CHAPTER - I

Introduction

1. Physical features:-

District

1.1 Location:- Jalgaon which was formerly known as East Khandesh district is situated on the north-east fringe of the Bombay Division. stretching across the upper Tapi basin in the Khandesh territory, the district with an area of 11375 square Km. lies in between 20° and 21° north latitude and $74^{\circ} 55'$ and $76^{\circ} 28'$ in east longitude.

1.2 Boundaries:- Jalgaon district is bounded by Madhya Pradesh on the north, Madhya Pradesh and Buldhana district on the east, Aurangabad district on the south and Thulia and Nasik districts on the west. stretching nearly 145 Km. along the Tapi river, and varying in breadth from 113 to 145 Km., it forms an upland basin, one of the most northerly sections of the Deccan table land. Along the whole northern boundary, the district is bounded by ranges of Satpuda, a mountain tract from 48 to 64 Km. wide. Quite a major portion of the northern boundary is marked by tributary Anar, which is the west continues to separate Jalgaon from Thulia till its junction with the Tapi. To the south, the Ajantha, Satmala and Chandor ranges may roughly be said to mark the line between Jalgaon and the Marathwada territory. On the west Jalgaon shares its boundary with Nasik district over a stretch of about 40 Km. and then with Thulia district for about 80 Km., the Panjhara river being the only natural feature demarcating it over a major stretch.

District:

1.3 Topography: - Although Jalgaon belongs to the Deccan uplands of Maharashtra state, it is distinguished from the rest of the uplands by its westward aspect. While rest of the upland region is drained by the major rivers to the east, the Tapi and its tributaries drain the Jalgaon region to the west towards Arabian sea. This district has varied topographical features and landscapes, consisting of wild hills and forests, rich gardens and groves, stretches of barren plain, low rolling rocky hills and tensely gullied topography near river banks. Regionally from east to west, parallel with the Tapi are three well marked belts of country, in the centre the rich Tapi valley, in the north the high and wild Satpuda, and in the south and south-west bare ridges and rich well watered valleys flanked by Ajantha range.

1.4 Soil: - Broadly, the soil of this district can be classified into three major tracts. The northern tract mostly consists of rich black Cotton soil except for a small strip of 5 to 6 Km. along the foot of Satpuda and 2 Km. near the bank of the Tapi river. In the central tract there are three types of soil viz, - deep black, red and brown. The deep black soil is most fertile and yields rich crops. The lighter red soil though not so fertile, is sufficiently good for raising cash crops such as Cotton and Groundnut. The general quality of the soil in the southern tract is, however, inferior to that of the central or northern tracts. The redish brown soil in Pachora taluka and Bhadsaon peta is best suited for Jowar, Cotton and Groundnut, while the soil in Chalisgaon taluka is capable of raising heavy crops with the help of adequate water supply. On either side of the Tapi, runs an unbroken

plain of the deep black cotton soil forming a strip of alluvium covered lands.

1.5 Rivers: - Tapi flows from east to west and meets Arabian Sea at Khambayat, nearly 19 Km. from Surat. Out of the total length of about 724 Km. of this river, nearly 121 Km. is in Jalgaon and Bhulia districts. Almost all other rivers in Jalgaon district are its feeders. River Purna enters the district from South-east and meets Tapi at Changdev in Edlbad peta. Another important river Girna, takes its course in the Sahaydri in Nasik District flows from west to east in the southern part then south to north separating Erandol and Jalgaon taluka and meets the Tapi after taking a right angle

turn near about Jalgaon. among other feeders are included Bhojavati, Laghur and Bori feeding from South and Bhokar, Suki, Mori, Rathawati, Madhi, Mahi, Guti and Aner from north. The feeders from north except Aner are all small rivers.

1.6 Hills: Within the district there are three Chief hills ranges, the Satpuda in the north, the Hatti in the south-east and the Ajantha or Satmala in the South. In Satpuda the Chief peaks that rise over about 924 M. are Pancha Pandav and Mondhiamal looking down on Yawal. The Hatti hills bounding the Purna valley on the east, run north-west and south east and for about 32 Km. pass through the south-east corner of Jalgaon. The Satmala also known as the Chandor or Ajanta range breaking off sharply from the Sahyadris in the north-west of Nasik, runs eastwards for about 80 Km. Near Manmad, after a gentle depression, it again rises about 185 M. above the plain and forms a somewhat monotonous wall-like boundary between Jalgaon and the Deccan.

1.7 Minerals:- Jalgaon District is composed entirely of trap rocks which are generally barren of any economically useful and important minerals. The trap is used for building purpose and road metal, railway ballast and cement concrete.

1.8

Administrative Set-up:-

The set-up of important departments in Jalgaon district is described below.

Revenue Administration:- The Collector plays a pioneer role in the administration of the district. He is not only the head of the Revenue Department but also empowered to supervise working of all the Officers of other departments in the district. These statutory bodies started functioning from 1st May-1962. Local government functions were taken over by these bodies. In addition they have been entrusted with the execution of certain works and development schemes of the State Five Year Plans. In Jalgaon District there is Zilla Parishad at district level and Block Panchayat Samiti at each Taluka and Village Panchayat for a village or group of villages. This three-tier system has ushered in the District democratic decentralization of administration with a view to promote development by securing people's participation in P. Plans and Government affairs. The Zilla Parishad consists of President, Vice President, Chairman of Panchayat Samities and other elected members. The Chief Executive Officer is Principal Officer of Zilla Parishad. The Zilla Parishad is assisted in its functions by State Services representing various departments of the state. Important subjects viz, - Agriculture and Animal Husbandry, Education and Health, Community Development, Industrial Co-operatives, social welfare, District and Village roads etc. are entrusted to Zilla Parishad.

2.3 Police:- The Superintendent of Police heads the Police administration in the District. He has under him Assistant Superintendent, Deputy Superintendent, Inspectors and Sub-inspectors and the Constabulary. He looks after the exploitation and regeneration of forests according to the sanctioned working plans. He conducts sales, enters into contracts, realises revenue and incurs expenditure. He deals finally with forest offence cases, having power to compound the same. He has under him two Sub-Divisional Forest Officers to assist him in the work of inspection and supervision of various kinds of silvicultural works.

2.6 Industries Department - The Industries Officer, is in charge of industries department in the district. His function is to assist and guide the industries with a view to develop them. He is assisted in his work by Senior Industries Inspector and Junior Industries Inspectors. The work of rights and measures is also looked after by Industries Inspectors.

2.7 Co-operatives Department. - The Co-operative Department in the district is under the administrative charge of District Deputy Registrar of Co-operative Societies. He has to supervise and guide the various types of societies in his charge. Under him are two Assistant Registrars who are responsible for organization of societies, development of Co-operative movements, supervision over societies etc. There is in addition One Assistant Registrar for Cottage, and Small industrial societies. He works under Zilla Parishad. There are supervising unions to advise, guide and supervise and also to assess the credit of constituent societies for making recommendations for financing.

3. Area and Territorial Changes:-

3.1:- The entire area now included in the districts of Jalgaon and Bhulia were, upto the year 1905, administered as One district of Khandesh with headquarters at Bhulia. In 1906, thirteen talukas were separated from Khandesh district to form East Khandesh district, with its headquarters at Jalgaon. In 1950, Thirteen villages which formed part of Chalisgaon taluka were transferred to Aurangabad district. In the year 1961, the name of the District was changed to Jalgaon District.

3.2:- The total area of Jalgaon district according Directorate of Land records is 11375 sq.km. This is about 3.7 percent of total area of Maharashtra State. According to report of Surveyer General, the area of Jalgaon district is 11844 sq.kms. The difference is due to different methods used.

4. Climate, Temperature and Rainfall:-

4.1 Climate and Temperature. - The climate of the district is dry except in monsoon. The year can be divided into a dry hot

period during February and March, Summer during April, May and June, Rainy season from July to September, a sultry period in September and October and winter in November, December and January. April-May are usually the hottest months, when temperature rises upto 46°C , while January is usually the coldest month when it falls upto 6°C . Summer is the driest part of the year, when winds are generally light in the mornings and ^{blow} from directions between south-west and north-west. In rainy season, winds are stronger and ^{blow} predominantly from South-west. After rainy season the winds are generally light.

More than four fifth of the annual rainfall is received during the monsoon months of June to September, July being the month with highest rainfall. The normal rainfall figures show that the rainfall is usually uniformly distributed throughout the district ranging from 640 m.m. to 780 m.m. The central parts of the district comprising the talukas of Jalgaon, Bhusawal, Jamner and Pachora get a little more rain than the rest of the district. Jamner has usually highest rainfall, while Amalner, the lowest. On an average on 45 days in the year the district gets rainfall of 2.5 m.m.(10 cents) or more.

It has a temperature of 140° F. The water is tasteless, with a peculiar but hot sulphurous smell. The Sunabdev spring lie 13 Km. from Unabdev. The water is slightly sulphurous and has a temperature varying from 85° F. at dawn to 91° F. at noon. Najhardev, 2 km. or 3 km. ^{from} Sunabdev, has a hot spring flowing into a build pool. The water has a slightly sulphurous taste and varies in temperature from 100° F. at dawn to 103° F. at noon.

6.2 - The houses in the district are usually flat topped because of less rainfall. But tiled roofs are also seen in many places. The staple food of practically all sectors of population is Jowar bread. Wheat and rice also occupy an important place in the diet. Vegetables and bananas, which are grown on a large scale also form part of the food of the people. Though language of the people is Marathi, the villagers dialect is Ahirani, which is a mixture of Hindustani and Marathi with Gujarathi endings as Gujarath is adjacent to Khandesh.
