THE SECRETARY TO GOVERNMENT,
AGRICULTURE AND CO-OPERATION DEPARTMENT,
SACHIVALAYA ANNEXE,
BOMBAY-400 032.

SUBJECT :—Annual Season and Crop Report of
Maharashtra State for the year, 1973-74

Sir,

I am to submit herewith the Annual Season and Crop Report of Maharashtra State for the year ending the 31st July 1974.

After experiencing three consecutive drought years of which the worst in the history of the State occurred in 1972-73, the State turned the corner in 1973-74 when the agricultural season was, on the whole, satisfactory. The kharif season was characterised by the timely onset of monsoon. But initially, the monsoon was weak till the 15th June, followed by a dry spell commencing from the 16th June, 1973 for a period of nearly 10 days in the Konkan region and 16 days in the rest of the State. The dry spell resulted in the reduction in area under cotton and groundnut crops. This area was diverted mostly to kharif jowar, bajri, kharif pulses and wheat in the rabi season. During the months July to September the rainfall was widespread and more than adequate. Normally the monsoon retreats by September. This year, it extended upto October end and was useful for late sown kharif crops and for the timely sowing, as also for the proper growth of early sown rabi crops.

2. The impact of the satisfactory season during the year under report was reflected in the restoration of net and gross cropped areas to their normal levels, as these areas had recorded considerable reduction in the preceding three years of adverse season. Similarly, the lands which have remained unploughed to large extent particularly during 1971-72, and 1972-73 were brought under the plough this year, thereby bringing the area under current fallows also below to its normal level. Further due to reduction in the areas under non-food crops and their diversion to the cereal

crops, the area under cereals achieved its highest level during 1973-74 since the formation of Maharashtra State in 1960.

3. Another aspect of the impact was a conscious effort by the cultivators to exploit the irrigation facilities to the maximum extent possible. Consequently the net and gross irrigated areas during the year under report reached their highest levels of 14.7 and 17.6 lakh ha. respectively, being higher by 15.3 per cent and 20.2 per cent than those of the preceding year.

4. The total net cropped area increased from 160.6 lakh ha. in 1972-73 to 183.2 lakh ha. in 1973-74 i. e. by 14.1 per cent. Similarly the total gross cropped area increased from 169.8 lakh ha. to 194.9 lakh ha. i. e. by 14.8 per cent. Consequently the area cropped more than once increased from 9.2 lakh ha. to 11.6 lakh ha. i. e. 26.3 per cent. The increase in the cropped area was shared by all the districts of the State.

The area under food crops was 144.6 lakh ha. and exceeded that in the preceding year by 20.6 per cent. The area under non-food crops was 50.3 lakh ha. which was slightly higher by 0.7 per cent than in the preceding year. The total area under foodgrains increased from 114.3 in 1972-73 to 138.5 lakh ha. in 1973-74 i. e. 21.2 per cent. Similarly, the area under cereals increased from 93.1 to 110.9 lakh ha. (or by 19.1 per cent) and that under pulses from 21.2 to 27.6 lakh ha. (or by 30.0 per cent).

As a result of the efforts made by the department and the Zilla Parishads, the coverage under hybrid/high yielding varieties of cereals crops increased to 21.4 lakh ha.

5. Among the major crops of the State, kharif jowar was the only crop severely affected by the attack of midgefly and stemborer in several parts of Jalgaon, Dhule, Sangli, Kolhapur and parts of Marathwada and Vidarbha regions. Besides, the late heavy rains in October damaged the local jowar varieties, which were in the flowering stage, and also affected the quality of hybrid jowar grains. Thus earlier expectations of a bumper harvest of kharif jowar, due to the initial favourable weather conditions coupled with the highest area brought under this crop, were not fulfilled. Thus the production of kharif jowar worked out to only 12.9 lakh tonnes as against the initial expectation of over 19 lakh tonnes.

The total foodgrain production in the State was 70.45 lakh tonnes which was lower by over 6 lakh tonnes than the initially expected level of production, due mostly to the damage caused to kharif jowar.

6. The prices of all the agricultural commodities were higher in 1973-74 than those in 1972-73. Similarly wages of skilled and unskilled labour in the State, recorded an overall increase, in all the districts of the State.

7. The quinquennial live stock census 1972, showed that there was a slight decrease of 0.2 per cent in the number of cattle, whereas the total number of buffaloes recorded an increase of 8.5 per cent over the corresponding figures of 1966 census. The number of buffaloes, used for breeding purposes alone, decreased by 6.5 per cent. The number of sheep decreased by 3.5 per cent and horses and ponies by 42.3 per cent while the number of goats recorded an increase of 15.4 per cent. The poultry population showed an increase of 23.4 per cent.

According to the above census, the number of ghanis decreased by 47 per cent and sugarcane crushers decreased by 50.6 per cent. The number of wooden ploughs, iron ploughs and bullock carts showed an increase of 0.8 per cent, 13.2 per cent and 4.0 per cent, respectively. On the other hand, the number of oil engines and tractors increased by 17.2 per cent and 71.2 per cent respectively. The number of electric pumps increased by three and half times over that in the preceding census.

Yours faithfully,
S. R. CHOPDE,
Director of Agriculture,
Maharashtra State,
Pune-411 001.

Season and Crop Report of the State of Maharashtra for the Year 1973-74

CHAPTER I

SEASON

1. Distribution of Rainfall

The rainfall recorded at the selected centres in the State during the year under report, as compared with the normal rainfall, is given in table-1 (pages 34 to 49).

(i) *Pre-monsoon rains* (April to May).—The pre-monsoon rains were below the normal in most parts of the State except few parts of Pune, Satara and Sangli districts where they were near normal.

(ii) *Monsoon rains* (June to September).—The monsoon rains were above the normal in Deccan, Marathwada and Western parts of Vidarbha except in the districts of Ahmednagar, Kolhapur of Deccan and Osmanabad of Marathwada region.

In the coastal part consisting of three districts of Konkan region, and in Kolhapur and Osmanabad districts and the eastern part of Vidarbha, the rainfall was normal or nearly normal.

Only in Ahmednagar district, the rainfall during this period was below the normal.

(iii) *Post-Monsoon rains* (October to November).—Due to the unusual and rather heavy rains in October the post-monsoon rains were above the normal in Satara, Sangli and Solapur districts of Deccan region, Nanded, Osmanabad districts of Marathwada region and eastern districts of Vidarbha region. The districts where it was nearly normal were Pune, Kolhapur, Bhir, Parbhani, Akola and Yavatmal. In the remaining districts (i. e. all districts of Bombay division and districts of Ahmednagar, Aurangabad, Buldhana and Amravati), the rainfall in this period was below normal.

(iv) *Winter rains* (December to March).—Winter rains were below normal in most parts of the State.

(v) *Total rainfall for the year*.—The annual rainfall during the year under report exceeded the normal rainfall in parts of Nasik, Dhule, Jalgaon, Pune, Satara, Sangli, Solapur, Aurangabad and Nanded districts and western parts of Vidarbha region, while it was normal or near normal in coastal districts and eastern districts of Vidarbha region. It was below the normal in parts of Ahmednagar district only.

2. Effect of rainfall on sowings and crop condition

The pre-monsoon rainfall was very little or even absent in most parts of the State.

During the year under report, the South-West monsoon commenced in time. However, except in the Konkan districts, it was not vigorous in the beginning. As a result of the first showers, hardly 10 per cent of the area in the State as a whole could only be sown. From the 16th June, there was break in the monsoon for 10 days in the Konkan region and about 15 days in other parts of the State. This affected the sowings of cotton and groundnut crops in Deccan, Marathwada and Vidarbha regions which are the predominant cotton and groundnut growing areas of the State. Consequently, the area under these crops fell considerably.

Subsequently, the rainfall distribution was very satisfactory. Thus, the widespread and substantial rains in the first week of July, enabled the cultivators to undertake kharif sowings on an extensive scale. The cotton and groundnut areas which remained unsown due to inadequate rains at the sowing time (i. e. second fortnight of June) had to be diverted to other kharif crops, mainly bajri and kharif jowar. The rainfall thereafter was quite satisfactory and the total precipitation in the monsoon season exceeded the 'normal' in most of the districts of the Deccan and Marathwada regions and western parts of Vidarbha region. The continuous rains during August and September did not, however permit the usual interculturing operations affecting the normal growth of crops.

Normally, the monsoon practically withdraws by early October and very little rainfall is received in that month. But during 1973 heavy rainfall was received in October. Such a heavy rainfall in continuation of the prolonged and substantial precipitation received in August and September gave rise to the incidence of pests and diseases affecting cotton, groundnut and jowar. The cotton crop in Vidarbha was affected due to the long wet spell, delaying cotton picking, yellowing of crop and reduction of yields. In case of kharif jowar, the weather favoured the multiplication of midgefly on a large scale especially in the districts of Jalgaon, Sangli, Kolhapur, Aurangabad, Osmanabad and Buldhana. In other districts the incidence of the midgefly was mild. Consequently the earlier expectation of achieving a good production of kharif jowar crop, was not fulfilled. The bajra crop which is usually grown on lighter soils and the paddy crop which needs copious water, fared well. The increased large coverage under hybrid and high

yielding varieties of these crops was a contributing factor for increased production.

Although the heavy rains during the latter part of September and in October affected the production of some of the kharif crops, they were beneficial to the rabi crops. Thus due to adequate soil moisture, sowing of the rabi crops could be completed in time

and in fact their area also increased. Further, the growth of the rabi crops in general was also satisfactory.

On the whole, the agricultural season 1973-74 could be described as favourable for the production of food-grain crops in the State.

CHAPTER II

AREA CULTIVATED AND UNCULTIVATED

(Table II, Pages 50-51)

(Summary Table—A Page 19)

3. Number of Villages

During the year under report, the number of revenue villages in the State was 38,832 as against 38,825 in the preceding year. This increase by 7 villages was due to the formation of separate villages distributed in Jalgaon, Osmanabad, and Akola districts.

4. Total Area

The total geographical area of the State based on the survey carried out by the Surveyor General of India was 307.8 lakh ha. whereas the reporting area for Land Utilisation Statistics was 307.6 lakh ha. the same as in the last year.

5. Cultivated and Uncultivated area

The total cropped area in the State was 194.9 lakh ha. as against 169.8 lakh ha. during the preceding year, showing an increase by 14.8 per cent. The lower area under crops in 1972-73 is attributed to the unprecedented scarcity conditions that prevailed in the State

that year. The net cropped area in 1973-74 showed an increase of 14.1 per cent having gone up to 183.2 lakh ha. in 1973-74 from 160.6 lakh ha. in 1972-73. The area sown more than once also increased from 9.2 lakh ha. in 1972-73 to nearly 11.6 lakh ha. during the year under report or by 26.3 per cent. The increase in the cropped area during the year under report was mainly due to the favourable sowing season.

The area under current fallows decreased from 25.8 lakh ha. in 1972-73 to 7.6 lakh ha. during the year under report or by 70.5 per cent. The areas under 'Other fallows' and 'Culturable waste' also decreased by 29.0 per cent and 11.5 per cent respectively.

The decrease in the area under current fallows was noticed in almost all the districts.

The areas under other items of land utilisation recorded marginal variations only.

CHAPTER III

IRRIGATED AREA

(Tables III-A and III-B Pages 52-63)

(Summary Tables B and C Pages 20-21)

6. Sources of water supply

The Government and private canals increased from 752 and 7,460, in 1972-73 to 776 and 7466 or by 3.2 per cent and 0.1 per cent respectively during 1973-74. The running length of the government and private canals also increased by 3.2 per cent and 1.2 per cent

respectively. The number of wells (other than tube wells) used for irrigation purposes also increased to 7,53,293 or by 3.1 per cent during the year under report from 7,30,714 in the preceding year. The number of wells for domestic purposes, the number of wells having independent ayacut and the number of

wells supplementing recognised sources of irrigation also recorded an increase by 1.7 per cent, 3.7 per cent and 15.8 per cent respectively during 1973-74 as compared to those in the preceding year while the number of wells not in use decreased by 5.2 per cent.

The number of tanks both with ayacut 40 ha. or more and less than 40 ha. increased by 4.5 per cent and 1.3 per cent, respectively. During the year under report. The number of oil engines showed an increase by 0.3 per cent as compared that to in the preceding year. The number of electric pumps also increased from 1,47,987 in 1972-73 to 1,61,232 in 1973-74 or by 9.0 per cent. This is mainly due to Government efforts to provide more facilities to cultivators under rural electrification scheme for irrigation purposes.

7. The Gross and Net Irrigated Area

The gross irrigated area in the State increased from 14.68 lakh ha. in 1972-73 to 17.64 lakh ha. during 1973-74 or by 20.2 per cent. The net area irrigated also recorded an increase of 15.3 per cent having gone up from 12.76 lakh ha. in 1972-73 to 14.72 lakh ha. during the year under report. The increase, in the irrigated area is attributed to the availability of adequate water for irrigation from wells and tanks during 1973-74 after the preceding three successive drought years.

The percentage of net area irrigated to net area sown was 8.00 per cent while that of the gross area irrigated to gross area sown was 9.1 per cent during the year 1973-74 as compared to the corresponding figures of 7.9 per cent and 8.6 per cent of the preceding year.

8. Net area irrigated by different sources of irrigation

During the year under report, the net area irrigated by government canals, private canals, tanks, wells and other sources increased by 40,500 ha., 26,700 ha., 1,26,600 ha., and 1,200 ha., or by 16.8 per cent, 2.9 per cent, 13.6 per cent, 17.7 per cent, and 1.1 per cent, respectively as compared to those in the preceding year.

9. Sourcewise gross area irrigated

The gross area under Government canals, private canals, tanks and wells also increased by 47,500 ha., 1,000 ha., 28,100 ha., 2,20,500 ha. or by 16.9 per cent, 4.3 per cent, 14.2 per cent, 26.1 per cent, respectively while decrease is noticed in gross irrigated area under other sources by 800 ha. or 0.7 per cent.

10. Irrigated area under food and non-food crops

It is seen from the summary table C (page 21) that out of the total gross irrigated area of 17.64 lakh ha., during the year under report, an area of 16.28 lakh ha. (or 92.3 per cent) was under food crops and 1.37 lakh ha. (or 7.7 per cent) under non-food crops. Among food crops, foodgrains occupied the major area of 11.56 lakh ha. (or 71.0 per cent) of the total food crops.

The irrigated area under different crops has shown considerable increase over the last year. However, a decrease was noticed in case of paddy, citrus fruits, cotton and groundnut crops to the extent of 1.5 per cent, 1.8 per cent, 6.1 per cent, and 20.9 per cent, respectively.

CHAPTER IV

Cropped Area

(Tables IV-A, IV-B and IV-C, Pages 64-83)

(Summary Table D, Pages 22-25)

11. Total area under crops

The gross cropped area, area sown more than once net cropped area and area under food and non-food crops in each division for the two years 1972-73 and 1973-74 are presented in the summary tables below and the comments on the same are also given in brief. While perusing the area figures in the tables; it will be pertinent to bear in mind that 1972-73 was a year affected by acute scarcity condition while 1973-74 experienced a favourable season due to which the

disparity in the area figures during the two years will be quite marked.

(i) *Gross cropped area.*—The gross cropped area increased from 169.8 lakh ha. in 1972-73 to 194.9 lakh ha. in 1973-74 or by 14.8 per cent. The increase in the gross cropped area from 169.8 in 1972-73 to 194.9 lakh ha. in 1973-74 is shared by all the divisions as can be seen from the table presented below and the increase was 9.2 per cent, 28.3 per cent, 20.9 per cent, and 2.2 per cent in Bombay, Pune, Aurangabad and Nagpur divisions respectively.

(Area in ' 00 ' ha.)

Division	Gross cropped area		Increase (+) or decrease (-) over 1972-73 per cent
	1972-73	1973-74	
1	2	3	4
Bombay ...	31,451	34,348	+ 9.2
Pune ...	42,026	53,922	+ 28.3
Aurangabad ...	43,513	52,624	+ 20.9
Nagpur ...	52,807	53,965	+ 2.2
State ...	1,69,797	1,94,860	+ 14.8

(ii) *Double cropped area.*—The area sown more than once (mostly under double cropping) showed an appreciable increase of 26.3 per cent, having gone up from 9.2 lakh ha. in 1972-73 to 11.6 lakh ha. in 1973-74. This increase was shared by all the four divisions and was of the order of 17.8 per cent, 66.5 per cent, 21.2 per cent, and 5.5 per cent, in Bombay, Pune, Aurangabad and Nagpur divisions respectively as shown below:—

(Area in ' 00 ' ha.)

Division	Double cropped area		Increase (+) or decrease (-) over 1972-73 per cent
	1972-73	1973-74	
1	2	3	4
Bombay ...	1,845	2,174	+ 17.8
Pune ...	2,081	3,464	+ 66.5
Aurangabad ...	2,568	3,235	+ 21.2
Nagpur ...	2,604	2,747	+ 5.5
State ...	9,198	11,620	+ 26.3

(iii) *Net cropped area.*—The total net sown area during the year under report was 183.2 lakh ha. which is about the normal area, the appreciable lower area during the preceding year being due to the adverse season in that year. The increase in net cropped area was reflected in all the four divisions of the State. The details are shown in the table presented here below—

(Area in ' 00 ' ha.)

Division	Net cropped area 1972-73	Net cropped area 1973-74	Increase (+) or decrease (-) over 1972-73 %
Bombay ...	29,606	32,174	+ 8.7
Pune ...	39,945	50,458	+ 26.3
Aurangabad ...	40,845	49,389	+ 20.9
Nagpur ...	50,203	51,219	+ 2.0
State ...	1,60,599	1,83,240	+ 14.1

(iv) *Total area under food and non-food crops.*—Out of the total gross cropped area of 194.9 lakh ha. during 1973-74 in the State, food crops occupied an area of 144.6 lakh ha. or nearly 74.2 per cent. This area was more by 20.6 per cent as compared to the last year. The area under non-food crops, at the State level also increased from 49.9 lakh ha. in 1972-73 to 50.3 lakh ha. in 1973-74 or by 0.7 per cent as seen from divisionwise table below, in spite of decrease in Bombay and Nagpur divisions by 1.4 per cent and 3.2 per cent respectively mainly due to decrease in the area under cotton.

(Area in ' 00 ' ha.)

Division	Area under crops						
	Food crops				Non-food crops		
	1972-73	1973-74	Increase (+) or decrease (-) over 1972-73 %	1972-73	1973-74	Increase (+) or decrease (-) over 1972-73 %	
1	2	3	4	5	6	7	
Bombay ...	22,941	25,960	+ 13.2	8,510	8,388	- 1.4	
Pune ...	32,969	44,332	+ 34.5	9,057	9,590	+ 5.9	
Aurangabad ...	31,800	40,316	+ 26.8	11,713	12,308	+ 5.1	
Nagpur ...	32,176	33,997	+ 5.7	20,631	19,969	- 3.2	
State ...	1,19,886	1,44,605	+ 20.6	49,911	50,255	+ 0.7	

CHAPTER V

AREA, AVERAGE YIELD AND OUTTURN OF CROPS

(Tables IV-A and IV-B Pages—64-81)

(Tables V-A and V-B Pages—84-109)

(Summary Tables D and E Pages—22-26)

12. Cropwise comments on the seasonal conditions affecting the yields* and production of principal crops are briefly given in the following paragraphs. In this connection, it will be pertinent to mention at the about, that the crop yields in 1973-74 appear to be appreciably higher as compared with those of 1972-73 mainly due to the acute scarcity condition that prevailed in 1972-73 resulting in relatively low yields far below the normal ones.

A. Kharip foodgrain crops

(i) *Rice*.—Rains received in early June in Konkan and Mawal areas were adequate for sowing of paddy nurseries. These areas experienced a dry spell during the period from 16th June to the 26th June and affected the seedlings in the nursery. With the receipt of adequate rains in early July, transplanting was undertaken thereafter and completed by mid-August. In the

* *Yield per hectare*.—During the year under report, Statewide crop estimation surveys were continued on the principal crops of paddy, ragi, kharif jowar, bajri, wheat, rabi jowar, gram, sugarcane, cotton and groundnut. The survey on tur was continued in all the districts of Nagpur division and in Solapur and Osmanabad, Aurangabad and Parbhani districts while that on tobacco crop was also continued in Satara, Sangli and Kolhapur districts.

The districtwise average yield based on the data of the crop estimation surveys, are given in table V-A. In the same table current yields of other crops not covered by crop estimation surveys, are also given. In the case of tur and tobacco crops the current yields based on annawari are given for those districts which are not covered by the crop estimation surveys.

eastern paddy regions consisting of Nagpur, Bhandara and Chandrapur districts, some area was sown by broadcasting, in the first week of June and nurseries were also sown in anticipation of the normal arrival of the monsoon. However, due to the dry spell during the second fortnight of June, the growth of paddy seedlings was affected while the heavy rains in the first week of July damaged the seedlings to some extent. The seed already broadcast did not germinate well. Rains, received in July and August in these parts, enabled the completion of transplanting operations by the end of August. Thereafter with the receipt of adequate rains in September and rather heavy and late rains in October the growth of the crop in the State was quite satisfactory.

Except for incidence of armyworms in parts of the Konkan region and of gall-fly in the endemic areas of Bhandara district, the crop was free from pests and diseases. On the whole, the condition of the crop was quite satisfactory.

Cultivation of summer paddy was carried out under satisfactory conditions, the total area under the crop being 21,900 ha. distributed mainly in Ratnagiri, Kolaba, Bhandara and Chandrapur districts. The growth of the crop was good.

The table below gives the State and divisionwise area, yield per hectare and production of the crop (including summer rice) for the years 1972-73 and 1973-74.

Division	Crop : RICE										
	Area in '00' ha		Increase (+) or decrease (-)	Average yield per ha.		Increase +	Production in '00' tonnes		Increase +		
	1972-73	1973-74		1972-73	1973-74		1972-73	1973-74			
1	2	3	4	5	6	7	8	9	10		
				Kg.							
Bombay	...	4,834	4,895	+ 1.3	864	1,501	+ 73.7	4,178	7,347	+ 75.8	
Pune	...	1,808	1,791	- 0.9	504	1,365	+ 170.8	912	2,444	+ 168.0	
Aurangabad	...	853	793	- 7.0	49	594	+ 1112.2	41	471	+ 1048.8	
Nagpur	...	5,822	6,032	+ 3.6	417	1,013	+ 142.9	2,435	6,108	+ 150.8	
State	...	13,317	13,511	+ 1.5	568	1,212	+ 113.4	7,566	16,370	+ 116.4	

The State total area in the year under report slightly increased by 0.19 lakh ha. or 1.5 per cent as compared with that of the preceding year. The increase was mainly located in Nagpur division while in Aurangabad division, the area decreased by 0.06 lakh ha.

The State average yield of rice increased from 568 kg/ha in 1972-73 to 1,212 kg/ha in 1973-74 or by 113.4 per cent. Appreciably higher yields were obtained in all the divisions of the State as compared with those of the preceding year. Consequently the total rice production in the State increased from 7.6 lakh tonnes in 1972-73 to 16.4 lakh tonnes in 1973-74 or by 116.4 per cent.

The total production of summer rice during the year under report was 26,700 tonnes.

(ii) *Kharif jowar*.—The rains received during July were beneficial for the sowing of the crop. The sowing was completed mostly by July end in different parts of the State. The crop in the initial growth stage turned yellow in parts of Marathwada and Vidarbha regions due to heavy and continuous rains in the second fortnight of August adversely affecting the grain formation

of hybrid jowar. The crop in Parbhani district was affected by excessive rains in September also. In Dhule district, the grains in earheads of hybrid jowar had sprouted due to the excessive rains in the last week of October. The late rains in October affected the quality of jowar grains in the south Deccan and parts of Marathwada and Vidarbha regions and had delayed the harvesting of the early sown crop. Incidence of midgefly was reported on late sown hybrid kharif jowar as also on local jowar in most parts of the State and the incidence was heavy in the districts of Jalgaon, Dhule, Sangli, Kolhapur and parts of Marathwada and Vidarbha regions thereby appreciably reducing the crop yields in these areas. Hybrid jowar was also affected by stemborer in Satara, Kolhapur, Bhir, Parbhani, Buldhana, Akola and Amravati districts. As a result, despite the increase in the area under the crop its production was only 12.9 lakh tonnes against the production of over 19 lakh tonnes, anticipated at the beginning of the season.

The table below gives the State and divisionwise area yield per hectare and production of the crop for the years 1972-73 and 1973-74.

Crop : KHARIF JOWAR									
Division	Area in '00' ha.			Average yield in kg. per ha.			Production in '00' tonnes		
	1972-73	1973-74	% increase (+)	1972-73	1973-74	% increase (+) or decrease (-)	1972-73	1973-74	% increase (+) or decrease (-)
1	2	3	4	5	6	7	8	9	10
				kg.	kg.				
Bombay ...	2,067	2,155	+ 4.2	532	507	- 4.7	1,099	1,093	- 0.5
Pune ...	1,993	3,114	+ 56.2	301	867	+ 188.0	599	2,699	+ 350.6
Aurangabad ...	8,165	9,428	+ 15.5	272	292	+ 7.4	2,217	2,752	+ 24.1
Nagpur ...	12,713	12,930	+ 1.7	405	491	+ 21.2	5,150	6,349	+ 23.3
State ...	24,938	27,627	+ 10.8	364	467	+ 28.3	9,065	12,893	+ 42.2

The State total area under kharif jowar increased from 24.9 lakh ha. in 1972-73 to 27.6 lakh ha. in 1973-74 or by 10.8%. This was mainly due to an increase in the area sown under the crop to the extent of 56.2% and 15.5% in Pune and Aurangabad divisions respectively.

The State average yield per hectare of the crop increased from 364 kg./ha. in 1972-73 to 467 kg/ha in 1973-74 or by 28.3% and the increase was shared by Pune, Aurangabad and Nagpur divisions to the extent of 188.0%, 7.4% and 21.2% respectively whereas there was a slight decrease by 4.7% in Bombay division.

The increase in the area and yield rate resulted in an increase in the production from 9.06 lakh tonnes in 1972-73 to 12.89 lakh tonnes in 1973-74 or by 42.2%. However, the year's production was much lower as compared with the normal production of 18.6 lakh tonnes achieved in 1968-69.

(iii) *Bajri*.—The rains received during June were beneficial for the timely completion of the sowing of the crop excepting in parts of Satara, Sangli and Solapur districts where, due to both delayed and inadequate rains, some areas remained unsown. The heavy and continuous rains in Marathwada in August adversely affected the growth of the crop. Again the heavy rains in the last week of September hampered the harvesting of the crop in Nasik, Dhule and Jalgaon districts, while the quality of the grains was affected to some extent by the rains received in the last week of October in Ahmednagar district and parts of Marathwada region. The crop suffered from ergot and downy-mildew diseases in parts of Nasik and Aurangabad districts and from ergot disease in Jalgaon district. Barring these isolated cases of adverse effect on the crop, the season on the whole was favourable to the crop in most parts of the State.

The table below gives area, yield rate and production of the crop divisionwise and at the State level during the years 1972-73 and 1973-74.

Crop : BAJRI									
Division	Area in '00' ha.			Average yield in kg. per ha.			Production in '00' tonnes		
	1972-73	1973-74	Percentage increase (+) or decrease (-)	1972-73	1973-74	Percentage increase (+) or decrease (-)	1972-73	1973-74	Percentage increase (+) or decrease (-)
1	2	3	4	5	6	7	8	9	10
				kg.	kg.				
Bombay ...	6,067	6,879	+ 13.4	170	508	+198.8	1,033	3,485	+237.4
Pune ...	4,043	9,171	-108.3	201	356	+ 77.1	886	3,267	+268.7
Aurangabad ...	3,404	5 572	+ 63.7	76	288	+278.9	260	1,606	+517.7
Nagpur ...	420	523	+ 24.5	184	270	+ 46.7	78	141	+ 80.8
State ...	14,294	22,145	+ 54.9	158	384	+143.0	2,257	8,499	+276.6

The State total area under the crop recorded an increase of 54.9 per cent having gone up from 14.3 lakh ha. in 1972-73 to 22.1 lakh ha. in 1973-74. The increase was quite substantial over the area sown in 1972-73, during which year large areas remained unsown due to the adverse season.

The State average yield per hectare of bajri crop increased by 143.0 per cent having gone up from 158 kg/ha. in 1972-73 to 384 kg/ha. in 1973-74. The increase was spread over all the divisions of the State.

As a consequence of the substantial increase in the area under and yield rate of the crop, its total production was nearly four times that in the previous year, having

risen from 2.3 lakh tonnes in 1972-73 to 8.5 lakh tonnes in 1973-74.

(iv) *Ragi*.—In the Konkan and Ghat regions the rains received in the first week of June facilitated large scale sowing of the crop. The seedlings were, however, affected due to the dry spell for a fortnight after the middle of June in the Konkan region. The rains received in July and early August proved beneficial to the timely completion of transplanting of the crop in both the regions. On the whole, the seasonal conditions were favourable to the crop resulting its satisfactory growth.

The table below gives the divisionwise and the State level area, average yield/ha. and the production of the crop for the two years 1972-73 and 1973-74.

Crop : RAGI									
Division	Area in 00 ha.			Yield in kg. per ha.			Outturn in 00 tonnes		
	1972-73	1973-74	Percentage increase (+) or decrease (-)	1972-73	1973-74	Percentage increase (+) or decrease (-)	1972-73	1973-74	Percentage increase (+) or decrease (-)
1	2	3	4	5	6	7	8	9	10
				kg.	kg.				
Bombay ...	1,284	1,432	+ 11.5	400	957	+ 139.2	514	1,370	+ 166.5
Pune ...	596	609	+ 2.2	492	982	+ 99.6	293	598	+ 104.1
Aurangabad ...	13	7	+ 46.1	231	680	+ 194.4	3	5	+ 66.7
Nagpur ...	4	500	2
State ...	1,897	2,048	+ 8.0	428	963	+ 125.0	812	1,973	+ 143.0

The State area under the crop increased by 0.15 lakh ha. or by 8.0 per cent as compared with that of the last year. The increase was contributed by Bombay and Pune divisions to the extent of 11.5 per cent and 2.2 per cent respectively.

The State average yield of ragi increase from 428 kg./ha. in the drought year 1972-73 to 963 kg./ha. in the year under report. The increase was observed in Bombay and Pune divisions to the extent of 139.2 per cent and 99.6 per cent respectively.

The table below gives the State and division level area, yield rate and outturn of the crop for the two years 1972-73 and 1973-74.

Crop : TUR									
Division	Area in '00' ha.		Percentage increase (+) or decrease (-)	Average yield kg. per ha.		Percentage increase (+) or decrease (-)	Outturn in '00' tonnes		
	1972-73	1973-74		1972-73	1973-74		1972-73	1973-74	Percentage increase (+) or decrease (-)
1	2	3	4	5	6	7	8	9	10
				kg.	kg.				
Bombay ...	262	285	+ 8.8	336	554	+ 64.9	88	158	+ 79.5
Pune ...	308	1,177	+ 282.1	214	435	+ 103.3	66	512	+ 675.8
Aurangabad ...	2,096	2,438	+ 16.3	178	379	+ 112.9	374	924	+ 147.0
Nagpur ...	2,346	2,339	- 0.3	543	697	+ 28.4	1,274	1,629	+ 27.9
State ...	5,012	6,239	+ 24.5	360	517	+ 43.6	1,802	3,223	+ 78.9

The area under the crop at the State level increased from 5.0 lakh ha. in 1972-73 to 6.2 lakh ha. in 1973-74 or by 24.5 per cent. The increase was shared by all the divisions except Nagpur division where the area decreased very slightly by 0.3 per cent.

The State average yield increased by 43.6 per cent having gone up from 360 kg./ha. in 1972-73 to 517 kg. in 1973-74. The increase was spread over all the four divisions to the extent of 64.9 per cent, 103.3 per cent, 112.9 per cent and 28.4 per cent.

The outturn of the crop increased from 1.8 lakh tonnes in 1972-73 to 3.2 lakh tonnes in 1973-74 or by 78.9 per cent and the increase was shared by all the divisions of the State.

The table below gives the State and division area, yield per hectare and production of the crop for 1972-73 and 1973-74.

Crop : WHEAT									
Division	Area in '00' ha.		Percentage increase (+)	Average yield in kg. per ha.		Percentage increase (+)	Production in '00' tonnes		Percentage increase (+)
	1972-73	1973-74		1972-73	1973-74		1972-73	1973-74	
1	2	3	4	5	6	7	8	9	10
				kg.	kg.				
Bombay ...	1,195	1,801	+ 50.7	437	851	+ 94.7	522	1,533	+ 193.7
Pune ...	1,079	1,598	+ 48.1	564	728	+ 29.1	608	1,163	+ 91.3
Aurangabad ...	1,967	2,885	+ 46.7	145	385	+ 165.5	285	1,111	+ 289.8
Nagpur ...	2,858	3,368	+ 17.8	382	494	+ 29.3	1,091	1,662	+ 52.3
State ...	7,099	9,652	+ 36.0	353	567	+ 60.6	2,506	5,469	+ 118.2

The outturn of the crop increased from 0.8 lakh tonnes in 1972-73 to 2.0 lakh tonnes in 1973-74 or by 1.2 lakh tonnes.

(v) *Tur*.—The sowing of tur crop was completed by early August in the different regions of the State. The growth of the crop was satisfactory due to adequate rains in September and October in major parts of the State. The crop was free from pests except in Nasik district where it was infested by podborers. The condition of the crop, on the whole, was satisfactory.

B. Rabi foodgrain crops

(vi) *Wheat*.—Good rains received in September and October facilitated large scale and timely sowing of the unirrigated crop. The germination of the crop was satisfactory. The sowing of the irrigated crop was completed by December, whereas it continued till January in Buldhana, Akola and Amravati districts of Vidarbha region. The unirrigated crop in light soils was affected at growth stage. Rat infestation was largely reported in Nasik, Dhule, Jalgaon, Ahmednagar and Solapur districts and in Marathwada and western Vidarbha regions. To control it, a drive with 100 per cent Government subsidy was undertaken over an area of 1.35 lakh ha. On the whole, the condition of the crop in the State was fairly satisfactory.

The area under wheat at the State level increased by 36.0 per cent or by 2.5 lakh ha. and is attributed to the favourable sowing conditions referred earlier. The increase was noticed in all divisions, it being 50.7 per cent, 48.1 per cent, 46.7 per cent, 17.8 per cent in Bombay, Pune, Aurangabad and Nagpur divisions respectively.

The State average yield per hectare of wheat increased from 353 kg/ha. in 1972-73 to 567 kg/ha in 1973-74 or by 60.6 per cent. The increase was contributed by all the divisions of Bombay, Pune, Aurangabad and Nagpur to the extent of 94.7 per cent, 29.1 per cent, 165.5 per cent and 29.3 per cent respectively.

The increase of 2.96 lakh tonnes in the State outturn during 1973-74 over that in the preceding year was shared by all the Division. The rise in both the area and yield rate resulted in an increase in the outturn of the crop from 2.51 ton ha. in 1972-73 to 5.47 lakh tonnes in 1973-74. The increase was spread over all the divisions.

(vii) *Rabi jowar*.—Wide spread and adequate rains received during mid August in Deccan and parts of

Marathwada region, enabled the cultivators to prepare the lands and undertake timely sowing there. Further, the good rains received in September and October in these parts were also helpful in completing the sowing all over the State and ensuring the proper development of crop. Due to heavy rains in the last week of October in Chandrapur district, some area could not be sown with rabi-jowar and was diverted to wheat crop in that district.

The germination of the crop was satisfactory except in Bhandara district where that of the early sown crop was affected. In the lighter soils of Ahmednagar district and adjoining areas of Marathwada region, the crop condition by December and January was reported to be not quite satisfactory due to lack of adequate soil moisture. The crop was severely affected by chikta disease in Solapur and Parbhani districts while in the districts of Satara, Sangli and parts of Marathwada region, the incidence was slight. Aerial spraying against chikta was undertaken in Parbhani and Osmanabad districts over an area of nearly 39,000 ha. On the whole, the condition of the crop in the State was only fairly satisfactory.

The table below gives the State and divisionwise area, yield rate and outturn of the crop for the years 1972-73 and 1973-74.

Crop : RABI JOWAR									
Division	Area in '00' ha.		Percentage increase (+)	Yield per ha.		Percentage increase (+)	Production '00' tonnes		Percentage increase (+)
	1972-73	1973-74		1972-73	1973-74		1972-73	1973-74	
1	2	3	4	5	6	7	8	9	10
				kg.	kg.				
Bombay ..	1,115	1,132	+1.5	275	713	+ 159.3	307	807	+162.7
Pune ...	18,445	19,714	+6.9	97	435	+348.5	1,786	8,573	+380.0
Aurangabad ...	7,627	9,873	+29.4	151	499	+230.5	1,148	4,925	+329.0
Nagpur ...	2,300	2,530	+10.9	361	393	+8.9	831	995	+19.7
State ...	29,487	33,249	+12.8	138	460	+233.3	4,072	15,300	+275.7

The State total area nearly regained its normal level of 33.2 lakh ha. from that below normal of 29.5 lakh ha. recorded in the preceding year of drought as also the yield-rate and production. This feature was observed at the divisional levels also. The total increase in the production of 11.23 lakh tonnes was shared by all the divisions of Bombay, Pune, Aurangabad and Vidarbha to the extent of 0.50, 6.78, 3.77 and 0.17 lakh tonnes respectively.

(viii) *Gram*.—Adequate rains received in September and October facilitated timely sowing of the unirrigated crop in the different regions of the State. The germination and growth of the crop were satisfactory. The crop was, however, infested with podborers in Bhir, Akola, Yeotmal and Nagpur districts. On the whole, the condition of the crop was fairly satisfactory.

The table below gives the area, average yield and outturn of the crop at the State and division levels.

Division	Crop : GRAM								
	Area in '00' ha.		Percentage increase (+)	Yield per ha.		Percentage increase (+)	Production in '00' tonnes		Percentage increase (+)
	1972-73	1973-74		1972-73	1973-74		1972-73	1973-74	
1	2	3	4	5	6	7	8	9	10
				kg.	kg.				
Bombay ..	245	382	+55.9	228	287	+113.6	56	186	+232.1
Pune ..	440	733	+66.6	243	329	+35.4	107	241	+125.2
Aurangabad ..	1,264	1,630	+28.9	119	353	+196.6	150	575	+283.3
Nagpur ..	641	761	+18.7	270	375	+38.9	173	285	+64.7
State ..	2,590	3,506	+35.4	188	367	+95.2	486	1,287	+164.8

All the divisions of the State shared the substantial increase of about 19 per cent to 67 per cent in the area, 35 per cent to 197 per cent in the yield rate and 65 per cent to 283 per cent in the production.

(ix) *Area under foodgrain crops.*—The table below presents at a glance the total area under cereals, are pulses and foodgrains at State and divisional levels during the years 1972-73 and 1973-74.

(Area in '00' ha.)

Division	Area under foodgrain crops								
	CEREALS			PULSES			TOTAL FOODGRAINS		
	1972-73	1973-74	Percentage increase (+)	1972-73	1973-74	Percentage increase (+)	1972-73	1973-74	Percentage increase (+)
1	2	3	4	5	6	7	8	9	10
Bombay ..	17,668	19,577	+10.8	3,962	4,960	+25.2	21,630	24,537	+13.4
Pune ..	28,783	36,679	+27.4	1,910	5,177	+171.0	30,693	41,856	+36.4
Aurangabad ..	22,308	29,041	+30.2	8,543	10,183	+19.2	30,851	39,224	+27.1
Nagpur ..	24,330	25,613	+5.3	6,826	7,303	+7.0	31,156	32,916	+5.6
State ..	93,089	1,10,910	+19.1	21,241	27,623	+30.0	1,14,330	1,38,533	+21.2

After experiencing droughty agricultural seasons 1970-71 and 1971-72 and culminating with the worst drought of 1972-73, the State can be said to have regained and even exceeded its normal level cropping

under foodgrain crops. The increase in area under foodgrains to the extent of 6.7 lakh ha. over the normal area of 132.4 lakh ha. is attributed to the diversion of unsown kharif area from cotton and groundnut crops and increase in double cropping.

(x) *Outturn of foodgrain crops.*—The table below gives the divisionwise and State total outturn of cereals, pulses and foodgrains during the two years 1972-73 and 1973-74.

(Production in '00' tonnes)

Division	Production in '00' tonnes								
	CEREALS			PULSES			TOTAL FOODGRAINS		
	1972-73	1973-74	Percentage increase (+)	1972-73	1973-74	Percentage increase (+)	1972-73	1973-74	Percentage increase (+)
1	2	3	4	5	6	7	8	9	10
Bombay ...	7,941	16,184	+103.8	805	1,614	+100.5	8,746	17,798	+103.5
Pune ...	5,267	19,262	+265.7	311	1,608	+417.0	5,578	20,870	+274.1
Aurangabad ...	3,998	11,002	+175.2	1,091	2,801	+156.7	5,089	13,803	+171.2
Nagpur ...	9,634	15,321	+59.0	1,995	2,659	+35.3	11,629	17,980	+54.6
State ...	26,840	61,769	+130.1	4,202	8,682	+106.6	31,042	70,451	+127.0

It is seen that the total production of foodgrains at the State level during 1973-74 was 70.45 lakh tonnes, made up of 61.77 lakh tonnes of cereals and 8.68 lakh tonnes of pulses. The production in most of cereals, pulses and foodgrains increased in all the divisions. The estimated production of foodgrains during 1973-74 in Bombay, Pune, Aurangabad and Nagpur divisions was 17.8, 20.9, 13.8 and 18.0 lakh tonnes, respec-

tively and it was higher than that in the preceding year by 103.5 per cent, 274.1 per cent, 171.2 per cent and 54.6 per cent respectively.

C. Other Principal Crops

(xi) *Sugarcane*.—The table below gives, for the two years 1972-73 and 1973-74, the area, yield rate and production of the crop for each division and the State.

Crop : SUGARCANE									
Division	Area in '00' ha.			Yield of gur per ha.			Production of gur in '00' tonnes		
	1972-73	1973-74	Percentage Increase (+) or Decrease (-)	1972-73	1973-74	Percentage Increase (+) or Decrease (-)	1972-73	1973-74	Percentage Increase (+) or Decrease (-)
1	2	3	4	5	6	7	8	9	10
				kg.	kg.				
Bombay	223 (201)	285 (270)	+27.8	9,339	8,922	- 4.5	1,876	2,409	+28.4
Pune	1,595 (1,206)	1,578 (1,193)	- 1.1	9,408	9,469	+ 0.6	11,346	11,297	- 0.4
Aurangabad	200 (200)	243 (243)	+21.5	5,307	6,012	+13.3	1,061	1,461	+37.7
Nagpur	37 (37)	39 (39)	+ 5.4	5,580	6,872	+23.2	207	268	+29.5
State	2,055 (1,644)	2,145 (1,745)	+ 4.4	8,814	8,845	+ 0.4	14,490	15,435	+ 6.5

At the State level, the increase in area under sugarcane, average yield per ha. of gur and its production was to the extent of 4.4 per cent, 0.4 per cent and 6.5 per cent respectively.

(xii) *Cotton*.—The rainfall received till the middle of June was insufficient for undertaking timely and large scale sowing of cotton in the major cotton regions of Marathwada and Vidarbha. Sowing of the crop was further delayed due to the dry spell that followed during the second fortnight of June. This situation was responsible for the reduction in the State total area under cotton by about 10 per cent of the normal. Due to the three preceding drought years, the availability of water for irrigation from tanks and wells was very limited, thereby reducing the irrigated area also.

The rainfed cotton germinated satisfactorily and its growth in July and till mid-August was also good. But due to continuous rains from the second week of August till the first week of September the crop turned yellow and its growth was stunted. Further, in the third week of September, there was a wet spell and the weather was often cloudy and hence favourable to the incidence of the common pests of cotton viz. aphides, jassids, spotted bollworms and heliothis. The heavy rains in the last week of October in Jalgaon, Nanded, Osmanabad districts and in the districts of Vidarbha region affected the crop and delayed the picking season.

On the whole, the season was not favourable to the cotton crop in the State.

Note.—Figures in brackets indicate the harvested area, on which the production estimates are based.

The table below gives the total area under the average yield of cotton per hectare and outturn of the crop for each division and for the State as a whole during the two years 1972-73 and 1973-74.

Division	Crop : COTTON									
	Area in '00' ha.			Yield of lint per ha.			Production in '00' bales of 180 kg. each			
	1972-73	1973-74	Percentage decrease (-)	1972-73	1973-74	Percentage increase (+) or decrease (-)	1972-73	1973-74	Percentage increase (+) or decrease (-)	
1	2	3	4	5	6	7	8	9	10	
Bombay	3,034	2,333	-23.1	89	101	+13.5	1,496	1,304	-12.8	kg.
Pune	253	158	-37.5	280	214	-23.6	393	188	-52.2	
Aurangabad	5,795	5,466	-5.7	49	88	+79.6	1,590	2,661	+67.4	
Nagpur	16,352	15,525	-5.1	78	75	-3.8	7,110	6,421	-9.7	
State	25,434	23,482	-7.7	75	81	+8.0	10,589	10,574	-0.1	

The normal area under the crop in the State is of the order of 27 lakh ha. It was 25.4 lakh ha. in 1972-73 and fell further due to adverse season in 1973-74 to 23.5 lakh ha. In the major cotton growing divisions Aurangabad and Nagpur, the area declined by 5.7 per cent and 5.1 per cent respectively.

The State level average yield recorded an increase of 8.0 per cent due to better performance in Aurangabad division where the increase in production by 67.4 per cent nearly compensated for the decrease in the remaining three divisions. The State outturn of the crop was estimated at 10.6 lakh bales and was about the same as in the preceding year.

(xiii) *Groundnut*.—As in the case of cotton crop, the area under groundnut declined in several parts of the State particularly in Bombay and Aurangabad divisions.

The high cost of groundnut seed coupled with the high seedrate required for the crop) may also have contributed to the reduction in the area sown and its diversion partly to kharif jowar in the kharif season and to safflower in the rabi season. The germination of the crop was satisfactory. The crop suffered in its subsequent growth stage due to heavy and continuous rains in August and early September and later in the last week of October in parts of Marathwada and Vidarbha regions. It suffered from pests like jassids and aphids due to the wet-spell that prevailed during critical period of crop growth. On the whole, the condition of the crop was only satisfactory.

The table below gives the area and yield rate of groundnut (dried pods) per hectare and its outturn at the divisional and State levels for the years 1972-73 and 1973-74.

Division	Crop : GROUNDNUT									
	Area in '00' ha.			Yield of pods per ha.			Production in '00' tonnes			
	1972-73	1973-74	Percentage decrease (-)	1972-73	1973-74	Percentage increase (+)	1972-73	1973-74	Percentage increase (+)	
1	2	3	4	5	6	7	8	9	10	
Bombay	2,241	2,038	-9.1	295	822	+178.6	662	1,675	+153.0	kg.
Pune	2,127	2,098	-1.4	293	888	+203.1	623	1,864	+129.2	kg.
Aurangabad...	2,166	1,959	-9.6	153	638	+317.0	331	1,249	+277.3	
Nagpur	1,638	1,489	-9.1	281	583	+107.5	460	869	+88.9	
State	8,172	7,584	-7.2	254	746	+193.7	2,076	5,657	+172.5	

The State level area under the crop decreased from 8.2 lakh ha. in 1972-73 to 7.6 lakh ha. in 1973-74 or by 7.2 per cent. The decrease was distributed over all the 4 divisions to the extent of about 2 to 10 per cent.

The average yield of dried pods at the State level was 746 kg/ha. in 1973-74 as compared with that of 254 kg/ha. in the drought year of 1972-73.

With the increase in the average yield, the outturn of the crop also increased from 2.08 lakh tonnes in 1972-73 to 5.66 lakh tonnes in 1973-74 and the increase was shared by all the divisions.

(xiv) *Sesamum* (both *kharif* and *rabi*).—The table below gives for the State and divisions the area, yield rate and outturn of the crop for the two years 1972-73 and 1973-74.

Crop : SESAMUM									
Division	Area in '00' ha.			Average yield in kg/ha.			Outturn in '00' tonnes		
	1972-73	1973-74	Percentage increase (+) or decrease (-)	1972-73	1973-74	Percentage increase (+) or decrease (-)	1972-73	1973-74	Percentage increase (+) or decrease (-)
1	2	3	4	5	6	7	8	9	10
				kg.	kg.				
Bombay ...	113	154	+ 36.3	142	325	+ 128.9	16	50	+ 212.5
Pune ...	61	91	+ 49.2	131	297	+ 126.7	8	27	+ 237.5
Aurangabad...	245	250	+ 2.0	94	176	+ 87.2	23	44	+ 91.3
Nagpur ...	913	999	+ 9.4	216	157	- 27.3	197	157	- 20.3
State ...	1,332	1,494	+ 12.2	183	186]	+ 1.6	244	278	+ 13.9

The State total area under the crop increased by 12.2 per cent and the increase was distributed in all the four divisions to the extent of 2 per cent to 49 per cent.

The average yield per hectare at the State level slightly increased from 183 kg. in 1972-73 to 186 kg. in 1973-74 or by 1.6 per cent. The average yield increased in the three divisions of Bombay, Pune and Aurangabad to the extent of 128.9 per cent, 126.7 per cent, 87.2 per cent and decreased in Nagpur division by 27.3 per cent.

The production at the State level reached a small increase from 0.24 lakh tonnes in 1972-73 to 0.28 lakh tonnes in 1973-74 or by 13.9 per cent. The increase was noticed in all the divisions except Nagpur where it decreased by 20.3 per cent.

(xv) *Linseed*.—The table below gives area, yield rate and outturn of the crop at the State and divisional levels for the years 1972-73 and 1973-74.

Crop : LINSEED									
Division	Area in '00' ha.			Yield per ha.			Production in '00' in tonnes		
	1972-73	1973-74	Percentage increase (+) or decrease (-)	1972-73	1973-74	Percentage increase (+) or decrease (-)	1972-73	1973-74	Percentage increase (+) or decrease (-)
1	2	3	4	5	6	7	8	9	10
				kg.	kg.				
Bombay ...	1	2	+100.0	...	500	1	...
Pune ...	22	56	+154.5	91	179	+96.7	2	10	+100.0
Aurangabad ...	772	1,026	+ 32.9	120	189	+ 57.5	93	194	+108.6
Nagpur ...	1,184	1,286	+ 8.6	176	180	+ 2.3	209	231	+ 10.5
State ..	1,979	2,370	+ 19.8	151	184	+19.5	304	436	+ 43.4

The area increased by 19.8 per cent at the State level. This was due to an increase in the area by 9 per cent to 33 per cent in the major linseed growing divisions of Aurangabad and Nagpur and also in Pune division.

The State average yield per hectare increased from 154 kg. in 1972-73 to 184 kg. in 1973-74 or by 19.5 per cent.

The State total production of the crop increased from 0.30 lakh tonnes in 1972-73 to 0.44 lakh tonnes in 1973-74 or by 43.4 per cent.

CHAPTER VI

PRICES

(Table VI Pages 110 to 114)

(Summary Table 'F' Page 27)

13. The districtwise average farm harvest prices of the principal crops during the peak marketing period in the year 1973-74 are given in the main table VI of the report. The average farm harvest prices at the State level for the principal commodities during the 5 years from 1969-70 to 1973-74 are given in the Summary Table 'F'. During the year under report, prices obtained by the farmers in respect of almost all the food commodities as well as the industrial raw materials increased as compared with those in the preceding year due to inflationary conditions.

14. The major variations in the average farm harvest prices of principal commodities at the State and divisional levels as compared with the corresponding prices of the previous year, are commented in the following paragraphs :

The price of paddy at the State level was Rs. 115.99 per quintal and was higher by 7.7 per cent than that of the previous year. The increase was noticed in all the divisions except Bombay where it decreased by 26.0 per cent.

The price of wheat at the State level was Rs. 203.37 per quintal and was higher by 49.2 per cent than that of the previous year. The increase was noticed in all divisions and ranged from 21.9 per cent in Aurangabad division to 69.3 per cent in Bombay division.

The average price of jowar at the State level was Rs. 155.54 per quintal and was higher by 45.0 per cent as compared to that of preceding year. The increase was observed in all the four divisions and it ranged from 9.5 per cent to 85.2 per cent.

Though the State average price of bajri was almost constant viz. Rs. 134.91 per quintal, a decrease was noticed in Aurangabad division to the extent of 23.2 per cent as compared to that of the preceding year.

The State level price of ragi viz. Rs. 112.14 per quintal was higher by 3.4 per cent than that of the last year. However, a decrease was noticed by 6.5 per cent and 19.9 per cent in Bombay and Aurangabad divisions respectively. In the Pune division, it was higher by 19.5 per cent as compared to that in the last year.

The price of maize at the State level was Rs. 141.6 per quintal and was higher by 20.5 per cent than that of the last year. The increase was noticed in all the four divisions and ranged from 9.9 per cent to 31.2 per cent.

The State average price of tur dal was Rs. 208.63 per quintal during the year under report showing a decrease by 5.0 per cent as compared to that 1972-73. The prices were lower in Bombay, Pune and Aurangabad divisions by 5.0 per cent, 9.4 per cent and 5.7 per cent respectively, while it was higher by 5.7 per cent in Nagpur divisions.

The price of gram was Rs. 212.95 per quintal and was higher by 36.0 per cent than that of the preceding year. The increase was shared by all the four divisions and ranged from 15.1 per cent to 50.4 per cent.

The State level average price of cotton (unginned) was Rs. 346.05 per quintal and was higher than that of the preceding year by 80.6 per cent. The increase was noticed in all the divisions except Pune where the price decreased by 11.9 per cent as compared to that in 1972-73.

The price of sugar (raw) at the State level was Rs. 221.15 per quintal and was higher by 12.0 per cent as compared to that in the preceding year. The increase was noticed in all the divisions except Bombay division where it decreased by 3.4 per cent.

The average price of groundnut (pods) was Rs. 274.25 per quintal and was higher by 24.9 per cent than that of last year. The increase was noticed in all

the four divisions and was of the order of 27.9 per cent, 22.6 per cent, 21.4 per cent and 31.0 per cent in Bombay, Pune, Aurangabad and Nagpur divisions respectively.

At the State level, the price of tobacco was Rs. 461.32 per quintal and was lower by 17.5 per cent as compared to that in the preceding year.

15. The table below gives the average prices of the agricultural commodities prevailing at peak marketing period for the years 1969-70 to 1973-74.

The State level prices of the remaining commodities viz., castorseed, linseed, sesamum, potatoes and chillies increased by 14.0 per cent, 44.8 per cent, 18.4 per cent, 23.8 per cent and 27.1 per cent respectively, during the year under report as compared to those in the preceding year.

Commodity 1	Centre 2	Prices per quintal				
		1969-70 3	1970-71 4	1971-72 5	1972-73 6	1973-74 7
		Rs.	Rs.	Rs.	Rs.	Rs.
Jowar	1. Mangalwedha (Solapur)	A 56.00	56.00	58.00	58.00	90.00
	2. Karanja (Akola)	B 54.00	54.00	56.00	56.00	88.00
	3. Latur (Osmanabad)	C 49.00	49.00	50.00	50.00	82.00
Bajri	1. Nasik	85.02	69.17	83.83	151.33	139.67
	2. Phulmaray (Aurangabad)	87.33	69.00	91.04	152.67	121.90
Rice	1. Thane	AA 100.50	100.50	106.00	109.00	120.00
	2. Goregaon	A 93.50	93.50	98.50	101.50	113.00
		B 86.50	86.50	91.50	94.50	105.00
		C 78.50	78.50	83.00	86.00	98.00
Wheat	1. Gada (Nagpur)	102.75	94.40	99.00	76.00	185.92
	2. Jalna (Aurangabad)	101.75	106.80	103.90	76.00	184.30
Groundnut	1. Karad (Satara)	140.00	146.86	133.69	266.00	255.20
	2. Osmanabad	170.00	145.97	133.80	256.00	275.60
Cotton (Jarilla)	1. Bombay	485.19	696.00	537.00	551.00	842.30

Note.—AA—Superfine, A—Superior, B—Medium and C—Coarse.

The centres mentioned in the table are typical representative markets and accordingly the markets indicate the general trend in the fluctuations of prices of essential commodities in the State, those given for

jowar, rice and wheat being controlled prices. The prices of groundnut and cotton (lint) rose appreciably due to inflationary pressures.

CHAPTER VII

AGRICULTURAL WAGES

(Table VII, Pages 115 to 127)
(Summary Table "G" Pages 28-29)

Categories of Agricultural Labour:

16. Agricultural labour is classified mainly into three categories viz. (i) skilled labour, (ii) ordinary labour and (iii) field labour. According to the State Manual

of Revenue Accounts, skilled labour comprises of carpenters, blacksmiths and cobblers. Ordinary labour includes load carrying coolies, well diggers,

assistants of masons and carpenters, earth workers etc. while field labour includes ploughmen, sowers, transplanters, weeders, reapers, harvesters etc. In this report, as shown in Table VII of Agricultural Wages, one more category of labour is included viz. herdsmen whose main daily work is to take the livestock owned

by different owners to the jungle for grazing.

17. Table VII of the report gives districtwise and monthwise figures of daily wages of different classes of agricultural labour. State level information along with that for the previous year, is given in the Summary Table 'G'.

The State level average agricultural wages of different categories of agricultural labour mentioned above are given in the table below for the years 1972-73 and 1973-74 :—

Agricultural wages (daily)

Year	Skilled labour			Field labour			Other Agril. labour		Herdsmen
	Carpenter	Black-smith	Cobbler	Male	Female	Child	Male	Female	
1	2	3	4	5	6	7	8	9	10
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1972-73	7.38	6.75	5.41	3.30	2.32	1.61	3.09	2.16	2.75
1973-74	7.71	7.13	5.79	3.58	2.52	1.77	3.36	2.44	2.94

It is seen from the above that during the year under report, the State averages in respect of all the classes

of agricultural labour showed an increase over those in the preceding year.

CHAPTER VIII

AGRICULTURAL STOCK

(Table VIII, pages 128 to 143)

(Summary Table 'H', pages 30 to 33)

18. Table VIII of this report gives the details of livestock, poultry, agricultural machinery and implements as per quinquennial census of livestock and agricultural machinery conducted in 1972 by the Director, Bureau of Economics and Statistics, Maharashtra State, Bombay. Summary Table 'H' gives provisional total number of livestock, poultry, agricultural machinery and implements according to different categories and comments on the same are briefly given below.

(i) *Cattle*.—There was a slight decrease in the number of cattle from 1,47,29,446 in 1966 to 1,47,05,147, in 1972 or by 0.2 per cent. The total number of males of age over three years decreased by 5.2 per cent. Out of these, the number of males used for work only recorded a decrease of 3.4 per cent. The number of 'other males' over three years only showed an increase of 9.1 per cent.

Among the females over three years, the number of breeding cows recorded an increase of 1.0 per cent while those in milk increased by 4.2 per cent. The number of young stock recorded an increase of 7.3 per cent over that in 1966.

(ii) *Buffaloes*.—The total number of buffaloes recorded in 1972 was 33,00,746 as against 30,41,919 in 1966 showing an increase of 8.5 per cent. Among the different categories of buffaloes, the number of males over three years was 3,08,353 showing a decrease of 9.2 per cent over that in 1966. Among the females, the number in milk was 9,54,884 in 1972 showing an increase of 11.7 per cent. The total number of breeding buffaloes showed an increase of 7.8 per cent. The number of young stock recorded an increase of 16.0 per cent.

(iii) *Sheep and Goats*.—The number of sheep decreased by 3.5 per cent whereas that of goats increased by 15.4 per cent as compared with the corresponding number of the year 1966.

(iv) *Horses and Ponies etc.*—The total number of horses and ponies declined considerably i. e. by 42.3 per cent in comparison with that of 1966.

The number of mules and camels declined by 64.4 per cent and 63.7 per cent or by 847 and 1232 respectively.

The decrease in the number of donkeys was by 18.2 per cent while the number of pigs increased by 12.0 per cent over that of the year 1966.

The total number of livestock recorded an increase by 3.6 per cent over that of the year 1966.

(v) *Poultry*.—The total number of poultry showed an increase by 23.4 per cent.

Contagious Diseases

During the year under report, the cattle and other livestock were affected by incidence of contagious diseases as follows :—

In equines one outbreak of Surra was reported from Buldhana district and in bovines 11 outbreaks of Surra were reported from Bombay and Nagpur regions.

The incidence of H. S.* in bovines was reported from all over the State. During the year under report 687 outbreaks were reported, affecting 2718, out of which 1976 animals died.

In sheep there were only 12 outbreaks in H. S. mainly reported from Aurangabad region. (83 per cent) similarly the incidences of B. Q.† were distributed all over the State. However the more outbreaks were reported from Aurangabad and Nagpur regions. They were 573 outbreaks affecting 1998 bovines, out of which 1494 died.

A disease like Rinder Pest was found only in Bombay claiming one outbreak. The incidences of Anthrax in bovines were reported mainly from Bombay region (7 outbreaks). The incidence of Foot and Mouth disease was widespread in bovines all over the State. In all 563 outbreaks were registered, affecting 17843 animals,

* H. S.—Haemorrhagic Septicaemia.

† B. Q.—Black Quarter.

‡ R. D.—Ranikhet disease.

out of which 26 animals died. In sheep 451 outbreaks of Foot and Mouth were reported, in Maharashtra State, out of which 164 were from Bombay region and remaining were evenly distributed in other regions. Similarly incidences of Enterotoxaemia and Sheep and Goat Pox in sheep and goats were reported mainly from Pune and Aurangabad regions.

In Poultry the incidence of R. D.‡ was more as compared to Fowl Pox disease. During the year 22 outbreaks of R. D.‡ and 2 outbreaks of Fowl Pox were reported.

Prompt preventive measures were adopted in controlling the outbreaks and spread of the diseases.

On the whole the condition of cattle and other live-stock was fairly satisfactory in the State.

(vi) *Agricultural Machinery and Implements*.—For the first time during 1972, the scope of the census was made comprehensive to cover data on up-to-date list of agricultural machinery and implements in the State. The variations in respect of the major items of agricultural machinery and implements based on 1972 census as compared with the previous one are summarised below :—

The number of tractors increased by 71.2 per cent while ghanis decreased by 47.0 per cent. The number of wooden ploughs, iron ploughs and carts showed an increase of 0.8 per cent, 13.2 per cent and 4.0 per cent respectively. Sugarcane crushers decreased by 50.6 per cent. Oil engines for irrigation purposes increased by 17.2 per cent while the number of electric pumps used for irrigation shot up from 37 979 to 1,69,778 or by nearly three and half times.

CHAPTER IX

AGRICULTURAL OUTLOOK

19. After three successive drought years, the agricultural season 1973-74 was on the whole a favourable one for all foodgrain crops except kharif jowar. The high level of production was largely attributed to three main reasons, viz., (i) The area under food-grain crops, particularly was a record one, being 138.5 lakh ha. the highest in the past 15 years, (ii) implementation of the hybrid and high yielding varieties programme over an area of 21.4 lakh ha. and (iii) a favourable season.

Due to initial inadequate rains during the sowing period, the cotton area declined from the expected level of 27.2 lakh ha. to 23.5 lakh ha. thus reducing its prospects.

The supply of fodder during June 1973 was not satisfactory. However with the receipt of rains in July

and thereafter, the supply was satisfactory and prices of fodder were also at a reasonable level in different markets in the State.

The availability of water for drinking and irrigation was adequate during the year under report.

Supply of oil-engines and installation of electric-pumps under agricultural production programmes was continued as a result of which larger area was brought under irrigation. This was mainly due to Government efforts to provide more benefits to the agriculturists in the command areas of the development projects in the State.

On the whole, the agricultural outlook was satisfactory in most parts of the State.

CHAPTER X

CONDITION OF AGRICULTURAL POPULATION

20. Favourable seasonal conditions during the year under report helped to increase the extent of cropped area and productivity of the crops in major parts of the State. Due to good crop reaped on account of the satisfactory season described in Chapter-I, coupled with the various development programmes (mentioned below) launched during the year under report, agricultural labour were engaged during the year in agricultural work and their wages were also high. On account of increase in the prices of agricultural commodities, the agriculturists received adequate returns by selling their produces. The fair price shops continued to cater to the needs of agricultural labour in the country side. In fact, the revenue for the year was collected in time and without causing any distress to the agriculturist in most parts of the State.

The cultivators were provided with various incentives to step up mainly food production under hybrid and high yielding varieties programme, undertaken on a larger scale. Loans were advanced to the needy agriculturist by Government, Zilla Parishads, Land Development Banks and various other banks and societies in the districts enabling them to improve their

economic condition. Launching of intensive cultivation programme arranging or demonstration plots, and parapatric training classes helped to some extent in the replacement of the traditional method of cultivation. Rural electrification scheme continued to help the agriculturists in irrigating the crop through the use of electric pumps in different parts of the State. Under the Integrated Area Development Scheme, the small holders and agricultural labourers in 25 blocks covering 6472 villages received the benefits of economic development facilities such as (i) making available loans on easy terms to the cultivators, (ii) granting them additional subsidies to lessen the financial burden, (iii) helping them to take up subsidiary industries like maintenance of milch animals, poultry, sheep and goat breeding and (iv) providing them irrigation by constructing community wells, small bandharas and lift irrigation units.

The Bombay Tenancy Act, the Agricultural Land Improvement Act, Prevention of Fragmentation and Consolidation of Holdings Act, continued to result in an overall improvement of agriculture and welfare of the agriculturists in the State.

SUMMARY TABLE 'A'

Land Utilization Statistics

(Area in '00' ha.)

Head of classification	1972-73		1973-74		Percentage increase (+) or decrease (-) over 1972-73
	Area	Percentage to total	Area	Percentage to total	
1	2	3	4	5	6
Geographical area*	3,07,762	...	3,07,762
Reporting area for the Land Utilisation Statistics [Total of (1) to (9)].	3,07,583	...	3,07,583
(1) Forests	53,705	17.5	53,669	17.5	- 0.1
(2) Barren and Unculturable land	17,589	5.7	17,602	5.7	+ 0.1
(3) Area under non-agricultural uses	9,000	2.9	9,130	3.0	+ 1.4
(4) Culturable waste land	12,347	4.0	10,925	3.5	- 11.5
(5) Permanent pastures and other grazing lands.	16,376	5.3	16,231	5.3	- 0.95
(6) Land under miscellaneous tree crops and groves not included in net area sown.	2,003	0.7	1,959	0.6	- 2.2
(7) Current fallows	25,787	8.4	7,601	2.5	- 70.5
(8) Other fallows	10,177	3.3	7,226	2.3	- 29.0
(9) Net area sown	1,60,599	52.2	1,83,240	59.6	+ 14.1
(10) Area sown more than once	9,198	3.0	11,620	3.8	+ 26.3
Total cropped area [Total of (9) & (10)]	1,69,797	55.2	1,94,860	63.4	+ 14.8

*This is based on the figures supplied by Central Statistical Organisation, Government of India.

SUMMARY TABLE 'B'
Sources of Water Supply and the Area Irrigated therefrom in the
Maharashtra State, during 1973-74

Item	1972-73	1973-74	Percentage increase (+) or decrease (-)
1	2	3	4
(i) Classification of Sources :—			
Govt. Canals ...	752	776	+ 3.2
{ Number	
{ Length (km.)	6,083	6,311	+ 3.2
Private Canals ...	7,460	7,466	+ 0.1
{ Number	
{ Length (km.)	9,140	9,152	+ 1.2
Tube Wells ...	108	133	+ 23.1
{ Government	
{ Private	473	519	+ 9.7
Total ...	581	652	+ 12.2
Number of other Government wells used for irrigation purposes only.	2,110	3,029	+ 43.5
{ Masonry	
{ Non-Masonry	2,227	3,654	+ 64.1
Number of Private wells used for irrigation purposes only.	5,02,406	5,14,266	+ 2.4
{ Masonry	
{ Non-masonry	2,23,971	2,32,344	+ 3.7
Number of wells (other than tube wells) in use for irrigation purposes only.	7,30,714	7,53,293	+ 3.1
Number of wells used for domestic purposes only	3,52,599	3,58,485	+ 1.7
Number of wells not in use	1,43,998	1,36,526	- 5.2
Number of wells having independent ayacut	6,37,629	6,60,977	+ 3.7
Number of wells supplementing recognised sources of irrigation.	20,988	24,302	+ 15.8
Number of reservoirs	1,193	1,204	+ 0.9
Number of Tanks	1,871	1,956	+ 4.5
{ (a) With Ayacut 40 or more ha.	
{ (b) With Ayacut less than 40 ha.	27,222	27,585	+ 1.3
Number of Oil Engines	1,56,782	1,57,201	+ 0.3
Number of Electric pumps	1,47,987	1,61,232	+ 9.0
(ii) Area Irrigated by (Area in '00' ha.):—			
Government Canals ...	2,404	2,809	+ 16.8
{ Net	
{ Gross	2,804	3,279	+ 16.9
Private Canals ...	173	178	+ 2.9
{ Net	
{ Gross	231	241	+ 4.3
Tanks ...	1,957	2,224	+ 13.6
{ Net	
{ Gross	1,982	2,263	+ 14.2
Wells ...	7,133	8,399	+ 17.7
{ Net	
{ Gross	8,438	10,643	+ 26.1
Other sources ...	1,095	1,107	+ 1.1
{ Net	
{ Gross	1,220	1,212	+ 0.7
Total net area irrigated	12,762	14,717	+ 15.3
Total gross area irrigated	14,675	17,638	+ 20.2
Percentage of net area irrigated to the net area sown	7.9	8.0	...
Area irrigated more than once in the same year	1,913	2,921	+ 52.7
Gross area of crops irrigated	14,675	17,638	+ 20.2
Percentage of gross area irrigated to the gross area sown	8.6	9.1	

SUMMARY TABLE ' C '
Area of Crops under Irrigation

(Area in "00" ha.)

Crops	1972-73	1973-74	Percentage increase (+) or decrease (-)
	2	3	4
(i) Food crops:—			
Rice	3,452	3,401	- 1.5
