CHAPTER - I

INTRODUCTION

LOCATION :

1.1 The Satara District is situated partly in the Bhima river basin and partly in the Krishna river basin. The tahsils Khandala, Phaltan and Man are situated in the Bhima river basin, while the rest of the tahsils are situated in the upper Krishna basin. The District has an area of 10,492 Sq.Kms.

The District lies between $17^{\circ} 5'$ and $18^{\circ} 11'$ North Latitude and $73^{\circ} 33'$ and $74^{\circ} 54'$ East Longitude.

BOUNDARIES :

1.2 The District is situated on the west of Deccan Plateau and is surrounded by the Pune District on the North by the Solapur District on the East, by the Sangli District on the South and by the District of Ratnagiri and Kolaba on the west.

TOPOGRAPHY :

1.3 (i) HILLS :- There are two main systems of hills in the Satara District. The Sahyadri range and its off-shoots and the Mahadeo range and its off-shoots. The main range of Sahyadri with a length of about 96 Kilometres from north to south forms the Western boundary of this District. The Mahadeo range starts about 16 Km. North of Mahabaleshwar and stretches east and south-east across the whole breadth of the District. From this main range of Mahadeo hills, three spurs stretch to the south. Hills in the District are very low, barren and ragged except near Mahabaleshwar and Koyana valley. The top of Mahabaleshwar the highest point in the District, is about 1,436 Metres above mean sea level.

(ii) RIVERS :- The Krishna is the principal river of the District. The other important rivers are the Koyana, the Nira, the Man, the Venna, the Kudali, the Urmodi, the Vasana, the Yerla and the Tarali.

The Krishna rises in the eastern brow of Mahabaleshwar plateau with its source at about 1,371 metres above mean sea level. Several streams which flow from the valleys formed by the main hills ranges in the District make up the head waters of the Krishna river. The drainage system of the Krishna river includes, besides the drainage of Central system, the drainage of seven feeders namely the Kudali, the Venna, the Urmodi, the Tarali and the Koyana on the right and the Vasna and the Yerla on the left. From the source, the Krishna flows for nearly 160 Kms. through the Satara District and enters there-after into the Sangli District.

The Koyana is the largest feeder of the Krishna river in the District. It rises in the Mahabaleshwar plateau, runs towards south upto Helwak in Patan tahsil, where it changes its course and flows towards east and falls into the Krishna at Karad.

The Nira river which flows on the northern boundary of the District and the Man river which flows in the South-east are tributaries of Bhima which itself meets the Krishna.

(iii) SOIL :- The Soils of the District are observed to be of varied textures. In the west, the soil in Mahabaleshwar, Wai, Jaoli and Patan Tahsils is formed from the red laterite of the Ghats. It is thin and poor on the hill slope, but gets richer where natural or artificial terracing has accumulated soil with vegetable matter drained by rain waters. Rich black soil is found in the low lands of the Valleys of Krishna, Venna, Kudal, Koyana & Kole rivers in Wai, Jaoli & Patan Tahsils.

The Central portion of the District consists of medium to deep black alluvial soils. Krishna valley soils are said to be one of the richest in the Deccan and the portion which lies in Satara and Karad tahsils is reported as the richest in the Krishna Valley. For the most part it is the finest black alluvial soil highly retentive of moisture and very fertile.

The soil in Khandala and Phaltan tahsils is poor and stony in the vicinity of the hills, but there are good black soils along the Nira and its tributary streams. In the eastern part of Khandala tahsil, the soil is poor, shallow and whitish but is capable of growing wheat if adequate water is available.

Towards the east of the Krishna valley the soil is poor with the exception of wide stretches of good black soil along the numerous streams and rivers in Koregaon tahsil.

In the Khatav tahsil, soils are of intermediate depth and more widely spreading than that of Man tahsil but not as rich as in Koregaon tahsil. In Man tahsil, the soils are extremely poor and shallow. Good soil is found only in narrow strips along the streams.

RAINFALL IN GENERAL AND SCARCITY CONDITIONS :

1.4 1) RAINFALL :- The rain starts by the middle of June and lasts till the end of September in the District. The rainfall is not uniform all over the District. It is very heavy in the western region and it goes on receding towards eastern part. The extreme west part gets over 5,000 mm. rainfall, while the eastern part of the Sahyadri Zone gets the rainfall between 1,200 mm. to 2,000 mm. The normal rainfall recorded at Mahabaleshwar centre is 6,182 mm. while at Pachagani it is 1,865 mm. The Central zone gets rainfall between 600 mm to 1,200 mm. The District Head-quarter Satara has normal rainfall of 1,025 mm. At other centres it is, Koregaon 707 mm. Khandala 504 mm, Wai 710 mm, and Karad 713 mm. In the eastern zone average rainfall is below 600 mm annually. It is as follows- Phaltan 473 mm, Dahiwadi 462 mm, Vaduj 512 mm.

ii) SCARCITY CONDITIONS :

The eastern part of the District is prone to scarcity conditions. The Fact Finding Committee appointed by the Government of Maharashtra under the Chairmanship of Shri. S.R. Sukhatankar has opined that the tahsils of Khandala, Phaltan, Man, Khatav and Koregaon are the drought-prone areas in the District. During the year 1981-82 no scarcity conditions prevailed in the District.

iii) MINERALS :

Except for building stone, lime stone and little iron deposits in about 20 villages of Jaoli tahsil and 30 villages in Patan tahsil deposits of important minerals are not known to have occurred in any part of the District. Building Stone, sand of good quality and lime stone is found to be available all over the District. Good clay for bricks and tiles is found on the river banks.

iv) FORESTS :

An area of about 1583 Kilometres of 14.9 percent of the total geographical area of the District is under forests. It is scattered over the entire District. These forests belong to three groups (1) the evergreen Sahyadri Forests (2) the plantation on the slopes of the offshoots of Sahyadri hills that run east and (3) Bush sprinkled hills to the east of Krishna.

The evergreen forests of Sahyadri ranges form a belt along the west of the District 10 to 22 Kilometres broad. These forests extend without a break through the whole length of the District. They contain many trees valuable both as timber and firewood. The chief of these are Jambool, Anjan, Ain, Umbar, Kenja, Hirde, Phanas and Nara. Teakmixed with bush-wood is found in the second group of forest lands i.e. ranges which branch east from the Sahyadries. These forests are much broken by patches of cultivated land. The forests of the third group are only sprinkled with bush and are very much scattered.

v) AREA :-

The District has an area of 10,492.0 Sq.Kilometres out of which 10,109.6 Sq. Kilometres is rural and 382.4 Sq.Kilometres is Urban area. The District ranks 16th in area among the 30 Districts of the Maharashtra State.

vi) DEMOGRAPHY :

The Satara District ranks 13th in population among the 30 Districts of the Maharashtra State, so far as population of 1971 census is concerned and now it ranks 15th as per 1981 Census.

The following table gives tahasilwise decadal variation for the last two decades.

Sr. No.	District/ Tahsil	Population			Decadal Per-centage variation.	Density

11.	MAHABALESHWAR.	24,370	30,191	36,475	+ 23.89	20.81	134	161

From the above table it will be seen that the decadal variation (1961-71 and 1971-81) in Satara District is less than the State variation which is 27.45 and 24.36 respectively.

DENSITY :

The density of the District as well as tahsils in 1981 as compared to 1971 shows increase, which is due to increase in population. The density of population is below the District density in Khandala, Man, Khatav, Phaltan, Patan, Jaoli and Mahabaleshwar tahsils, while in rest of the tahsils it is more than the density of the District.

1.5 SPECIAL FEATURES :

i) SUGAR FACTORIES :

Full storage was created for the first time during 1978 monsoon. Dhom left bank canal with harness about 22,626 Hect. of land from Wai, Satara & Koregaon tahsils whereas Dhom right bank canal will harness 6,866 Hect. of land from Wai, Jaoli & Satara.

Kanher dam is 1,955 mtrs. in length and maximum height is 50 mtrs. Earth work and Masonary work is in progress. After completion of Kanher left bank canal and Kanher right bank canal to their full length, irrigation benefits to the extent of 7,716 Hect. and 1,466 Hect. respectively can be extended to Jaoli and Satara Talukas.

In case the data for the relevant year is not available, the data for the latest available years are presented. In most of the cases, the reference period of the data is the financial year. The data on Agriculture, however, relates to the Agricultural year, whereas the data on 'Co-operation' is for the Co-operative year (1st July to 30th June). The data on other important items like rainfall, temperature, Civil and Criminal cases, Vital statistics, is for the calendar year. The information as far as possible is presented tahsilwise for inter tahsil comparison.

2.3 The data incorporated in the District Statistical Abstract have been presented in suitable tables, classified in appropriate groups. The concepts adopted in preparation of tables are summarised in the following paragraphs. The limitations of data are cited wherever necessary.

AREA & POPULATION :

2.4 The data of 1971 census mainly on population, area, houses and livelihood occupation, rural urban break-up distribution of household, distribution of houses as per material used etc. are presented in the first nine tables for all tahsils in the district. Data on population per square kilometre, decadal variations during 1951-61 and 1961-71, classification of villages and towns according to population ranges, number of workers and non-workers, population of scheduled castes and schedule tribes, distribution of population according to age group and religion are also given in these tables.

2.5 (A) URBAN AREA :

The following places have been treated as 'urban' areas (towns):-

1. Every place having a Municipality or Cantonment Board irrespective of its population.
2. Every other place which satisfies following three conditions:-

(B) RURAL AREA :

=====

The areas which do not satisfy the criteria prescribed for recognising urban area are called 'Rural-Area'.

A person primarily engaged in household duties or those who were students and help in the family economic activity, but not on full time scale were treated as 'Non-worker' in respect of their main activity.

CLIMATE :
=====

2.6. The rainfall and temperature have pronounced effects on climate. The rainfall data presented in table No.2.1 gives normal rainfall, monthly rainfall and number of rainy days during the calendar year 1981 for the selected eleven centres. Normal rainfall figures are worked out on the basis of actual rainfall for the periods ranging from a minimum of five years and a maximum of 80 years. A day was treated as 'rainy day' if during the twenty four hours the rain gauge recorded a minimum of 2.5 mm. of rainfall. The table No.2.2 gives actual maximum and minimum temperatures recorded during each of the month of the calendar year 1981 in respect of Mahabaleshwar and Satara centres in Satara District.

j) NET AREA SOWN : This consists of net area sown with crops

and archards, area sown more than once being counted only once.

k) GROSS CROPPED AREA : Total of area under all crops

including area under crops sown more than once is taken as 'Gross Cropped Area'.

CHAPTER - III

AN ANALYTICAL REVIEW OF SECTORIAL TRENDS

3.1 Data on various fields of development have been presented in Part II of this issue under the heading District Statistical Abstract. An attempt has been made in this chapter to present a comparative picture of Tahasils in the district during the years 1960-61, 1970-71, 1977-78, 1978-79, 1979-80 & 1980-81. The indicators of different developmental sectors are worked out to show the position of each tahasil in the district during the above period.

3.2 AGRICULTURE :

The development in the field of Agriculture can be assessed from six main indicators. They are (1) Percentage of Gross area sown to net sown area (2) Percentage distribution of gross area under important crops to total gross cropped area. (3) Productivity of important Crops (4) Percentage of net area irrigated to net area sown (5) Percentage of area under different irrigated crops to gross irrigated area (6) Sourcewise net irrigated area.

PRODUCTIVITY OF IMPORTANT CROPS :

3.5 Following table gives the yield rates and outturn of principal crops for the year 1960-61, 1970-71, 1977-78,

Figures for 1979-80 are finally revised.

The production of any crop depends on various factors, like use of improved seeds, irrigation facilities, use of fertilizers and much on timely rains. As such the yield rates show fluctuation from year to year. It can be said that the yield rates show downward fluctuation in 1979-80 for all crops except Wheat in the District.

In most of the tahsils except Phaltan the irrigation mainly rely on wells through which nearly 50% of net irrigated area is covered. In Man & Koregaon tahsils respectively about 90% and 75% of the net irrigated area is covered only by well irrigation. The source of Government Canal irrigation is mainly available in Phaltan tahsil.

CO-OPERATION :

3.10 The Co-operative societies play an important role in the field of Agricultural Development by extending credit facilities on an extensive scale. The progress of facilities given by the Agril. Credit Societies during the years 1960-61, 1970-71, 1978-79, 1979-80 and 1980-81 and 1981-82 are given in the following table.

WAGE RATES :

3.12 The data on Agricultural Wage Rates in rural areas are collected in three rural centres in Satara District since July, 1963. The centres are Umbraj from Karad Tahsil, Koregaon from Koregaon Tahsil and Limb from Satara Tahsil.

Note : The drop in per capita consumption under Agriculture & other purposes from 1979-80 onwards over 1970-71 was due to change in procedure of billing under Agriculture from actual consumption of electricity to HousePower of pump sets followed from 1978-79.

Itemwise consumption of electricity is given in table No.5.10 of Part II. The consumption of electricity has significantly increased from 51 Million KWH in 1970-71 to 90 Million KWH in 1981-82. Per Capita consumption has also increased significantly during the last 20 years.

3.16 Enrolment in 1981-82 is 261 percent higher than that in 1960-61. The percentage of placement to total registration is decreased from 18 percent in 1960-61 to 6 percent in 1981-82. This is due to the establishment of Divisional Selection Board through which most of the vacancies are filled in.

The ratio of a doctor to population is one of the indicators of the progress of medical facilities. The ratio was one doctor per 24237 population in 1961, which is now one doctor per 13705 population. Number of private doctors are not considered while calculating the said ratio.

The Ratio of No. of beds to population was one bed for 6112 population in 1961 however it has considerable improved as one bed for 1576 population.

3.18 The Medical facilities have increased substantially since 1961. This has enabled to treat large No. of Indoor & Outdoor patients at public medical institutions.

3.19 EDUCATION :-

The Education facilities have also increased remarkably during last 10 to 15 years. At present almost all the villages have been provided with primary school facilities. The following Table gives the Number of Institutions, No. of Pupils & the No. of Teachers.

	Teachers	130	498	683	788	877	746

3.20 From the above data it would be seen that as against 218102 students in primary-school there were 23112 students in secondary schools (i.e.10.5%) in 1961/62 while in 1981-82 there were 139082 students (i.e.38.6%) in secondary as against 343902 students in Primary school.

This shows that there has been considerable decline in dropout rate of students from primary to secondary education. Similar percentages for enrolment of students in secondary to Higher Institutions were 7.7 in 1961 & 13.3% in 1981-82. The substantial increase in these rates can be attributed mainly to a good network of higher educational facilities established even at Tahsil places & big villages. This can also be seen from the following rates.

3.22 ROADS :

The Pune Miraj Kolhapur Broadguage Railway route goes through Satara District with the total length of 124 Kms. At the end of 1980-81 & 1981-82 total length of all types of roads excluding Municipal roads, was 7126 Kms & 7353 Kms. The road length at the end of 1960-61 was 2481 Kms. Thus the road length per 100 Sq.Kms. of area is increased from 24 Kms. in 1960-61 to 70 Kms. in 1981-82.

The network of banking offices is spread over different tahsils of the District during the recent years and as a result the ratio of number of households served per banking office is reduced from 6755 in 1961 to 1667 in 1978.

3.25 Since November 1962 the prices of important commodities are collected by the Directorate of Economics & Statistics through the District Statistical Offices at each District HeadQuarter, on every Friday. As the prices are collected for selected commodities from selected shops. They may not represent the District position but the data may still prove useful as a broad indicator of trend in changes in retail prices over the period of time in the District.

The following table indicates the average prices of some important commodities collected at Satara town for the year 1962-63, 1970-71, 1978, 1979, 1980 & 1981.

CHAPTER NO. IV

INTRODUCTION :

4.1 Since the commencement of the Fifth Five Year Plan i.e. from 1974-75, the idea of Planning from below has started operating and the formulation of the District Plan was started. The new approach conceive that the formation of District Plan is the only means for ensuring efficient use of local potential and resources as also for providing a firm basis for planning at the State level. From 1974-75, the District Planning Bodies were constituted for each District and the district was adopted as a 'unit' of planning. The object of the District plan is to maximise the benefits of the plan expenditure by bringing in past experience, knowledge & local needs.

4.2 The District Planning Body which is called as the District Planning & Development Council is headed by the 'Palak Mantri' of the District as Chairman. Other Ministers of the District and the Divisional Commissioner are Vice Chairman and the Collector is the member secretary. The members of the council includes all M.P.'s, M.L.A's, M.L.C.'s, President, Zilla Parishad, Mayor, one president each from 'A' 'B' & 'C' class Municipal Councils, Chairman of District Central Cooperative Bank, Chief Executive Officer, Zilla Parishad, Director, Land Development Bank, Nine non-official members etc. The Council generally meets twice a year for formulating & coordinating district development plans.

4.3 To assist the council in its day to day planning and development activities, an Executive Committee is constituted at district level. The chairman and the Vice Chairman of the committee are the same as that of the council. The member Secretary is, however, the District Planning Officer. The committee consists of some selected members from the council. The committee meets regularly once in a month for reviewing the Plan performance and

In this chapter, a brief review of the Annual Plan 1980-81 & 1981-82 is taken.

The following table gives the consolidated information about the budget and expenditure figures under State Plan Schemes for the fifth plan period & for the year 1980-81 & 1981-82.

From the above table, it will be seen that the expenditure in 1981-82 is 122.58 percent of the budget provision for 1981-82.

The performance of the state Plan Schemes during 1980-81 & 1981-82 is reviewed in the following paragraphs.

The following table shows the Budget & Expenditure figures under different major heads for the reference period under review.

B = Budget E = Expenditure

From the above table, it will be seen that the expenditure
 under each major head of the development.

In the above table, the bracketted figures show the extent of utilisation of the budget provisions under each major head of the development.

A comparison of expenditure incurred under different major heads during the two annual plan periods shows that the increase in expenditure under " Social Services " in 1981-82 is quite significant.

The following table gives the percentage distribution of total expenditure incurred on different major heads of development

TABLE NO.3

There is no significant variation in the percentage distribution of expenditure incurred during the reference periods under review except on Social Services. During 1981-82 the share of the major head social services is about one-third of the total expenditure.

PHYSICAL ACHIEVEMENTS

The details of physical achievements under different schemes are given in Table No 11.2 of Part II of this publication. However a brief review of important achievements under each sub-head of development is taken in the following paragraphs.

I. Agricultural Programme

- a) AGRICULTURAL PRODUCTION : The achievements under, the schemes included Rat Control, Maize fly control Schemes.
- b) Under the scheme of Minor Irrigation works, construction of 36 percolation tanks was under-taken in 1981-82. Besides subsidy was given for construction of 57 wells.

- d) Forest : This programme includes plantation of general utility timber. In the year 1981-82 plantation in 100 Hect. was done.

DROUGHT PRONE AREA PROGRAMME

Drought prone Area Programme covers 129 villages from 5 Tahsils in Satara District. Various schemes under Soil Conservation, Minor Irrigation, Dry Land Farming, Forest Development, Fishery Development etc. are included in this programme. The total expenditure of Rs.43.33 lakhs was incurred in 1981-82 on this programme. During previous year 1980-81, the expenditure of Rs.75.19 lakhs was incurred on this programme.
