CLIMATE & RAINFALL

The climate of Nasik District can broadly be classified according to three district seasons.

1) Monsoon from June to September, 2) Winter from October to middle of March and 3) Summer from middle of March to middle of June. Except for the hilly Western slopes of Sahyadri, the district experiences salubrious climate. The summer months are moderately hot the temperature varies between 34.C to 43.C. The rainy season is comparatively cooler. The major rainfall is during the month of July and August. The winter is quite fair and slightly severe during the month of December and January.

NATURAL ZONES.

The district can broadly be classified into three zones namely 1) The Western zone 2) The Central zone and 3) The Eastern zone.

The Western zone comprises the talukas of Peint, Surgana and the Western portions of the talukas of Igatpuri, Nasik, Kalwan, Dindori and Baglan. This is hilly tract and resembles more with the Konkan tract than the up-ghat areas. The rainfall in this zone is the heaviest between 3000 to 3500 Mms in the district. Forest occupies most of the areas and the land suited for agriculture is limited due to the extreme ruggedness of terrain and paucity of flat portions. Paddy and Nagli are the main crops of this area. During off season the cultivators migrate to the cities and neighbouring districts for works.

The Central zone consists of the eastern parts of Nasik, Kalwan and Baglan Talukas and the Western parts of Sinnar and Niphad talukas. The climate in this part is equitable and dry and the rainfall is moderate with an average of 700 to 800 Mms. The soil is medium and the main crops grown are bajra, wheat.

gram, sugarcane, pulses and grapes.

The third zone which is the easternmost part of the district consists of Yeola, Chandor, Nandgaon and Malegaon Talukas and eastern parts of Sinnar and Niphad talukas. The entire portion is almost plain and consists of rich agricultural track. Rainfall is the lowest in this zone with an average of 650 Mms. The main crops are Bajra, Jawar and pulses. Irrigation facilities from the Gangapur, Nandur-madhy, meshwar and Girna Canals are mainly available to the regions in Central and Eastern Zones. Table No.2 below gives the talukawise and zone wise rainfall during the last 4 years

EXPLANATORY NOTE

In this chapter, short notes on the tables presented in the Abstract part are given indicating the source of the data, limitations if any etc. There are in all 85 tables presented in this Statistical Abstract.

2.1 Climate and Rainfall.

The two tables (Nos. 1 and 2), give the information regarding rainfall and climate respectively. The rainfall data is given for all the 13 talukas, monthwise. It will be observed that the district has got three zones caused by its topography. The hilly talukas (Western) get an average rainfall of over 2500 Mms., the middle zone an average rainfall of about 750 Mms., while the eastern zone gets a very low rainfall of about 550 Mms. per year.

As regards 'Climate' information of the same is received from the metrological offices, Bombay and is for three centres viz. Nasik, Malegaon and Ozer.

2.2 Area and Population (Tables 3 to 8)

These tables mainly give the data from 1961 Census Hand Book. Table 3A is newly inserted to supply the provisional data of 1971 population Census. The 1961 Census data covers taluka-wise information regarding Rural and Urban population, towns and villages, schedule castes and schedule tribes etc. as usual.

ANALYTICAL REVIEW GIVING SECTORIAL TRENDS:

3.1 This chapter deals with the relative positions of talukas in the various fields of economic developments. In our region main sector of economic development is agriculture. The relative position of the cropping patterns, land use etc. as well as the sectorial developments in other fields of economy such as Industry, Electricity, Social services, Medical and Education are given below.

3.2 Talukawise percentage of gross cropped area over net cropped area.

Table No.1 given below, gives the talukawise percentage of gross cropped area over net cropped area during 1961-62, 1966-67 and 1969-70. This percentage of land use mainly depends on the irrigation facilities available and hence gives a two side idea i.e. land use as well as the irrigation potentials.

Table No.1.

Table showing talukawise percentage of gross cropped area in Nasik District for the year 1961-62, 1966-67 and 1969-70.

Sr.No.	Name of Taluka.	Percentage of gross cropped area to net cropped area.		
		1961-62	1966-67	1969-70

13.	Sinjar.	102.98	103.15	102.88
	District	107.39	104.14	104.66

It is seen from above table that District percentage of above has gone down in 1966-67 as compared with 1961-62 but again has slightly increased in 1969-70.

The highest percentage recorded during 1969-70 is for Baglan where as the lowest comes for Peint, which shows an absence of the area sown more than once in Peint.

3.3 Productivity of important crop

Table No.2 as given below given the yield per hecters in Kg. for the important crops in District.

Table No.2:

Table showing yield rates of important crops in Nasik district during 1961-62, 1966-67 and 1969-70

18.	Cotton in terms of bales	159	467	148
19.	Chillies.	N.A.	398	868

Productivity of the crops mainly depends on the irrigation as well as quality of the seeds and fertilisers used by the cultivators as well as soil. In general the yield rate of some crops has been considerably increased during 1969-70 where as for some crops it has gone down too. The main crops i.e. rice wheat, Jwar, maize and Bajra have shown more return in comparison with 1966-67 and the cause of which is quite clear that more and more hybrid high yielding varieties of these crops and fertilisers are being made available to the cultivators in recent years.

3.4 Percentage of irrigated area.

Table No.3 given below gives the talukawise percentage of irrigated area to the net cropped area during the years 1961-62, 1966-67 and 1969-70.

Table No.3.

Table showing the talukawise percentage of net irrigated area to net cropped area during the year 1961-62, 1966-67 & 1969-70

13.	Sinnar.	5.21	4.77	11.01
	District.	4.88	5.98	9.20

From the above table it is seen that the percentage of irrigated area has shown significant increase for the District Baglan as well as for all talukas except Baglan. In/taluka, due to the increase in net area sown, the relative percentage of irrigated area to net cropped area declined.

3.5 Change in crop pattern:

Table No.4 given below deals with the changes in crop pattern in the District.

Table No.4.

Table showing the crop pattern in Nasik District during the year 1961-62, 1966-67 and 1969-70.

It is seen from the above table that area under food crops; as well as non food crops has shown declining trend during 1969-70 over the years 1966-67 and 61-62. If we consider the food grains only it will be clear from the table given below that the area under pulses has increased where as the area under e-- cereal has gone down slightly.

Table No. 5

1969-70	709.48	961.94	+ 213.29	+ 149.30

It is clear from above table that the advances given under Agricultural Credit has considerably increased during the year 1966-67 and 69-70 over the year 61-62.

Figures of outstanding which is a counter part of advances has also shown an increase during 69-70 over the year 66-67.
