INDEX TO THE CORRESPONDENCE RELATING TO THE REVISION SURVEY SETTLEMENT OF 109 GOVERNMENT VILLAGES OF THE SÁTARA TÁLUKA OF THE SÁTARA COLLECTORATE.

	Paras.	Pages.		Paras.	Pages.
Letter No. 628, dated 13th May 1893, from the Acting Superintendent, Deccan Revenue Survey, to the Collector of Sátara, submitting proposals for the revision survey settlement of 109 Government villages of the Sátara Táluka of the Sátara Collectorate	1-15			
CONTENTS.			APPENDICES.		
Introduction	1	...	Appendix A.—Statement of rainfall	16
Constitution of the Táluka at the time of the original settlement and the several changes that have since taken place	2	...	„ B.—Details of cultivation and crops	17
Present constitution of the táluka	3	...	„ C.—Showing the villages in which the principal weekly bazárs are held	18
Dates of original settlement	4	...	Appendices D(1) and D(2).—Details of population	19-20
Former and revision survey operations	5	...	Appendix E.—Occupation of the people	20
Differences found in individual numbers	6	...	„ F.—Showing the agricultural stock	21
Re-classification	7	...	„ G.—Showing shops, looms and temples and average births, deaths and vaccination	22
Area	8	...	„ H.—Showing the number of schools together with their average attendance	23
Position and physical features... ..	9	...	„ I.—Showing the proportion of Government occupied and Inam lands cultivated by occupants and sub-tenants	23
Climate	10	...	„ J.—Showing wells, budkis, tanks and other sources of water-supply	24
Crops	11-12	...	„ K(1).—Showing ordinary sales	25
Communications... ..	13	...	„ K(2).—Showing sales by Court...	ib.
Tolls	14	...	„ L.—Showing sub-lettings...	ib.
Markets	15	...	„ M(1).—Showing simple mortgages	26
Exports and imports	16	...	„ M(2).—Showing mortgages with possession	ib.
Agricultural statistics	17	...	„ N.—Showing the prices prevalent for the last 40 years	27
Population	18	...	Appendices O(1) to O(4).—Revenue History	28-31
Cattle for plough and other purposes... ..	19	...	Appendix Q.—Showing the results of the proposed rates	32-36
Cows, buffaloes and their young	ib.	...	„ R.—Correspondence relating to the original survey settlement of the táluka	36-63
Sheep and goats... ..	ib.	...	Letter No. 7099, dated 30th August 1893, from the Collector of Sátara to the Survey Commissioner and Director, Land Records and Agriculture, forwarding with his remarks the above correspondence	64
Carts	20	...	Letter No. B.—2498, dated 27th October 1893, from the Survey Commissioner and Director, Land Records and Agriculture, to the Chief Secretary to Government, submitting with his remarks the above correspondence through the Commissioner, C. D....	65-66
Horses and ponies	ib.	...	Memorandum No. B.—5538, dated 19th December 1893, from the Commissioner, C. D., submitting with his remarks the above correspondence for the orders of Government	67
Wells and budkis	21	...	Government Resolution No. 1899, dated 13th March 1894, passing orders on the above correspondence...	68-69
Agricultural statistics as arranged according to groups	22-23	...			
Schools	24	...			
Sub-tenures	25	...			
Value of land	26	...			
Ordinary sales	27	...			
Sales by Court	28	...			
Sub-lettings	29	...			
Simple mortgages	30-31	...			
Mortgages with possession	ib.	...			
Prices	32	...			
Revenue history... ..	33	...			
Amount of pressure used in collecting revenue	34	...			
Summary... ..	35	...			
Old grouping and rates... ..	36	...			
Proposed grouping and rates	37-38	...			
Rice lands	39	...			
Garden lands, Patasthal and Motasthal	40-42	...			
Lands irrigated from the Revdi Bandhára	43	...			
Estimated result of the proposed rates	44	...			
Estimated result excluding water cess... ..	ib.	...			
Villages in which the prescribed limit of enhancement is exceeded	45	...			
Total area and assessment of the villages according to the original and revision survey	46	...			
Incidence of assessment per acre	47	...			
Conclusion and guarantee	48	...			

and in the following table are shown the causes to which the more important differences may be attributed :—

Total old Numbers in which difference exceeded 15 per cent.	NUMBERS IN WHICH DIFFERENCE IS ATTRIBUTABLE TO			
	Alluvion or Diluvion.	Alterations in Roads.	Mistakes in old work.	Other Reasons.
1	2	3	4	5
269	239	11	8	11

From the above figures it may rightly be inferred that the quality of the old work was exceptionally good.

7. The process adopted and approved of in preceding revision settlements of Tálukas of the Sátára and Khándesh Collectorates has been applied to this Táluka also. The old classification has been accepted for the basis of the new settlement, with a graduated addition made to each field in proportion to its advantages with regard to moisture. All new numbers made at revision survey by a re-division of old numbers have had the old classification adjusted to them. Lands brought under irrigation during the currency of the present lease have been re-classed both for soil and water, old Pátasthal lands being re-classed for water only. The very large number of Bandhárás in this Táluka has entailed a great deal of time in their careful examination and obtaining detailed information as to the capabilities of each Bandhára and the areas irrigated. In addition to the above all corrections rendered necessary by new roads, streams changing their course, &c., have been made and the present record made complete up to date. In the subjoined table details are given of the soil classification work done in all the 109 villages under report :—

Number of Villages.	Total Survey Numbers and Pot Numbers.	Total Acres.	RE-CLASSED.		PERCENTAGE.		Village sites, Roads, &c., not re-classed. Acres.
			Survey Numbers.	Acres.	Survey Numbers.	Acres.	
1	2	3	4	5	6	7	8
109	21,735	1,45,000	3,442	8,197	15.8	5.7	5,975

8. The areas obtained by revision survey under each head are contrasted in the following table with those of the original record :—

Description.	By Original Survey.	By Revision Survey.	DIFFERENCE.	
			More.	Loss.
			4	5
1	2	3	4	5
	Acres.	Acres.	Acres.	Acres.
Dry-crop	1,09,576	1,03,281	...	6,295
Garden... ..	4,645	9,971	5,326	...
Rice	2,122	2,624	502	...
Unassessed	34,775	35,099	324	...
Total	1,51,118	1,50,975	6,152	6,295

The difference in the two totals is merely nominal, the area by revision showing a decrease of 143 acres only. The decrease of 6,295 acres under the head of dry-crop is made up by a very large increase under the head of garden, almost the whole area having been brought under irrigation by stream water, and in a small measure by an increase under the head of rice.

9. Sātára is the principal Táluka of the Sātára Collectorate and has two distinct divisions as will be seen from the map, open plain country on the East and hilly lands on the West. It is bounded on the North by portions of the "Jávli" and "Wái" Tálukas; on the South partly by the "Pátan" and "Karád" Tálukas; on the East by the Koregaon Táluka, from which, for about half the distance it is separated by the river Krishna, and on the West by portion of the Jávli Táluka. The Táluka is of a somewhat irregular shape but compact. Its greatest length from North to South is 26 miles and its greatest breadth from East to West 23 miles. The district is well watered. Its chief river,

the Krishna, enters the Táluka on the North near "Marda," and taking a South-Easterly course after being joined by its tributary, the Vena river, near the village of Sangam Máhuli, passes out of the Táluka near Chinchner, and then, as above stated, forms the South-Eastern boundary of the district. The Urmodi river has its source in the Western gháts and in its South-Easterly course, after being fed by many Nálas, joins the Krishna near the village of Kásil on the extreme Southern boundary. Besides the above-mentioned rivers there are numerous rivulets, which, though not large, are of importance as they are utilized for irrigation by the construction of many Kacha Bandhárás across them.

The soils are of a varied description from a light friable kind in the Western ghát villages to a rich black clayey loam in the East. The latter is of good depth and very fertile. A richer description of soil is met with on the banks of streams as well as in low-lying positions.

10. The rainfall varies considerably. In the plains it is certain, generally ample and equable, and well suited for both the early and late crops, while in the West, especially in the villages on the gháts, it is too copious for continuous dry-crop cultivation and only suited for hill grains, such as "Náchni", "Wari", "Sáva", "Banti" and rice. From Appendix A, prepared from figures obtained from the office of the Director of Land Records and Agriculture, it will be seen that the average rainfall during the 11 years from 1881 to 1891, gauged at Sātára, is 44' 60"; the heaviest fall occurring generally during the month of July and averaging 16' 87", with 6' 80" in June and 6' 28" in August. The months of September and October come next in order with 4' 84" and 4' 35" respectively. This information generally agrees with that given in Captain Anderson's report* on the introduction of the 1st survey settlement, which is printed as an appendix attached to this report, and there is no doubt that except Jávli the Sātára Táluka possesses the best rainfall in the Collectorate, as well as an exceedingly good climate.

* Report No. 553, dated 24th December 1861— See Appendix R.

11. The following statement, which is a précis of Appendix B, shows the different crops grown in the Táluka during the last five years and the proportionate area covered by each, the figures for which have been obtained from the Director of Land Records and Agriculture:—

	Percentage of cultivated Area.
<i>Cereals</i> —Jowári 34·0, Bájri 17·8, coarse grains 6·0, wheat 2·7, paddy 2·4, &c., 0·4	63·3
<i>Pulses</i> —Gram 4·2, Mug and Udíd 4·0, Math and Kulith 2·3, Tur 2·2, &c., 0·3	13·0
<i>Fibres</i> —Ambádi 0·6	0·6
<i>Oil-seeds</i> —Ground-nut 4·2, safflower-seed 1·2, niger-seed 0·9, linseed, &c. 0·1	6·4
<i>Orchard and Garden Cultivation</i> —Vegetables 0·4, fruit trees, &c. 0·1	0·5
<i>Miscellaneous</i> —Condiments and spices 1·3, sugarcane, &c. 0·8	2·1
	Total gross area cropped ... 85·9
<i>Deduct</i> —Area twice cropped	7·2
	Remainder net area cropped ... 78·7
<i>Add</i> —Fallow	21·3
	Total ... 100·0

12. The preponderance, it will be seen, is entirely on the side of the "Kharif", or early crops, being in the proportion of 70 per cent. of the whole. The chief agricultural product is jowári (34.0 per cent.) which is the staple food-grain of the people, and Bájri comes next with 17.8 per cent. Under the head of pulses, gram is the principal crop, 4.2 per cent., and under the head of oil-seeds, ground-nut shows a similar percentage. The other crops grown to make up the gross cropped area 85.9 per cent. of the occupied area, are unimportant and too small in quantity to need further notice. The area of land twice cropped bears a proportion of 7.2 per cent. which leaves the net area cropped 78.7 per cent. with 21.3 per cent. fallow. This latter seems a somewhat large percentage, but not out of proportion, considering the very hilly nature of the country on the Western portion of the Taluka where cultivation is non-continuous.

Of the total area, 8,626 acres shown as irrigated in column 11 of Statement B, 247 acres receive water from the Revdi irrigation Bandhára, and the remaining 8,379 acres from other sources. The average of the different crops grown during the five years from 1886-87 to 1890-91 and their respective areas making up the total as per figures obtained from the Agricultural Department are as follows:—

				Acres.
Wheat	1,505
Rice	1,149
Other cereals and pulses	1,729
Sugarcane	897
Other food crops	882
Non-food crops	3,223
Fodder crops	8
Total Area irrigated				9,393
Deduct—Area cropped more than once				767
Total				8,626

It will be observed from the above figures that non-food crops cover the largest area, being more than one-third of the whole. Other cereals and pulses come second, wheat third, rice fourth, sugarcane fifth and other food crops sixth, with but 8 acres of fodder crops only.

The rice of the Sátára District, though not covering a very large area, bears a high name for its excellence and is grown generally throughout the Taluka and every one of the villages comprised in the 2nd and 3rd new groups, which it is intended to propose later on in this report. The superior varieties are:—

- | | | |
|---|---|---|
| <ol style="list-style-type: none"> 1. Tám Sál ... 2. Chiman Sál ... 3. Káli Sál ... 4. Rái Bhog ... 5. Rái ... | } | Prices vary from Rs. 80 to Rs. 100 per khandi of 1,280 seers. |
|---|---|---|

13. With the exception of the ghát villages in the Western portion of the Taluka, where cart traffic is impossible, it will be seen from a reference to Captain Anderson's report on the original settlement that the Sátára District was even then "generally very well as regards made roads." These have been kept up and in some respects improved, and since then have been supplemented by the construction of new roads. A detailed list of all the made roads within the limits of the district is given below. The most important addition, however, in the matter of communications is the Southern Marátha Railway opened in 1886, which runs from North to South, a few miles outside the Eastern boundary of the Taluka, thus placing most of the villages within easy distance of the railway stations of "Sátára road," "Koregaon" and "Rahimatpur."

The under-mentioned roads were in existence at the time of the first settlement and are metalled, culverted and bridged:—

	Length in Miles.
1 Poona-Kolhápúr Road (through Sátára)	27
2 Sátára-Maháleshwar Road from junction of Poona-Kolhápúr Road ...	7½
3 Sátára-Tásgaon Road (from Godoli) thence on to the Rahimatpur Railway Station	10½
4 Sátára-Poona Road	10
5 Sátára-Pandharpur Road, not bridged across the river Krishna, crossed by ferry boat, thence on to the Railway Station of Koregaon ...	6½
6 Sátára-Shendra Road from the tunnel	3½
7 Sátára-Karanja Road	1
To these must be added the Imperial Cantonment Roads ...	8½

Roads made subsequent to the 1st survey settlement:—

8 Road branching off from the Sátára-Poona Road at Vaduth to the "Sátára Road" Railway Station	2
9 Sátára-Kás Tank Road	11
10 Sátára-Parli Road—narrow bridge across the Urmodi River for foot-passengers only	6
11 Road branching off the Poona-Kolhápúr Road at Varya and joining the Sátára-Maháleshwar Road at Ankla	5

Note (1).—Nos. 1, 2 and 6 are Provincial and all the others are Local Fund roads.

Note (2).—Nos. 9, 10 and 11 are murummed only but are bridged across small Nálás.

14. Tolls are levied on the under-mentioned roads and the sums realized by farming them out annually are shown in the following statement for the past three years. The figures have been obtained from the Mámlatdár of Sátára:—

Name of the made Road.	Name of the Toll.	Name of Village within the limits of which the Toll is situate.	Sums realized by farming out the tolls in the year.			Details regarding Subordinate Tolls.
			1890-91.	1891-92.	1892-93.	
1	2	3	4	5	6	7
			Rs.	Rs.	Rs.	
Sátára-Maháleshwar Road ...	Kondhiya Pass Toll ...	Ankla	2,760	2,675	5,680	Has one subordinate toll within the village limits of Chinchni.
Poona-Kolhapur Road ...	Nim Pass Toll ...	Varya	2,160	2,050	2,300	Do. do. Váda.
	Kodoli Pass Toll ...	Shendra	2,800	1,525	2,050	NIL.
Sátára-Poona Road ...	Vaduth-Krishna Bridge Toll.	Arla, near the Krishna Bridge.	5,320	5,465	6,505	Has one subordinate toll within the village limits of Váda.
		Total ...	13,070	11,715	17,115	

15. There are 3 market towns within the limits of the Táluka, Sátára, Parli and Nimb, and a reference to the appendix Markets—Appendix C. noted in the margin will show their relative importance. The local market of the large city of Sátára is of more than usual importance owing to the large number of shops, and the many merchants, traders and people in easy circumstances who reside there. The city is situated nearly in the centre of the Táluka and is a market for every description of produce, whether grain, fodder, or vegetables, and it is also the cattle mart of the district. Bazárs are held there every Monday, Thursday and Saturday, and the total sales during the week realize Rs. 38,010, or an average of Rs. 12,670 on each bazar day. The next bazar of importance is Parli in the Western part of the Táluka, held on Mondays; the average weekly sale amounts to Rs. 655. The third, Nimb, to the North, held on Sundays, is merely of local importance, the average weekly sale not reaching more than Rs. 132. Outside the limits of the Táluka but within easy reach of the district are the market towns of Medha on the North-West, Tária on the South, and Targaon on the South-East.

16. Exports consist generally of all surplus agricultural produce such as grain of all kinds, rice, jagri, earth-nuts, indigo, turmeric, ginger, &c., as well as hides and horus; while Exports and imports.

the imports comprise cloths, Kāmlis, groceries, salt-fish, iron hardware, copper and brass utensils, bangles, salt, kerosine oil, &c. The local industries include the expression of oil from earth-nuts, for which there are in all 270 presses in the district; weaving of cotton fabrics and woollen Kāmlis, for which, however, there are but 60 looms, 32 being used for the

Manufactures. Local industries.

Vide Appendix G.

former and 28 for the latter.

17. The following table is compiled from the appendices noted in the margin, and contrast the present condition of the villages under report with their condition in the year of the survey settlement. The present figures as regards population are taken from the special census taken by the Revenue Department, and the figures for other heads have been obtained from the Agricultural Department, while the old figures are those of the original survey census:—

Description.	At first Settlement.	1891-92	Difference.	Percentage.
1	2	3	4	5
Population	73,248	97,149	23,901	+32·6
Cattle ... { For agricultural purposes ...	13,014	15,390	2,376	+18·3
{ For other purposes ...	1,428	680	748	-52·4
Cows, buffaloes and young ...	24,717	27,320	2,603	+10·5
Sheep and goats	7,894	15,380	7,486	+94·8
Carts	938	1,735	797	+85·0
Horses and ponies... ..	930	1,104	174	+18·7
Wells and Budkis for irrigation ...	447	968	521	+116·6

18. Population has increased 32·6 per cent., much in the same proportion as in the other revised Tālukas, and now shows a density of 412 to the square mile. The proportion of these 109 villages contain 236 square miles. occupied acres to each head of population now is 1·2 as against 1·5 at the time of the former settlement.

19. There is a fair increase under this head, 18·3 per cent., which by the usual method of calculation is equal to 1 pair of bullocks to 12 acres of cultivation,—a very high proportion. Cattle for breeding and other purposes have increased by 52·4 per cent., probably owing to improved communications and by the supersession of pack bullocks by carts. Milch Cows, buffaloes and their young have increased by 10·5 per cent., and sheep and goats, and sheep and goats by 94·8 per cent.

20. Under this head the increase is very large and it is a very satisfactory proof of the immense development of trade and of consequent benefit to the rayats. The average of carts per village is now 16, whereas it was 9 at the former settlement. Horses and ponies have increased by 18·7 per cent.

21. The increase under this head also is very large, no less than 116·6 per cent. The area irrigated by wells alone has risen from 548 acres to 2,049 acres, a sure sign of enterprise, and doubtless due to the fact that under the liberal policy of Government all new wells are now exempt from garden assessment. The old records afford no data for wells used for other purposes, but of the total number of wells now in existence, 968 used for irrigation purposes, 579 for drinking and 11 for other purposes, are in good order, while

Vide Appendix J.
331 have fallen into disuse.

22. In the tables given below the statistics, which have just been given in total (paragraph 17) for the whole 109 villages under report, are now repeated under heads of the three groups into which it is proposed later on to divide the Táluka for the purposes of revised assessment. These three groups will be easily understood from the accompanying map by their different colouring:—

Description.	At first Settlement.	1891-92.	Difference.	Percentage.
1	2	3	4	5

Group I, 64 Villages.

Population ...	62,980	84,682	21,702	+ 34.5
Cattle ... { For agricultural purposes	10,518	12,349	1,831	+ 17.4
{ For other purposes	1,301	635	666	- 51.2
Cows, buffaloes and young ...	18,927	22,387	3,460	+ 18.3
Sheep and goats ...	7,256	14,428	7,172	+ 98.8
Carts ...	899	1,629	730	+ 81.2
Horses and ponies ...	865	1,013	148	+ 17.1
Wells and Budkis for irrigation ...	434	948	514	+ 118.4

Group II, 23 Villages.

Population ...	6,717	8,582	1,865	+ 27.8
Cattle ... { For agricultural purposes	1,718	1,944	226	+ 13.2
{ For other purposes	127	45	82	- 64.6
Cows, buffaloes and young ...	3,365	3,177	188	- 5.6
Sheep and goats ...	436	770	334	+ 76.6
Carts ...	39	106	67	+ 171.8
Horses and ponies ...	64	91	27	+ 42.2
Wells and Budkis for irrigation ...	13	19	6	+ 46.2

Group III, 22 Villages.

Population ...	3,551	3,885	334	+ 9.4
Cattle ... { For agricultural purposes	778	1,097	319	+ 41.0
{ For other purposes
Cows, buffaloes and young ...	2,425	1,756	669	- 27.6
Sheep and goats ...	202	182	20	- 9.9
Carts
Horses and ponies ...	1
Wells and Budkis for irrigation	1	1	...

23. It will be observed that all parts of the Táluka have participated in the general progress and that the increase itself is in proportion to the characteristics of the different parts of the Táluka.

24. The Educational Department has, as usual, furnished the information regarding Government schools summarized in Appendix H. From this it appears that there are altogether 31 schools for boys, 14 Government schools, 11 Municipal and 6 private. The average attendance is 632, 1,654 and 485 respectively. There is only one school for girls kept up by the Municipality, the average attendance being 113. The percentage of the total male population able to read or under instruction is now 13.4 against 9.2 at the 1st survey.

Appendices D^(a) and D^(b), column 11.

25. Details regarding sub-tenures will be found in Appendix I. 62.3 per cent. of the total numbers is cultivated by the occupants themselves or in partnership with others; 20.5 per cent. is sub-let for money payments; 15.9 per cent.

Sub-tenures.
Appendix I.

for a share of the produce (grain payment) : 0·5 per cent. of the numbers is waste and 0·8 per cent. unfit for cultivation.

26. The information compiled in the marginally noted appendices has been supplied by the Registration Department. The statements received, however, have been summarized in this office in the form in which they are now submitted. Cases involving houses or any other than landed property have, as usual, been excluded.

27. Appendix K⁽¹⁾ gives 89 cases of ordinary sales, from which it will be seen that in 5, land realized from 1 to 10 times the survey assessment per acre; in 21 cases from 11 to 25 times; in 24 from 26 to 50; in 23 from 51 to 100; and in 16 from 101 to 250 times the survey assessment. The total area sold amounted to 385 acres assessed at Rs. 715, or an average rate of Rs. 1-13-9 per acre, and realized Rs. 27,717, or an average rate per acre of Rs. 71-15-11.

28. Of the 33 cases of sales by Court decree, there are 13 in which the land realized from 1 to 5 times the survey assessment; 9 cases from 6 to 10 times; 12 from 11 to 50 times; 8 from 51 to 100 times; and in one case for a sum equivalent to 125 times. The total area sold amounted to 262 acres assessed at Rs. 472, or an average rate per acre of Rs. 1-12-10 and realized Rs. 7,137, or an average rate per acre of Rs. 27-3-10.

29. There were in all 85 cases of sub-lettings, 66 of which were sub-let from 1 to 5 times; in 16 from 6 to 10 times; in 2 from 11 to 25 times; and one case in which it was equivalent to 40 times the survey assessment. The total area amounts to 680 acres, bearing an assessment of Rs. 1,101, or an average rate per acre of Rs. 1-9-11, and were sub-let for Rs. 3,070, or an average rate per acre of Rs. 4-8-3.

30. Of simple mortgages 83 cases are given. In 3 cases the land was mortgaged from 1 to 10 times the survey assessment; in 40 from 11 to 25 times; in 25 from 26 to 50 times; in 14 from 51 to 100 times; and in one case to a sum equivalent to 109 times the survey assessment. The total area mortgaged amounts to 333 acres bearing an assessment of Rs. 669-6-0, or an average rate per acre of Rs. 2-0-2 and realized Rs. 18,215, or an average rate of Rs. 54-11-2 per acre. There are in all 86 cases of mortgages with possession, of which 31 cases were of lands mortgaged from 1 to 25 times the survey assessment; in 30 cases from 26 to 50 times; in 18 from 51 to 100 times; in 7 cases from 101 to 200 times. The total area mortgaged was 292 acres assessed at Rs. 611, or an average rate of Rs. 2-1-6 per acre, and was mortgaged for Rs. 21,052, or an average rate per acre of Rs. 72-1-6.

31. The only subject of interest in the forwarding letter of the Inspector of Registration regarding the value of land in the Táluka under report is contained in his concluding paragraph 8, which I herewith beg to quote :—

“ 8. If the figures of Statements A and C are taken into consideration it may be said that the saleable and mortgageable value of land in this Táluka is comparatively higher than in the Tálukas of Mán, Khatáv, Koregaon, Vítá (Khánápur), and Tásgaon. From this it could be inferred that possession of land is undoubtedly sought after in a greater degree. The instances of more and less proportions having been found in the above five Tálukas, it does not appear to me that the saleable or mortgageable value with regard to Statements B and D respectively is specially high or specially low. The leaseable value is decidedly lower here than in the Tálukas mentioned above and also in Wái.”

32. Turning to Appendix N, showing the average prices of the principal food-grains prevailing in the Táluka, it would be as well to mention that the figures for the last 4 years, namely, 1888-89 to 1891-92, have been obtained from the Agricultural Department, and as no further data are forthcoming for 4 years,

for 3 of the 10 years previous to the introduction of the survey settlement, and for one year during the 1st decade, the remaining figures have been obtained from the Mámlatdár's record. A précis of the appendix is given below :—

Years.	LRS. OF 39 TOLAS PER RUPEE.				
	Jovári.	Bájri.	Wheat.	Gram.	Rice.
1	2	3	4	5	6
Ten years before settlement, 1851-52—					
1860-61	75½	72	63	61½	38½
First decade of lease, 1861-62—1870-71 ...	33½	31½	24	32½	19
Second do. 1871-72—1880-81 ...	35½	33½	23½	29½	20½
Last 11 years, 1881-82—1891-92 ...	37	33½	27	34½	18

It will be seen from the above that during the 1st decade of the survey lease prices rose from 88 to 162 per cent. The second decade, while showing a fall in Jovári, Bájri and rice, exhibits a rise in wheat and gram. The last 11 years of the lease, as compared with the average prices ruling during the second decade, show a fall in Jovári, wheat and gram, with a rise in Bájri and rice. Comparing, however, the average prices of the last 11 years with those of the 10 years previous to the survey settlement, it is satisfactory to note that there is a rise in each description of grain ranging from 78·8 to 133·3 per cent.

33. The revenue history of the Táluka is given year by year in the appen-

Revenue History and Appendices O⁽¹⁾,
O⁽²⁾, O⁽³⁾, O⁽⁴⁾.
104 villages settled in 1861-62.
Deduct—
3 villages transferred from Karád Táluka
this year (1892-93).

101

old system, i.e. up to 1860-61, permanent and casual remissions had to be given annually, and that the average for 10 years amounted to Rs. 17,807 or about 17·0 per cent. of the assessment, the average collections being Rs. 85,776. The immediate result of the introduction of survey rates of assessment was a reduction of Rs. 6,054 on the average collections of the 10 years under the old system. Captain Anderson fully expected a decrease in the collections by the survey

Report No. 553, dated 24th December 1861.
Vide Appendix R.

settlement for reasons given in the 7th, 8th and 15th paragraphs of his report. A large area of land amounting to 10,531 acres, entered during the first 3 years of the survey settlement as Government, were after due enquiries made retransferred to the head of Inám. Similar transfers were made in the years 1874-75 and 1875-76 amounting to 4,505 acres. Beyond these adjustments cultivation and collections continued fairly steady. The waste area from 8,322 acres in 1861-62 dwindled down to 377 acres in 1891-92, the difference having been absorbed in cultivation. With the exception of the amount shown as casual remissions in the first year of the survey lease, made up of sums written off in accordance with the usual practice on the introduction of the new settlement, small sums appear in some years, but they are insignificant. The items shown as permanent remissions (column 4) since the year 1865-66 are due to land having been taken for a garden, Rs. 52 up to 1879-80, and after that Rs. 61 and Rs. 9 for land merged into a tank. Very small sums appear as outstanding balances during some years and these were finally remitted. Taking into consideration the circumstance of large areas of land having been re-transferred during different years from the head of Government to Inám, amounting in all to 15,036 acres, that no remissions worth noticing have been made, together with the large area of waste land brought under cultivation, the revenue history of the Táluka shows a quiet undisturbed state of prosperity.

34. The following figures furnished by the Mámlatdár show with what ease the collections have been made during the past 3 years and that in no case has distraint been necessary in order to realize the revenue:—

Year.	Number of villages.	Notices.	Cases in which distraint was resorted to.
1	2	3	4
1889-90	44	200	...
1890-91	52	204	...
1891-92	48	191	...
Total	144	595	...

35. It will have been gathered from the information and statistics brought together in this report that since the introduction of survey settlement the Táluka has enjoyed a steady prosperity. Communications have been greatly improved and materially added to, and a new* railway has been brought within easy reach of the Táluka. The value of agricultural produce has steadily risen and now shows an increase of 78·8 to 133·3 per cent. higher than existing at the time of the first settlement. Population has increased 32·6 per cent. and concurrently with this increase an accumulation of wealth has grown up, as evidenced by the returns of cattle, carts, wells, &c. Cultivation has greatly extended and the revenue has been collected with ease and regularity. Under these circumstances there seems no reason why the lease to be renewed should not be at rates moderately exceeding those of the present settlement. Before, however, stating the rates which it is now proposed to apply for this object, I will briefly explain the old grouping and rates.

36. The villages now to be revised number 109 Government. The bulk of them, 99, belonged at the first settlement to the Sátára Táluka and for the purposes of settlement were divided by Captain Anderson into 7 groups. Of the 10 villages subsequently received from the Koregaon, Wái and Tárgeon Tálukas, 7 being rated at a maximum dry-crop rate of Rs. 3 fall in the 1st Sátára group, 2 rated at Rs. 2-12-0 form a separate group (II), and 1 rated at Re. 1 goes into the 8th group. The number of villages in each group and the rates for each are as follows:—

Group.	Belonging to Sátára.	RECEIVED FROM THE TÁLUKAS OF			Total.	Maximum Dry-crop Rate.
		Koregaon.	Wái.	Tárgeon.		
I	42	2	1	4	49	Rs. a. p. 3 0 0
II	2	2	2 12 0
III	12	12	2 10 0
IV	1	9 }	2 6 0
V	9	7	2 2 0
VI	7	7	1 14 0
VII	7	11	1 1 0
VIII	11	1	11	1 0 0
VIII	10

The old grouping was, as will be seen from paragraph 11 of Captain Anderson's report, based upon the rainfall. The villages to the East being grouped as I and rated at a maximum dry-crop rate of Rs. 3 and the rates of the other groups gradually decreasing towards the West, owing to the fall of rain becoming more and more excessive and the villages on the extreme West being hilly and difficult of access. The sudden fall from the 6th group downward is very marked but not more than the nature of the country and local circumstances warrant.

37. As the amount of rainfall is clearly indicated by the plains on the East and centre and the hilly country on the West, and as I consider the fall to be pretty equable in the former, I see no reason to adhere to the minute grouping adopted by Captain Anderson, and instead of eight groups I would propose to have only three. The new grouping and the new rates I would therefore now beg to propose, based upon climate, markets, proximity to the railway and advantages of road communications, are as follows:—

GROUP I.—*Dry-crop maximum rate Rs. 3-8-0. Maximum rice rate Rs. 10.*—Sixty-four villages lying to the east and centre of the Táluka, possessing the best climate, good road communications, and two of the three bazar towns, and within easy distance of the Railway. This group includes the old 1st, 2nd and 3rd groups and 1 village of the 4th group. Old rice maximum rates Rs. 8 and Rs. 9.

GROUP II.—*Dry-crop maximum rate Rs. 2-8-0. Rice maximum rates Rs. 9 and 8.*—Twenty-three villages adjoining the 1st group on the West, but inferior as regards climate, with only one bazar town, Parli, distant from the railway and with only one road from Parli to Sátára. It includes the remaining nine villages of the old 4th group and all the 14 villages of the 5th and 6th groups. Old rice maximum rates Rs. 8, 7-8-0 and 7.

GROUP III.—*Dry-crop maximum rate Rs. 1-4-0. Maximum rice rates, Rs. 7 and 6-8-0.*—Twenty-two villages adjoining the 2nd group and lying on the extreme West of the Táluka, hilly and with no road communications; includes the old 7th and 8th groups. Old rice maximum rates Rs. 6-8-0, 6 and 5.

38. As the bulk of the dry-crop land in the proposed 2nd and 3rd groups is "Tisáli" and "Kumri", *i.e.* hill lands requiring a fallow of from 3 to 8 years after a three years' cropping, I propose a maximum rate of Re. 1-1-0, or an increase of Re. 0-1-0 on the present rate, which under the circumstances is, I consider, all that can fairly be imposed.

The proposed revised rates of assessment, it will be observed, fit in with those already introduced into the Koregaon Táluka on the East, and with the revised rates proposed for the Wái Táluka on the north. The rates for the other adjoining Tálukas, Karád, Pátan and Jávli, have yet to be revised.

39. By the original record, 2,122 acres are shown as rice in the villages under report; of these the Government land contains 1,297 acres, assessed at Rs. 5,504, or an average of Rs. 4-3-11 per acre. By revision survey there are 2,624 acres, of which 1,676 acres belong to Government and are rated at Rs. 7,644, or Rs. 4-9-0 per acre. The division of this land into old and new rice is shown below:—

Description,	Area,	Assessment.	Average per Acre.
1	2	3	4
	Acres.	Rs.	Rs. a. p.
Old rice	1,228	6,440	5 3 11
New rice	448	1,204	2 11 0

The new rice land has been assessed as dry-crop with an addition proportioned to its command of moisture, but always leaving it within the rate for the best situated dry-crop lands. The maximum rates proposed for old rice lands in each of the three proposed new groups have been given above and result, as shown, in an average of Rs. 5-3-11 per acre.

40. By the record of the existing settlement there are 4,645 acres of garden land in all, of which the Government portion is 2,304 acres assessed at Rs. 10,861, or Rs. 4-11-5 per acre.

Garden lands. By revision survey there are 9,971 acres, of which 5,447 acres are Government, bearing an assessment of Rs. 24,762, or an average of Rs. 4-8-9 per acre. The division of this land into Motasthal and Pátasthal is shown in the subjoined statement :—

Description.	Acres.	Rupces.	Average per Acre.
1	2	3	4
			Rs. a. p.
Motasthal	1,138	3,222	2 13 4
Pátasthal	4,309	21,540	5 0 0

41. In assessing the lands under wells, the orders of Government have been strictly adhered to; lands watered by wells formerly assessed have now been assessed within the highest dry-crop rate, and no additional assessment has been placed on wells sunk during the lease.

42. Of the 109 villages under report Pátasthal irrigation is carried on in 99 villages. Taking into consideration the ample supply of water afforded by streams, as well as the nature and description of the crops grown, I should certainly have proposed a much higher soil and water maximum rate, but as Government have limited the increase for Pátasthal (*vide* Government Resolution No. 3205, dated 4th April 1892), I find that an 8-rupee maximum rate is all that can be applied to the 1st and 2nd groups, and a 6-rupee rate for the 3rd group. In the following statement further details of the Pátasthal lands are given, from which a comparison may be drawn between the former and present areas assessed at Pátasthal rates :—

By FORMER SURVEY.							By REVISION SURVEY.						
Pátasthal Area.	Soil.		Water.		Total.		Pátasthal Area.	Soil.		Water.		Total.	
	Assessment.	Average.	Assessment.	Average.	Assessment.	Average.		Assessment.	Average.	Assessment.	Average.	Assessment.	Average.
1	2	3	4	5	6	7	8	9	10	11	12	13	14
Acres.	Rs.	Rs. a. p.	Rs.	Rs. a. p.	Rs.	Rs. a. p.	Acres.	Rs.	Rs. a. p.	Rs.	Rs. a. p.	Rs.	Rs. a. p.
2,034	4,628	2 3 7	5,122	2 3 3	9,650	4 11 11	4,309	10,242	2 6 0	11,298	2 9 11	21,540	5 0 0

43. Irrespective of the Pátasthal area above shown, portions of lands in the 3 undermentioned villages are irrigated by water obtained from the Revdi Bandhára in the Koregaon Talúka, which is under the sole control of the Irrigation Department :—

	Irrigated Area. Acres.	Water Assessment. Rs.
1. Government village, Shivthar 215	1,111
2. } Inám ... { Arphal 51	253
3. } Inám ... { Vaduth 78	637
	<u>344</u>	<u>2,001</u>

44. The estimated result of the new rates is shown for each village in Appendix Q, of which the following table is an abstract for each of the new groups :—

Group.	Maximum Dry-crop Rate.	Number of villages.	By FORMER SURVEY.		By REVISION SURVEY.						Percentage on Government occupied land.
			Government occupied land.		Government occupied land.		Government unoccupied land.		Total.		
			Acres.	Assessment.	Acres.	Assessment.	Acres.	Assessment.	Acres.	Assessment.	
1	2	3	4	5	6	7	8	9	10	11	12
	Rs. a. p.			Rs.		Rs.		Rs.		Rs.	
I ...	3 8 0	64	53,064	75,212	53,254	96,126	465	245	53,719	96,371	27.9
II ...	2 8 0	23	8,118	6,968	8,206	10,802	34	24	8,240	10,826	55.0
III ...	1 4 0	22	10,143	4,185	10,022	4,834	170	44	10,192	4,878	15.5
Total ...		109	71,325	86,365	71,482	1,11,762	669	313	72,151	1,12,075	29.4

In this table which includes the water-cess portion of the assessment on the new Pátasthal lands, the proportion of increase is 29.4, well within the 33 per cent. limit laid down by Government, and in the following statement, from which the water assessment on new Pátasthal is excluded, the increase on soil alone amounts to 22.3 per cent. The difference of increase by water-cess is 7.1 per cent. only :—

Group.	Maximum Dry-crop Rate.	Number of villages.	By FORMER SURVEY.		By REVISION SURVEY.						Percentage on Government occupied land.
			Government occupied land.		Government occupied land.		Government unoccupied land.		Total.		
			Acres.	Assessment.	Acres.	Assessment.	Acres.	Assessment.	Acres.	Assessment.	
1	2	3	4	5	6	7	8	9	10	11	12
	Rs. a. p.			Rs.		Rs.		Rs.		Rs.	
I ...	3 8 0	64	53,064	75,212	53,254	92,423	465	245	53,719	92,668	22.9
II ...	2 8 0	23	8,118	6,968	8,206	8,604	34	24	8,240	8,523	22.0
III ...	1 4 0	22	10,143	4,185	10,022	4,659	170	44	10,192	4,703	11.3
Total ...		109	71,325	86,365	71,482	1,05,686	669	313	72,151	1,06,899	22.3

Village Number.	NEW WATER CESS.	
	Included.	Excluded.
54 ...	86.0	57.9
56 ...	82.7	42.9
62 ...	81.9	39.1
76 ...	87.6	39.8
80 ...	104.7	34.9
81 ...	159.3	35.9
84 ...	88.5	35.1
85 ...	80.8	38.9
86 ...	67.6	21.3

45. In the individual villages marginally noted the enhancement of demand exceeds the sanctioned limit of 66 per cent. This is, however, in every case due to the new water-cess imposed on account of the conversion of dry-crop land into Pátasthal. When this has been deducted the percentage increase, it will be seen, falls within the prescribed limit.

46. The total results of the original and proposed revision settlements are given below under the usual heads :—

Description.	By FORMER SURVEY.		By REVISION SURVEY.		Judt or Quit-rent.
	Area.	Assessment.	Area.	Assessment.	
1	2	3	4	5	6
	Acres.	Rs.	Acres.	Rs.	Rs.
Government occupied land ...	71,325	86,365	71,482	1,11,702	...
Government unoccupied land ...	431	186	669	313	...
Inám ...	44,587	70,548	43,725	89,095	27,162
Government unassessed, un- arable, &c. ...	34,775	...	35,099
Total ...	1,51,118	1,57,099	1,50,975	2,01,170	27,162

47. On Government occupied land of all descriptions the average assessment per acre by the original settlement was Re. 1-3-4; by the proposed revision rates it will be Re. 1-9-0, an increase of Re. 0-5-8 per acre: excluding the new water-assessment the average is Re. 1-7-8 per acre, which shows an increase of Re. 0-4-4 per acre.

48. In conclusion I have the honour to recommend that the rates now proposed, if sanctioned by Government, may be guaranteed for the usual period of 30 years, and that in all cases of individual increase over 25 per cent. rates be gradually imposed in the usual way, as authorized by Government in the Resolution marginally noted.

Government Resolution
No. 2981, dated 20th April
1886.

I have the honour to be,

Sir,

Your most obedient Servant,

R. B. PITT,

Acting Superintendent, Deccan Revenue Survey.
