Dr. Brandis, late Inspector-General of Forests, could testify to. Plantations made by forest guards during the last 24 years in the Deccan are now being worked for timber for local supply.

The forest guards of the Sholapur Division without any cost to Government made the following sowings during the year:—

Ranges.	Dibbled.	Pitted.	Broadcasted.	Total.
	Acres.	Acres.	Acres.	Acres.
Sholapur	43 $\frac{7}{10}$	452 $\frac{1}{5}$	495 $\frac{9}{10}$
Bársi	12	1,160	1,172
Mádha	15	40	596 $\frac{3}{40}$	651 $\frac{33}{40}$
Karmála	6	60	1,044 $\frac{17}{20}$	1,110 $\frac{17}{20}$
Pandharpur	15	10	2,561 $\frac{13}{20}$	2,586 $\frac{13}{20}$
Sángola	20	21 $\frac{1}{2}$	310 $\frac{2}{5}$	351 $\frac{13}{20}$
Málsiras	3 $\frac{3}{4}$	20	1,151 $\frac{1}{8}$	1,171 $\frac{1}{8}$
Total	56 $\frac{1}{4}$	206 $\frac{19}{20}$	7,277 $\frac{1}{20}$	7,540 $\frac{1}{4}$

119. The cultural operations undertaken by the forest guards as a part of their ordinary duties, cannot fail to promote the rewooding of the country. All the forest region of the Circle is parcelled out into beats, not an acre of land in forests is left outside of a beat, and each beat is an unit of seed collecting and of sowings, i.e., of artificial cultural operations by forest guards. So that recreation, the chief work of forest management in the Deccan, goes on yearly, to a limited extent it may be, in 1,094 centres in the Central Circle, without any extra cost to Government, as will be seen :—

Divisions.	Number of Ranges.	Number of Beats.	REMARKS.
East Khándesh	13	122	
West Khándesh	10	160	
Násik	14	220	
Ahmednagar	11	146	
Poona	11	104	
Sátára	14	167	
Sholápur	7	85	
Total	80	1,094	

It has been said that this "is hardly scientific" : at any rate it is useful work ; and it shows some return for the employment and the cost of forest guards which cannot be gainsaid, and if much more such work were to be performed by forest guards all over India, in the more treeless parts especially, they would confer a lasting benefit on the country and upon its people.

(3). *Early Thinnings.*

120. No such operations are attempted in any forest of any division in this Circle ; and it would be very hazardous to allow forest guards, such as we have, to undertake such scientific operations as early thinnings in their forests.

(4). *Other operations for the improvement of Growing Stock.*

121. Every forest guard is provided with a Maráthi Koita wherewith to cut the creepers within the forests of his beat in the region of timber forests ; and the forest guards in charge of the Bábool forests in the champaign country of the Eastern Deccan are provided each of them with a "A'kadi" wherewith to cut, dig up and carry away all prickly pear (*Opuntia dillenii*) of recent appearance within the forest of his beat.

122. In the Násik Division Rs. 855 were expended in clearing prickly pear from Bábool reserves on the banks of the Godávári river and its affluents.

123. In the Ahmednagar Division 1,897 cart loads of prickly pear were dug out of Bábool forests in the Páner, Shevgaon and Ráhuri Ranges at a cost of Rs. 125, by gangs of labourers, 10 acres which had been choked by it were thus made available for timber growing ; and the forest guards cleared out about 1,720 cart loads, freeing thereby an area of 150 acres of this nuisance. All the prickly pear was buried.

124. The work of eradicating prickly pear (*Opuntia dillenii*) was pushed on vigorously in the Poona Division, mainly in the Bábool reserves on the banks of the Bhima river, and the progress made shows that 84 $\frac{1}{10}$ acres of forest lands in six ranges were entirely cleared of it at a cost of Rs. 1,669-12-3. The prickly-pear was either buried deep underground, or was stacked in big heaps to decompose and dry when it was burnt, forest guards cleared away all the fresh growth from their forests.

125. In the Sátára Division prickly pear was removed and destroyed from a Bábool forest on the banks of the Krishna river in the Tásgaon Range, at an expenditure of Rs. 614-10-0. And the forest guards in charge of beats in the moist forests, the region of heavy rainfall, where the Hirda tree (*Terminalia chebula*) grows, producing the nut which is the myrobolan of commerce, and

which not only brings in a large revenue to Government, but also gives considerable employment and wages to the mountaineer, the forest villager, in these parts in its collection and carriage to forest depôts, were made to clear space for the leading shoots of young Hirda trees, which were being suppressed in the forests, to push up to the light overhead, and for the crowns and branches of older trees which were being constricted to develop; it is fruit and not timber which is the object of this attention.

126. The removal with the burial of the *Opuntia dillenii* from the Bábool reserves of the Sholápur Division was carried on by beat guards and by hired labour:—

Ranges.			Square Feet of prickly pear removed.	Cost.		
				Rs.	a.	p.
Sholápur	40,578	194	8	0
Mádhá	77,661	224	4	0
Karmála	55,354	137	4	6
Málsiras	99,210	93	3	6
Total			2,72,803	649	4	0

The reserves subjected to this operation are on the banks of the Sina and Bhima rivers.

(5). Experiments.

127. There is nothing much to chronicle under this heading. Interchanges of seeds are made between divisions, and seeds are obtained from other parts of India, such as of pines from the Himálayas, of Eucalypti from the Neilgherries. Sal seeds have been received from the Central Provinces, and Sissu (*Dalbergia Sissu*) from the Changa Manga Plantation in the Punjáb; and sometimes seeds are brought from over the sea. But as the rule exotics do not thrive well in a forest where they are strangers, and they generally die prematurely for want of something they cannot get, or something they get too much of; and it is scarcely desirable to incur any considerable expenditure in endeavouring to make foreign trees take the places of the many beautiful and grand timber and fruit trees, the natives of our own forest soil, which are second to none in the vegetable kingdom of the universe. There are some foreign trees which acclimatize and grow, probably in special localities, under special conditions, such for example as the Casuarina on the sandy, and This tree may be said to be indigenous to Western India now, has to collect up its permanent abode with us. Its foliage resembling them try to shirk Cassowary is very graceful, and the sighing of the birds' sowings is fairly gives the music of the washing of waves on a showing their work sea shore. smooth and the wind is sleeping. The trees could testify to. For it has taken Bise it warps and cracks, and the fire could testify to. For it has taken by forest is a hill station, 4,378 feet as in the Deccan, the plumage of the for timber thrives under a rain-forest air through their leaves the forest guards trifle too vapour Division, shingly shore when the sea is ing the year timber is good when seasoned, other-ewood is excellent. In Poona and at. It above sea level, and about 50 miles inland, in fall of from 50 to 60 inches, but Maháblesh- at and damp for its constitution.

Althea colobium saman, grows very well in the Deccan. may be seen at Poona with a girth of 15" to 18" which 4 years old. The *Grevillia robusta* flourishes all over some fine samples of it in the grounds of the Forest officer's *Supressus torulosa* exists at Mahábaleshvar, but its growth several varieties of Australian acacias, Wattle trees, may be and elsewhere.

(6). Fencing.

128. Fencing is an important adjunct of forest conservancy management in the Deccan, for it is under effective protection only that the growth of self-sown seeds, as well as of those artificially sown, in the exploited compartments,

plantations, &c., into trees is assured. Living hedges take a long time to prove a safeguard against the inroads of trespassing cattle, and fences of crown branches of the felled trees, and of Bábool thorns, &c., have only a brief period of serviceable existence: but wire fencing is comparatively everlasting, and it becomes effective directly it is erected, and it can be removed from one place to another when the reproduction which it has been protecting has become "defensible." Some specially selected areas are being wire-fenced, and the following statement will show the expenditure incurred on such fencing, including the cost of wire, staples, &c., purchased for the purpose in the several divisions of the Central Circle:—

No.	Division.	QUANTITY OF WIRE, STAPLES, &c., PURCHASED.		Expenditure incurred.	Length of fence erected.	REMARKS.
		Wire.	Staples.			
		Cwt.	Cwt. qr.	Rs. a. p.	M. ft.	
1	East Khándesh ...	150	0 3	1,878 0 0	3 4,466	
2	West Khándesh ...	30	0 3	666 14 0	4 0	
3	Násik ...	200	5 0½	4,874 0 0	9 0	
4	Ahmednagar ...	30	0 3	498 3 6	...	
5	Poona ...	40	0 4	623 4 0	...	No wire fence was put up.
6	Sátára ...	30	0 3	474 1 0	...	Do. do.
7	Sholápur ...	50	0 5	795 15 0	1 4,595	
	Total ...	530	10 1½	9,810 5 6	18 3,781	

In the valuable Transpurna Bábool reserves opposite Ghodasgaon in the East Khándesh Division, four tracks, each 100 feet wide, have been cleared for cattle to go through these reserves to the grazing grounds beyond them; and a commencement has been made to guard all these tracks with wire fences, and nearly four miles were thus fenced in at the close of the year.

Wire fencing work in the West Khándesh Division was entirely confined to the Laling reserve in the Dhulia Range, and the length of fencing erected was 4 miles. Thorn fences were made round the stools of departmentally felled Anjan (*Hardwickia binata*) in the Dhulia Range, in order to protect the very delicate reshoots of this species from stray cattle.

In the Násik Division the work of wire fencing was undertaken in the following ranges at a cost of Rs. 4,874:—

Range.	Locality.	Length in miles.
Niphád ...	Narayan Tembhi ...	3½
Sinnar ...	Ghorwad and Shivde ...	1½
Nándgaon ...	Nándgaon ...	¼
Igatpuri ...	Pimpalgaon Ghadga ...	1½
Násik ...	Ganga Kath ...	1½
		9

The Bábool coupes exploited during the year in the ranges of Shevgaon and Kopargaon in the Ahmednagar Division were fenced round with Bábool thorns, at an expenditure of Rs. 155-12-6, and in the ranges of Nagar, Shrigonda, Ráhuri and Sangamner Bábool thorn fencing was put up by the agency of Beat guards. In addition to this 1,700 Bámbú shoots and 16,200 aloé bulbs were planted by forest guards along forest boundaries free of cost. The Shendi reserve in the Nagar Range is to be fenced with wire; and wire has been purchased for the purpose, and it will be erected next year.

For the protection of plantations and areas under special treatment for reboisement in the Bhámburda, &c., reserves in the Haveli Range of the Poona Division, Rs. 28-4-6 were spent in repairing the wire fences already put up; and, in addition to this, Rs. 614-11-0 were spent in erecting fences of thorns round Bábool coupes in the Haveli, Sirur, Dhond, Bhimthadi and Indápur Ranges. No new wire fencing was put up during the year 1893-94.

In the Sátára Division a start was made to lay the first wire fence in the division round the Burlí Amnapur reserve, coupes Nos. 1 to 5 of the Tásgaon Range, but the work was not completed before the year closed.

In the Sholápur Division an area of 25 acres and 37 gunthas was enclosed with wire fencing in the Sholápur and Karmála Ranges, and an expenditure, exclusive of the cost of wire, of Rs. 60-6-0 was incurred.

Wire is obtained from the Telegraph Department and the G. I. P. Railway Company, when they have any to spare, and some has been purchased during the year in the Bombay market.

(d). EXPLOITATION OF MAJOR FOREST PRODUCTS.

(1). *Clear or Regeneration Fellings.*

129. In the East Khándesh Division two compartments, one of 33 acres and the other of 55 acres, in the Somangaon and Sukli forest blocks, respectively, of the Transpurna Bábool reserve forest, which are being worked by area, under a rotation of 40 years, were exploited according to the provisions of the Working Plan. A clear felling of 500 khandis of Bábool firewood was made over an area of 1.22 acres in the Bhusával Range, and an additional area of 777 acres of disforested lands in the Chopda Range was cleared of all its trees.

130. At Ubhand in the Nizámpur Range of the West Khándesh Division, 200,000 cubic feet of Kheir (*Acacia catechu*) and other inferior firewood were felled, and the coupe was afterwards sown up with seeds.

131. The teak trees in Dálhi numbers in 9 villages of the Kalvan Range were cleared away by departmental agency, and the timber was then sold by auction. And in the Peint Range, the teak trees standing on all lands outside the forest boundaries in 15 villages were felled and removed by purchasers, at their own expense, to whom the standing trees had been sold by public competition. In the Báglán Range a compartment was exploited departmentally; and the ground was subsequently sown up with seeds.

132. In the Ahmednagar Division a great number of the Bábool forests has been blocked and subdivided into 40 compartments each, by area, and one of these is made a coupe of the year, all the trees standing thereon being sold by auction or tender to the highest bidder. The fellings are required to be completed by the end of March, and all the material to be removed from the coupe by the end of April, when the compartment is returned to the Forest Department, who enclose it with a thorny fence, plough up all the ground, and resow it with Bábool and other seeds, the usual associate of the Babool.

The following table shows the number of coupes exploited in each range, their aggregate area and the price they realized:—

Range.	Number of coupes.	Total area.		Price. Rs.
		A.	g.	
Nagar	2	12	24	886
Shrigonda	4	31	32	600
Shevgaon	5	28	8	458
Ráhuri	2	15	8	316
Kopargaon	17	102	31	548
Sangamner	3	18	26	395
Total	33	200	9	3,203

133. All the Bábool forests on the banks of rivers in the Poona Division which are being managed under a Working Plans founded on area had, each of them, a compartment exploited by purchasers at their own expense under clear fellings. The standing trees are sold to the highest bidder, and the following statement shows the sale results, &c., of the firewood coupes :—

Range.				Number of coupes.	Total area of coupes.	Number of trees exploited.	Yield in cubic feet.	Receipts.
					A. g.			Rs.
Indápur	2	4 7	485	12,825	270
Sirúr	11	43 6	2,969	60,220	1,365
Bhimthadi	8	38 18	3,871	39,325	562
Dhond	22	88 35	4,100	95,090	2,714
Haveli	6	18 26	766	31,450	1,146
Total				49	193 12	12,191	238,910	6,057

Some compartments, the trees in which could not be sold standing, were exploited departmentally to the following extent :—

Range.				Cubic feet.	Cost.	Receipts.	Remarks.
					Rs.	Rs.	
Dhond	2,878	131	342	
Junnar	11,006	57	411	
Sirúr	21,150	124	390	
Total				35,034	312	1,143	

134. In the Sholápur Division compartments were exploited in 3 forest blocks only of the Bársi Range, and in 11 of the Mádha Range ; all these forests have been created by the Forest Department during the past twenty years. 14 compartments were worked and a sum of Rs. 4,342 was realised by the sale of the timber.

(2). *Selection Fellings.*

135. In the Peint forests of the Násik Division 80 khandis of Sissum (*Dalbergia latifolia*) were sold on foot to purchasers to fell and remove at their own cost, at Rs. 6 per khandi of $12\frac{1}{2}$ cubic feet, and 80 khandis of Tiwas (*Dalbergia oojeinensis*) were likewise sold in the same manner, the trees having been selected and marked for the axe by Forest officers.

136. In no other division was a selection felling made save in the Sholápur Division, where 84 selected Bábool trees yielding 2,295 cubic feet of firewood, were felled in the Sadar bazaar reserved forest, and the material, after it had been brought out and stacked departmentally, was sold by public auction for Rs. 254.

(3). *Improvement Fellings*

and

(4). *Coppice Fellings.*

137. The teak forests occupying the second distinct forest belt from the Syhadris eastward, in the Poona, Ahmednagar, Sátára and Nasik Districts, as well as the moist or evergreen forests which occupy the first line bordering the gháts, and also the teak forests of Khándesh which are scattered all over the district, are worked under a 40 years' rotation, by area, as has already been explained. The fellings made in these forests may be classed as coppice or sold standards, and also improvement, for the main object is to improve the balance.

by removing all mature, badly grown, diseased and dying trees, but at the same time taking care to preserve the factors of the forests, and to guard against external dangers; seed-bearers for the natural shedding of seeds, of all kinds, but of teak and the more valued kinds in greater preponderance, are reserved; and in selecting the standards and in rejecting trees to be given to the axe, care is taken to protect against scour resulting from the monsoon and other storms, and to maintain to a considerable extent the overhead cover against the sun and winds, &c. A great portion of the reproduction in both classes of forests is by coppice shoots, many of the trees, broad-leaved species especially reproduce readily by shoots from the roots, stool or stem; and although this is the sheet anchor for the regeneration of the forests, still it is not depended upon entirely. Letting in light by the removal of trees causes the germination of seeds which have been lying on the ground dormant waiting for the magic touch to burst them into life. Then again blank patches of ground within the exploited coupe are sown with seeds after the ground has been prepared for their reception.

138. In the forests of the Cháliggaon, Jámnér and Yával Ranges of the East Khándesh Division teak rafters, crooked, stunted, unsound and diseased, were exploited, and in the Pátna reserve, about 2,000 khandis of firewood were cut out of a compartment of 250 acres. Two coupes were worked in the Mahádev forests of the Sávida Sátpúdas, one of 53 and the other of 83 acres, about 10 trees per acre having been reserved, the species consisted of Anjan (*Hardwickia binata*), Dhawra (*Anogeissus latifolia*), Salai (*Boswellia thurifera*), &c., with a sprinkling of teak.

139. In the West Khándesh Division teak trees were exploited departmentally from the forests of the different ranges to the following extent:—

Range.						Number of pieces.	Cost.	Receipts.
							Rs.	Rs.
Akráni	5,061	...	3,192
Nandurbár	21,415	583	9,450
Navápur	36,227	1,390	30,406
Pimpalner	15,930	450	5,857
Sháháda	7,043	176	1,782
Shirpur	20,473	609	6,562
Taloda	35,448	987	15,205
Total						141,597	4,195	72,454

The Laling forests of the Dhulia Range were subjected to an improvement felling; 250,000 cubic feet of wood was felled at a cost of Rs. 1,679, which sold at auction for Rs. 8,505; this wood was destined for the firewood supply of the town of Dhulia, for steam cotton factories, and for household consumption also. In the Nizámpur Range 200,000 cubic feet of firewood was felled and brought out at a cost of Rs. 1,000, and they sold for Rs. 4,010.

140. In the Násik Division the following number of compartments in several ranges was worked under this method:—

Range.		Number of Compartments.	Price.
			Rs.
Násik	...	8	3,044
Igatpuri	...	9	357
Sinnar	...	3	521
Nándgaon	...	17	1,668
Total		37	5,590

141. The teak forests in the Akola and Sangamner Ranges and the Jám-bhul (*Eugenia salicifolia*) forests on the bank of the Mula river, in the Ahmednagar Division, were thus worked; with the following results:—

Range.	Species.	Number of trees.	YIELD.	
			Pieces.	Firewood. Cubit feet.
Sangamner	Teak ...	4,000	3,421	16,596
Do.	Jám-bhul...	3,002	6,181	14,670
Akola... ..	Teak ...	19,326	10,217	27,556
Total		26,328	19,819	58,822

142. The teak forests in the teak belt; and some evergreen forests in the region of heavy rainfall, were worked in the Poona Division under the Working Plans arrangements governing their treatment. The unreserved trees in the compartment, which was the coupe of the year, were sold standing for purchasers to fell and remove at their own cost; and the following table shows the extent of the exploitations:—

Range.	Number of compartments.	Area.	Number of trees.	Receipts.	REMARKS.
Haveli... ..	7	310 13	12,071	7,169	Teak forests mixed with other species, teak predominating greatly. Evergreen.
Khed	4	150 0	1,657	1,566	
Ámbegaon	6	289 15	7,384	4,030	
Junnar	4	182 9	3,361	2,357	
Purandhar	4	171 0	4,936	2,300	
Mával	5	243 0	...	1,181	
Total	30	1,345 37	29,409	18,603	

A few compartments, the timber of which could not sell standing, were exploited departmentally.

Range.	Number of trees.	YIELD.		Cost.	Receipts.	REMARKS.
		Timber. Cubic feet.	Firewood. Cubic feet.			
Ámbegaon	1,106	4,067	1,100	Rs. 78	Rs. 805	
Khed	1,720	11,751	6,000	158	2,361	
Total	2,826	15,818	7,100	236	3,166	

143. In the Sátára Division all the compartments which are made coupes of the year are exploited departmentally, and none are sold for exploitation by purchasers; and the operations of the year were to the following extent:—

Range.	Number of coupes.	Total area.	YIELD.		Cost.	Receipts.	Number of trees reserved.	REMARKS.
			Timber.	Firewood.

The Divisional Forest Officer, Sátára, Mr. Fagan, writes:—"The coupe of one year old is a sight to please the eye of the most critical Forester, I have never seen anything in India like it before."

144. No forests in the Sholápur Division were worked by either of these methods, because there are none yet fit to work.

(5). *Unregulated fellings.*

145. In the East and West Khándesh Divisions the exploitations of timber, firewood and Bámboos made by Bhils, in exercise of their rights or privileges, in the Sápuda forests come under this method. There is no regulation whatever: the Bhil may cut where he likes, what he likes, save 3 or 4 reserved species; and when he likes: and he fells a tree and carries out only the more valuable portion of it which he can bear away conveniently, leaving all the rest to lie on the ground and rot, or to feed a forest fire. There is no restriction as to particular areas; trees that are not mature are not spared; anything is felled: and in consequence of this unregulated license of the axe the more accessible portions of the forests are cleared of the commercially valuable kinds of trees, and are deteriorating. All the trees are cut down over a certain area which is determined by the number of trees required to be put into the market.

146. Fellings made to clear the boundary lines of reserved forests in the Násik and Sátára Divisions, and also fellings of reserved trees made on occupied lands outside of forest boundaries in the Násik, Poona and Sátára Divisions are only regulated by the demand, and by the area to be cleared in the year. Free grants of timber made by Revenue Officers to cultivators and others which are supplied, whenever directed, by felling trees in parts of the forests, and at such times as may be most convenient to the grantees, come under this heading.

(e). **EXTRACTION AND TRANSPORT OF MAJOR FOREST PRODUCE BY LAND AND WATER.**

147. When timber operations are conducted departmentally, the trees are felled by hired labour, and the material is brought outside the coupe to a temporary depôt, and is there sold by auction. No conveyance of timber or other forest produce from the forest to its destination or place of consumption is undertaken departmentally, but all such work is left to private enterprise. Purchasers move their timber, &c., in carts, &c., logs are sometimes, and in some parts dragged by bullocks and buffaloes; firewood and charcoal are carried by pack-bullocks, mules, donkeys and sometimes on men's heads, as well as in carts. Floating is resorted to by contractors and purchasers where there is good water carriage available, such for example the Tápti river and the Nabadá in the West Khándesh Division for floating timber, Bámboos, &c., from the Navápur and Akráni forests to the markets of Surat and Broach on the coast, Permanent roads constructed by the Department of Public Works, and fair weather cart-roads tap almost the entire forest region of the Central Circle. The Akráni forests of West Khándesh and the Sápuda forests of West and East Khándesh are about the only extensive and valuable forests which are practically not exploited by wheeled carriage. The Koyna river in the Sátára District is utilised by purchasers for floating timber from the forests to the markets east of the Southern Marátha Railway line; and the railways are used very freely for the distribution of timber and other forest produce; for the conveyance of Hirdas, the myrobolans of commerce, to Bombay City; for export and for the conveyance of timber to large centres of consumption such as the City of Poona.

(f). **EXPLOITATION OF MINOR FOREST PRODUCE.**

(1). *Extraction of Fodder.*

148. In all divisions there are certain forest areas which are reserved specially for the exploitation of grass by hand. Such areas are termed valuable Kurans, and grass is likewise exploited by hand from closed forests: the right to exploit the grass is sold by auction, the extent to which this has been carried during the year of the report will be seen in the following table:—

Division.				Area	Price.
				Acres.	Rs.
East Khándesh	20,324	14,988
West Khándesh	20,827	9,520
Násik	33,878	14,083
Ahmednagar	67,990	3,087
Poona	87,076	3,458
Sátára	8,554	6,278
Sholápur	4,195	6,808
Total				242,844	58,167

Grass is also removed on permits issued on the payment of fees: and from the East Khándesh forests 38,200 cart-loads of grass valued at Rs. 4,775 were thus taken.

In West Khándesh

25,611 cart-loads were taken at	Rs. a. p.
677 bullock-loads do.	0 2 0
3,054 head-loads do.	0 0 6
	0 0 3

In the Ahmednagar Division the grass produced on 1,230 acres of reserved forest, valued at Rs. 3,503-0-0, is given to the Commissariat Department, free of charge, to cut and take: and on 630 $\frac{1}{20}$ acres, valued at Rs. 1,794, to the Remount Department, as under:—

Forest.	Area.	Value.	REMARKS.
	A. G.	Rs.	
Narayendoho	34 4	97	To Remount Department.
Chichondi Patel	596 10	1,697	
Total	630 14	1,794	
Shendi	272 36	777	To Commissariat Department.
Imámpur	733 34	2,090	
Ghospuri	223 10	636	
Total	1,280 0	3,503	

and in the Poona Division the grass of 59 reserved forests with an acreage of 18,023 acres, valued at Rs. 24,000, is given to the Commissariat Department at Poona for the supply of hay to feed the Government cattle and horses belonging to the Military Department. In this manner Rs. 29,297 are lost to the forest revenues of the Circle, and the Provincial Service Budget is deprived of Rs. 14,648 $\frac{1}{2}$.

(2). *Grazing.*

149. There are three methods for the management of grazing in forests, *viz.*, (1) Free grazing which is allowed to the agricultural cattle of a forest village which has contributed old gáirán to forests, and also to the cattle in Bhil settlements inside the reserved forests in the Khándesh District, (2) Grazing on payment of fees at the prescribed rates, (3) Grazing by sale of the right to do so.

150. The rates of fees charged for grazing are as under:—

	PERMITS ISSUED BY VILLAGE OFFICERS.				PERMITS ISSUED BY FOREST OFFICERS.	
	Cultivators' Cattle.		Professional Graziers.		Outside Cattle.	
	Rs.	a. p.	Rs.	a. p.	Rs. a. p.	
Buffaloes	0	8	0	1	0	0
Cows	0	4	0	0	8	0
Horses and asses	0	4	0	0	8	0
Sheep	0	1	0	0	2	0
Goats	0	2	0	0	4	0

In the Khándesh District the charge for goats, the property of professional graziers, admitted into the forests to graze, is 8 annas.

151. No grazing is sold by auction in the Khándesh and Ahmednagar Districts; in Násik the grazing of certain reserved forests (valuable Kurans) is sold to commence after the grass has been cut and to last for a limited period of time. In the Poona Division the grazing of the open forests in Koli country bordering the Syhádris is sold by auction.

152. The number of cattle of different kinds which grazed in the forests during the year is given below :—

Division.	Buffaloes.	Cows and Bullocks.	Goats and Sheep.	Camels.	Other animals.	Total.
East Khándesh... ..	24,220	137,085	40,949	...	1,620	203,874
West Khándesh	21,181	164,524	248,738	...	5,805	440,248
Násik	13,925	152,052	48,588	...	459	215,024
Ahmednagar	6,691	113,965	56,123	...	217	176,996
Poona	13,215	105,287	76,206	...	60	194,768
Sátára	27,830	137,351	33,619	...	7	198,847
Sholápur	2,697	35,550	120	38,367
Total	109,799	845,814	504,223	...	8,288	1,468,124

And the following of the above numbers, respectively, enjoyed free grazing :—

Division.	Buffaloes.	Cows and Bullocks.	Goats and Sheep.	Camels.	Other animals.	Total.	Value of the Grazing.
							Rs.
East Khándesh	1,514	8,228	19	...	915	10,676	5,777
West Khándesh	2,323	20,926	2	...	335	23,586	6,476
Násik	6,482	43,538	4,335	...	30	54,385	28,808
Ahmednagar... ..	237	10,305	5,837	16,379	3,247
Poona	10,628	83,728	94,356	52,990
Sátára	25,949	129,746	155,695	77,848
Sholápur	1,130	7,695	75	8,900	2,473
Total	48,263	304,166	10,193	...	1,355	363,977	1,77,619

153. In the East Khándesh forests more animals paid fees and grazed than during the preceding year, although it was of 15 months, the year of the report being of 12 months, so that the receipts from fees increased by Rs. 1,215. The collection of outstandings of the previous year due by certain wandering professional graziers contributed to this sum; but nevertheless it points to the grazing rules being understood and worked up to by the people, as well as by village officers.

154. Professional graziers in the West Khándesh Division pay full fees, ordinary cultivators pay half fees, and the cultivators in the Pimpalner, Nizámpur and Nandurbár Ranges pay quarter fees. No less than 309,733 cattle, the property of professional graziers, were grazed in the forests, a large proportion of these animals was sheep and goats, and so many as 248,738 of sheep and goats took advantage of forest grazing.

155. Free grazing is allowed to all the cattle of the Peint Táluka in the Násik Division and 30,217 animals, including 4,335 sheep, were free grazed in the forests of Peint. Fees for grazing were paid for 160,639 head of cattle throughout the district and this revenue from this source amounted to Rs. 40,135.

156. In the Ahmednagar Division 1,514 cattle of the bovine kinds in excess of the number of the preceding year were grazed in the forests; on the other hand there were 4,367 fewer sheep and goats grazed this year than last. The fees collected on grazing permits amounted to Rs. 34,027. Some complaints were made in 1892-93 of the insufficiency of provision made for sheep grazing in the forests of this division, and the following table will show the area opened to sheep with the results:—

Ranges.	Acres.	Sheep grazed.	Fees collected.		
			Rs.	a.	p.
Nagar-	10,405 $\frac{1}{2}$	2,338	159	8	0
Párner	23,613 $\frac{1}{2}$	8,762	611	8	0
Shrígonda	4,738 $\frac{1}{2}$	3,052	168	6	0
Karjat	4,180 $\frac{1}{2}$	8,369	577	0	0
Shevgaon	197 $\frac{1}{20}$	Nil.		
Nevása	35 $\frac{1}{2}$	Nil.		
Ráhuri	7,298 $\frac{1}{10}$	8,900	598	8	0
Kopargaon	1,349 $\frac{1}{2}$	1,253	98	12	0
Sangamner	13,523 $\frac{1}{10}$	17,612	1,104	8	0
• Total ...	65,341 $\frac{1}{2}$	50,286	3,818	2	0

It had been reckoned that 196,028 sheep could be provided with a sufficiency of grazing in the forests specially opened in the behalf of these animals. But only 50,286 sheep took advantage of the grazing against 54,656 grazed during 1892-93.

Goats which work death upon ligneous vegetation were grazed in the forests under the rule which admits 1 goat with every 50 sheep, to the extent of 226 animals, on payment of fees amounting to Rs. 31, but the damage they did with their macerating teeth may be valued at several multiples of this sum.

157. In the forests of the Poona Division 67,053 sheep and goats of forest villagers were permitted to graze, and 9,153 belonging to professionals. The fees collected in grazing permits amounted to Rs. 13,353-11-0 against Rs. 11,546 of the year before, thus evidencing a better understanding of the grazing rules and less endeavour to graze illicitly, without taking permits or paying fees.

158. Grazing is permitted by contract in 38,940 acres of the Sátára forests, which the Divisional Forest Officer states are the best pastures of the country, and are improving daily, *as no sheep and goats are allowed upon them.* There were in addition thereto 289,998 acres open to cattle on free or fee paid permits according to their classification. Sheep and goats are permitted to graze in the eastern forests in the region of light rainfall where the ligneous vegetation is comparatively sparse, and requires strong protection for the preservation of the hill sides against external dangers. In the open forests in the region of heavy rainfall 3 animals are allowed on to every acre and in the eastern forests only 2. No less than 32,698 sheep and goats belonging to forest villages and 921 to professionals were grazed on the eastern hills, where the tree growth is sparse and backward, and the damage they have done has been great.

159. In the Sholápur forests a larger number of cattle was grazed than last year; and the revenue was greater, which is a sign of improvement in taking out permits.

160. Statement showing the cattle census of the different collectorates comprising the Central Circle during 1893-94:—

No.	Collectorate.	Cows and Bullocks.	Buffaloes.	Horses.	Asses and Mules.	Sheep.	Goats.	Camels.	Elephants.	Total.	Remarks
1	Khándesh	760,865	205,053	26,662	7,303	89,994	206,342	94	...	1,245,378	
2	Násik	528,170	78,146	16,972	3,719	130,536	165,692	922,136	
3	Ahmednagar	639,718	60,891	26,471	8,108	313,903	237,833	5	...	1,330,128	
4	Poona	540,897	78,809	14,804	5,931	244,861	167,769	17	...	1,057,227	
5	Sátára	551,225	168,387	16,855	2,899	363,681	136,698	1,236,745	
6	Sholápur	476,159	71,100	13,986	4,146	242,206	136,070	948,676	
	Total ...	3,559,032	660,686	112,999	32,717	1,334,181	1,050,403	116	...	6,743,784	

(3). *Miscellaneous Produce.*

161. Under this heading come flowers, fruit, honey, wax, surface-soil, rock and minerals, reeds, oil, bark, &c.

The Collector of Khándesh has issued the following order with reference to Government Resolution No. 9846 of the 15th December 1892, to regulate the exploitation of minor forest produce :—

(1). Minor forest produce is to be held to be all forest produce, that is not timber, firewood, grass, charcoal, Bámboos and stones.

(2). The minor articles to be exported by the Forest Department in the East Khándesh Division are Hirdas, grass oil, mango fruits, all other minor articles will be collected free of charge and without restriction by the people.

(3). The arrangements and conditions will be that the right to taking grass oil, and the right of taking mangoes will be farmed out annually by the Forest Department. The privilege-holders under the Privilege Code will have to bring the Rosha grass, they cut, to the person who has taken the Rosha oil farm from Government. Hirdas will not at present be exploited at all.

Rosha oil is manufactured in the Khándesh and Násik Districts from a large bladed aromatic grass (*Andropogon schoenanthus*) known as Rosha oil grass. The oil is extracted by distillation. The grass flowers in October and November, and is then fit for cutting and use. From 373 lbs. of grass 1 lb. 5½ ozs. of oil were extracted by distillation under an experiment made in Bombay by Surgeon-Major B. A. Dymock, when Medical Storekeeper at Bombay. The oil is used by natives as a liniment in chronic rheumatism and neuralgia, and is also said to be a powerful hair restorer. A still is erected on the bank of a stream, consisting of a fire place with a large boiling pot above, and the latter is connected by a pipe with a large metal vessel placed in the water which acts as a condenser. The boiling pot is then filled with grass and water, and the lid of it is hermetically fastened down, and a fire is lighted under the boiler, from which the steam or vapour passes through the pipe into the pot under water in the stream, and is there precipitated in the form of oil, which is sent to Bombay for export. About 50,000 lbs. are exported annually, some to Europe, but to the Red Sea ports chiefly. Rosha oil is generally adulterated with groundnut oil, rape and linseed oils, and chiefly with oil of turpentine, before being sent to Bombay, and it is used itself to adulterate attar of roses. Rosha grass is abundant in the forests of the North Tápti ranges, and also in the forests bordering the gháts in the West Khándesh Division : in East Khándesh the grass is to be found sparsely growing in the Sápudas, and in the Jámner Range ; and in the Násik Division, it is found in the forests bordering the Syhádris, and also the Saptashring Range. The revenue derived from the contracts for Rosha oil was as under :—

	Rs.
East Khándesh	388
West Khándesh	15,655
Násik... ..	2,081
Total ...	18,124

which is an increase by Rs. 3,456 on the revenue of 1892-93 from this source. The manufacture of Rosha oil, and the revenue to be derived therefrom, is capable of very considerable development and expansion.

162. Hirdas, the fruit of the *Terminalia chebula*, the myrobollan of commerce, is a very profitable article of minor forest produce, which is in great commercial demand. The tree grows in the forests of heavy rainfall bordering the gháts, and the fruit is picked after the Diváli festival in November and December, and is generally brought to forest dépôts by villagers, who are paid at a fixed rate by weight or measure of capacity : the fruit is then dried and is stored and finally it is sold by auction or tender to dealers who remove it to Bombay for export to Europe. By dryage or shrinkage considerable loss in bulk and weight occurs.

There are no Hirdas in the Khándesh District, although the tree should grow in the Sápuda forests ; it is being planted there now. In the Násik

Division the Hirdas in one range were farmed for Rs. 103; and elsewhere they were collected departmentally: and 51 khandis, 24 maunds and 22 lbs.—the khandy being of 784 lbs.—were sold at the depôts for Rs. 1,412.

In the Ahmednagar Division 11 Hirda Depôts are established in the Hirda region of the Akola Range; the quantity received in them amounted to 62 Deshi, khandis, 17 maunds and 10½ pālis, equal to 154 Bombay khandis and 20 lbs. One Deshi khandi contains 1,920 pounds. The cost of its collection amounted to Rs. 1,182-3-9, and the Hirdas were sold at the rate of Rs. 67-4-0 per Deshi khandi for Rs. 4,236-13-3. The rate was much higher, and the collection was considerably greater than of the two previous years, as will be seen:—

Year.	Yield.			Cost.	Receipts.	Rate.						
	Kh.	m.	p.	Rs.	a.	p.						
1891-92	40	17	9	851	8	9	3,100	0	0	78	4	0
1892-93	22	3	6	582	11	3	997	14	0	33	12	0
1893-94	62	17	10½	1,182	3	9	4,236	13	3	67	4	0

In the Pōona Division, Hirdas were collected on the share system, i.e., the right of collecting Hirdas in each range was put up to auction and the payment was made in kind, i.e., in Hirdas, which were then sold by auction. Hirda trees are to be found in the 5 ghat ranges bordering the Syhādris, viz., Junnar, A'mbegaon, Khed, Māval and Mulshi and in Haveli. The collection and revenue as compared with 1892-93 show as under:—

Year.	Yield.			Receipts.			Selling rate.		
	Kh.	m.	lbs.	Rs.	a.	p.	Rs.	a.	p.
1892-93	169	16	2	3,679	1	4	21	10	3
1893-94	174	13	13	2,938	0	0	16	14	1

The khandi here mentioned is the Bombay khandi of 784 lbs.

During the year under report Rs. 11,578-4-9 were spent in collecting 1,347 khandis, 24 maunds and 10 lbs. of Hirdas in the Sātāra Division, which were sold for Rs. 22,336-15-3. The loss by dryage or shrinkage on the gross quantity of fruit received at the depôts amounted to 19.4 per cent. The collection this year is a record one, the highest ever known. But the selling rate was very low, being Rs. 18-8-0 per Deshi khandi below that of last year. The results of the two years compare as under:—

Year.	Crop.	Cost.			Price.			Rate per Khandi.					
		Kh.	m.	lbs.	Rs.	a.	p.						
1892-93		824	16	16	6,268	4	11	16,945	1	0	60	0	0
1893-94		1,347	24	10	11,578	4	9	22,336	15	3	41	8	0

There are no Hirda trees in the Sholapur forests save small seedlings which are being artificially cultivated here and there.

163. *Tarwad*, the bark of the *Cassia auriculata*, a tall shrub with virgate branches, with beautiful yellow flowers, in terminal corymbose, leaf bearing panicles, is sold, as it is used locally for tanning and dying leather, and is in great demand for this purpose. The *Tarwad* is closely allied to the *Senna* plant, and is avoided by goats and sheep, and therefore it is grown on forest lands opened to these browsers. The exploitation of the bark is worked on a rotation of five years, and the revenue derived from it during the year of this report amounted to Rs. 1,027-3-9;—

Division.	Amount.		
	Rs.	a.	p.
Násik	61	0	0
Ahmednagar	Not sold.		
Poona	839	2	0
Sátára	127	1	9
Sholápur		
Total	1,027	3	9

164. Shikakái, the pod thick, succulent, strap-shaped, straight, 3—4 inches by $\frac{3}{4}$ ", depressed between the seeds, of the *Acacia concinna*, which is in great request by native women for washing the hair, as it is said to be a hair restorer; to remove scurf and to give the hair a soft and beautiful glossy appearance, is sold by auction, to be gathered and removed by the purchaser at his own cost, the bush, which is prickly and scandent, is common in forests of Poona and Sátára near the gháts, the receipts during the year from this source were:—

	Amount.		
	Rs.	a.	p.
Násik	Nil.		
Ahmednagar... ..	do.		
Poona	277	0	0
Sátára	1,850	0	0

Leaves of the *Apta* (*Bauhinia racemosa*) and of the *Tembhurni* (*Diospyros melanoxylon*), which are made into covers for cigarettes or bidis as they are locally called, are sold by auction and the proceeds amounted to Rs. 734-0-0.

	Amount.		
	Rs.	a.	p.
Násik	734	0	0
Ahmednagar	Nil.		
Poona	Nil.		
Sátára	Nil.		

The *Apta* is the sacred tree of the Dásra festival, when its leaves are given by natives to their friends under the name of Sona (gold).

CHAPTER III.

GROSS YIELD AND OUTTURN OF FORESTS PRODUCE.

I.—DEPARTMENTAL OPERATIONS.

(a).—TIMBER.

165. The outturn in cubic feet, of timber exploited departmentally from the forests of the several divisions of the Central Circle, with the cost incurred and the amount realized by its sale during the forest year under report, compared with the results of the year preceding, is given in the following statement:—

No.	Division.	1892-93.			1893-94.		
		Timber in the rough.	Cost.	Receipts.	Timber in the rough.	Cost.	Receipts.
		C. ft.	Rs.	Rs.	C. ft.	Rs.	Rs.
1	East Khándesh...	18,740	1,273	10,152	16,045	1,158	12,760
2	West Khándesh	141,025	4,044	63,192	141,608	4,195	72,454
3	Násik	15,894	72	1,125	11,802	115	754
4	Ahmednagar	64,514	1,215	7,873	42,705	976	6,806
5	Poona	61,638	2,877	26,544	15,818	558	3,172
6	Sátára	13,545	1,154	9,058	19,132	1,470	14,084
7	Sholápur
	Total	315,856	10,635	1,17,944	247,110	8,472	1,10,030

166. Although the forest year 1892-93 embraced a period of 15 months, this prolonged period does not account in any degree for the diminished results of the year of this report, the causes whereof are various, and can best be explained separately for each division.

In the East Khándesh Division the exploitations of the year 1893-94 were only made from reserved forests; whereas during the preceding year fellings of trees on disforested lands contributed to unduly swell the outturn. However, notwithstanding the smaller quantity of timber departmentally extracted the revenue of the year is higher, owing to better prices having been obtained at the auction sales.

In the West Khándesh Division the output of timber exhibits a slight increase as compared with that of the previous year, but very high prices ruled the departmental sales, and the receipts are consequently so very much greater.

Departmental operations in the Násik Division were only confined to clearing Dalhi lands, *i.e.*, areas of shifting cultivation by axe and fire of their reserved timber, and are not of sufficient importance to call for any lengthy remarks.

In the Ahmednagar Division the teak trees which were felled were of inferior quality to those of the preceding year; and yielded a smaller quantity of timber of inferior kind, and consequently the receipts are less than of the year before.

In the Poona Division a remarkable falling off both in material and revenue appears, in consequence of the method of selling timber on foot to contractors and purchasers to fell and remove at their own cost, having been substituted largely for departmental operations. The only fellings that were made departmentally in this division were of teak trees standing on occupied lands outside of the forest boundaries in the village of Kohinde Budruk in the Khed Range, which the villagers refused to buy at the prescribed rate of one rupee per tree, and of one of the coupes of the year in the teak forests of the A'mbegaon Range.

The increase in the Sátára Division is due to the extension of provisional Working Plans to several forests which were not being exploited previously. All the forests are being worked departmentally, as the method of selling timber on foot for purchasers to fell and remove has not been attempted yet by the Divisional Forest Officer.

In the Sholápur Division all the timber exploited was sold standing in the forests to be cut and removed by purchasers, and consequently there were no departmental operations.

(b). FIREWOOD AND CHARCOAL.

167. The following statement gives the outturn of firewood, including the loppings of teak (*Tectona grandis*), Bábool (*Acacia arabica*) and other trees felled departmentally in the several divisions of the Central Circle, together with the expenditure incurred and the revenue realized, compared with the results of the previous year:—

No.	Division.	1892-93.			1893-94.		
		Firewood.	Cost.	Receipts.	Firewood.	Cost.	Receipts.
		C. ft.	Rs.	Rs.	C. ft.	Rs.	Rs.
1	East Khándesh...	1,022,985.	6,480	29,778	602,100	3,624	15,806
2	West Khándesh ...	431,766	2,407	12,433	490,210	2,679	13,086
3	Násik ...	129,463	677	3,322	55,759	250	1,412
4	Ahmednagar ...	111,614	18	636	58,822	1	604
5	Poona ...	45,365	184	836	42,134	220	1,150
6	Sátára ...	376,341	2,207	4,910	502,007	3,598	5,695
7	Sholápur ...	18,735	109	2,103	478	14	261
	Total ...	2,136,269	12,082	54,017	1,753,510	10,386	38,014

Extensive clearances were made in the preceding year of disforested lands in the East Khándesh Division, and consequently the operations of the year of this report were confined to 777 acres, being all the disforested areas in the

Chopda Range remaining to be cleared, and hence the heavy drop both in outturn and receipts under this heading.

In the West Khándesh Division the outturn and receipts show a slight increase over those of the preceding year as a larger volume of wood was produced from the coupes.

The yield in the Násik Division is much less than that of the year preceding, owing to the fact that departmental operations are being gradually abandoned in favour of the system of selling the crop on coupes to contractors to be exploited and removed at their own cost.

In the Ahmednagar Division the firewood sold consisted of loppings obtained from the teak (*Tectona grandis*) and Jámbhul (*Eugenia salicifolia*) trees felled under "Timber;" and although a smaller quantity of wood was produced, still the receipts are approximately the same as those of last year.

The firewood sales of the Poona Division show a slight decrease in material, but the revenue realized is greater than that of the year preceding.

In the Sátára Division the increase both in stock and revenue is due to the extension of provisional Working Plans to several forests which were not being worked before.

The coupes in the Bábool forests of the Sholápur Division were sold with the timber standing on them to be exploited by purchasers at their own cost; and the only departmental operation that took place during the year was in the Sadar Bazaar Reserve of the Town of Sholápur; and hence the decrease in the quantity of firewood and revenue under departmental operations.

No charcoal is manufactured or sold departmentally.

(c). BA'MBOOS.

168. A small operation in Bámbos was undertaken in one division only, West Khándesh, the receipts derived thereby amounted to Rs. 75.

(d). SANDALWOOD.

169. In the Sholápur Division 8 trees were felled in occupied lands yielding 8 cubic feet of wood which sold for Rs. 8. There is no great number of sandalwood trees in the forests of the Central Circle.

(e). GRASS AND OTHER MINOR PRODUCE.

170. Departmental operations are confined almost entirely to the collection and sale of Hirdás, the fruit of the *Terminalia chebula*, and these have been described already. The crop this year was unusually plentiful, and the price early in the season was high, but it fell very low later on. Sales in the Násik and Ahmednagar Divisions were made when the prices were high, but they had fallen considerably before the Sátára and Poona Hirdás were sold. The gross yield of the year of this report compares with that of 1892-93 thus:—

	Yield.		Price.
	K.	m. lbs.	Rs.
1892-93	918	1 12	18,502
1893-94	1,553	21 24	27,987

The only other minor produce collected is 700 cubic feet of Bábool bark stripped from the trees cut for timber and fuel in the Sátára Division. It was sold for a sum of Rs. 16.

II.—REMOVAL OF PRODUCE BY PURCHASERS.

(a). TIMBER.

171. The following statement shows the outturn in cubic feet of the timber removed from the forests of the several divisions of the Central Circle

by purchasers at their own expenses, and the amounts realized, compared with the results of the year 1892-93 :—

No.	Division.	1892-93.		1893-94.	
		Timber in the rough.	Amount realized.	Timber in the rough.	Amount realized.
		C. ft.	Rs.	C. ft.	Rs.
1	East Khándesh	255,105	6,024	85,455	2,018
2	West Khándesh	158,189	17,300	158,780	18,997
3	Násik	567,541	30,846	1,361,803	76,164
4	Ahmednagar	267	...	190
5	Poona	1,413	1,395	220,912	22,139
6	Sátára	25,023	12,341	23,237	11,678
7	Sholápur	302	11,155	13,026	4,570
	Total ...	1,007,573	78,828	1,863,213	1,35,756

172. The forest year 1892-93 embraced a period of 15 months, including two hot seasons, *viz.*, April to June, when the extraction of timber on permits by Bhils from the Sátputa forests of the East Khándesh Division is in active operation, and for this reason the outturn of and receipts from timber during 1893-94 are less, as it embraces only one hot season. It may be added that the constant and promiscuous exploitations made by the Bhil and Tadvi privilege-holders from the forests of the Sátputas are making the marketable timbers of all kinds scarce in the more accessible parts of these forests. The timber removed and the receipts derived from it in the West Khándesh Division, show such a slight increase on the figures of the preceding year, as to call for no special remark.

173. The revenue under this heading in the Násik Division is for the most part derived from the Teak (*Tectona grandis*) trees sold standing for being cut and removed by purchasers upon occupied lands, outside the limits of reserved forests in the Peint Range; and as the number of trees was greater in the group of villages sold during the year, they have yielded more timber; and as the demand was great, and the competition at their sale was very brisk, very much higher prices over those of the previous year were obtained; and hence the receipts have more than doubled.

174. The difference in the Ahmednagar Division where the sales are at all times very trifling, and are made of trees in the Akola Range on protected forests, is not worth considering, and is chiefly due to the fact that the forest year 1892-93 embraced a period of 15 months, against that of 12 months of the current year.

175. In the Poona Division, the method of selling timber on foot in specially marked out coupes, after a reservation of trees required to be seed-bearers and to protect against external dangers had been made, was greatly developed during the year, in connection with the teak and the evergreen forests of the division, in substitution of departmental operations; and to this cause is due mostly the circumstance that the volume of wood exploited under this heading increased from 1,413 cubic feet to 220,912 cubic feet, and the receipts from Rs. 1,395 to Rs. 22,139.

In addition to the coupes a large number of teak trees standing upon occupied lands, outside of the boundaries of reserved forests, were sold to the occupants of survey numbers at the prescribed price of Re. 1 per tree, sanctioned by Government.

176. A very large number of teak trees standing upon occupied lands outside the forest boundaries, was sold to the occupants of survey numbers at the fixed price of Re. 1 per tree, as sanctioned by Government, in the Sátára District likewise, and this accounts for the very large increase in the receipts

derived from timber of that division, although the volume of timber put into the market was slightly less.

177. The coupes of the Sholápur Division forming the main item of revenue under this heading were situated at a considerable distance from the great centres of trade, such as the towns of Sholápur and Bársi, and besides the number and quality of the trees contained in them being less and inferior, the revenue realized shows a great falling off over the figures of the preceding year.

(b.) FIREWOOD.

178. The quantity of firewood removed by purchasers both by sales of Bábool and other firewood coupes in the Násik, Poona, Ahmednagar and Sholápur Divisions, and by issues of permits on payment of fees, together with the revenue realized thereby, is given in the following table:—

No.	Division.	FIREWOOD IN CUBIC FEET,		Revenue in Rupees.	
		1892-93.	1893-94.	1892-93.	1893-94.
				Rs.	Rs.
1	East Khándesh	1,299,200	947,520	10,711	7,896
2	West Khándesh	167,900	243,150	8,542	8,641
3	Násik	331,704	518,825	3,869	5,948
4	Ahmednagar	81,843	80,067	3,846	3,451
5	Poona	184,543	287,173	8,002	9,256
6	Sátára	20,596	7,113	325	153
7	Sholápur	1,585	8,704	491	214
	Total	2,087,371	2,092,552	35,786	35,559

In the Khándesh Divisions the receipts result almost entirely from the fees paid on firewood taken by consumers from the forests on permits; and they fluctuate annually in keeping with the demand for permits.

In the other divisions the receipts are dependent on the sales of coupes. The revenue was very much greater from firewood this year than last.

(c.) BÁMBOOS.

179. The number of Bámboos removed by purchasers from the forests of all the divisions, where there are Bámboo forests, both under contracts and on permits in head-loads, cart-loads, &c., is given in the subjoined table. There are no Bámboo forests in the Sholápur Division:—

No.	Division.	1892-93.				1893-94.			
		Cart-loads.	Head-loads.	Number.	Amount realized.	Cart-loads.	Head-loads.	Number.	Amount realized.
					Rs.				Rs.
1	East Khándesh.	1,131,212	10,122	782,564	8,160
2	West Khándesh	131,253	4,731	211,780	1,820
3	Násik	585	...	266,637	6,189	497	...	122,803	3,744
4	Ahmednagar	46,578	773	40,678	141
5	Poona	142,151	1,477	105,968	1,129
6	Sátára	9	53,416	1,110	67,403	401
	Total... ..	585	9	1,771,247	24,402	497	...	1,331,196	15,395

180. There is seemingly a great decline in the number of Bámboos extracted this year as compared with 1892-93, and also in the revenue. But the

decline in the trade is more seeming than real. This year represents the working of 12 months, while 1892-93 embraced a period of 15 months, including two hot weather seasons, the time when the extraction of Bámboos is more active than during other seasons of the year. In the Khándesh Divisions the fee for Bámboos had been reduced, the rates being Rs. 1-8-0 per 100 for Bámboos 5 inches and over in girth, and Re. 0-12-0 per 100 for Bámboos under 5 inches girth instead of Rs. 2-0-0 per 100, Re. 1-0-0 per 100 the former rates.

(d.) GRAZING AND FODDER GRASS.

181. The particulars of this source of revenue and supply have been given already.

(e.) OTHER MINOR PRODUCE.

182. The following table shows the realizations from "minor forest produce", including Hirda (*Terminalia chebula*), stones, earth, thorns, fruits, Rosha oil (*Andropogon schoenanthus*), Karvi, Tarwad bark (*Casia auriculata*), Tembhorni and Apta leaves &c. &c., removed from the forests by purchasers compared with the results of the previous year 1892-93 :—

No.	Division.	Amount, 1892-93.	Amount, 1893-94.
		Rs.	Rs.
1	East Khándesh ...	1,665	1,470
2	West Khándesh ...	15,785	17,487
3	Násik ...	1,774	3,636
4	Ahmednagar ...	1,479	1,222
5	Poona ...	4,634	4,247
6	Sátára ...	3,045	2,342
7	Sholápur ...	67	226
	Total ...	28,449	30,630

Unusually high prices were paid for the Rosha oil grass contracts in the West Khándesh Division and hence the increase.

III.—FREE GRANTS OF FOREST PRODUCE.

183. The following is a comparative statement of free grants of timber which have been made by Revenue officers in every case during the last three years :—

No	Division.	1890-91.	1891-92.	1892-93.	1893-94.
1	East Khándesh	210
2	West Khándesh ...	142	714	458	1,518
3	Násik ...	217	177	274	369
4	Ahmednagar ...	10	139	...	20
5	Poona ...	519	709	628	684
6	Sátára ...	699	...	136	43
7	Sholápur
	Total ...	1,587	1,949	1,496	2,634

The increase in free grants has been in West Khándesh.

IV.—PRODUCE REMOVED BY RIGHT-HOLDERS AND UNDER PRIVILEGES.

184. The removals of timber and other forest produce by right-holders and concessionaries under the privileges granted to them are not confined to any

particular forests or portions of forests, and to any prescribed season, nor they are regulated by a system of permits or passes, and consequently it is impossible to give any approximately correct estimate of their value. It will only be sufficient to state here that the quantities of timber, firewood, grass and other minor produce removed from the forests by the wild tribes for private consumption and for barter or sale are very large.

185. The free grazing which has been allowed in the reserved forests as a privilege to agricultural and milch cattle has been controlled by issue of free grazing permits; and the subjoined statement shows the number of cattle that were allowed to graze free and the value of the grazing enjoyed by them, compared with the results of the year preceding:—

Number.	Division.	NUMBER OF CATTLE.		VALUE OF GRAZING.	
		1892-93.	1893-94.	1892-93.	1893-94.
				Rs.	Rs.
1	East Khándesh ...	8,898	10,676	2,587	5,777
2	West Khándesh ...	24,862	23,586	5,574	6,476
3	Násik ...	49,552	54,385	13,541	28,808
4	Ahmednagar ...	9,093	16,879	3,264	3,247
5	Poona ...	105,188	94,356	24,066	52,990
6	Sátára ...	290,419	155,695	75,023	77,848
7	Sholápur ...	11,383	8,900	2,416	2,473
	Total ...	499,395	363,977	1,26,471	1,77,619

186. The number of cattle free grazed in the forests has increased considerably in the East Khándesh, Násik and Ahmednagar Divisions, but on the other hand there is a considerably larger decrease in numbers entered for free grazing in the Sátára, Poona, Sholápur and West Khándesh Divisions. In the Sátára District the difference is very remarkable as it amounts to no less than 134,724 and in Poona 10,832 fewer animals were free grazed; this seemingly shows that greater attention was paid by the village officers to the differentiation of cattle between the privileged and the paying.

V.—SUMMARY OF PRODUCE REMOVED FROM THE FORESTS.

187. The following is a summary of produce removed from the forest:—

Description of material.		Number or quantity.
Timber...	Cubic feet	2,133,848
Fuel ...	Do.	3,847,186
Bámboos ...	Cart-loads	497
Do. ...	Number	1,331,196
Stones ...	Cart-loads	15,552
Do. ...	Cubic feet	249,062
Thorns and brushwood	Cart-loads	23,043
Do. ...	Head-loads	3,891
Manure ...	Cart-loads	1,869
Anjan and other leaves	Do.	591
Do. ...	Head-loads	716
Earth ...	Cart-loads	2,148
Do. ...	Cubic feet	405
Karvi ...	Cart-loads	393
Do. ...	Head-loads	12,949
Reeds ...	Cart-loads	1,424
Do. ...	Head-loads	172
Sand ...	Cubic feet	60,250
Limestones ...	Cart-loads	236
Aloe ...	Head-loads	70
Bábool bark ...	Cubic feet	700
Hirda ...	Do.	Kh. m. lbs. 1,697 3 23

CHAPTER IV.

FINANCIAL RESULTS.

188. The following statement exhibits a comparison of the financial results of the year under report with those of the year preceding :—

Year.	Receipts.	EXPENDITURE.			Surplus.
		A Conservancy and Works.	B Establish- ments.	Total.	
	Rs.	Rs.	Rs.	Rs.	Rs.
1892-93	8,23,495	1,60,625	4,27,367	5,87,992	2,35,503
1893-94	8,14,169	1,49,466	3,63,664	5,13,130	3,01,039
Increase	65,536
Decrease	9,326	11,159	63,703	74,862	...

189. The figures of 1892-93 cover a period of 15 months, *viz.*, from 1st April 1892 to 30th June 1893, while the figures of 1893-94 are of 12 months only, *viz.*, from 1st July 1893 to 30th June 1894; and when this fact is taken into consideration, it will be realised that although the receipts of the year of this report are Rs. 9,326 less than the preceding year, still they indicate an augmenting revenue: during the 3 additional months of 1892-93 the receipts collected amounted to Rs. 71,708, so that there has been a clear rise in the revenue of over Rs. 60,000 during 1893-94.

190. The financial results of the 12 months are very satisfactory: the surplus revenue shows an increase of Rs. 65,536 on the net results of 1892-93, but these figures do not present a correct deduction, because the expenditure in the three additional months of 1892-93 amounted to Rs. 1,05,513 and was greater than the revenue of these months by Rs. 33,805.

191. The financial results of the Central Circle for the two *Financial years* 1892-93 and 1893-94 show as under :—

Year.	Receipts.	Expenditure.	Surplus.
	Rs.	Rs.	Rs.
1892-93	7,51,787	4,82,479	2,69,308
1893-94	8,18,189	5,03,230	3,14,959

192. But it should be remembered that grass of the value of Rs. 29,297 is given to the Commissariat Department free of charge, *viz.*, Rs. 24,000 worth in the Poona Division and Rs. 5,297 in the Ahmednagar Division, and if this sum be added to the surplus revenue, and if the value of the free grazing given to cattle in the forests during the year which is computed at Rs. 1,77,619 be also added, it will be seen that the forest management of the Circle is more remunerative than the financial returns show.

193. The distribution of receipts among the several divisions of the Central Circle for the year 1892-93 and 1893-94 is given below :—

Number.	Division.	1892-93.	1893-94.	Increase.	Decrease.
		Rs.	Rs.	Rs.	Rs.
1	Direction ...	2	23	21	...
2	East Khándesh ...	1,67,237	1,37,999	...	29,238
3	West Khándesh ...	2,55,787	2,59,353	3,566	...
4	Násik ...	1,14,960	1,49,607	34,647	...
5	Ahmednagar ...	61,256	59,589	...	1,667
6	Poona ...	96,613	87,687	...	8,926
7	Sátára ...	87,787	86,860	...	927
8	Sholápur ...	39,853	33,051	...	6,802
	Total ...	8,23,495	8,14,169	38,234	47,560

194. The decrease of Rs. 29,238 in the East Khándesh Division was partly due to the fact that the figures of the preceding year representing the results of 15 months comprised two hot seasons, *i. e.*, April, May and June, the time when the import trade in timber on which duty is levied as well as exploitations on permits from the Sátputa forests are heavier and brisker than during other months of the year, and it is partly owing to the unusually large quantity of firewood which was sold during 1892-93, through clear fellings made upon 3,580 acres of disforested lands which had to be cleared of their tree-growth for cultivation during 1893-94, on the other hand, only 777 acres of disforested lands in the Chopda Range were cleared of trees, and the large quantity of firewood sold in the former year affected the rates of 1893-94, so that the receipts under I (b) amounted to Rs. 15,805 against Rs. 29,778 in the year before. There were, however, increases under I (a) and II (d) of Rs. 2,608 and Rs. 2,010 respectively, the former owing to higher prices for teakwood, and the latter to increased revenue from grass and grazing, but they were not sufficient to counterbalance the decrease.

195. The receipts of the West Khándesh and Násik exhibit an increase of Rs. 3,566 and 34,647 respectively, notwithstanding that the year is shorter by a period of 3 months than of its predecessor. The results are due in the west Khándesh Division to increased revenue from timber and firewood owing to higher prices realised at the auction sales, and also to large realizations from Rosha grass contracts; and in the Násik Division to the exceptionally great demand for teak trees standing upon revenue lands in the Peint Táluka, which have been sold for clear felling, at exceptionally high prices, the revenue under II (a) being Rs. 76,163 against Rs. 30,345 during 1892-93. There are, however, small decreases in the Divisions of Ahmednagar, Poona, Sátára and Sholápur, which are accountable by one year containing 3 months more than the other.

196. The receipts of the 7 divisions comprising the Central Circle for the 4 years of the current decennial period have fluctuated as shown in the following table; the figures of the official or financial year are given :—

Number.	Division.	1890-91.	1891-92.	1892-93.	1893-94.
		Rs.	Rs.	Rs.	Rs.
1	East Khándesh ...	1,17,334	1,50,811	1,50,163	1,40,883
2	West Khándesh ...	1,64,872	2,02,942	2,19,002	2,54,382
3	Násik ...	90,998	1,22,514	1,11,144	1,50,378
4	Ahmednagar ...	55,413	57,410	56,115	63,387
5	Poona ...	99,198	95,189	94,476	85,923
6	Sátára ...	70,664	88,642	82,632	88,822
7	Sholápur ...	21,613	30,641	38,255	34,414
	Total ...	6,20,092	7,48,149	7,51,787	8,18,189

197. The distribution of expenditure under "A. Conservancy and Works" among the several divisions of the Central Circle, during the year 1892-93 and 1893-94, is exhibited in the following table :—

No.	Division.	1892-93.	1893-94.	Increase.	Decrease.
		Rs.	Rs.	Rs.	Rs.
1	Direction	3,338	250	...	3,088
2	East Khándesh	12,021	15,246	...	3,775
3	West Khándesh	28,626	26,595	...	2,031
4	Násik	15,306	18,985	3,679	...
5	Ahmednagar	13,818	15,611	1,793	...
6	Poona	48,563	33,155	...	15,408
7	Sátára	22,920	30,558	7,638	...
8	Sholápur	9,033	8,046	...	987
9	Working Plans	1,020	1,020	...
	Total ...	1,60,625	1,49,466	14,130	25,289

198. The decrease of Rs. 3,088 under direction is due to the fact that the cost of maps and of sending specimens of timber, &c., to Chicago Exhibition was adjusted in the accounts of the Conservator, last year, while no such charges were incurred during the year. The decrease of Rs. 3,775 in the East Khándesh Division is due to the smaller tree divesting operation under I (b) as already explained under receipts. The small decrease of Rs. 2,031 in the West Khándesh Division is to be accounted for by the fact that the expenditure during 1892-93 included the charges for 15 months and also to smaller expenditure having been incurred than provided for under "Plantations" and "Protection from fire." There is, however, an increase of Rs. 3,679 in the Násik Division and the increased receipts under II (a) more than counterbalance the increased expenditure under II, in connection with the extensive clear fellings of teak trees in revenue lands; and under A VIII (a) on account of the demarcation work on a larger scale in the Peint Táluka which was carried on with additional vigour to serve as a relief work, owing to some scarcity prevailing in the Peint villages. The increase of Rs. 1,793 in the Ahmednagar Division is owing to the debit of forest survey charges Rs. 4,774, while there was no such debit last year, and had it not been for this charge, the expenditure would have been less than during 1892-93 as in other divisions. The Poona Division exhibits a decrease of Rs. 15,408 which is due to the abandonment of the departmental system of felling and exploiting timber in favour of sales on foot, by which all expenses are borne by purchasers, and also to the fact that no money was spent in payment of compensation for lands or rights, and that the work of erecting special forest boundary marks was not carried out on such an extended scale as had been provided for, owing to much sickness among the executive officers of ranges. The increase of Rs. 7,638 against the Sátára Division is mainly due to much larger purchase of Hirdas (*Terminalia chebula*) at the forest depôts than had been anticipated as the crop of the year was a record breaker, but the increased receipts under I e more than cover this extra cost. The decrease against the Sholápur Division is owing to the difference of 3 months and calls for no remarks. The increase of Rs. 1,020 against the Working Plans Division is solely due to the fact that there was no expenditure under this head during 1892-93, while this amount represents the cost of the Working Plans field establishment, while Mr. Fry, Divisional Forest Officer, Working Plans, belonging to the Northern Circle, worked in the Central Circle for a short period of the year.

199. The expenditure under A. Conservancy and Works of the divisions of the Central Circle for the four *financial years* of the current decennial period have varied as under :—

No.	Division.	1890-91.	1891-92.	1892-93.	1893-94.
		Rs.	Rs.	Rs.	Rs.
1	East Khándesh	11,487	16,578	18,454	14,618
2	West Khándesh	22,920	22,997	25,426	26,714
3	Násik	10,619	15,995	12,538	16,641
4	Ahmednagar	14,254	18,330	12,790	15,980
5	Poona	44,851	37,901	40,536	34,921
6	Sátára	16,659	18,276	20,135	31,683
7	Sholápur	5,639	6,807	8,153	8,739
	Total	1,26,429	1,31,884	1,38,032	1,49,296

200. Under B. Establishments the charges are regularly incurred according to the sanctioned scale, and the decrease of Rs. 63,703 is solely due to the additional cost of salaries and allowances during the 3 months of 1892-93 debited in that year. No detailed explanations are required of the expenditure under this major heading.

201. The expenditure under B. Establishments of the divisions included in the Circle has been returned as under during the four *financial years* of the current decennial period :—

No.	Division.	1890-91.	1891-92.	1892-93.	1893-94.
		Rs.	Rs.	Rs.	Rs.
1	East Khándesh	45,208	45,881	43,935	41,902
2	West Khándesh	45,523	43,257	47,212	46,642
3	Násik	56,734	57,892	62,515	65,176
4	Ahmednagar	41,469	40,421	37,674	43,712
5	Poona	60,956	65,439	66,598	71,753
6	Sátára	52,615	50,139	56,092	54,993
7	Sholápur	26,974	26,440	30,421	29,756
	Total	3,29,479	3,29,469	3,44,447	3,53,934

202. And the surplus revenues of the divisions for the same four years which run respectively from 1st April to 31st March appear as under :—

No.	Division.	1890-91.	1891-92.	1892-93.	1893-94.
		Rs.	Rs.	Rs.	Rs.
1	East Khándesh	60,639	88,352	87,774	84,363
2	West Khándesh	96,429	1,36,688	1,46,364	1,81,026
3	Násik	23,645	48,627	36,091	68,561
4	Ahmednagar	—310	3,659	5,651	3,695
5	Poona	—6,609	—8,151	—12,658	—20,751
6	Sátára	1,390	20,227	6,405	2,146
7	Sholápur	—11,000	—2,606	—319	—4,081
	Total	1,64,184	2,86,796	2,69,308	3,14,959

203. It is directed in paragraph 27 of Government Resolution No. 5385, dated 23rd June 1894, in the Revenue Department, that the receipts, expenditure and the net revenue of the past ten years should be shown for the Circle as it is now constituted in the report of 1893-94, consequently the following table is given, but in order that each year may show an equal number of months and its

figures may be for the same period of time, so that an equal comparison may be obtained, the financial results of the official year, *i. e.*, from 1st April of one to the 31st March of the next year, are given in the statement in block type below the figures of the two last years :—

Year.				Receipts.	Expenditure.	Net Revenue.
				Rs.	Rs.	Rs.
1883-84	4,70,219	3,35,287	1,34,932
1884-85	5,10,168	4,19,002	91,196
1885-86	5,11,379	4,32,600	78,779
1886-87	4,69,935	4,25,815	44,120
1887-88	4,95,425	6,52,617	42,808
1888-89	5,82,298	4,56,619	1,25,619
1889-90	5,89,455	4,33,181	1,56,274
1890-91	6,20,092	4,55,909	1,64,184
1891-92	7,48,149	4,61,853	2,86,796
1892-93	8,23,495	5,87,992	2,35,503
				7,51,787	4,82,479	2,69,308
1893-94	8,14,169	5,18,130	3,01,039
				8,18,189	5,03,230	3,14,959

204. It will be seen from the above figures that the net revenue of the forest year of this report is the highest ever obtained, and is a record surplus.

205. The figures of expenditure given above include the proportional cost of direction for each of the first nine years of the series and not the total cost thereof, because anterior to 1892-93 the Thána, Surat and Panch Maháls Divisions were under the same direction and their proportional share of the cost for the nine years 1883-84 to 1891-92 inclusive, has been deducted.

CHAPTER V.

FOREST ADMINISTRATION.

206. The forest administration of the Central Circle has, during the year, been conducted on the lines laid down in Government Resolution No. 7107, dated 6th September 1892, in the Revenue Department, which may be described briefly as making the Forest Department subordinate to the Revenue Department, on the grounds that as forest administration is a branch of the general administration of the country, and as the Commissioner of the division is, under the provisions of the Land Revenue Code, Bombay Act No. V of 1879, the head of the general administration of his division, in direct subordination to Government, therefore he is head of the forest administration in his division, and consequently the Conservator of Forests, who is the head of the Forest Department in the Circle, is directly subordinate to the Commissioner in all matters of general administration. In the same way, as the Collector is the head of the general administration of his district under the Commissioner of the division to which the district belongs, therefore the principal Forest officer of the district, designated the Divisional Forest Officer, is directly subordinate to the Collector in all matters concerning the general administration of the forests of the district. But in technical matters, the Divisional Forest Officer is directly subordinate to the Conservator of his Circle, and in regard of questions of accounts, establishments and leave, &c., the Conservator has still the privilege of addressing Government direct.

207. The principle governing the arrangement of placing the local Forest Department under the local Revenue Department is undoubtedly a sound one, for it gives strength to the forest administration as the experience of the year of this report has abundantly proved: the Collector being directly responsible for the forest administration in his district, and every detail of forest management being carried out, only with his full knowledge, approval and support: and

with the Commissioner in the back ground to hold the balance evenly between the two departments when conflicting opinions may arise, and to give the final order, and to see that the forest interests of Government receive their proper recognition: the forest administration has acquired a power it certainly lacked before.

208. Where to draw the line of demarcation between general administration and technical matters may sometimes be an intricate consideration, but it must be left mainly to the good sense of local officers to decide to whom the greater responsibility attaches on a particular question, and where lies naturally the greater, and it may be the special, knowledge.

209. There is some incongruity in the designations of forest officers, and the old style of calling the principal forest officer of a district "the district forest officer," and the principal forest officer of the revenue division "the Conservator of the division," instead of "the Divisional Forest Officer" and "the Conservator of the Circle" gives titles seemingly more appropriate to the existing relation of forest administration to the general administration of the country.

210. The rules prescribing the channels of communication are somewhat overstrained in their practical application to the transmission of papers, and a little relaxation on some points would promote the despatch of business, decrease avoidable work and cost in correspondence, without impairing the desired subordination of the Forest to the Revenue Department.

211. The constitution of the Circle has remained unchanged through the year.

ESTABLISHMENT AND THEIR RECRUITMENT.

212. The administrative staff of the department for directing and controlling operations consisted at the close of the year of one Conservator of Forests, 1st Grade, and 8 Divisional Forest officers who are either Deputy or Assistant or Extra Assistant Conservators of Forests of different grades, according to their respective ranks in the Indian Forest Service, or in the Provincial Branch of that service: and there were also 4 Sub-division Forest Officers of the rank of Assistant and Extra Assistant Conservator, attached to the divisions of West Khándesh, Násik, Poona and Sátára. One officer of the Indian Forest Service of the rank of Deputy Conservator has also been attached to the College of Science, Poona, as Professor of Forestry, and belongs in departmental matters to the Central Circle.

213. The following list shows the ranks and grades of the superior Forest officers who were attached to the Central Circle on the 30th June 1894:—

No.	Rank,	Grade.	Rate of pay.
			Rs.
1	Conservator	1st Grade	1,600
1	Deputy Conservator	2nd do.	800
3	Deputy Conservators	3rd do.	650
2	Do.	4th do.	550
2	Assistant Conservators	1st do.	450
1	Assistant Conservator	2nd do.	350
10	Total Imperial.		
2	Extra Assistant Conservators	1st do.	350
1	Extra Assistant Conservator	3rd do.	250
3	Total Provincial.		

214. No changes have occurred in the sanctioned strength and cost of the subordinate district establishments of the Central Circle, both permanent and temporary, and their distribution among the several divisions of the Circle is exhibited in the following statements:—

Permanent Establishment.

No.	Division.	Number of Ranges.	RANGE FOREST OFFICERS.						Forest Guards.						Total monthly cost.	REMARKS.	
			Rangers.			Foresters.											
			Rs. 100	Rs. 80	Rs. 60	Rs. 50	Rs. 40	Rs. 30	Rs. 20	Rs. 15	Rs. 12	Rs. 10	Rs. 9	Rs. 8			Rs. 7
1	East Khândesh ...	18							8	16	20	20	40	75	Rs. 15,159	The pay of Rangers and Foresters is personal, and they are liable to be transferred from one range to another as the exigencies of the service may require; consequently the number of appointments in each grade is shown in lump for the whole Circle.	
2	West Khândesh ...	10						7	14	18	18	50	102				
3	Násik ...	14						10	20	25	25	50	158				
4	Ahmednagar ...	11	1	3	5	7	17	25	22	6	12	22	22	50			85
5	Poona ...	11							9	17	26	25	60	120			
6	Sátára ...	14							9	18	24	22	57	102			
7	Sholápur ...	7							3	6	11	8	16	68			
	Total ...	80	1	3	5	7	17	25	22	62	103	146	141	323	710	15,159	

Temporary Establishment.

No.	Division.	Forest Guards.		Total monthly cost.	REMARKS.
		Rs. 8.	Rs. 7.		
1	Násik ...	3	3	45	The temporary establishment of Forest Guards has been sanctioned for these two divisions of the Central Circle only.
2	Poona ...	15	30	330	
	Total ...	18	33	375	

215. The strength and cost of the office establishment of the Central Circle has undergone no change during the year, but the transfer of 3 clerks and 2 peons from the office of the Conservator of Forests, Central Circle, to that of the Deputy Conservator of Forests in charge of the Northern Circle, which was made last year, has somewhat crippled the Central Circle.

The following statement shows the existing staff and its distribution among the several divisions of the Circle :—

No.	Division.	NUMBER AND GRADATION.										Total monthly cost.	REMARKS.
		Clerks.							Peons.				
		Rs. 100.	Rs. 80.	Rs. 50.	Rs. 40.	Rs. 30.	Rs. 20.	Rs. 15.	Rs. 10.	Rs. 9.	Rs. 8.		
1	Direction ...	1	1	2	1	1	2	...	1	1	3	433	
2	East Khândesh	1	...	1	2	2	...	1	3	183	
3	West Khândesh	1	...	1	2	3	...	1	5	214	
4	Násik	1	...	1	2	2	...	1	3	183	
5	Ahmednagar	1	1	2	2	...	1	3	173	
6	Poona	1	...	1	2	3	...	1	5	214	
7	Sátára	1	...	1	2	3	...	1	5	214	
8	Sholápur	1	1	2	1	...	1	3	158	
	Total ...	1	1	7	3	8	16	16	1	8	30	1,772	

216. In addition to this permanent establishment a temporary establishment consisting of one clerk on Rs. 15 and two peons at Rs. 8 each per mensem was in entertainment in the Násik Division, as in the year before, for duty under the sub-division officer there, who has no permanent establishment sanctioned for his office.

217. The inadequacy of both protective and office establishments has long been felt, and schemes for reorganizing them have already been submitted to Government, but the question has not yet been finally disposed of, as Government have in their Resolution No. 6702, dated 15th September 1893, in the Revenue Department, called for certain further details before passing final orders.

218. The East Khándesh Division was in charge of Mr. R. H. Mádan, Extra Assistant Conservator of Forests, 1st Grade, throughout the year, who administered his division efficiently. The conduct of the subordinate establishments in the Chopda, Yával and Sánda Ranges was very unsatisfactory, and inquiries were still progressing, when the year closed, in respect of certain allegations of fraud and dishonesty, which had been brought to Mr. Mádan's notice in the levying of permit fees on Bámbos, and of fees on passes issued under the rules of Section 41 of the Forest Act, and in the payment into the Treasuries of the collected fees. 2 round guards, 3 forest depôt officers and 15 forest guards and peons were dismissed the service during the year. The Collector in forwarding the report states "Mr. Mádan has had a trying year of it. But he appears to have worked well and successfully."

219. The management of the West Khándesh Division was under Messrs. Oliver and Keys from 1st July 1893 to 15th November 1893, and from 16th November to end of June 1894, respectively. Both officers have discharged their duties satisfactorily. Mr. Keys has suffered much in health from jungle fever, but nevertheless he has taken a keen interest in his work, and has moved over his wide division actively and his record is good. The Collector in forwarding the report remarks, "the financial returns of the Western Division are excellent and counterbalance the year's falling off in the eastern half of the district, and Mr. Keys is to be congratulated on the successful results of his year's work." Mr. B. H. Dalál was the sub-division officer from the beginning of the year to 10th April 1894, when his services were transferred to the Sind Circle much to the regret of the Conservator and of his Divisional Forest Officer. The Collector also remarked that Mr. Dalál in his forest work was "as keen as mustard." Mr. V. G. Tumne, who has succeeded him, is reported by Mr. Keys as promising to prove an efficient substitute.

220. Mr. W. G. Betham was the Divisional Forest Officer of Násik from 1st July 1893 to 13th April 1894, when he proceeded on three months' privilege leave, handing over charge of his duties to Mr. L. S. Osmaston, who held the division until relieved by Mr. Dasai on the 2nd May 1894, and who continued as Divisional Forest Officer till the close of the year. The forest administration has been well looked after by the three officers who held the reins during different periods. The sub-division office was in charge of Messrs. W. R. Gaunde, V. G. Tumne, L. D. Joshi and V. M. Tilak at different times, and all of them are reported to have worked well. It has been found necessary to dismiss only one forest guard of the Kalvan Range. The year was more unhealthy than the preceding one, the number of deaths of members of the establishment being 9 against 2 during 1892-93,

221. Mr. S. Hornidge has been Divisional Forest Officer of Ahmednagar throughout the year, and has worked satisfactorily. One round guard and 9 beat guards were dismissed the service for neglect of duty, absenting themselves without leave, &c.; there were two deaths in the staff against one in the year before.

222. The Poona Division has had Mr. A. D. Wilkins at its head throughout the year, and his administration of it has been good. The sub-division office was in charge of Messrs. L. D. Joshi, J. H. Clabby and V. M. Tilak, and they are reported to have worked hard and well. The Conservator regrets to have to mention the sudden death of Mr. L. D. Joshi, on the 19th June 1894, from heart disease. Mr. Joshi had served Government honestly and conscientiously for over 24 years. The year was exceptionally unhealthy in the Poona Division, and many subordinates were compelled to leave their duties on sick leave. Every clerk in the Divisional Office was prostrated with fever at the same time, and they were all absent in hospitals and under medical treatment

from 4 to 6 weeks all together. 17 forest guards had to be dismissed the service, and 7 to be reduced for misconduct and irregularities. The Khed Range was in a state of disorganization owing to the misconduct of the Range Forest Officer. There were several charges against him which were being inquired into at the close of the year.

223. Mr. R. S. F. Fagan had the management of the Sâtára Division throughout the year, and has worked with great industry and zeal. The Collector, Mr. Rand, in forwarding the report, writes: "During the short time that he has acted as Collector, the undersigned has been quite satisfied with Mr. Fagan's work." Mr. G. S. Hinge was the Sub-division Officer, and is reported to have proved himself to be a valuable assistant to the Divisional Forest Officer. During the year 2 subordinates retired on pension, 7 died, 1 resigned and 7 were dismissed the service. One round guard was prosecuted for stealing timber from the forests and was convicted and sentenced to 2 months' imprisonment.

224. The management of the Sholápur Division was in the hands of four different officers during the year, *viz.*, Messrs. J. H. Clabby, E. G. Oliver, W. R. Gaunde, and C. M. Hodgson, the lastnamed officer having taken charge only on the 13th of June 1894. The Collector has remarked: "There have been several changes of Divisional Forest Officer during the year and Mr. Oliver had just learnt the district when he was transferred. I hope Mr. Hodgson will be left here during the whole of the coming season." Two forest guards resigned the service, one died of fever, and six were dismissed the service for culpable neglect of duty and misconduct.

225. Mr. L. S. Osmaston has been attached to the Central Circle for duty on Working Plans from the month of December 1893, and has organized his office and been busily employed inspecting exploited compartments, closed for reproduction and coupes under exploitation and in gathering knowledge and collecting information preliminary to the formation of Working Plans.

226. Of the subordinate protective establishment the names of the following range forest officers have been brought prominently to notice by their Divisional Forest Officers:—Aminodin Aliodin, Sarfrazkhan Inayatkhan, and Tukaram Lalaji in East Khándesh, Husnodin Gulam Husen and Rahimatkhan Ktunkban in West Khándesh, Vishnu Mahadeo Tilak and Sadashive Vishnu Harshe in the Poona Division and Balkrishna Balwant Parasnis in the Sâtára Division.

227. Of the office establishment, the following clerks deserve special mention. Keshav Ganesh Vaidya, Madhavrao Narayen Gokhale, Krishnaji Vyankatesh Lohokare, Balkrishna Gopal Kher, Govind Lakshman Patankar, Tukaram Vithoba Sonar, Trimbak Govind Mahajan, Gangadhar Chintaman Kale and Vishnu Anant Bapat.

FOREST INSTRUCTION; &c.

228. The Principal of the College of Science, Poona, states in reference to the forest classes attached to the College that there are at present 28 students on the roll in this branch, 3 more than last year. The Conservator of Forests, Central Circle, sent 4 candidates, the Conservator, Southern Circle, sent 4, while the Conservator of Forests, Sind Circle, sent 2 only. At the Final Examination held in September 1893, 14 candidates appeared, of whom 12 passed the examination. Mr. F. Gleadow was a full time Professor throughout the year.

GENERAL REMARKS.

IMPORTS AND EXPORTS OF FOREST PRODUCE.

229. Duty on foreign timber is levied in the two forest divisions of Khándesh only in the Central Circle as stated last year; and the fees collected on imported timber, Bámboos, &c., amounted to Rs. 22,756 against Rs. 36,910 during 1892-93; the reason of this decrease being due chiefly to the collections of 1892-93 having extended over a period of 15 months, including twice over the two busiest months of the year, and partly to a general decline in the import trade of timber, &c., into Khándesh from the Nizám's forests on the eastern frontier

which are reported to have been closed against permit exploitations. The forests in Holkar's territory across the Aner river on the north of Khándesh are comparatively worked out and a small volume and inferior quality of timber, &c., is being brought from them into the Khándesh District yearly.

CONSERVATOR'S TOUR.

230. The Conservator's camp was in Poona when the year opened and after the close of the rainy season, early in November the Conservator moved camp into the Sátára Division and proceeded to Mahábaleshvar where the Divisional Forest Officer met the Conservator and from this place the surrounding forests and the Hirda operations in progress were inspected, the Collector of the district was met and forest business was discussed, and the divisional office was examined. From Mahábaleshvar camp marched through the Ranges of Jávli, Sátára, Koregaon, Khatáv, and Mán of the Sátára Division, conservancy and works were inspected daily on the way, and the Conservator then crossed the Pandharpur Range of the Sholápur Division, and marched through it into the Mádhá Range and encamped at Bársi road on the 11th, Mr. Oliver, the Divisional Forest Officer, and Mr. Fry, Divisional Forest Officer, Working Plans, met him there, and all three camps moved into the Karmála Range to Roplá, where the Divisional Forest Office was examined, and the forests of the Karmála Range were inspected, and forest matters were discussed. The Conservator's camp was in the Sholápur Division up to the Christmas vacation.

231. After the Christmas vacation, the Conservator proceeded to Ahmednagar where he inspected the Divisional Forest Office, and met the Collector, and subsequently marched through parts of the Párner, Ráhuri and Kopargaon Ranges inspecting forests, plantations and works, the Divisional Forest Officer Mr. Hornidge and Mr. Osmaston, Divisional Forest Officer of Working Plans, accompanying him.

232. Then he passed into the Násik Division inspecting forests of the Yeola Range: and from Manmád he and Mr. Osmaston went, with the Collector of Násik, and a party of the Railway Volunteers, from Manmád, and a party of armed police, and a small party of forest guards under two Range Forest Officers armed with guns and sticks, to Yeola, in a special train, on the night of the 6th February, to quell a racial riot which was going on between the Hindus and Mahomedans of the town.

233. After inspecting forests and works in the Chandvad and Málegaon Ranges of the Násik District, the Conservator marched into the Khándesh District to Dhulia where he met the Collector, and he made a tour through portions of the West and East Khándesh Divisions up to the end of February when his camp was at Chálisgaon, from whence he marched through the Nándgaon Range, and went to Násik by railway to meet the Divisional Forest Officer who was proceeding shortly afterwards on leave, and to inspect the Divisional Forest Office.

234. From Násik he returned to Poona by railway where he conducted the entrance examination of the candidates belonging to the Bombay Presidency for the Imperial Forest School at Dehra Dun, and he then went down to Bombay to attend a meeting of the Legislative Council of His Excellency the Governor for making laws and Regulations, to which he had been summoned, in virtue of the honour which had been conferred upon him by His Excellency the Governor in Council, in appointing him to be a member of that august body. Returning to Poona, the Conservator marched with his camp through the Mával, Mulshi and Purandhar Rauges of the Poona Division inspecting forests and works, and then through the Khandála and Wái Ranges of the Sátára Division up to Mahábaleshvar on the 7th May; and on the 10th June he went to head-quarters, Poona, for the rains, from whence a flying visit was paid on the 25th June to Dhulia in Khándesh *via* Chálisgaon, in order to inspect the Divisional Forest Offices and records of East and West Khándesh in their head-quarters station.

235. The Conservator has much pleasure in recording finally that there has been no avoidable friction in the administration of the forests of the Circle during the year: with the Collectors, his relations, and the relations of the Divisional Forest Officers, in official business, have been harmonious and cordial: every

reasonable assistance and all reasonable support has been given to the management of the forests. From the Commissioner, Central Division, Mr. J. F. Fleet, I.C.S., C.I.E., the Conservator has received the greatest consideration; and, forest administration has received just, sympathetic and impartial treatment. There have been differences of opinion between officers of different departments, as there will always be, when divergent interests have to be considered; and there has been consequently a certain amount of wholesome friction, which is not undesirable, for it evidences that conflicting interests are being safeguarded by the responsible officers. But there has been no unpleasantness: good-will and co-operation have carried the forest interests of the State smoothly through another, and what the Conservator ventures to think may be termed a successful year.

A. T. SHUTTLEWORTH,
Conservator of Forests, Central Circle.

Dated 29th December 1894. }

A. T. SHUTTLEWORTH,
Conservator of Forests, Central Circle.

Poona, 4th January 1895.

Submitted to Government.

2. This report was received less than a week ago, but as it has already been expedited by Government, the undersigned feels bound to forward it with only such cursory remarks as occur to him after a rapid perusal. His knowledge of present forest matters in the Central Division is necessarily limited, but he had the advantage of an intimate acquaintance with them in some districts a good many years ago.

3. With reference to paragraph 21 it may be assumed with certainty that under no circumstances is the present forest area likely to be increased in any appreciable quantity. The question is more likely to arise whether certain areas will not have to be given back for cultivation.

4. Although the general demarcation of forest areas was completed some years ago the work never seems to come to an end, for under the orders of the Government of India a most troublesome task is now being carried out by dividing forest areas into—

Forests proper,
Fuel and fodder reserves, and
Pastures.

There has lately been a still further enunciation of policy which will not simplify the question. From reports which have been received regarding only one or two talukas, it is evident the work will not be satisfactorily completed for years.

5. The undersigned considers that the working plan sketched by the Conservator is the only one that is suitable to such forests as are found in the Central Division. It is a matter for regret that up to the present so little should have been done in the way of forming blocks and coupes. It is presumed that there must be some special difficulty connected with the work as the Conservator says (paragraph 59) "at the most only one compartment to become the coupe of the year * * * * can be laid out in the more accessible blocks." It is to be hoped that more rapid work may soon be possible, but there is no doubt that some forests are so difficult to get at and so far removed from a market, that it will be impossible to exploit them for years. In the Thána district with accessibility to Bombay and two lines of railway with occasional water carriage, working plans with coupes for each year are in full operation.

6. The noticeable feature under "Protection from injury and breaches of Forest law" is the enormous reduction in the number of cases compounded under Section 67 of the Forest Act. This was of course due to the orders that were issued during the year 1892 and there was a good deal of misconception regarding their scope. Personally the Commissioner thinks that Section 67 is a most useful section which can be profitably worked to a very large extent under certain safeguards, but as the matter is now under the consideration of Government and orders may shortly be expected, it is hardly necessary to say anything further.

7. The regulation of grazing shows some interesting features. Nominally about one-third of the forest area is supposed to be closed to grazing. From this closed area no less than 188,584 animals were impounded. It may fairly be assumed that not one animal in ten which trespassed into the closed area was caught, so that practically the closing is a dead letter and the closed forest is nearly as much grazed as the open.

8. If the figures can to the smallest extent be relied on, paragraph 160 shows that the Central Division altogether contains 6,743,784 animals, the greater number of which require grazing of some sort. Paragraph 152 shows that 1,468,124 obtained grazing in the forests. From this it would appear that no

less than 5,275,660 animals were grazed in occupied and waste lands, or stall-fed. Only 363,977 animals obtained free grazing, being a trifle over 5 per cent. of the total number of animals in the division. The number of animals that paid for grazing in forests was 1,104,147 (1,468,124—363,977) or about 16 per cent. of the total of the division. It certainly seems a stretch of imagination to believe that nearly 80 per cent. of the cattle in the division are fed by private arrangement, that about 16 per cent. are grazed in Government forests on payment, and that only slightly over 5 per cent. graze free. The numbers of private impoundings given by the Conservator for some districts are also instructive. On the whole the Commissioner is of opinion that for several years to come any attempt at regulation of grazing will be practically futile.

9. Owing to practically unrestricted grazing, natural reproduction in the tracts where it is urgently required is retarded, and until certain areas are fenced and placed in charge of permanently resident watchmen, profitable results are impossible. When blocks and coupes have been marked off and rotation fixed, each coupe after it has been cut should be fenced and rigorously guarded night and day. Certain areas in favourable positions in the arid and treeless tracts of the Deccan might be subjected to the same treatment without having formed coupes of the year, but only after considerable expense has been incurred for some years will it be possible to judge of the results. It is the want of results up to the present that has to a certain extent fostered the cry against the utility of the Forest Department in certain areas.

10. On the whole the Department seems to have worked well under difficult conditions, and Mr. Shuttleworth has displayed his usual energy and devotion to duty.

J. K. SPENCE,
Commissioner, C. D.

SOUTHERN CIRCLE.

FOREST ADMINISTRATION REPORT OF THE SOUTHERN CIRCLE,
BOMBAY PRESIDENCY, FOR THE YEAR 1893-94.

INTRODUCTION.

The *personnel* of the superior and subordinate staff underwent no change during the year.

2. In comparing the results of the year under report with those of last year, it must be borne in mind that the period reported on last year comprised 15 months, while the one now reported amounted to only 12 months.

3. The area finally settled during the Forest year 1893-94, amounted to 427 square miles in Kanara and 29 square miles in Kolábá. In Belgaum, 37 square miles of 'Protected forests' were converted into 'Reserved.'

4. The demarcation-party completed the survey of a line separating "Protected" from "Reserved" forests, and aggregating $75\frac{1}{2}$ miles in length, in the Central and Southern Divisions of Kanara, at a cost of Rs. 1,894.

5. The Imperial Forest-Survey-Party carried on its operations in Kanara and Kolábá. The cost amounted to Rs. 32,863, and the area completed during the year to 249 square miles.

6. The work accomplished by the two Working-Plans' Parties comprised the collection of *data* for 135,406 acres of forests in Kolábá, and 21,106 acres in the Northern Division of Kanara, at a cost of Rs. 22,963, and 22,979, respectively.

7. The number of criminal cases which were taken into Court, amounted to 565, against 593 in 1892-93; and that of cases compounded by Forest-Officers, amounted to 374 against 916 in 1892-93. The marked diminution in the number of prosecutions and compoundings was, in a great measure, owing to wrong interpretation by Divisional Officers of orders issued by Government on the subject, and partly to the forest year having been 3 months shorter than that of 1892-93.

8. The number of cattle impounded for trespassing in closed forests, and for grazing without permits in open forests, amounted to 13,592 as against 16,746 in the preceding year of 15 months. The decrease is ascribable partly to greater leniency on the part of Divisional Officers in dealing with offences under the Forest Act, and partly to comparative shortness of the forest year.

9. The results of special measures taken for the protection from fire of an area of 1,320 square miles of forests, were, on the whole, satisfactory. Of the area attempted 98 per cent. is reported to have been successfully protected.

10. Natural reproduction was, on the whole, satisfactory.

11. The prices obtained for timber and other produce were high, owing to a generally-favourable agricultural season, and the consequent increased demand for building-wood.

12. The myrobollam-crop was unusually large, but the prices obtained for it were poor, owing to the dullness of European markets.

13. As regards the revenue, generally, the year has been a very prosperous one. Both the gross and net revenues of the year 1893-94, of 12 months were larger than those of the preceding year of 15 months. The receipts of the year amounted to Rs. 15,31,317 and the charges to Rs. 8,60,481.

CHAPTER I.

EXTENSION AND CONSTITUTION OF STATE FORESTS.

(i).—ALTERATION OF AREA.

(ii).—FOREST SETTLEMENTS.

14. The following table shows the forest-area of the Southern Circle for 1893-94 :—

Names of Districts.	Area on 1st July 1893.		Added during the year.		Excluded or transferred to other heads.		Area on 30th June 1894.		Total Forest Area.
	Reserved.	Protected.	Reserved.	Protected.	Reserved.	Protected.	Reserved.	Protected.	
	Sq.m. a.	Sq.m. a.	Sq.m. a.	Sq.m. a.	Sq.m. a.	Sq.m. a.	Sq.m. a.	Sq.m. a.	
Kanara	754 454	2,794 269	427 168	...	0 5	427 273	1,181 617	2,366 636	3,548 613
Belgaum	494 362	196 572	37 151	...	0 2	47 32	531 511	149 540	681 411
Dharwar	171 410	260 258	0 495	...	170 555	260 258	431 173
Bijapur	155 76	89 409	0 20	...	155 58	89 409	244 468
Kolábá	381 285	63 588	29 393	...	0 1	29 451	411 38	34 137	445 175
Ratnagiri	20 80	20 80	20 80
Total	1,977 389	3,405 176	494 72	...	0 523	504 116	2,470 577	2,901 60	5,371 637

15. The changes in the area and classification of forests in Kanara are owing to the completion of the settlement of the whole of the Yellapur-Táluka, 44 villages of Kumtá and 21 of Ankólá, comprising forest-areas of 268·8, 106·04 and 52·4 square miles, respectively. These areas have been notified under Section 19 of the Forest-Act.

16. In Belgaum, 37 square miles and 151 acres of "Protected" forest were converted into "Reserved;" and in Kolábá, the area which had been formerly notified "Protected Forests," aggregating 29 square miles 108 acres; was declared "Reserved"; 285 acres were also added to the "Reserved Forests" of that district.

17. The column headed "Excluded or transferred to other heads" of the above table, represents the area which was transferred from "Protected" to "Reserved." This amounted to 427·3 square miles in Kanara, 37·2 square miles in Belgaum, and 29·6 in Kolábá. The following acreage which is included in the same column was disforested :—

	Reserved.		Protected.		
	Sq.m.	a.	Sq.m.	a.	
Kanara	0	5	0	105	} Due to errors in former Notifications. During final settlement.
Belgaum	0	2	9	522	
Dharwar	0	495	
Kolábá...	0	1	0	340	
Bijápúr	0	20	
Total	0	523	10	327	

Kanara.

18. Mr. R. T. Wingate, Forest-Settlement-Officer, Northern Kanara, completed the field-work connected with 136 villages of Supá, aggregating 722 square miles. His settlement-proposals regarding this area will be ready early in November of the present year (1894).

19. Mr. Sheppard, Forest-Settlement-Officer, Southern Kanara, settled the forests of 53 villages in Siddápúr and 8 in Sirsi, with an area of 85·9 and 12·02 square miles, respectively.

20. The settlement-report on these forests will also be ready in November.

21. The 98 square miles of field-work completed by Mr. Sheppard last season compares unfavourably with Mr. Wingate's 722 square miles. The circumstances under which the two officers were working were, however, different. The forests of Sirsi and Siddápúr, owing to their being much intersected by cultivated and *bet*-lands, and to their being greatly burdened by rights-of way, require, acre for acre, more time to settle than the compact forests of Supá which are not infested by garden-proprietors and where rights are less numerous than those which exist in Siddápúr. Mr. Sheppard had also to make an enquiry into rights of way in 148 villages of the Sirsi Táluka; but what most impeded progress appears to have been his inquiry into customary usage regarding *bet* in Siddápúr, which necessitated his going to 90 per cent. of the *bet*-numbers and checking, on the ground, the lists of those who were reported to enjoy the right of user. He informs me that the total area of *bet* so treated was 13,117 acres, which, taking 4 acres as the average size of a *bet*-number gives over 3,000 *bet*-numbers, or, say, 2,700 to visit.

22. The investigation regarding the rights of user in respect to *bet*-lands, is only necessary in the event of a redistribution of the *bet*-lands and of the allotment by Government in communal *bet*-lands of specified portions for the exclusive use of specified gardens. This investigation can be most easily and cheaply carried out during the general settlement of the forest-area, and a speedy settlement of the policy to be followed in regard to *bet*-land is, on this account alone, greatly to be desired. If an allotment or sub-division of lands for *bet* is not to be carried out, the Settlement-Officer should, during the ensuing working-season, be able to complete the remaining field-work in Sirsi, Siddápúr and Honáwar (475.66 square miles).

23. The following area was notified under Section 4 of the Forest Act :—

Acres.	Guntas.	
180,222	11	in Supá.
582,160	6	„ Siddápúr.
133	16	„ Belgaum.
405	8	„ Gókák.

Belgaum and Dharwar.

24. In Belgaum, the resettlement of the tálukas on which reports had been submitted in previous years, with a view to the conversion of the "Protected" into "Reserved" forests, received the sanction of Government, but the area actually notified before the close of the year under report, consisted of only 37 square miles and 151 acres of the Gókák Sub-Division.

25. In Dharwar, the Settlement-Officer, Mr. Knight, completed the field-work of 5 tálukas, namely, Ránebnur, Kód, Hángal, Kalhatgi and Hubli, aggregating 154.7 square miles, and submitted settlement-reports on Gadag and Karajgi (70.9 square miles).

26. Mr. Knight reports that he also revisited the Bankápúr, Dharwar, Gadag and Karajgi Tálukas, and recorded rights of way omitted in the original reports. The field-work for the Dharwar-District has now been completed, and final proposals will, it is expected, be submitted very shortly.

27. The following table shows the progress made in the settlement of the forests which were gazetted under Section 34 of the Forest Act :—

Name of Collectorate.	Class of Forests.	At the commencement of the year.		Areas dealt with during the year and sanctioned by Government.		Area of Reserved Forests alienated under Section 26.	Area of Protected Forests disforested under Government orders.	At the end of the year.			
		Areas under Section 34 in which private rights have not been enquired into, settled or recorded.		Under Section 19, Chapter II of the Forest Act.	Under Section 28, Chapter IV of the Forest Act.				Sq. m. a.	Sq. m. a.	Sq. m. a.
		Sq. m.	a.	Sq. m.	a.						
Kanara ...	Reserved ...	214	286	214 286			
	Protected...	2,342	611	427	168	0 105	1,915 338			
Bijápúr ...	Reserved ...	155	78	0 20	155 56			
	Protected...	89	409	89 409			
Koláhá ...	Reserved ...	11	353	11 353			
	Protected...			
Total ...	Reserved...	381	75	20	381 55			
	Protected...	2,432	380	427	168	0 105	1,005 107			

28. The area of the "Reserved" class shown in the last column of the above table, against Kanara, has been finally settled and the settlement-report has been submitted during the year under report.

29. The total area remaining to be reported upon at the end of the year, including all classes, was :—

	Sq. miles.	Acres.
In Kanara as detailed above 2,129 square miles, 624 acres—		
214 square miles, 286 acres	1,915	338
In Kolábá	11	353
In Dharwar (to be converted into "Reserved")	266	286
Total	2,193	337

30. Government have, since the close of the year, passed orders on the settlement-reports on the Gadag and Dharwar-forests of the Dharwar-Collectorate (Government-Resolutions Nos. 6301 dated 26th July 1894 and 6354 dated 28th July 1894).

31. In Belgaum, 538 acres of waste land were notified during the year under Section 4, for inclusion in reserved forests.

32. The settlement of 11 square miles 353 acres of Kolábá, which has been a long time pending, has not been effected. It seems that the Collector is awaiting orders on a report submitted by him on the subject before undertaking the settlement.

33. Revised proposals for the Bijápúr-forests were sent in by the Collector together with maps, and orders were passed thereon in Government-Resolution No. 8339 of 11th October 1894.

34. Over 800 square miles of field-work were finished during last season by the two Settlement-Officers working in Kanara. The area for which field-work has still to be done is under 700 square miles. Two more working-seasons should, therefore, suffice for the completion of all field-work in Kanara and the last report should be ready by November, 1896, at latest. The settlement of the rest of the Circle is practically completed.

35. The expenditure incurred on account of settlement during the year under report, was as detailed below :—

Not charged to Forests.

	Rs.	Rs.
Salaries and allowances of the Forest-Settlement-Officer, Southern Kanara	11,665	
Salaries and allowances of the Forest-Settlement-Officer, Belgaum and Dharwar	12,846	
		24,511

Charged to Forests.

Salaries and allowances of the Forest-Settlement-Officer, Northern Kanara;	6,128	
and of the establishment employed under him, and contingencies	3,036	
Salaries and allowances of the establishment employed under the Forest-Settlement-Officer, Southern Kanara, and contingencies... ..	2,009	
Salaries and allowances of the establishment employed under the Forest-Settlement-Officer, Belgaum and Dharwar, and contingencies	2,838	
		14,011
Compensation	1,339	
Total	39,861	

36. The settlement of the year, which is represented by the above expenditure, comprises :—

	Rs.
494.1 square miles finally settled and sanctioned	13,410
974.6 square miles—settlement in progress (areas for which field-work has been completed)	26,451
	39,861

37. The cost per square mile of the settlement finally effected during the year was Rs. 27.2.

38. The total cost for settlement-operations up to 30th June 1893, amounted to Rs. 3,24,118, and that on account of the area gazetted during the year under report to Rs. 13,410. The area finally settled and gazetted up to end of the year under report is 2,910.35 square miles, and the average cost of settlement up to date comes to Rs. 116 per square mile.

39. The reduced cost last year is ascribable to the exceptionally-large area completed by Mr. Wingate.

(iii).—DEMARICATION.

(iv).—SURVEYS.

40. Lines of demarcation, dividing "Protected" from "Reserved" forests, and aggregating 75 miles 2½ furlongs in length, were surveyed and cleared, at a cost of Rs. 1,894, in the Ankólá, Yellápúr and Kúmtá Sub-divisions of Kanara, by the demarcation-establishment under the Forest-Settlement-Officer.

41. Field-books showing particulars of survey and boundary-marks for 8 villages of Ankólá, 2 of Yellápúr and 12 of Kúmtá, as well as maps of the forests, were also prepared for the use of Village and Forest-Officers.

42. No demarcation-lines were cleared by departmental agency owing to want of funds.

43. The Imperial survey-party continued the topographical survey of the Kanara forests, and details for 193 square miles, on a scale of 4 inches = one mile, were completed at a cost of Rs. 16,530. The triangulation of 265 square miles and traversing of 250 square miles, cost Rs. 7,361. The total cost amounted to Rs. 23,891. Reckoning in the same way as last year, the cost per square mile of completed area, for work done on the 4-inch-scale, was the same as last year, namely, Rs. 85.

44. For the Survey-year 1892-93, 16 square miles were surveyed in Kolába on the 8-inch scale, and 226 square miles in Kanara on the 4-inch. The average cost per square mile amounted to Rs. 89.

45. In Kolába, 56 square miles were completed on the 8" scale, at a cost of Rs. 8,972. The cost per square mile was Rs. 160, as against Rs. 205 in the preceding year; but in neither case is the cost incurred for traverses and triangulation included.

46. The average cost per square mile, reckoning as before, of the area completely surveyed during the year under report, was Rs. 102 against Rs. 116 in 1892-93.

47. Details of area surveyed, and under survey, during the year, will be found in the appendix, Form No. 49.

48. It is of course impossible to say exactly how much the completely-surveyed area has cost for any given year. If we assume that the cost of triangulation and traversing is constant each year, we must obviously take, as the cost of the completed area in any year, the whole of the expenditure during that year, or we may estimate the cost of triangulation and traversing per square mile, and add it to the cost of "detail" in order to get a fair idea of the cost of the survey.

49. Adopting the above methods, I find that the cost per square mile of completed area for the last three years was as follows:—

Year.	TOTAL AREA COMPLETED.		Cost per square mile. 4 inch'.	Cost per square mile. 8 inch'.
	8 inch'.	4 inch'.		
			Rs.	Rs.
1891-92	300	122
1892-93	68	195	119	239
1893-94	57	193	120	191

50. In 1892-93 and 1893-94, only detail-work was carried out on the 8-inch scale, and the cost per square mile of triangulation and traversing in this estimate has been taken from the actual cost of the survey under these items in 1891-92. The cost per square mile of the former was Rs. 12 and of the latter Rs. 22 in that year. By applying these results to 1892-93 and 1893-94, we get total survey-costs of Rs. 239 and Rs. 191, respectively.

51. It is evident, therefore, that there has been a remarkable increase in the cost of work since 1891-92. The cost last year was somewhat less than in the previous year, but the cost of the 8-inch survey was less in 1891-92 than the cost of the 4-inch in 1893-94.

52. But the most remarkable differences are to be found in the expenditure on the 8-inch survey, which, in 1892-93, cost more than double what it cost in 1891-92, and, last season, 57 per cent., more than in 1891-92. The Superintendent has not explained these apparent anomalies, and I regret that I am equally unable to account for them. If the cost of the 8-inch map is really so much greater than that of the 4-inch map, it would, in my opinion, be desirable to finish the Kolábá-Survey on the 4-inch scale, which would suffice for forest-purposes. At the same time, I confess, I have little hope that a very appreciable saving could be effected by this means, as practically all the details that can be taken up for the 8-inch maps can also be shown on the 4-inch maps, and it is the topographical details that, other things being equal, run away with most of the money. A reduction to the 2-inch, or 1-inch scale would, on the other hand, make an appreciable difference in the cost of the survey, and suffice for the forests still remaining to be surveyed.

53. It appears from paragraph 8 of the administration-report for 1890-91 that the difference between the cost of surveys on the two scales was estimated to be Rs. 12 for that year. In 1892-93, it had risen to Rs. 93 according to my estimate, and last season it appears to have been about Rs. 67. At the same time, the cost of maps on both scales has risen considerably, as already observed.

54. It seems desirable that some means should be devised for reducing the cost of the survey, as it is out of all proportion to the value of the forests still remaining to be surveyed.

CHAPTER II.

MANAGEMENT OF STATE FORESTS.

I.—REGULATION OF MANAGEMENT.

(a).—WORKING-PLANS AND THEIR CONTROL.

55. Mr. Mainwaring remained in charge of the Working-Plans' Party I. during the rains, and on his transfer to Bijápur about the end of October, he was relieved by Mr. Hodgson. From the beginning of the working-season, in November, Mr. Bell held charge of Working-Plans' Party II., relieving Mr. Hodgson, who was then posted to Party I.

56. Mr. Hodgson, in charge of Party I., commenced work in Kolábá early in November, and remained there until the 8th of March 1894, when he went on three months' privilege-leave. Mr. H. Mitra, Extra-Assistant Conservator, was then placed in charge of the party, and continued in charge of it, until the close of the working-season. Mr. Oliver, on transfer from the Central Circle, took charge of the party from Mr. Mitra on the 19th of June.

57. The following table shows the work accomplished by the Working-Plans' Party I, in Kolábá; during 1893-94:—

Area estimated.	Test trees felled.	Number of Compartments formed.	Area for which data for the preparation for Working-Plans were collected.	Number of Maps and Tracings prepared.	Total Cost incurred.	Cost per Acre.
Acres.	No.	No.	Acres.	No.	Rs.	Rs. a. p.
135,406.19	840	28.	135,406.19	47	22,963	0 2 8

58. The field-work in Kolábá consisted mainly in the counting of all teak-trees above 4 inches in diameter at breast-height on 205 square-miles of forest. The forest consists, almost entirely of coppice, and it is proposed to regulate it according to the quantity of material available subject to an area-check, the object sought being to cut annually approximately equal numbers of stems during each period on approximately equal periodic areas. The ground is very irregularly stocked, and it is hoped that by fixing the periodic area while varying the annual area in accordance with the mean capability of the periodic

area, a fairly uniform yield will be obtained during each period. The working-plan has been submitted by the Divisional Officer and will be in the hands of Government very shortly. One more season will see the work of organization finished for Kolábá. It is not possible to compare the work done last season in Kolábá by Party I. with that done by it in 1892-93 in Kanara, the method pursued in Kolábá being so much more rapid than that required for the heavy timber-forests of Northern Kanara. The progress made last season appears to me to be very satisfactory and creditable to Mr. Mitra and the other officers of Party I.

59. Party II., under Mr. Bell, continued the work of organizing the teak-forests of the Northern Division of Kanara, and the following table shows the work done and its cost:—

Year.	COMPARTMENT LINES 10'—15' BROAD.	Linear Miles surveyed.	Posts fixed.	Test trees felled.	Number of Com- part- ments formed.	Test area enumer- ated. Acres.	Trees examined by means of Pressler's Gauge.	Area for which the data for the preparation of plans were collected.	Total Cost.	Cost per Acre.
	Jungle cut and cleared.									
1893-94...	68,976	71,792	828	126	36	1,550	150	21,106.07	22,979	Rs. a. p. 1 1 5
1892-93...	40,427	43.7	784	77	18	937	...	9,994.6	13,753	1 6 0
Difference	+28,549	+28,092	+44	+49	+18	+613	+150	+11,111.47	+9,226	-0 4 7

60. The increase in the quantity of work done last season, as compared with 1892-93, is partly due to the fact that, in the latter year, a portion of the party was detached to mark off *coupes* in Kolábá, its services being consequently lost for the rest of the year, and partly to the fact that last season the party suffered less from sickness. These circumstances, alone, would not, however, suffice to account for the improvement effected, and credit is due to Mr. Bell and the officers serving under him for the increased quantity of work done. The area enumerated amounted to 7.05 per cent. of the total area for which data were collected.

61. Mr. Bell also prepared a scheme, now before Government, for the working of 215,904 square miles of timber-forests in the Northern Division of Kanara. The data for it were collected in former years with the exception of those collected for 16,884 acres during the season under report. The plan deals with the areas referred to in clauses 1 and 2 of paragraph 58 of last year's report, and although nominally a revised plan, it is virtually a new plan.

62. The forest, referred to in clause (4) of the same paragraph, has been divided up into compartments, but has not yet been finally organized as it consists almost entirely of jungle-woods for which there is at present but small demand. The area referred to in clause (3) consists of teak-tracts which can be most advantageously dealt with in connection with the adjoining teak-forests of the Gund-jungle, the organization of which will be proceeded with as rapidly as possible.

63. The cost of plans completed up to date is 13.5 annas per acre for the Northern Division of Kanara and 2.6 annas for Kolábá.

64. The total area for which complete data were collected amounted to 156,512 acres, and the average cost per acre to 4.6 annas. Complete working-plans have been submitted for 152,290 acres of this area.

II.—WORKING OF THE YEAR.

(a).—COMMUNICATIONS AND BUILDINGS.

65. A detailed account of the works executed during the year under report will be found in Form No. 51.

66. The outlay on communications amounted to Rs. 3,147, and on buildings to Rs. 2,384.

67. In the Northern Division of Kanara, no new work was executed during the year. The cost of repairing forest-roads and buildings amounted to Rs. 353.

68. In the Central Division of Kanara, the Shelebail branch of the Kanigeri-Udámaki forest-road was lengthened 1.19 miles at a cost of Rs. 93 and the well at Kólikéri was completed (Rs. 196). The cost of repairs to roads and buildings amounted to Rs. 865.

69. In the Southern Division of Kanara, a building was purchased for the Range-office, Honávár, at a cost of Rs. 435, and repairs to forest-buildings cost Rs. 579.

70. In Belgaum, Rs. 2,447 were spent on repairs to the Halshi-Nagargali-forest-road, and Rs. 243 on repairs to buildings.

71. In Dharwar and Kolába, buildings were repaired at a cost of Rs. 226.

72. In Ratnagiri, the expenditure under this head was confined to road-repairs. (Rs. 45).

(b).—PROTECTION OF FORESTS FROM INJURY.

(1).—General Protection and Breaches of Forest Law.

73. The following statement shows the number of prosecutions and breaches of Forest-rules during the years 1892-93 and 1893-94:—

Division.	CASES OF YEAR 1892-93.						CASES OF YEAR 1893-94.						Percentage of failure.			
	Pending in Court on 1st April 1892.	Taken into Court during the year.	Total.	Disposed of by Magistrates during the year.			Pending in Court on 30th June 1893.	Pending in Court on 1st July 1893.	Taken into Court during the year.	Total.	Disposed of by Magistrates during the year.			Pending in Court on 30th June 1894.	1892-93.	1893-94.
				Convictions.	Acquittals.	Total.					Convictions.	Acquittals.	Total.			
Northern Division, Kanara	119	119	68	48	116	3	3	102	105	32	73	105	..	41	69	
Central Division, Kanara	18	18	10	8	18	25	25	15	6	21	4	44	24	
Southern Division, Kanara	100	100	83	7	190	36	36	31	3	34	2	8	8

Kolába do.	5	133	138	102	134	4	4	287	291	187	33	220	71	24	11	
Ratnagiri do.	1	35	36	17	35	1	1	62	63	43	18	61	2	51	28	
Total	8	593	601	438	137	575	16	16	565	581	356	143	409	82	24	

74. Of the cases instituted in the Northern Division of Kanara, only 8 were in connection with offences committed in the heavy forests of the Supá and Haliyal-Ranges. Three of these were cases of incendiarism; and in two out of the three, convictions were obtained, the offenders getting off with fines. There were three cases in Supá concerning the clearing of jungle for grazing-purposes, but in none of them were convictions obtained.

75. In the Karwar-Range, 90 of the cases were for misappropriation of forest-produce within the five-mile-limit around Karwar. Up to the end of November, 1893, sixty-six of these cases were taken before Magistrates who let off the offenders in 53 cases with warnings, and convicted in 13 cases. This leniency failing to have the desired effect, magistrates became somewhat more severe, resorting, in some cases, to sentences of imprisonment for short periods, which resulted in the almost entire stoppage of offences.

76. In connection with these offences within the five-mile-limit, Mr. Davidson, the Collector, makes the following remarks:—

“The number of forest-offences brought before the Magistrates was considerable; and the result in the matter of convictions was not very satisfactory. That, however, was on account of the fact that in the neighbourhood of Karwar, where perpetual cutting and manufacture of dead-wood was going on, first offenders were let off with a warning as suggested in Government Resolution No. 7232, of 12th September, 1892. This was found not to be deterrent in the least, and, the cutting increasing, I issued a circular, which was brought to the notice of all concerned, warning them against cutting in forests, and at the same time pointed out to the Magistrates that unless people caught in the act were punished, no improvement was likely to take place. After a very few convictions, however, the illicit cutting almost entirely ceased.”

77. These cases explain the high percentage of failures in this Division. The number of cases taken into Court was less than in the preceding year, although higher than in 1891-92, on account of the measures taken to put down petty thefts in the vicinity of Karwar.

78. In the Central Division of Kanara, the percentage of failures was considerably less than that of the previous year. This, it seems, was due to greater care taken in the examination of cases before taking them into Court. There is a small increase in the number of cases which calls for no remark. None were of any importance.

79. In the Southern Division of Kanara, the number of cases taken into Court fell from 100 to 36, but the percentage of failure was the same as in the preceding year. Most of the cases taken before Magistrates, were in connection with the illicit cutting of *soppu* and reserved kinds of wood. The great decrease observable in the number of cases has not been satisfactorily explained by the Divisional Officer. Probably it is due to a misinterpretation by Controlling and Executive Officers of the orders contained in Government Resolution No. 7907, dated 6th October, 1892, regarding the treatment of offences.

80. A large decrease (119) occurred in the number of cases instituted in the Belgaum-Division. There is a decrease of 84 cases under "illicit grazing," as compared with the previous year's returns. There is a decrease of 35 in respect of offences of other kinds which fell from 55 to 20. The Divisional Forest-Officer reports that in view of the Government-Resolution already quoted, he was much more lenient in dealing with forest-offences. This falling-off in the number of cases cannot, therefore, be ascribed to a diminution in the number of offences.

81. The large increase in the number of prosecutions in Kolábá is mainly due, the Divisional Forest-Officer reports, to a large number of cases (126) of unauthorized cultivation by wild tribes, especially in Alibág and Nágóthná.

82. In Ratnagiri, the increase in the number of cases taken into Court is ascribed by the Divisional Officer to the uncertainty of the law in regard to the rights of occupants to reserved trees. This matter was referred to in paragraph 79 of last year's report. It remains in exactly the same unsatisfactory state.

83. Two important cases occurred in connection with this question. In one, the Khot's of Wádad in the Chiplun-Taluka were prosecuted for obstructing Forest-Officers in attaching wood cut on occupied land without permission. The accused were let off by the Sub-divisional Magistrate owing to the uncertainty of the law in such cases. In the other, the Khots of Pimplic-Khurd were prosecuted before the District-Magistrate for obstructing Forest-Officers in the cutting of reserved trees in *khoti* lands, but the case was dismissed on the same ground.

* * * * *

85. Details of cases of misappropriation of timber and other minor produce, as required by Government Resolution No. 7232, dated 12th September, 1892, are given in Appendix 52A.

86. Of the total number of cases that occurred in the Circle, 601 relate to theft of timber, 248 to theft of firewood, and 44 to theft of minor produce. The number of minor offences diminished from 875 in 1892-93 to 292 in 1893-94. The sudden fall in the number of cases brought forward is chiefly attributable to the effect produced on Divisional Officers by the orders contained in Government Resolution No. 7907, dated 6th October, 1892. The number of cases of theft of timber increased from 429 in 1892-93 to 601 in 1893-94, an increase which alone seems to indicate that forest-offences have not really diminished in number, although far fewer have been brought into Court. Another cause of apparent decrease in the number of cases is that the report for 1893-94 refers to the results of only 12 months, while that for 1892-93 refers to those for 15 months; but this cause does not nearly suffice to explain the great difference in the total number of cases taken into Court, and still less the decrease in the number of minor offences.

87. Appendix 52B shows details of cases compounded under Section 67 of the Forest-Act.

88. The cases dealt with under Section 67 of the Forest-Act were:—

Divisions.	1892-93.				1893-94.			
	Total number of cases disposed of.	Number of cases commuted.	Number of cases discharged.	Amount of compensation recovered.	Total number of cases disposed of.	Number of cases commuted.	Number of cases discharged.	Amount of compensation recovered.
				Rs.				Rs.
Northern Division, Kanara... ..	15	13	2	89	33	33	...	409
Central Division, Kanara... ..	22	20	2	103	7	6	1	17
Southern Division, Kanara... ..	4	4	...	53	1	1	...	9
Belgaum Division ...	475	475	...	580	86	84	2	36
Dharwar do. ...	37	37	...	83	35	5	30	1
Bijápúr do. ...	83	83	...	188	12	12	...	15
Kolábá do. ...	154	154	...	871	181	181	...	618
Ratnagiri do. ...	126	123	3	612	39	39	...	71
Total ...	916	909	7	2,579	394	361	38	1,176

89. There has been a marked decrease in the number of cases compounded during the year under report, in all the Divisions except Northern Kanara and Kolábá, where increase occurs of 20 and 27 respectively.

90. The increase in Northern Kanara was due to the occurrence of a great number of cases of illicit cutting of wood within the five-mile-limit of Karwar.

91. In Kolábá, the increase is attributed to the large number of cases on account of unauthorized cultivation of forest-lands in Alibág and Nágóthná. The amount of compensation accepted was, however, less by Rs. 253, which tends to show that the offenders were leniently treated.

92. As regards the large falling-off in the number of cases commuted during the year in Belgaum, Mr. Murray reports that it was not so much due to a diminution in the number of offences, as to the interpretation of Government-orders on the subject. Two hundred and sixteen cases in which people were accused of the cutting and removal of firewood for sale, which are not included in the number shown in the above table, were dismissed by him.

93. As in Belgaum, so also in Dharwar, minor offences were very leniently dealt with. Out of a total number of 38 cases reported, 30 were let off with warnings, and a nominal sum, Re. 1, was accepted as compensation in 5 of the remaining cases.

94. The Divisional Officer, Southern Kanara, reports that illegal *soppu*-cuttings in Sirsi and Siddápur, which are common in the unsettled villages of these talukas, were disposed of by the sale or destruction of the produce owing to the difficulty of obtaining convictions in such cases, which are too frequently regarded by Magistrates as too trivial for serious notice. Compensation was accepted only in 1 case in Kumta.

95. The decrease in Bijápur has not been satisfactorily explained by the Divisional Officer. The cause of it is no doubt the desire to carry out a conciliatory policy in dealing with offenders.

96. In Ratnagiri, the decrease is attributed to the uncertainty of the law regarding reserved trees in Khoti lands.

97. Appendix 52 shows the number of cases compounded and taken into Court during the year under report. The following statement shows the figures for 1892-93 and 1893-94:—

Division.	Taken into Court.		Compounded under Section 67.		Total number of cases.	
	1892-93.	1893-94.	1892-93.	1893-94.	1892-93.	1893-94.
Northern Division, Kanara ...	119	102	13	33	132	135
Central Division, Kanara ...	18	25	20	6	38	31
Southern Division, Kanara ...	100	36	4	1	104	37
Belgaum Division ...	145	26	475	84	620	110
Dharwar do. ...	29	17	37	5	66	22
Bijápur do. ...	14	10	83	12	97	22
Kolábá do. ...	133	287	154	181	287	468
Ratnagiri do. ...	35	62	123	39	158	101
Total ...	593	565	909	361	1,502	926

98. The number of offences commuted in 1893-94 is less than that dealt with in 1892-93 by 38 per cent., and the fines inflicted fell from Rs. 2,579 to Rs. 1,176. The decrease in the number of offences is partly due to the period examined in 1893-94, being three months shorter than that examined in 1892-93.

99. The fact that the period now under report comprises only 12 months, while the figures for 1892-93 were for 15 months, is one of the causes of decrease in the number of cases taken into Court, or compounded by Forest-Officers. If a proportionate number of cases were added for the year 1893-94, their sum would amount to 1,158 cases against 1,502 for 1892-93. Another cause of decrease has been already noted.

(2).—*Protection from Fire.*

100. A larger area was fire-traced in all the divisions except Dharwar and Kolábá.

101. The following table shows the results for each division :—

Division.	AREA IN SQUARE MILES.			Percentage of failures to area attempted.	Cost.		Proportion of Area under fire-protection to total Area of Reserves.
	Attempted	Failures.	Protected.		Per Square mile protected.	Per Acre protected.	
					Rs.	Pies.	
Northern Division, Kanara	513·61	·38	513·23	·07	20·42	6·12	...
Central Division, Kanara	261·89	2·95	258·94	1·13	22·92	6·87	...
Southern Division, Kanara
Belgaum Division	278·88	8·95	271·93	2·19	9·04	2·71	...
Dharwar do.	53·91	10·22	43·69	18·96	13·02	3·90	...
Bijapur do.	121·33	3·53	117·75	2·95	4·45	1·33	...
Kolábá do.	70·28	1·41	68·87	2·01	3·42	1·03	...
Ratnagiri do.	20·13	·07	20·06	·34	·84	·25	...
Total in 1893-94	1,320·	26	1,294·	1·97	15·62	4·68	53·41
Total in 1892-93	1,238·	19	1,219·	1·53	19·34	5·8	62·6
Increase or decrease in 1893-94	+ 82	+ 7	+ 75	+ ·44	- 3·72	- 1·2	- 9·2

102. The results of the year compare, on the whole, favourably with those of the year before. The area attempted has increased, while the cost per square-mile has decreased from 19·34 to 15·62 rupees. On the other hand, the failures have increased 0·44 per cent.; this increase is probably due to the absence of storms in parts of the Circle during the early part of hot weather.

103. The proportion of area protected to the whole area of the reserved forest shows a decrease, which is owing to 494 square miles having been brought over from the protected forest to the reserved area this year. Hence the apparent decrease in the area protected from fire.

104. The practice, introduced under Government-Resolution, No. 757, dated 27th January, 1893, of reporting each forest-fire to the Collector, is reported to have produced satisfactory results.

105. In Northern Kanara, 513·61 square miles, or nearly half the area of the division, were specially protected at a cost of Rs. 20·42 per square mile. The failures in this division amounted to 0·38 square miles, a very satisfactory result. Besides this area, about 49 square miles of forests in Haliyál, were protected by coolies without the opening of any fire-lines. In the Karwar-Range, 53 square miles of forest were added to the specially protected area.

106. No special operations were carried out in Southern Kanara, the important teak-forests, which were under fire protection in 1892-93, having been transferred to the Central Division of Kanara, during the year under report.

107. The results of fire-protection in the Central Division of Kanara, may, I think, be regarded as satisfactory. The failures (for an area attempted of 262 square miles) amounted to 2·95. The protected area of this division is much exposed to fires which spread from the Dharwar District, and to incendiarism on its eastern border, where the grazing is particularly good and some villagers and herdsmen like to burn the forest with a view to the production of a good crop of grass. There is, however, a slight improvement in the area protected last season, and a very great improvement in the cost of protection per acre, which fell from 11·7 to 6·87 pies. The Divisional Officer ascribes the saving in cost to early and frequent hot-weather-storms.

108. Mr. Haselden reports that "it is a very pleasant thing to be able to record that in Mundgód, and more especially in the Yellápur-Range, the Pátels and villagers voluntarily turned out on several occasions and extinguished forest-fires. It speaks well for the good feeling existing between the protective staff and the villagers."

109. In Belgaum, the area under protection was increased by 22·79 square miles. The principal reason for the increased expenditure which was 9·04 against 7·21 per square mile in the previous year, is ascribed by the Divisional Officer to the fact that a greater number of watchmen were found to be necessary to keep the fire-lines clean and to patrol the most important areas in Khánápur. Mr. Murray reports that particular attention was paid to the fuel-cuttings, the area burnt in the cuttings was the smallest on record, being 388 out of a total of 10,000 acres. It seems that there was no fire of much importance in the fuel-cuttings, with the exception of one caused by a passing train in the Akrali-cutting, in which 270 acres were burnt.

110. The area burnt during the year in Belgaum, was just double that burnt in the previous year. The increase occurs mostly in the Belgaum Sub-division, where a very large

area along the Gháts is reported to have been burnt. The Divisional Officer reports that owing to the heavy rains last year towards the close of the monsoon, the grass was of exceptional length, a circumstance which rendered the forests much more liable to fire and the extinction of fires more difficult. In no case was the cause of fires traced. Mr. Murray is of opinion that they were caused by incendiaries. The Collector is of opinion that the system of reporting fires by means of post-cards is of some value if only as a means of convincing those directly concerned of the great importance which the authorities attach to this subject.

111. The number of fires was 136 in the year under report and 89 in the previous year. The Divisional Officer reports that the villagers rendered willing assistance in their suppression.

112. The reasons for the increased cost of fire-protection in Dharwar and Kolábá, have not been satisfactorily explained by the Divisional Officers concerned.

113. The following areas are estimated to have escaped fire without the adoption of special measures :—

					Acres.
Northern Division, Kanara	480,145
Central Division, Kanara	437,181
Southern Division, Kanara	918,822
Belgaum Division	252,885
Dharwar do.	260,850
Bijápur do.	73,435
Kolábá do.	240,606
Ratnagiri do.
Total	<u>2,663,924</u>

114. The area reported as having escaped fire without the taking of special measures amounted to 4,000 square miles, or 74·3 per cent. of the whole area, during 1892-93. During the year under report, it amounted to 4,162 square miles, or 77·3 per cent. of the whole area.

115. *Northern Division of Kanara.*—The protection from fire of the dry teak-forests of this division is again reported to have been very successful. Five small fires took place in the Haliyál-Range, and three in the specially protected area of Supá, the area burnt being 121 and 53 acres, respectively. The offenders in two of the cases in Supá were traced, and their prosecution was ordered by the Divisional Officer about the close of the year. Seventeen cases of fire were also reported in Karwar, and a total area of 68 acres was burnt. Two offenders were prosecuted for setting fire to the forests, but the evidence was not sufficient to obtain conviction. In other cases, no trace of the offenders could be found. It seems probable that all the fires in Karwar were purposely caused by villagers for grazing-purposes, and that those in Haliyál were accidental.

116. *Central Division of Kanara.*—The Divisional Officer reports that protection from fire was very successful in the Yellápúr-Range. Having been there at the end of the hot weather, after the storms had dissipated all fear of fire, I can confirm this opinion. In the Mundgód-Range, several fires are said to have spread from *Inamdars'* forests on the borders of the Dharwar District. This is usually the case. Eighty-one fires took place in the division, in 4 of which the offenders were traced. The offenders detected in two of the cases were prosecuted for wilfully setting fire to *bet*-lands; and in one of these, the accused was let off with a fine of Rs. 2. In the other, the accused had not been tried at the close of the year. The remaining two cases were let off with warnings, as, in one, the offender was a boy, and, in the other, the fire had accidentally spread from the burning of a dead body. No offenders could be traced in the remaining 77 cases.

117. *Southern Division of Kanara.*—For reasons already given no special measures of fire-protection were adopted in this division. The number of fires amounted to 53, but their origin was in no case discovered. In all, 2,374 acres are reported to have been burnt. The area which escaped fire, was, according to this statement, 99 per cent. of the whole, but this is probably an over-sanguine estimate. It appeared to me when travelling in the division in the hot weather that a larger area had been burnt.

118. *Belgaum.*—Protection is, on the whole, regarded as satisfactory in the division, as the most important areas were successfully protected. The number of cases in which fire was brought to notice was 136 against 89 in the previous year. The number of fires reported is steadily increasing, but this is almost certainly due to the greater attention now paid to fire-protection as compared with former years. There is certainly no reason to suppose that protection is now less effective. The failure to detect a single offender is very disappointing.

119. *Dharwar.*—The Divisional Officer reports that forest-fires were more prevalent in the Kalghatgi and Dharwar sub-divisions, than elsewhere. Seventy-five cases were reported, of which 13 occurred in forests protected by fire-lines, and one in a closed number in the Kod-Range. The remainder occurred in localities in which no special protective measures were undertaken. The proportion of failures does not compare favourably with the results of the previous year, but this is attributed to extra care in estimating the actual areas burnt. No offenders were detected.

120. *Bijápur*.—The closed forests and the plantations in Bádámi and Bágalkót were specially protected as in the preceding year. It is reported that 2,296 acres were burnt during the year, against 51 in 1892-93. No offenders were discovered and the cause of fires could not, therefore, be ascertained.

121. *Kolába*.—113 fires were reported. The offenders were discovered in nine cases and one was prosecuted and fined 8 annas by the Magistrate. The rest were dealt with under section 67 of the Forest-Act. The fires are reported to have been caused by *ráb*-burning and smoking. The area attempted was 44,978 acres against 59,159 in 1892-93. The decrease is ascribed to want of funds. The Divisional Officer should arrange for the protection of a larger area.

122. *Ratnágiri*.—The results are very satisfactory. The number of fires that occurred, and the acreage of forest burnt during the year under report, amounted to 5 and 42, as against 3 and 6, respectively, in the previous year. The offenders in connection with 2 fires in the Khed-Range, were prosecuted, but were let off with fines of Rs. 5 and 3, respectively. In the case of a fire in Dápoli, the offender was traced and orders for a prosecution were issued about the close of the year. Of the remaining two cases, one was let off with warning to the accused for his carelessness, and no trace could be found of the offender in the other case.

123. The number of fires reported was 488 for the whole circle, while the number of cases in which the offenders were detected was only 21. It is extremely difficult to detect offenders, and, in those parts of the Circle in which the forests are set fire to year after year, indirect means, such as a slight and temporary increase of the grazing-fees, will, in my opinion, have to be resorted to sooner or later.

(3).—*Regulation of Grazing and Protection from Cattle.*

124. The grazing rules introduced in 1890-91 into parts of the Circle appear to have worked fairly well, but there is a very general feeling amongst District Officers that the uncertainty that exists in regard to what cattle should, in any given case, be considered agricultural, is apt to give rise to disputes and to lead to fraud on the part of Village-Officers. It seems probable, too, that villagers, themselves, prefer a uniform charge for each head of cattle grazed in the forest, whether agricultural or not, and that they have some difficulty in understanding the rationale of the present system. If continued, it appears to be necessary to determine the number of acres of wet and dry-crop land that can be worked by a pair of bullocks and to allow free cattle according to a fixed scale. This is what is now done in Belgaum, but, in Dhárwár there is no such system, and the cultivator does not understand on what principles the free-grazing of his cattle is settled.

125. Referring to this question, Mr. Fairlie Muir, Collector of Dharwar, writes: "The grazing-rules have worked satisfactorily. As the people have grown accustomed to the slightly enhanced rates, the feeling of discontent, that their introduction gave rise to, has well nigh disappeared. The only point about which discontent appears now to exist is with reference to the alleged irregularities, in so far as the rates for agricultural cattle are different from those of non-agricultural cattle. The cultivator looks upon it as a grievance that he has to pay more for his milch-cow than for his plough-bullock. Were the rates assimilated, all ground for complaint would be removed. This uncertainty, too, of the present incidence sometimes raises disputes, causes trouble, and gives rise to opportunity for improper practices on the part of the Village-Officers who realize the rates."

126. The number of cattle impounded is shown in the following table. The period for 1892-93 comprises 15 months; that for 1893-94, 12 months. The decrease in the latter year amounts to just about 20 per cent. and is proportionate to the shorter period embraced by it. It is relatively somewhat greater in closed than in open forest, a fact which, so far as it goes, is satisfactory:—

Division.	NUMBER OF ANIMALS IMPOUNDED DURING 1892-93.			NUMBER OF ANIMALS IMPOUNDED DURING 1893-94.		
	In open Forests.	In closed Forests.	Total.	In open Forests.	In closed Forests.	Total.
Northern Division, Kanara	207	207	111	157	268
Central Division, Kanara ...	129	417	546	37	71	108
Southern Division, Kanara ...	76	43	119	8	62	70
Belgaum Division ...	3,178	1,750	4,928	3,527	2,019	5,546
Dhárwár do. ...	3,233	3,935	7,168	2,253	981	3,234
Bijápur do. ...	2,037	779	2,816	2,270	1,299	3,569
Kolába do. ...	593	...	593	...	573	573
Ratnágiri do.	372	372	...	224	224
Total ...	9,246	7,503	16,749	8,206	5,386	13,592

127. The decrease in the number of cattle impounded in Dharwar and the Southern Division of Kanara is regarded by the Divisional Officers as a sign that the people are becoming more willing to pay the fees. The difference in the case of Dharwar is, however, so great, that this explanation appears improbable; and I think it should be ascribed in a great measure to inefficient protection. The Collector of Dharwar thinks it may be due to some extent to the extra fees leviable in some of the pounds.

128. In Central Kanara, the decrease amounts to $\frac{3}{4}$. The Divisional Officer ascribes it to the absence of many professional graziers who have left the country on account of cattle-disease which has been very prevalent there of late.

129. The increase in Belgaum is ascribed by the Divisional Officer to the greater leniency displayed towards offenders, men, who might have been prosecuted for allowing cattle-trespass, having been let off and their cattle simply impounded, or allowed to go free.

130. Details of areas closed to horned cattle and browsers, as well as those left open for grazing, are given in Appendix 54. The areas closed to all animals amounted to 850 square miles, to browsers to 731, and those open to all animals to 3,832 square miles.

(c).—IMPROVEMENT OF FOREST-GROWTH.

(1)—*Natural Reproduction.*

131. The attempt to exclude fire from the forests of the Northern and Central Divisions of Kanara has had a most marked effect on the reproduction by seed of teak, blackwood and other superior timber-species. Systematic protection was commenced in 1887. Up to that time, all deciduous forests of the Circle, with the exception of a plantation or two, were annually swept by fire. If, by chance, a portion of jungle escaped one year, it was pretty certain to be burnt during the next. Not a seedling was to be seen during the hot weather, and the soil was baked as hard as bricks and was quite unsuitable for the reception of seed. In addition to all this, an immense amount of damage was done to both standing and fallen timber. The first attempt at fire-protection, in 1817, although far from a failure, cannot be said to have been very successful. The system of fire-lines was incomplete, the lines were not properly attended to, and the executive and subordinate establishments were slack, being by no means alive to the importance of the work and to the possibility of carrying it out successfully. These initial difficulties have, however, been gradually overcome, and the success that has attended fire-protection during the last few years in many parts of the Circle, more particularly in the two most important divisions of Kanara, is very satisfactory indeed. Southern Kanara, Dharwar, and Kolábá are the most backward Divisions in regard to fire-protection.

132. In 1887-88, the areas attempted aggregated 130 square miles. In 1888-89 the area attempted rose to 1,000 square miles, but in neither of these years was the protection afforded considered at all satisfactory. In 1889-90, the area attempted was much the same, but the result appears to have been far more satisfactory, and it is stated in the administration-report for that year that, "this is the first year in which special fire-protection on a large scale has been, on the whole, successful in every part of the Southern Circle." Since then, protection has continued to be satisfactory and its effect on reproduction by seed has, as already observed, been most marked. All that is now wanted to ensure the adequate regeneration of our large timber-forests is more extensive protection and a regular system of improvement-cuttings which shall favour superior species by girdling or cutting inferior kinds. But, in the present weak state of the executive, the latter operation cannot be satisfactorily performed except for an insignificant area, comparatively speaking.

133. *Northern Division of Kanara.*—The Divisional Officer reports that natural reproduction by seed continues good in fire-protected areas, and remarks that teak is coming up well, and that its growth should be encouraged by improvement-cuttings.

134. *Central Division of Kanara.*—Here also the Divisional Officer reports that seedling-growth is excellent. The only impediment to it is fire, which is difficult to keep out on the eastern border of the Mundgód-Range. I was particularly struck during my tour in this Division with the excellent reproduction by seed of teak and blackwood and with the improvement in fire-protection in the Mundgód-Range. In the Yellápúr-Range, the reproduction leaves little to be desired.

135. *Southern Division of Kanara.*—The Divisional Officer reports that natural reproduction has improved and that it is best along the gháts. The fires in this Division cause a great deal of damage, and are very difficult to prevent in Sirsi and Siddápúr where the forests are cut up by *bet*, gardens and rice-land.

136. *Other Divisions.*—With regard to the other Divisions, there is nothing to add to the remarks contained in last year's report.

137. *Coppice.*—Everywhere reproduction by coppice is good. Mr. Talbot reports that a fuel-forest in the Karwar-Range, cut over 12 years ago, is again ready for exploitation. The forest referred to is, of course, a forest below the gháts, but the growth above the gháts is extremely good also. Particulars of some experiments made regarding the growth of coppice-stems will be found in Appendices (A—D) to this report.

(2).—*Artificial Regeneration.*

138. *Northern Division of Kanara.*—4,223 teak-seedlings in bamboo-tubes are reported to have been put down in gaps in the forests about Barchi. Of these, 1,060 are now reported to be dead, and the remainder to be 2 feet high.

139. In the Súpá-Range, out of 7,000 put down only 1,712 survived the hot weather.

140. Small nurseries were made at seventeen guard-houses dotted over the Division, and a good crop of seedlings has been obtained. These plants were to be put out last July in the forest, in gaps arising out of jardinage or other causes.

141. Better results will, it is hoped, be obtained in this Division during the current season. In 1893, the work in Haliyal was carelessly carried out. Tubes were loosely set in the ground with their ends protruding, the planting-sites were in many cases badly chosen, and the plants were often too close together.

142. The expenditure in this Division amounted to Rs. 218, most of the work being done by the guards.

143. *Central Division of Kanara.*—12,844 teak, 10 blackwood and 2,512 other species were put down in plantations, and 2,368 teak, 50 blackwood and 5,805 junglewood plants were put out in the forest. All the blackwood and about 600 teak have died. About 600 plants of *Pithecolobium saman* were put down and nearly all survived. This species thrives extremely well in Kanara.

144. A teak plantation has been made at Hulihond, in the Mundgód-Range, on a number of deserted rice-fields surrounded by forest. The Divisional Officer considers that it is turning out successfully, and this may prove to be the case. I was not, however, very favourably impressed with the appearance of the plants, and it seems to me that teak is not a species suitable for the planting-up of waste-land, where, in spite of watering, its growth is slow and feeble. The experiment at Hulihond should decide this question, as regards unmixed teak-plantations.

145. It is generally supposed that teak is not a shade-enduring species, but this supposition is certainly not true for Kanara, where seedlings and small poles may be seen forcing their way up through thick bamboo-cover, and where seedlings appear to flourish best under shade sufficiently dense to prevent the growth of grass. It appears, therefore, that teak in Kanara is well suited to natural regeneration by seed. So also are valuable species of other genera associated with it, such as *Dalbergia*, *Pterocarpus*, *Adina*, *Xylia*, and *Terminalia*.

146. The number of young trees surviving in the plantations of this Division at the end of June is estimated to be as follows:—

Range.	Teak.	Other Species.
Yellápur	6,842	6,817
Ankolá	15,056	11,416
Mundgód	27,012	18,233
Total	48,910	36,466

147. 2,368 teak, 50 blackwood and 5,805 plants of other kinds were taken from the forest and planted in suitable places in other parts of the forest, and 14 bagfuls of teak-seeds were sown partly in pits, or patches, 2 feet square and partly broadcast. Altogether 13,479 patches were sown in the Yellápur-Range, and 2,970 in Mundgód.

148. The expenditure on plantations amounted to Rs. 760. The operations in connection with sowing and planting in the forest itself, as distinguished from plantations, cost nothing, as they were carried out by guards and coolies employed in fire-protection.

149. *Southern Division of Kanara.*—The 25 acres planted up in the Honávar-Range in 1891-92 have been apparently a comparative failure: 1,500 plants are reported to be flourishing.

150. A few sandal-seedlings were planted out but they, too, failed, as also seeds collected and sown by the guards.

151. Small nurseries were prepared at each guard-house. The expenditure was Rs. 68.

152. *Belgaum.*—The nursery at Nágargáli was extended from one guntha to 41, and is reported to contain a good stock of teak-seedlings.

153. The experiment at Nágargáli, referred to in paragraph 147 of last year's report, was successful. About 60 per cent. of the seedlings planted out having survived, but it is too soon to form definite conclusions regarding the degree of shade most suitable for the teak.

154. The 400-acre-plot at Hémadge, referred to in the report for 1892-93, which was enclosed with a fence, is gradually becoming re-stocked by natural means. The latter were supplemented by planting but unsuccessfully. Considerable damage was unfortunately done to this area by fire.

155. In the closed portion at Konnur (referred to in paragraph 131 of the report for 1892-93) comprising 200 acres, no planting was carried out, but the good effect of closure is reported to be very evident.

156. The expenditure in this division was Rs. 125.

157. *Dharwar, Bijápur and Kolábá.*—No fresh planting was done in these Divisions. The forests consist almost entirely of coppice.

158. *Ratnagiri.*—26,105 Casuarinas, 1,000 teak, 1,100 Terminalias were raised in a nursery. Of these 20,105 Casuarinas and 50 Terminalias were put down in the Dápóli-plantation. 12,400 plants of other species were also put out on blanks, and about 9 khandis of seeds were collected and sown broadcast by the guards.

159. Rupees 61 were expended.

(3).—*Early thinnings.*

160. The Casuarina-plantations near Karwar and Honávar were thinned.

161. In Haliyál, 172 square miles of forest were thinned. 3,448 dead standing mature timber-trees, and 7,417 dead standing poles were extracted.

(4).—*Other operations for the improvement of the growing stock.*

162. In Súpá and Karwar, inferior species on 1,300 acres were girdled to death.

163. The area over which similar operations extended in the Southern Division, Kanara, was 1,500 acres.

164. In Belgaum, inferior-species on 1,500 acres were girdled to death.

165. Similar operations were carried out on a smaller scale in Yellápúr and Ankolá.

166. Forest guards were also employed in cutting back creepers and vegetation that interfered with the growth of superior species.

(5).—*Experiments.*

167. In June, a smaller quantity of seeds of the *Swietenia macrophylla*, received from Mr. Gleadow, were sown in the Belgaum-Division and the Southern Division of Kanara, and some of these have germinated.

168. The *Pithecolobiums* sown in the previous year in the latter Division are reported to be doing well.

169. Experiments were made regarding the growth of coppice. Full details regarding them will be found in Appendices (A.—D) together with curves and tables of growth.

CHAPTER III.

GROSS YIELD AND OUTTURN OF FOREST-PRODUCE.

Northern, Central and Southern Divisions of Kanara.

170. The large teak exploited, yielded 371,216 cubic feet, against 305,500 cubic feet in 1892-93; and small teak, such as poles, rafters, &c., aggregated 28,018 cubic feet, against 50,940.

171. The quantity of large junglewood removed, rose, from 296,440 cubic feet in 1892-93, to 336,605 cubic feet in 1893-94, and that of small junglewood fell, from 29,844 cubic feet to 20,298 cubic feet. The quantity of large blackwood, exploited, also fell, from 55,551 cubic feet to 30,205 cubic feet, and that of small blackwood from 220 cubic feet to 73.

172. The increase in the yield of large teak occurs mostly in Central Kanara: about 69,800 cubic feet of timber were brought to the Kóðibág and other depôts in excess of the quantity brought in during 1892-93. The contractor for that depôt failed to take down the prescribed quantity of wood during 1892-93, and this wood, amounting to 45,974 cubic feet, was brought down last season. The yield of the Northern Division of Kanara shows a decrease of 4,976 cubic feet. This decrease as well as the decrease in the quantity of small teak and blackwood is mainly due to the fact that the figures for 1892-93, covered a period of 15 months and that those for the year under report are only for 12 months.

173. The quantity of large and small junglewood exploited during the year under report, was larger by 30,619 cubic feet. There was a better demand for the local consumption of *Matti*-wood (*Terminalia tomentosa*) in Northern Kanara, and *Nana* (*Lagerstroemia microcarpa*) in Central Kanara.

174. The number of bamboos extracted was 3,707,493 in 1893-94 and 4,507,910 in 1892-93. The decrease is ascribable to the comparative shortness of the forest-year 1893-94. The demand for bamboos during the year under report, was good and the number sold exceeded that sold in 1891-92 by 413,301. Owing to the largeness of the crop, the yield of myrobollams was 4,479 khandis against 2,319 in 1892-93.

175. The firewood exploited, increased, from 1,133,355 cubic feet to 1,211,623 cubic feet. The increase is met with in the Northern Division of Kanara. The quantity supplied to the Southern Mahrátta Railway-Company rose, from 202,232, to 744,780 cubic feet. The Railway-Company is now able to utilize more firewood than can be supplied.

176. In Central Kanara there was a falling-off in the demand for export-fuel, the quantity removed being 1,278,300 cubic feet in 1892-93 and 130,087 cubic feet in 1893-94. The quantity exported from Southern Kanara, however, rose slightly, from 210,835 to 224,148 cubic feet.

Belgaum.

177. The yield of large teak from thinnings, always an uncertain quantity, amounted to 8,911 cubic feet against 18,661 cubic feet; of junglewood to 6,417 cubic feet and of blackwood to 233 cubic feet, against 4,302 and 638 cubic feet, respectively.

178. The outturn of teak, black and junglewood-poles, pieces, &c., measured 68,875, 700, and 31,255 cubic feet, respectively, against 34,979, 190 and 12,313 cubic feet. The large increase in teak-poles is due to selection-fellings for the depôts of Lingamath and Goli-halli, which have been renewed, the forests in the neighbourhood of those *Nákás* having had a long rest. 73,319 cubic feet of bábul were brought in, against 3,181 cubic feet in the previous year: the increase is owing to the sale of bábul-wood in *kurans* in the Athni-Táluka, and is, therefore, an extraordinary felling.

179. The yield of firewood also shows an increase. The running-fuel for the Southern Mahrátta Railway-Company amounted to 4,254,382 against 3,128,149 cubic feet; lighting-fuel to 16,802 cubic feet against 33,262 cubic feet; and firewood sold to the public to 790,653 cubic feet, against 735,823 cubic feet.

180. The yield of myrobollams also increased, from 2,751 khandis in 1892-93, to 5,814 khandis. The crop was exceptionally good.

181. The number of bamboos fell, from 678,467 in 1892-93, to 512,087 in 1893-94.

182. This fall is probably owing entirely to the comparative shortness of the last forest-year; the most active season of the bamboo-traffic is the hot season from February to May. The yield rose in 1892-93 (15 months) to 678,467 from 402,037 in 1891-92 (12 months).

183. The outturn of *Shigekai* (pods of *Acacia concinna*) rose from 140 to 260 khandis.

Dharwar.

184. The yield of teak increased, from 21,079 cubic feet in 1892-93, to 147,217 in 1893-94; and of jungle-and black-wood rafters and *jarayat-pieces* (agricultural wood) from 5,036 to 6,704 cubic feet.

185. The quantity of fuel extracted, also increased, from 227,401 to 250,591 cubic feet. But the number of bamboos fell from 465,134 to 363,146. 7,766 trees were exploited from *Malki* lands.

186. The increase in the quantity of timber exploited is due to the increased prosperity of the district. There were, at the commencement of the year, large stocks in depôts, which, owing to a succession of bad or indifferent agricultural seasons, had remained unsold. Last season was a very prosperous one for the agriculturists, and the demand for timber was so great everywhere that it became necessary to carry out extensive fellings in order to keep a sufficient stock in hand. The contrast between the results of the last two seasons is increased by the fact that in 1892-93 cuttings were curtailed owing to the great quantity of surplus-stock in depôts.

187. The apparent falling-off in the bamboo-trade is not real. It is due to the cause that brought about a diminution of sales in other districts.

Kolábá.

188. The yield of teak fell from 658,810 to 478,674 cubic feet. But the quantity of firewood removed, increased, from 480,814, to 1,102,940.

189. The decrease in the quantity of teak exploited is partly due to the comparative shortness of the official year, and partly to a diminution of the quantity fixed for cutting during the year, owing to fear that the sustained yield might be exceeded if more were cut.

190. The increase in the quantity of firewood exploited is probably ascribable to the coupes of the year's being better stocked, but a conclusive explanation has not been received from the Divisional Officer.

CHAPTER IV.

FINANCIAL RESULTS.

191. The details of the year's transactions are shown in Forms Nos. 61—65 appended.

192. The receipts and expenditure of the Southern Circle for the forest-year, 1893-94, were :—

Receipts.	CHARGES.			Surplus.
	A.—Conser- vancy and Works.	B.—Establish- ments.	Total.	
Rs.	Rs.	Rs.	Rs.	Rs.
15,31,317	5,55,022	3,05,459	8,60,481	6,70,836

193. The figures for the financial years 1892-93 and 1893-94 were :—

Year.	Receipts.	CHARGES.			Surplus or net Revenue.
		A.—Conservancy and Works.	B.—Establishments.	Total.	
	Rs.	Rs.	Rs.	Rs.	Rs.
1892-93	12,01,085	3,88,824	2,85,773	6,74,597	5,26,488
1893-94	15,12,407	5,37,493	3,02,280	8,39,773	6,72,634
Increase	3,11,322	1,48,669	16,507	1,65,176	1,46,146

194. The increase occurs chiefly in the Northern and Central Divisions of Kanara, and in Belgaum and Dharwar. It is mainly attributable to a prosperous agricultural year in the Southern Mahratta Country, which gave rise to a good demand and high prices for timber.

195. The following shows the revenue and outstandings at the end of the forest-year, as well as at the end of the financial year :—

Year.	Amount realized.	Balance due to the Department at the end of the year.	Total.
	Rs.	Rs.	Rs.
Forest-year 1893-94 (1st July 1893 to 30th June 1894)	15,31,317	2,94,856	18,26,173
Financial year 1892-93	12,01,085	2,43,963	14,45,048
Do. 1893-94... ..	15,12,407	3,06,030	18,18,437

196. It will be seen that the transactions of the Circle, for the financial year 1893-94, amounted to Rs. 18,18,437, against Rs. 14,45,048 for the year before, those for the forest-year under report being Rs. 18,26,173.

197. The increase in the outstanding balances for the year under report, is accounted for by the unusually large sales of timber referred to above.

198. These large outstanding balances are an unsatisfactory feature in the annual reports, but cannot be greatly reduced under the circumstances without certain loss to Government. I have issued, for several years past, stringent orders forbidding any sales unless a quarter of the purchase-money has been paid down at the time of purchase. In former years, security was not always taken, and some bad debts were contracted, and, even now, it is not always possible to avoid them. Two statements are in course of preparation by divisional officers: the one showing recoverable and the other irrecoverable balances, and I will shortly report to Government on the subject. In the past year, the outstandings have increased with the increase in the quantity of timber sold. There must always be a considerable balance outstanding under our present system of selling timber in Kanara, but no other would answer. The custom is to pay down 25 per cent. of the purchase-money and the balance before the removal of the wood from the depôt, certain penalties being inflicted on the purchaser for its non-removal within a short period. If it is not removed within a year it is liable to be resold at the risk of the original purchaser. 25 per cent. of the purchase-money suffices to secure the department against all risks under this mode of sale. The wood is generally bought up by dealers who remove it from the depôts by degrees, when they require it, for resale to smaller dealers or builders.

199. The following shows the receipts and expenditure under main heads:—

Heads of Revenue and Charges.	1st July 1893 to 30th June 1894.	FINANCIAL YEARS,			
		1892-93.	1893-94.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.	Rs.
REVENUE.					
I.—Timber and other produce removed from the forests by Government agency	11,06,415	8,37,582	10,98,167	2,60,585	...
II.—Timber and other produce removed from the forests by consumers or purchasers	4,03,066	3,46,130	3,94,294	48,164	...
III.—Drift and waif-wood and confiscated forest-produce	4,298	6,717	4,034	...	2,683
IV.—Revenue from forests not managed by Government	26	824	89	...	785
V.—Miscellaneous	17,512	9,832	15,873	6,041	...
Grand Total, Revenue ...	15,31,317	12,01,085	15,12,407	3,14,790	3,468
CHARGES.					
<i>A.—Conservancy and Works.</i>					
I.—Timber and other produce removed from the forests by Government agency... ..	4,27,369	2,65,614	4,12,495	1,46,881	...
II.—Timber and other produce removed from the forests by consumers or purchasers	8,887	8,574	8,912	338	...
III.—Drift and waif-wood and confiscated forest-produce	67	47	78	31	...
IV.—Revenue from forests not managed by Government
V.—Rent of leased forests and payments to shareholders in forests managed by Government ..	12,918	9,497	13,210	3,713	...
VI.—Live-stock, stores, tools and plant.	2,528	9,853	5,684	...	4,169
VII.—Communications and buildings ...	6,743	7,951	7,007	...	944
VIII.—Organization, improvement and extension of forests	89,123	77,705	82,560	4,855	...
IX.—Miscellaneous	7,437	9,583	7,547	...	2,036
Total A.—Conservancy and Works ...	5,55,022	3,88,824	5,37,493	1,55,818	7,149
<i>B.—Establishments.</i>					
I.—Salaries	2,56,138	2,39,765	2,54,130	14,365	...
II.—Travelling allowances	37,424	34,816	36,817	2,001	...
III.—Contingencies	11,897	11,192	11,333	141	...
Total B.—Establishments ...	3,05,459	2,85,773	3,02,280	16,507	...
Grand Total, Charges ...	8,60,481	6,74,597	8,39,773	1,72,325	7,149

200. The receipts show increases under the main heads I, II, and V; and decreases under III and IV.

I.—TIMBER AND OTHER PRODUCE REMOVED FROM THE FORESTS BY GOVERNMENT-AGENCY.

201. The increase is common to all the sub-heads. Under "a. Timber", it amounts to Rs. 1,92,187, and is met with as follows:—

Rs. 1,01,004	in Northern Kanara,
„ 1,28,899	in Central do.,
„ 11,694	in Dharwar,
„ 11,021	in Belgaum,

while the receipts of Kolábá and Ratnagiri show a decrease of Rs. 58,093 and 1,921, respectively.

202. The increase is attributable to prosperity in the Southern Mahratta Country, and consequent high prices. In 1892-93, the demand was weak owing to the agricultural distress of the previous year.

203. In Kolábá, a smaller quantity was exploited by Government-agency than that of 1892-93. The increased revenue under "II a", which amounts to Rs. 51,685, in a great measure accounts for the difference. There was also a less demand for wood sold in departmental cuttings.

204. The increase (Rs. 54,884) under "I b" is due chiefly to an increased quantity of fuel supplied to the Southern Mahratta Railway-Company from Belgaum and Northern Kanara. The receipts of Dharwar also show an increase of Rs. 6,790, due to a better demand: 11,498 stacks of firewood were sold, as against 5,048 in 1892-93.

205. The increases under *d* (Rs. 3,226) and *e* (Rs. 10,204) are owing (*a*) to a larger quantity of sandalwood having been sold in Dharwar and in Southern and Central Kanara, and (*b*) to a better crop of myrobollams.

II.—TIMBER AND OTHER PRODUCE REMOVED FROM THE FORESTS BY CONSUMERS OR PURCHASERS.

206. The increase under "a. Timber" (Rs. 57,167) is attributable to a larger quantity having been exploited under the contract-system in Kolábá (with a corresponding decrease exploited under I); and to the sale of timber in *kurans* in Belgaum. The receipts for Ratnagiri show an increase of Rs. 6,400 owing to a part of the revenue from cuttings made in 1892-93, having been credited during 1893-94.

207. The increase under "II c" (Rs. 11,429) occurs mostly in Northern Kanara, and is due to a better demand for bamboos. Under "II e", the increase (Rs. 6,180) is due to better rates obtained for honey and to Rs. 4,200 on account of the sale of *tarwad*-bark (bark of *Cassia auriculata*) in Belgaum.

208. On the other hand, there was a falling-off of Rs. 23,362 under "II b. Firewood and Charcoal". Decreases are met with in Central Kanara (Rs. 21,760), Northern Kanara (Rs. 5,202) and Kolábá (Rs. 3,230): the purchasers had large unsold stocks of wood of the previous year on their hands, and, so, the demand diminished during 1893-94. In the Honáwar-Range of the Southern Division of Kanara, however, a larger quantity of firewood was sold for export, and this caused an increase of Rs. 3,636 in the receipts of that division. The receipts of Belgaum also show an increase of Rs. 2,332, due to sale of firewood in *kurans*, and of spray wood in the Khánápúr-fuel-cuttings.

209. The receipts under "II d. Grazing and Fodder Grass", show a decrease of Rs. 3,250. The decrease is met with mostly in the Northern (Rs. 2,000) and Southern (Rs. 2,682) Divisions of Kanara. A part of the grazing-revenue belonging to 1893-94 was credited in the accounts of 1892-93; hence the decrease. An increase of Rs. 2,199 is to be noted in Dharwar.

210. In Central Kanara, a large portion of the wood confiscated, illegally cut by a contractor, was sold in 1892-93, and this swelled the receipts of that year under III; hence the decrease shown above.

211. The increase of Rs. 6,041 under V is owing (*a*) to the first instalment of rent for *kuram*-lands, in Belgaum, leased out for the eradication of prickly pear in combination with cultivation, and (*b*) to the sale of Government-buffaloes.

EXPENDITURE.

A.—CONSERVANCY AND WORKS.

212. The increase under I, viz. Rs. 1,46,881, is met with as follows:—

213. Rs. 82,320 under “a. Timber”, Rs. 46,588 under “b. Firewood and Charcoal” and Rs. 18,032 under “c. Grass and other minor produce”.

214. The increase under a occurs in Northern (Rs. 56,467), Central (Rs. 55,223), Kanara, Belgaum (Rs. 2,451) and Dharwar (Rs. 2,992), and is due to a corresponding increase in the receipts under “I-a. Timber”. The charges for Kolábá and Southern Kanara show a decrease of Rs. 9,261 and 5,459, respectively, due (1) to a corresponding decrease in the receipts and (2) to no charges having been incurred in the latter division on account of the Singanhalli-Depôt, which was transferred to the Central Division of Kanara during the year.

215. The excess charges referred to above were to a considerable extent, on account of share-payments to those timber-contractors in Belgaum and Kanara, who are paid for logging and bringing wood to depôt by receiving a fixed percentage of the sale-proceeds which were higher than in 1892-93, owing to the exceptionally high prices realized for timber.

216. The increases under “b. Firewood” and “c. Grass and other minor produce,” are also due to increases under the corresponding heads of receipts. The charges for Belgaum under b, also include arrears’ payments for 1892-93 to fuel-contractors, amounting to about 11,000 Rupees.

217. The increase under V is due to larger payments to *Khóts* and *Rakhwáldárs* in Kolábá; and that under VIII is due to charges on account (1) of the salary and allowances of a Forest-Settlement-Officer, which were charged to the Forest Department, (2) of an additional Forest-Settlement-Office in Kanara, and (3) of compensation for lands purchased.

B.—ESTABLISHMENT.

218. The increase of Rs. 14,365 under “I. Salaries” is ascribable (1) to the payment of compensation-allowances (Rs. 7,265), (2) to the acting promotion of Divisional Officers and (3) to the appointment of an additional Divisional Officer and an extra-Assistant-Conservator.

219. The increase under II is attributable (1) to the travelling-allowance of the additional officers, and (2) to payment of daily batta to foresters not in charge of ranges.

220. The value calculated at seigniorage-rates of the forest-produce granted free during the two years 1892-93 and 1893-94, is given in the following table:—

Division.	1892-93.					1893-94.					
	Timber.	Bamboos.	Canes.	Firewood.	Value.	Timber.	Bamboos.	Palm tree.	Canes.	Firewood.	Value.
	C. ft.	No.	Head-loads.	C. ft.	Rs.	C. ft.	No.	No.	Head-loads.	C. ft.	Rs.
Northern Division,											
Kanara,	23,927	15,765	...	2,334	5,738	17,003	59,762	1,725	3,504
Central Division,											
Kanara	29,705	7,120	6,490	20,852	12,113	4,779
Southern Division,											
Kanara	22,057	4,916	23,966	...	1	2	...	4,772
Belgaum	3,252	4,366	...	792	899	1,664	2,675	1,188	492
Dharwar	202	600	92
Bijápur
Kolábá	17,190	1,119	10,770	1,589
Ratnagiri	100	32	2,300	368
Total	96,438	27,851	...	3,126	19,286	76,555	74,560	1	2	2,913	15,504

221. The decrease is due to the careful scrutiny of applications for free-grants by the Commissioner.

222. The following shows the receipts and expenditure for the last five years :—

Financial year.	Receipts.	EXPENDITURE.			Surplus.
		A Conservancy and Works.	B Establish- ment.	Total.	
	Rs.	Rs.	Rs.	Rs.	Rs.
1889-90.	13,25,676	3,99,326	2,51,017	6,50,343	6,75,333.
1890-91.	13,49,826	4,38,426.	2,66,529	7,04,955	6,44,871
1891-92.	11,47,707	4,37,415	2,67,816	7,05,231	4,42,476
1892-93.	12,01,085	3,88,824	2,85,773	6,74,597	5,26,488
1893-94.	15,12,407	5,37,493	3,02,280	8,39,773	6,72,624
Average, annual	5,92,358

223. The year 1891-92 was a year of scarcity throughout the Southern Mahratha Country, and the market for timber fell off suddenly. Since that year, the improvement in the gross and net revenues has been continuous and satisfactory.

CHAPTER V.

FOREST-ADMINISTRATION.

INADEQUACY OF THE EXECUTIVE AND SUBORDINATE STAFF.

224. The want of a sufficient number of executive and subordinate officers is severely felt. The staff of rangers and foresters is not half what it should be for efficient management. Important ranges are in charge of men on Rs. 20 and Rs. 30; and sometimes have to be placed temporarily in charge of guards. I am convinced that if an adequate establishment were sanctioned, the additional charge for it would soon be covered many times by the increase in the revenue caused by more careful and efficient management.

FOREST STUDENTS.

225. Owing to the absence of prospective vacancies in the executive staff, I have been obliged to defer indefinitely the deputation of students to the College of Science for the study of Forestry. The work of men who have passed out into the service from the College is generally satisfactory, and I am therefore very sorry not to be able to send the usual batch of 4 men to the College next term.

226. Four men passed out in September last, and 4 men are now going through the course of study.

TOUR OF INSPECTION BY THE CONSERVATOR.

227. On November 5, I arrived at Karjat from Belgaum, and on the 7th proceeded, *via* Chauk, to Bárwai, where I met Mr. Mitra, Extra-Assistant-Conservator, and Mr. Hodgson, who was in charge of Working-Plans' Party I. After settling some details of organization with those officers, I went on to Panvel, where I met Mr. Stewart, Divisional Officer of Kolábá, on November 11. With him I went to Alibág, and, after the examination of his office, we proceeded together to Róhé, where we were joined by Mr. Robinson, Extra-Assistant-Conservator, in charge of the Northern Sub-division of Kolábá. From Róhé, I proceeded to Indápúr and Dásgáon, where I arrived on the 25th November, and embarked there for Ratnagiri. At Ratnagiri I met the Divisional Officer, Mr. B. G. Déshpándé. Leaving Ratnagiri on 29th, I travelled, *via* Páli, Sákopé, Malkápúr and Irla, to Kolhápúr where I took train to Belgaum arriving there on December 4.

228. On December 13, I left Belgaum, and travelled through the Belgaum-District *via* Sútgati, Halki, Yergati and Kerkól to Konur in the Bijápur-District, and, on the 23rd moved camp to Nilgund, and on the 29th to Badámi.

229. On the 4th January, I reached Jálíhál on the borders of Bijápur and travelled through the Rón and Gadag-tálukas of Dharwar to Annigéri, Hubli and Dharwar. On the 20th, at Dástikóp, I met the Divisional Officer of Dharwar, Mr. Woodrow. From Dástikóp, I moved Camp to Káwalwád and Halliyál, which was reached on the 24th. On the 26th, I left Halliyál, and reached Súpá on the 29th, Barchi on the 8th February, and Dándéli on the 13th. All the clerks, cartmen and followers being down with influenza, I determined to go back to Halliyál for medical advice. We reached that place on the 16th, and did not get away until 2nd March, when we started for Yellápúr *via* Sámbráni and Tátwhál. From Yellápúr, camp was moved, *via* Manchikéri and Sondá, to Sirsi. There I met the Collector and the Forest-Settlement-Officer, and on the 22nd proceeded to inspect forests in Siddápúr-Táluka, now under settlement by Mr. Sheppard. On the 31st, I returned to Sirsi, where I met the Divisional Officer, Mr. Betham, leaving again on the 4th April, and, travelling through the eastern portion of the Southern Division, reached Pálá on the 14th. From Pálá, I moved, through the Mundgód-subdivision, to Yellápúr, where I met the Divisional Officer, Mr. Haselden, on the 25th. On the 30th I went to Kolikéri, and returned to Yellápúr, where I met Mr. Bell, Divisional Officer, Working-Plans' Party II, on the 7th May. From Yellápúr I marched to Alnáwar and Nágargáli, returning to head-quarters on the 22nd.

ESTABLISHMENT.

230. The establishment underwent no change during the year. The actual cost amounted to Rs. 1,10,391 and Rs. 1,41,464 on account of the superior and subordinate staffs, respectively; against Rs. 1,22,519 and Rs. 1,75,759 of 1892-93.

231. The changes among the officers of the superior staff were:—

232. Mr. A. C. Robinson, Extra-Assistant-Conservator and Sub-Divisional Officer, Kolábá, was on privilege-leave from 10th July to 9th October 1893. Mr. Régé, Ranger, acted for him.

233. Mr. W. R. Woodrow, Divisional Officer, Dharwar, was on privilege-leave from 21st September to 7th December, during which time the charge of the Division was held by Mr. Bell, in addition to his own, for part of that time; and, for the rest of it, by Mr. Talbot.

234. Mr. H. Mainwaring handed over charge of the Working-Plans' Division, No. I, to Mr. C. M. Hodgson, who gave over that of Division No. II to Mr. T. R. D. Bell, who handed over that of the Bijápur-Division to Mr. Mainwaring, on the 1st November, 1893.

235. Mr. C. M. Hodgson, Divisional Forest-Officer, Working-Plans' Party No. I, proceeded on 3 months' privilege-leave, handing over charge of his office on the 8th March, 1894, to Mr. H. Mitra, Extra-Assistant attached to the Party, who gave it, on the 19th June, 1894, to Mr. E. G. Oliver, Deputy Conservator, transferred, from the Central, to this Circle. Mr. Hodgson, on his return from leave, was posted to the Central Circle.

236. Mr. W. R. Woodrow, Divisional Officer, Dharwar, proceeded on 19 months' furlough, handing over his charge, on the 5th May, 1894, to the Collector, Mr. Fairlie Muir, who was relieved of it by Mr. Fry, Deputy Conservator, transferred from the Central Circle.

237. Five men, from the College of Science, were appointed as probationers, and four candidates were sent up to the Forest-class during the year under report.

238. During the year, the boundaries of the Central and Southern Divisions of Kanara were altered: the Kumta-Range with its establishment of 1 forester and 11 guards was transferred to the Southern Division, and the forests of 68 villages of the Sirsi-Táluka with 4 guards was transferred to the Central Division.

239. Thirty-seven guards were dismissed for misconduct, and one forester.

240. The conduct of the executive establishment has been, on the whole, satisfactory, but the work it is called upon to perform is too much for its strength.

241. The services of the following officers are specially mentioned by the Divisional Forest-Officers as deserving commendation :—

- Mr. A. C. Robinson, Sub-Divisional Officer, Kolábá.
 „ G. J. Régé, Ranger, Khánápur, Belgaum Division.
 „ S. V. Nádkarni, } Trained Forest Probationers, N. D., Kanara.
 „ V. S. Nagarkar, }
 „ Mangéshráo Nágapa, Ranger, Yellápúr, }
 „ Mahábléshwar Nágapa, Forester, Ankolá, } C. D., Kanara.
 „ Sheshgiri Govind, Forester, Yellápúr, }
 „ G. R. Máné, Ranger, Sirsi, } S. D., Kanara.
 „ Wáman Subráo, Forester, Kumtá, }
 „ Shankar Bápu Sáwant, Forester, Khed, Ratnagiri Division.
 „ H. A. Nádkarni, L. C. E., Surveyor. }
 „ R. R. Háttyangdi, } Trained Forest- }
 „ D. D. Anantbhat, } probationers. } Working-Plans' Division.
 „ T. N. Koppikar, }
 „ M. Krishnaráo, } Foresters.
 „ G. C. Sirur, }

242. I have much pleasure in testifying to the good work done by Divisional Officers.

243. The health of the controlling establishment has been fairly good.

LIST OF STATEMENTS, ACCOMPANYING THE FOREST ADMINISTRATION REPORT OF THE CONSERVATOR OF FORESTS, SOUTHERN CIRCLE, FOR 1893-94.

Remarks.—These results are based on experiments on 3 or 4 trees for each species. The data were determined for all ages of the trees examined, mature trees only having been examined. Their ages varied from 38 to 44 years.

Station.—Place: Nagargali; altitude: 2,200 feet; rainfall: about 80"; soil: laterite, more or less humus. Rock laterite overlying gneiss. Fire protected for last six years. The 4 species examined constitute about 90 per cent. of the crop density '9.

Belgaum, 29th September 1894.

J. L. L. MACGREGOR,
Conservator of Forests, Southern Circle.

(2) RESULTS OF AN EXPERIMENT MADE BY MR. ANDREWS IN THE COPPICE NEAR NAGARGALI, DURING FEBRUARY 1886, TO DETERMINE THE AVERAGE ANNUAL INCREMENT PER ACRE.

The experiment was made on an area of 2 acres, in a well stocked part of the forest with the following results:—

Number of Trees and their Circumferences.

The circumferences were measured at 5 feet from the ground, from 6 in. to 44 in. thus 6, 8, 10, 12.....44 in. Above 44 in. the trees were considered exceptionally large and the results are given separately:—

Circumference in inches.	Jamba.	Nana.	Kindali.	Aula.	Kumbha.	Dhamani.	Blackwood.	Teak.	Matti.	Honni.	Helu.	Khavringa.	Apta.	Kalan.	Hanmanki.	Jammu.	Hanagl.	Moyi.	Bhivala.	Haan.	Total
6	28	1

32	2	9	4	1
34	2	16	5	1	1
36	1	10	4	1	1	1	1
38	...	5	1	1
40	1	3	4	...	1
42	...	1	1	2
44	1
Total	778	179	94	27	26	25	10	7	7	4	3	3	2	2	2	1	1	1	1	1	1,174

For calculating the volumes, all the trees of from 6—14 in. in circumference have been assumed to be 10 in. in circumference, from 16—24 in. to be 20 inches in circumference, from 26—34 inches to be 30 inches and 36—44 inches to be 40 inches.

Height of Trees.

The heights were measured by means of a bamboo pole 25 feet in length; altogether the heights of 75 trees were taken with the following results:—

Average tree of 10 inches in circumference 10 feet in height.

"	20	"	"	25	"
"	30	"	"	33	"
"	40	"	"	38	"

Calculation of Volume.

Volume of average tree of 10 inches circumference	=	0.55262	cubic feet.
"	"	20	"
"	"	30	"
"	"	40	"

Volume of trees 10 inches in circumference	=	561	×	0.55262	=	310.02				
"	20	"	"		=	423	×	3.10849	=	1314.89
"	30	"	"		=	150	×	7.29459	=	1094.19
"	40	"	"		=	40	×	13.12473	=	524.99

Total volume = 3244.09 cubic ft.

Exceptionally large Trees.

These to the number of 22 gave the following results:—

		H = height in feet. C = circumference in inches.	Volume c. ft.
5	Kindali	= 78C × 40H, 78C × 36H, 48C × 32H, 46C × 35H, 46C × 30H	= 122·86
1	Hela	= 103C × 40H	... = 74·33
3	Dhamani	= 60C × 35H, 46C × 36H, 46C × 36H	... = 54·86
1	Blackwood	= 52C × 40H	... = 21·23
2	Nana	= 68C × 30H, 68C × 20H	... = 42·01
3	Jamba	= 52C × 30H, 50C × 15H, 48C × 30H...	... = 37·29
2	Kernal	= 68C × 40H, 68C × 30H...	... = 58·82
1	Apta	= 60C × 35H	... = 23·68
4	Teak	= 66C × 40H, 60C × 40H, 48C × 35H, 48C × 35H	... = 91·50
<hr/>			
22			Total ... 526·58 c. ft.

Of this amount $\frac{2}{3}$ only have been taken as representing ($\frac{2}{3} = 351·05$) the real volume, for most of the large trees were hollow, decayed, or deformed. Thus the total number of trees on the 2 acres is 1,196, and their total volume is 3595·14.

Results per Acre.		Percentage Composition.		Percentage Composition.	
Number of trees = 598, say 600.	Jamba	... = 65·06	Teak	... = 0·58	
Volume = 1797·57 c. ft., say 1,800 c. ft.	Nana	... = 14·98	Matti	... = 0·58	
Volume stacked = about 2,700 c. ft.	Aula	... = 2·25	Remainder...	... = 1·75	
Stack volume is to solid measure as 1 to 0·67.	Kindali	... = 7·86	Large trees	... = 1·84	
	Kumbia	... = 2·18			
	Dhamani	... = 2·08			100·00
	Blackwood	... = 0·84			

Experiments to determine age.

	Circumference.	Age.		Circumference.	Age.
Jamba...	11	24	Nana ...	34	39
	21	35		24	35
	34	36		15	18
	19	25	Anla ...	32	36
	22	37		16	18
	21	32	Hela ...	17	16
	19	36		33	30
	30	50	Dhamani	23	25

	21	32	Sawari...	30	36
	22	26	Báwá ...	20	28
			Kindali	19	24

This gives approximately the following results:—

The age of trees of 10 inches circumference is 15 years	And the mean annual diameter growth is	212
" " 20 " " 27 "
" " 30 " " 36 "		233

Age of forest (large trees excluded).

Trees of 10 inches circumference = 561 × 15 = 8415
" 20 " " = 423 × 27 = 11421
" 30 " " = 150 × 36 = 5400
" 40 " " = 40 × 45 = 1800
<hr/>
27,036

$$\text{The age of the forest} = \frac{27036}{1174} = 23 \text{ years.}$$

$$\text{Average annual increment per acre} = \frac{1797·57}{23} = 78 \text{ cubic feet solid measure.}$$

$$= 117 \text{ cubic feet stack measurement.}$$

J. L. L. MACGREGOR,
Conservator of Forests, Southern Circle.

Belgaum, 26th October 1894.

J. L. L. MACGREGOR,
Conservator of Forests, Southern Circle,

D.—CENTRAL DIVISION OF KA'NARA.

Experiment made by Mr. B. J. Haselden, Acting Deputy Conservator, at Hattikeri on 21st March 1894, to ascertain the ratio that the contents of Solid bears to that of Stacked Firewood, and the weight of the Wood.

The experiment was made with wood from the mixed forests, below Gháts, which consist of well-stocked groups of *Terminalia*, *Xylia*, *Lagerstræmia*, *Albizia* and minor species usually associated with these. Both density and growth were good, the stems were clean and straight, and the age of the groups was about 40 years.

1st Experiment, with green wood of Terminalia tomentosa, Xylia dolabriformis and Lagerstræmia microcarpa; including bark, stem, and thick branch-wood; spray excluded:—

105 pieces .	{	Weighed	5,093 lbs.
		Measured stacked	100 c. feet.
		Measured solid	74·87 c. feet.

Therefore, one stacked cubic foot weighed $5,093 \div 100 = 50\cdot93$ cubic feet.

One solid cubic foot weighed $5,093 \div 74\cdot87 = 68\cdot02$ lbs.

And stack-measurement was to solid measurement as 1 is to ·75.

2nd Experiment, with wood cut 15 months before the date of the experiment:—

103 pieces .	{	Weighed	3,042 lbs.
		Measured stacked	100 c. feet.
		Measured solid	62·25 c. feet.

Therefore, the weight of a cubic foot of air-dry wood was $3,042 \div 100 = 30\cdot42$ lbs. stack-measurement; and $3,042 \div 62\cdot25 = 48\cdot87$ lbs. solid measurement.

And stack-measurement was to solid measurement as 1 is to ·62.

The wood on the Coast is sold, generally, when it is more or less green. It is usually measured within a month or two of its being cut. The mean of these two experiments may, therefore, be taken as affording results more in accordance with the conditions. The mean results were:—

208 pieces .	{	Weighed	8,135 lbs.
		Measured stacked	200 c. feet.
		Measured solid	137·12 c. feet.

Therefore, one stacked cubic foot weighed $8,135 \div 200 = 40\cdot68$ lbs.

Solid wood weighed $8,135 \div 137\cdot12 = 59\cdot26$ lbs.

And stack-measurement was to solid measurement as 200 is to 137·12; or as 1 is to ·68.

Dated Belgaum, }
26th October 1894. }

J. L. L. MACGREGOR,
Conservator of Forests, Southern Circle.

No. 227 OF 1895.

REVENUE DEPARTMENT.

Belgaum, 26th January 1895.

Forwarded to Government.

2. The year under report covered the ordinary period of twelve months, against an exceptional period of fifteen months immediately preceding. It will be recognised that this renders comparisons difficult and not very satisfactory.

3. The total areas of reserved and protected forest in the whole Circle on the 1st July last were, respectively, 2,471 and 2,901 square miles, against 1,978 and 3,405 square miles on the corresponding date in 1892-93. The table shows 197 square miles of protected forest in the Belgaum district; but, properly speaking, there are now no protected forests in that district, the whole of them having been brought into the reserved class; in the case, however, of the Belgaum, Chikodi, Khánápur, and Parasgad tálukas, the notifications were not issued till after the close of the year.

4. Settlement operations were in progress in Dhárwár and Kánara. Mr. Wingate completed the field-work of 722 square miles in the Haliyál táluka (Kanara); and it is expected that his report will now be ready very shortly. Mr. Knight completed the field-work of 155 square miles in Dhárwár; his reports have since been submitted. Mr. Sheppard completed the field-work of 98 square miles in Kánara, in the Siddápur and Sirsi tálukas; but his reports have not yet been received; the only report received from him was the report for the Kárwár táluka, where the work was completed in 1892-93; it was actually submitted by Mr. Wingate, during Mr. Sheppard's absence on leave. The outturn of Mr. Sheppard's work seems inadequate, as compared with the work done by Messrs. Wingate and Knight. The Conservator of Forests explains, however, that the forests of Siddápur and Sirsi, with which Mr. Sheppard had to deal, are much intersected by cultivation and *betta*-lands, and also are greatly burdened by rights of way; and that consequently they required, acre for acre, comparatively much more time to settle than the compact blocks of the Supa forest, in the Haliyál táluka, in which not only is the garden cultivation very small, but also the rights to be enquired into are less numerous; and he also shows that Mr. Sheppard did a good deal of work in connection with the *betta*-lands.

5. The final report on the allotment of lands for cultivation to the Thákurs of the Khálápur petha and the Karjat táluka in Kolába, called for by Government Resolution No. 196 dated the 7th January 1893, is still awaited. The orders of Government on this office letter No. 2567 dated the 19th June last on the subject of *dalhi* assignments in the other parts of the Kolába district, are also awaited.

6. Paragraphs 30 to 34 show that there remains only an area of about 700 square miles in Kanara, for which field-work has still to be done. In the Conservator's opinion, two more working seasons will suffice, and the work will have been reported upon by November 1896. The settlement of the rest of the Circle is practically complete, except in respect of 11 square miles and 353 acres in Kolába, the report regarding which is delayed pending the settlement of the claim of the Pant Sachiv to certain palm groves in the four villages of Rabgaon, Chikkalgaon, Kondgaon, and Shiloshi.

7. The question of *betta*-lands (see the Conservator's paragraph 22) has already been before Government (see this office No. 1242 dated the 21st March 1894, and No. 2679 dated the 25th June 1894). The Commissioner agrees with the Conservator that an early decision of Government in the matter will, besides facilitating the settlement work, result in a considerable saving of the time and expense that would be necessary if the re-distribution of *betta* were to be carried out after the Settlement Officer leaves the tálukas.

8. The Imperial survey-party was working in Kanara and Kolába. The work done during the forest years 1892-93 and 1893-94 is given in the subjoined table:—
Paras. 40 to 54.

	1892-93.			1893-94.		
	Area.	Cost.		Area.	Cost.	
	Sq. m.	Rs.	a. p.	Sq. m.	Rs.	a. p.
<i>I.—North Kanara.</i>						
Triangulation 4" ...	600	7,057	2 7	265	4,155	15 5
Traversing 4" ...	300	6,589	9 8	250	3,204	15 0
Detail Survey 4" ...	220	1,773	13 4	193	16,530	1 11
	1,120	15,420	9 7	708	23,891	0 4
<i>II.—Kolába.</i>						
Detail Survey 8" scale ...	16	3,355	2 8	56.98	8,972	3 11

9. The Conservator makes remarks on the excessive cost incurred on the eight-inch survey in Kolába, pointing out, in paragraph 52, that in 1892-93 it cost more than double what it cost in 1891-92, and that in 1893-94 it cost 57 per cent. more than in 1891-92. In paragraph 64 of his report for 1891-92, the Conservator of the Central Circle explained the differences in cost in the surveys on the sixteen-inch, eight-inch, and four-inch scales, and referred to the small, scattered and broken patches of forests in Kolába as one of the principal causes contributing to the heavier cost; and Government in paragraph 11 of their Resolution No. 4944 dated the 8th July 1893 accepted the explanation as correct. Mr. MacGregor suggests that a four-inch scale would suffice for forest purposes. No details are given, either in Form No. 49 or in the body of the report, as to how much work still remains to be done in the Kolába district. A reference to paragraph 47 of the Conservator's report for the year 1892-93 shows, however, that about 300 square miles have still to be surveyed. The cost is no doubt an important factor. But the Commissioner would deprecate the adoption of the four-inch scale when more than one-third of the work has been completed on the eight-inch scale.

10. Two working plans parties were employed during the year. A revised plan, prepared by Mr. Bell in charge of the Working Plans Party II, for the organisation of the valuable teak forests of the Haliyál táluka, including the Supa petha, was submitted to Government under this office No. 3789 dated the 4th September last. Mr. Haripad Mitra, an extra Assistant Conservator attached to Party No. I, has also lately submitted a similar report for working the forests in the Panvel, Pen and Alibág tálukas and the Nágothna petha; it is now under consideration in this office, and will be forwarded to Government in due course. The cost of the plans completed up to date is, on an average, 13.5 annas per acre for the northern division of Kanara, and 2.6 annas for Kolába. The difference in cost is due to differences in the local peculiarities of the forests, and consequently to differences in the systems adopted.

11. The report of the Conservator of Forests, Southern Circle, called for by Government in paragraph 6 of their Resolution No. 5385 dated the 23rd June 1894, explaining why the enumeration and classification system is being tried in the Southern Circle, instead of the equal area system adopted in Thána and elsewhere, was forwarded to Government with this office No. 3789 dated the 4th September last.

12. The expenditure on communications, buildings, &c., has decreased from Rs. 8,621 in 1892-93 to Rs. 5,531 during the year under review. The decrease is due chiefly to the diminished requirements in respect of new wells. In the previous year, seven new wells, costing in the aggregate Rs. 1,690, were sunk in Kanara, while,
Paras. 65 to 72.

during the year under review, only one such well was constructed, at a cost of Rs. 196. The H...i-Nagargalli forest road in the Belgaum district was repaired during the year, at a cost of Rs. 2,447.

13. The total number of breaches of the Forest law committed during the year was 1,600, against 1,989 in 1892-93; they are classified below:—

Paras. 73 to 123.

Nature of offence.	Dealt with by Magistrates.	Dealt with departmentally, under Section 67.	Not detected.
Injury to forest by fire... ..	9	2	232
Unauthorized felling of wood	512	381	392
Grazing without permission in closed areas	8	1	3
Other offences	36	23	1
Total	565	407	628

14. The following table shows the result of prosecutions instituted in regard to 581 offences, i.e. 565 committed during the year and 16 pending trial at the beginning of the year:—

District.	1892-93.			1893-94.			Percentage of failures.	
	Prosecutions.	Convictions.	Acquittals.	Prosecutions.	Convictions.	Acquittals.	1892-93.	1893-94.
Belgaum	146	126	14	32	26	5	9	15
Bijapur	15	14	1	10	10	...	7	...
Dhárwár	29	18	9	19	12	5	31	26
Kanara	237	161	63	166	78	82	26.5	49.4
Kolába	138	102	32	291	187	33	24	11
Ratnágiri	36	17	18	63	43	18	50	23
Total	601	438	137	581	356	143	23	24

15. Except in Kanara and Belgaum, the percentage of failures has fallen in all the districts; and this shows that greater care is now taken in deciding whether the evidence by which the prosecution is to be supported is sufficient to secure a conviction. In Kanara, the rise in the percentage of failures is attributed to the fact that, during the first five months of the year, out of the 66 cases of misappropriation of forest produce from the forests within the five-mile radius of Kárwár, in no less than 53 cases the offenders were let off with a warning; the leniency thus shown, however, was afterwards found to be misplaced, as instead of resulting in a decrease of crime, it had the effect of increasing illicit cutting in the forests; the District Magistrate then pointed out to his subordinates that, unless offenders detected red-handed were adequately punished, no improvement was likely to take place.

16. The following table gives details of the cases dealt with under Section 67 of the Act:—

District.	1892-93.				1893-94.			
	Total number of cases disposed of.	Number of cases committed.	Number of cases discharged.	Amount of compensation recovered.	Total number of cases disposed of.	Number of cases committed.	Number of cases discharged.	Amount of compensation recovered.
				Rs.				Rs.
Belgaum	475	475	...	580	86	84	2	36
Bijápur	83	83	...	188	12	12	...	15
Dhárwár	37	37	...	83	35	5	30	1
Kanara	41	37	4	245	41	40	1	435
Kolába	154	154	...	871	181	181	...	618
Ratnágiri	126	123	3	612	39	39	...	71
Total	916	909	7	2,579	394	361	33	1,176

17. In regard to this table, particularly, it has to be remembered that the year 1892-93 comprised 15 months. Notwithstanding this, there was an increase in two districts. In Kanara, it was due to increased activity on the part of the protective establishment within the five-mile radius of the town of Kárwár. In Kolába, it was the result of unauthorised cultivation in Alibág and Nágothna. On the whole, however, the Divisional Officers appear to have shown exceptional leniency, especially in the Dhárwár and Belgaum Collectorate. In the latter district, 216 cases, in which people were accused of the cutting and removal of firewood for sale, were dismissed by the Divisional Forest Officer and are not included in the above table.

18. The following table shows how the total amount of Rs. 1,176, as compensation on account of the 361 offences, was made up:—

District.	Number of offences.	Amount levied.
		Rs.
Belgaum	84	36
Bijápur	12	15
Dhárwár	5	1
Kanara	40	435
Kolába	181	618
Ratnágiri	39	71
Total	361	1,176

19. There was only one case in which a fine of Rs. 50 was levied; it was in the northern division of Kanara. The rest of the fines were small sums.

20. The table in paragraph 101 shows the results of attempts to protect the forests from fire. The area attempted increased from 1,238 to 1,320 square miles, while the cost of protection per square mile decreased from Rs. 19.34 to Rs. 15.62; but the percentage of failures has increased from 1.53 to 1.97. The system of reporting fires by post cards is stated to have been working well; and the results were specially satisfactory in Kanara, which represents more than half the area of the Circle,—in the Yellápur range, the villagers, on several occasions, spontaneously came forward and assisted in extinguishing the fires. Most of the fires in Belgaum are stated to have been caused by incendiaries.

21. In paragraph 123 of his report, the Conservator states that the number of fires reported was 488, and that the number of cases in which the offenders were detected was 21. A reference to the 3rd column of Form No. 52

shows, however, that there were in all 243 cases of injury to forest by fire. Out of these, in nine cases the offenders were dealt with by the magistrates; in two cases fines were inflicted departmentally under Section 67; and in no less than 232 cases (136 in Belgaum, 85 in Kanara, 10 in Kolába, and one in Ratnágiri) the offenders remained undetected.

22. The grazing rules were in force throughout the Circle, except in some parts of Kolába. A special report on the working of these rules has been separately called for by Government; and therefore the Commissioner will not enter on this matter now.

23. Of the total area of 5,413 square miles, 731 square miles were closed only to browsers, and 850 square miles to all animals. The rest of the area, 3,832 square miles, was open to all animals, as shown in the following table:—

Division.	Total area in square miles.	Area open to all animals during the whole year.	Percentage of Column 3 on Column 2.
Belgaum ...	681	117	17.1
Bijápur ...	245
Dhárwár ...	431	331	76.7
Kanara, N. D. ...	1,189	998	83.9
Kanara, C. D. ...	965	692	71.7
Kanara, S. D. ...	1,439	1,318	91.5
Kolába ...	443	373	84.1
Ratnágiri ...	20	3	15.0
Total ...	5,413	3,832	70.7

24. The proportion of forest area open to grazing varies in different localities,—the highest percentage (91.5) being in the southern division of Kanara and the lowest (15) in Ratnágiri. It must, however, be remembered that in the latter district only 20 square miles are under forest.

25. The number of cattle impounded for trespass in forests was 13,592, against 16,749 in the previous year. The decrease seems to be proportionate to the shorter length of the year under report. The only district in which there was an increase, amounting to 753,—is Bijápur; no explanation thereof is given. There was a somewhat large decrease in the Dhárwár district. The Divisional Forest Officer attributes it to the greater willingness of the people to pay the fees; the Conservator ascribes it to inefficient protection; and the Collector thinks that it may be due to some extent to the extra fees leviable in some of the pounds.

26. It is satisfactory to learn that fire-protection of the forests in Kanara has had a marked effect in promoting natural reproduction, by seed, of teak, blackwood, and other superior timber trees. Systematic protection was commenced in 1887; and since then natural reproduction has been gradually and steadily improving. This is one of the most important indirect benefits derived from fire protection. The Conservator states that all that is now wanted, to ensure the adequate regeneration of the large timber forests, is more extensive protection combined with a regular system of improvement-cuttings, but that, in the present weak state of the executive, the latter operation cannot be satisfactorily performed, except for an insignificant area. Artificial reproduction is also being resorted to, *pari passu* with natural reproduction; and, in the central division of Kanara, the most important forest tract in the whole Southern Circle, the number of young trees surviving amounted to 48,910 teak and 36,466 other trees.

27. The following table, extracted from Form No. 57, contrasts the out-turn of timber and other forest produce during the year 1893-94 with that of the previous year:—

Description of Timber and other Forest Produce.	Year.	Quantity.
Timber in the rough logs ...	1893-94 ...	Cubic feet 334,861

Do. ...	1893-94 ...	Nil.
	1892-93 ...	On contract No. 100,000

28. The increase in the yield of large teak occurs in the central, and that in firewood in the northern, division of Kanara. The quantity of firewood exploited has largely increased during the year under report. The running fuel supplied to the Southern Marátha Railway amounted to 4,254,382 cubic feet, against 3,128,149 cubic feet during the fifteen months of the preceding year, and the lighting fuel to 16,802 cubic feet, against 33,262; and it is reported that the Company is now able to utilise more firewood than the Forest Department can supply. In Kolába, the yield of teak decreased from 658,810 to 478,674 cubic feet; the decrease is partly due to the shorter period of twelve months against fifteen, and partly to a diminution in the quantity fixed for cutting.

Financial results, paras. 191 to 200.

29. The following table compares the receipts and charges for the financial year 1893-94 with those of the year 1892-93 :—

Year.	Revenue.	Expenditure.	Surplus net Revenue.
	Rs.	Rs.	Rs.
1893-94 ...	15,12,407	8,39,773	6,72,634
1892-93 ...	12,01,085	6,74,597	5,26,488

30. There is a satisfactory increase in the net earnings of the Département. The increase occurs chiefly in the northern and central divisions of Kanara, and in Belgaum and Dhárwár, and is ascribed to a prosperous agricultural year in the Southern Marátha Country and to the consequently greater demand for timber. But, with the increase in the revenue of the Department, the outstanding balances have also risen; the balance due at the end of the financial year was Rs. 2,43,963, and it has now increased to Rs. 3,06,030. This is attributed to the unusually large number of sales of timber which took place during the year, and to the present system of sales followed in Kanara, under which the contractor pays down only 25 per cent. of the purchase-money, and has an indefinite period,—any time, within one year, up to the removal of the wood,—for the payment of the remaining three-fourths. The Conservator states, however, that no other system would answer in Kanara. With a view to reduce the amount of arrears, he has called for two statements from the Divisional Forest Officers,—one showing recoverable, and the other irrecoverable balances.

J. F. FLEET,
Commissioner, in charge Southern Division.

SIND CIRCLE.

No. 2046 of 1894-95.

From

THE ACTING DEPUTY CONSERVATOR OF FORESTS,
SIND CIRCLE.

To

THE SECRETARY TO GOVERNMENT,
REVENUE DEPARTMENT,
BOMBAY.

*Deputy Conservator's Office,
Karachi, 25th October 1894.*

Sir,

I have the honour to submit herewith the Annual Administration Report of the Sind Forest Circle for the year 1893-94, together with its subsidiary statements.

I have the honour to be,

Sir,

Your most obedient Servant,

G. M. RYAN,

Acting Deputy Conservator of Forests,
Sind Circle.

Through the Commissioner in Sind.

*Annual Administration Report of the Sind Forest Circle for the
year 1893-94.*

CHAPTER I.

EXTENSION AND CONSTITUTION OF STATE FORESTS.

The subjoined table gives the area of the forests of the Sind Circle as it was on the 1st July 1893, the additions and deductions during the year under report, and the area as it stood on the 30th June 1894:—

Name of Division.	Area as it stood on 1st July 1893.				Area added during the year.				Area excluded during the year.				Area as it stood on 30th June 1894.			
	Reserved.		Protected.		Reserved.		Protected.		Reserved.		Protected.		Reserved.		Protected.	
	Square miles.	Acres.	Square miles.	Acres.	Square miles.	Acres.	Square miles.	Acres.	Square miles.	Acres.	Square miles.	Acres.	Square miles.	Acres.	Square miles.	Acres.
Sukkur ...	448	86	1	128	...	1074	447	820	1	128
Naushahro ...	228	635	3	427	228	635	3	427
Hyderabad ...	159	497	159	497
Jerruck ...	140	111	...	117	117	...	140	111
Total ...	975	49	5	32	...	1074	117	...	976	483	4	555

2. The only addition to the forest area during the year was of 1,074 acres in Deh Malir of the Ghotki Taluka, Sukkur Division, which was notified under Section 19 in Government Resolution No. 2286 of the 29th March 1894.

3. The exclusions amounted to 2 acres from the Gajidero reserved forest, in the Naushahro Division, which was transferred to the Public Works Department, for a bungalow and garden, on the bank of the new feeder of the Western Nara, in accordance with the instructions of the Commissioner, *vide* his No. 4212 of 24th November 1893. As this area has not been disforested under Section 26 it is not included in the above statement.

4. One hundred and seventeen acres of protected forest were given up in the Jerruck Division, to the Revenue Department, for cultivation. This area was always intended for agriculture, and was only converted into protected forest as a temporary measure till the land was required for such a purpose.

5. The area notified under Section 4 of the Forest Act during the year amounted to 35,169—23 acres. In addition to this there are 33,681—5 acres similarly notified from 1886 to 1893 inclusive, as per Statement A attached, still awaiting final settlement.

6. Proposals for reserving about 30,000 acres of land in the Kashmir Taluka of the Upper Sind Frontier District were submitted, and their notification under Section 4 appeared shortly after the close of the forest year. The Kashmir jungles have for some years past been under the protection of the Forest Department, and they have annually been sources of large supplies of fuel to the railway at Sukkur. Their acquisition to the forest area now will form a most valuable addition to the state forests of the Province.

7. But more land is sadly needed in the Hyderabad District for forests. The consumption of fuel at Kotri, both for the railway and distillery and other works, which has always been in excess of the supply available from the forest areas, is going up by leaps and bounds. So valuable is firewood at Kotri now, in consequence of scarcity there, that during the year some locomotive fuel, which was rejected by the North-Western Railway as unfit for their boilers, was bought by the Kotri Distillery for Rs. 75 per 1,000 cubic feet, and this value will be adequately understood when good locomotive fuel is purchased by the railway from the Forest Department at Rs. 44 per 1,000 cubic feet. The case may be exceptional, but Rs. 60 per 1,000 cubic feet as the price of a stack

of wood there of 1,000 cubic feet (equal to 250 Maunds) is not uncommon. Suffice it to say that the outcry at Kotri for fuel is greater than at any other place in the Province and it is very desirable, therefore, that the existing forest area in that region should be considerably increased. The Divisional Forest Officer, Hyderabad, after entering minutely into figures estimates that he needs 40,000 acres more land than what has already been added or will be added by the Forest Settlement Officer, Mr. Barrow. It may be impossible to acquire so much, but wherever any waste land exists, its acquisition should, it is thought, only be abandoned on the strongest grounds possible.

8. The following statement shows approximately the action of the river on the forest frontages during the year under report:—

Action of the river.

Division.	Area		Amount spent in clearing eroding banks.	Amount realised by sale of erosion timber.	Value of material in hand.	Remarks.							
	lost.	gained.											
	A.	G.	Rs.	a.	p.	Rs.	a.	p.					
Sukkur ...	3,074	0	6,969	0	171	10	0	693	6	5	175	5	0
Naushahro ...	2,090	0	3,600	0	2,397	12	2	4,078	5	0	74	0	0
Hyderabad ...	792	0	730	0	350	0	0	511	0	0
Jerruck ...	725	0	504	0	30	15	0	45	0	0
Total ...	6,681	0	11,803	0	2,950	5	2	5,282	11	5	294	5	0

9. The area gained, as will be seen, is in excess of that lost by 5,122 acres; but on these figures very little reliance can be placed for they are the estimates of Range Forest Officers on Rs. 20 and 30 per mensem, who, as a rule, are ignorant of survey work and, moreover, have such a great deal to do in other ways that no time can be devoted by them for this particular duty. Such a constant fluctuation in the area of the riverain forests takes place owing to the eccentricities of the river, and the changes are so extensive and important that, unless some one is especially employed with a knowledge of surveying to measure the fluctuations accurately and promptly, the figures given each year in the above statement, and in the last column of the statement in para. 1, will never be of any value. For this reason a surveyor, it is thought, should be attached to each Divisional Forest Officer: the work of measurement could then be done and plotted by him and checked by the Divisional Forest Officer himself, as was done last year in the Jerruck Division, *vide* para. 4 of the Administration Report for 1892-93. Under such circumstances only may accurate figures be expected, and it is earnestly hoped Government will see the necessity of sanctioning such establishment when application for the entertainment of it is made.

10. There is but one surveyor in Sind, and he has been assisting the Forest Settlement Officer in preliminary demarcation of some of the new lands that are being acquired in addition to performing his other duties; and Forest settlement work in fact had a prior claim on his time: one man, however, it is found, is not enough for the whole Province under ordinary circumstances where in addition to the measurement of the new kachas, frequent and numerous boundary disputes are taking place, and where a great many new maps have constantly to be drawn up.

11. The figures quoted in Chapter I, para. 1, of last year's report as the area of the forest on the 30th June 1893, are, it is feared, from the want of accurate yearly records for these reasons, purely mythical. For instance, the Shah Belo, which stands on the records as 13,433 acres is now only about 1,500 acres in extent really, the remainder of the forest being on the other side of the river; but a large portion of the piece opposite has been acquired by the Revenue Department, because it was land fit for cultivation. The portions taken from, and the portions left to the Forest Department on the opposite bank, having never been accurately surveyed, the actual forest area of Shah Belo at

present in consequence is only very approximately quoted. This is only one instance of the many that are occurring.

12. The areas gained will not be useful for probably eight or ten years, while the area eroded consists in many instances of good old established forests, and this unfair exchange is likely to continue for a number of years, owing to the results of the bund system; and this is said without in the least degree wishing to cast any reflection on the officers of the Public Works Department, who, in their present policy, are actuated, no doubt, by what is considered in their opinion best in the interests of the State. But from observations made from time to time all along both banks of the Indus it seems that to the erection of bunds closely hemming in the lateral overflow of the river in many places must be attributed in a great measure the extensive erosion of canopied Forests that is annually taking place. Before the advent of bunds the natural course of things was for high canopied forests to form, and for the lands on both banks to get gradually more and more firm. The tendency of the stream now is to undo all this. The Bangar lands in the Punjab are strong evidence of the fact, how even unforested alluvial banks last and become perfectly firm under natural conditions. Judging from results in Sind, all the old forests are vanishing and are being replaced by new kachas, which, owing to the rapid play the river has from bank to bank never last very long. Embankments, therefore, according to observation seem to provoke erosion: but this is not mentioned as an argument to abolish embankments; from a politic and economic point of view, and for the general health and prosperity of the Province they are in many places an absolute necessity. The extensive erosion, however, which takes place might, it is thought, be to a certain degree mitigated were they thrown further back. The reasons for such a conclusion, and whether or not this could be adopted advantageously to the State are too controversial and are too lengthy to be stated here, and moreover do not come within the scope of an annual report, and apologies are offered for having stated so much; but suffice it to say that, if throwing the bunds further back did not mitigate the evil most of the forests now cut off from the river would be brought within the sphere of its natural lateral overflow, a factor of supreme importance, bearing in view the great value of forests in Sind politico-economically and financially. In a report (No. 1631 of the 5th September 1894) to the Commissioner in Sind recently it was pointed out what a high percentage of profit forests even now, as some stand cut from the river, yield on the capital outlay as compared with results in the Irrigation Department. There the profit on capital outlay is 11.71, *vide* para. 33 of Review on the Irrigation Report for 1892-93, while for the past 22 years the percentage of profit on capital outlay in the Forest Department in Sind is 42.5 per cent.

13. No change can, of course, be made in the present position of the embankments merely for the forest benefit it is true, but in all future works and where opportunities occur no objection, it is hoped, will be taken to remove them further back inland. One forest (Mohro Mari) of 11,900 acres in the Sukkur Division, for instance, which is not very far from the river would be especially benefitted by such a policy. It is entirely cut off from the river now by the Sukkur-Begari Bund, and only received water during the current inundation because of the breach in the bund.

14. It is not known how far kharif cultivation, and the health of the surrounding population would be affected by an alteration in the bund alignment three or four miles inland here, but from the demands for rabi cultivation in consequence of the breach in this bund inside this forest this year very little, if any, loss of revenue, it is thought, would follow outside forest limits on account of loss of kharif: in fact gain probably would result, and the important feature is, that about 8 annas per acre, net profit, in addition would accrue to the State from a large area of about 11,000 acres of land which now brings in scarcely anything. An opportunity is now offered of considering the various issues at stake here, and of making a new alignment, if possible, near Mahro Mari because as stated, the Sukkur-Begari Bund close to that place breached

this year, and instead of repairing that breach it might be possible to erect a new bund further inland, and so convert the Mehra Mari Forest, now cut off from the river, into a riverain reserve. The Superintending Engineer will be communicated with on the subject.

15. An important concession, which although it was made just after the close of the forest year, must not be omitted from mention in this report, and many acknowledgements are due to Mr. James for it, and that is, the Commissioner's Circular No. 3,524 of the 31st August 1894, on kacha disputes, in which he has laid down (para. 3) that no kacha land thrown up in front of and adjoining a forest should be given except to the Forest Department. Under previous instructions Collectors had it in their power to retain for cultivation any portion of land thrown up admittedly in front of a forest. It may be interesting to note that Mr. Baden-Powell has expressed an opinion in the pages of the Indian Forester Magazine on the subject of alluvion and diluvion which is in exact accordance with Mr. James' present circular order, and which is as follows:—

Commissioner in Sind's Circular regarding kacha disputes.

“That the ordinary and well known rule of law is that an accretion or accessory follows the principal. If a tree is mine so (in the absence of express arrangements otherwise) is the fruit, and so will a cow and its calf on exactly the same principle; a gradual accretion of mud which in time hardens on to my frontier and increases my area is in general an accessory.”

16. One of the main duties of the Divisional Forest Officer when he visits a forest is to see that its boundary paths are kept clear. A ten feet ride is cut round the forest and at distances varying from 30 to 100 yards prominent conical shaped earthen mounds are built with poles fixed at the apex. These boundary marks have to be annually repaired, and rebuilt especially in the kachas where the floods are so heavy, and where, if not inspected and adjusted after the fall of the river are very difficult to find owing to the vegetation that springs up around them, and which conceals them from view; and they easily become permanently effaced in consequence. Revenue stones in the more packa areas even are very difficult to trace at times for this reason. Unless yearly inspected, therefore, boundaries between various properties soon get effaced in Sind.

Boundary paths, etc.

CHAPTER II.

MANAGEMENT OF STATE FORESTS.

Regulation of Management.

17. Although every endeavour was made to adhere to the working plan as laid down in the Annual Report for 1891-92, it cannot be said that success has attended results to the letter. Conditions in Sind are very different to what they are in other parts of India, where the forests depend on a rainfall, and where the lands, after being once demarcated remain in that condition permanently, only to be slightly altered perhaps by a revision survey, and where a forest after being sub-divided into a certain number of *coupes* can be worked in rotation accordingly. The river in Sind with its vagaries upsets all calculation. It is found next to impossible to force the whole of the working plan system as originally stated (*vide* para. 14 of Sind Administration Report for 1891-92) into the symmetry of the most perfect proportions. A forest may be on the immediate river-side one season, or may have a suitable bund attached to it for the loading of boats close by and for two or three seasons; afterwards, perhaps, it may become entirely unexploitable, because the river has probably retired and left an extensive shoal in front of it. The exploitation of this forest, therefore, has for a season or two under the circumstances to be abandoned and the working plan calculations are at once upset.

Working plan and its difficulties.

18. Labour, again, is another factor to be reckoned with, and it is so inadequate in some places that it has been found practically impossible to clear $\frac{1}{2}$ th of the forest in the time allotted (*viz.*, seven months) while in other places the areas to be exploited are, perhaps, too distant from the Railway line or river side, and remain untouched on account of heavy expenditure of extraction of material. The difficulties and obstacles of this nature are enormous; but for all that a very great advance has been made in recent years on the old system of working, and the great feature about the present departmental plan is that, wherever there has been clean cutting in one season, that area is sown and closed for reproduction the next, and each season selected compartments only are exploited, and efforts are concentrated on those localities. The system may be said to be an admixture of the jardinage, group, and other systems combined; and although this may seem anomalous, force of circumstances render such a condition of things necessary. There are canopied babul forests where the jardinage system can be and is put into operation, and there is some scrub kandi jungle where scarcely any timber at all is to be found and which can be clean cut and closed.

19. The peculiar character and situation of the Sind Forests have rendered it necessary to subdivide them into squares of 160 acres each, which are used as coupes, but the coupes are not suitable for the efficient carrying out of a working plan. The system of squares was adopted during the tenure of office of Mr. Hexton's predecessor, and it was introduced mainly to facilitate the estimate of, and noting on the forest maps, the extent of erosion and accretion in the various divisions; a plan which, it may be interesting to observe in passing, was adopted by King Sesostris in Egypt more than 2,000 years ago in connection with the measurement of land on the banks of the Nile. The cultivated lands in Egypt on the riverside were subdivided into quadrangles, and each season the erosion or accretion was measured by surveyors and assessment recovered accordingly. In Sind, as previously stated, Range Forest Officers have so much to do that this measurement is often entirely neglected, and as figures are necessary for insertion in their reports the estimates of gains especially are invariably given by guess work.

20. The drawbacks to the system in Sind or quadrangles is that, the coupes formed in certain localities are necessarily of unequal size, and often 160 acres is too large an area in a particular forest for the year's operations. To remedy this it has been found necessary in some of the divisions to sub-divide the squares of 160 acres into four parts of 40 acres each, and although this is a tedious operation it must be done. Erecting cairns or other marks defining the limits of subdivisions of a 160 acre quadrangle would in the majority of instances be useless, as the growth is so very dense that a passage through is the only means of defining it. But even with these smaller coupes difficulties in addition to those explained in paras. 17 and 18 arise. For instance, charcoal making in a coupe already exploited for firewood cannot be carried on because probably of huge cracks or fissures in the soil, caused by its expansion owing to excessive moisture and subsequent contraction; or erosion in one part of a forest necessitates suspension of work in the coupe originally selected to save the valuable timber exposed to erosion from being washed away. The difficulties and drawbacks in fact to an effective carrying out of a strict working plan in forests that have to be worked for fuel and charcoal especially, even when the coupes are smaller are considerable and they would remain so possibly even under any altered plans.

II.—WORKING OF THE YEAR.

Rides or Communications.

21. The following statements show the progress made in the work of sub-dividing the forests by rides or communications :—

Cutting and cost of rides.

Division.	No. of miles.	Total cost.			REMARKS.
		Rs.	a.	p.	
Sukkur	19	157	0	0	
Naushahro	18	205	0	0	
Hyderabad	20	421	0	0	
Jerruck	15	277	0	0	
Total	72	1,060	0	0	

Division.	Area cut up into compartments up to 30th June 1893.		Area cut up during 1893-94.		Total area cut up into compartments.		Area still remaining to be cut up.
	Acres.	Length in miles of rides of 20 feet wide.	Acres.	Length in miles 20 feet wide.	Acres.	Length in miles 20 feet wide.	Acres.
Sukkur... ..	200,824	1,254	2,056	19	202,880	1,273	83,720
Naushahro	83,084	518	2,880	18	85,964	536	60,589
Hyderabad	96,607	491	2,000	20	98,607	511	3,447
Jerruck	93,473	533	2,405	15	95,878	548	1,216
Total	473,988	2,796	9,341	72	483,329	2,878	148,972

22. The rides are perfectly straight and run parallel from the river bank to the boundary of the forest inland and parallel with the course of the river. At each half mile they cross one another at right angles, and in this way squares of 160 acres each are formed : in some cases the four sides of such a figure, especially on the river side, remain incomplete, but additions are not unfrequently being made to a forest, so, if the accretion be sufficiently extensive the rides in every direction are extended on to the kacha, and the additional squares or portions of squares so formed enable the accretion to be estimated with accuracy. In like manner, if a forest is eroded, the area of the portion of a quadrangle eroded can be seen at a glance from the map, and estimated accordingly.

23. There are difficulties, however, in carrying out this to the letter : the time of Range Forest Officers is so much occupied in superintending felling, carting and boating operations, and collecting the grazing revenue that they cannot be spared to direct the ride cutting operations. Such work requires a knowledge of the use of the cross staff and chain, moreover, and forest guards are, as a rule, too ignorant for it. Retired measurers from the Survey Department, usually on 8 annas a day, are entertained, and their work is personally checked by the Divisional Forest Officer. Their object is to dawdle over their duties in order to prolong them over the season, and if a Divisional Forest Officer is not careful, cutting a mile will often cost Rs. 30, whereas its actual cost, according to experiments made by officers on the controlling staff, is less than half ; but the drawback is, if expenditure is cut down, the measurers throw up their appointments and ride cutting work is for the time suspended. It is because of the check that was placed on the measurers in this way and consequent difficulty to obtain men to replace those who left, that less work is shown than the year before.

24. The rides are usually from 15 to 30 feet wide, and are extensively used for the traffic of carts and camels to and from ferries, and they of course form the boundaries of different blocks and coupes, and are used as fire traces, but they also form roads of communication, and it is for this reason that particulars regarding them are introduced under this chapter for the first time. Without these rides some of the riverain localities would be one dense impenetrable mass impossible of inspection and probably the home of outlaws. The opening out of the Sind Forests in this manner has no doubt tended to reduce crime and expel such characters from the Province who found the forests good harbours of refuge formerly. Doubtless bad characters and especially cattle-lifters still exist in some of them, but they are kept more under surveillance by being obliged to conform to rules of residence in the forest, one of which is that they shall only build their huts on or close to the rides on the banks of dhands and jheels.

Buildings.

25. In the Naushahro Division a house was erected for the Range Forest Officer, Larkana, in the Larkana Depôt, at a cost of Rs. 142, and other minor repairs to the Larkana Depôt itself and Garhi Yasin Ghat, amounted to Rs. 25. The erection of a wall round the Hyderabad Depôt and sheds for storing charcoal therein cost Rs. 991-5-9. No expenditure is shown under "Buildings" in the Sukkur and Jerruck Divisions.

26. It is found useless to erect expensive houses for Range Forest Officers because the embankments are never permanently secure and may at any time be breached and the buildings consequently much damaged or destroyed. In Upper Sind the large District bungalow at Aliwahan, for instance, was carried away by the river the year before last, although it was erected there originally in the belief of its certain immunity from the action of the river; showing how unsafe it is to erect expensive buildings.

27. In Lower Sind (Shahbunder District) Range Forest Officers live in temporary "landhis" costing but a few rupees to erect. Although bunds exist in this part of the country they almost yearly breach, and the country around is flooded. One Range Forest Officer was driven from his temporary hut in the Mulchand Range to Jerruck on the opposite shore in consequence of floods during the year. Another, the Range Forest Officer, Shahbunder, while doing his office work lived in hourly peril of having his hut and office records washed away by floods. The bund behind which his hut was erected eventually burst and he had to take refuge on top of it, preserving his records as best as he could.

General Protection and Breaches of Forest Law.

28. The following statement shows the number of cases tried by Magistrates during the year as compared with the previous year:—

Cases tried by Magistrates.

Divisions.	Number of cases taken before Magistrates.		Number of convictions.	
	1892-93. 15 months.	1893-94. 12 months.	1892-93. 15 months.	1893-94. 12 months.
Sukkur	18	12	7	5
Naushahro	13	20	7	9
Hyderabad	15	13	10	11
Jerruck	4	3	1	...
Total ...	50	48	25	25

29. A slight decrease (2 cases) in favour of the year under report is due to the difference in periods comprised in the two forest years. The failure to obtain convictions in Jerruck is reported to be due to witnesses for the prosecution having been tampered with and having retracted before the Magistrates the statements made at the preliminary enquiry.

30. The only serious case was one in the Hyderabad Division which occurred last year and which was decided in the year under report, where the offender was fined Rs. 100 for theft of timber.

31. The number of cases compounded under Section 67 of the Indian Forest Act compared with 1892-93 is as follows:—

Divisions.	Illicit grazing.		Theft.		Other offences.		Compensation.	
	1892-93 15 months.	1893-94 12 months.	1892-93 15 months.	1893-94 12 months.	1892-93 15 months.	1893-94 12 months.	1892-93 15 months.	1893-94 12 months.
Sukkur	1,199	*...	175	23	1	...	1,637	44
Naushahro	163	...	35	60	19	...	263	153
Hyderabad	243	...	101	83	632	323
Jerruck	456	...	34	4	1	1	553	8
Total ...	2,061	...	345	170	21	1	3,085	528

32. The figures for 1892-93 are for 15 months, and even if this be taken into consideration a decrease under each head for 1893-94 will still be visible, which may be said to be satisfactory in that, it shows that the population in and around the forests are being treated with consideration and forbearance, and Forest Administration is beginning to be felt less irksome.

33. The total amount accepted as compensation up to Re. 1 and upwards is Rs. 528, details of which will be found in Statement B.

34. The number of cattle impounded in the open and closed forests is given below. The total is 21,671 as against 25,857 during the previous year, viz., fifteen months:—

Divisions.	Number of cattle impounded in		Total.
	Open forests.	Closed forests.	
Sukkur	3,263	2,852	6,115
Naushahro	2,010	4,111	6,121
Hyderabad	1,449	4,687	6,136
Jerruck	820	2,479	3,299
Total ...	7,542	14,129	21,671

35. The following table is a comparative statement of fires for 1892-93 and 1893-94, which shows an increase in the number and the area burnt over the previous year:—

Divisions.	Number of fires.		Area burnt.	
	1892-93.	1893-94.	1892-93.	1893-94.
Sukkur	38	79	1,273	3,727
Naushahro	6	3	282	109
Hyderabad	2	9	90	516
Jerruck	7	16	594	3,457
Total ...	53	107	2,239	7,809

* The figures for 1893-94 will be found in Statement D attached.

36. Fires commenced in March and continued up to the rise of the river which took place in June, and they were most prevalent in the extreme northern and southern divisions in localities where the floods swept through a forest and were not controlled by bunds, such as in the Rohri Sub-division of the Shikarpur District, and where the bunds breached, such as in Shahbunder District or delta region of the Karachi Collectorate, causing a superabundance of grass both in and outside forest limits. After a good inundation an increase in the number of fires may nearly always be expected.

37. A couple of months or so before the inundation, when the country around is parched up, and when the grass becomes rank and as dry as tinder, the people set fire to the jungles in order to procure fresh and succulent shoots, which always spring up after a fire, for their animals. Cases of fires arising out of gross neglect also in a forest are not unfrequent where the people, in order to clear the jungle from their own fields which has grown up since the previous inundation season owing to breaches in bunds or canal banks, have set fire to such jungle without any thought of the consequences. Although each forest is bounded by a clear path 10 to 20 feet wide, the fires leap over these with consummate ease, and once in a forest they crackle and rush on with lightning-like speed, akin to the great prairie fires in America.

38. No offences under this head were detected, except one, in the Hyderabad Division, which remained undisposed of at the close of the year; and it is almost impossible in a country like Sind to capture offenders because the landscape is so flat, and the jungles so very dense, that cover for concealment is afforded to offenders. There are so many exists also from a forest. In fact, a forest which usually suffers from fires, forms an island in a sea of cultivation, dotted around with villages, so the only method of capturing incendiaries would be to surround the area with Forest Guards (a practically impossible plan with the present small protective staff) as soon as smoke was seen issuing from a forest; and even then it would probably be too late for by the time a cordon were formed (if such an one could be) round 10,000 acres, the miscreant would be far away.

39. During the year under report men were met with burning the jungles in their fields and could only be cautioned. In one case the Divisional Forest Officer, Jerruck, chanced to come upon a man burning the grass near Ranta in his own field adjacent to a forest, a large portion of which had *recently* been burnt, and although the circumstantial evidence of guilt was strong, still the case, it was found, would not have held good in a court of law, and no steps were, therefore, taken against the individual.

After consultation with the Collector and Assistant Collector, 500 acres of land, burnt last year, were closed during the year under report against grazing in the Jerruck Division.

40. It has been observed that, wherever the floods are banked up, often standing for three weeks or a month, with glassy stillness against the embankments, the long "sar" and "dabh" grass in the forests dies out naturally, and a complete change has thereby come over the character of some of the forests in such localities: a change which is one of the good results arising from the present bund policy.

Improvement of Forest growth.

41. Natural reproduction in Sind, is, perhaps, attended with more successful results than in many other parts of India. Here there are jungles ready made to hand, and in spite of all the heavy grazing of camels, goats and other cattle, vegetation declines in many places to be suppressed. These remarks apply of course to the areas within the lateral overflow of the river, because, wherever the floods are

kept out by bunds successfully, barrenness and decay present a woeful picture, and it is no wonder that travellers through Sind, journeying by rail, carry away a wrong impression of the country, believing it all to be as dry as dust and without any forest-clad tracts. The soil is so extremely fertile, especially in the riverain areas, that as soon as the floods subside the country is clothed with countless thousands of tamarisk (*Tamarix Gallica* and *Dioica*) seedlings, and it is not only on the kachas or shoals that these seedlings are seen; almost everywhere, where the soil is not pure sand, are they visible, and so rapid is their growth that the greatest difficulty is often experienced in keeping them down in places, especially rides and forest boundary lines, which are required to be kept open. One of the main duties of the Forest Guard, after the fall of the floods, is to go out with his axe and cut down the young tamarisk on the rides, &c., in order to keep them clear for traffic. If this annual operation of keeping them open were not rigidly enforced, the forests especially of tamarisk, in three or four years would probably bear the aspect of never having been subdivided at all by paths; and it is very necessary to maintain these paths which are largely used for inspection purposes, as well as for general traffic.

42. Babul (*Acacia Arabica*) is found growing gregariously in only a part of one forest in Upper Sind. In Central and Lower Sind there are unmixed canopied babul forests on the river side with trees of 6 and 8 feet girth, all formed by natural means before the bunds as at present constituted existed. All that is done now when exploiting these areas is to fence them immediately after being cleared, and after the inundation a dense crop of seedlings covers the ground without any artificial aid. These seeds are distributed by wind, flood and animals.

43. By protecting the area from the depredations, especially of goats and camels, in 8 or 10 seasons the crop is ready for exploitation again, and probably 500 cubic feet of saleable wood per acre is available from it. Measurements taken of babul in the Province show that, in a little less than five years, this tree under favourable conditions of soil and moisture attains a girth of $1\frac{1}{2}$ feet at 4 feet from the ground. In no other part of India probably are such favourable conditions apparent, and it is mainly because of these satisfactory conditions that the Sind forests are probably the most valuable in India. It might seem, therefore, that silviculture is rendered very easy under such circumstances but the fact is, that the country is infested with large flocks of goats and hundreds of camels, and the greatest difficulty possible is experienced in protecting the fenced-in areas although large hedges 6 to 8 feet high are constructed to exclude the animals. The babul in consequence of the tremendous spur owing to favourable conditions of soil and moisture, would, no doubt, still grow if left unprotected, but it would remain in the form of a scrub, and very few plants would probably go beyond that stage. Fortunately in the fresh alluvial lands, goat and camels do not, as a rule, penetrate to a very large extent: camels are afraid to go because of their liability to sink in the "gup" or soft mud of which the kacha land consists. They restrict themselves chiefly to the forests of older formation, and in consequence of this, on the new kacha lands, young babul may be seen forcing itself up ultimately to form canopied forests if not eroded by the river.

44. Bahan or Poplar, (*Populus Euphratica*) which commands a very good price in the market, in spite of its crooked bole, is entirely grown under natural conditions. In several localities in Upper and Central Sind it grows abundantly on the fresh alluvial formations, and in less than a dozen years suitable poles for dwellings are available, the value of which is Rs. 30 to Rs. 40 per 100.

45. Attempts to reproduce the tree artificially from seed have been tried in the more permanent lands but without success, and such attempts, it is thought, will never be fruitful because the seed is extremely light and delicate, and like thistle-down and willow-wool is carried away in the breeze, and is only capable of germination in localities where the soil is of extremely soft consistency.

46. Attempts to reproduce the tree from cuttings have also been tried, but without success. All that can be done is to fence in the areas self-clothed

with young poplar, when the soil has sufficiently stiffened, and to protect seedlings from the depredations of buffaloes, bullocks and cows, who are very fond of the new and succulent young poplar leaves. To the damage caused to the poplar in its early stages by these animals, may possibly be ascribed its present crooked growth; but the tree being a very shallow rooted one and growing in localities exposed to the full force of the breeze, it is more than probable that the swaying about, to which it is subjected, induces a sinuous growth. Perfectly straight poplar poles and rafters are rarely, if ever, found.

47. The tree coppices readily, and from the roots, which spread out laterally and run just below the surface, a heavy crop of young poplar springs up. After a fire in the Azizpur Forest, in the Sukkur Division, in an area where there were several mature poplar trees, young poplar was found freely springing from the roots at 30 feet from the parent tree.

48. Poplar flourishes along the Indus as far down near its mouth as Kot Almo, a reserved forest, a few miles north of Tatta in the Shahbunder District. The railway have tried it as fuel and rejected it; and the only use it is put to is for timber. The figures given in para. 37 show large quantities of rafters, &c., disposed of at depôts annually which are mostly of poplar.

49. Kandi (*Prosopis Specigera*) is found growing away from localities subjected to heavy inundation. It possesses great vitality, grows rapidly, and coppices with astounding rapidity where the stools are not entirely submerged by flood. In any felling operations, therefore, which are undertaken care has to be exercised not to cut the stools low down otherwise after results are nil. On being fully established the tree can exist without surface irrigation and will coppice freely although it is doubtful whether under such circumstances it will survive a second felling. The roots of this plant enter very deep in the sub-soil, and there is one instance recorded by Sir D. Brandis, where the root penetrated upwards of 70 feet. In view of this characteristic it would possibly be a better tree to plant along the base of bunds than babul which is a very shallow rooted plant and easily uprooted by wind and flood.

50. Babul, probably, is thought to be more lucrative to the Public Works Department because of the sum realised by the sale of its timber and pods, and by the sale of lac, especially in Central Sind; and while it may be grown with impunity along some canal banks, its existence along the bunds must always imperil their safety, as any storm suddenly arising probably would blow down a tree and cause a breach in the embankment or canal bank. Kandi is seldom or ever blown down: in fact the writer of this report cannot recall an instance of having seen one down. The lac insect, moreover, subsists on this tree to a small extent and its pods are also used for fodder. It has been known to seed three times in the year, and the poor people in times of scarcity grind the seed and use it as an article of food.

51. The amount of babul and kandi seed collected by Range Forest Officers in the circle amounted to 2,321 maunds. This was sown chiefly broadcast in the kachas in pure tamarisk jungle, and also in compartments that had been exploited and fenced in, and a quantity of seed was sent to the Northern and Central Circles. The total area so sown amounted to 12,200 acres. Seed that has either been quidded by goats, or which is found in the excreta of bullocks is, as a rule, collected by Range Forest Officers, who pay 8 annas a maund for its collection. In view of the remarks made in paras. 43 to 45, regarding natural reproduction, it may seem a waste of money collecting seed and sowing it in the forests; but no matter how successful natural reproduction may be, artificial agency has to be employed to assist in the distribution of babul in certain localities. There are areas, for instance, of unmixed tamarisk which it is necessary should be replaced by babul, and it is more especially in these and other open glades in a forest that artificial means are resorted to. In Upper Sind especially is artificial aid more necessary for the reproduction of babul, because such forests are not common there, and the cold in winter is so severe that the young tree requires very

careful treatment in its earlier stages of growth. It is not at all certain whether the same means as are adopted for the growth of tali (*Dalbergia Sissoo*) should not be adopted for babul, bearing in view its value and demand especially for the Quetta Commissariat. The young tali plants are covered with straw in winter till three or four years old, and in this way extensive plantations of this latter tree, a *quasi-exotic*, have been created. There are now about 200 acres under tali in the Sukkur Division, 100 acres having, during the past two years, been carried away by the river, as explained in para. 4 of last year's report. Tali has a very straight bole, and sells at the rate of 1-4-0 a cubic foot, while babul and poplar sell at 8 annas. The cost of cutting and delivering the timber amounts to 2 annas per cubic foot.

52. Babul grown from broadcasting the seed in Lower Sind in the closed compartments has attained the following dimensions in 2 years: 4½ inches in girth, 10 feet in height. Rats did a great deal of damage to the young seedlings, the roots of which they attacked.

53. In the Rahuja nursery near Sukkur there are a few *Eucalyptus* trees and one teak tree, all of which are just keeping alive. Oranges, peaches and grapes grow very well in this nursery, and are usually sold at a good price. A few bamboos also exist here, and it is found that this tree would thrive if it were artificially encouraged; but the great attention it requires makes its extension as a forest tree prohibitive.

54. In the Sonda and Miani nurseries in the Jerruck and Hyderabad Divisions the *Prosopis Glandulosa* was introduced some years ago, and now this plant may be seen spreading in the forest of its own accord.

55. At a time when the finances of the country are so embarrassed it is necessary to point out a source of revenue in the Province which has hitherto remained dormant, and the development of which might, if needed, be left in the hands of the Forest Department; but considering the heavy administrative duties of the officers and the numerically weak establishment at command, the care of it might be left to the officers of the Revenue Department, who have a much larger subordinate staff, and more means at their disposal for carrying out the operations. The source of revenue referred to is from the fibre of the "ak" plant (*Calotropis Gigantea*). Its fibre has been reported by experts to be worth £ 30 to £ 40 per ton, against £ 18 to 21, for jute. Jute requires most careful cultivation with manuring and a good soil, namely loam, while the ak plant grows wild all over the Province abundantly and thrives even on saline soils. Under the present rude and wasteful system of preparing the fibre one acre is reported to yield 582 lbs. or 727 lbs. where waste is guarded against (*vide* page 72 of Mr. Strettle's pamphlet on the ak plant).

56. The only drawback to the development of this source of revenue was the difficulty and expense in extracting the fibre from the plant. A machine has now been invented by Mr. Smith, which extracts the fibre from the rhea (*Boehmeria Nivea*) and is used in Bengal for that purpose, and there seems no reason why it should not be introduced into Sind for the use of the ak. A reference was made to Calcutta about the value, &c., of the machine and it is reported to cost £ 55. It is possible a good export trade would result if the cultivation of the ak plant were encouraged and the fibre extracted by means of the machine. The exports of jute from India amount to about four millions sterling a year.

57. As soon as the new canal, north of Shikarpur, is completed arrangements ought to be made for the conversion of 10,000 acres of the Sultankot Reserve into a plantation on the scale of Changa Manga in the Punjab. This is a most important work and will be of immense benefit not only for the purposes of the Quetta fuel supply but also for the Province. Shikarpur is one of the largest towns in the Province, and the country for miles and miles around it entirely heretofore

of trees. At one time, as the reserves situated in the vicinity of the town show, a large quantity of fuel and fodder were available from them when the floods were allowed to spread. Now, every vestige of grass has disappeared, and the few trees left are decaying, or have been converted into scrubby bushes by the continued browsing of goats and camels, and in a few years will be entirely effaced. An estimate of the cost of starting this plantation and of maintaining it was submitted just after the close of the forest year, in which it was shown that the plantation (11,000 acres) would after 12 years pay 11 per cent on the capital outlay; water for the plantation to be given gratis as it would be surplus water from the Shikarpur Canal.

EXPLOITATION OF MAJOR FOREST PRODUCE.

58. Fuel is cut and carried to the different railway stations in the Province departmentally from selected compartments. Range Forest Officers employ a class of men styled "Labana" in Upper Sind, and "Chawan" in Lower Sind, who cut and stack the wood in stacks of 1,000 cubic feet. Kandi (*Prosopis Specigera*), babul (*Acacia Arabica*) and Tamarisk (*Tamarix Dioica and Gallica*) are the kinds of wood used for fuel both by the railway and different Government Departments and private purchasers.

59. To cut and deliver a stack of fuel of 1,000 cubic feet on the river bank or dhand costs from Rs. 10 to Rs. 16. The billets are as a rule $2\frac{1}{2}$ feet long and from 8 inches to $2\frac{1}{2}$ feet in girth.

60. Timber is cut mostly by contract agency on the share system. A contractor cuts and delivers the material at the depôt, and on its sale receives Re. 0-10-6 in a rupee. The exploitation of timber is carried on under the jardinage method.

61. In the Jerruck Division babul timber is exploited by a contractor who prepares sleepers and bolsters himself from it in the forests. Babul beams of an average contents of 20 cubic feet each are also cut by a contractor annually for the Gun Carriage Factory in Bombay. The material cut, is sent by boat to Keti Bänder, at the mouth of the Indus, and then re-shipped in sea boats to Bombay.

62. Charcoal is exploited on the share contract system in the Hyderabad Division, and departmentally in the Naushahro and Jerruck Divisions. On the share system the contractor cuts up and makes the charcoal, and on its sale realises 12 annas in the rupee. In the Jerruck Division the material is cut and converted departmentally, at Rs. 16 to 20 per 100 maunds, and sold to a contractor on the spot at Rs. 38 per 100 maunds. The weighing of the charcoal is done in the compartments by the Range Forest Officer, in the presence of the contractor and charcoal makers, and the latter take care to see that no short weight and very little waste are allowed, because payments for work are made according to the contractor's receipts. Before commencing work the charcoal makers are given advances and as soon as deliveries are made to the contractor the advances are cleared off.

63. The busy season in the circle commences in November and continues upto the end of May, when the river rises and overflows its banks, and the forests get flooded to various depths, ranging from 1 to 8 feet. From July to about the end of September, therefore, no work practically is done in the riverain areas. At this season extraction of forest material to a very large extent by boat takes place.

64. The towns of Sukkur, Rohri, Shikarpur, Larkana and Hyderabad are chiefly supplied with dead and fallen fuel, extracted by men who collect it from the inland forests themselves on permits, and carry it to these places on camels and

donkeys and in carts. Nakas are situated on the various roads leading into the above places, where munshis are stationed who collect dues on the different loads as they enter the town. In Shikarpur fuel is thus brought from 32 to 35 miles. In Rohri, Sukkur, Larkana and Hyderabad, the distances vary from 2 to 10 miles. A large number of people are engaged in this occupation and the profit derived on firewood is fairly lucrative. A good deal of fraud is often attempted by the Naka Munshis and peons engaged by the Forest Department, and the work of checking imports requires very close supervision. The revenue derived from this source is Rs. 30,264 as detailed in para. 104.

Extraction and Transport of Forest produce by Land and Water.

65. The Indus is utilised very largely for the transport of railway fuel and timber from the forests to the different railway stations and depôts. During the inundation months especially is the largest quantity of fuel carried along it. In the cold months the forests for the most part stand high and dry, or they are perhaps situated on a side channel of the river. In such cases the wood is cut and stacked on the bank in the working season and as soon as the water reaches the forest in the inundation, boats come and lift the wood and convey it a distance perhaps of 35 or 40 miles to railway stations. At some stations in the Sukkur, Naushahro, Hyderabad and Jerruck Divisions, railway fuel is conveyed direct from the forests to stations by the wood-cutters themselves on their donkeys: at other stations wood is cut by the wood-cutters and carried independently by petty contractors by means of carts and camels.

66. The supply of fuel for the railway, from the Jerruck Division, has in former years been small owing to the difficulty of obtaining boats to convey the material to Kotri: all forests in Jerruck, it must be remembered, being situated below that place. It was only in the inundation season, and from forests about 15 to 20 miles from Kotri, that fuel, as a rule, could be conveyed there by boat, as the south-west wind, which springs up when the river rises, enables traffic against the current to be carried on.

67. During the year under report, however, the railway were induced to bring a large steamer "Tug D" into use for conveying fuel from the forests in flats and by this means three laks cubic feet were so conveyed in three months during the cold whether to Kotri: an operation which may be said to have been extremely satisfactory in spite of the many difficulties that arose. Without the steamer the forests which supplied the fuel would never have been and could never have in the future been exploited at all (1) because they are situated upwards of 60 miles below Kotri near Tatta, and the carriage by boat from such a distance, while being probably impracticable, would have been prohibitive on the score of expense, and (2) because the growth of these forests, consists chiefly of tamarisk (*Tamarix Gallica*) and kandi (*Prosopis Specigera*) species of wood not suitable for the coast and Karachi trade and therefore never exploited for these places. The cost inclusive of royalty, cutting, and delivering fuel in this manner from the forests to the railway stacking ground at Kotri, was Rs. 52-0-0, a rate below that which the same administration pay the Punjab Forest Department for fuel supplied in that Province to them. The experiment cannot probably be again repeated at the same rates but it showed (1), that a large quantity of fuel, which otherwise could not be exploited at all, can be utilised, and (2) that even if the cost to the railway be Rs. 60-0-0 per 1,000 cubic feet such an expenditure would be about Rs. 40-0-0 per 1,000 cubic feet cheaper than coal, taking the price of that article to be Rs. 20-0-0 per ton delivered in Karachi, which is the quotation of Messrs. McIver, Mackenzie & Co., the British India Agents, and reckoning 2 tons of wood to be equal to one ton of coal. But the railway decline to pay more than Rs. 46-0-0 at the outside in future.

68. Forest material for the railway cannot be said to have been properly extracted from the forests till handed over to the railway, and the duty

of handing it over to the latter administration devolves upon a European contractor, Mr. Clarkson, and a staff of munshis. Under the old contract system contractors cut and delivered the material themselves to the North-Western Railway, and the fuel they often brought to stations was so inferior that it would not be accepted even at a reduced rate by the Railway authorities; it used to remain for months at stations in peril of being destroyed by fire from the sparks of passing engines; and finally the then Conservator obtained the sanction of Government to the employment of an Extra Assistant Conservator to go up and down the line to settle disputes that arose between contractors and Fuel Inspectors, vide Government Resolution No. 6762 of the 5th October 1887.

69. All these disputes are now at an end (as reported last year, vide para. 24 of the Administration Report) and a still more satisfactory feature of the arrangement now is, that in addition to the saving of the Extra Assistant's pay (as the employment of one on the line is no longer necessary) a saving of Rs. 17,273 has been effected from the change to the departmental system. The latter system means that the cutting and extraction of wood is carried on by Range Forest Officers, who have nothing to do with handing over the wood to the railway at all. Mr. Clarkson does this, and he sees that only material suitable for the engine boilers is put into stacks. At first considerable opposition arose among the subordinates to the employment of Mr. Clarkson, which has now disappeared and work is carried on both satisfactorily in the forests and harmoniously with the railway officials, and harmoniously also between the Forest subordinates and Mr. Clarkson.

70. Charcoal made departmentally in the Jerruck Division is sold to contractors on the spot in the forests, who remove it at their own expense by means of camels and boats. This material is taken to Keti Bunder by river, and then on to Karachi in sea boats. Six annas a maund is the cost of charcoal to purchasers in the forests and by retail sale it is disposed of in Karachi at 15 annas or rupee one per maund. In the Hyderabad Division, charcoal is manufactured by a contractor and is conveyed to the Hyderabad Depôt by river, first to Gidu Bunder, about 15 miles, and then on in carts to Hyderabad by road, a distance of about 3 miles. A certain quantity is disposed of in the forests and removed by purchasers by river at their own expense. From the Naushahro Division charcoal is sent to Sukkur and Quetta by rail by purchasers.

Exploitation of Minor Forest Produce.

71. The inundation was almost the highest on record, and the riverain forests in consequence were well watered. In Lower Sind the bunds and canal banks burst in various places providing a good deal of fodder both in and outside forest limits. The grass was so dense in the lands set apart for kharif and which had been destroyed by flooding that the people, in order to clear their fields for the next season's crop set fire to it, and the fires, as reported in para. 37, spread in some instances into forests. The grazing in such forests as Garhi Yasin in the Naushahro Division, and Sultan Kot in Shikarpur, large tracts permanently cut off from the river is confined chiefly to goats and camels which browse on Kandi and Tamarisk bushes. No surface growth exists and no reproduction is taking place in these tracts and the heavy browsing to which the growth is subjected is gradually making it small by degrees and beautifully less.

72. In the Rohri Sub-Division of the Shikarpur District, the great part of which is not cut off from the river by bunds, pasture is always abundant as it is in the Shabbander and some parts of the Jerruck Division also. The grass in these localities is often most luxuriant and plentiful, as the vast number and excellent condition of cattle about that part of the country, indicate.

73. In the canopied babul forests in Central and Lower Sind, where there are numerous camels and goats, a great deal of promiscuous damage to the forest is done by goat herds, who are very fond of lopping branches for the benefit of their goats which cannot reach the higher shoots.

74. Grazing in the forests is a subject of great importance in the Province as by means of it, a large part of the rural population make a living by selling the dairy produce of their animals. Many of the forests also form breeding grounds for all kinds of animals, especially camels, the latter of which are used by District officers almost entirely for the carriage of their camp equipage in the District season. It is natural, therefore, that the interests of the Forest Department and those of the cattle-owners should clash, because on the one hand the Forest Department are expected to recover fees on all the animals that graze in their forests, and on the other, the people endeavour to evade payment of fees.

75. The grazing rules approved by Government in 1886 (*vide* Government Resolution No. 7277 of 13th October 1886) are now strictly carried out. The system in Sind is for the fee to be levied per mensem, at various rates ranging from 4 annas for a camel and 3 pies for a goat, as follows:—

Animals.	Grown, maximum rates.			Young, maximum rates.		
	Rs.	A.	P.	Rs.	A.	P.
Camel	0	4	0	0	2	0
Buffaloe	0	3	0	0	1	6
Cow or bullock	0	1	6	0	0	9
Goat or Sheep	0	0	3	0	0	0
Ass	0	1	0	0	0	6
Horse	0	1	6	0	0	9

Passes are required to be taken out for two months at a time. The Range Forest Officer issues the pass on the statement of the individual who demands a pass, and subsequently when inspecting the forest he checks it by counting the cattle found in the forest grazing, and this duty also devolves upon the Divisional Forest Officer himself. If more cattle are found grazing in the forests than are entered in the pass the owner is fined an extra month's fees and if the cattle-owner has not his pass with him at the time of inspection he is charged a fortnights fees extra.

76. The penal clauses under the rules do not, it is found, act as a sufficient deterrent in preventing an infraction of the rules, which accounts for the number of cases of illicit grazing recorded (*vide* Settlement D): although the number is smaller proportionately than last year the figures of which are for 15 months. The cattle-owners are as a rule, so well to do that no very great hardship results when extra fees are demanded of them, for where extra fees are paid perhaps in one instance a dozen other instances could be shown where illicit grazing was practised without detection. No very great difficulty exists in evading the extra payment, because by collusion with the Forest Guard of the beat (a man whose net pay amounts to about Rs. 6-8-0 or Rs. 5-8-0 per mensem) information is always available of the whereabouts of the Range Forest Officer and Divisional Forest Officer, and if by any chance either of these officers be near a forest, extra

animals grazing in it are at once removed from it. To grapple with the evils attending the present system of grazing collections in the Province under such circumstances is very difficult, and any increase in offences under this head ought to be viewed with favour because it clearly indicates that the superior officers are doing their duty in the face of strong opposition consisting of their own subordinates and the owners of cattle.

77. Those people who are allowed to live in the forests, or on the border, in the fair season are treated as a rule with much consideration, so much so, that they render the Department help in erecting boundary marks which annually require reconstruction because of damage caused by floods, and in the erection of large hedges, and the clearance of rides, all free of cost, and if some extra head are grazed without the payment of a fee nothing is said; but it is only when extensive systematic frauds are practised that a rigid enforcement of the rules becomes necessary.

78. The total area closed to grazing in the Province amounted to 35,079 acres, or about 55 square miles. The areas closed are not closed in name only: hedges round each block are erected in order that there may be no mistake about what is close and what is open, and the hedges, are constructed extra strong so as to prevent stray cattle passing through inside. These hedges form a great feature of the Sind forests, and their erection for the most part entails no extra expense to Government. Compartments, half a mile square, of 160 acres are each fenced in in a forest leaving the rides clear for the passage of cattle to and fro to grazing grounds beyond, so as to interfere as little as possible with the convenience of the forest population.

79. The grass in the closed compartments becomes much prized, especially towards the latter part of the season when everything outside becomes as dry as tinder: protection then becomes a troublesome matter. Some of the cattle-owners who are less law-abiding than others deliberately break down the fences and admit their animals. The closed areas are also utilized by people who do not wish to leave an attendant in the forest to look after their cattle and who therefore turn them into the fenced-in areas.

80. The number of animals that grazed free under the Forest Settlement Officer's proposals was 14,075. In addition to these, animals belonging to wood-cutters and the charcoal contractors, grazed free while actually working in the forests. Passes, coloured red, are issued to the owners of free cattle which are renewed every six months.

81. The present system of collecting the grazing revenue requires alteration, as the constant *monthly collection* of the revenue throws a vast deal of work on Range Forest Officers who have to superintend their railway fuel cutting operations, to count the number of trees extracted from each compartment, mark standards, undertake the transport of material by boat, and various other duties. In Chapter III it will be shown what a small protective establishment Sind has as compared with the Province next door, the Punjab, where the quantity of material extracted per acre is about the same, and indicates the amount of labour thrown on a Range Forest Officer.

82. Nowhere is grass extracted by villagers from the forests for the feed of their cattle, and no grass kurans exist, nor is grass sold by auction. The right to collect sar reed and munj grass is sold by auction, and this is used for thatching roofs, and for door chicks, &c. The collection of lac in the Hyderabad and Jerruck Divisions is undertaken by a contractor who bought the right for Rs. 7,000 in Hyderabad, and in Jerruck for Rs. 330.

83. Lac flourishes chiefly on the babul (*Acacia Arabica*) but is also found on the Kandi (*Prosopis Specigera*) ten miles south of Hyderabad on the Fuleli. The insect seems to avoid damp and a moist atmosphere and only thrives in those forests in the Jerruck Division removed some distance from the Indus. There are two crops of lac in the year: one gathered between November and February and the other between May and July. The produce is exported to Europe, Mirzapur and Calcutta. The collection of babul pods is let to contractors who buy the right to collect them at auctions annually.

CHAPTER III.

GROSS YIELD AND OUTTURN OF FOREST PRODUCE.

84. The following statement shows the details of the working of the Depôts :—

Name of Depôt.	Stock on hand on 1st July 1893.			Added during the Forest year.			Disposed of during the Forest year.			Balance on the 30th June 1894.		
	Timber.	Posts and rafters.	Fuel.	Timber.	Posts and rafters.	Fuel.	Timber.	Posts and rafters.	Fuel.	Timber.	Posts and rafters.	Fuel.
	C. ft.	No.	Mds.	C. ft.	No.	Mds.	C. ft.	No.	Mds.	C. ft.	No.	Mds.
Shikarpur...	371	2,744	...	2,098	816	...	1,143	3,324	...	1,324	236	...
Sukkur ...	10,776	16,620	...	24,708	46,467	...	16,487	37,260	...	18,997	26,917	...
Eohri...	2,340	2,087	...	7,455	12,550	...	3,434	11,399	...	6,361	3,323	...
Larkana ...	13	4,500	13	...	2,500	2,000
Schwan	1,360	1,360
Keti Bandar	1,000	15,151	...	4,002	15,151	...	4,000	1,002
Kotri...	...	5,009	18,250	8,150	8,608	140,200	8,150	13,613	159,588	8,914
Hyderabad ...	1,683	38,107	10,247	18,800	86,602	133,333	19,820	102,149	143,304	657	21,400	216
Total ...	15,183	65,143	29,497	70,300	155,293	291,175	64,204	169,600	306,450	27,339	50,836	12,223

85. The amount of timber disposed of at depôts during the year was 64,204 as against 53,274 cubic feet for the year previous. The increase was owing to sales in Upper Sind due to the contractor having brought in more material for disposal than was the case the year before when the share system did not exist. The share system was introduced in Upper Sind for the first time during the year and its results are being carefully watched. The contractors naturally under this system bring in as much material as they possibly can to depôts because their earnings are increased thereby, and Divisional Forest Officers will have most carefully to superintend their operations in order to see that more than the annual sustained yield is not being indented upon.

There is a slight falling off in the return for rafters and fuel which needs no explanation.

86. Deodar and pine timber is largely imported into Sind by river from Jhelum and Kashmere. Such timber is rafted down the Indus, cut up into scantlings at Sukkur and transmitted by rail to Quetta and other parts of the Province. Timber in the log is also sent away to various places by rail. Huge logs of Deodar and pine are also rafted down as far as Kotri whence they are sent to Hyderabad. Foreign material of this description realises from Re. 0-8-0 to Re. 1-6-6 per cubic foot and it is bought chiefly by the wealthier classes for the construction of their houses, and it is used also for the doors and windows of buildings constructed by the Public Works Department. No record is kept of imports of foreign timber. A suggestion was made six years ago to impose a light duty on such material because of its competition with local grown timber but the suggestion was vetoed.

87. The following is a comparative statement for 1892-93 and 1893-94 of the quantity of timber and firewood sold at each depot:—

Name of Depôt.	Timber, c. ft.		Posts and Rafters, No.		Firewood, Mds.	
	1892-93, 15 months.	1893-94, 12 months.	1892-93, 15 months.	1893-94, 12 months.	1892-93, 15 months.	1893-94, 12 months.
Shikarpur	176	1,143	7,045	3,324
Sukkur	19,492	16,457	51,366	37,260
Rohri	1,980	3,434	15,260	11,894
Larkana	36	13	3,700	2,500
Sehwan	10	...	8,946	1,360
Keti Bander	17,665	15,151	1,000	4,000
Kotri	31	8,150	9,137	13,613	184,315	158,586
Hyderabad	13,884	19,826	133,596	102,149	121,379	143,364
Total ...	53,274	64,204	225,350	169,600	310,394	308,450

88. The material cut from private jungles, and unoccupied Government waste lands and jagirs, and imported for sale into the town of Hyderabad and Kotri, is given in the following statement:—

Name of Town.	Babul logs. No.	Posts and Rafters of all kinds.	Firewood.	Char- coal.	Babul bark.	Lac.	Planks.	Reed.	Estimated value.
	No.	No.	Mds.	Mds.	Mds.	Mds.	No.	Bundles.	Rs.
Hyderabad	1,632	1,100	97,733	1,134	12,971	913	12,935
Kotri	691	16,214	27,399	160	3,666	...	190	300	3,942
Total ...	2,323	17,314	125,132	1,294	16,637	913	190	300	17,878

89. A large quantity of timber, firewood and charcoal is also imported into Karachi from lands other than forest, records of which are not kept because there is no forest establishment at Karachi; but records will be kept if possible in future. In the case of babul areas cut by private persons no reproduction is going on in them at all, as is observed; so that it is only a question of time for such sources of supply to cease and further demands upon the forest areas to ensue.

90. The total quantity of material shown in the above statement is somewhat less than the previous year although the estimated value of it is greater by about Rs. 4,000.

91. The following statement exhibits the quantity of timber supplied to the Bombay Gun Carriage Factory and other Government Departments in Sind and Beluchistan:—

Name of Department.	Babul logs.	Babul sleepers.	Babul slabs.	Babul Bolsters.	Babul Props.
	No.	No.	No.	No.	No.
Executive Engineer, Shārig	413	...	20,002
Gun Carriage Factory Bobay	724
North-Western Railway	620	...
Port Engineer Karachi	9,997
Total ...	724	9,997	413	620	20,002

92. The Gun Carriage indent, *viz.*, 900 logs, was exceptionally high in 1892-93. During the year 724 logs were supplied and in future 500 a year will be the amount required. Each log on an average is 20 cubic feet without the bark. Arrangements are in progress to cease supplying the Gun Carriage Department in future *departmentally* (which will have the advantage of reducing expenditure in the circle). At present the Forest Department employ a contractor to cut the logs and deliver them at Bombay for Re. 1-7-0 per cubic foot and Rs. 1-15-0 is recovered from the Gun Carriage Department by book transfer.

93. The contractor has been doing this work for a number of years: he is a man of means and is capable of undertaking the supply of the logs himself and under such circumstances there seems no reason why the Forest Department should incur the expenditure required for the supply. The arrangement proposed is for the contractor to purchase and pay for the timber at Rs. 7-8-0 to Rs. 8-0-0 a log from the Forest Department in the forests and deliver it at his own expense to the Gun Carriage Department, Bombay, receiving the usual value from the latter Department, namely, Re. 1-15-0 per cubic foot himself. The great advantage of this system is that it reduces departmental expenditure and that the risks and responsibilities, attending shipment of the timber, by the Forest Department cease after it has been handed over to the contractor in the forests. Under the old system the expenditure required to make a profit of 8 annas a cubic foot was Re. 1-7-0; under the proposed plan, the expenditure will be absolutely nil and the Department will only show the revenue, namely Rs. 7-8-0 a log which will be a direct set off against permanent establishment charges.

94. The subjoined is a comparative statement of the quantity of firewood supplied under departmental agency to various Government Departments and other large consumers:—

To-whom supplied.	Firewood in maunds.	
	1892-93, 15 months.	1893-94, 12 months.
North-Western Railway ...	1,692,215	1,283,054
Commissioner's Steamer "Jhelum" ...	27,584	29,965
Indus Ferry Steamers ...	66,622	68,537
River Conservancy Department ...	5,281	4,494
Public Works Department ...	43,488	41,587
Karachi Harbour Works ...	21,857	39,516
Commissariat Department ...	203,860	217,976
Hyderabad Water Works ...	52,000	61,500
Sukkur Municipality ...	10,400	7,295
Hyderabad Jail ...	4,178	3,576
Government Farm, Hyderabad ...	7,500	4,500
Seth Vishindas, Contractor ...	45,383	10,169
Local Boards, Shikarpur and Hyderabad ...	6,975
Sukkur Water Works	600
Executive Engineer, Military Works, Quetta	2,207
Adjutant Royal Artillery, Quetta	973
Messrs. Herman, Boyce & Co.	8,550
Cotton ginning engines	200,700
Total ...	2,187,343	1,985,499

95. The main reason why the total supplies fell short of the previous year is because of the difference in periods namely 15 and 12 months, respectively, and the inability of the Forest Department to cope with the indents. The railway indent, for instance, was for 108 lacs cubic feet or 27,00,000 maunds, whereas the total amount of wood supplied to them was 51,32,216 cubic feet or 12,83,054 maunds.

96. The cost of carriage especially is increasing and unless the railway are prepared to pay more for extracting their fuel from the forests, their supplies must be expected to fall short. Forests nearest the railway line, too,

and close to the riverbank are being closed for reproduction, so that the Department has further and further to seek for its fuel and the cost of carriage must, therefore, increase.

97. A complaint was made to the Commissioner during the year by the Manager, North-Western Railway, because the Forest Department sought higher rates for cutting and delivering wood at stations. The Manager threatened to burn coal, a threat which could never have been considered seriously, it is thought, when a comparison with the present rates of coal and the cost of fuel is made. Coal in Karachi is Rs. 20-0-0 per ton, and to deliver it at stations as far as Reti and Sukkur would cost about Rs. 5-0-0 to Rs. 7-0-0 per ton more at these stations and others in the whole circle. The average price paid by the railway for fuel equal to a ton of coal was Rs. 13-0-0 per ton, or half the value of coal, and Rs. 13-0-0 per ton is placing the equivalent of 1,000 cubic feet of wood at a figure even below 200 maunds, whereas 1,000 cubic feet is generally taken to be equal to about 250 maunds. It pays the Burma State Railway to burn wood at Rs. 71-4-0 per 1,000 cubic feet equivalent to Rs. 23-0-0 per ton of coal and it pays the North-Western Railways to burn wood at Rs. 53-8-0 or Rs. 18-0-0 per ton of coal in the Punjab.

This is the figure the same administration pay the Punjab Forest Department now for 1,000 cubic feet of wood and yet a complaint is made against the Sind Forest Department, who supply it at Rs. 5 per ton cheaper, and a threat to burn coal is added because an increase of about one rupee was asked on rates for cutting and delivery all round. It may be mentioned that the railway pay private contractors Rs. 55 per 1,000 cubic feet for fuel at Sukkur which is equivalent to Rs. 18 per ton of coal and only pay the Forest Department Rs. 45, or Rs. 15 per ton at the same station.

98. It is interesting to note that the Sind Forest Department supplies wood at a cheaper rate to the North-Western Railway than the rate at which any other railway is supplied with wood by any Forest Department in India and Burma, as the following figures (for 1892-93) show.

North-Western Railway, Sind Forest Department, Rs. 39 0 0 per 1,000 c. ft.			
Do.	Bahawalpur State	45 0 0	do.
Do.	Punjab Forest Department	53 8 0	do.
Madras Railway	...	51 14 0	do.
Southern Maharatta Railway, Bombay Forest Dept.			
Do.	Mysore State	61 10 8	do.
Burma State Railway	...	71 4 0	do.

N. B.—Ton tons have been reckoned to be equivalent to 1,000 cubic feet of wood.

99. The quantity of timber felled departmently and disposed of in the forests to private purchasers is given below:—

Division.	Timber.	Bahan	Bahan	Jhau and	Babul	Sleepers.	Planks.
		and babul Posts.	and babul Rafters.	kandi Rafters.	Props.		
	C. ft.	No.	No.	No.	No.	No.	No.

Naushahro	5,143	5,385	1,372	35	7,574	1,330
Hyderabad	18,935	34,284	16,618	21,223	123,146	80,718
Jerruck	28,733	24,762	580	602
Total...	75,994	85,495	32,877	31,836	190,592	128,183

104. The following statement exhibits a comparison of the quantity of timber cut and removed from the forests by purchasers in two years :—

Division.	Timber.		Posts.		Rafters.	
	1892-93, 15 months.	1893-94, 12 months.	1892-93, 15 months.	1893-94, 12 months.	1892-93, 15 months.	1893-94, 12 months.
	C. ft.	C. ft.	No.	No.	No.	No.
Sukkur	1,836	23,431	304	216	15,150	25,537
Naushahro	2,563	3,143	50	...	20,123	17,789
Hyderabad	4,097	3,609	2,672	1,414	19,675	13,397
Jerruck	1,461	399	4,823	991	5,916	16,360
Total ...	9,957	30,582	7,849	2,621	60,864	73,083

105. The total yield of timber, the total yield of firewood, and the total yield of charcoal in each Division will be found in statement C attached.

106. The comparative outturn for two years, of timber, firewood and charcoal in cubic feet is as follows :—

Name of Division.	Outturn in cubic feet.			
	Timber of all kinds.		Firewood and charcoal.	
	1892-93, 15 months.	1893-94, 12 months.	1892-93, 15 months.	1893-94, 12 months.
Sukkur	76,296	89,035	7,924,123	7,176,543
Naushahro	23,918	18,645	3,342,680	2,642,390
Hyderabad	107,477	101,128	5,265,260	4,731,702
Jerruck	42,849	60,338	3,154,491	3,230,953
Total ...	250,540	269,146	19,686,554 + 250,540	17,781,588 + 269,146
			19,937,094	18,050,734

107. The above figures give a yield of 28·73 cubic feet per acre for the year, which although less than last year (15 months) viz., 31·78, cannot be said to be but highly satisfactory. It proves how useful the forests are from a public point of view, and therefore how important it is that they should be properly managed and controlled. In no other part of India is such a large quantity of wood extracted per acre with such a small controlling and executive staff as the following figures (for 1892-93) from certain other Provinces indicate :—

Name of Forest Department.	Square miles.	Number of officers.	Cost of controlling staff per annum.	Cost of protective and office staff per annum.	Total cubic feet of timber and fuel, &c., removed per acre.
Burma (Lower and Upper) ...	32,804	49	327,600	111,576	1·66
Punjab	1,746	21	127,200	133,951	32·90
Assam	10,766	13	88,800	54,629	·87
Coorg	893	2	12,000	21,983	·98
Northern Circle, Bombay... ..	1,554	12	78,600	99,674	7·07
Central Circle do.	5,913	15	99,600	260,998	2·15
Southern Circle do.	5,384	16	96,000	175,759	2·08
Sind Circle do.	980	6	33,000	47,332	31·78

108. Only in the Punjab, it will be seen, is a slightly larger quantity of material per acre extracted, but for the extraction of this material there is a Conservator on Rs. 1,350, and controlling and executive staff costing Rs. 2,44,951. In Sind the administration is conducted by a Deputy Conservator on Rs. 900 with a total expenditure for controlling and executive staff for Rs. 69,532. If the same controlling staff proportionately were sanctioned in Sind as is now employed in the Punjab the number of officers would stand as follows :—

- 1 Conservator on Rs. 1,350,
11 Deputies and Assistants.

109. The total yield of the Circle in timber, firewood and charcoal is given below :—

Kind of Timber.				Quantity.	1892-93. 15 months.	1893-94. 12 months.
Timber	C. ft.	250,540	269,146
Posts	No.	40,726	34,457
Rafters	No.	251,456	201,266
Sleepers	No.	926	10,017
Firewood	Mds.	3,133,741	2,627,275
Charcoal	Mds.	75,267	91,922

110. The following is a comparative statement of the realisations by sale of farms for removal of minor produce and for fisheries :—

Division.	Babul pods.		Lac.		Munj, Sargrass, &c.		Fishery.	
	1892-93, 15 months.	1893-94, 12 months.	1892-93, 15 months.	1893-94, 12 months.	1892-93, 15 months.	1893-94, 12 months.	1892-94, 15 months.	1893-94, 12 months.
	Sukkur.....	756	135	932	818	1,625
Naushahro	2,717	1,109	1,114	919	1,356	1,392
Hyderabad	12,667	11,250	8,067	5,424	218	200	605	666
Jerruck.....	3,319	2,913	596	253	638	558
Total ...	19,459	16,407	8,663	5,677	2,264	1,937	4,224	4,327

111. A comparative statement of the grazing returns of the Province is as follows :—

Name of Division.	Grazing Fees.	
	1892-93, 15 months.	1893-94, 12 months.
Sukkur	20,041	15,681
Naushahro	11,818	8,867
Hyderabad	13,344	12,194
Jerruck	15,484	11,599
Thar and Parkar	4,611
Total ...	60,687	52,952

112. If the standard for fifteen months be taken at 60,687 the revenue for the 12 months under report ought to be 48,550, whereas it is Rs. 4,402 more. The returns from this source, however, are capable of further improvement, and

every effort will be made to carry out this improvement if possible; but taking a census of the cattle is first necessary to ascertain how much revenue should be expected, and this can only be done by employing very considerable pressure, because a census has been attempted departmentally under ordinary means and has failed. Only heavy punishments in a Court of law would compel people to assist in a census. But such a course is scarcely necessary perhaps, when a comparison is made with the grazing returns in the other three Circles in Bombay and other Provinces. The following are the figures:—

Name of Forest Department.	Revenue from grazing per square mile.		
	Rs.
Burma (Lower and Upper)		
Punjab	123	12	11
Assam... ..	0	10	0
Coorg	2	9	9
Northern Circle, Bombay	16	13	3
Central Circle, Bombay	66	5	1
Southern Circle, Bombay	22	10	10
Sind Circle, Bombay	61	14	10

It will be seen that Sind stands third on the list.

113. The number of cattle which grazed in the forests on payment and free amounted to 541,360.

114. The area under cereal cultivation and the amount realised by assessment in each Division is given in the following statement:—

Division.	Area under cultivation.				Amount realised by assessment.			
	Kharif.		Rabi.		Kharif.		Rabi.	
	1892-93, 15 months.	1893-94, 12 months.	1892-93, 15 months.	1893-94, 12 months.	1892-93, 15 months.	1893-94, 12 months.	1892-93, 15 months.	1893-94, 12 months.
Sukkur	479	513	2,523	1,953	1,091	1,596	10,408	8,004
Naushahro	240	453	2,668	2,290	636	1,305	7,925	7,178
Hyderabad	146	105	1,027	1,022	542	166	2,994	651

Total ...	1,244	1,290	6,271	5,824	3,707	3,739	21,464	15,983

115. It has always been the practice for years past to grant land for cultivation in forest limits as a reward to those men who render the Forest Department aid in various ways.

CHAPTER IV.

FINANCIAL RESULTS.

116. The following is a comparative statement of receipts and expenditure for the financial years 1892-93 and 1893-94:—

Receipts and Expenditure.

	Actuals, 1892-93.	Actuals, 1893-94.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Receipts	6,81,223	6,88,796	7,573
<i>Expenditure—</i>				
A.—Conservancy and Works	3,66,488	3,45,952	20,536
B.—Establishment	98,765	1,06,597	7,832
Total Expenditure	4,65,253	4,52,549	12,704
Net Revenue	2,15,970	2,36,247	20,277

117. The figures for the forest year are as follows :—

	15 months actuals', 1892-93.	12 months actuals', 1893-94.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Receipts	7,91,031	6,79,251	11,780
<i>Expenditure—</i>				
A.—Conservancy and Works	4,19,135	3,50,195	68,940
B.—Establishment	1,25,196	1,08,274	16,922
Total expenditure	5,44,331	4,58,469	85,862
Net revenue	2,46,700	2,20,782	25,918

118. The financial year's results show a surplus of Rs. 2,36,247 (or Rs. 20,277 more than in 1892-93) which gives a net revenue of 6 annas per acre. The results of the forest year are a net revenue of Rs. 0-5-7 per acre.

119. It is interesting to note that the net revenue from the Sind Forest is higher than in any other Circle in Bombay, or in any Province under the Government of India, probably higher also than in any Circle in Madras, but figures for that Presidency are not at hand. The following statement shows the net revenue of the different Provinces taken from the annual reports for 1892-93 :—

Name of Province.	Net revenue per acre.	Remarks.
	Rs. A. P.	
Burma	0 2 9	
Punjab	0 1 11	
Assam	0 0 4	
Coorg	0 3 0	
Northern Circle, Bombay	0 5 11	
Central	0 0 11	
Southern	0 2 5	
Sind	0 6 3	

120. It ought to be mentioned that a certain portion of the net revenue derived in Sind is from the royalty obtained on wood taken from the waste lands and sold to the railway ; but the value of this is very small, indeed, and scarcely worth mention.

121. The following table shows the revenue and outstandings at the end of the period under report as well as at the end of the financial year :—

Division.	REVENUE.		OUTSTANDINGS.	
	Forest year.	Financial year.	Forest year.	Financial year.
	Rs.	Rs.	Rs.	Rs.
Sukkur	2,05,535	2,16,540	27,815	115
Naushahro	1,06,061	1,04,465	1,101	849
Hyderabad	2,12,201	2,02,703	4,497	843
Jerruck	1,44,847	1,55,972	5,364	3,330
Thar and Parkar	10,607	9,116	138	819
Total	6,79,251	6,88,796	38,915	5,966

122. Government, in para. 28 of their Resolution No. 5385 of the 23rd June 1894, on last year's report, stated that the financial results in Sind were not satisfactory, and although this at first sight may appear to be the case, still, when the matter is properly explained, this view of the situation, it is hoped, will be modified. The net revenue of the Circle last year, as will be seen, was the highest in India. A factor of the greatest importance and which speaks for itself. Expenditure, it is true, was high as compared to revenue but the expenditure in 1892-93 was as follows :—

A. Conservancy and Works	...	Rs. 3,66,488
B. Establishment	98,765
		<hr/>
		Total Rs. 4,65,253
		<hr/> <hr/>

which shows that the cause for heavy expenditure was due to cost of works in connection with the exploitation of the forests. A very large proportion of the material disposed of in Sind is supplied to the North-Western Railway, and to obtain a surplus of Rs. 12 per stack of wood Rs. 27 on an average have to be spent, which shows the percentage of expenditure against revenue to be 69. If the Forest Department continue their supplies under the present system, namely, of securing Rs. 12 royalty on each stack over and above the actual cost of cutting and delivery of wood (which arrangement was settled by Sir Charles Pritchard at a Conference held at Sukkur in 1889) this high expenditure will always be maintained.

123. The great feature about the heavy expenditure in Sind, however, hitherto has been that it has enabled the resources of the forest to be developed to a very great extent (31 cubic feet of wood per acre was extracted in 1892-93 as against very small amounts in the other Circles, *vide* para. 107.) Formerly the development of the resources of the forests, however, had to be encouraged, and it was necessary to bring material to the doors of purchasers at Government expense; but now and for the past ten years the demands have increased so enormously that the Forest Department can, it is thought, afford to ask purchasers to come to them for fuel and timber in forests, and this plan is being resorted to wherever possible. For instance, a minor arrangement is just being entered into with the railway for the supply of three laks cubic feet of fuel from the forests through a contractor on the following terms :—

124. The Forest Department will cut the wood, say, at Rs. 12 per 1,000 cubic feet, and sell it to the contractor for Rs. 24, causing expenditure to be Rs. 50 per cent. The contractor will convey the wood at his own expense and sell it to the North-Western Railway at Rs. 46, the latter is a rate accepted by the railway for the supply of wood by Government Agency; but a glance at the arrangement will show that if the Forest Department supplied the wood to the railway, that is, carried it themselves and delivered it to that body through Mr. Clarkson, and were paid for it by book transfer, expenditure necessary to be incurred to obtain a profit of Rs. 12, would be Rs. 12 for cutting plus Rs. 22 for boating, namely, Rs. 34, or 74 per cent. against the revenue; whereas supplying it through the contractor in the manner explained means 26 per cent. less expenditure. In this manner it is hoped charges will be kept down generally.

CHAPTER V.

FOREST ADMINISTRATION.

125. Forest administration was carried out during the year by Mr. Hexton, Deputy Conservator of Forests, Sind Circle, and the following officers :—

Name.	Division.	From	To	Remarks.
Mr. J. Baptista ...	Sukkur ...	1st July 1893 ...	25th August 1893.	
„ G. M. Ryan ...	„ ...	26th August 1893...	24th April 1894.	Mr. Tuljaram, Extra Assistant Conservator of Forests served as an assistant to Mr. Ryan during the year.
„ B. H. Dalal ...	„ ...	25th April 1894 ...	30th June 1894.	
„ O. L. H. Napier ...	Naushahro ...	1st July 1893 ...	30th June 1894.	
„ Showkiram Pribdas ...	Hyderabad ...	Do. ...	Do. ...	
„ G. M. Ryan ...	Jerruk ...	Do. ...	Do. ...	

126. The normal strength of the controlling staff is a Deputy Conservator with five assistants, two being on the upper controlling staff.

127. Mr. Hexton proceeded on 2 months and 28 days' privilege leave on the 28th June 1894, and Mr. G. M. Ryan acted as Deputy Conservator of Forests, Sind Circle, in addition to his own duties as Divisional Forest Officer, Jerruck. Messrs. Ryan, Napier and Showkiram remained in charge of their respective Divisions throughout the year.

128. Mr. Baptista, Extra Assistant Conservator of Forests, was in the Circle in the early part of the year in charge of the Sukkur Division; but he proceeded on two months' privilege leave on the 25th August 1893, and on his return (25th October 1893) was not allowed to reassume charge of Sukkur, because of being considered quite unfit for such independent charge. He was accordingly placed under the orders of Mr Ryan, Divisional Forest Officer, Jerruck, who was appointed to the charge of Sukkur in addition to his own duties from the date Mr. Baptista proceeded on leave. Mr. Ryan, therefore, from the 26th August 1893 was in charge of Sukkur and Jerruck with Mr Tuljaram as an Assistant, and from 27th November 1893 he had Mr. Baptista also as an Assistant till Mr. Dalal came (25th April 1894), when the charge of Sukkur was given up to him.

129. Mr. Baptista was reduced to the rank of Ranger (17th March 1894) for insubordination and general misconduct (*vide* Government Resolution No. 2026 of the 17th March 1894), and subsequently of his own accord resigned the service.

130. There are five Rangers, 18 Foresters, 306 Forest Guards on the permanent establishment, and 11 Forest Guards on the temporary staff.

131. The area of forest each Forest Guard is under the necessity of looking after is, therefore, 1982 acres. The permanent protective and office staff are maintained at a cost of Rs. 47,332 (1892-93), and if compared with the establishment kept in the adjacent Province, namely, the Punjab, where the amount of work required to be done by the subordinates must be the same as in Sind, judging from the quantity of material extracted per acre (*vide* para. 107) the cost of maintenance of the protective and office staff proportionately would need augmenting in Sind to Rs. 75,000 a year.

132. Two students passed through the Poona College and reported themselves for duty and with the sanction of Government (Resolution No. 2356, of the 31st Mach 1894) were appointed forest apprentices on Rs. 20 per mensem, pending being permanently attached to the department. There are now in all 8 men serving in Sind who have passed through the Poona College and who are all doing well except one who was reported on as being very lazy.

133. It is a pleasure to report that the general conduct of all the Range Forest Officers in the Circle was satisfactory with one exception, and that was in the Jerruck Division, where a Range Forest Officer was reduced for neglect of duty under Mr. Hexton's orders.

134. Among the members of the protective staff one ghat munshhi was dismissed for suspected dishonesty in connection with the collection of revenue at the Shikarpur Ghat (see para. 64) and another was convicted of misappropriation of Government funds at the same place and sentenced to 9 months' rigorous imprisonment.

135. Mr. Napier, in charge of Naushahro, who joined the Forest Department on the 21st December 1891, passed all the examinations required for promotion to the rank of Assistant Conservator, 1st Grade, by October 1893, and was accordingly promoted to that grade from 12th April 1893. He has, it will be seen, qualified very quickly and has proved himself to be an active and capable Forest Officer.

136. Mr. Dalal, who joined the Sind Circle on the 25th April 1894, has worked hard and well, and considering that Sukkur is his first independent charge, he has shown tact and care in its management.

137. Messrs. Shoukiram, in charge of Hyderabad, and Tuljaram, Extra Assistant Conservator of Forests, Jerruck, have both given satisfaction in the performance of their duties.

138. The office establishment, which consists of 1 Accountant, 1 Head Clerk, 1 Assistant and 1 Vernacular Munshi, has done exceedingly well during the year. The Accountant, Mr. Parmanand, and Head Clerk, Mr. Parmanand, especially, are deserving of mention.

139. The lands proposed for forests under section 4 in Thar and Parkar amount to 186 square miles, and are under the management of the Revenue Department. The total revenue from these proposed forest lands for the forest year amounted to Rs. 10,607, and expenditure to Rs. 4,426, showing a percentage of surplus over gross revenue of 57, which is satisfactory. The receipts and expenditure are credited and debited respectively to forest accounts, which are submitted to the Deputy Conservator, who is the controlling officer, for the purpose of carrying out the provisions of the Forest Department Code. Details of management, and the amount of material extracted per acre are not available for inclusion in this report.

140. Mr. Hexton inspected the important forest in each Division and examined all the offices of the Divisional Forest Officers during the year. He has left no remarks on record regarding the administration, hoping to have written this report himself after his return from leave (25 September 1894), but ill-health unfortunately prevented him from carrying out his intention, and it is with much sorrow that his melancholy death, on the 10th instant, has to be reported.

G. M. RYAN,
Acting Deputy Conservator of Forests,
Sind Circle.

No. 4961 of 1894.

REVENUE DEPARTMENT.

*Commissioner's Office,**Karachi, 30th November 1894.**Review of the Forest Administration Report for the year ending
30th June 1894.*

In forwarding the accompanying report to Government, the Commissioner in Sind, while regretting that it should be a little late, has the honour to explain that at first it was hoped the late Mr. Hexton might be able to write, or at least to revise it, but this hope proved delusive, so, at the Commissioner's suggestion, Mr. Ryan undertook and completed it, though he was not actually in charge of the circle between Mr. Hexton's arrival and his death; and, though working under many difficulties, the Commissioner considers he has executed his task in a creditable manner.

2. The area added to Sind Forests was 1,074 acres in the Ghotki Taluka, and 117 acres of protected forest were given up to cultivation in the Jerruck Division. There were also 2 acres of the Gaji Dero Reserved Forest handed over to the Public Works Department during the year, but as they have not been formally disforested, they are not omitted in the return. The total area included in reserved forests is 976 square miles and 483 acres, and 4 square miles and 555 acres in protected forests. It must be noted, however, that up to the 30th June, 35,169 acres, notified during the year, and 33,681 acres, notified during the years 1886-93, under Section 4 of the Forest Act were awaiting final disposal, and 30,000 acres in the Kashmor Taluka were notified shortly after the conclusion of the year. The Forest Settlement Officer, who was appointed in October 1892, and took up his new duties on 23rd November, will submit a detailed report of his work as promised in the Commissioner's letter No. 2644 of 6th July 1894, after his duties are completed. Consequently no account of the work he has done has been embodied in the Administration Report. He was originally appointed for two years, ending with November 22nd 1894. His term of office was extended to December 31st, by Government Resolution No. 6145 of 20th July 1894, and the Commissioner has asked that it may be further extended for a little time beyond the 31st December, say, to the end of March 1895, in order that the areas notified under Section 4 may be settled by Mr. Barrow, though he will not, even then, have time to demarcate all the new areas. The Commissioner anticipates that a little over a lakh of acres will have been added to the forest area by that time.

3. It was estimated that 668 acres, were lost, mostly by erosion, and that 11,803 acres were added by the vagaries of the river. The former figure is probably fairly accurate, the latter is merely a guess-work estimate of kacha land which may not be serviceable for some years, and is very liable to be eroded again. Mr. Ryan pleads for more surveyors to map out and measure these areas. This may or may not be necessary, but should form the subject of a separate reference. The eroded portions have in many cases been already surveyed, and the exact area is known. As for new kachas, the Commissioner does not see any need for sub-dividing them till they are sufficiently established to carry boundary marks which will not be washed away, but it is of great importance that their outer boundaries should be mapped and made secure from encroachment by cultivators. This, however, is a question of administration in which the Superintendent, Land Records and Agriculture, will probably be able to help, but it need not be discussed in an administration report. Mr. Ryan also discusses the oft-repeated theme that the river embankments are injurious to inland forests, and that as the Sind Forest Department has earned profits of 42.5% on the capital expended on it during the past 22 years, the extension of forests is desirable. But anything heroic in the way of bund-making is out of the question, and the section and alignment of river bunds depends on a great many

other things besides forests. The Irrigation Department is only too happy when it can find a forest behind which it can establish a bund, though even in such cases the result is not always satisfactory.

4. The forest areas are divided as far as possible into square blocks of 160 acres, which are sometimes, if very thick, sub-divided into blocks of 40 acres. This important work appears not to be progressing so fast as is to be desired. Only 72 miles of rides, from 15 to 30 feet wide, have been cut during the year at a cost of Rs. 1,060. In fact, only 9,000 acres out of $1\frac{1}{2}$ lakhs that still remain, mostly in Sukkur and Naushahro, were so treated. The regular cutting of coupés in their turn is often seriously interfered with by the action of the river, and this makes the adherence to any plan rather difficult. In some places timber has to be cut at short notice to prevent its being lost by erosion. In another part the setting of the river prevents boats from reaching a coupé which was intended for cutting, and it has to be left, as the cost of carriage to the water-side is too great. The account of what has actually been done according to the working plan is, however, not very lucid. The fault, if there has been any in the past, is that the Forest Department has cut all the nearest forests to the railway and has now only distant ones to go to, the carriage from which is expensive.

5. The remarks further on in the report on "the improvement of forest growth" fill a large number of paras. full of information, but more suitable for a gazetteer than an administration report. It appears that, in view to aiding natural reproduction some 2,300 maunds of babul and kandi seed were collected and sown over 12,000 acres mostly in Upper Sind. A few hundred acres of tali trees would be very valuable. Next year, the Deputy Conservator will, it is hoped, give more information as to the actual measures taken for artificially extending forests, especially as to the sowing of the bare patches which ought to be in the course of gradual resumption from the cultivators. The remarks regarding the utility of the "ak" plant are interesting. Its fibre is well known to be extremely valuable, but the extraction of it is most expensive, and it is doubtful whether any machine could be made to peel its irregular woody stems. However, there is no objection to Mr. Ryan making an experiment with it in his leisure hours.

6. The number of forest cases taken before Magistrates was 48 for 12 months, which is a slight increase on the previous year's figure, 50 for 15 months. The percentage of convictions is much the same. The one serious case mentioned of theft of timber occurred in 1892-93, but was disposed of during the year under report. The decrease in the number of cases of illicit grazing compounded under the Forest Act, allowing for the difference of time with which the two years' reports deal, is remarkable in every division except Jerruck, where the number is much the same as in 1891-92. In Hyderabad they fell from 243 to 54, and in Sukkur to 606 from 1,199. Even though no explanation is given, the Commissioner attributes this result to the Forest Department having treated the people adjoining the forests with consideration in accordance with the orders of Government. Similarly with thefts, these have fallen from 175 to 23 in Sukkur, and from 34 to 4 in Jerruck. On the other hand the number of cattle impounded is proportionately larger though not to any great extent, in the year under report than in the last, *viz.*, 25,857 against 21,671. The number of cattle found trespassing in closed areas was 15,986 compared with 14,129. From the latter figures it seems probable that illicit grazing has not declined, and it is possible, judging by the remarks on the conduct of forest guards in para. 76 and 77 of the report, that they are responsible for the decrease in the figures under the head of "illicit grazing." The grazing fees are low in Sind, and the penalties for infringing rules are light. But the Commissioner will enquire whether the recent orders of the Government of India require any supplementing. Para. 77 of the report shows that the Forest Department's relations with those who live in the forests are on a good footing.

7. The floods are held responsible for the increase in the number of forest fires, as the coarse grass that springs up becomes like tinder when the ground dries, and, as usual, there were many more in the Sukkur Division than else-

where. Only in one case detection followed, and this was still undisposed of. Probably most of them are accidental. When it is suspected that forest grass has been fired in order to obtain a supply of succulent young shoots, the plan adopted in the Jerruck Division of closing the burnt area to grazing, may after a time have the desired effect.

8. The record of the year from a financial point of view shows an improvement on 1892-93. The gross receipts, Rs. 6,88,796-4-10, were Rs. 7,573 larger, and the total expenditure, Rs. 4,52,549-3-6, was Rs. 12,704 less than that of 1892-93. The net revenue was Rs. 2,36,247-1-4 as compared with Rs. 2,15,970 in 1892-93. The receipts from timber and grazing fees were higher and those from firewood and charcoal (by far the largest item of income) and minor produce, were lower than in the previous year. The expenditure on works and conservancy, Rs. 3,45,952, was lower than the figures for 1892-93, Rs. 3,66,488. Owing to the increasing demand for wood, the Deputy Conservator states that the plan of making purchasers arrange for their own cutting and delivery, that is, of buying the wood as it stands, appears to be more feasible than formerly. This will reduce the working expenses. At present the North-Western Railway is by far the largest purchaser, and under the existing arrangements the Department undertakes the cutting and delivery for them, the charges for which are bound to increase as the more accessible forests are worked out, as they certainly have been to some extent. The small decrease in working expenses is probably due to the smaller purchases of the North-Western Railway mentioned below more than anything else. The Deputy Conservator alludes, in para. 69, to a saving of Rs. 17,273 made by the departmental system, which really means the employment of petty contractors under the Range Forest Officers, who, by a system of advances, get the wood cut more cheaply than it used to be through large contractors. This system is still on its trial, and the Commissioner will say no more about it in this place, except that he hopes Mr. Desai will thoroughly test it and its financial results, as a system of giving large advances through subordinates will at any rate require careful supervision and check of a very special character.

9. The Commissioner cannot help observing in this place that the different systems of working Forests in Sind and other places rather handicap the Sind Forests when the financial results are compared. If a coupé in Thana is to be cut, the standing timber is sold to a Bombay borah, who cuts and removes it on his own account, and the net sum, say, Rs. 2,000, is credited to the Forest Department with little or no expenditure *per contra*. In Sind, owing to circumstances which need not be gone into, the Department cuts, divides into lengths, trims, conveys and delivers the timber to the purchasers, the principal of whom is the railway. Its net profit is perhaps more than in Thana, but it has to show in its accounts Rs. 6,000 as expended and Rs. 9,000 as received. Thus, though the net Sind revenue is larger, its expenditure appears very high and has to be budgetted for. Were the Deputy Conservator merely given an adequate permanent advance, to be reduced as he sees his way to employing contractors, the expenditure and net revenue of Sind would compare very favourably with any Forest Circle in India.

10. The total yield under the heads of timber, firewood and charcoal in the past three years has been—

	1891-92.	1892-93. 15 months.	1893-94.
Timber C. ft.	239,730	250,520	269,146
Firewood and charcoal	17,926,261	19,686,534	17,781,588
Firewood Mds.	3,008,027	3,133,741	2,627,275
Charcoal	58,677	75,267	91,922

It appears from these figures that the outturn of timber has been steadily increasing, also that of charcoal, but there has been a sensible decline in the yield of firewood, though it is slightly better in 1893-94 than in 1892-93. Turning to the tables in an earlier part of Chapter III, it seems that the outturn of posts and rafters has declined, and that it is the outturn of timber, proper,

including sleepers, that has risen. The number of cubic feet of timber disposed of during the past three years has been—

1891-92.	1892-93 (15 months).	1893-94.
40,033	53,274	64,204

The remark that the increase is due to sales in Upper Sind does not appear altogether correct. The sales at Rohri and Shikarpur, which form a very small part of the total disposed of, have increased, it is true, from 1890 to 3,434, and from 176 to 1,143 respectively. The sales at Sukkur have decreased. The increase of the year is principally at Hyderabad, where the figures for the past three years have been 3,380, 13,884 and 19,826 cubic ft. The balance in stock at depôts at the end of the year was under the mark, except under the head of timber, which has increased, especially at Sukkur. The Deputy Conservator states that where the "share" system exists, careful watch is kept to prevent the overstocking of depôts.

11. The principal purchaser of firewood, as usual, is the North-Western Railway, but this has taken only 1,283,054 maunds compared with 1,863,527 maunds in 1891-92, and *1,692,215 in 1892-93. It is admitted that the Forest Department cannot meet the demands of the railway and it only supplied half the quantity indented for. The Commissariat Department took more, and a new purchaser, cotton ginning-engines, is entered, to whom 200,700 maunds were sold. It is hoped that the additional area which is being granted to the Forest Department will place them in a little better position; but as they have been allowed to cut freely even in areas not under their charge, it would be too much to expect any great difference for some little time. The Commissioner would like to see the details of the figures given in para. 88, as his impression is, that a good deal more must be cut in "revenue jungles" than that paragraph admits. The depletion of the forests, is indeed, a matter of grave concern, and the North-Western Railway must be prepared to pay higher if they continue to burn wood, until the nearer forests have recovered. It is to be hoped, however, that the produce of some of the Khairpur jungles will soon be at their disposal, which will relieve the strain on the Government Forests and after all the prices which the North-Western Railway will have to pay will be less than they pay for fuel elsewhere on occasions. The employment of a European contractor for delivering to the railway, who is capable of dealing with the European railway officials, has worked, it is stated, very well, and prevented the friction which the employment of Range Forest Officers on the duty was sure to give rise to. It is very satisfactory that the railway administration showed itself willing to aid itself, by employing one of its laid-up-steamers, Tug D, to bring up fuel from the Jerruck forests below Kotri. This arrangement should be continued. The Commissioner believes also he has shown that if a light railway (the proposals for which are before Government) were made from Jungshahi to Tatta and the River Bank beyond, the branch railway would pay well by supplying fuel to the main North-Western Railway alone, and enabling the Delta Forests to be exploited. Unquestionably the highest public interests are served in giving cheap fuel to the railway. As British Baluchistan depends on Sind for its fuel, the Commissioner has directed separate forests near Rohri to be reserved for that purpose exclusively. He is also carefully reserving about 27,000 acres of land on the line between Ruk and Jacobabad which will one day be irrigated and give a magnificent yield of fuel and timber for the same object.

12. The revenue derived from grazing fees really shows an improvement on the year 1892-93, taking the difference of 3 months into consideration, but they are less than the receipts of 1890-91 and 1891-92. A census of animals has been made during the past 3 years. Some of the figures, *viz.*, of animals grazing in the forests are obtained from Forest Officers. The Commissioner cannot hope that they are very accurate, but they might be of some use in checking the number of animals belonging to villages which have the privilege of free grazing.

*This is for 15 months. Four-fifths of this is 1,353,772.

13. The area under cereal cultivation during the 12 months in 1893-94, amounted to acres 6,614, as against acres 7,515, during the 15 months in 1892-93. The assessment realised during the two periods was Rs. 19,722 and Rs. 25,171, respectively. The figures for 1893-94 show a decrease both as regards cultivation and revenue, but they appertain to a period shorter by 3 months. The Commissioner is of opinion that the cultivation of cereals within forests should be discouraged as much as possible, and in special cases where permission to cultivate is granted it should be given to *bunnyadi* zamindars in the deh and not to outsiders.

14. With the exception of one officer who subsequently resigned the service, the Commissioner has much pleasure in stating his satisfaction at the manner in which the Department has been administered, and in concluding would again deplore the loss the Province has sustained by the recent death of Mr. Hexton, who spent most of his service in Sind, and was head of the Department during the past $4\frac{1}{2}$ years.

15. The report should in future be indexed and the contents of each paragraph given in the margin, for facility of reference.

16. The Commissioner will only conclude with an expression of the hope that the Conservator's appointment may be recreated, as every year the Department in Sind becomes more important and more difficult to administer.

J. SLADEN,
for Commissioner in Sind.

STATEMENT A.

Areas notified under Section 4 of the Forest Act since 1886.

Name of Forest Block.	Taluka.	Area.		Year in which notified.
