CHAPTER - I INTRODUCTION.

1.1 Location and Boundaries

Jalgaon District lies between 20° and 21° North latitude and 74°-55' and 76°-28' East longitude. Stretching nearly 130 Kms. along the Tapi river and varying in breadth from 115 Kms. to 145 Kms; Jalgaon forms an upland basin, one of the most northerly sections of the Deccan table land. Along the whole northern frontier, the district is bounded by Satpuda ranges, a mountain tract from 50 to 65 kms. wide. It is bounded by Madhya Pradesh on the North, Madhya Pradesh and Buldhana district on the East, Aurangabad district on the South and Dhulia and Nasik districts on the West. Quite a major portion of the northern boundary is marked by the tributary Aner, which in the west continues to separate Jalgaon district from Dhulia till its junction, with Tapi. On the East and South-east, a range of low and detached hills and some major streams without any marked natural boundary, separate Jalgaon district from Buldhana district. To the south, Ajanta, Satmala and Chandor ranges may roughly be said to mark the line between Jalgaon and Aurangabad districts. On the west Jalgaon shares its boundary with Nasik district over a stretch of about 40 Kms., and then with the Dhulia district for about 80 Kms.

1.2 Area and Population

The total geographical area of the district is 11,375.3sq.kms (4392.0 sq.miles) and its total population according to 1961 Census is 17,65,047. Thus in terms of area and population this district makes 3.7 percent and 4.4 percent respectively of Maharashtra State.

The mid-year population is estimated for 1963 at 19.96 lakhs. According to area, Jalgaon district ranks fourth in Bombay division, and eleveth in Maharashtra State, and according to population, it ranks Third in Bombay division, (excluding of course, Greater Bombay) and fifth in Maharashtra State. The population of the scheduled castes and scheduled tribes is 1,60,029 as per 1961 Census.

1.3.1 Administrative Set-up

This district is divided in 13 Talukas. The area, number of inhabited villages, number of Towns, 1961 population, and the position in the district by percentage of area and population of each taluka are given in the table below.

The Jalgaon Zilla Parishad has been established in May-1962, with 13 Panchayat Samities at Taluka level. The areas under the jurisdiction of the Zilla Parishad and Panchayat Samities correspond to District and Taluka boundaries, except in the case of Municipal Towns, Cantonment Board, which are not covered by them. The Zilla Parishad of Jalgaon District covers 96.6% area and 77.7% of the rural population of the district and 1.2% of the urban population.

1.4.1 Topography

Although Jalgaon District belongs to the Deccan up-lands of Maharashtra State, it is distinguished from the rest of the up-land districts by their westward aspect. While the rest of the upland region is drained by the major rivers to the east, the Tapi and its tributaries drain Jalgaon region to the west towards Arabian Sea. The landscape is typically that of the Deccan lavas with residual hill ranges and broad valleys, with trap dykes introducing a sharp local contrast as small chains of hillocks. This district includes varied topographical features and landscapes, consisting of wild hills and forests, rich gardens and groves, stretches of barren plains, low rolling rocky hills and densely gullied (badland) topography near major river banks. Regionally from east to west, parallel with the Tapi, are three well marked belts of country, in the centre the rich Tapi Valley, in the north the high and wild Satpuda, and in the south and south-west bare ridges and rich well watered valleys, flanked by the Ajanta range.

1.4.2 River System

Tapi flows from east to west and meets Arabian Sea at Khambayat nearly 19-kms. from Surat. Out of the total length about 724 kms. of this river, nearly 121 kms. is in Jalgaon and Thuria districts. Almost all other rivers in Jalgaon district are its feeders. River Purna enters the district from south-east and meets Tapi at Changa in Edlabad taluka.

Another important river Girana, takes its course, in the Sahyadri in Nasik district, flows from west to east in the southern part, then south to north, separating Brandol and Jalgaon taluka and meets the Tapi after taking a right angle turn near about Jalgaon. Among other feeders are included Bhogavati, Waghur, and Bori, feeding from south and Bhokar, Suki, Mori, Ratnawati, Madhi, Mahi, Gudi and Aner from north. The feeders from north except Aner are all small rivers.

1.4.3 - Hills:-

Within the district there are three Chief hill ranges, the Satpuda in the north, the Hatti in the south-east and the Ajantha or Satmala in the South. In Satpuda the Chief peaks are Pancha Pandav and Mondhiamal looking down on Yawal. The Hatti hills bounding the Purna valley on the east, run north-west and south east for about 32-k, pass through the south-east corner of Jalgaon. The Satmala also known as the Chancor or Ajanta range breaking off sharply from the Sahyadris in the north-west of Nasik, runs eastwards for about 80-kms. Near Manmad, after a gentle depression, it again rises about 185 ft. above the plain and forms a somewhat monotonous wall-like boundary between Jalgaon and the Deccan.

1.4.4 - Soil:

The soil of this district can be, broadly classified into three major tracts. The northern tract mostly consisting of rich black Cotton soil, except for a small strip of 5 to 6

kms. along the foot of Satpuda and 2-kms. near the bank of Tapi river. In the central tract there are three types of Soil, viz, - Deep black, Red and Brown. The deep black soil is most fertile and yields rich crops. The lighter red soil, though not so fertile is sufficiently good for raising cash crops such as Cotton and Groundnut. The general quality of the soil in the southern part is however, inferior to that of the central or northern tracts. The reddish brown soil in Pachora tahsil and Bhadgaon taluka is best suited for Jowar; Cotton and Groundnut, while the soil in Chalisraon taluka is capable of raising heavy crops with the help of adequate water supply. On either side of the Tapi, runs an unbroken plain of the deep black Cotton soil, forming a strip of alluvium covered lands.

1.4.5 - Climate, Temperature and Rain-fall. -

i) The climate of this district is generally dry except in the monsoon. The year may be divided into four seasons. The cold season from December to February is followed by the hot season from March to May. June to September is the monsoon season and October to November for the post-monsoon season.

ii) The average annual rainfall in the district is 740.7 m.m. (29.15"). About 87 percent of the annual rainfall is received during the monsoon i.e. from ^{June} June to September, July being the month with the highest rainfall. The central parts of the district comprising the talukas of Jalgaon,

Bhusawal, Jajner and Pachora get a little more rain than the rest of the district.

iii) Jalgaon is the only meteorological observatory in the district. December is the coldest month with the mean daily minimum temperature at 11.9°C. and the mean daily maximum temperature at 29.3°C. Temperature begins to rise steadily from about the beginning of March and by May, the hottest month of the year, the mean daily maximum temperature reaches 42.5°C.

1.5.1 - Special Features.

The following specialities of Jalgaon District are also notable.

- 1) Banana. - An area of about 18 thousand hectares is under banana plantation in the district. The production was estimated at 9 lakh M.Tons. Banana is mainly exported to Delhi and Bombay.
- 2) Pulses. - Pulses, viz, - Udid, Moong, with an area of about 1,98,503 hectares and production of about 6000 M.Tonnes.
- 3) Industrial Estates. - There are two Industrial Estates. One at Jalgaon and the other at Bhusawal.
- 4) Ajantha Caves are only about 55 Kms. away from Jalgaon.
- 5) Jalgaon is an important business centre.
- 6) There are three spinning mills in the district. One at Jalgaon other at Amalner, third at Chalisgaon.
- 7) Defence project factory at Varangaon in Bhusawal Taluka.
- 8) Jalgaon is an important Railway Junction of Central and western railways.

EXPLANATORY NOTES .

The Statistical Abstract of Jalgaon District for the year 1965-67 which is presented in the second half of this publication presents information on selected features of the economic, geographical and social conditions prevailing in the District. Every effort has been made to give, Talukawise break-up, wherever possible.

There are in all 13 broad groups under which Statistical data is prepared. Also at the end is a Table showing the trends in selected indicators.

I. - Climate. -

There are two tables under this group. Table No.1 shows monthwise Rainfall and number of rainy days in millimeters for 13 selected centres for the year 1965 and 1966, it also indicates the normal rainfall for these centres. Table No.2 gives monthwise details of temperature for Jalgaon Centre, in terms of Mean, Mean-maximum and Mean-minimum for two years viz, - 1965 and 1966. The maximum temperature reached was 42.3°C in May and the minimum was 14.1°C in January.

2. - Area and Population -

There are Six tables under this group, the reference period for all these tables is 1961 Census. Table No.3 shows the figures of Rural and Urban population of each Taluka in 1951 and 1961. The population of the District increased from 14.71 lakhs in 1951 to 17.65 lakhs in 1961 i.e. by 20%. The next two tables (No.4 and 5)

show the classification of Villages and Towns respectively according to population ranges. There are 14 Towns and 1435 Inhabited Villages in the District. Table No.6 presents the classification of Workers and Non-workers into important categories based on 1961 Census. There were 8.13 lakh workers and 9.51 lakh non-workers in the District. Table No.7 shows the distribution according to (A) Age-group, (2) Mother Tongue and (C) Religion, population based on 1961 Census. Table No.8 shows the data of Scheduled Castes and Scheduled Tribes according to 1961 Census. The Scheduled Castes population was 61319 and that of Scheduled Tribes was 98710. All these tables are much useful for the study of general conditions in various talukas of the District.

Agriculture:-

There are ten tables in this group. The data of land utilisation and cropping pattern is given in hectares, for each taluka for 1964-65 and 1965-66. There has been no change in the cropping pattern during these 2 years. The double cropped area is 4.7% of the gross cropped area. Table No.11 shows the Yield and Out-turn figures for the year 1964-65 and 1965-66. Five Tables viz,- No.12, 13, 14 and 15, 16 present the area irrigated by different sources and under different crops, for the years 1964-65 and 1965-66. The rainfall in this district is uncertain, and generally falls short of the requirement. The area under irrigation of four Talukas viz,- 1)Amalner, 2)Erandol, 3)Bhadgaon and 4)Chalisingaon is more than that of Parola and Pachora Talukas by Government Canal. Yawal, Raver,

Amalner, Brandol and Chalisgaon Talukas lead in well irrigation. The irrigated area is 10.5% of the gross cropped area. The following Table shows the area irrigated by different sources in hectares during 1965-66.

I t e m	(Year - 1965-66.)
