CHAPTER NO. I  
INTRODUCTION  
SOCIO ECONOMIC REVIEW AND DISTRICT STATISTICAL ABSTRACT FOR THE  
1979-80 of THANE DISTRICT

LOCATION

1.1 The District forms as part of the North Konkan Region which lies between the Sahyadri Hills in the East and the Arabian Sea in the West. It has coastal line of about 113 Kms. It lies between  $72^{\circ}.45$  and  $73^{\circ}.48$  East Longitudes and  $18^{\circ}.42$  and  $20^{\circ}.20$  North latitudes. Its East-West spread is maximum at the South which is about 100 Kms. The North-South length is approximately 140. Kms.

BOUNDARIES

1.2 The district has triangular shape. Pune and Nagar district lie on the East. Nashik district on its East and North-East, Rajurath and Centrally administered areas of Dadra and Nagar Haveli lie on the North, Arabian Sea forms the North West boundary, while Greater Bombay and Kulaba (Raigad) district lie on the south.

TOPOGRAPHY:

- 1.2 The district is divided into three parts on the basis of its topography.
1. The central portion having Sahayadri ranges and its slopes is mainly forest area.
  - (i) The central Region covering mostly paddy fields and
  - (ii) Western part along the West coast, where horticulture, cultivation of quality fodder and Vegetables are Agril. practices.

HILLS AND RIVERS.

1.4.1 HILLS) The Sahyadri ranges, having unbroken boundary, run North South in the Eastern region of the district. There are also spurs running laterally to the main ranges. The heights of the mountains are maximum on the East and diminish gradually to Westwards. The mountains ranges also spread unevenly in the central region of the district.

1.4.2. REVERS

The two main rivers which join the sea on the West coast are Vaitarna and Ulhas. The Vaitarna river rises in the hills near Trimbak in Nashik district and flowing South-Wards takes a Westward turn centering Thane district at Vihigoan in Shahapur Tehsil. It further passes across northern boundary of Shahapur Tehsil to enter Wada Tehsil near Nishet village and then taking East-West courses through the middle of Wada tehsil. It enters Palghar tehsil near village Vasuri (B.K.) and runs in North-West direction upto Marjor, wherefrom it turns South-West and South wards upto village Navghar forming Vaitarna creek at the south of Palghar tehsil. The important tributaries of Vaitarna are:-

- i) Pinjal which rises in the mountains in the south of Mokhada tehsil and joins it at Alpan village in Wada tehsil.
- ii) Deherja which rises on the mountain in Jawhar tehsil and joins it at Durvas in Palghar tehsil.
- iii) Surya which rises in the mountains in Mokhada tehsils and taking south west and southward course joins it near Sakri village in Palghar tehsil.
- iv) Ghansa which rises in the mountains in Shahapur tehsil and joins it near Chikran village in Vasai tehsil. The first three tributaries viz. Pinjal, Deherja and Surya join the Vaitarna from the right and Ghansa joins it from the left. The Ulhas river rises in the Dhoir pass and flows North-West through Karjat tehsil of Kulaba district from creek at Vasai. Its important tributaries in Thane district are:-
  - a) Barvi which rises in the mountains in Murbad tehsil and joins it at Apti village in Ulhasnagar tehsil and
  - b) Bhatasa which rises in the mountains in Shahapur tehsil and joins it at vadavali in Kalyan tehsil. Kalu is an important tributary of Bhatasa river. It rises in the mountains in Shahapur tehsil and joins Bhatasa river near Sangoda in Kalyan tehsil. Both these tributaries viz. Barvi and Bhatasa join it from the right. The Vaitarna is navigable for 25 kms. inside the coast and Ulhas is navigable for 40 kms from Kalyan.

SOILS.

1.5.1 The soils of Thane district can be conveniently divided into three categories.

- i) Black soil containing sand.
- ii) Red Soil in the eastern region mostly on the slopes
- iii) & Brownish black soil in the patches of the valleys mostly lying between the coastal plains and the hilly slopes of Sahayadri.

1.5.2 The first type of soil which is found in Dahanu, Palghar Vasai and Thane tehsils is fertile and useful for horticulture, Paddy cultivation and vegetables. Whereas, the second type which is found in Mokhada, Talasari and some parts of other tehsils on the eastern slopes is useful for growing coarse millets like Nagli and Vari. The third type of soil found in Bhiwandi, Kalyan and Shahapur Tehsils is useful for paddy cultivation.

CLIMATE

1.6 The climate of the district is distinctly different on the coastal plains and on the eastern slopes. Being fully tropical, the climate on the coast, the coastal strip including Thane, Vasai, Palghar and Dahanu tehsils is very humid and warm. On the other hand, the climate on the eastern slopes and in the plains at the foot of the slopes<sup>is</sup> comparatively less humid. However, variation in temperature in the eastern region is more than that on the coastal strip. The maximum temperature in 1979 was 33.4 centigrade, while the minimum temperature was 16.3 centigrade recorded at Dahanu centre.

RAINFALL.

1.7 The district gets assured rainfall of 2,000 to 4,000 M.M. from the South-West monsoons during the months June to Sept. generally highest rainfall is recorded in the month of July. It is considerably more inland than on the coast. It is also less towards the north than towards the south.

MINERALS.

1.11 The mining activities are confined to quarrying of stones and sand, which is carried on especially at places which are near urban areas in Kalyan, Bhiwandi and Thane tehsils. Deposits of reddish laterite clay are also found near Gokhivare in Vasai tehsil. This clay is used for making bricks, tiles and cheap red glazed wares. Deposits of Karhar or intertrappean limestone are reported from some parts of the district. Limestone patches either of concurring nature or consisting of shell aggregate almost as a thin narrow but continuous formation occur right from Vasai to Daham. There are also springs of mineral waters containing traces of sulphur at Kokanar, Sativali, Vajreshwari, Ganeshpuri. This water has medicinal value. There are salt centres on the coasts in Thane and Vasai tehsils, where salt is produced by direct solar evaporation of sea water.

ANALYTICAL REVIEW OF SELECTED AREAS.

3.1 An attempt is made in this chapter to study the trends in various Socio Economic aspects of Thane district by working out various indicators on important items like Agriculture, Irrigation, Livestock, consumption of Electricity, Education etc. Most of the indicators have been worked out for district as a whole and remaining by taking tehsil as a unit. The data utilised for calculating the indicator pertaining to Agriculture, Irrigation etc. is for the years 1961-62, 1971-72, 1976-77, 1977-78 and 1978-79 while the data for items like Read length, co-operation, electricity consumption is taken upto 1979-80.

INDICATOR NO. 1: PERCENTAGE OF GROSS CROPPED AREA TO NET CROPPED AREA

3.2 Table No. 3.2 shows tehsilwise percentage ratios of gross cropped area to net cropped area for the years 1961-62, 1971-72, 1976-77, 1977-78 and 1978-79. These ratios show the extent of double cropping in each tehsil of Thane district. It may be observed that in Thane district, as a whole the variation in the ratios is negligible over the period 1961-72 to 1978-79 except in case of Thane, Vasai and Palghar tehsils. In other tehsils, the percentage ratios are within the range of 100 to 103 %
