CHAPTER - I  
INTRODUCTION

1.1 - Location:

Jalgaon district, located in the North of Bombay Division lies between 20° and 21° NORTH LATITUDE AND 74°-55' and 76°-28' EAST LONGITUDE.

1.2 - Boundaries:

Jalgaon forms an upland basin, one of the most northerly sections of the Deccan table land and stretches about 128 km. along the Tapi river and breadth of the district varies from 112 to 144 km. Along the whole northern frontier, the district is bounded by the Satpuda ranges, a mountainous tract from 48 to 64-km. wide. On the north-eastern side, the district is bounded by the territories of the Madhya Pradesh State. Quite a major portion of the northern boundary is marked by the tributary of river Aner which in the west continues to separate Jalgaon from Dhule district till it joins the Tapi. On the east and South-east a range of low and detached hills and some major streams, without any marked natural boundary, separate Jalgaon district from the districts of Vidarbha. To the south, the Ajantha, Satmala and Chandor ranges may roughly be said to mark the line between Jalgaon and the Marathwada territory. On the west, Jalgaon shares its boundary with Nasik district over about 40-km. and with Dhule district for about 80-km. The Panjhara river is the only natural feature demarcating it over a major stretch.

1.3 - Topography:

Although Jalgaon district belongs to the Deccan uplands of the Maharashtra State, it is distinguished from the rest of the upland districts by its westward aspect. While the rest of the upland region is drained by the major rivers to

the east, the Tapi and its tributaries drain the Jalgaon district to the west towards Arabian Sea. The landscape is typically that of the Deccan lavas with residual hill ranges and broad valleys with trap dykes introducing a sharp local contrast as small chains of hillocks. Thus Jalgaon district includes varied topographical features and landscapes consisting of hills and wild forests, rich gardens and groves, stretches of barren plain, low rolling rocky hills and tensly gullied (bad land) topography near major river banks. Regionally, from East to West, parallel with the river Tapi are three well-marked belts. In the centre there is rich Tapi valley, in the north the high and wild Satpuda and in the south and south-west bare ridges and rich well watered valleys flanked by the Ajanta range.

#### 1.4 - Hills and Rivers:

1.4.1 Within Jalgaon limits, three chief hill ranges, the Satpuda in the north, the Hatti in the south-east, and the Ajanta or Satmala in the south. The Satpudas, a broad belt of mountain land, stretching in a wall-like line along the north bank of the Tapi, rise from the first range of hills, ridge behind ridge, to the central crest about 2,000 feet high, and then slope gently to the Narmada. Among the peaks that rise upper about 3,000 feet the chief are, in the east, Pancha Pandu and Monchiamal looking down on Yawal.

The Hatti hills bounding the Purna valley on the east, run north-west and south-east, and for about twenty miles pass through the south east corner of Jalgaon. Rising gradually from the Tapi valley in their first twenty miles, they are rather low and tame. Further east, forming the northern frontier of Berar, they rise to nearly 4,000 feet and finally merge in the Nagpur hills. At first bare and rocky, as they near the southern limit of Jalgaon their sides are

Contd.....

in places somewhat thickly covered with brush-wood and timber and give shelter to wild beasts.

The Satmala, also known as the Chandor or Ajanta range, breaking off sharply from the Sahyadris in the north-west of Nasik, runs for about fifty miles east in a series of quaint basalt pinnacles and ridges. Near Manmad, after a gentle depression, it again rises about 600 feet above the plain, and forms a somewhat monotonous wall-like boundary between Jalgaon and the Deccan. Except for about fifteen miles in the west, actually par its limits, the range skirts the south of Jalgaon for about eighty miles. A few miles beyond Ajanta it turns south, merging into the highlands that form the southern frontier of the Berar districts. As it is a narrow range, little more than the steep northern face of the Deccan tableland, the Satmala contains few forest tracts. The sides, mostly bare or with a few scattered trees, have here and there strands large enough to shelter wild animals. Of late years, tillage has spread to the sides of many of the northern spurs, and in some places come close to the foot of the main range. Besides the picturesqueness of its western peaks, the chief interests in the Satmala range are the rockcut Buddhist temples and monasteries at Ajanta, Patna and Chandor. Within Jalgaon limits, besides several foot-paths, two roads cross the hills, one through the Ranjangaon pass near Chalisgaon and the other by the Ajanta pass above Fardapur.

#### 1.4.2 Rivers:

The Chief feature of the district, the line to which almost its whole surface drains, is the Tapi. The other important rivers which are flowing in Jalgaon district are Girna, Bori. The following are the irrigation projects as shown against the rivers in the district.

<u>Sr.No.</u>	<u>Name of River</u>	<u>Irrigation Project</u>

All above irrigation project works are in progress, except 1 & 2.

In addition to this, following are the details of the length of important rivers which flows in the district.

1.5 - Soil :

The broad categories of the Soil in the Jalgaon district are deep black, Medium black, forest, loam & a sandy. Deep black is observed in the Northern parts of Amalner, Erandol, Jalgaon, Bhusawal and Edlabad Tahsils. Medium black is found large in the district compared with the other soils and is observed in the Southern parts of Yawal, Raver & Chopda Tahsils. Also soils of Erandol, Chalisgaon, Amalner, Bhusawal, Jalgaon & Bhadgaon Tahsils belong to a large extent of this type. Forest soils cover more than half of Northern part of Raver, Yawal & Chopda Tahsils. Loam Soils are observed to the Southern most part of Amalner, Erandol, Jalgaon, Bhusawal & Erandol Tahsils. Sandy soil is observed on the slopes of Satpuda ranges and near Southern hills in Chalisgaon, Pachora, Jamner, Bhusawal, Parola, Erandol & Bhadgaon Tahsils.

1.6 - Climate:

The climate of this district is generally dry except in the monsoon. The year may be divided into 4 seasons. The cold season from December to February is followed by the hot season from March to May; June to September is monsoon season and October and November form the post-monsoon season. Jalgaon is the only meteorological observatory centre in the district. The data of this station may be taken to be fairly representative of conditions prevailing in the district. December is the coldest month, the Temperature of which is 23.1 Centigrade. Whereas May is the hottest, temperature of which is 43.5 in 1980. As the district is far away from the coastal track, large variation is noticeable in the day and night temperature.

1.7 - Rainfall:

The average annual rainfall of the district is 843.3 mm.

Contd.....

and about 75 percent of the same is received during monsoons. The rainfall is not uniform in all parts of the district. The Central part of the district comprising the talukas of Jalgaon, Bhusawal, Jamner and Pachora receives comparatively more rainfall followed by the talukas of the east and west of this central division. The district receives rainfall almost entirely from the south west monsoon, which is very powerful during June to September.

#### 1.8 - Minerals:

Jalgaon district is composed entirely of trap rocks, which are devoid of important minerals. However, being hard, dense and durable, the trap is most suitable for construction of buildings. It is also being used as road metal, railway ballast and in cement concrete.

#### 1.9 - Forests:

About 17 percent of the geographical area is covered by the forests, which are mainly found on the slopes of Satpudas in Chopda, Yawal and Edlabad tahsils. There are also some forests in Jalgaon, Bhusawal, Jamner, Pachora, Chalisgaon, Amalner and Erandol Tahsils, which are on the plains. The main species are Teak, Tiwas, Dhawda, Salai, Haldu, Sisam, Bible, Anjan and Sissu.

#### Forest Development Corporation:-

The area of operation of this corporation consists three Tahsils Chopda, Raver & Yawal. The Development Manager, Forest Development Corporation Ltd., Maharashtra is in charge of this office & his head quarter is at Yawal. 4630 hectares area is under central for plantation of Forest Development Corporation.

#### 1.10 - Area:

The total geographical area of the district is

11,771 Sq. km. divided into 13 tahsils. The district consists of 1,423 inhabited and 28 uninhabited villages and 15 Urban areas. Since independence, there was only the territorial change in the composition of the district, which took place in the year 1950, when 13 villages of Chalisgaon tahsil were transferred to Aurangabad district.

#### 1.11 - Population:

As per 1971 population census, the population of the district is 21,23,121 of which 51 percent is male and remaining 49 percent is female. According to population, Jalgaon district stands 6th amongst 25 districts of Maharashtra State excluding Bombay and Bombay suburban district. The percentage of scheduled castes and scheduled tribes was about 4 percent and 6 percent respectively during 1971 census. No variation is observed in the percentage of male and female population, which remains to be 51 percent and 49 percent to the total population, respectively. However, the percentage of the urban population has increased by one percent in 1971 census over 1961 census. 24 percent population is residing in urban areas while 76 percent in villages. The percentage of literacy is also high in this district. The literacy percentage, which was already moderate (34 percent of total population) in 1961 has further gone up to 45 percent of the population in 1971. However, there is a decrease in the percentage of working population. The percentage of working population in 1961 has gone down by about 10 percent in 1971 (36 percent of the total population). This decrease in percentage can be attributed to the change in definition of the workers in 1961 and 1971 census. In 1961 census, all those seasonal workers who had some regular work of more than one hour a day throughout the greater part of the season were treated as worker, whereas in 1971 census, the persons who had

worked in the current or last working season for the greater part of the season were treated as workers.

## EXPLANATORY NOTES

2.1 Contents of each table which are further classified into 13 broad groups in part II of this publication viz. District Statistical Abstract 1980-81 are given in this chapter; high-lighting certain significant aspects, viz. important concepts, limitations etc, wherever necessary. Normally data is presented for each financial year. However, in certain tables, the same is presented for calendar year. Similarly, data for tables on Co-operation relates to the co-operative year i.e. 1st July to 30th June, Agriculture data relates to Agricultural year. Data is furnished tahsil wise, wherever it is available. Source of information and notes, if any have been given at the end.

2.2 At the beginning of this publication, 'District at a Glance' is presented. This gives basic information on important items such as i) Population, ii) Agriculture, iii) Animal Husbandry, iv) Industries, v) Co-operation, vi) Medical and Public Health, vii) Education, viii) Transport and Communication, ix) Local bodies and plan Expenditure etc. for the year 1980-81 for the Jalgaon District, as well as for Maharashtra State.

The data is as per 1971 Census.

Defination of Urban Area

Tahsilwise and monthwise normal and monthly rainfall with number of rainy days for the calender year 1980 are presented. The figures of average or normal rainfall are worked out on the basis of actual figures for the periods ranging from a minimum of 5 years to a maximum of 30 years. As regards rainy days, a day was treated as rainy day if during the 24 hours, the rainguage recorded a minimum of 2.5 mm of rainfall. And minimum and maximum temperature recorded at the only centre, Jalgaon, for the calender year 1980 are presented in the table under this group. The figures are based on the data supplied by the Govt.of India's Regional Meteorological centre at Colaba (Gr.Bombay).

ANALYTICAL REVIEW OF SELECTED TRENDS

In this chapter an attempt has been made to present analytical review of the Socio-Economic aspects over a period of time. Talukawise data is depicted, wherever possible and if the talukawise data is not available, district figures have been shown. The status of development in respect of different indicators during 79-80 or 80-81 have been compared with previous years and with the position of 1960-61 and 1970-71.

INDICATOR NO. 1

Percentage of gross cropped area to net area sown.

3.2 The following table indicates the talukawise percentage of gross cropped area to net area sown during the years 1960-61, 1970-71, 1976-77, 1977-78, 1978-79 and 1979-80.

Table No. 3.1

(Percentage of the years 1979-80 are based on provisional figures).

It will be seen from the above table that no significant change has taken place in the percentage of gross cropped area to net cropped area in the district, as a whole, during the last 20 years even though irrigation facilities have been extended in many of the tahsils under various schemes of major, medium & minor irrigation projects. Since the maximum percentage of the district is dependent on rains, rabi crops as a second crop was not taken in some tahsil. As compared to last two years, percentage of gross cropped area to net cropped area during 1979-80 seems decreased in many of the tahsils. viz Jalgaon, Chopada, Yawal, Raver, Bhusawal, Jamner & Bhadgaon.

INDICATOR NO.2

Percentage distribution of gross area under important crops to total gross cropped area.

3.3 The percentage distribution of gross area under important crops grown in this district is given below in the form of table.

Table No. 3.2

Percentage distribution of gross area under important crops to total gross cropped area.

(Percentage for 1979-80 are purely based on provisional figures).

It will be seen from the Table No. 3.2 that the area under Rice, Wheat, Gram, Tur, Sugarcane and Groundnut has been reduced in the year 1979-80 compared to the previous years. Where as Jowar, Bajra, Chillies, Banana and Cotton show increasing trend.

INDICATOR NO.3

Yield rates and out turn of principal crops

3.4 Rice, Wheat, Jowar, Bajra, Gram and Tur are the principal crops in this district among the food crops while Sugarcane, Cotton Groundnut and Chillies can be classified as principal Non-Food Crops. The data of productivity for the year 1960-61, 1970-71, 1977-78, 1978-79 and 1979-80 are presented in the Table No. 3.3

Table No. 3.3

(Figures in brackets are yield per hect. in kg. Yield rate & production for the year 1979-80 are provisional).

It will be seen from above table that the productivity of most of the crops except Rice, Bajra & Sugarcane, has been increased during the last two decades; the credit of which can be attributed to the improved methods of cultivation including irrigation adopted by the cultivators. However, in the year 79-80, yield per hectare has been reduced pertaining to Rice, Bajra & Sugarcane if compared to that of 78-79 possibly due to the inadequate rainfall in the year.

INDICATOR NO.4

Percentage of net irrigated area to net area sown.

3.5 The district is benefitted by 3 Major Irrigation Projects viz. Girna, Hatnur and Aner and Medium Projects viz. Bori, Suki and Manyad. Beside; number of minor irrigation works including flow irrigation tanks, percolation tanks, Lift irrigation works in public as well as in private sector. The percentage of net area irrigated to the net area sown is given in the Table 3.4.

(Percentage of 1979-80 calculated on Provisional Figures).

It will be seen from the above table that from 4.45% in 60-61 the percentage to net area irrigated to net cropped area has increased to 10.79% in the year 79-80.

In the year 77-78 it was 11.39 & it has decreasing trend in 78-79 & 79-80, which is 11.52 & 10.79 respectively due to the inadequate rains and conditions of the scarcity.

INDICATOR NO.5

Percentage of area under different irrigated crops to gross irrigated area.

3.6 As already stated, the utilisation of the waters from various projects commissioned after 1960-61 and growing tendency of utilisation of the well water, a significant change is observed in the pattern of irrigation of crops. The following table no. 3.5 gives the percentage of irrigated area, under some important crops for the year 1960-61, 1970-71, 1976-77, 1977-78, 1978-79 and 1979-80.

9. Groundnut	Nil	Neg.	0.24	0.52	1.76	1.87	

(Percentage for the year 1979-80 are drawn on provisional figures).

It will be observed from table No. 3.5 that percentage of irrigated area under groundnut increased considerably & it has gone to 1.87 in the year 79-80 whereas it was 0.24 in the year 76-77.

If the percentages are compared to those of 60-61, 70-71 to 79-80, it will be revealed that except wheat and sugarcane for at most all the crops percentage of irrigated area is increased.

Special mention must be made of cotton wherein it was 12.51% in 79-80 compared to that of 7.53 in 78-79.

INDICATOR NO. 6

Sourcewise net irrigated area.

3.7. Government canals and wells are the main source of irrigation in this district. The Table No. 3.6 gives the data for the year 1960-61, 1970-71 and of 1977-78 and 1979-80.

Table No. 3.6

Sourcewise net area irrigated.

Sr. Name of the Source	Net area irrigated in hectares during the year				
	1960-61	1970-71	1977-78	1978-79	1979-80
1	2	3	4	5	6
1. Surface	2,605 (4.5)	12,915 (19.4)	20,807 (22.5)	21,194 (22.7)	13,238 (15.1)
2. Wells	32,821 (95.5)	53,435 (80.6)	71,494 (77.5)	72,133 (77.3)	74,563 (84.9)
3. TOTAL	35,426 (100.0)	66,400 (100.0)	92,301 (100.0)	93,377 (100.0)	87,801 (100.0)

(Figures in brackets are percentages to total area.)

It will be seen from the above table that the well irrigation plays the major role in the district followed by the source of Govt. Canals. Further, it has also been revealed that well irrigation shows increasing trend, while surface irrigation has decreased considerably in the year 79-80 compared to that of 78-79.

INDICATOR NO. 7

Increase in agricultural credit; outstanding, etc.  
 3.8 Loans advanced by the primary agricultural credit societies to the cultivators and repayment of loan has been discussed in this indicator. The loan advanced by primary agricultural credit societies during the years, 1960-61, 1970-71, 1977-78 to 1980-81 has been given below in the following table.

Table No. 3.7.

Extent of Co-operative Finance.

1979-80	859	200599	264125	133594 (631)	91096 (454)	210076 (1047)
1980-81	858	209779	370330	255481 (1213)	71130 (339)	283589 (1352)

(Figures in Brackets are Rupees per member).

It can be seen from the above table that no. of societies are more or less the same when compared for the last two decades. However, total no. of members increased considerably upto 80-81 & likewise working & loans advanced has also been increased substantially if position is compared with that of 60-61 & 70-71 to that of 80-81.

Contd.../-

Similarly loans outstanding per member when compared to 70-71 it was Rs.650 whereas it was more than double i.e. Rs.1352 in the year 80-81.

INDICATOR NO.8

Agricultural Wage rates at selected centres.

3.9 Wage rates for agricultural operations are being collected from three selected rural centres, viz. Bhadgaon (Bhadgaon Tahsil), Bodwad (Bhusawal Tahsil) and Marwad (Amalner Tahsil). The wage rates prevailing in the year 1978, 1979 & 1980 are given in the Table No.3.8 for the comparison.

Table No. 3.8

		1980	5.42	3.54	10.58	10.58	6.21

It would be seen from the above table no. 3.8 that the wage rates of Bhadgaon Centre is showing the upward trend during the last three years, where as the average wages have gone down in respect of skilled labour in other two centres.

INDICATOR NO.9

Livestock Population per 100 hectares of cultivable land.

3.9 Talukawise cultivable land during the year, Bovine and Equine Population as per data available from the 1978 Livestock Census have been taken for comparison and presented in the Table No. 3.9.

Table No. 3.9

Bovine and Equine Population per 100 hect. of cultivable land.

Sr. No.	Name of Tahsil	Bovine and Equine Population as per 1978 Livestock census.	Cultivable land in 1977-78 (Hectares)	Number of Bovine and equine population on per 100 hect. of cultivable land.

13.	Amalner	71,076	80,399	88
District Total		853,675	9,16,086	93

It will be seen from the Table 3.9 that the number of animals per 100 hectares of cultivable land differ from Tahsil to Tahsil. However the district average comes to 93, where as the maximum 110 is observed in Chopda Tahsil

and minimum 72 in Jamber Tahsil. Out of the 13 tahsils Jalgaon, Jamber, Pachora, Parola and Amalner show the average less than the district average of 93.

INDICATOR NO.10

Consumption of Electricity

3.11 The consumption of electricity can be treated as barometer of the increase in the standard of living, so also industrial development of the country. The number of villages and towns electrified, pumps energised and per capita consumption of electricity have been given in table no. 3.10 below for the year 1960-61, 1978-79, 1979-80 and 1980-81.

Table No. 3.10

Consumption of Electricity and pump sets energised.

Sr. No.:	Year	Villages electrified on 31st March.	Pumps energised on 31st March	Per capita consumption in Kwh.
1	2	3	4	5
1	1960-61	23	NA	1.50
2	1973-79	1451	45306	106.30
3	1979-80	1451	48546	77.30
4	1980-81	1451	53106	80.07

The per capita consumption of electricity has gone up more than 70 times during the year 78-79 but further again decreased due to power shortage in the country although it was more than 51 times that of 60-61.

All the villages in the Jalgaon district were electrified since 76-77.

No. of pumps energised has increased considerably from 45306 to 53106 in the year 80-81, i.e. by less than 20 p.c.

INDICATOR NO.11

Employment, candidates Enrolled and Vacancies notified.

3.12 The Employment Exchange Office, Jalraon provides the information regarding registration, placement etc. Which is given in the following table for the year 1960-61, 1970-71, 1978-79, 1979-80 & 1980-81.

Table No. 3.11

Candidates enrolled, vacancies notified and placements done.

Sr. No.:	Year	No. of candidates enrolled	No. of vacancies notified.	No. of placements through Employment exchange.
1	2	3	4	5
1	1960-61	7857	1314	891
2	1970-71	13639	1738	1259
3	1978-79	15966	1048	814
4	1979-80	17382	893	533
5	1980-81	18498	1948	1063

It will be seen from the Table No. 3.11 that enrolment of the candidates has increased by more than 12.5% due to extension of educational facilities and increase in the number of enterprencous using the media of employment exchange for their recruitment. However the placement during the year 1978-79 & 1979-80 was comparatively less when compound to the year 1970-71 due to partial restrictions on recruitment which are subsequently lifted.

INDICATOR NO.12

Indoor and outdoor patients treated in public and public aided institutions.

3.13 Data on number of hospitals, dispensaries, maternity homes and primary health centres alongwith the number of patients treated during the years 1961, 1971, 1978, 1979 & 1980 are given in the Table No. 3.12.

Table No. 3.12

Indoor and outdoor patients treated in public and public aided institutions.

Sr. No.:	Item	Years

3.	No. of outdoor patients treated (in '000)	240	1102	1151	1439	1142

It will seen from the above table that the number of institutions have increased considerably i.e. from 64 in 1960 to 129 in 1980. The substantial increase is also observed in the number of patients treated. However from 1979 incase of indoor patients & in 1980 in the case of outdoor patients decreasing trend seems due to opening of private dispensaries by the medical practitioners & specialists.

INDICATOR NO.13

Number of students in different educational institutions.

3.14 Data on institutions and their enrolment at various levels is discussed in this indicator. The table number 3.13 gives the data for the year 1960-61, 1970-71 and 1978-79 to 1980-81 for the institutions and enrolment at various levels.

5.	1980-81	1774	384038	246	132813	18	20416

It will be seen from the table 3.13 that there was constant increase in the number of institutions as well as enrolment of the students. The highest increase can be observed in the institutions and students of higher education.

INDICATOR NO. 14

Important Ratios in Education.

3.15 A ratio in education can show the tendency of population seeking higher education; so also the pupil teacher ratio if studies can very well tell us about the position of teachers and the number of students, he has to take care. The table 3.14 shows the various ratios for the year 1960-61, 1970-71, 1979-80 & 1980-81 for the district as whole as the data at taluka level is not readily available.

Table No. 3.14

Important Ratios in Education

Sr. No.:	Item	Ratios in the year			
		1960-61	1970-71	1979-80	1980-81

	i) Primary	44	34	34	33
	ii) Secondary	28	27	28	28
	iii) Higher	NA	28	25	26

It will be seen from the table 3.14 that the ratio of institutions of higher level to lower has increased considerably in last two decades. Likewise teacher pupil ratio. It will be seen that the ratio in primary school has gone down by 11 if compared to 1960-61 while it was some what constant in secondary education & reduced by 2 in 1970-71 to 1980-81, for higher education.

INDICATOR NO. 15

Increase in Commercial Banking

3.16 The growth of trade and commerce is always assessed by the availability of banking services in the area. The table 3.15 shows the growth of banking facilities in the year 1959, 1970 and 1979.

Table No. 3.15

Increase in Commercial Banking

Sr. No.	Tahsil	No. of Banking Offices			No. of Households served per banking office

13.	Amalner	6	7	16	2069	1826	874
District Total		59	102	228	2263	1444	771

It will be seen from the above table that the total no. of banking offices in the district has been increased by two times more than that of 70. Similarly no. of households served per banking offices has also shown increasing trend i.e. in the year 70, the 1444 households were served by one bank whereas due to increase in number now 771 households could be served by one branch. The no. of banking offices are more in Jalgaon followed by Yawal, Bhusawal. The Jalgaon District Central Co-operative Bank playing very vital roll in advancing the credit.

INDICATOR NO.16

Road length per 100 Sq.Km.of Area

3.17 Ratio of road length to the total geographical area is a good indicator for comparison of transport facility in the modern economic structure. An attempt has been made to compare the road length existing in the district and villages connected, by roads.

Table No. 3.16

Road length per 100 Sq.Km. of Area.

(Excluding Municipal Roads)

Sr. No.:	Year	Road length Km.:	Road length per 100 Sq.Km. of area.
1	2	3	4
1.	1960-61	2663	22.62
2.	1976-77	4557	38.71
3.	1977-78	4577	38.88
4.	1978-79	4594	39.02
5.	1979-80	5493	46.67
6.	1980-81	5945	50.51

It will be seen from the above table that the road length have been increased from the year 1979-80 due to number of roads constructed under various programmes, thus the road length per 100 Sq.Km. more than doubled in 1980-81 if compared to the year 1960-61.

INDICATOR NO.17

Retail Prices at District Headquarters:

3.18 Prices are collected at the district head quarter for the selected commodities and are restricted to only one quotation that too only from selected shop. The average prices shown in the table 3.17 for individual commodity can not be said to be fully representative but the data may prove useful as a broad indicator of the trend in retail prices over a period of time.

Table No. 3.17

Average retail prices at district headquarter.

16.	Shirting	Popline	Metre	5.50	11.42	11.00	11.66

It will be seen from the table 3.17 that the prices of almost all the commodities have gone up if compared to previous years. The responsibility of the increase can not be attributed to any one factor such as short supply or increased demand or monetary inflation etc. but can be said to be the effect of all the factors together which determine the prices at a particular period.

CHAPTER IV

Annual Plan 1980-81

4.1 Introduction:

The planning Commission has decided in April 80 to formulate a new five years plan to cover the period 1980-81 to 1984-85 in place of the five years plan 1978-83, the year 1980-81 will, therefore, be the first year of the new Sixth five years plan. The planning department had instructed to give top priority for spill over works especially under Minor & Medium irrigation & inevitable expansion, under education & health programme. The new works should be under taken subject to availability of funds after providing provision of the schemes where the people of weaker section are involved.

Accordingly Jalgaon district annual plan for 80-81 approved by District Planning & Development Council and Government of Maharashtra was of the order of Rs.906.80 lakhs as against the out-lay of Rs.797.99 lakhs for the year 1979-80. Provision for the tribal sub plan so also for Modified Area Development approach plan was included in the above allocation.

4.2 Expenditure incurred during the year 1980-81 was more than provision made by Rs.128.16 lakhs. It was mainly due to the excess expenditure incurred under Employment Guarantee Scheme & other sectors such as Agriculture, Industry Transport Major headwise expenditure incurred during the year 1980-81 is given below. (The excess in expenditure compared to that with budgeted provision over & above made by D.P.D.C. is sanctioned by the Departmental plan funds, placed at the Regional/Departmental heads level).
