## P R E F A C E

Most of the rehabilitation studies pertain to the problems of relief and rehabilitation of refugees displaced by political and natural causes. Not many studies are available on the problems of rehabilitation of people displaced from reservoir lands of river valleys projects so far. This thesis is a modest attempt to study the process and impact of rehabilitation caused by a multi-purpose river valley project in India.

I express my deep sense of gratitude to Professor V. M. Dandekar, my research guide, who not only suggested the topic and design of the study, but also helped me in various ways all through my work inspite of his busy schedule.

I acknowledge with thanks the authorities of the Gokhale Institute of Politics and Economics, my colleagues and friends in the Institute and outside who have facilitated my work in many ways.

Thanks are also due to Mr. S.B. Madlur for his able help during my field work, to Mr. G. K. Misra and to Miss S. Barve for helping me in preparing the maps and to Mr. A. G. Phadke for typing the thesis in a very short time.
