No. SCR/1274/6692/S-III,
DIRECTORATE OF AGRICULTURE,
MAHARASHTRA STATE,
PUNE-411 001.
Dated 8th December, 1975.

FROM

SHRI S. R. CHOPDE,
DIRECTOR OF AGRICULTURE,
MAHARASHTRA STATE,
PUNE-411 001.

To

THE SECRETARY TO GOVERNMENT,
AGRICULTURE AND CO-OPERATION DEPARTMENT,
SACHIVALAYA ANNEXE,
BOMBAY-400 032.

Sir,

I am to submit herewith the Annual Season and Crop Report of the Maharashtra State for the year ending the 31st July 1973.

Both the kharif and rabi seasons of the year were the most unfavourable ever since the formation of the State in 1960.

The kharif season was characterised by unusually low rainfall during the pre-monsoon period in most of the districts, delayed onset of the monsoon as late as in the fourth week of June and that too in not all the parts of the State. This was the third year in succession, when the south-west monsoon created a very precarious agricultural situation in the State. Although fairly widespread rains were received in the first week of July, the districts of Ahmednagar and Solapur and eastern parts of Pune, Satara and Sangli districts of the Deccan region and parts of Aurangabad, Bhir and Osmanabad districts of the Marathwada region were practically dry and kharif sowings could not be undertaken in many areas. In other parts of these regions, although sowings were completed, the crops on light soils failed completely due to the inadequacy of soil moisture. The early varieties of pulses also suffered because of the long dry spell in the months of July and August. Even in the assured rainfall areas of Konkan and eastern parts of Vidarbha, transplanting of paddy was delayed because of inadequate water in the fields in the months of July and August adversely affecting the crop yields. In Vidarbha, although kharif sowing could be completed in many areas, yet the crop condition was not good, as the long dry spells in the months of July, August and September-October coincided with the critical phases of the crop growth. The kharif season thus was very unfavourable by way of not only in the reduction in the sown area under crops but also in lowering their yield rates appreciably.

The rains received in the month of September lasted for a few days only and as the total rainfall was also inadequate, the sowing particularly of rabi jowar could be undertaken only in a limited area. The long dry spell from the 15th September to October end, interrupted the rabi sowings. In the

month of November, sowing of rabi crops was resumed but at that stage the sowing season of rabi jowar was over. As a result, although it was initially hoped that the unsown kharif areas would be diverted to rabi jowar thereby increasing its area considerably, yet actually there was an appreciable reduction in the area under this crop due to lack of adequate sowing rains. Inadequacy of soil moisture also put limitations on the sowing of rainfed wheat and gram crops. Crops normally irrigated in different parts of State were also affected due to the inadequacy of irrigation water. Hence the area under irrigated wheat also had gone down. Rabi jowar crop on light soils suffered heavily and the cold spell in the month of January 1973 further affected the crop adversely. Thus the rabi season was also very unfavourable and the hopes of wiping out a part of the deficit of the kharif season through an ambitious crash rabi programme could not be fulfilled.

Even during the kharif season, acute shortage of fodder, drinking water and irrigation water was experienced in major parts of the State and the situation worsened in the rabi season.

Summing up, it may be stated that the agricultural season 1972-73, in the State was the worst ever since the formation of the State in 1960. It was characterised by inadequate rains, failure of the monsoon in certain areas and prolonged dry spells, resulting in not only appreciable decrease in the area sown but also in reducing the yield rates and ultimately the agricultural production. Consequently scarcity conditions prevailed in 25,323 villages out of the total number of 38,825 villages in the State.

2. The incidence of ergot on bajri, aphids on kharif jowar and common pests of cotton was reported. Aerial sprayings were carried out on a large scale in Jalgaon and Akola districts against the common pests and diseases of cotton. Both prophylactic and remedial measures were promptly carried out on campaign basis in the severely affected areas.

3. The gross irrigated area during the year under report was 14.7 lakh hectares which was less than the last year's area of 16.2 lakh hectares by 9.5 per cent.

4. The area under food crops was 119.9 lakh hectares in 1972-73 as against 129.6 lakh hectares in 1971-72 showing a decrease of 7.5 per cent. Similarly the area under non-food crops decreased from 51.6 lakh ha. in 1971-72 to 49.9 lakh hectares in 1972-73 i. e. by 3.2 per cent. The year 1971-72 however was itself a scarcity affected one. Hence, the effect of unfavourable season could be brought out more clearly by comparing the figures with those in a normal year like 1968-69. In 1968-69 the areas under food and non-food crops were 137.7 lakh hectares and 56.0 lakh hectares respectively. Thus the corresponding areas in 1972-73 were less by 17.8 lakh hectares (or 12.9 per cent) and 6.1 lakh hectares (or 10.9 per cent) respectively.

5. The prices of all the agricultural commodities were higher than those in 1971-72. The wages of skilled and unskilled labour in the State, recorded a slight increase.

6. The latest available results of the quinquennial Live Stock Census 1972 show that there was a slight decrease in the number of cattle viz., by 0.2 per cent whereas the total number of buffaloes recorded an increase of

8.5 per cent over the corresponding figure of 1966 census. The number of buffaloes used for breeding purposes alone decreased by 6.5 per cent while the number of cattle in milk increased by 11.7 per cent. The number of sheep decreased by 3.5 per cent and horses and ponies by 42.3 per cent while the number of goats recorded an increase of 15.4 per cent. The poultry population showed an increase of 23.4 per cent.

7. According to the above census, the number of oil engines and tractors showed an increases of 17.2 per cent and 71.2 per cent respectively whereas the number of sugarcane crushers decreased by 50.6 per cent over the 1966 census figures. Similarly the number of electric pumps increased nearly by three and a half times while the number of ghanis declined by 47.0 per cent.

Yours faithfully,

S. R. CHOPDE,
Director of Agriculture,
Maharashtra State,
Pune-411 001.

Season and Crop Report of the State of Maharashtra for the Year 1972-73

CHAPTER I

SEASON

1. Distribution of Rainfall

The rainfall recorded at selected centres in the State during the year under report, as compared with the normal rainfall, is given in table-1 (pages 36 to 51).

(i) *Pre-monsoon rains*. (April to May).—The pre-monsoon rains were below the normal in most of the districts except Dhulia, Jalgaon, Ahmednagar, Poona and Kolhapur.

(ii) *Monsoon rains*. (June to September).—The monsoon rains were also below the normal in most parts of the State excepting Sangli, Kolhapur and Amraoti districts.

(iii) *Post-Monsoon rains* (October to November).—The post-monsoon rains were below the normal in most of the districts except Solapur, Nanded, Yeotmal, Bhandara and Chandrapur where due to occurrence of November rains, the post-monsoon rainfall exceeded the normal.

(iv) *Winter rains* (December to March).—The winter rains were below the normal in most parts of the State.

(v) *Total rainfall for the year*. —The annual rainfall during the year under report was less than the normal by nearly 50 per cent in most of the districts.

(2) Effect of rainfall on sowings and crop condition

The pre-monsoon rainfall was very little or even absent in most of the districts in the State. Besides, the monsoon rains not only arrived as late as the 4th week of June but the coverage was also incomplete. Their continuity was broken by two long dry spells, one from the 9th July to the 2nd week of August and the other from the 15th September to the end of October. As a result, the sowing of kharif crops could not be undertaken in many areas including the frequently scarcity affected areas of Ahmednagar and Solapur districts,

eastern parts of Poona, Satara and Sangli districts of the Deccan region and parts of Aurangabad, Bhir and Osmanabad districts of the Marathwada region. In other parts of these regions, although the kharif sowings were completed, the crops on light soils failed due to the inadequacy of soil moisture and at places the farmers even bakhared up their fields. The early varieties of pulses also received a serious setback because of the long dry spell in July-August. Even in the assured rainfall areas of the Konkan and eastern parts of the Vidarbha (comprising Nagpur, Chandrapur and Bhandara districts), the paddy transplanting was delayed due to the inadequacy of water in the fields. In the Konkan region, the transplanting of *nagli* was also delayed for the same reason. This had an adverse effect on the yields of both paddy and *nagli* crops. In Vidarbha, large scale kharif sowings were completed by June end but the crops were adversely affected as the long dry spells in the months of July-August and September-October coincided with the critical phases of their growth. With the receipt of rains for a few days in early September, the sowing of rabi crops, mainly rabi Jowar, was undertaken. But due to the continuous drought from the 15th September to October end, the crop could not be sown in several parts and consequently its total area was reduced appreciably. Similarly, the sowing of wheat and gram crops was affected not only under rainfed conditions due to inadequacy of soil moisture but also under irrigated conditions due to shortage of irrigation water. Rabi jowar crop on lighter soils in particular suffered heavily. Further, the cold spell in January 1973 adversely affected this crop.

The irrigated crops in general, all over the State, were affected because of inadequacy of water available for irrigation.

On the whole, the agricultural season 1972-73 was extremely unfavourable.

CHAPTER II

AREA CULTIVATED AND UNCULTIVATED

(Table II Pages 5-2-53)

(Summary Table—A Page 20)

3. Number of Villages

During the year under report, the number of revenue villages in the State was 38,825 as against 38,808 in the preceding year. This increase by 17 villages was due to formation of separate villages distributed in Dhulia, Jalgaon, Parbhani, Osmanabad, Akola and Amravati districts.

4. Total Area

The total geographical area of the State based on the survey carried out by the Surveyor General of India was 307.8 lakh ha. whereas the reporting area for Land Utilisation Statistics was 307.6 ha. the same as in the last year.

5. Cultivated and Uncultivated area

The total cropped area in the State was 169.8 lakh ha. as against 181.2 lakh ha. during the preceding year showing a decrease of 6.3 per cent. The net cropped area also showed a reduction of 5.7 per cent having decreased from 170.4 lakh ha. in 1971-72 to 160.6 lakh ha.

in the year under report. The area, sown more than once, decreased by 14.7 per cent. The area under non-agricultural uses increased by 2.6 per cent.

The area under current fallows increased from 14.8 lakh ha. in 1971-72 to 25.8 lakh ha. in 1972-73 or by 73.9 per cent which indicates how large areas remained unsown in the latter year. The area under "other fallows" increased by 0.9 lakh ha. or by 9.4 per cent due to prolonged acute scarcity conditions at sowing stages during the year under report as also two preceding years.

There was some increase in the area under "current fallows" mainly, in Nasik, Pune, Sangli, Solapur, Aurangabad, Bhir and Osmanabad districts while the area increased appreciably under "other fallows" in Ratnagiri, Sangli, Solapur and Osmanabad districts. Area under culturable waste decreased by 8.9 per cent as some old fallow area was brought under cultivation in some parts of the State. The area under other items of land utilization recorded a very slight decrease (by 0.7 to 3.2 per cent).

CHAPTER III

IRRIGATED AREA

(Tables III-A and III-B Pages 54-65)

(Summary Tables B and C Pages 21-22)

6. Sources of water supply

During the year under report, the number of government and private canals was 752 and 7,460, with running length of 6,083 km. and 9,140 km. respectively. As compared with the preceding year, the number of government canals increased by 3.2 per cent and the running length by 8.0 per cent. The number of wells (other than tube wells) used for irrigation purposes increased from 7,11,795 in 1971-72 to 7,30,714 in 1972-73 or by 2.7 per cent. The number of wells used for domestic purposes, the number of wells not in use and those having independent ayacut increased by 2.9 per cent, 7.0 per cent, and 7.6 per cent respectively, while those supplementing recognised sources of irrigation decreased by 4.5 per cent during the year under report. The number of tanks with ayacut 40 ha. or more showed an increase by 20.9 per cent, while the number of tanks with ayacut less than 40 ha. showed a

very small decrease. The number of oil engines recorded an increase of 2.3 per cent, from 1,53,243 in 1971-72 to 1,56,782 in the year under report. The number of electric pumps recorded a substantial increase of 19.8 per cent, having gone up from 1,23,508 in 1971-72 to 1,47,987 in 1972-73. This is attributed to the larger supply of electric power under rural electrification scheme for irrigation purposes.

7. The Gross and Net Irrigated Area

The gross irrigated area in the State recorded a decrease of 9.5 per cent, it being 14.68 lakh ha. in 1972-73 as against 16.22 lakh ha. in the preceding year. The net irrigated area was 12.76 lakh ha. which was 6.7 per cent lower than that in 1971-72 viz. 13.67 lakh ha. The decrease, in the net as also gross irrigated areas, was due to the shortage of irrigation water caused by acute scarcity conditions in most parts of the State.

During the year under report, the percentage of net irrigated area to the net area sown was 7.9 per cent, while the percentage of gross irrigated area to gross area sown was 8.6 per cent, the corresponding figures in the preceding year being 8.0 per cent and 9.0 per cent respectively.

8. Net area irrigated by different sources of irrigation

The net area irrigated by government canals, private canals, tanks and wells decreased by 41,300 ha. : 7,500 ha. ; 17,100 ha. ; and 57,400 ha. ; or by 14.7 %, 30.2 %, 8.0 % and 7.4 % respectively as compared with the corresponding figures in 1971-72. The area irrigated by other sources (including lift irrigation etc.), however, increased by 32,300 ha. or by 41.8 per cent.

9. Sourcewise gross area irrigated

The gross area irrigated by government canals, private canals, tanks and wells decreased by 42,600 ha. : 9,100 ha. ; 16,700 ha. ; 1,25,900 ha. or by 13.2 % 28.3 %, 6.9 % and 13.0 % respectively, whereas the

area irrigated by other sources increased by 40,200 ha. or 49.1 per cent.

10. Irrigated area under food and non-food crops

It is seen from the summary table C (page 22) that out of the total gross irrigated area of 14.68 lakh ha. during the year under report 13.39 lakh ha. during the year (or 91.2 per cent) were under food crops and 1.29 lakh ha. (or 8.8 per cent) under non-food crops. The irrigated area under food crops recorded a decrease of 9.2 % as compared to 14.75 lakh ha. of 1971-72. The decrease was considerable in case of the major crops of wheat, rabi jowar, gram, chillies and onions, the irrigated area under these crops having been reduced by 16.8 %, 133.8 %, 25.3 %, 20.1 % and 15.2 % respectively. The irrigated area under non-food crops also decreased from 1.47 lakh ha. in 1971-72 to 1.29 lakh in 1972-73 or by 12.4 per cent. The decrease was mainly in case of the major crops of cotton and fodder, the irrigated area under which fell by 19.4 % and 6.5 % respectively.

CHAPTER IV

Cropped Areas

(Tables IV-A, IV-B and IV-C, Pages 66-85)

(Summary Table D, Pages 23-26)

11. Total area under crops

The comments on the divisionwise gross cropped area, area sown more than once, net cropped area and area under food and non-food crops during the two years 1971-72 and 1972-73 are briefly given below. It may be recalled here that the year 1971-72 was also a scarcity year although less affected than 1972-73.

(i) *Gross cropped area*.—The adverse seasonal conditions described earlier (in Chapter I) resulting from the failure of the rains during the sowing periods in both the kharif and rabi seasons led to a reduction in the gross cropped area.

As stated in paragraph 5, the gross cropped area decreased from 181.2 lakh ha. in 1971-72 to 169.8 lakh ha. in 1972-73 and the decrease was mainly due to the lower area sown in Pune division (by 17 %) and to some extent (by 6.2 %) in Aurangabad division also, as can be seen from the table below :—

(Area in '00' ha.)

| Division | Gross cropped area | | Increase (+) or decrease (-) over 1971-72 % |
|----------------|--------------------|----------|--|
| | 1971-72 | 1972-73 | |
| 1 | 2 | 3 | 4 |
| Bombay ... | 30,975 | 31,451 | + 1.5 |
| Pune ... | 50,559 | 42,026 | - 17.0 |
| Aurangabad ... | 46,398 | 43,513 | - 6.2 |
| Nagpur ... | 53,221 | 52,807 | - 0.8 |
| State ... | 1,81,153 | 1,69,797 | - 6.3 |

वि (क्य) १५७९-१३

(ii) *Double cropped area*.—The area sown more than once (mainly under double cropping) showed an appreciable decrease of 14.7 per cent, having gone down from 10.8 lakh ha. during 1971-72 to 9.2 lakh ha. during 1972-73 and the decrease was largely located in Pune division and to some extent in Bombay and Nagpur divisions as shown below:—

(Area in '00' ha.)

| Division | Double cropped area | | Increase (+) or decrease (-) over 1971-72 % |
|----------------|---------------------|---------|---|
| | 1971-72 | 1972-73 | |
| 1 | 2 | 3 | 4 |
| Bombay ... | 2,051 | 1,845 | - 10.0 |
| Pune ... | 3,480 | 2,081 | - 40.2 |
| Aurangabad ... | 2,543 | 2,568 | + 4.9 |
| Nagpur ... | 2,715 | 2,604 | - 4.1 |
| State ... | 10,789 | 9,198 | - 14.7 |

(iii) *Net cropped area*.—The table below shows that the decrease in the State net cropped area from 170.4 lakh ha. in 1971-72 to 160.6 lakh ha. in 1972-73 was mainly due to the appreciable decrease of 15.2 % in Pune division and 6.9 % in Aurangabad division. The severity of the scarcity conditions in these two divisions led to large areas remaining unsown during 1972-73.

(Area in '00' ha.)

| Division | Net cropped area 1971-72 | Net cropped area 1972-73 | Increase (+) or decrease (-) over 1971-72 % |
|----------------|--------------------------|--------------------------|---|
| 1 | 2 | 3 | 4 |
| Bombay ... | 28,924 | 29,606 | - 2.4 |
| Pune ... | 47,079 | 39,945 | - 15.2 |
| Aurangabad ... | 43,855 | 40,845 | - 6.9 |
| Nagpur ... | 50,506 | 50,203 | - 0.6 |
| State ... | 1,70,364 | 1,60,599 | - 5.7 |

(iv) *Total area under food and non-food crops.*—At the State level, food crops occupied an area of 119.9 lakh ha. which formed 70.6 per cent of the total gross cropped area during the year under report and it was less by 9.7 lakh ha. or 7.5 per cent than that in the preceding year. The area under non-food crops, also decreased by 1.7 lakh ha. or 3.2 per cent, the figures of 1971-72 and 1972-73 being 51.6 and 49.9 lakh ha. respectively. The table below gives the divisionwise comparison of area under food and non-food crops during the years 1971-72 and 1972-73.

(Area in '00' ha.)

| Division | Area under crops | | | | | |
|----------------|------------------|----------|---|----------------|---------|---|
| | Food crops | | | Non-food crops | | |
| | 1971-72 | 1972-73 | Increase (+) or decrease (-) over 1971-72 % | 1971-72 | 1972-73 | Increase (+) or decrease (-) over 1971-72 % |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Bombay ... | 22,497 | 22,941 | + 2.0 | 8,478 | 8,510 | + 0.4 |
| Pune ... | 40,705 | 32,969 | - 19.0 | 9,854 | 9,057 | - 8.1 |
| Aurangabad ... | 33,445 | 31,800 | - 4.9 | 12,953 | 11,713 | - 9.6 |
| Nagpur ... | 32,933 | 32,176 | - 2.3 | 20,288 | 20,631 | + 1.7 |
| State ... | 1,29,580 | 1,19,886 | - 7.5 | 51,573 | 49,911 | - 3.2 |

CHAPTER V

AREA, AVERAGE YIELD AND OUTTURN OF CROPS

(Tables IV-A and IV-B Pages—66-83)

(Tables V-A and V-B Pages—86-111)

(Summary Tables D and E Pages 23-27)

12. The comments on the seasonal conditions affecting sowings, yields* and production of principal crops are briefly stated cropwise below :—

A. Kharif food-grain crops

(i) *Rice.*—Due to delayed onset of the monsoon in the last week of June, even sowing in paddy nurseries

* Yield per hectare.—During the year under report, statewide crop estimation surveys were continued on the principal crops of paddy, ragi, kharif jowar, bajri, wheat, rabi jowar, gram, sugarcane and cotton. The survey on tur was continued in all the districts of Nagpur division and in Solapur and Osmanabad districts while that on tobacco crop was also continued in Satara, Sangli and Kolhapur districts.

The districtwise average yield based on the data of the crop estimation surveys, are given in table V-A. In the same table current yields of other crops not covered by crop estimation surveys, are also given. In the case of tur and tobacco crops the current yields based on annewari are given for those districts which are not covered by the crop estimation surveys.

was delayed in the State. Early sown paddy seeds in Kolhapur and Nasik districts had poor germination due to prolonged absence of rains. In parts of Ratnagiri district, paddy area sown under dry conditions had to be resown. Rains received in the last week, facilitated large scale sowing of the crop in different regions of the State. The rains in Ratnagiri district in the north and parts of Kolaba district, being heavy and incessant, affected to some extent the nursery seedlings in the low lying areas. The subsequent dry spell from the 10th July till the 3rd week of August also affected the transplanting operations in the major paddy growing areas of the State. The operations were completed by August end in the Konkan region and by September end in the Vidarbha region. The crop in the State suffered heavily at the growth stage for want of timely and adequate rains. Army-worms in parts of Konkan region and Chandrapur district and gall-fly in the endemic areas of Bhandara district also damaged the crop. The condition of the crop in the State was very poor.

The table below gives the State and divisionwise area, yield per hectare and production of the crop

(including summer rice) for the years 1971-72 and 1972-73.

| Division | Crop : RICE | | | | | | | | |
|----------------|-----------------|---------|--------------------------------|---------------|---------|------------|---------------------------|---------|------------|
| | Area in '00' ha | | % Increase (+) or decrease (-) | Yield per ha. | | % decrease | Production in '00' tonnes | | % decrease |
| | 1971-72 | 1972-73 | | 1971-72 | 1972-73 | | 1971-72 | 1972-73 | |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay ... | 4,896 | 4,834 | - 1.3 | 1,294 | 864 | -33.2 | 6,334 | 4,178 | -34.0 |
| Pune ... | 1,920 | 1,808 | - 5.8 | 1,069 | 504 | -52.9 | 2,053 | 112 | -55.6 |

| Nagpur ... | 5,858 | 5,822 | - 0.6 | 913 | 417 | -54.3 | 5,346 | 2,435 | -54.4 |
| State ... | 13,395 | 13,317 | - 0.6 | 1,041 | 568 | -45.4 | 13,945 | 7,566 | -45.7 |

The State total area slightly decreased by 0.08 lakh ha. or 0.6 per cent as compared with that of the preceding year. The decrease was mainly located in Pune while in Aurangabad division, the area increased by 0.13 lakh ha.

The State average yield of rice decreased from 1041 kg/ha in 1971-72 to 568 kg/ha in 1972-73 or by 45.4 per cent. The decrease was noticed in all the divisions and was 33.2 per cent, 52.9 per cent, 83.3 per cent and 54.3 per cent in Bombay, Pune, Aurangabad and Nagpur divisions respectively and was due to the very much adverse season during the year under report.

The appreciable reduction in the yield rate was mainly responsible for the fall in the production of the crop from 13.9 lakh tonnes in 1971-72 to 7.6 lakh tonnes in 1972-73 or by 45.7 per cent.

Summer paddy was grown on 5,600 ha. in the Konkan region and 1,700 ha. in Bhandara and Chandrapur districts of the Vidarbha region and on small areas in Kolhapur district. The production of the crop at the State level during the year under report was 8,000 tonnes and was abnormally low due to the adverse season described above.

(ii) *Kharif jowar*.—The rains received in the last week of June facilitated large scale sowing of the crop in the State excepting eastern parts of the Deccan, parts of the Aurangabad and Bhir districts of Marathwada region. In July, practically no rains were received over major parts of Pune division and particularly in Sangli district, resulting thereby in the reduction in the sown areas of the crop. Sowing operations were continued in the Marathwada region on receipt of light and moderate rains in the first fortnight of July but the same were hampered due to the dry spell that followed. The condition of the early sown crop was not satis-

factory and the crop was reported to have withered in some areas of Aurangabad, Bhir, Parbhani and Osmanabad districts. Sowing was held up at places in Amraoti, Yeotmal, Wardha, Nagpur and Chandrapur districts, due to inadequate rains received in the first fortnight of July. The dry spell prevailed till middle of August. Consequently major crop area remained unsown in the Deccan and Marathwada regions. The rains received in the Vidarbha region during the second half of August proved useful to the growth of late maturing crop of local jowar. The dry spell in the second fortnight of September affected the crop heavily in north Deccan and eastern parts of south Deccan. The dry spell in the Marathwada region during the last 3 weeks of September affected the proper growth of the jowar crop. In the Vidarbha region, although the rains received in the first week of September improved the crop condition to some extent, the dry spell that followed since the middle of September deteriorated the crop condition in the light and medium soils and the growth of the late sown jowar crop was affected. In Nanded district of Marathwada region, the crop sown late was adversely affected at earhead formation stage due to the prolonged dry-spell. In the Vidarbha region also barring some parts of Chandrapur district, the growth of kharif jowar was adversely affected particularly in light soils due to depletion of soil moisture since the middle of September. The rains received in the first and last weeks of November were helpful to late sown crop in Yeotmal, Nagpur and Chandrapur districts whereas the grain quality of matured crop was affected in Yeotmal district. Jowar crop was affected by topshoot borer and stemborer in the major districts of Vidarbha, while incidence of midge-fly was reported in Jalgaon, Akola and Nagpur districts. On the whole, the condition of the crop in State was not satisfactory.

The table below gives the State and divisionwise area, yield per hectare and production of the crop for the years 1971-72 and 1972-73.

| Crop : KHARIF JOWAR | | | | | | | | | |
|---------------------|------------------|---------|--------------------------------|---------|---------|--------------------------------|---------------------------|---------|--------------------------------|
| Division | Area in '00' ha. | | Average yield in kg. per ha. | | | | Production in '00' tonnes | | |
| | 1971-72 | 1972-73 | % increase (+) or decrease (-) | 1971-72 | 1972-73 | % increase (+) or decrease (-) | 1971-72 | 1972-73 | % increase (+) or decrease (-) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay ... | 1,608 | 2,067 | + 28.5 | 398 | 532 | + 33.7 | 640 | 1,099 | + 71.7 |
| Pune ... | 2,473 | 1,993 | - 19.4 | 955 | 301 | - 68.5 | 2,362 | 599 | - 74.6 |
| Aurangabad ... | 5,939 | 8,165 | + 37.5 | 349 | 272 | - 22.1 | 20,73 | 2,217 | + 7.0 |
| Nagpur ... | 12,806 | 12,713 | - 0.7 | 447 | 405 | - 9.4 | 5,724 | 5,150 | - 10.0 |
| State ... | 22,826 | 24,938 | + 9.3 | 473 | 364 | - 23.0 | 10,799 | 9,065 | - 16.1 |

The area under kharif jowar at the State level increased from 22.8 lakh ha. in 1971-72 to 24.9 lakh ha. in 1972-73 or by 9.3 per cent. This was due to an increase in the area under the crop to the extent of 28.5% and 37.5% in Bombay and Aurangabad divisions respectively. In Pune and Nagpur divisions, the area decreased by 19.4% and 0.7% respectively.

The average yield per hectare of kharif jowar at the State level decreased by 23.0% having gone down from 473 kg. ha. in 1971-72 to 364 kg. ha. in 1972-73 and the decrease was noticed in Pune, Aurangabad and Nagpur divisions to the extent of 68.5%, 22.1% and 9.4% respectively whereas an increase was seen in Bombay division to the extent of 33.7%.

Despite the increase in the area, the yield rate being appreciably lower due to the unfavourable conditions described above, the crop production declined from 10.8 lakh tonnes in 1971-72 to 9.1 lakh tonnes in 1972-73 or by 16.1 per cent.

(iii) *Bajri*.—Substantial rains received in the fourth week of June facilitated large scale sowing of bajri crop in the Deccan and Marathwada regions excepting eastern parts of Pune and Satara districts and major parts of Ahmednagar, Solapur and Sangli districts where the rains received were inadequate for sowing.

Practically no rains were received in July in the eastern parts of the regions thereby restricting the sowing of the crop. Due to light to moderate rains in Marathwada region, bajri sowing continued. But the dry weather that followed till the 15th August held-up the sowing operations. Consequently major areas remained unsown in the Deccan region. The rains received in the third week, however, facilitated completion of bajri sowing in Nasik, Dhulia and Aurangabad districts. In Jalgaon district, resowing of the crop had to be carried out at places due to failure of the earlier sown crop caused by long dry spells. The early sown crop completely withered particularly in Ahmednagar, Solapur and parts of Bhir and Osmanabad districts and the fields were bakhared for rabi sowing. The dry spell in the second fortnight of September affected the bajri crop in grain formation stage in the north Deccan, eastern parts of the south Deccan and Marathwada regions and the growth of the crop was stunted. The crop was affected by incidence of pests like blister beetle in Buldhana district and of ergot disease in Dhulia district. On the whole, the condition of the crop was not satisfactory in the State.

The table below gives area, yield rate and production of the crop divisionwise and at the State level during the years 1971-72 and 1972-73.

| Crop : BAJRI | | | | | | | | | |
|----------------|------------------|---------|--------------------------------|---------|---------|--------------------------------|---------------------------|---------|--------------------------------|
| Division | Area in '00' ha. | | Average yield in kg. per ha. | | | | Production in '00' tonnes | | |
| | 1971-72 | 1972-73 | % increase (+) or decrease (-) | 1971-72 | 1972-73 | % increase (+) or decrease (-) | 1971-72 | 1972-73 | % increase (+) or decrease (-) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay ... | 5,022 | 6,067 | + 20.8 | 214 | 170 | - 20.6 | 1,073 | 1,033 | - 3.7 |
| Pune ... | 6,070 | 4,403 | - 27.5 | 211 | 201 | - 4.7 | 1,282 | 886 | - 30.9 |
| Aurangabad ... | 1,659 | 3,404 | + 105.2 | 145 | 76 | - 47.6 | 240 | 260 | + 8.3 |
| Nagpur ... | 372 | 420 | + 12.9 | 101 | 184 | + 82.2 | 38 | 78 | + 150.3 |
| State ... | 13,123 | 14,294 | + 8.9 | 201 | 158 | - 21.4 | 2,633 | 2,257 | - 14.3 |

The area under bajri at the State level recorded an increase of 8.9% having gone up from 13.1 lakh ha. in 1971-72 to 14.3 lakh ha. in 1972-73, though still quite below the normal area of 20.3 lakh ha. It may be recalled here that 1971-72 itself was a year of adverse seasonal conditions with area sown below the normal particularly in Aurangabad division.

The State average yield per hectare of bajri decreased by 21.4% having gone down from 201 kg./ha. in 1971-72 to 158 kg./ha. in 1972-73 and was due to prolonged dry spells during crop growth stage. The decrease was shared by the major bajri growing divisions of Bombay Pune and Aurangabad.

Although the area recorded an increase the reduction in the yield rate of the crop resulted in the decline in its production at the State level from 2.6 lakh tonnes in 1971-72 to 2.3 lakh tonnes in 1972-73.

(iv) *Ragi*.—Sowing of the crop in the Konkan and ghat regions was delayed due to the delayed on set of the monsoon in the last week of June. In Nasik district

where the crop was sown in anticipation of rains it suffered due to unsatisfactory germination. The transplanted nagli seedlings in the ghat region of Kolhapur district were washed away due to heavy and continuous rains in the first fortnight of July whereas transplanting of seedlings was held up in Thana and Ratnagiri districts of the Konkan region due to the dry spell from the 10th July to practically the third week of August. Light showers received in the first fortnight of September in major parts of the Konkan region and ghat area of Nasik district, followed by a dry spell. As a result, the early nagli varieties improved. Due to prolonged dry spell in October late varieties were reported to have withered in parts of the region and the condition of the latter further deteriorated at grain formation stage. On the whole, the condition of nagli crop was not satisfactory in the State.

The table below gives the divisionwise and State level area, average yield per hectare and production of the crop during the two years 1971-72 and 1972-73.

| Division | Crop RAGI | | | | | | | | | |
|------------|----------------|---------|---|------------------------------|---------|---|-------------------------|---------|---|--------|
| | Area in 00 ha. | | | Average yield in kg. per ha. | | | Production in 00 tonnes | | | |
| | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) | |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | |
| | | | % | | | % | | | % | |
| Bombay | ... | 1,189 | 1,284 | + 8.0 | 839 | 400 | - 52.3 | 997 | 514 | - 48.4 |
| Pune | ... | 649 | 596 | - 8.2 | 750 | 492 | - 34.4 | 487 | 293 | - 39.8 |
| Aurangabad | ... | 3 | 13 | ... | 711 | 231 | - 67.5 | 2 | 3 | + 50.0 |
| Nagpur | ... | 2 | 4 | ... | 807 | 500 | - 38.0 | 2 | 2 | ... |
| State | ... | 1,843 | 1,897 | + 2.9 | 807 | 428 | - 47.0 | 1,488 | 812 | - 45.4 |

The area under the crop at the State level increased slightly by 0.05 lakh ha. or by 2.9 per cent as compared with that of the last year. The increase was in the Bombay division to the extent of 8.0 per cent whereas in the Pune division the area decreased by 8.2 per cent during the year under report.

The State average yield per hectare of ragi decreased by 47.0 per cent having gone down from 807 kg per ha. in 1971-72 to 428 kg per ha. in 1972-73 and was due to prolonged dry spells during crop growth stage. The decrease was shared primarily by the major ragi growing divisions of Bombay and Pune to the extent of 52.3 per cent and 34.4 per cent respectively.

The outturn of the crop declined from 1.5 lakh tonnes in 1971-72 to 0.8 lakh tonnes in 1972-73 or by 45.4 per cent.

(v) *Tur*.—The late on set of monsoon, inadequacy of rains during the sowing period with long dry spells from the 9th July to the second week of August affected the sowing of the crop in normal areas particularly in the Deccan region. The condition of the crop was adversely affected as the long dry spell in the months of September-October coincided with the critical growth phase of the crop. The rains received in December were sporadic and inadequate for improving the condition of the crop in parts of Marathwada and Vidarbha regions. On the whole, the condition of the crop in the State was not satisfactory during the year under report.

The table below gives for the State as a whole and according to divisions the area, yield rate and outturn of the crop for the years 1971-72 and 1972-73.

| Crop : TUR | | | | | | | | | |
|----------------|------------------|---------|---|---------------------------|---------|---|---------------------------|---------|---|
| Division | Area in '00' ha. | | | Average Yield kg. per ha. | | | Production in '00' tonnes | | |
| | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay ... | 272 | 262 | - 3.7 | 441 | 336 | - 23.8 | 120 | 88 | - 26.7 |
| Pune ... | 697 | 308 | - 55.8 | 291 | 214 | - 26.5 | 203 | 66 | - 67.5 |
| Aurangabad ... | 1,720 | 2,096 | + 21.9 | 252 | 178 | - 29.4 | 434 | 374 | - 13.8 |
| Nagpur ... | 2,353 | 2,346 | - 0.3 | 646 | 543 | - 15.9 | 1,520 | 1,274 | - 16.2 |
| State ... | 5,042 | 5,012 | - 0.6 | 452 | 360 | - 20.4 | 2,277 | 1,802 | - 20.9 |

The area under the crop at the State level decreased slightly i. e. by 0.6 per cent as compared to that of last year. The decrease was shared by Bombay, Pune and Nagpur divisions to the extent of 3.7 per cent, 55.8 per cent and 0.3 per cent respectively whereas the apparent increase to the extent of 21.9 per cent in Aurangabad division was due to the fact that the year 1971-72 itself was not favourable to the crop.

The State average yield per hectare of tur declined by 20.4 per cent having gone down from 452 kg. in 1971-72 to 360 kg. in 1972-73. The decrease was shared by all the divisions of Bombay, Pune, Aurangabad and Nagpur to the extent of 23.8 per cent, 26.5 per cent, 29.4 per cent and 15.9 per cent respectively.

The outturn of the crop declined from 2.3 lakh tonnes in 1971-72 to 1.8 lakh tonnes in 1972-73 or by 20.9 per cent and the decrease was shared by all the divisions of the State.

B. Rabi foodgrain crops

(vi) *Wheat*.—The rains received in the first fortnight of September facilitated undertaking sowing of the rainfed crop at a few places in the Deccan region. However, large scale sowing of the crop was affected

in both the Deccan and Vidarbha regions due to the dry spell prevailing practically during the first three weeks of October. In the Marathwada region also, the rains received were not widespread and adequate. The rains received in the first week of November helped in improving the condition of the newly sown crop and for undertaking sowing in Sangli district. In Marathwada, the rains received were inadequate for completion of large scale sowing but the same proved beneficial to early sown wheat crop in Nanded and Parbhani districts. In several areas, the germination and growth of the crop were affected to some extent. The rains received in the first and last weeks of November in the Vidarbha region proved useful for the completion of the sowing of the crop. The crop in the Vidarbha region was generally affected due to the absence of cold weather and absence of dew formation. The prolonged dry spell since the early rabi season was responsible for limited availability of irrigation from wells, tanks and small bandharas. The irrigated crop in the State was affected to some extent. Rat infestation was reported largely in Nasik, Dhulia, Jalgaon, Buldhana, Amravati and Bhandara districts. On the whole, the condition of the crop in the State was not satisfactory.

The table gives the area, average yield and outturn of the crop at the State and divisional levels.

| Crop : WHEAT | | | | | | | | | |
|----------------|------------------|---------|-------------------------|------------------------------|---------|-------------------------|---------------------------|---------|-------------------------|
| Division | Area in '00' ha. | | | Average yield in kg. per ha. | | | Production in '00' tonnes | | |
| | 1971-72 | 1972-73 | Percentage decrease (-) | 1971-72 | 1972-73 | Percentage decrease (-) | 1971-72 | 1972-73 | Percentage decrease (-) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay ... | 1,911 | 1,195 | - 37.5 | 682 | 437 | - 35.9 | 1,304 | 522 | - 60.0 |
| Pune ... | 1,493 | 1,079 | - 27.7 | 675 | 564 | - 16.4 | 1,007 | 608 | - 39.6 |
| Aurangabad ... | 3,396 | 1,967 | - 42.1 | 360 | 145 | - 59.7 | 1,221 | 285 | - 76.7 |
| Nagpur ... | 2,983 | 2,858 | - 4.2 | 477 | 382 | - 19.9 | 1,423 | 1,091 | - 23.3 |
| State ... | 9,783 | 7,099 | - 27.4 | 506 | 353 | - 30.2 | 4,955 | 2,506 | - 49.4 |

It is seen from the above table that the area under wheat at the State level decreased by 27.4% or by 2.7 lakh ha. The decrease was noticed in all the divisions, it being 37.5%, 27.7%, 42.1% and 4.2% in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

The average yield per hectare of wheat at the State level decreased from 506 kg in 1971-72 to 353 kg in 1972-73 or by 30.2%. The yield rate also decreased in all the divisions of Bombay, Poona, Aurangabad and Nagpur to the extent of 35.9%, 16.4%, 59.7% and 19.9% respectively as the unirrigated crop suffered from inadequacy of soil moisture whereas the irrigated crop was affected due to shortage of irrigation during growth stage of the crop.

The total outturn declined from 5.0 lakh tonnes in 1971-72 to 2.5 lakh tonnes in 1972-73 and the decrease was mostly located in the first three divisions to the extent of 40% to 77%; it being lower i. e. 23% in the fourth division.

(vii) *Rabi jowar*.—With the receipt of rains in the first fortnight of September, large scale sowing of rabi jowar was undertaken in the Deccan and Marathwada regions. In the latter region, however, due to the inadequacy of rains, the germination of the crop sown was affected. The completion of rabi jowar sowing was held up in the districts of Deccan region and

Aurangabad division due to the prolonged dry spell during the first 3 weeks of October. The rabi jowar crop in the light soils withered while the crop sown later suffered in germination. In the Vidarbha region, the rains received in the first week of October in Chandrapur district and in the last week, of the month elsewhere in the region helped in undertaking the sowing of the crop. Light to moderate rains in parts of Poona, Sangli, Parbhani and Nanded districts and light showers elsewhere in the Deccan region during November helped in improving the newly sown crop in these areas. In the Vidarbha region also, the rains received in the first and last weeks proved beneficial to the growth of early sown rabi jowar and completion of rabi jowar sowing in that region. The rains received in December were sporadic and inadequate for improving the condition of the standing crop in Parbhani, Osmanabad and Bhir districts of Marathwada region. In the eastern Vidarbha region, the growth of the crop was satisfactory whereas in the western part and in the Deccan, the growth of the crop was affected due to the absence of winter rains. The condition of the crop, in the State, was not satisfactory.

The table below gives the State and divisionwise area, yield rate and outturn of the crop for the years 1971-72 and 1972-73.

| Crop : RABI JOWAR | | | | | | | | | |
|-------------------|------------------|---------|-----------------------------|------------------------------|---------|--------------------------------|---------------------------|---------|--------------------------------|
| Division | Area in '00' ha. | | % increase (+) decrease (-) | Average yield in kg. per ha. | | % Increase (+) or decrease (-) | Production in '00' tonnes | | % Increase (+) or decrease (-) |
| | 1971-72 | 1972-73 | | 1971-72 | 1972-73 | | 1971-72 | 1972-73 | |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay .. | 1,441 | 1,115 | -22.6 | 274 | 275 | + 0.4 | 395 | 307 | -22.3 |
| Poona ... | 21,628 | 18,445 | -14.7 | 198 | 97 | -51.0 | 4,292 | 1,786 | -58.4 |
| Aurangabad ... | 12,210 | 7,627 | -37.5 | 222 | 151 | -32.0 | 2,704 | 1,148 | -57.5 |
| Nagpur ... | 2,576 | 2,300 | -10.7 | 242 | 361 | +49.2 | 624 | 831 | +33.2 |
| State .. | 37,855 | 29,487 | -22.1 | 212 | 138 | -34.9 | 8,015 | 4,072 | -49.2 |

The area under rabi jowar at the State level decreased by 22.1 per cent having gone down from 37.9 lakh ha. in 1971-72 to 29.5 lakh ha. in 1972-73 due to the inadequacy of soil moisture during the sowing period. The decrease was distributed in Bombay, Poona, Aurangabad and Nagpur divisions by 22.6 per cent, 14.7 per cent, 37.5 per cent and 10.7% respectively.

The State average yield per hectare of rabi-jowar decreased from 212 kg in 1971-72 to 138 kg in 1972-73 or by 34.9 per cent. The decrease was contributed by the major rabi jowar growing Poona and Aurangabad divisions to the extent of 51% and 32 per cent respectively of inadequacy of soil moisture during growth

stage and incidence of cold spell in January 1973 commented earlier. In Bombay division, the yield rate was practically the same as that of last year and higher by 49 per cent in Nagpur division.

The production of the crop decreased from 8.0 lakh tonnes in 1971-72 to 4.1 lakh tonnes in 1972-73 or by 49.2 per cent. The decrease was distributed in the three divisions of Bombay, Poona and Aurangabad to the extent of 22 to 58 per cent.

(viii) *Gram*.—The sowing of the crop was undertaken at places in the State towards the end of September. Large scale sowing of the crop was however, held up

as a result of dry spell till the third week of October in Deccan particularly in scarcity areas and in Aurangabad district of Marathwada region. The rains received during the first and last weeks of October in Vidarbha region helped in undertaking gram sowing in the region. The intervening prolonged dry spell during the growth period affected the proper growth of the crop particularly in light soils in different parts

of the State. The rains received in December were inadequate for improving the condition of the crop. The crop was also not satisfactory due to the absence of cold weather particularly in the western parts of Vidarbha region. The condition of irrigated crop was, however, fairly satisfactory in the State.

The table below gives the area, average yield and outturn of the crop at the State and division levels.

| Crop : GRAM | | | | | | | | | |
|---------------|------------------|---------|----------------|------------------------------|---------|----------------|---------------------------|---------|----------------|
| Division | Area in '00' ha. | | | Average yield in kg. per ha. | | | Production in '00' tonnes | | |
| | 1971-72 | 1972-73 | % decrease (-) | 1971-72 | 1972-73 | % decrease (-) | 1971-72 | 1972-73 | % decrease (-) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay .. | 359 | 245 | -31.8 | 310 | 228 | -26.4 | 111 | 56 | -49.5 |
| Poona .. | 881 | 440 | -50.1 | 381 | 243 | -36.2 | 336 | 107 | -68.2 |
| Aurangabad .. | 2,439 | 1,264 | -48.2 | 270 | 119 | -55.9 | 659 | 150 | -77.2 |
| Nagpur .. | 657 | 641 | -2.4 | 326 | 270 | -17.2 | 214 | 173 | -19.2 |
| State .. | 4,335 | 2,590 | -40.2 | 305 | 188 | -38.4 | 1,320 | 486 | -63.2 |

The area under gram at the State level declined by 40.2 per cent having gone down from 4.3 lakh ha. in 1971-72 to 2.6 lakh ha. in 1972-73. The decrease was shared by all the divisions viz. Bombay, Poona, Aurangabad and Nagpur by 31.8 per cent, 50.1 per cent, 48.2 per cent and 2.4 per cent respectively.

It is seen that the State average yield of gram decreased from 305 kg./ha. in 1971-72 to 188 kg. per ha. in 1972-73 or by 38.4 per cent. The decrease in the average yield was noticed in all the divisions being to the extent of 26.4 per cent, 36.2 per cent, 55.9 per cent,

and 17.2 per cent in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

The outturn of the crop declined from 1.3 lakh tonnes to 0.5 lakh tonnes in 1972-73 or by 63.2 per cent. The fall in production was mostly contributed by the first three divisions to the extent of 50 per cent to 77 per cent while it was by 19 per cent in the fourth division.

(ix) *Area under foodgrain crops.*—The table below gives the divisionwise comparison of area under cereals, pulses and foodgrains during the years 1971-72 and 1972-73.

(Area in '00' ha.)

| Area under foodgrain crops | | | | | | | | | |
|----------------------------|----------|---------|---|---------|---------|---|------------------|----------|---|
| Division | CEREALS | | | PULSES | | | TOTAL FOODGRAINS | | |
| | 1971-72 | 1972-73 | % increase (+) or decrease (-) over 1971-72 | 1971-72 | 1972-73 | % increase (+) or decrease (-) over 1971-72 | 1971-72 | 1972-73 | % increase (+) or decrease (-) over 1971-72 |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay .. | 17,141 | 17,668 | + 3.1 | 3,998 | 3,962 | - 0.9 | 21,139 | 21,630 | + 2.3 |
| Poona .. | 34,745 | 28,783 | -17.2 | 3,518 | 1,910 | -45.7 | 38,263 | 30,693 | -19.8 |
| Aurangabad .. | 24,208 | 22,308 | - 7.8 | 8,208 | 8,543 | + 4.1 | 32,416 | 30,851 | - 4.8 |
| Nagpur .. | 24,818 | 24,330 | - 2.0 | 7,098 | 6,826 | - 3.8 | 31,916 | 31,156 | - 2.4 |
| State .. | 1,00,912 | 93,089 | - 7.8 | 22,822 | 21,241 | - 6.9 | 1,23,734 | 1,14,330 | - 7.6 |

It is seen that at the State level, the area under all cereal crops together was 93.1 lakh ha. as against 100.9 lakh ha. in 1971-72 thus showing a decrease by 7.8 per cent. Area under pulses also decreased from 22.8

lakh ha. in 1971-72 to 21.2 lakh ha. or by 6.9 per cent during 1972-73. Consequently, the total area under foodgrains crops (i. e. cereals and pulses together) decreased by 9.4 lakh ha. or by 7.6 per cent.

(x) *Outturn of foodgrain crops.*—The table below gives the divisionwise outturn of cereals, pulses and foodgrains during the year 1971-72 and 1972-73.

(Production in '00' tonnes)

| Division | Production of foodgrain crops | | | | | | | | |
|----------------|-------------------------------|---------|-------------------------|---------|---------|-------------------------|------------------|---------|-------------------------|
| | CEREALS | | | PULSES | | | TOTAL FOODGRAINS | | |
| | 1971-72 | 1972-73 | Percentage decrease (—) | 1971-72 | 1972-73 | Percentage decrease (—) | 1971-72 | 1972-73 | Percentage decrease (—) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay ... | 11,140 | 7,941 | — 28.7 | 978 | 805 | — 17.7 | 12,118 | 8,746 | — 27.8 |
| Poona ... | 11,783 | 5,267 | — 55.3 | 991 | 311 | — 68.6 | 12,774 | 5,578 | — 56.3 |
| Aurangabad ... | 6,499 | 3,998 | — 38.5 | 1,514 | 1,091 | — 27.9 | 8,013 | 5,089 | — 36.5 |
| Nagpur ... | 13,210 | 9,634 | — 27.1 | 2,449 | 1,995 | — 18.5 | 15,659 | 11,629 | — 25.7 |
| State ... | 42,632 | 26,840 | — 37.0 | 5,932 | 4,202 | — 29.2 | 48,564 | 31,042 | — 36.1 |

It is seen that the total production of foodgrains at the State level during 1972-73 was 31.0 lakh tonnes, made up of 26.8 lakh tonnes of cereals and 4.2 lakh tonnes of pulses. Comparing the divisionwise production, it is seen that the production of cereals, pulses and foodgrains declined in each case in all the divisions. The estimated production of foodgrains during 1972-73 in Bombay, Poona, Aurangabad and Nagpur divisions was 8.7, 5.6, 5.1 and 11.6 lakh tonnes, respectively and it was lower than the corresponding

production in the preceding year by 27.8 per cent 56.3 per cent, 36.5 per cent and 25.7 per cent respectively.

C. Other Principal Crops

(xi) *Sugarcane.*—The table below gives, for the two years 1971-72 and 1972-73, the area, yield rate and production of the crop both at the State and division levels.

| Division | Crop : SUGARCANE | | | | | | | | |
|----------------|------------------|---------|---|-------------------------------------|---------|---|----------------------------------|---------|---|
| | Area in '00' ha. | | | Average yield of gur in kg. per ha. | | | Production of gur in '00' tonnes | | |
| | 1971-72 | 1972-73 | Percentage increase (+) or decrease (—) | 1971-72 | 1972-73 | Percentage increase (+) or decrease (—) | 1971-72 | 1972-73 | Percentage increase (+) or decrease (—) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay ... | 185 | 233 | +20.5 | 9,329 | 9,339 | + 0.1 | 1,530 | 1,876 | +22.6 |
| | (164) | (201) | | | | | | | |
| Poona ... | 1,505 | 1,595 | + 6.0 | 10,117 | 9,408 | — 7.0 | 11,432 | 11,346 | — 0.8 |
| | (1,130) | (1,206) | | | | | | | |
| Aurangabad ... | 207 | 200 | — 3.4 | 5,304 | 5,307 | + 0.1 | 1,098 | 1,061 | — 3.4 |
| | (207) | (200) | | | | | | | |
| Nagpur ... | 38 | 37 | — 2.6 | 5,974 | 5,580 | — 6.6 | 227 | 207 | — 8.8 |
| | (38) | (37) | | | | | | | |
| State ... | 1,935 | 2,055 | + 6.2 | 9,283 | 8,814 | — 5.0 | 14,287 | 14,490 | + 1.4 |
| | (1,539) | (1,644) | | | | | | | |

Note.—Figures in brackets indicate harvested area, on which production estimates are based.

It is seen from the above table that the total area under the crop increased from 1.9 lakh ha. in 1971-72 to 2.1 lakh ha. in 1972-73 or by 6.2 per cent. The State average yield of sugarcane (gur), however, declined from 9.3 tonnes in 1971-72 to 8.9 tonnes in 1972-73 or by 5.0 per cent, the decrease being due to the prolonged scarcity conditions affecting irrigation supply from minor irrigation sources in Poona division particularly. The production at the State level in 1972-73 recorded a slight increase of 1.4 per cent over that of the previous year.

(xii) *Cotton*.—The rains received during the sowing period were inadequate in major parts of Nasik, Ahmednagar and Sholapur districts of Deccan region,

major areas of Marathwada region and parts of Buldhana and Amravati districts of Vidarbha region. This affected the proper growth of the crop resulting in poorer yield in Marathwada region, in Jalgon district and in the adjoining areas of west Vidarbha region. The irrigated crop also suffered to some extent due to insufficient water in wells and other sources of irrigation. On the whole, the season was not favourable to the crop.

The table below gives the total area, the average yield per hectare and outturn of cotton (lint) for each division and for the State as a whole during the two years 1971-72 and 1972-73.

| Division | Crop : COTTON (lint) | | | | | | | | |
|------------|----------------------|---------|---|--------------------------------|---------|---|---------------------------------------|---------|-------------------------|
| | Area in '00' ha. | | | Average yield in kg/ha of lint | | | Production '00' bales of 180 kg. each | | |
| | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) | 1971-72 | 1972-73 | Percentage decrease (-) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay | ... 3,155 | 3,034 | - 3.8 | 118 | 89 | -24.6 | 2,070 | 1,496 | -27.5 |
| Poona | ... 422 | 253 | -40.0 | 226 | 280 | +23.9 | 530 | 393 | -26.4 |
| Aurangabad | ... 5,388 | 5,795 | + 7.6 | 65 | 49 | -24.6 | 1,949 | 1,590 | -18.5 |
| Nagpur | ... 16,323 | 16,352 | + 0.2 | 85 | 78 | - 8.2 | 7,692 | 7,110 | - 7.5 |
| State | ... 25,288 | 25,434 | + 0.6 | 87 | 75 | -13.8 | 12,241 | 10,589 | -13.5 |

The State total area under cotton crop was 25.43 lakh ha. in 1972-73 as against 25.29 lakh ha. in 1971-72 thus showing a very slight increase of 0.6 per cent. In the major cotton growing divisions of Aurangabad and Nagpur, the area under the crop was higher by 7.6 per cent and 0.2 per cent respectively while in Bombay and Poona divisions it declined by 3.8 per cent and 40.0 per cent respectively.

It is seen that the State average yield per hectare of cotton (lint) recorded a decrease of 13.8 per cent having gone down from 87 kg/ha in 1971-72 to 75 kg/ha in 1972-73. A fall in the yield rate was noticed by 24.6 per cent in each of Bombay and Aurangabad divisions and by 8.2 per cent in Nagpur division, while an increase in the yield rate was noticed in Poona division by 23.9 per cent.

The outturn of the crop was estimated at 10.59 lakh bales (of 180 kg each) during the year under report

as against 12.24 lakh bales in 1971-72 thus recording a decrease of 1.65 lakh bales or by 13.5 per cent. The decrease in the production was shared by all the divisions of the State viz. Bombay, Poona, Aurangabad and Nagpur to the extent of 27.5 per cent, 26.4 per cent, 18.5 per cent and 7.5 per cent respectively.

(xiii) *Groundnut*.—Due to the late arrival of the monsoon, inadequate rains and prolonged dry spell from the 9th July to the second week of August, the area under the crop declined in several parts of the State, particularly in the districts of Nasik, Sholapur, Sangli, Aurangabad, Bhir and Osmanabad. The crop suffered not only in germination but its yield also was adversely affected due to the dry spell from the 15th September to end of October during the pod formation stage. The incidence of aphids also affected the crop in Osmanabad district and parts of Vidarbha region. On the whole, the crop fared, very badly in the State.

The table below gives area, yield rate and outturn of the crop at the State level and divisionwise for the years 1971-72 and 1972-73.

| Division | Crop : GROUNDNUT | | | | | | | | |
|---------------|------------------|---------|---|---------------------------------|---------|-------------------------|---------------------------|---------|-------------------------|
| | Area in '00' ha. | | | Average yield of pods in kg/ha. | | | Production in '00' tonnes | | |
| | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) | 1971-72 | 1972-73 | Percentage decrease (-) | 1971-72 | 1972-73 | Percentage decrease (-) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay .. | 2,332 | 2,241 | - 3.9 | 442 | 295 | - 33.3 | 1,031 | 662 | - 35.8 |
| Poona ... | 2,718 | 2,127 | -21.7 | 867 | 293 | - 66.2 | 2,357 | 623 | - 73.6 |
| Aurangabad... | 1,836 | 2,166 | +18.0 | 429 | 153 | - 64.3 | 787 | 331 | - 57.9 |
| Nagpur .. | 1,462 | 1,638 | +12.0 | 595 | 281 | - 52.8 | 870 | 460 | - 47.1 |
| State ... | 8,348 | 8,172 | - 2.1 | 604 | 254 | - 57.9 | 5,045 | 2,076 | - 58.8 |

The State total area under the crop in 1972-73 was 8.17 lakh ha which was lower than that in the preceding year by 2.1 per cent. The decrease was distributed in Bombay and Poona divisions to the extent of 3.9 per cent and 21.7 per cent respectively. In Aurangabad division, the increase in area during 1972-73 over that in 1971-72 is apparent only as the area sown in 1971-72 was less than the normal.

In Nagpur division, although the sowing was done in time, the crop suffered subsequently.

The average yield in kg/ha at the State level declined from 604 kg. in 1971-72 to 254 kg in 1972-73 or by 57.9 per cent due to the adverse season mentioned earlier. The outturn of the crop declined by 58.8 per cent during the year under report as compared with that in the previous year.

(xiv) *Sesamum* (both *kharif* and *rabi*).—The table below gives at the State and division levels the area, yield rate and outturn of the crop for the years 1971-72 to 1972-73.

| Division | Crop : SESAMUM | | | | | | | | |
|---------------|------------------|---------|---|----------------------------|---------|---|---------------------------|---------|---|
| | Area in '00' ha. | | | Average yield in kg per ha | | | Production in '00' tonnes | | |
| | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay ... | 150 | 113 | - 24.7 | 173 | 142 | - 17.9 | 26 | 16 | - 38.5 |
| Pune ... | 70 | 61 | - 12.8 | 186 | 131 | - 29.6 | 13 | 8 | - 38.5 |
| Aurangabad... | 234 | 245 | + 4.7 | 81 | 94 | + 16.0 | 19 | 28 | + 21.1 |
| Nagpur ... | 751 | 913 | + 21.6 | 165 | 216 | + 30.9 | 124 | 197 | + 58.9 |
| State ... | 1,205 | 1,332 | + 10.5 | 151 | 183 | + 21.2 | 182 | 244 | + 34.1 |

The area under the crop increased by 10.5 per cent at the State level which in turn was distributed in Aurangabad and Nagpur divisions to the extent of 4.7 per cent and 21.6 per cent respectively. It decreased in Bombay and Poona Divisions by 24.7 per cent and 12.8 per cent respectively.

The average yield per hectare at the State level increased from 151 kg in 1971-72 to 183 kg in 1972-73 or by 21.2 per cent which was due to the increase in the

average yield in Aurangabad and Nagpur divisions to the extent of 16.0 per cent and 30.9 per cent respectively. The yield rate declined in Bombay and Poona divisions by 17.9 per cent and 29.6 per cent respectively. Due to the increase in the area as also in the yield rate, the production rose by 34.1 per cent at the State level.

(xv) *Linseed*.—The table below gives area, yield rate and outturn of the crop at the State level and division-wise for the years 1971-72 and 1972-73.

| Crop: LINSEED | | | | | | | | | |
|----------------|------------------|---------|---|-----------------------------|---------|-------------------------|------------------------------|---------|---|
| Division | Area in '00' ha. | | | Average yield in kg per ha. | | | Production in '00' in tonnes | | |
| | 1971-72 | 1972-73 | Percentage Increase (+) or decrease (-) | 1971-72 | 1972-73 | Percentage decrease (-) | 1971-72 | 1972-73 | Percentage Increase (+) or decrease (-) |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Bombay ... | 1 | 1 | ... | ... | ... | ... | ... | ... | ... |
| Pune ... | 54 | 22 | -59.2 | 148 | 91 | -38.5 | 8 | 2 | -75.0 |
| Aurangabad ... | 1,249 | 772 | -38.2 | 148 | 120 | -18.9 | 185 | 93 | -49.7 |
| Nagpur ... | 1,086 | 1,184 | + 9.0 | 183 | 176 | - 3.8 | 199 | 209 | + 5.0 |
| State .. | 2,390 | 1,979 | -17.2 | 164 | 154 | - 6.1 | 392 | 304 | -22.4 |

Its area decreased by 17.2 per cent at the State level. This was due to a decrease in the area to the extent of 59.2 per cent and 38.2 per cent in Poona and Aurangabad divisions respectively. An increase was noticed in Nagpur division by 9.0 per cent while the area remained stagnant in Bombay division.

The State average yield per ha recorded a decrease from 164 kg. in 1971-72 to 154 kg. in 1972-73 or by 6.1 per cent. Amongst the major divisions growing the crop namely Aurangabad and Nagpur divisions, the average yield was lower by 18.9 per cent and 3.8 per cent respectively while in Poona division (having very small area under the crop) it was lower by 38.5 per cent.

The State total production of linseed declined by 22.4 per cent from 0.4 lakh tonnes in 1971-72 to 0.3 lakh tonnes in 1972-73.

(xvi) *Tobacco*.—It is a very minor crop in the State. The total area, average yield and production at the

state level are given in the following table for the years 1971-72 and 1972-73.

| Item | 1971-72 | 1972-73 | Percentage decrease (-) |
|----------------------------|---------|---------|-------------------------|
| 1 | 2 | 3 | 4 |
| Area '00' ha. | 118 | 95 | ... |
| Average yield (kg/ha) | 458 | 432 | ... |
| Production in '00' tonnes. | 54 | 41 | ... |

Its total area of 0.09 lakh ha. was less by 2,300 ha. as compared with that in the previous year.

The State average yield per hectare of tobacco (dry leaf) recorded a decrease of 5.7 per cent having gone down from 458 kg. in 1971-72 to 432 kg. in 1972-73. With the decrease in both area and yield rate, the outturn of the crop declined by 24.1 per cent during the year under report.

CHAPTER VI

PRICES

(Table VI Pages 112 to 116)

(Summary Table 'F' Page 28)

13. The Table VI of the report gives the districtwise average farm harvest prices during the peak marketing period, of the principal crops in 1972-73. The average farm harvest prices at the state level for the 5 years viz. 1968-69 to 1972-73 are given in the Summary Table 'F' for the principal commodities of the State. During the year under report prices obtained by the farmers particularly of food articles and industrial raw materials mentioned for the paragraph below rose appreciably due to a set back in agricultural production caused by widespread drought condition.

14. The major variations in the average farm harvest prices of principal commodities at the State and divisional levels as compared with the corresponding prices of the previous year, are commented in the following paragraphs :

The price of paddy at the State level was Rs. 107.73 per quintal and was higher by 30.0 per cent than that of the previous year. The increase was noticed in all the divisions ranging from 1.6 per cent to 32.8 per cent.

The price of wheat at the State level was Rs. 136.34 per quintal and was higher by 34.5 per cent than that of the previous year. The increase was noticed in all divisions, the increase ranging from 22.8 per cent to 51.9 per cent.

The State average price of jowar viz. Rs. 107.26 per quintal was higher by 26.4 per cent than that of the preceding year. It was higher in all the divisions, the increase ranging from 2.4 per cent to 51.3 per cent.

The State level price of bajri viz. Rs. 134.33 per quintal during the year under report was higher than that of the preceding year by 57.2 per cent. The increase was noticed in all the divisions, it being 57.2 per cent, 48.3 per cent 83.9 per cent and 59.4 per cent in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

The price of ragi per quintal at the State level was Rs. 108.43 and it was higher in the major ragi growing divisions of Bombay and Poona by 42.0 per cent and 32.3 per cent respectively.

The State average price of maize was Rs. 117.54 per quintal and at the divisional level, it was higher by 73.2 per cent, 49.1 per cent, 26.6 per cent and 40.9 per

cent in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

Among the different pulses, the State level average price of Rs. 209.70 per quintal of tur dal was higher by 34.8 per cent than that in 1971-72. The increase was noticed in all the divisions it being 19.4 per cent, 19.9 per cent, 60.8 per cent and 31.2 per cent in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

The average price of gram at the State level was Rs. 156.59 per quintal which was higher by 50.6 per cent as compared with that in the preceding year. The increase was noticed in all the divisions ranging from 38.5 per cent to 67.7 per cent.

The average price per quintal of cotton (unginned) at the State level was Rs. 191.65 per quintal and was higher than that of the preceding year viz. by 12.8 per cent. The price of cotton increased by 5.2 per cent, 33.9 per cent, 22.7 per cent and 17.2 per cent in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

The State level average price of Rs. 197.43 per quintal of sugar (raw) was higher by 36.7 per cent than that of the preceding year. The increase was noticed in all the divisions except Nagpur and was of the order of 71.9 per cent, 35.1 per cent and 44.4 per cent in Bombay, Poona and Aurangabad divisions respectively. It declined in Nagpur division by 12.1 per cent.

The average price of groundnut (pods) was Rs. 219.60 per quintal and was higher by 50.4 per cent as compared to that in the preceding year. It was higher in all the divisions the increase being 53.0 per cent, 60.7 per cent, 48.8 per cent and 31.0 per cent in Bombay, Poona, Aurangabad and Nagpur divisions respectively.

At the State level, the price of tobacco viz., Rs. 559.12 per quintal ruled higher than that of the previous year by 22.2 per cent due to the increase in price in the major tobacco growing districts of Poona division.

The prices of the remaining commodities viz., castor-seed, linseed and sesamum potatoes and chillies increased at the State level as compared to those in the preceding year. The increase was of the order of 57.6 per cent, 15.2 per cent 18.8 per cent, 17.6 per cent, and 5.8 per cent respectively.

15. The table below gives the average prices of the agricultural commodities prevailing at peak marketing period for the years 1968-69 to 1972-73.

| Commodity 1 | Centre 2 | Prices per quintal | | | | |
|------------------|--------------------------------|--------------------|--------------|--------------|--------------|--------------|
| | | 1968-69 3 | 1969-70 4 | 1970-71 5 | 1971-72 6 | 1972-73 7 |
| | | Rs. | Rs. | Rs. | Rs. | Rs. |
| Jowar | 1. Mangalwedha (Solapur) | A 56.00 | 56.00 | 56.00 | 58.00 | 58.00 |
| | 2. Karanja (Akola) | B 54.00 | 54.00 | 54.00 | 56.00 | 56.00 |
| | 3. Latur (Osmanabad) | C 49.00 | 49.00 | 49.00 | 50.00 | 50.00 |

| | 2. Osmanabad | 139.17 | 170.00 | 145.97 | 133.80 | 256.00 |
| Cotton (Jarilla) | 1. Bombay | 418.05 | 485.19 | 696.00 | 537.00 | 551.00 |

Note.—AA—Superfine, A—Superior, B—Medium and C—Coarse.

The centres mentioned in the table are typical representative markets and accordingly the markets indicate general trend in the fluctuations of prices of the essential commodities in the State. Prices given for jowar, rice and wheat are controlled ones. The prices

of bajri, groundnut and cotton (lint) rose appreciably due to partly to set back in agricultural production caused by widespread scarcity conditions and partly due to inflationary pressures.

CHAPTER VII

AGRICULTURAL WAGES

(Table VII, Pages 117 to 119)

(Summary Table 'G' Pages 29-31)

16. Agricultural labour is classified under three categories viz. (i) skilled labour, (ii) ordinary labour and (iii) field labour. According to the State Manual of Revenue Accounts. Skilled labour comprises of carpenters, blacksmiths and cobblers. Ordinary labour includes load carrying coolies, well diggers, assistants of masons or carpenters, earth workers etc. while field labour includes ploughmen, sowers, transplanters, weeders, reapers, harvesters etc. In this

report, as shown in Table VII of Agricultural Wages, one more category of labour is included viz. herdsmen whose main daily work is to take the livestock owned by different owners to the jungle for grazing.

17. Table VII of the report gives districtwise and monthwise figures of daily wages of different classes of agricultural labour. State level information along with that for the previous year, is given in the Summary Table 'G'.

The table below gives the state (simple) average of agricultural wages of different categories of agricultural labour, during the years 1971-72 and 1972-73.

Agricultural wages (daily)

| Year | Skilled labour | | | Field labour | | | Other Agril. labour | | Herdsmen |
|-------------|----------------|-------------|---------|--------------|--------|----------|---------------------|--------|----------|
| | Carpenter | Black-smith | Cobbler | Male | Female | Children | Male | Female | |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| | Rs. | Rs. | Rs. | Rs. | Rs. | Rs. | Rs. | Rs. | Rs. |
| 1971-72 ... | 6.88 | 6.23 | 5.15 | 3.06 | 2.07 | 1.50 | 2.87 | 1.95 | 2.47 |
| 1972-73 ... | 7.38 | 6.75 | 5.41 | 3.30 | 2.32 | 1.61 | 3.09 | 2.16 | 2.75 |

It is seen from the above that during the year under report, the State averages in respect of all classes of agricultural labour showed an increase over those in the preceding year.

CHAPTER VIII

AGRICULTURAL STOCK

(Table VIII pages 130 to 145)

(Summary Table 'H' pages 32 to 35)

18. Table VIII of this report gives the details of livestock, poultry, agricultural machinery and implements as per quinquennial census of livestock and agricultural machinery conducted in 1972 by the Director, Bureau of Economics and Statistics, Maharashtra State, Bombay. Summary Table 'H' gives provisional total number of livestock, poultry, agricultural machinery and implements according to different categories and comments on the same are briefly given below.

(i) *Cattle*.—There was a slight decrease in the number of cattle from 1,47,29,446 in 1966 to 1,47,05,147 in 1972 or by 0.2 per cent. The total number of males of age over three years decreased by 5.2 per cent. Out of these, the number of males used for work only recorded a decrease of 3.4 per cent. The number of 'other males' over three years only showed an increase of 9.1 per cent.

Among the females over three years, the number of breeding cows recorded an increase of 1.0 per cent while those in milk increased by 4.2 per cent. The number of young stock recorded an increase of 7.3 per cent over that in 1966.

(ii) *Buffaloes*.—The total number of buffaloes recorded in 1972 was 33,00,746 as against 30,41,919 in 1966 showing an increase of 8.5 per cent. Among the different categories of buffaloes, the number of males over three years was 3,08,353 showing a decrease of 9.2 per cent over that in 1966. Among the females, the

number in milk was 9,54,884 in 1972 showing an increase of 11.7 per cent. The total number of breeding buffaloes showed an increase of 7.8 per cent. The number of young stock recorded an increase of 16.0 per cent.

(iii) *Sheep and Goats*.—The number of sheep decreased by 3.5 per cent whereas that of goats increased by 15.4 per cent as compared with the corresponding number of the year 1966.

(iv) *Horses and Ponies etc.*—The total number of horses and ponies declined considerably i. e. by 42.3 per cent in comparison with that of 1966.

The number of mules and camels declined by 64.4 per cent and 63.7 per cent or by 847 and 1232 respectively.

The decrease in the number of donkeys was by 18.2 per cent while the number of pigs increased by 12.0 per cent over that of the year 1966.

The total number of livestock recorded an increase by 3.6 per cent over that of the year 1966.

(v) *Poultry*.—The total number of poultry showed an increase by 23.4 per cent.

During the year under report, the cattle and other livestock was affected by incidence of contagious diseases as follows :—

In bovine, 13 outbreaks of Surra were reported mainly from Bombay region. The incidence of

Haemorrhagic Septicemia was reported in bovines from all over the State where as in sheep and goats it was reported mainly from Aurangabad region. In bovines 1017 outbreaks were reported affecting 3738 animals out of which 2880 died. In case of sheep and goat there were only 7 outbreaks. The incidence of Black Quarter disease in bovines was reported from all over the State. However, more outbreaks were reported in Aurangabad and Nagpur regions with 1387 outbreaks affecting 4446 bovines resulting in 3655 deaths. The incidence of Anthrax was reported from all over the State except Aurangabad region. There were 41 outbreaks affecting 374 animals out of which 326 animals died. The incidence of Foot and Mouth disease in bovines was widespread in the State with 736 outbreaks affecting 22731 animals out of which 104 animals died. In case of sheep and goats, 13 outbreaks of Foot and Mouth disease were reported. In sheep and goats, the outbreaks of Enterotaxaemia and Sheep Goat pox were reported from all over the State. There were 71 outbreaks of the former disease affecting 465 sheep and goats out of which 425 animals died while there were 40 outbreaks of the latter disease affecting 1010 sheep and goats out of which 312 animals died.

In case of poultry, there were 41 outbreaks of Ranikhet disease and 13 outbreaks of the Fowl pox disease.

Necessary measures were taken in controlling the outbreaks and spread of diseases.

On the whole the condition of cattle and other livestock was fairly satisfactory in the State.

(vi) *Agricultural Machinery and Implements.*—For the first time during 1972, the scope of the census was made comprehensive to cover data on up-to-date list of agricultural machinery and implements in the State. The variations in respect of the major items of agricultural machinery and implements based on 1972 census as compared with the previous one are summarised below :—

The number of tractors increased by 71.2 per cent while ghanis decreased by 47.0 per cent. The number of wooden ploughs, iron ploughs and carts showed an increase of 0.8 per cent, 13.2 per cent and 4.0 per cent respectively. Sugarcane crushers decreased by 50.6 per cent. Oil engines for irrigation purposes increased by 17.2 per cent while the number of electric pumps used for irrigation shot up from 37,979 to 1,69,778 or by nearly three and half times.

CHAPTER IX

AGRICULTURAL OUTLOOK

19. This was the third year in succession, when the south-west monsoon created a very precarious situation in Maharashtra. The kharif season was the most unfavourable by way of reduction in area under crops as compared to normal season as also lowering their yield rates. Similarly the rabi season was also the most unfavourable and the hopes of wiping out part of the deficit of the kharif season through an ambitious crash programme did not materialise.

Even during the kharif season, acute shortage of fodder, drinking water and irrigation water supply was experienced in the major parts of the State and the situation in the rabi season had worsened.

The production of the food grains during the year under report was the lowest since 1960-61 as, out of 38.8 thousand villages in the State, nearly 25 thousand villages were affected by conditions of drought to a greater or less extent. Worsening of the situation was, however, saved to some extent by the hybrid and high yielding varieties which gave higher yields of crops as compared to traditional varieties.

The contribution of bringing larger area under irrigation under agricultural production programmes due to supply of oil engines and installation of electric pumps was affected to some extent due to low water table in wells in major parts of the State. The irrigation projects in operation, however continued to benefit the agriculturists in the project command areas of the State.

Supply of fodder was inadequate in major parts of Deccan and Marathwada regions during the greater part of the year and at few places mainly in Buldhana, Yeotmal, Wardha and Chandrapur districts of Vidarbha region for a few months in the year. The prices ruled high in different markets situated not only in the affected areas but also elsewhere in the State throughout the year. To tide over the situation, fodder supply was arranged (i) on tagai basis, (ii) by transporting fodder from available sources to the affected areas and (iii) migrating cattle to camps or for grazing in different parts of the State.

Due to acute scarcity conditions declared in about 25 thousand villages, the agricultural labour could not be fully engaged in agricultural operations. Besides, even the agriculturists with substantial holdings had been affected by acute distress during the year under report. Consequently most of the agricultural labourers including agriculturists were diverted 13560 relief works (till December 1972) out of which 8577 were scarcity relief works and 4983 normal departmental works. The daily attendance of labour engaged in scarcity relief works was 20.16 lakhs by end of December 1972 and the same rose upto 49.46 lakhs by end of May 1973, the highest level ever reached. The labourers particularly in the scarcity relief works received higher wages in the State.

CHAPTER X

CONDITION OF AGRICULTURAL POPULATION

20. During the year under report, adverse seasonal conditions (described in Chapter-I) affected both the extent of cropped area and the productivity of the crops in major parts of the State. Even the rabi crash programme planned to knock out the deficit of the kharif season was upset in many parts of the State due to the adverse seasonal conditions. The agricultural wages increased to some extent while prices of agricultural produce (barring controlled commodities) and other essential commodities recorded considerable increase. The State was in the grip of scarcity conditions for the third year in succession with the affected area covering nearly 80 per cent of the villages spread over all the districts, thus crippling the State economy. Nevertheless the measures described below, helped in tiding over the precarious situation to fairly large measure.

The Government faced the drought situation with tenacity and pragmatism. Emphasis had all along been given not only in providing productive relief works but also in building up of permanent assets to ward off drought in future. Thus, the labour as also the agriculturists with small holdings were engaged in various relief works such as soil conservation, boring and blasting programme, digging of community wells, construction of percolation and irrigation tanks and construction of roads. Besides, the incomplete works of the preceding year were continued in some districts. Supply of foodgrains at controlled prices through ration shops was continued 'Sukadi' a vitaminised food was supplied to distressed agricultural labour on scarcity works in some of the major scarcity affected districts of the State. The condition of agricultural labour had eased to some extent. The industrial and factory areas, also absorbed labour on fairly good wages paid both in kind and cash suited to local conditions in the State. The cultivators

were provided with various incentives to step up food production under hybrid and high yielding varieties programme, undertaken on a larger scale. Loans were advanced to the needy agriculturists by Government Zilla Parishads, Land Development Banks and various other banks and Societies in the districts enabling them to improve their economic condition. Launching of intensive cultivation programme and arranging of demonstration plots had also helped to some extent in the replacement of the traditional method of cultivation. Rural electrification scheme continued to help the agriculturists in irrigating the crop wherever possible depending on the availability of water in wells, tanks etc., through use of electric pumps in different parts of the State. Under the Integrated Area Development Scheme, the small holders and agricultural labourers in 25 blocks covering 6,472 villages received the benefits from the process of economic development. Facilities were provided such as (i) making available loans on easy terms to the cultivators, (ii) granting them additional subsidies to lessen the financial burden, (iii) helping them to take up subsidiary industries like maintenance of milch animals, poultry, sheep and goat breeding and (iv) providing them irrigation by constructing community wells, small bandharas and lift irrigation units. As special features of the measures taken, facilities providing free irrigation water and making available other inputs on loan to the needy cultivators were offered under the rabi crash programme for wiping out the deficit of the the kharif season, in different parts of the State. Besides to tide over the shortage of drinking water supply was arranged through tankers in the affected areas in the State. The Bombay Tenancy Act, the Agricultural Land Improvement Act, Prevention of Fragmentation and Consolidation of Holding Act continued to result in an over all improvement of agriculture and welfare of the agriculturists in the State.

SUMMARY TABLE 'A'

Classification of Area

(Area figures in '00' ha.)

| Head of classification | 1971-72 | | 1972-73 | | Percentage increase (+) or decrease (-) over 1971-72 |
|---|----------|---------------------|----------|---------------------|--|
| | Area | Percentage to total | Area | Percentage to total | |
| 1 | 2 | 3 | 4 | 5 | 6 |
| Geographical area* | 3,07,762 | ... | 3,07,762 | ... | ... |
| Reporting area for the Land Utilisation Statistics [Total of (1) to (9)]. | 3,07,583 | ... | 3,07,583 | ... | ... |
| (1) Forests | 54,068 | 17.6 | 53,705 | 17.5 | - 0.7 |
| (2) Barren and Unculturable land | 17,989 | 5.8 | 17,589 | 5.7 | - 2.2 |
| (3) Area under non-agricultural uses | 8,773 | 2.9 | 9,000 | 2.9 | + 2.6 |
| (4) Culturable waste land | 13,551 | 4.4 | 12,347 | 4.0 | - 8.9 |
| (5) Permanent pastures and other grazing lands. | 16,634 | 5.4 | 16,376 | 5.3 | - 1.6 |
| (6) Land under miscellaneous tree crops and groves not included in net area sown. | 2,070 | 0.7 | 2,003 | 0.7 | - 3.2 |
| (7) Current fallows | 14,832 | 4.8 | 25,787 | 8.4 | + 73.9 |
| (8) Other fallows | 9,302 | 3.0 | 10,177 | 3.3 | + 9.4 |
| (9) Net area sown | 1,70,364 | 55.4 | 1,60,599 | 52.2 | - 5.7 |
| (10) Area sown more than once | 10,789 | 3.5 | 9,198 | 3.0 | - 14.7 |
| Total cropped area [Total of (9) & (10)] | 1,81,153 | 58.9 | 1,69,797 | 55.2 | - 6.3 |

*This is based on the figure supplied by Central Statistical Organisation, Government of India.

SUMMARY TABLE 'B'
Sources of Water Supply and the Area Irrigated therefrom in the
Maharashtra State, during 1972-73

| Item | 1971-72 | 1972-73 | Percentage increase (+) or decrease (-) |
