1.4 General Administration and Revenue:

The Collector, is incharge of general administration law and order, treasury, land revenue and civil supplies. He is assisted by a Residential Deputy Collector, two Deputy Collectors, one for each revenue division Nanded

and Deglur. They are incharge of these divisions and assist the Collector. Tahsildars are incharge of eight talukas in the district They are assisted by Naib-Tahsildars.

#### 1.5 Area :

The area of Nanded district is 10,333.3 Sq. Km (10,095.5 Sq. Km. rural and 237.8 Sq. Km. Urban). It is the seventeenth district in rank, in the terms of area in Maharashtra State and fifth in Marathwada region.

#### 1.6 Topography :

Nanded district lies in the plateau of south India , on account of which it is one of the most homogeneous districts in Maharashtra. It does not have any well defined topographical natural zones. The southern portion of the district is however little different because of its poor hilly soil. The northeastern taluka of Kinwat is again different because of its extensive mountain ranges and barren areas. The rest of the central part of the district is flat with fertile land of black cotton soil.

#### 1.7(A) Hill Ranges and Forests :

There is only one main system of hills known as Bhag or Thanvari range. It traverses the district from north-west to south-east. There are a few minor ranges of hills like Muckhed hills in Bhokar and Hadgaon talukas and Balaghat mountain in Kandhar and Mukhed talukas. This district has various types of forests from sparse and stunted to dense and ever green of high rainfall areas.

The area under forest is over 777 Sq. Km. forming 8.27% of the total geographical areas of the district.

Major portion of the forests in this district is in Kinwat taluka, where 25% of its area is under forests, inter-alia Hadgaon and Bhokar talukas are also gifted with dense forests area in the district.

1.7(B) Rivers :

The most important river in the district is the Godavari. Other rivers which flow in the district are the Manjara, Manyad, Sarswati, Penganga, Ashana, Sita and Lendi. The Godavari enters the district from the west and flowing through the central part of the district passes out into Nizamabad district of Andhra Pradesh. The Manjara which is the largest tributary of the Godavari flows from south to north and demarcates the boundary of the district and Andhra Pradesh. The Manyad flows through Kandhar taluka from west to east and forms the natural boundary between Mukhed and Deglur talukas on one hand and Biloli on the other. The Sarswati rises in Wakhad hills and flows from north to south through the eastern portion of the district and finally joins the Godavari near the village Malkautha. The Ashana flowing in the eastern direction falls into the Godavari on the left bank about 2 miles from Nanded town. The Sita also rises from north and meets the Godavari. The Lendi flows from west to east in Deglur taluka. It runs partly along the southern boundary and after taking a slightly north-ward course passes through Deglur taluka and meets the Manjara. The Penganga forms the northern boundary of the district flowing in easterly direction and flowing down, it falls into the Wardha river in Yeotmal district of Vidharbha Division.

1.7(C) Soil }

The soil of the district in almost all the talukas is regad or black cotton soil and is fertile. Particularly the rich valley of Manyad river contains excellent soil, The ridges and spurs from the uplands, which are all of trap formation reduce the cultivable areas considerably. The best black soil is found in a narrow strip of land on the banks of the Godavari and its tributaries.

Good black cotton soil is found along the banks of the Manjra and the Manyad rivers in Biloli taluka, while elsewhere it is undulating and much inferior in quality and covered with loose stones. The soil of Nanded taluka consists principally of rich black alluvial deposits. Near the foot of the hills black soil is scarce and it is of a very poor description.

Deglur taluka has the best soil in the district. With the exception of a small portion of the taluka towards the west and soil is of superior quality and suitable for rabi crops.

Kandhar taluka generally has black and rich soil and grows rabi crops. Nearly half of the taluka is covered with hills and has light soils. It is undulating and covered with loose stones where kharif crops are chiefly grown.

About three fourth of Hadgaon taluka is highly fertile. The portion along the banks of the Penganga is the most fertile. Towards the south, nearer the hills, the soil is rather mixed up with certain saline matter. In Bhokar and Kinwat talukas except for the hilly tracts, the entire land is of black cotton soil.

### 1.7 (D) Minerals :

The only mineral, found in the district is lime stone. Deposits of intertrappean lime stone have been found to occur in Kinwat taluka. The lime stone quarried is not uniform in grade and is highly siliceous. The reserves have been estimated at ten million tons. Building materials like Deccan trap or basalt, sand-stones and brick clay are also found in this district.

### 1.8 Climate Temperature and Rainfall.:

#### 1.8 (A) Climate :

The climate of the district is dry and subject to extremes of heat and cold. It is very hot in summer and cold in winter. The hottest month is May and lowest temperature is reached some time during December and January.

Within the district, the weather conditions show local variations also. Kinwat taluaka in the extreme north-east is comparatively more hot than other talukas. There are wide seasonal variations in temperatures even at Nanded town. The rainy season starts from June and lasts upto the end of September. It is followed by cold weather from October to February and by hot weather from March to May. The climate of the district on the whole is healthy.

#### 1.8(B) Temperature :

Monthly temperature records are available for Nanded station only. In the year the highest temperature in the month of May reached  $42.4^{\circ}$  centigrade and the lowest was recorded as  $12.9^{\circ}$  centigrade in the month of December.

The highest temperature reached upto 41.9° centigrade in the month of May and the lowest temperature touched 8.2° centigrade during December in the year 1970.

1.8(C) Rainfall :

The rainy season starts from June and lasts upto the end of September. Nanded district falls in assured rainfall zone of the state, though the rainfall is not even in all parts of the district. In all 75% of the total rainfall is received from the south-west monsoon (June to September) and 16% from post monsoon period (October to December). Pre-monsoon showers contribute about 7% of the total rainfall and the remaining 2% is received from winter monsoon during January and February.

The rainfall data is available for eight centres located at taluka head quarters. The maximum rainfall recorded during the year 1969 was 1,104.4 mm. in Nanded taluka and the minimum rainfall was recorded 682.4 mm. in Deglur taluka. During the year 1970 the highest rainfall was observed 1,410.1 mm. in Kinwat taluka where as the lowest rainfall was recorded as 822.7 mm. in taluka Kandhar.

2.2 It is clear from the above table that during the year 1968-69, wheat, gram, sugarcane, groundnut and cotton registered a sizeable increase in the production over the year 1960-61 whereas the agricultural production during the year 1969-70 decreased as compared to the years 1960-61 and or 1968-69.

Indicator No. 3 :- Gross value of Agricultural Production.

3.1 Agriculture constitutes a major portion in National Income of our country and hence any change in agricultural production affects the levels of National Income. Gross value of agricultural production is always studied in the context of the prices which is a relative phenomenon and due to which gross value is a subject of comparison rather than the subject of basic study.

3.2 The gross value of agricultural production in the years 1960-61 at the prices prevailing in 1960-61 was Rs. 16.05 crores and in the year 1968-69 and 1969-70 at the prices prevailing in the corresponding years was Rs. 31.93 crores and Rs. 32.41 crores respectively. The gross value of agricultural production in the district had increased by 98.94% in 1968-69 and 101.93% in 1969-70 over 1960-61. The increase in gross value can be attributed to the rise in prices rather than increased production. The per-capita gross value of agricultural production in the district is calculated to be Rs. 149.00, Rs. 295.79 and Rs. 300.17 respectively in the years 1960-61, 1968-69 and 1969-70 at prices prevailing in the respective years.

Indicator No. 6 :- Increase in Agricultural Credit, outstanding dues and gross value of agricultural produce.

6.1 Active participation of the co-operatives in financing the rural credit needs resulted in increasing the agricultural credit continuously. Out-standing dues also increased with the increase in the agricultural credit over the period 1960-61 to 1969-70. The gross value of agricultural production during the same period increased by 98.94% and 101.93 percent in the years 1968-69 and 1969-70 over 1960-61.
