CHAPTER - I

INTRODUCTION

1.1 Location

Jalgaon district, located in the north of Bombay Division, lies between 20° and 21° NORTH LATITUDE and 74°-55' and 76°-28' EAST LONGITUDE.

1.2 Boundaries

Stretching nearly 128 Km. along the Tapi river and varying in breadth from 112 Km. to 144 Km., Jalgaon forms an upland basin, one of the most northerly sections of the Deccan table land. Along the whole northern frontier, the district is bounded by the Satpura range, a mountain tract from 48 to 64 Km. wide. On the north-eastern side, the district is bounded by the territories of the Madhya Pradesh State. Quite a major portion of the northern boundary is marked by the tributary Aner which in the west continues to separate Jalgaon from Dhule district till it joins the Tapi. On the east and south-east a range of low and detached hills and some major streams, without any marked natural boundary, separate Jalgaon from the districts of Vidarbha. To the south, the Ajanta, Satmala and Chandor ranges may roughly be said to mark the line between Jalgaon and the Marathwada territory. On the west, Jalgaon shares its boundary with Nashik district over a stretch of about 40 km. and with Dhule district for about 80 km. The Panjhara river is the only natural feature demarcating it over a major stretch.

1.3 Topography

Although Jalgaon district belongs to the Deccan uplands by the Maharashtra State, it is distinguished from the rest of the upland districts by its westward aspect. While the rest of the upland region is drained by the major rivers to the east, the Tapi and its tributaries drain the Jalgaon region to the west towards Arabian Sea. The landscape is typically that of the Deccan lavas with residual hill ranges and broad valleys with trap dykes introducing a sharp local contrast as small chains of hillocks. Thus Jalgaon includes varied topographical features and landscapes consisting of hills and wild forests, rich gardens and groves, stretches of barren plain,

contd....

low rolling rocky hills and tensly gullied (bad land) topography near major river banks. Regionally, from east to west, parallel with the Tapi are three well-marked belts of country. In the centre the rich Tapi valley, in the north the high and wild Satpuda and in the south and south-west bare ridges of rich well-watered valleys flanked by the Ajanta range.

1.4 Hills and Rivers

1.4.1 Within Jalgaon limits, there are three chief hill ranges, the Satpuda in the north, the Hatti in the south east and the Ajanta or Satmala in the south. The Satpuda, a broad belt of mountain land stretching in a wall-like line along the north-bank of the Tapi; rises from the first range of hills, ridge behind ridge, to the central crest about 2000 feet high and then slope gently to the Narmada. Among the peaks that rise higher, about 3000 feet, the important are Pancha-Pandu and Mondhiamal in the east looking down on Yawal. The Hatti hills bounding the Purna valley on the east, run north-west and south-east for about 32 km., pass through the south-east corner of Jalgaon. At first bare and rocky, as they near the southern limit of Jalgaon. Their sides are at places somewhat thickly covered with brush-wood and timber and give shelter to wild beasts. The satmala, also known as the Chandor or Ajanta range, breaking off sharply from the Sahyadris in the north-west of Nashik runs for about 80 Km. each in the series of quint basalt pinnacles and ridges within Jalgaon limits. Besides several footpaths, two roads cross the hills, one through the Ranjangaon pass near Chalisgaon and the other by the Ajanta pass above Fardapur.

1.4.2 The Chief feature of the district is the river Tapi, which drains about 120 km. of surface within the limits of Jalgaon. The water of the Tapi is hardly used at present for irrigation. A major project on Tapi is being constructed in Jalgaon district with an irrigation potential of about 40,000 hectares of land. During the course through Jalgaon, the Tapi receives many tributaries from both sides. On the right bank, beginning from the east are Bhcker, the Suki, the Mora, the Harki, the Manki, the Guli and on the left the Purna, the Bhogavati, the Vaghur, the Girna and the Bori. The Girna, the second important river of the district, rising the western hills of the Nashik district flows for about 120 Km. in the Jalgaon district and joins the Tapi near villages Manded in Amalner tahsil.

contd.....

Passing eastwards through Nashik almost in a straight line, the course changes to north-east in Jalgaon and then flowing for several kms. with many windings almost parallel to the Tapi. An irrigation project is also functioning in the Girna with an irrigated capacity of about 57000 hectares. In Jalgaon district, the river Bori has a course of about 56 km. For about 16 Km., it maintains an easterly course, and then with rather a sudden turn flows north for about 40 km., then taking another bend, it sets to the north-west joining the Tapi about 32 kms. below the Girna. Like Girna, in its upland valleys the waters of the Bori are much used for irrigation.

1.5 Soil

The soils of the district are essentially derived from the underlying basalt, which can be broadly classified into categories of deep black soil, medium black, Forest, loam and sandy. The central belt of the wide Tapi valley, about half of the whole area, consists either of black alluvial clay highly retentive of moisture or of a loam overlying a stratum of yellowish clay of good depth. On this soil, which for richness cannot be surpassed, wheat is extensively grown in some places from year to year without the aid of manure or change of crop. On the northern border lies the Satpuda hill region with its characteristic feature of relief and drainage. Much of this region is under forest cover and substantial portion of these forests are under the management of forest Department. South of the main Satpuda range, lying within the district, there is a piedmont belt, out-ward edge of which is of interest from the point of view of economics and human development. Soils are rich, cultivation is extensive, villages are large sized and better equipped and means of communication are developed. South of this piedmont edge begins the Tapi valley proper. The well-developed alluvial soil supports extensive agriculture with cotton as a principal crop. The large sized villages reflect the economic prosperity of the land and this is further emphasised by the flourishing market centres like Raver, Savda, Faizpur, Chopda in the north and Amalner, Parola, Erandol, Dharangaon, Jalgaon, Nashirabad, Bhusawal and Varangaon in the south. The southern zone of the district again develops a hilly character, in which the Girna valley occupies a special position mainly on account of development of canal irrigation. Bordered on both sides by residual hills, the Girna has developed rich agricultural land on either banks, where Sugar-cane and horticulture are

much in evidence. Bhadgaon is an important commercial centre and Pachora, its eastern counterpart, serves as a collecting centre for the surrounding cotton zone. The region between the Tapi valley and the Ajanta range is a fairly well-tilled plain with Jambner and Bodwad as local commercial centres. The outskirts of the Ajanta ranges lying within the district are minor hilly features mainly given to shrub and rough grass land.

1.6 Climate

The climate of this district is generally dry except in the monsoon. The year may be divided into 4 seasons. The cold season from December to February is followed by the hot season from March to May. June to September is the monsoon season and October and November form the post-monsoon season. Jalgaon has the only meteorological observatory in the district. The data of this station may be taken to be fairly representative of conditions prevailing in the district. December is the coldest month, while May is the hottest month. As the district is far away from the coastal tract, large variation is noticeable in the day and night temperature.

1.7 Rainfall

The average annual rainfall of the district is 926.8 mm. and about 75 percent of the same is received during the monsoons. The rainfall is not uniform in all parts of the district. The central part of the district comprising the talukas of Jalgaon, Bhusawal, Jambner and Pachora receives comparatively more rainfall followed by the talukas of the east and west of this central division. The district receives rainfall almost entirely from the south-west monsoon, which is very powerful during June-September.

1.8 Minerals

Jalgaon district is composed entirely of trap rocks, which are devoid of important minerals. However, being hard, dense and durable, the trap is most suitable for construction of buildings. It is also being used as road metal, railway ballast and in cement concrete.

contd....

1.9 Forests

About 17 percent of the geographical area is covered by the forests, which are mainly found on the slopes of Satrudas in Chorda, Yawal and Eclabad tahsils. There are also some forests in Jalgaon, Bhusawal, Jamner, Pachora, Chalisgaon, Amalner and Erandol tahsils, which are on the plains. The main species are Teak, Tiwas, Dhawda, salai, Haldu, Sisam, Bibla, Anjan and Sissu.

1.10 Area

The total geographical area of the district is 11771 Sq. km. divided into 13 tahsils. The district consists of 1,423 inhabited and 28 uninhabited villages besides 15 Urban areas. Since independence there was only one territorial change in the composition of the district, which took place in the year 1950, when 13 villages of Chalisgaon tahsil were transferred to Aurangabad district.

1.11 Population

As per 1971 population census, the population of the district is 21.23 lakhs of which 51 percent is male and remaining 49 percent is female. According to population, Jalgaon district stands 6th amongst 25 districts of Maharashtra State excluding Bombay and Bombay suburban district. The percentage of scheduled castes and scheduled tribes was about 4% and 6% respectively during 1971 census. No variation is observed in the percentage of male and female population, which remains to be 51 percent and 49 percent to the total population, respectively. However, the percentage of urban population has increased by one percent in 1971 census over 1961 census. 21 percent population is residing in urban areas while 76 percent in villages. The percentage of literacy is also high in this district. The literacy percentage, which was already moderate (34% of total population) in 1961 has further gone up to 45 percent of the population in 1971. However, there is a decrease in the percentage of working population. The percentage of working population in 1961 has gone down by about 10 percent in 1971 (36 % of the total population). This decrease in percentage can be attributed to the change in definition of the workers in 1961 and 1971 censuses. In 1961 census, all those seasonal workers who had some regular work of more than one hour a day throughout the greater part of season were treated

contd.....

as worker, whereas in 1971 census, the persons who had worked in the current or last working season for the greater part of the season were treated as workers. Thus in 1961, a number of housewives and students who helped in cultivation or other family business for an hour or more were included as workers, while in 1971 census, persons primarily engaged in household duties or those who were students and helped the family in economic activity but not on a full time scale were treated as non-workers, as their main activity was other than economic activity.

1.12 Cropping Pattern

The main food crops of the district are Jowar, Bajri, Wheat, Ragi, Maize and hill-millet among cereals; black-gram, green-gram, horse-gram, gram, chavli among pulses; banana and lady's finger among fruits and vegetables and Sugar-cane. Among the important non-food crops, cotton is important among fibers; groundnut and sesamum among oilseeds; tobacco and betel-leaf among drugs and narcotics; coriander, chillies and garlic among condiments and spices. Changes are also noticeable in the composition of food-crops. Bajri, which was one time the staple food of the district has given way to Jowar. Acreage under pulses has gone up considerably. Fruit and vegetable cultivation has also increased rapidly in recent years. Among fruits, banana has attained an enviable position and Jalgaon has become the most important Banana producing district of the State.

1.13 Agric Industries

Looking to the importance of agriculture in the district, efforts have been made to establish the industries based on agriculture and allied activities. 3 Sugar factories have been established in this district under co-operative fold, while 2 Co-operative spinning mills are also functioning in the district. Cotton ginning and pressing activities have also flourished under co-operative fold beside already established factories in private sector. Increased milk production has also compelled the Govt. to establish a Govt. milk scheme at Chalisgaon in 1969 with a handling capacity of around 15000 litres of milk per day, which is supplied to Bombay. Beside this Govt. dairy, Jalgaon district Dhudha Vikas Federation is functioning in the Co-operative sector with the help of National Dairy

contd.....

Corporation of India and World Bank with a capacity of handling one lakh litres of milk per day.

1.14 Industries

With the speedy development in all the other sectors, Jalgaon district also marched towards speedy industrialisation. There are about 200 registered factories producing various types of products. Some of the important industries, which are functioning in the district are cotton textile mills at 3 places employing about 5000 labourers per day, 2 hydrogenated oil (Vanaspathi) mills, about 30 oil mills of medium size and large number of cotton ginning and pressing factories. One large scale and one small scale defence project is functioning at Varangaon and Bhusawal, respectively and Thermal power station at Fekari near Bhusawal. Besides the above important industries, the Maharashtra Industrial Development Corporation has established Industrial Estates at Jalgaon and Bhusawal where-in about 38 units and 18 units, respectively are actually functioning. Industrial estates at three other places are also being established in the near future.

1.15 Infrastructure facilities

The length and condition of roads is somewhat better in this district. National Highway No. 6 is passing through this district and the course of this road in Jalgaon district is 149 Km. Number of State high-ways are also passing through this district with a total length of about 588 Km. Sufficient length of Major District Roads and Other District Roads is existing in this district. Some of the important roads of this district are Dhule-Jalgaon-Nagpur, Jalgaon-Ajanta-Amalner-Chopda-Bhulkot, Parola-Erandol-Savda-Surhanpur Bhadgaon-Pachora-Ajanta.

As regards railways, this district is served well since the latter half of the 19th century. Portion of Central Railway (G.I.P) falling in this district was opened for traffic, between 1861 and 1865. There are 4 junctions, namely, Bhusawal, Jalgaon, Pachora and Chalisgaon. From Bhusawal emanates the broad-gauge Bhusawal-Nagpur-Howrah line and the Bhusawal-Itarsi-Delhi line, from Jalgaon, the Surat-Bhusawal line, from Pachora, the Pachora-Jamner line and from Chalisgaon, the Chalisgaon-Dhule line. This district is linked with important cities like Bombay, Delhi, Calcutta, Nagpur and Allahabad. Total railway length thus available in the district is

contd....

is about 350 Km. of which, 296 Km. is broad-gauge and 54 Km. narrow gauge.

Postal, Telegraph and Telephone facilities are available in this district since long and all towns and big villages have been connected by telegraph and telephone facilities.

1.16 Special features of the District

1.16.1 Mineral Springs : In Jalgaon, hot springs have so far been recorded at Unabdev, Sunabdev and Najhardev in Chopda taluk. The Unabdev hot springs lie about 5 Km. north-west of village Unabdev in Chopda taluka and about 1.5 Km. from the grit spur of Satpudas. Flowing in a rapid spring from the mouth of a carved head fixed in a solid block of masonry that forms the lower part of the old temple. The water flows into a cistern, which is about 4 Sq. metres. As the ground near the pond is paved, the source of the spring is hard to trace. It has a temperature of 140° f. The water is tasteless with a peculiar but not sulphurous smell. It is reported to cure skin diseases.

About 12 Km. west of Unabdev, in a narrow glen formed by two outlying spurs of the satpudas, lie the Sunabdev springs. The water is lightly sulphurous and has a temperature varying from 85° f. at dawn to 91° f. at noon. It is also reported to cure skin diseases.

Najhardev, within 2 to 3 km. of Sunabdev, has a hot spring flowing into a built pool. The water has a slightly sulphurous taste and varies in temperature from 100° f. at dawn to 103° at noon.

1.16.2 Ordnance Factory : A large size ordnance factory is functioning at Varangaon in Bhusawal tahsil of the district, wherein a number of labourers are working. Besides this, a small size unit is also functioning at Bhusawal.

CHAPTER - III
ANALYTICAL REVIEW OF SELECTED TRENDS

In this chapter an attempt has been made to present analytical review of the Socio Economic aspects over a period of time. Talukawise position is depicted, in general, and where it was not possible district position has been shown. The stage of development in respect of different indicators during 1977-78 and 1978-79 has been compared with the position of 1960-61, 1970-71 and 1976-77. In a few cases the latest information available was upto 1977-78.

Indicator No. 1

Percentage of gross cropped area to net area sown

3.2 The following table indicates the talukawise percentage of gross cropped area to net area sown during the years 1960-61, 1970-71 and 1975-76 to 1977-78.

Table No. 3.2

Percentage of gross cropped area to net cropped area sown

<u>District Total</u>		107.18	106.61	112.04	107.58	109.42

From the above table it may be seen that no significant change has taken place in the percentage of gross cropped area to net cropped area in the district, as a whole, during the last 20 years eventhough irrigation facilities have been excluded in many of the tahsils. It may be due to inadequate rains and less moistures available for the Rabi crops.

Indicator No. 2

Percentage distribution of gross area under important crops to total gross cropped area

3.3 The percentage distribution of area under some of the important crops grown in this district is given in the following table.

Table No. 3.3

Percentage distribution of Gross area under important crops to total gross cropped area

Name of crop	Percentage of area to gross cropped area during the year				
	1960-61	1970-71	1975-76	1976-77	1977-78

Cotton	12.55	28.44	15.09	13.31	15.67
Total gross cropped area	100	100	100	100	100

contd.....

It will be seen from the above table that the Percentage under Jowar has shown increasing trend over the years. With the introduction of improved Bajra seed the percentage under Bajra has gone up during 1970-71 and 1975-76 but showing a declining trend in the subsequent years. May be due to inadequate rains and seasonal variations. Similar is the case with Wheat crop. However percentage under Wheat has shown upward trend, as the fruit is fetching higher price in the market and the margin of profit is more.

Indicator No.3

Yield rates and out turn of principal crops

3.4 Rice, Wheat, Jowar, Bajra Gram and Tur are the principal food crops in the district. Among other crops, cotton, sugarcane, groundnut and chillies are important. The data of productivity for the year 1960-61, 1970-71, 1975-76, 1976-77 and 1977-78 are presented in the following table : -

Table No. 3.4

10.	Chillies	N.A.	N.A.	43 (827)	66 (1015)	57 (1100)

(Figures in brackets are yield per hect. in kg.)

It will be seen from the above table that the productivity of most of the crops has gone up during the last 20 years. It is generally due to improved methods of cultivation, including irrigation, adopted by the cultivators.

Indicator No. 4

Percentage of net irrigated area to net sown area

3.5 The district is benefitted by the Girna irrigation project which covers Erandol, Bhadgaon, Parola and Amalner tahsils of this district. The number of wells being used for irrigation is also large and tahsils like Raver and Yawal are utilising this facility on a large scale. The percentage of net area irrigated to the net area sown is given in the table.

Table No. 3.5

Dist. Total		4.45	8.27	8.13	8.85	12.28

As per the above table the percentage of the district as a whole during the last 18 years shows rising trend. It has gone up from 4.45 % in 1960-61 to 12.28 % in 1977-78.

Among the talukas it will be seen that Yawal, Raver, Bhadgaon, Erandol and Amalner are having higher percentage during 1977-78, as compared to district percentage. While lower percentage is observed in the remaining talukas. The other important feature is that a constant rise is observed in the percentage of net area irrigated in most of the Tahsils during the last 18 years.

Indicator No. 5

Percentage of area under different irrigated crops to gross irrigated area

3.6 As already stated, the utilisation of the waters from the various projects commissioned after 60-61 and growing tendency of utilisation of the well water, a significant change is observed in the pattern of irrigation of crops. The following table gives the percentage of

irrigated area under some important crops for the year 1960-61, 1970-71, 1975-76, 1976-77 and 1977-78.

9.	Groundnut	Nil	Neg.	4.44	0.26	0.53

* No area shown as irrigated under Jowar during 1976-77 in season and crop report figures of which are provisional.

Percentage of irrigated area under Ground-nut has increased from 0.26 % in 1976-77 to 0.53 % in 1977-78 and is likely to increase further particularly due to introduction of summer crop in this district. The cultivation of Hybrid Cotton has been started which requires irrigation. The percentage of irrigated area under cotton in 1960-61 was 5.56 %, which is doubled in 1970-71 and there after has shown downward trend. May be due to change in cropping pattern, as more emphasis is given on cultivating Banana, Other fruits and vegetables. Irrigated area under Jowar has kept up an upward trend from 1970-71 onwards.

The per capita consumption of Electricity has gone up by 71 times during 1978-79. However, the consumption was found reduced compared to 1976-77 due to shortage of electricity supply and restrictions imposed by the Govt. All the villages were declared electrified since 1976-77

Indicator No. 11

The number of banking offices as well as the population covered have increased. The rise in the banking offices is due to opening of branches in rural area by Co-operative Central Bank in the last decade, so also by the nationalised banks during the last few years. It will be seen from the table that the number of banking offices in Jalgaon taluka are more due to number of branches of commercial banks located at Jalgaon proper, followed by Bhusawal taluka. Population covered per banking office is more in these two talukas if compared to some other talukas because of the urban population of Jalgaon and Bhusawal towns, respectively.

contd.....

Considering the district as a whole the banking offices have increased tremendously in the last few years. 317 households were served per bank office during 1977 while the number of households served in 1970 and 1959 were 1444 and 2263, respectively.
