No. SCR/1273/5481/S-III,  
DIRECTORATE OF AGRICULTURE,  
MAHARASHTRA STATE, POONA-1,  
Dated 29th March, 1975.

FROM

SHRI S. R. CHOPDE,  
DIRECTOR OF AGRICULTURE,  
MAHARASHTRA STATE,  
POONA-1.

To

THE SECRETARY TO GOVERNMENT,  
AGRICULTURE AND CO-OPERATION DEPARTMENT,  
SACHIVALAYA ANNEXE,  
BOMBAY-400 032 BR.

Sir,

I am to submit herewith the Annual Season and Crop Report of the Maharashtra State for the year ending 31st July 1972.

The south-west monsoon created a very precarious situation in the State this year. After initial showers in all districts, droughty conditions prevailed and continued almost upto the third week of August 1971, all over the State excepting the assured rainfall area in the western part of the State and parts of Vidarbha region. Consequently, in substantial parts of Marathwada and Deccan regions, the sowing of kharif crops could not be undertaken due to inadequacy of rains during the sowing season. The rains received in the last week of August and early September proved beneficial to the growth of standing kharif crops and facilitated large scale sowing of rabi jowar in these two regions. The dry spell that followed till the fourth week of September affected the standing kharif crops particularly cotton and groundnut in their critical growth stages. The rains received in the last week of September facilitated large scale sowing of rabi crops, the area under which increased due to diversion of unsown kharif areas to rabi jowar and other rabi crops. Lack of rains thereafter in October, November and December affected the proper growth of late kharif crops and unirrigated rabi crops particularly rabi jowar in most parts of the Deccan and Marathwada regions. Rabi jowar was also affected in its growth stage due to the severity of the cold spell during December and January in parts of Deccan. The occurrence of cold wave on the 13th and 14th February adversely affected fruits and vegetables and newly planted sugarcane to some extent in Nasik and Ahmednagar districts and parts of Dhulia, Jalgaon, Aurangabad and Poona districts. Irrigated crops were affected to some extent due to the inadequacy of water in wells in the State. On the whole, the rabi season was also not so favourable to the crop in different parts of the State.

Summing up, it may be stated that the agricultural season 1971-72, in the State was quite unsatisfactory. It was characterised by inadequate rains at the crucial periods of agricultural operations and long dry spells resulting in an appreciable decrease in the area sown, yield rates and ultimately in agricultural production. However, worsening of the situation was saved to some extent by the hybrid and high yielding varieties which gave substantially higher yields of crops.

2. Incidence of crop pests and plant diseases was reported on major crops, including hybrid and high yielding varieties in most parts of the State. The incidence of ergot on bajri, midgefly on kharif jowar and common pests of cotton and rabi jowar were reported. Both prophylactic and remedial measures were promptly carried out on campaign basis in the severely affected areas.

3. The gross irrigated area during the year under report was 16.2 lakh ha. which was more than the last year's figure of 15.7 lakh ha. by 3.3 per cent.

4. The area under food crops was 129.6 lakh ha. in 1971-72 as against 134.9 lakh ha. in 1970-71 showing a decrease of 3.9 per cent. The area under non-food crops was 51.6 lakh ha. in 1971-72 as against 52.4 lakh ha. in 1970-71, indicating a decrease of 1.7 per cent.

5. In view of the drought conditions in the State, scarcity was declared in nearly 14,700 villages and sown areas were considerably less particularly under the crops kharif jowar, bajri, cotton and groundnut. Based on the crop estimation surveys, the average yield rate per hectare at the State level for majority of the crops was lower than that in the preceding year (1970-71) mainly due to long dry spells during crucial periods of crop growth stages. Heavy rains in Bombay division affected bajri crop at the maturity stage while severe cold spell in Bombay and Aurangabad divisions, affected rabi jowar. The increase in the yield rate in the case of kharif jowar and cotton in 1971-72 was only apparent as the former crop was very much adversely affected due to the incidence of midgefly while the latter was affected due to crop failure in the preceding year. This situation resulted in the lower total production of most of the crops particularly rice, bajri, kharif pulses, sugarcane and groundnut during the year under report.

6. The prices of most of the agricultural commodities except potatoes and chillies were higher than those in 1970-71. There was a slight increase in the wages of skilled and unskilled labour in the State.

7. The latest available quinquennial Live Stock Census figures 1972, show that there was a slight decrease in the number of cattle viz. by 0.2 per cent whereas the total number of buffaloes recorded an increase of 8.5 per cent over the corresponding figure of 1966 census. The number of buffaloes used for breeding purposes alone decreased by 6.5 per cent while cattle in milk increased by 11.7 per cent. The number of sheep decreased by 3.5 per cent and horses and ponies by 42.3 per cent while the number of goats recorded an increase of 15.4 per cent. The poultry population showed an increase of 23.4 per cent.

8. The scope of the census of agricultural machinery and implements was extended for the first time to cover all the latest developments in the agricultural field. As per 1972 census, the number of oil engines and tractors showed an increase of 17.2 per cent and 71.2 per cent respectively whereas the number of sugarcane crushers decreased by 50.6 per cent over the 1966 census figures. Similarly the number of electric pumps increased nearly by 3½ times while the number of ghanis declined by 47.0 per cent.

Yours faithfully,  
 S. R. CHOPDE,  
 Director of Agriculture,  
 Maharashtra State,  
 Poona- 1.

# Season and Crop Report of the State of Maharashtra for the Year 1971-72

## CHAPTER I

### SEASON

The pre-monsoon season of 1971-72 was characterised by fairly widespread rains in the State during the fourth week of May. During the second fortnight of June and July, adequate rains were received in Konkan and Vidarbha regions enabling the cultivators to undertake large scale sowing of kharif crops while in the Deccan and Marathwada regions, the rainfall was inadequate for sowing till the third week of August and as a result large areas remained unsown. The condition of the sown crops in western Vidarbha was unsatisfactory till the middle of August, due to inadequate rains. Widespread rains were received throughout the State during the third week of August. These rains brightened the prospects of kharif crops in the Konkan and Vidarbha regions while in the Deccan and Marathwada regions, the withering of crops was arrested and early sowing of rabi jowar was facilitated in some areas. The dry spell that followed from early September till the third week of September predominantly in Marathwada region affected standing kharif crops particularly cotton and groundnut in their critical growth stages.

The rains received in the last week of September facilitated large scale sowing of rabi crops, the area under which increased due to diversion of unsown kharif areas to rabi jowar and other rabi crops. Lack of November rains affected proper growth of late kharif crops like kharif jowar in Marathwada and Vidarbha regions and unirrigated rabi crops, particularly rabi jowar, in light soils of the Deccan and Marathwada regions. Severe cold weather during December and January affected the satisfactory growth of rabi jowar in parts of the Deccan and Marathwada regions whereas it proved conducive to the growth of wheat and gram crops in most parts of the State. The occurrence of cold wave on the 13th and 14th February adversely affected fruit crops and vegetables and to some extent, newly planted sugarcane in parts of the north Deccan and Aurangabad district. The irrigated crops also suffered to some extent due to inadequacy of well irrigation.

On the whole, the agricultural season 1971-72 was quite unsatisfactory. Government declared scarcity conditions in nearly 14,700 villages of the State. The season was characterised by inadequate rains at the crucial periods of agricultural operations, and long dry spells resulting in an appreciable decrease in the area sown, yield rates and ultimately agricultural production.

#### 2. Distribution of Rainfall

The rainfall during the year under report as compared with the normal rainfall, recorded at selected centres in the State is given in Table-1 (Pages 40 to 55).

(i) *Pre-monsoon rains.*—The pre-monsoon showers were above normal in most of the districts except Jalgaon, Kolapur, Osmanabad, Buldhana and Wardha.

(ii) *Monsoon rains.*—The monsoon rains were below normal in most parts of the State excepting Thana, Kolaba and Sangli districts.

(iii) *Post-Monsoon rains.*—The post-monsoon rains were also below normal in most of the districts except Sholapur, Bhir, Parbhani, Nanded, Osmanabad, Akola, Yeotmal, Wardha, Nagpur and Bhandara districts where due to occurrence of October rains the normal of the season was exceeded.

(iv) *Winter rains.*—The winter rains were below normal in all the districts of the State.

(v) *Total rainfall for the season.*—The total rainfall during the year under report was less than the normal by 30 per cent in most of the districts except Thana and Poona where it was nearly normal.

#### 3. Monthwise description of the crop and weather conditions

*April.*—The pre-monsoon showers received in the second fortnight facilitated preparatory tillage operations for the kharif season. There was a hailstorm in the third week in parts of Nasik, Wardha and Nagpur districts, whereas good rains were received in Chandrapur district during the fourth week which were beneficial to the growth of summer crops.

*May.*—The monsoon entered into southern part of Ratnagiri district on the 27th May i. e. nearly ten days earlier than normal. Fairly widespread rains were received in the fourth week of the month throughout the State. Earlier during the third week, scanty to light pre-monsoon rains were received proving beneficial for preparatory tillage operations and for preparation of seed beds for paddy nurseries and sowing of paddy in parts of Konkan region and paddy areas of Satara, Sangli and Kolhapur districts. On the 18th, thunder-showers occurred in Ahmednagar district and hailstorm in Patoda taluka of Bhir district.

*June.*—In Konkan, rainfall received during the first week was substantial for sowing paddy in nurseries on

a large scale. At some places in Kolaba district, however, early sown paddy nurseries were washed away due to torrential rains. Due to heavy rains during the third week, the Vashishti river was in spate breaching paddy bunds and damaging paddy seedlings in eleven villages of Chiplun and Khed talukas of Ratnagiri district. In parts of Kudal and Vengurla talukas, the nursery seedlings had decayed due to water stagnation in the fields and resowing had to be done. In Kolaba and Thana districts, where heavy rains were received during the fourth week, the cultivators adopted the method of broadcasting germinated seeds, at places.

In the Deccan region (excluding the scarcity areas), the monsoon was active with good rains in early first week, facilitating sowing of paddy and nagli in the western parts of the region and sowing of other kharif crops like mung, cotton, groundnut, hybrid jowar and bajri in the central parts of the region.

In the scarcity areas, the rains were inadequate for large scale sowing of kharif crops. Due to inadequacy of soil moisture, the germination of crops sown towards the end of May and early June was poor, while sowing and transplanting operations were held up as detailed below :—

<i>Operations</i>	<i>Districts</i>
Sowing of cotton	... Dhulia district.
Sowing of bajri	... Ahmednagar, Poona, Sholapur, Satara and Sangli districts.
Sowing of groundnut	... Ahmednagar.
Sowing of kharif jowar	... Poona, Satara and Sholapur districts.
Sowing of early paddy and nagli.	Nasik district.

The growth of irrigated crops of cotton and sugarcane was also affected due to inadequate irrigation from wells in Nasik and Ahmednagar districts.

In Aurangabad division, the rains received during the month were inadequate, delaying large scale sowing of the kharif crops. The farmers took the risk of sowing mung, groundnut and cotton but the crops so sown had poor germination, particularly in Aurangabad and Osmanabad districts.

In the Vidarbha region, barring Bhandara district, rains received in the first fortnight were inadequate for undertaking large scale sowing of kharif crops. The rains received in the third week facilitated sowing of cotton, groundnut, jowar and pulses and the operation was completed in Nagpur and Chandrapur districts. The germination of early sown cotton in about 20 per cent of the area in Nagpur district was adversely affected due to heavy rains during the third week of the month.

*July.*—In Konkan, long dry spell during the first fortnight affected paddy nurseries while transplanting of seedlings of early varieties was delayed in Thana

district till the beginning of the third week of July. Substantial rains received during the third week in Thana district and second week in Kolaba district were useful for undertaking large scale transplanting of paddy and nagli crops whereas in Ratnagiri district this was done at intervals because of inadequate rains during the month.

In the Deccan region, practically no rains were received during the first fortnight due to which large scale sowing of kharif crops of bajri, jowar and cotton was affected. The germination of crops like cotton, groundnut, kharif jowar and bajri, where sown early, was also affected and they had to be resown when rains were received subsequently. Paddy transplanting in Kolhapur district was also delayed. The rains received in the third week of July, were not adequate for completing the sowings in certain areas particularly in the eastern part of the region. Consequently the area under cotton, groundnut and bajri in this region was considerably reduced.

In Aurangabad division, barring scanty showers during the last week in Bhir district and scanty to light rains during the first week in Nanded district, the weather was practically dry. As a result, large scale sowing of kharif crops was held up in all the districts except Nanded where rains in the first week were useful for saving the early sown crops at least in some areas and undertaking sowing in other parts of the district. At some places, resowing of cotton and groundnut was also undertaken in this district. Due to the long dry spell, the condition of rainfed crops, wherever sown as well as well irrigated crops, was not satisfactory.

In the Vidarbha region, the rains received in major areas were inadequate and erratic with a prolonged dry spell during the month. As a result the germination of early sown crops of cotton and groundnut was poor and resowing/gap filling had to be done at places on receipt of light rains in the fourth week. In the paddy areas of Nagpur, Bhandara and Chandrapur districts, transplanting of early paddy was delayed and only 50 per cent area could be transplanted by July end. The growth of the standing kharif crops, particularly in the light soils was retarded in the region due to the inadequate rains.

*August.*—In the Konkan region, transplanting of paddy was completed during the first fortnight. The rains received during the third and fourth weeks were useful for the proper growth of the paddy crop in Thana and Kolaba districts. In Ratnagiri district, the rains were rather heavy in Sawantwadi, Kudal, Chiplun, Rajapur and Sangameshwar talukas damaging the paddy plants in the embankment areas.

In the Deccan region, the rainfall received in Kolhapur district was uneven. In the remaining districts of the region, practically a dry spell was experienced till the 20th August. As a result, a large area under bajri and appreciable area under kharif jowar remained unsown. The rains received from the twenty-first were

very useful in saving the withering crops and improving the condition of irrigated crops, besides enabling sowings of rabi jowar on a large scale in Ahmednagar, Poona, Sholapur and Satara districts. The rains, however, affected the picking of irrigated cotton in Sholapur and Poona districts and the same was resumed by the month end.

In Aurangabad division, the dry spell continued till the first fortnight, with the result that the condition of standing kharif crops deteriorated further. This resulted in the considerable reduction in the area under cotton and groundnut and also hybrid varieties of bajri and jowar. In Aurangabad district, the area under well irrigated cotton and sugarcane was reduced to some extent. In Nanded district, the chilly seedlings in the nurseries were affected and the transplanting was held up. With the receipt of widespread and adequate rains from the twentieth, late sowing of bajri was undertaken in Sillod and Paithan talukas of Aurangabad district and of hybrid varieties of bajri and jowar in the light soils in Bhir district. Sowing of jowar and bajri was also undertaken for fodder purpose in Nanded district. The rains proved useful for undertaking of early rabi sowing in the heavy soils in Bhir, Nanded and Osmanabad districts. In Aurangabad district, however, more rains were needed for the proper growth of standing crop; and undertaking rabi sowings.

In the Vidarbha region, scanty and sporadic rains received upto the third week were not adequate either for completing transplanting of paddy in Umrer and Ramtek talukas of Nagpur district, Bhandara and Tumsar blocks of Bhandara district and parts of Chandrapur district, or for completing the kharif sowing as in a normal season. The plant population in parts of the division was not satisfactory. With hardening of the soils in Amravati, Yeotmal and Nagpur districts, the development of groundnut pods was severely affected. On receipt of good rains from the twenty-third August onwards the condition of the standing crops improved, only partially and delayed transplanting of paddy would be resumed. Late sowing of hybrid jowar and hybrid bajra was undertaken in the acute scarcity affected areas of Mekhar and Malkapur talukas of Buldhana district. The rains, however, proved very heavy in Wardha district damaging the mung crop ready for harvest. In Bhandara district, a very heavy rainfall of 23 cm. was recorded at Gondia on the twenty-ninth causing flood in Vainganga river, paralysing surface communications and holding up paddy interculturing in the affected areas. During the last week, harvesting of mung and preparation of land for rabi sowings were in progress.

**September.**—In the Kokan region, substantial and widespread rains received in the last week were beneficial for improving the late maturing paddy crop in Thana and Kolaba districts. In Ratnagiri district, however, the rains received on the twenty-second and twenty-third proved to be very heavy due to which the

early varieties of paddy crop suffered in grain formation. Harvesting of early varieties of paddy commenced at some places in the first week in Ratnagiri district and last week in other districts of Konkan. The condition of midlate and late varieties was not satisfactory due to the uneven distribution of rains during the early growth stage.

In the Deccan region, isolated and scanty rains were received in all the districts (except Kolhapur) resulting in precarious situation. Due to the extreme inadequacy of soil moisture, yellowing of crops was reported in light soils. With the receipt of widespread and substantial rains during the last week of the month, further deterioration in the growth of standing kharif crops was arrested. Late maturing crops of jowar and groundnut and late sown bajri crops were improving. The matured bajri crop, was, however, affected due to lodging caused by heavy rains in Nasik, Dhulia and Jalgaon districts, while potato crop in Satara district was affected at harvest stage due to stagnation of water in the fields. The rains proved beneficial for undertaking large scale sowing of rabi jowar in Nasik, Ahmednagar, Poona, Sholapur, Satara and Sangli districts and for improving the condition of early sown rabi crops in Ahmednagar, Poona and Satara districts. In Kolhapur district, the condition of standing crops was satisfactory excepting in the eastern part.

In Aurangabad division, with the rainfall received in the first week resowing of bajri was carried out in parts of Aurangabad district. The dry spell prevailed during the middle two weeks. In the last week of the month, widespread and substantial rains were received. These rains were beneficial for the standing late sown crops of hybrid jowar, bajri and kharif jowar as also for the proper germination and growth of early sown rabi crops and for undertaking large scale rabi sowing of rabi jowar, safflower, linseed and sesamum crops in different districts of the division. Harvesting of mung was completed in Parbhani district.

In the Vidarbha region, light rains were received in the first week in Buldhana and Akola districts and good rains in all other districts except Amravati district. Resowing bajri was carried out at places in Yeotmal district where the previous crop had failed while transplanting of mid-late and late paddy varieties was resumed in Ramtek and Umrer talukas of Nagpur district and in parts of Bhandara and Chandrapur districts and the same was completed during the second week. During the dry spell period of second and third weeks, intercultivation operations were attended to in the major areas to conserve soil moisture. With the receipt of good rains during the last week, the condition of kharif crops like cotton L-147, MCU-5, paddy and local jowar improved. The rains facilitated preparatory land cultivation for sowing of rabi crops like linseed, sesamum and rabi jowar. These rains, however, caused shedding of tender cotton bolls at some

places. The condition of paddy crop was not satisfactory in parts of Sironcha, Gadchiroli and Sindewahi blocks of Chandrapur district where more rains were needed for the vigorous growth of the crop. Harvesting of early sown paddy, hybrid jowar, mung, udid and groundnut was in progress in parts of the region.

*October*.—In the Konkan region, widespread and substantial rains received in the first week were useful for the healthy growth of late varieties of paddy and timely sowing of rabi pulses. Harvesting of early varieties of paddy and ragi was in progress while that of midlate varieties started later in the month.

In the Deccan region, widespread and sufficient rains were received in the first week followed by sporadic rains in the second and third weeks in major parts of the region. These rains affected the quality of kharif jowar and bajri grains in Nasik district and held up harvesting of groundnut and bajri at some places in Sholapur district. Due to these rains, the sowing of wheat and gram was also held up in Barsi, Akkalkot and North Sholapur talukas of Sholapur district. The rains received in Khandala taluka of Satara district and Tasgaon, Khanapur, Jath, Kavthemahankal talukas of Sangli district were, however, inadequate for the proper growth of rabi crops. Barring the above, these rains were helpful to the standing kharif crops including the irrigated crops, and also for the better germination of the recently sown crops, as well as for undertaking large scale sowing of rabi crops. Harvesting of mung, udid bajri and early paddy was over while that of kharif jowar, cotton, groundnut and mid-late varieties of paddy was in progress towards the end of the month. Sowing of rabi jowar was over by the end of the first fortnight while that of wheat and gram was in progress in the second fortnight in major parts.

In Aurangabad division, the rains received in the first fortnight proved beneficial to the growth of late sown kharif crops and sowing of rabi jowar and other rabi crops like linseed, safflower, wheat and gram. The rains, however, proved excessive in Kaj taluka of Bhir district affecting the standing kharif crops. The sowing of rabi jowar was nearly completed while that of wheat and gram was in progress. Harvesting of hybrid jowar, bajri and picking of cotton were in progress.

In the Vidarbha region, substantial rains received in the first week were beneficial to the growth of late sown kharif crops and facilitated sowing of rabi crops in the second fortnight of the month. The condition of the kharif crops, however, was not satisfactory in Malkapur and Mekhar talukas of Buldhana district and of paddy in Sironcha, Mul, Gadchiroli, Sindewahi and Chimur blocks of Chandrapur district. Cotton crop suffered from shedding of tender bolls at places in Amravati and Wardha districts. Due to cloudy weather, flowering of tur was affected in Yeotmal district.

*November*.—The weather during the month was cold and dry. The condition of standing kharif crops was

generally satisfactory excepting Balapur, Murtijapur and Akola talukas of Akola district and Pusad and Ner blocks of Yeotmal district where late sown crop suffered to some extent due to inadequacy of soil moisture caused by absence of November rains. The sowing of rabi jowar was over while that of gram and wheat was in progress. The area under these crops increased due to diversion of most of unsown kharif areas. The condition of unirrigated rabi jowar in light soils was not satisfactory in following talukas :—

- (i) Yeotmal, Niphad and Nandgaon talukas of Nasik district.
- (ii) Indapur, Sirur, Dhond, Baramati and Purandhar talukas of Poona district.
- (iii) Khandala and Phaltan talukas of Satara district.
- (iv) Jath, Kavthemahankal and Tasgaon talukas of Sangli district.
- (v) Malkapur and Khamgaon talukas of Buldhana district.

Due to dry and cold weather, the condition of wheat and gram crops was good. However, more rains were needed for proper growth of unirrigated crops.

*December*.—The dry and cold weather persisted throughout the State. The sowing of rabi crops excepting irrigated wheat was over. The area under rabi jowar and wheat increased due to diversion of the normal kharif area in Deccan and Marathwada regions. Due to long dry spell since the beginning of November, unirrigated rabi crops were in precarious condition. Rabi jowar withered largely in light soils. It was stunted in growth and poor in grain formation. It suffered from cold spells also in parts of Aurangabad and Bhir districts. The condition of wheat and gram crops was satisfactory due to cold weather in major areas of the State excepting in the Vidarbha region. Besides, the water table in wells had receded, and consequently well irrigation had also reduced in Buldhana, Akola and Yeotmal districts. On the whole, the condition of rabi crops was not satisfactory in the State.

Sowing of summer paddy was in progress in Kolaba, Ratnagiri and Kolhapur districts while transplanting of early sown crop also commenced in Kolhapur and Chandrapur districts. Harvesting of late kharif crops viz. paddy, groundnut and kharif jowar was over and that of cotton, tur and tobacco was in progress in the State.

*January*.—The condition of unirrigated rabi crops particularly rabi jowar continued to be precarious mainly in the light and medium soils in major parts of the State due to the prolonged absence of rains since the early part of the rabi season. In the absence of dew formation in Vidarbha region, the unirrigated wheat crop suffered, while irrigated wheat was also affected to some extent due to lowering of water table in wells and shortage of water in tanks and small

bandharas. The condition of grapes was precarious in Nasik district due to severe cold at the fruiting stage while banana gardens were affected due to cold spell in Jalgaon district. Misty weather affected chillies, mangoes and vegetables in parts of Nasik district.

In the Konkan region, the condition of horticultural crops was satisfactory. Transplanting of summer paddy seedling was nearly over in Kolaba, Ratnagiri, Kolhapur and Chandrapur districts.

Harvesting of unirrigated rabi crops was in progress in different parts of the State.

**February.**—In Kolaba district, light showers at scattered places during the first week helped cultivation of summer crops whereas they affected mango in-florescence. The cold spell during the second and third weeks affected horticultural and vegetable crops in Thana district and cashewnut and mango crops in Ratnagiri district. Due to the severe cold wave on the 13th and 14th, brinjals, tomatoes, potatoes and chillies were adversely affected in Nasik, Sinnar, Niphad and Dindori talukas of Nasik district, the damage varying from 75 to 100 per cent in the affected areas. The grape crop was damaged to the extent of more than 50 per cent in case of the 'Bhokari' variety. Similarly leaves of ratoon and newly planted sugarcane were damaged and the growth was affected, while the late sown wheat and gram crops in the initial grain formation stage were also affected to some extent. In the northern part of Ahmednagar district and certain parts of Sangli and Aurangabad districts, grapes, potatoes and newly planted sugarcane were severely affected due to the cold wave. In Dhulia and Jalgaon districts, lodging of matured wheat was reported at places due to westerly strong winds early during the month. The orange trees had profuse blossom but for want of adequate irrigation, dropping of raw fruits was reported from Buldhana, Amravati and Yeotmal districts. Condition of irrigated crops was satisfactory except at places in the State where shortage of well irrigation was felt. Harvesting of rabi crops in the major areas was over.

Transplanting of summer paddy in Ratnagiri district was over. Sowing of summer groundnut and preparatory tillage operations for the next kharif season were in progress in the State.

**March.**—The weather was hot and dry during the day while the nights were generally cool. The unirrigated wheat crop was affected to some extent due to rising temperatures in the Vidarbha region while the condition of irrigated wheat and gram was not so satisfactory. The condition of summer paddy was fairly satisfactory in Konkan and parts of Bhandara and Chandrapur districts. Harvesting of rabi crops and picking of cotton were practically over while threshing of the harvested crops was in progress. Sowing of irrigated cotton and summer maize was undertaken. Ploughing and harrowing operations for the next kharif season were in full swing in the State.

#### 4. Incidence of pests and diseases

During the year under report, incidence of pests and diseases was reported on different crops. The incidence as also measures taken are summarised in the following paragraphs:—

(i) **Rice.**—Prophylactic ground spraying of paddy nurseries was carried out over an area of 27,800 ha. in Konkan region against infestation of paddy stemborer. An attack of army worms and leaf roller was reported on the crop in areas of Konkan region and Poona, Kolhapur and Chandrapur districts. Incidence of gall-fly was reported in endemic areas of Bhandara and Chandrapur districts. Ground spraying campaign was operated in the affected areas. As a preventive measure against stemborer on summer paddy application of lindane granule was carried out in pockets of Kolaba district.

(ii) **Bajri.**—An attack of army worms was reported in Poona and Satara districts whereas ergot disease was reported on the crop in major areas of Nasik and Aurangabad districts and parts of Dhulia district. Necessary plant protection measures were carried out in the affected areas.

(iii) **Kharif jowar.**—Incidence of midge-fly was widely reported in the Deccan, Marathwada and Vidarbha regions adversely affecting the crop. Aphids, army worms and stemborer were reported on hybrid kharif jowar mainly in the Deccan region, while striga occurred on jowar in parts of Amravati, Yeotmal, Wardha and Nagpur districts. Plant protection measures were undertaken in the affected areas.

(iv) **Cotton.**—Aerial spraying covering an area of about 8000 ha. and ground spraying and dusting covering an area of 25,100 ha. were carried out against common pests and diseases on cotton in Jalgaon block in Buldhana district. Plant protection measures on campaign basis were carried out over 17,000 ha. against aphids, jassids and boll-worms in the major parts of the State. Irrigated cotton was affected by reddening of leaf at places in the Deccan canal areas in the State. Dusting campaign was organised to control the same.

(v) **Groundnut.**—Tikka and aphids were reported on groundnut in Dhulia, Sholapur, Satara, Sangli, Kolhapur and Nanded districts where plant protection campaign was undertaken over 6,000 ha.

(vi) **Sugarcane.**—Aerial spraying was carried out as a prophylactic measure against pyrrilla in the affected areas of Ahmednagar district.

(vii) **Rabi jowar.**—Incidence of chikta was reported in major areas of the State. Aerial spraying on a campaign basis was organised in 2.04 lakh ha. restricted to Marathwada region.

(viii) **Wheat.**—As a preventive measure against rust on wheat, spraying of diathane Z-78 was carried out in parts of the Deccan region and Nanded and Buldhana districts.

## CHAPTER II

### AREA CULTIVATED AND UNCULTIVATED

( Table II Pages 56-57 )

( Summary Table—A Page 24 )

#### **5. Number of Villages**

During the year under report, the number of revenue villages in the State was 38,808 as against 38,820 in the preceding year. This decrease by 12 villages was due to amalgamation of 13 villages distributed in Nasik, Parbhani, Osmanabad, Buldhana, Amravati and Wardha districts with the neighbouring villages in each case, and formation of a separate village in Chandrapur district.

#### **6. Total Area**

The total geographical area of the State based on the survey carried out by the Surveyor General of India was 3,07,76,200 ha. The reporting area for Land Utilisation Statistics (*vide* Summary Table-A) was 3,07,58,300 ha. the same as of the last year.

#### **7. Cultivated and Uncultivated areas**

The total cropped area in the State was 1,81,15,300 ha. and as seen from the Summary Table-A it showed a decrease of 3.3 per cent over that of the preceding year

which was 1,87,36,900 ha. The net cropped area also showed a decrease of 3.6 per cent having decreased from 1,76,68,200 ha. in 1970-71 to 1,70,36,400 ha. in the year under report. The area under non-agricultural uses and area sown more than once increased slightly viz. by 1.3 per cent. and 0.9 per cent. The extent of current fallows increased substantially from 8,22,700 ha. in 1970-71 to 14,83,200 ha. in 1971-72 (or by 80.3 per cent) due to the lack of adequate rains during the sowing period in the latter year. The area under 'other fallows' increased by 13.5 per cent as compared with that in the preceding year. The increase under both 'current fallows' and 'other fallows' was noticed mainly in Nasik, Jalgaon, Ahmednagar, Poona, Aurangabad, Parbhani, Bhir and Osmanabad districts of the State. The area under culturable waste land decreased by 9.0 per cent. The net cropped area also decreased by 6.32 lakh ha. or by 3.6 per cent as compared to that of the previous year. The area under other items of land utilization remained practically unchanged.

## CHAPTER III

### IRRIGATED AREAS

( Tables III-A and III-B Pages 58-67 )

( Summary Tables B and C Pages 25-26 )

#### **8. Sources of water supply**

During the year under report, the number of government and private canals was 729 and 7,457, with running length of 5,631 km. and 9,173 km. respectively. As compared with the preceding year, there was an increase in the number of government canals by 3.3 per cent followed by an increase in the running length by 4.3 per cent while the number of private canals remained unchanged. The number of tube wells increased by 14.7 per cent during 1971-72. The number of wells (other than tube wells), used for irrigation purposes, increased from 6,94,208 in 1970-71 to 7,11,795 in 1971-72 i. e. by 2.5 per cent. Number of wells used for domestic purposes, the number of wells not in use, that having independent ayacut and that supplementing recognised sources of irrigation increased by 0.6 per cent, 3.1 per cent, 5.7 per cent and 6.5 per cent respectively, during the year under report. The number

of tanks with ayacut 40 ha. or more showed an increase by 14.8 per cent, while the number of tanks with ayacut less than 40 ha. decreased by 1.7 per cent. The number of oil engines recorded an increase of 7.0 per cent from 1,43,198 in 1970-71 to 1,53,243 in the year under report. The number of electric pumps also recorded a substantial increase of 14.6 per cent, having gone up from 1,07,813 in 1970-71 to 1,23,508 in 1971-72. The increase was due to the larger supply of electric power through rural electrification schemes for irrigation purposes.

#### **9. The Gross and Net Irrigated Area**

The gross irrigated area in the State was 16,21,600 ha. in 1971-72 as against 15,70,300 ha. in the preceding year, thus recording an increase of 3.3 per cent. The net irrigated area was 13,67,200 ha. which was 1.5 per cent higher than that in 1970-71 viz. 13,46,900 ha.

During the year under report, the percentage of net irrigated area to the net area sown was 8.0 per cent while the percentage of gross irrigated area to gross area sown was 9.0 per cent. The corresponding figures in the preceding year being 7.6 and 8.4 per cent respectively.

#### 10. Net area irrigated by different sources of irrigation

The net area irrigated by Government canals, private canals, tanks and wells increased by 12,900, 5,800, 7,700 and 2,800 ha. or by 4.8 per cent, 30.5 per cent, 3.7 per cent and 0.4 per cent respectively as compared with the corresponding figures in 1970-71. The area irrigated by other sources (including lift irrigation etc.), however, decreased by 8,900 ha. or by 10.3 per cent.

#### 11. Sourcewise gross area irrigated

The gross area irrigated by Government canals, private canals, tanks and wells increased by 11,700, 9,600, 6,400 and 33,700 ha. or by 3.7 per cent 42.5 per cent, 3.1 per cent and 3.6 per cent, respectively

whereas the area irrigated by other sources decreased by 10,100 ha. or by 11.0 per cent.

#### 12. Irrigated area under food and non-food crops

It is seen from the summary table C (page 26) that out of the total irrigated area of 16,21,600 ha during the year under report 14,74,800 ha. (or 90.9 per cent) were under food crops and 1,46,800 ha. (or 9.1 per cent) under non-food crops. The irrigated area under food crops showed an increase of 2.8 per cent as compared to that of 1970-71, when it was 14,34,500 ha. The increase was appreciable in the case of the major crops of wheat, rabi jowar, gram, and chillies, the irrigated area under these crops having gone up by 8.5 per cent, 17.7 per cent, 21.4 per cent and 6.7 per cent respectively. The irrigated area under non-food crops also increased from 1,35,800 ha. in 1970-71 to 1,46,800 ha. 1971-72 i. e. by 8.1 per cent. The increase has been mainly in case of the major crops of cotton, groundnut and fodder, irrigated area under these crops having increased by 3.0 per cent, 4.7 per cent and 19.4 per cent respectively.

### CHAPTER IV

(Tables IV-A, IV-B and IV-C, Pages 68-87)

(Summary Table D, Pages 27-30)

#### 13. Total area under crops

The table at page 10 gives the divisionwise area under food and non-food crops, the gross cropped areas, area sown more than once, net cropped area and area under principal crops for two years 1970-71 and 1971-72 and comments thereon are briefly given below:

##### (i) Gross cropped area

After the initial widespread monsoon rains, the State experienced droughty conditions almost upto the third week of August in all parts except the assured rainfall areas. This led to reduction in gross cropped area.

The gross cropped area during the year under report was 181.2 lakh ha. and is less by 6.2 lakh ha. or by 3.3 per cent than that in 1970-71. The divisionwise increase or decrease over 1970-71, is given in the table below :—

(Area in '00' ha.)

Division	Gross cropped area 1970-71	Gross cropped area 1971-72	Percentage increase (+) or decrease (-) over 1970-71	
			1	2
Bombay	... 32,639	30,975	—	5.1
Poona	... 50,502	50,559	+	0.1
Aurangabad	... 51,806	46,398	—	10.4
Nagpur	... 52,422	53,221	+	1.5
State	... 1,87,369	1,81,153	—	3.3

The decrease in the gross cropped area was appreciable (i. e. 10.4 per cent) in Aurangabad division.

##### (ii) Double cropped area

The area sown more than once (mainly under double cropping) showed a slight increase of 0.9 per cent, having increased from 10.7 lakh ha. during 1970-71 to 10.8 lakh ha. during 1971-72. The divisionwise particulars of increase/decrease are given in the table below:—

(Area in '00' ha.)

Division	Double cropped area 1970-71	Double cropped area 1971-72	Percentage increase (+) or decrease (-) over 1970-71	
			1	2
Bombay	... 1,858	2,051	+	10.4
Poona	... 3,069	3,480	+	13.4
Aurangabad	... 3,149	2,543	—	19.2
Nagpur	... 2,611	2,715	+	4.0
State	... 10,687	10,789	+	0.9

##### (iii) Net Cropped area

During the year under report, the net cropped area at the State level was 1,70.4 lakh ha. which was lower

than that in 1970-71 by (6.3 lakh ha. or 3.6 per cent.) The divisionwise details are given in the table below :—

( Area in ' 00 ' ha. )

Division	Net cropped area 1970-71	Net cropped area 1971-72	Increase (+) or decrease (-) over 1970-71
1	2	3	4
Bombay	... 30,781	28,924	— 6.0
Poona	... 47,433	47,079	— 0.7
Aurangabad	... 48,657	43,855	— 9.9
Nagpur	... 49,811	50,506	+ 1.4
<b>State</b>	<b>... 1,76,682</b>	<b>1,70,364</b>	<b>— 3.6</b>

The decrease in the State total net cropped area by 3.6 per cent is attributed to the large area which remained unsown in Aurangabad and Bombay divisions during the kharif season.

#### (iv) Total area under food and non-food crops

As the State level, food crops occupied an area of 129.6 lakh ha. which formed 71.5 per cent of the total gross cropped area during the year under report and it was less by 5.3 lakh ha. or 3.9 per cent than that in the preceding year. The area under non-food crops, also decreased by 0.8 lakh ha. or 1.7 per cent, the figures of 1970-71 and 1971-72 being 52.4 and 51.6 lakh ha. respectively. The table below gives the divisionwise comparison of area under food and non-food crops during the years 1970-71 and 1971-72.

( Area in ' 00 ' ha. )

Division	Food crops			Non-food crops			
	1970-71	1971-72	Increase (+) or decrease (-) over 1970-71	1970-71	1971-72	Increase (+) or decrease (-) over 70-71	
1	2	3	4	5	6	7	
Bombay	... 23,908	22,497	— 5.9	8,731	8,478	— 2.9	
Poona	... 40,865	40,705	— 0.4	9,637	9,854	+ 2.2	
Aurangabad	... 37,953	33,445	— 11.9	13,853	12,953	— 6.5	
Nagpur	... 32,198	32,933	+ 2.3	20,224	20,288	+ 0.3	
<b>State</b>	<b>1,34,924</b>	<b>1,29,580</b>	<b>— 3.9</b>	<b>52,445</b>	<b>51,573</b>	<b>— 1.7</b>	

#### 14. Food Crops

The increase or decrease in area under the food crops during 1971-72 as compared with that in 1970-71 at the State and divisional levels is given in the statement at page 10.

( i ) *Rice* :—The area at the State level decreased by 12,900 ha. or by 1.0 per cent as compared with that of last year. The decrease was distributed mainly in Poona and Nagpur divisions. In Bombay division, however, it increased by 1.5 per cent.

( ii ) *Wheat* :—The area under wheat at the State level increased by 20.5 per cent or by 1,66,300 ha. The increase was noticed in all the divisions, it being 9.3%, 12.3%, 57.1% and 3.5% in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

( iii ) *Kharif Jowar* :—The area under kharif jowar at the State level decreased by 10.0 per cent having gone down from 25,37,000 ha. in 1970-71 to 22,82,600 ha. in 1971-72. The decrease was distributed in Bombay, Poona and Aurangabad divisions by 20.6%, 2.8% and 31.4% respectively while the area increased by 5.5 per cent in Nagpur division.

( iv ) *Rabi Jowar* :—The area under rabi jowar at the State level increased by 19.6 per cent having gone up from 31,66,000 ha. in 1970-71 to 37,85,500 ha. in 1971-72. The increase was noticed in all the divisions except Nagpur, it being 29.2%, 17.5% and 29.4% in Bombay,

Poona and Aurangabad divisions respectively. In Nagpur division, however, it decreased by 4.7 per cent.

( v ) *Bajri* :—The area under bajri at the State level recorded a decrease of 35.6 per cent, having gone down from 20,38,700 ha. in 1970-71 to 13,12,300 ha. in 1971-72. The decrease was shared to the extent of 19.6%, 27.9%, 69.5% and 2.9% by Bombay, Poona, Aurangabad and Nagpur divisions respectively.

( vi ) *Total area under cereals and pulses* :—From the Summary Table—'D' it is seen that the area under all cereal crops together was 100.9 lakh ha. in 1971-72 as against 103.2 lakh ha. in 1970-71 thus showing a decrease by 2.2 per cent. Area under pulses also decreased from 25.7 lakh ha. in 1970-71 to 22.8 lakh ha. or by 11.1 per cent during 1971-72. Thus the total area under food grain crops (i. e. cereals and pulses together) decreased by 5.1 lakh ha. or by 4.0 per cent.

#### 15. Non-Food Crops

The increase or decrease in area under the non-food crops during 1971-72 as compared with that in 1970-71 at the State and divisional levels is also given in the statement at page 47/10.

( i ) *Cotton* :—The area at the State level decreased by 2,21,000 ha. or by 8.0 per cent. The decrease was shared to the extent of 0.2%, 38.4% and 26.9% by Bombay, Poona and Aurangabad divisions respectively. In Nagpur division, it increased by 0.2 per cent.

( ii ) *Groundnut* :—The State total area under the crop recorded a decrease of 69,200 ha. or by 7.7 per cent having gone down from 9,04,000 ha. in 1970-71 to 8,34,800 ha. in 1971-72. The decrease was distributed in Poona, Aurangabad, Nagpur divisions to the extent of 11.3%, 19.0% and 3.2% respectively. In Bombay division, however, it increased by 5.9%.

( iii ) *Sesamum* :—Its area decreased by 6,200 ha. or by 5.0 per cent at the State level which in turn was distributed in Bombay, Poona and Aurangabad divi-

sions to the extent of 17.8%, 36.9% and 3.7% respectively. It increased in Nagpur division by 1.9 per cent.

( iv ) *Linseed* :—Its area increased by 21.8 per cent at the State level and the increase was by 31.7% and 71.8% in Poona and Aurangabad divisions respectively whereas it decreased by 66.7% in Bombay division and 8.9% in Nagpur division.

( v ) *Tobacco* :—Its area at the State level increased by 1.7 per cent or by 200 ha.

---

## CHAPTER V

## OUTTURN OF CROPS AND THEIR AVERAGE YIELDS

(Tables V-A and V-B Pages 88—113)

(Summary Table E Page 31)

## 16. Outturn of crops

The table below gives the divisionwise outturn of kharif and rabi foodgrain crops in 1971-72.

(Figures in '00' tonnes)

Division	Kharif Crops			Rabi Crops			Total		
	Cereals	Pulses	Total	Cereals	Pulses	Total	Cereals	Pulses	Total
1	2	3	4	5	6	7	8	9	10
Bombay	... 9,340	826	10,166	1,800	152	1,952	11,140	978	12,118
Poona	... 6,441	627	7,068	5,342	364	5,706	11,783	991	12,774
Aurangabad	... 2,563	818	3,381	3,936	696	4,632	6,499	1,514	8,013
Nagpur	... 11,155	1,862	13,017	2,055	587	2,642	13,210	2,449	15,659
State	... 29,499	4,133	33,632	13,133	1,799	14,932	42,632	5,932	48,564

It is seen that the total production of foodgrains at the State level was 48.6 lakh tonnes of which 33.6 lakh tonnes was of kharif crops while the remaining 15.0 lakh tonnes was contributed by rabi crops. The total production of cereals was 42.6 lakh tonnes and that of pulses was nearly 6.0 lakh tonnes. It is seen that Bombay, Poona, Aurangabad and Nagpur divisions produced 12.1, 12.8, 8.0 and 15.7 lakh tonnes of foodgrains respectively.

The comments on the seasonal conditions and their effect on the production of crops are briefly stated below :—

(i) *Rice*.—Rains received in the last week of May and the first week of June were adequate for sowing paddy seed in nurseries in Konkan and Mawal areas. Resowing was carried out in Thana, Kolaba and Ratnagiri districts in the areas affected by very heavy rains during the fourth week of June. Long dry spells during July affected growth of paddy nurseries as also transplanting on a large scale in the major paddy growing areas of the State. In the Vidarbha region, due to the scanty rains received upto the 3rd week, transplanting of paddy was held up in Umrer and Ramtek talukas of Nagpur district, Tumsar and Bhandara blocks of Bhandara district and parts of Chandrapur district. The transplanting of the crop was completed by the middle of August in the Konkan region and by mid-September in Vidarbha region. The crop in the State suffered at the growth stage for want of timely and adequate rains. The crop was affected by army worms in parts of Konkan region and Poona and Kolhapur districts. Attack of gall-fly was reported in the endemic areas of Bhandara district and in parts of Chandrapur district. On the whole, the condition of the crop in the State was not satisfactory. Summer

paddy was grown on 5,900 ha. in the Konkan region and Bhandara and Chandrapur districts of the Vidarbha region.

The total area under the crop decreased from 13.5 lakh ha. in 1970-71 to 13.4 lakh ha. in 1971-72 or by 1.0 per cent. The yield rate of the crop was also lower and the production of the crop consequently declined from 16.6 lakh tonnes in 1970-71 to 13.9 lakh tonnes in 1971-72 or by 16.1 percent.

(ii) *Wheat*.—Substantial rains received in the last week of September and in the first week of October facilitated large scale sowing of unirrigated crop. The germination of the sown crop was satisfactory. The dry and cold weather in November and December proved beneficial to the crop in major areas of the State except in the Vidarbha region where due to absence of dew, the unirrigated crop was affected. Due to the prolonged dry spell since the early rabi season, and the consequent lowering of water table in wells and shortage of water in tanks and small bandharas in the same region, the irrigated crop was also affected to some extent. Due to severe coldwave on the 13th and 14th February, late sown wheat crop in the initial grain formation stage was severely affected in certain parts of Nasik district. Rat infestation was reported largely in Ahmednagar, Amravati, Yeotmal and Bhandara districts. On the whole, the condition of the crop in the State was fairly satisfactory.

Due to diversion of unsown kharif lands the area under the crop in the State increased considerably from 8.1 lakh ha. in 1970-71 to 9.8 lakh ha. in 1971-72 or by 20.5 per cent. The yield rate of the crop was slightly lower but the total outturn increased from 4.4 lakh tonnes in 1970-71 to 5.0 lakh tonnes in 1971-72 or by 12.5 per cent.

(iii) *Kharif jowar*.—The rains received during the sowing period were inadequate and erratic with long dry spells affecting sowing of the crop in normal areas particularly in the north Deccan, major areas of Marathwada and west Vidarbha regions of the State. The germination of the crop was also affected and even resowing was carried out at places in Dhulia and Jalgaon districts. The crop on the verge of withering improved as a result of rains since the 21st August while the widespread and substantial rains received in the last week of September proved beneficial for the growth of the late sown crop. Rains received during the first fortnight of October generally boosted the growth of the late sown crop in major areas of the State.

The area under the crop decreased from 25.4 lakh ha. in 1970-71 to 22.8 lakh ha. in 1971-72 or by 10.0 per cent; however, the outturn of the crop increased from 8.9 lakh tonnes in 1970-71 to 10.8 lakh tonnes in 1971-72 or by 21.6 per cent. in spite of incidence of (i) army worms on hybrid jowar in Poona, Satara, Sholapur and Kolhapur districts. (ii) stemborer in Dhulia, Jalgaon, Sholapur, Buldhana and Amravati districts. Appreciable damage was caused to the crop in major parts of the State and of (iii) midgefly in major parts of the State.

(iv) *Rabi jowar*.—With the receipt of widespread and adequate rains since the 3rd week of August, large scale timely sowing of rabi jowar was undertaken in Ahmednagar, Poona, Sholapur and Satara districts and heavy soils of Bhir, Nanded and Osmanabad districts. The substantial and widespread rains received in the last week of September and 1st week of October helped in completing rabi jowar sowing in the Deccan and Marathwada regions and in undertaking its sowings in parts of Vidarbha region. The germination was satisfactory. In November, there were no rains, and the soil moisture was also inadequate, with the result that the condition of the unirrigated crop was affected in the light soils of the Deccan and Marathwada regions.

The State area increased from 31.7 lakh ha. in 1970-71 to 37.9 lakh ha. in 1971-72 (or by 19.6 per cent), while the outturn of the crop also increased from 6.7 lakh tonnes in 1970-71 to 8.0 lakh tonnes in 1971-72 (or by 19.7 per cent.)

(v) *Bajri*.—Due to inadequate rains with prolonged intervening dry spells during the sowing period, the sowing in normal areas was affected largely in north Deccan and Marathwada regions and particularly in scarcity areas of these regions. The germination of the early sown crop was adversely affected and resowing had to be done at places in the affected areas. Due to long dry spells in July and August, the condition of unirrigated crop, wherever sown, as well as of irrigated crop was not satisfactory in the State. The rains received in the last week of August improved the condition of late sown bajri crop. The early sown crop at maturity had lodged due to rather heavy rains in Nasik, Dhulia and Jalgaon districts. The crop suffered from ergot disease in parts of Nasik, Dhulia, Jalgaon and Aurangabad

districts. On the whole, the season was not favourable to the crop in most parts of the State.

The area under the crop decreased considerably viz. from 20.4 lakh ha. in 1970-71 to 13.1 lakh ha. in 1971-72 or by 35.6 per cent. The yield rate also showed a marked decrease. As a result the outturn of the crop declined sharply i. e. from 8.2 lakh tonnes in 1970-71 to 2.6 lakh tonnes during the year under report or by 68.0 per cent.

(vi) *Ragi*.—In Konkan and the Ghat regions, the assured rainfall tracts, the rains received in the first week of June were substantial and facilitated large scale sowing of the crop. The germination of the crop was satisfactory. The prolonged dry spell in Konkan in July delayed transplanting of the crop by 3 to 4 weeks and the same could be completed during the first fortnight of August following the substantial rains in the later half of July. The early and midlate varieties of crop, suffered at growth stage on account of dry spell during the first three weeks of September in major Konkan area. On the whole, the condition of the crop was not so satisfactory in the State.

The area under the crop decreased slightly from 1.9 lakh ha. in 1970-71 to 1.8 lakh ha. in 1971-72 or by 3.2 percent. The outturn of the crop also decreased from 1.6 lakh tonnes in 1970-71 to 1.5 lakh tonnes in 1971-72 or by 8.6 per cent.

(vii) *Gram*.—Due to substantial and widespread rains towards the end of September and first fortnight of October, sowing of the crop was undertaken on a large scale and was completed by November end. The area under the crop increased considerably due to diversion of unsown kharif lands particularly in Deccan and Marathwada regions. The condition of the crop was satisfactory as the dry and cold weather that prevailed was conducive to the growth of the crop. The crop, however, suffered to some extent in light and medium soils in parts of Nasik, Dhulia, Jalgaon and western Vidarbha region due to inadequacy of soil moisture caused by prolonged dry spell since early rabi season. Besides, due to severe cold on the 13th and 14th February, the crop in the initial grain formation stage was affected to some extent particularly in pockets of Nasik district. Attack of pod borer was reported on the crop in Buldhana and Akola districts. On the whole, the condition of the crop was satisfactory in major parts of the State.

The area under the crop increased from 3.1 lakh ha. in 1970-71 to 4.3 lakh ha. in 1971-72 or by 39.7 per cent and the outturn of the crop also increased from 0.9 lakh tonnes in 1970-71 to 1.3 lakh tonnes or by 52.4 per cent.

(viii) *Cotton*.—In north Deccan and Marathwada regions, the rains received during the sowing period were inadequate affecting sowing of the crop and its germination. The area under the unirrigated crop was considerably reduced.

In the Vidarbha region, the rains received in the third week of June facilitated large scale sowing of the crop. The interspersed dry spells in July and August arrested the crop growth in the State. However, the wide spread rains received in the last week of July, August and September enabled the crop to survive. Shedding of bolls was reported due to rather heavy rains during September in Nagpur district and during October in Amravati and Wardha districts. On the whole, the season was not very favourable to the crop.

The area under the crop decreased from 27.5 lakh ha. in 1970-71 to 25.3 lakh ha. in 1971-72 or by 8.0 per cent. The outturn of the crop during 1971-72 was 12.2 lakh bales (of 180 kg. lint each) as against the extremely low outturn of 4.6 lakh bales in the preceding year.

(ix) *Groundnut*.—Due to erratic, inadequate and prolonged dry spells during the sowing season, the area under the crop dropped in several parts of the State, particularly in the districts of Nasik, Jalgaon, Ahmednagar, Poona, Sholapur and all districts of Marathwada region except Nanded. The crop suffered not only in germination but also in growth. The incidence of tikka and aphids also affected the crop in Dhulia, Satara, Sangli, Sholapur and Kolhapur districts. On the whole the condition of the crop was not so satisfactory.

The area under the crop was 9.0 lakh ha. in 1970-71 and decreased to 8.3 lakh ha. in 1971-72 the decrease

being by 7.7 percent. The outturn of the crop also decreased from 5.9 lakh tonnes in 1970-71 to 5.0 lakh tonnes in 1971-72 or by 14.0 per cent.

#### 17. Yield per hectare

During the year under report, Statewise crop estimation surveys were continued on the principal crops of paddy, ragi, kharif jowar, bajri, wheat, rabi jowar, gram, sugarcane and cotton. The survey on tur was continued in all the districts of Nagpur division and in Sholapur and Osmanabad districts while that on tobacco crop was also continued in Satara, Sangli and Kolhapur districts.

The districtwise average yields per hectare for the above crops, based on the data of crop estimation surveys, are given in table V-A. In the same table, current yields of other crops not covered by crop estimation surveys, are also given. In the case of tur and tobacco crops, the current yields based on annewari are given for those districts which are not covered by the crop estimation surveys.

#### 18. Kharif crops

The State as well as the divisionwise estimates of average yield per hectare of rice, kharif jowar and bajri, based on the crop estimation surveys, are given below along with the increase or decrease in the yield of 1971-72 as compared with that in 1970-71.

Estimated average yield per hectare

Division	RICE (Total)			KHARIF JOWAR			BAJRI		
	1970-71	1971-72	Increase (+) or decrease (-)	1970-71	1971-72	Increase (+) or decrease (-)	1970-71	1971-72	Increase (+) or decrease (-)
	kg	kg	%	kg	kg	%	kg	kg	%
Bombay ...	1549	1294	-16.5	469	398	-15.1	504	214	-57.5
Poona ...	1974	1069	-0.5	879	955	+8.6	316	211	-33.2
Aurangabad ...	501	294	-41.3	227	349	+53.7	414	145	-65.0
Nagpur ...	1123	913	-18.7	307	447	+45.6	223	101	-54.7
State ...	1229	1041	-15.3	350	473	+35.1	404	201	-50.2

(i) *Rice*.—It is seen that the state average yield of rice decreased from 1229 kg/ha. in 1970-71 to 1041 kg/ha. in 1971-72 or by 15.3 per cent. The decrease was noticed in all the divisions and was 16.5%, 0.5% 41.3% and 18.7% in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

(ii) *Kharif jowar*.—The average yield per hectare of kharif jowar at the State level increased by 35.5% having gone up from 350 kg. in 1970-71 to 473 kg. in 1971-72 and the increase was noticed in Poona, Aurangabad and Nagpur divisions to the extent of 8.6%, 53.7% and 45.6% respectively whereas decrease was seen in Bombay division to the extent of 15.1%. The increase

is only apparent as in the preceding year, the crop was very much adversely affected due to severe incidence of midgefly.

(iii) *Bajri*.—The State average yield per hectare of bajri decreased by 50.2%, having gone down from 404 kg. in 1970-71 to 201 kg. in 1971-72 and was mainly due to the prolonged dry spells during the growth period of the crop in major areas of the State as also due to damage caused to it at the maturity stage on account of heavy rains in Bombay division. The decrease was shared by all the divisions and was to the extent of 57.5%, 33.2%, 65.0% and 54.7% in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

The average yield per hectare of tur and sesamum for the different divisions are shown below along with the increase or decrease in the yield of 1971-72 over that in 1970-71 :—

Division	Estimated yield per hectare					
	TUR				SESAMUM	
	1970-71	1971-72	Percentage increase (+) or decrease (-)	1970-71	1971-72	Percentage increase (+) or decrease (-)
1	2	3	4	5	6	7
Bombay	kg	kg		kg	kg	
...	540	441	-18.3	288	175	-39.2
Poona	kg	kg		kg	kg	
...	301	291	-3.3	216	186	-13.9
Aurangabad	kg	kg		kg	kg	
...	297	252	-15.2	140	81	-42.1
Nagpur	kg	kg		kg	kg	
...	646	646	...	106	165	+55.7
State	kg	kg		kg	kg	
...	432	452	+4.6	144	151	+4.9

The State average yield per hectare of tur showed an increase by 4.6 per cent having gone up from 432 kg in 1970-71 to 452 kg in 1971-72. A decrease was, however, noticed in the three divisions of Bombay, Poona and Aurangabad by 18.3 per cent, 3.3 per cent and 15.2 per cent respectively. In Nagpur division the yield rate was the same as that of last year.

The State average yield per hectare of sesamum showed an increase from 144 kg in 1970-71 to 151 kg in 1971-72 or by 4.9 per cent. This is due to the

appreciable increase in the yield rate by 55.7 per cent in Nagpur division, even though the other three divisions of Bombay, Poona and Aurangabad recorded a lower yield rate by 39.2 per cent, 13.9 per cent and 42.1 per cent respectively.

#### 19. Rabi Crops

The state and the divisional average yields per hectare of the principal rabi crops (based on the results of crop estimation surveys) are as under :

Division	Estimated yield per hectare					
	WHEAT			RABI JOWAR		
	1970-71	1971-72	Percentage increase (+) or decrease (-)	1970-71	1971-72	Percentage increase (+) or decrease (-)
1	2	3	4	5	6	7
Bombay	kg	kg		kg	kg	
...	904	682	-24.6	401	274	-31.7
Poona	kg	kg		kg	kg	
...	661	675	+2.1	183	198	+8.2
Aurangabad	kg	kg		kg	kg	
...	304	360	+18.4	263	222	-15.6
Nagpur	kg	kg		kg	kg	
...	447	477	+6.7	146	242	+65.8
State	kg	kg		kg	kg	
...	542	506	-6.5	212	212	...

It is seen from the above table that the average yield per hectare of wheat at the State level decreased slightly from 542 kg in 1970-71 to 506 kg in 1971-72 or by 6.5 per cent. This was due to the average yield being lower by 24.6 per cent in Bombay division. In the remaining three divisions of Poona, Aurangabad and Nagpur the yield rate was higher by 2.1 per cent, 18.4 per cent and 6.7 per cent respectively as compared with that of the preceding year.

The State average yield per hectare of rabi jowar remained the same as that of the preceding year being

212 kg. Amongst the divisions an increase in yield was noticed only in Poona and Nagpur divisions to the extent at 8.2 per cent and 65.8 per cent respectively. In the other two divisions of Bombay and Aurangabad, the yield per hectare decreased by 31.7 per cent and 15.6 per cent respectively because of inadequacy of soil moisture during the growth period of the crop and the incidence of cold spell.

The average yield per hectare of other rabi crops viz. gram ( based on the data of crop estimation surveys ),

linseed, rape and mustard (based on the annawari figures reported by the revenue department) for the different divisions of the State are given below:—

Division	Estimated yield per hectare									
	GRAM			LINSEED			RAPE and MUSTARD			
	1970-71	1971-72	Percentage increase (+) or decrease (-)	1970-71	1971-72	Percentage increase (+) or decrease (-)	1970-71	1971-72	Percentage increase (+) or decrease (-)	
1	2	3	4	5	6	7	8	9	10	
	kg	kg		kg	kg		kg	kg		
Bombay	...	407	310	-23.8	...	...	333	175	-47.4	
Poona	...	295	381	+29.2	195	148	-24.1	...	...	...
Aurangabad	...	216	270	+25.0	143	148	+3.5	105	63	-40.0
Nagpur	...	337	326	-3.3	169	183	+8.3	286	400	+39.9
State	...	281	305	+8.5	160	164	+2.5	172	136	-20.9

It is seen that the State average yield of gram increased from 281 kg/ha. in 1970-71 to 305 kg/ha. in 1971-72 or by 8.5 per cent. This was due to the increase in the yield rate in Poona and Aurangabad divisions by 29.2 per cent and 25.0 per cent respectively whereas in Bombay and Nagpur divisions it declined by 23.8 per cent and 3.3 per cent respectively.

In case of linseed, the State average yield per hectare recorded a marginal increase from 160 kg in 1970-71 to 164 kg in 1971-72 or by 2.5 per cent. Similarly the crop yield was slightly higher in Aurangabad and Nagpur divisions by 3.5 per cent and 8.3 per cent respectively while in Poona division, it declined by 24.1 per cent.

As regards rape and mustard, the State average yield per hectare appreciably decreased from 172 kg in 1970-71 to 136 kg in 1971-72 or by 20.9 per cent. This was due to a decrease in the yield by 47.4 per cent and 40.0 per cent in Bombay and Aurangabad divisions respectively whereas it increased by 39.9 per cent in Nagpur division.

## 20. Sugarcane and Tobacco

The table below gives the average yield per hectare of sugarcane (gur) (based on the results of crop estimation surveys) and tobacco (dry leaf) based on the survey data for the major crop growing districts and on annawari in the minor districts.

Division	Estimated average yield per hectare						
	SUGARCANE (GUR)			TOBACCO			
	1970-71	1971-72	Percentage increase (+) or decrease (-)	1970-71	1971-72	Percentage increase (+) or decrease (-)	
1	2	3	4	5	6	7	
	kg	kg		kg	kg		
Bombay	...	10,629	9,329	-12.2	...	...	...
Poona	...	10,456	10,117	-3.2	441	467	+5.9
Aurangabad	...	6,741	5,304	-21.3	500	333	-33.4
Nagpur	...	6,412	5,974	-6.8	500	429	-14.2
State	...	9,837	9,283	-5.6	448	458	+2.2

In the case of sugarcane crop, the State average yield per hectare of gur (based on harvested area) decreased from 9.8 tonnes in 1970-71 to 9.3 tonnes in 1971-72, or by 5.6 per cent. Amongst the divisions the decrease was 12.2 per cent, 3.2 per cent, 21.3 per cent and 6.8 per cent in Bombay, Poona, Aurangabad and Nagpur divisions respectively, due partly to the severe cold wave in February 1972 and partly to the inadequacy of well water caused by prolonged dry spells in the monsoon period and absence of winter rains.

The State average yield per hectare of tobacco (dry leaf) recorded a slight increase of 2.2 per cent having gone up from 448 kg in 1970-71 to 458 kg in 1971-72. This was due to increase in yield in Poona division (major tobacco growing area) by 5.9 per cent.

#### 21. Cotton

The table gives the total area, the average yield per hectare and outturn of cotton (lint) for each division and for the State as a whole during the two years 1970-71 and 1971-72.

Division	Area			Average yield per ha. (lint)				Outturn		
	in '000' ha.							in '000' bales*		
	1970-71	1971-72	Percentage increase (+) or decrease (-) over 1970-71	5	6	7	8	9	10	
1	2	3	4	kg	kg	kg	kg	kg	kg	
Bombay	... 316	316	... - 39.1	52	118	+ 126.9	91	207	+ 127.5	
Poona	... 69	42	- 39.1	118	226	+ 91.5	45	53	+ 17.7	
Aurangabad	... 737	539	- 26.9	21	65	+ 209.5	84	195	+ 132.1	
Nagpur	... 1628	1632	+ 0.2	26	85	+ 226.9	237	769	+ 224.5	
State	... 2750	2529	- 8.0	30	87	+ 190.0	457	1224	+ 167.8	

(\* 1 bale = 180 kg lint)

The State total area under cotton was 25.29 lakh ha. while the outturn (of lint) was estimated at 12.24 lakh bales (of 180 kg each) during the year under report as against 27.50 lakh ha. of area and 4.57 lakh bales of production in 1970-71 thus showing a decrease of 8.0 per cent in area and 167.8 per cent increase in the outturn. The apparent abnormal increase in the outturn over that of the preceding year was due to lowest level of outturn attained in 1970-71 the year of abnormal failure. The decrease in the area is noticed mainly in the divisions of Poona and Aurangabad to the extent of 39.1 per cent and 26.9 respectively, whereas

in the other two divisions the area was about the same as that of preceding year.

It is seen that the state average yield per hectare of cotton (lint) recorded an increase of 190.0 per cent. having gone up from 30 kg in 1970-71 to 87 kg in 1971-72. The large increase in the yield per hectare is only apparent being due to the fact that the yields recorded in the preceding year were abnormally low due to the crop failure. The increase was shared by all the divisions and was to the extent of 126.9 per cent, 91.5 per cent, 209.05 per cent and 226.9 per cent in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

## CHAPTER VI

### PRICES

(Table VI Pages 114-118)

(Summary Table 'F' Page 32)

22. The Table VI of the report gives the districtwise average farm harvest prices during the peak marketing period, of the principal crops in 1971-72. The average

farm harvest prices at the State level for the 5 years viz. 1967-68 to 1971-72 are given in the summary table 'F' for the principal commodities of the State.

23. The major variations in the average farm harvest prices of principal commodities at the State and divisional levels as compared with the corresponding prices of the previous year, are commented in the following paragraphs.—

The price of paddy at the State level was Rs. 82.87 per quintal and was higher by 5.9 per cent than that of the previous year. The increase was noticed in all the divisions ranging from 0.6 to 5.5 per cent.—

The price of wheat at the State level was Rs. 101.34 per quintal and it was slightly higher by 1.2 per cent than that of the previous year. The increase was noticed only in Bombay division by 4.0 per cent than that of the previous year. It was slightly lower by about one per cent than that of the previous year in the remaining three divisions.

The State average price of jowar viz. Rs. 84.85 per quintal, was higher by 8.9 per cent than that of the preceding year. It was higher by 17.8 per cent and 16.5 per cent in Bombay and Poona divisions and 1.4 per cent and 7.2 per cent in Aurangabad and Nagpur divisions respectively.

The State level price of bajri viz. Rs. 85.45 per quintal during the year under report was higher by 12.3 per cent than that of the preceding year. The price was higher by 15.1 per cent, 8.9 per cent and 24.0 per cent in Bombay, Poona and Aurangabad divisions respectively, while it was 4.5 per cent lower than that of the preceding year in Nagpur division.

The price of ragi per quintal at the State level was Rs. 80.28 and it was higher in the major ragi growing divisions of Bombay and Poona by 12.6 per cent and 3.6 per cent respectively.

The State average price of maize was Rs. 79.17 per quintal and at the divisional level, it was higher by 17.1 per cent and 47.5 per cent in Poona and Aurangabad divisions respectively and was lower by 15.9 per cent and 12.2 per cent in Bombay and Nagpur divisions respectively than that of the preceding year.

Among the different pulses, the State level average price of Rs. 155.55 per quintal of tur dal was higher by 18.8 per cent than that in 1970-71. The increase was noticed in all the divisions it being 36.4 per cent, 43.7 per cent, 5.0 per cent and 17.1 per cent in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

The average price of gram at the State level was Rs. 103.97 per quintal which was slightly higher by 3.7 per cent as compared with that in the preceding year. The increase was noticed in Bombay, Poona and Aurangabad divisions to the extent of 9.2 per cent, 12.3 per cent and 19.8 per cent respectively than the corresponding price of the preceding year.

The average price per quintal of cotton (unginned) at the State level was Rs. 169.93 per quintal and was higher than that of the preceding year viz. by 3.4 per cent. The price of cotton increased by 27.0 per cent in the Bombay division and by 2.7 per cent and 0.5 per cent in Aurangabad and Nagpur divisions respectively. It declined in Poona division by 7.4 per cent.

The average price of Rs. 144.44 per quintal of sugar (raw) increased by 40.9 per cent at the State level as compared with that of the preceding year. The increase was noticed in all the divisions viz. Bombay, Poona, Aurangabad and Nagpur and was of the order of 26.4 per cent, 39.9 per cent, 27.1 per cent and 47.6 per cent respectively.

The average price of groundnut (pods) was Rs. 145.97 per quintal and was lower by 7.9 per cent as compared to that in the preceding year. It was lower in all the divisions viz., Bombay, Poona, Aurangabad and Nagpur by 12.1 per cent, 10.0 per cent, 4.8 per cent and 3.5 per cent respectively.

At the State level, the price of tobacco viz., Rs. 457.47 per quintal was higher than that of the previous year by 32.7 per cent as the price in the major tobacco growing districts of Poona division increased by 36.4 per cent as compared with that in the preceding year.

The prices of the remaining commodities viz., castor-seed, linseed and sesamum increased at the State level while those of potatoes and chillies declined as compared to those in the preceding year. The price increase in the former three commodities was of the order of 1.0 per cent, 6.8 per cent and 4.7 per cent and the price decrease in the latter two commodities was respectively 1.4 per cent and 21.2 per cent respectively.

24. In the table below, the spot market prices of Vijay (Digvijay) and Jarilla/Virnar cotton ruling at Bombay during the year under report are compared with those of the preceding year and the average of 5 years ending 69-1970.

Variety of cotton	Price per quintal			Per cent Variations as compared with		
	Average of five years ending 1969-70	1970-71	1971-72	Average	The price of 1970-71	6
				price		
1	2	3	4	5	6	
	Rs.	Rs.	Rs.	Per cent	Per cent	
Vijay (Digvijay)	...	459	901	+ 53.8	- 21.6	
Jarilla/Virnar	...	392	696	+ 37.0	- 22.8	

It is seen from the above table that as compared with the quinquennial spot market prices, the yearly average price of Virnar during the year under report increased by 37.0 per cent. whereas the corresponding increase in the case of Digvijay was of higher order being 53.8 per cent. The prices of the varieties Virnar and Digvijay during the year under report as compared with the corresponding prices of the preceding year were, however lower by 22.8 per cent and 21.6 per cent respectively.

As against the general trend in cotton market prices that prevailed during the period under report, the spot market prices per quintal of cotton (lint) in respect of Virnar and Digvijay varieties varied from Rs. 445 to Rs. 721 and from Rs. 624 to Rs. 948 respectively as will be evident from the trend of prices recorded monthwise in the table shown aside.

		(Prices per quintal)		
Year	Month	Jarilla/Virnar Fine (average price)	Vijay Fine (average price)	
1	2	3	4	Rs.
1971	August	...	721	948
	September	...	—	—
	October	...	650	—

## CHAPTER VII

### AGRICULTURAL WAGES

(Table VII, Pages 119—131)

(Summary Table 'G' Pages 33-35)

25. According to the State Manual of Revenue Accounts, Agricultural labour is classified under three categories viz. (i) skilled labour, (ii) ordinary labour and (iii) field labour. Skilled labour comprises of carpenters, blacksmiths and cobblers. Ordinary labour includes load carrying coolies, well diggers, assistants of mason or carpenters, earth workers etc. while field labour includes ploughmen, sowers, transplanters, weeders, reapers, harvesters etc. In this report, as shown in Table VII of Agricultural Wages, one more category of labour is included viz. herdsmen

whose main daily work is to take the livestock owned by different owners to the jungle for grazing.

26. Table VII of the report gives districtwise and monthwise figures of daily wages of different classes of agricultural labour. State level information along with that for the previous year, is given in the Summary Table 'G'.

The table below gives the state (simple) average of agricultural wages of different categories of agricultural labour, during the years 1970-71 and 1971-72.

*Agricultural wages (daily) in rupees.*

Year	Skilled labour				Field labour			Other agril. labour		Herdsmen
	Carpenter	Black-smith	Cobbler	Male	Female	Children	Male	Female		
1	2	3	4	5	6	7	8	9	10	
1970-71	...	6.55	6.00	4.88	3.03	2.02	1.45	2.79	1.86	2.44
1971-72	...	6.88	6.23	5.15	3.06	2.07	1.50	2.87	1.95	2.47

It is seen from the above that during the year under report, the State averages in respect of all classes of

agricultural labour showed an increase over those in the preceding year.

## CHAPTER VIII

### AGRICULTURAL STOCK

(Table VIII Pages 132—147 )

(Summary Table 'H' Pages 36—39 )

27. Table VIII of this report gives the details of livestock, poultry, agricultural machinery and implements as per quinquennial census of livestock conducted in 1972 by the Director, Bureau of Economics and Statistics, Maharashtra State, Bombay. Summary Table 'H' gives provisional total number of livestock, poultry, agricultural machinery and implements according to different categories.

(i) *Cattle*:—There was a slight decrease in the number of cattle from 1,47,29,446 in 1966 to 1,47,05,147 in 1972 or by 0.2 per cent. The total number of males of age over three years decreased by 5.2 per cent. Out of these, the number of males used for work only recorded a decrease of 3.4 per cent. The number of 'other males' over three years only showed an increase of 9.1 per cent.

Among the females over three years the number of breeding cows recorded an increase of 1.0 per cent while those in milk increased by 4.2 per cent. The number of young stock recorded an increase of 7.3 per cent over that in 1966.

(ii) *Buffaloes* : The total number of buffaloes recorded in 1972 was 33,00,746 as against 30,41,919 in 1966 showing an increase of 8.5 per cent. Among the different categories of buffaloes, the number of males over three years was 3,08,353 showing a decrease of 9.2 per cent over that in 1966. Among the females, the number in milk was 9,54,884 in 1972 showing an increase of 11.7 per cent. The total number of breeding buffaloes showed an increase of 7.8 per cent. The number of young stock recorded an increase of 16.0 per cent.

(iii) *Sheep and Goats* : The number of sheep decreased by 3.5 per cent whereas that of goats increased by 15.4

per cent as compared with the corresponding number of the year 1966.

(iv) *Horses and Ponies etc.*—The total number of horses and ponies declined considerably i. e. by 42.3 per cent in comparison with that of 1966.

The number of mules and camels declined by 64.4 per cent and 63.7 per cent or by 847 and 1232 respectively.

The decrease in the number of donkeys was by 18.2 per cent while the number of pigs increased by 12.0 per cent over that of the year 1966.

The total number of livestock recorded an increase by 3.6 per cent over that of the year 1966.

(v) *Poultry* :—The total number of poultry showed an increase by 23.4 per cent.

(vi) *Agricultural Machinery and Implements* :—For the first time during 1972, the scope of the census was made comprehensive to cover data on upto date list of agricultural machinery and implements in the State. The variations in respect of the major items of agricultural machinery and implements based on 1972 census as compared with the previous one are summarised below :—

The number of tractors increased by 71.2 per cent while ghanies decreased by 47.0 per cent. The number of wooden ploughs, iron ploughs and carts showed an increase of 0.8 per cent, 13.2 per cent and 4.0 per cent respectively. Sugarcane crushers decreased by 50.6 per cent. Oil engines for irrigation purposes increased by 17.2 per cent while the number of electric pumps used for irrigation shot up from 37,979 to 1,69,778 or by nearly three and half times.

## CHAPTER IX

### AGRICULTURAL OUTLOOK

28. The south-west monsoon created a very precarious situation in Maharashtra, this year. After initial showers in all districts, droughty conditions prevailed and continued almost upto the third week of August all over the State excepting the assured rainfall area in the western part of the State and parts of Vidarbha region. Consequently in major parts of Aurangabad division and in Ahmednagar and Sholapur districts and in the eastern parts of Poona, Satara, Sangli, Dhulia and Nasik districts and western parts of

Jalgaon district, sowing of kharif crops could not be undertaken due to inadequacy of rains during the sowing season. The rains received in the last week of August and early September proved beneficial to the growth of standing kharif crops and facilitated large scale sowing of rabi jowar, in parts of Deccan and Marathwada regions. The dry spell, that followed till the fourth week of September, affected the standing kharif crops particularly cotton and groundnut in their critical growth stages. The rains received in the last

week of September facilitated large scale sowing of rabi crops, the area under which increased due to diversion of unsown kharif areas to rabi jowar and other rabi crops. Lack of rains thereafter in October, November and December affected the proper growth of late kharif crops and unirrigated rabi crops particularly rabi jowar in most parts of Deccan and Marathwada. Rabi jowar was also affected in its growth stage due to the severity of the cold spell during December and January in parts of Deccan whereas it proved conducive to the growth of wheat and gram crops in most parts of the State. The occurrence of cold wave on the 13th and 14th

February adversely affected fruits and vegetables and newly planted cane to some extent in Nasik and Ahmednagar districts and parts of Dhulia, Jalgaon, Aurangabad and Poona districts. Irrigated crops were affected to some extent due to the inadequacy of water in wells for irrigation caused by continuous drought conditions in the State. On the whole, the rabi season was also not so favourable to the crops in different parts of the State.

29. The table below gives division-wise actual area sown and the outturn of foodgrain crops during 1970-71 and 1971-72:

(Figures in hundreds)

Division	Area in ha.		Outturn in tonnes			Per cent
	1970-71	1971-72	1970-71	1971-72		
1	2	3	4	5	6	
Bombay	...	22,509	21,139	16,511	12,118	- 26.6
Poona	...	38,341	38,263	13,118	12,774	- 2.6
Aurangabad	...	36,808	32,416	9,966	8,013	- 19.6
Nagpur	...	31,205	31,916	14,542	15,659	+ 7.7
State	...	1,28,863	1,23,734	54,137	48,564	- 10.3

It will be seen from this table that the area under foodgrains crops decreased from 128.9 lakh ha. in 1970-71 to 123.7 lakh ha. in 1971-72 or by 5.2 lakh ha. The outturn of foodgrains was also lower by 5.5 lakh tonnes having gone down from 54.1 lakh tonnes in 1970-71 to 48.6 lakh tonnes in 1971-72 or by 10.3 per cent.

The decrease in the production was noticed in Bombay, Poona and Aurangabad divisions by 26.6 per cent, 2.6 per cent and 19.6 per cent respectively while an increase to the extent of 7.7 per cent was noticed in Nagpur division.

The production of the foodgrains during the year under report was lower as compared to that of the previous year mainly due to the reduction in area and lower yield rates caused by continuous dry spell in the growth stage of both rainfed kharif and rabi crops as also irrigated crops raised under well irrigation. Besides, the incidence of cold wave affecting the rabi jowar lowered the production level of the foodgrains crops. Worsening of the situation was saved to some extent by the hybrid and high yielding varieties which gave substantially higher yields of crops.

The supply of oil engines as also installation of electric pumps contributed in bringing larger area under irrigation covered under agricultural production programmes. Further the irrigation projects in operation continued to benefit the agriculturists in the project command areas of the State.

\*The comments on the condition of cattle and other livestock are based on the information sent by the Department of Animal Husbandry, Maharashtra State, Poona.

30. \*The condition of cattle and other livestock was fairly satisfactory in the State. The incidences of contagious diseases were as below:—

In equines, 17 outbreaks of surra and in Bovines 20 outbreaks of surra were reported from Bombay and Nagpur regions. The incidence of Haemorrhagic Septecemia was reported both in bovines and sheep from all over the State. In Bovines, 1,244 outbreaks were reported affecting 5,178 animals out of which 3,081 died. In case of sheep and goats there were only 13 outbreaks. The incidence was severe viz., 52 per cent in Aurangabad region. The incidence of Black Quarter disease was fairly distributed all over the State with 837 outbreaks affecting 2,777 animals resulting in 2,254 deaths. In Aurangabad region, the incidence of the disease was severe viz. 61 per cent. The Rinderpest disease was reported to a larger extent in Bombay region claiming 8 outbreaks while in Nagpur region, 6 outbreaks were reported. The incidence of Anthrax was reported from all over the State except Poona region. The incidence of Foot and Mouth disease in Bovines was widespread in the State claiming 1,016 outbreaks. In case of sheep the incidence was more in Aurangabad region as compared to other regions. In sheep, the outbreaks of Enterotoxaemia and sheep pox were reported from all over the State except Poona region.

In case of poultry, there were 46 outbreaks of the Ranikhet disease and 12 outbreaks of the Foul Pox disease.

Necessary measures were adopted in controlling the outbreaks and spread of diseases.

Supply of fodder was inadequate mainly in parts of Deccan and Marathwada regions during April to September 1971 and later in February and March 1972. The prices also ruled high from April to September 1971 in different markets in the affected areas. To tide over the situation, fodder supply on tagai basis was arranged in Ahmednagar, Poona, Sholapur, Satara, Sangli and Aurangabad districts. Besides in Sholapur district, maize seed on 50 per cent subsidy was distri-

buted by Zilla Parishad for raising fodder to meet the situation.

Due to drought conditions, the agricultural labour could not be fully engaged in agricultural operations. Besides prices of foodgrains and other commodities shot up. Consequently most of the labour was diverted in scarcity works undertaken in nearly 14,700 villages of the State. The labourer received higher wages in the State.

31. The table below gives the average prices of agricultural commodities prevailing at peak marketing period for the years 1970-71 and 1971-72.

Commodity 1	Centre 2	Prices per quintal				
		1967-68 3	1968-69 4	1969-70 5	1970-71 6	1971-72 7
Jowar	... 1. Mangalwedha (Sholapur)	Rs. A 56.00	Rs. 56.00	Rs. 56.00	Rs. 56.00	Rs. 58.00
	2. Karanja (Akola)	B 54.00	54.00	54.00	54.00	56.00
	3. Latur (Osmanabad).	C 48.00	49.00	49.00	49.00	50.00
Bajri	... 1. Nasik	97.42	92.36	85.02	69.17	83.83
	2. Phulmaly (Aurangabad)	92.21	82.35	87.33	69.00	91.04
Rice	... 1. Thana	AA 97.70	100.50	100.50	100.50	106.00
	2. Goregaon (Kolaba)	A 91.00	93.50	93.50	93.50	98.50
		B 84.25	86.50	86.50	86.50	91.50
		C 76.15	78.50	78.50	78.50	83.00
Wheat	... 1. Gada (Nagpur)	132.79	112.67	102.75	94.40	99.00
	2. Jalna (Aurangabad)	122.69	104.54	101.75	106.80	103.90
Groundnut	... 1. Karad (Satara)	121.91	123.82	140.00	146.86	133.69
	2. Osmanabad	153.96	139.17	170.00	145.97	133.80
Cotton (Jarilla)	... 1. Bombay	401.83	418.05	485.19	696.00	537.00

Note.—( i ) Prices given above for jowar and rice are controlled ones.

( ii ) Dashes indicate that prices in these cases are not available.

( iii ) AA—Superfine, A—Superior, B—Medium and C—Coarse.

The centres mentioned in the table are the representative markets and accordingly the markets indicate general trend in the fluctuations of prices of the commodities in the State during the period under review.

## CHAPTER X

### CONDITION OF AGRICULTURAL POPULATION

32. During the year under report, the adverse seasonal conditions (described in Chapter I) not only affected the extent of kharif cropped area but also the average yield rates of crops in most parts of the State. The agricultural wages and prices of agricultural commodities

recorded an increase. Scarcity conditions prevailed in most of the districts. However the measures described below, helped in tiding over the precarious situation to an appreciable extent.

The labour was engaged in various relief works such as soil conservation, field cleaning up campaign, construction of roads and percolation tanks etc. undertaken on a large scale by the Government and Zilla Parishads. Supply of foodgrains at controlled prices though ration shop was continued. Thus, the condition of agricultural labour had eased to some extent. The industrial and factory areas, also absorbed labour on fairly good wages both in kind and cash suited to local conditions in the State. The cultivators were provided with various incentives to step up food production under hybrid and high yielding varieties programme undertaken on a larger scale. Loans were advanced to the needy agriculturists by Government, Zilla Parishads, Land Development Banks and various other banks and Societies in the districts enabling them to improve their economical condition. Launching of intensive cultivation programmes on a planned basis for enhancing yield rates of principal crops coupled with intensive training programme and arranging of demonstration plots had also helped to some extent in the gradual replacement of the traditional method of cultivation. Rural electrification scheme helped the agri-

culturists in increasing the area under irrigation wherever possible ( i. e. depending on the availability of water in wells ) through greater use of electric pumps in different parts of the State. Under the Integrated Area Development Scheme, the small holders and agricultural labourers in 21 blocks covering 5,245 villages received the benefits from the process of economic development. Facilities were provided such as ( i ) making available loans on easy terms to the cultivators, ( ii ) granting them additional subsidies to lessen the financial burden, ( iii ) helping them to take up subsidiary industries like maintenance of milch animals, poultry, sheep and goat breeding and ( iv ) providing them irrigation by constructing community wells, small bandharas and lift irrigation units. Employment to agricultural labour in slack season was also guaranteed under the pilot Employment Guarantee scheme in certain blocks of Satara, and Sangli districts during the year under report. The Bombay Tenancy Act, the Agricultural Land Improvement Act, Prevention of Fragmentation and Consolidation of Holding Act resulted in an over all improvement of agriculture and welfare of the agriculturists in the State.

---

**SUMMARY TABLE 'A'****Classification of Area**

(Area figures in '00' ha.)

Head of classification	1970-71		1971-72		Percentage increase (+) or decrease (-)
