India

**Dr. P. C. Goswami**, M.A., B.L., Ph. D. (London)  
DIRECTOR.

**AGRO-ECONOMIC RESEARCH CENTRE**

FOR NORTH EAST INDIA,  
JORHAT-4, ASSAM.

Date 15th September 1970

This is to certify that Shri Niranjan Saha, M.A. (Economics), Research Officer, Agro-Economic Research Centre for North East India, Jorhat, conducted research work for his D. Phil. degree under my supervision. He has conducted field investigations in several villages in the hill areas amongst the shifting cultivators and has also gathered necessary research materials from secondary sources.

He has fulfilled all the requirements under D. Phil. Regulations of the Gauhati University.

This is an original piece of research work and it has not been submitted for research degree elsewhere.

I recommend the thesis entitled "The Economics of Shifting Cultivation in Assam" for submission for the D. Phil. Degree of the Gauhati University.

Jorhat :  
The 15th September, 1970.

*P. C. Goswami*

## P R E F A C E

This study stems from my interest in the tribal economy created during my stay in Garo Hills in 1950-60. After my joining the Agro-Economic Research Centre at Jorhat in 1960, Dr.P.C.Goswami, Director of the Centre and my teacher took interest in the subject and advised me to work on it. The various research projects undertaken by the Centre in tribal areas also deepened my interest and I had the opportunity of associating myself with most of these projects.

I owe a deep debt of gratitude to Dr.P.C.Goswami who supervised this work and allowed me to use data collected in the Agro-Economic Research Centre, Jorhat. I am thankful to all my colleagues in the Centre who have helped me in various ways. Special mention should be made of Dr.P.D.Saikia, Research Officer who has offered many helpful suggestions, Shri K.N.Bordoloi, Senior Computer who has assisted me in tabulation of data, Shri M.C.Dutta, Office Assistant who has typed the manuscript.

I have received help and cooperation from the various departments of the Government of Assam. Shri P.C. Goswami, Director of Soil Conservation, Assam has taken keen interest in my work and helped me in my field investigation. The Chief Executive Members of the various District Councils,

(ii)

the village headmen of the surveyed villages and, above all, the inhabitants of those villages have given me all possible help. I am grateful to all of them.

I am thankful to Dr.B.K.Roy Burman, the Deputy Registrar-General of India, with whom I had the benefit of discussion of various aspects of the problem.

In fine, I must thank my younger brothers, Nripendranath, Jitendranath, Birendranath and Narendranath who have given me their unstinted cooperation for the completion of this project.

I am, however, fully responsible for the views expressed and for the omissions and commissions, if any, in the thesis.
