2. The question has been the subject of discussion for many years, and has been investigated on several occasions during that period. As early as 1891 local governments were empowered to make rules for the ventilation of factories and for the protection of the health of the operatives. In most factories the regulation of the atmospheric conditions has presented no great difficulty. But in the majority of cotton mills the necessity for the employment of artificial humidification has proved a serious obstacle. It is unnecessary here to recapitulate the history of the question, because in spite of the attention given to the subject by Governments and employers and by more than one committee, no satisfactory solution was reached. It has

hitherto proved impossible to introduce regulations which would adequately secure the comfort and health of the operatives in cotton mills and which would not injure very seriously the cotton mill industry and, in consequence, the operatives themselves.

3. The Government of India accordingly instituted a special enquiry in 1921. The investigation was entrusted to Mr. T. Maloney, M.C., A.M.C.T., who was instructed :—

(1) To obtain accurate observations regarding the method of humidification and ventilation employed in cotton mills and their effect on working conditions; and

(2) to evolve recommendations designed to effect a marked amelioration in conditions without serious detriment to the industry.

His enquiries covered a period of 18 months and the detailed results, together with his recommendations, were embodied in his report entitled "Humidification in Indian Cotton Mills," which was presented to the Government of India in 1923. Printed copies of this report have now been in the hands of local governments, of employers, and of the public for some months, and the Government of India therefore trust that local governments are now prepared to give their views on the questions involved.

4. The need for improved ventilation and for the control of humidification in a number of cotton mills has never been seriously disputed. It has long been admitted that the conditions of work were the cause in many cases of serious discomfort, and occasionally of impaired health among the operatives, Mr. Maloney's general conclusion is that "while it has not been definitely proved that health is materially affected in every case, it is significant that the physique of the average cotton operative is much lower than that of workers of similar castes and wage-earning capacity in other trades, and that weight decreases after a few months' continuous service." He further adds, "There is also abundant evidence to show that when high temperatures were combined with a high degree of humidity, conditions were most distressing and uncomfortable, and on humanitarian grounds, even though health may not be permanently affected, something should be done to improve conditions." These conclusions do not differ from those generally held in the past, but, as a result of the investigations made, they now rest on full scientific enquiry. Mr. Maloney's report gives for the first time a detailed and accurate survey of conditions in all the important centres; it contains full statistics summarizing his observations in Bombay, Ahmedabad, Cawnpore, Madras, Coimbatore, Sholapur, the Central Provinces, Calcutta and Delhi. The conditions in each of the more important centres are discussed at some length, and local governments will no doubt devote special attention to those parts of the report dealing with centres for which they are responsible. The Government of India do not propose, therefore, to pass in review here the detailed analysis given in the report, but I am to add a few general conclusions that follow from the facts which have been ascertained.

5. It is clear in the first place that there are wide differences in working conditions between centre and centre. In view of the climatic variations some such differences were inevitable. Thus, in some centres there is no serious difficulty in maintaining comfortable conditions of work, and the report, while indicating the possibility of minor improvements, suggests that the operatives in such centres do not stand in pressing need of protection. In most centres, however, there appears to be considerable room for advance, and in some a strong case has been made out for insisting on radical alterations in the working conditions. For example, Mr. Maloney's description of conditions in Ahmedabad weaving sheds on page 16 of his report reveals a state of affairs which cannot be regarded with equanimity.

6. It is evident, however, that in addition to the inevitable variations between centre and centre, there are unexpectedly wide differences in conditions in different mills in the same centre. For example, in Bombay Mr. Maloney shows that the conditions in one weaving shed in December approximate to those in another in May—the worst month of the year—and that between the two mills there is an average temperature difference of 6° all the year round. In Ahmedabad the statistics show equally large differences; it is clear that both here and in the Central Provinces, where climatic conditions must be regarded as unfavourable, there are individual mills where conditions are markedly superior to the average. In practically every case in which comparisons are possible, conditions vary considerably from mill to mill. This conclusion is especially significant, as it indicates that conditions in the mills, while they are not, of course, independent of the climatic conditions, do depend to a large extent on factors lying within the control of factory owners and managers.

7. The problem can thus be reduced to one of standards. But there are two difficulties to be surmounted before standards can be laid down. In the first place, a system must be selected which will render possible a fairly accurate measurement

of the air conditions in any factory, viewed from the standpoint of the health and comfort of the operatives. These conditions must be expressed in some numerical form which will enable the inspector, employers and all who are concerned to compare without undue difficulty conditions in one mill with those in another, and conditions on one day or at one period with those on another day or at another period. The scale or scales evolved must be such that a movement in one direction or the other does correspond more or less accurately to a change for the better or for the worse in the conditions under which the operatives work. In the second place, if such a scale can be successfully constructed, there remains the difficulty of determining in the light of the needs of the operatives and the requirements of the industry the actual standards to be fixed, i.e., the minimum position or positions on the scale to which mills or departments are to be required to conform.

8. The method of measurement proposed in Section 15 of the report has as its basis the cooling power of the air, as ascertained by the kata-thermometer. A full description of this instrument is given in the report, with clear instructions for its use. It is sufficient to say here that it is an alcohol thermometer graduated from 95° F. to 100° F., and that the cooling power of the air is measured by observing, subject to certain precautions, the time taken for the temperature of the thermometer to fall from 100° to 95°. The cooling power is obtained by dividing the fixed number recorded on the instrument by the number of seconds of time occupied by the thermometer to fall. The kata-thermometer can be used either "dry or wet," i.e., the bulb of the thermometer may be either exposed in a dry state to the air or it may be covered by a small thread bag which is moistened with water before an observation is taken. It is the latter method which Mr. Maloney proposes to employ.

9. The theory underlying the use of the kata-thermometer is that, by registering the cooling effect of the air on the bulb when that bulb is approximately at blood heat, it indicates the cooling effect which the air conditions exercise upon the human body. The dry kata-thermometer gives an approximate measurement of the cooling power of the air on a person who is not losing heat by evaporation, i.e., who is not perspiring. When heat is being lost by evaporation the wet kata-thermometer gives a more reliable index. The measurement is always approximate, for the effect of clothes has to be considered, but where, as in Indian cotton mills, the workers are very lightly clad and the temperature is high, the wet kata-thermometer should give a very reliable estimate of the index of comfort. For other reasons, also, the dry kata-thermometer cannot suitably be used in Indian mills. It would be out of place here to enter into a technical discussion of the theory of the subject; reference may be made to the results of recent researches as given in such publications as the two Reports of the Medical Research Council on "The Science of Ventilation and Open-air Treatment" and the more recent report entitled "The Kata-thermometer in Studies of Body Heat and Efficiency." The Government of India observe that the conclusions reached independently by various researches in England and elsewhere have been confirmed by Mr. Maloney's extensive observations in India. In particular, to quote from the last of the reports, cited above, "In the judgment of all observers in all parts of the world, atmospheric conditions classified by one of us on the objective basis of kata-thermometric readings as unsatisfactory are, when tested by the subjective sensations of the observer, hard to endure."

10. The basis proposed—the cooling power of the air as measured by the kata-thermometer—is not as yet statutorily employed in any country in the world. But the existing standards in other countries date from a period before the recent researches were undertaken, and, in fact, before the kata-thermometer had been designed. Further, in addition to the strong case for the use of this method, there are serious objections to the use of any other method which has been suggested. The first method proposed in India was the prescription of the size of lateral openings in the factory walls or roof; an attempt to enforce such standards in Bombay more than thirty years ago was abandoned almost at once. The mere existence of openings of a certain size affords no guarantee to the workers of suitable conditions, while it may make the continuance of some processes impossible at certain seasons. The measurement of the content of carbon dioxide which has been used in England and other countries and which was contemplated by the Textile Factories Labour Committee of 1907 is now generally admitted to be thoroughly unsatisfactory; such a standard gives no measurement of comfort of the operative. The prescription of standards depending on the dry bulb and wet bulb temperatures and the difference between them is of more value, but it fails, like the standards just mentioned, because it takes no account of the vital factor of air movement. The adoption of wet and dry bulb scales on the lines of those laid down in Great Britain as necessary for the protection of the operatives would practically extinguish the cotton mill industry in India. Even if full allowance were made for the fact that the Indian operative does not undergo discomfort in conditions in which an English operative would find it difficult to work, any such system would act arbitrarily in preventing humidification when its

use was not objectionable, and in permitting its use when it should be forbidden. A system so prepared would, in fact, show little correspondence to the actual needs of the operative or to the legitimate requirements of the industry.

11. If the method of measurement is approved, the remaining question is the standard of cooling power to be adopted. Mr. Maloney suggests that the standard of cooling power as measured by the wet kata cooling power should be 11 (milli-calories per sq. cm.) at head level. He notes that a considerably higher standard would be advantageous, but, as a result of his observations, he considers that the standard proposed if applied, would prevent danger to health and serious discomfort among mill operatives. The standard is certainly a low one; it is far below the minimum suggested by Dr. Leonard Hill for sedentary work (18) and still further below the standards suggested for manual work (25 and 30). But Mr. Maloney has given grounds for the conclusion that standards regarded as suitable in Europe should not be applied unaltered to Indian conditions. And it is evident that the attainment of this standard would mean a vast improvement in existing conditions; it would probably fail to eliminate discomfort, but it would certainly prevent the continuance of conditions seriously detrimental to the operatives. While, therefore, this standard need not be regarded as an ideal one, its attainment would go far towards the solution of the problem. I am, therefore, to suggest that efforts during the next few years should be concentrated on making its enforcement practicable.

12. There remains the important question of the reconciliation of the demands of the industry with the standards to be introduced. Unfortunately, it is only too clear from Mr. Maloney's observations that the immediate introduction even of the low standard discussed in the preceding paragraph is impracticable at present. In some centres, e.g., Madras, the standard is exceeded for most of the year, and there would probably be no great difficulty in conforming to the standard continuously. But it is evident that in most of the mills in Ahmedabad and Bombay the cooling power seldom remains above the standard for the whole day, and frequently fails to attain the standard at any time in the course of the day. In some centres, such as Cawnpore, the standard is maintained only when the weather is cold. Mr. Maloney therefore proposed to allow the mills a period of about two years to enable them to introduce adaptations and arrangements capable of producing the required standard of cooling. Assuming that the standard is generally approved, the Government of India doubt if the period suggested will prove adequate for the purpose, and on this question I am to request that in reply an opinion may be expressed.

13. I am now to invite attention to the regulations proposed by Mr. Maloney for immediate application. These will be found on pages 87 to 90 of the report; they are designed to effect as much improvement as is immediately practicable in existing conditions and to enable millowners to prepare for the introduction of the standard of cooling power already discussed. Mr. Maloney's proposal, in essence, is to permit, as a temporary alternative to a standard of cooling power, a standard based on the difference between the wet bulb and dry bulb temperatures. The schedule of temperature suggested by Mr. Maloney naturally allows much wider latitude than the schedule at present in force in England. Mainly in order to meet monsoon conditions, Mr. Maloney further proposes to allow humidification so long as the wet bulb temperature inside the mill does not exceed the corresponding temperature outside in the shade by more than a small fixed amount. The result would be that artificial humidification would only be prohibited if the conditions in a mill violated each of three different standards. If the mill satisfied the regulations either by maintaining an adequate difference between the dry bulb and wet bulb temperatures, or by preventing the wet bulb temperature inside the mill from rising by more than a fixed amount above the wet bulb temperature outside, or by providing the necessary standard of cooling power, no restriction would be placed on artificial humidification. It is further proposed that where steam is used for the purpose of artificial humidification its introduction should cease when the dry bulb temperature of the room exceeds 85° F. There is abundant evidence to prove that the most distressing conditions are associated with use of live steam for humidification. As Mr. Maloney observes, the great objection to its use is that "it increases the wet bulb temperature, but unlike cold water humidification does not at the same time decrease the dry bulb temperature." The evidence which Mr. Maloney has adduced, affords, in the opinion of the Government of India, strong support for the immediate introduction of a regulation of the type proposed.

14. Mr. Maloney's examination of the application of his rules to existing conditions in the mill suggests that these regulations could be introduced without much difficulty. The existence of the alternative standards he suggests appears to afford considerable latitude, and as steam humidification when used in mills appears to be invariably supplemented by water humidification, the prohibition of steam humidification when a temperature of 85° is reached should not prove impracticable. It is, of course, obvious that the present unsatisfactory conditions cannot be improved

without placing a certain initial burden upon some millowners. The Government of India are reluctant, more especially at a time when the industry is not in a particularly flourishing condition, to impose any unnecessary burdens, but they feel that the existence of conditions disclosed by Mr. Maloney's investigations justify them in demanding that, in a number of cases, measures shall be taken to effect material improvements in working conditions. No factory should be permitted to conduct its work in conditions which constitute a serious menace to the well-being of its workers, and if the conditions regarded as objectionable are eliminated in other mills working under exactly similar climatic conditions, the argument for bringing pressure on the mills in which the worst conditions are found is extremely strong.

15. There are, however, reasons for believing that the benefits which will accrue from an improvement in working conditions will not be confined to the operatives. Researches in England and elsewhere have shown that an improvement in cooling power results in an increase of efficiency, and the experiments described on pages 60 to 73 of Mr. Maloney's report indicate clearly that similar results may be anticipated in India. It is indeed only natural to expect that, where the operatives have to carry on their work under conditions involving extreme discomfort, their efficiency should be temporarily, if not permanently, impaired, and there is every hope that an improvement in atmospheric conditions will be accompanied by an increase in output which may compensate for the extra expense incurred.

16. Mr. Maloney further proposes to insist on (a) the provision of an adequate number of hygrometers in departments where humidity is likely to be excessive, and (b) the maintenance of humidity registers containing records of the wet and dry bulb temperatures. The regulations requiring the maintenance of a number of hygrometers and the corresponding regulations for their proper care are obviously necessary. It is also evident that if accurate registers can be maintained in the form prescribed by Mr. Maloney, the data provided will be of great value. The statistics so collected would not merely provide information regarding any particular mill; they would furnish material for estimating the effect of any regulations introduced, and for enabling Government to modify unsuitable rules and to introduce fresh rules when required. There is considerable fear, however, that the entries in the register will be inaccurate, more especially in mills where the prescribed standards are being contravened, and it is clear that the register, if maintained, cannot be expected to provide a check on breaches of the regulations, or to take the place of adequate inspection. But the better mills may be expected to maintain reliable records, and in all mills the maintenance of the registers will ensure that the hygrometers are kept in working order; the work of the inspectors may be largely nullified if no such precaution is taken. On the whole, therefore, the Government of India are inclined to support Mr. Maloney's proposals.

17. Finally, it is proposed to empower inspectors to insist on the adoption of methods designed to reduce temperature and to place restrictions upon the methods of construction in the case of new mills. Rule 8 of the draft rules framed by Mr. Maloney contains certain proposals of this nature, and a number of other suggestions are made on pages 74 to 84 of the report. So far as existing mills are concerned, it may be advisable to empower inspectors to insist on the whitewashing of roofs or on spraying them with water when temperatures are excessive. It is also worth considering whether inspectors should not be empowered to insist on the introduction of suitable devices, where these are necessary, to mitigate unusually high temperatures. It should not be difficult for the inspector to select the mills or departments where abnormally high temperatures prevail, and general orders might then be applied to these cases.

18. As regards new mills, there appears to be no reason why effective control should not be maintained over their construction. As Mr. Maloney points out, a considerable amount of the discomfort suffered at present is due to the faulty construction of mills. Municipalities have usually the power to control the construction of new buildings in certain respects, but the considerations which weigh with such authorities in granting or refusing permission to construct are usually unconnected with the internal temperatures likely to prevail in the mill after it has been built. The Government of India are inclined to the view that, subject to the control of the local government, the sanction of the factory inspector should be necessary to the construction of a new factory or the conversion into a factory of an existing building used for some other purpose. The factory inspector would thus be able to prevent the erection of mills in which, by reason of the details of their construction, the operatives would be unable to work under humane conditions. This principle, if adopted, might apply equally to cotton mills and to other types of factories. If this suggestion is adopted, it will be necessary to ensure that industrialists are not subjected to unavoidable delay or unnecessary interference. It might be advisable for the local Government to issue and to publish for general information

instructions for the guidance of factory inspectors, specifying the particulars, e.g., as regards class of building, roof material, height, etc., which should render a proposed building above question.

19. In conclusion, it may be convenient to set down the main questions upon which the Government of India desire the views of the local Government.  
your views.

These are :—

(1) Should cooling power, as measured by the kata-thermometer, be adopted as the most satisfactory basis for ultimate control of the humidification and ventilation in cotton mills ?

(2) If so, should the standard suggested by Mr. Maloney be approved ?

(3) What period must be allowed to elapse before a standard of this kind can be enforced ?

(4) Is it advisable to introduce immediately the alternative standards suggested in Rules 1 and 2 on page 87 of Mr. Maloney's report ?

(5) Should the use of steam be prohibited when the temperature of a department exceeds 85° F. ?

(6) Should mill managers be required to maintain humidity registers ?

(7) Should inspectors be empowered to insist on whitewashing, roof-spraying, or other measures to reduce excessive temperatures ?

(8) What measures should be taken to control the construction of new factories with a view to ensuring healthy conditions of work ?

*Letter to all Local Governments (except Burma, Bihar and Orissa and Assam) and the Chief Commissioners of Delhi and Ajmer-Merwara, No. L.843, dated 11th December, 1925.*

The Government of India have considered in detail the opinions expressed on their circular letter No. L.843 of 26th April, 1924, and I am to forward for the information and guidance of the local Government their provisional conclusions.

2. In respect of one of the proposals put forward by Mr. Maloney, there is practically complete unanimity. This is the suggestion that the use of steam for the purpose of humidification should be prohibited when the temperature in a department exceeds 85° F. It is generally admitted that the worst conditions are associated with the use of steam for humidification at high temperatures, and the Government of India consider that prohibition of this practice will be attended with little difficulty and will constitute an important reform. They desire, therefore, that rules should be issued by local Governments to secure this end after allowing such period as is considered reasonable to enable the management of the mills affected to make the necessary alterations. Suggestions have indeed been made that a lower temperature standard might reasonably be insisted on and, if the local Government consider that it is feasible and wise to insist on a more stringent standard than is suggested by Mr. Maloney, the Government of India have no objection to their so doing. I am to request that copies of the draft rules and of the rules as finally framed may be forwarded to the Government of India after their publication.

3. On the first four questions formulated at the close of this department's previous letter, there is some divergence of opinion. The importance of effecting an improvement in conditions is generally recognized and the method of regulation suggested by Mr. Maloney has not been seriously questioned by competent critics. But there is in many quarters some reluctance to adopt the definite standards suggested without further investigations. In at least one province further inquiries are being conducted by the local Government. Considerable stress has been laid on the wide climatic differences prevailing between province and province; and, while the Government of India are anxious that advance in one province should not be delayed by inaction in another, they recognize that it is probably impracticable, at present at any rate, to prescribe minimum standards applicable to the whole of India.

4. They therefore approve the suggestion that further inquiries and experiments should be made, and they consider that the scope and nature of these inquiries can best be determined by local Governments with full regard to local conditions and local needs. They believe that in nearly all cases the maintenance of humidity registers in the more important mills will be an essential preliminary. And they are inclined to think that in most cases it will be necessary to proceed as Mr. Maloney has suggested, by the introduction of intermediate standards before final standards can suitably be prescribed. The Government of India consider that the necessary steps should now be taken by the local Government to obtain any further information which they require to enable them to formulate final conclusions. I am to request

that a special report embodying the results of any inquiries made, together with an account of the working of any rules, experimental or otherwise, which may have been introduced in the period, may be submitted to the Government of India not later than 31st October, 1927. The Government of India consider that the period allowed should be sufficient to permit of a full investigation, and it may then be possible, by examining the results obtained in different provinces, to secure some co-ordination in the rules relating to the subject.

5. Paragraph 17 of this department's previous letter raised the question of the control of temperature in factories generally. The Bill to amend the Indian Factories Act, 1911, introduced in the Legislative Assembly in September, 1925, contains clauses which, if adopted, will place inspectors in a position to secure that reasonable temperatures are maintained. This Bill has been separately circulated to local Governments for their opinions, and no further reference to this question is necessary here.

6. The question of the control and inspection of new factories, which were discussed in paragraph 18 of this department's previous letter, will form the subject of a separate communication.

## APPENDIX V.

### *Sickness Insurance.*

*Letter to all local Governments, No. L. 1518, dated the 20th September, 1928.*

The following resolution was adopted by the Council of State and the Legislative Assembly on the 20th and 27th March respectively :—“ That this Council/Assembly having considered the Draft Conventions and Recommendation adopted by the Tenth International Labour Conference recommends to the Governor-General in Council that he should not ratify the Draft Conventions nor accept the Recommendation.”

2. The Government of India are satisfied that the introduction in India of any comprehensive scheme on the lines of the Conventions is not a practical proposition in existing conditions. The reasons for this conclusion were indicated in the course of the debates in the Legislative Assembly and Council of State, and the Government of India do not think it necessary to enlarge upon them. They are of opinion, however, that the possibility of introducing some provision for sickness insurance requires further examination. Sickness insurance laws are now in force in nearly every leading country, and the Government of India are in entire sympathy with the ideals that underlie these laws. They are satisfied that the need of Indian workers for some provision is in no way less than the need of workers in other countries, and the problem as it presents itself to them is one of determining the extent to which the serious practical difficulties that must attend the introduction of any scheme can be overcome. I am to request that this matter may kindly be investigated by the local government, and I am to suggest for their consideration that it might be advisable to entrust the examination to a small and informal committee including a few representatives of employers and employees.

3. The Government of India do not desire to put forward any particular scheme for consideration at this stage. They recognize that conditions differ widely throughout India, and they would prefer to await suggestions from those who are familiar with the working conditions in different centres. Certain features, however, are common to practically every scheme of compulsory sickness insurance. These include the provision both of medical attendance (including medicines, etc.), and of a regular allowance to the worker who is prevented by sickness from earning a regular wage. Ordinarily benefits are withheld from persons who have not contributed for a specified minimum period before falling sick and a minimum period of sickness is necessary to qualify for benefit.

4. Laws relating to sickness insurance are generally national in their application ; but the workers covered are ordinarily distributed for the purposes of insurance among a number of groups, each of which is responsible, under State control, for its own fund. These groups may be organized in various ways ; they are commonly formed on a regional or an industrial basis, i.e., they may cover the workers in a particular local area or the workers in a particular division of industry. The benefits due to the workers in any group are met from the fund pertaining to that group ; and to this fund insured workers are required to contribute regularly ; their contributions almost invariably provide at least one-half of the income required. The remainder of the income is ordinarily met by a contribution from the employer,

supplemented in a considerable number of cases by a contribution from the State. The levy of a contribution from the employer is justified both by the extent to which the conditions of employment contribute to produce sickness, and by the benefit which the industry derives from a healthy and regular labour force.

5. It will be evident therefore that in any consideration of the problem there are certain factors which must receive attention. These include :—(1) the extent to which it is possible to provide medical facilities ; (2) the extent to which medical facilities are likely to be acceptable to the persons insured ; (3) the extent to which insured persons suffering from sickness are likely to remain within the area within which the organization applicable to them can effectively operate ; (4) the proportion which the expense of administration (which includes the provision of some machinery for the settlement of disputes) is likely to bear to the total cost of the scheme ; (5) the extent to which the classes whom it is proposed to insure are willing and able to meet the charges falling upon them ; (6) the extent to which State assistance can be granted.

6. The Government of India anticipate that an examination of the questions will lead to the conclusion that if sickness insurance schemes can be successfully introduced, they must, in the first instance at any rate, be applicable only within well defined limits, either regional or industrial, or both. If this anticipation is fulfilled and if the local government consider that the introduction of compulsory sickness insurance is practicable, they will doubtless consider whether legislation should be provincial or central. On this and the other questions raised in this letter, the Government of India are anxious to receive the views of the local Government, and they will be prepared to consider sympathetically any constructive proposals that may be put forward.

*Letter from the Government of Bombay, No. 5131-D., dated the 15th February, 1929.*

In the opinion of the Government of Bombay a scheme of sickness insurance is not a practical proposition at the present time, and assuming it were, if it involved contributions from the funds of the local Government, the latter would be unable to find them. If the Whitley Commission, after hearing evidence in all parts of India, comes to the conclusion that a scheme of sickness insurance is desirable and is practicable, and indicates the lines upon which such a scheme can be started, then the Government of Bombay will give the scheme its hearty support to the extent of the resources which may be made available.

*Letter from the Government of Bengal, No. 1719-Com., dated the 6th March, 1929.*

In view of the impending appointment of a Royal Commission on Indian labour, the Government of Bengal propose to take no further action in the matter until the subject is dealt with by the Royal Commission.

*Letter from the Government of Madras, No. 903-L., dated the 19th March, 1929.*

The Commissioner of Labour was asked to entrust the examination of the question to a small and informal committee as suggested by the Government of India, but the Committee so formed has not been able to suggest any satisfactory method of introducing a scheme of sickness insurance, and is of opinion that actual experiment is the only way to arrive at a definite appreciation of the practical difficulties involved and possibly a solution. This Government doubts whether any committee could within a reasonable time arrive at any result reasonably conclusive. A survey would have to be made of the wages paid in a large number of industries. Some knowledge also would have to be gained of the profits which those industries make in order to ascertain how far any particular industry would be able to bear the cost of the contribution which the employers would have to make. Extensive enquiries would also be necessary amongst the labourers themselves as to their willingness to contribute a portion of their wages for the scheme. All this would take time, and the Government do not consider it either expedient or necessary to have such an experiment made.

2. His Excellency the Governor in Council has carefully considered the question, and entertains grave doubts whether compulsory sickness insurance is at present feasible in the existing conditions in India. In the first place, the most authoritative opinion amongst those consulted is to the effect that the labourers themselves would be unwilling to share the cost which the scheme would entail, and the Government concur in this view. In a large proportion of the tea and coffee plantations and in

all well-organized industrial concerns, medical attendance is now given free, and in such cases in particular labourers would object to pay a contribution for what they now get for nothing. Secondly, in a large number of industries the labour population is floating, and the Government anticipate great difficulty in applying a compulsory scheme of sickness insurance to such men. This is particularly the case in the tea and coffee plantations in this Presidency, where labourers leave the estates for several months in the year and return to their villages in order to cultivate their own lands or often merely to revisit their own homes.

As regards medical facilities to work the scheme, it might be possible to provide them, but the real difficulty would be that the labourers who are mostly illiterate would very often look askance at the allopathic system of medicine, and would prefer to be treated by those who have a knowledge of the indigenous systems. This factor will greatly increase the difficulty of introducing any compulsory scheme, for the number of persons qualified in the indigenous systems who could reasonably be trusted would be quite inadequate to meet the demand, and the Government are opposed to the idea of allowing workmen coming under the scheme to be treated by people who in the large majority of cases may be little more than quacks.

Further, it is almost impossible on the data available to calculate what the cost of the scheme would be, particularly in reference to that portion of it which the State would have to bear. This Government have no funds at present to finance any such scheme, and the resources of the province are required to provide more important services such as elementary education and increased medical facilities and sanitary measures which would benefit the whole population, and not privileged sections of it. This is essentially an agricultural province, and the Government see no reason why they should go further to confer more privileges on the small section of industrial labour which already enjoys far greater amenities in respect of education, medical attendance, water supply and other sanitary requirements than the general taxpayer in the rural tracts, whose equipment in those respects lags behind that of those in towns. Illiteracy, which generally elementary education alone can break down, would be a fatal obstacle to the working out of any general scheme of sickness insurance, and even if a scheme restricted to industrial labour alone were attempted, the Government see no reason why they should bear the financial burden in respect of the large volume of industrial labour employed in undertakings in this Presidency directly or indirectly under the control of the Government of India, such as railways under company management. This Government also see no reason to suppose that the local legislative council would assent to the additional taxation required to meet the expenditure from provincial funds, nor would it agree to funds which are required for other general purposes being diverted to such a scheme, which attempts to impose on India measures which ignore Indian conditions, and are based on Western practice and conditions.

3. In the above circumstances, this Government are opposed to the introduction of any scheme of sickness insurance in this province.

*Letter from the Government of Assam, No. Immgn. 320-1674-G.J., dated the 23rd March, 1929.*

In the opinion of the Governor in Council no compulsory sickness insurance scheme would be practicable in Assam at present. The tea and mining industries already provide free for their employees all the benefits that could be obtained by any such scheme, and the introduction of any compulsory insurance to which the employees must contribute would be greatly resented by the labour force. The labour employed in these industries is illiterate and excitable. The labourers would not understand the merits of such insurance. They would certainly regard the contribution levied from them as an impost by their employers, and their resentment might lead to serious trouble and violence.

Outside the tea and mining industries labour in Assam is casual and migratory, and it would be impossible to bring such labour within any scheme of sickness insurance.

2. The question might be examined by the Royal Commission which is to be appointed to investigate labour conditions in India, but the Governor in Council sees no chance of success in Assam for any compulsory sickness insurance scheme on a contributory basis, until the spread of education and the general uplift of the labour population have changed the conditions now prevailing.

3. If conditions in other provinces are so far different as to justify such a scheme, and it is decided to introduce central legislation, the Governor in Council must urge that such legislation should not at present be applied to Assam.

*Letter from the Government of the United Provinces, No. 110-C., dated the 28th March, 1929.*

This Government appointed a small committee to examine the problem of sickness insurance.

The terms of reference of the committee and a copy of its proceedings are attached. It will be observed that the committee's views recorded in the proceedings represent those of employers of labour and Government officials only.

2. In 1927 the number of operatives in factories in the United Provinces under the Indian Factories Act was 88,319. Of these 19,331 were employed in Government and local fund factories. The number of perennial factories was 206, and of seasonal factories 126. The number of employees in the latter was about 12,000. There is little or no immigration of labour from outside the province to the provincial factories, so that provincial arrangements might be self-contained in regard to medical treatment as far as workers insured in this province are concerned. There is, however, considerable emigration of labour to other provinces, and the questions of transfer of insurances from province to province, and of provision here of benefits for men insured in other provinces would cause difficulty.

3. The Government agree with the committee that any legislation on the subject should be All-India rather than provincial. They also agree that at first, at any rate, a scheme could only be applied to factories under the Indian Factories Act; and that its application to domestic servants and other employees would be impracticable. They further agree that if it is decided to apply such a scheme to factories of a certain class only, as an experiment, the application should be an All-India one rather than local, in order that the factories in one locality may not be penalized in competition with those in others. The Government consider that if such a scheme is to be introduced at all, experiments should first be made; and they think that the Government and local fund factories, and particularly the railway workshops, offer a suitable field. They are further of opinion that it will be difficult to finance any part of such a scheme from provincial finances, and more especially so as the committee consider that Government will have to make a direct contribution as well as bear a share of administration expenses.

4. As regards the provision of medical facilities, they consider that it will be possible to arrange medical facilities for factory workers in this province in the places of their employment in view of the small numbers affected; but quite impossible to do so if they leave those places and return to their homes. If the payment of benefit is made contingent on acceptance of medical treatment, it is possible that there will be less tendency to such migration. The question of certification will present great difficulties. The provincial scheme for subsidizing medical practitioners to settle in the rural areas has so far proved a failure, and those areas are still very scantily provided with medical aid. The popularity of the various indigenous systems of medicine will add another complication. It will hardly be possible not to provide treatment by such systems for those who prefer it.

5. The Government can give no estimate of the expenses of administration. The figure in England is stated by the committee to be 1-9th of the total subscriptions. In the opinion of the committee, with which the Government agree, the funds must at the start be administered by a Government organization, even though separate accounts and separate funds may be maintained for the workers in separate industries or in smaller units. The committee could not come to clear finding on the point whether the separate funds should be on a basis of industries, or of locality, or both, but apparently they prefer a basis of industries. The Government think that a scheme should allow some flexibility in this matter.

6. The opinion of the committee that in the case of workers, drawing under Rs. 40 p. m., the burden would be shifted to the employers by a demand for increased wages is important. A 3 per cent. contribution from the workers, as in Japan, would mean six pies in the rupee, and might well produce a demand for an increase in the case of workers on daily or piece rates of Re. 1 per day or less. The committee in general consider that the introduction of sickness insurance is likely to be burdensome to the provincial industries in present circumstances and to hamper their expansion. The Government do not consider that there is yet any strong demand for such a scheme among the workers or the public of the province; and they think that its introduction is surrounded with such difficulties as to make it doubtful if it is worth while making an attempt at present to do so. Any such attempt should be on a small scale.

7. The Director of Industries put before the committee an outline alternative proposal of his own for a compulsory provident fund system as opposed to compulsory insurance. The idea has certain attractions in view of the industrial conditions of the country. It lends itself easily to extension for provision for old age, maternity,

unemployment and so forth ; and its administration would be easier ; since the risk of fraud is less. A person who draws from his provident fund under false pretences is at any rate only damaging himself, and not defrauding others. The disadvantages are that such a scheme cannot provide the same protection for an equivalent contribution, and would not entail compulsory medical treatment, and thus encourage the extension of facilities for medical relief. The Government do not therefore endorse the committee's approval of this scheme.

*Copy of Terms of Reference.*

To consider the practicability of introducing some provision for sickness insurance for industrial workers and to make recommendations. In particular, and without detracting from the generality of the above, the committee should examine the following questions :—

(i) should such insurance first be made applicable to all industries or to certain selected industries only, and if so to which ;

(ii) should it first be made applicable all over the province or only in certain local areas (whether to all industries or only to some) and if so in which ;

(iii) should separate insurance funds be formed for the workers in certain industries or groups of industries ; or for those in certain local areas ;

(iv) the extent to which medical facilities (a) can be provided and (b) will be acceptable to the insured ;

(v) the extent to which insured persons suffering from sickness are likely to remain within the area within which the organization applicable to them can effectively operate ;

(vi) the proportion which the expense of administration (which includes the provision of some machinery for the settlement of disputes) is likely to bear to the total cost of the scheme ;

(vii) the extent to which the classes whom it is proposed to insure are willing and able to meet the charges falling upon them ;

(viii) how far the existing industrial structure of the province can afford to bear the burden involved without being seriously handicapped ;

(ix) the extent to which State assistance can be granted ;

(x) how far certain practical difficulties, e.g., in connection with the obtaining of medical certificates, the extent of the reliability of such certificates, compulsion to undergo medical treatment, the administration of the insurance funds, etc., can be met.

*Proceedings of the Committee appointed by the United Provinces Government to consider the practicability of introducing Sickness Insurance for industrial workers.*

*Date of Meeting, 4th February, 1929.*

*Present :*

- (1) Mr. S. P. Shah, I.C.S., M.L.C., Director of Industries, United Provinces—  
*Chairman.*
- (2) Mr. E. M. Souter, M.L.C., *Member.*
- (3) Mr. W. R. Watt, M.A., B.Sc., *Member.*
- (4) Lala Padampat, *Member.*
- (5) Sardar Kirpal Singh Majithia, Sarava Sugar Factory, Gorakhpur, *Member.*
- (6) Lieutenant-Colonel H. Ross, I.M.S., Civil Surgeon, Cawnpore, *Member.*
- (7) Mr. W. G. Mackay, M.B.E., Chief Inspector of Factories and Boilers, *Secretary.*

1. Mr. W. Vernon, of the Elgin Mills, could not attend, as he had to go away from Cawnpore. Mr. Ganesh Shanker Vidyarthi, President of the *Masdoor Sabha*, too, could not attend, but sent a written note. This note was read out to the committee at the very outset. The committee thought it was a case based on the same arguments as Messrs. Joshi and Chaman Lal had used in the debates in the Assembly, and contained very little original matter needing special attention.

2. Before the committee proceeded further, Mr. Souter raised the question whether in view of the announcement by His Excellency the Viceroy of the appointment of a Royal Commission to inquire into the problems relating to industrial labour, it would be desirable for this committee to proceed. The chairman explained that he had already ascertained that the United Provinces Government did intend the committee to examine the problem as defined in the terms of reference to it. The committee thereafter proceeded with its work.

The question whether in the present industrial structure of the province sickness insurance was needed at all was raised. The chairman explained that a consideration of this question would be outside the scope of the reference to the committee.

3. The chairman explained in brief outline the history of the case and the scope of the terms of reference. The ten particular terms were, he said, intended to be a fairly exhaustive detailed analysis of the first sentence, which was the basic term of reference. The members present were asked if any of them had any other particular points to suggest. No member had any. The chairman, however, said he had two such points for the committee's consideration, viz. (i) whether any other more practicable scheme for insuring against sickness can be suggested. He added that he had such a scheme in view, which he would bring up for the committee's consideration later on; (ii) whether such scheme as might be introduced should apply to all classes of industrial labour or to only certain selected ones. The committee proceeded to consider this second point.

4. The committee unanimously accepted the proposition, that it will be difficult to supervise the actual working of any scheme except in the case of labour employed in factories under the Indian Factories Act. Messrs. Watt and Souter further held that it would be unfair to introduce a scheme not applicable to non-factory labour. Colonel Ross proposed that the scheme should, in the first instance, embrace only skilled and semi-skilled but not unskilled labour. The reason for the restriction proposed by him was that unskilled labour would be more migratory (not only from factory to factory but from one industrial centre to another), and being normally in receipt of lower wages would not be able to bear the burden so well as skilled and semi-skilled workers. Mr. Souter said that in practice it would be difficult to define in precise terms the distinction between skilled, semi-skilled and unskilled labour. Mr. Watt said that being poorer the unskilled labourer was in even greater need for a provision against sickness than his skilled and semi-skilled confrere.

After some discussion, the committee could not arrive at a unanimous resolution. Sirdar Kirpal Singh was for restricting the scheme to only skilled labour, Colonel Ross and the chairman to skilled and semi-skilled labour, and the other three members were for applying it to all three classes simultaneously. Even Sirdar Kirpal Singh, Colonel Ross and the chairman made it clear that their proposal to restrict the operation of the scheme was conditional on satisfactory and generally acceptable definitions of skilled, semi-skilled and unskilled labour being practicable.

The committee were unanimously of opinion that no industrial employee (i) whose engagement is on a genuinely temporary basis, or (ii) whose aggregate annual income as a wage-earner in a factory or factories exceeds a thousand rupees a year (or if his wages are regulated on a monthly, weekly, daily or other periodical basis, then such amount as represents a proportionate fraction thereof) should be brought under the operation of such scheme. The difficulty of defining the word "temporary" in (i) came up for some discussion. But the committee decided that it would not be possible for it to go into such details, and it preferred to leave the definition of this term to Government in the light of such material as the proposed industrial labour commission will, in all probability, make available. In connection with point (ii) the committee suggested that in case full annual income is not actually earned, the calculation for the purpose of ascertaining whether the scheme is applicable to that case or not, should be based on an estimate of what the aggregate annual income would, at the rates applicable and in force, be.

5. The committee then considered the terms of reference *seriatim*, but it desired, that its views on the question and especially on terms of reference Nos. 1 and 2 should be taken as an organic whole.

(i) In the committee's opinion it would not be quite fair to pick out certain industries and accord them differential treatment from the rest; this would amount to undesirable discrimination. On the other hand, some members emphasized that a universal application of the scheme to all industries was utterly impracticable, and indeed in some cases unnecessary and even undesirable. In this connection the distinction between seasonal and non-seasonal industries was discussed, and in spite of the difficulty of drawing it in every case, it was decided to adopt it on the ground that, generally speaking, it is well understood, and is already officially recognized. Ultimately the following resolution was adopted:—"In principle any such scheme should be applied to all industries and all areas, not only in the province but in the country. In the present stage of industrial evolution, however, it is impossible to apply it to seasonal industries." As to non-seasonal or perennial industries, Messrs. Souter and Watt were, for the reasons stated above, for bringing all of them under the operation of the scheme. All the other members of the committee, however, were in favour of restricting the scheme to selected non-seasonal industries. Consistently

with their view as just stated, Messrs. Souter and Watt would not specify the non-seasonal industries, which should, in the first instance, be put under the scheme. Colonel Ross thought that the workshops run by the State railways furnished "the most excellent places for experimenting with such a scheme;" he was not prepared to go further. The secretary explained that the railways already have got systems which provide *inter alia* some insurance against sickness. But Colonel Ross still thought that as regards any formal scheme of sickness insurance, the State should first experiment with the workshops. Sardar Kirpal Singh and Lala Padampat agreed with him. The chairman's view was that in the light of the secretary's remarks regarding the system already generally in force in the workshops, and also because the numbers of those benefited would in such case be a small fraction of the total industrial population of the country and even of the province, some other non-seasonal industry would also have to be brought under the scheme. He thought, that from the points of view of the organization of the industry, the stability of labour supply and the genuinely "industrial" character of the labour employed, the textile industry furnished another suitable field for experimenting. But he added that the application of the scheme to any private as distinguished from State industry should, in any case, be subject to similar industries in the other provinces being treated in an essentially similar manner; otherwise he thought there would be unfairness in the internal competition among the units of the industry or associated industries in the different provinces. To this the committee unanimously agreed.

(ii) The committee unanimously accepted the proposition that in the application of the scheme no discrimination between various local areas should be made, whether such application be merely experimental or substantive. In fact, as explained towards the close of the discussion on point (i) the committee agreeing with the chairman went a little further.

(iii) The committee felt that a decision on this question would to a large extent depend upon the character of the scheme adopted and the extent of its applicability. The chairman explained the various systems prevalent in European countries, and classified them into three groups. Colonel Ross explained in brief outline the scheme in operation in one of the Cawnpore mills. These formed the basis of the discussion that ensued. The propositions (i) that if and when reliable private enterprise (in the form of insurance companies or of associations of employers in general or in specific industries) is or becomes available, it should be utilized, but (ii) that for the present and subject to the above proviso the State should undertake the administration of all such insurance funds through a central organization located at Cawnpore, but with local representatives at important centres, were both unanimously agreed to. The committee thought that in the present circumstances of the country, especially of this province, this was the only sound way of securing stability, solvency and efficiency. The committee had, however, no objection to accounts and actuarial tables and other similar material and information being maintained industry-wise; in fact this was, in its view, the only way of securing a fair distribution of the burden of the scheme in force among the various component units, e.g., textiles, engineering, tanning, leather-working, etc.

(iv) and (v) Before the committee proceeded to discuss these points, the chairman remarked that terms Nos. (iv) and (v) would have to be taken together. He explained that the United Provinces Government had accepted, and to some extent even applied certain schemes for the extension of medical relief in the rural areas. Colonel Ross said he did not have the latest information or figures about these schemes. These schemes were kept in view throughout the discussion from the standpoint of their bearing on the practicability of sickness insurance. Colonel Ross had already made it clear that the question of surgical treatment would have to be dealt with separately from that of medical treatment as the problems and solutions were not identical. The committee felt that it could not advise in any precise terms on the extent to which medical facilities can be provided, unless it had much more material, especially that relating to provincial finances and Government's intentions in the matter of rural medical relief. Ultimately the following resolutions were unanimously adopted:—

(a) "Barring the towns, the existing medical facilities (even making an allowance for such schemes of expansion as Government have accepted) are in the committee's opinion utterly inadequate to deal with any scheme of sickness insurance. This is particularly so in the rural areas. It will not be possible to introduce and work any such scheme, unless and until such facilities are very greatly augmented."

(b) "In view of the facts, that the western scientific (or 'allopathic') system of medicine is not universally acceptable in this country, and that many other systems, e.g., homeopathy, bio-chemistry, unani, ayurvedic, etc., co-exist, and that some workers will prefer one or the other of these and will have a legitimate right to that which he prefers, such extension of medical facilities, as the province consistently

with its financial capacity is likely to be able to undertake in the near future, will still be utterly inadequate for the purpose of applying any scheme of sickness insurance on western lines. In the committee's opinion, however, it is possible, though not without difficulty, to work such a scheme in the more important towns."

(c) "It is impossible to state in precise terms the extent to which the insured persons suffering from sickness are liable to remain under continuous medical treatment. But the committee endorses Colonel Ross' view, that if any scheme is introduced, enabling workers to draw sickness insurance benefit for such time as they remain under medical treatment, it should considerably alter the normal workers present attitude towards (a) going to or remaining in hospital or other medical relief centre, and (b) going away to his own or to his friend's or relation's home."

"Beyond this it is impossible to know the extent to which such facilities as can be provided will be acceptable to the insured."

(vi) There was not sufficient material available for an adequate discussion of this question. The committee thought that it would be necessary to obtain relevant statistical information from other countries, especially Japan, where such schemes are in operation. In its opinion, any estimate or alternative estimates would involve considerable labour and would still be of very hypothetical value. It noted the secretary's statements that in Britain the cost of administration amounts to one-ninth of the total subscriptions, but that he was not sure whether this includes the expense of settling disputes.

(vii) The committee considered that all employees would be able to bear their share of the burden of sickness insurance. But it thought it likely that while industrial employees drawing approximately Rs. 40 per mensem and over will be willing to bear it, the great majority of employees drawing less than about Rs. 40 per mensem will not be so. In case a system of compulsory contribution is, as it should be, introduced, the committee thought that there will probably be a demand for increased wages. The incidence of the burden will, in the committee's opinion, be shifted to the employers. It was, however, emphatically of opinion that if any such scheme is introduced, compulsory contributions levied both from employers and employees should be its essential feature, the employers' contribution being equal to but in no case exceeding the employees'.

(viii) The committee reviewed the salient features of the industrial situation in 1929 and contrasted them with those during the period 1919 to 1922. The effect of the one-sixth ratio of exchange came in for a lively attack. The severe competition of foreign industries, especially continental ones with their depreciated currencies was reviewed. Ultimately the following resolution was unanimously adopted :—

"In the existing condition of the country's industrial system any burden, which the inauguration of any such scheme must necessarily entail, will be found intolerably heavy, and will aggravate the handicap already imposed by the one-sixth ratio. The committee does not consider this an appropriate time even for experimenting with such schemes."

(ix) The principle underlying State assistance towards the introduction of sickness insurance schemes was next discussed. The non-official members were unanimous in their view that the State must contribute. The chairman thought that the State in India had already so many schemes on hand that it could not in its present financial condition be legitimately expected to make a contribution other than the cost of administering the scheme as contemplated by the committee in sub-paragraph (iii), towards a scheme which would benefit the employer and the employee but not in any specific manner the general taxpayer. The committee did not accept his contention, and adopted the following resolution :—

"Some State assistance, not only administrative but also financial, is essential. Having considered the system in force in Japan the committee consider that this is just about the system which would suit the circumstances of this country."

(x) The committee considered it impossible to work any such scheme, unless a system for medical relief and other matters corresponding to the one which prevails in Britain (viz., "panel doctors"), is simultaneously introduced. Having regard to the existing circumstances, especially the failure of the scheme of subsidised medical practitioners settling in the rural areas to achieve even a modest measure of success, the committee thought it would be impossible to introduce any scheme for sickness insurance as such ; it could not see how more medical practitioners could or would settle for practice in the rural areas.

Holding this view the committee could not think of any practical scheme for rendering medical certificates, especially in respect of workers leaving the towns, more reliable. Yet the committee thought the reliability of such certificates would be the pivot of any specific sickness insurance scheme.

As regards compulsion to undergo medical treatment, the committee held that no scheme lacking this feature would be practicable, and yet in view of the co-existence of numerous medical systems, they could not devise or even think of any practicable and reasonably economical scheme whereby such compulsion can be enforced.

As to the administration of insurance funds, the committee had already in (iii) above held that at present and subject to a proviso therein stated, such funds should be administered by the State through a central organization located at Cawnpore. Even in case it was decided to make over their administration to private agency (other than regular insurance companies or associations), whether such agency be under the control of, and responsible to, employers or employees or both, the administering agency should be made subject to the effective supervisory control of the State.

6. The chairman then proceeded to explain his scheme for a practical solution of the problem of provision against sickness (see paragraph 3). The committee endorsed his views, that sickness insurance was only the thin end of the wedge and that the claim of accident, unemployment and old age insurance would, in all probability, be put forward by Geneva for India's acceptance. He thought that on actuarial principles every specific scheme for insurance must entail a certain proportion of dead loss to society, and he held it to be far more practicable and economical for India, in her present condition, to adopt a general scheme which would meet all reasonable needs arising from sickness, accidents not covered by the Workmen's Compensation Act, unemployment and old age. He thought a scheme for a general provident fund (based on compulsory deductions of certain proportions, whether uniform or progressive or declining) would not only provide general insurance but would eliminate the problem of the difficulty of obtaining medical certificates, the risk of corruption and chicanery, the need to apply compulsion, etc. It would also have the important elements of self-help and self-interest. He added that the railways and government and public bodies and some private firms have such system in operation already. It would also provide for expenditure on "social events," e.g., marriages, funeral and post-funeral ceremonies, religious rites, festivities, etc.

The committee unanimously agreed that this would be an easy, economical and practical solution, not only in respect of sickness but also accident, unemployment, old age and "social events." The committee did not think they were called upon to go into further details, and preferred to leave them to be worked out by Government with or without the assistance of any other general or expert committee.

7. Before declaring the meeting over the chairman thanked, on behalf of Government and himself, all the gentlemen, especially the non-official ones, for the valuable assistance and advice which, at personal inconvenience and sacrifice, they had given to the department.

*Copy of Note by Babu Ganesh Shankar Vidyarthi, M.L.C., President, Mazdoor Sabha, Cawnpore, dated the 3rd July, 1929.*

The introduction of the sickness insurance benefit for the industrial workers in these provinces, if undertaken will not be a little bit too soon. Under the present circumstances, it will really be unmanageable to put the scheme in work as regards the workers who are in domestic and agricultural services. Some optional scheme can, however, be sketched out for these classes of persons, but as we have to take into consideration only the scheme of the sickness insurance for the industrial workers, I shall confine my remarks to that item only. The Honourable Sir Bhupendra Nath Mitra, while moving in the Assembly on 27th March, 1928, not to ratify the Draft Conventions and accept the recommendations of the International Labour Conference regarding the sickness insurance scheme for the workers of all sorts, raised certain objections against the scheme. He held that owing to the migratory nature of the labour in India, the absence of qualified doctors in the interior, and compulsory contribution to the insurance fund by the workers, the scheme for the sickness insurance for the workers could not work in this country. He was also very much afraid of the great expenses which would have to be incurred by the State if a sickness insurance scheme was put into practice. I think that the fears of Sir Bhupendra Nath Mitra are too imaginary. He has not gone deeper in the matter, and had he taken the trouble to base his arguments on the data which were at his disposal in the form of the Health Insurance Act of Japan, he would have reached the conclusion that the things would be managed safely in the same way as they were being managed in that eastern country. The first objection that the labour in India is migratory, and a worker when ill is in the habit of leaving his place of work and going to his village, holds good as long as the conditions remain as they

are at present. The worker comes from the village. He works at the industrial centre. As soon as he falls ill, his income stops and expenses increase. He has no resources at the centre to fall back upon. He has to leave the centre and fly back to his village, where, of course, he has no good medical aid, but at least he finds his people and a sympathetic atmosphere. If there be a sickness insurance scheme working at the centres, the worker will have its benefit in full, partial wages for some weeks and good medical aid. Under these circumstances he will rather like to remain at the centre, when sick instead of going to his village where he will have no such benefits. The industry will also gain immensely thereby. They will have no longer to complain of the unstable character of the labour. Every worker will like to resume his duties as soon as he is cured. There is a dissatisfaction among the workers at present that when after illness they come back to their work they have to bribe the higher staff to be readmitted. But under the insurance scheme the worker will have the satisfaction that there is nothing to hold him back from his job, and this satisfaction will also contribute to the gain to the industry.

The main centres of industry at present in the provinces are:—Cawnpore, Lucknow, Gorakhpur, Jhansi, Allahabad, Agra, Aligarh, Firozabad and Hathras. There can be no difficulty of having proper medical aid for the workers at these places. The insurance societies can have the assistance from properly qualified vaidyas and hakims as well. Sir Bhupendra Nath's objection as regards the absence of a sufficient number of qualified medical men does not hold good as regards the industrial centres of our provinces, and I am sure that we shall have no difficulty on that account here.

There is a reasonable misgiving that the workers themselves will not like the insurance scheme when they will feel the pinch of compulsion of paying their contributions. Most of the workers are illiterate and ignorant, and it is possible that they may raise objections if the scheme is suddenly harnessed upon them. But if an earnest effort is made to get the workers to understand what the scheme will mean for them they will be very glad to come forward and offer their contributions. I had a talk with a number of ignorant and illiterate workers of Cawnpore, and after giving them to understand what the sickness insurance scheme would mean to them, I found each and every one of them ready to get a part of their wages cut for this purpose. Much depends upon the part of the wages to be cut, as well as the time after which the worker will be benefited by the insurance. In Japan they do not cut more than 3 per cent. of the wages of the workers. This works out to be half an anna per rupee. I found these men with whom I had the talk ready to get their wages cut at this rate for the benefits to be accrued from the sickness insurance.

Will it be a burden on the finances of the State if the scheme is put into action? I think not. At least not to any appreciable degree in these provinces. Here we have about 70,000 persons working permanently at the industrial centres of the provinces. The State in Japan contributes 10 per cent. to the funds of the workers' insurance. If we put Rs. 25 as average monthly wage of a worker—I think this amount is by no means a low estimate—we find that the monthly wages for the industrial workers amount to about  $70,000 \times 25 \text{ Rs.} = 17,50,000$ . Three per cent. of this amount  $\frac{70,50,000 \times 3}{100} = \text{Rs. } 52,500$ . A similar amount according to the

system in Japan will have to be contributed by the employers. The sum will then come to  $52,500 \times 2 = \text{Rs. } 1,05,000$ . The Government will have to contribute to this 10 per cent. of it which is  $\text{Rs. } 10,500 \times 12 = \text{Rs. } 1,26,000$ . It is a paltry sum for such a cause and I think that the local Government should have no objection to make this contribution for the welfare of the industrial workers. I do not know what made Sir Bhupendra Nath raise a false alarm of great expenses if Mr. Joshi's amendment to the main resolution was to be carried. Sir Bhupendra thought that the Government would thereby have a fresh burden of six crores annually. I think that his estimate was totally wrong and alarming. The Government of India while working on the line of the Government of Japan, would have to spend only Rs. 90 lakhs annually if they would have accepted the amendment of Mr. Joshi.

In the end I think that the sickness insurance will do much good to the workers, give stability to the migratory labour and benefit the employers too. The local Government will act wisely if they adopt a scheme of sickness insurance for the industrial workers of the provinces at once.

The replies to the questions sent to me with the agenda are as follows:—

- (1) Insurance should be made applicable to all the factory workers in the whole of the provinces. No particular industry need be selected.
- (2) It should be made applicable to the whole of the province.
- (3) Separate insurance funds be formed on the basis of locality. If the place is small, two such places be amalgamated for the formation of insurance funds.

(4) (a) I think that in all the industrial centres of the provinces we have a sufficient number of qualified medical men and if there is a dearth anywhere I am of opinion that proper qualified vaidyas and hakims should be asked to co-operate; (b) the medical assistance by the proper medical men will be acceptable to the insured worker. I cannot think of any hitch, and if there be any hitch, it will not be difficult to bring the worker round.

(5) The worker will not move out of the area to his village if he gets the benefits of the insurance. It is definitely advantageous to him to remain at his place of work at the time of sickness. If he moves he is bound to lose the advantage.

(6) I have no knowledge of the expenses of an insurance business and its administration. In Japan the insured person and his employer each bears one-half of the amount of insurance and sometimes the proportion of the insurance contribution to be borne by the employer is increased by the State in an undertaking of the kind in which danger occurs frequently to the insured employee. The State makes a contribution of 10 per cent. on the whole. It seems that the insurance machinery and its administration keep themselves well within the limits of this income and meet all their expenses and liabilities. However, I think that it is necessary to call for an experts advice on this item.

(7) All the classes of workers will be willing and able to meet the charges when they will be allowed to properly understand what insurance will be to them.

(8) I cannot say how far the existing industrial structures of the provinces can afford to bear the burden, but they should try to bear it as it is bound to prove beneficial to them as well.

(9) At least 10 per cent. of that which comes out from the employers and employees.

(10) They are minor details and can be worked out very easily when the Government earnestly desire to come forward with an insurance scheme for the industrial workers. Administration of insurance fund will need a very watchful supervision, and the State, with the co-operation of the employers and the representatives of labour, will always have to keep an eye on its proper working.

*Letter from the Chief Commissioner, Delhi, No. 2985-Industries, dated the 2nd April, 1929.*

In Delhi, for the purposes of the present reference, labour may be divided into two classes (i) factory labour and (ii) contractors' labour, i.e., labour employed by contractors in New Delhi.

2. As regards factory labour, about 33 per cent. of the workers in factories are said to live in Delhi with their families. Most of the remaining two-thirds come from outside the province, principally from the United Provinces. The biggest employer of factory labour in Delhi tells me that probably nearly 50 per cent. of the workmen in his employ at any given time have been with him for less than 12 months. These figures give some indication of the proportion of casual labour in Delhi factories.

3. Some of the Delhi employers are alive to the importance of making medical facilities available to their workmen. The management of the Delhi Cloth and General Mills has made arrangements with three neighbouring medical institutions for the treatment of their employees. In serious cases which necessitate medical attendance on patients in their quarters, the fees are paid by the employers in the case of the workmen who live in the quarters provided by the millowners. These number about 1,800 out of a total of about 5,500.

4. Wages stop as soon as a man goes off work, and the only sickness benefit the workmen get is that they are generally permitted to remain on in their quarters (provided they are living in the mill quarters) during temporary illness.

5. It seems to me impossible at present to provide either for adequate medical attendance or for sickness benefits in the case of workmen who live in the villages. No system of sickness insurance can be worked without adequate safeguards against malingering, and the first safeguard must be an adequate supply of doctors to tour the villages where the workmen live. I cannot think that a sufficient number of competent practitioners would be available at present.

Further, no system of sickness insurance would be worth maintaining for the 50 per cent. or so of casual labour.

6. It would seem, therefore, that the problem narrows itself down to a regional one, that is, whether any system of sickness insurance could be devised for the factory employees who live in Delhi or other areas where proper medical supervision is available. Even within these limits there will be a considerable number of casual workmen who will complicate the problem.

7. I am informed that the workmen are in favour of a compulsory system and the employers of a voluntary. It is hardly possible to imagine a system which would be voluntary as regards the employers, and I am disposed to agree with the workmen that if a system of health insurance is to be introduced, it should be compulsory, both for them and for the employers, within the regional limits suggested above. Within these limits I am in favour of the scheme being tried.

8. As regards contractors' labour, this is almost entirely migratory and casual, and is drawn from a very wide area in Northern India. I do not think that any system of health insurance could at present be applied to this class of labour, or would be appreciated by them.

9. The position will no doubt be thoroughly examined by the Labour Commission, and it is therefore hardly necessary for me to say more. I shall, therefore, deal very briefly with the questions set forth in paragraph 5 of Mr. Clow's letter of 20th September, 1928, to all local governments :—

(1) There will be no difficulty provided the regional scheme suggested above is adopted.

(2) It will probably be found necessary to put hakims and vaidas on to the panels, as many of the workmen are accustomed to employ them in preference to practitioners of western medicine.

(3) All those whose homes are in Delhi are likely to remain in Delhi when suffering from sickness.

(4) It is impossible to say what proportion the cost of administration is likely to bear to the total cost of the scheme. In Great Britain, I understand, it is about 12½ per cent.

(5) Neither the workmen nor the employers would be willing to meet any heavy expenditure. There is a feeling against paying for medical relief in India, and it would be to the sick-pay that the employees would look for a return for their contributions. In England the average cost per head insured appears to be about 50 shillings, but I have not been able to ascertain how this is divided between the State, the employer and the employed. If the average cost in India were 25 shillings, and the cost were equally divided, the workers would, I think, be able and willing to pay their share.

*Letter from the Government of Burma, No. 311.V.28, dated 28th March, 1929.*

The question has been subjected to a preliminary examination by a conference assembled for the purpose by the Financial Commissioner (Transferred Subjects). At this conference employers of labour were well represented, but owing to the almost entire absence of properly organized trade unions in Rangoon, only one representative of labour was present. The conference was also attended by the Inspector-General, Civil Hospitals, the Chief Inspector of Factories, the Labour Statistics Officer, and Professor Jevons, Professor of Economics in the Rangoon University. At this conference the various points raised in paragraph 5 of your letter were carefully discussed, but it is unnecessary to give in detail the conclusions arrived at on each point, for the general conclusion arrived at by a majority of the conference was that in present circumstances the immediate introduction even of a limited scheme of sickness insurance was not practicable, and the Financial Commissioner considers that action must be postponed until further progress has been made with the organization of workpeople in Burma. He points out that at present there is only one registered union. This union (the Motor Drivers Union) moreover is hardly concerned with sickness insurance. At any rate, it would be very difficult to apply any scheme of sickness insurance to motor drivers in Rangoon. And the final conclusion of Mr. Dunn, the financial commissioner, is that nothing should be done until the report of the Royal Commission on Labour has been received. He believes that this Commission's enquiries will ventilate a subject about which little is known—particularly among those for whose benefit it was raised—and will give us a clearer understanding than is at present possible both of the difficulties in the way of introducing even a limited scheme of sickness insurance and of the best way of surmounting those difficulties.

2. The opinion of the conference, however, was not unanimous. The representative of labour thought that a scheme should at once be introduced, but considered that the cost of the scheme should be borne by Government and the employers, and that wage-earners should not be required to contribute. Professor Jevons considers that a workable scheme of sickness insurance for skilled workers could be devised, and he has drawn up an outline of the sort of scheme he recommends, a copy of which is enclosed for the information of the Government of India.

As will be seen from the scheme itself, it is suggested that in the first instance this scheme should be applied only to skilled regular employees in a limited number of industries in specified towns, but that as experience is gained, it should be extended to other occupations and to unskilled workers.

3. The Government of Burma are disposed to take the same view as Mr. Dunn, though not altogether for the same reasons. They do not doubt the desirability of introducing some provision for sickness insurance for workmen, but they are impressed by the practical difficulties in the way and they believe that those difficulties are even greater in Burma than they are in India. Clearly if a scheme is to be introduced it can be made applicable in the first instance at any rate, only to certain well-defined areas, only to specified industries within those areas, and only to some of the workmen in those industries. These limitations themselves indicate the difficulty of the subject. The conference thought that any scheme which might be thought practicable should be introduced only in the ports of Rangoon, Akyab, Bassein and Moulmein, and Professor Jevons would omit Akyab. The Government of Burma would go further still. It seems to them obvious that any scheme which is introduced must be introduced by way of experiment, and that the experiment should be tried in the place where it has the best chance of success, where medical men are comparatively numerous, and where existing hospital accommodation is reasonably adequate. In other words they consider that in the first stage any experiment which may be tried under the auspices of the Government of Burma should be tried in Rangoon. But even in Rangoon the difficulties are very great. The principal one arises from the fact that labour in Rangoon is entirely Indian labour. Much of it indeed is purely migratory and seasonal, and even when the labourers are more or less settled in Rangoon they are constantly going back to India whether for a holiday or by reason of sickness or for other reasons. Any system which might be introduced would inevitably be a merely partial system and would leave large bodies of labour entirely untouched. And even in respect of those labourers to which it would be applied, the system probably would not work very satisfactorily. For periodically they would go off to India, and presumably they would thereby lose the benefit of payments made by them to the fund. The second difficulty arises from the fact already noted, namely, that the organization of labour into trades unions has hardly begun. This fact is no doubt due mainly to the different parts of India from which the Rangoon labour supply is drawn. Many come from Chittagong, many are Uriyas from Ganjam, and many are Telegus from Coconada. The different languages spoken by these three classes—which incidentally would complicate any system of medical attendance under a sickness insurance scheme—are a difficulty in the way of combination, but the fact that in spite of this handicap, there has been little attempt at combination indicates that the level of intelligence is not high, and lends point to the apprehension expressed by the conference that any contributory system of sickness insurance would be resented by the wage-earners. Whatever the cause may be, however, the fact remains that hardly any properly organized trade unions exist. Nor is there anything in Rangoon corresponding to the friendly societies of England, and the whole burden of organizing, supervising and working a system of sickness insurance would probably fall on the Government. Finally, there is the practical difficulty that in all probability no scheme can be introduced with any hope of success unless the Government, as Professor Jevons proposes, contributes to the cost. Professor Jevons, indeed, suggests that Government's share of the cost of the scheme outlined by him should be borne by the Government of India. But the Government of Burma do not suppose that the Government of India will accept this liability. Probably, indeed, there are constitutional difficulties in the way of their doing so, and the plain fact is that the Government of Burma are not in a position themselves to undertake the liability. It must be remembered that the liability is an indeterminate one. In the first place no information is available as to what the direct cost to Government would be of a scheme such as that outlined by Professor Jevons even if that scheme were confined in the first instance to Rangoon. Nor is it certain whether the inception of such a scheme would not necessitate the provision in Rangoon of additional hospital accommodation. Finally, the scheme is put forward merely as an experiment. If that experiment is successful, the idea is that it should be extended to other industries, to other places and to other classes of workers. And as it is extended obviously greater expense direct and indirect will fall upon the Government. And, as has already been stated, the Government of Burma are unable to face this expenditure.

4. These last remarks indicate what is a real difficulty—probably not only in Burma but also in other provinces—in the way of any scheme which proceeds on the basis that the local Government will bear part of the cost. At the conferences of the international labour organizations great pressure is put—quite naturally—on India to introduce measures for the amelioration of labour conditions which have been worked successfully in western countries. Those measures are usually

in themselves desirable, but apart from other differences between conditions in the west and conditions in the east, it is often forgotten, especially by those who speak for labour in the Central Legislature, that western countries are very much richer than India, and that they are able to finance measures which, however desirable they may be, are not practicable in India merely by reason of the fact that the local Governments cannot afford to pay for them. In the view of the Government of Burma it would serve little purpose to experiment with a modest limited scheme such as that proposed by Professor Jevons unless the Government were prepared to face the expenditure involved in extending that scheme in the event of the experiment being successful. And, apart from the difficulty of financing in present circumstances, even the limited scheme proposed by Professor Jevons, the Government of Burma are quite clear that an extended scheme would involve additional taxation, and they are equally clear that there is no hope of their Legislative Council agreeing to this additional taxation for the benefit of imported labour—particularly as that imported labour already commands much higher wages than it can hope to obtain in India. That, indeed, is the reason why there is such a continuous flow of labourers from India into Burma.

5. On the other hand, if Government does not contribute to the cost of sickness insurance, the prospect of the successful introduction of any scheme is diminished. Heavier contributions would be required from wage-earners, and already doubts are felt whether wage-earners would pay the contributions necessary under a scheme to the cost of which Government would contribute. Heavier contributions would also be required from employers of labour, and some industries are not in a position to bear this addition to the cost of production. The cotton mill industry of Bombay is one case in point. The rice milling industry of Rangoon is another.

6. Nor, again, are the Government of Burma satisfied that sickness insurance is the first subject that should be attacked in any comprehensive campaign for the amelioration of conditions of labour. Speaking for Rangoon indeed—and the same remark is probably true also of the cotton mill industry of Bombay and the jute mill industry of Bengal—they are inclined to think that the housing problem is more urgent. But it does not matter much whether this statement is correct or not. It will generally be admitted on the one hand that much remains to be done for the amelioration of conditions of labour, and on the other hand that the funds at the disposal of local Governments are strictly limited, and that there is also a limit to the burdens which can be placed on employers of labour in addition to those considerable burdens which have been placed on them by labour legislation in the course of recent years. These two last factors are the governing factors of the problem. It has now been decided that labour conditions in India should be subjected to a comprehensive survey by a Royal Commission specially appointed for the purpose. The Commission will no doubt have many recommendations for the improvement of those conditions, and it may be assumed that even if the Commission does not arrange its recommendations in order of urgency, it will stress some more than others. The subject of sickness insurance, as the Government of India themselves admit, is one of peculiar difficulty in India. As has already been pointed out, it is of little use to embark on limited schemes of partial application unless local Governments are prepared subsequently to extend those schemes in the light of the experience gained. In other words the introduction of a partial scheme must necessarily involve local Governments in a liability the extent of which it is impossible to foresee. It is a step, therefore, which should not be taken until the whole ground has been thoroughly explored. This exploration will be undertaken by the Royal Commission on Labour, and the Government of Burma consider that no further action should be taken on the subject of sickness insurance until the report of the Commission has been received. For it may well be that the Commission may report that there are other matters in connection with labour which should be taken up before the question of sickness insurance is attacked.

#### *A Scheme of Sickness Insurance for Skilled Workers drawn up by Professor Jevons.*

*General.*—This scheme is proposed as a workable system of assistance for skilled workers who may become ill for more than a few days. It is purposely limited in scope, the idea being to gain experience in administering a small scheme which could afterwards be extended to other occupations, and to unskilled workers. The figures of rates of wages, contributions and benefits are given merely for the sake of illustration, and would need adjustment on the basis of data to be collected.

*Persons to whom Applicable.*—Skilled regular employees paid at a wage-rate equivalent to Rs. 24 per mensem or more up to Rs. 80 per mensem in certain organized industries, e.g., rice mills, saw mills, engineering and contractors, workshops, printing, petroleum oil refining and packing, vegetable oil mills, flour mills, match factories

and aerated water factories in Rangoon, Moulmein and Bassein, and within five miles of municipal limits of these towns. After two or three years the scheme would be extended to all industrial establishments coming under the Factory Act.

*Contributions.*—The workers' contributions to be 4 annas per mensem for persons earning Rs. 24 per mensem and over up to Rs. 30 per mensem, 5 annas per mensem for those earning over Rs. 30 and up to Rs. 40 per mensem, and 6 annas per mensem for those earning over Rs. 40 per mensem. The contributions to be paid by affixing special insurance stamps to a card which lasts the year. Whilst a man is in employment the card will be with the employer, and the latter must deliver the card duly stamped to date to the employee on the latter giving notice of his intention to quit, or being dismissed.

The insurance fund will be made up of the workers' contributions and equal amounts paid in by the employers and by Government, i.e., each party pays one-third. Assuming for the sake of illustration that 16,000 persons would be insured in the above towns, and that the average rate of contribution be 5 annas, the income of the fund would be Rs. 15,000 per mensem from all sources.

*Benefits.*—An insured person will be entitled to free medical attendance and medicines, and to free treatment in hospital, including food for himself, or cost thereof, if supplied otherwise than by the hospital.

A person who does not go to hospital because he cannot be admitted must be attended at his home and receive a food allowance immediately. Should he be unwilling to go to hospital, or should the doctor consider the illness not serious enough to require it, he will be entitled only during the first seven days to an allowance in kind of milk or other invalid food which may be prescribed.

Should the illness continue, or the man be unfit for work after seven days, he will become entitled from the eighth day to a maintenance allowance at a rate equal to 64 times his monthly contribution. This will give Rs. 16 per mensem to the lowest class (up to Rs. 30 wages), and Rs. 24 to the highest class. The benefit at this rate to continue until the man is fit for work, or for six months, whichever is less.

For the protection of the fund at the commencement there should be a special rule that the total benefit which may be drawn during the first twelve months will not exceed 64 times the total of contributions paid by the insured before he fell ill, or six months, whichever is less. Thus, if he has paid contributions for four months he will be entitled to benefit for four months, and so on.

Maintenance allowances will be paid either through the employer or if employer or worker so demands, by an office maintained by the fund in each town. The worker should have an identification card besides his stamp card, and may send a relative for the money or have it delivered by postal money order.

*Medical Attendance.*—There will be a panel of doctors, amongst whom those employed by companies as wholetime medical officers will be included. Insured persons will be assigned to doctors; and if a company keeps a works doctor, all the employees of that company would be assigned to that works doctor, in the absence of any special reason to the contrary. Each panel doctor would receive Re. 1 per quarter (Rs. 4 per annum) in respect of each insured person assigned to him. In the case of employees of companies who maintain doctors, this payment, or most of it, would go to the company.

*Administration.*—The Government of Burma must make itself responsible for the administration of the scheme, though the Central Government should pay the Government contribution to the fund. There should be a board of control, consisting of three employers, and three employees' representatives, and three Government officers, one of the latter being chairman. There would be a wholetime superintendent of the scheme on about Rs. 1,000–50–1,500 per mensem, with necessary clerical assistance, and general supervision by the Labour Statistics Officer of Government.

*Letter from the Government of the Punjab, No. 13,600-Rev., dated the 9th April, 1929.*

A small and informal committee, including two representatives each of employers and employees, was appointed by this Government to examine the question of sickness insurance, and also the difficulties that must attend the introduction of any such scheme. A copy of the report submitted by the committee, together with a note by Mr. Ghani, M.L.C., appended thereto, is forwarded herewith for the information of the Government of India.

2. The Punjab is not the home of any large industry excepting the seasonal cotton and ginning factories and the localised salt, coal and oil concerns. Accordingly the question of the introduction of provision for sickness insurance is not of

much practical importance for this province, for the present at any rate, and from a provincial point of view there is no need for any legislation on the subject. Should the Government of India, however, decide to take up central legislation, this Government will not oppose, provided that it is made elastic enough to leave this province sufficient powers to adopt any such legislation to suit its local conditions.

3. The Governor in Council commends for consideration the recommendation of the committee that the scheme should be applicable to all permanently employed workers, which term should include within its scope the classes specified by the committee, while he would at the same time suggest that primarily a beginning should be made only with the workers coming under the Workmen's Compensation Act, the Factories Act, and the Indian Trade Unions Act.

4. The Governor in Council would dissociate himself from any acceptance of the suggestions in the committee's report defining the measure of State assistance which should be given to any scheme affecting any class in the classification of permanently employed workers. On the other hand, he would have no objection to accepting liability for the cost of administration.

I am also to make it clear that this Government and the Punjab Legislature would be unwilling to make any direct contribution to a sickness insurance fund. They would be ready, however, to levy any rates that may be approved from the institutions and others concerned to spend on them.

5. The Governor in Council has no other comments to make on the recommendations of the Committee.

*Report of the informal committee appointed by the Punjab Government to examine the question of sickness insurance. The committee consisted of the following members :—*

1. Dr. R. C. Rawley, Chairman.
2. W. H. Abel, Esq., Inspector of Factories, Punjab.
3. N. A. Lillay, Esq., of the New Egerton Woollen Mills, Dhariwal.
4. Dr. Curjee Wilson, M.D., D.P.H.
5. R. B. L. Dhanpat Rai, M.L.C., Lahore.
6. M. A. Ghani, Esq., M.L.C., Bar.-at-Law, Lahore.
7. Jiwani Lal Kapur, Esq., Bar.-at-Law, Lahore.

1. The committee met in the office of the Director of Industries, Punjab, on the 12th February at 2.30 p.m. and on 2nd March at 11.30 a.m. All members except Mr. Jiwani Lal Kapur, who was absent on the 12th February, attended both the meetings. After a brief preliminary discussion, the chairman placed before the Committee the various points mentioned in the Government of India letter referred to above for consideration, and suggested that these points might be regarded as an agenda for the meeting. This suggestion was accepted by the committee, and the following items were discussed in detail :—

- (1) The extent to which it is possible to provide medical facilities.
- (2) The extent to which medical facilities are likely to be acceptable to the persons insured.
- (3) The extent to which insured persons suffering from sickness are likely to remain within the area within which the organization applicable to them can effectively operate.
- (4) The proportion which the expense of administration (which includes the provision of some machinery for the settlement of disputes) is likely to bear to the total cost of the scheme.
- (5) The extent to which the classes whom it is proposed to insure are willing and able to meet the charges falling upon them.
- (6) The extent to which State assistance can be granted.
- (7) Whether the scheme can be made applicable to either regional or industrial limits or both.
- (8) Whether legislation should be provincial or central.

2. The committee were definitely of the opinion that not only from the industrial or labour point of view, but also from the point of view of public health, it was necessary to introduce some system of Sickness Insurance in the Punjab.

3. Before proceeding with the principal items on the agenda, the committee considered it advisable to define the occupations to which the proposed Sickness Insurance Scheme should apply. The committee were of the opinion that all

permanently employed workers should come within the scope of the Sickness Insurance Scheme. As regards the terms "permanently employed workers" they decided that it should include the following:—

(a) All those workers to whom the provisions of Workmen's Compensation Act are applicable.

(b) All those workers to whom the provisions of the Indian Trade Unions Act are applicable.

(c) Permanent workers in educational institutions, in particular, women teachers, drawing salaries below the income tax limit.

(d) Domestic servants.

(e) Such other workers as are working for registered employers or are themselves licensed workers.

(f) All Government servants receiving a salary below the income tax limit.

*Item 1.*—As regards item 1 on the Agenda, it was felt that it would not be difficult to provide medical facilities for the workers. The committee held that the existing facilities were not complete and for this reason it was necessary to provide extended medical aid to all workers coming under the categories defined above.

*Item 2.*—The committee felt that there could be no two opinions on the subject of acceptance of medical facilities by workers. It was, however, difficult to determine the extent to which the insured workers were likely to take full advantage of the medical facilities provided under the new scheme. Past experience indicates that wherever adequate medical facilities were provided by the employers, the workers took reasonable advantage of these facilities.

*Item 3.*—The committee were of the opinion that the present tendency of the workers was to go to their homes during illness on account of economic reasons, that is, they could not support themselves away from their homes and friends when ill. This tendency was, however, not so very marked in the case of workers coming under the categories at (c) and (f). The committee believed that with the benefits accruing from Sickness Insurance Schemes this tendency on the part of the workers would gradually disappear.

*Item 4.*—The committee were unable to estimate the proportion which the expense of administration (which includes the provision of some machinery for the settlement of disputes) was likely to bear to the total cost of the scheme, as no concrete instances were before them from which they could draw conclusions. On consideration of the various heads under which this type of expenditure neighbourhood be incurred, the Committee felt that the proportion would be in the even roughly, the 5 per cent. It was impossible for the committee to estimate, staff in the setting expenditure involved in the entertainment of administrative staff to enforce the provisions of the law.

*Items 5 and 6.*—Both these items were taken up for consideration together, as at this stage the main dispute was between the workers, the employers and the State. Mr. Abul Kalam, in which he discussed the question of contribution on the assumption that the average wage of a worker employed permanently was Rs. 40 per mensem. If this assumption were to be accepted, he suggested, that the worker should have to pay five annas per month, the employer five annas and the State two annas six pies. Messrs. Kapur and Ghani considered this proportion much too high for the worker and suggested that the employer should contribute twice as much as the worker. Other members of the committee were of the opinion that any increased contribution required from the employer would make the scheme prohibitive, as the increased cost would be borne by the consumer or would be met by cutting the wages of the employee to the detriment of the concern. After a prolonged discussion the committee came to the conclusion that the contribution towards the Sickness Insurance funds should be borne equally by the employer, the employee and the State. This proportion would no doubt place an additional burden on the State as the State would have in any event to provide medical assistance and the administrative charges of the scheme.

The committee were of the opinion that the employer and the employee would be willing and were able to meet the charges falling upon them under the proposed scheme. It was also realized that the burden of the State's contribution would be rather heavy in the beginning; but it was felt that the advantage to the State would be the increase in health and working power of its industrial workers which would counterbalance the cost of administration and contribution by the State.

*Item 7.*—The committee decided to recommend to Government that the scheme should be made applicable to the whole of the Punjab with a central administrative authority in Lahore. All payments should be made through the Post Office on a certificate being presented by the worker and countersigned by the qualified medical authority appointed under the proposed law.

*Item 8.*—The committee were definitely of the opinion that for any scheme of Sickness Insurance to be a success the legislation should be central.

*Note by Mr. M. A. Ghani, Barrister-at-law, M.L.C., Lahore.*

I agree generally with the report of the Committee but I would like it to be modified in the light of the following :—

1. I think it will be better if to the list of the workers to whom the scheme is proposed to apply, the following may also be added :—

(a) All workers or employees who are members of a Trade Union registered under the Indian Trade Unions Act.

(b) All workers and employees who are employed in a factory or workshop coming under the Indian Factories Act.

(c) All workers and employees working in a mine to which the provisions of the Indian Mines Act are applicable.

(d) All workers and employees employed by the Government irrespective of their being "Government servants" or not.

(e) All workers and employees employed by a contractor in contract with the Government or some local body or some limited liability Joint Stock Company.

(f) All quasi Government servants, e.g., village servants and so forth.

(g) All Municipal and District Board employees.

(h) All workers and employees employed in a scientific, educational, or in a charitable institution registered under the Act, 1860.

(i) All workers and employees employed in an educational institution not registered under 1860 Act but recognized by the Government or some local body whether receiving any grant-in-aid or not.

I would, of course, limit the above workers and employees to those receiving a salary below the income-tax limit.

2. It will be readily seen that the above list extends the scope of the scheme of the sickness insurance so far as the different classes of workers are concerned. The list prepared by the committee is too limited and is too narrow. No reason has been given why the benefits of the scheme should be made applicable to a limited class of workers. Why should we favour certain classes of workers and deprive the others of the benefits of the scheme however deserving they may be; "what is good for the goose is also good for the gander" is an old aphorism, and in applying the scheme we should not overlook it. In preparing the list of workers, I have not lost sight of the principle so rightly cherished by the Committee, that the scheme should be applied to those workers only who are reasonably permanently employed and whose whereabouts can easily be known, and who belong to such organizations and institutions through whom the scheme can easily be worked.

3. The list as prepared by the committee is not quite clear and is open to objection in more ways than one. As regards (b) of the list I submit that the Indian Trade Unions Act as such is not applicable to the workers as such. It is applicable to the Unions of the workers only. Hence, I think it will be better if we apply the scheme to those workers who are members of a registered trade union. This will also help the labour leaders to organize the workers generally. It is of no use to particularly mention the women teachers in (c) of the list. They come under "workers in educational institutions." Similarly the use of the word "permanent" in (c) of the list seems to me to be merely redundant.

4. I think that it is not only "the more or less rigid atmosphere of an ordinary hospital," as the committee has rightly pointed out, but it is also the most unsympathetic and unkindly (demoralized to the verge of cruel) treatment that is meted out to the workers there that deters them to be treated there, and thus compels them to go to their homes. This is due to the beastly capitalistic mentality of the people generally and to the conservative indifference and repugnance to the poor workers and labourers. A little labour propaganda and greater sympathy of the Government with the cause of labour will surely change the atmosphere to the great success of the insurance scheme.

5. So far as the much vexed and most important question of the contributaries to the Insurance Fund is concerned, I agree that the State should pay one-third, but as between the employer and the employed I am strongly of the opinion that the contribution by the employer should be a little higher than that by the employee. For this, my reason is that the relevant advantages to the employer, are certainly and admittedly much greater than those to the employee. Moreover, even from the economical point of view, it is not right and just to place the rich capitalist and the poor wage-earner on the same footing. Moreover, the nature, extent and value of the sickness insurance are closely related to the progress of industrialism, and to the evolution of economic conceptions and of political and social forces. In this progress and evolution the employer is certainly more interested than the poor employee. Again, the State as guardian of public health and national prosperity should contribute liberally to the insurance fund. In times of sickness, wealthier classes can look after themselves. It is only the poor classes that suffer most. On account of their poverty, they are more exposed to the risk of sickness than their rich neighbours. The occurrence of sickness entails for the poor wage-earner and their dependents an increase of expenditure on the one hand (e.g., cost of medical treatment and drugs) and reduction and even cessation of income on the other. To their rescue, under the circumstances, the State must come and help. I would therefore suggest that the following proportion would meet the justice of the case :—(1) the State, one-third ; (2) the employer, five-twelfths ; (3) the employee, one-fourth. It is no concern of ours to consider from where the employer would get funds to pay the contribution. It is his concern. It is his look-out. He would bear the consequences if "the increased cost would be borne by the consumer or would be met by cutting wages of the employee," as remarked by the committee. No reasonable employer in his own interest as marked above would and should grudge to pay a little more than the employee.

6. I think we ought to insist on the compulsory form of insurance. It is true that the question was not referred to us but in order to make the scheme a success we should give our opinion on this point too. To my mind, voluntary insurance will be a mere farce. The workers are not organized. They are illiterate to understand the value of the scheme. Their conservatism, their fatalism, and the general apathy of the employers, will surely stand in the way of voluntary insurance. Nothing but compulsion will make the scheme a success. The Government as guardian and well-wisher of public health should, in duty bound, impose compulsion in sickness insurance. In almost every civilized country compulsory sickness insurance is in vogue. There is no reason why the same should not be in this poor country. Taking into consideration the chronic poverty of the masses and their proverbial illiteracy, the compulsion is all the more necessary here.

With the above remarks, I would respectfully urge on the Government to bring in a legislation promulgating a scheme for the compulsory sickness insurance of the labourers and workmen at a very early date.

*Letter from the Government of Bihar and Orissa, No. 1537—XL-5/29-Com., dated the 16th April, 1929.*

The local Government after careful consideration decided that the appointment of a committee was not advisable. Owing to the fact that labour is almost entirely unorganized, except at Jamshedpur, where serious trouble then existed between the workers and employers, it would have been impossible to represent labour properly on an informal committee. They considered further that in the present disturbed industrial conditions the operations of a committee would be likely to arouse false hopes and upset labour. They have, therefore, restricted themselves for the present to ascertaining the exact position in the principal industrial areas, as regards the provision of medical relief and sick pay, and to instituting an inquiry in the smaller industrial concerns scattered up and down the province to ascertain the extent of available medical facilities and the extent to which the labour of these factories is seasonal, migratory, or stable in character. Appended to this letter is a memorandum summarizing briefly the results of this examination up to date.

2. These investigations go to show that in the main industrial areas, medical relief is organized and, generally speaking, is fairly adequate. At Jamshedpur, Jamalpur and in the Giridih coalfields a complete system of medical relief with well equipped hospitals and an adequate staff of doctors is provided by the employers. In the main coalfields medical relief is organized under the statutory supervision of the Jharia Mines Board of Health ; it is as complete as the economic conditions of the industry permit and it is generally satisfactory. Some collieries have their own hospitals, a considerable number of them have dispensaries, and all of them except few specially exempted collieries employ either jointly or individually

qualified medical officers to look after their workers. Any individual deficiencies are supplemented by the public hospitals under the District Boards. In the factories lying outside the main industrial areas medical relief is less fully organized. But a general survey indicates that something over one-third of the workers receive medical relief from their employers and that public hospitals or dispensaries are available for the treatment of all except a very small percentage of the industrial population. It is clear that the smaller industrial employer cannot be expected to provide any considerable amount of medical relief directly; but the inquiry already made shows that factories are generally so situated that medical treatment can be provided for almost the whole industrial population at existing public institutions.

The local Government have not thought it necessary at present to investigate particularly the extent to which medical relief is likely to be acceptable to the workers. The prejudice against dispensaries and medical treatment is breaking down even among the aboriginal peoples who form a large part of the mining population, and there is no reason to believe that medical facilities, if provided, will not be generally acceptable.

3. The information collected by the local Government regarding the payment of sick pay and allowances is less complete. In the coalfields it is fairly common, though not at all general. In the Jharia and Raniganj coalfields, out of 214 working mines, 58 pay both sickness and accident allowances and another 10 pay sickness allowances only. Among the Indian owned mines a number of the owners pay a daily allowance or a *bhatta*, roughly equivalent to pay during short illnesses. But this is not paid during prolonged illnesses and in many cases is afterwards deducted from the earnings when the worker rejoins. The grant of sick pay is in fact mainly confined to the larger mines which give it regularly and on organized basis, while in the smaller mines it is sporadic and undefined. In Jamshedpur, accident pay is always given and the staff employed on a permanent basis is entitled to sick leave with pay; but coolie labour receives no sick benefits as it is all employed on a purely weekly basis. In the Jamalpur Railway workshops and the Giridih coalfields, which are owned by the East Indian Railway, sick pay is on a fully organized basis. In the first the employees receive sick leave, in the second the miners have a benefit fund from which allowances are paid. This is the only instance in the province in which a fully organized contributory insurance scheme on a self-supporting basis exists. It shows that the difficulty of making the worker contribute willingly is not insuperable. But in this case the conditions are unusually favourable, because the labour force is largely permanent and settled and the whole area is under the control of one employer. The persons affected, therefore, remain within the area within which the organization can effectively operate. These conditions are not found to anything like the same extent in other industrial areas.

4. The first essential in any investigation of the possibilities of industrial sickness insurance is to ascertain for every area the proportion of stable and unstable labour. The local Government have not attempted to do this for the major industries owing to the magnitude of the task. They have attempted to make a rough survey for the minor factories outside the main industrial areas. But the results obtained were entirely unreliable and have merely proved that before any useful investigation into the possibility of insurance schemes can be undertaken a detailed and expert investigation of the whole question of labour turn-over is necessary. This is a task which would take some considerable time and requires an expert agency. The local Government have material to show that the percentage of seasonal and migratory labour is generally high even in the biggest industrial areas. But they are unable, at present, to furnish any reliable data as to the extent of that unstable labour. In the mining areas in particular, a very high proportion of the workers are really agriculturists and follow a dual occupation. Large numbers also are seasonal workers and the labour force employed in the mines fluctuates within wide limits. Similarly at Jamshedpur the very large coolie force is fluctuating in character. In both South and North Bihar most of the factories are oil, sugar and rice mills, or indigo factories, which are themselves seasonal in character, and the greater part of the labour forces is employed only for a portion of the year. It can probably be said with safety, therefore, that throughout the province the stable labour force is distinctly in the minority. This in the opinion of the local Government adds enormously to the difficulties of propounding any insurance scheme. The only big industries in which conditions favourable to an insurance scheme exist already make some provision on their own account. There is, in the case of the coalfields, the further difficulty that the industry generally is in a state of depression from which it is not likely to recover for some years. The creation of an insurance scheme presumably involves a contribution from the employers, and a large number of the employers are, at present, not in a position to shoulder any additional burden. Many of the owners of small factories throughout

the province are probably in the same position. If, therefore, an insurance scheme were to be undertaken, the question of State assistance would inevitably arise, and the local Government must make it clear that in the present state of their finances they cannot undertake any liability whatever in this matter. Their revenues have ceased to expand and they are only able with difficulty to maintain their existing institutions and services. They have had to cut down increases in recurring expenditure to the very narrowest limits. Further, the local Government do not receive directly any revenue from the proceeds of industry. The District Boards are empowered to tax certain industries by the imposition of road cess. The duty of subsidizing insurance could not be laid upon the District Boards, while the provincial revenues derive no benefit from this cess. Lastly, the local Government do not consider that they would be justified in undertaking to subsidize insurance and medical relief for a small class of the community at the expense of the rest even if they could afford it, until such time as they are able to provide adequate medical relief for the population in general. If State aid is necessary for the creation of an insurance scheme, the local Government are of the opinion that the liability must fall upon the central Government.

5. In view of the results of this survey of the situation, the local Government consider that further investigation of the problem in Bihar and Orissa at the present stage is premature and is unlikely to be profitable. They have, therefore, not appointed a committee.

#### *Summary of Information collected.*

The result of the inquiries made to ascertain the present extent of medical relief provided by the employers in the industries of this province are summarized below.

#### *Major Industrial Areas.*

1. *Jamshedpur, Tatas and Allied Factories.*—Complete medical relief is provided for all employees free of charge both at the Company's hospital and at the worker's home. The company maintains a hospital with 144 beds, an isolation hospital with 36 beds and a segregation ward, 5 dispensaries and 2 first-aid stations. The medical staff consists of 27 doctors, 19 nurses, 31 compounders, 21 dressers and 40 sanitary inspectors.

Accident allowances are paid to all persons injured while incapacitated. Persons absent owing to sickness count their absence against leave under the company's rules. But no sick leave or allowances are paid to the coolie force. This force is engaged on a purely weekly basis, and is paid when actually working.

2. *The Imperial Tobacco Company's Factory at Monghyr.*—The company maintains an out-door dispensary. Medical treatment is given free to all employees. But there is no indoor hospital. No reports have been received regarding sick pay.

3. *Jharia and Mugma Coalfields, Manbhum.*—At present 214 collieries are working. The medical and public health organization of the collieries is under the statutory control of the Jharia Mines Board of Health appointed under the Bihar and Orissa Mining Settlement Act of 1920. The collieries own 11 hospitals (owned by European firms), 72 equipped colliery dispensaries for outdoor and accident relief. All collieries which do not possess dispensaries keep a prescribed stock of drugs and medical equipment. There are, in addition, district board dispensaries and a central hospital at Dhanbad. The collieries maintain 68 qualified doctors and 5 principal medical officers. These doctors are employed by 156 collieries; 58 collieries are exempted from employing the medical officer as they employ a labour force of less than 30 persons.

Fifty-eight collieries pay sickness benefit regularly for both sickness and accident cases at rates varying from 2 as. to Rs. 1-8 annas per diem. Ten collieries pay accident benefit only at 3 as. to Rs. 3 per diem, and 7 others provide diet during illness. The Indian Mining Federation reports that it is the practice of its members to pay a *bhatta* roughly equivalent to daily wages during short illnesses. But nothing is done in cases of prolonged illness, as the labourers themselves leave the mines and return to their villages. Generally speaking organized sick benefits are paid principally by the big collieries, while the benefits in the smaller concerns are sporadic and not on any defined basis.

4. *Giridih Coalfields.*—The proprietors of the East Indian Company provide complete medical relief. There is also a self-supporting Miners' Benefit Fund which is maintained from contributions from the workers, men's subscriptions being one pice a week and the women's half a pice. From this sickness allowances and bonuses for births, marriages and deaths are paid. The fund has been in existence since 1892 and is self-supporting. The proprietors, in addition, provide both injury and old-age pensions to their miners.

5. No reports have been received regarding the *smaller coalfields* in Hazaribagh *s.s.*, Ramgarh, Bokharo and Karanpurah. These are also owned by State railways, and presumably provide medical relief.

6. *The Jamalpur Railway Workshops, E.I.R.*, maintains a large railway hospital fully equipped and staffed by one European medical officer, one assistant surgeon and three sub-assistant surgeons. There is also an outdoor dispensary. The workers receive free treatment in hospital. The employees are entitled to sick leave on pay under the company's rules.

7. *In the Mica Mining Area* only one concern, Christien & Co., maintains a hospital and provides medical relief. The other mines are practically all owned by Indians on a small scale.

*Industrial Concerns outside the main Industrial Areas.*

An enquiry was made by the Director of Industries with regard to (a) the extent of medical relief provided, and (b) the proportion of stable to seasonal employees in small factories scattered throughout the province.

The reports indicate that 39 per cent. of the total factory population outside the main industrial centres dealt with above receive medical relief at dispensaries provided by the employers; 57 per cent. are able to obtain medical treatment at public dispensaries within which the factory lies, while 4 per cent. are unprovided with any medical facilities. Relief provided by the employers occurs mainly in the Champaran and Darbhanga districts, and in the Manbhum and Singhbhum districts of Chota Nagpur. The percentages given above are not altogether reliable because, firstly, a part of the mining area has been taken into consideration which should have been excluded from the inquiry and, secondly, the percentages have been calculated not on the total turnover of workers, but on the maximum number of workers employed at the busy season.

The statistics on the subject of stability of workers are not given in this note because the results received have proved to be unreliable.

*Letter from the Government of the Central Provinces, No. C-22 652-XIII, dated the 17th April, 1929.*

The possibility of introducing some provision for sickness insurance was examined by a small informal committee including a few representatives of employers and employees. The report of that committee, together with the forwarding letter of Director of Industries, Central Provinces, accompanies this letter.

2. It will be observed that the members of the committee with the exception of the representatives of the employees are emphatically of opinion that any scheme of compulsory insurance is unworkable in practice. The local Government agree that the introduction of such a scheme must be attended by greater difficulties in a country where the path to compulsion has not been made easier by the existence of voluntary schemes of insurance, which are found where the system of trade unions is more developed. The extent of these difficulties cannot, however, be accurately estimated until an attempt has been made to put a scheme into operation, and the local Government is not prepared to accept the contention that they are insurmountable. It will, however, be conceded that, if an experiment is to be made, it must in the first instance be confined to industries in which labour is reasonably stable, that is to say, so far as the Central Provinces is concerned, to the textile, coal and manganese industries. Nor is there any valid reason that the scheme should not equally apply to labour employed on public or quasi-public enterprises such as the railways or under-departments of Government such as the Public Works Department. It follows that the sickness insurance must be organized on an industrial and not a regional basis.

3. I am further to point out that the time for the introduction of an innovation affecting the relations of capital and labour must be carefully chosen. At present labour is in a state of unrest—more so perhaps in other parts of India than in the Central Provinces. The introduction of a scheme of compulsory insurance would at the present moment in all probability be accompanied by organized attempts on the part of labour to shift the whole of the burdens to capital. Should these attempts be successful, the scheme would in effect lose one of its essential features that contributions should be levied alike for employers and employees. While, therefore, there is no objection to the preparation of a complete scheme, the local government feels considerable doubt as to whether the present time is propitious for its introduction.

4. The Government of India has directed attention to certain factors which must receive attention in any consideration of the problems. The provision of adequate medical facilities acceptable to the workers obviously is of paramount

importance. The Director of Industries has suggested in paragraph 8 of his letter that in urban areas the labourer should have the option of applying to reliable indigenous practitioners. Considerable practical difficulties would arise if there were two separate authorities to which the labourer desiring a certificate of sickness could apply; indeed, it might result in such certificates of sickness being obtainable with insufficient justification. The local Government would therefore suggest that for all industries, both urban and rural, the Western system of medicine should be utilized. Any prejudice that exists against that system would probably disappear in due course as a result of the benefits to labour resulting from sickness insurance. It is clear that the difficulties of administration from a medical point of view would be enhanced if the persons insured do not remain in the area within which the organization applicable to them can effectively operate. These difficulties will be minimized by the application of the scheme to industries with a stable labour force, but the local Government agrees with the Director of Industries that in order to simplify the administration, sickness benefits should be confined to persons who remain within specified areas.

5. It is not possible in the absence of statistics as to the number of workers who would be incapacitated by sickness to compute the cost of the scheme, even if the scale on which benefits are to be granted were laid down. It follows that it is equally impossible to assess the proportion which the expense of administration bears to that cost. In the initial stages of the scheme the administrative machinery for the settlement of disputes could probably be the same as that already provided under the Workmen's Compensation Act, but in order to prevent disputes either party should have the right of obtaining a second opinion in addition to that of the panel doctor before recourse is had to a tribunal for the settlement of disputes. This opinion should be that of a Government medical officer.

6. No demand has hitherto been put forward by the workers of this province for a contributory scheme of compulsory sickness insurance, and the local Government accepts the view of the Director of Industries that employees as a class will be opposed to making any contribution. It is only when benefits are realized that this opposition can be expected to decrease. Labour, however, as a whole will obtain an indirect increase in its earnings to the extent of the contribution by the employers less any overhead charges borne by the fund. Provided, therefore, that contributions are not pitched unduly high, there is no reason to suppose that the classes whom it is proposed to insure will be unable to meet those charges.

7. The question as to the extent to which State assistance can be granted is an important one. The demand for the augmentation of this assistance whether directly or indirectly is certain to be insistent, and the finances of the province are not in a position to bear the addition of what may prove to be a large and growing liability. It is, therefore, necessary that at the outset the contribution of the State should be clearly defined. If this proposition be accepted, the most practical solution is for the State to bear the cost of administration. This will include the keeping of accounts, the provision of Government medical officers to give a second medical opinion, and the provision of the machinery for the settlement of disputes. Ultimately, when the financial liability can be more exactly determined, it might be possible for the State to contribute a portion of the remuneration of panel doctors representing the cost of giving certificates of sickness, leaving the fund to bear the cost of treatment.

8. In conclusion I am to point out that labour welfare is a provincial subject, though subject to legislation in the Central Legislature. The local Government is fully alive to the necessity of co-ordination in matters affecting the conditions of labour, but considers that co-ordination can and should be secured by joint deliberations between the provinces at which the main principles can be settled. Control by the Central Legislature over a provincial subject should be exercised as rarely as possible. Moreover, constitutional changes are now under consideration, and the local Government would deprecate the initiation of legislation in the Central Legislature in connection with a provincial subject, when there is a possibility that the provincial legislature may have unfettered control before that legislation has reached its final stage.

*Copy of Letter No. C 12, dated the 22nd March, 1929, from R. N. Banerjee, Esq., I.C.S., Director of Industries, Central Provinces, to the Secretary to Government, Commerce and Industry Department, Central Provinces.*

I have the honour to forward herewith copy of a memorandum of the proceedings of the meeting of the special committee appointed to consider the proposals for sickness insurance contained in Government of India's letter No. L-1518, dated the 20th September, 1928.

2. It will be seen that all the members of the committee except the two representing the organized workers of Nagpur consider any scheme for sickness insurance impracticable at the present stage of the industrial development of these provinces.

3. Although there is no sort of formal provision for any kind of sickness insurance in the industrial concerns of the province at present, it is not accurate to say that large scale employers are entirely unmindful of their duties in this respect. A few of the large industrial concerns, e.g., the Empress Mills of Nagpur, the Pench Valley Coal Co., Ltd., Parasia (Chhindwara district), provide free medical attendance and treatment for their employees as part of the welfare organization attached to their works. The Pench Valley Coal Fields Co., Ltd., extend such free medical facilities even to the dependents of their employees and also grant a subsistence allowance or half wages to their employees so long as they are not fit for duty through illness.

4. I agree in the committee's view that no such scheme can be applied to agricultural labour, as it is far too unorganized and migratory at present in these provinces. For similar reasons I differ from the other members of the committee, and think no such scheme will be workable in respect of seasonal factories like the ginning and pressing factories in the cotton areas of the provinces.

5. I, however, think that there is a strong case for making obligatory such provision for the insurance of the workers against sickness as some of the larger industrial concerns have found it to their interest to organize on their own initiative. This provision should include both medical attendance and an allowance for the period of sickness as suggested in paragraph 3 of the Government of India's letter. Formal provision for sickness insurance should be made in all industries in which the labour employed may be said to be more or less stable. In these provinces the only such industries are the textile mills, oil mills and a few isolated perennial factories or works like the Katni Cement works. To these we might also add the railway. The workers in these concerns remain attached to them more or less permanently. For example, out of some 8,000 employees in the Empress Mills, Nagpur, nearly 5,000 have been there for more than two to three years, and nearly 4,000 for more than five years. It is easy to compile a list of such perennial works in the provinces.

6. Assuming that such a scheme will be applicable to concerns of the nature indicated above, my view is that insurance must be made compulsory. The average Indian labourer has not as yet developed the foresight and commonsense to realize the advantages of such a scheme. The Empress Mills, Nagpur, for example, have had a very liberal scheme of voluntary sickness insurance in force for the last eight or nine years; but out of 8,000 employees not more than 50 have cared to take advantage of it in any one year. This may be taken as a fair indication of what would happen to any optional scheme of this kind in these provinces.

7. I am at one with the majority of the committee in the view that the funds necessary for giving effect to any insurance scheme must be raised by contributions from the employers and the employed; and that Government should be responsible for the organization and financing of the machinery that will be necessary for administering these funds and the scheme very much on the same principle on which the Government now entrusts to its officers the function of the commissioner under the Workmen's Compensation Act.

8. I now touch on the several points raised in paragraph 5 of the Government of India's letter:—

(1) The perennial works in which the labour is comparatively permanent are mostly in urban centres, and it is possible to provide the necessary medical facilities. Special arrangements in the mining areas are quite feasible.

(2) Only a negligible minority may object to medical facilities according to the Western system. A panel of reliable indigenous practitioners (hakims and vaid)s in the urban centres will be available. For areas like the coal fields provision must be included that workers insisting on indigenous medical facilities will forfeit the benefits of any such scheme.

(3) The great majority of the stable element of labour in such works are likely to remain within the local area of the works. In any case, it would be quite fair to provide in the scheme that workers leaving that area during sickness will forfeit the benefits of the scheme.

(4) It is difficult to indicate this accurately without a closer study of the question. But roughly I am inclined to put the expense of the administration at one-fifth of the total cost of the scheme.

(5) The proportionate deduction from the wages of the classes to be insured will not entail any real hardship; but in their present frame of mind, they will strenuously oppose all such deduction. One can easily imagine what will be the first effect of

the introduction of any such scheme, say, three years hence. All the workers will immediately demand an increase of their pay to the extent of the amount of their contribution to the scheme.

(6) *Vide* paragraph 7 above.

9. I agree with the committee that a regional organization for the administration of the insurance funds would be more suitable to these provinces; and that, as in a matter like this uniformity is desirable, legislation should be central with provision for the local Government making rules.

10. For drawing up more detailed constructive proposals a much closer study of the question than I have been able to make is necessary. At present I can offer my views only on the general principles involved in the proposals indicated in the Government of India's letter. I may, however, add that the Japanese Act of 1922 appears to be a suitable model for India.

*Proceedings of the Meeting held on the 20th February, 1929, of the Committee appointed for the consideration of Government of India's proposals on Sickness Insurance.*

*Present :*

- (1) Director of Industries (*Chairman*).
- (2) Director of Agriculture.
- (3) Mr. J. Boyd, Manager, Katni Cement and Industrial Co., Ltd., Katni (Jubbulpore district).
- (4) Mr. A. H. Parry, Manager, Pench Valley Coal Fields Co., Ltd., Parasia (Chhindwara district).
- (5) Mr. Shyam Sunder Bhargava, M.L.C., Malguzar, Jubbulpore.
- (6) Rao Bahadur G. R. Kothare, President, Factory Owners' Association, Khamgaon (Buldana district).
- (7) Mr. L. H. Bartlett, M.L.C., President, C. P. and Berar Manganese Ore Co., Ltd., Nagpur.
- (8) Mr. R. W. Fulay, M.L.C., Press Employees' Association and Model Mills Textile Union, Nagpur.
- (9) Mr. R. S. Ruikar, General Secretary, Provincial Trade Union Congress Committee and Secretary, Nagpur Textile Union, Nagpur.

All except Messrs. Ruikar and Fulay think that such a scheme is not practicable at the present stage of the industrial development of the province, and if introduced, would lead to unnecessary complications, and would probably result in the workers being deprived of the minor benefits that are now already provided in some of the larger mining and textile concerns. Messrs. Parry, Bartlett, Boyd and Rao Bahadur Kothare lay special stress on this point.

Assuming that some sort of scheme of sickness insurance should be introduced all agree that it should be compulsory and contributory.

Mr. Fulay's views are that compulsory insurance should be introduced only when a certain percentage of the workers in any factory or works ask for it; and that workers drawing Rs. 30 or less per mensem should not be made to contribute anything towards the insurance funds, and only workers earning more than Rs. 30 per mensem should be made to contribute.

All agree that the State should bear the entire administrative cost, that is to say, the cost of the organization that may be necessary for administering the insurance funds and scheme, and that the State should not make any contribution towards the insurance funds proper. Mr. Ruikar dissents, and adds that in addition to bearing the total cost of the administration of the funds the State should also contribute towards the insurance proper. The worker should contribute one-fourth and the remaining three-fourths should be shared by the employers and the State, half and half.

2. *What Industries can the Scheme be applied to?*—All agree that agricultural labour is far too unorganized for the scheme. It should therefore be ruled out. The scheme should be applied to mines, textile and other mills and factories, railways and P.W.D. workers, whether departmental or in the employ of contractors.

There was much discussion on the feasibility of applying the scheme to seasonal factories. It was agreed that any scheme, if introduced, should also be extended to seasonal factories, even though the employees might benefit only during the period of six to seven months during which they would work in the factories. Even in the mines on 60 or 70 per cent. of the labour at most may be said to be stable, and the rest migratory. If the scheme is thus applied to mines there is no reason why it should not be applied to other seasonal factories like cotton ginning and pressing factories.

Mr. Fulay, however, adds that it would not be worth while applying any scheme to seasonal factories employing less than 100 persons. It is suggested that the exclusion of the seasonal factories would cause hardship to such workers as would join some other industrial concern after leaving them. The number of such employees would not, however, be appreciable, as most of these workers in the seasonal factories go back to their villages, and very few of them join any other industry.

Only Mr. Plymen was keen on the insurance of domestic servants as well. Others do not think that it is worth while extending any such scheme to them.

3. It emerges during the discussion that the migratory element of the labour in these industries mostly goes back to the villages presumably for agriculture.

4. The great majority of the workers would take advantage of the medical facilities provided.

Mr. Ruikar suggests that the Government should draw up a list of hakims and vaidis in the villages of which the employees may avail themselves in the off-season. This to some extent would meet the difficulties arising from the lack of medical facilities in the interior. The lack of such facilities is admitted by all.

5. All agree emphatically that the employees would not agree to the deductions from their pay. Messrs. Fulay and Ruikar say that they will agree if the benefits of the scheme are properly explained to them.

6. A territorial or regional organization for administering the insurance funds would be better than an occupational one.

7. Legislation should be central with provision for the local Government making rules.

8. In conclusion all repeat that the scheme would be impracticable. Messrs. Fulay and Ruikar dissent. Messrs. Plymen and Boyd suggest that money would be better spent on providing general medical facilities which would also benefit agricultural workers.

#### APPENDIX VI.

##### *Mr. Joshi's Maternity Benefit Bill.*

*A Bill to regulate the employment of women in factories and mines, and on those estates to which the Assam Labour and Emigration Act, 1901, applies some time before and some time after confinement, and to make provision for the payment of maternity benefit.*

Whereas it is expedient to regulate the employment of women in factories and mines, and on those estates to which the Assam Labour and Emigration Act, 1901, applies some time before and some time after confinement, and to make provision for the payment of maternity benefit during the period of absence from work due to advanced state of pregnancy and confinement; it is hereby enacted as follows:—

1.—Short title, extent and commencement. (i) This Act may be called the Maternity Benefit Act, 1926.

(ii) It extends to the whole of British India, including British Baluchistan and the Sonthal Parganas.

(iii) It shall come into force on the first day of January, 1926.

2.—Definitions. In this Act,—

(a) "factory" means a factory as defined in the Indian Factories Act, 1911;

(b) "mine" means a mine as defined in the Indian Mines Act, 1923;

(c) "estate" means an estate as defined by the Assam Labour and Emigration Act, 1901;

(d) "qualified medical practitioner" means a qualified medical practitioner as defined in the Workmen's Compensation Act, 1923;

(e) "benefit" means benefit as provided for by this Act;

(f) "employer" includes an "occupier" of a factory as defined in the Indian Factories Act, 1911, or the "manager" of a factory, or an "owner" of a mine or his "agent" as defined by the Indian Mines Act, 1923, or the "manager" of a mine, or the "chief person" for the time being in charge of any "estate";

(g) "Inspector of Estates" means an inspector as defined by the Assam Labour and Emigration Act, 1901;

(h) "Inspector of Factories" means an inspector as defined by the Indian Factories Act, 1911;

(i) "Chief Inspector of Mines" means a Chief Inspector as defined by the Indian Mines Act, 1923; and

(j) "Inspector of Mines" means an Inspector as defined by the Indian Mines Act, 1923.

3. Employment of women at the time of confinement and payment from Maternity Benefit Fund.—In any factory or in a mine or on an estate to which the Assam Labour and Emigration Act, 1901, or any section thereof applies, a women—

(a) shall not be knowingly employed during the six weeks following her confinement ;

(b) shall have the right to leave her work if she produces a medical certificate from a qualified medical practitioner stating that her confinement will probably take place within six weeks ;

(c) shall, while she is absent from her work in pursuance of clauses (a) and (b) of this section, be paid by the local Government in accordance with rules made for this purpose, out of a fund to be established for this purpose and called the Maternity Benefit Fund, benefit sufficient for the full and healthy maintenance of herself and her child, the amount of which shall be determined in accordance with rules made by the local Government.

4. Payment in case of death during period of confinement.—If a women dies at her confinement, or during the period for which she is entitled to benefit, the remaining sums due as maternity benefit shall be paid to the person who undertakes the care of the child in accordance with rules made by the local Government.

5. Dismissal of woman during confinement.—Where a woman is absent from her work in accordance with clause (a) or clause (b) of section 3, it shall not be lawful for her employer to give her notice of dismissal during such absence or at such a time that the notice would expire during such absence.

6. Penalty for contravention of Act by employers.—An employer contravening any provision of this Act or any rule made thereunder shall be punishable with fine which may extend to five hundred rupees.

7. Powers of local Governments to make rules.—Every local Government shall make rules—

(a) for the establishment of a Maternity Benefit Fund ; for fixing the amount of contribution to be paid to it by each factory or mine or estate ; for the collection of the contributions and for the management and safe custody of the fund ;

(b) for determining the manner of payment of the benefit to the person entitled to receive it ; and

(c) for fixing the amount of benefit to be paid under this Act.

8. Duties and powers of Inspectors.—The Inspector of Factories or the Chief Inspector of Mines or an Inspector of Mines or an Inspector of Estates shall have and perform the same powers and duties for the purpose of clauses (a) and (b) of section 3, and section 5 as they have and perform for the purpose of the Indian Factories Act, 1911, the Indian Mines Act, 1923, and the Assam Labour and Emigration Act, 1901, respectively.

#### *Statement of Objects and Reasons.*

The object of this Bill is twofold :—Firstly, it is intended to prohibit the employment of women in those industries, the work in which is regulated by law, six weeks after confinement, to enable them to leave work six weeks before confinement, and to prevent them from being dismissed from service during the days of their absence from work due to their advanced state of pregnancy and confinement. Secondly, during the period of her absence due to the above-mentioned reasons a women worker should be provided with financial help sufficient to maintain herself and the child in a healthy condition. The money necessary for this purpose is to be raised by the local Government by levying contributions upon the industries covered by the Bill in the form of a small cess on the products of the industries, or in some other convenient form to be decided by the local Government. The amount to be given to each women entitled to receive the benefit and the manner of payment and other matters connected with the Bill are left to be settled by the local Government by rules made by them.

The Bill seeks to carry out some of the proposals contained in the Draft Convention passed at the first International Labour Conference held at Washington in 1919. If India desires to secure her proper place among the civilized nations of the world she cannot plead her inability to treat her women workers in the way in which civilized nations are expected to do. Moreover, there seems to be a natural desire in the country for rapid industrialization. But if industrialism is to be an unmixed blessing to the working classes, timely provision must be made to avoid and counteract the evils incidental to the introduction of the new system. There is no doubt that if women continue their long and arduous work in factories, mines and other organized industries, even in an advanced state of pregnancy, and immediately after confinement, their health and the health of their children will not fail to suffer.

Provision of maternity benefit during the days of enforced absence is necessary, as without such provision, mere prevention of work will be a measure of doubtful utility. It is but fair that the financial burden of the provision of the maternity benefit should fall upon industries that employ women with their natural sex disabilities. Moreover, as only a small proportion of women out of the total number of women employed will be eligible for the maternity benefit during the course of the year, the incidence of the burden will be very small. To prevent women workers from being dismissed some time before they become entitled to the maternity benefit, it is necessary that the maternity benefit should be paid out of the general fund and not by individual employers. As the welfare of labour is a provincial subject, it is only proper that the working out of the scheme for the maternity benefit should be left to local governments.

### APPENDIX VIII.

#### *Reporting of Accidents due to Causes notified by the Governments of Burma, Bombay and Bengal under Section 34 of the Indian Factories Act.*

##### *Burma.*

When there occurs in any factory :—

- (1) The bursting of any vessel subject to internal pressure other than an aerated water bottle or a boiler licensed under the Indian Boilers Act, 1923 ; or
- (2) the breaking of a rope or chain used for raising or lowering persons or goods by the aid of mechanical power or the collapse of any crane, winch or gantry used for raising or lowering persons or goods ; or
- (3) the collapse or failure of any chimney or of any wall over five feet in height, or any post, pillar or beam on which depends the safety of any part of a structure near which any person is employed or may have occasion to pass, the manager of the factory shall forthwith notify the inspector of the occurrence. When the report is under either Clause (1) or Clause (2) of this rule the manager shall state when the appliance was last examined or tested by a competent engineer and the result of that examination or test ; when the report is made under Clause (3) the manager shall state what measures have been taken to prevent danger to persons working in the neighbourhood of the accident due to further collapse.

##### *Bombay.*

(a) Structural Collapse ; (b) The breaking of any rope, chain or other appliance used in raising or lowering persons or goods by the aid of mechanical or electrical power ; or (c) Fires in cotton openers in cotton pressing factories.—In exercise of the powers conferred by Section 34 of the Indian Factories Act, 1911 (XII of 1911), the Governor in Council is pleased to notify the above noted causes as causes of accidents due to which, occurring in factories on or after the 1st April, 1927, must be reported to the prescribed authority, in accordance with Rule 64A,\* by registered post within one hour of the occurrence, or the accident shall be reported by telegraph, telephone, or by special messenger within the same period.

##### *Bengal.*

*Collapse of Buildings and Accidents to Plant or Machinery.*—When in any factory there occurs any explosion, fire, collapse of buildings, or serious defects in machinery or plant, which might have caused or might cause injury to persons, such occurrence shall be reported by the manager within five hours of its occurrence to the authorities† mentioned in Clauses (a) and (b) of Rule 62 of these rules.

---

\* (a) The Inspector of Factories, Ahmedabad, in case of all factories situated in Sind, and in the districts of Ahmedabad, Kaira, Panch Mahals, Broach and Surat, and in the Nawapur Taluka of the West Khandesh District ; and

(b) The Chief Inspector of Factories, Old Customs House, Bombay, in all other cases.

† (a) The inspector notified for the area in which the factory is situated ; and

(b) The district magistrate, or, if he by general order so directs, to the sub-divisional officer.

## APPENDIX IX.

*Workmen's Compensation.*

*Letter to all Local Governments, No. L.1125, dated the 30th November, 1928.*

I am directed to refer to the Bill\* further to amend the Workmen's Compensation Act, 1923, for certain purposes which was introduced during the last session of the Legislative Assembly and circulated for the purpose of eliciting opinions thereon. This Bill\* is confined to the amendment of those sections which are admittedly defective and to the introduction of changes which are likely to raise no important controversial points and which will be generally recognized as improvements. But now that some experience of the working of the Act is available, it is desirable to re-examine the principles underlying the present Act and its more important features. The Act was admittedly an experimental measure and many of its features owe their origin more to a desire to minimize the difficulties attendant on the introduction of an entirely new measure of this kind than to any belief in their permanent value.

2. *The Scope of the Act.*—In any revision of the Act the two most important questions which require consideration are the definition of the workmen to whom the Act applies and the scales of compensation payable. The present Act aimed at the inclusion only of persons employed in branches of industry which were both organized and hazardous, and in extending the Act to fresh classes the Government of India has endeavoured to follow this principle. The great majority of the workmen who satisfy these conditions already come under the operation of the Act and if these conditions are to be maintained, no large extension of the scope of the Act is possible. It is difficult, however, to justify the exclusion of other classes of workmen on grounds of logic alone. The mere fact that an occupation cannot be described as hazardous is hardly sufficient justification for denying compensation to those who suffer from the rare accidents which occur and the fact that an industry is not organized in no way minimizes the hardship which accidents involve on workmen or their dependants.

3. No great difficulty would be created by the inclusion within the Act of workmen engaged in branches of industry which are not particularly hazardous and which are organized, e.g., to workmen employed on plantations. But the extension of the Act to workers in unorganized industries raises more serious problems, for the employer in an unorganized industry is not at all in a position to pay the compensation which would be due in the event of a serious accident. Nor would he be likely in most cases to take advantage of such facilities for insurance as are available. It would seem, therefore, that unless some scheme of compulsory insurance can be introduced, it would be unwise to contemplate any large extension of the scope of the Act. The Government of India are provisionally of the view that the endeavour to introduce any scheme of compulsory insurance, at any rate in unorganized industries, would be attended by serious administrative difficulties. In particular, the expense of administering such a scheme outside the more important urban areas would probably be prohibitive. But they would be glad if the local Government would consider, in the light of the above observations, the desirability of bringing further classes of workers within the scope of the Act. In particular, they would welcome any specific suggestions for additions to Schedule II of the Act.

4. *The Scales of Compensation.*—The main principles of the existing scales of compensation are:—

(1) The payment of a lump sum equivalent to 2½ years' wages of the deceased workman in cases of death of adult workmen.

(2) The payment of lump sums equivalent to 3½ years' wages (or in the case of minors, 7 years' wages) in the case of complete permanent disablement with proportionately smaller sums for partial permanent disablement.

(3) The payment of allowances at half the wage-rate for workmen temporarily disabled, with provisions for commutation. The most striking feature of the Indian Act in this respect is the preference shown for lump sums as against regular payments, and there is no doubt that in a country where industrial labour is confined to a large extent from distant areas, the payment of lump sums involves much less administrative difficulty than the payment of pensions. On the other hand, money received in the form of lump sums, particularly by ignorant workmen and their dependants, is apt to be expended in an improvident manner; and the payment of pensions, if it could be smoothly effected, would result as a rule in the receipt of substantially greater benefit for an equivalent amount of expenditure. The Government of India would be glad to know to what extent (if any) it is desirable, in the opinion of the local Government, that recurring payments should be substituted for lump sum payments in granting compensation.

\* This Bill has since been passed into law as Act V of 1929.

5. As regards the level of the scales, I am to invite attention to the recommendation on the minimum scale of compensation laid down by the Seventh International Labour Conference. It will be observed that the main principle underlying this recommendation is that the scales of compensation should be so framed as to provide the equivalent of two-thirds of the amount which the workman would have earned had he not been killed or incapacitated. The adoption of these principles in the Indian Act would involve an enhancement of one-third in the rate of payment for temporary incapacity and would probably involve substantial enhancements of the amounts payable on account of death or permanent incapacity; and the Government of India desire to receive opinions regarding the desirability of altering the scales. They are provisionally inclined to the view that in respect of the more poorly paid workmen in particular an enhancement would be justified and that, whether the scales for workmen generally are modified or not, the minimum scales of compensation which result from the application of Schedule IV of the Act might suitably be raised.

6. *The Waiting Period.*—A further question which arises in connection with the scales of compensation concerns the date from which compensation is payable. Under the Act as it stands at present, no compensation is payable in respect of the first 10 days of disablement and it has been suggested that this waiting period is too long and results in hardship. While the period is admittedly longer than that prescribed by the great majority of Acts in other countries, the Government of India feels some doubt as to the wisdom of making a general reduction. It should be borne in mind that every reduction involves a very large increase in the number of cases that can be brought under the Act. Experience in other countries in respect of accident frequency indicates that a reduction of the present period by only three days would involve an increase of about 25 per cent. in the number of possible cases. And even if the period was reduced to as low as four days, the amount of compensation for temporary disablement due to a workman who was disabled for a period of less than 10 days would seldom exceed Rs. 2 or Rs. 3, and it would not ordinarily be worth his while to contest such a claim where an employer refused to pay.

7. But the waiting period, in addition to excluding a large number of possible new claims for very short periods, operates to diminish the amount of compensation payable to workmen disabled for longer periods. And it is possible to minimize this effect without opening the door to a large number of trivial claims by providing that, where the disablement has lasted more than 10 days, the workmen should be entitled to receive compensation from an earlier date, e.g., from the fourth day of disablement. This method, which is known as "dating back" has been adopted in a number of Acts in other countries and was at one time in force in England. The disadvantage attendant on it is that it provides in a number of cases a strong temptation to malingering. For the workman who returns to work, for example, on the 10th day is entitled to no compensation, whereas if his disablement lasts for one more day, he receives compensation for a week. In spite of this disadvantage, the possibility of introducing "dating back" provisions deserves consideration.

8. *The Definition of "Dependants."*—The provisions of the Act relating to dependants were designed mainly in order to avoid administrative difficulties and it was recognized at the time that they might be somewhat arbitrary in their operation. The present law is briefly as follows. The amount of compensation to be distributed is independent of the number of their dependants and of the degree of their dependence on the deceased workman. Provided that there is a single relative falling within the group specified in Section 2 (1) (d) of the Act, the whole of the compensation has to be distributed, and so far as the employer is concerned the question of whether any of the relatives were actually dependent or not is immaterial. The commissioner has complete discretion regarding the distribution of the amount and in exercising this discretion, he is naturally guided by the extent to which the various claimants were dependent on the deceased. But as the Act at present stands, he may be compelled on occasion to grant the whole of the compensation to relatives who are in no way dependent, and he may find himself unable to give compensation to other relatives who are dependent but who do not come within the definition of "dependant" given in the Act. The Government of India have received suggestions that the list of dependants should be enlarged, but they are provisionally of opinion that this would be an unwise step so long as the present principles are maintained. For while there are other relatives who are in some cases actually dependent on the deceased, e.g., widowed sisters and widowed daughters, every addition to the list of a relative who is not in the great majority of cases an actual dependant, increases the risk of compensation going to those who have no just claim to it. And it would seem that if any amendment of these provisions is required, the amendment should be of a more radical character. Thus, for example, it would be possible to enlarge considerably the list of relatives entitled to claim and to insist at the same time on some proof of dependance. It would also be possible to provide that the amount of

compensation payable should vary with the number of the dependants and with the extent to which they were actually dependent on the deceased. Provisions of this nature would be more logical than those contained in the Act; but they would obviously be more difficult to administer than the existing law and the Government of India would be glad to know to what extent, in the opinion of the local Government, it is advisable to move in the directions suggested.

9. *Liability of Contractors.*—Sub-section (2) of Section 12 of the Act provides that where a principal is liable to pay compensation under this section he is entitled to be indemnified by the contractor. The whole section, which follows the British Act, contains no special provisions relating to sub-contracts, which are not uncommon in Indian industry, and some amendments appear to be desirable. A recent decision of the Calcutta High Court has made it apparent that no indemnification can be obtained under the Act from a sub-contractor in respect of compensation awarded against the principal for injuries sustained by a sub-contractor's workman. In such cases the principal can recover from the contractor, but neither of them can secure indemnification from the sub-contractor in the absence of an express contract providing for such indemnification. But it is open to the workmen to secure compensation from the sub-contractor by whom he is directly employed. Thus the section as it stands has the undesirable effect of enabling a workman to decide in a particular case on which of the parties the ultimate liability should lie, and an amendment is accordingly required.

10. The most obvious amendment would be one permitting the liability to be passed on in every case to the person directly employing the workman, and such an amendment would be in accord with the general principle of the existing section. But it is at least questionable if this principle is entirely suited to Indian conditions. In many cases the contractors who are responsible for the employment of labour have little control over working conditions, and the main responsibility for such matters as the safety of the workmen rests not with the contractor but with the principal. In a number of instances, and especially in the working of mines, the law definitely holds a particular party responsible for the safety of workmen and it is questionable if he should be at liberty to pass on the liability for compensation merely because he has not engaged the workmen directly. A possible alternative, therefore, would be so to amend the section as to provide that in any case where the contractor or sub-contractor is ordered to pay compensation, he shall be entitled to be indemnified by the principal. Such a provision would be subject to the exception contained in the present Section 12 (4) of the Act which makes the section inapplicable in cases where the accident occurred elsewhere than on the premises of the principal. There would, of course, be nothing to prevent a principal from entering into a specific contract with a contractor or sub-contractor providing for his indemnification, independently of the Act, against claims for compensation.

11. *Returns.*—While the majority of employers now send the prescribed returns punctually, there is a substantial minority who fail to comply with the provisions of Section 16 of the Act. And a suggestion has been made that a penal clause should be introduced in the Act making it possible to impose a small fine on employers who fail to submit returns within the time prescribed. At present, employers who intentionally omit to furnish returns can be prosecuted under Section 176 of the Indian Penal Code, but it has been urged that the difficulty of proving the element of intention renders this section insufficient for the purpose. The Government of India consider that the fact that a reminder or several reminders had been issued without result would in most cases suffice to establish intentional default, and they are doubtful if a special penal clause is necessary; but they would be glad to have opinions on the question.

12. Section 16 requires the submission by employers of correct returns specifying the number of injuries in respect of which compensation has been paid by the employer during the previous year together with such particulars as to compensation as the Governor-General in Council may direct. As the section stands, employers cannot be legally compelled to submit returns in respect of injuries for which no compensation has been paid and it has been suggested that the scope of the section might be enlarged so as to secure these returns and enable Government to judge of the extent to which injured persons succeed in getting compensation. This might be advantageous, but it would not be an easy matter to define the accidents in respect of which returns were required. It should be remembered in this connection that claims for compensation can arise in respect of injuries sustained elsewhere than on the employers' premises. And to call for returns in respect of injuries "arising out of and in the course of employment" would be to compel the employer to choose between restricting the returns to the cases in which he has paid compensation (and this is what is required at present) and admitting that he was liable to pay compensation in a number of other cases.

13. *Provisions relating to Procedure in Fatal Accidents.*—Finally, the Government of India desire to suggest some improvements in the procedure relating to fatal accidents, with particular reference to Section 22 (1) of the Act. As the law stands at present, under Sub-section (1) of Section 22 a dependant who finds that no compensation has been deposited on behalf of a deceased workman must first approach the employer. This appears to be illogical as, in the case of fatal accidents, it is not possible for the parties to reach an agreement that will be final. The duty of deciding what compensation, if any, should be given to each dependant rests solely with the Commissioner, and an agreement between any dependant and an employer is effective only in so far as it is an agreement on the employer's side to deposit compensation. The dependant can make no corresponding agreement to accept the compensation. As all cases of fatal accidents must come before the Commissioner and failure to deposit compensation is equivalent to a denial of the claim, the Government of India are inclined to the view that Section 22 should be amended in such a manner as to enable a dependant who claims compensation to approach the Commissioner for the settlement of his claim without first applying to the employer. This change would not affect the right of the employer to a notice of the accident.

14. Section 22 of the Act effectively presents the Commissioner from initiating proceedings on his own motion. It has been suggested that in a country like India, where the class of people from which workmen are drawn is almost entirely illiterate, the Commissioner should be given powers to initiate proceedings to secure the payment of compensation in cases where, owing to ignorance, no claim has been made. The proposal, as stated in this form, is open to serious objections, the main one being that it would tend to remove the Commissioner from the position of a referee to that of a partisan and to weaken the confidence of employers in his impartiality. The Government of India, however, consider that the migratory character and the general illiteracy of the workers in India and the absence of well-organized trade unions furnish grounds for taking special measures for securing to the dependants of a deceased workman the compensation which is due to them under the Act. For example, a provision might be made under which an employer would be bound to give notice to the Commissioner within a prescribed period of all accidents to his workmen which have terminated fatally. Failure to give such notice would render the employer liable to a fine. The notice would include certain specified details and would also include a statement whether the employer proposed to deposit compensation with the Commissioner or not; and if not, his reason for not doing so. Where the employer did not propose to deposit compensation, the Commissioner might be authorized to convey to the dependants of the deceased employee an intimation that it was open to the latter to take such further action in the matter as they might desire to take under the Act. Alternatively, other officers, e.g., inspectors of factories and mines might be authorized to prefer complaints (and to secure that the proper notice was served on the employer) in cases where they believed that a workman had been killed in circumstances giving rise to a claim for compensation, and where no compensation had been deposited. The Government of India would be glad if these suggestions could be considered; they will be ready to consider any other suggestions designed to meet the difficulty.

15. In a number of cases Commissioners for Workmen's Compensation have been unable to award compensation payable under the Act, owing to the fact that the dependants of a deceased workman could not be traced, and a suggestion has been made that employers should be obliged to register the names and addresses of the nearest relatives of each of their workmen as soon as the workman is taken into employment. The Government of India are inclined to view such a proposal favourably, but they consider that the procedure suggested could only be introduced effectively for certain limited classes of workmen, e.g., those employed in factories, mines and railways. In the case of a factory, for example, the employer has to keep a register of all the persons employed, and the names and addresses of the nearest relatives could be entered at the time when the entry of a workman's name is first made. These registers could be examined periodically by factory inspectors. On the other hand, the enforcement of a rule in the building trades, for example, would be scarcely possible. Another possible objection to this proposal is that in some areas workmen might be unwilling to give their wives' names and the wife, when living, is the most important dependant.

16. Cases arise in which the amount of compensation deposited on account of a fatal accident is inadequate and the Commissioner is at present precluded from taking steps on his own initiative to secure that the full amount of compensation is paid. He must await an application from a dependant before taking any action in this respect. As the deposit of compensation is tantamount to an admission of liability, it would seem to be desirable that the Commissioner should be empowered to call upon the employer depositing compensation in any particular case to show cause why he should not deposit the additional amount sufficient to bring the compensation up to the prescribed sum.

17. Section 8 (1) of the Act does not prescribe any particular period during which the payment must be made by the Commissioner, but it is doubtful whether he can, without statutory authority, withhold a payment for the periods which are sometimes necessary for the decision of an appeal by a High Court. It has, therefore, been suggested that Section 8 (1) of the Act should be amended so as to empower the Commissioner to withhold payment in cases where an appeal has been filed against his decision. The High Court might similarly be empowered to order in any particular case that the distribution of compensation should be suspended pending their decision.

18. In conclusion, I am to set out briefly the main questions on which the Government of India desire to receive opinions. These are as follows :—

- (1) To what fresh classes of employees, if any, should the Act be extended ?
- (2) Should any provisions be introduced for securing workmen against possible loss by reason of the inability of their employer to pay any compensation that may be due ?
- (3) To what extent, if any, should recurring payments be substituted for the lump sums at present payable under the Act ?
- (4) Should the scales of compensation be enhanced either for the more poorly paid workmen or generally ?
- (5) Should the waiting period be reduced either generally or in the case of those workmen who are disabled for more than ten days, and if so to what extent ?
- (6) Should the list of relatives entitled to claim compensation be enlarged ?
- (7) Should proof of dependence be required in order to enable a relative to claim compensation ?
- (8) Should the compensation payable vary with the number of dependants and with the extent of their dependance on the deceased workmen ?
- (9) Should Section 12 of the Act be amended—
  - (a) So as to place the ultimate liability for compensation on the person directly employing the workmen in every case, or
  - (b) so as to place the ultimate liability for compensation on the principal, or
  - (c) in any other manner ?
- (10) Should any penalty be provided in the Act for failure to comply with the provisions of Section 16 ?
- (11) Should employers be required to submit returns of accidents in respect of which compensation has not been paid, and if so, to what accidents should this provision apply ?
- (12) Should a dependant claiming compensation be relieved of the necessity of approaching the employer for the settlement of his claim ?
- (13) What steps, if any, should be taken to ensure that dependants who may have valid claims for compensation do not lose compensation through ignorance of their rights ?
- (14) Should employers be required to maintain a register of relatives of their workmen ?
- (15) Should Commissioners be empowered to call on employers depositing inadequate compensation for fatal accidents to make a further deposit ?
- (16) Should provision be made for the suspension of distribution by the Commissioner pending the disposal of an appeal against his decision ?

Other amendments of the Act may suggest themselves to local Governments or those consulted by them, and the Government of India will also be glad to receive any suggestions relating to points which are not discussed in this letter. I am to request that, after consultation with representative organizations of employers and employees and others who may be interested in the operation of the Act, a reply may be sent to this letter not later than 1st July, 1929.

## APPENDIX XII.

### *Deductions from Wages or Payments in Respect of Fines.*

*Letter to all Local Governments and Administrations, No. L.1418, dated 25th June, 1926.*

I am directed to ask for the/your assistance of the Government of India in enabling the Government of India to obtain information on the extent of the practice in India by which employers in industrial concerns are empowered to inflict fines upon their workmen. Suggestions have been made in the Central

Legislature, in the press and elsewhere that the system of inflicting fines upon workmen is common in Indian industrial establishments, and that it constitutes an evil of such proportions that steps should be taken either to abolish the system altogether or to reduce it to such dimensions as to prevent abuse.

2. That the system is liable to abuse is obvious. If fines are not subject to regulation the employer who imposes a fine acts as prosecutor and judge, and the employee has no effective remedy if he is fined unjustly or in excess. This is true even in countries where workmen are literate and where they have the support of trade unions in resisting unfair imposts. It is not unnatural to expect that in India the ignorance of the great mass of workmen and the absence of strong labour organizations would make the need for protection greater than elsewhere. The experience of western countries has in many cases led to more or less elaborate legislation on this subject. The main provisions of the English law are embodied in the Truck Act of 1896. In several other countries the power to impose fines and make deductions from wages is regulated by law. Sometimes a limit in the shape of a maximum percentage of wages is imposed; generally deductions can only be made in accordance with a code of regulations duly posted in the factory or other establishment; and frequently the law contains the salutary provision that sums paid as fines must be credited to funds devoted in some manner or other to the benefit of the workers.

3. It will be apparent that while the legitimacy of the system of imposing fines is recognized in most countries, restrictions are frequently imposed with the object of preventing abuse. The English law makes a distinction between three forms of deductions from wages—deductions in respect of fines, i.e., for breaches of discipline; deductions in respect of bad or negligent work, or injury to the materials or other property of the employer; and deductions in respect of material provided by the employer. The Government of India are not in possession of full information on the extent to which the practice of making deductions of these various kinds exist in India; though they are inclined to the view that it is in respect of the first two forms of deductions from wages, mentioned above, that the practice is most prevalent and most liable to abuse. The distinction between these two forms of deductions is not always easy to define, and indeed one of the recommendations of the Truck Committee appointed in England in 1906 was the repeal of the provisions of the English law relating to deductions in respect of damaged goods (Section 2 of the Act of 1896), the effect of which recommendation would be that the employer could only deal with cases of careless or negligent work in the same way and under the same conditions as he would be allowed to deal with breaches of discipline. The deductions would cease to be a method by which the employer recoups the loss he has sustained through the worker's act or default, and would become rather of the nature of a fine.

4. There is, of course, a body of opinion which urges that fines ought to be abolished altogether, the grounds advanced generally that experience shows that they are not a real deterrent, that they have a bad moral effect, and that, being often unfairly imposed, they create a sense of injustice and lead to irritation. The exponents of this view aver that discipline can best be maintained by adequate supervision and moral control, with the alternative of dismissal in the last resort. This was not, however, the view taken by the majority of the English Truck Committee of 1906-08. They pointed out the obvious dangers of the total abolition of the system of fining in the substitution of other and less desirable means of maintaining discipline. A considerable body of evidence was produced before the Committee to the effect that many workers prefer fines to the alternative of suspension or dismissal. Their final conclusions were not in favour of the total abolition of the system of imposing fines, but they proposed certain changes in the law designed to place such restrictions and conditions on the system as would prevent it from being either a source of profit to the employer, or a cause of improper or harsh treatment to the workers. They suggested, *inter alia*, that the maximum fine or accumulation of fines in any one week permissible by law should not exceed 5 per cent. of the wages of the worker; that deductions by instalments should be prohibited, i.e., that not more than one deduction should be allowed to be made in respect of one and the same fine; and that fines should be abolished altogether in the case of young persons of 16 years of age and under.

5. In referring very briefly and summarily to some of the provisions of the law in other countries, the Government of India must not be understood as intending to suggest that circumstances in India are the same, or that legislation on similar lines is necessary or desirable. They have not at present sufficient information at their disposal regarding the degree to which the system of imposing fines is prevalent in India, the forms which it takes, or the extent, if any, to which it is in practice abused, to enable them to form any definite conclusions. The object of this letter is to ask local Governments to furnish them with such information as they are able to collect

on the subject, after consultation with the interests concerned, and to favour them with their views on the desirability of taking any action, legislative or otherwise, to counter any abuses which may be found to prevail.

6. If, as the result of these enquiries, any legislative measures on the subject should appear to be desirable, the inherent difficulty of rendering such legislation effective must be recognized. This, indeed, is a difficulty which has been felt in England. The original Truck Act of 1831 largely failed of its effect because no one was officially recognized as having a special duty to enforce it. This drawback was, to some extent, remedied by Section 13 of the Truck Act of 1887, which placed upon inspectors of factories and mines the duty of enforcing the provisions of the Truck Acts and gave them for this purpose the same powers and authorities as they possess for enforcing the provisions of the Acts relating to factories and mines. The Report of the Truck Committee already referred to, shows, however, that even in England where the workmen are literate and in every way in a better position to resist illegal exactions than in India, it has been difficult to prevent or to detect violation of the law. It appears to the Government of India that if any legislation is ultimately found to be desirable in this country, it would probably be impracticable, in the first instance at any rate, to extend its scope beyond industrial establishments, such as factories and mines, which are already regularly inspected by a special staff.

7. In asking for information on this subject, the Government of India would welcome any suggestions which the Government of you may have to make on the form which any measures, which it may be found desirable to adopt to remedy abuses, should take. They would be very grateful if after consultation with the interests concerned, the local Government would favour them with their views not later than the 1st March, 1927.

*Letter from the Chief Commissioner of Coorg, No. 72/5826, dated the 5th January, 1927.*

The system of imposing fines upon workmen employed in industrial concerns or coffee plantations does not exist in Coorg. The chief commissioner does not, therefore, consider it necessary to take any action, legislative or otherwise, in the matter so far as this province is concerned.

*Letter from the Chief Commissioner, N.W.F. Province, No. 6-C. & I. (Revenue), dated the 5th January, 1927.*

No industrial concerns of any magnitude or importance exist in this province, and the enquiries made have not revealed the existence of any system of imposing fines on the workmen employed in such establishments as are to be found. I am unable, therefore, to offer any useful suggestions on the subject.

*Letter from the Chief Commissioner, Delhi, No. 300-Industries, dated the 13th January, 1927.*

In my opinion it would not be possible at the present stage of development of this country to introduce legislation on this subject (even as regards factories and mines already inspected by a special staff) which would not cause considerable irritation without any corresponding benefit, for an ill-intentioned employer would still find many loopholes whereby to evade it. In the long run every employer gets the employees he deserves, and the average employer is not blind to that fact or to his own interests. In the past few years India has had a plethora of industrial legislation, and the country should be given time to digest it fully before too many further steps forward are taken. *Festina lente* is a hackneyed motto, but there are times when it has much to commend it.

*Letter from the Government of Assam, No. 337-F.M., dated the 19th January, 1927.*

There are few large industries in this province besides the tea estates. On tea gardens the system of fining for bad work or damage to materials practically does not exist. The piece-work system is generally in force there, and as the labourer is paid for the actual work done, the question of fining for bad work does not arise in his case at all. Members of the supervising staff however, are occasionally fined for neglect of work or irregularities. The power of fining for damage to tools and plant is not utilized at all in tea gardens. Fines are imposed for breaches of discipline, such as drunkenness, but the power is not abused. Any such abuse would at once lead to an exodus of the labourers and this in itself is a sufficient safeguard.

The fines most commonly imposed on tea gardens are those imposed in settlement of disputes among the labourers themselves, where the fines are paid to the aggrieved party, and fines for petty offences, e.g., cattle trespass, stealing firewood, etc. These fines are imposed in lieu of sending the persons concerned to court and are accepted as a preferable alternative. They do not fall within the class of fines dealt with by the Government of India and may be left out of consideration.

2. In industries other than the tea industry, the system of fining for bad work and damage to materials as well as for breaches of discipline does exist, but the Governor in Council has no reason to believe that it is abused. In the Assam Railways and Trading Company, which is the largest of such industries in the province, the total fines imposed in 1925-26 amounted only to 18 per cent. of the wages bill.

3. The Governor in Council holds that the power of fining must be retained as an alternative to other and less desirable means of maintaining discipline or to the more drastic punishment of dismissal for bad work. There is no abuse of the power of fining in Assam, and there is no danger of such abuse in a province where labour is difficult to obtain and perhaps even harder to retain and any abuse of the power would bring its own punishment in the loss of labour. For these reasons legislation to regulate fining is not required in this province.

*Letter from the Chief Commissioner, Ajmer-Merwara, No. 198/1805 of 1927, dated the 3rd February, 1927.*

So far as Ajmer-Merwara is concerned, no legislation is called for in the matter at present.

*Letter from the Honourable the Agent to the Governor-General in Baluchistan, No. 489-R., dated the 10th February, 1927.*

The industries in this province consist of coal and chromite mines only, while the factories are mainly Government workshops of the railway, ordnance and military departments, and a couple of private steam flour mills and an ice factory.

2. There are no special rules in existence on the subject of powers of employers of the industrial concerns to inflict fines on their workmen. From enquiries made, however, it appears that fines of trivial amounts are inflicted in the cases of breach of discipline, of negligent and bad work, and are readily accepted by the employees concerned. In the case of railway workshops, the amount so realized is credited to a special fine fund, which is used solely and entirely for the benefit of the staff and in no way forms a source of income to the railway. In the case of arsenal workshops, the fines are scrutinized by an officer senior to the one recommending the same before the publication of the same in orders.

3. The system of inflicting small fines is considered to be the only suitable way of dealing with small errors and slackness, and its abolition is deprecated all round in the interest of maintenance of proper control and discipline over the employees.

4. In order, however, to restrict abuses, the following suggestions appear to the Honourable the Agent to the Governor-General and Chief Commissioner to be fair and suitable for all concerned :—

(i) that a list of all fines inflicted in an industry or a workshop should be kept in a special book in which the signature or thumb impression of the employees fined be taken and witnessed by one of his fellow workers in token of the employees acquiescence to the deduction of the amount from his earnings ;

(ii) that the total of such deductions should not exceed 5 per cent. of the monthly earnings of the employee so fined ; and

(iii) that in the case of mines and factories it should be made compulsory for the employer to submit at the close of each year to the inspectors of mines and factories, respectively, for scrutiny, a list of all fines inflicted during the year with full particulars of the circumstances connected with each fine.

*Letter from the Government of the Central Provinces, No 608/1394-XIII, dated the 18th February, 1927.*

The system of fining prevailing in the province is neither a source of profit to the employer nor a cause of harsh or improper treatment to the workers. It has, on the other hand, been effective in enforcing discipline and preventing careless or negligent work. In recent industrial disputes in the province, the subject of fines

has not been brought up as a grievance and no complaints from employees regarding excessive fines have been made to the factory inspection staff. The employers of labour are unanimous in opposing legislation on the subject, and having regard to the conditions obtaining in the province, the local Government inclines to the view that it is unnecessary to introduce legislation on the lines of the English Truck Act. It is suggested, however, that it might be prescribed by a rule under or an amendment of the Indian Factories Act and the Indian Mines Act that the owners of factories and mines shall maintain a register in which the amount of fine or deduction from wages and the nature of the act or omission in respect of which such fine is imposed or deduction made should be entered. Such a register, which should be open to inspection by the factory or mines inspector, would furnish a means for the verification of any complaints and would enable the local Government to watch how far the system is abused in practice.

*Letter from the Government of Madras, No. 381-L, dated the 21st February, 1927.*

I am directed to say that the Commissioner of Labour, the Board of Revenue, the Director of Industries and representatives of employers of labour and employees were consulted.

2. From the enquiries made, the Government observe that fining is generally used both for breaches of discipline and (though apparently not so often) for bad or negligent work or injury to materials and tools. It does not appear that, in the larger concerns, employers hire out materials or tools to workmen and deductions are not therefore made in respect of them. Fines for bad work and injury to materials tend to be regarded as fines for disciplinary purposes and the two groups may therefore be treated together.

3. The enquiries made do not furnish any evidence that the practice of fining is abused in this Presidency. The maximum of 5 per cent. of the wages of any worker suggested by the English Truck Committee of 1906-1908 as being the limit up to which fines may be levied on him in a week is apparently never exceeded in this Presidency, and the average percentage of fines levied appears to be almost invariably less, sometimes much less, than one-half per cent. The fines collected are generally credited to a fund mainly devoted to the benefit of the workmen. In the opinion of this Government the conclusion is irresistible, on the above data, that no need for legislation exists.

4. Further, there are three grave dangers attending legislation of this kind in this country. Firstly, by fixing a maximum by statute, fining is legalized up to that maximum and it will tend thereby seriously to increase the evil against which it is proposed to legislate. Secondly, legislation may drive employers to resort more largely to other methods of enforcing discipline, such as reduction in wages and the withholding of gratuities or bonuses, which would be gravely to the detriment of the workmen. Thirdly, the proposed legislation would not give control where control, if it could be enforced, is necessary. For instance, in the hand loom industry, the middlemen, in whose hands the industry is to a very considerable extent, advance yarn, looms, etc., and use their power of making deductions for alleged bad work or waste of material to an extent which no industrial concern would contemplate. It is, in fact, one of the methods by which they keep the weavers who work for them in a perpetual state of indebtedness. This abuse on the part of employers who do not come within the scope of the Factories Act would not be checked by the proposed legislation, and the restriction of such legislation to industrial establishments in which the abuse hardly exists will not secure the object in view.

*Letter from the Government of the Punjab, No. 561-R, dated the 7th March, 1927.*

From enquiries made it appears that although the practice of inflicting fines on workmen employed in industrial establishments is common throughout the province, it is not resorted to any appreciable extent by any concerns of repute or standing, and that it does not constitute an evil of such proportion as to necessitate legislation to abolish the system altogether or to restrict it within narrow limits.

2. Fines are a well recognized method of inflicting a minor punishment and the system has not led to any great abuse. In fact, the demand for labour is so great that a firm known to deal harshly with its employees in this respect would soon find itself in difficulties in securing adequate supplies of labour. It is also doubtful if industries could be run in India without a system of fines; the labour so far commands the situation (in most industries) that there is little danger of a wholesale misuse of the system. Accordingly in the opinion of the Punjab Government the necessity for interfering with this well recognized method of inflicting a minor penalty is not

established, at least in so far as this province is concerned, and they would not view with favour any legislation intended to stop or regulate the infliction of fines. The enforcement of such legislation would also be very difficult, even if it were confined to factories and workshops liable to inspection. In others it would remain a dead letter.

3. In case, however, the Government of India still decide to introduce legislation in this matter, it would be necessary to define the limit of fine, and in the opinion of the Punjab Government this should be fixed at one-eighth-of-a workman's wages. Any reduction in this limit is likely to lead employers to dismiss their workmen for want of power to impose adequate punishment and this would be a clearly undesirable alternative.

*Letter from the Government of Bengal, No. 1678-Com., dated the 7th March, 1927.*

The Government of Bengal consulted the various interests concerned, and they have now obtained the necessary information, which is summarized below, and which shows that the abuses are so few that it is doubted whether legislation of any kind is necessary at the present time.

2. The extent to which fining is prevalent in Bengal may be judged from the following summary of information supplied by the Bengal Chamber of Commerce :—

" *The Indian Mining Association* (representing the coal-mining industry).—It may be fairly stated that the imposition of fines is not prevalent in the coalfields to any great extent. For if it were the mine workers who are largely agriculturists would not come into the coalfields to work year by year as they now do. There may be deductions from wages occasionally on account of bad work, gross carelessness or negligence, damage to property or pillar stealing. But neither in the case of the workmen engaged by the collieries themselves, nor in the case of the labour brought in by the contractors, has fining become a regular or extensive system in the coalfields.

" *The Indian Engineering Association* (representing the engineering industry).—Fines are imposed in engineering works to a nominal extent only. The maximum limit is not more than 2 per cent. in any of the works and in some of the larger works the amount is less than 1 per cent. of the wages. The system is not abused, and the Association does not consider that any steps are necessary in this regard. In large establishments, such as most of the engineering works are, there is a sufficiently strong class feeling among the workmen to prevent any abuse of the system. The fines are on too insignificant a scale to recoup the employer for the value of any material that may be spoiled by a workman. The system is simply a means of enforcing discipline, and for that reason the Association is opposed to its abolition. If fines were prohibited, employers would be compelled to dismiss offenders, and dismissal is a much more severe punishment than a fine.

" *The Indian Tea Association* (representing the tea industry).—The system of fining is practised to a very small extent in the tea industry and does not constitute an evil. It is considered to be of value as a means of maintaining discipline, and it is obviously not abused, as if it were labour would tend to leave the estates. When inflicted fines are usually either a punishment for bad work or for offences such as petty pilferages, etc."

3. Enquiries made in the tea-garden area of this province have elicited further information regarding the system of fining in that industry. This information shows that abuse is limited by the consideration that the shortage of labour compels the planters to treat their employees with every consideration. The letter from Mr. W. L. Travers, M.L.C., Vice-Chairman of the Doars Planters' Association, to the address of the Commissioner of the Rajshahi Division, amply bears this out, and also demonstrates the fact that, so far as the tea industry in this province is concerned, the time has not yet arrived when legislation of a Truck character would serve any useful purpose.

4. The information supplied from commercial sources is in general agreement with that which Government has received from the Factory Inspection Department, and also from Mr. K. C. Ray Chaudhuri, one of the labour representatives on the Bengal Legislative Council, who was specially consulted on the subject. The fining system may be said to be general in all industrial establishments, and fines are generally imposed for :—

- (a) breaches of discipline ;
- (b) bad or negligent work or injury to materials ; and
- (c) injury to machinery or tools supplied by the employer. It is reported that (a) and (b) are usually the causes of fines in textile mills and tea gardens and (a) and (c) in engineering concerns. About 80 per cent. of the total labour force in this province is employed in textile and engineering concerns, and special enquiries conducted in these industries by inspectors of factories prove that the fining system has

not led to any appreciable abuse. In jute mills it has been found that the majority of fines are inflicted on piece-workers, and, in particular, on weavers on account of bad and negligent work and injury to material. The following are a few random samples taken from jute mills :—

—	Wages per week.			Fines.	Cause.	Percentage of wages.	
	Rs.	a.	p.				Rs.
A. Mill weavers .. ..	3	14	3	0	2	(b) For bad work ..	3
	6	8	0	0	4	(b) Do. .. ..	3.8
	6	11	6	0	4	(b) Do. .. ..	3.7
B. Mill weavers .. ..	6	0	0	0	2	(a) Committing nuisance	2
	8	4	0	0	4	(b) For bad work ..	3
	7	13	9	0	4	(b) Do. .. ..	3.2
A. Mill preparing department.	8	8	0	0	8	(b) Do. .. ..	6
	2	8	0	0	2	(b) Bad work .. ..	5
Finish carding .. ..	2	12	0	0	2	(b) Do. .. ..	4.5
Selectors .. ..	8	8	0	0	8	—	6
Sirdar .. ..	5	8	9	0	8	(b) Bad supervision ..	9
B. Mills spinner .. ..	3	8	0	0	2	(a) For leaving tokens ..	5
Do. .. ..	3	8	9	0	2	(c) For being late ..	5

In no case do the fines in the above instances exceed 5 per cent. of the employees' wages, where monthly wages are taken into account, and in no case investigated does it appear that an employee has been fined more than once in a month. In the case of one mill the aggregate of fines per week amounted to Rs. 50, the majority of which were imposed on weavers, and the balance on the remaining classes of time-workers for breaches of discipline, timekeeping, etc. The total wages bill for the week in this concern was Rs. 14,000. In another mill with a monthly wages bill of Rs. 4,200, the fines aggregated Rs. 6-2 annas per week. In still another mill the aggregate of fines per week was Rs. 300, of which Rs. 200 were imposed on weavers for bad work and the remainder on time-workers for breaches of discipline and infractions of the Factories Act. In this case the total wages bill was Rs. 15,000.

Cotton mills are reported to impose fines similar to jute mills in approximately the same proportion to wages. It is stated that warnings are given before the fines are imposed, and that when an employee is found to be doing better work after having been fined the fines are returned to him in the form of a bonus.

In engineering concerns the available information goes to show that in no case do the fines exceed 5 per cent. of the employees' wages, and that the aggregate of fines is negligible compared with the total wages bill. Fines in such works are generally inflicted for breaches of discipline, bad timekeeping, and injury to tools supplied by the employers.

Information is difficult to obtain in respect of smaller factories, but the fact that no complaints have been received shows that fining does not lead to abuses. It has been noted that in some concerns, such as rice mills, no fines are said to exist, because in such industries the question of skill scarcely arises, with the result that there is no bad work. Punctuality and discipline are also of less importance than in big textile concerns.

5. Under the English Truck Acts all contracts in regard to fines, bad work, damage, use of machinery, light, etc., are required to contain in expressed words the limitation imposed by statute that the deduction or payment is to be "fair and reasonable, having regard to all the circumstances of the case." Contracts also in regard to bad work or damage must also contain the limitation that the deduction or payment shall not exceed the actual or estimated loss to the employer. The information which has already been supplied is sufficient to show that the stipulation "fair and reasonable having regard to all the circumstances of the case" is in practice accepted so far as the large industries in this Presidency are concerned. With regard to the limitation of the fine to the actual or estimated loss to the employer there is, and can be, no attempt in this country at recovering loss due to bad workmanship. When a weaver is fined, say 4 annas, for injury to material, in all probability the cost of the injury to the employer is from Rs. 15 to Rs. 20.

Moreover, in the case of jute mills, consistently bad work turned out by a mill may mean the relegation of the mill to a lower grade by the buyers with consequent general lower prices. One recent case has been quoted in which bad work of this kind has meant a loss of Rs. 3,000 per month to the mill for a full year. Similarly, in engineering works the proportion which the fine bears to the loss in tools or material incurred by the employer is infinitesimal.

6. Generally speaking, it may be said that the fining system is more distasteful to employers than it is to employees. It is obviously in the interest of the employer to have good work done by his employees, to have good discipline in his factory, and also to have good timekeeping. Were fining carried on to an irksome extent it would undoubtedly be reflected in the causes of strikes. An analysis of the strikes recorded in this province from 1920 to 1926 shows only a few cases in which fines have been an ostensible cause of workers going on strikes. This deserves more than a passing note because in the jute-mill industry the quality of the product depends very largely on the quality of the yarn. In a small number of cases, strikes have been occasioned by the imposition of fines due to bad work which was set down by the employees as the result of bad yarn, and which, in some cases, ultimately led to an enquiry into the quality of the yarn used by the weavers. Normally, it is the duty of the supervising staff of the mill, in the interest of the mill itself, to see that the yarn supplied is sufficiently good for the fabric to be woven, so that the likelihood of fines being imposed in big proportions for bad work owing to bad yarn is very small. It has been reported, too, that employers have attempted to eradicate possible abuses which the fining system may give rise to by making a rule that only European supervisors may impose the fines. In cases it has been noted that where a *sirdar* is fined for bad supervision he is liable to pass the tax on to his subordinates. It is always difficult to detect such impositions, but in some mills it is noted the management have encouraged the employees to report direct to them any grievances which they may have arising from this cause. Some managers, it is also reported, have tried suspension, especially in the case of old employees, for breaches of discipline or bad work, but it is doubtful whether suspension is preferred as a penalty to fining.

7. With regard to the introduction of legislation on this subject, I am to say that, after considering the information at his disposal and the views which have been expressed, both by the commercial and labour interests concerned, the Governor in Council is of opinion that it is not necessary at the present time to undertake any legislation of a Truck character at all. The views of the commercial interests are summed up in the following paragraph submitted by the Bengal Chamber of Commerce :—

"It is the considered opinion of the Committee of the Chamber that no legislation of any kind is necessary in connection with the system of fining. They would, indeed, be most strongly opposed to an Act having for its object the total abolition of the system. Nor do they believe that any good purpose would be served by attempting to regulate the practice by legislation. But if the Government of India decide, nevertheless, to legislate, they suggest that the scope of the Act should not extend beyond factories and mines; and that Inspectors of Factories and Inspectors of Mines should enforce its provisions. They are unable to outline what the provisions of the Act should be. But they think that, as was suggested by the English Truck Committee, it might provide that the maximum fine, or accumulation of fines, permissible, should not exceed a certain percentage of the wages of the worker. This proposal is supported by the Indian Jute Mills Association, and it appears to the Committee of the Chamber to be reasonable. They also agree with the Association's recommendation that a notice of fines imposed should be posted in a prominent place in the mill or factory, so as to be readily accessible to the workers. It is also their opinion that fines ought not to be a source of profit to employers, and that they ought not to aggregate such a sum as to be in any way a recovery of the cost of the damage caused by a careless, or inattentive, worker."

From this it will be seen that although the Chamber oppose the introduction of legislation, they are not altogether averse from a general provision to the effect that fines should be limited to a certain percentage of the wages of the worker. Mr. K. C. Ray Chaudhuri is more emphatic than the Bengal Chamber of Commerce. He says:—

"Abolition of fines will not, however, mend matters, and, on the contrary will lead to suspension or dismissal of hands and provide handles to unscrupulous *sirdars* to recruit substitutes and make money. It should be borne in mind that with the exception of certain months, the supply of jute labour exceeds demand. Several hungry applicants hang outside the mill gate for jobs, and the *sirdars* are in the habit of selling jobs to the highest bidder.

"Any Act on the lines of the British Truck Act is out of the question at the present time, as workers are mostly illiterate and are hardly affected by printed notices or written contracts."

8. The experience of the Factory Inspection Department leads to the same conclusion. Indeed, the parallel provisions of the English Truck Acts are in practice observed in this province at the present time. The fines are fair and reasonable, having regard to all the circumstances of the case, and the workmen are personally aware of the system before they enter employment. Fines are rarely imposed on children, *i. e.*, up to 15 years of age, and fines do not exceed 5 per cent. of the employees wages for the month. In some cases also fines are credited to a fund administered solely for the benefit of the workers. On the whole, therefore, there seems to be no case for undertaking legislation at the present moment, even of the general character which would only prescribe a percentage of wages beyond which fines should not go.

The framing of a law to this general effect would, so far as Bengal is concerned, only legalize what is at present the practice. It would, however, materially add to the work of the factories and mines inspection staff, and His Excellency in Council does not look with favour on the addition to the duties of these departments of functions which would not materially benefit the labouring classes. At the present stage of development, the attention of these departments is required for the enforcement of the more vital principles enshrined in the factories and mines legislation. The existing system, moreover, contains in itself the necessary checks against abuse and, in the limited scope in which it is carried on, is suitable to the type of labour, and its organization, employed in this Presidency."

*Letter from the Government of Bihar and Orissa, No. 572-Com./XL-2, dated the 12th March, 1927.*

The Jharia coalfield constitutes the most important industrial area in Bihar and Orissa. The Chief Inspector of Mines reports that, so far as his information goes (and the same opinion is corroborated by the inspectors subordinate to him), the imposition of fines is not prevalent in the coalfields. When fines are imposed, they are ordinarily a punishment for breaches of discipline. In cases in which it is evident that workmen have broken statutory rules and there is insufficient evidence to support a prosecution in the courts, the Mines Department tacitly acquiesces in the imposition of fines by the employer, and the Chief Inspector states that in such cases it is customary for the employer to credit the fine to some charitable institution, and to send the receipt to the Inspector. The Chief Inspector of Mines observes that owing to the difficulty of retaining labour, mines managers are reluctant to impose fines which might result in the workmen concerned, and other workmen belonging to the same group or coming from the same village, leaving their employment and going elsewhere. Before replying, the Additional Deputy Commissioner of Dhanbad (in the centre of the Jharia coalfield) referred the subject to the Indian Mining Association, the Indian Mining Federation and the Colliery Managers' Association. All these three associations deny that there is any regular or extensive system of fines in the coalfields, applying either to the workmen engaged by the colliery companies or to the labour brought in by the contractors, though occasional deductions from wages are made for bad work or injury to property. The Additional Deputy Commissioner, Mr. Hoernle, who possesses considerable personal experience of conditions in the coalfields, considers that the statements made by these associations fairly represent the facts. Labour employed in the mines is in a strong position, and would be able to contest any excessive or unjustified fining.

2. Outside the coalfields, the chief industrial establishments are the Tata Iron and Steel Works at Jamshedpur, the Peninsula Tobacco factory at Monghyr and the workshops of the East Indian Railway at Jamalpur. The Tata Iron and Steel Company report that, in their works, fines are inflicted only for culpable negligence in the loss of or damage to property, or for the loss of the nickel or bronze tokens which are issued for purposes of identification. Further, they observe that in a manifesto issued some little time ago by the Jamshedpur Labour Committee (of which copies were sent to all members of the Legislative Assembly), no reference of any kind was made to fines or stoppages of pay, though every possible grievance was brought out and ventilated. The general manager of the company adds that if the management were deprived of this simple means of maintaining discipline, they would have no alternative but to resort more freely to the dismissal of unsatisfactory workmen. The Deputy Commissioner of Singhbhum corroborates the statement made by the Tata Iron and Steel Company, and expresses his opinion that the imposition of fines is not abused by employers either in mines or factories in that district.

The Peninsular Tobacco Company at Monghyr has no regular system of fines, though fines are occasionally imposed.

In the workshops of the East Indian Railway at Jamalpur, there is a more or less recognized scale of fines for certain minor offences; for instance, smoking or sleeping in the works, washing at the hydrants, failure to produce train passes, going out without tickets, committing nuisance, etc., is punished by a fine of one day's pay, rising to Rs. 2 according to the gravity of the offence, while loitering in the workshops may be punished with a fine of two days' pay rising to discharge or dismissal. Government understand that the fines that are realized are credited to special funds maintained for the benefit of the workmen, and spent either on entertainment or for helping deserving workmen and their families.

The reports received from other districts all indicate that the imposition of fines is not carried to excess, and is not abused.

3. Local official opinion is almost unanimously opposed to any special legislation being undertaken. In agreement with the Commissioners of each of the five divisions of the province, the local Government are of opinion that, the statutory prohibition of fines is not desirable, and would have unfortunate results for the workmen themselves, while so far as conditions in this province are concerned, no special legislative measures of any kind are required to remedy or prevent abuses in the imposition of fines.

*Letter from the Government of Burma, No. 302-V.-26, dated the 2nd March, 1927.*

There are at present no provisions of law in Burma either empowering employers to fine their workmen or prohibiting them from doing so. The matter is therefore one purely of civil contract between the employer and the workmen. Enquiries made by the local Government show that infliction of fines upon workmen in this province does not amount to an abuse which calls for legislation. It appears to the local Government that whatever may be the case in Bombay and in other provinces where textile industries are of importance, the problem of the unjust or oppressive employer is not one which calls for attention in this province in its present state of development. This is probably due to the peculiar circumstances of industry in Burma, and in particular to the fact that labour, most of which has to come from other provinces, is in great demand, and will not come to Burma unless it receives fair treatment. The treatment of certain immigrant coolies by maistries through whom they are employed, is a matter to which the attention of the local Government has, from time to time, been directed, but this cannot be dealt with in legislation affecting the relations between the employer and the workmen in industrial concerns, and is therefore outside the scope of this enquiry.

2. With a view to ascertaining to what extent the practice of fining workmen is prevalent in Burma, particulars have been obtained of fines inflicted in certain industrial establishments. The results of the enquiry have been tabulated in the statement\* attached to this letter. The figures are in most cases the monthly averages for the calendar year 1925, but in a few cases they are for one month only. In the case of rice mills, fines are said to be rarely, if ever, inflicted; and it is said that a warning, followed by dismissal, is the usual means of dealing with unsatisfactory work in such establishments. The statement\* shows that in most cases the percentage of employees fined is very small; and in cases where a considerable proportion of employees are fined, the average fine imposed is unlikely to constitute a serious hardship to the employees. In some cases the fines which are inflicted are credited to a hospital fund or other fund used for the benefit of the workmen. It has not been possible to obtain figures for native mills; but it is reported that fining in such mills is not excessive.

3. The Chief Inspector of Factories, who was consulted on the subject, has reported as follows:—"So far as my enquiries go, fines are inflicted for disciplinary reasons in most of the properly organized factories. It may be said that in a factory where there is proper supervision there are fines, and in the happy go lucky up country places where everyone does what seems good in his own eyes, there are no fines. In place of fines we get irregular time keeping, dirty machines, dangerous methods of work and bad maintenance of guards.

"It is a little difficult to say at times whether a deduction from a man's nominal wage is a fine or not. The usual method of payment in this country is by the month, but this implies the tacit understanding that the man turns up on each working day. If he takes a day off and 1/28th part of his monthly wage is deducted, is this deduction a fine or not? It would be easy to argue either way. A similar problem arises with piecework. Suppose it is agreed to pay a man Rs. 12 a dozen for making say bolts, and that he makes 14 of which two are defective. Is he fined if he only gets Rs. 12 for his work? It is quite certain that the employer when he engaged the man had no intention of paying him for making bad bolts. He offered him the Rs. 12 for making 12 good bolts.

"I mention the above cases to show the difficulty of determining when is a fine not a fine, and the abundant literature on the Truck Acts indicates the similar difficulty of determining when a deduction is not a deduction.

"The Officer in Charge of Labour Statistics is putting up a statistical note which he has compiled from returns received from factory managers, but in view of the preceding paragraphs it is possible that some of his fines or deductions may not really be fines or deductions. Still, even so, I think his statements, which I have been permitted to see, indicate that fines and deductions are not an abuse in this country.

"In some cases at least (Burma Oil Company and Burma Railways) fines are credited to the hospital or to the Workmen's Institute, but generally I think firms, copying the example of Government, do not expend fines on any eleemosynary objects.

"My enquiries show that it is fairly common, particularly in printing presses, to dock a man two days' pay for one day's absence. This is not, I think, unreasonable, as it means that a costly machine lies idle while the man is away.

"Small fines for lateness, loss of tools, etc., are fairly common, but I have not come across any cases in which excessive deductions are made. In the small up country mills the feeling between the manager and the workmen is often such as to render any question of fines quite out of place. I know cases when the manager during the off season pays his old workmen if they are unable to obtain other work, and no attempt is made to recover these payments when the mill starts work again.

"I have no information on the subject of deductions made by maistries from their coolies, but there is some reason to believe that these are sometimes excessive. I do not see how the system can be stopped or the administrative machinery by which it could be regulated, without causing serious disturbance to the present system of employing coolies through a maistry.

"While I consider that there is at present no necessity for any legislation on the subject of fines and deductions, I do not think it would be impossible to draft an Act which should prevent fines or deductions ever becoming an abuse in the case of men paid directly by a factory or mine. It would be necessary to define what is meant by a workman's wages, to prohibit any deduction from those wages unless made in accordance with a notice of fines (which might perhaps have to be approved by an inspector) to require that a register showing particulars of all fines inflicted should be maintained and that the total fines inflicted on each individual should be shown in the wages sheet.

"The undoubted difficulty is to define what is meant by wages, and I should much prefer to criticize other peoples' definitions than to make a definition myself."

The local Government is in general agreement with the views expressed by the Chief Inspector.

4. As already stated, the local Government does not consider that there is any necessity at present for legislation on the subject in this province. That being so, it is hardly possible for the local Government to consult the interests concerned as to their attitude with regard to any legislation on the subject which may be proposed. His Excellency in Council considers that the only course is to frame legislation to suit conditions in those provinces where legislation is required. If this were done, the local Government could examine the proposals, in order to determine whether they might be adopted without inconvenience in this province. The local Government agrees with the Chief Inspector of Factories that it should be possible to draft an Act which would prevent fines or deductions becoming an abuse, at any rate, so far as factories and mines are concerned; and it is possible that such an Act might be put in force in this province without inconvenience. This is, however, a matter upon which the local Government would prefer not to express a definite opinion until legislation has been framed and is under consideration.

*Office Memorandum from Railway Department (Railway Board), No. 4414-E., dated the 6th April, 1927.*

The undersigned is directed to forward herewith a summary\* of the views expressed by agents of railways, and to state that the Railway Board support the almost unanimous opinion of the agents that the system of fining cannot be altogether dispensed with on the railways, which have to deal with a very large number of illiterate employees. It is also pointed out that there are checks against any abuse of the system as persons fined can appeal to higher authorities. Legislation to prevent abuses is not therefore necessary so far as railways are concerned. Fines realized are not credited to the railway revenues, but are taken to a fine fund, which is utilized entirely for the benefit of the employees.

\* Not printed.

*Letter from the Controller of Printing, Stationery and Stamps, No. H.Q.-10/60, dated the 8/9th April, 1927.*

The following fines are imposed on the employees of Government of India Presses :—(1) Fine for absence without leave ; (2) fine for making pye ; (3) fine for late attendance ; (4) fine for neglect of duty ; (5) fine for bad work ; (6) fine for disobedience or breach of discipline.

2. Fines under (1), (3) and (6) are credited to the fine funds constituted in the presses, while pye fines and special fines for bad or careless work, entailing direct loss or extra expenditure to the employer are rightly credited to Government.

3. The system of fining in Government Presses has not assumed such a proportion as would constitute it an evil, neither does it inflict unnecessary hardship on the employees. The figures in paragraph 5 below show the total amount realized over the whole year in fines is less than 2,000 on 6½ lakhs paid in wages (supervising staff excluded).

4. The fine fund was introduced by the Government of India in 1920, and the question of fines came under review of the Piece-workers Committee in 1922. Their recommendation reads :—

“ Provided that the system of fines at present in force is worked in the existing lenient manner, we cannot advise that the Press authorities should be deprived of this method of maintaining discipline. We must add that the money received by fines is not credited to Government. The proceeds from fines are being funded with the object of creating a compassionate fund for the benefit of Press employees and their families.”

5. That the system of fines is administered more leniently, as far as the Calcutta Press is concerned, than it was when the above was written, the following figures will show :—

	1922.		1926.	
	Credited to Government. Rs.	Credited to Fine Fund. Rs.	Credited to Government. Rs.	Credited to Fine Fund. Rs.
	1,316	2,580	881	1,093
Total ..	3,896		1,974	

There are over 1,000 men employed in the Calcutta Press so that the total amount of the fines inflicted in 1926 works out on the average to less than Rs. 2 per head for the whole year, of which a sum in excess of Re. 1 per head was returned to the men by way of the fine fund for the purpose of immediate relief in cases of distress amongst the employees and their families.

6. The effect of abolishing fines in the Government of India Presses would be to encourage, especially under the piece system, careless and inefficient work with consequent substantial loss to Government. I am, therefore, not in favour of total abolition.

7. In the Calcutta and Simla Presses during the periods when they were under my charge, every recommendation for a fine came under the review of the manager, and as he only sanctioned the fine and fixed the amount, no man was actually fined until it was found that several warnings were ineffective, with the consequent reduction in the amount realized by fines.

8. In the Government of India Presses the men have an additional safeguard against hardship in the infliction of fines or unnecessary fining by the management, inasmuch as they have the right of appeal to the Controller and to the Government of India. Any grievance or injustice inflicted can also be brought to notice and discussed in the works committee. It may be asserted, therefore, that the Government Press employee is sufficiently protected from abuse of the system of fining by the conditions of his employment and by the rules, etc., already in force.

*Letter from the Controller of the Currency, No. Cy.-508, dated the 16th March, 1927.*

I have the honour to state that so far as the departments under my control are concerned, fines are in most cases levied on well-defined and automatic principles and are not therefore, liable to abuse. In Currency Offices, fines are imposed in accordance with Articles 40, 131 and 145 of the Currency Code for bad and negligent work. The men affected are literate and most of them are members of associations recognized by Government and can ventilate their grievances through those bodies. As regards Mints, fines are inflicted mainly for late attendance, and to a small extent for bad work, breach of rules, etc., under rules laid down in Mint Codes or standing orders which are known to the men.

2. In practice very few fines are imposed, and no complaints have been received so far in individual cases. The men have the right of appeal to Deputy Controllers of the Currency or Mint Masters, as the case may be, or even to the Controller of the Currency. For routine and mechanical work like that of currency offices and mints, fines have a salutary effect and act as a deterrent to careless work, breach of discipline, etc. In the mints especially, which have a short working day, it is necessary to ensure punctuality which can best be done by imposing a penalty in the shape of a fine for being late.

3. The employees themselves prefer this form of punishment to the more drastic alternative of a postponement of increment.

4. For these reasons I am not in favour of abolishing fines, and I do not consider that any special measures are necessary to remedy abuses of the system so far as the departments under my control are concerned.

*Office Memorandum from the Secretary, Central Board of Revenue, C. No. 77-Gl./27, dated the 17th March, 1927.*

The Secretary, Central Board of Revenue, is directed to forward a copy of each of the letters noted below, which furnish the information required, regarding the levy of fines on workmen, etc., in (certain) departments under the administrative control of the Board. The Board considers that the present system of imposing fines should continue, and that so far as Government employees are concerned no legislation to regulate it is necessary.

(1) Letter from the Master, Security Printing, India, No. 52/27-4703, dated 16th February, 1927.

(2) Letter from the Collector of Salt Revenue, Bombay, No. 105-28/26, dated the 18th February, 1927.

(3) Letter from the Collector of Salt Revenue, Madras, No. D.-357-Salt/27, dated 7th March, 1927.

(4) Letter from the Commissioner, Northern India Salt Revenue Department, No. 54-Gl./27, dated the 15th March, 1927.

*Letter from the Master, Security Printing, India, to the Secretary, Central Board of Revenue, No. 52/27-4703, dated the 16th February, 1927.*

I have the honour to inform you that no general system of imposing fines on labour exists in Security Printing. In one section, that of postcard counting, where the counters are paid by piece-work per tray (5 reams) of cards, a system is in force whereby a mistake detected in the counting of a tray cancels the payment due for it. This, however, can scarcely be termed a fine, as it merely means that the worker is only paid for accurate counting.

2. In rare cases, fines are imposed under my orders for careless mistakes made in the checking, etc., of other products where the introduction of piece-work is not possible. In one (or two) cases also, employees have been fined in order to make good the value of products found to be deficient.

3. I am strongly of opinion that the practice should continue, the only alternative punishments in such cases being reduction in pay or dismissal. I also consider that no regulation by law is necessary or desirable.

*Letter from the Collector of Salt Revenue, Bombay, No. 105-28/26, dated the 18th February, 1927.*

I have the honour to state that the system of imposing fines on labour does not prevail in the Bombay Salt Department. At the Government salt works at Khara-goda and Dharasna and Chharvada, the agarias receive wages at a certain fixed price per maund of salt produced by them and delivered or sold. No deduction is made therefrom.

*Letter from the Collector of Salt Revenue, Madras, D. No. 357-Salt of 1927, dated the 7th March, 1927.*

The system of imposing fines exists in this department only to a limited extent. Fines are inflicted on permanent petty officers and peons, whose pay ranges from Rs. 12 to Rs. 25 per mensem, up to a maximum of Rs. 3, according to the rules laid down in paragraph 792, Salt Manual, Volume II, for breaches of discipline, when black marks are ineffective. Temporary peons and platform coolies of factories are also fined small amounts for similar offences, as the black mark rules do not apply to them being daily labourers. Workmen of the Madras Depot Workshop (mechanics

and coolies) in number about 20, are also occasionally fined both for slack work and breaches of discipline. The total amount of fines realized from 1st April, 1926, up to date in the Madras Depot Workshop is only Rs. 5. The local officers report that the 5 per cent. limit of pay suggested by the English Truck Committee of 1906-08 has rarely been exceeded.

There is little fear of abuse of the system of fining for the following reasons:— Firstly, the maximum amount of fines has been fixed, and those who are so punished have the right of appeal to a higher authority. Secondly, the power to inflict fines is only vested in gazetted officers who can be trusted to use the power with wise discretion. Finally, orders have recently been issued to substitute extra fatigue duty instead of fines for petty offences as far as possible. In these circumstances I do not consider that there is any necessity to abolish the system.

*Letter from the Commissioner, Northern India Salt Revenue, No. 54-G1/27, dated the 15th March, 1927.*

I have the honour to report that in the Salt Range Division of this Department a system of imposing fines on labour prevails, regulated in the case of persons other than Government servants or daily labourers by Rules 18 and 21 of the Mining Rules, which run as follows:—

“The manager (assistant commissioner) of a mine or quarry may punish any person (other than a daily labourer) employed in such mine or quarry above or below ground and not being a Government servant against whom any breach of these rules or of any standing orders or any carelessness or misconduct in connection with his work may be established with—(a) a fine not exceeding Rs. 5 for every such offence, (b) (other alternative follow).

Under Rule 19 an appeal lies to the general manager. Rule 21 runs:—

“The general manager of salt mines may punish any miner or other person not being a Government servant employed in or in connection with any mine or quarry in the division for misconduct, breach of any of these rules or disobedience of lawful authority by a fine which may amount to Rs. 50 or by removal or dismissal from employment.”

Under Rule 22 an appeal lies to the Commissioner.

2. I attach a copy of a note\* by the General Manager, Khewra, on the working of the system. Fines at Khewra and Warcha average Rs. 75 a month or about 0.84 per cent. on the wage bill, are credited to a divisional “fine and pension fund” and utilized with the advice of the miners’ committee on relieving distress among widows and orphans, men incapacitated from work by accident or old age, etc. Under the Rules for the Management of the Salt Range Division Fine and Pension Fund levied (without specific rules in regard to this levy) from a long list of employees on construction and upkeep, carriage of salt, mine inspection and sanitation and in the depot, are also credited to the fund, in the benefits of which they share.

3. There are no specific orders regarding fines on classes of labour other than those mentioned in the mining rules and the notes received from the various divisions are incomplete in their information, while no time remains in which to have the gaps supplied.

4. The Departmental Manual contains rules empowering the various grades of officers to fine for misconduct the inferior permanent establishment subordinate to them—general managers and assistant commissioners up to a limit of Rs. 5 for any one offence, superintendents up to Rs. 2, and inspectors up to Re. 1, and I understand from Mr. Reid that in Khewra, the assistant commissioner, mine, and the engineer, fine by analogy the labour under them up to a limit of Rs. 5, and the superintendent depot, up to a limit of Rs. 2. In Rajputana, most works are done by contract and the occasions for fining labour are few. In the Sambhar Workshop, fines are imposed for neglect of duty, loss of or damage (other than accidental) to tools, etc., apparently on the same scale as in Khewra.

5. No contracts are made with labourers and no maximum fine or accumulation of fines is prescribed.

6. So far as this department is concerned, I would on no account abolish fines. All that seems required is by executive order to define exactly in the case of labour other than that covered by the mining rules, the officers who may fine with the limit of their powers, the employees whom they may fine, the faults for which fine may be awarded and the maximum fine permissible in a given period. Except in Khewra, where conditions permit of this, it appears impossible to arrange for the utilization of fines for the benefit of the workers.

*Letter from the Director-General of Posts and Telegraphs, No. 79-G.127, dated the 22nd April, 1927.*

The deductions in respect of fines for breaches of discipline are regulated by well defined rules which fulfil the provisions of the Truck Acts. According to these rules the following are exempt from fines :—(a) all postal officials who do purely clerical work ; (b) those postal operatives who have passed the second efficiency bar in the clerical time-scale ; (c) telegraph officials of the ministerial establishment ; (d) those drawing Rs. 100 and upwards.

2. In other cases, the rules authorize the imposition of fines only in cases of perverse or repeated neglect. Each case is required to be carefully considered, and any attempt at abuse of the power is discouraged. Every order of punishment (including fine) has invariably to be in writing after the explanation of the official has been obtained on a written memorandum of charges. A statement of punishment (including fines) is submitted monthly to the Head of the Circle, who is thus in a position to check any tendency on the part of his officers to abuse the power of inflicting fines. The staff have the right of appeal to higher authority, and are consequently well protected against harsh or unjust treatment. Lastly, fines are limited on the postal side to a week's pay in a month, or roughly speaking, 25 per cent. of the monthly earnings of a worker, and on the telegraph side to 10 per cent. Incidentally, I propose to look into this difference of practice in the postal and the telegraph branches.

3. The efficacy of the safeguards provided against abuse is apparent from the figures for the last year. The total number of postal operatives serving in Calcutta during the past year numbered some 2,700, exclusive of the staff employed in the Calcutta Sorting Division. Their annual earnings in wages amounted to above Rs. 20,63,000. The amount of fines imposed and realized from these earnings was only Rs. 323-10 annas. The recovery works out at less than 2 annas a head per annum. In the case of the Calcutta Sorting Division the relative figures are—wages Rs. 4,76,000, fines Rs. 12-8 annas, and the incidence 1/3rd anna per head per annum.

4. I feel rather sceptical about the view that discipline can best be maintained by "adequate supervision" and "moral control" with the "alternative of dismissal as the last resort." Adequate supervision is rather a vague expression, moral control cannot always be exercised, while dismissal is far too drastic. Some form of coercion is necessary to make the employee work diligently. It is the day to day pressure that counts. Where officials are in the enjoyment of a time-scale of pay, stoppage of increment for varying periods according to the circumstances of the case is often a good substitute for fining. This course has the additional advantage of restricting the pay of the defaulter to his worth. But for low paid employees generally, I consider that *with proper safeguards*, the system of fining for disciplinary purposes is a very suitable form of punishment. The workers themselves, I believe, prefer small occasional fines to stoppage of increment, degradation or dismissal.

5. The second form of deduction from wages as classified by the English law presents a far more serious and perplexing problem. An employer who sustains loss by the bad or negligent work of his employee naturally seeks to take, and feels justified in taking, such a measure against the delinquent as will not only act as a strong deterrent, but also yield to him some recompense for the loss. It is difficult to persuade an employer to treat such loss as an ordinary breach of discipline.

6. So far as this department is concerned, the loss or damage caused to Government due to bad or negligent work, arises chiefly out of the loss or theft of insured articles, short realization on account of value payable charges and customs duties, mispayment of telegraphic money orders, refund of the cost of telegrams, etc. In all these cases when dealing with the individual to blame for the loss, his capacity to pay is taken into account. Every official who joins this department, and who is expected to handle cash, is required to furnish a security bond in which it is clearly laid down that he is required to make good up to a certain amount any losses that may occur as a result of his neglect, default, omission, dishonesty or disobedience. The employees are thus fully aware of the system on which such deductions are based in this department, and the provisions of the Truck Acts in this respect are observed.

7. Nevertheless, heavy recoveries to the full extent of the loss sustained are not infrequently ordered, which are not always either fair or reasonable. For example, an act or omission involving the same degree of negligence or disobedience of the same rule may result in the loss of an insured letter for Rs. 100 or for Rs. 1,000 ; yet in actual practice the officials concerned in the two cases have to make good Rs. 100 and Rs. 1,000 respectively. On the other hand, if this principle is departed from and recoveries are made proportionate to the degree of negligence involved, which is in itself a very baffling equation, there is always the danger that losses may be very heavy, and the department would have no remedy except to dismiss the official. The officials themselves more often prefer to make good the loss, heavy though it may be, than be removed from the service.

8. It has been suggested that recovery in such a case should be limited to the maximum of the security given by the official at fault. I propose to pursue this suggestion specially in respect of insured articles, where the loss is covered by the insurance fees.

9. The third form of deduction from wages does not enter into the question so far as my Department is concerned, as all equipment for work is provided free.

*Letter from the Government of United Provinces, No. 815, dated the 9th May, 1927.*

This Government has consulted the two Chambers of Commerce, the Mazdur Sabha of Cawnpore, the Director and the Board of Industries, the Chief Inspector of Factories and representative employers of industrial labour of various kinds in different localities. The opinions received are divided. Some of the more important views are summarized below.

2. The Upper India Chamber strongly protest against the volume of factory legislation, and what they describe as an increasing tendency on the part of the Government of India to improve the conditions and class-power of labour at the expense of the employer. They state that the system of inflicting fines upon workmen is common in factories, as it is in every other sphere of life where it is necessary to punish an employee with something more than an admonition or censure, and something less than suspension or dismissal. They deny that an employer levying a fine acts both as prosecutor and judge. In most factories the fine is said to be leviable only by somebody in authority upon due complaint and proof, and the prosecuting individual is not the judge. They admit that workmen in this country are ignorant and without the protection of labour unions. But these factors, they affirm, tell against the employer more than against the workman. Owing to ignorance, the workman takes no pride in his work, and does as little as he can. His ignorance and inadaptability cause loss to the employer in tools, machinery and material, and make it necessary for his employer to adopt methods in dealing with him which will seldom be necessary in most other countries. All the manufacturing members of the Chamber agree that the abolition of the system of levying fines, when deserved, is impossible.

3. The Chamber state that many factories already regulate the imposition of fines, and that the maximum number of persons fined is not greater than three per cent. of those employed. They classify fines as follows:—(a) *Disciplinary*—inflicted for disobedience of orders, lateness or absence, uncleanness or breach of sanitary rules, and quarrelling or fighting; (b) *Compensatory*—viz., deductions for damage done to tools, machinery and material. These deductions amount, perhaps, it is said, to four annas per hundred rupees of the wages earned, except in some textile mills, where the practice has been introduced recently of making the weaver buy the cloth he spoils. Such cases are claimed not to exceed 1 per cent. of the men employed nor to represent more than 10 per cent. of the offender's earnings.

Disciplinary fines and sometimes even compensatory deductions are said to be usually credited to a fund for the benefit of the workmen, e.g., for recreation or medical attendance.

4. The Chamber protest against the suggestion that the restriction of fines, if enforced, may have to be confined to factories and mines where the presence of Government inspectors will make enforcement possible. They say that if legislation is decided on, the Government should set the example by controlling fines in their own departments and on the railways and in municipal offices. They also argue that in India, where the supply of factory labour falls short of the demand, an employer cannot afford to substitute dismissal for fining.

5. The United Provinces Chamber consider that the system of fining is worked in this province "with great discrimination and moderation." An employer resorts to fines as a deterrent and not as a source of profit to himself. The Chamber also consider that the workman's ignorance, inefficiency and defective sense of responsibility furnish an additional reason for maintaining the system of fines. They, too, are opposed to legislation.

6. The Mazdur Sabha of Cawnpore, on the other hand, strongly favours legislation. It is unable to make any definite suggestions, except that fines in respect of damaged work must be stopped, and damage to work should be treated as a breach of discipline. It would also limit the fines which can be imposed in a definite period. I am to point out, however, that this Sabha is as yet hardly representative of the labouring class of this province generally.

7. The Industrial and Trade Association of Benares advocate that the power of fining workmen for negligent work should not be withdrawn, but advise that fines should go towards the workmen's welfare.

8. The Chairman of the Cawnpore Improvement Trust (Rai Bahadur Babu Anand Sarup, a well-known public man) believes that the practice of fining is generally abused by employers (barring a few honourable exceptions like the Muir Mills) and results in much hardship to the workmen. He considers that though it is neither possible nor desirable to abolish fines, as some check on indolence, indiscipline and bad work is necessary, there is a clear necessity to regulate them.

9. The inquiries made by this Government show that the practice of fining workmen is general in this province. It takes the following forms:—(a) *Disciplinary fines*—for disobedience of orders, being late or absent, breach of sanitary rules, disorderly conduct, etc.; (b) *Compensatory deductions*—for damage to goods, machinery or tools; (c) *Compulsory purchase* by a weaver of cloth spoiled by him. It is reported by the Chief Inspector of Factories that the percentage of workmen affected varies from one to twenty, and the price paid from 5 to 10 per cent. of the wages earned. He adds that he has received no complaints on this score, and the workmen prefer taking the cloth to being fined or dismissed.

10. There is no indication, however, that the practice is abused, except perhaps by some of the smaller manufacturers whose employees are not villagers (e.g., the wire workers of Benares and the metal workers of Moradabad). No complaints have come to the notice of the Government that workmen employed by the larger mills—to whom admittedly legislation would have to be confined, at least in the first instance—are unjustly treated. If there had been any serious abuse it would have certainly come to the notice of the Government in connection with the strikes that have from time to time occurred. Moreover, in a province like the United Province, where most of the factory hands are drawn from the agricultural classes, the problem of the larger employer has always been to get and to keep his labour, and this operates as an effective check on any tendency to excessive or unjust fines. Further, most of the larger firms, at any rate, do not make any profit out of the fines, but employ them for the benefit of the operatives themselves in various ways.

11. The Governor in Council sees little or no evidence that industrial operatives in the larger factories of the United Provinces are fined harshly. He knows of no good reason for recommending that the employer should be legally debarred from fining undisciplined or defaulting or destructive workers (who often earn Rs. 30 a month) more than Rs. 1-8 annas per month. He has received no complaints from the workmen, and thinks that the time is not ripe and no real necessity exists in this province for any legislative action. Moreover, the Indian Trade Unions Act, which will come into force on 1st June, 1927, will stiffen the attitude of the employees, and make it still more difficult to treat them unfairly. If the Government of India nevertheless decide to legislate, they will, it is hoped, give provincial Governments the power to determine what provisions of the new law should be applied to their provinces.

*Office Memorandum from the Army Department, No. 33812/2 (A.D.), dated the 8th June, 1927.*

The undersigned is directed to forward the undermentioned copies of correspondence \* which show the present rules and practice as regards the imposition of fines on workmen, etc., employed in the various ancillary services of the Army in India. On an examination of these papers the Army Department have come to the conclusion that, so far as they are concerned, there are no abuses which need to be checked, and that no executive or legislative action is therefore necessary from their point of view.

*Letter from the Government of Bombay, General Department, No. 5773/D., dated the 29th September, 1927.*

I am directed to forward (1) a copy of a \* Report on an Enquiry into Fines conducted by the Labour Office of the Government of Bombay; (2) \* copies of the replies received from officers and interested Associations who were consulted on the question and (3) a detailed \* summary of those replies classified according to the points treated together with the views of the Bombay Labour Office.

2. A summary of the results of the Enquiry was forwarded with relevant papers to 25 officers and interested associations in the Bombay Presidency for opinions on the various questions raised in your letter under reply, and on the points arising out of the enquiry. An examination of the replies received shows that all Employers' Associations are of opinion that no legislative action for the control of fines

is necessary. The majority of the Employers' Associations have confined themselves to the expression of the opinion that the results of the Labour Office Enquiry do not show that the conditions are such as would justify legislative action. Representatives of labour, on the other hand, are of opinion that the results of the Enquiry show that legislative action is necessary. The Bombay European Textile Association, which is composed of European mill managers and European textile departmental masters, does not give a definite opinion on the question of the necessity of legislation though it seems to imply that legislation is necessary. The agent of the G.I.P. Railway has forwarded his views direct to the Railway Board. The agent of the B., B. and C.I. Railway does not consider legislative action necessary in the case of railways. The Commissioner, Bombay Municipality, and Chief Officer, Bombay Improvement Trust, favour legislation. The Karachi Chamber of Commerce qualifies its disapproval of legislative action by recommending that, under the rules of the Factories Act, it should be made compulsory for all factories to keep a record of fines with the reasons for their infliction, and an account of the disposal of the money so collected, which should be available for inspection by factory inspectors.

3. The Officer-in-Charge of the Labour Office of the Government of Bombay is not in favour of the abolition of fines, but considers that legislative action for the control of fines is desirable. The Governor in Council is in general agreement with the views of the Labour Office, and considers that legislation may be necessary on the following points:—(1) Extent to which fines may be inflicted; (2) Disposal of fines; (3) Power to fine; (4) Maintenance of Registers of fines; (5) Fines for bad and negligent work; (6) Fines for breaches of discipline; (7) Withholding of wages; (8) Forfeiture of wages; (9) Compulsory purchase of damaged material; (10) The "Double Khada" rule; (11) Deductions for supply of medicines and medical attendance; (12) Deductions for the use of reading rooms and libraries; (13) Deductions for education; (14) Deductions for compulsory contributions to charity; (15) The Havala system; (16) Conditions under which fines may be inflicted; (17) Supply of particulars to workers who are fined; (18) Suspension and (19) Dismissal.

*Views of the Director of Information and Labour Intelligence (Labour Office),  
Government of Bombay.*

*Principle of Fines.*—The evidence submitted to the Truck Committee shows that it is not possible to abolish fining in all classes of industries, and that it is possible only in concerns where the workers possess a high level of education and where the labour turnover is not high. In Indian industry the workers are illiterate and migratory in character and it does not, therefore, seem possible to abolish fines. Besides, it is important that a certain amount of latitude should be left to the employer as regards the method of maintaining discipline and efficiency. If fines are abolished, suspensions and dismissals would be the only punishments left and they may be quite unsuitable in cases of offences of a minor character. It is recommended, therefore, that the law should not prohibit fines but only aim at their regulation and control.

*Fines for Breaches of Discipline.*—The results of the Labour Office Enquiry show that in those establishments which supplied correctly classified information the incidence of fining for breaches of discipline worked out at 4 annas and 7 pies per offence for men, and at 2 annas and 11 pies per offence for women, in 45 textile mills in the Bombay Presidency; and at 12 annas and 5 pies per offence for men in 25 factories other than textile mills. These figures for purely disciplinary fines, especially in the case of factories other than textile mills, appear rather high when compared with the incidence of fines given in the evidence submitted before the Truck Committee. The evidence collected by the investigators of the Labour Office by personal investigations shows that there have been several cases where unreasonable deductions in respect of fines for offences classed as "breaches of discipline" have been made. In one case a worker was fined Rs. 5 for taking his brother into a weaving shed without permission, and in another case a fine of Rs. 3 was inflicted for failure to deliver a message from one officer to another regarding the former's inability to go to the latter's house in the evening. The results of the enquiry conducted by the Labour Office further showed that, with the exception of a very few cases, no lists giving the specific offences for which fines may be inflicted are to be found in the concerns which fine. In the few cases where rules have been made for fining, the rules generally provide that fines may be inflicted for "breaches of discipline," "disobedience," "insubordination," etc. These terms are much too wide and leave an unlimited amount of discretion in the hands of the officers authorized to fine. It appears necessary that employers should notify to their workmen the particular offences for which fines will be inflicted.

*Fines for Bad and Negligent Work.*—The incidence of fining for bad and negligent work in those concerns in the Bombay Presidency which supplied properly classified figures, works out at 3 annas 10 pies per offence for men, and 2 annas 8 pies per offence for women, in 45 textile mills; and at Rs. 1-10-6 pies per offence for men in 25 factories other than textile mills. The average for textile mills given above does not include the loss to the worker for the compulsory purchase of damaged cloth.

The enquiry conducted by the Labour Office did not make any attempt to ascertain the principles on which fines for bad and negligent work are inflicted. Personal investigations subsequently made into this practice have, however, revealed the existence of considerable abuses. It has been found that fines in the weaving department are inflicted without ascertaining whether the fault or damage complained of is due to the carelessness or negligence of the worker concerned or to defective machinery or faulty material. Many instances were given where workers had been penalized for material spoilt as a result of bad yarn or defective looms, and where no attempts had been made to ascertain the extent of the carelessness or negligence of the workers concerned. In the Ahmedabad mills, the duty of examining material is entrusted to cut-lookers, and in many cases, to the detectors, whose earnings depend on the amounts which they are able to collect in fines. It is obvious that apart from the question of the actual amounts of fines inflicted in individual cases, the system of inflicting fines for bad or negligent work by "detectors" without thorough investigation with regard to the placing of the responsibility for the damage complained of, must give rise not only to abuse in practice, but also to considerable injustice to the workers concerned.

In considering the question of the manner in which fines for bad or negligent work should be controlled, it is as necessary to protect the employer from careless and slipshod work as it is to safeguard the worker from unfair and unjust penalties. With regard to the quality of work which an employer has a right to demand from his workman, the employer will always have the power to warn and dismiss those workers who are habitually negligent. He can also enforce efficiency by suspension. It may be necessary for the employer in order to get good work from his employees to resort to small punishments, in the shape of fines, and it is, therefore, recommended that this right of the employer should not be interfered with provided it is exercised in a just and reasonable manner.

*Fines for Damage to or Loss of Property.*—The results of the Labour Office Enquiry show that in the 45 textile mills in the Bombay Presidency which supplied correctly classified figures for the different kinds of fines inflicted, the incidence of fines for loss of and injury or damage to materials, tools, machinery or plant belonging to the employer amounted to 6 annas and 1 pie in the case of men, and 3 annas and 4 pies in the case of women. In the case of the 25 factories other than textile mills which gave correctly classified information, the average incidence of fines on this account works out at Rs. 1-1-3 pies for men. Here again, no data are available with regard to the extent to which such fines are inflicted in individual cases, but during the personal investigations made by the Labour Office a few instances of unjustifiable fines were revealed. However, it appears that in cases where damage or loss results through negligence some punishment in the nature of a fine is necessary.

*Deductions for Supply of Materials and Tools.*—There are few deductions made from wages in the Bombay Presidency on account of charges for the supply of tools or materials to workers. In cases where such deductions were reported, they appeared to be on account of the supply of special tools to special workers. In the textile industry some mills require weavers to provide themselves with their own reed hooks and combs, and in cases where these are supplied by the mill, their cost is recovered in cash or by deductions from wages. The conditions governing such deductions where they exist are reported to be made known to the workers concerned prior to engagement.

If the results of the Labour Office enquiry in connection with this subject are analyzed there does not appear to be any necessity for dealing with this question in any legislation which may be provided for the control of fines and deductions.

*Deductions in respect of Rents for Housing provided by Employers.*—There is no evidence to suggest that workers are unjustly treated as regards deductions for rent for housing provided by the employer. The results of the enquiry conducted by the Labour Office with regard to welfare work in the Bombay Presidency showed that in most cases rent is charged at rates below the economic rent. As it is desirable to encourage employers to provide good housing accommodation for their employees, it is recommended that no action should be taken as regard deductions for rent.

*Deductions for Supply of Medicines and Medical Attendance.*—The majority of the employers who provide medicines and medical attendance for their employees do not charge their workers on this account. A few textile mills in Bombay and Ahmedabad did, however, report that deductions are made from wages for the supply of medicines and medical attendance. It is considered that the employers

should not be allowed to make compulsory deductions for medical attendance, as such deductions are not fair to employees not taking advantage of these facilities, and also because the worker is made to pay for something over which he has no control.

*Deductions for Supply of Food Grains.*—In most cases where deductions are made from wages on account of the supply of food grains, such deductions are for sales from the cheap grain shops attached to the establishments concerned. In the case of a few mills at Sholapur, a deduction is made from the wages in lieu of grain which is given to the worker. The market price of this grain is greater than the amount of the deduction, so the system is really to the advantage of the worker. There is no evidence to show that the system of deductions for cheap grain has anywhere led to abuse. What little evidence there is on the subject shows that the system is of great benefit to the workers, so it appears unnecessary to interfere with the practice by legislative action.

*Deductions for Supply of Water.*—Deductions for the supply of water are made only in those cases where certain castes require special facilities. Where the employer provides these he incurs the expenditure and recovers the same from the wages of his employees. If some workers are not prepared to take advantage of the normal facilities provided for all the workers, they should pay for special facilities themselves. No legislative action, therefore, appears necessary in this connection.

*Deductions for Contributions to Provident Funds.*—The Labour Office enquiry shows that deductions for provident funds are generally confined to Government organizations, public utility concerns and the larger non-factory establishments, such as the Port Trust, and are found only in very few private factories and establishments. The contributions are voluntary in the majority of concerns having provident fund schemes. Compulsory deductions are made only in a few cases. It appears, therefore, that deductions on this account do not constitute an evil which the law should try to eradicate.

*Deductions for the use of Reading Rooms and Libraries.*—It is recommended that deductions for the use of reading rooms and libraries provided by the employer should not be permitted, but the workers should be free to contribute to any fund started by themselves or the employer for the maintenance of reading rooms and libraries.

*Deductions for Education.*—It is recommended that deductions for educational facilities provided by the employer should be permitted only if such deductions form part of the contract of service.

*Deductions for Compulsory Contributions to Charity.*—Seven textile mills in the Bombay Presidency reported deductions amounting to Rs. 4,138-2-9 pies from the wages of their employees during the first ten months of the year 1926 on account of compulsory contributions for charitable purposes. Two other factories also reported similar deductions amounting to Rs. 210-15 annas during the year 1925. Although this system does not prevail to any appreciable extent in the Bombay Presidency, the fact that it exists is sufficient to merit consideration. It will be admitted that an employer has no right to compel his employers to contribute to charities of his own choosing and to make deductions from their wages for this purpose. It is recommended that compulsory deductions of this nature should not be permitted.

*Deductions for Entertainments provided by Employer.*—This subject was not included in the enquiry conducted by the Labour Office, but a few mills and factories reported deductions from wages on account of entertainments provided by the employer. Personal enquiries made by the Labour Office show that in several mills, jobbers stage-manage dramatic and other performances and compel the workers to attend and force them to pay. The grievance of the workers is against these compulsory levies by the jobbers rather than against the employers. The rules of several of the mills prohibit monetary transactions among the employees and the remedy in such cases lies, therefore, in the hands of the workers, who can report such cases to the management. Cases of deduction for entertainments by employers themselves are so rare that it does not appear necessary for the law to intervene in this matter.

*Suspension.*—Suspension is practised side by side with the system of fining or as the only system of punishment where the nature of the offence committed does not justify dismissal. The results of the enquiry conducted by the Labour Office show that this form of punishment is general in Municipalities and in Government establishments. A few of the larger workshops stated that they do not inflict fines at all and only punish offenders by suspending them from work for some days. This form of punishment is also found to exist in railways, other public utility companies, and some of the larger non-factory organizations in addition to a few concerns in each of the other groups covered by the enquiry.

It may be said in favour of this form of punishment that the employer does not benefit by suspending an employee from work, except perhaps in cases where workers are suspended ostensibly for committing some offence but really because the employer

has not sufficient work for them. There is no unanimity as regards the merits or demerits of suspension. Some labour interests actually prefer it to fines. Others are of opinion that fining is preferable to suspension, because suspension not only deprives the workers of a substantial part of their earnings, but also affects them physically and morally owing to enforced idleness. In some employments, the power of suspension is considered to be essential in cases where breaches of discipline have resulted in accidents or actions endangering the lives of other employees or members of the public during the period of an enquiry into the offence. In the evidence tendered before the Truck Committee, this was stated to be particularly necessary in the case of railways, mines and hydro-electric concerns. Employers in Great Britain who have abandoned fining in their establishments are of opinion that suspension is preferable to fining for habitual offenders. Other employers state that it is not always feasible to suspend the more skilled workers because by so doing they are deprived of their services.

It seems necessary that employers should be allowed to retain the power of suspension in cases where the infliction of small fines has not had a deterrent effect, and where the offence at the same time does not merit dismissal. It is recommended that the employer's right to suspend employees should be recognized in any legislation that may be devised. It should also be provided that all the concerns covered by the Act should maintain registers of suspensions giving full particulars regarding the cause and the period of suspension and the loss in wages for the period covered. This register should be opened to inspection by the inspecting authorities under the Act. Provision for the maintenance of such registers would effectively control this form of punishment. It might also be desirable to prescribe that in all cases where workers are suspended, the workers should be given notification slips containing full particulars of the punishment.

*Dismissal.*—It is recommended that there should be no interference on the part of the State with the right of the employer to dismiss his workmen. At the same time in order to obviate harsh or arbitrary dismissals there should be some provision to safeguard the interests of labour. This could be achieved if it is provided that a register of dismissals should be maintained in each concern, and that every dismissed employee should be given a notification slip with the reasons for his dismissal.

*Compulsory Purchase of Damaged Material.*—The practice of compelling a worker to take over an article or material spoilt or damaged during manufacture and of deducting its cost from his wages exists in several textile mills in the Bombay Presidency. Out of the 144 textile mills which furnished information for the Labour Office enquiry, 84 mills or 58·3 per cent. reported that this practice was followed. Eleven mills stated that they had abolished it with effect from November, 1926. There are only a few factories and concerns outside the textile industry which follow the practice.

Out of the 84 textile mills which insist on the compulsory purchase of damaged material, only 46 mills gave figures both for the amounts deducted on this account and the number of cases. A few other mills gave only the amounts of deductions without giving the number of instances. The statistics for the 46 mills which supplied full information show that the total deductions during the first 10 months of the year 1926 in respect of damaged or spoilt material handed over to the workers concerned amounted to Rs. 1,60,326-5-4 pies, recovered in 50,981 instances. The average incidence per deduction works out at Rs. 3-2-4 pies.

This practice has often given rise to considerable industrial unrest. Since the 1st January, 1925, there have been altogether 11 industrial disputes in the Bombay Presidency in connection with deductions on account of bad and negligent work and the compulsory purchase of spoilt and damaged material. Out of these 11 disputes, 8 were directly concerned with the giving of damaged cloth in lieu of wages. Workers' associations and other labour interests have been unanimous in condemning this system and the feeling among the majority of the workers who were personally interrogated regarding this matter was emphatically in favour of abolishing this practice. There is, however, a small body of workers who favour its continuance. Some of them stated that they liked this practice because it afforded them opportunities to spoil cloth purposely which they desired to obtain at manufacturer's wholesale prices.

Several workers who have been punished in this way considered that they had been unjustly penalized for damage caused by reasons which were beyond their control. The Indian weaver is usually not in a position to state whether he was actually responsible for the damage for which he is punished. Conversations with a few of the more intelligent weavers showed that in most cases the employer makes no effort to ascertain whether the defect is due entirely to the negligence of the worker.

It is urged that the employees who are given the spoilt material have no difficulty in selling it, and that in cases where they are not able to sell it they use the cloth themselves. This may be partly true, but the evidence of the workers themselves

goes to show that in many cases they experience the greatest difficulty in disposing of the material that has been thrust upon them, and this is especially the case as regards the kinds of cloth for which there is no local demand. The weaver, owing to his limited resources, is anxious to realize the value of the damaged cloth as soon as possible and is, therefore, forced to sell it for whatever price he can get. In most cases the price obtained is considerably below the actual "cut" effected from the weaver's wages. In many cases the worker is forced to retain cloth for which he cannot get a satisfactory price although he does not require it for his own use.

It is clear that the practice of handing over spoilt material to the worker leads to many abuses. While it may cause hardship to the worker in individual cases it does not necessarily always act as a deterrent, as the worker may sometimes be able to dispose of the damaged material at a price equal to, or more than the amount deducted from his wages, and thereby escape punishment altogether. This practice thus appears to be objectionable from the employers' as well as from the employees' point of view, and it is, therefore, recommended that it should be prohibited, but the imposition of a reasonable fine for bad or negligent work which causes damage to the material should be allowed.

*The "Double Khada" Rule.*—The rules of almost all the mills in Bombay City provide for a cut of two days' wages for each day's absence without leave, but the rule is not enforced. A similar rule also exists in the textile mills in Ahmedabad, Sholapur, and other centres and in various factories and concerns in different parts of the Bombay Presidency, but it is strictly observed only in some of the Sholapur cotton mills. This rule is popularly known as "The Double Khada Rule." This practice of cutting two days' wages for one day's absence without leave, though not very prevalent, is objectionable. In a country like India, where the conditions of the workers are not conducive to a healthy and regular life, it is considered that cases of absence without leave should not be dealt with so harshly. The employer should, of course, have the right to inflict a fine in order to enforce discipline and ensure punctuality, but the system of cutting two days' wages for one day's absence without leave should not be permitted.

*Withholding of Wages.*—The Labour Office enquiry did not include this question, but personal enquiries show that several mills and factories often withhold wages for different periods as a punishment for offences. In most cases wages are withheld for absence without leave for three days or more. In view of the fact that the payment of wages in the case of monthly workers is generally made a fortnight after they fall due, the economic position of a worker must be considerably worsened if the payment of the wages which are due to him is still further delayed by a week or more. The danger of this practice is that it often throws the worker into the clutches of the moneylender. The imposition of a fine would be a better and more direct method of punishment; it, therefore, appears desirable that the withholding of wages should be prohibited.

*Forfeiture of Wages.*—The Labour Office enquiry did not cover the question of forfeiture of wages and no data are, therefore, available with regard to the extent to which this practice prevails in different types of establishments in the Bombay Presidency. Prolonged absence without leave is generally considered to be an offence to be punished by dismissal with forfeiture of wages. The rules of the textile mills in Bombay City contain full lists of the offences which are punishable by summary dismissal and forfeiture of all wages due. These offences are as follows :—

- (1) Leaving service without giving notice as required by the rules.
- (2) Absence without leave.
- (3) Neglect of work or performing work in a negligent or careless manner.
- (4) Wrongfully stopping any machine while the engine is running or otherwise causing delay to work or injury to property.
- (5) Insubordination or disobedience to superiors, individually or in combination with others.
- (6) Refusal or failure to assist in an emergency.
- (7) Striking from work or soliciting or enticing others to leave service or exercising any pressure or intimidation to prevent others from working.
- (8) Spitting on the floors or the walls of the mill buildings after a warning has been given or a fine inflicted for the first offence.
- (9) Entering or leaving or attempting to enter or leave the mill or mill premises by any other way than by the properly appointed entrance or exit.
- (10) Lending money to or having money dealings with other employees in the same mill.
- (11) Receiving bribes or illegal gratifications from any person or persons whether employed in a mill or not.

(12) Drawing or attempting to draw the wages of any other employee by misrepresentation or in aiding or abetting such offences.

(13) Acting in an immoral manner or in a manner subversive of discipline.

(14) Wilful or negligent damage to or loss of material or property of the employer.

(15) Theft and fraud.

Many other mills and factories which have rules have similar provisions with regard to dismissals with or without forfeiture of wages. It is not known to what extent wages are forfeited for breaches of the rules enumerated above. The employers state that wages are forfeited only in extreme cases, whereas the workers maintain that this penalty is inflicted even for trivial offences. It is not only for the commission of offences that wages are forfeited in the mill industry. It is fairly common to forfeit wages not claimed within six months and in some mills within three months of their becoming due. The forfeiture of wages in either case is objectionable. The penalty of dismissal and a fine should be adequate for any offence. It is, therefore, recommended that the law should prohibit this practice.

*Advances and Interest on Advances.*—The results of the Labour Office enquiry show that out of the 72 textile mills in the Bombay Presidency which reported that advances are granted, 28 mills or nearly 39 per cent. charge varying rates of interest, the rate of interest in some of the Ahmedabad mills being as high as 150 per cent. per annum. In some cases, where the mills themselves do not grant advances, the owners make arrangements with privileged *pedhiwallas* (grain dealers) or *banias* (moneylenders) to lend money to their workmen at agreed rates of interest. Advances are not generally granted in Government factories. In the case of other factories, only 3 concerns out of the 143 which give advances reported that interest is charged.

The main objection to the practice of granting advances is the high rate of interest charged by some employers. There is no compulsion on the part of the workers to borrow money from their employer, and if they do so it implies that they cannot get it at cheaper rates elsewhere. The employer cannot be expected to advance the money free of charge. It does not appear that legislation can do anything to check the rates of interest charged on advances.

*The "Havala" System.*—The word "Havala" is used in two different senses. It is used by employers to denote the discharge pass or pay order ticket, whereas labour leaders apply the term to the endorsement or letter of authority given to a third person to collect wages due.

The "Havala" system obtains in the textile mills in the Bombay Presidency. It arises out of the practice followed in the mills of making all payments of wages on a fixed day. This practice leads to complications, especially in the case of workers who have been dismissed or have left employment after giving due notice. A worker who leaves his employment before the regular pay day does not receive his wages on the day he leaves, but he is given a discharge pass or pay order ticket and he is required to call for his wages on the regular pay day of the month. The question of "Havala" does not arise in the case where the worker is able to call for his wages himself on the regular pay day but when the worker wishes to leave the town where he is employed and requires his wages he is obliged to have recourse to "Havala" in order to get ready money. He accordingly endorses his discharge pass or pay order ticket in favour of a third person, who cashes the ticket at a rate of discount which is generally 1 anna in the rupee. Usually, jobbers and grain dealers cash these tickets but sometimes employers do so themselves. The system of "Havala" then is connected with the system of payment of wages on certain fixed days, generally 10 or 15 days after they are due. As long as this system of payment prevails, it seems undesirable to abolish "Havala" altogether. It is a convenience for the needy worker, although he may lose a part of his wages by way of discount. The abuses arising out of the system might, however, be removed by legislation. The rate of discount charged and the agency employed for cashing the pay order tickets need regulation. The employers alone should be permitted to cash these tickets and they should be permitted to deduct from the gross amount due only what is necessary to defray the extra cost involved in making earlier payments.

*Bonus for Regular Attendance.*—Bonuses for regular attendance are given in the textile industry in the Bombay Presidency. The results of the Labour Office enquiry showed that out of the 144 textile mills which supplied information, no less than 110 or 76·4 per cent. grant good attendance bonuses. Except in the case of the cotton mills in Sholapur, this bonus takes the form of a cash payment. In most of the Sholapur mills, workers who have not lost more than four days' work during a month are given 20 seers of grain at a concession rate.

There is a danger in the granting of good attendance bonuses because it enables an employer to set off a part of the regular wages of an employee as a bonus to be given to him only if his attendance is quite regular. If the employee fails to put in the number of days required he not only loses his wages for the days of absence but

also his good attendance bonus. On the other hand, if the good attendance bonus is not included in the normal wage but is an additional gratuity given by the employer as an inducement for good attendance, there is nothing to be said against the practice. So far as the Labour Office is aware there have been no complaints against the system. Legislative action in this matter does not, therefore, appear necessary.

*Bonus for Better Work.*—As in the case of bonuses for good attendance, the system of granting bonuses for better work or better production also obtains in the textile industry in the Bombay Presidency. Several other concerns besides reported that such bonuses are given. The returns for the textile industry show that 25 out of the 78 reporting mills in Bombay, 40 out of the 49 reporting mills in Ahmedabad and 11 out of the 19 reporting mills in Sholapur and other centres grant "efficiency" bonuses. Considering the textile industry as a whole the figures are 76 out of 144 reporting mills or 52·78 per cent. No bonuses of this kind are granted by municipalities, commercial offices and steamship companies.

It is sometimes urged that bonuses for better production are given where the normal wages are low; that they make the worker work harder than is good for him; and that very often the workers on the whole benefit less than the employers by this system of bonuses. It is not known to what extent the wages in Indian industry may be regarded as normal, nor what is the result of such bonuses on the physique of the workers, and it is not possible to estimate the sum total of the benefit derived by the employer or the workers. In the absence of such information it is difficult to say whether such bonuses are in the interest of the workers. However, the Labour Office is not aware of any complaints by the workers in this matter so it is considered that no legislative action is necessary.

*Prevention of Monetary Transactions amongst the Workers.*—In the majority of concerns where rules governing the conditions of employment are framed heavy punishments are provided for monetary transactions amongst the workers. It appears unnecessary to make any provision in the law in respect of this question.

*Conditions under which Fines may be inflicted.*—In the Bombay Presidency, almost all the textile mills in Bombay City have printed rules regarding the conditions of employment and the lists of offences for which workers may be dismissed, with or without forfeiture of wages. Some of these rules give the offences which may be alternatively punished by inflictions of fines. The actual rules regarding fines are general in character and simply state that fines will be inflicted for "breaches of discipline," "insubordination," "disobedience," "late attendance," and a few specific offences. In most cases the maximum punishment of dismissal with forfeiture of wages is prescribed. Only three mills in Ahmedabad and about half-a-dozen mills in the rest of the Bombay Presidency reported that rules had been framed with regard to conditions of employment. These rules are framed, more or less, on the model of the rules of the Bombay mills. The rules of a few factories—Government and non-Government—and those relating to public utility services, give more amplified lists of the offences for which fines may be inflicted. The rules of the municipalities are general in character. Factories and workshops other than those mentioned above have no rules regarding the imposition of fines. In almost all the cases where rules are provided, copies of the rules are hung up in the time-keeper's office and, in some cases, in the various departments as well. Two or three mills stated that, prior to the engagement of a new hand, the rules of the mill are read out to the prospective employee and, if he accepts service, his signature or thumb impression is taken in a special register as a record that he has accepted employment with the knowledge of the conditions under which his wages are liable to deduction in respect of fines. Some other concerns stated that the rules are read out to the men. In a few cases the daily employment of attendance cards which are given to all workmen have the rules with regard to fines printed on the reverse. But in the large majority of cases no attempt is made to acquaint the workers with the conditions under which they are liable to be fined, and the offences for which fines may be inflicted are presumed to be known by usage or custom. It appears necessary that legislation should be framed providing that every employer should make definite rules regarding the terms of employment and the conditions under which fines may be inflicted.

*Supply of Particulars to Workers who are Fined.*—Most of the returns submitted for the Labour Office enquiry stated that full particulars regarding the offence for which a fine is inflicted are supplied to the worker at the time of the occurrence of the offence. This is generally true in the case of fines for breaches of discipline, but personal enquiries made by the Labour Office show that particulars regarding fines for bad and negligent work and also for deductions in respect of compulsory purchase of damaged goods come to the knowledge of the workers concerned only when they draw their pay. This is due to the fact that the cutlookers and detectors examine the cloth produced some days after it has been manufactured, and the penalties in respect of damaged material are then noted against the worker concerned.

By this procedure the worker has to submit to a fine without having an opportunity of vindicating himself. Except in a very few cases the notification of the particulars regarding the offence for which a fine is inflicted is given to the worker orally. To prevent the possibility of unfair inflictions of fines it appears desirable that the law should provide that the amount of the fine inflicted together with the reasons therefor should be made known to the worker at the time of inflicting the fine.

*Power to Fine.*—With the exception of the few textile mills in Bombay City which reported that the power to fine rests with the jobbers in addition to heads of departments, and those mills in Ahmedabad which stated that this power is delegated to special employees called "detectors," who receive a certain percentage of the total fines inflicted, almost all the mills, factories and concerns which sent in returns for the Labour Office Enquiry stated that the power to fine is exercised by the proprietors or by the heads of departments in the larger establishments. Subsequent personal enquiries made by the Labour Office show that fining by jobbers is more common than appears from the results of the statistical enquiry, and that it gives rise to considerable abuse. It is recommended that no employee whose remuneration depends in any shape or form on the amounts of fines which he inflicts, should be allowed either to recommend a fine or to inflict a fine on a worker himself, and that the power to fine should be vested in managers and responsible heads of departments.

*Extent to which Fines may be inflicted.*—No limits exist with regard to the extent to which fines may be inflicted in factories and workshops in the Bombay Presidency with the exception of a few of the larger railway workshops, and some Government and semi-Government factories and concerns. In this connection, several employers stated that as fines were not inflicted in an unreasonable manner, no necessity had arisen for fixed definite limits. The personal investigations of the Labour Office, however, show that cases where heavy fines are inflicted are not uncommon.

It appears necessary that if any legislation is framed for the control of fines, such legislation should provide a maximum limit to the extent to which fines may be inflicted. The Majority Report of the British Truck Committee recommended a limit of 5 per cent. In this connection the Minority Report, however, stated that "the tendency of a maximum to become a standard, illustrated by several witnesses and recognized in the Report, must not be considered by itself, but in connection with the clear intention of unscrupulous firms to make a profit out of their workers by methods that upright firms would reject." The fear that the maximum would tend to become the standard is based on the assumption that the employer makes fines a source of profit; but if it is laid down that all recoveries of fines are to be credited to a welfare fund, this danger is not likely to arise.

From the point of view of the employer a maximum limit might be considered undesirable where the prescribed limit has already been reached, and he is thus prevented from inflicting additional fines for further offences committed during the same wage period.

If it is decided to fix a maximum limit it will be necessary to provide that the limit should be for the length of time covered by each wage period. No fines in excess of the prescribed limit for any particular wage period should be allowed to be carried forward or deducted from the wages for the next or a subsequent wage period, and the payments of fines by instalments should also be prohibited. Exceptions to the rule may, however, be permitted, and in certain cases local Governments may be empowered to extend the maximum limit or to suspend its operation.

*Disposal of Fines.*—A few textile mills in the Bombay Presidency reported that all amounts collected through the infliction of fines are utilized specifically for welfare work, but the majority of the mills reported that fines are credited to "revenue." It must be stated, however, that the great majority of the mills undertake some welfare work, especially in connection with the maintenance of free dispensaries and the provision of free medical attendance. Most of the departments connected with the larger railway administrations and a few Government and other factories have special fines funds to which all fines are credited. These funds are utilized for the workers' welfare. Some clubs and offices utilize fines for the payment of annual bonuses, whereas some concerns use them for donations to charitable objects. Apart from the instances quoted, fines are generally appropriated by the employers to "revenue."

In England, although the Truck Acts contain no specific provision regarding the question of the disposal of fines, all deductions in respect of fines are generally utilized for welfare work, as shown by the evidence given by various employers before the Truck Committee. In Germany, Austria, Russia, Switzerland, Poland, Norway, Portugal, Czechoslovakia, Lichtenstein, Latvia and Greece the legislation which exists with regard to the control of fines definitely provides that all fines should be utilized in some manner or other for the benefit of the workers. In the Netherlands, the law prohibits the employer from utilizing or appropriating fines for his own

direct or indirect benefit. It appears that in almost all other industrial countries the influence of trade unions and public opinion have compelled employers to credit all fines to special fines funds, to be used for the welfare of the workers concerned. It is recommended that the law should lay down that this practice should be followed in India.

*Necessity of Legislation.*—The question whether legislation should be undertaken in India for the control of fines depends on the following considerations :—(1) The extent of the prevalence of the system ; (2) the extent to which workers are subjected to fines in establishments where fining prevails ; (3) the administration of the system ; (4) the influence of workers' organizations on the system.

With regard to the question of the extent of the prevalence of the system, the Labour Office Enquiry shows that it is general throughout the Bombay Presidency. In considering the question of the extent to which workers are subjected to fines in establishments where fining prevails, it must be stated that there are several points with regard to fining which were not covered by the enquiry conducted by the Labour Office. For instance, no enquiry was made in connection with (1) the frequency of fining in the case of individual employees ; (2) the actual amounts of fines inflicted in individual cases ; and (3) the forfeiture of wages. The proportions between fines and wages given in the Report show the ratio between total amounts of fines and the total wages bill of all employees. It is probable that there exist, in individual establishments, large numbers of workers who are seldom, if ever, fined. It would have been more useful if information could have been obtained to show the proportion which total fines bear to the total wages bill of those workers who are actually fined. It would have been practically impossible, however, to procure this information in view of the difficulty of calculating the wages and deductions figures for each worker employed during a period covering ten to twelve months. It was also not possible to ascertain the amounts of fines inflicted in each case, as the enquiry was not conducted on the basis of the individual. The figures given in the Report in connection with the average incidence of fining in different sets or classes of establishment, show that in the textile industry the average incidence of fining in 45 mills in the Presidency which supplied properly classified information, amounted to 3 annas 11 pies per offence in the case of men, 2 annas 8 pies per offence in the case of women, and 1 anna 11 pies per offence in the case of children. In factories other than textile mills the average incidence for men amounted to Re. 1-2-4 pies. These figures do not include the losses sustained by the worker for penalties such as compulsory purchase of damaged material, suspension and forfeiture of wages. Nevertheless, they are higher than the figures for fines in England as appears from the evidence submitted to the Truck Committee.

As regards the administration of the system, there are several matters which call for legislative control. For instance, the power to fine is sometimes placed in the hands of special employees whose remuneration depends on the amount which they are able to collect in fines. The enquiry conducted by the Labour Office shows that such employees, called detectors, are employed to a large extent in the textile mills in Ahmedabad. One mill in Ahmedabad employing 1,843 workers, recovered an amount of Rs. 10,234 in fines during the first ten months of the year 1926 for 83,253 offences. Another mill employing 3,209 operatives, inflicted fines amounting to Rs. 9,981 in 25,949 instances during the same period. The number of instances in which fines were inflicted in these concerns appears to be high when compared with the figures for similar establishments where detectors are not employed. There can be no doubt that such a system must give rise to considerable abuse where the earnings of the officers specially employed to fine depend on the amounts of fines collected. Outside the textile industry in Bombay city, very few establishments have rules governing conditions of employment and the power of fining. The rules where they exist, appear to be rather harsh and place unlimited power in the hands of the manager or the departmental heads to whom the manager delegates his authority.

In all industrial countries, trade unions play an important part in regulating the relations between the employers and the employed in connection with the inflictions of fines and punishments. In France, Sweden, Bulgaria, Canada and countries which have no legislation for the control of fines, trade union action has resulted in either abolishing the imposition of fines altogether or restricting the system to a reasonable extent. Even in countries where legislation exists for the control of fines, trade unions exert a salutary influence.

In India, however, trade unionism is still in its infancy, and the workers' organizations are too weak to exert their influence to any appreciable extent in the regulation of fines. Any abuses which exist therefore in the system of fining cannot be remedied or removed by trade union action, so the State may have to intervene. It appears that as far as the Bombay Presidency is concerned, the conditions as regards fining in industry are such as would warrant legislative action. Cases of excessive fines are not uncommon, some of the fines are unjust, the workers are not always aware of the

offences for which they may be punished, the manner of inflicting fines is often arbitrary, and the agency employed for the imposition of fines is not always suitable. In countries where labour is properly organized, many of these evils could be removed without legislative action, but in view of the lack of such organization and the ignorance of the workers in this country, it appears that a simple Act of the legislature is necessary to eradicate the evils connected with the present system of fining in industry.

*Scope of the Measure.*—The results of the Labour Office Enquiry show that the system of inflicting fines is prevalent in all textile mills and in most Government and local fund establishments, and in the majority of the better organized and larger non-Government factories and workshops. In municipalities and in public utility concerns the system is fairly general, but it does not appear to prevail to any appreciable extent in seasonal establishments such as gins and presses. In offices the system is confined to the fining of peons and menials, though in a few cases clerks are also occasionally fined. Amongst miscellaneous establishments the system is prevalent in the larger hotels, clubs and restaurants, but it is absent in most of the commercial organizations such as shops, stores, etc. It also obtains in almost all steamship companies, and the system is governed and regulated by the Indian Merchants Shipping Act, 1923. It is thus seen that the system of fining is practised in almost all the various types and classes of establishments and concerns covered by the Labour Office Enquiry, but only in the large industrial establishments does the system appear to have become an evil of such proportions as would necessitate legislation. It would be premature at the present stage to apply to all concerns the provisions of any legislation that may be passed, and it does not appear necessary. Even if a simple Act is passed the present inspecting staffs of the Factories and Mines Departments will have to be considerably strengthened for its proper administration. Detailed legislation might cost more than would be justified by the results. Besides, it may not be possible to administer the law effectively if it enters into too many details. Moreover, the employers' interests have to be taken into account, as too much interference with industry is undesirable. It is recommended, therefore, that the proposed legislation should be confined to factories and mines coming under the Factories and Mines Acts.

*Maintenance of Registers of Fines.*—In the factories and workshops in the Bombay Presidency fines are usually recorded in the main wages roll. For the proper enforcement of the proposed legislation it seems necessary that employers should be required to maintain complete and detailed registers of all the fines inflicted.

*Method of Enforcement.*—Even if the proposed legislation is confined to factories and mines coming under the Factories and Mines Acts, its proper enforcement will present innumerable difficulties. The existing Factories and Mines Departments appear to be the most suitable agencies for administering the law in its broader aspects. The work of inspecting the registers and of prosecuting defaulting employers can be entrusted to them. Their activities will, however, have to be supplemented by some other agency, who will hear complaints, investigate into their causes and bring them to the notice of the prosecuting authority. This appears to be essential if the spirit of the law as well as the letter is to be observed.

### APPENDIX XIII.

#### *Prompt Payment of Wages.*

*Letter to all Local Governments and Administrations, No. L-1391, dated the 28th July, 1926.*

I am directed to address you regarding the advisability of legislating for the purpose of preventing undue delay in the payment of wages to industrial workers.

2. In this Department's letter No. L-1192 of 20th September, 1924, local Governments were requested to furnish particulars regarding the periods by which wages are paid in organized industries, and the delays which are associated with their payment. The information so collected, which has since been published in tabular form,\* reveals a state of affairs which cannot be regarded as other than unsatisfactory. For it is clear that, generally speaking, the time which elapses between the end of the period by which wages have been earned and the date on which they are paid is longer than is usual in industries in other countries; and the delay is, in a number of cases, so great as to add appreciably to the economic difficulties of workmen. Systematic delays in payment are particularly associated with payment on a monthly basis, and the month is the period most commonly employed for the calculation of

\* Bulletins of Indian Industries and Labour, No. 34. Periods of Wage Payment.

wages. It is no uncommon thing—in fact it appears to be the rule in certain industries—for monthly wages to be systematically withheld until a fortnight after the close of the month to which they relate. And cases have come to the notice of Government in which wages had been withheld for considerably longer periods.

3. It is unnecessary to emphasize the fact that a practice of this kind results in considerable hardship to the workers concerned. With monthly payments, a delay of a fortnight in disbursement means that the employee has to work for over six weeks before he gets his first month's wages. Even if he is not financially embarrassed when he starts work, he has, as a rule, no monetary reserve, and he may be, in consequence, compelled to contract, at the commencement of his service, a fresh debt of a month and a half's wages, generally taken on a high rate of interest. A number of employers endeavour to minimize the hardship involved by the grant of advances, but this practice is by no means general, and even where the advance represents wages that have actually been earned, interest is occasionally charged on it. Cases have come to the notice of the Government of India where workers were compelled to strike in order to secure wages which had been held back for unreasonable periods; in one such case, where over three weeks had elapsed from the close of the month, the strikers were dismissed: in another case, the workers went on strike over five weeks after the end of the month for which they wanted their wages.

4. It has been suggested that, as the evil is particularly associated with monthly payments, employers should be compelled to adopt shorter periods of payment. This was, in fact, one of the arguments put forward in support of Mr. Chaman Lall's Weekly Payments Bill, which was referred to local Governments for consideration. But the Bill met with general opposition. The Government of India, after reviewing the opinions received on it, were compelled to oppose its consideration in the Legislative Assembly, and the motion for consideration of the Bill was finally withdrawn by its sponsor.

5. The Government of India do not think that any Bill of this kind is likely to receive the support of public opinion, or to prove effective in its operation. While they should not be regarded as accepting the view that the general system of monthly payments is a satisfactory one, they believe that an attempt to impose by legislation a radically different system would have little chance of success, and might do considerable harm. They recognize—and they believe that local Governments will agree with this view—that if the abuses to which they have referred above can be checked or eliminated by legislation, it is the duty of Government to introduce such legislation. But they are inclined to think that legislation, if it is regarded as desirable, will have to be attempted on somewhat different lines if it is to have a reasonable prospect of successful working. The details of a fresh scheme are set out provisionally in the paragraphs that follow, and I am to ask for the views of the local Government both on the advisability of adopting some scheme of this kind, and on the detailed provisions contemplated.

6. The Government of India propose to set statutory limits to the time within which wages must be paid. To begin with, at any rate, they consider that it would be unwise to attempt to do more than prevent the more obvious abuses, and in the case of wages paid on a monthly system (or any longer basis), it might be sufficient to prescribe that they must ordinarily be paid within a week of the close of the month. It may be desirable to allow some relaxation in the case of bonuses earned by a long period, e.g., a year of work, but it will be difficult, and possibly dangerous, to discriminate between bonuses and wages. It could, if desired, be left to the employer, subject to the approval of the local Government, to fix the date on which the month should commence, which need not necessarily be the first day of the calendar month. As regards payments on shorter periods than a month, the evidence available indicates that there is less need for legislation, but I am to ask for the views of the local Government on the suggestion that corresponding limitations might be imposed, e.g., in the case of fortnightly wages, four days delay might be allowed, in the case of weekly wages, two days, and in the case of daily wages, a day. Wages might be limited to cash payments; but it seems undesirable to do anything that might encourage payment in kind, and a distinction is possibly unnecessary. It would probably be advisable to give local Governments, in all cases, the power to grant exemptions where special (and defined) circumstances, e.g., the distance of the worker from the headquarters, rendered this necessary. The difficulties arising out of the fact that in some cases for instance when wages are paid piece-rates, intricate evaluations may be required to calculate wages might be met by prescribing that, in such cases, the payment, within the statutory period, of 75 per cent. (or some higher percentage) of the wages earned should constitute compliance with the law.

7. The main difficulty in regard to legislation of this kind arises in connection with its enforcement. It would be possible, and seems to be desirable, to provide for the prompt recovery of wages by some form of summary procedure, e.g., in a manner similar to that prescribed in the Employers' and Workmen's Disputes Act, IX of 1860.

It would also be necessary to provide for some fine, part of which might be payable to the workmen injured, for the offence. The maximum fine on a first conviction might be small, with larger penalties for subsequent offences. But provisions of this kind will not be sufficient to secure the end in view, for the workman would seldom be in a position to use the power so conferred on him. The employer who is protected could pay the wages and dismiss the workman, and it would be impossible to prevent by law dismissals of this kind. Other reasons could always be put forward as the ostensible grounds of any dismissal, and the result would be constant disputes. And even when the workman did not apprehend reprisals, it would seldom be worth his while to institute proceedings with the object of obtaining a single month's wages a short period before the date when he would receive them without invoking external assistance. The grant to any number of workmen in the same establishment of the power to join in one proceeding might meet some of the difficulties in part, but it would not be sufficient. Quite apart from the difficulties inherent in the joint conduct of proceedings by numerous complainants, the fear of victimization and the large amount of inconvenience necessary to secure a very small advantage to each workman would be sufficient to prevent action in most cases. The Government of India consider that, if the enforcement of the law is to depend on the initiative of the workmen themselves, the Act will fail to achieve its object. If this conclusion is accepted, it seems essential that the power to prosecute should be granted to some external authority, such as an inspecting staff. The difficulties in the way of the workmen would be removed by such a provision, and the conduct of prosecutions instituted by inspecting officials would be free from serious administrative difficulty.

8. This has a close bearing on the important question of the scope of the measure. In the case of factories and mines, there are already in existence inspecting officers who have experience of the institution of prosecutions, and who could safely be entrusted with the enforcement of the Act. If the measure was to be extended to establishments which are not subject either to the Factories Act or the Mines Act, it might be impossible to render it effective without the employment of a special staff, and even with such a staff, its enforcement would be attended by serious difficulty. Further, the evidence before the Government of India indicates that the evil is particularly associated with the larger industrial establishments, where the work involved in the calculation of wages is heaviest, and where the presence of intermediaries between the workmen and the management and other circumstances tend to aggravate delays. In the smaller establishments lying outside the scope of the Factories and Mines Acts, there are no serious abuses such as would justify not merely the introduction of legislation, but the establishment of new and special machinery for its enforcement. On all grounds, therefore, the Government of India are inclined to the view that the measure should be confined, in its operation, to those establishments which are subject to the operation of the Factories Act or the Mines Act : but this is a point on which they would be glad to have the opinion of the local Government.

9. I am to request that, after consulting the interests concerned, a reply may be sent to this letter not later than 1st January, 1927.

*Letter from the Chief Commissioner, N.-W. F. Province, No. 986-XVI-F.-104-C. & I., dated the 10th September, 1926.*

This province is entirely agricultural, and has no industries, and therefore no criticisms or suggestions of value can be given.

*Letter from the Chief Commissioner of Coorg, No. 4107/103-19-Enclos., dated the 2nd December, 1926.*

Wages are paid weekly in Coorg. In their own interests planters are particularly careful to be punctual. So far as Coorg is concerned, the Chief Commissioner has, therefore, no remarks to offer on the scheme set out in paragraphs 6-8 of your letter.

*Letter from the Government of Madras, No. Misc.-2013-L., dated the 22nd December, 1926.*

Mr. Ley's letter No. L.-1391, of the 28th July, 1926, was referred by this Government to the Board of Revenue (who consulted collectors), the Director of Industries, and the Commissioner of Labour, who, in his turn, consulted ten associations of employers, including Chambers of Commerce besides prominent individual employers such as the Buckingham and Carnatic Mills, and six associations of employees.

2. The enquiries thus made have failed to elicit any evidence that the delay which occurs between the date on which wages fall due and that on which they are paid does, in fact, cause any real hardship or economic injury. There is not the

slightest indication that employers delay payment wantonly or arbitrarily; and the interval which normally occurs, and which is naturally longer in the larger businesses, is recognized to be due to the labour involved in the preparation of detailed pay bills with establishments whose attendance is frequently irregular, and who are far less disciplined and less amenable to regulation than workmen in western countries.

It appears, moreover, to be the case that where payment of wages is spread over a period of some days, care is taken to see that the intervals in the case of individuals are of uniform length.

3. The special hardship, to which Mr. Ley's letter calls attention, of a newly-engaged employee having to wait for as much as six weeks before receiving any wages is, the Madras Government understand, much mitigated by the practice of making advances. It may further be pointed out that a six weeks' interval represents an extreme case. New employees are not infrequently engaged after the beginning of a month, and their period of waiting is thus proportionately shortened.

4. If then, as appears to be the case in Madras, workmen are after their first receipt of wages paid at uniform and regular intervals of a month, a fortnight or a week (as the case may be), and if the inconvenience caused by the initial period of waiting is mitigated by the practice mentioned above, His Excellency the Governor in Council is unable to detect any abuse or economic hardship requiring remedial legislation, and he is sure that the Government of India will agree that legislation imposing obligations on employers towards the employed tends to mar the harmony of their relations and should be avoided unless really required.

5. For the information of the Government of India, I am to enclose copies\* of certain typical replies which illustrate and confirm the view of the question which the Governor in Council has been led to take. It will be seen that those replies which assert the existence of a grievance propose as a remedy, not the acceleration of payment, but the shortening of the qualifying wage period, a proposal akin to that contained in Mr. Chaman Lal's recent Bill, the principle of which has been repudiated by the Government of India.

6. I am to add certain observations on the nature of the proposed legislation, on the supposition that such legislation is to be introduced. In the first place, the proposal to include bonuses in the scope of legislation for the prompt payment of wages has been generally objected to on the grounds that bonuses are given entirely as an act of grace and should be free from any element of compulsion, and that in practice these payments are not made monthly or generally at more frequent intervals than once a year. Bonuses are thus, in principle and in practice, quite distinct from wages and it would be a mistake to treat them alike. The Governor in Council agrees with this opinion.

\*7. The problem of enforcing the proposed legislation, which, as the Government of India observes, presents considerable difficulty, would not, in the opinion of this Government, be solved by the suggested restriction of such legislation to institutions to which either the Factories or the Mines Act is applicable. Except for the advantage derived from the existence of an inspecting organization under these Acts, which if suitably strengthened at the expense of the taxpayer, would no doubt provide machinery for carrying the law into effect, there appears to be no logical reason or justification for depriving of the presumed benefits of the law those numerous wage earners who do not come within the scope of either of the above-named enactments. The restriction would also produce the anomaly that, in the case of railway administrations, the men working in workshops and sheds would enjoy the benefit of the law, while the rest (including the line staff and traffic employees who are exposed to the longest delays) would have no redress whatever.

8. It appears to His Excellency the Governor in Council that there would be little difficulty in evading any provision for accelerating payment of wages; compulsory acceleration, unless so liberally applied as to fail of its object, would throw a burden upon industry which might have unfavourable reactions on employed as well as employers; and the benefit to be derived by workers from the proposal under consideration would in the opinion of this Government be so slight as by no means to warrant the expense, the inconveniences and the risk of failure involved.

*Letter from the Chief Commissioner, Delhi, No. 7903-Industries, dated the 24th December, 1926.*

I have consulted the Deputy Commissioner and the Inspector of Factories on the subject. They are in general agreement with the policy outlined in paragraphs 6, 7 and 8 of the Government of India letter. The Inspector of Factories is of opinion

that power to exempt employers, when they can prove to the administering authority that advances during the period of work were made to workers up to 75 per cent. of their pay, free of all interest, should be given to local Governments. The Inspector of Factories also considers that power to prosecute offenders against the Act should be in the hands of the executive authority.

I am myself in agreement with the policy outlined in paragraphs 6, 7 and 8 of the Government of India letter under reply.

*Letter from the Chief Commissioner, Ajmer-Merwara, No. 2096-C.1823 of 1926, dated the 28th December, 1926.*

The scheme as detailed in paragraphs 6 to 8 of the letter, under reference, would serve a useful purpose and may be adopted.

*Letter from the Honourable the Agent to the Governor-General in Baluchistan, No. 4992, dated the 30th December, 1926.*

The extent of industries in Baluchistan is very limited, those of any importance being Government and quasi-Government concerns consisting of the local arsenal and the North-Western Railway. Exceptions are to be found, however, in the Baluchistan Chrome Mining Company and the Quetta Branch of the Murree Brewery, both of which concerns employ much skilled and unskilled labour and are under European management.

2. Enquiries show that there is no undue delay in the payment of wages to workmen employed by the Arsenal and Baluchistan Chrome Mining Company. In both cases the men receive their wages within a week. The brewery management has vouchsafed no reply to enquiries made on the subject and merely remarks that it wishes to express no views on the proposed legislation.

3. It would appear that unnecessary delay does take place in the payment of the railway staff, due to a lengthy system of centralized check and audit. It is understood, however, that the agent of the North-Western Railway is representing his views in the matter to the Government of India direct, on a separate reference.

4. The concensus of local opinion indicates that legislation on the general lines proposed by the Government of India is desirable and should be adopted. In this view the Honourable the Agent to the Governor-General concurs.

5. Regarding the points raised in paragraph 6 of the letter under reply, I am to say that the limits proposed therein within which wages are to be paid would appear to be suitable.

There is, however, in the opinion of the Honourable the Agent to the Governor-General, a further case for which legislation would appear to be indicated, viz., that in which a workman is dismissed or takes his discharge before the end of the month, fortnight, or week as the case may be, and who, without special legislation to the contrary, might have to wait a comparatively considerable period before he can receive his wages. This would constitute a decided hardship because a workman who is employed has usually no difficulty in obtaining supplies on credit from a shopkeeper. But once he is out of employment his credit is immediately closed. To obviate this hardship where it exists at present, the Honourable the Agent to the Governor-General would suggest that a clause in the proposed legislation might be inserted to the effect that in all cases of the nature indicated above, the workman in question shall receive his dues within a period of two days subsequent to his becoming unemployed, irrespective of the system of wages on which he may have been engaged.

6. The Honourable the Agent to the Governor-General agrees in the view expressed by the Government of India to the effect that if the enforcement of the law is to depend on the motion of the workmen themselves, the Act will fail to achieve its object; and while it would be costly to employ special staff for the purpose of prosecution, he considers that the power to prosecute should be granted to the inspecting staff, and that the proposed measure should be confined in its operation for the present to such of the establishments only as are subject to the provisions of the Factories Act or Mines Act.

*Letter from the Government of Assam, No. 30-F.M., dated the 4th January, 1927.*

The general opinion is that there is no need of such legislation in Assam at present, but there is no serious opposition to the proposals of the Government of India. With this view the Governor in Council agrees. There are few large industries in Assam besides the tea estates, where the scarcity of labour compels the management

to do all that is possible to keep the labour force contented. There is, therefore, no abuse in the payment of wages, which renders necessary in this province, legislation on the lines suggested by the Government of India. On the other hand, the Governor in Council recognizes that conditions may differ in other parts of India and that legislation of this nature if required at all should apply to the whole of India. The proposals put forward in paragraph 6 of your letter with the safeguards there suggested are fair and reasonable and legislation on those lines could be given effect to in this province without any serious difficulty. The Governor in Council also agrees with the proposals in paragraphs 7 and 8 of your letter that the measure should be restricted to establishments subject to the Factories Act or Mines Act, and that the enforcement of the Act should be entrusted to the inspecting staff.

*Letter from the Government of Central Provinces, No. 73/1593-XIII, dated the 7th January, 1927.*

In order to elicit local opinion, Government consulted the managers of important industrial concerns in the province. There is a consensus of opinion that so far as this province is concerned, the proposed legislation is unnecessary and may hamper the growth of industrial concerns. From the statement forwarded with this department's letter No. 2967/2256-XIII, dated the 12th December, 1924, it will be seen that in the case of monthly payments, delays for periods exceeding 15 days are not usual, while in the case of payments on shorter periods than a month, the scale suggested in the letter under reply is rarely exceeded. In the circumstances, therefore, and in view of the fact that no complaints on the part of workmen of delay in payment have come under its notice, the local Government is inclined to concur in the view of the managers of industrial concerns that the need for introducing legislation on the proposed lines is not urgent. Should it, however, be decided on general grounds to undertake legislation on the subject, I am to suggest that a period of 10 days may be allowed for payment on a monthly basis and the question of payment on shorter periods be left out of the scope of the measure. The local Government agrees that some provision for the summary recovery of wages is a necessary complement of the main provision of the Bill, even though the provision were seldom actually put in force.

2. For the reasons given in paragraphs 7 and 8 of the letter under reference, the local Government agrees with the Government of India that the scope of any such measure should be restricted to establishments coming within the purview of the Factories Act and the Mines Act, where inspecting officers could be required to bring to notice cases of infraction of the rules and empowered to initiate prosecutions.

*Letter from the Government of Burma, No. 337-V-26, dated the 17th January, 1927.*

The local Government has obtained the opinions of commissioners of divisions and deputy commissioners, as well as those of commercial bodies and others interested in the matter. The general consensus of opinion in the province is decidedly hostile to the proposals. In a few cases, opinions in favour of the proposed legislation have been expressed, but the local Government is not impressed by those opinions, which rest on the assumption that the state of affairs in the province calls for legislation, and that the proposed legislation would do sufficient good to justify the interference with custom which it involves. These assumptions are either unsupported by arguments or are supported by arguments whose validity the local Government is unable to accept.

2. The object of the proposals is to ameliorate the condition of industrial workers by ensuring that they get their wages within a fixed number of days of the end of the month or other period for which the wages are paid. Industrial workers in Burma are in almost all cases paid by the month, so that the expression "wages" in this letter may be taken to mean monthly wages, unless the contrary is indicated. The opinion generally held in this province, which the local Government finds itself bound to accept, is that there is no need for legislation, and that the interference caused to existing business arrangements would be out of all proportion to any benefits resulting from legislation on the lines proposed. The tabulated results of the enquiries made by the Government of India into delays in the payment of wages show that in Burma the waiting period at the end of the month does not ordinarily exceed 15 days, and no complaints have been received or hardships occasioned by the existing custom. The effect of the proposed legislation would be that in the industries affected the waiting period would be reduced to a maximum of seven days. It is obvious that after the initial period the advantage of the change would be felt only by workmen taking up new employment. At present such workmen have to finance themselves for six weeks before getting their first month's pay, and this

period would be reduced by the proposed Act to five weeks. The majority of workers live on a credit basis, and any provident ones who have savings which would enable them to take up fresh employment without incurring debts are as likely to be able to support themselves for six weeks as for five. The credit basis on which the majority of the workers live is a monthly one, and if a worker in a permanent job gets his wages at regular monthly intervals the permanent postponement or advancement of his monthly pay day by a few days can make but little difference. On taking up new employment the credit period is a little longer than a month, and this merely means that the worker who has no savings at all has to live more carefully than usual for a time. In Burma, where wages are high and workers make heavy remittances to India, this can be done without great difficulty. The immediate effect of the proposals in the majority of cases would merely be that workers would for one month find themselves in possession of their wages a week earlier than in the previous month and would squander the extra week's wages or send them to India, and then carry on as before on the monthly credit basis. It has been noted by some of those consulted that in some cases in Burma new employees are assisted by advances and that interest is not charged on such advances.

3. The possibility of any advantage accruing to the workers from the proposals must also be discounted, because of the possibility that some employers, who have what they consider adequate reasons for making late payments, would still contrive to make such payments, and that others who cannot make the change imposed without extra cost would contrive to make the workers pay a part, at any rate, of the extra cost. In the opinion of the local Government it is unsafe to assume that legislative interference with the economic relations of classes can be contrived so that one class shall benefit entirely at the expense of the other.

4. It has also been pointed out by critics of the proposal that the limitation of the proposed action to establishments, subject to the Factories Act or the Mines Act—and in the opinion of the Governor in Council such limitation would be necessary in practice—would mean that classes of workers who are more in need of protection than those affected would not be benefited, and that in some cases half of the workers under the same employer would fall within the scope of the Act while the other half would not, with possible consequences of dissatisfaction and unrest. A very large proportion of the workers employed in connection with the principal industries in Burma are engaged on what is known as the "maistry system," and in the mines, workers are frequently employed through contractors. The methods of payment in such cases vary from place to place and between individuals in the same place. It is frequently alleged that coolies working under maistries and contractors are unfairly treated, but it would be impossible to bring such coolies within the scope of the proposed Act.

5. The objections to the proposal raised by commercial bodies and others consulted are mainly on the ground of the difficulty of accelerating the payment of wages or the impossibility of doing so without the employment of extra clerical staff. It is also suggested that in some cases the custom of withholding wages for a time has arisen from the necessity for maintaining a hold upon the workers so that they may not disorganize the business by leaving without notice. This is probably true to a great extent in the case of small concerns which are not represented on the chambers of commerce, and the local Government is inclined to think that it is true also to a greater extent than is admitted in the case of many other employers. The Government of India remarks that "generally speaking the time which elapses between the end of the period by which wages have been earned and the date on which they are paid is longer than is usual in industries in other countries." It may be argued that this is due to the greater reliability of workmen in other countries, or to the fact that at certain times of the year at any rate, workmen who leave their employment in India can find other employment at once. Conditions in Burma, where wages are high and seasonal demands for labour very heavy, might be expected in a special degree to render safeguards for employers necessary. The present proposal will prevent the employer from protecting his interests in the above manner, but it provides no substitute for the safeguard which has been established by custom and which it will abolish. It has been suggested that the proposed Act, in order to be complete, should provide also for the punishment of workers leaving their employment without giving one month's notice. Such a course perhaps cannot be contemplated seriously at the present time, but it appears to be a logical corollary to the proposals of the Government of India.

6. Apart from the practical objections raised, the proposals are open to the inherent objection that they would bring the employer within the criminal law in connection with what is merely a civil contract between him and his workmen. The Governor in Council would hesitate to recommend such legislation even if substantial advantages to any class of the community would certainly follow, and in the present

instance the possible advantages appear quite insufficient to justify the consideration of such legislation. By the repeal of the Workmen's Breach of Contract Act a similar interference with civil contracts in favour of the employer has been done away with, and it would be a retrograde step now to interfere with the employer's right to contract with his workers. The Workmen's Compensation Act and the Trade Unions Act have recently been passed in favour of the workmen; and the latter Act, with time and the spread of education, will no doubt lead to the removal of any genuine disabilities suffered by the workmen. The local Government, after considering the matter in all its aspects, is of the decided opinion that legislation should not be proceeded with on the lines proposed.

7. If the Government of India decides to proceed with legislation, the general lines indicated in your letter appear to the local Government to be suitable. The Governor in Council would, however, urge that legislation should not apply to the whole of India, but that provision should be made for the application of the Act in those provinces only where the need of such legislation is experienced. The Act might relate to workmen generally, but its provisions should be applicable only to such classes of workmen as the local Government may direct, and full power of granting exemptions from the provisions of the Act should be accorded to the local Government.

*Letter from the Government of the Punjab, No. 186-R., dated the 20th January, 1927.*

The Government of India were informed in the letter of this Government No. 905-54-17112, dated the 20th December, 1924, that wages in the principal organized industries of the Punjab are paid by the month and disbursed as a rule from 10 to 15 days in arrears. They were informed at the same time, with regard to Diwan Chaman Lal's Bill, that there is no general dissatisfaction amongst workers with this system. After further enquiry, the Governor in Council finds no reason to modify the view he expressed in 1924. He sees no objection to the introduction of legislation if such action is considered necessary, having regard to All-India conditions. But if an Act prescribing dates for the payment of wages is passed, I am to suggest that it be made applicable to this province only by a resolution in the local legislative council.

2. The Governor in Council agrees that any legislation which may be introduced should be on the lines proposed by the Government of India. He agrees that the Act should apply only to workers in registered factories and mines; that a summary procedure should be provided for the trial of cases; that inspectors working under the Factories and Mines Act should be empowered to institute prosecutions; and that local Governments should be given the widest authority to grant exemptions. As regards the period of grace, he considers that seven clear days might be allowed to the employer who pays by the month. The prescription of correspondingly shorter periods in the case of fortnightly and weekly payments appears to be unnecessary. Employers are not likely to revert from the monthly system to a system of more frequent payments merely to evade the Act, in view of the waste of time in the calculation and payment of wages, and the almost inevitable loss of work after pay day which would result.

*Letter from the Government of Bihar and Orissa, No. 270/X.L.-29—Com., dated the 28th January, 1927.*

In order to elicit opinions on the scheme tentatively suggested by the Government of India, the local Government have consulted their local officers, together with representative employers of labour.

2. The most important industrial areas in Bihar and Orissa are the coalfields of Chota Nagpur, and outside the coalfields such large industrial establishments as the Tata Iron and Steel Works at Jamshedpur, the East Indian Railway workshops at Jamalpur and the factory of the Peninsular Tobacco Company at Monghyr. The number of persons employed under any single employer in iron ore, mica and other mines outside the coalfields is seldom considerable; local industries are still comparatively undeveloped; and for the time being Bihar and Orissa retains its character as a predominantly agricultural province. The Indian Mining Association and the Indian Mining Federation together represent almost the entire body of employers in the coalfields. Both are opposed to the suggested legislation on the ground that it is undesirable and uncalled for, and both rely on the statement at page 24 of Bulletin No. 34 that there is no delay in the payment of wages by colliery proprietors. In the Jharia coalfield, wages are paid weekly and in the Raniganj coalfield, daily. The Chief Inspector of Mines has commented that there cannot be said to be any real necessity for legislation so far as mines in this province are concerned, since the waiting period is short.

3. Turning to the greater industrial establishments mentioned above, I am to enclose a copy\* of the reply given by Messrs. Tata Sons on behalf of the Tata Iron and Steel Company. The number of employees in the steel works is approximately 29,000, of whom between 12,000 and 14,000 are paid weekly, while the rest are paid monthly. The Government of India will observe that while the company express their approval of the underlying principle of the scheme suggested for their consideration, namely, that wages should be paid as early as possible, they represent that if legislation were passed on the lines suggested, they would have to ask for special exemption for their firm on the ground that it would not be practicable for a company employing so large a staff as theirs to comply with the law. The number of persons employed in the Jamalpur workshops of the East Indian Railway is approximately 15,000. Wages are paid monthly on the 15th of the succeeding month. As reported by the local Government in paragraph 5 of Mr. Dain's letter No. 81-XL-26-Com., dated the 10th January, 1925, when expressing their opinion on Mr. Chaman Lal's Weekly Payments Bill in the strike on the East Indian Railway in 1922, no complaint was made by the strikers with regard to the period of their wage payment, though every possible grievance was brought out and ventilated. The Peninsula Tobacco Company employ 6,000 workmen. The wages are paid monthly, not later than the 10th day of the month following that in which the wages are earned. The company have stated that the system of monthly payments (which the Government of India appear to condemn) was selected only after exhaustive enquiries into local custom, and as the system which would be best appreciated by their employees and more likely to keep them out of debt than shorter periods.

4. The conclusion which the local Government have drawn is that in organized industry in this province no dissatisfaction has been expressed by workmen with the present system; abuses have not come to light; and that in the circumstances no case for special statutory measures has been established. In paragraph 8 of your letter the Government of India state that abuses are particularly associated with the larger industrial establishments where the work involved in the calculation of wages is heaviest, and where the presence of intermediaries between the workmen and the management and other circumstances tend to aggravate delays. In the smaller establishments lying outside the scope of the Factories and Mines Acts there are no serious abuses such as would justify the introduction of legislation. His Excellency in Council finds himself unable to assent to this view. The opinion expressed by Messrs. Tata Sons emphasizes the difficulty of rapidly clearing the wages accounts where the number of employees is considerable, but in all large establishments there are regular dates definitely fixed for wage payments. Smaller employers are apt to be very much more casual in their methods, and the local Government, in disagreement with the views expressed by the Government of India, have no doubt that, taking individual cases, the worst instances of delay in the settlement of wage accounts will be found in small establishments suffering from lack of funds rather than in the larger concerns in which capital has been sunk, and where a ready supply of money to meet the regularly recurring bill for wages is recognized as essential to the life of the firm. In paragraph 3 of your letter the Government of India have cited instances in which workers were compelled to strike in order to secure wages which had been held back for unreasonable periods. The local Government can rely only on their own experience to state that no such instances have come to their notice in this province. In 1920 and again in 1922 there was a general strike of the employees of the Tata Iron and Steel Company. As in the case of the strike on the East Indian Railway, so also at Jamshedpur, no dissatisfaction was expressed by the strikers with regard to the periods of wage payments. The Government of India themselves recognize that it would not be practicable to apply their scheme to smaller establishments outside the scope of the Factories and Mines Acts, and with this expression of opinion the local Government agree. If, on the other hand, the suggested legislation is designed to meet conditions in the larger industrial concerns, the opinion of the local Government is that so far as conditions in this province are concerned, the legislation is not required, and the scheme prepared in outline by the Government of India should be dropped.

5. In conclusion, I am to add the following comments on the details of the Government of India's scheme. It is suggested that any legislation which might be undertaken should be confined in the first instance to wages paid on the monthly system. The Government of India will, of course, recognize that in that event employers who at present pay their workmen a monthly wage would be disposed to adopt shorter periods for the purpose of freeing themselves from the application of the law. The local Government doubt whether this could be claimed to be an advantage. As they stated in Mr. Dain's letter No. 81-Com., dated the 10 January, 1925, the established practice of payment in India is on a monthly basis, and life

is organized accordingly. If among the class affected wages are to be paid weekly (or fortnightly), domestic matters generally will have to be adjusted to the change. There is a considerable body of opinion that the payment of wages in industrial establishments at shorter periods than a month induces thriftlessness and encourages debt, and His Excellency in Council considers that that opinion cannot be ignored. The Government of India consider that there is less need for legislation with regard to weekly and fortnightly period. The view which the local Government desire to emphasize is that if legislation is to be undertaken discrimination should not be made solely against wages paid on a monthly basis.

6. The Government of India recognize that if the enforcement of the law is to depend on the initiative of the workmen, the Act will fail to achieve its object, and for that reason they suggest that the power to prosecute should be granted to some external authority such as an inspecting staff, and they would apparently utilize the staff employed under the Mines and Factories Act for that purpose. The Government of India, however, do not make it clear whether the inspecting staff are to have power to proceed on their own motion or only on complaint made to them by the workman concerned. If, on their own motion, then a great part of the time which they should devote to their regular duties will be lost in preliminary enquiries to ascertain why wages which were due to payment by the 10th of the month were not paid till some days later. The delay may be due to a variety of reasons other than any deliberate intention on the part of the employer to withhold payment. These reasons would require investigation before the inspector could decide whether or not to prosecute. If the inspector is to act only on complaint made by the workman, he would still need to verify the truth of the complaint, and the circumstances in which delay, if any, had occurred, while the workman would be as much exposed to victimization as if he had himself prosecuted his employer. The fact that the prosecution would be conducted not by himself but by a Government Inspector, would not materially affect the position as between himself and the management. Lastly, if duties of the kind suggested by the Government of India are to be thrown on the inspectors employed under the Mines and Factories Act, the present staff would certainly require to be supplemented.

7. To sum up, the Government of Bihar and Orissa consider that conditions in this province are not such as to require legislation to ensure the more prompt payment of wages, and secondly that it is open to question whether legislation on the lines suggested by the Government of India would be successful in improving relations between employers and employed in the matter of wage payments. If, however, the Government of India decide to proceed with their scheme, the local Government would represent that any Act which might be passed should apply to those areas only to which it might be extended by notification. The legislation could thus be confined to any advanced industrial centres where its need may be established, and this province could be excluded until circumstances are found to require these special statutory measures for which existing local conditions supply no present justification.

*Letter from the Government of Bengal, No. 986-Com., dated the 9th February, 1927.*

The letter was circulated for opinion to the various commercial bodies usually consulted by the Government of Bengal on such questions; and the Commissioners of Divisions, who consulted the district officers, also examined the proposals in the light of local opinion and practice prevailing within their jurisdictions. The Chief Inspector of Factories and the Chief Inspector of Mines were also asked for their views and the feeling of the working classes was ascertained through Mr. K. C. Roy Chowdhury, M.L.C., who is actively connected with several local trade unions.

2. The facts regarding late payment have already been ascertained, and it will be seen that, though there is little or no dispute on points of facts, a number of reasons have been adduced to prove why legislation is not necessary. Some of these reasons are of a general, and some of a particular, nature. One type of the general arguments is that contained in the reply of the Bengal Chamber of Commerce, to the effect that because restrictive measures have been found to be necessary in Europe, it does not necessarily follow that they should be introduced in India. The Chamber says that, because of the operation of the law of supply and demand, the Indian is in a stronger position than the English worker, and has not the need for the same degree of protection by the State. Another type is given in the reply of the Commissioner of the Burdwan Division, viz., that the time of payment is a question which should be settled by labour itself with its employers through its unions. On the latter question, as a general principle, the Governor in Council agrees that the problem should be settled by mutual agreement between master and workmen. The time

of payment, like the payment itself, may be looked upon as part of the contract of service, and, as a matter of policy, it is not advisable to interfere by legal measures with such contracts except in cases of necessity. With respect to the subject under discussion, the facts have been definitely established that payment in many cases is unduly delayed and that hardship results, and interference is justified to remedy a grievance which combined action by Indian workers will take many years to effect. Were the trade union movement in this country of any considerable strength, it is probable that this issue would not have to be raised by the Government of India at all. As is well known; trade unionism in India at present is in a quite embryonic stage, and such indications as exist point to its taking many years to develop sufficient strength to enforce on employers obligations regarding wages which trade unions in the West have done years ago. The Bengal Chamber of Commerce are in error if they think that the restrictive conditions of the West similar to those now suggested by the Government of India have been imposed by legislative action. The restrictive measures of the West in respect to wages are mainly the result of trade union action, and when, and if, trade unions in India develop power similar to that of Western trade unions, it is likely that they will demand the full measure of what the moderate suggestions of the Government of India now propose to give part; like Western unions, they will press for payment at the moment the contract is finished. The Indian worker in this respect is not, as the Bengal Chamber of Commerce say, in a stronger position than the English workmen, and in less need of protection by the State. There are admittedly aspects of the Indian workers' conditions which compare favourably with those of Western workers, but their power to enforce quick payment is not one of them, and it is for this reason that the Governor in Council supports the proposals of the Government of India to give him protection from proved abuse by the action of Government.

3. Several replies, while objecting to the proposals of the Government of India, declare that so far as their particular industry is concerned, there are no abuses. In such cases there can be no fear of the new measure, as the proposals of the Government of India are meant to remedy evils, and where there are no evils there will be no remedy. The commercial interests practically all point out that hitherto there have been no complaints regarding the period of payment. This contention is largely borne out by an analysis of the strike returns compiled by the Government of Bengal. The percentage of strikes, which have been caused by delay in payment, is very small, and most of them have occurred in concerns in which there has been bad management or which have been on the point of going into liquidation. It is true also that delayed payment does not materially affect employees if the payment is regular. There is the initial waiting period which may involve the contracting of debt, but once it is over, regular payment, even though late, is very much the same as regular payment at the end of the period over which the pay was earned. Even so, there is no reason either of logic or of justice why the worker should wait for appreciably long periods after the payment is earned before it is made. Even though the differences between the West and India are marked, there is no specific difference which would seem to allow for late payment. It is now a recognized principle in the West that industrial workers are paid immediately the payment is earned under the contract of engagement. They have no reserve to fall back upon, and their lives are regulated according to their earnings, which are usually paid on a weekly basis. The Indian worker similarly has little or no reserves to fall back on, and there is no valid reason why he should not be treated as industrial workers in Western countries. A common contention in this connection used to be that owners should keep a certain amount of wages in hand to have a hold over workers leaving without due notice or causing loss by carelessness, neglect, or wilful damage to property. This argument has not been advanced against the proposals of the Government of India by the commercial interests who have replied to the reference—a fact which in itself shows that the argument is out of accord with modern notions of the relationship of workers in organized industries to their employers.

4. An analysis of the particular arguments which have been brought against the proposals of the Government of India shows that not a single good reason has been adduced to prove why payment in India should not be made more quickly. The particular reasons all arise from expediency. The manager of the Darjeeling Himalayan Railway, for example, makes a reference to the difficulties arising from the pre-audit system of payments on railways. This is a real difficulty, but that it is not insurmountable is recognized by the agent himself, when he says that if prompt payment is made compulsory the post audit system will have to be introduced. A more formidable contention is put forward by the Bengal Chamber of Commerce when they say that the methods of quicker payment are impracticable. It would require a much larger clerical establishment than any industrial concern can be reasonably expected to provide, they say, to pay several thousands of men on one day or two days by the methods which have to be followed in this country. They

refer particularly to the Indian Jute Mills Association, who are reported to have stated definitely that "payments of weekly wages could not be arranged for earlier than our days after the close of the week." These arguments are not quite consistent with the Chamber's general remarks on the differences between Western and Indian labour. These differences are said to make quicker methods of payment impracticable; whereas they should actually make quicker payment easier. Although there is no difference in principle between piece rates in India and piece rates in the West, there are marked differences in the more recondite applications of the piece system, or in the West it has developed elaborations in bonus, premium bonus, and differential variations which require the highest skill in calculation. In India, however, only simple bonus schemes are in operation, requiring no highly specialized staff for calculation. In the West, even the most intricate piece systems do not prevent prompt payment; thus the argument from the point of view of difficulty of calculation in India is on the side of shorter periods. The particular argument of the Indian Jute Mills Association is even less apposite. The controlling staff of the jute mills are very largely recruited from Dundee and environs, with previous experience of the system of payment in the jute mills of that area. The wages of the jute industry are governed by Trade Board rates, which are exceedingly complicated and difficult of application; yet the argument has never been put forward that this should be a reason for the postponement of payment. In Bengal, where there is not a tithe of the difficulties that exist at Dundee, the contention is not worthy of serious consideration. It may be conceded that the payment of the wages of thousands of employees in one day will be difficult, but this contention, in the view of His Excellency in Council, can hardly be upheld against the clear justice and obvious reasonableness of the proposals of the Government of India.

5. With the general principles set out in paragraph 6 of the Government of India letter, I am to say that the Governor in Council is in agreement. The adoption of shorter periods of payment referred to in paragraphs 4 and 5 of the Government of India's letter has already been dismissed as impracticable by the Government of Bengal—*vide* their letter No. 7-T.-Com., dated the 26th May, 1925. The proposal to set statutory limits to the time in which wages must be paid is both reasonable and practicable. The periods suggested are also accepted—*viz.*, within a week of the close of the month for monthly wages, within four days for fortnightly wages, within two days for weekly wages and within one day for daily wages. The Governor in Council is not in favour of discrimination between bonuses and wages, except in the case of long periods—*i.e.*, half-yearly and annual bonuses. As already mentioned, the bonus system in vogue here is relatively simple; indeed, piecework and bonus on the work of an individual means very much the same thing, and should be paid at the same time as ordinary wages. The principle of the suggestion that the date on which the month should commence should be left to the employer, subject to the approval of the local Government, is also accepted; but if such a provision is to be included in the Act, the Government of Bengal would prefer that the approval should be subject to the Chief Inspector of Factories or the Chief Inspector of Mines.

It is undesirable to distinguish between cash and kind payment. Industrial wages should be normally taken to mean cash wages, and the mention of "kind" payment would introduce into the legislation the element of Truck, which should, if necessary, be dealt with separately. The power of exemption suggested by the Government of India is also accepted, as it will give elasticity in the application of the provisions of the legislation, but the limits within which the exemption should be permitted should be narrow and no general exemption should be permitted. Exemption should also be subject to written reasons and specified conditions. The local Government doubt the wisdom of prescribing a minimum percentage of the wages which, paid within the statutory period, would secure compliance with the law. The power of exemption should give sufficient elasticity in applying the measure; to permit anything less than full wages being the statutory requirement would open the door to multitudes of pleas among which local Governments would find much difficulty in discriminating.

6. The attention of the Government of India is particularly invited to the letter of the Bengal Chamber of Commerce so far as it concerns contractors. As the Government of India are aware, a very large proportion of work in engineering works in Bengal is done through contractors, and the difficulty mentioned in the Bengal Chamber's letter is a very important one. It will be recalled that a similar difficulty appeared when the Workmen's Compensation Act was under discussion, and that it was successfully overcome by the provisions laid down in section 12 of that Act. To exempt contractors from the provisions of the proposed legislation would largely nullify its objects, as evasion would be made possible by the simple expedient of declaring labour to be contract labour. There seem to be two possible methods of solving this problem. One is to incorporate in the law a provision parallel to section 12 of the Workmen's Compensation Act, by which if the principal were penalized

under the Act, he would be liable to be indemnified by the contractor. The other is to bring the contractors themselves within the provisions of the Act. I am to say that the Governor in Council prefers the latter alternative on the ground that it would be unfair to good employers to have to incur the odium of conviction even with possible indemnification, when they were not primarily responsible for breaking the law.

7. With respect to the enforcement and the scope of the legislation, I am to say that the views of the Government of India as contained in paragraphs 7 and 8 of the letter under reply have the general support of the Government of Bengal. Prompt recovery should be provided by some form of summary procedure, and fines should be provided for offences, with the possibility of assigning the whole or part of the fine to the injured person. The principle that the enforcement of the Act, for the reasons given by the Government of India, should depend not on the workers themselves, but on an external authority is well established in the West, particularly in the Trade Board legislation of Great Britain, under which inspectors are appointed to enforce the provisions of the Trade Boards Acts. The Government of Bengal also agree that, in the first instance, the legislation should be applied only to organized industry—i.e., to concerns which come within the jurisdiction of the existing Factory and Mines legislation. It is doubted whether the evils of late payment are more common in large than in small concerns, but it is obviously impossible at the present stage of development to go beyond the bounds of existing Acts. All replies are unanimous regarding the scope of the legislation. I am, however, to say that the Governor in Council is of opinion that it should be open to local Governments to designate the officers who will be responsible for enforcing the Act. Normally the work will be done by the Factory and Mines Inspection staff. The ascertainment of the dates of payment during routine inspections will not be a heavy addition to the existing work of the department. Difficulties will arise, however, in cases of individual complaints, particularly from factories at a distance from headquarters. The Factory Inspection Department in Bengal is already heavily worked; and His Excellency in Council would hesitate normally to add to this work burdens which in any way might interfere with its main duties under the Factories Act. It is not anticipated that the accretion of duties under the proposed legislation will be heavy; but he would prefer that the legislation should permit of the appointment of district or other officers as inspectors under the Act in order to obviate journeys by Factory Inspectors, and also to facilitate the easy disposal of cases on the spot. With regard to the form that this part of the legislation should take, I am to recommend a perusal of sections 14, 15, 16 and 17 of the Trade Boards Act, 1909 (9 Ed. VII Ch. 22).

*Letter from the Government of the United Provinces, No. 517, dated the 16th February, 1927.*

This Government have consulted the two Chambers of Commerce at Cawnpore, the Mazdur Sabha, the Director of Industries, the Board of Industries, the Chief Inspector of Factories, and the Superintendent, Government Press. The opinions received are divided. The United Provinces Chamber consider that the delay in paying wages is generally not deliberate, but is due to the time taken in preparation of the pay rolls, which involve a large amount of calculation. But if the facts in possession of the Government of India warrant a conclusion that payment is unreasonably delayed, the Chamber would not oppose legislation. They propose, however, that the statutory limits of time within which wages must be paid should be ten days, five days, three days and one day, respectively, for monthly, fortnightly, weekly and daily wages. But they urge that these limits should not apply to piece-work at all, and believe that the suggestion to prescribe for the payment of 75 per cent. of the wages earned for this class of work within the statutory period would lead to serious administrative difficulties. They would not confer power to prosecute on any external authority and would confine the measure to mines and factories only. The Upper India Chamber begins by protesting "respectfully but very emphatically against the ever-increasing tendency on the part of the Government of India to favour the introduction of legislative measures in connection with industrial labour employed in factories, which measures are almost invariably in the direction of improving the conditions and the class-power of labour at the expense of the employer." They assert that such legislation has constituted a handicap on industrial expansion and that the continued tendency to favour labour at the expense of the employer will shortly constrain the employer to claim protection against his labourers. They impress upon the Government their feeling that the country is not ripe for the labour conditions which the Government are attempting to impose on it by legislation. Turning to details, the Chamber deny that the information collected by the Government of India reveals an unsatisfactory state of affairs. It is not alarming that monthly wages should be paid from 10 to 15 days after the close of the month.

In a large factory this period is the minimum necessary for calculating the wages due and the price of piece-work. They admit that in some cases hardship results in the first month of employment, but this is alleviated by the readiness of employers to make advances during that period. If legislation is to be enforced, they would increase the statutory period from a week to ten or twelve days for monthly payments, and from four to seven or ten days for fortnightly payments. They strongly protest against vesting in any external authority the power to prosecute. They would not confine the measure to factories and mines, but would extend it to all Government services,\* tea gardens, plantations, in fact all employers of labour, especially railways and municipalities where the delay is as great or greater than in factories.

2. The Director of Industries is not aware of any hardship caused to workmen by the delay in payment of wages, and neither he nor the Board of Industries see any need for legislation in this province.

3. On the other hand, the Mazdur Sabha, the Chief Inspector of Factories and the Superintendent, Government Press, consider legislation necessary. The Mazdur Sabha would fix five days, three days, and one day for monthly, fortnightly and weekly payments, respectively. They would confine legislation to mine and factories, and would for the present vest in the inspecting staff the power to prosecute. When the Sabha is well organized it will, they think, be able to enforce the law on the employers. The Chief Inspector states that the Cawnpore mills generally take from ten to fifteen days to pay wages, and he thinks legislation would serve a useful purpose in reducing this period. He would grant the power to prosecute to an external authority such as an inspector of factories. The Superintendent, Government Press, states that employers withhold payment of fifteen days as "this period coincides with the period of notice customarily demanded from monthly workers before they leave service." He holds that delays favour the operations of the moneylender. He would introduce legislation to compel monthly payments within ten days, and not seven as proposed by the Government of India. He thinks that these ten days will be more than sufficient for the reckoning of wages, and will give employers ample safeguard against desertion of workers. As to the authority to prosecute, he would give powers both to the workmen and the external authority. Finally, he urges that the evil is not confined to large establishments only. The small employer is just as ready as the large to safeguard himself against desertion by postponing wages. He would therefore extend the measure to all establishments where 20 or more workers are employed.

4. Opinions for and against legislation are thus fairly evenly balanced. Employers generally oppose the proposal and employees welcome it. This Government think that there is something to be said on both sides. There are two main causes of the delay in paying wages. One is inevitable; the other is not. The first cause is the time which must be taken to calculate the workmen's dues. This calculation is not a simple matter. Owing to fines and to absenteeism it takes a long time in a big factory to calculate the wages due to workmen. If piece wages are paid the time will probably be longer. That this is a real difficulty is proved by the delays which occurred in district boards, even under official chairmen, in paying the wages of teachers. The difficulty arises in calculating pay for men who have been on leave or fined or promoted. At least ten days are probably required for the payment of monthly wages. The second cause of delay is avoidable. It is due to the employer's desire to postpone payment in order to prevent discontented employees from leaving as soon as they get their pay. A discontented workman receiving his pay on the fourth or fifth day of the month may be ready to resign his post without giving notice and to forfeit the four or five days pay due. But a postponement of payment for ten or fifteen days ties him to the factory. The longer the employer defers payment the stronger is the tie. The employer's anxiety to retain his labour is intelligible in a country where a labourer is only a part-time industrialist, ready to drift back to the land on the least discouragement, and to leave his employer in the lurch. None the less, in so far as the employer's action is an interference with the labourer's right to seek employment where he will, it ought not to be countenanced by the State.

5. None of the critics of this measure have remarked that after the first period of waiting, wages are actually paid monthly, even though delayed. For example, if a labourer is employed on 1st January, he may get no pay until 20th February. If the factory continues to delay his wages, he will thereafter get his pay on 20th March, 20th April, and so on. A variation of one or two days on either side makes no difference. If the workman can get an advance during the first six or seven weeks when he draws no wages, he will suffer no hardship from the recurrent postponement of pay. If he wishes to resign, and gives notice at the beginning of the month, he would be entitled when paid on the 30th day of the month to draw his wage also for the 30 days.

6. This Government consider that the demand for the measure in this province is insignificant, possibly because delay in payment ceases to operate as a hardship after the first period of waiting. On general grounds they think it undesirable to add to the rapidly growing volume of labour legislation a measure which employees generally have not asked for, and which employers strongly oppose. In this view they are influenced also by the prospective difficulty of enforcing the law. It would be necessary to appoint numerous inspectors and they would be difficult to supervise. As the arguments against legislation appear considerably stronger than the reasons in favour of it, this Government are opposed to proceeding with it.

*Letter from the Government of Bombay, No. 5773/859/D., dated the 16th February, 1927.*

In considering legislation of the kind proposed the Governor in Council agrees with the view expressed by the Government of India in their letter under reference that if abuses can be checked or eliminated by legislation, it is the duty of Government to introduce such legislation. It is, however, essential first to ascertain whether the evil, it is desired to eradicate is a real one, and prevails to such an extent as to justify the somewhat drastic remedy of penal legislation with its natural accompaniments—interference with long established methods of conducting business and an addition to the expenditure of local Governments. Such considerations would carry no weight if the lot of the workers in this Presidency could be improved by legislation of the kind proposed, and it is necessary, therefore, to examine the proposed legislation and the assumptions on which it rests in order to see if the conditions laid down have been fulfilled.

2. It is suggested that Government action is necessary because systematic delays in the payment of wages add appreciably to the economic difficulties of workmen. This is perfectly sound theoretically, but it requires examination in the light of the practice as regards payment in industry generally, and when so examined this argument loses a good deal of its force. As is pointed out by the Bombay Millowners' Association, who quote a speech of the Honourable Sir B. N. Mitra, Member of Industries and Labour, in the Legislative Assembly in February last, "What the worker wants is that his wages should be paid quickly." The workers whose economic difficulties are affected by the present delay of a fortnight in the payment of monthly wages are those who take up employment in a particular mill or other establishments for the first time, *i.e.*, it is only the first period of wages that is withheld for longer than a month, because after the first period of waiting is over the worker gets his wages regularly every month. Under the monthly system of payment prevalent throughout India—with which it is not proposed to interfere—a new worker entering a mill, etc., at the beginning of a month, has to wait nearly six weeks for his first month's wages. Thereafter he is paid promptly every month. The legislation that is proposed would, therefore, in practice benefit only the irregular or casual worker or the person entering into employment for the first time, and then only to the extent that at the best he would receive his *first* wages a fortnight earlier than is usual, but most probably not more than a week earlier than usual. The Governor in Council is unable to see that the economic position of industrial workers generally would be materially assisted by legislation of this kind. There is an almost general consensus of opinion that legislation of the kind proposed should be, and could in practice only be, applied to those establishments coming under the Factories and Mines Acts, and these are the establishments where the regular payment of wages is the rule. The practical effect of such legislation, therefore, would be to permit a relatively small number of workmen to receive their first month's wages a week earlier than they do at present. The Governor in Council is unable to agree that penal legislation is necessary in such circumstances, for the practical benefit to the worker in industry generally would be negligible. While, therefore, of opinion that the proposed legislation is not required, the Governor in Council desires to offer his views on the points raised in the Government of India's letter in case it is decided by the Government of India to proceed with legislation.

3. *Scope of the Measure.*—As has been mentioned in a previous paragraph, opinion is overwhelmingly in favour of confining such legislation, if it is necessary, to establishments subject to the Factories and Mines Acts, the main reason for such limitation being the practical impossibility of enforcement if it were made generally applicable. The Bombay Engineering Employers' Federation are in agreement with the Government of India as regards the difficulties which must arise in legislation of this sort and these are such that legislation could only affect those concerns coming under the Factories or Mines Acts. "This appears to be one of the weaknesses of the whole scheme," says the Federation, "as it restricts the legislation to concerns which are generally well organized, and where abuses are less likely to be found and leaves the smaller concerns entirely free to carry on as they please. If it is not possible to make legislation of this nature universal it were better left alone altogether." The

workers' interests generally agree to this limited application, but suggest that State employment, railways, municipalities and all organized industries in large establishments should be covered, while the Central Labour Board is of opinion that it should also be extended to other industrial concerns "where the more intellectual classes such as clerks are employed." The Bombay Textile Labour Union recognize that additional staff would have to be employed, but consider it is worth while incurring this extra expenditure.

4. The Governor in Council, for the reasons given in previous paragraphs, is unable to accept this view, because he believes that the measure could not be enforced outside establishments under the Factories and Mines Acts where, as has been pointed out, there is little cause for complaint that wages are not paid regularly. The Governor in Council, however, concurs with the view expressed by the Director of Information and Labour Intelligence, and one or two other officials, that even if the Act is restricted in its scope, power should be taken under the Act to extend it, if necessary, the power being vested in the local Governments.

5. *Method of Enforcement.*—Opinion on this subject is largely in favour of the responsibility for enforcing legislation being confined to the existing Factories' and Mines staff. The Chairman of the Bombay Port Trust considers that the procedure to be adopted in regard to inspections should be very carefully defined, it being clearly desirable to avoid all unnecessary intreferece with the internal management of the concerns affected. "It would probably be sufficient in most cases if the employers were required to furnish periodical certified returns showing the period and date of disbursement of their staff wages." The workers' interests, however, favour an "outside and independent agency" to enforce the Act. The Chief Presidency Magistrate is of opinion that it should be open to any workman to institute proceedings on his own initiative, prosecutions by inspecting officers of the Factories or Mines Departments being merely an additional facility. The late Sir Lallubhai Shah, Judge, Bombay High Court, was of opinion that the power to prosecute should not be given to any external authority such as an inspecting staff, but a provision should be inserted granting any number of workmen from the same establishment the power to join in one proceeding. The more general opinion seems to be that in the present state of the organization of labour, the Act would be a dead letter if it were left to the workers to initiate prosecutions. The Chief Inspector of Factories suggests that work under the proposed measure in districts would entail considerable expenditure and waste of time, in the event of prosecution being considered necessary, which could be reduced a great deal if *ex-officio* inspectors (local officials) were empowered to act as prosecuting officers. The Bombay European Textile Association objects that the duties of the Factory Inspector should not entail having to take sides between employers and employees where wages are concerned.

6. The Governor in Council has given careful consideration to the various suggestions that have been made, but he is unable to agree that the power of putting the penal law in motion should be given to any other authority than the officials who would be responsible for administering the Act, that is Factory Inspectors. The Director of Information and Labour Intelligence points out that a clear distinction should be drawn between procedure for the prompt recovery of wages due to a worker and the punishment of an employer for an infringement of the law. A workman or an organisation of workmen can draw attention to breaches of the Act, and ask for the law to be put in motion, but the initiation of proceedings should be in the hands of the administrative authority. The Governor in Council concurs with this view, and is opposed to any suggestion that the power to prosecute should be given to private individuals or associations of individuals.

7. *Statutory Limits of Wage Payments.*—The Governor in Council agrees with the view expressed in paragraph 5 of the Government of India's letter that a Bill providing for the weekly payment of wages is not likely to receive the support of public opinion or to prove effective in its operation. After the general strike in the Bombay mills in the early part of 1924, His Excellency the Governor interested himself in the question of the fortnightly payments of wages and the Millowners' Association took steps to ascertain the views of the millhands themselves. Replies were received from practically all the mills in the city and island of Bombay, and, with the exception of two mills, all the operatives expressed themselves as being in favour of the continuance of the present system of monthly payments. It was pointed out by one group of mills that in 1912 they made the experiment of fortnightly payments, but the attempt had to be given up owing to the opposition from the workpeople. The workers' interests, who have dealt with this point in their reply to the Government of India's letter, recognize that the system of monthly payment is the one most favoured by the workers. The Social Service League has, however, every hope that public opinion will soon be unanimous for weekly payment of wages, while the Bombay Textile Labour Union feels confident that, if the advantages accruing from a weekly system of wage payments were fully explained to the workers, they would withdraw their

opposition, and agree to the system of payments for shorter periods. One labour organization, however, definitely states that the monthly system of wages is more advantageous to the majority of workers. The Bombay European Textile Association point out that the Association had approved of the fortnightly payment of wages, but when their members were instructed by their respective employers to persuade the operatives employed under them to accept this system, they were in almost every case informed by the operatives themselves that any departure from the present monthly system would be detrimental to their interests. The operatives refused to accept any change from the present system, and said that any attempt to change would be met by a strike.

8. The Governor in Council is in entire agreement with the views expressed almost unanimously by well-informed opinion. The legislation, therefore, should deal only with wages paid under the existing system, which in the Bombay Presidency is almost universally monthly, the chief exception being in the Ahmedabad mills. As has been pointed out above, legislation will to all intents and purposes benefit only the irregular or casual worker, and the workers taking up employment for the first time, and in view of these limited benefits it is necessary to examine the reasons for the present system of paying wages from 10 to 15 days after the end of the month, and to see whether this period could not be altered, without undue disorganization of the industries concerned.

9. *Period within which Wages should be paid.*—The Bombay Chamber of Commerce point out that any acceleration of the payment of wages, *i.e.*, in less than 15 days could not be enforced without a general revision of the period for making up accounts. The obstacle in the way of payment of monthly wages within a shorter period than 15 days after "making-up day" are (1) the difficulty of introducing satisfactory mechanical timekeeping appliances; (2) the considerable amount of clerical labour which would be involved owing to the fact that overtime is worked up to the last day of the month, and men are employed on different grades of work at varying rates of pay; and (3) the delays incidental to workpeople being employed at a distance from headquarters. The Chamber point out that it would be difficult, if not impossible, to pay within one week, specially in the case of railways and many public bodies, owing to the delay in getting in paysheets and having them checked and returned. The Bombay Engineering Employers' Federation are very strongly of the opinion that a fortnight from the end of the period under calculation for monthly payments, and a week for fortnightly payments is the absolute minimum that should be allowed. The Bombay Millowners' Association think that the rights of labour would be sufficiently protected if legislation is enacted prohibiting the withholding of wages for more than a fortnight after they have become due. The Ahmedabad Millowners' Association has no objection to restricting the period of payment for monthly wage earners to 10 days. The spinners and weavers in the Ahmedabad mills receive their wages every fortnight, on the eighth day after they become due, and the Ahmedabad Millowners' Association are strongly opposed to any departure being made from this practice. The Karachi Chamber of Commerce think that ten days would be a reasonable period for monthly workers and five days for fortnightly, three days for weekly and the following day in the case of casual workers paid by the day for a day's work; but this should not be made to apply to employees who, though working on a daily wage, are in effect permanently employed and are paid monthly, the daily being merely the basis of computing the monthly sum due. The Bombay Port Trust consider six days a reasonable period counting Sundays and holidays as *dies non*. The Karachi Port Trust is prepared to make arrangements so as to enable payments being made within a week of the close of the month. The Municipal Commissioner thinks that the period of payment would have to be extended to fourteen days or at least the tenth working day after the close of the month. The Central Labour Board can see no reason why wages should not be paid after five days, or after two days in the case of payments made fortnightly. The Bombay Textile Labour Union suggests a week and four days respectively, two days in the case of weekly wages and the same day for daily wages. The Ahmedabad Labour Union would allow three to four days in the case of fortnightly wages.

10. The Governor in Council after due consideration of all the views expressed concurs with those of the Director of Information and Labour Intelligence, and desires to draw attention to the remarks made by that officer. The Governor in Council again wishes to emphasize the fact that in organized industries wages are already paid *regularly*, and the practical benefit of reducing the period within which wages must be paid after they become due is very small. The Governor in Council, therefore, is inclined to the view that so far as piece workers are concerned, 14 days should be allowed after the end of the month, but in the case of workers on time rates the period should be seven days. In the Ahmedabad mill industry, where payment on a fortnightly basis is general—the men affected being mostly pieceworkers—and for fortnightly wages generally, the period should be seven days. For weekly workers

it should be three days, but where workers are engaged from day to day they should be paid off at the end of each day. The Governor in Council desires to draw attention to the remarks of the Karachi Port Trust, the Director of Information and Labour Intelligence and others, and to point out that it is important in framing legislation that the period for which wages are paid and the rate at which they are calculated, should be kept distinct, because workers may be engaged on weekly or daily rates of pay, but may be paid once a month or once a fortnight or once a week as the case may be.

11. Employers should also be empowered to fix the date upon which they elect to begin and close the month, and to fix different dates for different departments.

12. *Inclusion of Bonuses.*—Only a few opinions were received on the question of including bonuses within the scope of the legislation. The Governor in Council is of opinion that where a bonus is another name for a high cost of living allowance or an allowance at a fixed percentage over basic rates, or is a reward for good work or good attendance, and is provided for in the muster rolls and paid regularly month by month, it should be treated as other wages are treated. Bonuses which take the form of payment to the employees when the profits of the business, in the opinion of the employers, justify such a distribution, should clearly not be affected by the operation of the Act.

13. *Limitations of Wages to Payments in Cash.*—Only two opinions have been received on this subject, both of which are in favour of payments in cash. The Governor in Council does not consider that any expression of opinion is called for upon this question, as it could more appropriately be dealt with in any legislation which might be considered necessary as the result of the enquiry which is now being conducted at the request of the Government of India into the question of fines in industry and deductions from wages.

14. *Penalties for Infringement.*—None of the non-official bodies consulted and very few officials have expressed any opinion as to the extent of the penalty. The Governor in Council concurs with the suggestion of the Director of Information and Labour Intelligence that penalties might be fixed at Rs. 100 for the first offence, Rs. 250 for the second offence and Rs. 500 for third and subsequent offences. The fines recovered under the Act should be credited to the Public Treasury in the same way as the fines inflicted for any breach of the law.

15. *Exemptions.*—The Governor in Council is of opinion that power should be reserved to local Governments to grant exemptions from the Act in cases where special circumstances render this necessary.

16. *Payment of Wages for Broken Periods.*—Several questions have been raised in the course of the enquiry regarding points not specifically covered by the Government of India's letter. The most important relate to the question of the forfeiture and withholding of wages. The period of notice in any particular industry varies, and is largely a question of customs which it will be difficult to deal with by legislation, but the question of payment for broken periods should be considered. The Ahmedabad Millowners' Association point out that it is the practice in the Ahmedabad mills not to pay wages to operatives unless they put in a full seven days, and the Association strongly objects to any departure being made from this practice. The Social Service League point out that in some mills in Bombay the discharged employees are not paid there and then, but are asked to wait until the next pay day, but if they want their wages paid at once they have to pay some commission or discount. This is called the *Havala* system. The League say that this system is unfair to workmen, and when a month's previous notice has been given or received by the employer, there is no reason why the employee should have to pay any commission for securing his wages for the work already done by him. The complaint of the employers, however, is that workers leave without any notice at all, and it is in order to endeavour to check this practice that wages are sometimes kept in hand. Attention is also drawn to the practice of forfeiting wages not claimed within six months, and to the fact that within that period of six months wages are only paid on certain fixed days. The Bombay Textile Labour Union draws attention to the hardship upon workers who are not paid off when they are discharged or given notice, and to the question of forfeiture after six months.

17. The Governor in Council is of opinion that this question of prompt payment for broken periods depends upon whether the period of employment is broken by the action of the employer or of the employee. Where an employee takes a job which is payable monthly and leaves before the end of that period, it is not unreasonable for the employer to insist that the ordinary procedure should be followed, and that the wages should not be payable until the regular pay day. Where, however, an employer himself gives notice to an employee at any time in the course of the month he should be compelled to pay the wages of that employee up-to-date, and the wages of that employee should continue until payment is received.

## MEMORANDUM RELATING TO SEAMEN BY THE DEPARTMENT OF COMMERCE (GOVERNMENT OF INDIA).

## I.—Recruitment.

5. The recruitment of seamen is governed by Section 25 of the Indian Merchant Shipping Act (Act XXI of 1923), according to which no person shall engage or supply a seaman to be entered on board any ship in British India unless that person either holds a licence under the Act for the purpose, or is the owner or master or mate of the ship, or is *bona fide* the servant and in the constant employ of the owner, or is a shipping master. Under Section 25 (2), no person shall employ, for the purpose of engaging or supplying a seaman to be entered on board any ship in British India, any person unless that person either holds a licence under the Act for the purpose, or is the owner or master or mate of the ship, or is *bona fide* the servant and in the constant employment of the owner, or is a shipping master. Licences have been issued in the past by the local Governments under Section 24 of the Indian Merchant Shipping Act to persons to engage or supply seamen for merchant ships in British India. Such licences, which are liable to be revoked, are now granted by the Governor General in Council for such period and under such terms and conditions as he thinks proper.

As a result of the recommendation of the Seamen's Recruitment Committee, the question of revising the system of recruitment of seamen at the principal ports of Calcutta and Bombay has been engaging the attention of the Government of India for some time past, and it has recently been decided that there should be two methods of recruitment of serangs and butlers (the leading ratings), either of which may be adopted by the shipping companies.

The first method is recruitment by the ship-owners or their agents direct. This method has been followed by the British India Steam Navigation Company at Calcutta, and Peninsular and Oriental Steam Navigation Company at Bombay, for some time past; and most of the shipping companies at Calcutta have agreed to adopt it for the recruitment of their leading ratings. It has also been adopted by the British India Steam Navigation Company and one or two of the smaller companies at Bombay. The system which it is proposed to adopt is as follows :—

(1) The companies will maintain registers of the serangs and butlers in their regular employ.

(2) The selection of serangs and butlers will be done at their own offices by their own marine superintendents, chief officers, chief engineers, etc.

(3) Preference will, as far as possible, be given to men on the register who have been longest out of employ.

(4) The broker will not be employed in any capacity in the selection.

(5) Intimation that a crew is wanted will be given, not through a broker, but by means of a notice board at the companies' offices. This notice will specify the ship for which the crew is required and will give the date and hour at which the leading ratings will be selected.

(6) On the date fixed, the leading ratings will assemble and the selection will be made from those present.

(7) The lower ratings will be recruited by the marine superintendents or the ship's officers or a regular employee of the firm with the aid of the leading ratings.

The second method is the recruitment of the leading ratings through the shipping office by means of an employment register for serangs and butlers, and selection at an open muster. This method has been devised for ship-owners or agents, who may not find it possible to make the necessary arrangements for the adoption of the first method. According to this method an employment register of serangs and butlers will be maintained in the shipping offices. Here, again, intimation that a crew is wanted will be given, not through the brokers, but by a notice on the notice board at the shipping office. The notice will specify the ship for which a crew is required and the date and hour at which the leading ratings will be selected. At the time stated the owners or agents' officers or the ships' officers will attend and select the leading ratings from among those present at the open muster. The lower ratings will be recruited by the officers of the owners' or agents' or by the ships' officers.

It is hoped that the adoption of these systems of recruitment will remove the broker entirely from all connection with the selection of the leading ratings, and will limit his employment as an intermediary in the recruitment of the lower ratings almost entirely to the supply of men to fill vacancies occurring immediately prior to the vessels' departure.

At Calcutta it was the practice prior to the year 1925 to grant, on payment of the prescribed fee, first issue continuous discharge certificates marked "No previous sea service" to all applicants applying for these certificates, irrespective of whether

they had obtained employment. These new recruits, about 10,000 annually, joined the ranks of seamen waiting for employment, and possibly the majority sooner or later got away to sea as "first voyagers." The annual addition of this large number to the ranks of seamen waiting for employment at the port only served to accentuate the unemployment problem and to intensify the post-war outcry in regard to unemployment.

In 1925 the number of new recruits enrolled out of the applicants attending daily was gradually reduced under the orders of the shipping master, and at the end of the year this method of enrolment was stopped altogether. According to the present practice, "first voyage certificates" are only issued on the receipt of a written undertaking from the ships' officers to the effect that the men will be signed on for the current voyage, and then only to those who have passed the medical examination held by the ship's medical officer. Under this procedure the number enrolled each year is about 5,000.

Sukhanes (quartermasters) at Calcutta, are selected at an open muster held at the shipping office. The selection is made by the marine superintendents of the shipping firms or by the ships' officers.

*Desirability of establishing Employment Agencies.*—The majority of lascar seamen are partly agriculturists, and after a period of service at sea often return to their homes in the districts for considerable periods. They form themselves into groups—this is particularly so in Bombay—and these groups attach themselves to head ratings who belong to their districts and whom they know. They will seldom agree to be employed unless their friends are engaged on the same vessel. In fact, the serang is the crew. He takes the chief part in their selection and is responsible for the efficient working of the lower ratings under him. In these circumstances it is more than doubtful whether any employment agency could be worked with success.

## II.—Organization of Managing Staff.

13. Complaints against the master or officers of a ship under Section 92 of the Indian Merchant Shipping Act, 1923, are few and far between. Relations between the superior staff and the seamen appear to be satisfactory.

## III.—Housing.

16, 18 and 19. With the exception of a certain amount of housing provided by employers in Calcutta for seamen employed on inland steam vessels, housing is not provided for Indian seamen by employers, Government or other public agency.

In Calcutta, a small percentage of Indian seamen—those who have made their homes in Calcutta—live in their own homes.

With the above minor exceptions, Indian seamen, while ashore at the ports and not at their homes in the districts, live in so-called boarding homes belonging to private landlords. The Goanese seamen (the saloon crew), when ashore in port, live in "clubs" run by themselves.

Indian seamen do not live with their families in the seaport towns. Their families remain at their homes in the districts. The accommodation supplied by the "boarding houses" is, therefore, of the simplest, and several men usually share one room. The boarding houses in Calcutta are generally of a poor character, chiefly of the single-storied tiled type; dark, damp and unhealthy looking.

The clubs in which the Goanese live provide similar accommodation, but of a considerably better character. The accommodation provided is usually fully utilized.

20. *Bombay.*—The usual rent paid by the Indian seamen is Re. 1 per month. In the Goanese clubs the monthly charge varies from Re. 1-8 annas to Rs. 3.

*Calcutta.*—The Indian seaman pays a rent of 8 annas a month, Rs. 6 a year, for his accommodation in the boarding house whether he occupies it or not. In the Goanese club the annual charge is about Rs. 12.

*Rangoon.*—The charge in the boarding houses for Indian seamen is reported to be Re. 1-8 annas per month.

## IV.—Health.

23. The general condition of health of Indian seamen may be described as good. They are medically examined before being signed on for employment on board a ship. In Calcutta, the average number who fail to pass the doctor may be taken at 8 per cent. The most usual causes for rejection by the doctor are venereal disease, respiratory troubles and skin complaints. The agreement with seamen is in the form

sanctioned by the Government of India under Sections 27 and 28 of the Indian Merchant Shipping Act, 1923. This form prescribes the latitudinal and time limits of the voyage or voyages, and provides for the free supply of warm clothing to the crew and the heating of their quarters in case the vessel proceeds to certain latitudes during the winter months. A scale of provision is included in the agreement and at the commencement of every foreign-going voyage the shipping master inspects the crews' provisions and water in the presence of the serangs. The Act also provides for complaints from seamen regarding bad or insufficient food or water and for compensation therefor to seamen. Provision is also made in the Merchant Shipping law in regard to accommodation and medical attendance of seamen on board ships. The accommodation must be properly ventilated and protected from the weather and the sea, and the minimum space required for each lascar seaman is specified—*vide* Sections 198 to 211 of the English Merchant Shipping Act, 1894 ; Sections 25–27, 34 and 64 of the English Act of 1906 ; and Sections 85–91 of the Indian Merchant Shipping Act, 1923. Due precaution is thus taken for the health of seamen on board ship.

No reliable figures of mortality among seamen are available as the majority die in districts where their homes are. The figures of mortality on board ship among lascar seamen engaged at the port of Bombay for the last three years are as follows :— 1926–27, 141 ; 1927–28, 126 ; 1928–29, 102.

24. The Merchant Shipping Act, 1894 (Section 209) requires a doctor to be carried by every foreign-going ship, as defined in that Act, which has 100 persons or more on board. The Indian Merchant Shipping Act, 1923 (Sections 184 and 201), also provides for a doctor when more than 100 passengers or pilgrims are carried between Indian and Red Sea ports. When no doctor is carried, any illness or injury to a seaman at sea is attended to by the master, who is instructed by the Medical Guide prescribed for the purpose by the Board of Trade. Serious cases, or cases requiring hospital treatment, are left in hospital at the first port of call. In urgent cases at sea, the master can obtain medical advice by wireless from any port within call or any vessel within call, which carries a doctor. In case of illness or injury on board a vessel in port which carries no doctor, the practice is to get a doctor from the shore. Most, if not all, shipping companies employ a doctor on shore for this purpose. In the case of hurt or injury in the service of the ship, or illness not due to the wilful act or default of the seamen, all medical and maintenance expenses incurred until the seamen is cured or returned to his home port or dies (and in the latter case the expenses of burial), are payable by the owner of the ship.

At the port of Calcutta, sick seamen are admitted for treatment into the Presidency General Hospital, the Campbell Hospital, the Mayo Hospital and the Howrah Hospital. Hospital charges are met from the Hospital Port Dues Fund, constituted under Section 49 of the Indian Ports Act.

In Rangoon, free treatment is given at the following hospitals, to which seamen are sent by the port health officer and medical officers attending the ships :—(1) The General Hospital, Rangoon ; (2) The Contagious Disease Hospital, Rangoon ; and (3) The Ram Krishna Hospital, in East Rangoon.

In Bombay, seamen are treated in the Jamsetjee Jeejibhoy, Goculdas Tajpal, and other hospitals.

#### V.—Welfare.

32. There is no recognized institution in Bombay connected with the welfare of Indian seamen. The establishment of an Indian Sailors' Home in Bombay, has been under consideration for some time, and a committee appointed by Government is now considering the whole question. The Bombay Port Trust have already agreed to provide a suitable site or sites free of charge for the purpose and it is expected that the institution will come into existence before long. In Calcutta and Rangoon no institute caters especially for the welfare of Indian seamen. The existing Sailors' Home in Calcutta, is at present purely an institution for non-Indian officers and seamen. The home is being replaced by another institution to be called the Marine Club. Under the Memoranda and Articles of Association of the new (Marine) Club, Indian seamen are not excluded from the possible future benefits arising from the club.

36. So far as is known, no special facilities exist for the education of lascar seamen and their children.

#### VIII.—Workmen's Compensation.

Since April, 1926, all the shipping companies have consented to the insertion in the Articles of Agreement of a clause by which they agree to pay compensation in cases of injury to or death by accident of any lascar or other native seamen in accordance with the provisions of the Indian Workmen's Compensation Act, 1923. Before that date, Indian seamen employed on vessels registered in the United

Kingdom were entitled to compensation under the English Act of 1906 and not under the Indian Act. The present arrangement is much more satisfactory, as it enables claims to be dealt with sooner and the claimants can appeal to the commissioner for workmen's compensation in case they are not satisfied with the compensation received. The decision of the commissioner is final.

### IX.—Hours.

55. There are no legislative provisions, stipulations arising out of collective agreements, or arbitration decisions or awards regulating the working periods on board ship. It is only by custom that the period of work is regulated, and the working periods vary with different ratings and also to some extent on different lines. There is, therefore, no standard time-table in force, but the hours of work are generally as follows:—

*Deck Hands.*—At sea, from about 5.30 a.m. or 6 a.m. to 5 p.m. or 5.30 p.m., with two intervals of one hour each for meals and one hour's duty on look-out. Shorter hours are worked on Saturdays and Sundays. On Saturdays from 5.30 a.m. or 6 a.m. to 2 p.m. or 1 p.m., with one hour off for meals, and on Sundays from 5.30 or 6 a.m. to 9 a.m. In port from 6 a.m. to 5.30 p.m., with the same intervals for meals and shorter hours as above on Saturdays and Sundays.

*Engines Room Crew.*—At sea, the crew is divided into watches. Each watch is four hours on duty and 8 hours off duty. In port, the hours of duty are from 7 a.m. to 5 p.m., with intervals for meals as above. Shorter hours are worked on Saturdays—7 a.m. to 2 p.m., with one hour off—and no work is done on Sundays, except that necessary to maintain lighting and sanitary services.

*Saloon Crew.*—The duties performed by this section of the crew are so various that any general statement regarding hours of work would be misleading. Broadly speaking, men are required to be on duty during service hours, which vary with the class of employment and the rating of the individual.

The men are, however, liable to be called out at any time in case of emergency. Such emergencies occur seldom and overtime is avoided as far as possible. When overtime becomes necessary, it is the general practice to give the men compensating time off as opportunity occurs during ordinary working hours. Complaints regarding overwork or overtime are unknown.

56. The days worked per week are six to six and a half approximately.

The Thirteenth Maritime Session of the International Labour Conference to be held in October, 1929, will consider the question of the regulation of the hours of work on board ship, and their deliberations will show how far it is feasible or advisable to regulate the hours of work for seamen employed on board ships.

### XII.—Wages.

96. Lists are appended showing the prevailing rates of wages and the wages paid before the war by the Peninsular and Oriental Steam Navigation Company (Appendix A).<sup>\*</sup> These rates are slightly higher than those paid by other companies. Lists showing the rates of wages paid by other shipping companies in Bombay are also attached (Appendix B).<sup>\*</sup> A list of wages prevailing at the port of Calcutta since 1923, on ships other than those belonging to the British India Steam Navigation Company, Limited, is also attached (Appendix C).<sup>\*</sup> The wages paid by the British India Steam Navigation Company, Limited, are slightly higher than these. The present rates of wages in Calcutta are generally from 33 per cent. to 50 per cent. above pre-war rates. The rates of seamen's wages in the port of Rangoon, although based on wages prevailing at Calcutta, are slightly higher owing to local conditions.

101. Wages are not fixed by agreement, but the wages paid are entered on the Articles of Agreement under which the seamen are signed on. The present Bombay rates of wages (excluding those paid by the P. & O.) were fixed by the Liners' Conference and to this extent are standardized. Wages vary at the different ports and some companies pay slightly higher rates than other companies for particular ratings.

104. The labour supply being greater than the demand, it is not affected by wage changes. Moreover, the changes in wages during recent years have on the whole been to the seamen's advantage.

105. It is not considered necessary to fix minimum wages.

<sup>\*</sup> Not printed. The rates are given in Memoranda of Government of Bombay and Messrs. Mackinnon, Mackenzie & Co. (Vol. I, Part I, pages 71 and 545-546); and also in Memorandum of Capt. R. Liddle (Vol. V, Part I, pages 364-365).

106. (i) Fines deducted from the wages of Indian seamen for breach of discipline on board do not in the aggregate amount to large sums. These fines are deducted from the wages of the seamen when they are paid off and are credited to Government by the shipping master. At Bombay, the amount credited during the last three years has been as follows :—1926–27, Rs. 682 ; 1927–28, Rs. 729 ; 1928–29, Rs. 593.

(ii) Other deductions from wages provided in the agreement are for embezzlement or wilful or negligent destruction of ships' cargo or stores, and for fines imposed by the customs' authorities for contraband goods found on board. The offence must be supported by a log entry. An entry inflicting a fine in the case of Indian seamen is frequently cancelled by the master at the termination of voyage if the seaman's subsequent conduct has been good.

(iii) Fines are not utilized for any special purpose.

107. Wages are paid on the termination of the voyage and completion of the agreement. An advance of one month's wages is usually made when the crew are signed on and further advances may be made during the voyage at the discretion of the master. The English Merchant Shipping Act provides for the final payment of wages within two days of discharge (Section 134) ; while under the Indian Merchant Shipping Act, payment must be made within five days after discharge or within three days after delivery of the cargo, whichever first happens (*vide* Section 47).

108. Indebtedness of seamen in Calcutta is extensive. It is reported that in the deck department, 85 per cent. of the lascars are in debt and the average rate of their indebtedness is Rs. 25. The minimum debt is stated to be Rs. 15 and the maximum Rs. 700. In the engine room department, 95 per cent. are in debt, with an average rate of indebtedness of Rs. 30, the limits varying from Rs. 20 to Rs. 1,000. In the saloon department, 75 per cent. are in debt, with limits varying between Rs. 25 to Rs. 1,000, and the average being Rs. 35. Taking all these departments together, the average rate of interest paid on loans varies from 75 to 150 per cent. It is roughly estimated that the total amount lent amounts to as much as 4 or 5 lakhs of rupees.

As regards indebtedness in Bombay we have very little information. The shipping master reports that when seamen have been out of employment for a long time and have no money, they borrow from other seamen or from serangs or ghat serangs, and pay back the loan when they get employment. He adds that in Bombay, professional money-lenders do not lend money to seamen, on account of their frequent absences and because their homes are not in Bombay.

### XIII.—Efficiency.

Certificates of efficiency as lifeboatmen are now granted by the Board of Trade officials in the United Kingdom, and by port officers in India. Seamen may appear for examination to obtain such certificates, and are encouraged to do so by the shipping companies. The increased employment of Indian seamen in recent years would seem to indicate that they are reasonably efficient. It also appears from informal enquiries made by shipping masters that ships' officers are of opinion that there has been considerable improvement in the general efficiency of Indian crews during the last year. This is partly accounted for by the medical examination which precedes engagement and by the closer scrutiny of the men's records, as shown by their continuous discharge certificates by the ship's officers at the time of selecting the crews.

### XIV.—Trade Combinations.

117. Indian seamen have organized themselves into several unions. At Calcutta there are at present four unions :—The Indian Seamen's Union, the Indo-Asiatic Seamen's Union, the Indian Quartermasters' Union and the Mariners' and Workers' Union. The Indo-Asiatic Seamen's Union is a new body, having come into existence owing to a split in the Indian Seamen's Union. The Mariners' and Workers' Union is a body which professes to represent Port Trust dock and marine employees. At Bombay there are two unions :—The Indian Seamen's Union and the Bombay Seamen's Union. The former union comprises about half the total number of Goanese seamen who are employed as butlers, cooks, waiters, general servants, etc. (known as the saloon or purser's department), and about a quarter or one-third of the seamen employed in the deck and engine room departments, the majority of whom are Muhammadans and the remainder Hindus. Punjabis and Pathans, who are mostly employed in the engine room department in the P. & O. S. N. Co., do not belong to the Union, neither do the deck crews of the same company, who are Muhammadans from the Bombay Presidency. The Bombay Seamen's Union is composed of the Goanese seamen employed in the P. & O. S. N. Co. There is also a seamen's union at Karachi.

The numerical strength of the unions mentioned above is reported to be as follows :—The Indian Seamen's Union, Calcutta, about 8,000; the Indo-Asiatic Seamen's Union, about 2,000; the Indian Quartermasters' Union, Calcutta, about 1,500; the Mariners' and Workers' Union, Calcutta, not known; the Indian Seamen's Union, Bombay, about 21,500; the Seamen's Union, Bombay, about 8,500; the Seamen's Union, Karachi, 25.

118. The organizations mentioned above do not appear to have had much effect in the conditions generally of the employees. Attention is, however, invited to the attached note prepared by the Government of Bombay regarding the seamen's interests in that Presidency (Appendix D).

119. The aim of all the associations and unions is the protection of the interests and the improvement of conditions of their workers.

120. (i) The history of the several unions mentioned above is not available, but brief particulars regarding the Indian Seamen's Union, Bombay, will be found in the constitution and rules of the union and in the notes prepared by the Government of Bombay (Appendix D).

(ii) In Bombay the majority of seamen in the deck and engine room departments do not belong to the unions and evidently have no use for them. In Calcutta only a small percentage of the seamen belong to the unions. The Indian Quartermasters' Union, Calcutta, is, however, believed to be well representative of the quartermasters. This union is better organized than the others. The workers or members appear, in practice, to exercise very little control over the management of the union.

(iii) The relations of the Bombay Seamen's Union with the P. & O. S. N. Co., seem to be of a friendly and co-operative nature. Relations between the shipping companies and the Indian Seamen's Union, Bombay, are not of this character, as this union is reported to have adopted a dictatorial and obstructive attitude on several occasions.

121. The only union registered as a trade union under the Trade Unions Act, 1926, is the Indian Seamen's Union, Bombay.

#### XV.—Strikes and Lock-outs.

123. In the port of Bombay there have been no strikes and lock-outs in recent years. In 1926 a dispute took place between the Indian Seamen's Union and the licensed shipping brokers. Although referred to as a strike, it was not a regular industrial dispute in the sense in which the term is generally understood.

In Calcutta there has been only one industrial dispute affecting Indian seamen (other than seamen employed on inland steam vessels) during the period 1921–28. It involved 2,000 men and caused a loss of 24,000 days to the workers. The dispute arose on the question of pay but ended in failure.

124. The shipping master is open to receive and hear grievances of seamen and represent the same to the shipping companies.

The English Merchant Shipping Act, 1894 (Sections 137 and 211) and the Indian Merchant Shipping Act of 1923 (Sections 42 and 92) provide for settlement of disputes regarding wages, and for facilities for seamen to make complaints against the master or any of the crew to a magistrate, British consular officer or officer in command of one of His Majesty's ships. The Articles of Agreement also provide for the representation of grievances to certain authorities in the United Kingdom, British colonial ports or foreign ports.

No use has so far been made of the Employer's and Workmen's (Disputes) Act IX of 1860.

#### APPENDIX D.

Trade combinations amongst seamen in Bombay City date as far back as the year 1919. The Asiatic Seamen's Union and the Portuguese Seafarers' Union were the earliest formations which amalgamated together in April, 1921, under the name of the Indian Seamen's Union. This union was composed of Goans working as saloon crews, and the main object for the formation of this union was to secure rotation of employment for its members by insisting that all requisitions for saloon crews should be filled from persons put up by the union and not directly by the Government shipping brokers, who, it was alleged, were in the habit of offering employment to those who could and were prepared to pay the highest price for jobs. During the year 1925 the activities of the union were considerably curtailed owing to a dispute with the Government shipping brokers regarding the channels through which men

should be engaged for the shipping companies. The union contended that the brokers had agreed not to engage saloon staff except through the union, but the brokers denied this, although they used to engage a certain number of men through the union. At the beginning of the year 1926, the Government shipping brokers began to become more independent of the union owing to more non-unionists being available and the number of orders sent to the union declined. The officers of the union retaliated by refusing to allow any unionists or non-unionists to accept employment through the brokers. Active picketing was resorted to and this "strike" was reported to have cost the union nearly Rs. 20,000, which the officers of the union stated had been spent in giving relief doles to unemployed members. But this explanation of the diminution of the funds was not accepted by many of the members of the union. The position then was that the Government shipping brokers did not forward any orders at all to the union and engaged all the necessary crews they required both from non-unionist and those members of the union who refused to obey the mandate of the president of the union not to accept employment offered by the brokers. The policy of the executive created a considerable amount of discontent among the members and they refused to pay their subscriptions to the union until such time as a proper account was forthcoming of the manner in which the union's fund had been expended. The members of the union held a meeting on the 15th March, 1926, at which various questions in connection with the re-organization of the whole union were discussed. About 500 members, however, declined to continue as members under the existing management, and they decided to start a new union under the name of the Bombay Seamen's Union. By the 15th April, 1,500 persons had joined the new union and this number was doubled by the 1st June. The new union raised a special fund of Rs. 3,000 for the legal expenses in connection with the prosecution of I. J. Athaide, President of the Indian Seamen's Union, on a charge of alleged criminal misappropriation of funds amounting to over Rs. 18,000, which were held to the credit of the reserve fund of that union in the names of its president and secretary. The charge was, however, not sustained and Mr. Athaide was eventually honourably acquitted, after a protracted trial, the legal costs of the defence of which completely crippled the financial resources of the Indian Seamen's Union. In July, 1926, the Indian Seamen's Union decided to make the union thoroughly representative of all classes of seamen, and as a result of extensive propaganda work succeeded in registering 5,968 khalasis, serangs, tindals, etc., from engineering and deck crews as members. The constitution was remodelled and at a meeting of the members held on the 19th October, 1926, Mr. N. M. Joshi, M.L.A., was elected treasurer, and Mr. Syed Munawar, M.L.C., was appointed general secretary. The union was registered under the Trade Unions Act on the 1st December, 1927. Mr. N. M. Joshi was elected president of the union about the middle of the year 1928, and Mr. S. V. Parulekar, another member of the Servants of India Society, was appointed treasurer. The membership of the Indian Seamen's Union stood at 21,512 as at 1st March, 1929, and that of the Bombay Seamen's Union at 8,548. Several efforts were made by disinterested outsiders from time to time to try and bring about a reconciliation between these two unions with a view to an amalgamation. The members of the Bombay Seamen's Union, however, refused to listen to any proposal for a combination unless the Indian Seamen's Union abandoned its policy of extending its membership to departments other than saloon crews. As the latter union has now fully committed itself to the policy of admitting persons employed as deck and engine hands, a reconciliation appears to be highly improbable. A third seamen's union in the Presidency was formed at Karachi, in July, 1927, under the name of the Indian Seamen's Union, Karachi, but the membership of this union as at 1st March, 1929, stood at 25.

The following figures illustrate the growth of membership of the two unions of seamen in the Presidency :—

Name of Union.	Membership as at 1st June of—							
	1922.	1923.	1924.	1925.	1926.	1927.	1928.	1929.
The Indian Seamen's Union.	10,000	10,000	11,000	12,000	11,597	15,436	19,931	21,512*
The Seamen's Union.	—	—	—	—	2,900	8,000	8,555	8,548*

\* As at 1st March, 1929.

Mr. CHARLES T. LETTON, OFFG. CONTROLLER OF PRINTING AND STATIONERY, INDIA.

*Introductory.*

For the execution of the printing and binding work of the offices of the Central Government comprising the Secretariat Departments of the Government of India and their attached and subordinate offices at Simla and Delhi and the Army Headquarters, the five major presses are: (1) Government of India Press, Calcutta; (2) Government of India Press, Delhi; (3) Government of India Press, Simla; (4) Government of India Press, Aligarh; (5) Government of India Forms Press, Calcutta, and are maintained directly under the control of the Controller of Printing, Stationery, India. In addition to these, there are also certain minor presses, which, though not strictly under the administrative control of the Controller, are still subject to his technical supervision, some of which are occasionally utilized to a small extent to take up the overflow of work in the major presses in times of stress. These minor presses are: (1) The North-West Frontier Province Press, Peshawar; (2) The Residency Press, Hyderabad; (3) The Residency Press, Bangalore; (4) The Central India Agency Press; (5) The Baluchistan Agency Press. The information furnished in this memorandum relates mainly to the major presses.

**II.—Staff Organization.**

*Recruitment and Training of Subordinate Supervising Staff—(i) Methods in force; (ii) Facilities for training and promotion of workmen.*—Consequent on a stringent economy campaign by the Government of India relating to their printing and stationery department, which commenced about the year 1922, as well as the introduction of mechanical composition, it was necessary to make considerable reductions in the staffs of all the presses. There has since been little or no recruitment of industrial staff and where additional labour was required, it was recruited from the men who had been retrenched. Therefore, as regards the industrial staff it may be said that any special method of recruitment has for some years now been uncalled for.

Men are recruited to the permanent or temporary establishment under the orders of the manager. Candidates for the posts of readers may be required to appear in an examination to show their proficiency before they can be employed in any of the Presses. Compositors are recruited only after trial before one of the supervising officers. They are classified after three months' earnings on piece only, after which their classes are fixed according to the rules for classification of pieceworkers in the Government of India Presses.

The measures adopted for securing appointment of the members of minority communities to clerical establishment of the Government of India Offices were not previously adhered to in making appointments to the industrial establishment, but it has lately been decided by the Government of India that the procedure laid down for the recruitment to clerical establishments should also be adopted in the case of industrial establishment, subject to the condition that the communal composition of the staff should be determined with reference to the aggregate strength of the Press.

In order to provide for the training of Indians for supervising posts in the Government of India Presses, five apprentices are trained in the Government of India Press, Calcutta. The period of apprenticeship is five years, during which an apprentice is paid Rs. 50 per mensem as subsistence allowance. The apprentices are placed under the direction of the supervising officers in the various branches of the Press. Examination to test the progress made is held from time to time. Facilities are also provided for the higher training of apprentices in England at the rate of one each year details of which follow.

*Recruitment of the Subordinate Supervising Establishment.*—Under the instructions issued by the Government of India, Department of Industries and Labour, letter No. A-369, dated the 2nd February, 1923, paragraph 2 (8), vacancies in the grade of sectionholders are alternatively filled from assistant sectionholders and duly qualified compositors. Apart from this and the apprenticeship scheme mentioned above, there are no methods in force at present regarding the recruitment and training of the subordinate supervising staff, and we have to content ourselves with what material we have in the lower ranks, and promote them to the

subordinate supervising staff as vacancies occur. These men undergo no specific training beyond what they can learn in the course of their duties and in their own time. Such staff, therefore, generally consists of workmen who have qualified themselves for supervising duties by reason of their experience and service in their respective branches. It is not possible to recruit outsiders for such duties, who possess no experience of press work, especially of Government presses. So far no difficulty has been experienced in finding suitable men to fill vacancies that have occurred, but I am afraid that in this respect the future does not look too bright, as there are now very few men in the Presses really capable of taking up supervising work. This, I think, is due to the fact that of recent years the type of man taking up printing as a livelihood has deteriorated, due, I think, to the fact that the emoluments available offer insufficient inducement to the type of men we obtained 20 or 25 years ago.

The rules relating to the recruitment of apprentices will be found in the new handbook.

Scholarships in the Printing and Allied Trades are awarded by the Government of India. Since the institution of the scheme apprentices have been sent each year to England for training, selected from amongst those undergoing training in the Government of India Press, Calcutta.

*Training of Apprentices in India.*—The training of apprentices at the Calcutta Press is not altogether satisfactory, but under conditions prevailing, I doubt whether any considerable alteration or improvement is possible.

The method adopted is practically identical with that exercised in England. The apprentices spend a part of their apprenticeship in all branches of the Press to work side by side with those employees actually carrying out the work of each branch. There is, however, one great difference; the apprentice in England works side by side with fully trained men, and is able, from the commencement of his career, to glean absolutely expert advice from the workmen. If he is ambitious, he is able to attend evening classes at technical schools for a thorough theoretical training in subjects not generally dealt with in detail in the ordinary workshops. These conditions do not prevail in India in the printing trade. Practically all the workmen have a very elementary knowledge of the art. The number of fully trained technical staff employed at the Government of India Presses is insufficient to permit of their imparting a thorough knowledge of the art to the workmen; they are only able to advise or instruct as occasion arises.

The position at the Calcutta Press for imparting good technical knowledge to the apprentices does not improve as time advances, chiefly on account of the fact the overseers' posts are being filled, at present, by men who possess only the Indian workmen's knowledge of the art. Whatever help and advice is possible is given by the trained officials and the apprentices are instructed to approach the fully qualified technical officers with any difficulties they experience.

That two apprentices failed in the past is not sufficient cause to condemn the present system, seeing that there is no alternative at present. From what I saw of the apprentices' work in the last examination held, I am of the opinion the men can, and do obtain sufficient grounding to justify their being sent to England to complete their training. We should not, and do not, detain apprentices the full five years if they do not show adaptability to the work, or it is considered that they are not sufficiently interested.

The result of the examination given to the apprentices periodically should be such as to satisfy the management they are likely to acquire such a knowledge of the trade after three years' training, especially from a practical point of view, to justify their being sent to England to gain the more advanced knowledge. I am convinced, however, that if they are prepared to work and study hard in England, they will learn more during their three years study there, than we are able at present to impart to them over many years in India.

I am unable, under present conditions at the Press, to suggest more helpful methods of instruction than at present exist. It must be recognized a good deal depends on the apprentice himself, if he is sufficiently interested and ambitious he will seek knowledge from those he is aware are able to give it, and I am sure the instruction will be well and freely given.

There is at present under consideration in Calcutta by private printers and the Government of Bengal a scheme for training, in the technical school there, of youths in practical printing. The Government of India need to be associated with and to encourage this movement, which will be for the good of the industry in general and the Government Presses in particular.

*Holders of Government Scholarships in Printing and Allied Trades now under training in England.*—The following gives the particulars of the holders of Government scholarships in Printing and Allied Trades now under training in England :—

Names.	Dates of their apprenticeship in the Calcutta Press.	Dates of commencement of their training in England.	Date due to return from England.
1. Mr. A. C. Sen ..	1st May, 1922 ..	23rd August, 1926	September, 1929.
2. Mr. B. K. Roy	1st May, 1924 ..	23rd August, 1927	September, 1930.
3. Mr. M. K. Mazumdar.	Unpaid apprentice from 18th February, 1926. Paid apprentice from 1st January, 1927	* September, 1928	September, 1931.
4. Mr. A. N. Sen ..	Unpaid apprentice from 23rd January, 1926. Paid apprentice from 1st October, 1927	* September, 1929	September, 1932.

\* Exact date not yet reported by the High Commissioner.

*Works Committee.*—Works committees have been established in the Calcutta, Simla, Delhi and Aligarh Presses to afford the employees regular opportunities of discussing with the supervising staff inequalities and difficulties which may arise under working conditions. The rules for works committees will be found in the new handbook.

Considerable difficulty has been experienced in keeping the works committees alive in some of the Presses latterly. While that in Calcutta became defunct in 1924-25, that in Simla flourished from the start while I was manager of that press. I found the committee of substantial assistance, and ready to co-operate on all questions arising for the benefit of the workmen in general or the Press in particular. On taking over charge of the Calcutta Press, I resuscitated the committee there, and up to 1927, when I handed over charge, I found it also substantially advantageous to the management and to the workmen. The elections for representatives were keenly contested each year, and the committee soon realized the benefits it conferred. That committee is a real live committee as a perusal of the minutes, especially those recently received, will show. In Simla, however, I regret to note that since I handed over, there has been a change for the worse. The manager of that Press now reports :—

"The works committee has been revived on more than one occasion, and though still in existence here, it has been lacking in interest in the performance of its legitimate duties for some time back. It is extremely difficult to say exactly why this state of affairs should persist. Efforts have been made, more than once, to bring home to the men that the works committee is not functioning as it ought to, but with no permanent results. I have even suggested matters that could be taken up by the works committee, and drafted questions for them which at the time seemed to waken them up a bit, but they soon fell asleep again.

"One thing is morally certain, and that is the reason for this lack of interest cannot be because there are no grievances to ventilate. That would be a state of affairs too utopian to contemplate, and hardly to be found in any factory. From my experience of works committees during the past five years I am inclined to the view that employees expect that whenever suggestions are put up by them they ought to be carried out, and when, for administrative reasons these are turned down, they get disgruntled and protest by silence. Employees are also very fond of taking up matters through the works committee which are outside the scope of the committee, and when informed the matter cannot be discussed, they get quite annoyed, though they know full well they are in the wrong. The invariable reply is 'What is the use of a works committee if we cannot take up any question we want to?'

"Then again there is the Legislative Assembly. From many of the questions that have loomed up in that body lately, so far as the Simla Press is concerned, it would appear as if employees have found a more effective way of ventilating their grievances, for many of the questions have been such as could quite legitimately have been taken up by the works committee. I do not for a moment consider that

"the men obtained any more favourable results by this method, but they have certainly gained wider publicity, which is apparently what they are after, and which undoubtedly gives a certain amount of satisfaction, and creates a feeling of something gained, however small."

In Delhi the works committee is functioning satisfactorily, but in Aligarh it has not been a success. I have on more than one occasion had to communicate with the management on the subject. In 1927 I had to insist on this committee being resuscitated. Only recently I have had to call the manager's attention to the fact that more anonymous letters reach the Controller from this Press than all the others combined, and yet this is the only Press which continually reports the works committee as not meeting because there is no business.

That there is something in what the manager, Simla Press, says in his last paragraph, is borne out by a communication I have received from the manager of the Calcutta Press, forwarding the undermentioned notice which he found posted up in the Press, and it may well be that the employees prefer to air their grievances publicly in this manner :—

#### PRESS EMPLOYEES' ASSOCIATION.

(Founded by Deshabandhu Das in 1919.)

Head Office : 175, Bowbazar Street, Calcutta, the 29th July, 1929.

To—All Compositors, Government of India Press, Calcutta.

Dear Sirs,—I beg to inform you that autumn session of the Council of State and the Legislative Assembly will commence its sitting shortly. I shall, therefore, be glad to receive all grievances for interpellation within two days.

Trusting this will receive your prompt attention.

Yours faithfully, (Sd.) M. DAS GUPTA,

*Acting Secretary, Press Employees' Association.*

*Relations generally between the Supervising Staff and the Rank and File.*—Relations generally throughout all the Presses are fairly satisfactory. There are occasions, but they are of very infrequent occurrence, when the employees, through the works committee, bring to notice the fact that the relations between the manager and the employees leave something to be desired. The grievances of the employees are mostly to be attributed to what they consider to be the insufficiency of their emoluments than to any dissatisfaction with the management of the several Presses.

#### III.—Housing.

In the Calcutta Press, accommodation is provided for the menial staff only, i.e., durwans and sweepers.

In the Delhi Press there are at present 342 quarters of various types at its disposal, out of which 311 are occupied by Press employees. The number of employees is 410. Therefore housing is found for 76 per cent. The remainder live in the city either for preference or family reasons.

A statement showing the description of each class of quarter, and to which class of employees actually allotted, is given below :—

Type of quarter.	Number allotted.	Description.	Status of employees to whom the quarters are allotted.
" C "	37	4 rooms, with 2 verandahs, 1 store room, 1 servant's room, 1 kitchen, 1 bath room, 1 latrine and courtyard.	Clerks, readers, supervising staff, operators, mechanics, etc.
" D "	7	As in " C " type, except 1 servant's room.	Clerks, readers and operators, etc.
" E "	224	2 rooms, with 2 verandahs, 1 kitchen, 1 bathroom, 1 latrine and courtyard.	Assistant sectionholders, compositors, binders and warehousemen, clerks, pressmen and machinemen, etc.
" F "	74	Constructed 6 in a block, containing 17 rooms and 2 latrines.	Inferior servants.

Under the orders of the Government of India, the recovery of rent from the Indian staff for accommodation, furniture where provided, and water is limited to 5 per cent. of salary. For the purpose of salary of pieceworkers class rates are taken. Peons are allowed free quarters.

It may be mentioned in this connection that the Government of India have sanctioned the construction of the following accommodation at the new site in the city extension area, to which place the Press will be shifted as soon as the new building is ready for occupation :—

*For Officers.*

1 bungalow for gazetted officer ..	Class "C."
1 bungalow for non-gazetted officer ..	Class "D."

*For Establishment.*

1 orthodox clerk's quarter ..	Class "B."
2 orthodox clerks' quarters ..	Class "C."
5 unorthodox clerks' quarters ..	Class "C."
37 orthodox clerks' quarters ..	Class "D."
29 orthodox clerks' quarters ..	New type.
191 daftries' quarters.*	
61 peons' quarters.	

328

The sanctioned strength of the Press establishment is 410 ; so it appears that it is proposed to provide accommodation for 80 per cent. of the staff.

In Simla, with the exception of 21 quarters on the ground floor of the Indian Clerks' Barracks situated on the Cart Road, and 12 on the Press premises for peons and chaukidars on the permanent establishment, there is no house accommodation provided for the employees of the Simla Press as is the case at Delhi. The quarters on the Cart Road are occupied by 19 men out of a total strength of 353. The accommodation available is one room measuring 10 ft. by 10 ft., with a small kitchen and latrine adjoining the room. These are provided at a rent of Rs. 47 per annum plus electric charges of Re. 1-4 annas per mensem, and are subject to the conditions that they will have to be vacated should they be required for occupation by secretariat clerks. Though this has not been necessary so far, presumably on account of the limited accommodation and poor condition of the quarters, the stipulation is nevertheless laid down by Government for all Press employees. There is very little doubt in my opinion but that this question of quarters has produced much discontent. Personally I am of opinion that the provision of quarters at a reasonable rent will go a very long way towards alleviating the present discontent. Moreover, it will, I feel, be distinctly advantageous to Government as owing to the accommodation question in Simla a man living in Government quarters will hesitate before he resigns or gives cause for dismissal involving removal from these quarters, with the possibility of finding none elsewhere even at an exorbitant rent. Therefore, I think the provision of quarters at a reasonable rental will not only of itself go a long way towards attracting men to the Press, but contribute towards retaining the men we have got. Failing the building of suitable quarters for Press employees, I feel that the demands for house rent allowance will have to be considered.

In the Aligarh Press no quarters are available except for a few menials.

#### IV.—Health.

The information to be furnished under this head will depend upon the maintenance and examination of health and vital statistics relating to the Press employees in the cities in which the Government of India Presses are located. Statistics will also have to be collected showing the extent to which Press employees are susceptible to local diseases prevalent in certain cities, such as malaria and beriberi in Calcutta, fever, small-pox and lung diseases in Delhi, etc., and the common ailments which compel them to be absent from work from time to time. It will also be necessary to know the extent to which local diseases supply the causes for premature retirement from service, and other causes leading to their being invalided. Statistics on these points are not available, and the figures kept by the municipal committees of the towns do not show separately the health conditions of Press workers. It is not therefore possible to furnish any information on this point, and if it is desired that statistics under this head should be collected in future, the health departments of

---

\* It has since been proposed to convert 96 of these to a new "E" type.

The various cities in which the Government of India Presses are located will have to be asked to maintain separate figures for the purpose, and render an annual return to the Controller of Printing and Stationery for examination and review. If, however, the general health can be judged by the number of medical certificates received daily in each of the Presses from the employees in support of their applications for leave, then I am afraid the only conclusion to be arrived at is that the health of the employees is, indeed, in a bad state. This, however, may not be a genuine test of health conditions, as in order to prevent leave being refused otherwise, recourse is had to medical certificates for any and every minor ailment. There is no doubt, in my mind, that with very few exceptions, the physique and stamina of the Press workers in all Presses is very poor. How much of this can be attributed to any of the following reasons is a matter of opinion, i.e., standard of living, arduous labour, hours of work, insanitary working conditions. Certain it is that in the Simla Press the building and surroundings are ideal. In the Calcutta Press, they could not be much worse. Here a large number of the workers perform their allotted task daily with the aid of artificial light, as the workrooms in places are dark and badly ventilated. They are overcrowded.

In the Delhi Press it is noted that the physique of the workers appointed locally appears to be somewhat better than that of the Bengalee employees who were transferred from Calcutta, who appear to have suffered from the effects of the Delhi climate and also from malaria.

In Delhi a new Press building is going up, and like Simla, there should be no complaint about conditions of work there. Working conditions in the Presses, however, have improved considerably during recent years, but there is still room for improvement in the following directions:—The Calcutta Press should be rebuilt without any further delay. In Delhi and Simla a reduction of the hours of attendance during the Legislative Sessions is called for. House accommodation should be provided where the Press is difficult to get at as in Simla.

*Establishment of a Provident Fund to provide for the Widows and Children of deceased Employees.*—Statistics are not readily available, but I venture the opinion that very few Press workers live to enjoy their pension for any lengthy period. I have been struck by the large number who die at or about the pensionable age.

*Extent of Medical Facilities provided and utilised.*—In Calcutta a dispensary has recently been attached to the Press. It is manned by a sub-assistant surgeon and two compounders, and their services are readily availed of by the employees.

In Simla a sub-assistant surgeon visits the Press every second day, and quite a number of men seek his advice. Owing to the distance of the Press from the hospital a coolie has recently been sanctioned by Government for bringing medicines from the hospital, to the Press. Medicines are supplied free of cost at the Civil and Military Dispensary. In addition to the above a first-aid medical box is provided at Government expense for emergencies, as it was not possible to open a dispensary on the Press premises.

Delhi.—During the malaria season following the monsoon, as a prophylactic measure, quinine is distributed free to the staff of the Delhi Press, and an annual expenditure of Rs. 150 is being incurred on this account.

Attached to the residential quarters of the Press employees, there is a provincial Government hospital named Balak Ram's House Hospital. It is staffed by an assistant-surgeon, sub-assistant surgeon and two compounders. This hospital is meant for all Indian servants of the Government of India residing in this area (Timarpur), including the employees of the Press who have the same medical facilities at this hospital as employees of other departments of the Government of India.

The sub-assistant surgeon attached to Balak Ram's House Hospital attends the Press during working hours for one hour on alternate days (thrice a week). A first-aid chest is maintained at the Press, and employees reporting sick for minor ailments are treated by him there. He also examines and prescribes for those who cannot attend at the hospital for some reason or other, but require medicines other than those available in the first-aid chest. These prescriptions are then dispensed from the Balak Ram's House Hospital. Serious accident cases requiring treatment or facilities not available at Balak Ram's House Hospital are sent to Civil Hospital, Delhi. Such a case happened in the year 1926, when a wall of the Press building collapsed. The victims were treated under direct supervision of the Civil Surgeon.

In Aligarh arrangements have been made with the District Hospital for providing free medical attendance and medicines for the employees of the Government of India Press, but it is stated by the manager that the men do not take full advantage of the concession. A first-aid cabinet and some medicines are provided in cases of emergency.

*Utilisation of Medical Facilities.*—The Press employees generally do avail themselves of the facilities provided. In Delhi, however, they are greatly handicapped by the Press working hours coinciding with the hospital hours, e.g., during summer the hospital opens at 7 a.m., and a number of Press employees have to leave their homes about that time to reach the Press, where their work commences at 8 a.m. During the winter they get no time at all, as they have to reach the Press at 8 a.m. and the hospital opens for work at the same time. In the evenings also they return late from the Press, and by that time the hospital is closed. It will thus be seen that except by absenting themselves from their work, the Press employees are not able satisfactorily to attend to their own or their family medical requirements. I am considering whether it is possible to provide facilities similar to those of the Simla Press.

*Extent of prevalence of Industrial Diseases.*—Certain sections of Press workers are employed in essential processes involving the use of lead compounds, both in the manufacture and subsequent use of type. Such workers, i.e., in the foundry and mechanical branches and in the composing room and distributing rooms, are liable to contract lead poisoning through the inhalation of absorption of lead fumes or minute particles of lead dust. Due precautions, e.g., the provision of exhaust fans, etc., etc., are in every Press taken for the prevention of this disease, and although the employees concerned must necessarily be affected to a certain extent, lead poisoning in its serious stages is very rare in the Government of India Presses. Its prevalence in the milder stages cannot be ascertained without a thorough medical examination of all Press employees liable to be so affected. It may therefore be said that cases of industrial disease have not so far come prominently to notice.

*Simla.*—The conditions in Simla are ideal, and the factory inspection authorities have expressed satisfaction with the conditions under which the employees work in that Press. In all the Presses exhausts have been installed to draw off the fumes from the metal pots of the mechanical composing machines. In Simla central heating has been installed for use in the winter months, and in the plains the Presses have been adequately supplied with electric fans. Washing facilities with soap, etc., have recently been provided in all the Presses.

*Delhi.*—In an endeavour to obtain some reliable statistics, the invaliding certificates of those members of the industrial staff of the Delhi Press who were invalided since 1st March, 1923, have been examined, and the result is as follows:—

Number of men invalided from 1st March, 1923, to date, 27; Number of men invalided suffering from lead poisoning, pyorrhea, defective vision, 11; number invalided for debility, tuberculosis, accidents, bronchitis, etc., 16.

There were two cases of lead poisoning in 1926, and one recently from the Delhi Press.

This Press will be housed shortly in a new building on another site, and it is hoped to make it a model Press in every way.

In Calcutta conditions leave a lot to be desired. The workrooms are overcrowded, and in places so dark that the electric light is kept burning throughout the day. The rooms, too, are not efficiently ventilated. The building is quite unsuitable, and a new Press should be built with the least possible delay.

*Aligarh.*—Aligarh has hitherto reported no specific case of industrial disease. Conditions in this Press are not unfavourable.

## V.—Welfare.

*Physical Welfare.*—As regards sanitation and hygienic conditions of residence and factory, it may be mentioned that in the case of press workers at Delhi to whom Government residences have been provided, necessary sanitary and hygienic arrangements have been duly provided by the Public Works Department. It has already been explained that in the Government of India Presses in which the men spend a major portion of the day on work, necessary hygienic arrangements exist for the removal of dirt, dangerous fumes, refuse water, etc., resulting from the operations of the employees. Satisfactory arrangements exist in the Press buildings for proper ventilation and regulation of temperature in the hot and cold weathers to enable the workmen to attend to their duties with due comfort and convenience. Electric fans are provided wherever necessary for cooling. In the Simla Press a special heating plant has been installed to keep the workmen warm during the winter and monsoon months. The existing arrangements are considered satisfactory, except perhaps in Calcutta, for the physical welfare of the workmen, in view of the fact that no complaints or representations have so far been made regarding their inadequacy in any other of the Government of India Presses.

As regards athletic clubs, gymnasia, etc., necessity has not been felt so far for Government to take steps to provide facilities for the workers to take part in suitable games and sports to maintain their physical fitness. In Calcutta, where football

is very popular with the Indians, the workmen have combined together to form a regular football club, which has been working satisfactorily. The staff of the other offices of the Printing and Stationery Department at Calcutta also participate in the game, and sufficient encouragement has been given by the management for the success of these private undertakings. Similar athletic organizations do not seem to have been started by the workers in Delhi, Simla and Aligarh, but in cases when any such clubs come into existence, the management will be glad to encourage the efforts of workers as far as possible.

*Intellectual Welfare.*—No educational facilities for the benefit of the workers themselves have so far been considered necessary by Government. Unlike in England, America and other foreign countries where special institutions exist for imparting technical instructions to workmen, even in big cities like Calcutta and Delhi no recognized technical schools or colleges seem to exist where workmen desirous of acquiring higher theoretical knowledge of the art of printing can attend out of their working hours to gain knowledge. The present facilities afforded by the Presses for the training and promotion of workmen in the various branches of printing are considered sufficient for present requirements, but it does appear necessary that steps should be taken to provide special educational and training facilities for the training of those workers who show sufficient aptitude to become expert in the art and in administration.

In regard to reading circles and libraries, attempts seem to be at present confined to private efforts of the workers themselves, and no necessity has so far been felt for special assistance from the management to encourage their formation or working.

*Social Welfare.*—It has not been found so far necessary to take any steps to encourage the social welfare of the press workers by helping them to form recreation clubs and societies, social gatherings, etc. In matters of this kind, the results of private enterprise of the workmen are in evidence in certain places, notably in Calcutta, where a dramatic club has been started by the staff of the Stationery and Printing Department, in which a number of the employees of the Press also participate.

No official information is available regarding the existence or otherwise of similar clubs and gatherings for the social entertainment and welfare of press workers in Delhi, Simla and Aligarh.

*Economic and Moral Welfare.*—Fuller information regarding thrift and co-operative societies of press workers has been furnished elsewhere. There is no indication that intemperance and drug habits prevail to an appreciable extent among the workmen of the Government of India Presses, who are generally sober and regular in habits. In the case of the Mohammadan employees, drinking is prohibited by their religion, and the majority of the Hindu workmen, being religious and orthodox to a degree, are not believed to be addicted to the drink or drug habit. No necessity for special temperance propaganda or efforts for the prevention of other pernicious habits has, therefore, arisen. Owing to the policy of the religious neutrality of Government it is not possible for the management to interfere with other moral activities of the workmen which more or less assume a religious character.

In Delhi, maternity and child welfare work is being carried on in Timarpur by the Delhi Notified Area Committee, among the families of Government servants who reside in that area. These include the clerical staff of the accountant-general, posts and telegraphs, the Government of India Press employees, and the clerks of that portion of the Army department which is located in Old Delhi during the cold weather. Maternity and child welfare activities were first undertaken in this area in 1927, by the Delhi Health and Baby Week Committee. In December, 1928, the Notified Area Committee took over this work and improved it by appointing a lady doctor in charge of this centre.

*Provision of Educational Facilities for Workers and their Children and the extent to which utilised.*—No facilities are provided at present at any of the Presses, and the employees have to make their own arrangements at the local schools if they can afford to do so.

I have proposed that provision be made for a primary school near the new Press building at Delhi. I have not the slightest doubt that any facilities in this direction which could be provided would no doubt be welcomed, although I doubt if any facilities are called for in Calcutta. Delhi is better off in this respect than the other Presses, as the Notified Area Committee, Civil Station, Delhi, maintains three day schools for boys and girls, and two night schools for adults at a cost of about Rs. 17,300 per annum.

The N.A.A.V. Middle School at Timarpur, imparts free primary education in Urdu, Hindi, Bengali and Tamil, and a fee, under the Punjab Education Code rules, is charged from the boys reading in the middle classes. Free and half-free concessions are given to poor and deserving students to the extent of 10 per cent. of the total number on the rolls.

There are two girls' schools for teaching, through the mediums of Urdu, Hindi and Bengali, up to the standard of V class. In these schools needlework and sewing is also taught by trained and well qualified mistresses. These three schools are highly spoken of by the educational authorities and the public.

Besides these there are two night classes at Chandrawal and Dhakka, where as many as 55 adult students are reading Hindi and Urdu. One night class at the Boys' School, Timarpur, which was started in August, 1927, at the request of the Press employees for teaching English, Urdu and Hindi, was closed last year owing to the meagre attendance due possibly to the long hours of attendance at the press or to apathy.

*Extent of Co-operative Movement.*—There is in Calcutta a very efficiently run co-operative society, which men of all the Calcutta branches are eligible to join. Copies of bye-laws are available from the Deputy Controller, Stationery, Calcutta.

In Simla also a Co-operative Thrift and Aid Society has been registered for many years under the Co-operative Societies Act, and the objects of which are stated in the bye-laws, copies of which are available from the Manager of the Simla Press.

There is in Simla another fund called the Bepunna Bandhub Fund, of a distinctly charitable nature, the funds of which were subscribed by Press employees about 40 years ago, and the interest on which is allotted for such purposes as small monthly allowances to the destitute widows and children of deceased Press employees. The control of these two funds is entrusted to the manager as president, and a separate managing committee for each, who are elected annually by the Press employees from amongst themselves.

#### VII.—Safety.

*Incidence of Accidents in Presses and their Causes.*—There have been two fatal accidents in the Presses in recent years—one in the Delhi Press in 1926, due to the fall of a wall under construction by the Public Works Department, and one in the Aligarh Press. In the former, two men were killed and three injured, and in the latter, one was killed. Accidents of a minor nature occasionally occur, due to the careless handling of machines which are power driven, but which are protected as required by the Factories Act and which are frequently inspected by inspectors under the Act.

In the Calcutta Press there were, in 1928–29, 17 minor accidents reported, of which three were cases of pure accident and the rest were due to negligence on the part of the men injured.

The Aligarh Press case mentioned above was that of a coolie who fell as the result of an electric shock while repairing some electric supply lines.

In the Delhi Press, besides the fatal accident due to the fall of a wall mentioned above, there were, in 1927–28, 13; in 1928–29, 11 minor accidents, in every case due to carelessness on the part of the injured persons.

*Measures for Accident Prevention (including "Safety First" Propaganda) and for the First Aid and Medical Relief.*—Notices giving precautions to be taken are hung near the machines and near any dangerous electrical equipment likely to cause injury by careless handling. The motors, shafting and belting in the various Presses are all protected. In Simla, which is the last Press to be reconstructed, the following protective arrangements have been adopted and will no doubt be adopted in the Delhi Press now under construction, and in the Calcutta Press if and when it is rebuilt.

The motors in various places are kept underground, and where this is not possible the motors are covered by wooden fencing. All the conduits for water and for electric heating and power wires are under the floor, which is of reinforced concrete. Machines are operated by trained labourers only. The casters, keyboard and air compressors are belt driven from shafts in trenches below floor level. Each printing machine has its individual motor belted direct and below floor level, and the electrical starter for each machine is conveniently placed for the machineman on a stanchion within easy reach of the feed-board.

The Press employees are entitled to free medical attendance and medicines from the hospitals, and dispensaries provided by the local Government. In addition, at Delhi, Simla and Aligarh, a first-aid chest is maintained in the Press, which is visited on every alternate day by a sub-assistant surgeon. In Calcutta a dispensary with a sub-assistant surgeon in charge has been established in the Press building.

An attempt is being made by the Delhi Health and Social Service Union—a union formed in Delhi under the guidance of the chief commissioner—to start classes, lectures, and courses on hygiene and first aid. Circulars have been circulated to the various offices and industrial concerns calling for names of candidates. If an adequate response is obtained, the classes will be started in various centres. It remains to be

on whether the response anticipated will be forthcoming. I do not anticipate a rush of candidates from the Press employees, as usually one branch of the Press is working overtime throughout the year and during the period the Government of India is in Delhi, the employees have to work so much overtime that they have no time in which to attend lectures. In the summer those who leave at 5.30 p.m. are so fatigued by the excessive heat during the day that they desire some form of recreation by which to recuperate. However, the syllabus of instruction proposed by the union is a very comprehensive one and if their efforts are successful, it will be another step in the right direction in the interests of industrial workers generally.

### VIII.—Workmen's Compensation.

The Workmen's Compensation Act came into force on the 1st July, 1924, and the following cases of compensation paid under this Act have been recorded :—

Date.	Name and designation.	Details of accident.	Nature of injuries.	Amount.
4.11.1926	Mohd. Khuda Bux.	Delhi Press, collapse of newly built wall.	Killed .. ..	Rs. a. p. 1,650 0 0
4.11.1926	Abdul Shakur	Do. ..	Do.	1,387 8 0
4.11.1926	Sarat Chandra Bose.	Do. ..	Compound fracture of left leg.	1,575 0 0
4.11.1926	Hem Chandra Singh.	Do. ..	Severe injuries, not specified.	1,750 0 0
4.11.1926	Mohd. Yakoob	Do.	Do.	787 8 0
27.6.1928	Narain ..	Fall due to electric shock while repairing electric supply lines.	Died of effects of fall.	450 0 0

Extraordinary family pension also granted for dependants of Khuda Bux and Abdul Shakur—Rs. 11-6 annas and Rs. 12-5 annas per month, respectively.

The case of Mahabir Prasad, a compositor of the Delhi Press, who was invalidated from the 2nd April, 1928, on account of his being affected by lead poisoning, may also be mentioned here. It is proposed to pay him Rs. 875 on account of his permanent disablement, involving the loss of one-fourth of his earning capacity, subject to a reconsideration of the opinion of the medical officer, Delhi, who has been asked to give a final opinion.

As a result of the call for information for this memorandum from the Delhi Press, it has been discovered that the undernoted persons were invalidated due to "chronic" lead poisoning :—

Name.	Designation.	When invalidated.	Reasons.	Amount of invalid pension granted.
(1) Kumar ..	Compositor ..	5.9.1926	Chronic lead poisoning.	Rs. a. p. 24 6 0 per mensem.
(2) Bose ..	Do. ..	10.9.1926	Do. ..	36 10 0 per mensem.

No compensation under the Workmen's Compensation Act was paid to them, neither was any claim put forward by the persons concerned. As these men were invalidated after the Workmen's Compensation Act had come into operation, the matter is being examined to ascertain their title or otherwise to any compensation under the Workmen's Compensation Act.

*Suitability of the Provisions of the Act relating to the Scales and Conditions governing the Grant of Compensation and Industrial Diseases.*—In Simla there have been no cases for the grant of compensation and, therefore, the suitability or otherwise of

the provisions of the Act have not been questioned there. In Calcutta, Delhi and Aligarh, no grievance has been forthcoming regarding the suitability of the provisions of the Act, and so far I have had no occasion to notice the unsuitability of the provision of the Act relating to the scales and conditions governing grant of compensation, neither have any representations regarding inadequacy of compensation paid been received from the dependants of the deceased or from the disabled employees. Perhaps the Act has not been in operation long enough to prove its suitability or otherwise in this respect, as it is only by experience and application of the relevant portion this can be definitely ascertained.

Employees, who come under the new leave rules, are entitled to injury leave to half-pay rates from the commencement of disablement if injured in circumstances which would give rise to claim for compensation in the case of a workman as defined under the Workmen's Compensation Act. This leave can be granted for so long as it is necessary subject to a limit of two years for any one disability and five years during an employee's total service. Leave salary payable under this rule would, in the case of a workman to whom the Workmen's Compensation Act applies, be reduced by the amount of compensation payable under Section 4 (1) D of this Act.

### IX.—Hours.

The ordinary working hours of the Presses are 48 per week, exclusive of meal intervals. The ordinary hours worked per day from Monday to Friday are 8½, and on Saturday 5½, making a total of 43 hours per week exclusive of meal intervals, but quite an appreciable amount of overtime is required to be worked in all the Presses except perhaps Aligarh.

In Simla and Delhi overtime is excessive during the period the Legislatures are in session, and when the Government of India Secretariat is in Delhi and Simla, respectively.

The Delhi Press has for this reason been exempted by the local Government from certain provisions of the Factories Act for a period of five months during the year, which permits the Press working 12 hours per day.

During the year 1928-29 the Delhi Press was open on 302 days, and on 235 days it was necessary to work ordinary overtime either in some or all branches, and emergent or special overtime was worked on 72 days. In addition to this the Press was kept open on a Government of India closed holiday and one Sunday. In Calcutta Sunday work obtains when His Excellency the Viceroy is visiting there.

For working on Sunday an allowance of 50 per cent. over the ordinary rates is now paid, if it is not possible owing to pressure of work to allow the men a day's holiday in lieu. This can only happen, however, when exemption from Section 22 of the Factories Act has been obtained.

The possibility of a reduction in the working hours of the Presses is a question which has periodically arisen during the last 20 years. There is no denying the fact that the amount of overtime which has to be worked in the Presses during the Delhi and Simla season must in the course of time affect the vitality of the workers, especially as the climate of Delhi during the hot weather is enervating and not recuperating.

Prior to the revision of 1920, the ordinary working hours were from 10 a.m. to 5 p.m., with overtime morning and evening, which was at that time practically unrestricted and abnormal. The revision increased the normal day for all industrial workers who draw overtime to 8½ hours on five days of the week and 5½ on Saturdays, but overtime was considerably curtailed under the revision which limited the working hours to 60 per week or a maximum of 250 hours, including overtime per month; thus the curtailment of overtime reduced the abnormal number of hours worked under the old system, but lengthened the normal working hours which must be worked daily and before overtime payment commences. I think I am correct in stating that this change of hours has always been brought forward from time to time as a grievance by the industrial workers.

From the management point of view, the hours worked at present are essential to cope with the enormous amount of work allotted to the various Presses, and also to cope with the demands made upon it by the departments, which in some cases are unfair and impossible.

The amount of overtime worked during the winter months has been curtailed considerably during the past two years, and the 12 working hours per day allowed by the exemption from Section 28 of the Factories Act has been adhered to in all the Presses, except perhaps on one or two occasions at Delhi. But even these hours are excessive, and it is most trying for the employees to work so many hours for at least 2½ months in the year. Extra staff for this period would not obviate the difficulty,

skilled labour is not available in Simla or Delhi in sufficient quantities ready to accept employment for 2½ months only in a year. If the labour were available, the introduction of a shift-system might be considered.

*Existing practice in regard to intervals and their relation to Fatigue and to Workers' Meal times.*—An interval of half an hour is allowed after every 5 hours as provided for under the Factory Act. This, however, is not paid for, and is over and above the ordinary hours of attendance. Men engaged on 8 hours basis attend in Delhi and Simla from 9 a.m. to 6 p.m., with rest interval from 1.30 to 2 p.m.—9 hours. In Calcutta an extra meal is taken at 10 to 10.30 a.m., making the total attendance 9½ hours daily. The employees usually take their meals before and after the above mentioned hours of attendance in Delhi and Simla; while in Calcutta food is taken during the first interval. The intervals chosen were decided as the result of referendums of the employees, who are at liberty to make recommendations or suggestions for changing them at any time should they find them inconvenient. The interval from 9.30 to 10 a.m. appears to suit the majority of employees, who take a meal at this period after working from 8 a.m. in Delhi and 9 a.m. in Calcutta. The next interval is from 1.30 to 2 p.m., and this interval is utilized generally as a rest period as very few employees take a meal during this hour. When overtime is worked, another interval of half an hour is allowed from 5 to 5.30 p.m., during which period some employees take refreshment according to their customs.

A few years ago it was a common practice for compositors to work during meal intervals, whenever an opportunity was forthcoming, in order to inflate their earnings. Formerly they were allowed to charge at class rates for these periods if engaged on hour work at the time of the interval, during which they would also do fresh composition. With the abolition of the payment for meal intervals, the prohibiting of employees to work during meal intervals, and stricter supervision, the practice has ceased.

## XII.—Wages.

The following tabulated statements show the rates of wages and earnings, and the movements of wages in recent years. Improvements in the rates of wages and in piece rates have taken place in recent years, and the statements show the effect thereof. The time allowed has proved insufficient to produce an exhaustive and complete statistical picture of movements of wages, and the following can only be said to show roughly the movements both as regards salaried men\* and piece-workers. These are separately shown.

The rates for timework and piecework are given in the new Handbook of the Government of India Presses.

Statement showing comparative statistics of hourly earnings of piece-workers in the Government of India Press, Calcutta, during the years 1919-20 and 1920-21, and for the period from the 1st July, 1928, to the 31st May, 1929.

### Compositors (Hand).

*Method of fixing Wages and extent of Standardisation.*—The rates of pay for various classes of press workers are sanctioned by the Government of India. The broad principles regulating fixation of wages are (i) cost of living, (ii) availability of the class of workers required, (iii) nature of the duties performed. Beyond this it cannot be said that any particular method is adopted in either fixing or standardizing wages in the Presses.

*Extent of Deductions made on account of Fining and their utilisation.*—Fines made are classified under three heads:—(a) Those credited to Government for neglect of duty or bad work involving extra expenditure to Government; (b) the pye-sorting fine imposed to re-coup Government for the cost of sweeping from the floor and sorting and replacing in the cases type thrown there by the compositors; (c) those imposed for petty misdemeanours involving no loss to Government.

As regards the last category, the Government of India decided, as a result of a representation made while I was in charge of the Simla Press and as a result of a works committee representation, to institute with effect from the 1st April, 1922, a fine fund for each of their Presses. To this fund are credited all fines realized from the workmen, excluding pye and such other fines as are levied for neglect or bad work entailing loss or extra expenditure on Government. The assets of the fund are applied to the relief of distress among workmen or their families in accordance with the rules which follow. This fund is quite separate and distinct from the general provident fund or any special provident fund established specifically for Press workers. For example, grants may be made to sick workmen or to families of workmen left in impoverished circumstances by the death of bread winner.

No grants are made except upon the recommendation of the manager with the sanction of the controller. It is open to the works committee to bring to the notice of the manager any cases which they consider deserving of relief from the fund. In fact, no grant is usually made unless agreed to by the works committee.

The amount of the grant is fixed with reference to the rate of pay, length of service, the necessities of the case and the balance available in the fund.

Recoveries of the funds are deposited in the Post Office Savings Bank to the credit of the manager of the Press, and regular accounts of receipts and expenditure are submitted to the controller and audited by the examiner, Government Press accounts.

The following statistics show the amount of fines levied for bad work involving loss to Government, and it may be noticed that considering the large number of employees the amounts in recent years are trifling :—

Year.	Calcutta.	Delhi.	Simla.	Aligarh.

*Extent of Annual Leave allowed and taken by Workers.*—For the purpose of leave the industrial staff is classified into the following six categories :—

Classification.	Leave rules under which governed.
(1) Employees holding permanent substantive appointments prior to 6th September, 1928.	Fundamental rules.
(2) Permanent salaried industrial employees classed superior appointed substantively on or after 6th September, 1928.	Leave rules sanctioned in Annexure I to F.D. Resolution No. F.119/R.I./28, dated 6th September, 1928.
(3) Permanent piece - workers classed superior.	Leave rules sanctioned in Annexure II to F.D. Resolution No. F.119/R.I./28, dated 6th September, 1928.
(4) Temporary salaried employees appointed prior to 22nd May, 1929.	Supplementary rules.
(5) Temporary piece.. .. .	Sixteen days class pay leave in a year provided the employee is regular in attendance.
(6) Temporary salaried employees appointed on or after 22nd May, 1929.	Non-cumulative leave on full pay for 16 days in a year.

Permanent salaried industrial employees below the grade of overseer or assistant manager earn leave on average pay at the rate of one month's leave for every complete period of 11 months' duty, and as regards incomplete periods, one day's leave for every 11 days' duty, provided that no such leave can be earned by any employee who has four months' leave on average pay to his credit.

On the production of a medical certificate, leave on half average pay up to three months may be added to the leave mentioned above, and a further extension of leave on half average pay not exceeding three months may be granted on the production of a fresh medical certificate granted by the officer in chief medical charge of the district in which the employee is residing, provided that the total amount of leave on medical certificate during the employee's service shall not exceed two years. Leave without pay is granted when no other leave is due.

Injury leave at half-pay rates is granted from the commencement of disablement to all permanent salaried industrial employees below the grade of overseer or assistant manager irrespective of whether their pay exceeds Rs. 300 a month or not, who are injured in circumstances which would give rise to claims for compensation in the case of a workman as defined in the Workmen's Compensation Act. This leave is granted for so long as is necessary, subject to a limit of two years for any one disability and five years during an employee's total service. This is not taken into account in calculating the limits laid down for leave on medical certificate.

Permanent salaried industrial hands employed before the 6th September, 1928, enjoy 10 days' casual leave during a year.

*Permanent Piece-workers.*—Non-cumulative leave on average pay is granted to piece-workers according to their service as shown below :—

<i>Length of service.</i>	<i>Leave admissible.</i>
Less than 10 years .. .. .	16 days in each calendar year.
10 years but less than 15 years ..	23 days in each calendar year.
15 years and above .. .. .	31 days in each calendar year.

In calculating the length of service, the period of continuous temporary service rendered by a piece-worker up to the date of his being brought on to the permanent establishment is taken into account. Gazetted holidays actually enjoyed are, at the option of the piece-worker, counted against any leave admissible to him, and if so counted will be paid for.

Leave on medical certificate on half average pay is earned at the rate of one month's leave for every complete period of eleven months' duty and as regards incomplete periods, one day's leave for every eleven day's duty. It is cumulative and is granted only when no average pay leave is admissible.

Leave without pay is granted when no other leave is due.

No continuous period of leave with pay shall exceed one year; any extension over one year shall be leave without pay.

Injury leave is granted as mentioned above.

*Temporary Establishment.*—Temporary salaried industrial hands who were in employ before the 22nd May, 1929, are allowed 10 days' casual leave in a year plus leave under Supplementary Rule 285, but those recruited on or after the 22nd May, 1929, are allowed 16 days' leave in a year. Those who come within the first category have the option to take 16 days' leave in a year in lieu of the leave to which they are entitled. The option once exercised is final. Temporary piece-workers are granted 16 days' leave in a year.

Quarantine leave is granted to salaried industrial hands and piece-workers, whether permanent or temporary, on the occurrence of infectious diseases in their quarters or when they are detained in plague camps, with full pay up to 30 days. This leave is not debited against any kind of leave which is due to them. If the period of absence exceeds 30 days, the employees are allowed leave with leave salary of any kind which is due to them and thereafter leave without leave salary.

In the case of a Press worker bitten by a rabid animal, to enable him to undergo anti-rabic treatment in a Pasteur institute, he is granted, under Rule 2 of Appendix 8 to Civil Account Code, Volume I, one month's casual leave, or when the appointment of a substitute is found necessary, one month's extra leave on average pay, which will not be debited to his leave account, any leave required in excess being granted under the ordinary rules.

As the leave rules in the fundamental rules were considered unsuitable for industrial establishments like the Government of India Presses, a new set of leave rules for the new entrants to permanent superior industrial establishment and the existing permanent superior piece workers were introduced in September, 1928. In the said rules new concessions regarding leave on average pay and medical leave on half average pay were also, for the first time, given to piece-workers.

*Extent of Leave taken.*—Except in rare cases, piece-workers avail of all the leave on full class pay admissible to them in a year. An examination of the amount of leave on average pay taken by the permanent salaried industrial employees of the Delhi Press during the year 1928-29 shows that out of a staff of 141, leave on average pay was taken by 93 men to the extent of an average of 1 month and 4 days per head. The minimum and maximum amount of leave on average pay taken during the year varied from one day to 8½ months. Taking into account all sorts of leave taken by the industrial staff, comprising 360 men during the year 1928-29, it has been found that on an average 13 per cent. of the staff is absent daily on leave of one kind or another.

#### XIV.—Trade Combinations.

*Effects of Trades Unions.*—There is an organization founded in 1919 with its headquarters in Calcutta called the Press Employees Association. This organization has not yet received recognition by the Government of India, as it does not conform to the requirements under which such organizations are to be recognized.

A phase of its activities is to be seen by the letter given under *Works Committees* and it is stated by one manager that its activities such as those which have detracted from the interest formerly taken in the works committees by the employees who prefer to have their grievances ventilated in the Council Chambers.

Personally, while in charge of the Simla and Calcutta Presses, I have had no reason to complain of the activities of this Association.

I have no information of the present existence of any organization of the employees of the Delhi Press. In March, 1928, a meeting of Press employees was held at Timarpur, at which a prominent Labour member of the Legislative Assembly presided with the object of organizing a trade union of Press employees amongst those engaged in that industry in the Delhi province which, presumably, meant a branch of the Calcutta Press Employees Union. A temporary working committee was appointed and, I think the union functioned for some time, but I have no official information of its present existence in Delhi; therefore, the effects of the Trade Unions Act, 1926, and any organization of the operatives have been nil so far as the Delhi Press is concerned.

*Effects of Trade Union Act.*—As no organization is yet in existence which is recognized by Government, I have no remarks to offer.

#### XV.—Industrial Disputes.

*Extent of Strikes and Lock-outs in Presses, with Causes, Duration and Nature of Settlement—Calcutta.*—In September, 1905, influenced by the Swadeshi and Boycott movement in Bengal, the employees of the Government of India Press, Calcutta, struck work. The position was at the very outset taken in hand, and the Comptroller-General gave a sympathetic hearing to the grievances of the strikers. The main demands of the strikers were increased overtime and payment for Sundays and other holidays. The Controller of Printing and Stationery instituted enquiries into the matter, and effected what appeared to be a settlement, but it subsequently proved to be merely a lull in the storm. About seven ringleaders who were at the bottom of the whole trouble were dismissed. Some of these were also arrested by the police on a charge of threatening the men who did not join the strikers. This revived the strike, and about 50 per cent. of the employees absented themselves. Although they were informed by the Controller that modifications were called for in some of the rules and conditions that regulated the Press, they did not appear to be interested neither would they represent any grievance in the proper way. They convened meetings under the auspices of the leading politicians, as a result of which the trouble was exaggerated. Efforts were made to pacify the excitement by persuading the strikers to submit their grievances, but in vain. Work was carried on with the co-operation of the local private presses, and with the assistance of the Provincial Government Presses. Briefly, the grievances were :—(1) Payment for Sunday holidays; (2) Payment for Gazetted holidays; (3) Imposition of irregular fines; (4) Grant of leave on medical certificate and average pay; (5) Higher rate of overtime; (6) Re-instatement of dismissed men. Settlement on the following terms were offered and accepted by the strikers, and the trouble was brought to an end in November, 1905, after a little over one month :—(1) List of Bengal holidays was incorporated in the Press Rules; (2) Reduction in the rate of deduction for pye-sorting; (3) Provision of more coolies for carrying compositors' cases; (4) Payment to salaried men for working extra hours; (5) Fine register was maintained regularly. The men who were dismissed were not re-instated.

The last strike in Government of India Presses took place in July, 1920, which affected the Presses at Calcutta, Simla and Delhi.

The strike of 1920 was confined in the main to the piece-workers, although the machinemen of the Delhi Press, who were and are still salaried men, and many other salaried hands joined the strikers, as also did the bindery staff, who at that time worked solely on hour rates. The remainder of the staff worked throughout the strike.

In the Calcutta Press practically the whole of the operatives left their work whether salaried or otherwise.

The duration of the strike was about two months, i.e., from July 20th to September 19th, 1920, in the Delhi Press, but the operatives of the Calcutta Press left their work on or about the 14th July, 1920.

Before the strike concluded it had, more or less, developed into a fight between the piece-workers and the Government of India for fixed salaries *versus* piece-rates, but the original reason for the operatives leaving their work was their dissatisfaction with the revised terms of service, increase of rates, etc., published in a Government of India Resolution No. A-31, dated July 15th, 1920, from the Board of Industries and Munitions.

For some time previous to the strike the Press employees had been in receipt of temporary war allowances, and the Resolution previously referred to abolished these and increased the rates of payment by an amount which the Government of India thought adequate, but the operatives thought otherwise and left their work.

The Government of India gave an assurance to the strikers that the main object underlying the Government Resolution was to enable operatives to earn higher wages than heretofore, and to work shorter hours. The operatives, however, were not satisfied with the revision of emoluments, and remained away from their duties for two months. During this period some of those who went out on strike returned to duty and negotiations took place between the representatives of the strikers and the Government of India, which resulted in their resuming work on the same terms with which they had expressed their dissatisfaction by going on strike. The period of absence without permission was not treated as a break in service for the purpose of pension, etc., and no man was in any way penalized or punished as a result of the strike.

---

#### THE NATIONAL ASSOCIATION FOR SUPPLYING MEDICAL AID BY WOMEN TO THE WOMEN OF INDIA (COUNTESS OF DUFFERIN'S FUND).

For the information of the members of the Royal Commission on Labour, it is desirable to state the nature of the organizations on whose behalf the following memorandum is submitted.

The Women's Medical Service of India has a cadre of 44 members recruited in the proportion of 50 Europeans and 50 with Indian domicile. The majority of the latter have both Indian and European qualifications. The Service is administered by the Countess of Dufferin's Fund Committee, which receives a grant of Rs. 3,70,000 from the Government of India for the purpose. The Chief Medical Officer, besides being the head of the Service, is consulted freely on questions relating to the supply of medical aid to the women of India, and is intimately acquainted with all the many problems involved. She is also secretary to two other organizations which deal with questions affecting the health and welfare of women.

*The Victoria Memorial Scholarships Fund* was established in 1902 to promote the training of indigenous midwives (or dais).

*The Lady Chalmersford League for Maternity and Child Welfare* undertakes three main pieces of work:—(1) Propaganda of various types; (2) Organizing schools for the training of Health Visitors; (3) Grants-in-aid to organizations in Government of India areas. It is also in correspondence with numerous organizations throughout India, which seek its advice on matters relating to maternity and child welfare schemes, and is in touch with the movement all over the world. Apart from the help given in advice, the League has been the means of supplying health visitors to various societies for employment.

On account of this knowledge of the medical and health needs and problems of the women of India, I beg to submit the following remarks under the heading :

#### IV.—Health.

23. (ii) *Birth-rate and Infant Mortality.—Methods of registration.*—The figures for infant mortality in industrial areas compare unfavourably with those in other towns and in rural areas. In the report of the Public Health Commissioner with the Government of India (1926) the following figures are quoted :—

Calcutta 372 per mille, Howrah 339, Ahmedabad 436, Cawnpore 484. It is doubtless true that these figures are vitiated to some extent by the exodus of women for child-birth to their villages, and the death of the child on their return to the town, but the fact remains that the conditions of life for children in industrial areas, whatever the cause, are not those that make for health. Investigation on this point is urgently required. Medical women in India have repeatedly pressed for an enquiry into the causes of infant mortality. An enquiry of this kind would enable suitable measures to be taken to try and reduce the mortality, and such an enquiry would naturally embrace in its scope the question of the causes of high death-rate among the children of industrial workers. No response has yet been made to this request for investigation, though it is obvious that it is a *sine qua non* for the formation of proper child welfare schemes.

Registration is known to be very faulty, and the penalties attached to failure to register are insufficient to act as deterrents. Accurate vital statistics are said to be the foundation of proper public health work. If that is the case it is difficult to see how the latter can be satisfactory in India.

The registration of the *causes* of death is even more unsatisfactory hence the necessity for an enquiry.

In this connection I should like to point out the usefulness of the work of Health Visitors. Were Health Visitors at work in an industrial area they would be able to aid registration in various ways, e.g., they would have knowledge of the cases of delivery expected in their area and would know what proportion stayed in the locality and how many went to their villages for confinement; they would be able to detect unregistered births and urge registration in their visits to the homes; they would be able to check, to a certain extent, the causes of death.

24. *Extent of Medical Facilities provided.*—In dealing with this point my evidence is based not so much on actual experience of industrial areas as on general knowledge of the demand for and need of medical women, health visitors and midwives. My remarks concern 24. (iv) more particularly, but I have not found it possible to separate the four sub-heads.

The cadre of the Women's Medical Service is very small, and it is composed of relatively expensive and highly trained women. The services of these can be seconded to a provincial Government or a private body by arrangement, and are sometimes asked for in this way. With the exception of the cases noted below no doctor has ever been asked for in connection with work for women in industrial areas, either Government or private.

In 1921 the Department of Industries considered seriously the possibility of giving effect to the recommendations of the International Labour Conference at Washington regarding the employment of women before and after child-birth. A scheme was drawn up which proposed the employment of medical women, health visitors and midwives. As a preliminary, the services of two medical women were asked from the Countess of Dufferin's Fund for investigating the conditions of women's labour in Bengal and Bombay. These two medical women belonging to the Women's Medical Service were lent for this purpose, their grade pay being paid by the Countess of Dufferin's Fund.

These two officers submitted their reports,\* which in addition to the results of their investigations on the effect of factory and other work on the health and physique of women workers, contained various suggestions and recommendations regarding the provision of medical and health facilities for women workers. These suggestions, which could well form the basis of schemes at the present day, have hardly been acted upon and no first class medical women have been asked for for this work. Medical women are employed by some of the Bombay and Nagpur mills, but not so far as we are aware by any of the jute and other mills near Calcutta, or in any other industrial concerns in India, either private or Government.

Health visitors have been employed in small numbers, e.g., in Bengal, one health visitor was appointed in 1922 and another in 1926. I believe others are about to begin work in the jute mills near Calcutta, but the numbers employed are certainly very inadequate to the need. Health visitors have been employed in Cawnpore for some years under the B. I. Corporation.

\* *Maternity Benefits to Industrial Workers*, Dr. F. D. Barnes, Bombay Labour Gazette, September, 1922. *Women's Labour in Bengal Industries*, No. 31. *Bulletins of Indian Industries and Labour*.

In Bombay, Ahmedabad, Nagpur and Sholapur some provision is made for nurses, and creches are also established in certain mills for the care of infants of women employees, but it is certain that the needs of women and children have not been met by these provisions either by Government or by employers. Occasionally voluntary societies have started work which should properly have been undertaken by the employing bodies, e.g., creches and dispensaries in Ahmedabad and health visitors in a few places. (In the hydro-electric scheme of the Punjab at Mandi a health visitor is working. The scheme was at first entirely financed by the Lady Chelmsford League, though the Punjab Health Department is now meeting some of the expense.)

The conditions of work of health visitors are frequently difficult, as they may be placed in situations where they are lonely and unprotected. The pay given does not always compensate them for these drawbacks.

Midwives are sometimes asked for by employers, and difficulty has been experienced in securing suitable women. It has to be realized that the difficulties involved are very real. The midwife may have the same disadvantages to cope with as the health visitor, and in addition she has to face competition of a serious kind from the indigenous untrained midwives who are on the spot. These latter women are either local midwives (or dais) or else they come from the villages with the workers. They must in either case earn their livelihood, and it is a very poor one, so that they resent the intrusion of paid midwives, who take no fees. They do not scruple to spread absurd and lying rumours about the new comers, which may make their work impossible.

In considering this problem (i.e., 24 (iv)) it is necessary in my opinion to take a large view of it.

It is obvious that, where numbers of people are gathered together as in industrial centres, the need to guard the health of workers is specially great. This is generally recognized as a principle in such matters as housing and sanitation, and the prevention of epidemic disease, even though in practice it may be imperfectly realized. In so far as women and children are part of the population of these areas, they share in the benefits of such schemes of improvement. It is, however, a fact that women and children have special needs in industrial, as in other, areas, due to the peculiar conditions of life in India, and very little attempt has been made to meet these needs. This no doubt partly due to the fact that the needs have not been realized, but it is also due to apathy and to unwillingness to spend money on the purpose, or inability to do so. In this connection it is to be noted that this special provision is needed, not merely for women actually working, but also for the wives and children of workers.

The circumstances that render necessary the provision of special facilities for medical treatment and for health work among women and children are as follows:—

(1) The fact that the majority of women, even when not observing "purdah," do not care for the attendance of men doctors for gynaecological complaints or at the time of child-birth.

(2) The fact that the majority of confinements in India are presided over by untrained indigenous midwives (dais). These ignorant women, belonging frequently to low castes, are the sole attendants, and they serve the function of midwife and nurse, and frequently also of gynaecological consultant.

(3) The small experience of most men doctors of midwifery and gynaecology and also of diseases of children for the reason given under (1).

(4) With special regard to health work, the difficulty of penetrating the house and home of the worker with any teaching in health matters or securing any supervision of what occurs there, which may be greatly to the detriment of the health of both the home and community at large.

A complete scheme of medical women with health visitors and midwives working under their control is what is likely to meet the problem. It is almost impossible to ask individual women to undertake the necessary work. Without inspection, control and encouragement such workers, even if they are ready to stand up to the conditions involved, tend to get into ruts over their work, and fail to uphold a good standard. It is very difficult for men doctors to effect this necessary supervision for various reasons.

Such a scheme would not be difficult to carry out. In a really large concern the expense could be met by a single firm. In other cases a group could unite to employ one good medical woman to supervise the work of several mills or factories, the lower grade of workers being paid for by individual firms. For even smaller units, part-time services might be utilized. No doubt such schemes would require careful organizing, but there is no reason why they should not be successful.

The presence of women assistants to the Directors of Public Health in the provinces would materially assist in the advancement and smooth working of such schemes. This was in fact recommended in the reports alluded to above, and has been repeatedly urged by medical women since.

At the time of the scheme suggested by the Industries Department in connection with maternity benefits, the doubt was expressed that medical women would be available in sufficient numbers for the purpose outlined. Though many more medical women are available at the present time, that doubt is still voiced. It is also expressed with regard to the provision of health visitors and midwives. I believe this does present some difficulty, but at the same time I have not much doubt but that, if posts were created, applicants would come forward. Since the demand has been so little made, the supply is not apparent. Were the demand to increase, the supply would increase. Good conditions must, of course, go with such appointments in order to attract the right type of workers. It has to be remembered that the earning power of all professional women in India is greater than that of men, so that their work is relatively expensive.

It may be pointed out here that substantial benefits would accrue to the employing bodies through such appointments. The complaint is frequently made that labour is unstable; and this involves loss to the firms concerned. The provision of good medical and health facilities for women would prevent to a large extent the exodus of women to villages for confinements, and would tend to correct the disturbance of the sex ratio in industrial areas. No one can doubt that both these factors would help to stabilize labour. With regard to the women who are actually working, improvement in their physique would undoubtedly increase their value to the employer and mean less absence for sickness. Such provision as I have outlined for women workers or the wives and children of workers, need not therefore be regarded as pure philanthropy, but as an investment which will bring in a return.

25. (ii) In the reports of Dr. Curjel and Dr. Barnes above alluded to, the fact was brought out that women take very little advantage of the provision made by mill and factory authorities for medical help. I give above my reason for this state of affairs. My opinion is based not only on these and other reports of those acquainted with the conditions in industrial areas, but on my own knowledge of the facts as applied to the general public. It is true that in many parts of India women have no objection to attending general dispensaries for ordinary complaints, but when anything gynaecological occurs, they will not seek advice from men, nor be attended by them in child-birth. The women of Madras Presidency are perhaps an exception to this rule, but, even there, many women would prefer a woman, even though the services of a man might not be actually banned. Where adequate medical facilities exist, and in this I include the provision of health visitors and midwives, and are suited to the conditions, they are fully utilized and appreciated.

---

LIEUT.-GENERAL SIR EDWIN H. DE VERE ATKINSON, K.C.B., K.B.E.,  
C.M.G., C.I.E., MASTER-GENERAL OF THE ORDNANCE IN INDIA.

*General.*—Detailed replies to the questionnaire have been sent in by four arsenals and seven factories. It would be difficult without reiteration to collate these in detail, as the local circumstances differ so much in establishments spread over an immense area as involved in India.

It must be borne in mind that in arsenals, the majority of the labour is unskilled, and in factories the majority is skilled.

In the following memorandum I have endeavoured to provide what has been asked from me, which is a general statement on the most important points, and not a detailed reply to each sub-item of the questionnaire. Technical details such as time-keeping, payments, safety, compensation, etc., are more or less the same in all factories, and have been dealt with by superintendents.

#### I.—Recruitment.

Migration of unskilled labour is, as is to be expected in an agricultural country, chiefly due to seasonal causes when men return to their crops.

Changes in skilled labour are mostly due to the varying needs of the army. As the load on the factories varies with the yearly demands on them, so the number of skilled employees has to be changed to meet the varying load. Any large turnover is to be strongly deprecated from a point of view of efficiency.

Recruitment of labour varies in methods :—(a) Through existing employees ; (b) Labour Bureaus and trade tests, and registration of applicants ; (c) Apprentices ; (d) Notices at factory gates ; (e) Through sirdars, or gangers.

There is no doubt that the best method is an efficient and well-organized Labour Bureau. These have been existent in most factories for years, and have lately been introduced into arsenals.

The functions of a Labour Bureau generally are :—(i) The recruitment and grading of all skilled and unskilled labour ; (ii) The maintenance of records of service of workmen and of their earnings and punishments ; (iii) The records and location of all discharged men.

The efficiency of the work depends, however, greatly on a first class manager.

The duties as detailed in the rifle factory, Ishapore, are heavy, and it is hoped all other bureaus will develop on these lines.

The worst method is (e) through sirdars or gangers. The breaking up of this system in the clothing factory, Shahjahanpur, was responsible for a strike in 1926 (Vol. III., Part I., page 303). The custom was for a ganger, who was not often even a tailor, to produce so many tailors and take a percentage of their pay. When it was settled to introduce piece-work and pay a man according to his skill and industry, it was necessary to abolish gangers. They naturally resented having their soft method of livelihood taken away and organized a strike. Certain tailors, however, refused to strike and accepted the new terms, and on their experience the strikers soon returned when they saw the advantages to themselves of the new system.

*Unemployment Insurance.*—This would be far more difficult and expensive in India than in the West, but if possible would be a great boon to skilled workmen, specially trained for ordnance manufacture, but if generally introduced the burden on Government and the employer would be immense.

*Turnover of Labour and Public Employment Agencies.*—Superintendents have given details of turnover generally. There are, however, some aspects they are unable to touch on.

The volume of work in any ordnance factory is dependent on the army demand, and this is not a constant quantity, hence the majority of our employees have to be kept on an elastic basis. In a few cases it is practicable and advisable to keep out-turn fairly constant, and let variations in stock cover variations in consumption ; examples are small arm ammunition, cartridges .303 in. Such cases can only occur when the military necessity of readiness for mobilization justifies the expenditure of more cash than the minimum visible demand would cost. In the majority of cases this is not practicable, and variations in labour staff required become inevitable with consequent turnover.

In recent years army provision methods have improved, and very great fluctuations in demand have been eliminated.

The labour records now kept enable us to keep to some extent in touch with labour that has left, and we have evidence that some at any rate of the private firms are beginning to use army factory labour records as a convenient method of getting hold of semi-skilled and skilled men to deal with the variations in demand which are equally inevitable in the private trade.

I am informed that certain firms when they sell machine tools advise the buyers to get men trained at Cossipore or Ishapore. Some firms are openly approaching factory Labour Bureaus for this purpose. Others, however, do not do this, though we know they depend very largely on ordnance factory men.

Up to a point we are welcoming this type of turnover, as it increases the reserve of skilled or semi-skilled labour in the country available to meet mobilization needs. Moreover, the wider experience obtained tends to more fully trained men for supervising posts.

The above facts indicate that there are already openings for general labour bureaus in the country. I am in doubt, however, whether the time is really ripe for them, and it is possible they would lead to "graft." A difficulty is the immense distances in India and the sparse distribution of trades. Though Indian labour does not mind considerable migration, yet the cost of journeys has in the long run to be borne by the cost of goods, and the margin available for such extraneous charges is none too large. The evidence for readiness to migrate is available from ordnance factories.

Aruvankadu (Nilgiris) employs men recruited in Calcutta and Madras. The map of recruitment at Jubbulpore shows a range from Tuticorin to Kabul. Metal and Steel Factory regularly recruits certain types from Mirzapore. Shahjahanpur taps Sialkot.

A further difficulty is the uncertain standard of training. Apparently in England a man's union ticket is a real guarantee of a minimum standard of skill. There is nothing like this in India, and a man must be classified by trial on arrival.

In Appendix IV, I give some analyses of the uneconomical effect of a large labour turnover, which were worked out to help our proposal for a provident fund for daily men, in so far as it would tend to keep our turnover as steady as possible.

## II.—Staff Organization.

The staff organization of the army ordnance factories at army headquarters is as follows (details for arsenals not given).

The *Master-General of the Ordnance* is responsible to His Excellency the Commander-in-Chief.

*Director of Ordnance Factories and Manufacture.*—This officer is responsible for the administration of all the factories. In addition, in conjunction with the Director of Technical Organization, he is responsible for keeping in general touch with private manufacture in the country to see what army stores can be produced in India, and thus avoid importation.

He has under him :—(a) Deputy Director.—Responsible to the director for all questions concerning personnel and stores, also spade work of finance ; (b) Civil Engineer Adviser.—Responsible for all questions concerning plant, buildings and methods of working ; (c) Assistant Civil Engineer Adviser (I).—Responsible for regulation of output to meet needs. Cross feed between factories and allied work. This officer is also responsible to the officer in charge of army provision for placing orders for supply of all army needs, after quantities and cash available have been approved, and for following up rate of supply. He is also responsible to the Director of Technical Organization for placing these orders in the way best calculated to ensure possibility of requisite supply in war ; (d) Assistant Civil Engineer Adviser (II).—In primary charge of material provision section, and spade work in assistance to Deputy and C. E. A.

*Finance.*—The factories are essentially financed from the value of orders placed on them. Each item of manufacture is priced at a sort of catalogue rate by the financial authorities, called "Priced Vocabulary Rates." Normally this rate is the lowest at which recent supplies have been made. Prices are assumed to remain constant for three years and are then revised.

The sum total of the value of orders so placed at these rates, plus any incidental receipts such as sale of waste materials, is the available cash at the disposal of the Director. This cash has to pay for all expenses of the factory, including all wages from that of the Director downwards, depreciation charges, police charges, etc.

This system has had great effects. It has brought home to all concerned more or less definitely that the more the individual and system together earn, the more there is available for increasing the real money value of all wages, whether directly or by means of increased comfort and other conveniences.

The Director allots funds to the individual factories on practically the same system, but allows for variations in the amounts of available stocks.

In each factory the organization is essentially identical, and is fairly self explanatory :—Superintendent ; works manager, production ; works manager, non-production, including stores ; works inspection officer ; assistant works managers as needed ; sections (typical) ; 1 foreman ; 1 assistant foreman ; chargemen as needed ; 1st, 2nd and 3rd grade supervisors as needed ; gang or line mistries ; workmen ; store section, 1 store-holder ; assistant store-holder, receipts and issues ; assistant store-holder, provision ; chargemen as needed ; godown-keepers as needed, each responsible for holding a small group of stores.

The works inspection officer is responsible that correct material is used, and for all stage inspection.

An independent army inspection staff inspects final out-turn, and any key stages desired. This has no connection with factory costs.

An independent accounts organization, which is, however, charged against factory out-turn, compiles and audits all factory accounts and supplies factory management staff with necessary figures.

In any given factory or section any one or more posts or grades may be eliminated if necessary. For instance, one factory has only one officer representing the assistant works manager and upwards.

Details of the organization in each factory and arsenal are given in their printed statements.

*Recruitment and Training.*—The various schemes under which the ordnance factories endeavour to train men for their various charges is given in Appendix I—'Extracts from a note on Vocational Training in the Ordnance Factories.'

(iii) Appendix II shows sanctioned permanent establishment in the Indian ordnance and clothing factories, and arsenals.

Appendix III shows the average present strength of employees in the Indian ordnance and clothing factories, and arsenals per diem.

*Works Councils, Associations and Trade Unions.*—Brief histories of each that exist are as follows. It will, however, be seen from the detailed reports that various workmen's councils have been started and tried out, but have generally died out.

*Civilian Gazetted Officers' Association of the Ordnance Factories.*—Application for Government recognition of the Association was first received in December, 1925, and Government recognition was accorded in 1926. The membership of the Association is open to the civilian gazetted officers employed in the ordnance and clothing factories and the inspection section. The Association deals with questions relating to the status, conditions of service, concessions, remuneration, etc., of the above-named officers.

On the 28th March, 1929, the Association had on its books 37 members, out of 58 officers eligible.

*Foreman's Association of India.*—This was the first Association in the ordnance factories which was recognized by Government in 1919.

In their application for recognition it was stated that the Association was an incorporated body, duly registered, and requested that it might be recognized by Government as representing the civilian mechanics of the ordnance department, and at the same time assured Government that the object of the Association was to loyally assist the Government in every effort to better the prospects of the civilian mechanics and raise the standard of the department all round.

As this was the first definite application for recognition received by the Government of India from a body of Government servants, the matter was considered in all its bearings between the various departments of the Government of India with regard to such combinations of organized labour in India and their effect on the authority of Government in dealing with them. The matter was ultimately discussed in Viceroy's Council and the principle of recognition accepted. The official recognition was accordingly accorded to the Foreman's Association of India on the conditions laid down in the late Indian Munitions Board letter No. E.-1024, dated the 23rd May, 1919 (see Appendix VII).

The Foreman's Association of India as at present constituted is designed to protect the interests of the non-gazetted staff (principal foremen, foremen and assistant foremen) of the ordnance factories, inspection section and arsenals. Various representations and memorials have been received from time to time for the improvement of their terms and conditions of service during the last four or five years, and have been dealt with by this branch in the usual way and with due expedition.

*Precis of Formation of Whitley Councils, their present condition and work done so far.—Formation.*—In June, 1923, the Foreman's Association represented to the late Director-General of Ordnance that they desired the formation of Whitley Councils applicable to the civilian technical non-gazetted officers of the Indian Ordnance Department.

On examining the question in detail it was found that the system in force in England was not in all ways applicable to India, but it was decided to endeavour to form modified Whitley Councils.

The M.G.O., therefore, formed a representative committee consisting of:—One representative of the director of ordnance factories and manufacture, five representative officers from five factories, six members of the foreman's association, to meet in July, 1925, with a view to settling the drill to be followed in regard to the formation of the proposed Whitley Councils. In this meeting the object and functions of the proposed councils were drawn up and after some discussion, the Government of India in September, 1927, accorded an official recognition to the Whitley Councils.

The councils consist of:—

*Factory Councils.*—In each factory, consisting of two gazetted or commissioned officers and two members of the association.

*Central Council.*—Consisting of one gazetted or commissioned officer and one member of the staff side from each factory council.

*General Council.*—Consisting of the members of the central council with a representative of the M.G.O.

(This council is to meet not more than twice in a year and only if asked for by not less than three factory councils.)

All local questions are dealt with in the factory councils. Those that cannot be dealt with in the factory councils are referred to the central council and such matters as cannot be dealt with by the central council are referred to the general council.

The object and function of the councils are :—(i) Provision of best means for utilizing the ideas and experience of the staff ; (ii) to make recommendations regarding the general principles governing conditions of service, e.g., recruitment, hours, tenure and remuneration of the staff ; (iii) the encouragement of further education of the staff and their training in higher administration ; (iv) improvement of office machinery and organization ; (v) discussion of the general principles governing superannuation and provident fund rules and their application to the staff ; (vi) discussion of any promotion in regard to which the staff side considers that the principles of promotion have been violated.

*Present Condition and Work done so far.*—Members of the factory and central councils were chosen for the first session and the first meeting of the general council was held on 27th November, 1928. The following points were discussed in this meeting :—(a) Interpretation of the objects and functions of the councils ; (b) drawing up of bye-laws for the factory and central councils ; (c) procedure to be followed in affording executive experience to the non-gazetted staff ; (d) procedure to be followed in filling vacancies in junior gazetted and in non-gazetted staff ; (e) revision of the I.O.D. provident fund rules ; (f) adequacy of the present medical concessions ; (g) revision of the existing travelling allowance rules.

Items (a) to (d) have already been settled.

Regarding item (e), this is awaiting revision of the provident fund rules on the railway side, as the I.O.D. provident fund rules are based on those rules.

As regards item (f), the concessions asked for were :—(i) Medical attendance by an R.A.M.C. or an I.M.S. officer or by a qualified civil doctor ; (ii) provision of a motor ambulance in each establishment for carrying cases to hospitals ; (iii) treatment in military hospitals or where a military hospital is not available, treatment in civil hospitals.

(i) Is already provided for in the regulations ; (ii) this is under consideration ; (iii) treatment in military hospitals of civilian European gazetted and non-gazetted officers has been sanctioned in Army Department letter No. Z./4380/2 (D.M.S.), dated 9th August, 1929.

As regards item (g), the concessions asked for were :—(x) First-class travelling allowance and daily allowance for non-gazetted staff ; (y) actual expenses incurred for journeys within a radius of five miles of headquarters.

(x) Has been negatived ; (y) this is under consideration.

*Précis of History of the Cordite Factory Labour Union.*—In the first instance on the formation of the Cordite Factory Labour Union, the master-general of the ordnance had to inform the members that there were no existing rules under which the union could be recognized, but that he would be pleased to meet the members informally whenever he was in Aruvankadu. This he did several times, and came to the conclusion that the union if properly run was likely to be of great assistance to the administration.

Rules having been set forth by the Government of India, the Cordite Factory Labour Union was officially recognized by Government in 1928, on the understanding that the union would not amalgamate with other trade unions not composed of Government employees, and under the further conditions set forth in the rules (see Appendix VIII) regulating the recognition by Government of associations of Government employees. The registration of the union under the Indian Trade Unions Act, 1926, was not considered necessary by the Government.

The union consists of workmen and supervisors on the temporary establishment of the Cordite Factory, Aruvankadu.

On 27th August, 1928, the union had 459 members on its books out of a total eligible strength of about 700. It had a balance to their credit of Rs. 578 on 1st July, 1928.

Representations received from the union from time to time have been given sympathetic consideration and two of the important concessions asked for by them, e.g., grant of leave with pay to daily paid men and provision for old age in the shape of a provident fund, have been recommended to Government and are likely to be in force shortly. Various minor recommendations have been carried out.

*Précis of the History of the Harness and Saddlery Factory Labour Union.*—The Harness and Saddlery Factory Labour Union applied for official recognition in January, 1928, and was officially recognized by Government in June, 1928, on the understanding that the conditions set forth in the rules regulating the recognition by

Government of Associations of Government employees are complied with. The registration of the union under the Trades Union Act of 1926 was not considered necessary by Government.

The union consists of workmen and supervisors on the temporary establishment of the Harness and Saddlery Factory, and of the Inspectorate of Stores and Clothing. The union had 350, out of about 1,800 eligible, members on its books on 31st March, 1929, and had a credit balance of Rs. 48 on that date.

The leaders of the union appear to take their advice from outside rather than inside the factory.

Since its recognition, no representation has been received from this body. An article appeared in the local newspaper "Mazdoor," in February, 1929, written by the honorary secretary of the union, accusing certain members of the Harness and Saddlery Factory staff of corruption, but the writer subsequently retracted it and apologized.

*Association—Clerks, Ordnance Factories.*—Clerks of ordnance factories have an All-India Association, with its headquarters at the Metal and Steel Factory, Ishapore, and branches at other ordnance factories. The Association was recognized by Government in 1924. Its aims are mainly to watch the interests of the clerks of the ordnance factories. The membership of the Association as reported by the Association in November last stood at 297, out of approximately 400 who are eligible to join.

There is also an All-India Arsenal Clerks' Association.

### III.—Housing.

There is no doubt that all over the world generally wages have ceased to be the sole consideration in labour problems, and while wages have increased considerably faster than prices, discontent has grown out of the very discovery that money cannot purchase alleviation of the conditions under which men work. With education, the desire for a higher standard of living has increased and labour demands that it shall no longer be bought and sold as a dead commodity, but that its remuneration shall be regulated on the basis of the human needs of a family living in a civilized community.\*

In India, labour has not, except in a very few exceptional cases, arrived at the above pitch of reasoning, but there is no doubt that Indian labour at the present moment looks with appreciation at all attempts made to provide it with decent housing.

As stated in my evidence, I considered that the State should show the way to private concerns in giving decent accommodation to its workmen. Unfortunately, the amount involved was a large one and it has been possible to provide only a small amount in every year for workmen's lines.

Further, this has not merely a moral aspect but a financial one. From statistics kept and information obtained from acquittance rolls, it has been proved in Jubbulpore, that men living in the factory village compared with men living in the bazaar showed an average increase of efficiency of 17.5 per cent. equivalent to 436 annas per man per hour. The men had been for years engaged on piece-work so that their earnings were a measure of their efficiency.

Appendix V† shows what we have been able to do recently for housing workmen and Appendix VI our expenditure on welfare schemes.

### IV.—Health.

The following is the best we have been able to do, but there is no doubt in my mind that there is a strong feeling among workmen for the provision of medical and hospital facilities for themselves and their families:—

#### *Hospitals and Dispensaries.*

Metal and Steel and Rifle Factories, Ishapore.	(1) European park dispensary. (2) Central dispensary and 6-bedded casualty ward for Indian workmen. (3) Gate dispensary for first aid.
Ammunition Factory, Kirkee .. ..	2-bedded dispensary.
Cordite Factory, Aravankadu .. ..	(1) Central dispensary. (2) Maternity ward and child welfare centre.

\* Hobson.

† Not printed.

*Hospitals and Dispensaries.—Contd.*

Gun and Shell Factory, Cossipore	..	The Factory subscribes to a local charitable 60-bed hospital.
Gun Carriage Factory, Jubbulpore	..	(1) Factory dispensary. (2) Lines (3) 12-bedded hospital under consideration for epidemics.
Harness and Saddlery Factory, Cawnpore		Central dispensary.
Clothing Factory, Shahjahanpur	..	(1) Hospital for 2 European and 6 Indian beds. (2) First-aid dispensary.

**V.—Welfare.**

It must be borne in mind that all expenditure on health and welfare has to be met out of the factories Budget, which, as explained under Finance (Staff Organization) depends on the rates fixed by the accounts officers for work turned out by the factories. It is only from profits made by efficient work and administration that any money is available, and further the existence of any profit depends on the total factory load being large enough to carry the fixed overhead charges.

Then again the success or otherwise of all the measures depends on the enthusiasm of the staff. The outstanding success of the rifle factory schemes is almost entirely due to the whole-hearted enthusiasm of the late Superintendent, Lieut.-Col. Lenfestey, R.A., and I am glad to be able to place this fact on record.

*Co-operative Societies.*—These valuable societies only exist in five factories, as their existence must depend on local enthusiasm, being self-supporting. Their objects are :—(i) To issue loans to members and free them from debt, and for marriage purposes ; (ii) Supply of stores when co-operative stores do not exist ; (iii) To encourage thrift through a deposit account system ; (iv) To pay home allowances to members' families.

By far the most successful is the Rifle Factory, Ishapore, which on 13th March, 1929, had—members, 2,958 ; working capital, Rs. 2,08,055 ; loans outstanding, Rs. 1,42,686 ; reserve fund, Rs. 20,960.

*Co-operative Stores.*—These again depend on local enterprise, and at present are only running in three factories. The Cordite Factory, for an invested capital of Rs. 7,500, has a turnover of Rs. 95,500 and 410 members.

*Other Welfare Measures.*—1. An Indian Club has been started at Ishapore at a cost of Rs. 25,000 with tennis and Badminton courts.

2. An educational cinema has been installed at the Technical School, Rifle Factory. For this purpose His Excellency the Commander-in-Chief gave a grant of Rs. 1,500 from his special fund.

I would also like to place on record that nearly the whole of the machinery in use at the Technical School has been received as free gifts from various Calcutta engineering firms.

*Grant of Leave with Pay to daily rated and monthly paid Men.*—Our daily rated and monthly paid men in factories at present only get leave with pay as follows :—(a) Leave for two days for plague inoculation ; (b) Short leave for broken periods of a day ; (c) Enforced casual leave for not more than one month at a time when the man himself or a member of his family or household is suffering from an infectious disease, or when he is sent to a Pasteur Institute for antirabic treatment.

A scheme has now been approved to follow railway practice and grant, in addition to the above, 15 days' casual leave with pay (to cover absences on account of non-gazetted holidays, sickness or leave) in each year to daily rated, but monthly paid, artisans, workmen and piece-workers, subject to the following conditions :—(i) That the man has been in the regular employment of the factories or inspection sections for the previous 12 months ; (ii) That the leave cannot be claimed as a right, nor can it accumulate.

*Provident Fund for monthly and daily rated Supervising and Clerical Staffs, Workmen and Piece-workers employed on Temporary Establishments of Ordnance and Clothing Factories and Inspection Sections.*—A proposal for making provision against old age and incapacity was mooted by the Cordite Factory Labour Union, Aruvankadu, in 1924. After prolonged consideration of this proposal the Government of India decided recently that the institution of a contributory provident fund for these workers is justified. Government have come to this decision not only from the point of view of the welfare of the employees, but with also the object of preventing the

pecuniary loss to Government caused by the fact that skilled workmen of the factories have frequently been tempted away to other workshops which offer inducements in the shape of provident fund, bonus and gratuities such as railway workshops. Government also preferred a contributory provident fund over a direct increase in emoluments of the workers concerned chiefly on the grounds that the provident fund enables a man to save money which otherwise, under the family system prevailing in this country, would go to his relatives or be spent on weddings and other ceremonies also that a provident fund has a great value in developing thrift and strengthening the position of the employer.

2. The Secretary of State has now approved the Government of India's scheme generally, but while leaving the detailed approval of the proposed rules to the Government of India, made certain suggestions. These suggestions may take some time in complying with, and then when funds can be made available the scheme will be brought to being (probably on 1st April, 1930). The provident fund scheme thus approved provides for subscription to the proposed fund by men with three or more years' continuous service in the factories or inspection sections, and includes certain safeguards against the men resigning their employments in order to obtain the provident fund money at their credit. Government contribution to each subscribers's account will be 50 per cent. of the money subscribed by him. This, though meeting to some extent the case of future workmen, does not legislate for the loyal workers of long service, who shortly have to leave through ill health or old age. The only way to meet these cases is the payment of bonuses from the fine funds, which is not an ideal method of meeting the obligation.

*Fine Funds.*—A fine fund is maintained by each ordnance and clothing factory. Its income is derived from fines realized on the following account from men on the extra and temporary establishment, whether monthly paid, daily paid or piece-workers :—Lateness, absence, bad work and breach of rules.

The fund is utilized for the benefit of the workmen and their families generally. The following is legitimate expenditure from the fund :—(a) Gratuities or donations may be given to workmen on discharge, but they must not exceed those permitted by regulations, though they may be given in addition to them ; (b) Donations to widows and families of deceased workmen ; (c) Allowances to sick or injured men in special cases ; (d) Relief in deserving cases, e.g., losses from floods or fires in the houses of men who have claims on the factory ; (e) Cost of construction and maintenance of such buildings and institutions as rest and dinner sheds, grain and other shops and schools for the benefit of the workmen and their families, provided that the entire expenditure on this account, initial as well as recurring, is met from the fine fund, and no portion thereof is charged against the working expenses of the factories.

Bonuses may be given periodically for good attendance or long service or for special good services.

## VI.—Education.

There is no doubt that education of workmen and their families leads to efficiency of work, better workmen, and the power for workmen to recognize the efforts that are being made, and that ought to be made, for their own comfort, health and well-being.

The amount of work we have succeeded in doing, with the funds at our disposal, is detailed in Appendix I.

## XII.—Wages.

Ordnance factories are distinct in a way from civilian factories, in that they are a branch of the army. They have to keep, in many cases, a larger nucleus of keymen, buildings and equipment than might be necessary in peace, to be ready for instant mobilization and enormous expansion in war. They do not require their men to serve under fire, but they do expect men to work somewhat under the same spirit of self-sacrifice as soldiers do, and to put their last ounce of effort into a job in the nation's service.

Their wages must vary in various factories, depending on local conditions, climate, race, etc., but the general principles for fixing wages are as follows :—

Wages are to be fixed in the first instance at the lowest rate that we can persuade efficient workmen to engage, which rate must be sufficient to keep them in such a state of fitness and keenness at all times that they may turn out our goods at the lowest practicable cost. Superintendents are encouraged to exercise full responsibility in the matter, and to take into consideration, in addition to actual money, education, quarters, welfare and other amenities. They have in their evidence detailed their local methods.

The higher management generally scrutinizes to see that the standard of fitness and keenness aimed at is not in excess of what is economical, having due regard to repercussions on the army at large and on local industries.

The criterion for testing these amenities is precisely the same as that for testing whether a new pattern machine is advisable ; (a) Have we cash available to authorize these ? (b) Money paid in the event of a man being hurt ; (c) Is it reasonably probable that they will not cause unwelcome repercussions in the army at large ?

It will be seen from the detailed reports that having fixed the minimum, in most factories work is graded into various scales, and the probationer is trade tested and his grade provisionally fixed. The trade test, in addition, is to ascertain whether it is safe to allow a man to try his hand at a specific job without undue risk of loss, by waste of material, of machine time, or of planning time.

In ordnance factories 95 per cent. of the workmen are paid on piece-work rates, and so the trade test not only fixes a nominal daily rate which only governs (a) money paid for a holiday with pay ; (b) money paid in the event of a man being hurt, but also the scale of piece-work rate.

The piece-work rate is fixed with the intention that a man of average intelligence with the necessary minimum skill, after a short experience, can earn about 25 per cent. over his nominal daily rate. Exceptional men can attain to three times the normal wage. If a man fails to earn sufficient he either leaves on his own, or is discharged by the factory for being a nuisance.

If it is found that an insufficient number of men stop, it is necessary to increase the piece-work rates or improve the standard of planning, whichever is most economical.

*Daily versus Monthly rates of Pay.*—From the fact that the load on factories depends on the yearly variation of demands from the army, which itself depends on the size of the army, the changes in patterns of equipment and lethal weapons, policy and economy, the ordnance factories have to be in an elastic position as regards the majority of their labour. Further monthly paid men clamour for every holiday, which in India are most numerous ; whereas daily paid men clamour for the factory to be kept open on holidays, which adds to efficiency and economy.

We restrict monthly paid men to those who normally do not do much overtime, but are essentially whole-time Government servants, keymen, and those cases where a man's job ought to carry a special " izzat."

The additional arguments on either side are as follows :—

*Daily Wage Men.*—(1) They are not whole-time servants of Government ; (2) They are therefore entitled to overtime ; (3) Unless specifically agreed to the contrary, they can go absent at any time without penalty, and in any case the penalty is small ; (4) They can be paid at piece-work rates, without difficulty, and allocation of time to a job is simple ; (5) There is no difficulty, other than funds being available without injustice to others, in arranging for a limited amount of leave with pay ; (6) Rates of pay are by custom fixed locally, and can follow market conditions.

*Monthly Wage Men.*—(1) Are whole-time servants of Government ; (2) They are therefore not entitled to overtime, and special sanctions have to be obtained to pay it ; (3) In theory one day's absence without leave ends their service, and washes out all previous service unless absence is specially condoned. In practice this is arranged for, but at any time they are at the mercy of audit, which is necessarily soulless ; (4) Piece-work payment is difficult if not impossible, and time allocation to a job is harder ; (5) They are automatically entitled to privilege leave under certain conditions annually ; (6) Rates of pay have invariably to be sanctioned by higher and non-local authority, and payment has to be subject to pre-audit. It is in consequence difficult for rates to follow the market ; (7) From the old idea of what are now considered illegitimate " perquisites," the rates of pay which will initially attract are low, and this leads later to dissatisfaction.

*Regularity of Employment and rates of Pay.*—The question has been asked whether we have to pay higher wages owing to irregularity of employment. There is no such thing as absolute constancy of employment in any job which depends on demand. The army is commonly regarded as constant employment, and yet in the war temporary engagements were innumerable.

This impossibility of guaranteeing continuity is common to all firms employing labour of the class we do. We endeavour to keep labour as constant as possible because anything else is expensive, not in direct wages, but in lost material and time.

We have repeatedly made comparisons with other firms, and do not seem to pay more at any rate, either in money or money's worth.

The question has further been touched on in the detailed replies from factories (see Metal and Steel Factory, para. 101).

### XIII.—Industrial Efficiency of Workers.

The questionnaire as it stands is very difficult to deal with. Workmen's efficiency depends very largely (a) on efficient management, administration and plant, while (b) it also depends on welfare, health, education, standards of living, etc.

In my opinion, to undertake a given volume of work a larger number of Indian workmen and a larger number of men employed on supervision and planning is necessary than is the case in England.

While as regards (a) we can have a standard as equally high as in England, as regards (b) we are a long way behind, and this seems the avenue along which to increase efficiency.

The experience of ordnance factories from 1796 onwards has shown that with efficient management, Indian factories can compete effectively with imported goods, and in the long run definitely undersell imported goods of identical quality and similar numbers, provided always they are produced by the same methods, i.e., mass production or general engineering methods. It is obvious that an article in either country produced by general engineering methods cannot compete with one produced by mass production. The point, however, is that it takes from two to five years to do this, after all plant is ready and manufacture started, and it will only be obtained if the management is accustomed to make the best advantage of the peculiarities of Indian labour.

One further difficulty has inevitably to be faced. If a new industry starts in England, a "by product" market exists or can be developed. In India "by product" markets are very difficult to find.

Though only speaking for ordnance factories, I believe that the same experience will be found in commercial work. The fact that ordnance factories have to carry greater capital and nucleus staff in peace to insure meeting war needs is balanced by profit and interest on capital, which has to be taken into account in commercial enterprises.

Generally speaking, we consider that there are ample margins for the standard of comfort and education to rise considerably without undue difficulty to the management in keeping costs competitive, provided the workmen continue to realize that to get greater advantages, they must earn them. This, I think, they are shrewd enough to realize.

### XV.—Industrial Disputes.

The Indian workman as a whole is singularly unvoiced, and it is, in consequence, very hard to always ascertain what grievances exist. If one can do this, it is often easy to remove the grievance. Their very voicelessness, however, makes them suspicious of changes, and it is often difficult to get rid of imaginary grievances.

If a grievance cannot be accurately located, their voicelessness is an unmitigated nuisance. What, for want of a better word can only be called political agitators, find it easy to get hold of them. In this event strikes are apt to be long drawn and futile, and the removal of the real grievances does not always lead to contentment.

An example was the introduction of the Labour Bureau at the Rifle Factory. The first and immediate effect of the Labour Bureau was to put a somewhat abrupt end to the system which had grown up and was justified by tradition, whereby gang mistries and various higher grades got a rake off from individual workmen on employment, and promotion, and had considerable say in discharges. Although the men, who lost traditional perquisites and power were given small increases in pay, they did not appreciate the innovation. The workmen even were suspicious, as they imagined at first they were losing the old protection from above. The suspicion was taken full advantage of by outsiders to boost "non-co-operation." After some six weeks the men came back unconditionally, but it still took some time to get them to fully realize that they were better off.

The break up of the gang system at Cawnpore led to similar trouble, but more sporadic.

Delays in dealing in 1920 with a known and located grievance at Jubbalpore led to a long drawn out strike, but it took several years to really re-establish confidence.

In the case of this grievance the cause was located at Kirkee, and was common to all India. During the war the cost of living rose, and earnings during the war period (which in factories continued throughout the Afghan war and later) kept pace with this owing to overtime and increased intensity of planning. When the pressure ceased all earnings, particularly piece-workers, fell below the minimum necessary for a reasonable standard of comfort. The cause was obvious, and increased rates were ordered forthwith, together with a strict scrutiny of all workmen's jobs to ascertain

whether they were workers or passengers. Passengers were eliminated as far as justice would allow. The result was to give individuals enough pay without any appreciable rise in the cost of goods. The increased efficiency soon removed even the slight rise in the latter.

Rapid action was taken in all factories except Jubbulpore, and elsewhere there was little or no trouble. At Jubbulpore there was delay, and the superintendent was moved elsewhere.

This voicelessness of the Indian workmen makes the higher management ready to welcome labour unions. A union which will give the management coherent intimation of incipient grievances is invaluable. At the same time not every union can be welcomed, it must really represent the men, and have their interests at heart. If the union presses for abnormal privileges for one group, it is merely raising discontent elsewhere. The Indian workman is intensely shrewd. An analogy to his village system is easily followed. When reductions of staff become necessary, for example, they will instantly appreciate why their village cannot afford to keep more than two blacksmiths to look after 200 cattle. A union that brings this shrewdness to bear is invaluable, one that does not is damaging in the long run both to the management and workmen.

The question of recognition is complicated. For example, it is hard to expect a Government to recognize a union which definitely announces that one of its objects is to destroy that Government. At the same time if the union is reasonably sane, no difficulty is experienced in practice whether there is formal recognition or no. In any case the management, higher and lower, do meet union representatives and do hear their views, and such action is taken as is practicable.

## APPENDIX I.

### *Technical and Vocational Training.*

The whole of the various schemes now working in the factories are shown in extracts from the report made by the Master-General of the Ordnance in 1926 on his proposals for revision and improvement. Most of these recommendations have been carried out except as regards gazetted officers, which latter are still under consideration with the Secretary of State, and this part has been omitted as it will not apparently interest the Labour Commission.

### *Report on Vocational Training in the Ordnance Factories in India with proposals for Revision and Improvement.*

Part I.—General; Part II.—Boy Artisans; Part III.—Apprentices; Part IV.—Apprenticeship training in individual factories; Part V.—Schools; Part VI.—Hostels; Part VII.—Financial proposals.

#### *Abbreviations used.*

R. F. . . . .	..	..	Rifle Factory, Ishapore.
M. & S. F. . . . .	..	..	Metal and Steel Factory, Ishapore.
G. & S. F. . . . .	..	..	Gun and Shell Factory, Cossipore.
H. & S. F. . . . .	..	..	Harness and Saddlery Factory, Cawnpore.

Cord. F. . . . .	..	..	Cordite Factory, Aruvankadu (near Ootacamund).
Clo. F. . . . .	..	..	Clothing Factory, Shahjahanpur.
M. G. S. . . . .	..	..	Master-General of Supply (now Master-General of the Ordnance in India).
D. O. F. & M. . . . .	..	..	Director of Ordnance Factories and Manufacture.

## PART I.

### *General.*

1. Vocational training has been carried on in various ways in ordnance factories since their inception. A revised apprenticeship scheme was sanctioned as lately as A. D. letter No. 1048-4 (O. 3), dated 19th January, 1924, but no attempt was made to place schools and boy artisan training on a satisfactory footing. The apprentice scheme has done good work, but experience has shown that it requires revision and pruning, while a co-ordinated, all-embracing scheme of vocational training, if now sanctioned, may lead to very successful results. It is hoped that this report will show that the authorities concerned are very whole-heartedly keen on making a success

and giving the inhabitants of India a chance to train in ordnance factories. Naturally, as practically the whole expense is borne by the army, the interests of the ordnance factories is the predominating feature, but there is no obligation for those trained to remain in the factories; so successful scheme must undoubtedly react wholesomely on India in general.

It will be noted that the additional expenditure asked for, both initial and recurring, is very small, compared with the importance of the results, which may be obtained.

2. Ordnance factories not only cover, a very wide field of production, but the products must be of a high standard, as in use they are subjected to severe conditions at a time when failure may be disastrous. Further, they are products of precision and inter-changeable, requiring accurately adjusted machinery, high grade tools, and work of a high degree of exactitude. As weight is a very important consideration, strength must be obtained by quality, not quantity of material. Taking steel as an example, this means that the material must be perfectly treated and subjected to physical, chemical and microscopic tests. The critical constants must be determined by the thermal curves. It is then forged at definite temperatures, normalized and macrographs taken to examine the flow of grain. It is then machined, and it is often necessary to relieve the stresses by annealings. It is hardened and tempered, the process being controlled by pyrometers. The results being checked by the Brinell impact test, tensile tests, photo-micrograph, etc. An equally careful and scientific procedure is required for other materials. This, however, is not now a laboratory, but a workshop operation, and in the hands of workmen who have to deal with expensive and delicate appliances.

To enable the best to be made of material as outlined above, experience and knowledge of a high degree are required, and this is brought to the workshop in the form of supervision. In old days, the good workman rose to foreman, but he would be quite incapable of supervising the processes mentioned above. Now, to properly exercise this supervision a comparatively high professional and scientific training is necessary, together with manual dexterity acquired by experience, and this is even more necessary in India than in other countries in view of the general low efficiency of the labour that has to be supervised. It is further obvious that supervision can now only be entrusted to the educated, and can be only efficiently exercised by men with long experience and training.

3. The above paragraph is an attempt to show very briefly why the ordnance factories have to engage their supervision in England, and why it is vitally necessary for them to educate and train men in India to enable English recruits to be replaced. This is the object of our apprentice schemes.

4. Further, as regards workmen, the Indian shows considerable intelligence, and has proved himself capable of work requiring the highest skill, but generally he is handicapped by lack of elementary education, and the average of skilled labour is very low and largely illiterate. Hence we also require to educate boys to become tradesmen, with highly developed manual skill, combined with sufficient elementary education to read and write English, to enable them to have access to engineering tables and data. This is the object of our boy artisan classes.

5. We require in factories :—(a) *Gazetted officers*, who must be men of high education, great technical knowledge, ripe experience and the necessary qualities to make leaders of men. It is seldom that they will be found by promotion from (b) *Foremen and others engaged in supervision* (see Part III). These men must be absolute experts at their trades to command respect from their workmen, combined with sufficient education to efficiently exercise the functions of supervision sketched in paragraph 1. Grit and personality are very important qualities; (c) *Skilled tradesmen* (see Part II).

6. We will now deal with these three grades in the reverse order.

## PART II.

### *Skilled Tradesmen supplied by the Boy Artisan Class.*

1. *Field of Recruitment and Numbers required.*—As far as possible, they should be sons of our workmen, and their numbers might be unlimited, both for the sake of the factories on mobilization and for the general good of India.

The numbers that can be entertained, however, depend on the load on the factories. If working at full output, a large number could be entertained, but working, as we are at present on reduced output, the numbers must be restricted both because of the reduced flow of work, and because too large numbers would mask production costs.

The existing numbers and the numbers recommended at present are :—

	R. F.	M. & S. F.	G. & S. F.	H. & S. F.	G.C.F.	A.F.	Cord.	F. Clo.	F. Total.
Existing .. ..	19	16	28	18	84	14	18	Nil.	197
Recommended .. ..	30	20	30	25	50	20	10	20	205

The M. G. S. should be empowered to raise these numbers to a maximum of 300, if time and experience show they can be absorbed without detriment to factory output.

2. *Education*—(a) *Theoretical*.—This will be compulsory for boy artisans in factory schools, which now require to be placed where necessary on a sound basis. This is a transferred subject, and the local education grants only finance a school to the same extent as money is provided by the local body, which is the factory. This question of schools being a lengthy one is dealt with in Part V. It must be understood that not only boy artisans are concerned, but the general question of workmen's children and half-timers working in the factory.

(b) *Technical*.—This should be practically in one trade or in one or two branches thereof, and the object is to produce skilled tradesmen, and from these in time higher grade of extra temporary supervision than is now obtainable.

(i) The training should normally be for 4 years, but in certain trades may be extended to 5 years, at the discretion of the superintendent.

(ii) There will be no obligation to employ or render service at the termination of the training.

(iii) Age of recruitment should not be less than 12 or more than 17, but each factory may fix its range at the discretion of the superintendent to suit the various trades it caters for.

(iv) There should be approximately 10 hours per week theoretical instruction in school, of as high a standard as the factory can provide or the boys assimilate. Where it is more convenient or efficient to give this in night schools, it may be done.

(v) A minimum of 6 hours a day to be spent in the shops as soon as possible, and as far as possible on production work.

(vi) Maximum pay as follows, but pay to be fixed by each factory superintendent to suit the circumstances of the station. Promotion to be based on proved earning capacity (but see note below) :—

1st year .. ..	..	..	..	..	8 annas per diem.
2nd " .. ..	..	..	..	..	8 " "
3rd " .. ..	..	..	..	..	10 " "
4th " .. ..	..	..	..	..	12 " "
5th " .. ..	..	..	..	..	14 " "

One anna extra per diem for good colloquial English, and a further one anna for reading and writing English. Further, in cases where boy artisans show great skill and proficiency, they may be placed on piece-work rates at the discretion of the superintendent. Eight annas a month to be contributed by each boy artisan to the schools. Eight annas a month to be passed to the credit of the boy artisan in a deferred pay fund, and only to be paid over to him on his completing his course to the satisfaction of the superintendent.

Note.—In cases where a lad who is already earning satisfactory money in one branch of a trade (e.g., milling) is changed over to another branch (e.g., slotting) for training, he should have his daily rate continued, whatever his earnings, for such period as it is considered by the Superintendent reasonable for him to take to attain the equivalent degree of skill.

3.—*Cost*.—Boy artisans have been trained in the ordnance factories for over 50 years, but no attempt has been made to definitely settle their status. They have been treated as unskilled workers and, as stated under apprentices, the fluctuating load on factories means constantly "hiring" and "dismissing" men. Whenever a new unskilled workman is taken on he is put on a daily rate, but for some time he costs an appreciable sum. Till he knows his work he spoils machines, materials and tools, and takes up the time of mistries and foremen in teaching him. This is part of inevitable expenditure against the factory.

Boy artisans are treated in the same way, and in some factories boy artisans soon earn their pay, but in others they do not.

For example, in the R. F. he is carefully selected, for 140 days he is attached to a selected skilled workman, usually a relative. After 140 days without pay, he gets his share of the profit or of this gang of two, or may be permitted to work alone, and very soon earns his pay.

In other factories, it is impossible to get boys to work without pay, and in some cases the workmen object to having them in their gangs.

Further, he has to go for two hours schooling, which deducts from his production. No provision is made for theoretical tuition, books or apparatus.

Further, average lads may earn their pay, but the lads above the average, whom we specially want to train for the extra temporary supervision, require special arrangements, and often, in consequence, cannot earn their pay.

On the sanction of the apprentice scheme, some difficulty arose with regard to boy artisans as the accounts rightly contended that they did not all earn all their pay, and it was decided to charge, wherever possible, direct to production, and the balance to a special work order A.-67, which was the apprentice grant, and limited to Rs. 50,000, and already too small for the apprentice scheme.

Now, it is requested that the scheme may be regularized, and a definite sum sanctioned by Government as a maximum and placed at the disposal of the D. O. F. & M. for allocation to factories.

The factory allotment should be placed to a special work order Training of Boy Artisans, which will be debited with the pay of each boy, and credited with his productive out-turn, the account of each boy being kept separate. Taking a four years course as a normal, the average pay proposed works out at As.  $4^a=9\frac{1}{2}$  annas per diem. Add 50 per cent. of the extra 2 annas allowed for English = 1 anna. Average pay  $10\frac{1}{2}$  annas. As shown, any definite estimate for a fair charge direct to production is impossible, and a conservative guess may be 5 annas, leaving  $5\frac{1}{2}$  for indirect charge. Add  $\frac{1}{2}$  anna for equipment, prizes, miscellaneous, making 6 annas in all. Taking working days at 24 a month, this works out to 9 rupees a month per boy artisan or Rs. 108 a year.

It must be understood that the whole is now borne by the factory, and the above is only a convenient method of watching results, and allocating to indirect charges or direct charges.

It is requested that this may be sanctioned up to a maximum of 300 boy artisans, provision being made in the budget for the actual numbers anticipated in the coming year. If experience shows a greater percentage can be charged direct to production, the budget provision can be altered.

Further, it is found that it is often very efficient to give a bonus to selected artisans for instructions, and sanction may be accorded for a bonus up to Rs. 4 per mensem to be given when considered necessary by the superintendent, and charged to the special work order.

### PART III.

#### *Apprentices.*

1. *General.*—The existing scheme is as sanctioned in army department letter No. 1048-4 (O. 3), dated Simla, the 19th January, 1924, and has generally shown signs of success, but experience now enables us to more accurately define its scope, and make some improvements and alterations. The existing scheme is in some ways based on the system followed at the Royal Ordnance Factories, England.

2. *Object.*—It must be definitely understood that our object is to train men *who can build on their apprentice training, by work as improvers*, and ultimately fit themselves for chargemen, assistant foremen and foremen as their individual capacity and personality dictate. A few may rise to higher things, and provision is being made for these.

It will be understood that the opportunities, trades, standards, etc., possible, vary enormously in the different factories, and each must be considered separately, but there are some general principles common to all factories.

3. *Recruitment.*—Recruits are available in far greater numbers than our requirements or capacity for training, and in many cases we can demand a high educational qualification. The following principles should be laid down:—

(i) Apprentices will be recruited from every race and creed found suitable for performance of the work required. They will include a proportion of Europeans, Anglo-Indians, Mohammedans, Hindus, Sikhs, Punjabis, Madrasis, etc. It is most undesirable that any one class or caste should predominate.

(ii) Too great stress should not be laid on purely educational qualifications, and social standing, physique, health, character, skill at games, etc., must be considered. Candidates successful in the qualifying examination should be personally interviewed before final selection.

(iii) The entrance qualification should be generally a "sound general education." The exact qualifications to be fixed by each factory to suit their peculiar circumstances and to be sanctioned by the M. G. S.

(iv) *Period of Apprenticeship*.—To be five years, except in certain specialized trades (e.g., plumbing), where a longer or shorter period is required and is customary. Also the term is extensible in case of unavoidable sickness. It is to be sanctioned by D. O. F. & M.

(v) *Scope of Apprenticeship*.—"General Engineering Apprenticeship" to be limited to four factories—those at Ishapore, the Gun Carriage Factory at Jubbulpore and the Ammunition Factory, Kirkee. The other factories to have specialized apprentices. *Apprentices*.—Most of the apprentices at the Metal and Steel Factory will be "special."

(vi) *Pay*.—The maximum rates of subsistence pay, as at present sanctioned, are as follows, but rates may be fixed within this scale in each factory, to suit the circumstances of the locality and this will be sanctioned by the M. G. S.

					Rs.	
1st year	..	..	..	..	40 p.m.	} If housed by the State, Rs. 20 p.m. to be deducted. (See, however, para. 5 below.)
2nd "	..	..	..	..	50 "	
3rd "	..	..	..	..	60 "	
4th "	..	..	..	..	70 "	
5th "	..	..	..	..	80 "	
6th "	..	..	..	..	100 "	

10 per cent. of an apprentice's pay will be deducted and placed in the Post Office Savings Bank or a recognized deferred pay fund. It will only be paid to him if he completes the full apprenticeship to the satisfaction of the superintendent, and no other charges are outstanding against him.

(vii) *Rules*.—Conditions of service, indentures if any, rules, etc., to be based on a common principle, but to be drawn up to suit the individual needs of each factory and sanctioned by the M. G. S. as is done at present.

4. The present number of apprentices sanctioned is 290, and the existing number is 171 (1925).

I propose the following maximum numbers for the factories :—

R. F.	M. & S.	G. & S.	H. & S.	G. C. Fy.	A. F.	Cord F.	Clo. F.	Total.
60	30	20	24	32	16	20	20	222

or allowing for contingencies, say 230.

I propose therefore that instead of the intricate rules existing, there should be a fixed grant of Rs. 22 per apprentice.

5. *Deduction of Rs. 20 p.m. for Rent*.—The present rule is that if an apprentice is housed in a hostel, a deduction of Rs. 20 on account of rent is made. This is regarded as a grievance. The rates of subsistence pay have been given with a view to a living wage for boys apprenticed a long way from their homes, and we propose to embrace all India. I strongly recommend this deduction should be done away with altogether, but if this is not approved it should be reduced to a nominal figure. It should be recognized that a subsistence pay is for a definite purpose, and all charges, such as rent, lighting, water tax and conservancy should be a book debit against training and not recoverable.

#### PART IV.

*Consideration of the Conditions of Apprenticeship Training in individual Factories.*

1. *General Engineering Apprentices*—(a) *R. F.*—This factory has gone far ahead of all others, and has a successful system of apprenticeship developed. The educational qualifications of applicants is high and so selection is easy, but it has the inherent disadvantage that up to date practically only Bengalis have been admitted. This is now being changed, and letters issued to all Governments in India to nominate candidates for the entrance examination.

This is the only factory which does and can aim at two classes of apprentices :—

(a) Student apprentices ; (b) Trade apprentices.

*Student Apprentices*.—The entrance qualifications and entrance examination are fairly stiff. The object of the theoretical and practical training is to turn out lads for trades which require general engineering education. The apprentice will still require to work as an improver, but this time may be spent in any selected factory or workshop. He should rise rapidly to charyman and assistant foreman.

It is emphasised that the training of student apprentices does not mean the lads are being trained for gazetted ranks, but rather for trades such as draughtsmen, gauge, tool and fixing designers, etc., which require general professional engineering training. The training is intended to be of a standard which would enable a lad to compete for a Whitworth scholarship, if such existed in India. It must be recognized that attaining to higher posts is a matter of personal qualifications, including experience, and a certain few of the best will be eligible for further training.

Lads who cannot keep pace with the work will on the recommendation of the superintendent, be permitted to join the trade apprentice class. The number sanctioned is five per annum.

*Trade Apprentices.*—This is the general type of apprentice we cater for, and while learning one trade thoroughly, apprentices are given opportunities of learning a reasonable amount about allied trades (e.g., a toolmaker will be trained primarily as a fitter and turner, but will do a certain amount in smithy, pattern making, drawing office, etc.). It is intended the lads should be thoroughly useful tradesmen, so trained that the most ambitious and capable will not be handicapped by lack of technical knowledge from rising to the posts of foremen. This paragraph may be taken to apply to all trade apprentices in all factories. The R. F. is well equipped for high grade tool production and for plant maintenance, but otherwise has little machinery of a general engineering character and the trades which can at present be taken on are:—(1) Toolmakers; (2) Millwrights; (3) Blacksmiths; (4) Joiners and pattern makers.

The number sanctioned is the number necessary to bring the total number of apprentices at any given time up to 60. It will be seen that this scheme is very much more complete than possible in any other factory, and it is recommended that for the R. F. in addition to the Rs. 22 a month per apprentice, the following be sanctioned:—

	Rs.
(1) Hostel * superintendent at average pay 273 .. .. .	3,276 per annum
(2) Full-time lecturers at 273 .. .. .	6,552 ..
	9,828 ..

The monthly allowance will be required for the part-time services of members of the staff, equipment, etc.

Ten student apprentices have completed their training. Eight have been retained as improvers, one has obtained employment in the M. & S. F. and one in the inspection branch.

Four trade apprentices have passed out; one is employed in the M. & S. F. and two in the Calcutta Corporation, and one in the Stocking (woodwork) section of the factory.

(b) *M. & S. F.*—This factory has no apprentices at present, but a scheme is now under consideration. They will all be trade apprentices, and the following trades can be catered for:—(1) Non-ferrous worker; (2) Blacksmiths; (3) Steel rollers; (4) Moulders; (5) Electrical engineers; (6) Millwrights; (7) Toolmakers.

The apprentices will attend for theoretical work the class in the R. F. for the technical instruction of trade lads, and may be required to take such classes with the international correspondence schools as the superintendent may direct.

*Notes.*—It has been found that very few, if any, Indians will take up apprenticeship at the M. & S. F. The work is very heavy and hot.

(c) *G. & S. F.*—The apprentices are of the class of trade apprentices, and carry out their theoretical training at the Calcutta Technical Evening School, and are given lectures of a semi-practical and technical nature by the factory staff.

There are at present 16 apprentices, and 10 have passed out. Two are supervisors in the factory. The rest were offered work as improvers, but selected to leave, and of these, six are known to have obtained appointments with engineering firms of repute.

(d) *G. C. F.*—The following trades are available for trade apprentices:—(1) Machine workers; (2) Fitters and erectors; (3) Smiths; (4) Moulders and pattern makers; (5) Carpenters; (6) Power station work.

Theoretical work is at present done by the factory staff. The present number is 36.

\* See Hostels.

Seven have completed their course of training. One has been selected by the Central Provinces Government for a 3-year improver course with an engineering firm in England. Another has entered the Manchester Works of the Metropolitan Vickers Co. on a 2 years' scholarship. Three have been engaged by the factory, one in the inspection branch and one in the electrical department of the G. I. P. Railway. As this is a very promising field for apprenticeship, it is recommended that a hostel be built (*vide* Part VI). Further, this year for apprentice training, a physical and chemical laboratory has been provided in the main office block. The present allowance for a senior chemical instructor is 50 p.m. and a junior 25 p.m.=Rs. 900 per annum.

The work is done by two chemists on the factory staff, whose salaries less the above 900 are charged to works inspection. As they devote more than half their time to apprentice training, it is considered only fair that half their salaries, viz., Rs. 2,250 be charged to apprentice instruction being an increase of 1,350 per annum.

2. *Specialized Trade Apprentices*—(a) *Harness & S. F.*—Apprentices take the following courses:—

A. Tanning	..	..	..	..	..	4 years.
Currying	..	..	..	..	..	2 ..
B. Harness and saddlery	..	..	..	..	..	5 ..

Local arrangements are made for hostel accommodation. There are at present eight apprentices, only one has completed the course, and has gained a post in a local tannery. No alteration recommended.

(b) *A. F.*—There are at present 18 apprentices. Three have passed out, one being appointed to the factory, one has proceeded to England, and one has obtained employment in India. The trade apprentices at the A. F. do a general engineering training. A new scheme is now under consideration. The Poona Engineering College gives students a three years' course of theoretical and practical training in mechanical and electrical engineering, and then places them for two years with the Tata Iron and Steel Works, Jamshedpur; M. & S. M. Railway Workshops, Perambur; E. I. Railway Workshops, Jamalpur; B. N. Railway Workshops, Kharagpur; B. B. & C. I. Ry. Workshops, Ajmer.

It is proposed that the A. F. should become a training centre for these apprentices. It is thought the factory will get a far better trained apprentice at a reduced cost of training as the factory has very poor facilities for theoretical education. I recommend that the power to inaugurate this scheme be vested in the M. G. S., provided that the cost does not exceed that at present sanctioned for 16 apprentices allotted to the A. F., viz., pay as per Part III, paragraph 2 (vi), plus 22 per mensem per apprentice.

(c) *Cord. F.*—The trade apprentices are here necessarily specialized, and the object of training is to provide men who can be employed in a supervisory capacity in chemical works. The scope and numbers are consequently limited. Two years are devoted to machine tools, fitting, carpentry, smithy, repair and maintenance of electrical plant, steam boilers, and two years to practical operations involved in cordite manufacture (excluding the manufacture of nitro-glycerine). The rules, etc., are satisfactory, and no alteration is recommended.

This factory should be given Rs. 300 per mensem, till the number of apprentices reaches 14. It should also be given an initial grant of Rs. 3,000 per annum for three years to provide all the necessary equipment, etc., which starting a scheme involves.

(d) *Clo. F.*—This factory has only been recently taken over by the M. G. S. branch and rebuilt and reorganized. It has no schools, apprentices, boy artisans or welfare scheme.

## PART V.

### *Schools.*

Schooling for children of employees is imperative from the point of view of the moral obligation of the employer, and the ultimate efficiency of the factories. It will be seen from the following report on existing schools that the circumstances and success of the existing schools vary and seem greatly dependent on local initiative. Some have been built and supported or partly built and partly supported from the Workmen's Fine Fund which severely cripples the Fine Fund.

In certain cases there are no teachers, except volunteers from the staff.

Schools are required not only for boy artisans, but for the large number of half-timer boys working in the factories, and also for the children of workmen, or families living on the estate.

The existing situation in each factory will be reviewed separately, and the immediate needs to place the schools on a satisfactory footing noted. Education is a transferred subject, and the local Governments have assisted, but in some cases shortage of funds is, as usual, in the way.

I. R. F.—This is by far the most elaborate system and consists of :—

(a) The ordnance Village Infant School. For children below 8 years of age.

(See M. and S. F.)

(b) The ordnance Village Primary School. Provides a four years' course of primary education, especially adapted for requirements of an engineering career. It caters also for the M. and S.F. The boy artisans attend the school, and also special evening classes.

(c) Missing link—a technical school—dealt with afterwards.

(d) Continuation classes. These are held in the factory by Indian personnel, such as clerks, supervisors, draughtsmen, godown keepers, etc., and comprise such subjects as fitting, turning, English, elementary mathematics and are self-supporting.

2. *The Technical School.*—This is the missing link as under the existing system there is a break in the education of boys between the age of 12, when they leave the primary school, and the age of 15, when they join the factory.

It will also provide evening instruction for the purpose of raising the status of men in employment, which they cannot do at present. The school has only just been sanctioned. The capital cost will be Rs. 50,490.

*Recurring Cost* Rs. 540.

The Bengal Government have agreed to contribute Rs. 25,000 capital and Rs. 3,600 per annum.

3. *Staff of the Primary School.*—Towards this we receive a grant-in-aid for three years from the Bengal Government which covers the cost of staff (excluding part-time instructors, 40 rupees p.m. paid from the Fine Fund). Local Governments, as a rule, only pay half the cost and owners the rest, but the reason for their generosity is that they paid nothing to the cost of buildings and their grant-in-aid will be reduced to half in 1929. The Fine Fund also contributes a sum of about Rs. 1,000 per annum for electric light, equipment and prizes which should be really a Government contribution.

I recommend that the following expenditure should be sanctioned, viz., Rs. 1,500 p.a. at present, and Rs. 3,760 p.a. from 1929 onwards.

4. *Buildings.*—Excellent buildings exist, the funds for which were originally sanctioned from the Fine Funds of the R. F. and M. & S. F., but the M. & S. F. could provide no funds except for the Infant School, so the rest of the cost has fallen on the R. F. This consisted of :—

	Rs.
Buildings .. .. .	about 12,000
Equipment .. .. .	2,000

5. Inspectors' reports have been very satisfactory.

II. M. & S. F.—This factory has only a Primary School for boys and girls up to 8 years, which it shares with the R. F.

No funds are available, and expenses are met from the Fine Fund. An application to Government for Rs. 100 a month for the maintenance of the school in 1922 was held up pending the result of the Inchcape Committee recommendations. This was again held over in 1923 while the Inspector of Schools, Presidency Division, Calcutta, stated his allotment was only sufficient to meet existing grants.

I recommend a recurring grant of Rs. 1,000 per annum be sanctioned to cover cost of teachers, prizes, equipment, etc. Efforts will still be made to get a grant from the Bengal Government.

III. G. & S. F.—This factory has an Anglo-Vernacular School situated in the factory, and attended by 78 boys employed in it, including boy artisans (under 18).

The staff consists of six teachers and one secretary from the factory clerical staff, who receive no remuneration.

Extra expenses are met from the boy artisan fund. The boy artisans subscribe a monthly subscription of  $\frac{1}{4}$  anna per rupee of pay, and thus support the school.

The services of the factory staff are hardly voluntary, and the system causes inconvenience and discontent.

I recommend that a permanent staff of three teachers on Rs. 60, 50 and 40 per mensem be sanctioned. The annual cost being Rs. 1,800 and Rs. 200 for equipment, prizes, etc., making an annual grant of Rs. 2,000 in all.

IV. G. C. F.—This is a more elaborate system. It consists of two schools, viz. :—  
(a) Anglo-Vernacular and Middle School, including boy artisans and half-timers ;  
(b) Primary.

These two schools are housed in an excellent building, obtained by extending old buildings and consists of 9 rooms.

*Finance—*

	Rs.
Annual grant-in-aid—Boy Artisan and Anglo-Vernacular and Middle Schools—from Central Provinces Government .. .. .	933
Annual grant-in-aid—Primary School—from the Central Provinces Government .. .. .	808
Factory .. .. .	1,020
Fees from boy artisan students .. .. .	1,032
Fees from Anglo-Vernacular Middle and Primary School students ..	1,129
	4,922

*Requirements.*—For the last two years the lowest class has consisted of 80 boys. These are divided into two portions and occupy two rooms. Already this year 25 applications have been refused for want of room. Further, class VIII was formed this year, and there is one room short. Two additional rooms are required at an estimated cost of Rs. 3,000. Seven electric fans are required at a cost of Rs. 1,134.

The present factory contribution is Rs. 1,020, and it is recommended this be increased to Rs. 1,250 to meet the cost of replacement of furniture, equipment and up-keep of library.

V. H. & S. F.—There only exists a primary school which is held in some open sheds, and is attended by 29 boys employed in the factory, whose attendance is compulsory, and 44 children of workmen (who pay 8 annas a month).

It works in 3 shifts of 2 hours, each boy attending for 2 hours.

*Finance.*—Factory grant Rs. 600 per annum ; United Provinces Government grant Rs. 576 per annum ; each boy who earns over Rs. 6 a month is charged a fee of 8 annas.

There is an undoubted want of a better school and decent buildings. It is proposed to add an Angle-Vernacular School, and the estimated cost of buildings and equipment is Rs. 14,000. Additional staff would be required, and though no details have yet been worked out, it is anticipated that Rs. 2,600 per annum would be sufficient.

VI. A. F.—Here the circumstances are very different. The whole schooling is done in the Alegaonkar Brothers Schools. These brothers were factory clerks who gave up their professions to start schools.

There are six day schools and seven night schools situated in Kirkee, and various suburbs and villages where the workmen dwell, and are partly financed by the local Government.

Factory boys who attend are given an increase of six pies per diem on the principle that an educated boy is of more value than an uneducated one.

Eight annas a month is collected from the pay of these boys and paid to the school. Last year the amount was Rs. 1,460.

The Fine Fund paid Rs. 2,000 to assist in new school buildings, and in 1926 Rs. 1,000 to maintenance. This factory has a large number of children of school-going age employed in the factory, viz., 524 (in 1925) out of which 246 were attending the Alegaonkar Schools.

I am of opinion that in addition to what the Fine Fund can afford, we should give Rs. 2,000 per annum, and a special grant of Rs. 5,000 to the Building Fund.

If more information is required regarding these excellent schools, it can be furnished.

VII. *Cord F.*—This factory only has a night school. Average attendance 70-75.

The staff is financed by a provincial grant.

The situation in Aruvankadu is somewhat different to most other factories, and after consultation with the local educational authorities, it is recommended that a Higher Elementary Anglo-Vernacular School be instituted. It is estimated that about 260 scholars will attend.

The local education authorities should provide half, so our expenses would be :—

	Rs.
Initial .. .. .	16,500
Recurring .. .. .	3,726

VIII. *Clo. F.*—This factory has recently been taken over by the M. G. S., and has no school or educational facilities, technical or otherwise.

I recommend there should be (a) Infant school for children under 8 ; (b) Anglo-vernacular school for boys over 8 and for boy artisans.

A rough estimate of the cost of the building is Rs. 20,000 and equipment Rs. 2,000.

Endeavours would be made to get the local Government to pay half the initial and recurring cost.

## PART VI.

### *Hostels.*

Hostels are required at the R. F., which will include accommodation for the apprentices of the M. and S. F. and at the G. C. F.

*Rife Factory.*—Accommodation is required for 90 apprentices. At present two old war-time barracks provide accommodation for 20 each and 8 class X quarters which will be used for hostel superintendent, teachers, sick boys and six apprentices. Total available 46. So additional accommodation is required for 44 apprentices. The dormitory principle, which has been successful at Ishapore for six years, is recommended.

Three cook-houses with connected messes are required for (a) Mohammedans, (b) Hindus of Bombay and Madras, (c) Hindus of the rest of India. Ablution shed and drying rooms and latrine with water-borne sewage will be provided. Modest provision for a library is provided, and for health and recreation purposes a small gymnasium and 3 pucca tennis courts.

The rough estimate is taken at Rs. 3,400 per head, approximately Rs. 1,50,000. This includes equipment as follows :—Tennis courts, gymnasium, library, beds with mosquito poles, mosquito nets, chests of drawers, kit boxes, tables and stools.

G. C. F.—A hostel here is a necessity for the proper execution of a factory scheme.

(This hostel has not so far been built owing to scarcity of funds.)

## APPENDIX II (abridged).

*Sanctioned permanent establishment in the Indian Ordnance and Clothing Factories, and in Arsenals, Ordnance and Clothing Depots in India.*

10 Factories.	Non-gazetted staff, e.g., Foremen, Assistant Foremen, etc.	Clerical establishment.	Medical establishment.	Miscellaneous.	Total.

## APPENDIX IV.

*Analysis of the uneconomical effects of a large Labour turnover.*

*Tailors.*

One tailor draws on piece-work 6 annas per unit of work done.

The standing charges for one day per tailor come in round figures to 12 annas a day.

A man who has had about 12 months' experience does 3 units a day, and there is definite evidence that with 3 years' experience he could do 4 units. If he does 3 units the cost is—

Piece-work rates	.. .. .	18 annas.
Standing charges	.. .. .	12 ..

**30**

or 10 anna per unit in all.

A new man only does  $1\frac{1}{2}$  units at first and reaches 2 units after about a month's work, and the cost is—

Piece-work rates	..	..	..	..	12 annas.
Standing charges	..	..	..	..	12 ..
					24 ..

or 12 annas per unit.

The extra expense in consequence of having new hands is 2 annas per unit or  $16\frac{1}{2}$  per cent. of the man's earnings. This loss occurs for at least six months, and means that 8 per cent. of the man's earnings are lost by each turnover of labour.

There is further but very small loss of material by spoil work.

To maintain a force of 1,200 men last year 2,836 were engaged, stopped a short time and then left.

#### *Cordite Rifle Pressing.*

The machines can in theory do 73 cycles per shift.

A really trained man (12 months' experience) will get 72 cycles and a yield of  $1\frac{1}{2}$  lbs. per cycle, equivalent to an output of 96 lbs. The cost of these 96 lbs. excluding material is—

Day work rate...	..	..	..	..	12 annas.
Standing charges	..	..	..	..	84 .. (700 per cent.)
					96 ..
					= 1 anna per lb.

An unskilled man will only get 64 cycles after a month, and a yield of  $1\frac{1}{2}$  lbs., equivalent to 72 lbs. per shift.

The cost is the same as the skilled man's 96 lbs. or  $1\frac{1}{2}$  annas per lb. The extra cost for an output of 960 lbs. is therefore 240 annas.

This means that each turnover of labour per year costs nearly 100 per cent. of the day workers' earnings per annum.

In addition there is a very appreciable loss by the expenditure of acetone and labour on reworking the waste; which would amount to about 1 anna per lb.

This is the case when the plant is fully loaded. In peace, however, the plant is half empty, and we rarely employ extra men, which means that the cost of 96 lbs. goes up to 100 annas or an increase of  $33\frac{1}{3}$  on the man's day rate.

The turnover in this factory, which is only manned with a nucleus staff, is 10-15 per cent. per annum.

#### *Cartridge Making.*

One operation in this is drawing. This is done on a machine which can in theory do 108 strokes per minute.

Experience has shown we can only get 400 working minutes in a shift of  $7\frac{1}{2}$  hours.

A really experienced hand will get 95 effective strokes per minute out of the machine, or a yield of 38,000 cases per day. He gets  $\frac{1}{4}$  of an anna per 1,000 at piece-work rates, and costs are per 38,000.

Wages ..	..	..	..	..	12 $\frac{1}{2}$ annas.
Standing charges	..	..	..	..	25 $\frac{1}{2}$ ..
					38 ..
					or 1 anna per 1,000.

A new hand will only get 80 effective strokes per minute after one month's work, or an output of 32,000 per shift. These cost—

Wages ..	..	..	..	..	10 $\frac{1}{2}$ annas.
Standing charges	..	..	..	..	25 $\frac{1}{2}$ ..
					36 ..
					or $1\frac{1}{2}$ annas per 1,000 = 1.13.

In addition there are very heavy spoil work charges; experience has shown that the difference in expenditure between new and old hands throughout is—

Old hands	..	..	..	..	·275 cwts. per 1,000 cases.
New hands	..	..	..	..	·315 " " "
Difference	..	..	..	..	<u>·040</u>

This, however, has to be divided among 10 operations, and hence the loss for the one considered is per 1,000 cases—

$$\cdot 004 \times 90 \times 16 \text{ annas} = 5.76 \text{ annas.}$$

Rs. 90 is the loss in value for each cwt. of brass cups damaged. The total increase in cost is thus 5.92 annas per 1,000 cases, which is over 100 per cent. on the experienced man's earnings, and the full extent of this loss is felt on each change in labour for at least two months, and then rapidly diminishes. Turnover of labour in this group averages 25 per cent.

In these three groups of unskilled labourers the loss on each turnover of labourer comes to per annum—(a) Tailor group about 8 per cent. of the man's earnings; (b) Cordite group about 16 per cent. of the man's earnings; (c) Cartridge group over 100 per cent. of the man's earnings. This loss is distributed over expenditure on—(1) Increase of labour staff payments; (2) Wear and tear of plant; (3) Wastage of material used. American labour experts estimate that each new hiring costs 25 per cent. of the man's annual wages.

It is worth trying to stop this loss; the attempt can be made in two ways—(a) by increase of labour rates, which is only of temporary effect, but requires no sanction. It would be relatively expensive, about 10 per cent. of the wages bill; (b) by a provident fund, which will cost about 2½ per cent. of the wages bill at most. This has been suggested by the labour unions. Even if success is only very limited the savings which follow will recoup us, and in consequence I am prepared to certify that no extra cash is needed, though I cannot specify whether the actual saving will show by diminution of—(1) number of labourers, i.e., reduction of wages total bill; (2) reduction in amount of material expended; (3) reduction in indirect expenditure on repairs. If there is any appreciable saving as a result the army gets the benefit at the next periodic revision of P. V. S. rates.

#### APPENDIX VI.

##### Cost of Welfare Schemes in Ordnance and Clothing Factories in India.

N.B.—The figures are approximate.

Serial No.	Name of Measure.	Existing Buildings and Welfare Institutions.		Proposed Schemes.		Remarks.
		Initial.	Recurring per annum.	Initial.	Recurring per annum.	
1	Housing schemes	Rs. 9,22,600	Rs. 37,300	Rs. 62,96,000	Rs. 86,500	Approval of Government has been accorded to provision of quarters for about 50 per cent. of the labour strength of factories during peace time. The total cost of this scheme, which includes 3 hospitals and 4 schools, comes to Rs. 69.74 lakhs, out of which Rs. 6.78 lakhs has been spent during the past 6 years, and the balance, Rs. 62.96 lakhs, is still to be spent. Approximately Rs. 2 lakhs are provided annually for this scheme. In addition to Rs. 9.22 lakhs spent during the last 6 years on quarters for workmen a considerable amount has been spent sporadically during the 160 years and more that the factories have been in existence.

## APPENDIX VI.—contd.

Serial No.	Name of Measure.	Existing Buildings and Welfare Institutions.		Proposed Schemes.		Remarks.
		Initial	Recurring per annum.	Initial.	Recurring per annum.	
2	Factory Clubs for Indian employees	Rs. 14,290	Rs. 200	—	—	This is for the Ordnance, Indian Club at Ishapore.
3	Hospitals and dispensaries, including Maternity Wards.	1,25,000	(x) 82,000 (y) 1,720	(z) 34,400	470	(z) On hospital and dispensary staff and equipment. (y) Maintenance of hospital and dispensary buildings. (x) Initial cost of proposed 12-bedded hospital at G. C. Fy., Jubbulpore, for workmen and their families.
4	Dinner sheds and tiffin rooms for workmen, clerks, etc.	64,900	—	—	—	Rs. 50,200 spent from Government funds and Rs. 5,700 from the Fine Funds of the factories.
5	Co-operative Credit Societies Stores and other stores.	(a) 26,900 (b) 3,000	—	—	—	(a) Erected from Fine Fund at Rifle Factory, Ishapore. (b) Erected from Fine Fund at Harness and Saddlery Factory, Cawnpore.
6	Education of workmen's children.	(c) 1,30,700	(a) 37,690  (b) 1,530	—	—	(a) On school staff and equipment. Local Governments contribute Rs. 13,740 per annum towards this expenditure. (b) Maintenance of school buildings. (c) Cost of factory schools—Rs. 1,11,000 spent from Government funds and Rs. 20,000 from Fine Funds. Rs. 15,890 (cost) will be contributed by local Government towards cost of new school at Cordite Factory.
7	Provident fund for supervisors, clerks and workmen on temporary and extra temporary establishments.	—	—	—	1,15,900	
8	Grant of casual leave with pay to daily rated workmen and piece-workers.	—	—	—	2,10,000	
9	Free issue of ice, lemon, &c., to workmen employed on arduous work, such as on furnaces.	—	2,000	—	—	
10	Machinery, educational cinema plant and theatrical equipment for Technical School, Ishapore, and general instruction and entertainment of employees and their families.	5,250	—	—	—	Rs. 1,500 granted by His Excellency the Commander-in-Chief from funds at his disposal and Rs. 3,750 allotted from the Fine Fund of the Rifle Factory, Ishapore.

## APPENDIX VII.

*Copy of Letter No. E-1024, dated 23rd May, 1919, from the Secretary, Indian Munitions Board (through the Director of Ordnance Factories), to the Secretary, Foreman's Association of India, Dum Dum, Calcutta.*

I am directed to acknowledge your letter addressed to the President, Indian Munitions Board, No. M.-5, dated 28th April, 1919, regarding the meeting which took place on the 31st March, 1919, between the Hon'ble Sir Thomas Holland and a deputation from the Association, when the question of the official recognition of the Foreman's Association of India was discussed.

2. Sir Thomas Holland has explained to your representatives that the attitude of Government towards such bodies as your own is a friendly one, and that there is no objection to their being officially recognized as representing in each case the class of Government employees concerned, subject to the observance of certain essential conditions. These conditions are :—

(a) That an Association can be recognized by Government only in so far as it represents a distinct class of Government employees employed under a single department of Government ;

(b) that Government can recognize only associations which employ no paid officer who is not in the active service of Government, and belonging to that class of Government servants which the Association represents ;

*Exception.*—This would not, however, preclude the employment as an office holder, of a pensioned officer of the same class.

(c) That an Association shall be allowed to represent the interests of a class but not of an individual ; the representation of a class may cover questions relating to conditions of work such as remuneration, hours of work, grant of leave and the like, which though they may relate directly to a single individual only, may also affect all the members or a group of members of the association concerned ; but it does not give the association any right to represent individual cases in matters of discipline, promotion, transfer or extension or in any matter which can only affect a single member of the staff ; such cases being dealt with by the ordinary memorial rule procedure, namely by application by the individual himself ;

(d) that an association must correspond with Government through the regular official channel as prescribed for individual Government servants of the class represented. Obviously, this procedure prevents a source of delay in dealing with a representation.

3. I am to say that the Government of India accordingly agree to grant official recognition to your association, subject to the observance of the preceding conditions and will be pleased to accord it such support as is practicable in its efforts to improve the technical efficiency of the staff represented, and generally to improve their amenities in such a way as to conduce towards their contentment. The Government of India observe that though, so far as is known, the present membership of your Association is confined to employees of the Indian ordnance factories, the Rules of Association would allow of other persons of similar status, belonging to other departments or private firms, also becoming members. It must be understood that the recognition now promised to your association is governed by condition (a) above. While there is no objection to your association comprising persons other than ordnance factory employees, you will understand that the Government of India can consider its representations only when they are limited to the interests of a specific class as already defined.

(Copy forwarded to the Department of Commerce and Industry for information.)

## APPENDIX VIII.

## RULES.

**PART A.**—*Rules applicable to Government Employees in Departments other than the Police and Prisons Departments.*

1. Government is prepared to accord official recognition to associations of its employees which comply with the conditions set out in the following rules. Representations from such associations, whether made orally, by deputation, or presented in writing, may be received by Government officers, subject to the conditions set out in these rules, and notwithstanding anything contained in the rule relating to the submission of petitions and memorials by Government servants.

*Notes.*—Nothing in these rules affects the discretion of the Governor-General and the Governor or other Head of a Province to receive or not to receive a deputation from any association.

2. The association must ordinarily consist of a distinct class of Government employees.

3. Every Government employee of the same class must be eligible for membership of the association.

4. Ordinarily Government will not object to persons who are not in the active service of Government being office-holders of the association, but Government reserves the right in particular cases of refusing recognition to associations of which all the office-holders are not either in the active service of Government or honourably retired officers belonging to the same class of Government employees as the association represents.

5. No representation or deputation will be received, except in connection with a matter which is, or raises questions which are, of common interest to the class represented by the association.

6. Government may require regular submission, for its information, of copies of the rules of the association and the annual statement of its accounts and of lists of its members. In the event of legislation being passed which will permit of the registration of the association, the association shall be duly registered.

7. Government may specify the channel through which representations from the association shall be submitted and the authority by whom deputations may be received.

8. The officer who is empowered to grant leave to a Government employee will, so far as is possible, grant casual leave to an employee who is a representative of a recognized association to attend duly constituted meetings of the association. The grant of such leave will be subject to the exigencies of the service, of which the officer in question shall be the sole judge, and such officer will have complete discretion to refuse such leave if asked for more than once in any month.

9. (1) In these rules unless the context otherwise requires "Government" includes a local Government and a Department of the Government of India.

(2) A local Government or a Department of the Government of India may delegate any of its powers under rules 1 to 8 to any authority subordinate to it.

(3) A local Government or a Department of the Government of India may make subsidiary rules relating to the recognition of associations of classes of Government employees subordinate to it.

---

COL. J. D. GRAHAM, C.I.E., I.M.S., PUBLIC HEALTH COMMISSIONER  
WITH THE GOVERNMENT OF INDIA.

1. Prior to the introduction of the Reforms in 1921 industrial hygiene as a Division of the Health Organization was not regarded in India, and, indeed, in many other countries, as being of very material significance. Though, even at that time, signs were not wanting that the public and professional consciences in various countries had already demanded or were moving towards a demand for such an organization, the real awakening was just beginning, and throughout the British Empire outside of Great Britain, the movement is consequently hardly more than a decade old. It is little wonder, therefore, that India had at that period made practically no organized effort to collect any data, and to co-ordinate and control this work.

2. The peculiar circumstances surrounding the organization of the medical services in India—circumstances which have been detailed in full in a volume\* prepared for the League of Nations Interchange of Health Officers two years ago—were not calculated to produce in the post-reform period such a modern development as a Division of Industrial Hygiene. Such an omission, though it is partly, no doubt, the fault of the organization referred to, indicates a very definite gap in the central health organization as at present constituted.

3. In the pre-reform period a few of the provinces took limited cognisance of this subject in their annual health reports, but the information was always scrappy; in the post-reform period, so far from becoming augmented, this has tended to become even more scrappy. In verification of this one need only turn to the annual report of the Public Health Commissioner to see how meagre is this information in regard to

---

\* Health Organization in British India, by Colonel J. D. Graham, C.I.E., I.M.S.

industrial hygiene for an empire like that of India. It has now been arranged, however, to give greater provincial latitude to health directors in the arrangement of these health reports, and to break away from the stereotyped sectional headings of the past which have held the field for over two decades. In such instances industrial hygiene is being and will be given its proper place in these new schemes.

4. In pre-war days most civil surgeons throughout India were, where circumstances indicated, medical inspectors under the Factories Act; but I understand that this role has now ceased for many of them. Here and there certain directors of public health have been able to keep a finger on this pulse, even though the control was no longer vested in them, and have remained in visiting charge of some plants such as certain mining operations in Madras, the Burma Corporation works at Namtu, certain mines in Bombay, etc. In Bombay the officers of the Public Health Department still inspect factories, and in Madras and in the United Provinces directors of public health, certain civil surgeons and district and municipal health officers are "ex-officio" additional inspectors of factories within the limits of their jurisdictions. It is obvious that little information which was precise and in line with modern developments was likely to be available from such inspections, and a reference to the provincial reports bears this out. As a result there could be no systematic attempt to collect relevant data centrally, and such therefore do not exist. Whether, under the developments envisaged in Dominion Status, the central medical re-organization associated with such a future will be framed to include a division of industrial hygiene it is impossible to say; but there can be no doubt from the technical point of view of the necessity for its creation and organization.

5. In view of the closeness of the parallels to that of India, it will be profitable to examine briefly some other systems now in operation.

6. Great Britain has been a pioneer in this field and began early; but, if we glance hastily at this organization in other countries and in other parts of the British Empire, we see how recent is its growth.

7. In Canada it dates from 1919, and was a definite result of the British (War-time) Health of Munitions Workers Committee, which produced a realization of the main principles, of the fact that output and health are integrally related, and that health reacts delicately to all factors in the working environment. As a result of the Federal Committee on Industrial Fatigue in 1919, the assembly of a library and relevant data was made possible; and publicity and propaganda work were begun. In 1920 the former were in due course transferred to the newly created Division of Industrial Hygiene, which has functioned at Toronto for the last seven years. In 1928 a division was inaugurated for Quebec at the University of McGill. Both of these have concerned themselves with the formation of a library and information bureaux, with publicity, with propaganda, with full time medical services, and with the study of various occupational diseases both experimentally and in the field. As a result, though there is much still requiring to be done, a large number of important industries have now been investigated and are under hygienic control. Though legislation to date is scanty and there are no factory medical inspectors, the Factories Act has been administered through the Factory Inspecting Department.

8. In Australia this movement began with an enquiry into lead poisoning in Broken Hill Mines in 1893; but, at the time of Federation in 1901, there was no factory branch of any health department of State. Between 1901 and 1914 two royal commissions and various enquiries took place; but it was largely as the result, in 1917-18, of the stimulus from the Rockefeller Foundation's investigations into "hookworm" in New Guinea and Queensland that American experts were deputed to help for two years and that, in 1921, a division of industrial hygiene was established. This division, since its inception, has been exceptionally active at its three conferences of 1922, 1924 and 1927 by breaking new ground on each occasion, and by getting down to notification of occupational diseases, factory inspection, hygienic standards, morbidity statistics, child and female labour, accidents, the various poisonings, clothing trade and printing industries, flour mills, examination of Government employees, etc. The Royal Commission on Health in 1926 led to a Federal Health Council being established, and this is now functioning to the benefit of all such industrial questions. The Division of Industrial Hygiene now deals with statistics, the publications of special reports, industrial welfare services (medical, dental, nursing), medical examination of employees, uniformity of records, university training for medical officers in industrial health, and special surveys in order to set up Australian standards. In spite of all this progress and gradual improvement "State" inertia exists, and the position is still considered defective and incomplete, though it is recognized that Federation has made State co-ordination possible in a way which was not previously the case. It is realized, however, that a good start has been made, and that it is only a matter of time till employers grasp its significance and value.

9. The position in South Africa first centred round mining, and the problems associated with the importation of a large native labour population. Lord Milner, in 1903, was responsible for initiating enquiries, and in 1911 a Medical Commission on Miner's Phthisis was appointed. Since 1926 the big developments have taken place, and some of these have a special interest for us in India, in view of the composition of the labour force and the importation of much of it from Portuguese East Africa. Such diseases as silicosis, tuberculosis, hookworm, pneumonia, typhoid, scurvy as well as industrial fatigue in its various aspects have all been specially investigated with a view to scientific and rational control; and the more specifically urgent problems such as tuberculosis and pneumonia have received very special attention at the hands of the South Africa Institute for Medical Research.

10. In America this work began desultorily by its introduction over 15 years ago into certain of the more enlightened labour plants, and has since spread rapidly. I mention a few facts in this connection as examples of what is going on.

(a) The Tennessee Coal and Iron Railroad Company have, since 1913, organized and operated an Industrial Health Department very much on the lines of that of the Asansole Mines Board and the Jharia Mines Board in Bengal, thus controlling some 22 villages in six sanitary areas and establishing divisions of sanitation, medical relief, dentistry, and a social science department. This has been reproduced in scores of plants in other industries.

(b) In 1924 the New York State as a result of a conference between the College of Physicians and Surgeons, the Industrial Health Division of the State Department of Labour and the Reconstruction Hospital of New York State, established an industrial hygiene clinic in New York with devices to diagnose and treat industrial diseases, and to teach doctors in regard to these. This clinic is highly organized for the purpose with X-ray, electro-photo-hydro-mechano and occupational therapy.

(c) The Public Health Institutes created at Yale and Harvard are developing departments where highly specialized experimental research on such physiological problems as ventilation and illumination, humidity, atmosphere, etc., can be easily undertaken and efficient demonstrations given to students.

(d) Over nine years ago the Association of Industrial Physicians and Surgeons was inaugurated in America and this has done valuable work by publications, propaganda and advice on the various aspects of industrial hygiene.

(e) The Federal Government has a bureau of industrial hygiene and sanitation under its Division of Scientific Research. This is a very live bureau.

11. From the above brief references to what is happening outside of India it is obvious that not only is this a branch of recent growth, but that on these analogies a similar organization should exist in the Central Health Department of an empire like that of India. It is not for a moment suggested that nothing has been done in India in this regard. Problems of industrial housing and modern sanitation have been tackled in many industrial areas which the Commission will visit, more especially in Bombay, Nagpur, Cawnpore, Tatanagar, Calcutta, etc.; while problems specially associated with the control and prevention of infectious diseases and such tropical diseases as hookworm and malaria are being intelligently grappled with in the tea and rubber areas, in the jute factories, in the coal and iron areas of Bengal and in other places.

12. India has a wealth of disease problems; some of which are peculiarly her own; but those most in the limelight, so far as labour is concerned, are connected with the three infectious diseases—plague, cholera and smallpox—with tuberculosis, malaria, hookworm, skin diseases, including leprosy, drug addiction and, in a minor way, with venereal disease, cancer and respiratory diseases generally. The variety of "study" problems comprised in the term "industrial hygiene," in so far as India is concerned, is very great. Such problems, for example, as the examination of employees, housing, welfare of women and children in factories, fatigue and rest, nutrition, pregnancy, accidents and their relief, ventilation and lighting, child labour, malingering, noise, eye and mental strain, electric accidents, temperature, humidity, air movement, dust and health education generally are only some of those that must claim attention.

13. As Public Health Commissioner with the Government of India I feel it my duty to emphasize the necessity for the creation of a central bureau or division of industrial hygiene in any developments of the central health organization of the future. In view of the transfer under the Reforms Act and the Devolution rules of certain aspects of health work to the provinces, it may be necessary, however, to allay some slight degree of suspicion which seems to be in danger of developing between Provincial and Central Governments as a result of this transfer. The creation of a Ministry of Health would no doubt help to circumvent this; but, short of this proposal, the creation of a thoroughly representative Central Health Board would probably go far

towards meeting such difficulties as I have in my mind. The resolutions of such a Board, if it were sufficiently representative, should carry weight everywhere, and would allow of co-ordination of effort and, if necessary, legislation, on an all India basis. Such a Board would help to justify, from the administrative point of view, the creation of such a central bureau, and would be a great step forward for the wage earner, the employer, the individual doctor and society generally.

### CHIEF COMMISSIONER, AJMER-MERWARA.

#### *Conditions of Industrial Labour in Ajmer-Merwara.*

*Extent, Distribution and Classification.*—Ajmer-Merwara is a district of 2,711 square miles with a population, according to the 1921 Census, of 4,95,271. It is surrounded on all sides by various Indian States of Rajputana. There are no plantations in the district. Statistics with regard to industrial undertakings were collected at the time of the last census. Eight years have since elapsed, and changes have occurred, but the figures may be taken as approximately indicating the present position. They show that the number of industrial establishments in the district employing ten or more persons was 73, and the number of persons employed in them was 20,410, *i.e.*, about 4 per cent. of the total population. These establishments were classified as follows:—

Industry.	Number of Establishments.	Number of persons employed.
Mines .. .. .	24	736
Textiles .. .. .	19	2,405
Wood .. .. .	2	48
Metal .. .. .	1	30
Food industries .. .. .	6	146
Dress .. .. .	2	48
Furniture .. .. .	2	24
Means of Transport .. .. .	7	16,295
Physical forces .. .. .	1	24
Luxury .. .. .	8	511
Jail factories .. .. .	1	143
<b>Total .. .. .</b>	<b>73</b>	<b>20,410</b>

The classification of these establishments (excluding the Jail Factory) with reference to size and the use of mechanical power or otherwise is shown below:—

Size of establishments.	Using power.		Not using power.	
	number of establishments.	persons employed.	number of establishments.	persons employed.
10—20 persons ..	3	47	17	237
20—50 .. .. .	10	315	23	710
50—100 .. .. .	6	434	3	185
100—200 .. .. .	5	576	1	164
200—400 .. .. .	—	—	—	—
400 and over ..	4	17,599	—	—
<b>Total .. .. .</b>	<b>28</b>	<b>18,971</b>	<b>44</b>	<b>1,296</b>

*2. Strength of Labour.*—The last report on the working of the Indian Factories Act in Ajmer-Merwara, compiled by the Inspector of Factories, Punjab, North-West Frontier Province, Delhi and Ajmer-Merwara—for the year 1928—shows that there

were 40 factories in the district subject to control under the Act, 35 of which worked during the year. Their classification and the average daily number of persons employed was as follows :—

Industry.	Number of factories.	Average daily number of persons employed.	Remarks.
Textiles .. Cotton (spinning, weaving and other) factories	5*	2,097	*Two are combined with cotton ginning and pressing factories.
Engineering .. Railway workshops ..	4	10,353	
Minerals and metals .. Foundries .. ..	1	17	
Paper and printing .. Printing presses ..	1	113	
Food, drink and tobacco .. Ice and aerated waters ..	1	14	
Gins and presses Cotton ginning and baling .. ..	23	2,277	
Total ..	35	14,871	

Of the 14,871 operatives employed in these factories, during 1928, 13,252 were males, 1,388 females and 231 children (between 12 and 15 years of age). Eighty-five per cent. of these workers are employed throughout the year, and 15 per cent. for four to six months, only the latter being engaged on seasonal work in cotton ginning factories.

3. The principal employers of labour in this district are the Bombay, Baroda and Central India Railway Company in their carriage and wagon and locomotive workshops in Ajmer, each of which employs about 5,000 men. Next in importance come the three principal cotton spinning and weaving mills which are located at Beawar in Merwara and employ over 2,000 persons. The cotton ginning and pressing factories also provide work for over 2,000 employees. The majority of these are located in Beawar and Kekri, but there are isolated factories at different places in various parts of the district.

4. *Recruitment.*—Recruitment of labour is not a serious consideration with the factory owners who do not attach any great importance to references except in the case of supervising and mechanical staff. The method adopted by the employer is frequently that of taking a worker for a week or more on trial, during which period wages are not always paid.

Labour in textile mills is mostly recruited from the agricultural classes, and to some extent from the artisans from neighbouring villages, but technical experts are imported principally from Ahmedabad and the United Provinces.

The B. B. & C. I. Railway Workshops, Ajmer, who employ skilled labour from almost all the neighbouring provinces, recruit mostly from the sons and relatives of their employees. The higher technical staff is imported from England.

5. *Unemployment.*—There is a certain amount of unemployment amongst workers in cotton ginning factories, the reason being that the cotton industry has experienced three poor seasons in succession. In textile mills there has been little or no unemployment during the past three or four years, this is due mainly to the fact that labour troubles in Bombay and Ahmedabad have increased the work in the textile mills of Ajmer-Merwara, and these mills have not only greatly expanded during recent years, but have also been working at full pressure.

6. *Mines.*—The mining industry is not of great importance. The mines are mostly surface mica mines scattered about the district. They are not worked very regularly or systematically and obtain labour, as required, from villages in the vicinity. As regards health, efficiency and standard of living, there is no distinction between the labourers so employed and the agriculturist. They are ordinary villagers, who from time to time take employment in the "mines" instead of working in the fields.

7. *Standard of Living.*—Generally speaking the standard of living of industrial labourers in this district is not different from the ordinary standard of living of the masses of the population. They live in the towns or villages, in or near which the factories and mills in which they are employed are located, and under the same conditions of life as any other residents of these towns or villages. As they have regular

work and in most cases adequate pay they are to this extent better off, and have more money to spend than the ordinary agriculturist who ekes out a precarious existence with uncertain harvests, dependent on the vagaries of the monsoon, and with land revenue to deduct from his profits. In some respects the establishment of mills and factories has definitely raised the standard of living of certain sections of the community. But the standard is still low, and the sustenance it provides is inclined to be inadequate. The final report of the last settlement of the district, written in 1910, contains the following observations in the section relating to the "condition of the people."

"The establishment of the railway workshops at Ajmer and the development of Nayanagar (Beawar) together with the frequent famines have had a great effect upon the condition of the artisan classes and the labourers. Formerly these village servants were paid for their work by doles of grain, or sheaves of the cut crop at harvest time, according to the amounts or rates fixed and recorded in the village's 'Wajib-ul-arz.' Uncertain and short payments of these, however, have yielded before the superior attractions of employment at regular cash wages always to be had at the workshops of mills. The workshops absorb all the labour that offers itself, and pay good wages. The previous village system has, therefore, largely broken down, but on the whole to the convenience of both parties, as the villagers now pay for the piece of work done, while the artisan class is on the whole well off, or where some of them have remained still in the villages can better themselves by moving into Ajmer or Beawar. These workshops and mills and the growing demand for labour for handling goods in the towns and at railway stations, have made things easier for the unskilled village labourers also, as in the intervals between ordinary agricultural operations they can generally find employment at good wages if they wish for it."

This was written many years ago, but serves to show that the effect of the mills and factories on the economic life of the district has been beneficial. It cannot now be said that the workshops and mills absorb all the labour that offers itself. Since 1927 there has been some reduction in the numbers employed in the railway workshops in Ajmer, and for the present at any rate they are taking on few new hands, and can employ only a fraction of the available supply of labour. In the hilly sub-division of Merwara agriculture is scanty and precarious, and cannot provide a livelihood for the whole population of the rural area. In the past the army has taken the surplus, but this outlet is now closed. The 44th Merwara Infantry was disbanded after the war, and recruitment in Merwara for other regiments of the Indian Army has been discontinued since 1927. At the same time the Mers and Merats already serving in the army were mustered out and returned to their homes. Many of these men, for whom there was no room on the land or in the mills, have sought employment outside the district, *e.g.*, in the Ahmedabad mills.

8. *Housing*.—Quarters are generally provided for the permanent staff such as managers, engineers, etc. The factories employing a limited number of workmen or those carrying on business operations during a part of the year have no apparent intention to house their labour. Two of the textile mills in Beawar have, however, made provision on a restricted scale for the accommodation of their operatives at a reasonable rent. The dwelling provided by the Krishna Mills, Beawar, are mostly constructed in corrugated iron sheeting, and are lacking in ventilation and sanitation. The quarters provided by the Edward Mills, Beawar, on the other hand, are of a somewhat improved type. The quarters provided in Ajmer by the B. B. and C. I. Railway Co., are only for their European and Anglo-Indian staff of higher grades, *e.g.*, firemen, chargemen, drivers, etc. (about 700). No quarters are provided for the lower grades of workers in the railway workshops. The housing conditions of the accommodation provided by the B. B. and C. I. Railway workshops, Ajmer, are on the whole satisfactory in relation to drainage, water supply and sanitation. The bulk of the labouring classes in Ajmer and Beawar live in privately rented quarters, while those employed in the cotton ginning and pressing factories throughout the district live in the various towns and villages subject to the conditions generally prevailing in them. In Ajmer the employees in the locomotive and carriage and wagon workshops with their families form about half the total population of the town. In spite of reduction each workshop still employs over 5,000 men. They are to be found residing in all parts of the town, and its suburbs and the adjacent villages, but the largest number is concentrated in the suburbs of Jones Ganj, Ram Ganj and Nagra, in the vicinity of the workshops.

9. *Wages*.—Wages, of course, vary considerably with the nature of the work. The average pay for unskilled labour is 12 annas a day. For skilled labour the average ranges from Rs. 15 per mensem for a press compositor to Rs. 60 per mensem for a fitter. In the Beawar Mills the average wage of a whole time worker is between Rs. 22 and Rs. 30 a month. In the Kekri cotton ginning and pressing factories the average wage is somewhat lower, but still compares favourably with the average daily

wage of an agricultural labourer, which is about four annas. In the two big railway workshops in Ajmer the average daily wage of an Indian adult workman for an eight hours day is 22 annas. It has trebled since 1914, and more than doubled since 1919. Boys (from 12 to 15 years of age) earn from three to six annas a day. For Indian adult workmen the minimum wage is seven annas a day, and the maximum Rs. 2-10 annas under the ordinary rates, and Rs. 3-4 annas under the special rates, the application of which is restricted to 20 per cent. of the men drawing the ordinary rates. There are certain grades of boilermakers, fitters and erectors, and turners who earn from Re. 1 to Rs. 11 a day. These are filled by Europeans and Anglo-Indians.

10. *Conditions of Work.*—Considerable improvement has been effected in the conditions under which employees in factories work, by enforcing the provisions of the Indian Factories Act; by introducing rules in connection with ventilation and humidification in cotton spinning and weaving mills; by insisting on adequate arrangements for water supply and sanitation; and by preventing breaches of the rules prescribing proper intervals of rest, and a maximum of 60 hours work in a week.

11. *Health.*—As regards health industrial labourers suffer generally from the same disabilities and enjoy the same facilities as other classes of workers. They live in congested and unhealthy towns and insanitary villages. The majority of them live in Ajmer and Beawar, and the municipalities of these towns have under consideration extensive schemes for improving the sanitation and water supply, if funds are available. The Bombay, Baroda and Central India Railway Company contribute towards the municipal funds, and to this extent are helping to improve the conditions under which their employees live. The employees in the Beawar Mills and the railway workshops have special medical facilities provided by their employers. The former maintain for the benefit of their workmen dispensaries at which ordinary ailments can be treated, and first aid rendered in case of accident. The Bombay, Baroda and Central India Railway in Ajmer maintain a very well equipped central hospital, with 41 beds for in-patients, conveniently situated near the workshops. It has a thoroughly efficient staff, and provides excellent medical and surgical facilities, including anti-rabic treatment. There are also four branch dispensaries—one in the locomotive workshops, one in the carriage and wagon workshops and two others. Railway employees and members of their families are entitled to free treatment, if they attend at the hospital or any of the dispensaries at the fixed hours, or in their houses, if they are too ill to leave them. The following figures for 1928 indicate the extent of the work which the hospital and dispensaries are doing:—

New cases	.. .. .	31,004
Daily average number under treatment	.. .. .	628·07
In-patients:—		
Europeans and Anglo-Indians	.. .. .	173
Indians	.. .. .	509
		} 682
Major operations..	.. .. .	26
Minor operations..	.. .. .	3,414
X-ray examinations	.. .. .	203
Anti-rabic patients	.. .. .	128

The principal diseases are enteric, colitis, malaria, tuberculosis, pneumonia and trachoma. The standard of health of railway employees, other than those living in railway quarters, is not high. The sanitation of Ajmer being what it is, a high standard could hardly be expected. One of the principal localities occupied by railway employees is the suburb of Nagra, which is a particularly unhealthy and insanitary part of the town.

12. *General Sanitary Conditions.*—Sanitary conditions in the larger and well organized factories are on the whole satisfactory, but in smaller factories sanitation frequently leaves much to be desired, owing partly to the ignorance of the operatives and partly to lack of interest on the part of the factory management.

Latrines are provided for workers according to rules laid down in the Ajmer-Merwara factory rules: they are flushed and kept clean by persons especially appointed for the purpose. The habits of the labouring classes being generally dirty, latrines are frequently found to be in a very insanitary condition, due more to the workers themselves than to lack of provision for supervision.

13. *Efficiency.*—As regards the efficiency of labour the standard in the mills and in the ginning and pressing factories is not remarkably high. But in the railway workshops in Ajmer the standard is certainly high, and with regard to general efficiency the labour employed in these would probably compare favourably with similar classes of industrial labour in other parts of India.

14. *Education.*—In the way of providing special educational facilities very little is done by employers in Ajmer-Merwara. The B. B. & C. I. Railway maintain an anglo-vernacular school for boys for the benefit of their employees in Jones Ganj, and a vernacular Primary School for girls in the same suburb. Both are aided by municipal grants and the former also by a grant from Government. The railway spend about Rs. 3,500 on the boys' school and Rs. 600 on the girls' school. The enrolment is 98 in the former and 48 in the latter. There is also a Railway European Primary School for boys with an enrolment of 43. The railway expenditure on this school is about Rs. 3,000. Technical schools for training apprentices are also maintained by them. The educational efforts of the Beawar Mills are confined to grants to some of the local schools. Apart from the railway schools in Ajmer, employees in industrial establishments in this district are dependent on the schools maintained by Government and local bodies for educational facilities.

15. *Relations between Employers and Employed.*—The labour force in Ajmer-Merwara is mostly unorganized and illiterate. Relations between employers and employed in Ajmer-Merwara are good. As a general rule employers are not inconsiderate in their treatment of their workers, and are ready to redress genuine grievances. Attempts on the part of agitators, mostly not belonging to Ajmer-Merwara, to stir up discontent have not met with much response. Labour troubles in other industrial centres have their repercussions here, but they have hitherto not seriously disturbed the relations existing between the workers and their employers in this district. Ajmer-Merwara has been free from industrial disputes for the past ten years.

One trade union has recently been registered in Ajmer—"The B. B. & C. I. Railway Workers' Federation." It has 48 office bearers and committee members, 31 of whom are employees in the carriage and wagon workshops and 13 in the locomotive workshops. Its nominal membership is large, but it is doubtful if the majority are effective members who have paid their subscriptions and take an active interest in the affairs of the union. Two branches of railway unions, registered in Bombay and Ahmedabad respectively, have also been opened in Ajmer, but they are more or less dormant and are said to have had little success in enlisting members. The trade union movement has only just begun in Ajmer-Merwara, and it is too early yet to say how it will develop. On the whole, employees in industrial establishments here are well content with their lot. It is the ambition of nearly every boy of the classes which supply labour in Ajmer to obtain employment in the railway workshops and there is keen competition for any vacancies. There is no general dissatisfaction with rates of pay and conditions of work.

The *Workmen's Compensation Act* is working well, and employees get the full advantage of the benefits provided by it. Employers have evinced no desire to evade their obligations. 12,399 persons work in factories which come within the scope of the Act. In these 146 cases of accident, to which its provisions were applicable, were reported in 1928, and compensation, aggregating Rs. 7,762-4 annas, was paid in 141 cases to the persons injured or, in the cases of fatal injury, to their dependants.

16. *Co-operative Movement.*—Some mention should also be made of the co-operative movement, which contains great possibilities for advancing the welfare of the industrial labourer as well as the agriculturist. Fifty-two societies with a membership of about 1,000 have up to now been formed in this district among persons of the labouring class. The majority of these are in Beawar, their members being employees in the three big mills there. Their principal object is to encourage thrift, and there is ample scope for development in this direction. The industrial labourer no less than the agriculturist suffers from the evil effects of his own improvidence and the tyranny of his social customs. He spends large sums, altogether disproportionate to his income, on marriage and other ceremonies and consequently gets into the hands of the bania, and is saddled with a burden of debt. If the Co-operative movement can help him to escape from his own disastrous habits and customs, it will open up an avenue of progress at least not less promising than the avenue which trade unionism can provide by protecting him from unfavourable conditions of employment.

17. *Welfare Work.*—Except by the B. B. and C. I. Railway Workshops, Ajmer, very little is attempted for the welfare of the employees by the factories or other agencies in Ajmer-Merwara. The facilities for recreation provided by the railway company in Ajmer and the amenities which the railway institute offers (i.e., libraries, reading rooms, band and cinema shows) are provided for their European and Anglo-Indian employees only. It is, however, understood that the railway have given monetary assistance to a few recreation clubs started by their Indian employees. For the latter there is also an Indian Co-operative Association, at which they are able to purchase supplies at reasonable rates, and which thus exercises a moderating effect on prices generally, as its competition prevents profiteers from unduly forcing up prices of foodstuffs. Special sheds have also been erected for the operatives to take their meals in at meal times.

28. (ii) Special rules for the control of temperature and humidity in the cotton spinning and weaving mills came into force only last year. There are only five cotton spinning and weaving mills in which artificial humidity is being used at present, affecting about 2,097 operatives. The rules are still in an experimental stage, and it is yet too early to report with regard to their suitability or otherwise.

29. (i) Up to this time no occupational disease has been reported or has come to my notice.

## VII.—Safety.

43. *Railways.*—Regulations with regard to the workers' safety are shown in rules made under the Indian Factories Act, and are based on the workshop rules existing in Europe, altered where necessary to meet local conditions. An abstract of the principal rules relating to general safety is posted up at the entrance of all factories in English and in the language of the majority of workers. Apart from this, every year a circular letter is issued to all factories bringing to their notice the chief requirements relating to safety measures, and to other requirements of the factory law relating to hours of work, etc. In this circular a special reference is made with regard to the guarding of the dangerous machines, and any other matter of importance which requires careful attention, when these regulations are persistently violated prosecutions are instituted against the offenders.

44.—A reference to annual reports on the working of the Indian Factories Act in Ajmer-Merwara, will show that accidents have increased considerably during the past five years.

45. The increase in the number of accidents referred to in the preceding paragraph is attributable to the following causes :—

(a) More accurate reporting of accidents by factory owners, due to some extent to the strict administration of factory law.

(b) Operatives are themselves becoming acquainted with the fact that accidents should be reported and they frequently report themselves to the factory inspector's office.

(c) The introduction of the Workmen's Compensation Act has also had an effect on accident reporting as the injured persons think that by reporting accidents they might get compensation.

(d) Ignorance of the workers and a belief in fate rather than carefulness is also responsible for many accidents. After frequent demonstrations of how to handle a particular machine, workers with apparently full knowledge of the dangers, still take frightful and unnecessary risks.

(e) Frequent instances of serious accidents are reported where workers remove safety guards in order to clear a jam or fault, and use their hands or feet to put the fault right. This is to a great extent due to ignorance, but much also is due to carelessness and disregard of known dangers.

(f) Investigations into the causes of serious and fatal accidents to workers on dangerous duties, such as maintaining of pulleys in order, oiling of bearings, etc., show that underpaid and unskilled workers are put on jobs of which they have no experience; there is no definitely laid down standard of a skilled worker, and it is therefore impossible to bring home to the employer his responsibility in this respect.

49. (i) During the year 1928, 77 inspections were made, resulting in one prosecution to enforce factory regulations.

The bigger and well-organized mills do consider it their duty to work to factory rules, and make an effort to do so.

## IX.—Hours.

### A.—Factories.

55. Factory law permits working 11 hours a day, but not exceeding 60 hours a week. In perennial factories other than railway workshops is taken full advantage of.

56. Factories work for six days a week, and the seventh day, which is a Sunday, or a substituted day, is observed as a complete holiday.

57. So far as workers are concerned, they have welcomed the 60-hours week since the change has not been accompanied by the reduction in wages.

59. A further reduction in the maximum hours per week is, I think, not advisable, especially in the case of seasonal factories in which punctuality and consistent work are not noticeable amongst factory workers, few factories have yet adopted the

clocking in and out system, as a result considerable amount of time is wasted in getting to and from the actual job: it is improbable that in a 10-hours' day the average worker is on his job more than 8½ hours.

60. (i) *Existing Practice.*—(a) The break after putting in six hours' work is very useful and does go a long way in preventing undue fatigue.

(b) The break after six hours' work is utilized chiefly as a rest. The workers do not generally take their meals at this time, their meal hour being earlier in the morning, between 9 and 10, and again after their work in the evening.

(ii) The existing law seems to have worked satisfactorily in this direction.

(iv) Ample holidays are given or taken by the workers, apart from the weekly holidays there are many public holidays which are given to workers either as extra holidays or substituted for weekly holidays.

61. (i) The day of rest is usually Sunday. It is, however, possible to change the weekly rest day at any time by giving previous notice to the inspector, and this is done whenever the necessity arises—public holidays are often substituted for Sundays.

(ii) The existing law seems to have worked satisfactorily in this direction.

#### C.—Railways.

73. Railway workshops at Ajmer have a uniform eight hours a day or 48 hours a week.

74. Railway workshops work for six days a week, and the seventh day, which is a Sunday, is observed as a complete holiday.

76. Rest intervals and weekly holidays are observed like other factories.

### X.—Special Questions relating to Women, young Adults and Children.

#### A.—Factories.

82. The admission of children into factories is discouraged. It is, however, difficult to always keep them out, because they are too young to be separated from their mothers.

83. The present regulations with regard to the employment of women in factories are quite suitable. Hours of employment for women are the same as for men, except that the former cannot be employed before 5.30 a.m. or after 7 p.m.

84. The present law with regard to the employment of children appears to have worked satisfactorily.

### XII.—Wages.

96. (i) The prevailing rates of wages for the past five years are given below :—

Classification of Labour.	Average per Month.				
	1924.	1925.	1926.	1927.	1928.
<b>1. Skilled Labour.</b>					
Fitter .. .. .	Rs. a. p. 58 0 0	Rs. a. p. 58 0 0	Rs. a. p. 60 0 0	Rs. a. p. 60 0 0	Rs. a. p. 60 0 0
Blacksmith .. ..	35 0 0	35 0 0	35 0 0	35 0 0	34 0 0
Carpenter .. .. .	30 0 0	30 0 0	30 0 0	30 0 0	30 0 0
Engine driver.. ..	30 0 0	30 0 0	28 0 0	28 0 0	30 0 0
Boilerman .. .. .	30 0 0	30 0 0	28 0 0	28 0 0	28 0 0
Oilman .. .. .	18 0 0	18 0 0	18 0 0	18 0 0	20 0 0

Coolie (woman) on gins	0 5 0	0 5 0	0 5 0	0 5 6	0 5 6

**XIII.—Industrial Efficiency of Workers.**

112. The efficiency of the highly paid workers has increased slightly during the past five years, but in the case of labouring classes no improvement has been noticed. In fact the efficiency of these workers has not kept pace with the advent of modern machinery in factories. In my opinion health is one of the chief factors governing the efficiency of the workers, and unless the labouring classes are well fed by an increase in their wages, it is not possible to effect any improvement in this behalf.

113. I am of opinion that the foreign worker has proved to be more efficient than an Indian worker.

**XVII.—Administration.**

138. The average workman has little knowledge of factory legislation ; although copies of the abstracts of the Indian Factories Act and the rules made thereunder both in English and in the language of the majority of workers are posted up in every factory, yet it is doubtful if the worker ever makes an effort to get to know what the posters really mean.

139. (i) In this province which is one of the four provinces under my jurisdiction, namely, Punjab, Delhi, North-West Frontier Province and Ajmer-Merwara, the Factory Inspection staff consists of one full-time Inspector, one Industrial Surveyor under the control of Director of Industries, Punjab, stationed at Delhi, who is notified as additional Inspector of Factories under certain sections of the Indian Factories Act for Ajmer-Merwara.

The number of factories in this province at present is 40 and the staff is adequate.

It may be noted here that the local Government in the case of Punjab have decided to appoint one full-time Inspector with effect from 1st April, 1930, withdrawing the powers conferred upon the five Industrial Surveyors in the Punjab. Thus from April next there will be one Chief Inspector and one Inspector in the Punjab.

Should the Ajmer-Merwara Government follow the Punjab's lead in this respect, inspection of factories in Ajmer-Merwara will be much more efficient, as the big textile mills require considerably more attention from a fully qualified Inspector than can be given at present. The newly appointed Inspector for the Punjab will be an experienced technical officer, whereas the Additional Factory Inspector, Delhi, is notified for certain sections of the Act only.

(ii) Rigour and efficiency of administration of factory law depends on frequent inspections, instructions, prosecutions and finally on their results.

(iii) During the year 1928 only one case under the factory law was instituted against the occupier of a factory, and the same resulted in the conviction of the occupier.

---

Miss J. E. COPELAND, M.A., CHURCH OF SCOTLAND MISSION HOUSE,  
AJMER.

**I.—Recruitment.**

1. There is practically no migration. The chief industrial centres are Ajmer, Beawar, Kekri. Most of the labourers particularly the women labourers, are residents of these centres, or they come in from neighbouring villages.

2. Some labourers live in their villages and walk to and from work daily. Others move into town, but go out to their villages on holidays.

3. There should be some organized system of recruiting labour. The need is specially urgent in the matter of getting boys into suitable employment when they leave school, and in the matter of securing a better system of apprenticeship and training, either within the area or beyond.

7. There is considerable unemployment. The B. B. & C. I. Railway, which is the largest employer of labour in the area, is reducing its staff of workmen.

**III.—Housing.**

The B. B. & C. I. Railway have quarters for their employees, but not in sufficient numbers. There is indeed great shortage of houses for working people in Ajmer. In Beawar the Edward Mills and the Krishna Mills have some workmen's houses, but no adequate provision.

#### IV.—Health.

23. Registration of births and deaths is not effectively carried out, so reliable statistics are not available. Working conditions are on the whole satisfactory in the bigger concerns. Where there are home industries as "tying and dyeing" and "gota weaving" in Ajmer, the conditions are not good, because of the low rates of pay, the bad sanitary arrangements of the city, and the small size and bad ventilation of most of the workers' houses.

It is, however, a welcome sign of progress that local Vaidhy has just published a book on the "Increased Mortality in Beawar, its Causes and Cure."

24. In Ajmer, the B.B. & C.I. Railway have good medical arrangements, a hospital, dispensaries, child welfare centre. There are also good Government and mission hospitals, numerous private dispensaries, a maternity home, child welfare centres and a supply of trained midwives.

In Beawar there is a Government hospital, with male and female departments. Private Vaidhys (five) also practise in the city. But these facilities are far from the mill area. There is urgent need for more medical provision in Beawar, and this should be near the mills. Two of the mills engage the services of Vaidhys, but these are not always at the works. The third large mill keeps first aid appliances in the mill. There should be a Government dispensary in the mill area contributed to by the millowners. There should also be a trained midwife whose special duty it would be to look after maternity cases among the wives of the millhands and among the women labourers. This midwife should be supported by the three large mills, and her services should be made available free to the labourers. It would also be very desirable to have a trained health or welfare worker who would look after the women's interests in other than maternity cases.

25. Such facilities as exist are made use of.

26. Sanitary arrangements in the larger factories are fairly satisfactory. The B.B. & C.I. Railway employ no women and the silk factory only a few. Drinking water arrangements are good in the city, but sanitary arrangements are bad. In Beawar, where most of the women labourers of this district are employed, separate latrine and bathing arrangements should be provided in another part of the compound from the men's.

In one of the mills the drinking water is too far away from the work buildings.

28. The question of humidification in the Beawar Cotton Mills is engaging the attention of the inspecting officers.

#### V.—Welfare.

32. In Ajmer, the B.B. & C.I. Railway provide two schools for workers' children, one European school and one Indian. The railway also organizes an annual sports day and a Christmas tree for the children. Apart from this no definite welfare work is being done among the railway Indian employees or in the mills and ginning factories of Beawar and Kekri. Some years ago, a beginning was made in the Beawar Mills with a monthly visit to each of the three large concerns of a lady social worker, who held a meeting for the women labourers. This attempt at welfare work should be resumed, and progress made along these lines. In Ajmer, sports, recreation and amusements are catered for by many agencies. The various churches and missions, also, have many strong effective and helpful contacts with the railway employees, but more could be done if the employers helped directly by organization providing opportunities, lending halls, etc. The W.C. Temperance Union and other temperance societies, by occasional meetings, public or other lantern lectures, and other propaganda are also helping to raise the standard of life and efficiency among the labourers, but here more also could be done if the employers co-operated directly. In two of the Beawar Mills there are shelters set aside for the infants of women labourers, but except the building, no other arrangements are made by the millowners. These shelters should be utilized for creches with a competent woman in charge. Each of the three larger mills should have such a creche, with full time though not necessarily highly paid workers, and one trained health or welfare worker should organize and supervise all three and look after the wider interests of the women labourers.

36. In Ajmer, the B.B. & C.I. Railway provides for the education of workers' children in two schools, one for European, the other for Indian children. In Beawar, the mills contribute to schools in the city, but these schools are not attended by workers' children, who are almost entirely illiterate. In Kekri, no provision for education is made by the ginning factories, and the workers and their children are almost entirely illiterate.

**VI.—Education.**

40. In Ajmer, there are Government (higher education only) municipal, mission and other private schools. These are for children not in employment. There are some privately-run night schools for boys or young adults at work during the day.

41. Facilities for industrial and vocational training are quite inadequate. The principal method in use is to put a new worker alongside an experienced man or woman. The method as practised seems to have many defects.

**VII.—Safety.**

46. In all the Beawar mills safety propaganda consists only in the expectation that old workers should warn employees as they work beside them.

48. First aid appliances are kept, and two of the Beawar mills employ Vaidhys who, however, are not usually or always at the works.

50. Women are not employed in any of the more dangerous operations in the Beawar cotton mills or Kekri ginning factories.

**IX.—Hours.**

55. Women workers in Kekri and Beawar work 10 hours per day, 60 hours per week.

56. Sunday is the usual off-day, except in Jain factories, where the 8th and 14th are observed as holidays. When a festival falls upon a working day in any week the workers must work on Sunday to make up for the holiday on account of the festival.

60. In the mills, workers seem to take their meals at any time, and there seemed a lack of concentrated effort. The working hours should be reduced to nine or eight per day.

**X.—Special Questions relating to Women, young Adults and Children.**

82. Infants play around in the factory and mill compounds, but are forbidden to go near dangerous places. More thorough arrangements are necessary and creches should be established in the Beawar mills, and perhaps also in Kekri during the busy cold weather season.

84. There are few children employed in the larger concerns.

86. Facilities for apprenticeship are totally inadequate even in the large B.B. & C.I. Railway workshops, and in other industries are non-existent in the true sense of the word "apprentice."

**LIEUTENANT-COLONEL G. M. MILLAR, O.B.E., I.M.S., CHIEF MEDICAL OFFICER IN RAJPUTANA AND CIVIL SURGEON, AJMER-MERWARA.**

23. *General Health Conditions of Workers.*—No separate returns of mortality, birth rate and infant mortality are maintained for workers in Ajmer-Merwara, but judging from the general appearance of the workers I consider that the general standard of health is good.

Working conditions on the whole are satisfactory. Out of a total of approximately 15,000 workers, about 12,000 are employed by four concerns, the B.B. & C.I. Railway workshops at Ajmer, the Edward Mills Co., the Krishna Mills Co., and the Maha Lakshmi Mills Co., the last three cotton mills at Beawar. The conditions at the railway workshops are excellent, and those at the three mills mentioned are very good.

The dietary of Europeans and Anglo-Indians calls for no comment, while that of Indian workers is the same as that used by the ordinary inhabitants of Ajmer-Merwara, the principal constituent of which is barley, to which is added a little maize and gram and occasionally wheat.

The physique of Indian workers is in general well up to the standard of this district, and does not seem to me to be adversely affected by working conditions.

No statistics are available to show whether there is any disturbance of the sex ratio, or to indicate the relation between housing and mortality.

24. *Extent of Medical facilities provided.*—The B.B. & C.I. railway maintain a large up-to-date hospital in Ajmer for their employees and families as well as four out-door dispensaries.

With this exception no hospitals or dispensaries are maintained by employers.

Factories exist at Ajmer, Beawar and Kekri, at which places Government controlled medical institutions are situated, to which workers have free access.

In Ajmer there is a mission hospital for women controlled by the Scotch Mission. In Beawar a lady sub-assistant surgeon is on the staff of the dispensary.

A maternity home at Ajmer, in which dais are trained, is maintained under the Lady Chelmsford League.

25. *Extent to which medical facilities are utilized.*—In general these facilities are utilized freely, and women on the whole now come freely to medical institutions.

26. *Sanitary Arrangements.*—Latrines in general in work places are sufficient and well kept, and the supply of water for drinking, bathing and washing is good and sufficient.

27. *Extent and Nature of Official Supervision.*—The Civil Surgeon is a Joint Inspector of Factories for the purpose of supervizing the sanitation of factories and the inspection of children employed in them.

There are four certifying surgeons, two at Ajmer, one at Beawar and one at Kekri, who examine and issue certificates to all children employed in factories.

In the railway workshops at Ajmer no person is allowed to work till he has been declared fit by one of the railway medical officers.

A large area in Ajmer is controlled by the B.B. & C.I. Railway, the health supervision of which is efficiently controlled by the railway medical officers and their sanitary staff.

There are no special plantations in Ajmer-Merwara.

28. *Suitability of existing Factories and Mines Acts and Rules.*—I consider the existing Acts and rules satisfactory and suitable for this area. The temperature in factories is not excessive considering the normal atmospheric temperatures which are prevalent.

Owing to the general dryness of the atmosphere throughout the greater part of the year humidifiers have to be employed in cotton mills. Those in use at present seem satisfactory, while the introduction of live steam to any room where the temperature exceeds 85° F. has been prohibited. The conditions at present prevailing do not seem to be injurious to the health of the workers.

29. *Disease.*—Industrial diseases have not occurred recently. In the past a few cases of lead-poisoning occurred in the railway workshops at Ajmer.

Cholera occurs, but epidemics are practically never severe. Malaria is endemic, but usually is not severe; hookworm and leprosy are not common. Dysentery is prevalent. No other tropical disease is sufficiently prevalent to call for comment.

In Ajmer city tuberculosis is very prevalent.

30 and 31. There is no provision for sickness insurance or maternity benefits.

48. *First Aid and Medical Relief.*—In the railway workshops at Ajmer the arrangements are very well organized and highly efficient. At Beawar a few drugs and dressings are available in the larger mills. It would, I think, be possible to arrange for instruction in first-aid to some of the workers in these mills.

84. *Suitability of Regulations affecting Children.*—These appear to me satisfactory. The great majority of children employed in the factories are strong and healthy. The minimum age of twelve and the maximum age of fifteen are suitable for this area.

---

Mr. E. C. GIBSON, I.C.S., COMMISSIONER FOR WORKMEN'S COMPENSATION, AJMER-MERWARA.

## VIII.

### *Workmen's Compensation.*

51. During the four years subsequent to the year in which the Workmen's Compensation Act was brought into force (1924), the number of accidents reported from factories and coming within the purview of the Act, the number of cases in which compensation was paid, and the amount paid was as shown below. The figures are

taken from the Annual Report on the working of the Workmen's Compensation Act, which is compiled by the Inspector of Factories, Punjab, North-West Frontier Province, Delhi and Ajmer-Merwara :—

Year.	Number of accidents coming within the purview of the Workmen's Compensation Act.	Number of cases in which compensation was paid.	Total amount of compensation paid.
1925 .. .. .	284	281	Rs. a. p. 3,009 9 6
1926 .. .. .	459	458	3,924 1 0
1927 .. .. .	134	134	3,385 0 0
1928 .. .. .	146	141	7,762 4 0

Very few cases come before the Commissioner under the Workmen's Compensation Act. The number of such cases, which have been dealt with since the Act came into force, is 27 up to and including 1928. Of these cases 22 were merely for the registration of agreements; four related to claims for compensation contested by employers, and one to distribution of compensation to dependents of a workman fatally injured. Most of these cases came from the three big mills in Beawar. Naturally, the largest number of accidents occur in the railway workshops, but until recently cases of compensation to employees of these workshops have been dealt with by the District Magistrate, Abu, and not by the Commissioner, Ajmer.

(iii) *Effects on Industry.*—In the Statement of Objects and Reasons drawn up when the Bill was introduced in the Legislative Assembly in 1922, some of the advantages that might be expected to result from this legislation were described as follows :—

"An additional advantage of legislation of this type is that by increasing the importance for the employer of adequate safety devices, it reduces the number of accidents to workmen in a manner that cannot be achieved by official inspection. Further, the encouragement given to employers to provide adequate medical treatment for their workmen should mitigate the effects of such accidents as do occur. The benefits so conferred on the workman added to the increased sense of security which he will enjoy, should render industrial life more attractive, and thus increase the available supply of labour. At the same time a corresponding increase in the efficiency of the average workman may be expected."

The Act has only been in force for five years, but the beneficial results anticipated are in process of achievement. It is probable that some workers, who fall below the higher standard of physical fitness which is now demanded by some employers, find it more difficult to obtain employment in the larger industrial establishments such as the railway workshops where, I believe, stricter medical examination before employment is now insisted on. On the other hand a system, under which only persons who are physically fit can obtain employment, must tend to increase the efficiency of labour in industrial undertakings.

So far as this district is concerned, the available supply of industrial labour is at present greater than the demand. In Ajmer this is partly due to the fact that the railway workshops are reducing the number of their employees. In Merwara I believe that a certain number of men have recently gone to Ahmedabad to seek employments in the mills there, because they are not able to get employment in the Beawar mills. This is partly due to the fact that as recruitment for the army in Merwara has recently been discontinued, military service, which formerly attracted considerable numbers of the rural population of this sub-division, is no longer open to them.

(iv) Insurance companies provide facilities for covering employers' liabilities under the Act and some, at any rate, of the mill and factory owners in this district do cover their liability by insurance. The value of this is presumably greater from the point of view of the employer than of the worker, though the latter must also benefit indirectly, since his chances of recovering compensation due to him under the Act are not prejudiced by the reluctance or inability of his employer to pay it, and any temptation to withhold compensation is removed when liability is transferred from an employer to an insurance company. No case, however, in which an employer has tried to evade or been unable to meet his obligations under the Act has come to my notice in Ajmer-Merwara.

(v) The scope of the Act is at present confined to industries which are more or less organized, and the classes of workmen benefited by the Act are, generally speaking those whose occupations are hazardous. Some system of compulsory insurance would probably be necessary if the provisions of the Act were extended to workers in unorganized industries. The difficulties and expense of administering such a scheme would, however, be very great.

52. Logically there seems to be no strong argument against the extension of the Act to unorganized industries and non-hazardous employments. It is very doubtful, however, if such extension of the Act could be made practically effective without a system of compulsory insurance, and whether the difficulties of enforcing any such system of compulsory insurance could be satisfactorily overcome.

53. I have not heard of any dissatisfaction on the part either of employers or workmen in this district with the provisions of the Act. No doubt they are capable of improvement in some respects. I think that they are perhaps most open to criticism as regards the *scales of compensation* payable to workmen on lower pay. Compensation for injuries received by such workmen are often, in my opinion, somewhat unequal and inadequate. I may quote as an instance the last case with which I have dealt. This was the case of a workman who, as the result of an accident while employed on his regular work, received injuries which necessitated the amputation of the four fingers on his right hand. His pay being Rs. 12 a month, the compensation to which he was entitled under the Act was Rs. 126. This amount seems to be hardly commensurate with the extent of the disablement. With only the thumb left he has practically lost the use of his right hand. Similarly, if a workman drawing Rs. 10 a month loses any finger other than the index finger he is, in accordance with the provisions of Section 4 (1) (c) (i) read with Schedule I of the Act, entitled to receive compensation amounting to Rs. 21.

The *waiting period* of 10 days provided for in Section 4 (1) (d) of the Act also, no doubt, causes a certain amount of hardship to workmen by reducing the amount of compensation payable to them. It is probably, however, undesirable to reduce the period, and I believe that the method of "dating back" for purposes of compensation has serious disadvantages. I understand that the Bombay, Baroda and Central India Railway pay their employees full pay for the first 10 days (or shorter period) of disablement. If this example were followed by other employers of labour, the hardship would be removed.

Owing to the habitual improvidence of the Indian labouring classes the system of paying compensation in a lump sum is not very satisfactory. In principle a system of *recurring payments* would certainly be preferable, but here, too, the practical difficulties would be great, one of the principal obstacles being the fact that much of the labour employed in factories is migratory.

As far as this district is concerned I think that the present machinery for administering the Act works on the whole satisfactorily.

**Monday, 21st October, 1929.**

PRESENT :

The Rt. Hon. J. H. WHITLEY (*Chairman*).

The Rt. Hon. V.S. SRINIVASA  
SASTRI, P.O.

Sir ALEXANDER MURRAY, Kt., C.B.E.

Mr. A. G. CLOW, C.I.E., I.C.S.

Mr. KAMR-UD-DIN AHMED, M.L.A.

Mr. JOHN CLIFF.

Mr. N. M. JOSHI, M.L.A.

DIWAN CHAMAN LALL, M.L.A.

Miss B. M. LE POER POWER.

Lt.-Col. A. J. H. RUSSELL, C.B.E.,  
I.M.S. (*Medical Assessor*).

Mr. S. LALL, I.C.S.

Mr. A. DIBDIN.

} (*Joint Secretaries*.)

**ALI HAIDER and HABIB KHAN, representatives of the  
Khewra salt miners.**

The *Chairman*: We have carefully considered your petition\* which was presented to us yesterday. The duty of this Commission is not to deal with detailed grievances which there may be in this and other working places in India. Our duty is to see if we can suggest here and elsewhere a system whereby all these grievances may have a proper hearing and be dealt with in a proper way. One of the paragraphs of your petition asks that the committee of the miners might be elected by yourselves.

B-1. Has that request been put before the management of the mine before to-day?—We have made the suggestion several times, but no heed has ever been paid to it.

B-2. In your petition you say that a change in the system of payment took place about a year ago; am I to understand that the miners would wish to go back to the old system?—That was better than the present system of work and payment; we consider that that would be better than what is being done at present.

B-3. Do you consider that you receive less on the average under the new system than you did under the old?—The old rates were not sufficient to meet the cost of living and the present rates are even less.

\* Not printed.

B-4. Am I to understand that the miners would be prepared to elect a committee who should speak for them on their grievances to the management?—Yes, we are prepared to do so.

B-5. The first paragraph of your petition relating to the question of the property in the mines is not a matter with which this Commission can deal; it is a legal question, which, if there are any rights that have not been observed, should be taken to the law courts?—We have mentioned the fact that we have these rights in the mines in order that you should appreciate that though we have owned this land for some time, we are not well treated even as labourers.

B-6. *Mr. Sastri*: In the petition the statement is made that outdoor work is not given to you miners, but that you would like to take it up; is that correct?—We are prepared to do the outdoor work if we are given sufficient wages.

B-7. Is it not a fact that you miners have been used for generations to indoor work and that you have an aversion to doing work outside?—We miners are accustomed to work inside the mine and we cannot work properly outside, but in order to get a living we are prepared to do so if sufficient wages are given.

B-8. I did not understand what was said about the houses in which you live, that if you repair or rebuild a house you have to execute some document?—Yes, we have to execute a bond in favour of the Salt Department that the house belongs to the Department and we cannot build without the permission of the Department.

B-9. So that it is not only the mine, but the whole of the house property here that now belongs to Government?—The conditions laid down in the deed are so stringent that even for ordinary faults miners can easily be turned out of the houses. Previously no bond was demanded, but now the conditions laid down in the agreement are such that miners can be ousted at any time even for an ordinary fault.

B-10. What is the daily average wage that a miner gets?—Four miners working together get Rs. 4-8 a day.

B-11. Do you mean that four miners work together?—Only one miner is shown as the actual miner, and he has three others to assist him; the output of the four is taken as the output of one miner and the payment is made in one miner's name.

B-12. Do those three other miners include the wife and children who may be labouring?—It includes their wives and their sons or others who go and work in the mines.

B-13. You have not yet told me the average wage; would it come to 12 or 14 annas?—It would come to 10 annas; the utmost they can get is 10 annas.

B-14. In other words, if instead of engaging their own wives and children, they engaged other miners, they would pay them 10 annas?—They are paid equal shares. Our wages are paid on output. The output is sometimes 4,000 maunds and sometimes 6,000 maunds. If the output is small we get less wages.

B-15. Are the miners usually able to employ their wives and all their children above 13, or is there a certain amount of unemployment?—There is unemployment; the miners do not get sufficient work here.

B-16. Do the miners take advantage of the school that is established here for their children?—Arrangements for education at this place are not so good, and the miners cannot afford to send their children to a school which is 5 miles away.

B-17. Is it a Government school?—There is a private school under the District Board.

B-18. I understand there is a desire on the part of the officers to employ miners' children as clerks; do you take advantage of that?—When we get no education, how can we get our sons employed as clerks? And those who are educated have been given no employment here.

B-19. *Sir Alexander Murray*: In reply to Mr. Sastri you said there was unemployment and you said you were willing to work outside. Why is it necessary to bring convicts to do the loading rather than to employ you; why will you not do this work instead of the convicts?—We are prepared to do it if that work is given to us.

B-20. At what rate of wages?—We are quite prepared to do that work at wages a little higher than are paid to the convicts, because, after all, being prisoners, they are prepared to do it for a smaller wage. We are prepared to do that work if no restrictions are placed on us and we are allowed to complete the work; but we are compelled to work for a few hours in the morning and then continue in the evening for 8 annas a day. Such restrictions should not be made.

B-21. You have never been asked to work for 8 annas a day where the convicts have been working for 10 annas a day, have you?—We were offered the same wages, but that work could be done by three persons and they insisted that we should engage at least 6 persons.

B-22. If they engaged three persons they would have to pay three times 10 annas, which is 30 annas; whereas if they engaged six persons, they would have to pay six times 10 annas, which is 60 annas?—More wages should be given per person if the work is being done by three persons than if it were being done by six persons. The miners would not engage their children on this work.

B-23. I am not talking about women and children; I am talking about these men. Why is it that convicts have to be brought in here to do that work when there is a lot of men seeking employment?—There was a strike in the year 1921. Before that we dare not make any complaint. After the strike of 1921, the Officers of the Salt Department tried to oppress us in every way and this work was stopped. We are quite prepared to do this work if it is given on contract or we are given good wages.

B-24. How long have the convicts been coming here?—For the last 6 or 7 years.

B-25. There is also unemployment in the mines; there are far too many miners and there is not sufficient work to go round. Supposing there are 500 miners, and there is only work for 400 miners, would you prefer that 100 miners be put out of the mine altogether and only 400 kept in the mine, or would you prefer that 500 be kept in and get less wages?—All the miners depend entirely on the mine; they cannot be turned out. If they were turned out, where would they get employment? They also should be given work in the mine.

B-26. I might have put it in this way: your sons are growing up and there is not sufficient employment in the mine for you and your sons. Why do you not get your sons to do the outside work, or some other work, so that you can continue to work in the mine?—They do not get the work outside the mine, so that they have to go to the mine.

B-27. *Mr. Ahmed*: Since 1921, when you struck, the Government have employed convicts to carry salt to the railway trucks?—Yes.

B-28. May I take it that Government have punished you in this way and you have incurred great loss thereby?—We do not know why it was done.

B-29. *The Chairman*: Is it quite clear that before the strike of 1921 miners were doing the work of loading the trucks outside?—We used to do the loading work, but when there was great demand for labour others used to be called in by the Department.

B-30. *Mr. Ahmed*: But if the work is offered to you now, you will be anxious to do the work as you did before 1921?—We should be given more wages than are at present given to the convicts; they have no children and we have to support families.

B-31. I understand that out of the Rs. 3-6 which you are paid for a tub of salt weighing 40 maunds you have to pay certain expenses amounting to 14 annas per tub, which leaves about Rs. 2-8 per tub?—Yes.

B-32. So that you get Rs. 2-8 per tub, there being no further expenses?—That is clear wages.

B-33. If you do not get good salt and it is stoney, the Government officials of the salt mine reduce your pay?—We are paid nothing for the rock or stone that is extracted by us; we have to extract it at our own expense.

B-34. What will be the percentage of rejections from the tubs?—About 25 per cent.

B-35. To load 40 maunds of salt you require the work of four persons for two days?—Yes.

B-36. Then I take it that 8 labourers get Rs. 2-8 for a tub?—That is so.

B-37. If you divide Rs. 2-8 by 8, what will it be per head?—5 annas per head per day.

B-38. Is it the fact that all the workers have not got wives and children to help in the work of loading, and so they sometimes engage outside people?—Yes.

B-39. And you have to pay those outside workers a share of the Rs. 2-8?—Yes.

B-40. In what proportions do you share the money with such outside workers?—The payment made to outside people engaged by us is made by measurement.

B-41. What is the system of measurement?—Re. 1 is paid for a cutting 6 ft. long and 1 ft. deep.

B-42. If as a result of the cutting you do not get salt, but get stone or half stone and half salt, what is the position then?—We are paid nothing for stone or rock.

B-43. Is rock or stone entered in the note-book which the officers give you?—That is not shown in the note-book.

B-44. Since when have you been receiving lower wages?—Up to last year our wages were better than they are now.

B-45. Since the accident, when your houses were destroyed, I understand you have petitioned the officers to be supplied with Government quarters?—That petition was made but no action was taken on it.

B-46. Would you like to elect your own committee of management?—Yes.

B-47. You do not desire to elect a lambardar, but would prefer to elect your own men?—That is so.

B-48. Do you think that if you had had a good committee consisting of your own elected representatives, you would not have been so harrassed?—Yes.

B-49. You have said that in view of the present cost of living the wage that you now get is not sufficient for the maintenance of a family?—That is so.

B-50. And unless higher wages are paid, it is very difficult for you to go on?—That is so.

B-51. Am I to understand that you have to pay for medical attention out of your own earnings?—If we go to hospital we do not pay anything, but if we call a doctor to our own house we have to pay the fee. For instance, if a man's wife is ill the doctor does not come without a fee.

B-52. You have to pay for the doctor, and have you to pay for the medicine as well?—We pay nothing for the medicine.

B-53. Where do you get the medicine?—From the local hospital.

B-54. You say the school is 5 miles from here and if you send your children there it involves expense?—Yes; Rs. 10 or Rs. 12 a month.

B-55. And you cannot afford that expense?—We cannot.

B-56. You therefore expect, as a matter of necessity, that Government should provide for the education of your children?—Yes.

B-57. As you do not get sufficient wages, you incur debts with the sowkar?—Yes.

B-58. It is therefore evident that since you are indebted, it is not possible for you to buy your daily necessities from outside and store them for a year?—We cannot.

B-59. I suggest that if you started a co-operative society, with Government assistance, you would be benefited because money would be supplied at lower rates of interest?—If the money were advanced by Government at lower rates of interest, we should welcome it.

B-60. It is one of your grievances that there is no provision of pure water for drinking?—Yes.

B-61. Certain Government lands were given to you for building your quarters?—No land was given to us for building.

B-62. Were not some lands given to some men?—I do not know. We are living in houses built by ourselves.

B-63. But some of you probably wanted certain lands from Government to build your quarters?—We desire that that land should be given to us outside this dangerous area.

B-64. You do not like the system of payment through contractors; you would prefer that your wages should be paid to you direct and not through a middleman?—The miners should be paid direct.

B-65. I understand some of you work 12 hours and some 11 hours, but it is stated somewhere that you only work 8 hours; which is correct?—We sometimes have to work as long as 16 hours.

B-66. The workshop employees are supplied with quarters by Government?—That is so.

B-66. And you would expect that Government should supply you with similar quarters?—Yes, we also want such quarters, with electricity and water.

B-67. It is said that the Workmen's Compensation Act is inoperative and that there is in fact no employers' liability with regard to accidents?—That is so.

B-68. *Divan Chaman Lal*: Would you prefer to get a minimum living wage?—Yes, we would prefer that.

B-69. *Mr. Ulow*: At present I understand that there is not enough work for all the men?—No.

B-70. Then why do you bring your wives into the mines?—We are very poor, and instead of getting other men we take our wives with us.

B-71. But there are other men sitting idle in the village?—If we give work to other people there will not be sufficient for ourselves.

B-72. How many hours work do you get at present, on the average. I do not mean machine work?—Eight hours.

B-73. The work seems to be sufficient?—We do not get sufficient wages. We work for eight hours, but there is salt-dust and rock for which we get paid nothing, and we have to waste a lot of time.

B-74. What is the usual rate of interest charged by money-lenders in the village?—It varies from one to two rupees per month per cent.

B-75. *Mr. Joshi*: Are there any difficulties in your getting land for cultivation?—We cannot get any land for cultivation.

B-76. What is the difficulty?—We cannot purchase the land ourselves, and there is not enough land here.

B-77. But say a mile or two away from here?—All the holdings are small here.

B-78. It is stated by *Mr. Hoyle*, the Commissioner, Northern India Salt Revenue, that the miners would not like a scheme for sickness insurance. If a scheme, by which they can get some wages during sickness, is prepared, would you like it or not?—We would prefer that scheme.

B-79. Will you pay, say, one pice in a rupee if you get your wages during sickness?—We would not like to pay anything from our own pocket, because even now we do not get sufficient for us to live.

B-80. I understand that your wages will not be so much if women do not go underground; but is there any other objection to the Government making a law that women should not work underground?—We have no objection to that.

B-81. *Miss Power*: In your petition you refer to the committee of four men. Who elects those four men?—They are appointed by the General Manager of the salt mines.

B-82. The workers have no say in the appointment of those four men?—No.

B-83. Has that committee of four men no power to deal with disputes as regards the workers' conditions in the mines?—They have no powers.

B-84. So that if the workers want to make representations about their conditions they have to do it either individually or collectively among themselves?—Everybody has to do it individually.

B-85. *The Chairman*: We have heard what you have had to say, and what you have told us will have our consideration when the time comes for us to make our Report. With regard to some other individual petitions which have been handed to me, those will be sent to, and dealt with, by the General Manager. They are not matters which this Commission can entertain.—We should not be victimized for what we have said to-day. We are afraid that the Government Department will not treat us properly for giving this evidence.

*The Chairman*: As a Royal Commission we should take into very serious consideration any victimization of any kind of anyone who appeared before this Commission.

(The witnesses withdrew.)

**A representative of the workshop men of the Khewra Salt Mines.**

B-86. *The Chairman:* We have a memorandum\* from the labourers in the Engineering Section of the salt mines:

*The Secretary* read the memorandum.

B-87. *The Chairman:* Who prepared this memorandum?—A general meeting of the labourers of the Engineering Section was held, and this petition was drawn up by their common assent.

B-88. When was the meeting held?—On Saturday last.

B-89. Did you word the petition?—Yes, I had to translate it into English.

B-90. On behalf of the men you have presented this petition in English?—Yes, in English, but the ideas have been taken from what the men said.

B-91. When a petition is handed in only a few minutes before we sit, it is difficult for us to do more than to say that we will take into consideration what you have asked in the petition. How long have you been employed in the engineering shop?—From the 10th March 1927. My colleague has been employed for about 6 years.

B-92. Have you represented to the management of the mines these proposals which you have submitted to us?—Yes. This petition of ours has been read over by the Engineer in charge.

B-93. Your petition has only just come into my hands. You will understand that it is not possible to examine you on this petition, but we can perfectly well understand it, and all I can say is that it will have our consideration, with the others that we have received.

B-94. *Diwan Chaman Lall:* What was the reason why you were taken off the monthly rates and put down to daily rates?—We have never had monthly rates. We have always been paid on the daily system.

B-95. There is a statement here to the effect that you had been put down to the daily rates. Since when?—The daily system has prevailed from the beginning.

B-96. Would you like to be put on monthly rates?—Yes, all of us. Then we would be paid for all Sundays and holidays.

B-97. Do I understand that formerly you used to get paid for Sundays?—Yes.

B-98. Were you consulted before this change was introduced?—We were not.

B-99. Did you make a protest to the authorities against this change?—Yes, all of us made protests verbally to the authorities, but they said that since the Act had been introduced they could not help it.

B-100. Suppose a system were introduced whereby a small sum were to be deducted from your wages, and if you fell ill you were given a certain proportion of your salary—sickness insurance: would you be willing to contribute towards that?—Yes, quite willing.

B-101. How many men are there working in the workshop?—More than 200 men.

B-102. How many quarters have you provided for you?—I have not got the exact number, but I think it is not more than 30 quarters or so.

(The witness withdrew.)

\* Not printed.

**Mr. A. L. HOYLE, I.C.S., Commissioner, Northern Indian Salt Revenue, and Mr. C. H. PITT, Manager, Khewra Salt Mine.**

*The Chairman:* Mr. Hoyle, I think we need only trouble you with that part of your memorandum which refers to Khewra. There will be one question about Rajputana. I suggest that we take Khewra first. You have been present at the Commission and have heard the evidence just given to us. There are one or two questions I would like to ask you on that.

B-103. Have you been aware of the suggestion that the miners should elect a committee?—What they said just now is an absolute misstatement, namely, that they have represented it many times. The whole petition was definitely not spontaneous. The suggestion about an elected committee is not a genuine one of the miners at all. They have never represented it once. They have never represented that as a complaint to anybody.

B-104. If they took steps in a proper orderly manner to have a committee of representatives, you would be willing to hear it?—Most certainly. It would have every consideration. We should be most ready to hear any suggestion they might wish to make. We could not undertake naturally to agree to it, but we should be perfectly ready to hear what they have to say.

B-105. Of course you could not undertake to give everything that was asked for, but you would be willing that a committee should be elected amongst the miners, a committee which should continue in existence in some regularized form and which should from time to time bring to your notice anything which was thought to be wrong by them. You would have no objection to that?—Yes, I do not think I would have any objection to that.

B-106. I understand you to tell the Commission that a good deal of what has been stated in the petitions presented to us really is at variance with the facts?—It is, both in the way of suppression of the truth and a misstatement of the truth. For instance, they told you that their houses were destroyed owing to our action, and they said that Government ought to give them land and give them free houses. They omitted any reference to the fact that Government had given free grants. They were called "irrecoverable advances", because that sounds rather more economical of public money than calling them "grants". But Government has given a grant of Rs. 500 to a very large number of these men to build houses for themselves outside the danger zone. We have provided altogether for this purpose an expenditure of about Rs. 57,000, out of which about Rs. 30,000 has been already expended. I think the petition was unfair in that it suppressed any reference to that.

B-106 (a) Is there any other point that you wish to put forward?—I do not want to bring in the point about the land because you have ruled that out, but I might mention briefly that the whole matter was threshed out years ago by the settlement officer, and they have not a shadow of a right. Then they referred to some documents, that is, agreements they have to sign. Mr. Pitt could show you a sample. Really it was introduced some years ago as a means of retaining some kind of hold on them, or rather as a means of controverting any claim that they might put forward to be the owners of the land. They are not the owners of the land. We thought it would be a good thing that that should be recognized. Their figures, I should think, with regard to their earnings are open to dispute. They are paid at the rate of Rs. 3-6 per tub load of salt, and they made out that that represents about half a dozen people. As a matter of fact one man can fill a tub load of salt in a day. One of their figures struck me as very much out. The number of miners working they say is 2,667. The actual number is about 1,100. They said that they used to be paid far better before than they are now, under the old measurement system. The present rate of payment, viz., Rs. 3-6 per truck, was fixed after a very careful examination of all the factors entering into the matter, and calculations have been made

which show that actually they are paid rather more than they were under the old system, after allowing for everything. A few months ago some of them were rather vocal on the subject of this rate. They liked the system. They all preferred this system, but some of them said that the rate was rather low. Calculations were made and explained to them, and since then they have been very careful not to say anything further about this rate for fear that Government might enquire into the question more closely and reduce the rate. What this man said just now about preferring the old system, I can assure you, is not a representative statement of opinion. Miners have, as a body, expressed themselves in favour of the present system of payment in preference to the old.

B-107. What do you mean "as a body"?—The representatives of miners. Frequently the men come up to me and talk to me in a body, and opinion has always been expressed in favour of the new system. These two men unfortunately are not representative miners.

B-108. Then it would help you really in your work if they had representative men with whom you could talk on these questions and explain when a change was going to be made, so that you might be sure what the opinion of the miners as a whole was?—It is rather difficult to say to what extent it would help. It might help. Anyhow I do not know of any objection to it. It is an experiment which might be worth trying.

B-109. It was stated to us just now that the work of loading into the railway trucks done by convict labour was instituted after the strike in 1921. Is that the case?—It was introduced during the war. (Mr. Pitt) I cannot give you the exact year; but during the war imported salt could not get into India owing to the lack of shipping, and this mine had to work at a very high pressure. The whole country was working at very high pressure. The only labour that was available of any kind was jail labour.

B-110. That is quite clear. You required all the men who were miners or who would go into the mine to be there, because of the demand?—Yes.

B-111. Since then the demand has reverted to what we may call the ordinary demand?—Yes.

B-112. The result of that is that some miners have not full employment with the present output?—Yes.

B-113. They have told us to-day that they would be willing to do this work of loading railway trucks at a cost not greater than that you are at present paying. Is that the case?—(Mr. Hoyle) In connection with that, the experiment was tried in 1927, and Mr. Pitt has on record many statements from the men that they did not want to take on this work. (Mr. Pitt) That is so.

B-114. That again would be a suitable matter to discuss with the men if you had a regular committee of them?—Yes.

B-115. So that you might be quite sure of your ground in attempting any further experiment. One can understand that you would not like to change your system and then change back again, but you would be willing to consider that in the same way if they represented to you through a regular channel?—I think so. Most certainly.

B-116. Mr. Clow: The figure of men employed here is 1,100. I take it that there has been no substantial change since 1927?—No.

B-117. A considerably lower figure is given by the Chief Inspector of Mines in his Annual Report,—presumably an average, which is reduced by the fact that he averages it over the whole year, while they work for only ten months?—I have not seen his figures, but I should think that is probably the reason.

B-118. As regards the hours of work, what control is exercised by the management over the hours during which the men work?—Practically none. They really come and go as they please. They go away for their midday meal at the time which suits them, and they leave the mine in the afternoon

when they feel they have done enough, and they come in the morning when they want to.

B-119. It would be open to a man to work any number of hours a day he wanted?—I suppose it would. There is nothing to stop him.

B-120. There is no system by which the Mine Inspector can check the extent to which the provisions of the Mines Act are observed in respect of hours?—No. It could be devised. We could devise ways and means of doing it.

B-121. My point is, there is no means at present?—No. At present we have not any system of checking when the people arrive and when they go off.

B-122. Is there really any check of the amount which a man can turn out? If he chooses to turn out more than there are trucks to take away, that is his own look out?—Quite.

B-123. So that is there not a tendency for your stocks to increase?—No; some of the men are lazy, and I understand that although these people will work very hard for a time they will not keep it up indefinitely. They are rather spasmodic in their method of work. (Mr. Pitt) The stock is not likely to increase unduly, because when a miner excavates the salt it is his property. It is put on loading stations ready for putting it into the trucks, and can be stolen by any of his friends, so that he is not likely to keep a very large stock. Until the salt is put into the truck, it is absolutely unguarded.

B-124. You could secure the present output with a substantially smaller labour force without working them unreasonable hours?—(Mr. Hoyle) Yes, Sir. I should say so. We hope to increase the output very materially. Railway freights are being reduced with a view to turn out more salt and put it on more distant markets than we send to at present. We hope to do that without overworking anybody.

B-125. We discovered this morning that recently you seem to be still taking on fresh workers. For example, we met one boy who had been taken on a few months ago. Would it not be better to stop fresh recruitment in view of the general underemployment which appears to exist?—The whole system of work in the mines here is a family arrangement. If you saw a new boy being taken on, it would simply mean that one more member of the family group was growing up and joining the family group in the mine. The boys rarely come of themselves. I have stated in my memorandum that these miners are a very conservative folk. They resent any interference with a happy family arrangement that they have been accustomed to for generations. I think it would probably cause more trouble than it is worth if one started keeping the boys out of the mines when they started getting big enough.

B-126. What is the average time at present which exists between the time the salt is cut and the time that it is loaded into trucks?—(Mr. Pitt) It depends entirely on the miner; but the maximum, I think, would be three days.

B-127. As regards holidays, we have seen a suggestion that the passing of the recent Act has altered in some respects the position as regards holidays, but that Act—the Mines (Amendment) Act, 1927—did not in its terms do so. Can you explain that?—(Mr. Hoyle) It is not so. The mine is always closed on Sundays and on certain other holidays. It has not made any difference at all.

B-128. In other words the position in respect of holidays now is much the same as it was five years ago?—Exactly the same, I should say. (Mr. Pitt) We have enforced the limitation of hours of working days very much more strictly in the last four years. This applies to the workshop.

B-129. I should like to ask one question on Rajputana. You suggest in your memorandum that the Workmen's Compensation Act being inoperative, there is no employer's liability in cases of accident?—(Mr. Hoyle) No legal liability.

B-130. Do you in practice give compensation on the scale of the Workmen's Compensation Act or do you give no compensation?—I cannot remember any case. There has been no such case in my time; nobody has applied for it. We have not given compensation.

B-131. *Mr. Joshi*: Will you explain what are the exact functions of the committee of four which you have appointed?—(Mr. Pitt) The existence of the committee was due originally to the fact that the old measurement system was very complicated, and there was invariably trouble between different members of the gang with regard to how much exactly was due to each man. It is very difficult indeed to measure proportionately each man's space. We found also that the men in charge of the working chamber were not to be trusted, because they would generally favour their own relatives. Therefore this committee was appointed to settle disputes in the mine about measurements. They do very little work indeed now. They do practically nothing as regards sanitation, or anything else.

B-132. Were you ever at any meetings of the committee?—We endeavoured not to be. Our intention was that the committee should represent, so far as possible, the opinion of the community.

B-133. Is it true that the committee does not function?—It functioned very well indeed. In four years I have only had three appeals from its decisions. Under the old measurement system there were frequent cases; they would decide possibly an average of two cases a week. Very rarely were their decisions at all unfair or unjust.

B-134. In view of the fact that there is a difference in the statement made by the workers as regards wages and the statement made by Mr. Hoyle, can you give us a more detailed statement of wages?—(Mr. Hoyle) I can give you figures showing how the rate per tub of Rs. 3-6 has been arrived at. (Mr. Pitt) I have it here. It is a long and complicated statement.

B-135. I want to know the actual number of miners employed and the total wage bill paid over the whole year.—Very well.

B-136. You give the figure of 50 rupees as the average wage. Does that include or exclude the deductions which you make?—The figures are very approximate. We have given 30 and 50 rupees.

B-137. I want to know whether these figures are inclusive or exclusive of the deductions?—They are net—excluding deductions.

B-138. As regards housing, we are told that you lay down the condition that whenever a man does not work in the mine he cannot live in the house. Out of the total cost of the house, what would be the amount of the Government grant and what would be the amount invested by the workmen themselves?—(Mr. Hoyle) You are talking of cases in which we have given one of these "irrecoverable advances" to a miner to build a new house?

B-139. You make a provision that a man must leave the house if he does not work in the mine, though you expect him to build his own house. I want to know whether it is a fair condition, if the miner has to invest a large amount of money to build his house, to turn him out of it if he no longer works in the mine?—(Mr. Pitt) There is no such condition.

B-140. You do not ask the man to leave the house, even if he does not work in the mine?—No. The lease provides for the ejection of a disobedient tenant.

B-141. What is the meaning of "disobedient"?—One who does not obey orders in the mine, or other points of discipline in the village.

B-142. I want you to consider this from the point of view of the workman. He is expected to build his house. If he builds his house, and if he invests his money in it, the condition on which he can be evicted must not be a light condition, such as disobeying orders in the mine.—(Mr. Hoyle) I think some provision is necessary against mutiny or indiscipline. We give them the site of the house free.

B-143. *The Chairman*: Does the Rs. 500 of which you speak cover the whole cost of building the house or not?—No. (Mr. Pitt) The Rs. 500 was

only given in the case of houses which collapsed due to a bad subsidence which we had in the village. In the case of a man wanting to build a house, he builds it at his own cost without any advance from us.

B-144. *Mr. Joshi*: In that case is it just for you to put conditions on him?—He has built it on our land here, and with our stone.

B-145. *Mr. Cliff*: As I understand it, you give the miner a site; the miner erects a house. If that man ceases to work in the mine, legally you can compel him to give up possession of the house. Is that correct?—(Mr. Pitt) Yes.

B-146. *Mr. Joshi*: Will you explain why you brought on convict labour?—We have not now got convicts in the ordinary sense of the word. These men are probationers. They are long-sentence men whose terms have nearly expired, and they are released on ticket-of-leave. During the war we had regular convicts who, instead of breaking stones in the jail, came and stacked salt in our depôt and lived under jail conditions. The men we have now are ticket-of-leave men. They are released on probation and they work here under the supervision of a Convict Reclamation Officer.

B-147. When there is unemployment here, why should you get these men from outside?—The men who came and gave evidence just now said they were willing and anxious to work in the depôt. That is not so. The experiment was tried in 1927, and the miners would not do it. A month ago I was approached by the miners that they should be allowed to do that work. I said "Very well, I will call for tenders"—which is what we are always required to do in connection with all Government work. We called for tenders, and not one miner or gang-man tendered for that particular work. They were not sufficiently interested even to put in a fairly high figure on the off-chance of their getting it.

B-148. As regards this strike, I am anxious to know whether, as a result of it, the wages were increased?—Yes, they were.

B-149. You thought the strike was justified, and the wages were low, and therefore higher wages were necessary?

B-150. *The Chairman*: Was not the time of the rise of wages the time when the cost of living went up very considerably after the war?—I cannot speak of that definitely, as I came here actually while the strike was in progress.

B-151. *Mr. Joshi*: The wages were increased after the strike?—Yes.

B-152. The representative of the workmen said there were not sufficient quarters for them. Do you accept that statement?—(Mr. Hoyle) We are short of quarters for everybody. We keep on building as fast as we can, but we cannot get enough money in our budget to build houses for everybody.

B-153. They also mentioned they had not sufficient work. When some men leave do you appoint new men in their places, or are you taking steps to reduce the number?—We do not reduce the staff unless we find that there are definite economies which can be made.

B-154. Can you give us a full statement of your pensions scheme; how many members there are; what contributions are made by them; what contributions are made by you; and how many men are receiving pensions?—(Mr. Pitt) I can let you have a report to-morrow morning.

B-155. Will you tell me why, if your workers accept a pension scheme, they should also not accept a sickness insurance scheme?—I should think probably they feel that enough cuts are made from their pay as it is, and they do not want any more made. Further, this is not a favourable field for grand-motherly legislation. They are a self-reliant and a very conservative lot of men.

B-156. But they like the pension scheme?—No. It is called a voluntary contribution fund but it is really not very voluntary.

B-157. I find in the report of the Chief Inspector of Mines that your hours are mentioned as 48, and the maximum 50, while in your memorandum

the hours are rather more than 48 a week, and 50.—(Mr. Hoyle) I must apologize for that. It is a mistake in my written memorandum. It should be 8 hours, instead of 10.

B-158. I want to know why you do not observe the Act as regards hours?—It has never been the custom of the men here to work for more than the permissible hours under the Act, and therefore we do not feel under any obligation to compel them to do what they are already doing.

B-159. One man just now said that sometimes they work even 16 hours. The maximum allowed under the Act is 12 hours?—I heard him make that statement and it surprised me. It is entirely untrue. He might have been referring to the workshop, about which he does not know anything. In the workshop they do at times have to work overtime.

B-160. You state in your memorandum that there has been little marked change in the general efficiency of the workers in the past ten years. Did you make that statement after comparing the figures of production with the number of men, or is it your general impression?—It is more Mr. Pitt's general impression than mine. I have only been in charge of the department for 18 months, so I am not in a position to judge; but I consulted Mr. Pitt on the subject and that was the impression he had formed.

B-161. I find a remark in the report of the Chief Inspector of Mines to the effect that the production in your salt mine is going up. I take it also that the efficiency is going up?—(Mr. Pitt) The population is also increasing.

B-162. Are any efforts being made to mitigate the misery caused by unemployment by finding some supplementary occupation for these people?—I have spent a considerable time in corresponding with the Punjab Government on the subject of grants of land—not free grants of land, we can hardly expect that, but as to whether concessions could be made to our men in the matter of leases of land. There is a colony in the Punjab in which a good deal of land has been put up by Government for sale. I wrote some time ago to the local Government of the Punjab enquiring whether they could give any special concessions in view of the hardness of the case, that these men were, a good many of them, out of employment, and I undertook that they would make a fairly good type of settlers. I asked the Government to see what they could do about it. I have lately had a reply; they have slightly modified their terms; they have made their terms as to instalments a little easier.

B-163. *Mr. Cliff*: What are the terms?—I think they pay the purchase price in 14 annual instalments. I tried to get them to agree to 20 or 25 years, but they said they could not do that. The first instalment is cash down. I could give you the figures, but I was not prepared for the question and I have not the file with me.

B-164. May I put this figure to you; the first instalment is Rs. 2,500; is that correct?—That figure does not sound familiar to me. I am not sure you have got it right, but I have not the figures with me.

B-165. These figures were given to me by an officer in the mine.—(Mr. Pitt) It is something like that.

B-166. What is the holding?—(Mr. Hoyle) It is one square, which is 25 acres.

B-167. *Mr. Joshi*: Are you able to give us some information about this co-operative society which takes contracts for labour? Have you got a report of this society?—No, I am afraid not. It works under the Registrar of Co-operative Societies for Ajmer-Merwara. At the head of it is one of our Superintendents; he is put on deputation as Chief Manager of it. I am afraid I can give very little information about it; we do not get any reports at all.

B-168. *The Chairman*: Is not a report sent to the Registrar?—So I believe, and he inspects it like any other society.

B-169. There will surely be an annual report?—Yes. You could obtain that from the Registrar of Co-operative Societies of Ajmer-Merwara.

B-170. *Mr. Joshi*: You have referred to a certain Superintendent of yours who is now managing this society?—Yes.

B-171. My impression was that this Superintendent was doing some contract work. He, being a Government servant, that was not really allowed; this fact came to light after some time, and then he in order to continue his own work started a co-operative society and became the Chairman?—No, not so far as I know. It is absolutely above-board now, anyhow. The same Superintendent is not now in charge of it; the man who was in charge of it has gone on leave; he was taken ill a few months ago. What you are describing sounds rather underhand; I had not heard of that. The Society is officially recognized by the Government.

B-172. Looked upon as an experiment it is really a very interesting experiment?—Yes.

B-173. It is a kind of labour society in which the society takes the contracts. I was asking you about its origin; I want to know whether that state of things has now changed and whether it has now become a real co-operative society?—Oh, yes. We are only dealing with it as a contractor for the supply of labour. It is composed of local people of fairly substantial means, I understand.

B-174. *The Chairman*: Can you obtain for us a report of this interesting society?—Yes, I will send for it.

B-175. *Miss Power*: In your written memorandum you say: "The advantages of the Workmen's Compensation Act were not at first fully understood by the work people. They now understand them, and claim compensation whenever it is due. Six claims were paid in the last three years". Are we to take it that only six claims were paid but that more claims were put forward, or that all claims put forward, which amounted to six, were paid?—I think really every claim that was a valid one has been paid. I remember there was once a case which came up and which we found did not come under the Act; it was the case of a man who was employed by the mule contractor; when he was working in the mine, in the tunnel, the mule stepped forward, hauled the truck over his foot and it was crushed.

B-176. That would be an exceptional case?—Yes. We made the contractor pay. I tried to get Government to agree to treat it as an exceptional case, since as a matter of fact it did not fall within the Act.

B-177. Are any of these six claims to which you refer claims in respect of women?—I can have that looked into; I am almost certain one is.

B-178. You say in your memorandum: "The rate of accidents for the past three years is—fatal.....1 per 1,000; serious.....4·7 per 1,000." You tell us that the number of persons employed in the mine is approximately 1,100. In view of those figures it seems strange that you should say that only six claims were paid in the last three years. Can you reconcile those two statements?—Perhaps there is a fallacy there. In the first year very few claims were submitted because the work-people did not understand the Act at first.

B-179. Then are we to take it that this statement that only six claims were paid in the last three years is not correct?—I think there must be some mistake about that. This statement was prepared in a great hurry.

B-180. What machinery have you for notifying any accident involving absence for longer than ten days?—The doctor at the hospital sends a report of every case that is sent to him.

B-181. That is when they go to the hospital; but there are people who do not go to the hospital when they are injured?—I think they all go to the hospital if they are injured in the mine. If they are injured outside, in the road, we do not know anything about it. They invariably go to the hospital after accidents.

B-182. You mean serious cases?—(Mr. Pitt) All accident cases go to the hospital. The people who do not go to the hospital are people who are suffer-

ing from illness; and sometimes a hospital case which is progressing fairly favourably is taken away from the hospital before it should be.

B-183. In every case where a worker, male or female, is absent from the mine for more than ten days because of an injury sustained in the mine, is his or her claim put forward under the Workmen's Compensation Act?—Yes.

B-184. Yet in spite of that there are only a small number of claims made in three years, even if we do not accept the figure of six claims?—The reason for that, I think, is that for the first year after the Act came into operation we did not know very much about it; the workers certainly did not know and they did not put in any claims.

B-185. *Sir Alexander Murray*: Has Government insured under the Workmen's Compensation Act?—No.

B-186. They do their own insurance?—Yes. As a Government concern we must make it a point of paying in every single case.

B-187. *Miss Power*: In the workers' memorandum\* reference has been made to the fact that the system of payment now in vogue through lambardars is a comparatively recent system, and previous to that payment was made to the miners. Can you tell me why that alteration was made?—I do not think that statement is quite correct. The same classes of workers who were paid individually under the old system are paid individually under the new system. For instance, driving of tunnels had to be paid for through one man; there is no other way of arranging it.

B-188. You mean that you have invariably paid through the lambardar?—Yes.

B-189. There is no alteration?—There has been one alteration in the case of roof work; in working a roof under the measurement system we paid individually but we now pay through the gangmen.

B-190. The workers complained that sometimes the trucks were not weighed, that they were told that there was so much waste. Would it not be possible to associate a workers' representative with whoever is responsible for weighing the trucks? As you know, that is done in the English mines.—(Mr. Hoyle) Only a percentage of the trucks are weighed; we have a weigh bridge outside the mine, but it is not used for every truck by any means. They are paid on an estimated content of 14 maunds in the tub. Actually the tubs are over-loaded so as to balance out the waste, the marl and impurities of various kinds. Then the actual amount of salt issued from the mine is subsequently ascertained by the issues from the depôt. There is always a slight balance in favour of the miners and that is distributed to them *pro rata*.

B-191. What proportion of the ~~l~~ workers are women?—(Mr. Pitt) More than a third. We can give you exact figures.

*Sir Alexander Murray*: 396 are women.

B-192. *Miss Power*: In your memorandum, with regard to hours, you say: "Nine hours for surface and ten hours for underground labour, with the exception of female labour which works from four to six hours daily." The women are only employed underground, are they not?—Yes.

B-193. Are we to take it that those women are not working more than four to six hours a day?—It is very exceptional that they work longer hours.

B-194. What is one to understand when they say that their women remain with them during the whole of the time they are down the mine? What are the women doing during the rest of the time? Do they leave men hewing and go off?—Yes; the men go into the mines at about 7 o'clock in this weather. The women will draw water and do their household work and go down the mine at about 8 o'clock to 8-30. They then carry salt till about 12 o'clock or 12-30; after that they go home and get the food ready for their men.

B-195. *Sir Alexander Murray*: It would appear from your return to the Inspector of Mines that you give these women full pay for doing that?—There is some mistake in the returns. A lot of our mine returns are all wrong; I happened to be on leave at the time.

B-196. *Miss Power*: What arrangements are made to see that none of the young persons employed are under-age, that is, under 13?—Our staff has instructions that no child under 13 is to work, and any doubtful cases are sent to the Kewra hospital for examination; the doctor is the final authority to say whether a child is under or over 13.

B-197. How soon after a child's first employment is he seen by the doctor?—I do not think we usually examine our children.

B-198. If you do not usually examine your children how do you know whether they are under-age or not? Is it left to the father?—It is left to the parents; we have no actual machinery.

B-199. But if it is left to the parents, is it not common sense to suppose that a father who wishes to employ a child under-age is not likely to bring him forward to you to be inspected by the doctor?—Our own staff would take the case up immediately, and the gangman would be fined or punished in some way. We have had very little trouble with regard to breaking that particular rule; they do not seem to want to break it.

B-200. I see you say you have no welfare schemes?—No.

B-201. Can you tell me what supervision you exercise over women who are doing the carrying work immediately before and after child birth?—(Mr. Pitt) None whatever.

B-202. You mean a woman can work till practically the last moment if she pleases?—Yes.

B-203. And she can return on any day she pleases after the birth of her child?—Yes. We have no machinery of any kind. We find that the people very much resent any interference with the female labour.

B-204. Is any wage payment made to the regular workers when they are off work on account of child birth?—No.

B-205. They simply lose their wages for that time?—Yes.

B-206. So that the presumption is that they will return as soon as they can?—Yes.

B-207. Is any supervision exercised over the weights that these women carry?—No.

B-208. Have you any idea what the average weight is?—The load is supposed to be 40 lbs., half a maund. It is often above that and sometimes below it.

B-209. Have you any idea what the maximum weight is likely to be?—I should think it is never above 60 lbs.

B-210. You refer to the removal of a certain percentage of the women from the mine every year so that women will be completely removed at the end of a ten years' period. What effect do you think that is likely to have on the remuneration of the men?—It will have very little effect. We could stop all the female labour in two years.

B-211. Then who would you put on to that work?—We should use machinery.

B-212. So that the only reason why you do not use machinery now is because the women's labour is cheaper than any sort of machinery?—No, it is because the people want to use female labour.

B-213. Do you mean to say that you may be using a more expensive method by employing the women when you could do it more cheaply by machinery? Are you being philanthropic to the women, or is it because the women are cheaper than the machinery?—The question has never arisen.

B-214. It has arisen now?—Yes; now we are taking it up, and we shall very easily replace female labour with cheap machinery. In fact it is hardly machinery at all; it means just an ordinary chute.

B-215-16. Your case is that the chutes would be cheaper than the women at approximately 4 to 6 annas a day?—It will not affect us at all. The miner is responsible for delivering the salt into the truck; what means of transport he uses does not concern us. A number of them use Kashmiri labourers in the winter when Kashmiri labour is cheap. They get a Kashmiri labourer for 4 or 5 annas. We are not concerned with that.

B-217. What will you do during this gradual withdrawal of women labour?—We shall gradually go over to machinery; as women are withdrawn so we shall replace them by machines.

B-218. Have any of them been withdrawn already since the passing of the Act?—No.

B-219. When does the first year come when you will be withdrawing a percentage?—I think it will come next year or the year after; it is spread out over a period of years.

B-220. You are doing it gradually year by year?—Yes.

B-221. *Diwan Chaman Lal*: Can you give me any figures showing the cost of production per maund?—Certainly.

B-222. Will you also give me the cost of labour separately?—Yes. I am just making a very elaborate statement for the Tariff Board who are going closely into this question. Would you like to have that?

B-223. Certainly I should. I am concerned as to what is the actual cost of production per maund and out of that the total that is spent on labour. Perhaps you would be kind enough to put down in a separate column the actual cost of the supervising staff?—Yes, the indirect charges.

B-224. I notice there has been a great deal of unemployment and under-employment here. Would you be in favour of instituting some sort of scheme of unemployment insurance in order to relieve distress?—Theoretically, yes.

B-225. I mean a contributory scheme?—(Mr. Hoyle) Theoretically, I think it would be a very good thing. But practically as applied to Khewra, I should have a great deal of hesitation in adopting it because, as I have already remarked, the miners are the most conservative people in the world. They probably would not take kindly to any further cut from their pay. I should not be very much in favour of trying to introduce it.

B-226. Do you mean to imply that you have objections to it on financial grounds?—I certainly think there are financial difficulties.

B-227. Would you like time to consider it, and will you let us have your views on the subject? It is probably unfair to put this question to you at this stage.—I would not mind giving you a note on it at some time or another.

B-228. Would you be in favour of a scheme in which the employee did not make any contribution?—I think that would be slightly unreasonable.

B-229. Have you any plans for putting an end to the unemployment that exists at Khewra?—It is difficult to think of a ready-made plan. I have told you what we have done as to land. Attempts have been made to get them into the army; they are a good type of fighting men, as you can judge from what you have seen of them. In fact, they are the same type as is generally recruited from the Punjab I believe. But unfortunately the army has definitely said on various occasions that they do not want them. (Mr. Pitt) We have been able to get a certain number of men into the army and into the police. We have also lately been fairly successful in encouraging them to take up local contracts. We are very pleased to say that they, in fact, built the office in which you are now sitting; a number of gangmen took the contract for it and employed quite a number of miners on the less skilled jobs. About two years ago we started quarrying gypsum, and that gives steady employment to about 15 to 20 men. (Mr. Hoyle) Our chief possible

means of lessening unemployment is increased outturn. Our outturn is limited only by the demand. We have a large quantity of untapped salt in the mine, and we could increase our outturn by 50 per cent. without the slightest trouble if we only had a market for it. The Central Board of Revenue after a good deal of difficulty have succeeded in obtaining from the railways concerned certain concessions in the matter of freights. If we can get further fairly substantial concessions we shall be able, we hope, to get our salt into Calcutta and the markets of Bengal, and then we can expand a bit.

B-230. Has the duty levied on salt anything to do with the rate of consumption?—No, not at all, because after all it is very small. Whether it is Re. 1-4-0 or Re. 1-8-0 per maund, it cannot affect the consumer's family budget very much. One maund of salt, I fancy, is more than enough to keep a whole family going for a year.

B-231. You say in your written memorandum, with regard to staff organization—"Relations generally are satisfactory. The miners have no hesitation in bringing any grievances to the notice of the Mine Manager or General Manager." Are these grievances sent to you in writing?—Yes. I understand they are most regular in coming forward and having their grumble about things.

B-232. Were these grievances of a general character, or were they specific?—(Mr. Hoyle) There was a fairly frequent complaint about the rate that had been fixed for the tubs. When I am here on tour they generally come up and talk to me about their grievances. (Mr. Pitt) My office gets about twelve vernacular petitions a week from the workers.

B-233. Does not that show that there is need for some sort of machinery being set up which would deal with the grievances of the men as they come up?—Yes, and co-ordinate them a bit; I think that might be a good thing; it might possibly weed out the more irresponsible of the grievances. I fancy that some of these grievances were probably individual personal quarrels about the allotment of spaces and that sort of thing; they have feuds now and then between themselves about the allotment of spaces in the working chambers and things of that kind.

B-234. You say that the gangmen elect annually a panchayat or committee to deal with small local disputes. Will you let us have any records of these gangmen's committees, if they are written down?—I am afraid there is nothing of that sort. The question is usually referred to the Committee and they say they have heard the evidence and have decided that so and so has no right to such and such a chamber.

B-235. You say that the physique of the mining community as a whole is somewhat below that of agricultural labour in the Punjab. What are your reasons for saying that?—I have no real evidence except just walking about the country and seeing the two different classes of men; one is rather impressed by the fact that the miner is slightly weaker than the ordinary man who works on the land.

B-236. What do you think that is due to?—I suppose working in the dark is not so healthy as working in the open air. I think it is also due to in-breeding; the hereditary clans who work in the mine are rather exclusive and inter-marry a lot among themselves.

B-237. Would you also put it down to the fact that they probably do not get enough to eat?—We are told that they do not get enough vegetables to eat. As you have observed, there is no green stuff in this neighbourhood.

B-238. Have attempts been made to grow vegetables here in order to provide for these people?—The difficulty is the water-supply; the water comes from about three miles up the gorge and is just sufficient for drinking and bathing purposes. There is very little available for cultivation and certainly not enough available for making a big vegetable garden such as would be needed for this community.

B-239. May I take it that by spending a little money you could provide a sufficient water supply here at Khewra?—No. A great deal of money has

been spent and every drop of water that we can get here has been brought own.

B-240. Could you not build a reservoir for this purpose or sink tube wells?—No.

B-241. You give the figures as to the number of patients attending your hospital. In 1926 I see the number was 8,288, but by 1928 it has gone up to 13,245. Has that increase in the number of cases attending your hospital any relevance to your statement that the physique of the average miner is poorer than that of the agricultural worker in the Punjab?—That increase is almost entirely due to the personality of the Assistant Surgeon. I think that poor attendance in 1926 was unsatisfactory; it was not at all a matter for congratulation. The fact was that the people did not appreciate the advantages of medicine and did not attend hospital when they ought to have done so.

B-242. What is the total mining population of Khewra?—It is very difficult to get the exact figures.

B-243. I see there are said to be 2,000 men engaged in the rock salt industry in the Jhelum district?—It is rather more than that; a special census which was taken about four years ago, I think, gave the whole population as over 3,000.

B-244. The patients at your hospital in 1928 are 13,245 males and 6,860 females; that gives a total of about 20,000, which means over six attendances in a year by each individual?—The attendance is not limited to the people living in the village. If there is a popular Assistant Surgeon in charge people will come from all the neighbouring villages to be treated.

B-245. May I take it that substantially it is the population of Khewra that attends?—Khewra including the sub-villages.

B-246. You have said that the idea of a pension scheme is not favoured. Is it a fact that the decision as to whether a benefit shall be given is left in the hands of the leaders?—Yes, in a way.

B-247. I see that, under the head "Welfare" you say that the recipients are chosen by the gangmen and lambardars in consultation. A man who contributes towards this fund has no inherent right to a pension out of the fund; he is entirely at the mercy of the gangmen and lambardars?—The Mine Manager invariably attends the meeting. When we have enough money in the fund to pay out, say, a dozen more pensions, we convene a general meeting of the lambardars, gangmen and a few of the more responsible miners, and the Mine Manager attends. From what I have seen, they are fair in their judgments.

B-248. If a man contributes towards this fund that gives him no inherent right to get a pension?—No.

B-249. Has that something to do with the unpopularity of this scheme?—Possibly. Any scheme here is unpopular if it stipulates that there shall be a cut in wages.

B-250. You have made a statement as to the failure of the co-operative society. Why did it fail? You say that the shareholders took no interest in it. Is it a fact that the management in charge of the co-operative society failed?—I fancy the management was selected from the shareholders and the managing committee took no interest in the shop.

B-251. That was one of the main reasons why it failed?—Yes.

B-252. Some time ago there was a subsidence or collapse of houses. Was there an enquiry into that and is the report of that enquiry available?—There are several reports available; it was reported on by nine or ten people.

B-253. Was not a Government official put in charge of the making of the report?—The Inspector of Mines reported on it; the Consulting Engineer to the Government of India reported on it; the Chief Controller of Stores, who is an all-round engineer, also reported on it.

B-254. Let me have what you consider to be a representative report.—I will let you have all of them.

B-255. You said in your memorandum that the miners would object to the shift system. On what is the opinion based? Have you consulted the miners?—(Mr. Hoyle) They have been questioned again and again about this kind of thing. I also have innumerable reports.

B-256. But you have no reports from the miners themselves in regard to this matter?—I do not think they have put anything in writing as to their not wanting the shift system.

B-257. With regard to the payment of wages you say that payment is sometimes delayed from one day to 14 days and that in exceptional cases periods of from three weeks to one month have elapsed. Why is there no uniform system?—There are certain classes of workers who like to be paid at certain intervals and others who like to be paid at other intervals. Some like to be paid monthly and some fortnightly. About 12 months ago we made an enquiry and so far as practically possible, paid each class of labour at the interval at which it desired to be paid.

B-258. In some cases the wages have been in arrears as much as a month?—Yes.

B-259. I dare say you would be in favour of legislation which would make prompt payment of wages feasible?—I do not think legislation is necessary here. That long delay is not the kind of thing that happens regularly. In the ordinary course wages are paid punctually.

B-260. Among the miners is there a preference for weekly payment?—I cannot give you the figures off hand, but they are on record.

B-261. During the last nine years how many accidents have there been in the blasting factory?—We had a bad one in February of this year; there was one in 1918 and one in 1916 I think.

B-262. You have had several?—There have been three within the last thirteen years.

B-263. Were there residential huts adjoining the factory?—This factory was really a temporary residence of the powder contractors. The powder contractors are not employees of ours, but they were allowed to settle on land of ours for the purpose of manufacturing their powder. Their predecessor built himself a house on our land and during the period he held the contract he both lived and manufactured his powder in that house. His contract ended in 1919 or 1920. Since then the contract has been held more or less in partnership by three different men; they and their families were allowed to live on our land in this building which has been left behind by the former licensee.

B-264. On numerous occasions the blasting factory has been blown up, but nevertheless dwellings have been permitted to be built adjoining it?—I think the report you wish to see is the report of the Chief Inspector of Explosives.

B-265. I should like to see the report of the sub-divisional officer?—I should not think there would be any objection to that.

B-266. On page 3 of the annual report of the Chief Inspector of Mines, dealing with Jhelum he says: "The District Magistrate states that the relations of the labourers and employers were not harmonious throughout the year. The hereditary miners of Khewra have had considerable grievances against the salt department and as a consequence thereof a conference was held in Simla in 1907." I should like to have the District Magistrate's report and the report of the conference held by the salt department in 1907 at Simla?—This is the first I have heard of it.

B-267. Have you not seen a copy of the Chief Inspector's report for that year?—No. What you call the blasting factory is not the property of the Government; it belongs to the contractors who get a licence from the District Magistrate for the manufacture of powder. We used to allow

them to live on our land. The factory does not exist any longer and we are not allowing them to rebuild there.

B-268. Will you kindly supply me with the number of men working in the workshop and the number of quarters available for employees working at the workshops?—Yes.

B-269. Have you in your experience anywhere in India come across any factory or mine in which convict labour or semi-convict labour has been employed?—No, I cannot think of any at the moment. I should think that probably there are some; I should not be prepared to say there are not.

B-270. Do you favour a system of that kind?—I have not quite made up my mind. The Reclamation Officer is constantly writing and asking us to report in favourable terms as to the excellent discipline and training of his men. But I am not fully convinced that it is quite so excellent as he would have us believe. I am not quite prepared to pass a final opinion on it. Of course it has been a convenience in a way, as our miners will not work in the depôt.

B-271. Would it not be better to use electrically run locomotives rather than the present system?—It would be much better on all grounds.

B-272. *The Chairman*: I understand you have applied for authority to instal electric traction in the mines?—A scheme has been put forward and has been carefully scrutinized by the experts of the Indian Stores Department. Their report has been further scrutinized by my staff in Khewra. I have finally sent it back to Government asking for sanction to include the necessary funds in my budget for 1930-31.

B-273. *Diwan Chaman Lall*: Under section 17 of the Indian Mines Act, you have to provide latrines and water. Is there any such provision?—There are latrines of a kind, but they are not used.

B-274. Do you provide water inside the mines?—(Mr. Pitt) yes, we have to provide water for the mules and they use the water in the shot holes.

B-275. *Mr. Cliff*: What have you to say as to the complaint of the work-people that they can only obtain water at a restricted period?—It is perfectly true that the period is restricted, but we are all restricted.

B-276. Are they restricted to thirty minutes?—The time given was not true; they get a supply for about four hours daily from stand pipes, and hydrants in the village.

B-277. For what period of the day?—Two hours in the morning and two hours in the evening. The time is varied according to the supply available. At present, just after the monsoon there is no trouble whatever; the only really troublesome months of the year are April, May and June when water is rather short.

B-278. *Diwan Chaman Lall*: Am I to take it that Section 17 of the Act has not been complied with?—It is being complied with.

B-279. Under Section 17 you have got to provide drinking water in the mine itself?—It is provided. It is not provided through taps; you cannot have fresh water running about a salt mine, but there are tanks which are sent in. There are also latrines.

B-280. Do you think it would be a good thing if provision were made in the Workmen's Compensation Act to compel you to send in a return of the accidents that happen?—I do not see any necessity.

B-281. *The Chairman*: Do you report all your accidents to the Mines Department?—Under the Mines Act we are required to send immediate notice of any serious accident or any accident that is likely to be serious. A serious accident is one that keeps a man from work for 21 days. If it is likely to be serious or if it is fatal a report goes in within 24 hours.

B-282. *Diwan Chaman Lall*: Would you be in favour of reporting any sort of accident that is suffered by a worker?—No, I think the law is fairly good as it stands. Any sort of accident may mean just a scratch. If

such small matters were reported the work of the Mines Department would increase enormously; it would create a mass of correspondence.

B-283. But in the absence of trade unions would it not be better to have a report?—You have that report in the office of the Inspector of Mines.

B-284. But that is only of serious accidents?—I think that is sufficient.

B-285. *Mr. Cliff*: There has been handed in a file of correspondence which has taken place with the Punjab Government as to your application for land for miners. Would it be convenient to prepare a memorandum on this subject for the Commission?—Yes I will prepare a precis.

B-286. Are you directly responsible for the conditions of labour of the work-people, fixing their rates of wages and their welfare?—Yes, in a way I am responsible for all that goes on in the Department. Almost everything except unimportant routine detail comes up to me.

B-287. *The Chairman*: How far have you a free hand, without getting the consent of some higher authority, to make changes in the conditions of the workers?—Practically every change has financial implications of some kind or another. My financial powers are very circumscribed. Therefore almost everything has to be reported to the Central Board of Revenue which is really a branch of the Finance Department of the Government of India. For instance, the fixing of the rate of payment for tubs was sent up to the Government of India for approval.

B-288. *Mr. Cliff*: Have you ever previously handled large numbers of industrial workers?—No, I have not. This is my first experience of being in command of them.

B-289. Since you became Commissioner how many times have you visited Khewra?—I think this is my fourth visit.

B-290. Are you satisfied that the conditions at Khewra are as they ought to be?—It would be rather a sweeping statement to say that they are. Almost anything will admit of improvement.

B-291. Did you hear the evidence of the representatives of the miners this afternoon?—Yes.

B-292. Did it strike you that their complaint was a demand for security?—Well, they ended up by asking for security and saying they hoped they would not be ill-used for having made uncomplimentary references to their officers and the Department.

B-293. I am not thinking of victimization; I am thinking of the whole petition?—It is a little difficult to judge that petition dispassionately because of the way in which it is conceived. I mean it was grossly unfair. For example, they said that Government ought to have provided them with houses when the subsidence occurred, absolutely suppressing the fact that Government had given them irrecoverable advances. No doubt there is a good deal in that petition that is deserving of consideration and enquiry. I am quite certain that it was not a spontaneous petition. It was drafted I believe, by a pleader on behalf of the men. The new system of payment is preferred by the miners as a whole, but at first they had a little grievance about the rate. Then the rate was recalculated, the details were explained to them and they said no more about it, being evidently afraid that Government would now proceed further to enquire into it and the rate would be reduced. The statement in the petition that the rate was too low, I am inclined to think, was not a spontaneous idea of the people for whom that petition nominally stands.

B-294. *The Chairman*: Were the men consulted before the new system was put into operation?—(*Mr. Pitt*) Yes, it was explained very thoroughly to them and the general body did not seem to be at all antagonistic to the new system. There was a little bit of argument about what they were to be paid per tub which was our unit. There was also a certain amount of argument because under the old measurement system they were paid for

carrying salt up to different heights. Payment of that kind is impossible under the system of payment by weight, or it is only possible with the aid of very complicated calculations. Our endeavour was to evolve a very simple system. The old measurements and calculations used to take six weeks to work out occasionally.

B-295. I understand it was explained to them before it was put into operation?—It was. After it had been in force for some time we made an experiment on a working place, calculating the amount due to the men by measurements and by weight; in fact we made two experiments. In both cases we found they were paid more for a given quantity of work by the weight system. We showed them these figures; they were rather frightened that we should send these figures to Government and that the flat rate would be reduced.

B-296. Mr. Cliff; I think you said it was explained to the 'general body' of workers. What does the expression, 'general body' cover?—The people who are sitting round here are a fairly general body.

B-297. One body of which you have spoken consisted of four members of a committee of lambardars and the men who were literate. Can it be said that the explanation was given both before and after to the whole of the miners?—Did they appreciate what you were doing before you did it?—It was not given to the whole of the miners.

B-298. If an explanation was not given to the whole of the miners, is it not natural that when a system which they had not been able to appreciate was introduced, there should be objections?—It was explained to the gangmen, lambardars, and the heads of the families, who were asked to explain it to the people who worked in their gangs.

B-299. What is the function of the lambardar in the mine?—He has no real function in the mine.

B-300. So that for our purpose we need only consider gangers in the mine?—Yes.

B-301. How many gangers have you in the mines?—41.

B-302. You pay wages to these gangers?—No.

B-303. To whom do you pay wages?—Wherever we can we pay wages individually; our payment system provides for individual payment of the ordinary excavation work which forms the bulk of our outturn.

B-304. When you speak of individuals you are referring to registered miners?—Yes.

B-305. So that as far as the registered miners are concerned, for the great bulk of your work you pay them weekly?—Whenever practically possible, yes.

B-306. Can you give me some rough idea of the proportion whom you pay directly?—I could give you the proportion of the total wages which are paid individually and paid to the gangers.

B-307. The explanation was given to the gangers. It was given before the change was decided on?—Yes.

B-308. Was any explanation given to the miners of whom I understand a considerable proportion would be affected?—Yes, wherever possible.

B-309. By you?—Yes, I was Mine Manager at the time and personally explained to as many work-people as possible what was going to happen; because the weight system postulates the use of the small account book and we had to explain carefully to each man what that book was for.

B-310. Why was this change desired?—(Mr. Hoyle) It was for audit reasons really. The result of this measurement system was that the people did not get fully paid up for long periods. It was a thoroughly faulty method. For that reason the new system ought to be greatly preferred by the men, because their payments were frequently delayed under the old system.

B-311. What is the number of registered miners?—(Mr. Pitt) It is just over 600.

B-312. Is the number of women about 350?—Something like that.

B-313. How many are engaged in the shops and loading platforms?—1,100 is the number working underground. I think our figure is wrong here.

B-314. Am I to understand that there are still 150 to account for underground?—Not as many as 150.

B-315. May I take it that there are 950 underground or must I take it that it is 1,100?—I am sure that there are not 1,100 underground, because that number includes workshop people.

B-316. Have you got a muster roll of the actual number of people underground?—Yes.

B-317. Does that include persons under 13?—Yes. The trouble with some of our information is that the whole thing had to be done in three or four days. It was not possible to check the figures.

B-318. *Mr. Cliff*: You say: "The total permanent labour force including miners, workshop hands and some of the semi-permanent labour is about 1,100 (including women) at Khewra." What is the number underground?—The number underground is about 500 miners. The whole 600 are very rarely working. There would possibly be between 300 and 350 women and there would be another 20 to 40 men on transport work.

B-319. Does your muster roll show how many youths over 13 and under 18 years of age you have employed in the mine?—Our register of miners includes practically all the able-bodied males in the village.

B-320. I understand it is your view that there are more miners employed than is necessary?—Yes, that is the case.

B-321. What number would you say would be adequate for your output?—Unfortunately we are just going to change our output. For the output up-to-date which is about 30 lakhs of maunds a year, 400 men would be ample.

B-322. If a miner chooses to bring a woman or a man there is no restriction on him?—No.

B-323. He could do that?—Yes.

B-324. Have you more men engaged in the workshops than are necessary?—No.

B-325. Is that for economic reasons?—The men in the workshop are paid daily wages.

B-326. Therefore you do not employ more than you actually require?—No.

B-327. Is it any concern of yours that there are more people having the opportunity of working in the mines than are required?—We encourage them to take up other branches of work and not to go into the mine.

B-328. Provision has been made that by a certain date women shall be excluded from the mines?—Yes.

B-329. And yet you tell me that you are permitting new women to go into the mines?—Yes they go at present.

B-330. Does it appear to you that in order to prevent friction and trouble it is well to discourage them now?—These people are very very sensitive about their womenfolk; the less one interferes with their womenfolk in any way whatever, the better.

B-331. However sensitive they may be, if the law is operated at the prescribed year, they will have to put up with it?—Yes.

B-332. Do you not think it would be advisable that there should be no new entries of labour into the mine?—I think it would be.

B-333. I understand you to say that on the loading platform, i.e., discharging of the small trucks, you have asked the people to tender and you have

not received any tender. Have you tried to employ them at daily rates of wages?—No.

B-334. Have you ever thought of taking youths who are growing up and as they are growing up encourage them on that class of work at a daily rate?—The miner is rather a snob in his way and to descend from a skilled worker to a worker in the depôt would be a distinct loss of prestige and respectability.

B-335. Is not that responsibility upon you to find employment here wherever possible?—We feel that responsibility.

B-336. Have you in any way sought to train the boys who are growing up?—We have a number of sons of miners employed in the workshop. There are a number of them on our electrical installations. Wherever possible we put them in.

B-337. Will you tell the Commission the number that you have trained and your views on the success of the experiment?—I cannot give you the actual figure.

B-338. Is it a dozen or twenty?—At least 20.

B-339. What opinion have you formed as to the success that has attended this scheme?—It has been quite successful.

B-340. What do you mean by "semi-permanent labour"?—Permanent labour is the hereditary mining caste. Purely casual labour is labour which is recruited for construction work. If we want to build a bungalow or an office or something like that we recruit purely temporary labour to do that work.

B-341. Taking semi-permanent labour, are they employed regularly throughout the year?—Yes.

B-342. What proportion of the people employed about a mine are not subject to factory legislation?—The Mines Act covers everything including workshops.

B-343. Do all the employees specified in these categories come under the Workman's Compensation Act?—Yes.

B-344. Does that include contractors' men?—Not in relation to us. The obligation in that case is on the contractor and not on us.

B-345. The employee has a legal right against the contractor?—Yes.

*Mr. Clow*: And also against you, the principal.

B-346. *Mr. Cliff*: Under the head "Wages" in your memorandum you apparently make an analysis of the cost of living of a family. Can you tell me how that is made up?—(*Mr. Pitt*) Yes, I have the detailed figures here. It is a very difficult thing to get the figures of the cost of living.

B-347. Will you put in those figures?—Yes. I will not guarantee their accuracy.

B-348. Have you ever considered accepting liability under the Workman's Compensation Act in the mines that are in the Indian States?—No, we are not legally liable, but undoubtedly if we had a serious accident which was due to employment in our Department we should consider the matter and try to get Government to sanction some compensation for it as a special case. We once got sanction from Government for the payment of compensation to some labourers who lived near the edge of the lake and whose huts caught fire from the sparks of the engine which was hauling our salt. I give you that as an instance of the kind of cases in which we thought fit to ask Government to sanction compensation.

B-349. Can you tell me whether a case has occurred in the Indian State for which you would be liable if it were in British India?—I cannot remember such a case.

B-350. You agree that you are morally responsible?—I agree that we should consider whether we ought to pay. I do not know that I am prepared

to admit it straightway as a general principle, but I certainly think we ought to consider in such cases whether or not we are morally liable.

B-351. *Col. Russell*: I understand you had employed here for several years a trained dai or native midwife?—Yes.

B-352. Why did she leave?—(Mr. Pitt) She reached the age limit and retired about two months ago.

B-353. Since she retired in June has any attempt been made to get a substitute?—Yes.

B-354. But you have not been able to get one?—We have applied to four different places. I have been offered lady health visitors at rather high salaries, which I do not think Government will pay.

B-355. During her last seven years' work in Khewra the figures that I got this morning from her own registers show that the cases had steadily diminished?—Yes.

B-356. Was that due to her old age or was it due to the fact that the women did not want her services?—She was a most unsatisfactory woman; she was not supposed to take any fees, but she took very high fees for attending cases. She was very dirty and lazy.

B-357. Then I take it that the fall in numbers was not due to the unwillingness of the women to make use of her services?—To some extent.

B-358. I am aware of the fact that the people here are very conservative; but would women welcome the development of that kind of work or let me say, general welfare work, if it were initiated by Government agencies like the Salt Department.—We are thinking of having an experiment on the lines of having a health visitor to come and tour the neighbourhood.

B-359. Although a health visitor is under consideration, so far you have done nothing further about it, because of the high salaries that these applicants are asking. Have you asked Government whether they will sanction the salary of a fairly highly paid women or not?—It is still under consideration.

B-360. Whose consideration?—I think the file is in my office at present. Correspondence is going on between my office and the Commissioner's office as to the replacement of a dai and the possible appointment of a health visitor.

B-361. Do you think that is an important question as regards the health of the women in connection with the mines?—(Mr. Hoyle) Do you mean from the economic point of view?

B-362. No, from the point of view of the welfare of the women?—My own opinion is that it would be a good thing. In other parts of India I have seen some welfare work which has been done with an industrial population, and I think the effects were extremely good.

B-363. You will admit that that kind of work is bound to increase the comfort and happiness of the population?—It seems so from what I have seen of it.

B-364. There is no sanitary inspector employed here?—No, the Director of Public Health goes round from time to time.

B-365. Probably he would get to a station like this about once in two years?—Yes.

B-366. Have you any body regularly on the staff to see that sanitation is carried out?—No.

B-367. Do you not think that it would be an improvement if such an appointment were made?—I should think it would be a very good thing.

B-368. For instance, I understand that the whole of the night soil and refuse from the hospital is dumped into the gorge about 150 feet below the hospital. Do you not think the inspector, if he were here, would prevent that happening?—He probably would. I am not opposed to it. I am really thinking of the Finance Department of the Government of India.

B-369. If you put up such a proposal, surely they could hardly refuse it?—Fortified by the recommendations of this Commission, I dare say it could be done at a later stage.

B-370. I have noticed there was a considerable amount of fairly obvious anaemia not only among the workers themselves, but among the boys. That may be due to deficiency of vegetables as was suggested; but is there no disease in the population which may be a cause of the anemia?—I do not think there is any disease which is particularly common here more than in other places.

B-371. Do you not think that the appointment of a sanitary inspector with a certain amount of anti-malarial training would be of advantage in that respect?—Yes, undoubtedly.

B-372. Water supply is brought down in pipes?—(Mr. Pitt) Yes.

B-373. How is it collected at the top?—There is a dam built across the head of this gorge.

B-374. You told Mr. Chaman Lal that the water supply could not be increased. Is that an engineering impossibility?—It is not an engineering impossibility; it could be increased at prohibitive cost.

B-375. That is a matter of opinion; but if the reservoir could possibly be increased you would have a large water supply available?—No, the limestone will not hold water. There is almost nowhere to build a really large reservoir. It would give us a better water supply for perhaps a fortnight in the hot weather.

B-376. At present do the women have to carry the water from the taps to a very considerable distance?—Yes, they carry it to the top of the village.

B-377. Would it not be possible to have branch pipes so that it may run into the village?—The ground is all saline and invariably where you have a hydrant there is wastage.

B-378. That could be carried away by a drain?—It eventually finds its way into the soil and causes subsidence.

B-379. That could be avoided by putting in pucca drains?—But there is no pucca ground to put it on. We find it inadvisable to extend the water-supply more than necessary on a salt area.

B-380. How much drinking water do you provide in the mine for the workers?—We send in two tubs of about 25 c. ft. capacity.

B-381. That is 600 gallons?—Yes.

B-382. Each day?—Yes.

B-383. Mr. Ahmed: The workers in the mines inhale a certain amount of brine which injures their health?—(Mr. Hoyle) Of course the air is not quite as pure as the air outside; on the other hand it is kept pretty well in circulation.

B-384. The air is comparatively bad?—Yes, compared with the outside air.

B-385. That injures the health of the workers?—I should prefer to take medical opinion as to that. I am not really fitted to express an opinion.

B-386. If sufficient capital and a sufficiently large market were given to you could you utilise the services of the unemployed?—I am not quite prepared to say that I could do so immediately. We do not yet know how the consuming public will take to Khewra salt which we are trying to put on more distant markets; and there are certain kinds of work which these men do not seem to take too regularly.

B-387. Have you sufficient space in the mines to utilise the services of these unemployed people here?—There is undoubtedly sufficient space.

B-388. Do I understand you will be able to go on with your work here steadily for fifty years?—I think easily.

B-389. With regard to persons being elected on the committee you now realize that it is a better system for you to elect them than to nominate them because you yourself said that these two men who came here this afternoon were not representatives of the miners?—Certainly.

B-390. You say they told us things which were not the opinions of the workers?—Yes.

B-391. For that reason it is better for you to get an elected body?—I have already said that I think it might be a good thing.

B-392. In 1921 there was a strike on account of the low wages paid to the workers. You say that the workers were estimated to have lost a large sum in wages. But you say in another paragraph that there was no particular loss to the industry?—Yes; the miners lost three months' wages; they were replaced, to some extent, by outside labour.

B-393. Is it not a fact that the high officials drew salaries for those three months and therefore there was a loss to industry?—No, because the miners were replaced by Pathan labour.

B-394. What do you mean by saying that there was no particular loss to industry?—What was intended was that the industry was not held up and other labour was secured.

B-395. Do you consider that the co-operative system is beneficial to the workers here?—The co-operative society of which we have spoken exists from our point of view merely with the object of supplying labour; it is not a co-operative society of our people; it is a co-operative society of local persons of a fair degree of substance who recruit labour.

B-396. *Sir Alexander Murray*: The particular industry with which you are connected here is not a typical industrial undertaking?—No.

B-397. The troubles you have here are not troubles incidental to an ordinary industrial undertaking?—No.

B-398. The type of labour with which you are dealing is not typical labour; it consists of these hereditary miners?—They are quite different from ordinary labour.

B-399. I think you will agree that special consideration ought to be extended to these workers in connection with unemployment?—Yes.

B-400. I understand you have brought down here about 160 ticket-of-leave men?—It varies; it is anything from 100 upwards.

B-401. You house them free of cost?—Yes.

B-402. How much are you paying them?—We pay them piece-work; it works out at about Rs. 15 to 16 a month; it varies with the output; they can go up to Rs. 20 or 22.

B-403. It is said that in this part of India one out of every eight men of military age enlisted in the army during the war, but in this particular area—the Salt Range—one out of every three men went into the army?—Yes.

B-404. Do you not think it is your duty here to do your utmost to give employment to such men rather than to convicts?—I would like them to take the work on but they will not do so.

B-405. But do you not think that you as the General Manager could talk to the men and explain to them that it is in their own interests to do that work instead of bringing in outside labour; would not that be better than that they should go about starving?—They are not starving.

B-406. I cannot reconcile the figures you have given us with the statistics of the Inspector of Mines.—I am afraid our return must be hopelessly wrong.

B-407. Will you therefore give us some figures dealing with 1927-28?—Yes.

(The witness withdrew and the Commission adjourned to Lahore.)

# PUNJAB

## FOURTH MEETING

LAHORE

Thursday, 24th October, 1929.

PRESENT:

The Rt. Hon. J. H. WHITLEY (*Chairman*).

The Rt. Hon. V.S. SRINIVASA  
SASTRI, P.C.

Sir VICTOR SASSOON, Bart.

Sir ALEXANDER MURRAY, Kt.,  
C.B.E.

Mr. A. G. CLOW, O.I.E., I.C.S.

Mr. KABIR-UD-DIN AHMED, M.L.A.

Mr. JOHN CLIFF.

Mr. N. M. JOSHI, M.L.A.

DIWAN CHAMAN LALL, M.L.A.

Miss B. M. LE POER POWER.

Lt.-Col. A. J. H. RUSSELL, C.B.E.,  
I.M.S. (*Medical Assessor*).

Mr. HARKISHAN LAL, Bar.-at-Law.

Mr. R. W. TAYLOR, DIRECTOR, East India  
Carpet Co., Amritsar.

Dr. K. C. Hiteshi.

Mr. M. A. Ghani, Bar.-at-Law.

Pt. RAM AUTAR, Vice-President, North-  
Western Railway Union.

Col. C. WALTON, D.S.O., Agent, N.-W. Rly.

Mr. M. S. GREGORY, M.C.

Miss SIRAJ-UD-DIN

Mrs. DAGMAR CURIEL WILSON. } (*Lady Assessors.*)

Mr. S. LALL, I.C.S. } (*Joint Secretaries.*)

Mr. A. DIRDIN.

(*Assistant  
Commissioners.*)

**Mr. W. R. WILSON, I.C.S., Revenue Secretary to the Government of the Punjab.**

B-408. The *Chairman*: Mr. Wilson, you are the Revenue Secretary to the Government of the Punjab?—Yes.

B-409. Will you tell us how long you have held that office?—For the last two years.

B-410. I take it from the memorandum submitted by the Punjab Government that out of a population of 80 million only some 51,600 come under the provisions of the Indian Factories Act?—I think that is the case.

B-411. Namely, in round figures, 43,300 men, 7,500 women and 783 children?—Yes.

B-412. Analysing those figures, cotton ginning and pressing is the staple industry employing 31,335 workers who look upon this, for a period of four or five months in a year, as a side line to agriculture. Is that so?—Yes.

B-413. Of the remaining 80,000 factory workers, 18,000 are in Government employment—13,629 in railway workshops and 4,743 in Government factories; so that only 12,000 factory workers are left in private industrial employment outside cotton ginning and pressing?—Yes.

B-414. Of the 7,534 women working in factories, 7,123 are employed in cotton ginning factories, leaving only 411 for other employment?—Yes.

B-415. So far, therefore, as factory labour is concerned, apart from ginning factories, Government is far and away the largest employer?—Yes.

B-416. Has the Punjab Government any considered policy with regard to labour questions?—There has been no formal pronouncement or definite formulation of a policy that I know of. I think the object of Government is to endeavour to enforce the provisions of the Factory Act, the Workmen's Compensation Act, and such legislative measures as apply to labour.

B-417. Is it anticipated that the new power supply will lead to an expansion of industry in the Province?—That is so.

B-418. At present the scarcity of coal makes the Punjab practically a non-industrial province?—Yes, the coal such as there is in the Salt Range is not suitable for industrial purposes. There is hardly any iron except a little in Patiala. We have water and something is to be made of it in the hydro-electric scheme.

B-419. Therefore it might be said that the Punjab Government has the advantage of an almost clean slate in industrial matters with a prospect of considerable developments in the near future?—Yes.

B-420. Has any attempt been made to co-ordinate the activities of the various Government Departments concerned? In the preface to your memorandum I observe that industrial matters are divided between four different portfolios of one Member and three Ministers?—Some subjects are Central and the Local Government is acting as an agency. The Central subjects are in the portfolio of the Hon. Member for Revenue; for example, regulation of mines, development of any industry that may be declared by the Central Government to be suitable for Central control in the interests of public service, and control of production, supply and distribution of any product about which the Central Government may similarly declare to be under its control in the interests of the public—these are the main Central subjects. In the Provinces the industrial matters that are called reserved, i.e., welfare of labour including housing, accident insurance or other insurance, smoke nuisances and settlement of disputes, are under the Hon. Member for Revenue. Then there is another head electricity, boilers, factories and gas. These are the four heads under the devolution schedule relating to labour which come under the portfolio of the Hon. Member for Revenue. Development of industries, including technical research and industrial education, is a transferred subject that is dealt with by the Minister for Education. Labour questions which can be differentiated from industrial development, and subjects such as welfare of labour, housing, and settlement of disputes, are in the portfolio of the Hon. Member for Revenue, they being Provincial subjects, reserved. Medical and public health are transferred subjects in charge of an entirely different Ministry.

B-421. It seems very complicated?—It is rather. Medical and Public Health and Education used to be under one Minister three or four years ago. Now "Education" and "Industries" come under the Minister for Education and Medical and Public Health have been put in a separate portfolio, the portfolio of the Minister for Local Self-government.

B-422. What is the meaning of 'public works' in the portfolio of the Minister for Agriculture?—It refers to the execution of public works such as roads, and buildings and works of general public utility carried out by the Public Works Department, including the hydro-electric scheme.

B-423. I take it from what you told us that there is at present no means of co-ordinating these departments in their various relations to industrial questions?—Not so far as Medical and Public Health are concerned. We do so, for instance, in such questions as the planning out of a colony town or in the matter of framing factory rules; we consult the Director of Public Health in such matters.

B-424. I mean with regard to the framing of a policy in view of the coming development from the hydro-electric scheme and thinking ahead so

that the Punjab may become a model to the whole of India in its future industrial development.—The supply of power is three or four years ahead, and when it does come, it will simply operate to replace the local sources.

B-425. *Sir Victor Sassoon*: You have referred to the evening classes for the workers regretting that there are no philanthropists here who would institute such classes in the Punjab. Do you consider that the provision of such evening classes is likely to be a success unless you have compulsory education?—In rural areas where there is no compulsory education a movement has been in force for the last five or six years to provide night classes for adults, of course in the vernacular and primary education. These schools may be good in some places; they may be bad in other places. But in the rural areas there is a distinct endeavour on the part of the Education Department to supply some facilities in the way of primary education for adults. I think that that is largely a rural development and the progress made in that development has not been so great in the towns as in the country.

B-426. That bears out what I have heard. Where there have been attempts to start evening classes in industrial centres they have not been patronized. So that your point is that such classes at the moment are more likely to be successful in rural districts.—They have been tried in rural districts up to the present, as far as I know.

B-427. You say: "As for possible means of securing increased efficiency, the main appeal to the worker can only reside in an improved method of remuneration which will give him a fair share in the increase of output." Do you mean by that that you are likely to get a workman to increase his efficiency if you increase his remuneration?—If you give him an interest in the concern he would increase the production, because that would put something in his own pocket.

B-428. I thought that was a platitude. In other parts experience has been that increased remuneration has often not led to increased output; if anything it has led the workmen to do rather less work.—That is news to me.

B-429. That is not so in the Punjab, at any rate? I do not quite understand table No. 7 in the Government Memorandum, which gives the number of acres per rupee of rice, maize, wheat, etc., over a period of years. From this chart it would appear that in the last few years these products were the cheapest in 1923 and had then with a few setbacks risen yearly. Is that so? Is it a fact that in the Punjab foodstuffs have been rising in prices practically from 1923?—From this chart it would appear to be so. Possibly in other parts of India they have gone down.

B-430. I ask that because we have had cost of living figures in other parts of India where these figures have gone down during that period, or at any rate have not gone up.—From this chart it would appear that as the expenditure of the worker on food is as high as 60 per cent, the cost of living has gone up in the last six years.

B-431. It would appear that the cost of living has gone up in the last six years?—Yes.

B-432. And yet in the report it is mentioned that the drop in wages has been due to lower cost of living. I cannot quite see how the cost of living could have gone down while your foodstuffs have gone up. Who issues the chart?—This chart was prepared by the Director of Land Record's office. The Director of Land Records keeps an account of food prices.

B-433. Have you any idea as to how many districts he takes into account in getting these figures? It might be that these represent only a small number of districts and may not necessarily give the values all over the Province?—I think the system is that he selects districts representative of localities in the Province.

B-434. You are referring to the Workmen's Compensation Act in connection with forest work. I take it, whether it has been scheduled as hazardous work or not, that would not make the rates any different?—I

think that merely brings the work under the Act; the compensation that would be given to such work people would be on exactly the same scale as in other industries brought under the Act. The Punjab Government suggested to the Government of India sometime this year that forest fellings should be brought under the scope of the Workmen's Compensation Act. The Government of India said 'No.' Therefore compensation cannot be given according to the Act, but we adopt the same scales in giving gratuities under the Civil Service Regulations.

B-435. These rates which they receive are, according to your report, two or three times the amount which would satisfy those concerned?—That is the information I got from the Chief Conservator of Forests.

B-436. At the same time you are suggesting that the scale of compensation should be increased by 25 per cent. in respect of poorer paid workmen who only get a wage of Rs. 25 a month. I take it these men in the forestry work would not be receiving more than that?—No; they are usually working in out-of-the-way areas where labour is cheap.

B-437. Therefore they would probably be getting less than Rs. 25, and would come under the head of poorly paid workpeople?—Yes.

B-438. Therefore, if the recommendation you make were adopted, you would be increasing by 25 per cent. the amount which is, according to your statement, more than would satisfy them?—I would. The forest labourers are probably in receipt of poorer rates of pay than labourers in the plains.

B-439. That rather strengthens my point that although they are receiving poorer rates they are at present receiving two or three times the amount which would satisfy them. Your statement that the present scale amounts to two or three times what would satisfy them does not apply to other labour under the Workmen's Compensation Act?—No, it does not apply.

B-440. Yet these people are receiving less?—Yes.

B-441. They are really worse off and they are more than satisfied?—If you like we could eliminate forest people from any general recommendation to increase the scale.

B-442. I was wondering whether any increase for the others could be justified in view of the fact that the poorer classes are more than satisfied?—Forest cases are comparatively rare—I think four or five in the year.

B-443. *Mr. Clow*: In your memorandum dealing with housing, you have stated that the workers would be only too glad to get any accommodation provided by the employer; but the need to provide accommodation is rare. What do you mean by 'the need'? Do you mean there are already satisfactory houses provided by private landlords?—The ginning factories are mainly in the colony areas where there is plenty of room, where there is no such congestion as you have in the older and bigger towns of the Province, and in laying out a factory town, the factory sites have certain places allotted for building quarters. There is no difficulty about getting land as there is with the older factories on account of the cost.

B-444. My point is that if they are only too glad to get any accommodation provided by the employer it looks as if there was need for accommodation?—In the towns they would like accommodation, but in the colonies where the ginning factories are, I do not think there is any need for accommodation of the ginning labourers.

B-445. In your memorandum you deal with the question of controlling the construction of new factories, and you say that the Central Government held the view that the most that the Government of India could do would be to ask the Central Legislature to pass an enabling measure. I think I am right in saying that the Government of India took the view that it would be better therefore to leave the whole thing to the Provincial Legislature?—No local Legislature, to the best of my knowledge, has legislated in any Province. The Government of the United Provinces has framed certain rules for municipal towns and District Board areas.

B-466. What I would like to get from you, if possible, is the reasons which have prevented the local Government from putting forward a proposal for legislation?—As far as the Punjab is concerned, when Bengal and Bombay and other more important centres have done nothing themselves, we propose to confine ourselves to trying to amend the Cotton Ginning and Pressing Factories Act and the Rules thereunder in order to get more control over conditions affecting the comfort of the labourers in the main class of factories in the Punjab—the cotton ginning and pressing factories.

B-447. *The Chairman:* This is a question of controlling the construction of factories?—Yes. There are rules for controlling the construction of cotton ginning and pressing factories under the Cotton Ginning and Pressing Act.

B-448. *Mr. Clow:* You have had a very serious accident in Amritsar lately, when a factory fell and killed several people?—That was due to the factory not working for more than two years, and with the very opening of the work the top storey came down.

B-449. Do you consider it necessary that before a factory starts work, or starts to work again after an interval, there should be some control over its construction?—That suggestion has been made and Government has suggested I think that before a factory starts after not being used for a year, it should be inspected by the Inspector of Factories.

B-450. At present you have no power, except in so far as Municipal Act gives the power, to prevent an unsuitable building being used as a factory?—Yes, but on account of that accident it is now proposed to take power.

B-451. By legislation?—I do not know whether our factory rules will admit of amendment to bring it within their scope; but if necessary, by legislation.

B-452. So that I take it that the real reason for the inaction here is that other more important Provinces have taken no action?—That is one of the reasons.

B-453. In your memorandum, dealing with "Health", which I understand, is not entirely endorsed by the local Government, you say that the Committee which dealt with the provision of sickness insurance came to the conclusion that if the legislation was to be sanctioned it must be Central. Is that view shared by the local Government?—Yes, I think so, as far as I remember.

B-454. Could you give us the reasons?—A certain amount of money is necessary for embarking on a scheme of this nature.

B-455. Central legislation would not necessarily mean a Central subvention?—As far as I remember, the local Government said that they would have no objection to bearing the administrative expenses of any scheme that might meet with general approval throughout India.

B-456. But not the contribution?—The contribution was left indefinite for consultation with other Provinces and the Central Government, if ever headway was made.

B-457. Mr. Abel, Chief Inspector of Factories, has given us some very striking particulars of what appear to be extraordinarily inadequate fines for repeated serious offences against the Factories Acts; there was one instance in particular in which a man who was discovered four times in two years employing children illegally was fined on the last occasion in two cases Rs. 25, having been much more severely fined on his second offence. Did the local Government consider the question of applying for an enhanced fine?—I do not know whether the case was brought up; I do not think so. It would not come to me; I would not see it.

B-458. Is it correct that when a man is convicted in a case like this, it is not possible, even after conviction, to bring to the notice of the Court the fact that he has been previously convicted?—Do you mean after the fine has been imposed?

*The Chairman:* I think Mr. Abel could best answer that question?—*(Mr. Abel)* The point has been raised in a Court by defending counsel, that

there being no provision in the Act by which an enhanced fine can be imposed, it is not possible to state in the complaint that there is a previous conviction.

B-459. But after the Magistrate has decided to convict?—In such cases I always send on to the local Government a resumé of the actual case and point out that the fine has been inadequate. In one or two cases I have asked the Deputy Commissioner of that particular district to call for a revision in the Court; but only in one case have I been able to get a revision. Usually the Deputy Commissioner prefers not to alter the case.

B-460. In your memorandum reference is made to five fatal accidents in 1925 in five cotton factories. I take it you mean cotton ginning factories?—(Mr. Wilson): Yes.

B-461. Nothing in the form of compensation seems to have been paid, and you say Government asked for a further report. Was that report received?—Not to my knowledge yet.

B-462. Then do you consider it is necessary to have some means whereby workmen or their dependents who are unaware of their rights, as was presumably the case here, should be enabled to make claims or stimulated to bring claims?—I think these cases are under consideration, but there has been considerable delay in settling them.

B-463. They have applied to the Commissioner?—I fancy they must have, though I have not received a further report.

B-464. In your memorandum you discuss the question of legislation on the subjects of fines and prompt payment of wages. Your conclusion is that "Legislation to assure prompt payment to factory employees is needed". You have not apparently considered the question of how it is to be enforced, which is the crux of the question?—Would the enforcement be more difficult than the enforcement of many of the other provisions in the Factories Act?

B-465. Possibly not; but when you are dealing with fines you state that legislation is not likely to be of much use on account of the illiteracy of the average worker. I do not see how the position is different as to fines and payment of wages in this respect. My point is that if it is possible to legislate effectively in order to assure the prompt payment of wages, it should be equally possible with regard to fines; the difficulties of enforcement are the same?—Yes, there are difficulties. I only mention the fact that if possible there should be some provision for securing more prompt payment of wages, because, as far as I can make out, most of the small strikes that are reported by the Director of Industries are simply due to the fact that wages have been delayed a month or five weeks.

B-466. But I gather the local Government have come to a conclusion favourable to legislation to secure the prompt payment of wages, but unfavourable to legislation in respect of fines?—The local Government have come to no such conclusion.

B-467. Since the introduction of the Reforms have you ever had any labour measure before the Legislative Council?—None to my knowledge, but I have only been in the Council for two years; there has certainly been nothing in that time.

B-468. Does the Board of Economic Enquiry receive a grant or assistance from Government?—It received a consolidated grant; I think it is Rs. 18,000, and it appoints its own investigators.

B-469. *Mr. Joshi*: Is it the policy of your Government not to take any measures with regard to labour questions until communism appears on the scene?—We are not an industrial Province. There was a strike at Dhariwal in the beginning of last year, and there was some labour unrest in the North-Western Railway workshop at the beginning of the year; but with those exceptions during the last two years at any rate happily strikes have been few and far between.

B-470. But did you not have strikes on the railways, and is it not the duty of the local Government to look after the welfare of labour whether

they be the employees of the Central Government or of a private employer?—I think the railways have taken considerable steps this year to do what they can to remedy any grievances railway labourers may have; they have I think started a Labour Bureau and they have special labour officers appointed this year.

B-471. I want to know what the local Government proposes itself to do as a Government, because labour welfare is one of the duties of the Provincial Government. You say there are not many strikes; are you going to wait until strikes become numerous?—We hope there will not be many strikes. This is an agricultural Province, it is not industrial yet and is not likely to be for a long time.

B-472. What is the general attitude of your Government towards trade unions?

*Mr. Sastri:* It is stated in the Government memorandum—"The Punjab Government has no hesitation in admitting that in industries on any considerable scale trade unionism and combinations are indispensable".

B-473. *Mr. Joshi:* Are you acting up to that view?—Trade unions are registered. When they apply for registration any representation they may make, if they wish to make a representation, about any pending matter receives its due measure of attention. But the trade unions in the Punjab are such fluid bodies. They are only in their infancy. The membership changes. They are absorbed.

B-474. Is the policy of your Government such that the work of the trade unions is encouraged, or is it such that the work of the trade unions is discouraged or obstructed?—There is no discouragement or obstruction.

B-475. As regards housing, do you think more and more factories will be erected in the Punjab, or do you think it will remain a wholly agricultural Province?—I think that for many years it will still be an agricultural Province, with the exception of whatever developments may be brought about by hydro-electric power.

B-476. Do you think, even if the number of factories is small, slums may arise if care is not taken about the matter of town-planning?—I do not think it is very likely.

B-477. There are in your Province 725 factories, and at present you have one Factory Inspector. I understand you propose to add one more?—Yes.

B-478. Do you think a staff of two inspectors will be sufficient to deal with 725 factories?—Three-fifths of the factories are seasonal. The present Factory Inspector has also got his own assistant who inspects factories. As far as the welfare of the operatives is concerned, every District Magistrate is himself an inspector; and recently limited powers have been given, in every district, to selected officers to inspect factories with a view to seeing that the hours are not too long, and that women and children are not illegally employed—all the human part of the inspection as distinct from the technical part. So that the Inspector of Factories has really more assistants than would at first sight appear. There is a proposal that he should also have a fully qualified second Factory Inspector with effect from April next year.

B-479. *Lala Harkishan Lal:* Can you give us the difference between the rise in prices and the drop in wages? Do you think that the failure of the crops for the last 3 years is responsible for the all-round rise in prices of imported goods?—I think that has a good deal to do with it.

B-480. The suggestion has been made that with the advent of hydro-electric power there will be an increase in the industrial life of the Punjab. Do you think that the lack of coal supplies in the Punjab is the only cause of lack of industrialism in the Punjab, or is there any other cause which retards that industrialism?—We have got the water, but we have not the coal or the iron which is necessary for any industrial development.

B-481. Can skilled labour for textile work be obtained in the Punjab?—It has to be imported from Ahmedabad.

B-482. All the textile mills have had to import their labour from outside?—That is the case regarding skilled labour.

B-483. Do you know also what difficulties there are with regard to capitalization of industries in the Punjab?—There are great difficulties, because money flows to the acquisition of land instead of being put in industry in the Punjab.

B-484. With the introduction of hydro-electric power, would capital come more easily into the Punjab?—The hope is there.

B-485. Something has been said about slums arising around ginning factories. Are you aware that most of the ginning factories are outside the towns?—They are generally.

B-486. Do you know that generally there is plenty of land attached to ginning factories, even in Multan, Hissar and Ambala, which are all very ancient towns?—It may be so. I have no personal experience.

B-487. Is it not a fact that labour, as such, does not form the portfolio of any member of the Government, and is not a separate subject?—Industrial matters affecting labour are in the portfolio of the Member for Revenue—I mean the settlement of disputes, housing and welfare of labour.

B-488. If there was trouble in the Public Works Department with a contractor, would that be dealt with by the Member for Revenue?—No case has arisen, but I think that would be a matter for consultation between the Member for Agriculture and the Member for Revenue.

B-489. As a matter of fact, labour troubles are very few in the Punjab, and therefore there has been no provision made specifically for dealing with labour?—Very few references come to me in connection with labour apart from questions arising out of the administration of the Factory Act.

B-490. *Mr. Taylor*: In your memorandum under the heading "Education" you bring into prominence the question of child education with particular reference to the children employed in carpet factories in Amritsar. You say "Industrial areas being mainly in municipalities or small towns children not in employment come under the control of the system of compulsory education". Do not children who are employed come under the same system?—It depends upon the rules. There are exemptions. Exemptions can be given, if claimed. I ought to say that this first sentence is rather misleading, because Municipalities have not as yet adopted compulsory primary education as a general rule.

B-491. Does the Amritsar Municipality enforce compulsory education?—They agreed to adopt it two years ago, but whether or not it is in force yet I do not know. I do not think it is.

B-492. I am under the impression that one or two wards have compulsory education?—A beginning must have been made by this time, but how far it is general I cannot say.

B-493. Presumably, if certain wards of the Municipality have compulsory education, the onus for sending the children to school falls on the parent or guardian of the children rather than on the employer?—Yes, in the absence of any rule prescribing the procedure to be adopted for any children employed in any factory within that area.

B-494. You say "No special arrangements exist for the education of children employed in factories". In those wards where education exists it is presumably not necessary for the employers to offer special facilities?—It depends on the scheme. It is possible that children employed in factories would not be able to fit in any education proposed for them within the ordinary curriculum of the municipal schools.

B-495. You go on to say towards the end of your memorandum—"But the factory owners shelter themselves under the opposition of the master weavers to any such restriction of hours." I am under the impression that the Hon'ble the Revenue Member sometime back met a deputation of the master weavers in this respect. I was not present at the meeting. Can you tell me whether this impression was gained by the Hon'ble the Revenue

Member after that meeting?—As far as I remember, there was a tentative agreement arrived at at a meeting held last year that children in the Amritsar factories should not be allowed to enter the factories unless they were nine; that from the age of 9 to 12 they should not do more than five hours' work; and from the age of 10 to 15 should not do more than 8 hours' work with a break in between; and some arrangements should be made, if possible, in the factories for half-time education. It was hoped that some sort of arrangement would be come to to make it unnecessary to provide for special legislation for the children in the Amritsar factories. Then, I think, on the representation of the factory owners at Amritsar it was requested that the Hon'ble the Revenue Member should see a deputation of master weavers. I do not know whether the master weavers are the parents or the contractors, but these master weavers saw the Hon'ble Member for Revenue in September, and they pointed out that they could not afford, at the rate paid to them by the carpet factory owners, to dispense with the employment of children. The fact was reported to the Government of India, and we asked that certain enquiries should be made from the United Provinces. An inquiry was made and the Government of India has said that the whole matter should be left to the advice of the present Royal Commission. That, I think, is the position at present.

B-496. Is it, in the view of the Government, more expedient that the children should receive education in the factories rather than attend the municipal schools which are in close proximity?—Yes, I think the local Government probably holds that the schooling should be part of the wages if possible; that the accommodation and the provision of classes should be, if possible, in the factory.

B-497. You say "the factory owners shelter themselves under the opposition of the master weavers to any such restriction of hours, and the children continue their blind alley occupation." Is it the view of the Government that carpet weaving is more of a blind alley occupation than other weaving industries in the province?—That is not my experience. If I am not mistaken, the Deputy Commissioner reported that at the age of 14 the boys left their occupation and went elsewhere from the factory; he may be right or wrong, but I think I am not misquoting him.

B-498. *Mr. Ghani*: In your memorandum you have given us the prices of foodstuffs. May I know what machinery is provided by the local Government to arrive at those prices—how those prices are ascertained by the Government?—Districts are selected, representative of various parts of the province, towns as well, and the Director of Land Records keeps a record of, I think, current fortnightly prices.

B-499. Who reports these prices to the local Government?—Presumably that maid-of-all-works, the Deputy Commissioner.

B-500. May I know if the Deputy Commissioners of the Punjab themselves visit the various food-markets and ascertain the prices, or do they get those figures from some subordinates, for instance, the *Patwari*?—I may have been remiss; but I have never visited a food-market; I have taken the prices reported to me. The *Tahsildars* have a meeting fortnightly with the shopkeepers and managers and prepare a recognized rate for the locality.

B-501. May I know what is the policy of the local Government as regards the registration and recognition of trade unions of Government employees, in industrial and other concerns?—I do not think that they are registered.

B-502. May I know the reasons why the trade unions of Government servants are not registered while the trade unions of other servants are registered? I do not think I can give the reason.

B-503. *The Chairman*: With whom does the decision lie?—There has been an instruction, I think, from the Government saying that for the present unions of Government servants should not be registered.

B-504. *Mr. Ghani*: As regards the slums in the two biggest cities of the Punjab, namely, Lahore and Amritsar, may I ask you if the local Govern-

ment took any action against any Municipality of these two cities for improving those slums, or doing something to better the conditions in those slums?—That is more a question for the Secretary for Transferred Departments; but I do not know whether you refer to any instructions that may have been given by Government for tightening up municipal rules. I do not deal with municipalities, and I only know that there is some sort of town-planning scheme operative in Lahore, and it is hoped to get a town-planning officer next year. But these matters are not in my province.

B-505. In your memorandum you refer to the Lahore Improvement Trust. May I know if the Improvement Trust has done anything as regards the slums in Lahore where most of the workers live?—Where do most of the workers live is a question I found myself unable to answer when I was trying to prepare this memorandum.

*Mr. Harkishan Lal:* There is no Improvement Trust for Lahore.

*The witness:* There is a body that is consulted in the matter of street alignment and matters of that sort; but "Trust" is probably a misnomer.

B-506. *Colonel Russell:* Dealing with the inspection of factories the Director of Public Health says "his proposal that District Medical Officers of Health should also be appointed Additional Inspectors in respect of their several districts was not approved by the Government." Can you tell me why that was not approved, because these medical officers would seem to be quite useful factory inspectors?—I do not think one wants too many Inspectors or Additional Inspectors of Factories in a district, and the local Government is more concerned to see that the factory rules and the Factory Act with regard to the hours of labour and the employment of women and children should receive, first of all, attention from Government.

B-507. Yes, but generally speaking, I think that the health conditions in factories are not quite satisfactory, and medical officers who are concerned in health work would obviously be more able to judge whether the health conditions laid down in the Act are complied with or not?—They would be able to do so, but the question is whether they would be in a position to make really practical suggestions.

B-508. Surely that depends on the personality of the individual health officer. You will not be surprised to hear that this method is being adopted in other Provinces?—It was decided for the time being that there was no such necessity, and that attention should be concentrated upon the two other matters.

B-509. Is there any Factory Inspector at present who is an expert in connection with health matters?

*Mr. Harkishan Lal:* Mr. Gill.

*The witness:* He is a Factory Inspector.

B-510. *Colonel Russell:* Obviously the Director of Public Health cannot inspect 725 factories; so that would you not admit that it would be better to have a District Health Officer an *ex-officio* Inspector of Factories?—I should not like to say off-hand; I should like to consider that.

B-511. *Divan Chaman Lall:* You mentioned that there are 2,000 schools with 5,000 pupils. Is not that figure incorrect?—There is something wrong there. There are about 20 industrial schools.

B-512. With regard to International Conventions you quote the statement made by the Director of Industries and say that that statement is ambiguous. I personally cannot find anything ambiguous in it. Will you explain it?—It says; "modify them". You must modify the articles, but it does not particularize in what way modification is necessary in view of local conditions, which is the whole point.

B-513. Does the Punjab Government accept the principle of sickness insurance for workers?—The Punjab Government has only said that it is a desirable thing, but there are financial considerations involved, and for the present they have said that they are willing to bear only the cost of administration.

B-514. According to the evidence we have got, out of every five visits paid by the Factory Inspector one has resulted in prosecution, which shows a very serious state of affairs?—Yes.

B-515. You further stated that there have been strikes, but not very many strikes?—I have not heard of any strike in connection with the cotton ginning factory.

B-516. I am not talking of the cotton ginning factory alone, but discussing the general question. You further say that the health of these workers is low. Do you not think under these circumstances that it would be necessary for the Punjab Government to concentrate attention on these matters which affect thousands of workers, by appointing a Labour Ministry?—I do not see the necessity for any Labour Ministry concerned simply with questions of labour alone.

B-517. Health, wages, education of the working classes, etc.?—I should not like to give an answer to that. That would mean a reorganization of the various departments and Ministries of Government; and labour only comes in in a casual fashion in connection with the problem of administration of factories, industrial development and the like.

B-518. Are there large numbers of workers working in small cottage industries in the Punjab?—You mean wood work, metal work, weaving and the like?

B-519. Yes, in such places as Ludhiana, Jullunder and other places?—You could get that from the census report.

B-520. This figure that you give of 50,000 could be multiplied a hundred times over?—This figure is only the factory figure.

B-521. It only refers to factories, so that if we take a broader definition of industrial workers the figure would be very much larger than 50,000?—Yes.

B-522. Probably you will have to multiply that many times?—Yes, very likely.

B-523. Would you admit that there is a large labour force in the Punjab whose welfare it is the business of the Government of the Punjab to look after?—In relation to the agricultural population, no. There are 21 millions in the Punjab.

B-524. Is it a fact that complaints have been made occasionally to the Punjab Government that in the matter of strikes, there has been a great deal of police interference against the interests of the workers?—I am not aware of any such. As I say I remember the strike at Dhariwal.

B-525. I particularly refer to the strike at Dhariwal. Do you remember having received a representation from the workers of Dhariwal that they were molested by the police and not allowed to organize their meetings and were interfered with in various other ways?—There was a representation that was sent to the Deputy Commissioner for enquiry, as far as I remember, about 18 months ago. He reported that there was very little truth in the allegation.

B-526. A question was put to you about the discouragement of trade unionism. Is it a fact that a circular was sent out by the Home Department of the Government of India suggesting to the Punjab Government that they should not register unions of Government employees?—I think so.

B-527. What action was taken by the Punjab Government in regard to that circular?—The formation of unions has not been objected to; in fact in the last few years several unions have been formed.

B-528. My question is about the registration of the unions and not about the formation; because no Government can prevent the formation of unions?—It was noted that registration should not be allowed for the present in accordance with the circular referred to.

B-529. Was any instruction given to the Director of Industries in regard to that?—In writing to the unions concerned it was noted that they should

not be registered. I cannot say off-hand whether the Director has any standing instruction or not as Registrar.

B-530. You would not be averse to the proposition, in view of the low state of the health of the industrial workers, of a separate Ministry of Labour being instituted?—I have never considered that question; I do not see the necessity for it.

B-531. In one part of your memorandum it is stated that there is no serious problem of unemployment; but later on you say that as far as unskilled workers are concerned, "the matter is entirely different, there appears to be a lot of unemployment and the labour turnover is high"?—May I point out that that is a quotation from Mr. Charles who is talking of the conditions prevailing in his workshops in Amritsar?

B-532. Do you agree with that proposition?—I think the labour turnover is high; but perhaps speaking from my own experience, I would be inclined to doubt the truth of the first part of that statement.

B-533. Has any enquiry, apart from the unemployment enquiry which was made into unemployment amongst the educated classes, been made into the question of unemployment of the working classes?—That unemployment enquiry was comprehensive. I do not think it was confined to unemployment amongst the educated classes. It was found that unemployment amongst the educated and literate classes was extreme, whereas it was not the case in the case of illiterate and labouring people. It was a general reference.

B-534. Suppose it is established that there is a great deal of unemployment amongst semi-skilled and unskilled workers, would you be averse to a system of unemployment insurance and the setting up of labour exchanges?—I do not think that the setting up of a labour exchange, as far as I can see, is needed. And the other question is entirely a matter of finance and funds.

B-535. *Mr. Cliff*: Would it be unfair to say that, apart from inspection, the policy of Government is a policy of inaction?—Inspection, and enforcement of such Acts and Rules as may be operative in the Province. The Punjab Government is not very closely concerned with what are called labour questions on account of the nature of the Province.

B-536. You say in your memorandum "Statistics of labour employed on open canals are not maintained". Do I understand that labour employed on canals is employed by the Government?—With the exception of a small staff of gangs for supervision and patrol work, the labour employed on canals is I think largely employed through contractors.

B-537. You have a very interesting paragraph in your memorandum on contractors. You say "The notable personage in India is the contractor". Do the Government of the Punjab pursue that as a policy of the line of least resistance?—It is a system that has been in vogue and is in vogue, and it is I think, for this Province, the best way of getting work done. It often perhaps may be the only way of getting work done.

B-538. What steps do the Government take to ensure protection for the labour engaged on the work which is done for them?—Such works being in the countryside or on the canals?

B-539. I do not mind if you take canals; I do not mind if you take forests; I just want one or more instances of the kind of protection which it is within the power of Government to give; which they commend in other people; which they say is desirable. Where does the Government put that into practice?—I cannot speak of anything specific. There is always a staff which exercises general supervision over the carrying out of any duty or the construction of any work. I suppose that ultimately the responsibility for the welfare of labour engaged on any particular work resides in the amount of supervision which the Government and the local staff can give, and does give.

B-540. That leads me to a word that you have used often in your examination. It is the word "hope". In answer to many questions you have

stated that 'it is hoped', or 'we hope'. Is it unfair to say that the policy of the Government is a policy of hope?—Every policy I think must have some ray of hope in it.

B-541. Looking through your memorandum and seeing the deferred hopes that there are in it, is it to be wondered at that the people may be sick?—Is there sickness at the moment in any violent form.

B-542. That leads me to another question. You seem to indicate in your answers to questions that there is nothing wrong until there is a withdrawal of labour, and there is no need of action until a withdrawal of labour has occurred. Is that the way you judge when people are sick?—If any representations are made by workers in any locality or in any factory that there is a grievance and they desire that Government should look into this grievance in order to settle possible disputes that might lead to trouble, then the Government does make an enquiry. If there are telegrams or representations from factories or from other places, if they seem to be such that an enquiry is needed, then the Director of Industries is asked to go and ascertain the facts with a view to a composition of whatever trouble may be brewing. I do not think it is right to say that Government waits till any dispute has flamed out into rather drastic action.

B-543. I did not say that myself. I rather took it from your own answers to questions that you indicated that there have been few strikes, and that you looked into things when strikes had occurred?—There are both processes. As a matter of fact some strikes are probably composed through the intervention of the Factory Inspector or the Director of Industries.

B-544. I am glad to note the assistance which has been given by Government officials, and the suggestion that they may be able to give further help. May I put it to you in this way. There will be a memorandum of evidence before the Commission to-morrow, in which this significant statement is made: "Illiteracy is even a greater bar than caste", in dealing with labour in India. Assuming that to be true and applying it to your last answer—the opportunity of making representations—may I ask you whether in fact there is an opportunity of making effective representations?—Effective in the results?

B-545. Effective in the sense that they are clearly expressed and may be clearly understood by those who receive them.

The Chairman: Do you refer, Mr. Cliff, to Government employees or private employees?

B-546. Mr. Cliff: I am just following Mr. Wilson in his own answers in regard to opportunities that the people have to make representations to the Factory Inspector in view of the illiteracy which exists?—I think in the matter of stating grievances, both orally and in writing, in spite of their illiteracy they are able to make representations which are intelligible and which can be understood. That is only my opinion.

B-547. With regard to compensation, I want you to return to Sir Victor Sassoon's question. Will you be good enough to state what is the compensation which the worker in the forest who I understand is earning 8 annas a day, would be entitled to?—It depends on the period of disablement.

B-548. What would he be entitled to per month?—There is a schedule under the Workmen's Compensation Act which is applied.

B-549. You have indicated that there is a lack of skilled labour in the Punjab. What has been done in the Punjab either by Government or by employers to train unskilled labour?—I do not think I can in this connection refer to the schools such as that at Moghalpura because I do not think those institutions are for the training of unskilled labour. There are industrial schools, which are of course schools for youths and not for adult labour.

B-550. Can you tell me how many craftsmen have been produced in this Province, either by Government or by employers?—I could not tell you. I may say that in the industrial schools, which are the only schools I can think of corresponding to those to which you seem to be referring, there

are about 4,000 students at the present moment, half of whom are the sons of artisans, metal workers, weavers and blacksmiths. There are these schools growing up which in the course of time we hope will become high schools, and then become institutions for the teaching of mechanical and electrical practice to the sons of artisans. At present we have only about 24 schools, one in each district, though it is hoped to increase very greatly the number of industrial schools with a view to bringing them up to the standard of technical institutes in the course of time, mainly for the sons of artisans and craftsmen.

B-551. Am I to understand that at the moment there are 2,000 pupils being trained as artisans?—About that. There is an Inspector of Industrial Schools.

B-552. *Mr. Ahmed*: Do you regard prompt payment of wages as being beneficial to the labourer?—Yes.

B-553. Are you in favour of payment weekly?—There are difficulties; I only say prompt as far as possible, not necessarily weekly.

B-554. Is the indebtedness of the workers due to wages not being paid promptly?—I do not say that, though if wages are not paid promptly it does tend to put workers into the hands of their food suppliers.

B-555. You have considerable experience of the rural districts?—Yes; I have very little experience of towns.

B-556. In the agricultural areas have co-operative societies materially assisted the cultivators?—Yes, particularly the agricultural tenant class and the peasant proprietor.

B-557. Do you propose to start similar co-operative societies for the poor people in the industrial areas?—There are in the industrial areas co-operative credit societies on the same lines as in the rural areas, but there has not been the same extension in the industrial areas that there has been in rural areas. The pace of progress in the co-operative movement has of late been slowed down simply in order to go safely and not take unnecessary risks. Although urban societies are on the increase, it is not possible to make very rapid progress.

B-558. You are in favour of gradual development?—Yes, with safety, both in the country and in the towns. There is also the Industrial Loans Act; that is for the promotion of industries.

B-559. With regard to the housing problem, are you in favour of quarters being provided for the labourers by Government?—I think Government does in its own factories supply quarters for the subordinate staff to some extent.

B-560. I am not speaking of the clerks and other officials, but the industrial workers?—It depends on the acuteness of the housing problem in the immediate neighbourhood. There may be need for it, but in most cases the need probably does not exist because you have not got so much concentration in towns.

B-561. Do you think it would be advisable to have a separate Department of Labour?—I have not considered that question and could not give any definite answer, but I do not think it is necessary.

B-562. *Sir Alexander Murray*: As regards the question of the advisability of having a separate Labour Department, I notice that according to the 1921 Census, the number of workers employed in organized industries was only 0.25 of the total population?—It might be 0.2 per cent.

B-563. If your figure is correct, do you think such a percentage would justify yet another portfolio being added to the Punjab Government?—I do not think so.

B-564. Is there much unemployment amongst unskilled workers?—Not amongst unskilled workers; I think perhaps there is among semi-skilled workers.

B-565. If that is so, why are so many skilled workers from other Provinces finding their way into the Punjab?—Possibly the local people have not got

that particular skill. I saw a complaint the other day from second and third grade engineers, as they are called, who get certificates from an appointing board here. They complain that their wages are only in the neighbourhood of about Rs. 40 or 50 a month. Whether that is true or not I do not know.

B-566. You mean more or less skilled workers?—Yes.

B-567. The Punjab is what is called one of the immigrant Provinces: on balance, more people come into this Province from other Provinces than go out of this Province?—Yes; they come from the North-West Frontier Province, from the United Provinces and from Rajputana. We require a lot of tenants in the new colonies.

B-568. In the memorandum of the Punjab Government there is the statement: "The pitch of wages paid in the Punjab would appear to be higher than in the United Provinces, for example, and this partly accounts for the influx of labour from Central India." So that labour seems to be attracted from other Provinces?—Yes.

B-569. Then you say in your memorandum "The employer however really dictates his own terms". How can he dictate his own terms if the demand for labour is in excess of the supply?—I do not think the two propositions are incompatible or inconsistent; I mean the employers may dictate their own terms to the ordinary employees, but at the same time the pitch of the wages in the Punjab may be higher than in other Provinces.

B-570. In answer to Lala Harkishan Lal you said that apart from the unemployment question in industrial labour there is scarcity of capital in the Punjab. For instance, the great bulk of the industrial labour in Bengal consists of workers who are imported from outside; in some of the large towns, practically 90 per cent. of the labour employed is imported from other Provinces. So that there is really nothing to stand in the way of industrial development of the Punjab so far as labour is concerned, because, if you follow what has been done in other Provinces in India, the workers would go to the Province where conditions are attractive?—Yes. Capital is extraordinarily shy in the Punjab of going into any sort of industrial enterprise.

B-571. I notice, for instance, in Bengal of which I know most, that the jute, tea and coal industries were started with foreign capital, so to speak. Can you not get somebody with sufficient confidence in the Punjab to put the capital down for industries here?—It is a matter of hope; the Dhariwal Mills, I think, have got a certain amount of foreign capital.

B-572. Mr. Sastri: With regard to the children employed in the carpet industry at Amritsar, the condition of things you describe is to be found in other Provinces as well?—In the United Provinces, in particular.

B-573. In Madras as well. May I ask whether it has come under your observation that parents pledge their children for labour for a space of two or three years? Have you noticed that sort of thing?—No; I have not been in these factories myself and I have never heard of pledging of labour for a period of years.

B-574. I have known cases?—I saw a reference in the correspondence once, not to the master weavers which I take to mean the parents, but to *thekedars*.

B-575. I shall probably repeat that question to the Inspector of Factories. With regard to child labour in these small industries I believe it is one of the most deplorable features of our industrial organisation. It seems to me that it needs very careful attention of Government, and I commend that part to your special notice?—The problem has been or will be specifically referred to this very Commission. There are difficulties, because it is said that on the delicate work the children's fingers can do what adults cannot do so well; and the parents also say that the family will be ruined if the children do not come in and co-operate. The payment is by piece-work. I cannot say whether the children work in a leisurely way. It is a problem

on which the Government of India has sought the advice of this Royal Commission.

B-576. *The Chairman*: In regard to your last remark, do you recognize any international similarity in that argument in favour of the employment of young children? Have you heard it elsewhere than in India?—Yes; at the same time, I believe, in Persia and in Kerman, the problem has been solved and regular restrictions have been put on the labour of children on Persian carpets.

(The witness withdrew.)

**Mr. W. H. AFEL, Inspector of Factories, Punjab, and Dr. R. C. RAWLLEY, Director of Industries, Punjab.**

B-577. *The Chairman:* Mr. Abel, you are the Inspector of Factories here in the Punjab?—Yes; and also for Ajmer-Merwara and the North-West Frontier Province.

B-578. A very large area?—It is indeed.

B-579. And a large industrial population is included in that area?—Exactly; it is a very big area.

B-580. How long have you held that office?—Since 1920.

B-581. I need only put three or four leading questions to you on your memorandum. Dealing with the extent of welfare work, you remark "One of the reasons for this" (that is, that little is being done by the employers except in one or two of the bigger mills) "is that the operatives are frequently changing from one factory to another; as a result neither employer nor worker get to know each other well, and little thought is given for anything beyond the work of the day. There are however one or two exceptions in this respect to be found". I take it from that that you would consider that any means which would achieve greater regularity in the labour force would be of advantage both to the workers themselves, and to the employers?—It would indeed; but the factory population of the Punjab consists mostly of agricultural workers who work in factories during the time when there is no agricultural work to be done, and, as a result, immediately their work in the fields requires their attention, they leave the factory and go up to their fields to work. When they come back, possibly they find that their places have been filled and they go to another factory.

B-582. I am suggesting that if it were found possible to secure a greater regularity of work, the worker returning to the same place and the same job, the worker would attain a greater skill and there would also be a greater opportunity for an understanding between the employees and their employers?—Yes, that is so. I think it would also automatically lead to more welfare work being done by the employer for his worker.

B-583. Therefore the extreme changeability of labour probably is one of the factors which lies in the way of welfare work for the benefit of the workers?—Yes.

B-584. May I draw your attention to your remarks on the Factory Act and its enforcement? I take it you strongly recommend to us that the Act needs strengthening with regard to penalties for repeated offences?—Yes.

B-585. You tell us that an improvement of the Act in that respect would facilitate your work in enforcing on the employers a strict compliance with the Act?—It would very much facilitate our work.

B-586. Then you say that "if it were possible to have a Public Prosecutor attached to this Department such difficulties will be greatly minimized"?—That is so.

B-587. That we will certainly take into consideration. Dealing with the Workmen's Compensation Act, you make some valuable observations with regard to the difficulties of the workers in obtaining that to which they are entitled under the Act. You have not, in this paragraph, made quite the same clear suggestions to us as to how the Act could be improved. But I take it that your point is that there should be some advisor at the service of the worker who has been injured?—That would be extremely useful to the worker. I am not really concerned with workmen's compensation; I merely collect the returns at the end of the year and pass them on to the Director of Industries. But these remarks are formed from the workers who have appealed to me to endeavour to see their claims settled. Actually I have no authority and I take no great interest; I merely advise what they should do and pass them on to the Director of Industries.

B-588. But you do not suggest that in addition to your duties you should occupy the place of an advisor?—No, not at all.

B-589. You again give us a valuable suggestion for our consideration— that sub-section (3) of Section 36 of the Indian Factories Act is defective and leaves a loophole which is taken advantage of by factory occupiers. We would carefully note your suggestion that it should not be possible for a factory occupier to change the working hours without a proper notice of the change being given to you. I think it is the practice in England that the factory inspector must be advised?—The advice already comes to the Factory Inspector; but since it is not necessary to send it until 36 hours after the change has actually taken place, it leaves a very big loophole for factory managers to change their working hours at any time.

*The Chairman:* We understand that, and we will carefully note your suggestion.

B-590. I note your recommendation to us that with regard to workers in carpet factories, especially boys, control is very sadly needed in this behalf?—Yes, it is.

B-591. Am I right in saying that the Government of the Punjab could bring these factories under the law if they chose?—They can do it. As the Act stands at present, it is possible for the local Government to extend the Act to all concerns in which ten persons are employed. That would cover many of these small industrial concerns; but it would not affect the whole of them. The difficulty is this: all of them being situated together, it would be unfair to bring one factory employing ten or eleven persons under the Act and leave out of the Act another factory employing only nine persons.

B-592. Does not this case of carpet factories refer more to ones which stand out of the Act because there is no motive power?—Yes, that is another point.

B-593. In your view which is the more important extension of the Act?—The carpet industry is isolated in practically one district, the Amritsar district, whereas other small factories such as the foundries, which are the principal offenders, and printing presses, are throughout every town; and the extension of the operation of the Act to these factories would affect more operatives than would be affected in the case of the carpet factory workers. I think that both are necessary.

B-594. As far as you know has there been any move on the part of the Punjab Government to use their powers in this respect?—Yes, there has. In the case of the cotton ginning factories the Act has already been extended to factories in which ten persons are employed. The same has been done in the case of ice factories. As far as carpet factories are concerned, they are not under the Act in any way at all, I have not a great deal of concern in them; I know some of them. There have been conferences arranged by the Government for the last three or four years at different times to think out some scheme whereby labour in carpet factories could be controlled. I believe it is before the local Government at the present moment.

B-595. In your memorandum you tell us that Government are considering making rules whereby prospective factory builders must get the plans of their factories approved before the buildings are erected. I take it from that paragraph that Government has power to do that if they please?—That I could not say. I do not think they have the power under the Factories Act. It probably would have to be a special Act, to be put before the Legislative Council.

B-596. Perhaps later on the Director of Industries will be able to tell us whether it is a municipal bye-law or a power under some general Act?—As it stands at present, it is only necessary for a prospective builder of a factory to get his plans passed by the Municipal Engineer of that particular district; but once they have been passed and the factory is put up, I find very little else ever happens to them. Possibly another storey or another wing is added, of which no notice appears to be taken by the Municipality. As a result we have factories collapsing. There is a certain clause in the Factories Act

which allows a factory inspector to prohibit the use of any part of a factory which he considers unsafe and we use that power to a certain extent. But it is very difficult to apply it, as one inspector has to inspect 700 factories and it would be impossible for him to tell whether the beam of a factory roof which is already covered up is safe or unsafe. It would put a great deal of work on the factory inspection staff.

B-597. You think that new factories should be subjected to control both in regard to health and safety?—Yes, before they are actually used as factories.

B-598. *Sir Victor Sassoon*: Dr. Rawley, I notice that you are in favour of public employment agencies with a view to offering suitable opportunities of employment to unemployed workers. We have already had your figures as to industrial workers analyzed and we find that if we take away those more or less permanently employed by Government and on the Railways, and if we take away those who look on the work in gins and so on as secondary to their agricultural work and, according to your own memorandum, are working only for two or three months in the year, there is only a matter of 11,478 men, women and children who would have to be looked after by a permanent agency. You say that the problem of unemployment may be regarded as a mystery; you quote Mr. Abel who says that where it does exist it is purely voluntary; and you also quote a committee which says that there is no unemployment worth mentioning among the uneducated classes. In view of the fact that you are dealing with a labour force which is only half as large as my own firm in Bombay has to look after, would you justify an increase in the bureaucracy by the appointment of an employment agency?—In my opinion there is unemployment in the Punjab. I am basing my opinion on one particular fact; that is that during the course of my experience as Director of Industries in the Punjab, there is hardly a day when a man does not turn up in my office, an engineer or a mechanic, who wants a job. We get applications from various classes of people, mechanics, wood workers, turners and fitters wanting jobs.

B-599. But the number of jobs available is under 12,000?—I have stated in my memorandum that these Factory Act reports do not give us the exact number of workers. 51,000 is not the real number of workers. If you calculate the actual number of workers it might even go up to one million. Of course the number employed in the registered factories is known but the number employed in unregistered factories is not known to us. These in my opinion are all industrial workers.

B-600. Are you in a position to know exactly when the factories which are not registered need labour?—If I were to conduct a research I could tell you definitely; but as it is I am giving you my personal observation. You go to any small village and there you find a small flour mill employing three or four men.

B-601. You are giving figures from 50,000 to a million. I take it that this is spread over the whole of your Province which is of the size of England and Scotland?—That is true.

B-602. Therefore you will have to have a number of employment agencies to begin with?—I shall have to start an experiment in Lahore or Amritsar or one of these towns.

B-603. When you go to the big towns the number of work people who are in need of employment would not approach anything like a million?—It may not; but still it will help the people to get jobs.

B-604. You cannot make an employment for the whole population. What is the population of Lahore?—Between three and four lakhs.

B-605. You could not get anything like employment for three to four lakhs of workers out of a population of three to four lakhs of men, women and children. What is the industrial population including those working in unregistered factories?—I must say that the Labour Exchange Bureau

need not confine its applicants only to Lahore town. They might get applications from Amritsar, Ludhiana, Gujrat and Rawalpindi.

B-606. In your experience of the people of the Punjab, if a man is out of employment, is he likely to go to look for employment?—He must go.

B-607. But we have evidence in India that if you want workers you have to send for them, because they will not come of their own accord. You have to send recruiters to their homes. We in Bombay tried as much as possible to employ men directly, but we found that we had to send jobbers to the homes of the people to bring them to the work. Is that not a fact?—I am afraid that is not my experience.

B-608. You disagree with your own statement that the problem of unemployment is a mystery; because in your view there is a large unemployment problem and there is a large number that could be employed?—I have given you the verdict of the Unemployment Enquiry Committee of which I myself was a member. As a matter of fact I did not agree with them on many of the points. I have to say that the problem of unemployment is a mystery.

B-609. I take it that this Province, as you will admit, is essentially agricultural?—Essentially agricultural.

B-610. I take it that generally speaking the inhabitants of the Punjab would prefer agricultural to industrial pursuits?—I am afraid I am unable to say whether or not that is true; it all depends on the wages.

B-611. It would be easier to get a Punjabi to go to a canal colony than it would be to get him to go to a carpet factory, because he has been trained to agricultural pursuits?—My experience is that all the people that I have engaged in the Government factories stick to their jobs, because they get higher wages with us than they would get outside.

B-612. If you have factories working all the year round, do you think that the workers who work now for a part of the year would prefer to leave their agricultural employment and become industrialists all the year round?—They are doing it at present.

B-613. Would they prefer to?—They may not prefer to do it; but they are doing it.

B-614. I take it that the gins work only for part of the year?—Yes.

B-615. You think they would prefer to take industrial employment which continued all the year round rather than go back to their land?—If they can get higher wages, they like to work in the mills.

B-616. All the year round?—Yes.

B-617. They would prefer that to using that as a secondary means of employment?—Quite.

B-618. May I take it that the Punjab has no natural facilities for the development of industries?—The Punjab has more facilities than any other part of India.

B-619. If you have got natural resources, and money can be made out of them, if you have a population that is desirous of working in such industries, I really cannot understand why available capital for the development of industries should have gone to other parts of India and have missed the Punjab. We have all as capitalists been told that in the Punjab, there is not a superfluity of population needing work, and that owing to your canal colonies the surplus population settles down in agriculture. We have always been told that they only like to work as part-time workers, and that therefore if we want to put up a factory here we would have to rely on imported labour?—You have to rely on imported labour in any part of the world when you start a new industry, because local labour is not trained in that direction.

B-620. Surely after a time local labour generally tends to take the place of the imported labour?—That is exactly what is happening in the Punjab

just now, in the case of the textile industry in particular. We started an experiment a year ago and we have been able to train about 30 to 40 weavers. But it is a very small concern. They go into the mill and learn from their fathers and relations. That is exactly what is happening here in the weaving industry. We have old loom weavers. These people are now learning to work power looms; they go to small factories in Jullunder and Ludhiana and our own factory here in Lahore, they learn work on the machines and after they have learnt the job they stick to it.

B-621. I notice in one part of your memorandum you state that husbands do not get employment in the same factories as their wives or fathers as their daughters. Why is that? Generally where you have women and children working they work in family groups?—That is particularly the case in ginning factories, where the men get better wages outside the factory, and the women work inside the factories.

B-622. Do you employ women only in the ginning factories. I have seen men also in the ginning factories?—(Mr. Abel). In the mechanical department and those departments where the duties are arduous.

B-623. Are the men in a minority?—In the Punjab 70 per cent. of the workers in ginning factories are women.

B-624. I notice that in your memorandum you say that a reduction in the maximum hours of work will have a salutary effect on the illiterate worker who regards the wastage of time as a mere matter of routine. This is different from what Mr. Abel says in his memorandum. He points out that in a 10 hour day the average worker does not do more than 8½ hours of work. My experience agrees with that of Mr. Abel. Why should you think that if you reduce the time from 10 to 8½ hours, you would get 8½ actual hours of work, without any waste of time?—My opinion is based on experience in Sholapur. In our mills there, specially in the weaving section, I myself carried out a test. Before the introduction of this new Act we were working 12 hours a day. When we reduced the working hours to 10, I discovered by actual tests on the machine that the worker produced 10 per cent. more than he produced during the 12 hours.

B-625. Do you assume that if you continue to decrease the number of hours per day you would continue to increase the efficiency per hour?—No. What I mean is that when the maximum physical fatigue has been reached the worker cannot produce more by working longer hours.

B-626. I am inclined to agree with you. But here we are told that in a 10 hour day they are giving 8½ hours work. Do you think the worker would prefer to give 8½ hours strenuous work rather than give 8½ hours work spread over a 10 hour day?—I should have split up the 8 hours to 4 hours in the morning and 4 hours in the evening.

B-627. Do you think you would get as much work as you now get in a 10 hour day?—Yes, that is my opinion and it is based on recent experience.

B-628. You have told us of a decrease in hours from 12 to 10, but your point was that in that case the men had reached the fatigue limit. If you now decrease from 10 hours to 8, do you think you would still increase the efficiency per hour?—That is my own opinion.

B-629. Have you known of any case in which hours have been decreased from 10 to 8, and the same amount of work has been done?—I made the experiment myself last month of 9 hours work per day in my own factory here—the Government demonstration factory. In the month of August our production per loom per day was about 9 lbs.

B-630. What material were you using?—Cotton and silk both. Working a 10 hour day we got a 9½ lbs. production per loom per day. When we reduced the hours to 9, when they had to work intensively and look after the looms properly, I got a production of about 10 lbs. It may be due to climatic influences, and also because in August it was very hot here.

B-631. Has that been tried for two years? I am going to try it now.

B-632. You do not really know how it is going to work?—No.

*Sir Victor Sassoon:* Your experience has not been the same as that of others who tried the same experiment.

(The witnesses withdrew.)

The Commission adjourned till to-morrow morning, Friday, 25th October, 10 A.M., the evidence of these two witnesses being adjourned till Saturday, 26th October, 1929.

# PUNJAB

## SIXTH MEETING

LAHORE

Saturday, 26th October, 1929.

PRESENT:

The Rt. Hon. J. H. WHITLEY (*Chairman*).

The Rt. Hon. V. S. SRINIVASA  
SASTRI, P.O.

Sir VICTOR SABSOON, BART.

Sir ALEXANDER MURRAY, Kt.,  
C.B.E.

Mr. A. G. CLOW, O.I.E., I.O.S.

Mr. KABIR-UD-DIN AHMED, M.L.A.

Mr. JOHN CLIFF.

Mr. N. M. JOSHI, M.L.A.

DIWAN CHAMAN LALL, M.L.A.

Miss B. M. LE POER POWER.

Lt.-Col. A. J. H. RUSSELL, C.B.E.,  
I.M.S., (*Medical Assessor*).

Mr. HARKISHAN LAL, Bar.-at-Law.

Mr. W. TAYLOR, Director, East Indian  
Carpet Company, Amritsar.

Dr. KARAM CHAND HITSEHI.

Mr. M. A. GHANI, Bar.-at-Law.

Pandit RAM AVATAR, Vice-President, North-  
Western Railway Union.

Col. O. WALTON, D.S.O., Agent, North-  
Western Railway.

Mr. M. S. GREGORY, M.C.

Miss. SIRAJ-UD-DIN.

Mrs. DAGMAR CURIEL WILSON. } (*Lady Assessors.*)

Mr. S. LALL, I.O.S. } (*Joint Secretaries.*)

Mr. A. DIBDIN.

(*Assistant  
Commissioners.*)

Lt.-Col. C. A. GILL, D.P.H., I.M.S., Director of Public Health, Punjab.

*The Chairman:* There are many things in your memorandum that demand a great deal of our attention and thought, but I think, at the same time, if my colleagues agree, the best way will be to ask our Medical Assessor, Colonel Russell, to open the examination, and then I imagine there may not be many questions to ask.

B-633. *Colonel Russell:* Is the housing condition of the industrial classes of workers in the Punjab satisfactory or not?—You cannot distinguish between the industrial classes and the classes from which they are drawn. The housing conditions, especially amongst the poorer classes of the urban population are not satisfactory.

B-634. Would you consider that a room measuring 8ft. x 12ft. would be fit for two or three people to live together?—No, certainly not.

B-635. What minimum accommodation would you suggest?—It is a question of light and ventilation; if the light and ventilation is satisfactory you can cut down the space. Without considering these factors I would not fix myself down to any actual space.

B-636. Have you got any plans approved by the Sanitary Engineer and the Director of Public Health for housing the workers who are in Government employment?—There are standard plans. As far as I know,

they have not been, in my time, approved by the Director of Public Health, but they may have been approved by my predecessors.

B-637. The argument is frequently used that the houses provided in the industrial areas are as good as, if not better than, those used by the workers in their own villages. Do you approve of this argument? Would you not rather insist that the worker should have a better house when he becomes an industrial worker because the new conditions under which he has to work are inherently different from the normal conditions?—I agree with that. In the villages, although the houses look bad, they are at any rate ventilated owing to the roofs of mud houses being permeable. But if you put that same man into a room with brick walls, back to back houses without ventilation, although the space may be greater than he was accustomed to in his village, he would not be living under such good conditions as he was in his village.

B-638. Do you associate the increase of tuberculosis with urban conditions?—It is particularly associated with urban conditions. In fact, so far as we know, most of the tuberculosis met with in the villages has been contracted in the towns.

B-639. You would be glad, I take it, if all plans for the erection of new factories and accommodation for factory workers were sent to you for scrutiny and approval before erection?—Yes. I have asked that this should, in future, be done.

B-640. *The Chairman*: Have you any power to ask for them?—I have put in a representation that they should be sent to me as it is most important.

B-641. Have you any legal power to demand it?—No.

B-642. *Colonel Russell*: But it would be advisable for other Government Departments interested in labour to send you plans such as these?—Yes, I have asked that they should do it.

B-643. The same argument that was used in connection with the houses of industrial workers is used for sanitary conveniences. Would it not be better to have an improved type or an increased number of sanitary conveniences in the areas occupied by industrial workers?—Yes; there should be a proper lay-out of the area with an adequate number not only of sanitary conveniences but of ablution places and *dhobi ghats*.

B-644. Have you a Director of Town Planning in the Punjab?—A Town Planning Engineer has been sanctioned but he has not yet been appointed.

B-645. But until he is appointed these plans and lay-outs should be referred to the Director of Public Health?—Yes, and after too.

B-646. Is it sufficient for a factory of considerable size to have only a medical officer who visits once or twice a week?—I consider that there ought to be one sanitary inspector attached to larger factories who should report to the Medical Officer of Health who could come once a week or a fortnight as may be necessary.

B-647. It is very necessary to visit as often as possible?—Yes.

B-648. Do you think that in addition to medical work the employers should be asked to initiate welfare schemes, especially where women workers are employed?—I think it would be desirable, if it is possible.

B-649. Is it not a fact that welfare schemes will conduce to the improvement of health and efficiency among workers?—It is calculated almost certainly to do so.

B-650. Would it be possible to get Indians, both men and women, to take up welfare work of the kind indicated by you?—I think that it would be difficult; but I should think, in time, we shall be able to get some.

B-651. Is it not the case in the Punjab that you have already got a Women's Health School which turns out welfare and health visitors who have done successful work?—Yes; we are turning out eight Health Visitors a year at present.

B-652. But could not that be extended to general welfare work in industrial areas?—Yes.

B-653. *Mr. Cliff*: Do you make any distinction between men and women doctors in the matter of welfare work?—For maternity and child welfare work, we want women; for purely public health work, we require men; but the women are so few that I would use them all for welfare work amongst women.

B-654. *Mr. Joshi*: Are women so very rare in the Punjab or in other parts of India?—I cannot speak about other parts of India. It is very difficult to get eight suitable women together to do a health course every year; it is not easy to get suitable candidates at the present time, but we hope to overcome this difficulty gradually. We cannot extend our activities rapidly on account of lack of suitable women.

B-655. *Col. Russell*: Is there any Maternity Benefit Act in the Punjab?—No.

B-656. Is a pregnant women worker given any allowance for a period before and after confinement?—There is no legal enactment. I do not know what individual firms do.

B-657. Do you think that this should be introduced by legislation?—I do not like to express an opinion. I have not carefully considered the matter.

B-658. Do you agree with the Director of Industries, Punjab, who says that female labour is not essential to the industries of the Punjab and the effect of such legislation would be that employers would dispense with female labour?—I should think it would probably have that effect, but of course that is only a guess.

B-659. With regard to the question of sickness insurance, apart from the question of its possibility, I should like to ask you particularly with regard to the occurrence of epidemics, which you say are frequent in the Punjab, and whether you think there will be any difficulty in introducing a scheme for sickness insurance?—The matter requires very careful consideration, because if the whole population is affected, it will be financially impossible to run any scheme. But I have not yet considered the matter. I know that we were unable to introduce a system of notification for infectious diseases because the cost was enormous on account of epidemics. We only proposed to give 8 annas per certificate.

B-660. *Mr. Joshi*: If such a scheme is confined to factories and organised industries, will there be the same difficulty?—I presume it is not intended to apply it to the whole population.

B-661. *The Chairman*: You mean to say that the actuarial basis of such a scheme will be very difficult?—Yes, because other countries do not get such wide-spread and frequent epidemics as we do here.

B-662. *Col. Russell*: Do you agree with the Director of Industries that an average unskilled worker spends about 60 per cent. of his earnings on food alone?—From my experience I can say that it is about that figure.

B-663. Even then he does not get a diet sufficient either in quantity or nutritious in quality?—Assuming that a man gets 12 annas a day, the usual wage at the moment, with 60 per cent. of that amount he can hardly get enough.

B-664. Are there any mal-nutritional diseases in the Punjab?—There is malnutrition, but the so-called deficiency diseases are not very conspicuous. We do not get beri-beri and pellagra scurvy is not very common though we had an epidemic of it recently owing to deficiency of vegetables. Rickets does occur but is not a common disease in the Punjab. We get a fair number of cases of osteomalacia.

B-665. Is that not a deficiency disease, especially among women?—It is not necessarily due to deficiency of diet, because many of these cases of osteomalacia are among women who are in comparatively affluent circumstances.

B-666. You do not get osteomalacia among women of the industrial classes?—I am not in a position to say.

B-667. Is there a sufficient milk supply in the urban areas in the Punjab?—No, it is very deficient.

B-668. Do you agree that milk is an essential part of a vegetarian's diet?—Yes. The price of milk is high, and the ordinary labourer would be very much better off dietetically if he could afford to purchase it.

B-669. You say that an ordinary industrial worker is not able to purchase milk, sugar and ghee, which are essential for a suitable diet. Therefore to that extent his diet must be deficient?—Yes; his diet is undoubtedly deficient. He cannot afford to purchase these things out of his low wages.

B-670. What about vegetable ghee which I understand is imported into the Punjab in large quantities?—I am in favour of importing and selling this ghee in the Punjab, because it forms a very valuable addition to the fat supply of the Province. The trouble is that at present it is sold at the same price as the ordinary ghee. The ordinary ghee contains vitamins which are destroyed in cooking; if the vegetable ghee is used for cooking purposes, it will save much the natural ghee with its large vitamin content for eating purposes. So that I am in favour of the use of the vegetable ghee provided it is not sold at the same price as the animal product.

B-671. *The Chairman*: Have you no Foods and Drugs Act to prevent that imposition?—Yes. We have the Punjab Adulteration of Foods Act which is about to be revised, we hope that a better law termed The Punjab Pure Food Bill will be passed by the Legislative Council shortly. Under this Act it will be possible to deal with this question of artificial ghee.

B-672. *Col. Russell*: In your note you have given details of the number of calories that an ordinary working man gets for the amount he spends on diet. You have stated that he spends five annas a day. But in the examination of the diet of a worker in one of the railway workshops we found that he spends Re. 0-5-11 for his morning meal and Re. 0-4-2 for his evening meal; that is for him alone and not for his wife and children, while his pay is Rs. 26 a month?—Then he is spending a great deal. I worked out the case of a man who was earning As. 12 a day. I asked him what diet he was taking and worked out the number of calories he was getting for his money.

B-673. There is still another case of a man who spends Re. 0-7-2 for his morning meal and Re. 0-9-2 for his evening meal?—That is high for people on small wages.

B-674. Will you then take the jail diet as a reasonable standard?—Yes, that would be a reasonable standard.

B-675. That costs without vegetables As. 2?—It is not a fair comparable figure. The jail diet costs As. 2-25. It is a very good diet, but you cannot compare it with the cost of the labourers diet, because the jails buy in bulk and at the cheapest rate of the market. Many things such as vegetables are got for nothing in the jails. The labourer has to buy his food-stuff in the retail bazaar every day or for two or three days at a time.

B-676. Your conclusion is that a man earning Rs. 16-8-0 per mensem has just sufficient to live on and no more?—Yes, in Lahore.

B-677. He has not enough to support a wife and children?—No, that is the general complaint. He can manage to live on that, but he cannot have his family with him.

B-678. *Sir Victor Sassoon*: Does that include rent and other expenses?—Yes. His diet costs him Rs. 9-8-0 approximately and with the balance he can pay his rent and meet other expenses. He cannot keep a home and maintain his wife and children. They have to leave their families in the village. Of course Lahore is a little more costly than the rest of the Punjab.

B-679. *Col. Russell*: It is obvious that accurate figures are essential if there is any question of a minimum wage being fixed?—Yes.

B-680. And accurate figures are difficult to get?—Yes, they are very difficult to get.

B-681. You would not be prepared to accept the figures that I have referred to as typical of the workers' diet?—They are rather high for men drawing Rs. 26 a month.

B-682. Are there any statistics of value regarding the causes of absenteeism and sickness among industrial workers?—No, unfortunately we have not any.

B-683. Do you think it would be a good plan to collect these statistics and information relating to fatigue and rest periods necessary through an organisation such as an Industrial Health Research Board?—I think a time will come when we must have something like that. We have not got to that stage yet; but certainly we must begin to do something about it at an early date.

B-684. How would you staff such an organisation?—At first we may have to have men trained in England.

B-685. You would send selected Indians to be trained in England?—Yes, as we have got nothing to go on here.

B-686. It has been the experience in England that shorter hours, within limits, and properly spaced rest periods, promote the efficiency of the workers and increase the output. Are there any reasons why that should not occur in India?—I should think that it is almost bound to follow that if you make conditions better for the worker, you will get some return in the way of greater output.

B-687. In your memorandum you refer to the carrying out of sanitary duties by local bodies. Have these local bodies shown much desire to work out their own salvation sanitarily?—I am afraid they have shown none, or very little.

B-688. Then you go on to say: "In short, in the absence of a public health policy, each individual has acted in the manner which appeared to him to be right." I take it this is evidence of the lack of co-ordination that you complain of?—Yes. The position is that things have changed very much, and at the present time administrative arrangements are not co-ordinated or adapted to this change.

B-689. Would you approve of a Ministry of Health for the purposes of co-ordination?—I think the time has come when we ought to have a miniature Ministry of Health, in which all problems affecting labour and health generally should be examined and dealt with.

B-690. To assist you in working a Ministry of Health, you would require a fairly wide Public Health Act. Have you any such thing now?—We have a very good Municipal Act, only it does not function.

B-691. Would you prefer a consolidated Public Health Act?—There is no immediate necessity for it, but in course of time we should have one.

B-692. You say that the welfare of the poorer classes should be a matter for the Ministry of Health. Do you want this to be dealt with by this Ministry or another?—By this Ministry.

B-693. Have you been able to get sanction for a sufficient number of medical officers of health?—Yes, we have sufficient for our needs at present.

B-694. You say that the Government refused to accept your proposal that district medical officers of health should be appointed additional inspectors of factories. Do you not think that that was a mistake? Let me put it in this way. A medical officer of health being a trained officer in public health work would be able to detect, point out and report on health conditions in factories far better than a Factory Inspector would?—Yes. We have medical officers of health in every district; and obviously if there is to be any inspection carried out in a systematic manner it must be done by the man on the spot. Assistant Directors and myself have only time to inspect factories occasionally, usually for some special reason.

B-695. Factory inspection is mainly to increase the health, safety and comfort of the workers in that factory. A medical officer of health would be the best person to do that work?—I proposed that he should do it; and possibly it will be done: up to the present time it has not been done.

B-696. You feel that it is not the function of the Director of Public Health to be constantly acting as a detective in regard to public health matters which are being wholly or partially dealt with by other Departments?—What we want is that these matters should be automatically referred to the Director of Public Health, instead of his having to find them out himself.

B-697. In railway systems would you be willing to leave it entirely to the Railway medical and sanitary staff?—Yes, I think so.

B-698. Their organization is satisfactory?—They are getting a complete medical and public health organization. Things have greatly improved from what they were two or three years ago. Before that they had no whole-time Chief Medical Officer of their own, and no public health expert on their staff.

B-699. In your memorandum you mention an Urban Sanitary Board and a Rural Sanitary Board. If you have two Boards already, why do you want to create another Board, a Board of Public Health?—I want to amalgamate these two Boards, so as to have one Board for all purposes. I would have one Board of Public Health, and this would be done by amalgamating the two existing boards which are doing more or less similar work and whose work often overlaps. I have made this suggestion to Government and it may or may not be acted upon.

B-700. You stated to the Chairman that you had an Adulteration of Food and Drugs Act. Is it a dead letter?—I am afraid it is, it is very difficult to work, and this is the reason we are bringing in a Bill called "The Pure Food Bill."

B-701. You sent in a report on health conditions in the Khewra Salt Mines in 1922. Has any action been taken on that report?—I understand not; but I have not made an inspection there. The Salt Mines of course have nothing to do with the Punjab Government. The Salt Mines are under the Government of India, and the enquiry, a copy of the report of which has been supplied to you, was made at the instance of the Government of India. It was sent to them for action. I have no official knowledge about what action was taken but I understand that nothing has been done.

B-702. What was the anæmia, that you observed, due to?—I thought at the time it was due mostly to defective food, to malnutrition and lack of vegetables in particular.

B-703. Would you lay equal stress on the fact that the miners are working underground?—Yes, that has to be taken into account.

B-704. Is it of equal or less importance than lack of vegetables?—I should say that the fact that they are working underground, and doing very hard work, would necessitate a better diet.

B-705. I noticed when I was there that boys of 8, 9 and 10 years of age obviously suffered from the same degree of anæmia as the adults. They could not have got their anæmia from working in the mines, because they were under-age?—But they all go into the mines.

B-706. But they do not work in the mines?—They have to take the food for the miners.

B-707. But children of 7, 8 or 9 years of age do not stay in the mines for any period?—I should not be surprised if they did.

B-708. Mrs. Wilson: With regard to the nutritional value of artificial ghee, is it not the fact that in villages now it is the custom to mix artificial ghee with the real ghee and sell it as ghee?—Yes. If it is really mixed, it does not matter because 0.004 mg. of any vitamin is all you require; so that a little ghee will go a long way.

B-709. In 1923, when I was working under your predecessor, a recommendation was made by him to Khewra that they should employ a woman.

health visitor. Have you had any correspondence on the subject?—No, I have never heard of it.

B-710. The health of women of the criminal tribes compares very unfavourably with that of women in hospitals; is the health of the men of the criminal tribes also bad and is there need of further care of criminal tribes?—Yes; the health of the men is also bad. The Commission will visit the criminal tribe settlement at Amritsar.

B-711. Is there sufficient provision for privacy for women in the houses in which the factory workers live?—I have not any information on that point.

B-712. Do the medical students here ever visit the health school in order to learn the value of maternity and child welfare?—Not that I am aware of.

B-713. The Association of Medical Women in India have made representations to your Department that maternity and child welfare should be more stressed in the education of medical students in the Medical College here. Have you taken any steps in that direction?—They have not made any representation to me.

B-714. Would you advocate that?—Yes, I think it is most important.

B-715. For that purpose is not it necessary that the examining body should put questions on those subjects?—I think the teaching of hygiene is of very great importance, and, like many other things, requires looking into and keeping up-to-date.

B-716. You have stated that to help the women from a health point of view, especially in factories in the Punjab, a health visitor is very desirable?—Yes, it would be a very excellent thing. At the Mandi hydro-electric works we have a welfare worker who is a qualified midwife and looks after the health of the women.

B-717. It is the opinion among certain Indians here that there would be more Indian women available for training as health visitors. I gather it is proposed to set up a new health school?—It is sanctioned, but owing to the recent floods it will probably be postponed for another year. The plans and estimates are ready and the scheme should have been included in the next budget.

B-718. In view of the temptations that might be put on a health visitor employed in a factory by the private staff, would you advocate the provincialisation of the health visiting service?—I do not know whether provincialisation is going to get over that difficulty, because it will still remain; it is a very great difficulty. Whether an individual is a Government servant or not will not affect the temptations put in her way.

B-719. If they do not get women on the local committees there is not much chance of good work being done?—I have represented the necessity of amending the Punjab Municipal Act to enable women members to serve on Municipal Committees.

B-720. *Mr. Joshi*: You state in your memorandum that the contractor often runs the *bania's* shop in the labour camp?—Yes.

B-721. Does it often happen in that case that the worker receives his wages not in cash but in the form of goods?—I think that is so, but I am not certain. I think it is very probable that is so, and it is very probable that he does not get his due.

B-722. He does not get all his wages in cash; he gets some in the form of goods?—Yes.

B-723. *Dr. Hiteshi*: You have told us that the great cause of anaemia among labourers and their children is malnutrition. Is it largely due also to the abuse of quinine?—I have not seen it in the course of 26 years.

B-724. Medical practitioners sometimes give a dose of as much as 60 grains of quinine at one time; do you approve of that?—That is rather a stiff dose; I have never known of it being given.

B-725. Your report shows that infantile mortality is very high; do you think vaccination is one of the causes?—No; if it had not been for vaccination the infantile mortality would have been much higher.

B-726. *Diwan Chaman Lall* : Should I be correct in saying that a manual worker requires at least two full meals a day to keep himself fit for the work on which he is engaged, and would you include in a meal meat, milk, wheat and vegetable?—I should think there are very few manual workers in India who get a diet of that kind. A good many do not take meat and get most of their protein from one of the staple food grains; they do not take it in the form of meat.

B-727. Is that because they cannot afford it?—Yes, sometimes, of course. Many have never taken meat.

B-728. But the Punjab is more or less a meat-eating province; meat is eaten by every Mahommedan and by many Hindus?—Yes, but a great many of the labouring classes do not eat meat at all.

B-729. If a man gets a meal of meat, bread, milk and vegetable, would that be a good meal for him?—It would not be bad, but it is entirely different from the diet to which these people have always been accustomed, and I do not know whether they would like it if they were put on to it.

B-730. They do eat bread and vegetables and drink milk; the only difference is that they do not eat meat, you say?—They are getting plenty of protein, but they are taking it in a vegetable form.

B-731. Supposing a worker could afford to get a good meal like that, would it be good for him?—If they could get milk or *ghee* in addition to the diet they are taking, they would not be doing at all badly; but the average diet of the low paid labourer is deficient in fats and carbohydrates. I think the diet is not unsuited to the country, but at present it is on the short side for many of the poorer classes.

B-732. Supposing on the average a worker were given 1 seer of milk a day, and he ate his *dal* and his *roti*, and a sufficient amount of *ghee* or butter, as the case may be, would not that cost much more than 8 annas a day, because 1 seer of milk alone would cost him 5 annas?—It would be a very difficult thing to supply the milk; the shortage of milk is very great. It would be very difficult and very costly to do it.

B-733. *Sir Alexander Murray* : I take it that the incidence of tubercular diseases to which you refer is the same in all large towns and cities whether industrial or not?—Yes; I have no means of separating industrial and non-industrial urban conditions; generally speaking, it is high in the towns, but it is not particularly associated with industrialism.

B-734. In reply to Colonel Russell you referred to epidemics in connection with the possibility of sickness insurance. For instance, within the last year or two there have been epidemics of cholera which have caused the death of over 100,000 people. Is this not so?—No; we had an epidemic of cholera which caused 12,000 deaths, but we had an epidemic of plague in 1924 which caused 250,000 deaths. In 1928 cholera caused about 7,000 deaths.

B-735. Malaria, of course, is very prevalent?—We get big epidemics of malaria. We are having a big epidemic now, but it is not in this part of the Province.

B-736. You sum it up by saying: "India is the great breeding ground of disease and the source of the world-wide spread of infection"?—It is to a large extent, especially in connection with cholera and plague.

B-737. That being so, would you agree that it would be very difficult to introduce any system of sickness insurance?—It would be costly and difficult on account of these epidemics.

B-738. *Mr. Ghani* : Have you appointed, particularly for the industrial areas, any sanitary inspectors or health visitors? Can you point out to me some industrial areas?—There are industrial areas within the municipal limits, but they are under the municipality; they have a municipal staff to deal with them.

B-739. As Director of Public Health, are you aware that the sanitary inspectors and health visitors generally visit only the houses and places where people live?—I have no information about that, but I hope that they inspect both.

B-740. I suppose you will agree that there are some very dirty slums in the big cities of the Punjab?—Yes.

B-741. What suggestions have you to make to put an end to these slums?—One suggestion that I have put up is that an executive officer should be placed in charge of every large municipal town, so that the Municipal Committee under whose charge public health comes will function more efficiently. At the present moment they are doing little or nothing; it is also necessary to provincialize the service of municipal medical officers of health. Until these things are done, I am afraid progress will be slow.

B-742. *The Chairman*: We have heard that in the main the people of this Province are rather above the general in India in the matter of physique?—Yes, I think that is admitted.

B-743. Therefore, when you speak to us of the deficiency of their diet in respect of milk and ghee, you of course want them to be still better than any other part of India?—I have shown in my memorandum on diet of which I will have a copy sent to you that the conditions of which I am speaking do not refer to the whole population. The rural population are very much better off than the urban; they have their own cows and food, fresh air and natural sanitation; so that the persons to which I have been referring are rather the poorer classes living in urban areas which embrace most of the industrial workers, I am not speaking of the whole Province.

B-744. That is to say, it is the same problem as we have in the crowded cities in England: there is a deficiency of milk and butter and things that are of the highest food value?—Yes.

B-745. And the problem is that those things are at present too expensive.

B-746. *Mr. Clif*: Does that mean that it is a question of poverty.

B-747. *The Chairman*: That is what I am leading up to, it is a question of lack of means and also lack of supply; the supply is limited and very expensive?—Yes, it is those two things put together.

B-748. Do you consider that in the urban areas there is a deterioration of physique due to the causes you have mentioned?—I have not any statistical data to go on, but I should say that in my opinion the physique of the worker deteriorates as a result of prolonged residence in towns.

(The witness withdrew.)

**Mr. R. J. S. DODD, Registrar of Co-operative Societies, Punjab.**

B-749. *The Chairman*: You are Registrar of Co-operative Societies for this Province?—Yes.

B-750. Your work, in the main, is with Co-operative Societies in the villages?—That is where most of the societies are.

B-751. We are specially interested in the possibilities of co-operative societies in the industrial areas. Have you any experience with regard to them?—With one or two exceptions we have no co-operative societies among employees of a definite factory; but I cannot say whether any of the labourers employed in a factory in a town are members of a society elsewhere—in their home village for instance.

B-752. In your memorandum you speak of two co-operative printing presses?—The members of the society run the press for themselves.

B-753. That is different from a co-operative society in the general sense in which the phrase is used. The village co-operative societies are in the main credit societies?—Most of them.

B-754. A few are supply societies?—Very few.

B-755. With regard to your co-operative societies in the villages, have they made considerable progress in the last ten years?—Yes, both in number and wealth.

B-756. Then can you explain why, when people come to work in industrial areas, they should not accept and welcome the same co-operative system in the period of their urban life?—A co-operative society is really a business, and for it you need some stability among the shareholders; and if the people are working in a factory for a few weeks or months and then go away again, and there is no guarantee that they are going to return to the same factory, there is no chance whatever of being able to run a successful business amongst them. Another thing is that most labourers are either indebted or would like to be, and it is easier generally to be indebted to the local shop keeper than it is to be indebted to a properly run credit society; and the principle of a supply society is that all dealings are for cash. In England several co-operative societies have been ruined because they began to deal on credit. The same thing happens out here, but much more so.

B-757. Would you agree, then, that if the labour in the factories was regularized, and the same persons came back to the same work, although they might have their intervals in their village, that would give a better basis?—It would give a start. The mills at Dhariwal have a very successful society which does both supply and credit.

B-758. Is the reason of that because their labour is more regular?—They live there all the year round, and the management of the mills takes a very large part in the management of the society.

B-759. May I take it that one necessary factor for a co-operative society within a factory would be that there should be some personal help provided by the management?—Not necessarily. The essential is that there should be somebody to manage the society properly. It need not be the management. If the same labour were constantly employed there would be no reason why an intelligent labourer should not run it.

B-760. You have only this one instance to which to direct our attention of successful industrial co-operation in a factory in the Punjab?—Yes.

B-761. You can point to nothing of the kind in Lahore?—No. The Rail way workshops at Mogulpura have a large society. The North-western Credit Society is open to the clerical staff also.

B-762. Does that come under your supervision?—It does ultimately.

B-763. Is that successful?—Very successful.

B-764. Do you see any reason why that should not be extended to larger classes of workers?—There is no reason except the character of the workers with whom one would have to deal.

B-765. Do you find the workers in the towns, as well as in the villages, slowly beginning to learn that they can become free men if they have the wisdom?—No.

B-766. The custom is so ingrained?—Our field staff know the conditions of the workers in the factories, and it is taken for granted in some cases that it would be useless and dangerous to try to start a society among them in their present condition.

B-767. You tell us that in the villages, where the people know one another and live with one another, you do get the basis on which real co-operative societies can be run?—Very much so.

B-768. That, I take it, is because they would know normally when a member was abusing his right, and would know when their own credit was being harmed by the misconduct of any of their fellows?—That is what we hope, and in many cases we get that. We do not get it always.

B-769. *Mr. Cliff*: It is a question of ability and integrity. Is that how you sum it up?—Yes.

B-770. *Diwan Chaman Lall*: Are you aware that the co-operative credit society run for the employees of the North-Western Railway is going on very satisfactorily?—Yes.

B-771. Also the credit co-operative society run by the Telegraph employees?—Yes.

B-772. Wherever the workers organize themselves they can run these societies successfully?—There is no inherent reason why they should not.

B-773. Provided assistance is given by the authorities?—There is no essential need of assistance from any authorities at all, so long as the people who associate themselves into a society are of the right sort.

B-774. *Mr. Chow*: We have been told by the Railway administration that under statute they recover debts from the pay bills up to half of a man's salary. It has been suggested to us that this power of recovery through the pay bill should be restricted or abolished. What would be the effect on general indebtedness of that?—I do not think I can answer that. I think it would very much retard the recovery of debts.

B-775. Would it be likely to diminish indebtedness?—Not a bit.

B-776. *Sir Victor Sassoon*: We have been told that the Railways cannot see their way to extend the co-operative society to the illiterate employees. In the rural districts I take it there must be a great deal of illiteracy?—The very small minority is literate.

B-777. The illiteracy of the rural workers does not prevent the co-operative society being successful?—No.

B-778. So that the point of illiteracy ought not to weigh with the Railway people?—I would not say generally yes or no. The villager is a different sort of man from the factory worker.

B-779. In other words the railway illiterate staff is more fluid, whereas the villager remains in the village?—Yes.

B-780. *Mr. Gregory*: Is it not a fact that the North-Western Railway administration assists in carrying out the duties of the co-operative society?—I cannot say. I have not seen the society myself.

B-781. Is it not a fact that the Secretary is an officer of the Railway?—They are all employees of the Railway.

B-782. Would it be possible to run the society without the assistance of the administration?—It may not be, of course; in the same way as a factory society.

B-783. *Mr. Gauri*: Co-operative societies exist among the agricultural classes in rural areas. The success of these societies is mainly due to the help given by your Department, and to the propaganda which has been carried on by your Department. Is not that so?—I think so, yes.

B-784. Can you not carry on the same propagauda among the industrial workers so as to make industrial co-operative societies a success?—It depends entirely on the character of the people who are going to be the members.

B-785. Do you know that most of the industrial workers of the Punjab are drawn from the agricultural classes?—Yes, but an agriculturist employed in a factory is a very different person from an agriculturist working in his own village.

B-786. In what respect is he different?—Because he is not living at home.

B-787. From the co-operative point of view, what difference is there between an industrial worker and an agricultural worker when both belong to the same class?—The circumstances.

B-788. *Mrs. Wilson*: In view of the success of the one woman whom you have had attached to your Department, and in view of the fact that the women, for instance, in the cotton ginning, are drawn from villages, would it not be well for your Department to have at least an additional woman worker to work in the villages?—Already we have six sub-inspectresses, as well as an inspectress. They have been working for a few months each, and we have one in each of the central districts. In the middle of this last summer Government sanctioned the entertainment of a second inspectress, but we have not been able to entertain her at the moment because of the floods. I hope to get her next year.

(The witness withdrew.)

**Mr. W. H. ABEL, Inspector of Factories, Punjab, and Dr. R. C. RAWLLEY, Director of Industries, Punjab.**

B-789. *Sir Victor Sassoon*: You say in one part of your memorandum that there is more unemployment among unskilled workers than skilled workers, while at the same time in another part of the memorandum you say that generally there is no enough unskilled labour available when required. Can you tell us how you would correlate these two rather what might appear to be opposing points of view?—(Mr. Abel) The rural labourer does not care very much whether he works or not for any length of time; he will work for a week or two and then possibly rest for a few days. There always appears to be a surplus, or it appears to be very easy to get unskilled labourers.

B-790. May I take it that your unskilled labourer is not unemployed at the moment when he is called upon by the industrial organization; he is attending to his rural pursuit and leaves it and goes over to the industrial organization when there is a demand?—Yes; when he has no other land work to do, or when there happens to be work to be done in a factory. He can afford to leave the land for a few days or a week, almost at any time; he always has that to fall back upon when there is no work in the factory or when he has to do work on the land.

B-791. He is not really unemployed; he is merely changing his employment?—It would be nearer that, although he would have very little to do on the land.

B-792. There is no difficulty, you say, in getting unskilled labour when you want it?—I have never come across any instance where it was difficult to get unskilled labour.

B-793. So there is no necessity for an employment agency to be established?—For the unskilled labourer I should think not.

B-794. I take it there is difficulty in finding skilled labourers?—There is a great difficulty.

B-795. At the same time we are told that there is a superfluous pool of skilled labourers due to a reduction in the staff of the railways?—That is true. The railway workshops have reduced their labourers during the last two or three years; but the skilled worker in factories in the Punjab is mostly imported chiefly because he is expected to be a whole-time worker. The Punjabi has some interest in land; and whether he is getting more wages or not in a factory, when there is some work to be done on his land, he goes on to do it.

B-796. Would that apply to the skilled worker who has been axed from the railway workshops?—The skilled labourer who has been dispensed with from the railway workshops is generally an engineer or a mechanic.

B-797. The point really is that you have not enough engineering enterprises here to absorb the skilled workers?—That is difficult to say.

B-798. Would you say that there is a demand, which is satisfied by importing skilled labour from outside and which, if you had an employment agency could be met by the men who have left the workshops?—The man who has left the workshop is generally an imported man in the first place, who has settled down in the Punjab and probably has very little interest in land; whereas almost all other workers in the Punjab have an interest in land.

B-799. I appreciate that. What I am trying to get at is whether employment agencies would be of any use in securing jobs for the skilled workers?—I should say that there is a room for an employment agency to some extent for disposing of skilled workers, but not to a very great extent.

B-800. *Messrs. Harkishan Lal and Sons* in their evidence say that there are one or two unemployment agencies in the Punjab. Do you know anything about them?—No.

B-801. I find that you advocate extension of the Factories Act to places where more than ten workers are employed and use power. Will it not be

practicable to extend the Act even to places where you have a large body of labourers working although no power is made use of?—To avoid the Factories Act, they will work in smaller numbers.

B-802. Your objection to bringing them under the Act is that they would get round it?—Yes.

B-803. I have always understood that the difficulties in extending the Factories Act to smaller factories, which employ less than 20 men, were due to administrative difficulties and cost?—That is true to a very great extent.

B-804. But you are suggesting an extension?—I think it would be advisable.

B-805. Can you give us some constructive advice as to how these administrative difficulties could be got over? Would the cost not be too excessive?—It is much more difficult to administer the Factory Law to smaller factories such as would come within the purview of the Act than it is to the bigger ones, so that your administrative difficulties would be much greater and the cost would be considerably heavier. For instance, it is very much more difficult to apply the Factories Act to small bazaar workshops than a big mill.

B-806. Do you still maintain that the Factories Act should be extended?—It certainly should; it will take very much more staff than we have at present to do it.

B-807. Can you efficiently control these small mills or workshops?—Not very efficiently.

B-808. Would you, therefore, say that the success would be commensurate with the extra cost?—We would get some success; it is going in the right direction, I think.

B-809. You think that the extra cost would be justifiable?—Yes, I do.

B-810. What limit would you put to the number?—Up to 10; we are gradually doing that; we have done it in the case of cotton ginning and ice factories.

B-811. Would the cost of the department increase by double or treble?—I do not think it will be double; it would probably be 30 to 40 per cent. more.

B-812. Your recommendation is to lower the figure from 20 to 10?—I think that would be a good thing.

B-813. Would you include those factories which do not use power, or would you let them remain as they are?—If you apply it where there is no power, you would increase the cost a good deal more. I fear that the Act would be defeated even in that way. For instance, take wool picking industries where power is not used. If you apply any regulation to that particular yard or area, the occupier to overcome the difficulties of the Factory Law will split the workers into groups of 5 or 6 persons.

B-814. But would not the workers be worse off by working in smaller groups?—It would not make very much difference to them; it certainly would not help them.

B-815. You do not therefore advocate bringing in no-power concerns under the Act?—No. It will no doubt be an ideal state of affairs but it will be difficult to administer; I would not advocate it at this moment.

B-816. You say, Dr. Rawley, in your memorandum: "It will be noticed that wages of ordinary skilled labourers rose gradually between the quinquenniums ending 1917 and 1922 as compared with the quinquennium ending 1912 but a fall was registered at the wages census for the quinquennium ending 1927." You then go on to say: "The fall in the wages of other industrial labourers is undoubtedly due to the fall in the cost of living since the last wages census." I think you refer to the census of 1927?—(Dr. Rawley) Yes, that is true.

B-817. I cannot reconcile this statement of yours that there has been a fall in the cost of living with the statement made by the Punjab Government in

their memorandum that the prices of foodstuffs have gone up since the last wages census. You also give us the percentage of increase or decrease in the wages of certain classes of labourers in Lahore, Amritsar and Multan in 1927 as compared with 1922. Let us take cotton weavers. Are they handloom weavers or do they use power?—Most of them are handloom weavers. There is not much power loom industry.

B-818. Are all those brass, copper and metal workers, and so on, working in their homes and not in factories?—Yes.

B-819. Am I right in drawing the conclusion that the wages of workers in factories have been rising whereas the wages of those who are not working in factories have remained stationary, and have, if anything, gone down?—The figures given in my memorandum are taken from the Director of Land Records.

B-820. In your memorandum you say that the efficiency of the Indian worker has increased very steadily during recent years. Do you apply that to all over India, skilled as well as unskilled labour?—I am mainly talking of the efficiency of skilled factory labour.

B-821. In your memorandum you say that "it is almost impossible in the absence of any recorded observations to give an estimate of the comparative efficiency of Indian and foreign workers". Surely, the question of efficiency is a quantitative one, and the other points you raise are merely reasons why the efficiency in one country might not be up to that of another?—Strictly speaking it is not merely quantitative, but it is also qualitative. When you are talking of the efficiency of two individuals, you have to take the circumstances and conditions under which they both work. For instance, take the power loom weaving industry. You can say that the efficiency of the Indian worker as compared with that of a Lancashire worker is not so very low as compared with other industries.

B-822. You probably refer to 2½ Indian weavers being equal to one Lancashire weaver, against 4 to 1 in other trades?—It all depends on the machinery too.

B-823. I am taking the same machinery. Dealing with working hours and its relation to output, and taking the case of the spinning industry, do you consider that a reduction in the number of hours will affect the output?—That is what I maintain, that during the last two hours of the day the weaver cannot attend to the breakages to the same extent as he can in the earlier hours.

B-824. Have you any evidence, or is that your opinion?—I have evidence.

B-825. Have you figures to show the output for a nine hour day and the output for a ten hour day?—In an 11 hour day the output per spindle per day on 20's counts was six ounces. For a ten hour day the output was exactly the same.

B-826. May that not be due to the inefficiency of the worker in the first case?—The men with whom I tried this experiment had been trained for the last thirty years.

B-827. To-day in Bombay we are getting over six ounces of 20's per spindle per day, working two sides with one man?—That is due to the fact that during the last four years you have bought better machinery.

B-828. No, we have not. It is chiefly due to careful mixings. But let us assume better machinery. Supposing I stop one hour, do you say I am going to get the same production?—In weaving you will.

B-829. You say in your memorandum that it is necessary that statistical data should be collected regarding the various matters affecting labour. What would be the approximate cost of an organization for that purpose?—So far as the Punjab is concerned, it would cost anything between Rs. 1,500 and 2,000 a month extra.

B-830. Mr. Clow: Do the cotton ginning factories enjoy any exemption in respect of hours?—(Mr. Abel) Not at present. Exemptions have been granted

during abnormally good seasons. The last exemption was given about two years ago. Last year no exemption was given.

B-831. Will you explain a little fuller the working of the pooling system in these factories?—The cotton crop of the Punjab during the last three or four years has been very much below the normal. A factory situated in an area like Lyallpur, where there are 14 or 15 factories crowded together, has not sufficient work to keep it running for six days a week at full pace. As a result, the owners of all the factories meet together and decide that they will run only such a number of factories as they can keep going throughout the week, and close the rest. The profits or losses of the various factories working are pooled and distributed amongst the factory owners of the whole area.

B-832. What are the average hours of work in these factories in actual practice?—Seventy per week possibly. That does not refer to all of them. Cotton ginning factories are notorious offenders against the rule of hours of work. 60 is the limit; but I should think that one might put the average for all ginning factories somewhere between 66 and 70 hours.

B-833. Does not this pooling system lead to the closing of some factories and throwing their workers out of employment, and sweating the remaining workers who work in the factories which are kept open?—That is true.

B-834. In your memorandum dealing with the wages of skilled and unskilled workers in the cotton ginning factories for the past ten years, you say that the wages have steadily risen during this period. That seems to be true in the case of skilled workers, but in the case of unskilled workers in factories there is no perceptible rise. Their wages, if anything, have remained stationary or have fallen?—Yes.

B-835. What is that due to?—It is due to the fact that the cotton crop in the Punjab has been below normal since 1922 or 1923; as a result there are more workers to undertake the work.

B-836. The owners in this industry are in a very much stronger position than the workers?—Yes, very much.

B-837. Were you able to pay any surprise visits to these factories?—Yes. It means visiting them very early in the morning and late in the evening, or adopting some method by which you can arrive at the factory without the owners knowing of your arrival.

B-838. Are your movements well heralded?—No. As far as I know, no one knows where I am going.

B-839. Are the visits of the *ex-officio* inspectors, the district administrative officers, effective?—No.

B-840. Would it not be better for them to pay surprise inspections?—I do not think so. The average district official would be very unlikely to undertake a surprise inspection at 5 or 6 o'clock, the same as a full-time inspector does.

B-841. Has not the district official on the spot an advantage in this matter over the factory inspector who is far away?—Experience has shown that district officials either do not take interest in inspections, or are never able to bring home to the factory owners the necessity for a due observance of the rules. For instance, I have never had a prosecution which has been successfully launched by a district official. Another thing is that it is necessary for an inspector to have some experience in inspecting, and know what to look for and when to look for it.

B-842. As regards prosecution, what is the normal procedure? Your sanction is required for a prosecution, I take it?—Yes.

B-843. Is there any other officer's sanction required, or can you launch a prosecution yourself?—I can launch it myself.

B-844. Without reference to any other authority?—Yes.

B-845. You have referred to competition with Indian States in the Punjab, and to the fact that in some cases factories remove across the border in order to avoid regulation in British India?—Yes.

B-846. What are the regulations which they so strongly desire to evade?—Hours of work and child labour.

B-847. Not the Cotton Ginning and Pressing Factories Act?—I do not think that would worry them very much, although I do not administer that Act.

B-848. Is there any regulation in any of the Indian States with regard to hours of work or child labour?—I believe in one or two of the States they have a Factory Act.—I should think, from the fact that factory owners in British India always complain that the competition they get from factories in Indian States is so very great, that the regulations are not enforced at all.

B-849. *The Chairman*: What is the extent of the movement out of British India, to which you have referred?—I only know of two factories that have deliberately moved into British India, but there are many cases where factories which might have been built in British India have not been built here.

B-850. *Mr. Clow*: Dr. Rawley, you were Chairman of the Committee which met to consider the question of sickness insurance?—Yes.

B-851. Your Committee came to the very definite conclusion that for any scheme of sickness insurance to be a success there should be central legislation. Can you give us the reasons that led the Committee to that conclusion?—(Dr. Rawley) We were of the opinion that one Province should not be at a disadvantage as compared with other Provinces from the financial point of view.

B-852. Do you regard sickness insurance necessarily as a disadvantage?—Not exactly. If the cost of administration is very high, one Province has to pay out much more money than another Province.

B-853. As far as industrialists are concerned, surely it would bring benefits in its train?—I agree.

B-854. And would it not be more likely to be successful if one started experimentally in a limited area?—We, as a Committee, came to the conclusion that there should be central legislation, and that the scheme should be started at the same time all over India.

B-855. *The Chairman*: Centrally controlled but locally administered?—Yes.

B-856. *Mr. Clow*: Have you considered the question of the possibility of enforcing by legislation weekly payments in certain industries or branches of industry?—We have not yet considered the question of weekly payments at all.

B-857. Do you think weekly payments would be popular with the workers?—Yes, very popular.

B-858. Would they be beneficial?—I should imagine they would be. Under the present circumstances the worker has got to borrow money from the bania, and buy his food for the whole of the month on credit, and pay very high interest.

B-859. It has been suggested that the bania would merely charge interest weekly, and that the compound interest would accordingly be greater?—I think the rates would probably be lower. I am giving this view from my own experience of my servants and people I have engaged.

B-860. *Mr. Joshi*: Do the workers, who go back to their villages every year for some months, return to the same industry?—(Mr. Abel) They mostly do.

B-861. Therefore, as regards skill, there is not much loss caused by the workers going back to their villages?—No.

B-862. What is called the "migratory character" does not cause any loss to industry?—No.

B-863. Does it do any good to the health of the worker that he should go back to his village and return after some months?—I should think it does. The work of cotton ginning is very dusty, and I should imagine that the worker would gain by getting out on to the land for some months during the year.

B-864. You mention the strike in Dhariwal mills. Some time after the strike, were the conditions of the workers improved to some extent?—I did not notice that they were. The unrest at Dhariwal was nothing to do with factory regulations. Therefore I took no official interest in it.

B-865. You make some remarks about the relations between staff and rank and file, and you say "In bigger industrial establishments particularly those run by responsible companies the relations between the staff and the workers are quite satisfactory", and so on. What leads you to think that the relations are more favourable in India than they are in other countries. Is it the lack of strikes?—That has something to do with it. We have been very free from strikes in the Punjab.

B-866. Is that due to the fact that the workers are too poor to rebel?—The worker is mostly far too poor to engage counsel to settle his disputes, but from what I see in well-conducted factories the labourers are fairly well looked after, and they appear to be contented.

B-867. You generally agree that it is the highly paid man who goes on strike rather than the badly paid man?—The average paid worker—the artisan—is the man who goes on strike.

B-868. Do you insist upon the drinking water for operatives being cool in the hot weather?—Drinking water either comes from municipal taps, and it must be fairly cool since it comes from underground, or it is kept in *chattis* which keep the water cool.

B-869. I should like you to make an experiment to see whether it is cool or not?—I will. I have found nothing wrong with the water. I have taken samples of it and had it analysed.

B-870. Would there be any objection if a clause is inserted in the Factories Act making it obligatory upon factory owners to keep first-aid appliances?—There is such a rule in the Punjab.

B-871. When you give exemptions from mid-day rest, do you insist that some compensation should be given to the workers for the exemption?—It depends on the exemption that is given. We lay down conditions for exemption. Actually exemption is very seldom given now, and only where there is an exceptional press of work for a certain period, in which case overtime pay automatically comes in; compensatory rest periods are also put down as a condition.

B-872. Do you give any exemption from the weekly rest provision?—On occasions. I think the last one was to the railway printing works to enable them to print the memoranda for this Commission.

B-873. What conditions did you lay down?—That was done by the local Government without being referred to me at all.

B-874. And they gave no compensation to the workers for depriving them of the right given under the Act?—They pay them  $1\frac{1}{4}$  full pay or more for all hours over 60.

B-875. But they did not give any holiday after the pressure was over?—No, as far as I know there was no compulsion in that way.

B-876. Do you think it is desirable that, when you give exemptions from rest time, some provision should be made for giving rest days when the pressure of work is over?—I do. Indeed, I think exemption should not be given. I mostly oppose it if I have an opportunity.

B-877. You state in your memorandum with regard to industrial efficiency that amongst the labouring classes no improvement has been noticed. You have also stated that when the hours of labour were reduced from 12 to 10 there was no decrease in production?—I said there was very little.

B-878. Then why do you say there has been no increase in efficiency?—By reducing hours from 11 to 10 the fatigue element would be eliminated which would to some extent make a difference. When the Act was amended in 1922 millowners and factory owners complained bitterly that they would lose an hour; but they gradually increased the efficiency of their staff and now they

say they do not lose very much; but that is not a very great improvement in the efficiency of the worker.

B-879. *Sir Alexander Murray*: I understand you to say that whether the hours are 12 or 11 or 10 in the day, the worker generally works 8½ hours?—Yes. My experience is that the worker works when he is made to work to a great extent, and if you put him on to longer hours of work he does not work.

B-880. *Mr. Joshi*: That is true. I therefore want to know whether his efficiency will not increase if the hours are reduced, while if the hours are kept long he does not show efficiency?—That is true, but there is a limit.

B-881. Are seats provided in factories for women workers?—I should say 9 per cent. of women workers are sitting the whole time, because they are mostly working in cotton ginning factories. There are a few operations in textile mills where women stand and there are no seats provided; but those constitute very few workers and I do not think you would find them overworked; they sit down when they want to.

B-882. Is there any rule in the Factories Act with regard to the weights to be lifted by women?—No.

B-883. Do you think it is desirable?—I have never seen a woman having to lift heavy weights in a factory. They are generally engaged on very light work such as feeding the gins with raw cotton.

B-884. Where no power machinery is used have you any regulations?—No.

B-885. Do you think such work should be brought under regulations?—I think it would be very useful.

B-886. I think your Government has taken an adverse view with regard to the Maternity Benefit Bill; in view of the fact that an Act has been passed in Bombay, do you think there will be a change of view in your Province?—I am sorry I cannot say; it all depends on the view taken by the Punjab Government.

B-887. Are you in favour of the compulsory insurance of workers against accidents?—I am.

B-888. You have expressed yourself as being in favour of increasing the rates or compensation. Have you considered whether the period for which compensation is provided in the Workmen's Compensation Act should be extended, say, from 42 to 84 weeks?—Yes, I think so.

B-889. You are the Registrar of Trade Unions?—Yes.

B-890. While Mr. Wilson was being examined mention was made of some circular issued by Government directing that the associations of Government servants should not be registered under the Act; is that so?—That is true.

B-891. Is the Registrar of Trade Unions an executive or a judicial officer? I think he is a judicial officer.

B-892. Can the executive Government issue orders to a judicial officer with regard to the interpretation of the Act?—That is for the Government of India to decide.

B-893. *Miss Power*: Mr. Abel, in your memorandum you say that you made 667 inspections, I think in 1928, and you say you cover 725 factories in three Provinces. In the Government memorandum there is the statement that "it is fairly safe to say that inspectors cannot turn up more than once a month". This makes me enquire what system you have for allocating inspections among the factories under your jurisdiction?—(Mr. Abel) I have five part-time inspectors distributed throughout the Province, each at a centre. I am myself a full time inspector in Lahore, taking the whole of the Punjab. I issue programmes to each one of these men as to the factories which I want them to visit throughout the month. When they visit the factory and find it working and have any defects to report, they report to me. I take action on that if I find it necessary. Apart from that, I myself tour the Province whenever I can, that is, 15 to 20 days a month, making independent inspections, apart from seeing that some of the inspections

which have already been made by my men in the districts have been properly carried out.

B-894. Are the assistants you refer to inspecting on the technical side, or on the more general welfare side?—No, only on the general side. They are not technical men, and they are only occupied under certain Sections of the Act.

B-895. Does that mean that you are obliged to retrace their steps, as it were, to catch up on the technical side?—It does. This system disappears from the 1st April of next year, when Government have agreed to appoint another fully qualified inspector, and the powers of these men will be taken away.

B-896. It seems that the one assistant factory inspector is going to replace the six part-time men?—Yes.

B-897. You do not anticipate from that an increase in inspection, do you?—No, what I anticipate is more effective inspections. Inspections may possibly decrease; in fact, I think they must; but I think they will be much more effective.

B-898. How many inspectors, in your opinion, are necessary to make effective inspection of the places that you have now got under the Act?—To inspect them effectively we might need anything up to six or seven inspectors. The factory inspection is such that you can make an enormous amount of it if you like. For instance, with regard to welfare work, we have very little time indeed to look to it although it is really one of the duties of a Factory Inspector that he should attend to it.

B-899. When you said that if the Factories Act were extended to include some of the unregulated places there might be an increase of about 30 per cent. in the cost, were you basing your figure on the present measure of inspection?—Yes.

B-900. In view of the large number of women employees in ginning factories do you think there would be any improvement in the inspection if women factory inspectors were employed?—It is very difficult to tell. Certainly a lady inspector would be useful, but, as far as women workers are concerned, our inspections really apply to their hours of work to a very great extent; their conditions of living do not seriously concern the inspector at the moment because they live in districts outside the factory area over which we have no control.

B-901. You do not suggest that regulating the hours of work is the only concern of the inspector?—I do not at all; in fact we do other things. We have tried to prohibit small children being brought in, and to make the conditions of women workers very much better.

B-902. Do you see any reason why your experience here in India as to the uses to which women factory inspectors can be put should differ from that of Europe?—It would be rather difficult, to my mind, for a lady inspector to tour the country and go into factory areas, as a man does.

B-903. I was not thinking so much of the difficulties of the woman inspector, which I think could be got over. I was thinking of the administration of the Act in the interests of the women and children?—I think it would be very useful indeed, but the point is whether the number of women workers would warrant the expenditure.

B-904. Do you get complaints from women factory workers?—Very seldom.

B-905. Does that imply anything to you?—First of all the woman worker is very shy.

B-906. Shy of a man?—Yes. The chief things we are concerned with as to women workers are hours and conditions of work. They have no heavy weights to lift; they have very little manual or heavy work at all to do. They sit the whole day in ginning factories merely putting cotton through gins.

B-907. Do you think a man factory inspector is very likely to get a complaint from a woman factory worker as to, for instance, the sanitary

arrangements supplied for women workers?—No, I do not think so; but the factory inspector does look to this too; he sees that proper sanitary arrangements are made for women workers.

B-908. But still there may be many abuses of which you do not know, just as there were in England?—Yes, it is possible.

B-909. You say that about one-third of the children employed are in the ginning factories. Do your Certifying Surgeons get round to see those children in time to prevent illegal employment?—They should do. The method is that the Certifying Surgeon can delegate his powers as a Certifying Surgeon to an Assistant Surgeon, which he generally does. The Assistant Surgeon will then issue certificates to children as they come to him. The Certifying Surgeon should go round the Province once every three months.

B-910. Does he in fact do so?—I doubt it; I think he probably goes round once a year.

B-911. The ginning factories are only seasonal; does he tour when they are kept open?—Yes.

B-912. The Director of Industries in his memorandum speaks of the long hours of work of the children in ginning factories. In practice, is there any distinction between the hours the women work and the hours the children work?—Yes, there is; if it is possible for the employer to do so, the scheme is to start the children working early in the morning; and if they are not detected by the factory inspector by mid-day they probably go on for the rest of the day.

B-913. Have you any reasons to think that there are children in ginning factories who work for 70 hours?—I am afraid I have.

B-914. On the question of the admission of underage children into the factories, you appear to have made some effort to solve the difficulty, but have had to abandon it?—Yes.

B-915. I take it that because the ginning factories are so small and scattered, no attempts have been made to start creches?—I have tried that in one or two areas, but they are not used to any great extent.

B-916. Have you any solution for this particular problem, because the atmosphere of the ginning factories is hardly conducive to the health of the children?—I have not found a solution. I have tried many ways. For instance, I have had dust-proof masks made for these people to wear, but they will not wear them. We thought of the possibility of having gins covered and an exhaust pipe to take out all the dust, but the scheme had to be abandoned as it would have been very expensive.

B-917. Have you considered the question of erecting a shade within the compound of the factory where women work?—I doubt whether they would make use of it. The woman works inside a big room in the ginning factory and my experience is that she will not leave her child anywhere; she will take the child with her.

B-918. Would it be an unfair assumption that in actual practice the system of factory inspection breaks down as regards seasonal factories?—It does not break down entirely. We try to do a lot of good but our work is seriously handicapped by the fact that if we file cases against an employer for overworking his workers it is difficult to get a conviction against him and even more difficult to secure any adequate fine or punishment.

B-919. If a child is turned down not for being underage but for reasons of health, is any attempt made to do any follow-up work and send the child to a health centre or hospital?—Not that I am aware of; not in my Department.

B-920. The child is simply told it is unfit for work?—Yes.

B-921. Do you think it would be a good thing to link up the work of the Certifying Surgeon with that of public health?—Yes, it would be a very good thing.

B-922. Is there anything to prevent a child who has been rejected because of age or for reasons of health, going forthwith to work in an unregulated factory?—Nothing whatever.

B-923. In fact that is what the child does?—Very probably; I cannot tell because I do not know what actually happens in unregulated factories. It would be quite possible for a child who was refused by the Certifying Surgeon to go and work anywhere else.

B-924. That seems to be an additional reason for bringing such factories under the Act. Since no effective check is put on the employment of such children, the issue of the certificates by the Certifying Surgeon amounts to a farce?—I am afraid it does.

B-925. On the question of double employment of children, you say in your memorandum that "many of them work at other occupations". By that do you mean that they work at home or in unregulated factory?—Either in the fields, or at home, or in any unregulated factory. I have no statistics to show that, but I am almost sure that children of between 12 and 15 years of age, who are only permitted in regulated factories to work for six hours, can if they choose or if their parents choose, go and work elsewhere.

B-926. Do you think that some of the children in the carpet factories or other unregulated places here in Lahore are partly employed in a regulated factory and partly in an unregulated factory?—To some extent I should think they are; as regards carpet factories I do not know.

B-927. Is there any co-ordination of the activities of Certifying Surgeons. For instance, when they are determining age, do they follow any medical schedule which enables them to maintain a uniform standard?—That I do not know; I merely get a certificate to show that the child is over a certain age and I must accept it.

B-928. Is there any control over the activities of the Certifying Surgeons by any one Department?—It comes under the Public Health Department, so far as I know.

B-929. So that the Director of Industries or the Factory Inspector has no control over their activities.—None whatever.

B-930. You simply have to accept the certificate of the Certifying Surgeon?—If I find that a child working in a factory is unfit, although he may have been certified, I send him back to the Certifying Surgeon to re-certify him; if he then appears again, having been re-certified, I must accept him as a healthy worker.

B-931. With regard to your remarks on "Acquaintance of workpeople with factory legislation", is there any arrangement made whereby they can understand the abstracts; is any lecture explaining it ever given to employees in the factories?—Not that I know of.

B-932. So that it means that only that small section that can read the particular vernacular language in which the notice may have been posted would be able to follow it?—I think that if one person in the factory can read that abstract the whole of the workers would know it very quickly.

B-933. Is the name of the factory inspector of the Province always put on the factory abstract?—No.

B-934. Do you not think that that should be done so that people should know to whom they should complain?—It would be helpful, but I do not think there is any difficulty in factory workers knowing where to complain.

B-935. Suppose they wanted to get a writer to send a written complaint to you, in these scattered ginning factories, are they likely to know where you are?—I do not think that is a difficulty. I think they know that they only have to address their complaints to "The Factory Inspector, Punjab". News travels very quickly in India, and if one person knows anything it would go round the whole village or town very quickly.

B-936. Are complaints from the workers as to evasion of the Factories Act on the increase?—No, I do not think they are.

B-937. Approximately how many a year do you think you receive?—There might be 50; not more than that.

B-938. Direct from the workers?—Yes; they are frequently anonymous and they are frequently written by some one in a competitive mill or factory and are not always genuine; it is very difficult to tell whether they are genuine.

B-939. *Sir Alexander Murray*: Have you ever met a worker who did not know what the legal working hours were and so on?—Many times; the average illiterate worker does not know; if you ask him at what time he goes to work he will say "Early in the morning"; if you ask him at what time he leaves the work he will say "When the engine stops". Many of them do not understand time at all. My remarks apply to the unskilled illiterate workers and not to the engineers and other staff.

B-940. *Miss Power*: The illiterate workers are the bulk of them, are they not?—Yes, in seasonal factories.

B-941. Dealing with "Rigour and efficiency of administration" you make some suggestions for increased penalties. In the memorandum submitted by the Punjab Government there is a reference made to the fact that there has been a tendency on the part of the magistracy, in the case of offences against women and children, not to fine but simply to warn?—That is so.

B-942. Do you think that if you had heavier penalties for repeated offences in respect of women and children, it would possibly have the effect of penalising the work of women and children?—I think it would, if it were deliberately done for offences of over-working women and children. At the present moment, if a factory owner can employ a man at the same rate at which he can employ a woman, he prefers to employ the man because the regulations are slightly harder with regard to the employment of women workers than men; so that, if you are going to penalize the employer in respect of women and children very much more than you do men, you will find that the women worker will soon be very little sought.

B-943. You think there would be that danger?—Yes. I issued an order prohibiting children under the age of 6 going into cotton ginning factories. One of the results was that the women were not employed in the ginning factories. They then appealed to me that it was a hardship to them rather than an advantage. That was why I withdrew the order later on.

B-944. Have you visited the place where wool picking is carried on?—Yes, I know it quite well. There are three or four areas in Lahore, and in other parts of the Punjab there are many more.

B-945. Would it be within your province to consider whether or not all such work should be done over a grid under which there was an exhaust fan?—It is within the power of the local Government; it is not within the power of the factory inspector. If these factories are brought under the Factories Act we can then frame rules to cover such cases. But they not being under the Factories Act at present, we have no power whatever.....

B-946. Supposing these factories were brought under the Factories Act, although there might be an attempt to divide them into groups, you could then provide that no such work as that involving such dust and risks should be done without it being done over grids with downward exhaust fans?—That would involve a certain amount of expenditure on the part of the employer, and I think, rather than incur the expenditure he would split up the factory into a number of small rooms, having one central press which would take the wool that had been cleaned in each one of these places. It would then be necessary to notify every such place as a factory regardless of the number of workers employed therein.

B-947. If they were all under one employer?—It is not impossible for one employer to have a dozen small factories.

B-948. Surely some legislation to regulate these factories could be devised to cover that point?—The Factories Act as it at present stands speaks of premises where so many persons are actually employed. I have known many

instances of printing presses and other factories where a partition wall is put down in the middle of a factory, with the result that each is split into two or more factories for evading the provisions of the Act in this respect. We have managed so far to get over such difficulties, but in the case of wool picking it is a very easy matter for the contractor or the owner to split his factory into small rooms.

B-949. Do you not think the cost of the exhaust fan system would be very small?—I do not know what power would be used for it. These factories have no power whatever at the moment. It is all hand work. The exhaust fans must have some power to drive them. That would necessitate a small power plant, either under every grid or a system of shafting or electric wiring to run the fans.

B-950. Is not this industry confined to towns?—Most of it is done in Lahore; there is a certain amount of it in Amritsar. There is also one other place, Fazilka, where a lot of wool picking is carried on.

B-951. Is there no electric power available usually?—It is available in Lahore and Amritsar, but Fazilka is a rural area and it is not available there.

B-952. *The Chairman*: You told us of administrative difficulties in the way of extending the scope of the Act so as to cover small workshops, say, in the bazaar, employing 10 or 11 workers. But from the point of view of health do you not think it more important to bring within the Act those larger groups of men and women who are at present outside the Act because no motive power is used in the factories in which they are working?—It is very important. But as I have said, they would split their factories into small groups and evade the Act, unless legislation were so tightened as to prevent their doing so.

B-953. Do you really think it would be difficult to make legislation sufficiently tight?—I do not think it would be easy.

B-954. *Mrs. Wilson*: Are most of the women workers in cotton ginning factories got through women contractors?—No woman contractor has come to our notice. I should imagine they are all got through men contractors.

B-955. That is not what the women told us the other day?—I have no experience; I know it is got through contractors.

B-956. But we saw one of them during our visits?—She was very likely a sub-contractor. It is very likely that her husband was the contractor who settled the accounts and that she was in charge of the women workers.

B-957. From the health point of view is there any inspection of quarters occupied by the Railway employees?—I have been round them on one or two occasions and have thought they were not too bad and that no action on my part was necessary.

B-958. Have you made any attempts to get women health visitors appointed in connection with these industries?—No.

B-959. Have you put any such suggestion before the owners of factories?—No, I never have.

B-960. Have you suggested that the women Sub-Assistant Surgeons attached to the civil hospitals should be asked to attend the workers in these factories once a week?—No, I have not done anything like that.

B-961. Do you not think it would be a desirable thing to do?—I think it would be a very good thing; but these are matters which concern the general district health administration more than the factory inspector. Provided a person in a factory is healthy and appears to be fit, as a factory inspector I have nothing to say. Apart from that, I have very little time to undertake such duties.

B-962. In regard to ventilation, have you made attempts to improve the atmosphere in the cotton ginning factories?—Yes, as I say I had some masks made for the workers to wear. I also got draft sketches of exhaust fans which might be fitted over gins, but their cost was prohibitive.

B-963. Is there any objection to using some simple model of the kind used here in this hall? It could be done in Lyallpur where there is power?—I have tried it but it does not do much good. The dust comes from the gin itself, and it would merely drag it swiftly through the room, possibly into the lungs of the people working, rather than take it straight out. When you have dust emanating from 70 or 80 machines, all of them three or four yards apart on either side of the room and distributed throughout the room, my experience is that it is very difficult to get rid of the dust except through the workers themselves.

B-964. Regarding first aid, do you ever inspect whether the arrangements are properly made?—I always look at the first aid appliance, and frequently suggest that they should renew things which have become old.

B-965. Are women forced to work longer hours when the cotton picking season is at its height?—Yes, I do find women working longer hours in such seasons. Whenever possible I take action against employers. During the last few years I may have taken action against 30 or 40 employers who have over-worked women and children.

B-966. Would it be of any help to the women concerned if you assembled them by beat of tom-tom and told them the hours they are entitled to work as we do with regard to public health measures?—I do not think so. The point is that a woman has her living to earn and if she is not prepared to work in the way the employer wants her to do, she is not going to get employment.

B-967. Do you not think that pressure is put upon doctors who certify as to the ages of children employed in factories. Have you any suggestion to make in that respect?—I fear there is because the Certifying Surgeon or rather the doctor to whom these powers are delegated is frequently a man living within the local areas, and apart from being the Certifying Surgeon he is also the local practitioner and possibly receives a retaining fee from the employer himself. Therefore it is very difficult to get a really straight deal from him. I think there should be a Certifying Surgeon attached to the Department as a whole-time Government servant.

B-968. *Miss Power*: If you had a Certifying Surgeon attached to the Department, I take it he could not do more than supervise the work of the other surgeons; he could not cover the whole Province?—No, but he could act as an inspector and pay surprise visits to factories, and I think that would promptly stop any mal-practice in this respect.

B-969. Has any suggestion of that sort ever been put to the Punjab Government, or to your Department?—No. I think we have almost thought that there are not yet a sufficient number of child workers. In bigger provinces I believe they have Certifying Surgeons attached to the Factory Inspection Department.

B-970. *Mrs. Wilson*: In your opinion is it actually harmful to have assistants who are of such a grade of industrial surveyors that they have relatively small salaries, and might have the same pressure put on them as you mention that my medical colleagues have?—I think the powers that an inspector has are such that they make it necessary for Government to employ the best possible person they can get, and I think, as a whole, the industrial surveyor working as he does at the moment is underpaid in view of the powers he has and the work he is expected to do.

(The Commission adjourned till Monday, the 28th October, 1929.)

**PUNJAB**  
**SEVENTH MEETING**  
**LAHORE**  
**Monday, 28th October, 1929.**

PRESENT:

The Rt. Hon'ble J. H. WHITLEY (*Chairman*).

The Rt. Hon. V. S. SRINIVASA  
SASTRI, P.C.

Sir VICTOR SASSOON, BART.

Sir ALEXANDER MURRAY, Kt.,  
C.B.E.

Mr. A. G. CLOW, C.I.E., I.C.S.

Mr. KABIR-UD-DIN AHMED, M.L.A.

Mr. JOHN CLIFF.

Mr. N. M. JOSHI, M.L.A.

DIWAN CHAMAN LALL, M.L.A.

Miss B. M. LE POER POWER.

Lt.-Col. A. J. H. RUSSELL, C.B.E.,  
I.M.S. (*Medical Assessor*).

Mr. HARKISHAN LAL, Bar.-at-Law.

Mr. W. TAYLOR, Director, East India Carpet  
Co., Amritsar.

Dr. K. C. HITESHI.

Mr. M. A. GHANI, Bar.-at-Law.

Pt. RAM AUTAR, Vice-President, North  
Western Railway Union.

Col. C. WALTON, D.S.O., Agent, North  
Western Railway.

Mr. M. S. GREGORY, M.C.

Miss SIRAJ-UD-DIN.

Mrs. DAGMAR CURJEL WILSON. } (*Lady Assessors.*)

Mr. S. LALL, I.C.S. } (*Joint Secretaries.*)

Mr. A. DIBDIN.

} (*Assistant  
Commissioners.*)

**Mr. W. H. ABEL, Inspector of Factories, Punjab, and Dr. R. C. RAWLLEY, Director of Industries, Punjab (*continued*).**

B-971. *Mr. Taylor:* Dr. Rawley, can you tell me whether there are any stipulated hours of work in the carpet weaving industry in Amritsar?—There are no stipulated hours of work as such, but, as I have mentioned in my memorandum, according to custom they work from sunrise to sun-set; if the sun rises at 6 in the morning and sets at about 5 or 6 in the evening, the hours of work may be 10 to 12.

B-972. There is no compulsion with regard to the hours of work that a weaver must work in a day?—No compulsion, as far as I know.

B-973. The weaver, I take it, can go into the factory when he wants to and leave it when he wants?—Yes, he can do that.

B-974. The carpet weaving industry is under the contract system?—Yes, the work is done on a contract basis.

B-975. It is quite possible then that a weaver does not work 10 hours a day in the winter?—Yes, that is possible. It all depends upon the amount of work. He might work 14 or 15 hours and it is also possible he might work 4 or 5 hours.

B-976. 14 or 15 hours is contrary to your own statement, because you say 10 hours?—That is in the winter.

B-977. Do you think that a weaver in the carpet weaving industry works longer hours than he would do in the cottage industry?—I am afraid it is difficult for me to say, because I have not watched their conditions all the time, but I should suggest that he works almost the same number of hours as he would work in his own home.

B-978. In your memorandum you say that "the rates of wages are still very low and the labourer gladly welcomes overtime work by which he can add to his meagre income". I take it you raised this question particularly with reference to the carpet weaving industry?—I think so far as the carpet weaving industry is concerned, the rates of wages as compared with the pre-war period are anything from 100 to 150 per cent. higher.

B-979. How does the weaver in the carpet weaving industry stand in regard to indebtedness?—In my opinion in the carpet weaving industry there is no indebtedness whatever, the reason being that the owners themselves advance money to the weavers and recover it from their wages. Therefore the weaver is not forced to borrow from the *bania*.

B-980. Is that advance given free of interest?—As far as I know it is given free of interest.

B-981. So that from the answers given am I right in coming to the conclusion that the weaver in the carpet weaving industry is fairly adequately paid, at any rate as compared with the ordinary textile weaving industry in this Province?—Yes, the carpet weaver is much better paid, it being a specialized trade.

B-982. In the Punjab Government memorandum it is stated that the children employed in the carpet weaving industry "continue their blind alley occupation". That means it is considered to be a blind alley occupation so far as children are concerned. Do you, as Director of Industries, subscribe to that view?—It is very difficult for me to say anything definite about it. One has to watch their future career and see if those employed at the ages of 6, 7 or 8, continue their occupation till the ages of 25 or 30. If it were so, it would not be a blind alley occupation. But if they left their occupation at the ages of 15 or 16, it would be a blind alley occupation. I think what the phrase "blind alley occupation" means is that there is too much employment of child labour in the carpet weaving industry; children under nine years form about 25 per cent. of the total labour force engaged in this industry.

B-983. That does not quite cover this statement. It is stated definitely that the carpet weaving industry is a blind alley occupation. Do you, as Director of Industries subscribe to that view?—No, I do not think that it is a blind alley occupation in that sense, because I have known of weavers who have continued their occupation till 30 or 40 or 50 years of age.

B-984. During your term of office, have you ever received any complaint from the carpet weavers themselves with regard to the hours of work or wages?—No, I have not, but the non-receipt of complaints is by no means an assurance that everything is all right in the carpet weaving industry.

B-985. But you have paid personal visits to Amritsar and I think you are personally acquainted with the carpet weaving. What is your personal opinion?—I gave my personal opinion at a meeting held by the Punjab Government, at which you were present. I think that children below the age of 9 should not be employed in the carpet weaving industry; children between 9 and 12 should work only for three or four hours in the morning; and children between 12 and 15 should not work for more than six hours a day.

B-986. Would you enforce that only with regard to children employed in the carpet weaving industry? Why should you not extend it to children employed in the general handloom weaving industry of the Province?—The general handloom industry is not concentrated in a parti-

ular place; it is scattered all over the Province; it is being carried on in the weavers' own homes in which not more than three or four people are engaged in it. On the other hand, the carpet industry is a centralized industry in which under one roof 200 people may be working.

B-987. In this Province?—Yes, so far.

B-988. Are you aware that in central and southern India the carpet weaving industry is carried on as a cottage industry in the same manner as the ordinary handloom weaving of the Province?—I do not know anything about central India; I know that the industry is localized in Ajmer and Agra.

B-989. In Persia also it is a cottage industry as in central and southern India. Supposing the hours of work in this industry were restricted, is it your opinion that the carpet weaving industry would continue as such in the factories, or do you think it would disperse, as was suggested by Mr. Abel, and the cottage carpet weaving industry would become prevalent in the Punjab?—It would in my opinion be very difficult to maintain anything like a good administration; that is to say, you would not be able to spread the right type of designs amongst the workers and watch the exact quality of their work, if the work were carried on in their cottages.

B-990. I believe last year you visited Poland, Greece and other countries and observed the conditions of the handloom carpet weaving industry in those countries. Can you tell us how the industry in India compares with the industry in those countries as regards the hours of work and wages?—In Poland the wages are very low indeed. I do not remember the exact figures. They are paid in Polish currency, Zlotis, but the wages work out in Indian currency at about Re. 1 to Rs. 1-6 a day. I also noticed a good number of small girls employed, who, the employer told me, were above 15; but as far as I could see, they were only 12, 13 or 14 years old. I was told that the weavers worked 10 hours a day and were paid for over-time after 8 hours. In Salonica and Athens also the conditions were not very much better than those in Amritsar.

B-991. Am I to take it that the wages paid in the carpet weaving industry overseas are less than those paid in Amritsar?—I think the Polish standard of wages is lower than that of Amritsar.

B-992. Can you give us the average monthly wages of an average weaver here?—It is Rs. 25 to Rs. 30 a month; of course there are experts with long experience who earn as much as Rs. 40 to Rs. 50 a month.

B-993. *Dr. Hiteshi*: Can you tell me Dr. Rawley why there are no trade unions of employers in the Punjab?—There are associations of employers.

B-994. Are there any registered associations of Employers under the Trade Union Act?—I think it is beneath their dignity to do that.

B-995. In your memorandum you stated that three trade unions, namely, the Textile Mill Workers' Union, the Electric Supply Company's Union, and the Punjab Mechanical Engineers' Union, have been dissolved. What was the reason?—They are defunct bodies. After taking the certificate they never complied with the law. They just automatically dissolved.

B-996. *Mr. Ghani*: You suggest that some wage-fixing machinery should be created in the Punjab. What method would you suggest to fix the minimum wages of labourers?—We have not gone into that question in detail. We have just given a suggestion that, taking into consideration the cost of living of the average industrial worker in the Punjab, some sort of machinery should be evolved whereby wages could be fixed, but as to what machinery will suit the Province itself we have not worked that out in detail.

B-997. In replying to Mr. Taylor you stated that the wages of carpet workers in Poland were less than they are in the Punjab. While you were touring in Poland, did you also enquire what was the cost of living in Poland?—Was it more or less than it is here?—The cost of living in Poland is also less, on account of the very low rate of exchange; when I was there last year the rate was about 800 to 900 zloties to the £1, so that obviously the

cost of living worked out in relation to exchange would be very low; but whether the actual cost of living in money and in kind is the same as in the Punjab or less or more, I cannot say.

B-998. *Mr. Gregory*: Does the Punjab Government employ contractors?—I am not aware of it. It may be that they do in the Irrigation Branch of the Public Works Department.

B-999. Are you aware of any measures or regulations issued by the Punjab Government to enforce the Washington and Geneva Conventions on contractors?—Not so far as my Department is concerned.

B-1000. Are there any measures in force in the Punjab to safeguard the labour employed under contractors?—No, I do not think so.

B-1001. After the initial registration have you laid down any method to be adopted for the purpose of keeping a strict watch on the management of a trade union?—Under the rules framed under the Trade Unions Act, the union have to submit to us certain statements. That is the only check that we keep.

B-1002. At the end of the first year and subsequently, if necessary, you get a statement of accounts?—That is right.

B-1003. Do you scrutinize the accounts?—Yes.

B-1004. Between the time you register a union and receive the balance sheet, do you keep a watch to see whether the funds of the union are being correctly expended?—I am afraid there is nothing in the Act which empowers me to check that.

B-1005. *Col. Russell*: Have you any suggestion to make as to the method by which you might obtain mortality statistics?—My suggestion would be that there should be a greater amount of co-operation between my Department and the Public Health Department, and that figures in so far as physique and fatigue and similar matters are concerned, should be collected by the Department of Public Health and passed on to us.

B-1006. Do you think the Public Health Department will be able to do that?—They have district health officers now-a-days in almost every place. I think the District Officer of Health will be in a position to collect all the material that is required.

B-1007. Would it not be better to have something like an Industrial Health Research Board to make investigations of that kind?—Of course, that would be the ideal, but I do not know whether funds will be found for that or not.

B-1008. You say "Little control is exercised at the present moment over the building of factories". How would you propose to remove this lack of control?—There have been suggestions that all the plans should be submitted to the Inspector of Factories and the Director of Public Health, who should then comment on the plans from the point of view of ventilation, spacing and sanitary arrangements.

B-1009. Do you think that would be an adequate control?—In the beginning it should be.

B-1010. Would it be an adequate control?—I am afraid not.

B-1011. How would you suggest that you should get adequate control?—I would suggest greater powers being given to the Factory Inspection Department.

B-1012. *The Chairman*: I presume that the plans for a new factory have to be submitted to some Department of the local authority?—No; that is only under one Act—the Cotton Ginning and Pressing Act.

B-1013. Not generally speaking?—No.

B-1014. *Col. Russell*: There is at present absolutely no control over the building of factories?—At present there is none.

B-1015. *The Chairman*: Except in the Municipalities?—Yes.

B-1016. If it is proposed to build a new factory in Lahore, to whom would the plans go?—If the factory is to be situated within the municipal area, they would be submitted to the Municipal Committee.

B-1017. But then it does not come to you or to the Public Health Department?—No.

B-1018. Outside the municipality a new factory can be proceeded with without the plans being submitted to any authority?—There is some provision so far as District Boards are concerned. There is no effective control of any kind.

B-1019. This is an important point, and it was raised by Mr. Abel. Would Mr. Abel tell us what his suggestion is?—(Mr. Abel) There should certainly be some direct control over the building and altering of factories; but it would not be very useful merely for the plans to be submitted either to the Public Health Department or Industries Department for passing and sanction. We want more control over the actual material used in the building and supervision, if we are going to have any real control. At the present time plans for the building of cotton ginning and pressing factories do come to the Agricultural Department and to the Department of Industries, and we examine those plans and pass them if they are satisfactory; but we have no control over the building or over the material that is used. We may pass a plan as regards area and sanitation, and yet the factory may be built entirely wrong and collapse very soon. We have no control over that at all.

B-1020. Have you ever put down in black and white what amendment you would wish?—Yes, I have. This question has been discussed for the last two years or more with the local Government, and also with other local Governments; and the local Government have asked us on one or two occasions to frame rules which would govern the building of these factories; but it is very difficult, because a factory built in a town would be entirely different from that in the rural district. Our reply has been that we cannot possibly frame any hard and fast rule, but we suggested that not only should plans come to us for scrutiny, but also that we should have some control over the material that is to be used in the building of particular factories. What will happen really if this is enforced is that it will merely turn the factory inspector into a consulting engineer, and nothing more will be done unless we have a Department which can actually work it and see that what we say is really carried out.

B-1021. *Sir Alexander Murray*: Are you prepared to take the responsibility of seeing that the proper mixtures are used in a building, thereby transferring the responsibility from the shoulders of the contractor and the factory owner, so that if anything collapses, the owner can turn round and say:

“Mr. Abel and his staff came and inspected it and he must accept responsibility”?—I should need an enormous staff to do it.

B-1022. It would be an impossibility, would it not?—I certainly could not take the responsibility myself.

B-1023. *Col. Russell*: Are there any members of the Departments of Agriculture and Industries who now see these plans are capable of judging whether they are suitable or not?—Actually no civil engineer sees them; I think I am the only engineer and I am mechanical.

B-1024. *Diwan Chaman Lall*: Dr. Rawley, could you tell me why children are employed in preference to adults in these carpet factories in Amritsar?—The argument given to me is this, that they have got very delicate fingers and can handle the operations much better than grown up people can. The second point is that obviously the wages of these children employed in these factories are much lower than those of adults. The adult contractor has a number of boys working with him, probably 3 or 4 or 5. The contractor gets the wages in terms of so many annas for so many hundred stitches, and then it is open to him to distribute these wages amongst the boys. So it is very difficult for us to determine as to what wages a child actually earns there.

B-1025. Would you give me some statistics as to what a child, let us say of 10, would get per thousand stitches?—The usual rate in Amritsar is 1½ annas for 1,100 stitches.

B-1026. Can you give me any figures regarding the profits made by the carpet industry in Amritsar?—Those figures are a mystery and a secret which nobody knows outside the carpet industry. It is impossible to find out; I have tried my level best to collect the statistics during the last few years, of the percentage of dividend paid or the actual money made, but I have not been able to secure the information at all.

B-1027. Are some of these joint stock companies?—Only the East India Company is a joint stock company.

B-1028. What has been the difficulty: the refusal on the part of the employers to let you have their balance sheets?—Yes; they do not want to let us know the cost of production.

B-1029. Is the carpet industry in Amritsar mostly owned by Indians, or is it owned by any outside firm?—There is one outside firm known as the Oriental Carpet Manufacturing Company, Limited.

B-1030. Is that the biggest firm in Amritsar?—Yes.

B-1031. Mr. Abel, in your memorandum you make a statement about unemployment and reference has been made to the Report of the Unemployment Enquiry Committee. Is it a fact that that Unemployment Enquiry Committee disposed of the question of unemployment among the illiterates in their Report?—(Mr. Abel) I have not seen this Report before, and I am afraid I do not know.

B-1032. Dr. Rawley, can you tell us anything about that?—(Dr. Rawley). Yes; I was a member of that Committee myself.

B-1033. Is it a fact that only 20 witnesses were examined by that Committee?—Yes, that is true.

B-1034. And generally they relied upon reports which they received from the District Officers?—That is true.

B-1035. So should I be correct in stating that that Committee did not really enquire properly or scientifically into the matter of unemployment in the Punjab?—You are right.

B-1036. It has been suggested to you by Sir Victor Sassoon that, the Punjab being an agricultural Province, the number of industrial workers is not very large. Should I be right in saying that according to the Census figures out of a population of 21,000,000 in the Punjab, there are at least 3,000,000 industrial workers and 3,000,000 persons dependent upon those industrial workers?—That is quite true.

B-1037. If we include the entire number of domestic servants and transport workers as industrial workers, it is practically half the population of the Province?—The majority of that number would refer to industrial works outside the scope of the Indian Factories Act. My memorandum refers only to workers within the purview of the Act. I have no experience of those outside the Act.

B-1038. Sir Victor Sassoon: Do you accept the statement that half the population of the Punjab is employed outside agriculture?—(Mr. Abel) It may be so according to the Census; I have no knowledge of it. (Dr. Rawley): Only 14,800,000 persons are employed in agriculture; that is out of a total population of 25,000,000 including the Indian States; the actual population of the Punjab is 21,000,000.

B-1039. Does your 14,000,000 include dependents?—Yes.

B-1040. *Dinoo Chaman Lal*: Any question of unemployment, to be tackled properly, must necessarily include those people who are outside the scope of your Factories Act?—(Mr. Abel) That is true.

B-1041. Therefore, if it can be established that there is unemployment, you would not be averse to the setting up of unemployment bureaux in order to deal with that problem?—I do not see why they should not be set up.

B-1042. There is a constant tendency on the part of the agricultural workers in this Province to move out from the villages into the big towns?—There is a tendency; I would not say that it is very strong.

B-1043. But does it affect large numbers of the population, taking the Province as a whole?—That is impossible for me to say; I only know that a certain proportion of agricultural workers come into the factory, as in the case of Dhariwal last year; they will come into the factory, find they like that work better, probably earn bigger wages, and remain on. But I do not think it affects a very large proportion of agriculturists. Apart from that, the average Punjabi has some sort of interest in the land; either his family have some share in a small holding, or something of that sort. The land requires him during the time the harvest is being brought in. Whether he is or is not getting more pay in the factory, it is my experience that he does go back to his land when he is wanted.

B-1044. Even for those numbers that come in from the villages it would be necessary to have some sort of organization in order to help them to find employment?—I think it would be very useful.

B-1045. In your memorandum you speak of the collection of statistics; is there any regular method or system for the collection of statistics for your Department?—Yes; at the beginning of the working season of every seasonal factory I get a report on the number of workers that are or will be employed in that factory; that is the average number for the season. That enables me to determine the number of workers there are actually in factories. I also get returns at the end of the year as to the wages paid, and it is on that that I determine my statement showing the average wages of workers in factories.

B-1046. The figures that come in naturally come in from the employers?—Yes.

B-1047. In your memorandum you give us a chart as to wages and you say that the increase in wages is due to the increased cost of living?—That is my presumption; I do not collect statistics regarding food.

B-1048. Can you give me any idea as to the increase in real wages?—Wages have undoubtedly advanced slightly as far as skilled workers are concerned.

B-1049. But could we get any estimate of the increase in real wages?—I do not think you can get anything beyond this, unless you take it from the worker himself.

B-1050. *Sir Victor Sassoon*: But do you say that real wages have advanced slightly?—Yes, real wages have, in the case of skilled workers. It is more costly now to get a blacksmith or a carpenter. Possibly in the last 6 or 8 years there has been a 10 or 15 per cent. increase.

B-1051. *Diwan Chaman Lall*: How much absenteeism is due to illness?—I have no statistics.

B-1052. Has any serious attempt been made in the Punjab to investigate the question of the prevalence of industrial or occupational diseases?—Not more than our ordinary visits. I have had metal analysed in order to endeavour to discover what percentage of arsenic there is or if the fumes are injurious; and in printing presses where lead is smelted special stoves are provided with exhausts for taking away the fumes. Beyond that we have done nothing.

B-1053. We can take it that the welfare of the worker in the Punjab is nobody's concern?—Yes.

B-1054. Do not you think it is essential that the State should lend a helping hand in the matter?—It would be very useful but it would be very difficult, because the average worker in the Punjab does not stay at the factory sufficiently long for anyone to be useful to him.

B-1055. If a worker stays even two months, would you not make your machinery for welfare work available for him?—I would in the case of all factories which work throughout the year.

B-1056. You make the very serious statement that cheap labour is one of the causes of accidents. Would I be correct in suggesting that, as far as this Province is concerned, the workers in those factories are treated, as so much raw material and not as human beings?—Not entirely. In many factories they are.

B-1057. In regard to sickness insurance, you suggest that the employers in certain factories do engage doctors to look after the workers. There you have the rudiments of the panel system. Could that be usefully extended if the State came in?—Yes, I think it could.

B-1058. With regard to inspection, did you bring the facts about prosecutions referred to in your memorandum to the notice of the Government?—I did.

B-1059. What action did the Government take?—Almost every year I bring these matters to the notice of the local Government, and they have on two or three different occasions addressed the magistrates, pointing out the necessity of inflicting adequate punishment for such offences. In this particular case I asked the Deputy Commissioner, who is the authority, for a revision, pointing out to him the exact details. The reply to that was that he felt that the High Court would not be prepared to do anything, and therefore it was useless approaching it.

B-1060. How do you explain the fact that in the Punjab a man is sentenced to two years' imprisonment for an ordinary theft, and yet in regard to these serious matters only small fines of Rs. 45 are imposed. Why do not the magistrates take as serious a view of these matters as they do in the case of an ordinary theft?—I think it is because our system here is wrong. A case under the Factories Act goes to the local magistrate, and the factory owner of that particular district is probably the most influential person in that area. The Public Prosecutor is a part-time servant of Government. During the other part of his time he probably works for the factory owner. The local doctor who issues certificates regarding children is also a part-time practitioner, and is probably also employed chiefly by the factory owner. Our difficulty arises, therefore, in the factory owner more or less controlling that area. Neither the Public Prosecutor nor the magistrate really do their job.

B-1061. What do you suggest in regard to over-working in seasonal factories?—One or two adequate punishments, such as heavy fines or imprisonments would very quickly stop it.

B-1062. The difficulty is in getting convictions and proper punishments. What particular method of control would you suggest in those cases, in order to obviate the difficulty which presents itself?—I would suggest in the first place that the Department should have its own Public Prosecutor, and the magistrate should assuredly be either the District Magistrate or the Deputy Commissioner.

B-1063. You mention that women take their children with them to work, and that when you passed an order stopping that they came and complained to you. Suppose a creche were instituted outside the factory: would the women be averse to leaving their children there?—They would; I have made arrangements in one or two places, but I have found the women do not like to leave their children.

B-1064. Suppose the creche were in the factory?—Then the dust would be bad for the children.

B-1065. At which places did you try this?—At Lyallpore and Ajmere, but they are not working satisfactorily?

B-1066. What is the arrangement in the creche?—A fairly healthy shed is put aside. There is water, a good floor, and a woman is told off to look after the children.

B-1067. Have you tried supplying free milk?—No.

B-1068. That might be an inducement?—It might be. We might get more children than actually belonged to the factory workers.

B-1069. I notice there is a good deal of indebtedness. Would I be correct in saying that the average worker in the Punjab is really living on next month's wages?—I should not like to say how far that is true. It works both ways. I know of instances where an employer has taken over a good *mistris* complete with his debts in order to get him.

B-1070. You make the statement that the figures of average wages are misleading. Will you explain that?—I get at the end of the year a statement from each factory showing the wages paid to the individual workers. Then I make an average of that for my Report. It is true that a blacksmith in Lahore City gets more pay than a blacksmith in the country. Again, a carpenter in a centre like Jhelum would earn very much more than he would do in the country. What I find is that a man may start as a blacksmith in a factory. He goes up possibly a rupee a month per year. He still calls himself a blacksmith. He is probably getting Rs. 75 or 100 per month. I find that on one statement. The next statement says a blacksmith is worth Rs. 25. Striking an average is not helpful.

B-1071. Would you consider that the wages of that particular type of worker are living wages?—As he lives at present, yes.

B-1072. As he lives at present it is not very good for him?—I think his conditions of living might be improved. He might improve them for himself very much.

B-1073. You talk about efficiency, and the foreign worker being more efficient. Are not the factors which govern efficiency, good housing, education, good food, and other amenities for a decent existence?—Yes.

B-1074. Would I be correct in saying that in the majority of cases these factors are lacking amongst the workers?—The housing is certainly not very good. I know nothing about their food, but I think the worker himself could help himself a good deal by becoming more skilled. I find very little ambition among the workers to get up into a better position.

B-1075. Are there any arrangements made for his training?—There are one or two industrial training centres. We have 23 industrial schools at present.

B-1076. What is the number of students who attend those classes?—(Dr. Rawley) We have at present on the rolls 4,000 students.

B-1077. Is the system of promotion based on efficiency, or is there no system of promotion? I am referring to a matter which probably is outside your competence, namely, the workshops at Lahore where up to a certain limit a man gets Rs. 2-8-0 a day and thereafter even if he were to put in 20 years' service he does not get any promotion?—I do not think that is so; the man working for Rs. 2-8-0, and knowing that he is worth more, will not stick to his job for a long time.

B-1078. We know numerous cases of that kind where the limit is Rs. 2-8-0 and the man cannot get beyond that. Would it not improve his efficiency if a better system of promotion were instituted?—That I cannot say, as far as the railway workshops are concerned. In private-owned factories I find that a fitter, a mechanic or a carpenter, when he feels that he is really efficient in his job, leaves one factory and goes to another if he likes.

B-1079. In your memorandum you mention a case where a fine of Rs. 45 was inflicted on an employer for not guarding the main line shaft alley, which is a very serious matter as it may endanger life. Would I be correct, therefore, in saying that the average employer considers the Punjabi's life worth Rs. 45?—Some employers, I am afraid, do. Since the Workmen's Compensation Act came into force I have heard one or two employers who told me deliberately that they are not in favour of employing well-paid men because in case of accidents they would have to pay more as compensation.

B-1080. Would you recommend that every employee should be compulsorily insured by the employer?—Yes, I would.

B-1081. *Mr. Cliff*: In the flour mills I understand that there are two shifts and each worker gets rest for two hours during his period of 12 hours of

duty. Have you any means of ensuring that that is strictly carried out?—At the beginning of each month a flour mill or an oil mill that works on this system sends on to me a copy of their proposed register for that month, showing the names of the persons who will work from a certain hour to a certain hour and will take rest from either 12 to 2 or from 2 to 4 as the case may be; when I go to inspect the mill I can take with me my copy of the register—a duplicate copy of which is also kept in the mill—and can go round and find out whether a man is actually on duty when he should be or should not be.

B-1082. Such registers are sent to you monthly?—Yes; but if there is a change after the register is sent on to me, I get a notice of the change, that such and such a man is ill or has changed his duty and will work at another period or from a certain date to a certain date; actually, I think that two hours rest is mostly given.

B-1083. *Sir Victor Sassoon*: Can it be split up into two halves of an hour each?—It is not usually done.

B-1084. You have no objection if it is done?—No, provided not less than one hour is given at a time. When once a flour mill has started production it requires very few men to look after it; it could almost easily halve that staff.

B-1085. *Sir Alexander Murray*: Dealing with the question of offences under the Factories Act you recommend the appointment of a special Prosecutor. Is it because your present Prosecutor is not getting sufficient convictions that you make this recommendation?—The present Prosecutor has very little knowledge of the Factories Act inasmuch as he might only get one or two cases in a year; apart from that, the biggest trouble is that he is also a local barrister.

B-1086. From your annual report for the last year I find that out of a total of 130 cases instituted only in 8 cases were the accused acquitted. From this one can assume that your prosecuting officers have done their duty?—I would not say that; I never make a case against a factory unless I am almost perfectly sure of gaining a conviction.

B-1087. You have given us some very interesting facts regarding the prosecutions you instituted during recent years. Taking the first of the instances enumerated by you, I see that the employer was fined Rs. 45 for each of the two offences committed by him, that is to say, Rs. 90. He could have been fined at least Rs. 1,000 if the Magistrate cared?—Yes.

B-1088. In one instance the employer was fined Rs. 1,250; he could have been fined Rs. 4,000 if the Magistrate cared?—That is so.

B-1089. So the responsibility of inflicting light fines rests on the Magistrate?—Not absolutely; because the Public Prosecutor is there to press his case if he feels so disposed to. In this particular case, I myself attended the court for three days and gave evidence as a result of which I gained a fine of Rs. 1,250. The case immediately went to the Sessions Judge who without hearing any of us reduced the fine to Rs. 400.

B-1090. *Mr. Sastri*: You did not attend the Sessions Court?—No.

B-1091. *Sir Alexander Murray*: For inflicting small fines it is the judicial side that has to be blamed?—Chiefly.

B-1092. You say in your memorandum "There is nothing in the Act, which provides for an enhanced sentence for the repetition of an offence: hence no mention of the offences having been committed before, is legally permissible in the complaint." If I am a thief and you haul me up before a Magistrate you do not, till after I am found guilty, tell the Magistrate that I have been a thief a hundred times before and should get a heavier sentence?—That is true.

B-1903. What is the difference between an employer of labour and a thief if you are going to try a case on its merits; that is to say, surely you desire that cases where an employer is charged with an offence should be tried on their merits?—Exactly.

B-1094. Therefore the fact that previous convictions have not been mentioned in the complaint is no handicap in proving the case. After securing a conviction against an employer for his contravention of the Act is it the custom then to say "this employer last year or previous to that was fined and found guilty of the same offence; therefore I ask for a heavier punishment this time"?—I do that when I am in the court myself.

B-1095. I think it is the duty of the Public Prosecutor to tell the Magistrate, after he has found the man guilty, about his previous convictions and to press for a heavy sentence. Do you do it?—I do it, but I have been informed by the Public Prosecutor that it is quite an illegal procedure.

B-1096. Is it or is it not legal?—I have to take the word of the Public Prosecutor who is the legal authority.

B-1097. And he says that you should put that into the complaint before the man is tried?—No; he says it will not do any good at all. Some cases have been turned down as a result of my putting it into the complaint.

B-1098. To get a proper opinion on this important point, did you bring it to the notice of the Government and the Legal Remembrancer?—Not that deliberate point, but I have sent the whole proceedings to the Government on more than one occasion; in fact, in every case in which I thought an inadequate fine had been awarded I have sent the entire case to the Government.

B-1099. If I were a Factory Inspector what I would have done would be to wait till the man was convicted and then tell the Magistrate that he was previously found guilty of the same offence, and press for the Magistrate not fining him Rs. 20 but Rs. 2,000?—That I do, but I do not get much change out of the Magistrate.

B-1100. Do you think it is a reasonable proposition that while the case is going on it should be put in the complaint that the man had committed the same offence before?—No; it does not sound reasonable.

B-1101. You said that in seasonal factories the workers really do not know what the working hours are. Does that also apply to the factories that start at a particular time and close at a particular time?—No.

B-1102. Is it your experience that notwithstanding their illiteracy, the workers, generally speaking, know when they should be at the factory?—In the bigger textile or perennial factories, the worker, to a very great extent, knows when he should come and when he should go.

B-1103. From the statement given by you, Dr. Rawley, in your memorandum with regard to the registration of trade unions, I find it mentioned in the case of the North-Western Railway Union that at the time of registration their membership was 5,000; on the 31st of March 1928 the number again stood at 5,000 and the same was the case on the 31st of March 1929. To me it is an extraordinary coincidence to say the least of it. When you got those returns did it not occur to you that it was an extraordinary coincidence?—Yes, it did.

B-1104. Did you not feel justified in asking for an explanation?—We have to accept their statement.

B-1105. At the time of registration they might put their number at 5,000; on the 31st March following they might put it at 15,000 and 150,000 on the 31st March succeeding. So far as you are concerned you merely accept the figures?—That is so.

B-1106. *The Chairman*: Do you not check the numbers with the audit returns?—We do; but the statement as presented to our office we have to accept unless there is some doubt or we get a complaint.

B-1107. *Sir Victor Sassoon*: What do you do when there is a difference between the number furnished by the union and the audit statement?—We write to the President or to any of the office bearers to explain the discrepancy.

B-1108. Therefore you do not necessarily accept the figure furnished by the union?—We have to check the number on the rolls with the statement given to us by the auditor.

B-1109. *The Chairman:* Is there any penalty inflicted on the Secretary of the Trade Union who sends to you a wrong return?—I think there is.

B-1110. *Sir Alexander Murray:* How do you know whether he has or has not sent you a wrong return until you check it?—As a rule one has to accept it unless there is something substantially wrong with the union or we hear any complaints about it.

B-1111. There is no reason why the local Government should not appoint local Magistrates, Medical Officers of Health, Directors of Industry or anybody else who is directly or indirectly interested in factory administration?—They have done to a very great extent. All District Magistrates are inspectors under the Act. Certain revenue assistants, Extra Assistant Commissioners, and three assistants of the Public Health Department and certain Sub-divisional Officers have already been notified for certain sections; that is regarding health and sanitation.

B-1112. Do they send returns to you with regard to factory inspection?—Yes. The number of inspections made by *ex-officio* officers during last year was forty.

B-1113. Do you bring them out in your factory inspector's report?—Yes; and Government last year commented on the fact. They said that they were pleased to note that *ex-officio* inspectors were taking a slightly more interest in inspections.

B-1114. So that, if the Government choose to put more pressure on *ex-officio* inspectors, you could get much more efficient factory inspection in the Punjab?—I am not prepared to say that the inspection would be more efficient; in fact I think it would not.

(The witnesses withdrew.)

**PUNJAB**  
**EIGHTH MEETING**  
**AMRITSAR**

**Tuesday, 29th October, 1929.**

**PRESENT:**

The Rt. Hon. J. H. WHITLEY (*Chairman*).

The Rt. Hon. V.S. SRINIVASA  
SASTRI, P.O.

Sir VICTOR SASSOON, BART.

Sir ALEXANDER MURRAY, Kt.,  
C.B.E.

Mr. A. G. CLOW, C.I.E., I.C.S.

Mr. KABIR-UD-DIN AHMED, M.L.A.

Mr. JOHN CLIFF.

Mr. N. M. JOSHI, M.L.A.

DIWAN CHAMAN LALL, M.L.A.

Miss B. M. LE POER POWER.

Lt.-Col. A. J. H. RUSSELL, C.B.E.,  
I.M.S. (*Medical Assessor*).

Lala HARKISHAN LAL, Bar.-at-Law.

Mr. W. R. TAYLOR, Director, East India  
Carpet Company, Amritsar.

Mr. M. A. GHANI, Bar.-at-Law.

Dr. KARAM CHAND HITESHI.

Mrs. DAGMAR CURJEL WILSON. } (*Lady Assessors.*)

Miss SIRAJ-UD-DIN. }

Mr. S. LALL, I.C.S. }

Mr. A. DIBDIN. } (*Joint Secretaries.*)

(*Assistant  
Commissioners.*)

**Mr. GEORGE STEVENS and Mr. GERALD ALFRED DAVIES, of  
the East India Carpet Company, Limited, Amritsar.**

B-1115. *The Chairman:* Mr. Stevens, I understand you are the Managing Director of the East India Carpet Company, Limited, Amritsar?—Yes, I am.

B-1116. And that your company has four factories in Amritsar with a total of 267 looms out of which 93 are working?—That is right.

B-1117. You told us that the labour is paid on a piece-work basis, that the master weaver earns wages which vary from Rs. 30 to Rs. 50 per mensem?—That is correct.

B-1118. Is that apart from the payment of the boys or does the payment of the wages include the payment of the boys?—It does not include the payment of the boys; that is the minimum amount of money which remains with the master weaver.

B-1119. But the master weaver pays the boys?—Yes, and the master weaver will earn more than that during the month.

B-1120. Out of which he pays the boys?—Yes.

B-1121. Does he pay the boys at his own sweet will or is there an agreed rate?—I think there is more or less an arranged tariff. It is not really a tariff, but it is arranged by the master weaver when he engages the boys.

B-1122. Do you find that in your four factories the payments to the boys are uniform or do they vary?—They are about uniform. The boys go on getting more as they are put in more efficient work.

B-1123. You told us that your factories are open really from day-light to dusk?—Yes.

B-1124. And that the people can work all that time if they please?—Yes, if they wish to; they are at liberty to work all that time.

B-1125. I take it that when they once begin on a carpet they work pretty steadily to get that carpet completed?—Not always; some of them do; some of them are slack and do not work so fast. They close for every holiday, both Hindu and Muhammadan, although they are Muhammadans; they are always ready to take advantage of a holiday.

B-1126. But the actual payment until the carpet is finished presumably is made by measurement?—Yes, it is made by measurement and then there will be a reckoning up when the carpet is completed.

B-1127. Therefore those who are anxious to get more money will put in more work?—Yes.

B-1128. But it may happen that after one carpet is completed on a loom there will be a considerable gap before another carpet is set up?—As a rule when business is good, there is not much of a gap. There is a gap of possibly three or four days. A certain amount of time is then occupied in preparing the warps for the new carpet.

B-1129. By the same men?—Yes; there is always a loss of two or three days' time.

B-1130. Then the master weavers do prepare their own warps?—Yes.

B-1131. Are the boys engaged then?—Yes, the boys are engaged too, but that is very easy work.

B-1132. As you know, there have been questions from time to time about bringing these carpet factories under the Factories Act?—Yes.

B-1133. I understand that the employers are afraid of a step of that kind?—I do not think "afraid" is the right word.

B-1134. What would you say?—We are not afraid of coming under the Factories Act, but it would certainly change the industry; there is every probability that if the carpet factories come under the Factories Act, the industry will become a cottage industry as it is in other places in India. For instance, in Mirzapur district it is all a cottage industry. There would then be absolutely no control of child labour.

B-1135. I take it what really has happened is that you have brought what was once a cottage industry into the organisation of these factories?—That I could not say, because the idea of a carpet factory was already existing when I came to India. I have only been in India since the beginning of 1923. At that time the industry in the Punjab was already in the shape of carpet factories. I think it has been brought into carpet factories because the weavers were not sufficiently reliable to be trusted to weave in their own houses; and apart from that they have got no capital.

B-1136. Is there not another advantage in concentration; control of designs?—It would mean greater difficulty in controlling the looms, but nevertheless that is the way we do it in Persia.

B-1137. I understand that before you came to India you were in Persia?—I was in Persia for 21 years.

B-1138. For this same company?—No, for a different company, but I have been there lately for the same company for five months; I have just come back from Kerman.

B-1139. This East India Carpet Company has allied businesses in Persia, Greece and Turkey?—Yes.

B-1140. In each of those countries are different kinds of carpets produced?—We try and keep them as different as possible so as not to have the different companies competing with one another. Persian carpets are entirely different, but I am not prepared to say as much about Greek and Indian carpets.

B-1141. That is to say, that if the conditions were made difficult in one country you fear that it might result in carpets being made, say, in Greece instead of in this country?—Certainly it would. As a matter of fact that is what has happened with Greece and Turkey. Greece is just about to beat

Turkey because the Greek Government is helping as much as possible the carpet industry. We have been lately requested by the Italian Government to start carpet factories on the same plan in the Dodacanese Islands which belong to Italy.

B-1142. You have told us that medical facilities are provided; "a doctor visits the factories each fortnight and certifies the age of any new apprentice; no boy under nine years of age is admitted to apprenticeship"—Yes.

B-1143. Will you tell us exactly what that means?—No boy under nine years of age is allowed to enter the factory. They can come there and play about if they like if they come with their fathers; but they are not allowed to work and they do not work.

B-1144. But if you are under the Factories Act that age would be raised from 9 to 12?—Yes.

B-1145. Do you think that the difference between 9 and 12 would make an appreciable difference?—I think it would because a lot of the weavers employ their own sons. For instance, a man who had three sons would only have two working.

B-1146. You are no doubt aware that in England it was thought in a similar kind of operation that a child of 10 was quite necessary and that the industry would be ruined if they could not employ children under 10? But they have found that when it was raised to 12 and 13 the industry did not happen to be ruined?—Yes. But at the same time I do not think Great Britain was faced with the same competitions as we are.

B-1147. In your written statement you say that "one very unusual feature of this industry is the absence of indebtedness to money-lenders, as advances without interest are afforded by the company when necessary". Since when have you been able to carry out that reform?—When I first came here I refused to give advances. Other companies were giving advances but I wanted to work without advances. I found it difficult to do so and I think, it was in 1924 that I decided to allow advances.

B-1148. Are you quite sure that the result of your action is that none of your men are indebted?—I have never had any complaints about money-lenders. At our mills at Chheharta I have known of our men being in debt to money-lenders; there was one case which came into my hands and I had to settle the debt to get rid of the money-lender.

B-1149. I take it that this arrangement of yours only affects the master weavers?—Yes.

B-1150. It is not in any regular form a credit society?—No, it is not in any regular form; we only give advances of course when we know the master weaver is going to weave a carpet for us; then if he needs an advance the amount of the advance is discussed with him and paid over. It is repaid gradually from the wages of the man. Sometimes a balance is carried on from one carpet to another carpet, but there is nothing binding in it; it does not mean that the weaver is bound to take a new carpet from us. Provided he refunds us what he owes us he is at liberty to go and work with any one.

B-1151. That does not make quite sure that the man has no other debts to the *bantia*?—If he has other debts we soon find it out because the weaver does not come to work if he is pressed for money. My sincere opinion is that there are no other debts.

B-1152. *Mr. Sastri*: Do you generally have these carpets made to order, or do you have them made on the chance of finding a market?—Up to about two years ago all our carpets were made to order; but during the last two years we have been working, as you say, on the chance of finding a market.

B-1153. You say a great many of your looms are idle?—We have got 93 looms working out of 267—that is because we have not found the market.

B-1154. We did not seem to see many looms idle; I suppose they are elsewhere?—We have two factories which are closed; one has two looms working, the other is entirely closed.

B-1155. You said that your men are comparatively speaking free from debt. You do not include the children in that category, do you?—No, I am talking about the master weavers.

B-1156. But you know nothing about the children?—I have got some idea that the children are indebted to the master weaver. The master weaver pays an advance to the parents to get the children when they are not, of course, his own relatives. If they are his own relatives there is no advance made, but in certain cases if the master weaver wants to have what they call *shagirds* he pays them something in advance. That is what happens everywhere, in Persia, Greece and Turkey.

B-1157. Whom does he pay it?—I suppose it is to the father of the child, but I am not certain.

B-1158. You have no knowledge?—I could not say that exactly.

B-1159. What is the number of children employed in these factories under you; do you know?—I am afraid I have not got the figures.

B-1160. Would it be something like 500?—No.

B-1161. Not so many?—On 93 looms I have not got 500 weavers all told. I may have on an average four men per loom.

B-1162. But every weaver has 3 or 4 children?—Yes, but of the four children two will be above 14.

B-1163. I suppose the children we saw to-day are the only children that come daily. Are there any children that we did not see?—Our factory has been shown to you as it is every day. No one has been sent away from the factory and no one has been introduced.

B-1164. How much would a master weaver lend to the parent to get the labour of the children; we are interested in the children and we should like to know how the children go into the factory and how they fare there?—I have my Indian assistant here who can give the information. (Indian Assistant) Sometimes they advance Rs. 100, sometimes Rs. 50 and sometimes Rs. 25.

B-1165. Is there any document that passes from the weaver to the parents?—Sometimes they take an agreement from their parents to work. The advance is not deducted continually but it is deducted by the instalment system.

B-1166. It is of some interest to us to know the nature of this transaction?—Deductions are fixed according to a certain period. When the loan is entered into there are two ways in which the money can be taken back. One is that he has got to work right through his period; the other is that an advance is paid to him and according to the agreement one rupee or two rupees are deducted as the payments are made to the boy.

B-1167. Are these advances usually recovered in the shape of wages regularly, or has the master weaver sometimes to go to court to recover the money from the parent?—Very seldom.

B-1168. That is to say the children labour faithfully?—Yes, faithfully. The other system is that if the child leaves and goes to another employer the other employer will pay the debt.

B-1169. During the time that the child is under a master weaver who feeds the child?—His parents.

B-1170. So that the children go to the parents every day for their meals?—Yes.

B-1171. If the children are playful, and not quick in learning or do not diligently do their work, how does the weaver get work from them?—By punishing them.

B-1172. What sort of punishment?—A slight beating.

B-1173. Beating in what way; is it on the hand?—On the hand and sometimes with a stick.

B-1174. *Mr. Ghani*: And with shoes too?—(*Mr. Stevens*) Sometimes. I have never seen any sticks used in our factories, but I have seen weavers slapping the boys.

B-1175. *Mr. Sastri*: To-day I have seen the very stick used. And a man of about 35 told me he had grown up with marks all over his body of the beatings that he had: he did not complain; he said "it is the regular way" and he thought it was the proper thing.—I suppose he was beaten by the stick 25 years ago, if he is 35 years of age now; but the use of the stick has certainly been abolished in our factories; I have never seen a stick there: but I have seen master weavers slapping the boys. I was slapped when I was a boy too.

B-1176. We have been told how the slapping is done and have seen also the instruments used to slap the boys. Have you seen any of these agreements?—(*Indian Assistant*) Yes; usually they are entered into a book.

B-1177. When such a document is filed in a court, does the court recognize it; I mean is it regarded as a valid and legal document?—The court has held them valid.

B-1178. Do you know if the children's names are mentioned there?—I think so; the children's fathers' names are mentioned; it is said that the father has made his son work with such and such weaver.

B-1179. Are the wages mentioned?—Yes.

B-1180. Are the hours of labour mentioned?—No.

B-1181. So this agreement which is the common basis of labour in these factories is a document purporting to proceed from a father to a weaver and pledging out a child's labour for so many months and so much a day. How much a day would it be?—It is according to the intelligence of the boy; some are paid 6 annas some Re. 1. (*Mr. Stevens*) I should say an average of 8 annas to 10 annas a day.

B-1182. Five annas is mentioned in this book?—I am talking about our factories.

B-1183. As it is from your factory that I got this document so this is the way in which labour is engaged from day-to-day here; apart from the master weaver the bulk of the labour in these factories is that of children engaged on term similar to these?—(*Indian Assistant*) Yes.

B-1184. The children are therefore pledged to the weavers for a certain period?—Yes. (*Mr. Stevens*) I do not think it is correct to say the bulk of the weavers' children because a good part of these children are above 14 years.

B-1185. Above 14 years you would not call them children?—No.

B-1186. Will some one translate this document?

*Diwan Chaman Lall*: "I, Booter son of Chakli, Chowkidar of Amritsar, owe Rs. 57 odd, of which half is Rs. 28-8-0, which I have borrowed from Booty, weaver, in advance. I agree that my grandsons N and F, should be handed over for the purposes of carpet weaving. N is to get Rs. 9 per month and F is to get Rs. 7 per month. I will take the wages monthly. I will not break this agreement. If I break this agreement I will return all the money I have borrowed to the man who has lent it to me."

B-1187. *Mr. Sastri*: Nothing is said about the children's feeding or their play-time or their time for study?

*Diwan Chaman Lall*: Nothing.

B-1188. *Sir Alexander Murray*: What is the date of that document?

*Diwan Chaman Lall*: The date is 2nd October 1929.

B-1189. *The Chairman*: Has that document been held by the Courts to give a claim to the work of these children for an indefinite period?—(*Indian Assistant*) No decision has been taken in regard to the services of these children; the decision was in regard to the loan, that this is a valid loan. If he does not pay this money back it can be recovered by means of a decree.

B-1190. *Mr. Sastri*: When they speak of a certain amount a month, does that mean that the boys have to labour every day, or do they get some holidays?—They will get their wages for which they work; if they are absent they will not get wages for those days, but there are certain instances in which they fix the labour for the month. And if it is arranged that they should pay Rs. 9, they pay Rs. 9 a month even though the boys have been absent four or five days.

B-1191. Have you known of cases in which the children run away from the work to play or to loiter?—Yes.

B-1192. How are they brought back?—Sometimes their parents bring them; the master weavers do not look after them because they will not waste their time.

B-1193. *Mr. Stevens*, you are not aware of the nature of this agreement?—(*Mr. Stevens*) I have never seen it; I hear about it now for the first time.

B-1194. How long have you been here?—I have been in Amritsar six years.

B-1195. And during those six years you have had this labour in your factory and known nothing about the basis of it?—I have had nothing to do with the children. I have only to deal with the carpet weavers.

B-1196. *Sir Alexander Murray*: Have you had artificial light of any kind in the factories?—Sometimes we have had the electric light when it was a case of making special carpets; we have had two or three shifts of workmen and work at nights.

B-1197. When I went there I did not see any lights?—They might not be there because we do not keep them on looms when we are not working.

B-1198. If you are working at nights what power lights do you use?—We use 50 candle power electric lights. It has been the case when we have had to make carpets for Delhi for Viceregal Lodge and the carpets have to be made for very urgent delivery; we have employed three shifts, some of the men working at night. We instal electric light on that particular loom. As soon as the carpet is finished the electric light is taken off.

B-1199. We have been told that normally you work from day-light to dark. There is nothing to prevent any factory working 24 hours?—It is said that weavers will not work.

B-1200. Have they a Factories Act or any regulation in Persia?—The League of Nations have sent a sort of Commission to Persia. I have been away to Persia and have come back to Amritsar only 10 days ago. The League of Nations have complained very bitterly about the conditions in the factories in Persia; it must be admitted that the factories in Kerman where I have just been are much better than they used to be; they are better ventilated and cleaner; and the cases of deformed spines in the girls in Kerman are fewer than they were. I was talking to the O. M. S. Mission Doctors in Kerman, and I think they told me, though I am not certain of the figure, that the cases had gone down from 100 to 15. So far as working hours in Persia are concerned, a lot of promises were made but none were kept.

B-1201. Do they work from day-light to dark in Persia, or do they use light at night?—They do not work at night because kerosene is too expensive and the weaver cannot afford to have light on his looms.

B-1202. Therefore a girl or a boy working in Persia is limited to the hours from morn to night?—He is limited to the sun-light hours. In certain parts of Persia you have mild weather in winter which enables the people to weave the whole year round, but in the north of Persia the temperature goes down to as low as 25° fahrenheit below zero and the looms are practically closed for three months sometimes because the weavers cannot handle the yarns, their fingers become frozen.

B-1203. In Persia the conditions prevent the boys and girls working more than 8 hours?—In certain parts they can commence at 4 o'clock in the morning and finish late at night.

B-1204. All the year round?—Not all the year round. The days are shorter in winter, but you get longer days in Kerman.

B-1205. How short are days in winter?—In winter they can work 8 to 10 hours a day easily when the weather is very mild.

B-1206. And in Turkey?—I cannot tell you; I have never been in Turkey.

B-1207. And in Greece?—I could not tell you.

B-1208. *Mr. Ahmed*: Your contractor advances money in order to get a supply of labour without any trouble?—Yes.

B-1209. And he advances money in order that the labourer may not run away without doing work according to the terms of the contract?—I do not think that is the idea; I think he really advances money because the parent of the labourer needs money, or wishes to have money. I do not think it is to prevent the small workers from running away.

B-1210. Rs. 7 or Rs. 9 a month is a very low rate of wages considering as you say that you sometimes pay Re. 1 per day?—Some of them are paid Re. 1 per day. There are 25 working days in the month.

B-1211. You have said just now that the average is 10 annas per day?—I think so.

B-1212. It is not your concern whether the contractor pays them liberally?—That does not concern us; we only work with the contractors. I have been into the matter when the case with regard to placing carpet factories under the Factories Act came up and the wages which the boys were getting in our factories. From the information which I received I gathered that the wages came to 6 annas to Re. 1 a day. I therefore took 10 annas as an average. I may be mistaken.

B-1213. Probably you will agree with me that in view of these conditions being contained in the agreement which has just been translated, the people are afraid to go away without fulfilling the conditions and the terms of the contract?—Well, I suppose the man who made the contract feels it to be his duty to fulfil it.

B-1214. Is your firm an old firm?—I think our firm is the oldest carpet firm in the world. I am not speaking of the East India Carpet Company but our mother company.

B-1215. I suppose you have been making very good profits?—We have been making good profits for two years, but we have reduced our capital enormously the first year we were in India.

B-1216. Nine-tenths of your business consists in supplying America with carpets?—That was so up to two years ago; it has not been so for the last two years.

B-1217. Is that the reason why you do not pay higher rates to the contractors?—We have paid a higher wage than any company has paid, and the rates of the contractors have gone up threefold in the last 15 or 20 years. Rates have not gone up threefold in Persia, Turkey or Greece; Greece may now be on the same level as India. India is the place where the highest carpet weaving rates are paid, and the Punjab is the highest in India.

B-1218. And in spite of that you have started four factories here?—We have started four factories in the Punjab; we have had in the Punjab 203 looms, but we had, I think, 860 all over India which we have brought to a standstill. I am keeping the wages where they were before.

B-1219. What were the wages before; were they more than Rs. 7 or 9 per month?—I am talking about what I pay for weaving my carpets. Years ago the master weaver used to get half an anna for a thousand stitches. Now it has gone up to 1½ annas. Therefore I am justified in saying that the wages of the master weaver are three times what they were. I do not know what the master weaver does with his boys, but I take it for granted that the salaries of the boys have gone up.

B-1220. *Sir Alexander Murray*: Have you ever reduced the rates?—The rates were reduced once when there was a strike before our time. Our com-

pany has only been in existence since September 1922. The rates were once reduced by a company which was afterwards incorporated in our company. That was on account of the strike. Now the rates have been restored to what they were before.

B-1221. When did you restore the rates?—(Indian Assistant) They were paid 2 annas.

B-1222. When was that?—In 1917, when prices were very high.

B-1223. The rate was put up to 2 annas?—Yes.

B-1224. How long did it remain at 2 annas?—For 1½ years.

B-1225. When was it reduced?—In 1921. (Mr. Stevens) That was before my time. We came here in September 1922. When we came here the rate was 1 anna 3 pies; we put it up to 1½ annas which was the rate before the strike took place.

B-1226. Mr. Ahmed: I take it the master weaver pays at the lower rate and takes the higher rate?—I suppose he will take as much as he can for himself and give as little as he can to his labourers.

B-1227. If the wages were paid direct by your firm to the labourer he would get more money?—I do not know that would be so, because a trained man should be paid more than an untrained man.

B-1228. If payments were made directly by you to the labourer instead of to the master weaver, I suppose the labourer would be paid properly?—The labourer would have been paid properly but a skilled man will always get more than an unskilled man. There would have to be a schedule of rates.

B-1229. You have not got that sort of thing?—No.

B-1230. With regard to hours of work: we went to your factory and asked some of these boys how many hours they worked. Most of them told us that they worked from 6 o'clock in the morning till 7 o'clock in the evening?—(Mr. Davies) The factory opens at 6 o'clock in the morning. When a weaver comes along to start his work the door is open and he is admitted; that does not necessarily mean that he goes and sits at a loom straightaway and starts putting in stitches. Many of them have not bathing facilities in their own houses and they come to the factory where ample facilities are provided. There are two water taps there; they bathe and wash, and generally start work when there is sufficient light, which is about 7 o'clock on days like this.

B-1231. So that you have provided quarters for them with all the facilities?—Yes.

B-1232. I suppose they would prefer to stay in your factory rather than go home?—(Mr. Stevens) The children are happier in the rest time playing in the courtyard of our factory than in their homes.

B-1233. And you like that sort of thing?—To me it is indifferent whether they play in the courtyard or my factory or in the street or in the house. But I think they are much happier playing in the courtyard of the factory than in the street. Comparing it with the street I think the children can play better in the courtyard and there is no objection to it.

B-1234. There is no provision for a supply of drinking water?—There is; we have kept pumping station water which we all drink in our houses without filtering it; I do not see how they can get better water.

B-1235. Would it not be better to have a system of working four hours in the morning and four in the afternoon?—It certainly would be more regular than the irregular hours which they keep now, which may be six hours one day, eight hours another day and nothing the day after.

B-1236. Would it be better to have fixed hours of work during the day, not in one stretch?—Regular hours of work would suit me much better. But I do not know that it would suit them.

B-1237. Mr. Cliff: In answer to a question put by the Chairman as to whether the Factories Act should be applied to carpet factories I understood you to say that the result would be that the carpet industry would become a

cottage industry?—Probably it would, though one never knows what will take place. You may restrict us to eight or ten hours and enforce the Factories Act; it is impossible to say at this stage what will happen. It may become a cottage industry. In my opinion the probabilities are that that would be the result or the industry may cease to exist. It may either kill the industry or transform it into a cottage industry. In any event it will not remain as it is.

B-1238. Do you mean that there is a possibility of the East India Company going out of business?—It may be so; it all depends on foreign competition. Persia is producing carpets considerably cheaper than we can produce here.

B-1239. Can you tell me the approximate number of boys who will be employed on these 93 looms?—I could not tell you; I should say that on the 93 looms we must have about 350 people working and there may be 100 boys. I am giving you figures at random. I can get you accurate figures if you like by getting statistics made in the factory.

*The Chairman:* I think our observation was that roughly speaking there were one boy and two older youths on the average per loom.

B-1240. *Mr. Cliff:* On previous visits that have been made there is a statement that one may take it that usually four to eight boys are employed on a loom. I want to know whether that would represent the position in your factory?—We have had visits from the Factory Inspectors and two years ago sometime in the summer I took the Deputy Commissioner round at about 7 o'clock in the morning without giving warning to anybody; we went there on the sly to see the number of boys there. We did not see more than about one boy in three.

B-1241. The note we have says that the wages earned by a master weaver vary from Rs. 30 to Rs. 50 per mensem.—A loom produces about 12 yards a month on which the wages paid are about Rs. 7 per yard; so that the wages earned on a loom will come to about Rs. 84 a month for three to four people weaving. Sometimes they weave much more, but if the master weaver gets Rs. 30, the other Rs. 54 is divided between two or three boys. The master weaver may make Rs. 40 and the boys Rs. 44; but our average weaving in Amritsar is 12 square yards of our standard cloth per month per loom of four men for which we pay Rs. 7 per standard yard.

B-1242. *The Chairman:* I believe it is customary to speak of them all as boys if they are not master-weavers?—Yes, they are all called *chokras* here, weaving boys. The master weaver will be paid an average of Rs. 84 a month; that is for him and three other weavers. We have woven much faster than that, but on an average we calculate one 9 ft. by 12 ft. carpet per month per loom.

B-1243. *Mr. Cliff:* Would you say that the average earning is Rs. 84 per month for a master weaver?—Between Rs. 80 and Rs. 84. That was so up to last year in the Punjab; they may now be weaving slower or faster.

B-1244. You say there is an unusual feature of this industry and that is the absence of indebtedness. At the same time you say there is much under-employment.—I am talking about them when they are in employment, but of course when they leave our factories and are unemployed, the probability is that they will go and borrow money. We have had exceedingly few cases of weavers leaving us; as a matter of fact we have had practically no cases of weavers leaving us except to go and work in another carpet factory.

B-1245. You say you have 267 looms?—Yes.

B-1246. Can you tell me when the majority of these looms were being worked?—They were in full work up to about 18 months to two years ago.

B-1247. You have closed two factories. Are those men likely to be engaged by other carpet factories in Amritsar?—Some of them have, but not many. I have had no time to see what the other carpet factories are doing, but from the letters I have from everywhere I think there is a general crisis

high has affected India much more than other countries and I do not think many of the weavers we have lost have found work in other factories.

B-1248. Have you made advances to the weavers who are unemployed?—No, we have not. If we did the probabilities are that we should never get the money back. (Mr. Davies) We have made advances to some of them.

B-1249. *Mr. Ghani*: Have you got the money back?—No, we have not. We are willing to provide them with work until they have worked off the advances, but they do not want to come back. Most of these men are working in other factories. (Mr. Stevens) They will come back to us, I think, when they have finished their work in the other factories, to redeem the advances.

B-1250. *Mr. Cliff*: Have you any security for the advances?—(Mr. Davies) None at all.

B-1251. Is there a definite break in the factory for meals?—Yes, from 2 to 1.

B-1252. Do you turn them from their looms?—No, we do not turn them out; some go home and some have their midday meal on the loom.

B-1253. So that it may be that some of the boys are in the factory the whole of the day?—That is quite possible, but they are not there under compulsion; they can go home if they like. (Mr. Stevens) They leave the factory for many other reasons than getting their meals.

B-1254. You say they are not under compulsion. It does appear from the answers given that they are not under direction.—They are not under compulsion from us. I was speaking of the master weavers. Sometimes they do not come and the loom will be closed. When we ask the reason we are told that there has been a wedding; the whole loom goes to the wedding and you do not see them for a week. They go and come whenever they like; there is no compulsion.

B-1255. There is no compulsion and there is no regulation?—No; the factory is open to them, that is all.

B-1256. *Colonel Russell*: The position that these boys adopt when working at the loom is the normal squatting position; is it not?—Yes.

B-1257. So that there is nothing abnormal in the position they take up at the loom?—I do not think there is anything abnormal, but in Persia it has been found to be abnormal with very small girls. Little girls in Persia were put on the looms when they were two years old. We have made it a point that we are not going to have a single girl in the carpet factories. I mean that in the cottage industry we do not allow girls to be employed. The result of putting little girls of two years of age on the looms was that the hip bone never developed and that led to great trouble later on. I think I am right in saying that that has been stopped in Persia.

B-1258. You have never seen any such thing in India?—Never.

B-1259. Do you come across any cases of deformity of the spine among these boys?—In India, never; I have not seen any cases.

B-1260. Are there any other deformities?—I do not remember having seen any; I have seen it in Persia.

B-1261. What about flat foot?—I have never known such a thing.

B-1262. Your medical officer has never reported the appearance of any deformities among the boys in the factory?—I find they look just the same as other Indian boys who do not work in the factories.

B-1263. Has your medical officer ever reported to you any case of deformity?—No.

B-1264. What sanitary arrangements are provided in your factory?—Just the ordinary arrangements which they have in other factories under the Factories Act, I suppose.

B-1265. For instance how many latrine seats do you provide for those you employ?—(Mr. Davies) We have two latrines, ten seats.

B-1266. Do you employ women and girls?—(Mr. Stevens) Sometimes we have women for opening out yarns; they are in a separate compound.

B-1267. Then they will have separate sanitary conveniences?—Yes.

B-1268. I suppose in the hot weather these weaving sheds become very stuffy?—I do not think they become stuffier than other places in the town; they are well ventilated.

B-1269. How do you manage to ventilate them?—It is just the normal ventilation. There is always wind here. We do it by heightening the roof; but as a matter of fact in the hot weather they cover up the outside with curtains. They water the curtains. But the men do it themselves.

B-1270. It is your opinion that the ventilation of these sheds is satisfactory?—I consider it is.

B-1271. *Diwan Chaman Lall*: Whenever a master weaver requires an advance it is you who give it to him?—We give it to him, yes. The factory advances a certain amount after discussion and after we have asked him how he is going to refund it; we come to some agreement.

B-1272. For instance, you want labour; you call in a master weaver and ask him to go and engage workers?—I do not ask him to engage workers; I tell him I have such and such a carpet and will he weave it for me.

B-1273. Suppose he then asks you for an advance for that purpose, you give it to him?—He does not ask me for an advance to get boys; he asks me for an advance, but he does not mention why he wants an advance. As a rule he has got boys because every master weaver carries his boys along with him. If he is a new weaver who has no boys he may ask for an advance in order to get boys.

B-1274. Mr. Sastri put a document to you. In that case I take it the advance did not come out of the pocket of the master weaver?—I do not know if that book comes from one of our factories or not, but if it does I have not seen the book; I do not know of the existence of the book. It is a weaver who has done the transaction; it has nothing to do with us.

B-1275. Suppose you have given the advance to a new master weaver who wants to get new boys; suppose he gets the advance from you and utilizes it for the purpose of getting these boys; in that case would you consider the master weaver to be your agent?—No, I know nothing about it; I do not see why the master weaver should become my agent.

B-1276. He is your agent in this sense that in order to get labour for you, you have advanced money and he again has advanced that from the money which you have advanced him.—I have not advanced him the money on the understanding that he is to get labour; I have advanced him money to weave a carpet for me. The two points are entirely different.

B-1277. A little while ago you told me that in the case of a new master weaver if he wants to get boys you do advance him money?—I do not say that in case he wants boys I do advance money. I do advance him money and he may use the money to get boys. It is not at all the same thing.

B-1278. You say there is no compulsion under which they are made to remain on in the factory?—I have not said there is no compulsion on the boys; I have said that I put no compulsion on any of the weavers. As far as I am concerned there is no compulsion whatever originating from me or my company. I do not know whether the weavers thrash their boys or not; they do not do it in my factory. If a weaver were caught thrashing a boy he would be turned out; but when it is a question of slapping a child's face, as I have said, I have been slapped many times and I expect I am much the better for it.

B-1279. You have not answered my question. It is your manager who made a statement that the boys are at liberty to come and go at any time they choose.—If my manager made that statement, I am afraid he has misworded his statement. The master weavers and the boys are at liberty to go as far as we are concerned: they can do what they like; but I cannot

guarantee that the master weaver will not tell a boy " Before going you have got to weave so many more stitches ".

B-1280. I may take it that what you say is this, that your statement does not apply to the actual workers; it only applies to the master weavers.—No, my statement applies to the labourers as well. It does not apply to the *chowkidars* who are paid monthly by me and have to stop there. My statement applies to the master weavers and the boys on the looms; they are free to go as far as I am concerned.

B-1281. But the boys may not depend entirely on themselves; they may depend on the weaver who gives instructions to the boys?—As far as we are concerned they are free; I have nothing to do with them.

B-1282. I am not attempting to foist the responsibility upon you; I am merely desirous of getting the facts. You mentioned that your *chowkidar* is employed by you on a monthly wage and has to remain in the factory?—Yes.

B-1283. Do you realize that these boys also are being employed on a monthly wage?—Not by me.

B-1284. Are they or are they not being employed on a monthly wage?—I am not satisfied that that contract which has been shown here is the one that prevails everywhere. That contract speaks of a monthly wage of Rs. 9; but I have an idea that some of the boys are paid according to the work they do and not a monthly wage.

B-1285. You have stated that if the Factories Act were applied it would possibly lead to the dispersal of this industry and would turn it into a cottage industry?—It might.

B-1286. Why do you say that?—My reasons are that the weavers may no longer be satisfied with the conditions prevailing and may start weaving in their own homes where they will not be under the Factories Act.

B-1287. Supposing a weaver who makes according to you Rs. 30 a month and works ten to twelve hours a day, is made to work nine hours a day and yet makes the same amount of money, what do you say?—The question would then remain to see whether the Indian business would be able to face the competition of Turkey.

B-1288. Now you are coming to the second point, but you agree with the first point that if the Factories Act were applied to these factories it would improve the conditions of work?—No. It would improve the welfare of the boys to a certain extent.

B-1289. That is sufficient for my purpose. Is your company a limited liability company and registered in India?—Yes.

B-1290. Can you present the Commission with your balance sheets for the last few years that you have been in operation in India?—Our company is a private company; it is not a public company.

B-1291. Would you be averse to telling us roughly what profits you have made since you started operations in Amritsar?—The profits we have made have not paid for the losses we have made. I do not think the application of the Factories Act would improve the factories. We have had two prosperous years, we have had one year without dividend and we have had another year with a reduction of capital. That is about as much as I am willing to state.

B-1292. With regard to holidays, do these people get Sunday off?—The factories are closed on Friday.

B-1293. For half a day or the whole day?—For the whole day. Sometimes a weaver will come in on Friday and go round. But 99 per cent. of the looms are idle the whole of Friday. Whenever there is a Hindu holiday all the Muhammadans are only too pleased to partake in it and whenever there is a Muhammadan holiday they close the factory as well. They are all Muhammadans with the exception of one loom which is worked by Hindus.

B-1294. Mr. Ghosi: In your factory the looms are worked in places with walls on three sides and open on one side?—Yes.

B-1295. Do you provide any fans?—No.

B-1296. Do you provide any heating arrangement in the places where they work?—No.

B-1297. Have you kept any schools specially for these children?—I was the first to suggest having a school in our factory. It was about four years ago that I suggested that to the Director of Industries. It was decided that the Municipality should give us a teacher, but the Municipality never gave us a teacher, we are still waiting for the teacher the Municipality is to give us.

B-1298. Did you suggest to the Municipality the opening of the school?—I suggested it to Dr. Rawley.

B-1299. Did you suggest it to the Municipality?—I suggested having a school at the factory you visited this morning and Dr. Rawley told us that certainly the Municipality would give us a teacher. The Municipality has not given us a teacher. I say quite frankly that I never expected much from the Municipality. We have got our mills which are under the Factories Act and we have a teacher there. They have a sort of canopy in the fields where the children are taught.

B-1300. Did you write and remind the Director of Industries of the promise to provide a school?—No, I have not written.

B-1301. I suppose there is no labour organization, no trade union of the master weavers or boys in your factory?—I do not think there is; I do not know. I have never had any bother with trade unions and labour unions and I know nothing about them.

B-1302. If one labour organization is formed, would you be averse to it?—I am afraid I do not like labour organizations.

B-1303. You have told us that there are two water taps in the factory. If your factory is in full swing how many people are employed?—Possibly 300 people. It would be very easy to put up ten more taps and I am quite willing to do so if necessary. But I think there are more than two. (Mr. Davies) That is only in one factory.

B-1304. Have you ever noticed that the boys get cuts on their hands from the knives they used?—(Mr. Stevens) The knife is so blunt that I do not think they could cut their fingers with it.

B-1305. I saw a boy this morning who had a number of cuts on his hand?—My son bought a pen-knife and cut himself with it seven times on the first day.

B-1305. *Mrs. Wilson*: You said that boys under nine years of age are not allowed in the factory. As a medical woman I am interested to learn how you know when they are nine?—The doctor comes and certifies their age.

B-1306. Who is the doctor employed by you?—Dr. Ram Rakamal, the Sub-Assistant Surgeon.

B-1307. He certifies that they are nine. Is there any other form of medical inspection of the children?—He goes there once a fortnight and sees everybody there.

B-1308. I myself work in a hospital in this town at times. I have been interested to see the deterioration of physique in your children as compared with the children who form hospital classes. You yourself said that you have never noticed anything about their legs?—I have never noticed that they were different from other children whom I have seen in other works or in the streets playing about.

B-1309. Do you mean in any other carpet works?—No, in any other works.

B-1310. I am accustomed to seeing the ordinary population that go to the hospital and they do not normally have these curves?—Possibly, but I am no doctor and I am afraid I have never noticed it.

B-1311. Have you any idea as to whether there is any eye strain among the children? My experience of Amritsar is that in the winter mornings it is distinctly dark up to about 10 o'clock.—When it is dark they do not come in; they do not start weaving until it is full light.

B-1312. As far as you know is there any evidence of any eye strain among the children?—Sometimes they get a little conjunctivitis and we treat them ourselves; we always have zinc solution, but I do not think there is any more conjunctivitis in our factories than anywhere else in Amritsar. As a matter of fact I am very friendly with the lady doctors of the hospital and they have never pointed out to me anything on the subject.

B-1313. Your factories here are situated within the municipal limits?—Yes.

B-1314. Have you had any assistance from the Medical Officer of Health in regard to the sanitary conditions in your factories?—I do not think we have. We have never asked for assistance; we prefer to be independent.

B-1315. Have you anybody with public health qualifications visiting your factories to help you in carrying out sanitation? The Sub-Assistant Surgeon has no public health qualification. Is there anyone who comes in?—I do not think anybody comes in.

B-1316. *Miss Power*: You were giving us some information in respect of your Persian experience. Is carpet weaving in Persia done in factories or entirely in cottages or in both?—It is called a cottage industry, but it is really done in large centres and large villages in the houses of the Persians.

B-1317. Regulations were passed some time ago as a result of agitation; did that in any way break up those units and make them smaller units than they were before?—No, but they were already very small units. The largest factory I have seen in Kerman, this time that I visited it, is a factory containing eight looms.

B-1318. How many workers?—There may be four or five people on each loom.

B-1319. So that 40 people was the largest you saw?—Yes, and that is an exception. As a rule there were two looms in all houses which belonged to the owner of the house who was himself a weaver and employed labour where he could get it. If his sons and daughters or his wife can weave they will weave when they are not in the fields gathering crops.

B-1320. You gave us some statistics implying that the regulations had been to a certain extent effective?—The regulations have been effective inasmuch as the carpet factories seem to me to be better ventilated now than they were. I do not guarantee the accuracy of my figures.

B-1321. Who has enforced that improvement?—The Persian Government.

B-1322. Can you tell me by what means?—I was not there, but they sent a commission there.

B-1323. You do not know whether they have a regular system of inspection?—I have visited all the more important looms in Kerman; I have visited about 800 looms. I do not find that the conditions in the villages are better, but the doctors of the C. M. S. hospital have told me that they consider that the actual condition of the health of the little weavers is much better than it used to be, and they attribute it to the better ventilation of the factories.

B-1324. You do not yourself hold the opinion that it is impossible to regulate an industry which is carried on in small units?—It is absolutely impossible to regulate an industry which is carried on in cottages. We have an affiliated company in Mirzapur where it is carried on by cottage industry and you cannot regulate it. It is impossible to enforce any satisfactory regulations in a cottage.

B-1325. Have the altered conditions in the Persian factories affected their competitive powers at all? Has it in any way increased the cost of production?—No. They white-wash their walls and paint the windows; that is all they have done.

B-1326. They have put older children on the work, have they not? I understood you to say that the girls of two years of age are no longer employed?—Little girls never weave. They used to sit there from the age of

two years but they never wove until they were five or six. It is the sitting position that impairs the development of their bones. Now you do not see them on the looms any more; they do not put children on the looms so young.

B-1327. *Mr. Clow*: Are carpets made in cottages in Amritsar district at all?—I do not think so; I do not think there is any carpet cottage industry in Amritsar district.

B-1328. Is there any cottage or factory industry of this sort in the Indian States in the Punjab?—I could not tell you; I do not know of any.

B-1329. *Mr. Taylor*: In view of your experience in Persia can you tell us how the general conditions as to carpet weaving compare in Persia and India?—I think in India the factories are much better organized and the conditions of hygiene in the factories are far superior in India than in Persia.

B-1330. Can you tell us how the wages compare with the cost of living?—I do not know what the wages are now in the north of Persia, but in the south of Persia in Kerman where I have been, the wages are lower than they are here; I should say they are 20 per cent. lower.

B-1331. How does the cost of living compare?—The cost of living is approximately same.

B-1332. So that wages in Persia are relatively lower than in India?—They are certainly lower and the cost of living is about the same.

B-1333. *Sir Victor Sassoon*: Have you ever been asked to make advances for marriages among your workers?—I think we have.

B-1334. Have you any idea of the sort of amounts that they have borrowed from you?—They may come to very high figures.

B-1335. Can they borrow as much as a thousand or two thousand rupees if they wanted?—No, I do not think they go up to that.

B-1336. I was trying to find out the amount they might spend on a marriage?—It all depends on the class of men. One of our mechanics in the mills we have at Chheharta was married. His first marriage cost him Rs. 500 and his second marriage Rs. 1,200.

B-1337. Did he borrow all that?—I found out later that he borrowed all that money.

B-1338. From the firm?—No, the firm lent him Rs. 200, but that is not the carpet firm; I do not think we have ever advanced money for marriages. (Mr. Davies) No, not specially for marriages.

B-1339. So that they may be owing money outside for marriage or something of that sort if you do not advance them enough.—(Mr. Stevens) They have never asked us for advances for marriages, though possibly they have paid such expenses out of the advances they got from us. (Mr. Davies) The majority of the weavers here do not get married until they are in a financial position to do so.

B-1340. How many workers are there on each loom?—(Mr. Stevens) It depends on the width of the loom; I should say on a nine foot loom there are about four workers.

B-1341. And how many would there be on the largest looms?—Our largest loom is 45 feet; the number of workers would be in proportion; it is about one worker for 2½ ft.

B-1342. You say that you have 267 looms; you cannot really say how many people would be working on these looms because it depends on the width of the looms?—You can take a loom to be on an average 11 or 12 ft. The majority of the looms are 9 feet long; but we have looms up to 45 feet.

B-1343. So that there may be 8 or 10 people on a carpet; it depends on the width?—There may be. About two years ago when we were working to our full power I reckoned that we had about 5,000 people weaving carpets for us in India on a total of 860 looms.

B-1344. When there are four workers on a loom one would be a master weaver?—Yes.

B-1345. Would two of the boys be older boys?—I should say two would be young; if it is possible to say so  $1\frac{1}{2}$  of the boys would be older boys; out of six, two would be junior workers.

B-1346. Would one master weaver control more than one loom?—Sometimes two.

B-1347. Does he arrange it so that generally he has a team of eight people working two small looms?—Some of them have a team of more than eight people; some of them even have four or five looms, but they have an understudy in charge of each loom to dictate the designs.

B-1348. An assistant master weaver?—Yes; all the looms may belong to the same master weaver and they may all be in partnership on terms which they have arranged among themselves.

(The witnesses withdrew.)

**MUHAMMAD RAMZAN and RAJBAL, two master weavers  
examined (Diwan Chaman Lall interpreting).**

*The Chairman:* I asked that one of the master weavers should attend in case we required to question him and I asked the Secretaries to take one quite by chance so that there should be no possibility of selection in the matter. With a view to saving time I would suggest to my colleagues that we should ask Mr. Sastri to conduct the examination; I think we should all be satisfied to leave it in his hands.

B-1349. *Mr. Sastri:* Are you master weavers?—One of us a master weaver and the other is an assistant.

B-1350. How long have you done this work?—27 years.

B-1351. Do you work at one loom or have you more than one loom?—Two.

B-1352. Do you do piece-work or do you get so much per carpet from the proprietor?—Piece-work.

B-1353. How much are you paid for your piece-work?—One anna six pies for 1,100 stitches.

B-1354. How much would you get per day at that rate?—A strong healthy man would get 14 or 15 annas.

B-1355. *Mr. Clow:* Is that your remuneration for the day or the total amount given to you out of which you have to pay the boys?—My remuneration would be 14 or 15 annas and the boys would get 9 annas each.

B-1356. How many have you working under you?—I have 20 or 21 boys working under me.

B-1357. *Mr. Sastri:* After paying them you have 14 annas for yourself per day?—After paying out to these 21 boys at the end of the month I myself save Rs. 45 to Rs. 50.

B-1358. How often do you pay the boys; do you pay them every day or once a week?—Every fifteen days.

B-1359. *The Chairman:* Are the parents of the boys paid in advance?—We pay the parents of the boys.

B-1360. *Mr. Sastri:* Do you pay them in advance or subsequently?—We pay them in advance.

B-1361. Taking them on an average how much do you pay a parent?—Some boys get 8 annas a day, some 6 annas, some 14 annas and some 15 annas.

B-1362. But how much do you give to a parent in advance in order to get the work of his son regularly?—During the first two or three months the boy is learning his work; nothing is paid to the parent or to the child for the first two or three months. It all depends on what amount of money the parent needs. In some cases the advance is Rs. 50 and in other cases Rs. 80.

B-1363. Would that amount be for two boys or for one boy?—We have given as much as Rs. 100 for one boy.

B-1364. Then would an agreement be written out? Yes, agreements are written out.

B-1365. Is the name of the boy mentioned in the agreement?—Yes.

B-1366. Do you usually specify the period during which the boy shall work out the advance?—No period is mentioned, but it is mentioned that this money is to be paid back in so many instalments. When the money is paid back the boy is released.

B-1367. Otherwise the boy must work for years?—That is right. Until the money is paid back the boy has to work for me.

B-1368. How is the calculation made of the amount that the boy has earned every day?—Every day we make a calculation of the amount of work done.

B-1369. Supposing I am a boy engaged by you, is it I or you or the two together or the parent in addition who determine how much I have done during the day?—We pay them by the month and we make the arrangement with the parent.

B-1370. If you pay them by the month, is it so much whatever the amount of work turned out by the boy?—We see to it that the boy is made to work a little more than he ought to work; if it is one rupee's amount of work we see that we get 17 annas out of the boy.

B-1371. You know how to get 17 annas work out of the boy?—Yes, a little more.

B-1372. Do you get work from the boys on all the days in the month or do you give them specified holidays, Sundays or Fridays?—On Fridays there are holidays. Also if he is ill he does not turn up.

B-1373. In settling the account with the parent do you take interest into account or do you only take account of the money you have advanced?—No interest is charged.

B-1374. If a boy does not turn out efficient work how do you get him to do it?—Beat him, hit him on the face, hit him with the fist and whatever we have handy at the time such as a stick.

B-1375. Does the boy sometimes run away?—Yes.

B-1376. When he runs away how is he brought back to work?—Very few run away; when they do run away we go after them or send the parents after them.

B-1377. Supposing a boy does not like to work under a particular master weaver, has he any chance of getting a transfer?—Provided he pays back the money we have advanced.

B-1378. Do the boys, so far as your observation goes, usually improve from week to week or from month to month?—As they go along I notice some improvement.

B-1379. If a boy during the first month turns out Rs. 7 worth of work and then owing to the improvement caused by practice he turns out Rs. 9 worth of work next month does he get the Rs. 9, or does the parent get credit only for the Rs. 7 stipulated?—We stick to our agreement.

B-1380. Whatever the efficiency of the boy?—Yes, within the time limit. The only limit is when they pay back the money.

B-1381. Do you occasionally have to go to Court in respect of the carrying out of the agreement?—Sometimes we get hold of such a boy and such parents and we have to go to Court to recover the amount.

B-1382. When you go to Court do you put this agreement in as evidence of the contract?—Yes, we present this agreement.

B-1383. And the Court accepts it as valid?—The Court accepts it as valid.

B-1384. *The Chairman*: During the period does the boy or do the parents get cash or are the parents credited with the accrued monthly amount; that is to say, is the money deducted from the loan or is it paid in cash?—We pay in cash to the boy's parents; if he is not a minor we pay him.

B-1385. Is the loan repaid by regular instalments or is it allowed to drag on?—If a boy has done Rs. 10 worth of work we will give him Rs. 8 and keep Rs. 2; that is how bit by bit we get the loan back.

B-1386. *Sir Alexander Murray*: Supposing the advance is Rs. 84; does the boy work for 12 months at Rs. 7 a month which makes Rs. 84 and does that wipe out the debt or what happens?—If he can afford it we take the whole Rs. 7 in payment of the loan, but if he cannot afford it then it may be that out of the Rs. 7, he will take Rs. 6 and we keep Rs. 1.

B-1387. I suppose you would prefer to take only Re 1 because in that event it would be six years before the loans will have been repaid.—No, we prefer to get back cash, because sometimes we also have to borrow the money.

B-1388. *The Chairman*: What proportion of these boys go on to become master weavers?—There are some who become master weavers after ten years; there are those who have been working for twenty years and more and are still only assistant master weavers.

B-1389. *Sir Alexander Murray*: When you started did you start against an allowance?—No, I did not.

B-1390. What pay did you get?—Two rupees a month when I started work.

B-1391. What was your age?—About nine or ten years when I started.

B-1392. *Mr. Sastri*: When a boy is careless and does not turn out the expected work, besides punishing him is there a system of fining him?—We ourselves do not fine the boys.

B-1393. *Sir Alexander Murray*: What is the age of the youngest boy you have working in your looms?—10 or 11. I do not think I have any boy under 10 working with me.

B-1394. *Mr. Cliff*: What is the lowest grade of wages that you pay for a boy of 10, if there is no advance?—My boys are all on advances.

B-1395. What is the lowest wage?—It comes on an average to 6 annas a day though it is paid on a monthly basis. If there are four or five days in which the boy is absent and those are cut out, the average will come to 6 annas a day for a month of 30 days.

(The witnesses withdrew. The Commission adjourned to Delhi.)

# DELHI

## NINTH MEETING

Saturday, 2nd November, 1929.

PRESENT:

The Rt. Hon. J. H. WHITLEY (*Chairman*).

Sir VICTOR SASSOON, Bart.

Sir ALEXANDER MURRAY, Kt.,  
C.B.E.

Mr. A. G. CLOW, C.I.E., I.C.S.

Mr. KAMR-UD-DIN AHMED, M.L.A.

Mr. JOHN CLIFF.

DIWAN CHAMAN LALL, M.L.A.

Miss B. M. LE POER POWER.

Lt.-Col. A. J. H. RUSSELL, C.B.E.,

I.M.S. (*Medical Assessor*).

Mrs. J. C. CHATTERJEE (*Lady Assessor*.)

Mr. S. LALL, I.C.S. } (*Joint Secretaries*.)

Mr. A. DIEDIN. }

**Mr. W. H. ABEL, Inspector of Factories, and Mr. MEHTAB SINGH  
Industrial Surveyor, Delhi.**

B-1396. *The Chairman*: Would you, although it may involve a little repetition, tell us the organization of your Department with regard to the Delhi Province?—(Mr. Abel): I am the Inspector of Factories for the Punjab and for Delhi, having full powers to apply the Act. I have in Delhi one Industrial Surveyor who is a part-time Inspector under my control, and also notified for several sections under the Act, that is, for sanitation, hours of work and all the things which have nothing to do with engineering. He is resident here in Delhi, and I visit Delhi once or twice a month as I think necessary.

B-1397. I note in the memorandum you have submitted to us you tell us of a change which is going to take place next year?—The change is in the Punjab at the moment. Ordinarily speaking, any change in administration is first of all adopted by the Punjab and then it is for the consideration of any other Government, Delhi and the other two Administrations, the North-West Frontier and Ajmer-Merwara in which I have jurisdiction, to consider whether they would also like to adopt the same measure as the Punjab but it is for each local Government to consider for themselves whether they really want it or not.

B-1398. You say in your memorandum that in the case of the Punjab the Government "have decided to appoint one full-time Inspector with effect from April 1st, 1930, in the place of the five Industrial Surveyors of the Punjab under certain sections of the Indian Factories Act. Thus from April next there will be one Chief Inspector and one Inspector in the Punjab."—Will both of them be full-time officers?—Yes.

B-1399. You told us, I think, at Lahore that you thought that would contribute to the efficiency of your Department and enable more effective inspection to be carried out?—That is true. At the present moment, as I have full powers—and I am the only Inspector with full powers under the Act—it is necessary still for me to go to factories although they may have been inspected by Industrial Surveyors previously.

B-1400. Do you feel that your staff is adequate for the large area that you have to cover?—No, not by any means.

B-1401. You feel, as your colleagues in other countries do, I imagine, that greater staff could be usefully employed?—It would be extremely useful; the more staff we have the more work we can do. At the moment there is very

much work in factory inspection which is left undone that could be done if we had a larger and better staff.

B-1402. I take it from what you have already told us that it is so recently that the Factories Act came into operation that you have a great deal of difficulty with certain employers in getting them readily and willingly to observe the Act?—That is so. The Factories Act actually in India is yet a young Act, and it was drastically amended in 1922. Even now we are not actually up-to-date and we have not been able to get employers really to realize that the enforcements which are now law should be carried out.

B-1403. You have not yet arrived at a stage when employers think it bad form to be evading the Act?—We have not arrived at that stage yet.

B-1404. *Mr. Birla*: Discussing the question of efficiency you mention that, from what you have seen, the efficiency of the Indian worker is lower as compared with the foreign worker, and then you say that unless the labouring classes are well paid by increasing their wages it is not possible to increase their efficiency. Now, apart from the question of increasing the wages, could you suggest some other remedies for increasing the efficiency; for instance, the abolition of the drink evil, solving the housing problem and such other things?—Yes, to improve those conditions would naturally increase the efficiency of the worker, but I think there are two points which would help the worker to become more effective, such as standardizing his work or endeavouring to create a standard to which the worker would work up. For instance, trade unions could help, I think, in this direction so as to make a mechanic fit to be a mechanic when he has learnt his trade after apprenticeship.

B-1405. You know the trade unions at present are in an infant stage, and I should like to know how far the Government or the employer could be helpful in increasing the efficiency of the worker?—The employer could do very much. Certainly if better houses were provided for a worker and more interest taken in him, he would become more efficient and be more useful to his employer.

B-1406. I think I am inclined to agree with you that if every worker were provided with good accommodation the efficiency would increase, but the difficulty of the employer is that he cannot always get suitable land. Do you think it should be the duty of Government to acquire land at a reasonable cost for the employer if he wants to build houses for his workers?—It is very difficult to say; I am afraid I cannot give a reply to that question.

B-1407. It has been suggested in certain quarters that it might be possible for Government to grant loans, say, to the extent of 50 per cent. of the cost of quarters to be built for the working classes. Do you think it would be a desirable scheme?—I think any sound scheme whereby better houses could be produced and good housing facilities could be made for the worker would be a very useful thing.

B-1408. You know some of the factories here are working on a double shift, day and night?—Yes.

B-1409. How do you think night work affects the health of the workers as compared with day work although the night workers may get the same amount of sleep?—I am sure it is not as good for them.

B-1410. May I take it that you suggest shorter working hours for night workers?—No, I do not know that I should say that. I certainly think that a day worker is at a greater advantage than a night worker, but from the night workers that I have seen coming off duty I would not say that they are utterly fatigued or worn out. I do not suggest a reduction in working hours for the night worker.

B-1411. So far as the question of fatigue and health is concerned you think there is not much difference if the worker works for 10 hours either during the day or during the night?—There is not a great deal of difference. Certainly a worker would prefer to work by day if he had the choice.

B-1412. That is not necessarily so. In fact, I have come across cases in the hot season when workers prefer to work during the night?—That is possibly so in the hot season.

B-1413. You have not mentioned any views on the question of sickness insurance. Have you any suggestions to make on that point?—Sickness insurance would be very useful. It is a matter for the employer. I think if he considers that it would be profitable and useful to him, I am sure the worker would welcome it.

B-1414. But do you think the worker would be prepared to contribute to the sickness insurance fund?—That I am not prepared to say. In Lahore we had a conference to consider whether sickness insurance should be brought into force and we found there that the workers consulted were rather reluctant to pay anything out of their wages. The sum that they could afford to pay would be so small that it would be hardly useful. On the other hand, the employers were not very interested in paying anything towards insurance, and the only suggestion that we could get was that Government should finance the scheme.

B-1415. *Miss Power*: Mr. Abel, you were giving evidence just now about the adequacy or inadequacy of the inspection staff. I take it that your remark in your memorandum that "the staff is adequate" is a misprint; your considered view is that it is inadequate?—Yes. I am sorry about that. It is a misprint.

B-1416. *The Chairman*: That, of course, refers to the Province of Delhi and not to the Punjab?—Yes.

B-1417. *Miss Power*: You also refer to the fact that the people who were imported from Rajputana and Central India have now very largely settled in Delhi and further on you say that there has been unemployment owing to the contraction of activities in the Public Works Department Workshops. Is it customary when large numbers of workers are imported for a special job, to take no action to send them back to their place of origin when that work is practically finished?—I have never heard of any scheme whereby arrangements have been made to send them back, but in the case of importing these coolies to Delhi, they were imported 10 or 12 or possibly 15 years ago for the work on New Delhi, and they have more or less settled and made Delhi their home.

B-1418. But is industry in Delhi growing sufficiently quickly to absorb these people when the construction work is over?—I do not think it is.

B-1419. Does that mean that there is likely to be a permanent unemployment problem?—It will gradually decrease, but the decrease in the number of workers as a result of the buildings having been finished is much greater than the increase in industry to absorb that amount of unemployment. The result is that there is a good deal of unemployment amongst unskilled workers in Delhi.

B-1420. You say "no occupational disease has been reported or has come to my notice", but in the evidence given by the Government Press they refer to certain cases of lead poisoning which they say came to their notice as a result of obtaining information for submission to the Commission. Is there any obligation under the Factories Act that cases of that kind in industrial undertakings should be notified to the Factory Inspector?—There is no obligation. We invariably enquire, I have taken up his question rather carefully, and I certainly have not heard of any occupational disease, particularly with regard to lead poisoning.

B-1421. Do you think there should be an obligation on the employer to report those cases?—I think it would be helpful; but no case has ever come to my knowledge, and it is one of those things we take an interest in; I really thought that there was no such case.

B-1422. Dealing with "Industrial Efficiency" of workers in your memorandum you say that the "health is one of the chief factors governing the efficiency of the workers and unless the labouring classes are well fed by an increase in their wages, it is not possible to effect any improvement in this behalf". Have you made any investigation in the course of your work as to what is the cost of living for an industrial labourer in your area?—No, I have not.

B-1423. Have you any experience upon which to calculate whether the wage paid to the unskilled worker in this district will cover the cost of a family?—I think I have if I had time to go into it, but one would need to take the average over a number of months before you could really get anything material.

B-1424. Even if you have not investigated it scientifically, what is your conclusion: Is it that the average wage of the ordinary labourer will cover the family requirements like food, housing, clothes, etc.—It is only just enough; it does not leave anything for him to spare, or very little, and as a result my experience is that he does not eat as much as would be good for him in the ordinary way, and then on such a day as this, the *Divali* day, he probably spends the whole of what he has saved which should have been spent on good food.

B-1425. You mean to suggest that if he has anything to spare, instead of spending all of it on living he spends some on the smaller luxuries and as a result goes without necessities?—That is what happens.

B-1426. That is what the rest of us would probably do?—Yes.

B-1427. *Mrs. Chatterjee*: Is it not a fact that the rents of working class quarters in Delhi have vastly increased?—That I am fairly sure about. I have no statistics about it, but house rents in Delhi have increased enormously within the last five or six years.

B-1428. Do employers of small factories give any allowance for house rent?—I have never heard of such a case.

B-1429. Dealing with the extent to which medical facilities are utilized by women you say "Women do not always make use of the medical facilities on account of their traditional *parda* system." Is it not a fact that women working in industries do not observe *parda*?—They observe no *parda* when they are actually inside the buildings, but I find that women are reluctant to go to the mill doctor for advice.

B-1430. Do you not think it is because women doctors are not provided for them? Naturally they might be shy of going to a man doctor?—If women doctors were provided, they would make more use of them than they do of the men doctors.

B-1431. Do you think if factories or groups of factories provided medical facilities with women doctors they would be better utilized?—I think that if there was a lady doctor either within the mill area or in the mill itself, the women workers would take advantage of her presence.

B-1432. So it is not absolutely that *parda* stands in the way?—Not absolutely *parda*, but it is the fact that they have been accustomed to *parda*.

B-1433. In your memorandum you talk of recreation grounds provided by employers. Could you tell me where these recreation grounds are?—The Birla Spinning Mills have provided very good facilities in this respect.

B-1434. How far are they made use of?—The workers do make use of them to a very great extent.

B-1435. Do women make any use of them?—I do not think I have ever seen women workers making use of them.

B-1436. You say that some workers are low paid. Are there not particular industries in which they are low paid?—There is no special industry in which they are lower paid than in others; but the average wage of the unskilled worker is low—about 10 as. a day.

B-1437. Is that for both men and women?—No, the woman gets slightly less; a woman worker probably gets 7 as. and a man worker 10 as.

B-1438. Does it mean that she does less work?—No; she usually does a much lighter work.

B-1439. *Colonel Russell*: In relation to fatigue you say "The break after putting in 6 hours work is very useful and does go a long way in preventing undue fatigue." Have you made any personal observations with regard to that matter?—I have frequently been in factories just before the rest interval,

and I have thought, by the look of many of the workers, that it was time they did have rest.

B-1440. Are there any statistics?—I have never taken any statistics in that respect.

B-1441. *Diwan Chaman Lall*: Can you tell me something about exemptions that are asked for from the Factories Act by the employers and by Government?—Exemptions were asked for fairly frequently after the Act was amended in 1922; and Government were in the habit of giving exemptions to almost any one to start with. We gradually worked factories up to a state when exemptions were not required so frequently. It was customary to give exemptions to a privately owned printing press here nearly every year to enable it to deal with the rush of work, and apart from that Government factories have fairly frequently for, and obtained, exemptions even up to this time.

B-1442. So I take it that the Government of this Province has been the greatest sinner as far as exemptions are concerned?—They have had more exemptions than privately owned factories.

B-1443. Did you take any action against the stone factory here for working more hours than they should have done?—Yes, I have done so recently, possibly two months ago. After having written to them several times regarding overwork, I found rather a bad case of overwork and I lodged four or more cases against them for overworking their employees.

B-1444. That is also owned by the Government?—It is a Government factory loaned to some extent to the contractors. The work produced there is for Government; the produce is Government, the machinery and buildings are all Government property, and it is controlled, I am told, to a very great extent by the Public Works Department.

B-1445. Is it a fact that after you launched this prosecution, the Deputy Commissioner of Delhi gave an order withdrawing the prosecution?—I lodged these cases in the court, and I appeared when the case was first opened. The case was adjourned that day as it could not be finished I think it was two days later I saw in a newspaper that it was strongly rumoured that the Deputy Commissioner was withdrawing the cases. I wrote to the Deputy Commissioner to ask if that was a fact, and the reply I received was that there were certain circumstances under which it would be preferable not to proceed with these cases. I have not entirely agreed with the Government's action on that point. The cases are still pending. No decision has yet been come to as to whether they shall be withdrawn or proceeded with.

B-1446. What was the date of the institution of these cases, could you give me a rough idea?—Three cases were made on the 16th February and then another case later on on April 25th, 1929.

B-1447. *The Chairman*: And still undecided?—Yes, they have not advanced to that stage.

B-1448. *Diwan Chaman Lall*: One case was nine months ago and another seven months ago and they are still pending?—That is so.

B-1449. What are the other functions of the Industrial Surveyor here?—I think he can best describe them himself, but he is the officer in charge of industries here under the Department of Industries, Punjab. Part of his duty is to collect trade prices to look into any problem regarding industries and in addition to that he has a laboratory here as a science man for making tests for the Municipality, for the Health Department, Chambers of Commerce, factory owners and anyone who cares to bring anything for analysis.

B-1450. So that he is a sort of Registrar of Joint Stock Companies, Chemical Examiner and Collector of Statistics, apart from the other duties that are connected with your Department?—That is so.

B-1451. So that in spite of the fact that you have got a very able Industrial Surveyor here, he is not in a position to cope with all the work?—It must be very difficult for him. Sometimes it must also be very embarrassing to have so many subjects to deal with.

B-1452. A question was asked by Mr. Birla about the efficiency of the workers and their drinking habits. Have you any statistics in regard to their drinking habits or the alleged drinking habits of the working classes here?—No, I do not keep such statistics.

B-1453. *Mr. Clow*: Is drink a serious evil?—I do not think it is really a serious evil. It is noticeable once or twice a year.

B-1454. *Mr. Cliff*: Is that the Scotch New Year's Day?—No.

B-1455. *Diwan Chaman Lall*: In his memorandum the Industrial Surveyor mentions the fact that the average wage of the unskilled worker was about 10 as. ?—Yes.

B-1456. In their memorandum the Punjab Chamber of Commerce have mentioned that the question of efficiency is not really governed by housing conditions, better conditions of living and so on. You do not subscribe to that view?—No, I do not. I think that the more you look after the worker the more efficient he would become, the elements being good housing, good food, education, recreation and welfare work.

B-1457. You have mentioned in your memorandum that there has been a reduction of hours without any reduction of pay and that the workers welcomed it?—Yes.

B-1458. If the working day were reduced to an 8 hour day, do you think that the workers would welcome that?—I think the workers would naturally welcome that, if they get exactly the same pay for an 8 hour day, as they get for a 9 or 10 hour day.

B-1459. The Washington Convention gave an exemption as far as India was concerned and fixed the limit at 60 hours the explanation given being that the conditions were different in India. Do you find that the conditions are different in any way which would justify Government in keeping to 60 hours instead of 48?—I find that the worker here in India is very much slower getting on his job than in Europe; as a result a good lot of time is wasted in starting and stopping. He is ready, to get on to his job and then wait for half an hour before he really starts. He is also very ready at the end of his six hours or even before that to prepare for closing down. So that if the hours were reduced very much more, a considerable proportion of his day or the same proportion would, I think, still be spent in starting and stopping and production would suffer very heavily.

B-1460. Do you mean to say that the average worker does not get there before the usual time for opening the factory?—He does get there before time. But he is, very slow. I find that the worker will get on his job a quarter hour, half an hour, possibly longer than that, before the time he should be there. Nevertheless he is even longer than that in starting on his job.

B-1461. If he is slow at work that is also a matter of efficiency?—Exactly.

B-1462. If you improve the efficiency you will improve the method of work too?—If you could improve the efficiency then you would improve the output.

B-1463. Is not that a vicious circle? Can you not improve the efficiency of the worker by reducing the hours of work and increasing his pay?—I think that a moderate line will have to be taken. The average factory worker now does not put in a 10 hour day.

B-1464. Do you seriously mean that the worker who does put in a 10 hour day now-a-days has any leisure left for recuperation of any sort?—I quite agree that he has very little. But if he is persuaded to put in a full 9 hour day and actually work those 9 hours, both the employer and himself would gain very considerably.

B-1465. Is there any arrangement here whereby either the technical worker or the unskilled worker is being trained in order to increase his efficiency?—Not that I am aware of.

B-1466. A question was put to you about land for housing the workers. Would it not be better if either the State or the Municipality undertook the

task of providing houses for the working classes?—I should think it would. I believe that has been tried in Bombay and has not been successful.

B-1467. There are other reasons why it has not been successful. The reasons were that the workers were not consulted on the type of houses that were built. They were too hot in summer and too cold in winter. It was not a case of the workers not wanting better facilities for housing?—I certainly think whoever put up good quarters and made houses for workers would reap the benefit of them in the efficiency of the worker.

B-1468. *Mr. Cliff*: The memorandum of the Industrial Surveyor records that there are 60,000 industrial workers in Delhi, whereas you record 10,443?—Yes.

B-1469. You also say that these workers, are employed in 61 factories?—That is so.

B-1470. Can you tell me whether there has ever been a census of the factories in Delhi other than that 61?—Not that I am aware of.

B-1471. Would the factories and workshops in Delhi be recorded in the census in 1921? Would they take a census of the factories there, or is that a census of population?—I think it was only a census of population.

*Mr. Clow*: There were industrial figures in that census, I think, of establishments employing ten or more.

B-1472. *Mr. Cliff*: Have you an approximate idea of the number of unregulated factories? Have you had any experience?—Only from observation. The number of unregulated factories employing ten persons or more in Delhi must be twice or three times as many as those that are under the Factories Act at the present moment.

B-1473. Have you visited any of these factories?—Yes, many of them.

B-1474. Can you tell the Commission what kind of conditions you saw in those unregulated factories?—The conditions are not too good; small children are employed; the workshops themselves are very crowded, very small and very dirty. They leave very much to be desired.

B-1475. Do they work long hours?—Yes, they do.

B-1476. Longer than under the Factories Act?—Very much longer.

B-1477. Have you any idea about the prevailing rates of wages?—No.

B-1478. With regard to the difficulty of obtaining what in your judgment is a satisfactory penalty for contravention of the Factories Act now, is there any means of forming public opinion which has been adopted by your Department other than prosecutions in courts?—I do not know of any.

B-1479. The Chairman suggested by question that you had not reached a stage where it was regarded as being bad form to contravene the Act. I was wondering whether your Department ever did any propaganda work with regard to the observance of the law?—We never have undertaken any propaganda in that respect, I do not think the ordinary person would be sufficiently interested.

B-1480. As far as I know from your report given to us at Lahore, you have not sufficiently interested the magistrates even?—Yes, that is so.

B-1481. I wonder whether with this experience of having had the administration of this law, you have reached any conclusion as to whether by circular letter or by articles in periodicals or the Press, you could create a stronger and more virile public opinion?—I think it would be very difficult. Often cases are reported in the press. Also there have been some writings in the press particularly from the other Provinces regarding small fines. I do not think that will help very much.

B-1482. Has this ever been the subject of a resolution or discussion in the Legislative Assembly?—No. I think the only discussion that has taken place will be my annual reports and my letters to the Government authorities concerned.

*Mr. Clow*: The Assembly in 1929 did agree to a substantial enhancement of the maximum penalty for contravention of the Act.

B-1483. *Mr. Cliff*: Since that date, with regard to the enforcement of the law in very serious cases to which Mr. Abel called our attention the other day, has there been any action taken by the responsible Ministers with a view of creating public opinion even in the Assembly?—No. With regard to what was happening in Delhi, when I reported to the Deputy Commissioner that the fines were not sufficient, he replied that he had instructed his magistrates to pay more attention to these matters and that fines should be heavier. That has had a slight effect.

B-1484. That is as far as it has gone up to the present?—Yes.

B-1485. You make a reference in your memorandum that unskilled labour has not made any progress or has not made progress during the last few years? Has there been any real attempt to train unskilled labour?—As far as I know, none.

B-1486. Having in mind the illiteracy and the helplessness of this population, is it to be expected that there will be an improvement unless they are aided and trained?—Certainly not.

B-1487. You said that sickness insurance would be useful. May I ask you whether you mean by being useful it would be helpful?—It would be helpful to the worker.

B-1488. Would it be helpful to the industry as well as to the worker?—Yes, I should think it would be.

B-1489. With regard to contributions, I take it that you accept the canon that no one should be called upon to pay except in so far as he is able to pay?—Unless you fix some definite rate such as a percentage of pay or something of that sort, you would have most people saying that they were not able to pay.

B-1490. You cannot put upon the poorest people of the land a burden heavier than their capacity to pay?—That is so.

B-1491. *Mr. Ahmed*: You remember when we visited the Government Press this morning we saw many workers there who were not very healthy. Is that due to overwork under the piece-work system or to insanitary conditions of their dwelling?—I think it is more a case of the type of person that is recruited. The conditions in that Press are good; lighting and ventilation are good; hours of work are not excessive; the rates of pay are good; the quarters they live in compare favourably with others. I think it is more a point of the type of person that is recruited for the work. There is one other thing that may be the cause of the workers there not appearing to be physically fit; and that is the press is comparatively new and the workers there might have been imported from other Provinces where the physique is not quite so good as it is here. I cannot think of any other reason. The work that they do is not unhealthy.

B-1492. Increased wages, good housing, facilities for education and recreation, supply of pure drinking water and such measures will increase the efficiency of the workers?—Yes, that is so.

B-1493. Will that not be a great help to the employer as well?—It would; because it would enable the worker not only to get more pay, but to earn more.

B-1494. They would be able to discharge their duties more satisfactorily?—Yes, that surely would happen.

B-1495. Do you think that it would be a good thing if Government granted loans to the employers for the purpose of acquiring land for housing workers?—I imagine it would help the employers to put up quarters for their workers.

B-1496. Does not working in the night cause a lot of accidents owing to the peculiar nature of the work and various other difficulties?—I do not know that accidents are more frequent during night than during day.

B-1497. Are they not more likely to occur?—Yes, they are more likely to occur, because the worker is less likely to be alert.

B-1498. It would be better for the worker to work at day than at night?—Undoubtedly better.

B-1499. Is it not difficult for him to work at night for eight to ten hours at a stretch?—He gets the rest interval in the night exactly the same way he does in the day.

B-1500. But he has to pass sleepless night?—Exactly.

B-1501. With regard to the sickness insurance scheme as to which Mr. Birla asked whether the workers would be willing to contribute, do you think it reasonable and feasible to ask the workers to contribute towards any such scheme?—If you do not get something from the workers you will be putting a tax on the industry. If the worker is going to be benefited from the insurance I think it is reasonable that he should be expected to contribute something towards it, however small.

B-1502. *Sir Alexander Murray*: In his memorandum, the Industrial Surveyor says that "the industrial employer is given facilities for the grant of Government land on favourable terms for purposes of building workers' houses." Can you tell us something about it? (Mr. Singh) I am afraid I do not know anything about it, except that one of the cotton ginning factories applied to Government for the grant of Government land at reasonable prices for the construction of coolie quarters and Government complied with their request.

B-1503. In how many cases did Government extend similar help?—I know of two cases.

B-1504. If any other employer in Delhi comes to Government with a similar request is he likely to receive the same consideration?—I think so, if the land belongs to Government.

B-1505. Do you know whether there is anything corresponding to that in the Punjab or in any other Province?—I know only so far as Delhi is concerned; I do not know of any other Province.

B-1506. Do you consider that the statistics of the cost of living compiled by the Industrial Surveyor are fairly accurate?—So far as the prices of commodities are concerned, they were taken from Government publications. But so far as house rent, social functions and cotton piece goods are concerned, we had to cover fresh ground and we have done that to the best of the resources at our disposal.

B-1507. As regards the variation in the cost of living. You give eleven different items, add up their prices, divide the total by 11 and call that the average cost of living for the period?—Yes.

B-1508. Now take sugar. In 1924, the price was 92 and in 1925 you say that the price rose to 349. By taking the actual figures 92 and 349 without weighing them properly you make your calculations faulty. Supposing, a man eats one maund of wheat in a week he may eat only one pound of sugar in a month. According to your calculation you have given the same weight to wheat as you have given to sugar. Have you any idea how much sugar a man will consume in the time that he takes to consume one maund of wheat or *bagra* or *jowar*. Will it be one pound?—I have no idea; I cannot say.

*The Chairman*: I think it is like reckoning the cost of the meal on the cost of the mustard.

B-1509. *Sir Alexander Murray*: Mr. Abel, dealing with the question of unemployment I think you said that that was due to the stoppage of building operations in Delhi?—(Mr. Abel) Yes.

B-1510. There must have been many thousands of workers engaged in building operations in Delhi?—There must have been probably 20,000 or more.

B-1511. What has happened to them?—They gradually disappeared. Many of them doubtless have gone back to their homes. Some of them have found employment here in Delhi.

B-1512. And many of them must be out of employment at the present moment?—Exactly.

B-1513. Do you know anything about the working of the double shift system in connection with the building operations in Delhi?—They did that when the Public Works Department had a great deal of work to do. But it was chiefly unskilled work. The difficulty arose that it was not possible to get skilled workers in order to put on an extra shift. When the application came in for exemption for these works, knowing that unemployment was prevailing in this Province, I suggested that an extra shift of workers should be put on. The Chief Engineer, Public Works Department said that it was not possible owing to the fact that there were not enough skilled workers. He said that it could not be done.

B-1514. Many of the workers employed in the building operations in Delhi must have been skilled workers. Is it the case that they have found employment elsewhere?—I do not know where the skilled workers could have dispersed. The work of stone masons is a specialized work.

B-1515. In connection with printing presses you said that probably these workers were recruited from other places. You went through the Government Press to-day and you are in the habit of going through presses periodically, I take it?—Yes.

B-1516. What have you to say of the physique generally of the workers in the press as compared with the workers you see in other industrial undertakings to which you go?—I think the standard of physique in the press we saw to-day was lower than that in the iron foundry or even in textile mills.

B-1517. Why should that be so?—I think it is a matter of recruitment. I know of no other reasons.

B-1518. *Mr. Clow*: You do not think it is because they are overworked?—No, the hours of work in the Government Press are 48 hours a week, normally; occasionally they go to 52 hours; and on very rare occasions, once in year, they apply for exemption to work 60 hours. I do not think it is a case of overwork.

B-1519. *Sir Alexander Murray*: You have stated in your memorandum that the average worker instead of working 10 hours a day is not more than 8½ hours on his job. Supposing you reduce the 10 hour day to an 8 hour day or 9 hour day, how long do you think the average worker will be on the job? Do you mean to say that there is a possibility of the time spent on the job also being correspondingly reduced?—I think he would still spend some time not on his job. In an 9 hour day he will be on his job for 8 or 8½ hours. It is the habit of the worker to take rest between 8 and 9 in the morning for a quarter of an hour.

B-1520. The Certifying Surgeon suggests the possibility of children between the ages of 12 and 15 years being periodically examined in order to see whether their health is maintained. He further suggests that that should be continued up to the age of 20, and that, if necessary, medical officers should be appointed by Government, their pay being charged to the mill owners. Would that be a reasonable proposition—that the mill owners should pay for Certifying Surgeons?—I do not think so.

B-1521. He gives, as his reason, that it would be necessary to see how the health of the children continued from year to year. On the other hand, he gives statistics which show that during 1928 he examined 1056 children, and only 10 of these were declared unfit on account of disease. That is less than 1 per cent. Do you think that would justify the appointment of a medical man to check the health of the children from year to year?—I hardly think it would.

B-1522. *Sir Victor Sassoon*: In the report of the Industrial Surveyor it is stated that an unskilled worker expects his wife and children to work whereas a skilled worker does not; so that in working out the family budget of an unskilled worker you would have to take into account the wages earned by his wife, and in the case of a skilled worker you would only have to take into account the man's own wages. Do you agree with that statement?—I should think that the families of men workers earning up to Rs. 150 a month would do something towards contributing to the upkeep of the house.

B-1523. Whether they are skilled or unskilled?—I should have thought so. I have not very great experience.

B-1524. From what you have noticed, would you say that it was not only so in the case of the unskilled worker but in the case of the lower paid skilled worker too?—I think it is so in the case of the lower paid skilled worker too.

B-1525. If night schools were started for the benefit of skilled and unskilled workers, do you think they would take advantage of them—if there were no fees or very small fees?—Skilled workers would take advantage of them to some extent, but I do not think that unskilled workers would.

B-1526. Even if there was a small fee charged?—Not very many. There would be a certain proportion of the skilled workers who would take advantage of free schools; but I do not think that either the skilled or unskilled worker is sufficiently ambitious to pay anything in order to learn at a night school.

B-1527. Am I right in thinking that your view is that if there was no fee you might fill a school, whereas if there was a fee you would not expect to fill the school?—That is so.

B-1528. On this question of the efficiency of the workmen, I take it that, compared with Europe, we have to take his efficiency when he is working all out, and we have to allow for his habit of being a slow beginner and leaving his work more quickly. There are two sides?—Yes.

B-1529. When he is working all out would you say that his efficiency compared very badly with the European worker?—I am of opinion that he compares unfavourably.

B-1530. And on the top of that you have this habit of his of delaying beginning?—Yes.

B-1531. So it is a question of his always being slow in getting on to his work—quite apart from how much work he is capable of doing?—That is so.

B-1532. Supposing better housing were provided for workers but that they had to pay a little more rent for it, do you consider they would take advantage of it, or do you think they would still prefer to live where they are because it is cheaper?—Judging by the fact that even when they have good quarters provided for them they are very keen to sub-let, it would seem that if bigger houses were provided for them at a bigger price, they would not take very much advantage of them. It is a matter of education—training the man up to appreciate something more.

B-1533. Am I right in thinking that the worker would only take a better house if he felt he could make more out of it by sub-letting and that he would not take it if he were not allowed to sub-let?—If the cost was heavier I doubt if he really would take it.

B-1534. *Miss Power*: Sir Alexander Murray put the question that there was a very small percentage of children whose physique was poor, and that this possibly showed that there was no necessity for the appointment of full-time medical officers. Do you not think the figures possibly reflect rather the inadequacy of the type of medical inspection made by the Certifying Surgeon than the actual state of health of the children?—The Certifying Surgeon does his work well but there is probably quite a lot in what you say—that all Certifying Surgeons should be conscientious men.

B-1535. You do not accept these figures as being typical of the standard of health of the average child who applies to get into factory labour?—Not absolutely, but it is very seldom that I find a child in a factory who is physically unfit, and whom I have to send back to the Certifying Surgeon to be re-examined.

B-1536. *Sir Ibrahim Rahimtoola*: You make the statement that “there has been retrenchment in some industries owing to several causes. In order to minimise the cost of production, there is a general tendency for the introduction of labour-saving appliances and high speed machinery in the industrial undertakings generally”. And you go on a little later to support that statement by saying that “the iron foundry

industry is in a depressed condition owing mainly to the reported poverty of the yield of sugarcane crop in the surrounding districts coupled with increased external competition in recent years." Then the whole problem that we are asked to investigate depends upon the economic production of factories?—(Mr. Singh) These are the causes which have led to the surplus of labour in Delhi.

B-1537. You say labour saving and high speed machinery has to be brought in in order to meet external competition, and as a result unemployment increases?—Surely.

B-1538. The capacity of the employer to employ the number of hands usefully depends upon his ability to produce on a basis by which he can compete successfully with foreign imports?—Quite so.

B-1539. And therefore any proposals to increase the cost of production would probably have the effect of increasing unemployment, because if the factory is unable to produce on an economic basis, and to successfully compete, in the open market it would have to shut down?—Quite so.

B-1540. Therefore the problem has to be examined from the point of view of successful competition?—To some extent.

B-1541. And in order to get that successful competition labour must be efficient and the management must be efficient?—Quite so.

B-1542. Now if management and labour are both efficient, if the machinery employed is up-to-date, then there is a fair chance of that industry prospering and being a source of larger employment?—Yes.

B-1543. Anything that militates against successful enterprise would adversely affect all the industries concerned?—Surely.

B-1544. Then you say "The development of home industries is known to play an important role in the national welfare of a country." And again "The solution of the problem of economic salvation of the masses fundamentally lies in the organization and development of home industries." Dealing with the question of labour and its well being, would you advocate a solution on the lines you have indicated, namely, an increased number of successful enterprises in industrial development with both management, and labour freely efficient?—Yes.

B-1545. And the cost of production should not be such as would allow successful competition. These factors have to be borne in mind in coming to a decision on these problems?—Yes.

B-1546. *Mr. Clow*: Is primary education compulsory in this province?—In certain municipal wards.

B-1547. It is not general?—No.

B-1548. Are these wards in which primary education is compulsory wards in which industrial workers live?—No.

B-1549. You mention that there is undue competition with Indian States. To what States are you referring and to what industries?—Sarawar, Kishan-garh and Vijyanagar.

B-1550. This does not refer to Delhi?—No.

B-1551. Have you any responsibility for the enforcement of the Boilers Act?—No.

B-1552. Is your work carried on entirely with Government funds or do you receive contributions from employers?—The Industrial laboratory was established from funds contributed partly by industrialists, but now it is being maintained by Government.

B-1553. Employers are no longer contributing to it?—No.

B-1554. Could you give us a specific instance of any particular industry which is competing with the industries of British India?—Cotton ginning and pressing.

B-1555. How many ginning factories are there in the surrounding Indian States?—I know of seven.

B-1556. *Miss Power*: You state that a large number of woman and children are indiscriminately employed. Do you know whether there are more women and children employed in the unregulated workshops than there are employed in the regulated workshops?—In the thread-ball factories, of which there are about 18 in Delhi, from 40 to 200 women are employed making thread-balls. What hours do they work?—Ten, eleven and twelve hours a day.

B-1557. Can you answer my first question—whether there are more women and children employed in the unregulated workshops than there are in the regulated workshops?—We have no statistics.

B-1558. *Mrs. Chatterjee*: You state that a maternity home has recently been started at the mills. Have any women been appointed in connection therewith?—A woman has been appointed as midwife.

B-1559. Is she a midwife or a nurse?—A midwife and a nurse.

B-1560. Has she had any special training?—She is a trained midwife.

B-1561. You mention the question of unsatisfactory sanitary arrangements at certain places. Has the matter been brought to the attention of the Health Officer?—I have brought it to the notice of the Inspector of Factories, under whom I act.

B-1562. Has the Inspector been able to do anything?—Not to my knowledge.

B-1563. You refer to welfare work. Do you think the proprietors of the mills do anything for the workers in this direction?—Libraries are provided for the literate people and the illiterate take part in games.

B-1564. Is there any particular organisation existing which looks after these matters and which induces the people to avail themselves of these facilities?—There is a labour secretary, who entertains them.

B-1565. Do you not think some outside agency would be able to do it better?—It would be very helpful.

B-1566. *Colonel Russell*: You say in your memorandum: "The coolie camps housing the industrial operatives employed in the building trades in New Delhi present not a pleasant spectacle, and suffer by comparison". By comparison with what?—Similar accommodation provided by the mills.

B-1567. You are not comparing it with houses in Delhi?—No. I am comparing it with the houses provided by the employers.

B-1568. You say "The food of the average worker is poor, and consists of inferior quality of flour, pulses, rice and ghee". Is it a fact that the workers are only supplied with inferior qualities of these things?—They cannot afford to purchase good qualities of food.

B-1569. Do you know anything about vegetable ghee?—Yes. It is a cheap commodity taken advantage of by the poorer classes.

B-1570. Would you have any objection to it being prohibited, or do you think it is a valuable foodstuff in itself?—It is a commodity which is consumed by the poorer classes, but it is devoid of food value.

B-1571. You refer to the question of medical facilities, and you say that they are not availed of owing to the fear of the worker of a loss of a day's wages entailed in the visit. Is it a common experience that the men do not make use of medical facilities because of the fear of the loss of their day's wages?—They do not go if it means a long journey, because they would lose their day's wages.

B-1572. What happens if a man is very sick?—Then he is attended by the factory doctor, or he is taken to the nearest medical man.

B-1573. But they do make use of the medical facilities available?—Yes.

B-1574. You refer in your memorandum to the general absence of statistics. Have you a statistician?—Recently I have had an assistant appointed under me.

B-1575. What is his training?—He is being trained now. His actual work will commence from the 1st January 1930.

B-1576. Who is training him?—He is getting training here, locally, in the Municipal Committee under me, and I propose to send him outside too.

B-1577. So that you anticipate that from the 1st January your statistics will be of greater value?—Yes.

B-1578. *Diwan Chaman Lall*: You state that the average wage of an unskilled worker is 10 annas a day. Would I be correct in saying that the average unskilled worker living on that wage is living on a starvation wage?—That is the minimum living wage for that class of worker.

B-1579. Is it or is it not a fact that a minimum wage of 10 annas a day for an unskilled worker is a starvation wage?—He can accommodate himself. He is accustomed to accommodate himself within that limit.

B-1580. You have given us in your memorandum a family budget for the unskilled worker. You say that this budget is for a family of five. You put down food at Rs. 17 a month. Does that work out to about  $1\frac{1}{2}$  annas a day per head?—Yes.

B-1581. Would you not agree with me that, taking into account that on food they are spending  $1\frac{1}{2}$  annas a day per head, that is a starvation wage?—It is an inferior quality of stuff which the man purchases. He takes sufficient food to fill his belly.

B-1582. Would it be correct to say that, because they spend only  $1\frac{1}{2}$  annas a day, many of the workers go without the usual two meals a day?—I have no experience.

B-1583. On what basis did you estimate the Rs. 17?—Flour.

B-1584. How much flour would you require for a family of five?—Five *chapatis* for the man, and five for the woman and  $1\frac{1}{2}$  for each of the three children.

B-1585. And what else?—And *dal*.

B-1586. That is all?—*Dal*, oil, common salt, pepper and turmeric.

B-1587. Supposing this is the diet that is given—one seer of *atta*, a little *dal* I presume, oil, salt and pepper for a family of five. No milk, no vegetable?—Nothing of that sort. Only on ceremonial occasions they take extras.

B-1588. Do I take it then that the average unskilled worker is living on this diet?—Yes.

B-1589. In the skilled worker's budget you have given in your memorandum, you provide Rs. 18 for food for a family of five. Do I take it that the average skilled worker's family is also living practically on this diet, at only a difference of one rupee a month?—Yes.

B-1590. It is not a healthy diet. Nor a nourishing diet?—No.

B-1591. A question was asked a little while ago as to whether these workers would be ready to pay a little more rent in order to go into a better class of houses. Is it because the margin of their wages is so small that they cannot afford to pay a single anna even towards extra rent?—In my opinion, they cannot afford to pay.

B-1592. In your memorandum you mention that the permanent workers in Delhi are 60 per cent., while (Mr. Abel) in his memorandum says they are 80 per cent?—That may be in regard to factory labour.

B-1593. There are two figures given, one is 60 per cent. and the other is 80 per cent.; which is the correct figure?—I have taken industrial labour as a whole, including the factory labour. I have calculated 60 per cent. as the total labour force which is permanent in Delhi.

B-1594. There are no proper methods of calculation?—Only from personal inquiries I have come to this conclusion.

B-1595. You say that you are "not aware of any appreciable degree of dismissals nor of any voluntary retirements." Is it correct that the average agreement that a man enters into when he seeks work in a factory is purely a verbal agreement?—Yes.

B-1596. So that at any time he can be discharged or dismissed?—Mostly that is the case.

B-1597. There is no security of tenure at all?—No, in most cases.

B-1598. You say "there is no marked distress noticeable amongst the industrial population in this province" and yet you say that many of the industries are passing through a period of depression. That would entail unemployment, I take it?—It will throw out of work a certain number of persons.

B-1599. You do not mean to imply that there would be no distress amongst those who have been thrown out of employment?—At present there is no marked distress amongst the industrial population.

B-1600. What do you mean by "no marked distress"?—They are not going without food or clothes.

B-1601. You mean even those who are unemployed and have no means of earning their livelihood?—They are earning enough for their maintenance.

B-1602. Would you agree with me that there would be distress if a man were thrown out of his job?—He will get some other job to earn his maintenance.

B-1603. Suppose he is not able to, considering that the industry is passing through a period of depression?—If he cannot earn anything, of course he will be in distress.

B-1604. Would you be in favour of a scheme for unemployment insurance in order to protect that particular class of worker?—I think the unemployment insurance, under existing conditions, might be productive of idleness. The thing is that industrial workmen are uneducated, they are illiterate, they do not realize their responsibilities at present; so it might encourage them to be idle.

B-1605. Have you any experience of the system of unemployment insurance in other countries?—No.

B-1606. What is your suggestion regarding training and promotion of workmen; have you any concrete suggestions?—The Government industrial schools can provide training for these people.

B-1607. You have got an industrial school here?—Yes.

B-1608. How many pupils have you got in that industrial school?—About 300.

B-1609. In your memorandum you say "The effects of contract work appear to be generally satisfactory to the parties concerned". What do you exactly mean by that? Let me put it like this: Do you mean to imply that the average worker is willing to part with a portion of his earnings which he has earned to a man who is a contractor who does no work himself and is pleased with the idea that he should part with a portion of his earnings to that particular contractor?—I mean the employer who gives a contract to the contractor. He gets an out-put from him, and the employee who works under the contractor gets his wages.

B-1610. Would you prefer such a system?—I wish to eliminate the middleman.

B-1611. Are you in favour of setting up unemployment exchanges?—Yes.

B-1612. You say "The cooly-camps housing the industrial operatives employed in the building trades in New Delhi present not a pleasant spectacle and suffer by comparison." Would you be in favour of a comprehensive Housing Act which would undertake legislation in regard to housing?—I have no experience of it.

B-1613. What attempts have you made to find out whether the workers want better housing or not?—Have you any experience of that?—No.

B-1614. Have you made any attempts to investigate the prevalence of occupational diseases?—I have been enquiring every now and again during

the course of my duties, and I have never come across any case of occupational disease in Delhi.

B-1615. No special inquiry has been instituted?—No.

B-1616. Dealing with sickness insurance you quote the resolution of the Assembly that the Governor General should not ratify the Draft Conventions nor accept the Recommendations of the International Labour Conference. What is your personal view about this matter?—I am in favour of sickness insurance.

B-1617. In your memorandum you speak of amendment of the Workmen's Compensation Act. You have made very helpful suggestions, if I may say so Mr. Mehtab Singh. Are they the result of your considered judgment and practical experience in this matter?—Yes.

B-1618. Dealing with the reduction of hours, you say: "There appears to be no possibility of reduction in maxima as was indicated in the recent speech delivered by the Employers' Delegate from this country at the last International Labour Conference." What do you mean by that? Do you mean that the employers are averse to it, or it would not be a desirable thing?—I mean that the existing imperfect development of industrial organization in India does not make room for reduction in the maximum number of hours.

B-1619. Do you mean to say that the employers are to blame for not organizing industry, or do you blame the workers?—The thing is that the Indian worker is less efficient as compared with the foreign worker.

B-1620. And therefore you want longer hours of work?—I do not want to adversely affect industry and, at the same time, the worker, because he is mostly employed on piece-work system at present, will not be able to earn what he is earning now if the hours of working are reduced.

B-1621. Dealing with Trade Combinations you say that the *Mazdur Sabha* met with no success. That was a local trade union that was formed, I believe, last year when the Assembly was in session?—Yes.

B-1622. Is it a fact that the employers generally refused to recognize the leaders of the *Mazdur Sabha*?—I cannot say.

B-1623. Knowing what you do, can you tell me whether the increase in the cost of living in Delhi has been greater than the increase in the wages of the workers in the periods that you mention in your memorandum?—I have given there the variations in the wages also.

B-1624. But what is your opinion?—That the wages have also fluctuated to some extent.

B-1625. In your opinion, have the wages kept pace with the cost of living in Delhi or not?—I cannot say.

B-1626. *The Chairman*: Mr. Mehtab Singh, how long you have held this present office?—Since 1924.

B-1627. And what is your previous experience of industry?—First of all for six years I was employed as a lecturer in science in the Gordon College at Rawalpindi, and for 5 or 6 years I was doing business in indigenous medicines, drugs, herbs and chemicals.

B-1628. You have given in your memorandum and in evidence some opinions about various schemes, for instance, unemployment exchanges, sickness insurance and also unemployment insurance. Have you made an estimate of the cost of those services?—No. I am asked by the Government to submit my opinions to them on these Bills and I make a personal study of the existing conditions and submit my views to the Government.

B-1629. But you did not carry out an investigation into the cost?—No.

B-1630. Do you know if any investigation has ever been carried out in India as to the cost from an actuarial point of view?—Not to my knowledge

(The witnesses withdrew.)

**Mr. P. MUKERJEE, Mr. W. R. TAYLOR and Mr. SHRI RAM,**  
**representatives of the Punjab Chamber of Commerce.**

B-1631. *The Chairman:* Will you tell me about the organization of your Chamber of Commerce?—(Mr. Mukerjee) The organization of the Chamber of Commerce started in 1905. We have at present about 72 members including both Europeans and Indians. We represent all interests, banking, industrial, mercantile, railway, etc., covering an area of the provinces of the Punjab and Delhi and certain parts of Ajmer-Merwara and Rajputana.

B-1632. Do you consider your membership fairly representative?—I think there are very few firms of importance in these provinces which are not members of the Chamber.

B-1633. Are there any sub-divisions of your Chamber of Commerce in which employers in specific industries meet together?—They are not exactly affiliated to the Chamber of Commerce, but there is an association here in Delhi called the Millowners' Federation of which my friend and colleague Mr. Shri Ram is the President.

B-1634. Your Chamber as such deals not specifically with employers' questions but with general questions of trade and commerce?—We have different Standing Sub-Committees in which we take up different matters. For instance, if there is any question relating to Industrial matters it will be dealt with by the Sub-Committee appointed for the purpose and if there is any question on banking, it will go to the Banking Sub-Committee and so on.

B-1635. I notice that you express sympathy with the proposal for sickness insurance on a restricted scale. You say that the cost of the scheme should fall equally in the proportion of one-third on the worker, one-third on the employer and one-third on the State. Do I take it that the employers within your association are agreeable to bear their one-third?—Yes; we referred this matter to all the employers and this is their considered view.

B-1636. You also agree to bear one-third in your second capacity as taxpayers on your income?—Yes.

B-1637. Have you any evidence if the worker is willing to contribute his one-third?—No.

B-1638. Has your association formed any estimate of the cost of a scheme of that kind?—No, we have not. We considered it as a general proposition; we have not gone into the details and we have not even considered about the practicability of instituting the proposal. There are practical difficulties in the way.

B-1639. It is a kind of expression of good-will?—I think it can be put in that way.

B-1640. Referring to the question of the method of payment of wages you say "The system of monthly payment of wages is generally in vogue in industrial undertakings in the provinces of the Punjab and Delhi. Some of them however pay wages fortnightly".—Yes. For instance, Mr. Taylor in certain cases pays his labour fortnightly.

B-1641. What kind of factory is this?—Carpet factory.

B-1642. Are wages paid fortnightly in more than one carpet factory?—(Mr. Taylor) In the carpet industry we pay fortnightly.

B-1643. You do not find the men objecting to that because we have had it suggested in some quarters that they would hate to be deprived of the monthly payment?—We have not found it so, because we have always paid fortnightly. Probably if we were to pay them on a monthly basis they would object strongly, having got so accustomed to the fortnightly payment.

B-1644. Your experience is that it has not done them any harm to be paid fortnightly?—No.

B-1645. In your memorandum you make an interesting reference to prohibition. You say "As regards alcohol and drugs, absolute prohibition will not only raise the moral standard of the worker but will also increase his efficiency".—(Mr. Mukerjee) I think that necessarily follows.

B-1646. Do I take it that the members of your Chamber of Commerce are ready for that proposal applying not only to the workers but to everybody?—On that I have some doubts.

B-1647. *Mr. Clow*: As regards the payment of wages in the carpet factories, is that a payment to the contractors or to the workmen?—(Mr. Taylor) Payment to both; we pay to the contractors who in turn pay to the workmen; it is a general distribution.

B-1648. They do pay them actually fortnightly?—Yes.

B-1649. Is there much delay in the payment of wages in this province?—(Mr. Mukerjee) They are paid monthly. If they are paid, say, on the 15th of this month, they will be paid exactly on the 15th of next month.

B-1650. What is the usual period lapsing between the end of the month and the payment?—About 15 days.

B-1651. Would you find it very inconvenient if you were compelled to pay, say, within 2 or 3 days?—It is almost impracticable, as it would be impracticable to make up the pay-sheet even.

B-1652. You could not do it?—I think big industries cannot do it.

B-1653. It is done in other countries?—I think in other countries they pay weekly.

B-1654. Surely that is more difficult because more accounting has to be done?—I do not think so.

B-1655. If a weekly system were adopted, would there be the same difficulty?—I think the difficulty would be greater for the change from the system which obtains at present would not be liked by the workers.

B-1656. But what is the difficulty in calculating the wages due in two days? Is it lack of staff?—It may be due to lack of staff, but in case the suggested change of payment is enforced, i.e., within the first week of the succeeding month it would lead to unnecessary increase in the staff who may not have enough work for the whole month.

B-1657. Take a factory employing 1,000 persons. Suppose Government compels you to pay wages in three days how much extra staff would you require?—(Mr. Shri Ram) The position here is quite different from the position in the west. Here we have not only to calculate the monthly wages due to the man, but we have also to calculate the wages due to him under the piece work system. We have to make deductions for rent, bad work, advances paid, provident fund and so many other things. We have to make all these calculations through human agency, unlike in the west where they employ machines even for ordinary calculations. Moreover from time immemorial the workers here including the clerks have been accustomed to receiving their wages once a month. Of course those employed on inferior jobs such as road-making and building receive their wages weekly or fortnightly. The rest would not like to receive their wages weekly or fortnightly.

B-1658. Because they would feel that their status has been reduced?—Exactly.

B-1659. The average man's wage does not vary from month to month?—It varies on account of various causes such as his absence from work, the advances he has received, and deductions for bad work. The regularity of attendance here is nothing like the regularity of attendance in the west. That is why the calculations take a long time to finish.

B-1660. Are advances generally given to the great majority of the workers?—So far as my mill is concerned we give two sorts of advances, provident fund advances and pay advances. Provident fund advances are

given for big expenses such as marriage and pay advances are given every week for meeting small expenses before they get their pay.

B-1661. Generally what proportion of the pay is given to them as advances?—In the case of the monthly wage workers we give anything between 25 to 30 per cent. and sometimes even 75 per cent. of the pay for new comers; for the old hands we give up to 50 per cent.

B-1662. Do you charge interest on these advances?—We do not charge interest on advances against pay; but on advances from the provident fund which are taken for buying land, for marriages and so on we charge  $7\frac{1}{2}$  per cent.

B-1663. Do other employers charge any interest on advances against pay?—I do not think anybody charges interest on such advances. The small interest we charge on provident fund advances is intended just to keep them from taking too much advances.

B-1664. *Mr. Birla*: It has been suggested that the employers in Delhi are generally in favour of sickness insurance being introduced and that they would be prepared to contribute their own quota to the sickness insurance fund. Taking a specific case of your own mills do you think that you would be prepared to contribute towards such a fund?—We have all of us sympathy with the sickness insurance fund. So far as my mills are concerned, even without the sickness insurance I do not think any of our workers suffers. When he is sick he is helped in some form or other. He is helped so far as medical attendance is concerned, which he gets free. Even with regard to wages he is given some form of help. But if it came to a question of compulsion it would all depend on the conditions then existing in the factory.

B-1665. You may be doing many things voluntarily, but if you are compelled by law to contribute to the sickness insurance fund would you do it?—I have no idea what that amount of contribution will be. If it were a big amount certainly we would fall out of the scheme.

B-1666. I take it you have not considered this question seriously and what has been expressed in this memorandum is a sort of lip sympathy?—Not lip sympathy exactly, but as the Chairman put it, just an expression of good-will.

B-1667. Do you think that your workers will be prepared to contribute towards such a fund?—Certainly not. It was years before we could make the provident fund system compulsory; it had been optional all the time before.

B-1668. When did you start this provident fund?—About 12 or 14 years ago.

B-1669. What percentage do you contribute?—Jobbers, mistries and clerks contribute  $\frac{1}{12}$  of their pay and we contribute an equal amount. It is on a sliding scale for the lower staff. People getting Rs. 10 and below and half-timers contribute 8 as. to 12 as. a month.

B-1670. What does your worker do generally if he is ill?—Does he take advantage of the medical facilities provided by you, or does he prefer to go back to his native place?—If he has ordinary illness, certainly he takes advantage of the medical facilities which I fortunately have in abundance. My mill is hedged on all sides with medical institutions like the Tibia College, the Lady Willington Medical School, and the Municipal dispensary to the cost of which we contribute a good deal. Those who have been ill for a long time and those who have not become permanent residents of Delhi would rather go away to their villages.

B-1671. Suppose a man is seriously ill and wants to go to his village and draw from there the benefit due to him, would you be averse to pay him on the certificate of any unknown doctor; or how would you manage it? You know it is not easy to get doctors in our remote villages.—We are aware of the difficulties. We pointed them out when the question came before us. Even the Government referred to them in their letter to us.

B-1672. In your opinion apart from the difficulty of contributions, which as you say is a small thing the employers might agree to, there are other difficulties, *viz.*, about administration. Therefore you think that at present it does not seem to be a practical proposition?—Yes, I think, so.

B-1673. All the same you are in sympathy with the object in view and you would desire that some sort of scheme should be promulgated?—Yes.

B-1674. In your memorandum you say: "As far back as 1920 a suggestion was made by Government as to the desirability of interesting Local Governments in the matter of housing which this Chamber fully endorsed and it is understood that Government always assist by leasing out its land for industrial concerns on favourable terms". Is that your own experience too?—My experience is just the reverse of it. I do actually want to build houses for my workers. But it is simply impossible to get any sort of help from Government. So far as the Local Government is concerned they are quite willing to help. In one case they recommended to the Imperial Government that a plot of land might be sold to me at Rs. 4 per square yard. The Imperial Government turned down that proposal and I had to pay Rs. 9 a square yard for that land.

B-1675. What is the sort of help you want from Government?—We must get land somewhere near the factories. Then we should get advances of money on favourable terms. In their circular letter No. 628, dated 12th August, 1920, the Government of India clearly stated that the Local Governments and Municipalities would help us financially in building houses for the workers; but in practice it is impossible to get anything out of them.

B-1676. You suggest that Government should not only give you lands at reasonable prices, but that they should also grant you loans if necessary.—Yes.

B-1677. It has been suggested in certain quarters that if the working hours were reduced the efficiency of the worker would be increased. Can you throw any light on that point?—I doubt if we could get any more output in proportion if we cut it to 8 hours. At present for a 10-hour day we are getting 8½ hours work.

B-1678. What is your spinning efficiency?—I could not tell you since I have been out of touch for the last six or seven months. I think it might be about 90 per cent.

B-1679. *Sir Victor Sassoon*: How many ounces do you get per spindle on 20's?—With warp spindles we get 6½ to 6¾ ounces.

B-1680. *Mr. Birla*: I think it would be more appropriate if I put the question as to what efficiency you get. Because so far as the number of ounces are concerned, it all depends on the speed of the machine and the quality of cotton. With cotton of bad quality the speed would have to be reduced and consequently the output of thread in ounces will be diminished. I want to know what efficiency you get.

*Sir Victor Sassoon*: How is he going to work that out?

B-1681. *Mr. Birla*: Ounces are not essential from my point of view. You think it is 90 per cent.?—I think so, but I am not quite sure.

B-1682. This 10 per cent. goes towards doffing, breakages and contraction and all that sort of thing?—Yes.

B-1683. If we reduce the working hours from 10 to 8 what do you think will be the efficiency of the worker converted into 10 hours production? In the ordinary course there must be a 20 per cent. reduction.—Efficiency does not vary with the number of hours.

B-1684. What will be the percentage of efficiency converted into 10 hours production?—There might be 1 or 2 per cent. better efficiency. I do not think there is room for much. When we were having a 16-hour day, the efficiency was the same as when we had a 12 or 13-hour day. Now, I think it is all different and there is not much room for efficiency.

B-1685. Could you furnish the Commission with a statement showing what would be the increase in the cost of production if the working hours were reduced from 10 to 9 or from 10 to 8?—If the working hours are reduced from 10 to 8 per day, it will mean an increase of 16 and 13 per cent. in the cost of yarn and cloth, respectively.

B-1686. Because I think that would be very helpful in finding out what the increase in the cost of production would be in a cotton mill, if any question of the reduction in hours were considered.—I will work that out.

B-1687. You have experience of the double shift system?—Yes.

B-1688. I understand that your mills also work 10 hours during the day and 8 hours during the night?—Yes.

B-1689. What is your experience about night work? Do workers prefer to work at night or during the day?—Certainly during the day. For 8 hours in the night I have to pay the same wages as for 10 hours in the day.

B-1690. Have you got cooling arrangements?—Yes.

B-1691. Does that keep the temperature down during the warm season lower than it is outside?—Except in the rainy weather, it is comfortable.

B-1692. Have you any experience of trade unions in Delhi?—There is no such thing as a trade union.

B-1693. There is no organized trade unions?—Organized or disorganized, there is no such thing.

B-1694. Did you ever refuse to recognize any? I understand there was one union some time back?—A few people at one time collected together and called themselves a *Mazdur Sabha*. (Mr. Mukerjee) What Mr. Shri Ram says is that there was no registered trade union. (Mr. Shri Ram) Registered or unregistered it does not matter. There were certain mushroom trade unions which lasted for not more than a month or 15 days. I do not think they lasted for more.

B-1695. *Diman Chaman Lall*: Why did they not last longer?—There must have been some inherent defect in them.

B-1696. *Mr. Birla*: Did you refuse to recognize any trade union?—If there had been any trade union I would have recognized them. There did not exist any proper trade union.

B-1697. Are you doing welfare work?—Yes.

B-1698. What is the welfare work you are doing?—We give them every week some soap and water to wash themselves with. Then we hold the workers' fair every year in which we give for each man half-anna tickets worth one rupee with which to buy sweets and things of that sort, so that there might not be any hoarding of money. We arrange joy rides, magic lanterns, a laughing gallery and so on. They enjoy them immensely.

B-1699. Do you provide any sort of daily recreation?—Since I came back I started loud speakers and playing gramophones half an hour before the mill starts, twice a day. We have some other small things in our own way. We give them cinema shows.

B-1700. Does any outside agency ever afford any help to you in the matter of your welfare work?—When this so-called *Mazdur Sabha* was started some well-intentioned people volunteered to work among my staff; but I did not require their services, because I think I am in a better position to serve my staff than those coming from outside who really do not know the labour problems.

B-1701. Are there any social workers in Delhi who are working among the working classes?—Very few, I might say, one or two only.

B-1702. What is your view about this drink problem? Do you think that total prohibition of drink among the working classes would help to improve their efficiency?—It is much less as it is, than it was ten years ago. If compulsion were introduced I do not think anybody would object except very few old sinners.

B-1703. Would it increase the efficiency of the workers?—Certainly. The advantage will be not in efficiency, but in better attendance.

*The Chairman*: You do not suggest Mr. Birla, that it should be applied to one section of the people only?

B-1704. *Mr. Birla*: Is it not a fact that so far as Indians are concerned they look upon drink as a sort of evil and generally they do not drink, at any rate publicly?—(Mr. Mukerjee) I think there are many of those who drink and do so publicly.

B-1705. You think that Indian public opinion would strongly support a proposal for total prohibition?—(Mr. Mukerjee) I think so. (Mr. Shri Ram) I do not know about the country, but the Delhi Municipality of which I am the Vice-President has already proposed to increase the duty on liquor from nothing to Rs. 5 per maund during the last four or five months.

B-1706. *Mr. Cliff*: What is the Delhi surtax?—Up to about a few weeks ago there was none. I understand that they have imposed a tax of Rs. 5 a maund.

B-1707. *Sir Ibrahim Rahimtoola*: On country liquor or imported liquor?—Less on country liquor and more on imported liquor. I was away and I do not know definitely how much it is.

B-1708. *Mr. Birla*: May I take it from you that so far as Indian public opinion is concerned they will support such a proposal?—Yes, there will be a preponderating majority in favour of a proposal for total prohibition.

B-1709. *Miss Power*: In dealing with staff organization you say that "owing to lack of education it is not easy to train labourers for promotion to the superior staff and there are, therefore, not many facilities to train them". Do you know of any experiment being conducted by the members of your Chamber to give any educational facilities of that kind to the lower grade workers?—We are doing our very best to induce these people to attend night schools and improve themselves and make themselves fit for higher posts. As it is they cannot rise above the post of jobbers.

B-1710. Is there anything else for them except night classes?—Nothing else except the night classes. Even the night classes they would not take advantage of.

B-1711. Do you not think that possibly long hours of work has something to do with that? People working 10 to 12 hours a day may not be inclined to go to night classes after that.—I do not think that stands in their way. That is mere change of work.

B-1712. Our experience in the West has been that working long hours stood very much in the way of attendance at night classes.—I do not think that stands in their way here.

B-1713. *Mr. Cliff*: Why do you not think that it stands in the way?—That is my view. I have been with them for 25 years now and I know they are averse to any sort of education. All that is now slowly changing and they want to learn something. But still they are far behind.

B-1714. *Sir Alexander Murray*: Children below the age of 12 years are not employed; they could go to school if they wanted to?—Yes.

B-1715. *Mr. Cliff*: Do you provide a school for the workers in your mill?—We provide the building and the Municipality provides the staff.

B-1716. *Miss Power*: In your memorandum you have stated that "in a very restricted scale maternity benefits are available. An allowance of three months' wages is in certain cases given to women labourers, that is, two months before and one month after confinement". Can you tell me how many firms are involved in a scheme of that kind?—I think only one.

B-1717. How many women are covered by that?—I cannot tell you about this particular firm, but we have not 1 per cent. of female labour in our mills.

B-1718. So that it is less than 1 per cent.?—Mr. Birla has introduced this maternity benefit scheme in his mills. I do not think they have many women there.

B-1719. Would your Chamber be in favour of a Bill of the nature referred to in your memorandum covering the whole of the Punjab and Delhi?—(Mr. Mukerjee) We have said that we have full sympathy with Mr. Joshi's Bill about maternity benefits which was introduced in the Legislative Assembly before 1925. If the scales of benefit are placed before the Chamber, we shall examine them and we shall be able to give a considered opinion on the Bill itself. As it is I understand that employers in general throughout the country have some sort of maternity benefit scheme.

B-1720. You say: "Stringency of inspection and enforcement of regulations are generally at times more than necessary both in seasonal and permanent factories". Would you explain what you mean. Do you mean that there is not an excessive amount of industrial inspection?—I mean that there is too much industrial inspection. If any mill applied to Government for exemption to work over-time within limited periods, although it is provided for by the Act, such exemption is not usually granted, or if it is granted it is done so too late. The mill authorities do not even get a reply from Government in less than a month. Our practical experience is this. This is one form of stringency. Again they do not allow any laxity on the part of employers and the inspecting authorities are only too ready to pounce upon them even for small lapses.

B-1721. Do they not give you a warning first?—They give a warning, but they are also very prone to instituting prosecutions even for small lapses.

B-1722. Are you referring only to cotton ginning factories?—I am referring to cotton ginning factories, mills and everything coming under the Indian Factories Act.

B-1723. Do you imply that the cotton ginning factories never work above the regulated hours?—No, they do not. They cannot, according to the Act.

B-1724. Your evidence, you probably know, is contrary to that of the Factory Inspector who stated that there is a great deal of over-time work in the cotton ginning mills in the Punjab?—That has not been my experience.

B-1725. How are you in a position to say that? Have you any means of collecting information as to the actual number of hours they work every day?—We have not found that necessary.

B-1726. *Mrs. Chatterjee*: With regard to welfare work you said that you give them soap and water to wash themselves with once a week and you conduct some fair when you give Re. 1 to buy sweets. Do you think that is sufficient welfare work?—That is a matter of opinion. We think we do more than what most of the factories do not only in India but also in the West.

B-1727. What is your definition of welfare work?—That is again a difficult question to answer.

B-1728. Had you any definite scheme after you returned from Europe regarding the welfare work?—Problems of India are quite different from the problems of the West. What is necessary in the West is entirely unnecessary here.

B-1729. I could grant that it is so. But have you not to stretch your imagination and try to suit those things?—I am thinking of them. We have just started, as I said, playing the gramophone and the loud speakers half an hour before the work starts, twice a day.

B-1730. *Diwan Chamon Lall*: Mr. Mukerjee, you state in your memorandum that the indebtedness of the workers is almost general. Can you tell me what it is due to?—I am afraid I have to revise my opinion. On further enquiry I understand that that is not so general as it used to be ten years ago.

B-1731. If there is indebtedness, what is that due to?—I think the indebtedness of the labour population is due to the extreme poverty of the country.

B-1732. But you go on to say that raising the level of wages will not increase the efficiency of the labourer?—I personally think that the labour population does not understand the value of money. So long as they have got enough to eat, they will not go to work. That is my personal experience. Raising the wages will not necessarily increase the efficiency of the worker.

B-1733. *Mrs. Chatterjee*: Is not the inefficiency of the worker really due to lack of food? The physique of the people is generally going down. Have you not noticed that?—No, we do not say that; we say that lack of education is the main factor.

B-1734. You do not think that lack of food has got anything to do with it?—I think as long as a man is properly fed he is all right.

B-1735. But do you think the labourer is properly fed?—I think so; I think the labour population is well fed; I think it is the middle classes who are not well fed.

B-1736. *Col. Russell*: We have been told in other connections that malaria sometimes exists in the Punjab to such an extent that it may affect 80 per cent. of the working population for two or three months. The resulting cost of such an epidemic would be far higher than the 12½ lakhs you have quoted in your memorandum?—If that is actually the fact, yes.

B-1737. Therefore it becomes still more difficult for you to face the financial obligations involved in connection with an insurance scheme?—(Mr. Taylor) Yes.

B-1738. But in India you must not only consider normal malaria; you must also consider the question of these abnormal epidemics that occur?—(Mr. Mukerjee) The financial liability must be much more, but I do not agree with the suggestion that malaria accounts for 80 per cent. of the sickness of the whole working population.

B-1739. You say that the "accommodation provided by the employers is generally satisfactory and in most cases it is far better than the standard of houses in which the working population lives in its village home". Do you think that is a sufficient standard on which to base your estimate?—I think the housing conditions provided by industries generally are quite satisfactory.

B-1740. With regard to the industrial efficiency of the workers, you say. "It is admittedly a fact that in recent years the efficiency of workers has improved". Then you say that the health, physique and standards of living cannot be said to affect it to any appreciable degree. How do you reconcile those statements?—As I have said in answer to Mrs. Chatterjee's questions, it is not the health, the physique and the standard of living that account for the inefficiency of the working population; that inefficiency is mainly due to lack of education.

B-1741. *Diwan Chaman Lall*: Would you consider that a man and his family living on 1½ annas a day for food well-fed?—I do not think so.

B-1742. Is there unemployment and under-employment in Delhi?—There is no unemployment of the labouring classes.

B-1743. In your memorandum you say that there is no "acute" unemployment; I take that to mean that there is unemployment but that you do not consider it to be acute?—You must consider the answer in reference to the question in order to follow it.

B-1744. I am taking the words in your own memorandum: "Amongst the working classes there does not seem to be acute unemployment"?—I do not think there is any kind of unemployment.

B-1745. Have you any method of finding whether there is or is not?—No.

B-1746. Did you ever try to find out?—Yes. We have asked the Industrial Surveyor.

B-1747. You have not investigated the matter yourself; you have accepted the statement of the Industrial Surveyor?—We have investigated the matter practically in this way: We have to recruit labour and we find that labour does not come to us. That means there is no unemployment, because we find difficulty in recruiting labour.

B-1748. What class of labour—unskilled labour?—We may not find much difficulty in getting unskilled labour, but there is difficulty in recruiting skilled labour.

B-1749. We have evidence to the effect that there is no difficulty in the recruitment of unskilled labour because there are many people available for that purpose, which proves that there are many people seeking one particular job. That leads to the further conclusion that there must be some kind of unemployment?—(Mr. Taylor) My experience is that the ordinary working class men do not as a rule remain for any length of time at their job; they are always leaving for some reason or other. It may be for no reason at all, or simply to get a change. There is a continual circle of people leaving employment and getting other jobs; one has a continuous flow of people going out and coming in.

B-1750. If that is so, would it not be better to have some arrangement to assist them in finding the jobs for which so many are looking?—(Mr. Mukerjee) There is no doubt about it. (Mr. Taylor) I personally do not think it would serve the purpose either for skilled or unskilled labour.

B-1751. You are contradicting one another?—(Mr. Mukerjee) We say there is no unemployment.

B-1752. Supposing people are continually leaving employment and seeking employment elsewhere, would you have any objection to a systematic arrangement being made by means of which the workers could place their demands before some organized body and asked that they should be placed in their particular jobs; what objection would you have to that?—(Mr. Taylor) No objection at all, except that there seems to be no necessity for it.

B-1753. *Diwan Chaman Lall*: In the opinion of your Chamber would it not be preferable to make the Municipalities or the State responsible for the housing of the working classes?—(Mr. Mukerjee) Yes, we would welcome it; in fact there was a Government proposal to that effect.

B-1754. In your memorandum you say that from the health point of view such accommodation is generally satisfactory.—We have been told that in some cases there is congestion in the living rooms, and a medical witness says that the number of deaths due to tuberculosis is 12·8 per cent. among the general population. There are no exact statistics with regard to the labourers. Obviously this is not a healthy state of affairs?—I think tuberculosis is more to be found in middle class families than among the workers.

B-1755. You say further that "the moral effect of industrial housing conditions on the worker has not been found detrimental, otherwise there would be many instances of disturbances in areas where houses for labourers are situated. Do you mean that you test the moral effect of housing by the existence or otherwise of disturbances?—I think it follows.

B-1756. Then you say that the wages of workmen are fixed more or less verbally. I take it that your Chamber would not be averse to a better system of entering into agreement between employers and employees?—It would not.

B-1757. I understand you to say that efficiency is not governed by the health, physique and standard of living of the workers. Surely a worker in good health with good physique and who lives better would be a more efficient worker?—That is in answer to some specific question; we say

that it is not so much governed by the health of the worker as the efficiency of the machinery.

B-1758. You speak of industries being in a depressed state. I take it that the cloth mills are not in a depressed state?—They are very much more so.

B-1759. You refer also to the Indian States. Have you any more information as to what the Government of India have done in regard to this matter?—Not since I returned from Geneva.

B-1760. *Sir Victor Sassoon*: Do you consider that labour in Delhi is in a better or worse state than labour in the surrounding agricultural districts?—I think the industrial worker is generally better off than the agricultural worker.

B-1761. Do you consider he is better or worse off in Delhi than he would be in a large industrial centre?—I do not know.

B-1762. You have had had a temporary influx of workers due to the building of New Delhi?—Yes.

B-1763. When New Delhi is finished naturally a large number of these workmen will have to leave because there will not be employment in Delhi?—Yes.

B-1764. I take it that that is beyond question?—Yes.

B-1765. May that be the cause of temporary congestion of housing?—Yes.

B-1766. May it be that the reason why that congestion was not obviated was because it was known that the labour would be here temporarily?—Yes.

B-1767. So that the congestion that may have been existing during the last two or three years in Delhi will not continue?—No, it is not continuing. Had it been permanent labour the employers would have taken good care to provide good housing conditions.

B-1768. So that we need not expect that these unfortunate housing conditions will continue?—No.

B-1769. Is it not a fact that the grain merchant is in the habit of giving credit to work-people?—Yes.

B-1770. He gives a month's credit as a rule?—Yes.

B-1771. Whether the workmen were paid by his employers at once or at the end of the month the price charged by the grain merchant would probably be the same?—Yes.

B-1772. He would pay the ruling price whether he pays at once or in a month?—Yes.

B-1773. When a workman starts work, as you pay your work-people a fortnight after the end of the month, he would not be able to pay his grain merchant for six weeks?—Yes.

B-1774. Do you think that the grain merchant would insist on being paid or do you think that knowing that the workman was to be paid a fortnight later, he would give additional credit for that fortnight?—I think he would give him that latitude.

B-1775. So that the workman would not have to go to the money-lender in order to pay the grain merchant?—No.

B-1776. Afterwards the workman would only be a month in arrears?—Yes.

B-1777. And if he changed his employment, I take it it would still only be a month?—Yes.

B-1778. It is only the new worker who has that extra fortnight?—Yes.

B-1779. Even if he were paid with only one week delay it would only mean that he would have to take five weeks' credit instead of six weeks?—Yes.

B-1780. Probably the workman is no worse off by having a delay of a fortnight than if he were paid the day after because of the credit he gets from his supplier?—Yes.

B-1781. The workman would not have to go to the money-lender in order to pay the merchant who supplies his grain?—Yes, because he gets advances from the employer in the interim.

B-1782. What would these advances be for?—For his own daily food.

B-1783. Does he pay cash for his daily food?—Sometimes he gets advances.

B-1784. What does he do with the advances; would he use the advances in order to pay the grain merchant?—Sometimes.

B-1785. In Bombay the grain merchants always give credit. He would not have to pay rent in advance?—No.

B-1786. Would he have to pay cash for his food?—Sometimes he can get advances.

B-1787. Would he have to pay the grain merchant cash?—No. He would get credit with the grain merchant and he will make payment after he gets his pay.

B-1788. Therefore the advances would be used for extraordinary expenditure and would not be used to pay for his food or his rent?—No.

(The witnesses withdrew.)

**Rai Bahadur BSAKHA SINGH, Contractor, New Delhi.**

B-1789. *The Chairman:* How long have you been a contractor in New Delhi?—In New Delhi from 1912, but I have been a contractor since 1907.

B-1790. How many men do you employ as a maximum?—2,000 at a time.

B-1791. How many have you now?—Now at different places I still have about 2,000. They are at Multan, Lahore and here. I have got about 500 here now.

B-1792. The term "contractor" with reference to yourself includes more than merely collecting and supplying labour?—I recruit the labour myself and do the whole thing.

B-1793. That is to say, you contract for the doing of certain work?—Yes.

B-1794. What kind of work do you undertake with the labour that you bring?—Different sorts of work, with masons, carpenters, stone dressers and unskilled labour.

B-1795. That is, general building work?—Yes.

B-1796. Does it include actual erection of buildings?—The erection of buildings also.

B-1797. Is it under the supervision of the architect?—Yes, under the supervision of the Government architect and engineers.

B-1798. You take a contract to carry out the work?—Yes.

B-1799. Therefore you are what in England is called a 'building contractor'?—Yes, a building contractor.

B-1800. I understand there are other people in India called contractors who merely collect and supply labour and have no further responsibility?—There are some petty contractors, but I take up the work myself because I am an engineer. I did some service for the Government in the beginning, and I now take on work which I supervise.

B-1801. When Government enters into a contract with you for some large scheme of building, which I take it they do, does Government put in any conditions or directions to you with regard to your labour force, or is it left absolutely to you?—No, they do not make any condition as to labour; it is left to me. If the contractor does not pay, the labourers generally go to the officers; but that very seldom happens.

B-1802. No condition is laid down as to housing or medical facilities, or anything of that kind?—No.

B-1803. There is one matter in your memorandum which I do not understand. You say in one place "Improvements are possible if labour exchanges—that is, State Bureaux similar to those in Great Britain—are established, where unemployed can register their names and occupations, and to which the employer in need of labour may apply". In the next paragraph you appear to say something which is quite the opposite—"Public employment agencies should be discouraged, as these would be harmful considering the present labour conditions in India." What distinction do you make?—That should read "Private employment agencies should be discouraged."

B-1804. *Sir Ibrahim Rahimtoola:* You say "Industrial workers are generally recruited from amongst the ranks of those uprooted from the soil, whose ancestral land has under the baneful influence of fragmentation dwindled to a point at which it will no longer support its owner and his family". That is to say in your view the labour which finds employment in industry is a surplus over what the land will stand. People who are unable to maintain themselves on the land are driven to industrial occupations?—

Yes. Those who cannot maintain themselves on the land have to seek labour outside.

B-1805. *Mrs. Chatterjee*: You say that the general health of the workers is not very good. How do you account for this?—In the first place they have not good houses, which affects their general health. The houses are overcrowded, being occupied by three, four or five families.

B-1806. Is that the only reason? Do not you think there is lack of food?—They eat very little.

B-1807. You say the birth rate is low and that infant mortality is high. What are the reasons for that?—The health is bad. They cannot keep their children in good houses, and therefore the infant mortality is high.

B-1808. You say that their physique is generally weak. What is the reason for that?—They have no facilities to improve it.

B-1809. You state that the provision of women doctors is very poor. Can you suggest any remedy for that?—The Government should put in every contract with its contractors a clause providing for medical attendance for the workers. At present there is no such clause in the contracts. Sometimes I employ doctors for the workmen, but it is in my private capacity. There should be something in the agreement to the effect that the contractors are responsible for the general health of their employees. Government provide one or two doctors, but the number is not sufficient.

B-1810. Medical aid is too expensive under the Western system of medicine. Has any effort been made to try the indigenous system?—The people were at one time prejudiced against the English medicines, but now that prejudice is breaking down.

B-1811. *Sir Victor Sassoon*: Is it not a fact that with regard to Government contracts Government provide doctors, dispensaries and medicine?—Yes.

B-1812. Is that the reason why Government does not ask the contractor to provide such things—because Government itself provides them?—Yes.

B-1813. *Mr. Chow*: How do you get your labour? Suppose you want more labour to-morrow, what do you do?—We know that there are certain centres of available labour, and we have got mates, whom we send to the villages to recruit labour which we know is available there.

B-1814. Do the mates have to give advances?—Sometimes, yes—advances and railway fares.

B-1815. Not always?—Not always. Those who have faith in us will not ask for advances.

(The witness withdrew.)

# DELHI TENTH MEETING

Monday, 4th November, 1929.

PRESENT :

The Rt. Hon. J. H. WHITLEY (*Chairman*).

<p>Sir VICTOR SASSOON, BART.          Sir IBRAHIM RAHIMTOOLA, Kt.,          K.C.S.I., C.I.E.          Sir ALEXANDER MURRAY, Kt.,          C.B.E.          Mr. A. G. CLOW, C.I.E., I.C.S.          Mr. KABIR-UD-DIN AHMED, M.L.A.</p>		<p>Mr. G. D. BIRLA, M.L.A.          Mr. JOHN CLIFF.          Mr. N. M. JOSHI, M.L.A.          DIWAN CHAMAN LALL, M.L.A.          Miss B. M. LE POER POWER.          Lt.-Col. A. J. H. RUSSELL, C.B.E.,          I.M.S. (<i>Medical Assessor</i>).</p>
<p>Mrs. J. C. CHATTERJEE (<i>Lady Assessor</i>).</p>		
<p>Mr. S. LALL, I.C.S. } (<i>Joint Secretaries</i>.)          Mr. A. DIBDIN. }</p>		

**Major J. R. D. WEBB, I.M.S., Health Officer, New Delhi.**

B-1816. *The Chairman:* Major Webb, you are the Assistant Director of Public Health, Delhi Province?—Yes.

B-1817. How long have you held this office?—I have been here since March 1928.

B-1818. Your previous experience?—I was at Simla from July 1923 until the time of joining here, with a break of about four months, while I toured India in connection with the interchange of health officers of the League of Nations. Apart from that I was stationed in Bombay doing public health work there from 1917. I was on active service during the Great War. I have been serving in India since 1913.

B-1819. You have long experience of the Indian health conditions over a wide part of this country?—I believe I may say so.

B-1820. And you have specially devoted yourself to the study of malaria and its control?—I would not say entirely malaria, but field work in connection with the improvement of all classes of individuals living in India.

B-1821. And as a result of your experience you in your memorandum lay great stress on malaria as being the greatest ill to which the health of the Indian people is subject?—I do.

B-1822. You quote some figures where you say that well over a million deaths occur solely from malaria?—These figures are quoted from the Director of Malarial Survey in India. 1,130,000 deaths occur per annum from malaria alone.

B-1823. You suggest that the great number of deaths is only a fraction of the harm that is done to the national health by malaria?—That is so.

B-1824. You again tell us that there is a loss of over 300,000,000 working days per annum in India on the top of the death rate?—Yes, that is so. I took the figure from the Director of Malarial Survey of India.

B-1825. Has that loss of so many working days per annum ever been put into the form of a percentage of loss of national working efficiency?—No. It has been calculated in rupees, annas and pies; and we find that there is a potential loss to the country of about Rs. 1,50,00,00,000 or £100,000,000 sterling.

B-1826. Has that ever been put in the form of percentages; for instance, would you say that the loss of working efficiency amounts to 20 per cent. or 30 per cent.?—I would not be prepared to make that statement without reference to the Director of Malarial Survey. That question could better be answered by him. I have not worked that out.

B-1827. Could you obtain that from him?—I could do so.

B-1828. Because it would be most useful to us in our work if we could have a reliable estimate on which depends so many other things?—Exactly.

B-1829. Is it the case that this national weakening from malaria predisposes the population to other epidemics when they come along, for instance cholera, plague and hookworm?—That is so. Not only those diseases which you mention, but other diseases such as leprosy, pneumonia, influenza and weakening generally of the physical side of the people through re-attacks of malaria. That is not generally appreciated by the workers themselves and those controlling labour.

B-1830. I take it that it is your deliberate opinion that the control and practical elimination of malaria, or at any rate a reduction of malaria to a small item in the national health, would do more than any other one thing?—I do believe that. When one refers to the conditions in America and the Federated Malay States where work is being done, there would be no doubt felt in that respect.

B-1831. And I notice that you have pinned your opinion to a practical point in your memorandum where you say: "I do not believe that an insurance scheme against sickness could be successfully introduced at present. My reasons are as follows: Such insurance schemes cannot successfully operate until we have reduced the incidence of disease to a reasonable figure"—I believe that is so. I understand from enquiries in Delhi that insurance companies of a very small nature have been started from time to time in connection with the insurance of labourers against death. These are small insurance companies with no capital behind them admittedly. They do not bear too close an inspection in respect of even insurance against death. It would be more difficult to insure against sickness in our present state.

B-1832. Therefore you consider that the control of malaria is a condition precedent to any practical scheme of sickness insurance?—I do. That is one thing. But other epidemics occur, such as cholera, plague, enteric fever which are not brought to the fore, and tuberculosis. All these revolve round the same subject.

B-1833. I understand you to say that once malaria was conquered the work of tackling other diseases would be simplified?—Yes.

B-1834. Your reason I take it is that as long as this terrible national weakening through malaria persists, the actuarial basis of any scheme would involve such heavy contributions from the worker, the employer and the State that it would not be a practical proposition?—That is exactly the point.

B-1835. *Col. Russell*: In your memorandum you say that "In the earlier days the labour was entirely controlled by the Public Works Department." Can you explain what that means?—That requires a qualification. The Public Works Department representing Government did not directly control labour in the sense of recruiting them and paying their wages directly. All they did was to build quarters for them, afford them medical facilities, supply them with good drinking water and arrange for the conservancy of their quarters.

B-1836. The Public Works Department lines were built by Government agency. Did the coolies pay any rent for them?—The coolies did not and do not pay any rent for the coolie lines, with the exception to my knowledge of one small coolie line in the notified area. I am excluding Delhi City for the present from my remarks and speaking of the Imperial Capital and the Notified Area. The Notified Area has a small remains of coolie lines which at one time was controlled by Government and

which the Commission saw yesterday. The coolies there pay on an average 12 annas per mensem to the contractor who at present owns these lines.

B-1837. In your memorandum you say that "Government maintained dispensaries and sub-assistant surgeons to attend to the minor ailments of labour,.....". How many dispensaries and how many sub-assistant surgeons were in use?—The history of that in the Imperial capital is interesting. At the beginning two sub-assistant surgeons, two compounders, a small staff of menials and one choukidar were maintained by Government in one area. One sub-assistant surgeon worked in the dispensary and the other moved into camps amongst labour carrying with him a certain number of medicines for treating the labourers. This formed the initial basis of development of what is known as the combined hospital at New Delhi. In addition to this, one sub-assistant surgeon and one compounder were kept in the southern area to look after the large mass of labour engaged in the manufacture of bricks. In addition to this a contractor paid for and started a dispensary with a compounder in charge near the Secretariat. Later on he moved that on to the stone-yard. The Municipality also employed a compounder and a woman worker who was not fully qualified to look after a small labour camp. That served very well for the transitional stage before the combined hospital was started. There was practically nothing else for the workers except a small crèche which was developed at that time, the welfare centre opened by the Baby Health Week organization and the lady compounder who lived apart near the clerks' quarters.

B-1838. Then I take it you think that these arrangements were not sufficient for 30,000 coolies?—I do not think so.

B-1839. Were there no first aid posts?—With the exception of what I have described there was no first aid post actually in the camps at a later date.

B-1840. I take it you approve of the foundation of first aid posts?—I do most decidedly.

B-1841. Did you ever ask for these?—I was not here at the time. Immediately I came to Delhi I did ask for them.

B-1842. You say in your memorandum that the crèche was not a success. Can you tell me why?—There are several reasons why it was not successful. One was that it was a new idea foreign to women labour. Secondly this crèche was left entirely in the hands of amateurs to operate. Thirdly, there was the difficulty of breast feeding of children. Indian women feed their children at the breast and there was the difficulty of the women returning to their children. Attempts were made to bring women into the crèche for that purpose. Fourthly, as the building progressed, the crèche had to be moved from one room to another. Lastly, this crèche was paid for by a contractor who withdrew his subscription and gave it to another charity, and the crèche closed down.

B-1843. Is it your personal opinion that these crèches will always be a failure?—I do not think so, if they are properly operated.

B-1844. Then I take it that you would be glad to help in the development of welfare work of that kind?—Yes.

B-1845. What have you done in this direction in Delhi?—When I first came to Delhi two ladies Miss Griffin and Miss Graham were carrying on welfare work here under the auspices of the Lady Chelmsford League of India, an organization for welfare work. Later on Her Excellency Lady Reading took a personal interest in the matter and started the Lady Reading Health School. We had then a small welfare centre staffed by a compounder and the lady worker to whom I just referred and who was chiefly working among the clerks and not among the coolies. We then learnt that this welfare centre was under the control of the Delhi Baby and Health Week Association, a most excellent institution whose aims and objects are to formulate and establish centres for welfare work in various part of India, and as they become established, to hand them over to the local governing bodies. We made a proposal to that association to take over the welfare centre

at New Delhi and asked the Municipality to increase the work. It took a considerable time and the matter was then settled in April 1928. Before September of the same year we established six welfare centres in the coolie camps in the various lines. I may state here that we did not officially wait for sanction as we knew that sanction was going to come. We forged ahead with what money was left in the balance of funds of the Baby Health Week Association and we personally established those centres in anticipation of sanction.

B-1846. Have the labour force welcomed this work?—Yes, they have done so. In this connection I would refer you to the pamphlet enclosed with my memorandum, describing maternity and child welfare work in Delhi, in three labour camps for the year 1928. The camps were opened in May; and before December of the same year, the clinic attendance at one of them was 3,130, at another, over a thousand, and at a third, nearly 4,000. On page 14 you will see that the house to house visits in these camps range round 4,000 for each camp. I may observe here that labour here is generally fatalistic in its outlook with regard to work of this sort and education is necessary to firmly establish good work amongst them.

B-1847. From your last remark I take it you consider that some advance in educational facilities would not only be appreciated, but would be made use of?—Educational facilities are absolutely necessary. We see them making some attempt. The coolies themselves in one particular camp have started a small educational institution. They contribute two rupees per child. In the Notified Area we have a night school for all adult coolies, which the Commission saw yesterday. They also saw the school mentioned above. A well-known lady of Delhi, whose name I do not mention here, has started an industrial school for workers in a highly populated village in the Notified Area. That will be extending the work for helping labour in industrial and minor education.

B-1848. I would call your attention to a statement made in the memorandum sent in to the Commission which runs as follows: "The causes of the troubles among Indian labour are"—I will not read item No. (1)—"the growing feeling of unrest among Indian labour and the limited scope of welfare activities". Have you any experience either to support or refute such a statement?—In New Delhi and the Notified Area there is no unrest amongst the coolies. They are disciplined. In this connection I would mention that about two or three years ago the headquarters of the Communist Party in connection with labour was actually stationed in Delhi. I am told,—I was not here at that time—that there was some unrest at that time. But very shortly afterwards, in about six months the headquarters was transferred to Bombay, because Delhi was not considered to be an industrial city.

B-1849. Another witness says that medical facilities are not properly used because of the fear of loss of a day's wages entailed in visits to hospitals and dispensaries. What is your personal experience?—That is absolutely correct. That was one of our reasons for establishing first aid posts in the labour camps in New Delhi.

B-1850. You think you would solve that difficulty by establishing first aid posts?—I do.

B-1851. Has the propaganda work carried out by your department been of any lasting good?—Would you like to extend the work?—Propaganda work is a subject of its own. It requires a special staff. In Delhi city, the Notified Area and the rural areas of Delhi my small public health staff has done considerable propaganda work apart from their other activities. Last year, they gave 83 cinema and lantern lectures with a counted attendance of 40,000 persons. Similar work is being carried on by various bodies like the Delhi Social Service union. Private individuals, such as doctors and certain Medical Officers of Health are making efforts at doing propaganda work in the city.

B-1852. In her memorandum Dr. Scott, Secretary of the National Association for Supplying Medical Aid by Women to the Women of India, says

stress upon the necessity of investigation into the causes of infantile mortality amongst industrial workers. At present no such investigation is made?—No. In this connection I would refer you to the memorandum of Dr. Sethna, the Health Officer of Delhi Municipality, who deals with this point. I regret to say that even my own figures in this connection are not absolutely fool-proof.

B-1853. Then she says: "Medical women in India have repeatedly pressed for an enquiry into the causes of infant mortality." Do you know why that enquiry has never been made?—I presume it is a question of money.

B-1854. Is there any source at present from which you can get any reliable statistics of the incidence of disease and low health of many of the workers?—Not that I know of. There is absolutely none.

B-1855. What suggestions would you make for the collection and investigation of such statistics?—I would suggest that essentially we require women workers amongst the people to obtain these statistics. At present these statistics are obtained through the agency of sweepers in various areas or through menial public health servants in Delhi city. Two sub-assistant surgeons are also employed by the Delhi Municipality to determine the birth rates and death rates, chiefly the latter. I am unable to give you any details in that respect.

B-1856. I take it you do not approve of the method of employing sweepers for collecting statistics?—I do not.

B-1857. Have you any practical suggestions as to how it can be carried out?—It can be carried out by women workers if they are properly trained and work under the Public Health Department.

B-1858. Then you would agree with Dr. Scott when she says it is a very important point that women medical officers and health visitors should be used in order first of all to gain the confidence of women and then to collect information?—Yes.

B-1859. Is there any difficulty in getting medical women, trained midwives and women to do welfare work?—There is the greatest difficulty. In New Delhi and the Notified Area I had sanction for two women. It took me six months to get one and nine months to get the other, because I was determined to get one who would understand what welfare work was. We tried women and we said good-bye to them; we tried others and said good-bye to them. Eventually we were successful in getting two good workers whom we have now.

B-1860. There is one other statement in Dr. Scott's memorandum which is of considerable importance. She says: "The provision of good medical and health facilities for women would prevent the exodus of women to villages for confinement and would tend to correct the disturbance of the sex ratio in the industrial areas. No one can doubt that both these factors would help to stabilise labour." Do you agree with that statement?—I consider that to be so; it is mixed up with the question of sex ratio and one has to consider other points in this connection; but, generally speaking, there is no question that welfare work would tend to stabilise labour, because, as we know, women will stabilise men so to speak.

B-1861. This kind of work would also add to the efficiency of the worker?—I think so, yes.

B-1862. In another memorandum submitted to us from Delhi it is stated that the results of general welfare work are not at all satisfactory. Do you agree with that?—Welfare work in Delhi is in its infancy; it has been started and an effort is being made; but it does not always get the support it might have, and I am sorry to have to admit that the general public do not know what welfare work is. I have personally communicated with many contractors here, and I have a letter from a contractor in reply to a personal letter of mine. That contractor is very kind and very helpful; but he finishes his letter by calling my welfare centre a dispensary. That indicates the mentality of these people; they do not really know what welfare work is, and not knowing I do not think they are in a position to criticise.

B-1863. Is it easy or is it difficult to get any Indian men and women to take up this work?—It is not easy. In Delhi I can count on the fingers of one hand the Indian ladies who have taken an active part in welfare work. We hope that as time goes on the number of these ladies will increase. But I must admit that it is not easy to get ladies to take an interest. Certainly it is not easy to get the right type of worker for taking up this work.

B-1864. The Inspector of Factories in his memorandum has stated that the health of workers is generally good. Do you agree with that statement?—I would say no; the health of the workers and the physical conditions of the worker in Delhi are generally poor. This may be due to many reasons: malaria which we have already discussed and similar diseases, domestic worries, large families, difficulty of housing, food, etc., etc.

B-1865. Is there any clause in the contractors' agreements in New Delhi compelling them to supply housing or do any other welfare work for the labour they employ?—There is no definite clause; I believe there is a vague statement to the effect that the contractor must attempt to help his labour.

B-1866. Do you think that clause should be made more specific?—I do.

B-1867. In what directions?—In connection with the actual buildings, the way in which they could supply facilities for scavenging and general sanitation. There is the necessity for improved conditions during epidemics. These are the chief headings.

B-1868. *The Chairman:* Have you ever attempted to draft a clause which you would like to see inserted in the contract?—I have not personally.

B-1869. Do you know of the clause which is inserted in England when any large public works are undertaken?—No, I have no acquaintance with it.

B-1870. You say a clause exists in the contract whereby contractors are held responsible for the proper housing of their labour?—I believe a clause exists; I was told that by the Chief Engineer of the Public Works Department at Delhi. The details could be obtained from him.

B-1871. But there is no clause comparable with the one which exists in similar cases in England whereby these matters are made subject to the approval of the Medical Officer of Health?—No. That leads me to explain that the whole of the Capital of New Delhi was built without any reference to the Medical Officer of Health, and without any reference subsequently, until I came here in 1928, since when references are made to the Medical Officer of Health.

B-1872. Would you be in favour of the insertion of a clause in all such contracts?—I would.

B-1873. To provide that where any considerable body of labour is being imported into the district, provision for housing and general sanitary arrangements should be made subject to the approval of the Medical Officer of Health?—Most certainly.

B-1874. Do you think that a general clause of that kind would add greatly to the efficiency of the labour?—I do. Without that clause may I explain what happens here. In one of our camps we have labour making bricks; in June of 1929 we had 35 cases of cholera; at first we could get little done to improve that camp; we really had to send our men. Then we got into touch with the Chief Engineer and we said "we must be helped". The Chief Engineer saw the contractors and we got that help.

B-1875. If a clause such as I have suggested were standardised and made applicable to such contracts all contracts would be on the same level?—Yes, and we should automatically get that help.

B-1876. The contractors would take into account these requirements in the making of their contracts?—Yes.

B-1877. Therefore they would not be hurt in any way?—No.

B-1878. And you would then have no such camp established without your approval of the conditions?—Exactly.

B-1879. *Col. Russell*: You have stated that the Public Works Department never consulted the Public Health Department in connection with the construction of these camps?—Unofficially, but not officially.

B-1880. You have also done public health work in other parts of India. Do the same conditions apply to those other parts?—No, the Public Health Department is always closely consulted.

B-1881. Have you got any type plans approved by the Sanitary Engineer and the Director of Public Health for the housing of workers on Government works?—I have not seen any type plans, but I am told that type plans of a vague kind existed when the camps were originally established. I have not been able to see them and have not had time to make further detailed enquiries, but you may take it generally that at the present moment there is no type plan.

B-1882. And any plan which was prepared was prepared without any consultation whatever with the Public Health Officer?—As far as I know, yes.

B-1883. Do you see plans prepared by the Public Works Department for housing schemes, etc.?—I do now see them.

B-1884. Since when?—Since I came here.

That is because you have taken a personal interest in the matter?—Yes.

B-1885. But there is no Government regulation by which they have to be sent to the Public Health Department for approval?—I cannot say whether there is a Government regulation to that effect; it is always an automatic thing elsewhere wherever I have been.

B-1886. Do you consider that a room 8' x 10' is sufficient for a family of 4 or 5 living together?—Speaking generally, no.

B-1887. What minimum would you suggest?—It is difficult to lay down a definite size because the health of the people depends not only on the actual size of the room but on the ventilation, the air, moving currents of air coming in and out. One would have to take all these points into consideration in laying down any particular definite size, cubic space, and so on.

B-1888. You have no statistics to show whether the sickness rate or the death rate is higher among those living in one room houses than those living in two rooms?—I have no statistics to that effect.

B-1889. Are you satisfied with the type of the houses at present provided in the coolie camps which have been described by another witness as "not a pleasant spectacle"?—In reply to that question I would say it seems to be an exaggerated statement. Admittedly the mud huts of the coolies are not spacious and they are not luxurious as opposed to the better type of houses, the remains of Government houses, which are not at all bad. The Commission has seen them and one would not say that they are simply miserable human habitations.

B-1890. But another witness says definitely they are unfit for human habitation?—All I can say is that I have lived in places very similar for nearly three years during the war.

B-1891. Which would you consider more important: the actual floor space within a hut or the spacing of the huts in their lines?—The spacing of the huts in their line is a very important subject. With regard to the space between one series and another series, as you saw in the camps, we have spacing in between lines in three of our camps here and not spacing in houses except very occasionally.

B-1892. But I observed that in some cases the spacing had been done and laid out it was allowed to be filled up?—Yes, encroached on.

B-1893. You have no power at present to stop that?—We have not.

B-1894. *Col. Russell*: One of the memoranda that we have had put before us states that there is a general increase in mortality owing to the bad system of housing. Have you any statistics to support or review that statement?—The statement cannot be regarded as being an accurate statement because there are no statistics that I know of.

B-1895. You think this witness has no information which could confirm that remark of his?—I believe that to be so.

B-1896. There is another curious statement made by the same witness; he says that official supervision is lacking and boards of health are too few. Can you tell us exactly what he means by that?—I entirely refute the statement that official supervision is entirely lacking as far as New Delhi and the Notified Area is concerned. With regard to the city I would prefer not to express an opinion as I am not in medical control of Delhi city.

B-1897. Is there any maternity benefit in the Delhi province?—As far as I know there existed at one time an attempt in New Delhi towards maternity benefit; at the crèche labour workers made an effort to get a woman paid but not allowed to work; it was not very successful. I do not think more than two or three women actually benefited from this effort, though there may be a few more. Speaking generally, there is no maternity benefit.

B-1898. Are no allowances on leave given to women workers before and after confinement?—On enquiry I find an attempt has been made, on paper, to try and allow the women worker to work at lighter work during that period; but in actual practice it is impossible for a contractor to go round and see that every pregnant woman does light work and in actual practice it does not happen.

B-1899. What percentage of his earnings does the average labourer spend on food alone?—I should say 70 per cent. of his earnings are spent on food.

B-1900. Does that include food substances like sugar, ghee and milk?—It does not include milk because the labourer cannot afford to buy milk, and it does not include ghee because the labourer cannot afford to buy ghee. In place of ghee he buys oil. It includes a small quantity of sugar, namely, two ounces per meal at a cost of three pies. It is *gur*, which is not sugar in the sense of being purified Western sugar.

B-1901. Is the milk supply sufficient?—The milk supply is a big problem and it will take a long time to solve.

B-1902. I take it you agree that milk is an essential part of a vegetarian diet?—Yes, but the question is whether the labourer could ever afford to get it.

B-1903. *The Chairman:* You are no doubt aware that the same problem arises in the poorer parts of our cities in England?—I am quite aware of that; there is an absence of the vitamins A, B, C and D.

B-1904. I mean there is inability to purchase milk?—Yes, it is a question of supply and demand and costs; it involves a hundred and one things, such as the number of cattle and the grazing grounds.

B-1905. *Col. Russell:* Milk is highly expensive and grossly adulterated?—Yes. An effort has been made in Delhi to supply milk. The Municipality at one time started a small farm on the eastern side of the river; all the *goshis* or cattle dealers were sent out of the Delhi city over to the other side where there was built for them a more or less model village. At a later date this farm was taken over by Mr. Edward Kerenter. The actual proposal or hope of establishing a cheap milk supply for Delhi city failed miserably. At the present moment the Delhi Health and Social Service Union have a proposal to start a similar undertaking. It means capital and it means very careful supervision; to my mind it is very doubtful whether such a thing can be established without most careful thought.

B-1906. What about the question of vegetable ghee, which is sold very largely in the bazaar? It has no nutritional value, as the chemists tell us, although it is a very useful fat for cooking. It is a very useful fat, is it not?—Yes. Chemists have made their tests on cats fed with vegetable ghee, as you know, as compared with ordinary ghee and the results are not very satisfactory.

B-1907. *The Chairman:* But is not that corrected a good deal by a partial fruit diet?—Yes.

B-1908. The working classes in England seldom see real butter; what we call margarine corresponds to your vegetable ghee?—Yes.

B-1909. But here in India you have the advantage of a fruit diet?—Having bought his ghee at a certain price it is difficult for him to find money to buy fresh oranges or limes.

B-1910. *Mr. Cliff*: Am I to understand that the working man gets fruit or does not get fruit?—He does not.

B-1911. *Col. Russell*: Have you a Food Adulteration Act in this province?—There is the Punjab Food Adulteration Act, which they are making an attempt to introduce into the Province of Delhi. It is only an attempt; there has been a lot of talk but nothing has been done.

B-1912. It is practically a dead letter?—Yes.

B-1913. One witness says that the food is poor and consists mostly of inferior flour, pulses, rice, oil or ghee. Is that your experience?—One cannot say that the food, wheat and pulses are of the highest standard by any means; for the lower classes you may say it is rather a low standard.

B-1914. Are there any malnutritional conditions or diseases in your Province?—The subject of malnutritional diseases is one which requires investigation. The Commission have seen the state of the actual labour in the camps in Delhi; they have seen that the children are feeble. I would like to stress the particular point that the child at birth gains weight and is quite happy and healthy until it reaches the age of about 8 months; then it starts to lose weight very rapidly. That is accounted for by the fact that all children are breast fed until they are, roughly speaking, 8 months or a year old. As soon as they come off the breast they start to chew chapatis and other adult food straight away and they simply go down in health, and it is a question of the survival of the fittest.

B-1915. That would be largely counteracted by improving the education of the women?—Yes. I may say that what I have mentioned does not by any means apply to the labouring and the coolie classes only; it applies also to our intelligent clerical labour.

B-1916. Then do you agree that there is poor physique generally among the labouring classes?—Yes.

B-1917. Is that due to the poor quality of the food or insufficiency of food?—I would say both poor quality and insufficiency; then there is disease, lack of housing, worry and so on. There are many causes; I do not think you can attribute it to food alone.

B-1918. Is it a fact that a coolie and his family in Delhi Province when doing full work can earn from Rs. 50 to Rs. 70 a month. We were told that by one of your workers?—That is a statement which one of my workers made to you yesterday that the wage was somewhere in the region of 50 to 70 rupees. That is not in fact so as an average. The position is this: the coolie man draws 8 or 9 annas a day; generally in New Delhi it is 9 annas a day; the woman is also a worker and she draws 7 annas a day; the children are also workers; if they have passed the age of 12—at least we hope that they are past the age of 12—they draw four annas a day. If you take that family to be five in number you will have a round figure of about Rs. 40 a month. When the children grow up and become or appear to be adult, they will earn not 4 annas but 9 annas, the wage of a man. So that you may take it that the average earning obviously varies in families according to the size of the family and the ages of the members of the family. I would put the figure at an average of about Rs. 40, 42 or 43. The exceptional families which come forward and say they are drawing Rs. 50 to Rs. 70 a month are very lucky.

B-1919. Taking your average figure of Rs. 40 to Rs. 43, would that be sufficient to provide a physiological diet for a family of five?—No, certainly not.

B-1920. *The Chairman*: By a "physiological diet" you mean an ideal diet?—An ideal diet.

B-1921. *Col. Russell*: With the necessary vitamins, vegetables, and so on.

B-1922. *The Chairman*: The minimum scientific requirements for full health.

B-1923. *Col. Russell*: Yes?—It may be described as a balance with the wages on one side and the diet on the other; they are just about holding the balance; sometimes it goes one way and sometimes the other way.

B-1924. *Mr. Cliff*: Is this physiological diet a minimum diet?

B-1925. *The Chairman*: It is a minimum physiological diet. It is what the doctors say we ought to have.

B-1926. *Col. Russell*: Would not the opening of food shops by employers prevent the sale of inferior articles of diet to the workers?—Here in New Delhi there was a difficulty in getting grain at one time; the contractor, aided by Government, started a grain pressing machine where the grain was ground in a sort of common grinding place and sold at rather cheap rates. Later on this disappeared. Labour which comes from the Indian States into Delhi brings with it bad debts. As they bring with them bad debts the man who is looking for these bad debts accompanies them, namely the bania; he comes to Delhi and plants himself down with the labour; he is an importation with that batch of labour and I do not see how you are going to get over that difficulty. As the labour goes back to its own country, so the bania goes with it. No doubt control of the supply of food in the sense of co-operative societies would benefit labour considerably.

B-1927. One of our Delhi witnesses has also stated that the economic value of public health is not understood by the management and industrial workers. Do you agree?—That is absolutely true in Delhi.

B-1928. Can you give us any idea as to the chief causes of absenteeism amongst the workers?—There are no statistics.

B-1929. You have admitted several times that there are no statistics available. Would you favour the formation of a body like the Industrial Research Board in England for collection of statistics?—Most certainly.

B-1930. How would you staff such a board?—It is difficult to staff from India, because workers from India would not have any facilities for learning work of this nature, and the only method would be to select and to send and to train Indian workers in other countries.

B-1931. You would send Indians to England to be trained?—Yes.

B-1932. Would you favour the passing of legal provisions for places at present outside the Factories Act?—Yes, most certainly, with definite clauses, as far as housing, sanitation, water-supply, epidemic diseases and the like are concerned. The Factories Act, I am given to understand, is not very definite on these points.

B-1933. *Mrs. Chatterjee*: In answer to Col. Russell, regarding the unsuccessfulness of the crèche, you mentioned two causes, one was that it was under an amateur organisation and the second was breast feeding. Are you aware of the fact that the person who managed the crèche was a trained health worker brought down from the Lady Reading Hospital?—My inquiry showed that the management was started by a lady in New Delhi who was not a health worker and that a subordinate, so to speak, was employed who worked as a matron at the centre and that under her worked two aayas or nurses. I have an admission from the ladies who worked at the centre.

B-1934. Are you aware of the fact that I used to look after the crèche when that lady used to go to the hills during summer?—I am not aware of that.

B-1935. Are you also aware of the fact that at least Rs. 300 or Rs. 400 a month was being spent on this crèche whereas only about 20 babies on an average made use of it?—I was informed that the cost was about Rs. 100 a month, that the maximum attendance was 20 and that the average attendance was in the region of 6 or 7.

B-1936. You say the monthly cost was Rs. 100. Can you tell me what the trained health worker who had full midwifery qualifications was paid

not that job?—That revolves round the question that the institution seemed to have been governed by amateurs.

B-1937. *The Chairman*: Your opinion on this particular point really is second-hand?—Exactly; I explained at the start that it was so.

B-1938. *Mrs. Chatterjee*: I supervised this thing myself during the lady's absence in the hot weather and I know as a matter of fact that Rs. 300 to Rs. 400 was being spent every month on this crèche, including the salary of the health visitor, the matron and the ayas. Do you not think that if you had four crèches in different areas of the working class people, you could have made the crèches more successful?—I admit that. I do not say that crèches are useless. I think they are excellent, but I do think that unless they are carefully watched and handled, not weekly or monthly but daily and some actual health worker is made responsible for their proper working, we cannot hope to achieve any success. The crèche that existed seems not to have been successful due to the facts which I have mentioned.

B-1939. Are you not prepared to admit that there are not sufficient number of crèches or child welfare centres in Delhi, and one of the chief reasons is that anything that is started either by Government or under European organization is made top heavy so much so your wants are to be restricted, whereas by maintaining a low paid staff your wants can be increased?—My experience is not that. At New Delhi when we had one centre it cost a lot of money; to-day we have six centres which cost on an average about Rs. 90 a month. I do not think that is too expensive.

B-1940. I do not blame you at all; I know that you are doing very useful work here. I am talking of other places?—That may be so.

B-1941. With regard to housing, will you tell me what is the average number of occupants of each house?—On an average about 5 for a family; you know that well.

B-1942. You say that a large number of labourers go back to their homes during the rains. What proportion of these labourers are agriculturists?—I have not investigated the actual figures, but I should think that the fluctuating population is about 40 per cent., and 60 per cent. are, at least here in New Delhi, more or less farm labourers. During rains, when brick kilns are closed down, they go to their villages and come back again after rains.

B-1943. Regarding the diet of the worker, a question has already been put to you for not including ghee?—Oil has been included.

B-1944. Have you read Dr. Lancaster's report on tuberculosis?—I have.

B-1945. I have not unfortunately read the report, but during a conversation I had with him, while he was making this inquiry, he told me that a great percentage of tuberculosis was due to the lack of supply of ghee in the food-stuffs, and the classes who suffered most from tuberculosis were those who could not afford to go in for ghee. As far as my knowledge goes, I am personally convinced that oil is not a good substitute for ghee?—I think I have made it sufficiently clear of what I think about it.

B-1946. About the weights of children. You are aware of the fact that I have been managing baby shows since 1921 and I have got statistics of weights of different babies. To my knowledge the weight of the labourer's baby is far below the average; I should say that 70 per cent. of the babies of the labouring classes in rural areas are under weight. In your child welfare centres two things are taught, first, cleanliness and, second, feeding of infants. According to the statistics that we have received from various people, we find that the earning of a labourer is only just enough to keep his body and soul together. Do you think it is possible for those babies who are under weight as it is, when they are brought to child welfare centres, to get average weight without any proper food?—That is a point that we have been trying to stress. Although food is not conveniently available, we are trying to impress upon them the necessity for improving food conditions

and the necessity for teaching your people to improve not only bodily but mentally.

B-1947. How can you manage that effectively?—It is a question of rupees, annas and pies, is it not?

B-1948. As a medical man, can you say that a child who is under weight will grow up to be a healthy man, fit to do physical work which he naturally will have to do?—That is a very difficult thing to argue. I give you the example of a baby who won a gold medal for being the best baby is now a miserable specimen. That I was told by a very well-known health worker in Delhi a few days ago.

B-1949. I also know of cases of babies who died the very year in which they won gold medals. Have you got any means by which you could increase the weight of the children?—I do not know what you want me to say. Naturally you want to improve their diet which we admit; if you have money you would spend it on improving their diet.

B-1950. You say in your memorandum that the average debt of a cooly is about Rs. 80 a year and you also say that for his marriage he spends Rs. 200 to Rs. 400. How does he meet these demands?—As far as I know, most of the coolies own land somewhere although they may be in debt. They go on saving small amounts by which they buy a cow and land. The bania, apart from lending money against the possible cost of that land, will gladly lend them more and chase them for the rest of their lives, getting interest at 37.5 per cent. per annum.

B-1951. Have you made any personal investigation into this matter or only heard about it?—Investigation was made in 205 camps here. It is a well-known fact that all your labourers are in debt to the bania, and I am told that the investigation lasted sometime and the banias and the labourers were together; the banias were asked questions before the labourers and the labourers were asked questions before the banias and they had a little chat amongst themselves, and they put down the average debt at Rs. 80 a year and the interest at 37½ per cent.

B-1952. *The Chairman:* What puzzles me is that there is practically no margin between the dietary cost of living and the family income; yet the bania prospers well?—He does because they have got to find that money for paying him his interest sometime during the year; it goes on mounting up.

B-1953. Presumably he does not go on lending and lending without any repayment?—It practically amounts to that. Debts are carried on, and the general feeling is that he will hold that money, only collecting his interest; they thus never get out of their debts.

B-1954. He only spares his debts in paradise. In addition to that, is it not a fact that on an average the coolies send something like Rs. 40 to Rs. 50 every year to their village?—They do that although they are indebted to the bania.

B-1955. Still it is a little bit of economic puzzle?—The bania chases them to their village and back again to their work, and he is always in touch with them.

B-1956. *Mrs. Chatterjee:* You mention that there are no schools started by your Committee. Why is that so especially when construction work in Delhi has been going on for the last 15 years?—In New Delhi one contractor who was a member of our Committee was desirous of starting a school; that was just when I came to Delhi. I was desirous of introducing welfare work first, to be followed by a school. I still maintain that if you have got your school you better educate your boys, and if you have got welfare work you better start schools; if you have money to do both it is well and good, but if you want to have only one of the two, I say welfare work first and education second. You may not agree with me.

B-1957. I personally feel, after ten years or more of experience of health work that we must put education first and health after. You are talking of preventives whereas people need curatives?—That leads to a discussion

of the academic training of education as opposed to the vocational training. If your education is going to be of a vocational nature and of knowing to write your name and to add up a few figures, then I say yes. But what is education? It is an academic training which does not touch on these vocational subjects which we know are necessary.

B-1958. *The Chairman*: You told us that the bania in your district only thinks of getting 37½ per cent.?—As I mentioned, that was the figure that was arrived at after discussion in the presence of the bania and the coolie. I am unable to say if that is the definite figure but I should think that it is fairly correct.

B-1959. So there are modest banias in your district?—It appears to be so.

B-1960. As a matter of fact, what really happens is that he does not so much want any return of his capital as a constantly increasing mortgage on the lives of the people at the rate of 37½ per cent.?—That appears to be the position.

B-1961. *Sir Ibrahim Rahimtoola*: In the process as between a bania and a coolie it is hardly possible that the bania will continue to give debts to the coolie indefinitely. Do you see that a possible explanation is that when the debt increases the man has got to minimize in his food, in his clothing and in various necessaries of life in order to be able to pay a portion of the debt and interest to the bania?—That is quite possible, but he holds on to his land and his cows as long as he possibly can.

B-1962. A stage must be reached, unless he pays up his debts by striving to live on practically nothing, when the bania takes possession of the land he may have or any cattle, and the fellow goes to ruin. Is not that so? Therefore the whole problem is an economic one?—Yes.

B-1963. *Mr. Clow*: We saw a large number of coolies, both men and women, this morning at the building of the New Press who were not getting what you described as the proper diet, yet to a layman's eyes they appeared to be fairly adequately nourished. Is that due to a lack of observation or is there any other explanation?—There are exceptions to every rule. You will see from my statement that I have given there two diets—one is the ordinary diet and in the other a little extra is added which may be called the luxury portion of the diet. If you study the figures the cost comes to about Rs. 40 for a family of five while wages is somewhere in the region of Rs. 40, 50, 60 or 70. If you investigate into the matter closely, you will probably find that the healthy looking people are getting that diet—chapatis and dal, which is called the basic diet, of the family, plus one anna per head per day for ghee, oil and gur.

B-1964. They told us they only got gur very occasionally when they had extra money?—Yes. That may have been sufficient to keep the pot boiling.

B-1965. *Mr. Birla*: Regarding the question of malaria and the prevalence of other diseases, do not you think it is very closely connected with the question of poverty of the people?—The actual infection of malaria is not connected with poverty, but the resistance on the part of the people who suffer from that disease, when it gets into the system, is very closely connected with poverty, because in our present state of knowledge we do not know everything about malaria.

B-1966. What I was trying to point out was that in view of the low vitality and the low resisting power, the worker is more liable to infection than he would be if he were properly fed and clothed, and if he had all vitamins such as you get in milk, ghee, etc., provided to him which he does not get at present?—Do you mean to say that if people are properly fed, housed and clothed, they will be free from malaria. Panama canal is an instance in point.

B-1967. Is it not a fact that malaria is more prevalent among the poor who cannot afford to purchase mosquito nets and provide themselves with such precautions as are necessary?—You are now referring to the subject of control. Naturally, the wealthy people live in better houses, some are protected with wire gauze houses, some have mosquito nets; some people take

precautions round about their houses to prevent mosquito breeding—as opposed to the unfortunate labourer.

B-1968. Therefore well situated people have better resisting power. In order to tackle the problem of all these diseases, you have, first of all, to tackle the question of poverty?—If we can get industrialists to realise that one of the most important diseases is malaria and if you could wipe out malaria from this country both by control work and by improving the state and physique of the people you would have achieved something which would transform the country.

B-1969. But you will agree with me that mere propaganda without side by side increasing the resisting power of the people will not tackle the problem fully?—No, I say both should go hand in hand. Propaganda, control of disease and improved food should all advance for the benefit of the people, but you should bear in mind that one of the most difficult problems that you must tackle is malaria.

B-1970. How do you compare the nourishing quality of vegetable ghee with that of the country oil?—It is a chemical point which I prefer a chemist to reply to, but generally speaking, oil is valuable as opposed to vegetable fat.

B-1971. You cannot give us any opinion on the question whether oil is more nourishing than vegetable ghee?—Vegetable ghee would be useful, as I mentioned before, in cooking; it contains fat but not vitamins; oil does contain some vitamins.

B-1972. If oil is more nourishing than vegetable ghee, would you consider the question of discouraging the import of vegetable ghee which is at present very largely competing with the country-made oil?—That is a very big economic question. What appears to be ghee is sold, and it comes and revolves itself round and about the subject of Food and Adulteration Act.

B-1973. *Col. Russell*: Vegetable ghee is a valuable fat food?—Undoubtedly.

B-1974. The only difference is it lacks vitamins?—Yes.

B-1975. *Mr. Birla*: You refer to the rural uplift scheme of Mr. Brayne. Have you any first-hand knowledge about the work which has been carried on by Mr. Brayne?—I have not only very close knowledge but I claim that we have done more rural uplift work in the Delhi Province than Mr. Brayne in connection with public health amongst 304 villages.

B-1976. What I want to know is if, after the departure of Mr. Brayne, the work has been suffering or is it still continuing in the same way as it used to be when Mr. Brayne was in India?—The work is continuing but it is not continuing with as much zeal as it did while Mr. Brayne was present.

B-1977. You mentioned that there is difficulty in getting the right type of men and women for social welfare work. Can you explain why it is so?—Our educational standard with regard to improvement in public health work, especially amongst the doctor folk, is the same as that which obtains in the West. Education was carried on for curative medicine, and it is comparatively recently that public health work developed. Due to the economic factor, there have been more doctors who do curative work than public health work. That is the real state in India. Local doctors concentrate their attention on curative study of medicines because they can earn more money out of it than out of public health work. Consequently in the first place it is difficult to secure public health workers if you do not give them a living wage. Secondly a public health worker is born and not made. He has to start with a true desire to help his people, and there are exceedingly few workers in India to-day who are sufficiently educated to realise that their work in the public health field is for the benefit of their people. Usually the work is carried out for the benefit of oneself and not for the benefit of others.

B-1978. *The Chairman*: In all other countries this preventive work is a comparatively new public service. It is not surprising therefore that the supply in India at present is small, but it should increase by the help of public opinion and of the universities as quickly as may be possible?—Yes.

B-1979. *Sir Alexander Murray*: You say in your memorandum that the labourer may earn 9 annas per day, and that in pre-war days he used to earn 6 annas per day. Therefore there has been an increase of 50 per cent.?—Yes.

B-1980. You say that the cost of living has risen out of all proportion; that is to say, the cost of living has risen more than 50 per cent.?—Yes, I base that on the cost of a *chapati*.

B-1981. But you make a deliberate statement that the cost of living has risen out of all proportion?—Yes.

B-1982. You say that an average man eats five *chapatis* a day?—Yes, it also depends on the size of them.

B-1983. You said that the cost of *chapati* has gone up from three pies to nine pies?—Yes.

B-1984. At nine pies each, and taking five *chapatis*, that comes to four annas a day. Therefore he is spending four annas a day on *chapatis* if he eats five?—Yes.

B-1985. But your table shows that he only spends three annas a day?—The table which you now have before you is in connection with the Notified Area of Delhi. The statement with regard to the *chapati* basis was made from personal enquiries from the coolies in the camps in the New Delhi area.

B-1986. You say that the rise in the cost of living is about 70 per cent. as against a rise in wages of 50 per cent.?—Yes.

B-1987. You say in 1914 a *chapati* cost three pies, whereas to-day it costs nine pies, that is 200 per cent.—Yes, in other words, you doubt the statement with regard to the *chapati*?

B-1988. Very much so. Who gave you these figures?—They were collected from the people themselves in the camps. The figures with regard to food were collected from the local baniya shops both in New and Old Delhi.

B-1989. *The Chairman*: Do you mean to tell us that the cost of the items composing *chapati* is 200 per cent. above pre-war?—Yes.

B-1990. *Sir Alexander Murray*: That is not borne out by the figures?—You are questioning the cost of the *chapati*.

B-1991. Absolutely; I question the whole of your figures and I am taking your figures of *chapati* as typical of the rest of your figures.

B-1992. *The Chairman*: They were not prepared by a trained worker in this class of investigation?—The figures for the Notified Area were prepared by a gentleman who is now behind me, and the figures for New Delhi with regard to the diet, were prepared by a second gentleman sitting behind me.

B-1993. *Sir Alexander Murray*: Was their experience such as to enable them to do that?—They have intimate personal contact with these coolie camps. Both these gentlemen have been here since 1914-15.

B-1994. Who is the gentleman responsible for the statement that the cost of living has gone up by 70 per cent., when the *chapati* (which is the main article of a worker's diet) has gone up by 200 per cent. You say that a single man can live on four annas a day. Taking your figure at 9 annas there will still be a margin of 5 annas a day?—Yes.

B-1995. If he had only a wife, with no children, he would still be able to live on 9 annas a day?—Yes.

B-1996. If he wants to marry, the wedding ceremony would cost him from two hundred to four hundred rupees. Where would he get that money from?—He would borrow it against his property.

B-1997. You say he has to pay Rs. 80 per annum to the baniya here?—Roughly speaking, each year, he gets Rs. 80 out of the baniya from time to time—spread over the year.

B-1998. Take 1927. He gets in that year Rs. 80 from the baniya. In 1928 he gets another Rs. 80?—Meantime he has paid back something, but the usual thing is that it keeps mounting up.

B-1999. *Sir Victor Sassoon*: How much has he paid back?—I have not the figures here.

B-2000. Does he pay back the original capital?—He does not.

B-2001. *Sir Alexander Murray*: You say that he is indebted to the money lender to the extent of Rs. 80 per annum?—Yes.

B-2002. What does he repay him?

*The Chairman*: Does not the Commission think that we shall get some figures from skilled investigators who have been at this work?

*Sir Alexander Murray*: I hope so; but this statement is so interesting that I thought it was put before us by skilled investigators and I wanted to verify the figures as far as I possibly could.

*Mr. Cliff*: I understand this was compiled by a man who has been associated with the coolies for 14 years. It would be of advantage if we could clear up this matter. I take this figure of Rs. 80 as representing the man's total debt.

*Sir Alexander Murray*: But how did he pay Rs. 400 for his wedding?

*Mr. Cliff*: I am dealing first of all with the Rs. 80. It seems to me that the man is borrowing new money to pay back the old money. He always has an overhanging debt of Rs. 80. And sometimes he is paying more in interest than what the original debt amounted to.

B-2003. *Sir Alexander Murray*: You say the interest is only 37·5 per cent.?—But that mounts up.

B-2004. I am not taking your hypothetical figure. I am taking the actual figure which you give us in your statement, and you say that he is in debt annually to the extent of Rs. 80 and it includes a heavy interest of 37·5 per cent. per annum.

B-2005. *Sir Victor Sassoon*: Does that figure 80 include the interest?—Yes.

B-2006. *Sir Alexander Murray*: You have taken these figures on trust and you cannot vouch for them? I personally have taken these figures from the coolies who were brought to the camp by my worker. I did not stay throughout the whole meeting. The coolies were put on one side and the baniyas were put on the other and the discussion took a considerable time.

B-2007. *The Chairman*: These figures were prepared yesterday?—No, about six days ago.

B-2008. *Sir Alexander Murray*: Now I am getting at what I want. You say that the baniyas and the coolies were both there when the examination took place?—Yes.

B-2009. Do you think that a coolie would say exactly what he owed and make a clean exposure of it?—There was a most prolonged argument.

B-2010. Who was the argument between?—Between the coolies and the actual baniya who was owed the money.

B-2011. Did you get the books produced?—No.

B-2012. *The Chairman*: Did the baniya say to one man, "You owe Rs. 100; come and write there Rs. 50"?—No. It is most difficult to get at exactly what is owed to a baniya.

B-2013. *Mr. Cliff*: The baniya and the coolies finally agreed after an altercation, that Rs. 80 was about the figure. Is that clear?—Yes.

B-2014. *Sir Alexander Murray*: Were you there?—I was there part of the time.

B-2015. You were not there when they agreed?—No.

B-2016. *Sir Victor Sassoon*: Does it mean Rs. 50 to Rs. 60 borrowed, plus interest?

*Sir Alexander Murray*: He does not know, he was not there.

B-2017. *Dinshaw Chaman Lal*: Who is responsible for the taking charge of epidemics when they break out and what sort of epidemics are they?—Since

I, have been here we have had an outbreak of cholera. We get information from our inspectors, who go round the camps after the first or second case. You may get 30 cases in a night amongst a big population. The moment I get information I personally go to the camp.

B-2018. Do you see that these epidemics are controlled and that medicines are supplied for that purpose?—Yes.

B-2019. Can you give me the number of deaths during last year from cholera, small-pox and plague?—Speaking from memory there were 34 deaths in the camps from cholera. The number of small-pox cases has been exceedingly few in New Delhi. We have no plague.

B-2020. It has not been a very bad year apparently for epidemics of this class?—No.

B-2021. Would you therefore be in favour of a system of sickness insurance?—No, because you cannot take a single year or even a few years as a guarantee of what is going to happen in future.

B-2022. What I am driving at is this: since you have been in Delhi, have the epidemics been of such a nature as to make a scheme for sickness insurance impossible from a practical point of view?—No, not the short period. But it is impossible to base it on a short period.

B-2023. Since it is your duty to bring these epidemics under control would it not be better to have a systematic method whereby the workers could go to panel doctors, let us say?—I do not think that that system would succeed with our present state of disease.

B-2024. You deal with the matter when an epidemic breaks out. You have to spend money. You have to hand out medicines and send out doctors. Would it be difficult to do that systematically year by year?—Yes, because you get hundreds of deaths from disease when you least expect them.

B-2025. My point is that even now, when you get hundreds of deaths you have to treat them and you have to provide assistance?—We do. It is the cheapest and most effective method. If you left control work to panel doctors you would never get any control work done.

B-2026. Otherwise administratively you would have no difficulty?—No.

*Sir, Victor Sassoon:* What do you mean by "administratively"?

B-2027. *Diwan Chaman Lall:* That is to say, if you have a system of panel doctors?—I could not get them to work properly if they were not directly under me. I would not risk control work being done by panel doctors at this stage of our education.

B-2028. Would you prefer that the system which you have at present should be extended and made more permanent and practical?—Yes, that is what I have striven for all along.

B-2029. *Mr. Cliff:* Is that not only for preventive medicine but also for treatment?—I do not deal actually with the treatment. There is a separate branch which deals with the curative side of medicine.

B-2030. *Diwan Chaman Lall:* Mr. Clow asked you a question about certain workers whom you saw and who looked fairly healthy. Have you ever taken any statistics about the weight of any of these workers in order to find out whether their weight was up to the average or below the average?—I have not. I have been so busy with all sorts of other matters that the weighing of workers has not been done. An investigation on this point is most desirable.

B-2031. With regard to the question put to you about indebtedness, is it not a fact that the workers borrow money mostly on the security of the little piece of land which they possess in the villages or on their cattle or on the ornaments of their women?—I understand so.

B-2032. So that the debt goes mounting up to the stage when the baniya goes and pounces upon the man's land and cattle?—I think it gets sometimes even beyond that stage.

B-2033. *The Chairman*: Is there any deed executed?—I cannot tell you. Very often the baniya cannot read or write.

B-2034. *Sir Alexander Murray*: What happens when the debt gets beyond that stage?—The man is ruined. What does he do then?

B-2035. *Mr. K. Ahmed*: He pledges his children?—I do not know that.

B-2036. *Sir Victor Sassoon*: Is there any form of legislation which prevents the baniya from taking the land away?—Not that I am aware of.

B-2037. *Diwan Chaman Lal*: You stated that during the War yourself lived three years in huts?—I lived in dug-outs which were under the ground and most unpleasant.

B-2038. Would you more or less compare the housing arrangements with those dug-outs?—The dug-outs were worse really, but it is not possible to say that it is absolutely impossible to live in them.

B-2039. *Mr. Cliff*: You say that you do not believe that an insurance scheme against sickness can successfully be introduced at present. Have you made any actuarial calculation?—No.

B-2040. You are primarily interested in the prevention of disease?—Yes.

B-2041. You say you have medical inspection of school children. Do you make any provision for medicine or anything of that kind?—We do. We have made provision in this sense—that the hospitals and dispensaries of Delhi have set aside a time when school-children can be brought there for treatment, apart from being taken to private practitioners for treatment. The treatment given at the dispensaries and hospitals, roughly speaking last year was between 30 to 40 per cent. of those actually requiring treatment. Considering that this work was only started 18 months ago, that is a very large percentage.

B-2042. Is the treatment easily accessible to the children?—Fairly so. These dispensaries are placed in various parts of the city.

B-2043. Are they given any nourishing food at all?—Some schools in the city have started a system of what is known as "Food for all" movement. The children go to the school with a small amount of pocket money, with which they can purchase good ghee, wheat and other materials for making *chapatis*, and sweets of various sorts. The children pay the cost price to the master who is running that particular branch.

B-2044. You said that prevention and good food should go concurrently. Do you think it is advisable that, while you are doing all you can in your branch, there should be a good medical service for the work people?—Do you mean an insurance service?

B-2045. First of all should there or should there not be a good medical service for the work people?—There should be a medical service. At present it is worked in conjunction with our public health work.

B-2046. Could the two branches work in conjunction?—They could most decidedly.

B-2047. Are you not compelled to admit the necessity of giving nourishment in cases of sickness?—You mean to individuals not going to hospitals?

B-2048. Even at hospitals, or to cases at home?—They do get in the hospitals what they require according to the nature of the disease.

B-2049. You say in your memorandum that it is not possible to give monetary benefit; does that exclude any other form of benefit?—I do not think an insurance scheme could be successful financially, taking into account the enormous number of epidemics, and the enormous wastage of life which is occurring over vast tracts of land. Taking a specific place such as Simla or Delhi or any similar small town you might be able to do something in that respect for a particular place, but it could not be generalized.

B-2050. Supposing you had a famine in India, is provision made for it?—Yes, a certain amount of *fakavi*, as it is known, is given to the villagers.

B-2051. Is that provision only made in cases which may be said to be dramatic cases?—You may say so. We have had a fairly considerable famine

round Delhi affecting 304 villages owing to lack of rain, and the amounts of *takavi* which we have been able to give have been really very small.

B-2052. Is it not incumbent upon all responsible parties here to increase the necessary provisions in order to improve the health of the work people?—I say 'yes' every time: it is incumbent on us, bearing in mind what money there is available for the purpose. We cannot give money if we have not got it.

B-2053. But it is necessary to make provision?—Undoubtedly.

(The witness withdrew.)

**NANNA, son of Elahi Baksh, called and examined.**  
**(Diwan Chaman Lall interpreted).**

B-2054. *Mr. Clifff*: What occupation are you following?—I am a mason.

B-2055. Were you not in fact laying bricks this morning when we saw you?—I was laying bricks this morning.

B-2056. What do you earn?—Rs. 1-10 a day.

B-2057. How long have you been working in Delhi on this work?—I came here from my village four months ago; I have been at work for two months and for two months I have been unemployed.

B-2058. *Mr. Clow*: Where did you work before?—I am working at Dehra Dun; I was employed for some time and then I was unemployed for some time, and from there I went to Hyderabad (Sind).

B-2059. *Sir Alexander Murray*: What pay did you get at each of these places?—I was looking about in Hyderabad for fifteen days in search of work, but did not find work. I used to get Rs. 2 per day at Dehra Dun.

B-2060. *Mr. Clow*: Why did you go to Hyderabad if there was no work for you there?—I heard there was work and therefore I went there.

B-2061. *Sir Alexander Murray*: How long do you work in a day?—From 6'clock in the morning till dark.

B-2062. When do you eat?—I have my food in the morning before I go to work and I come back and have my food again when I get back. I get no rest during the day.

B-2063. Do you not take any food with you to work?—In summer when the days are long I take some food with me, but not in winter.

B-2064. *The Chairman*: Is your family with you?—Yes, my family is with me.

B-2065. Do they work?—I have one son, two daughters and two sisters; they are minors and they do not work.

B-2066. *Mr. Clow*: Does your wife work?—No, my wife does not work; she is in purdah.

*Diwan Chaman Lall*: He is quite indignant that it should be suggested that his wife works.

B-2067. *Miss Power*: How many dependents have you?—One son, two daughters, two young sisters, one brother, myself and my wife. My brother is seven years old.

B-2068. *Mr. Clow*: Is the whole family dependent upon you?—Yes, they are all dependent upon me.

B-2069. *Sir Victor Sassoon*: Have you any land?—No. I had a little land, but I fell ill one year and sold it to pay the expenses.

B-2070. Where was it?—In Bareilly in the United Provinces.

B-2071. Is your father living?—No.

B-2072. Where do you live?—I live at Paharganj and I pay Rs. 8 a month rent.

B-2073. *Sir Victor Sassoon*: Do you owe any money?—I owe Rs. 150 in Bareilly; I owe some to my brother-in-law and some to the bania. I have to pay the bania Rs. 3 a year. A debt of Rs. 8 remains to be paid to the bania.

B-2074. How are you paying the bania?—I pay Rs. 3 every year on the Rs. 8; this is the last bit of the loan left.

B-2075. How are you paying your brother-in-law?—I do not pay any interest on the money I borrowed from my brother-in-law. I owe in all Rs. 150. Rs. 8 of that I owe to the bania in Bareilly; the rest I owe to my brother-in-law.

B-2076. How much did you originally owe the bania and how did you pay him off?— I borrowed Rs. 50 from the bania originally.

B-2077. What interest did you pay on the Rs. 50?—Six annas per rupee per year.

B-2078. *The Chairman*: That is 37½ per cent.

B-2079. *Sir Victor Sassoon*: Then you have been gradually paying him off?—Yes.

B-2080. When was that Rs. 50 borrowed?—When I went to Hyderabad I borrowed this Rs. 50.

B-2081. When was that?—Over a year ago.

B-2082. *The Chairman*: Then when you have steady work you pay what you can and try to get into a better position?—When I have steady work I pay back the bania.

B-2083. *Sir Victor Sassoon*: How much did you pay for your wedding and where did you borrow that from?—I borrowed no money when I married; I had the money; my uncle and my father were both alive and they saw to it.

B-2084. *Mr. Clow*: How many days work did you do in the last month, October (1929)?—21 days.

B-2085. *Miss Power*: Are you paid weekly or monthly?—After a month.

B-2086. Would you prefer to be paid weekly?—It would be better for me to be paid weekly.

B-2087. When you first got employment here were you obliged to borrow before you got your first month's wages?—I borrowed the fare when I came here, and until I got my work I lived with some people in Paharganj who make cotton carpets and I borrowed money from them to carry on.

B-2088. Did they feed you?—Whatever they spent on my food they debited to me.

B-2089. *Sir Victor Sassoon*: They gave you credit?—Yes.

B-2090. Where do you get your food from now?—From the bania.

B-2091. Does the bania give a month's credit?—Yes, I had to pledge the children's things with the bania in order to get credit from him.

B-2092. Do you pay every month for the food when you get your wages?—Yes.

B-2093. If you paid him weekly would the bania make it cheaper for you?—If I were paid my wages every week I should not have to borrow but should buy things for cash.

B-2094. Would the things then be cheaper for you?—If I have to borrow it is naturally dearer.

B-2095. If you were paid by the week you would still have to get credit for a week, would not you?—The cash would be with me and then why should I go and borrow.

B-2096. The cash is not with you until you have worked a week?—I would ask the contractor to give me an advance on my wages.

B-2097. *The Chairman*: You think you would be less dependent on the bania if you were paid weekly?—That is so.

B-2098. If you were paid weekly, in your opinion you could pay cash and not be dependent on borrowing from the bania?—If I get paid week by week then there will be no necessity for me to depend on the bania.

B-2099. How much do you pay for your *atta*?—6½ seers or 6¾ seers to the rupee.

B-2100. That is what you are paying now?—Yes.

B-2101. If you had your money weekly and paid cash how many seers would you get to the rupee?—I get 6½ seers on credit and I get 6¾ seers for cash.

B-2102. *Sir Alexander Murray*: On what day after the end of the month do you get your pay?—Fifteen days after it is due.

B-2103. You say that if you were paid weekly, you would take the first week's money in advance from the contractor; why should you not take the first month's money also from the contractor?—I did not put in a full month's work; I only put in 21 days' work, and the contractor would not advance me a month's pay.

B-2104. *Sir Victor Sassoon*: Can you borrow at all from your contractor even now?—The mistrie takes the advance from the contractor and I take from the mistrie two rupees or four rupees as the case may be.

B-2105. *Mr. Cliff*: If you have a son or sons do you send them to school?—They are too small to send to school.

B-2106. Are you going to send them to school?—When they grow up I will send them to school.

B-2107. *Mr. Birla*: Have you to pay something to the contractor?—No, I give nothing to the contractor.

B-2108. Do you get full meals every day for your family and yourself?—I do not get any relief from the money-lender in respect of the money that I owe, but I try to make two ends meet.

B-2109. *Mr. Cliff*: Do you get full meals every day?—Twice a day.

B-2110. How do you spend your money?—I pay off the bania and I have three or four rupees left which I use up for the coming week.

B-2111. *Mr. Birla*: What did you have to eat to-day?—I had my *dal* and my *roti* this morning.

B-2112. How much?—Three annas worth of *atta* for the whole family this morning; one rupee's worth of *atta* lasts three or four days.

B-2113. *Diwan Chaman Lall*: What amount were you getting at Dehra Dun?—Rs. 2.

B-2114. What are you getting here?—Rs. 1-10.

B-2115. Why did you accept Rs. 1-10 here when you were getting Rs. 2 at Dehra Dun?—I accepted Rs. 1-10 because the contractor told me that he was not being paid more than that by the Government and therefore he could not pay me more.

(The witness withdrew.)

**PARA and KALLIE, representative women workers.  
(Diwan Chaman Lall interpreted.)**

B-2116. *Mr. Clow*: What is your name?—My name is Para. My name is Kallie.

B-2117. What is your occupation?—(Para) I am a gardener. (Kallie) I am a syce.

B-2118. From which district do you come?—Jaipur.

B-2119. What wages do you get?—7 annas a day.

B-2120. Does your husband also work?—(Para) My husband is disabled and cannot therefore work. (Kallie) My husband is an old man and does not work. I have four children and get 7 annas a day; I find it difficult to maintain the family.

B-2121. *Sir Alexander Murray*: What is your age?

*Mrs. Chatterjee*: She cannot say. Generally they do not know.

B-2122. *Sir Alexander Murray*: What are the ages of your children?—One daughter of 13 and one of 11, a boy of 9 and another of 5.

B-2123. Do any of them go for work?—No.

B-2124. *Diwan Chaman Lall*: Why not? Does not the girl of 13 go for work?—No, she cannot go to contract work at that age. Even when we do work we are sometimes thrown out.

B-2125. How much do you owe to the bania?—I owe Rs. 200 to the bania. All that debt has fallen on my shoulders because my husband is very old and my children are minors.

B-2126. What interest do you pay?—Two pice per rupee per month.

B-2127. How do you pay the interest?—If any balance is left after meeting the household expenses I pay, otherwise not. To enable me to pay to the bania I have cut down my food. (Para) I also owe Rs. 200 to the bania.

B-2128. What did you eat this morning?—One *sukki chapati* with one green chilli.

B-2129. Was it a thick one?—Yes.

B-2130. Do you take milk and ghee in your diet?—No.

B-2131. Do you take *dal*?—Yes, sometimes, not every day. How can I get *dal* every day when I am so poor?

B-2132. *Diwan Chaman Lall*: Does anybody other than your family members live in your hut?—No.

B-2133. What rent do you pay?—12 annas a month. (Kallie) In my hut also no outsider lives.

B-2134. Who built the hut, was it you or the employer?—We ourselves built the hut.

B-2135. Do you know that you actually owe Rs. 200 to the bania?—No, we maintain no accounts; it depends upon the bania.

B-2136. How long have you been working in Delhi?—(Kallie) 3 years. (Para) 1½ years.

B-2137. Did you work on the same kind of work before you came to Delhi?—Yes.

B-2138. Where was it?—In Jaipur.

B-2139. What wages were you getting there?—We were getting grain wages.

B-2140. Did you make any representation to your employer that you should get more wages?—7 annas is the fixed rate and we accepted the fixed rate which was given. Who is going to give us more than 7 annas?

(The witnesses withdrew.)

**Mr. J. A. WOODHEAD, I.C.S., Secretary to the Government of India, Commerce Department.**

B-2141. *The Chairman:* You are the Secretary to the Government of India, Department of Commerce?—Yes, Secretary to the Commerce Department.

B-2142. You have submitted to us a memorandum dealing with the question of seamen under the various heads of our questionnaire. How long have you held your present office?—Since March 1929.

B-2143. What posts have you held previously?—I was Joint Secretary, Commerce Department, before that for 18 months. I was Financial Secretary, Bengal Government, before that.

B-2144. Can you tell us how it came about that the question of seamen, their recruitment, and their conditions comes under your Department and not under the Department of Industries and Labour?—I think because we deal with mercantile marine questions.

B-2145. Therefore it is thought more appropriate presumably?—I think so. The provisions of the law which apply to seamen are in the Indian Merchant Shipping Act.

B-2146. Is there any contact between your Department and that of Industries and Labour on these questions?—Not a very intimate contact. Each Department consults the other Department on questions affecting both Departments.

B-2147. In your memorandum dealing with recruitment you say that "the question of revising the system of recruitment of seamen at the principal ports of Calcutta and Bombay has been engaging the attention of the Government of India for some time past, and it has recently been decided that there should be two methods of recruitment of serangs and butlers . . ." When was that decided?—The question of an employment register for serangs has been under discussion for some time; a final decision was arrived at towards the end of last year.

B-2148. That means that your department has definitely brought about the changes which you describe in your memorandum to us?—Yes, we have introduced these changes.

B-2149. Was that following the recommendations of the Clow Committee Report?—That did not absolutely follow those recommendations. They follow only partially.

B-2150. In your memorandum dealing with welfare you say that "the establishment of an Indian Sailors' Home in Bombay has been under consideration for some time and a committee appointed by Government is now considering the whole question." Which Government is that? Is that the Central Government?—The committee was originally appointed by the Government of Bombay.

B-2151. What do you mean by "originally"?—The committee has been in existence for some time as the question of welfare work was formerly a subject dealt with largely by the local Government. We have taken this subject over since 1st April 1929 when the centralization of Mercantile Marine Administration took place. Before 1st April Mercantile Marine Administration was what we call an agency subject, that is, it was administered by the local Government on behalf of the Government of India.

B-2152. So that it is now a committee of the Central Government?—Yes, it was originally appointed by the local Government.

B-2153. And you have taken over the same committee?—Yes, the same committee is continuing its work.

B-2154. Has it approached a decision now?—We have not received any information with regard to that. We have not received their report as yet.

B-2155. *Mr. Cliff:* How long has the committee been sitting?—I am afraid I cannot say definitely. There was *interregnum* for some time, and action

was postponed, exactly for what reasons I do not remember. They started sitting again towards the end of last year. It is a subject which we did not deal with originally; it came to us in April of this year.

B-2156. *The Chairman:* Are you taking any steps to promote the working of this committee?—The committee is sitting; we hope to receive the report before very long. The local Government is still taking an interest in the matter.

It seems to be falling between two stools?—I do not think so. We certainly hope to receive the report before very long. The Chairman of the Port Commissioners, Mr. Neilson, is the Chairman of the Committee.

B-2157. With regard to periods of wage payment dealt with in your memorandum is there any system by which Indian seamen can make allotments to their families during the time they are at sea?—The Indian Merchant Shipping Act provides for the making of allotments, but I cannot say definitely whether allotments are in practice made.

B-2158. I think it is a common practice in England, and seamen are encouraged to make allotments to their families during the time they are away?—Yes. Our Act also allows for allotments, but I have not heard of allotments being made. We have not got full information on this subject, because the administration was only taken over on the 1st April (1929) from the local Governments. Therefore on these questions it might be advisable to get information from the ports from the shipping masters.

B-2159. We shall pursue that no doubt, but do not you think it a very desirable thing that making allotments to their families should be encouraged?—You would have to take care that no mistake was made with regard to the persons to whom the payments were made. If a seaman has a wife she would not usually appear in public.

B-2160. The man himself would say to whom the allotment was to be made. Have you considered that?—No, we have not, while I have been in the Commerce Department, dealt with this question of allotment.

B-2161. With regard to indebtedness of seamen you say that "indebtedness of seamen in Calcutta is extensive", that in one case 85 per cent. are in debt, and in another 75 per cent., the debts ranging from Rs. 20 to Rs. 1,000?—Yes.

B-2162. Has any attempt been made to rescue these people by means of co-operative credit?—Co-operative credit is a local Government subject. I could not say how far the local Government has made any attempt to do that.

B-2163. Would it be with seamen whom you have taken under your own wing?—Yes, I think so. It must be remembered that the majority of Indian seamen do not live at the ports. Their homes are in the districts, miles away from the ports.

B-2164. I mean *qua* seamen, not *qua* citizens?—But then they are distributed all over the countryside; they do not live in one particular port.

B-2165. *Mr. Ahmed:* Mr. Woodhead, the Clow Committee report recommended two alternatives for the recruitment of crews and lascars?—Yes.

*Mr. Clow:* This report is a strictly confidential document. I understand it is not published at large. If evidence is going to be led about this I suggest that that should be confidential.

*Mr. Joshi:* Your recommendations are not confidential; they were published in the Government of India Gazette.

B-2166. *Mr. Ahmed:* There the report recommended that recruitment should not be through brokers which was an abuse. Is not that so?—Yes, the Clow Committee recommended that brokers should not recruit.

B-2167. That was in May 1922. Since then is not the same method of recruitment through brokers still in existence?—Not quite.

---

\* The report has since been received.

B-2168. What do you mean by 'not quite'?—The recruitment is still through brokers; this nuisance is still existing?—Brokers were never employed in Calcutta by the British India and the Peninsular and Oriental Companies. In Bombay the British India I think, at present do not recruit through brokers.

B-2169. Do you know that they have paid brokers?—In Bombay the Peninsular and Oriental did not employ ghat serangs. In Bombay the ghat serang was a broker's man.

B-2170. In Calcutta?—They employ ghat serangs who are their own employees, but do not employ the brokers.

B-2171. They get a certain percentage of commission from the recruitment?—No, the ghat serangs at Calcutta are paid servants of the British India.

B-2172. He gets a certain amount of commission for supplying crews?—No, for advances paid, not for recruitment.

B-2173. You count that as being on advances made by them?—I think that is the statement in the Clow Committee Report.

B-2174. Do you know that the ghat serangs at Calcutta also charge interest on the money which is advanced?—No, I do not know that. It has been alleged that the serang who is the head-man in the crew, realizes certain sums from the crew.

B-2175. Have you yourself made enquiries about this?—No. The Clow Committee Report stated that the serangs did not pay the men the actual pay they received from the company.

B-2176. About three or four years ago, when Sir Charles Innes was the head of your department, the Government of India informed the Indian Seamen's Union at Calcutta that they had appointed a Special Officer for recruitment; but though this officer has been appointed nothing has been done up to the present and the brokers are supplying crews?—I do not think that the Government of India informed the Union that nothing has been done.

B-2177. I do not say that the Government of India informed them that nothing had been done. The Government informed them that a special officer had been appointed for the purpose of recruitment and that no brokers or ghat serangs would take advantage of the crew seeking employment; that it would be done by a special officer who was there. Since then nothing has been done, though as a matter of fact a special officer has been appointed?—I do not know which letter you are referring to, and hence it is rather difficult to deal with the question. If the Government of India made any statement it was to the effect that they had appointed an officer from the Mercantile Marine, Captain Darvell, as Shipping Master. Prior to the appointment of Captain Darvell the Deputy Port Officer, who is a Royal Indian Marine Officer, was in charge of the shipping office. Captain Darvell was appointed definitely in the hope that he would remove the evils which existed.

B-2178. But he is not the sole recruiting officer. They are getting crews through brokers and ghat serangs? The British India does not get them through brokers.

B-2179. They are paid servants; they are employees of the company?—The majority of the shipping companies in Calcutta are now maintaining employment registers for their own serangs. The marine superintendents, the masters, or the chief engineers, select the serangs from the men entered on those registers of serangs. The serang then selects his crew and brings them to the marine superintendent, master or chief engineer, who approves of the crew. By this means we hope that the broker will not be employed in the initial selection of the crew.

B-2180. That was not your hope when the report was written on 5th May 1922?—The report was written before anything was done at all. There have been developments since the report was written.

B-2181. When the report was written why was not your department able to give effect to it and abolish the broker system altogether?—It was suggested that we should have a Government bureau for the selection of crew by a roster system; it is doubtful whether a rotation system would work.

B-2182. What are the reasons, and who suggested that?—Government recognized that there were evils in the broker system, and we are attempting to remove the broker as far as possible from the recruitment of the crews.

B-2183. When are you going to make a start?—A start has been made in Calcutta now. The companies, other than the British India, have now opened employment registers for their own serangs. The British India has had such a register for some time.

B-2184. Is it not a fact that the formation of a committee was suggested on which employers and employees should be represented, both sides selecting the men?—The Clow Committee made two alternative suggestions. One was for a joint supply, and the other was, if such a joint supply was not possible, a Government bureau. I take it that a condition precedent to the introduction of a joint supply is that the majority of seamen should be members of the union or unions. I do not think that is so at present. The proportion of seamen who are members of the unions is extraordinarily small.

B-2185. Are there any seamen's homes or recreation grounds in Calcutta for Indian seamen?—No. The seamen live in boarding houses.

B-2186. Do the keepers of these boarding houses extort money from the Indian seamen?—I could not say personally. I think there is a statement to this effect in the Clow Committee's Report.

B-2187. No housing accommodation is provided for Indian seamen by the employers or by the Government?—No.

B-2188. And no school is provided for them or their children?—There is no special school, but I presume they attend the ordinary primary schools.

B-2189. Neither the employers nor the Government has provided any school for Indian seamen or their children?—The Government of India does not provide educational institutions in the provinces. That is a provincial subject.

B-2190. Do you know that there have been some criminal cases in connection with extortion of money from Indian seamen by boarding house keepers?—I do not know.

B-2191. Have you any experience of the food which Indian seamen get on board the ship?—The scale is prescribed in the agreement, which they and the master of the ship sign.

B-2192. The cost of which is very small?—I cannot say what the cost actually is. The scale was prescribed some years ago. It prescribes the amount of each article of the diet.

B-2193. Do you know that the Indian seamen are not supplied with warm clothing when they go to the Mediterranean?—The Lascar agreement lays it down that they shall be supplied with warm clothing if they are taken beyond certain degrees of latitude. I believe warm clothing is always supplied when it is required to be supplied by the agreement.

B-2194. Is not the cost of that clothing subtracted from their wages?—No. The lascars are not so grossly ignorant in regard to these matters. He is, I believe, always supplied with warm clothing according to the agreement when he goes beyond certain latitudes. The agreement does not require him to be supplied with warm clothing in the Mediterranean.

B-2195. Will you tell me which rule that is?—You will find it in the seamen's agreement. When they are taken beyond certain latitudes, north and south, the agreement prescribed by the Government of India requires that they shall be provided with warm clothing. If they are taken further north still, the rule prohibits their being employed on deck.

B-2196. Do the steamship companies carry out that rule?—We have had no complaints so far.

B-2197. Have not you had memorials and resolutions from the Calcutta Union?—Not in my time.

B-2198. You were only appointed a few days ago?—Six months ago.

B-2199. Is it not a fact that since 1921 a great number of resolutions and memorials have been forwarded to you, and you have not paid any heed to them?—I cannot answer that off-hand. I can assure you that when the men go beyond certain degrees of latitude the agreement requires that they shall be provided with warm clothing.

B-2200. With regard to rations, the scale only provides for a very small amount of rations, does it not?—The scale is adequate so far as we know.

B-2201. Is not the amount of wages received by crews of other countries 10 to 25 times more than that received by Indian seamen?—I cannot tell you.

B-2202. *Diwan Chaman Lall*: Have you any comparative wage statistics?—No.

B-2203. *Mr. Ahmed*: Is it a fact that Indian seamen are not supplied with cabins but have to sleep on deck?—No, certainly not. They are all supplied with quarters. Crew accommodation is supplied on board every steamer.

B-2204. That may be the rule, but is it always complied with?—I think the rule is complied with.

B-2205. They have no fixed hours of work?—I have given the hours of work in the memorandum.

B-2206. You must have travelled at least by the boats of the Inland Steam Navigation Company?—I did not know you were talking about inland waterways.

B-2207. They work day and night on those steamers, do they not?—Not so far as I know.

B-2208. How many hours do the crew work?—I cannot say.

B-2209. It takes two weeks for the steamer to go from Calcutta to Assam, and the steamer is working all day and all night, is it not?—The steamer is running all day and all night, but that does not mean to say that the crew is working all day and all night.

B-2210. How many hours do they work—sixteen?—I presume the engine room crew work by shifts, and the deck crew are certainly not all on duty at night.

B-2211. I put it to you that they work from 12 to 16 hours a day. Is that correct?—I cannot say.

B-2212. *The Chairman*: How far has your Department any control over inland steam navigation?—We exercise no control, except so far as legislation in connection with inland steam vessels is concerned.

B-2213. *Mr. Ahmed*: Are you aware that only a month ago at Geneva it was decided to fix the hours of work on inland navigation boats the same as the hours on the open sea?—The matter is under discussion at present in Geneva. I do not think any decision has been come to.

B-2214. An amendment was moved and accepted that inland steam navigation boats should be included.

B-2215. *Mr. Joshi*: What were your instructions to your delegates—to support the Hours Convention or not?—The instructions were the same as those given in connection with the Genoa Conference in 1920.

B-2216. *Diwan Chaman Lall*: In 1920, Mr. Cuthbert Lawes suggested a discrimination?—The draft Convention of 1920, which was not accepted by the Conference provided for a differentiation.

B-2217. *Mr. Joshi*: Were those the same instructions?—Those, I think are the same instructions to-day.

B-2218. *Mr. Clow*: As regards the Seamen's Recruitment Committee, what are the results of the alteration of system which has been introduced?—One

result will be, we hope, that the brokers will largely disappear as recruiting agents.

B-2219. Has there been any result, for instance, on the sums taken by the serang from the men?—That can only be found out by enquiry.

B-2220. You were Marine Secretary in Bengal, and you may have some knowledge of it?—No, I am afraid not, as the subject was dealt with by the Deputy Secretary.

B-2221. As regards the reduction of unemployment has there been any result of the change. Has it had the effect of reducing the large mass of unemployed seamen at Calcutta?—I do not see how it is going to reduce the mass of unemployed seamen. You can distribute the employment among the seamen, but the manner of recruitment will not affect the unemployment. That depends on the supply and demand.

B-2222. This system was designed to secure more regular work for the seamen, and to eliminate the large number of useless and unemployable seamen?—I do not see how any bureau is going to increase the total amount of employment.

B-2223. Obviously, by limiting the numbers on the roster, the others will disappear to their villages?—You suggest that men who are useless should be taken off the register and refused employment?

Yes. I do not know how many useless people there may be. It is difficult to say whether a man is useless or not.

B-2224. Let me put it in this way. Is the mass of unemployed seamen in Calcutta smaller than it was in 1922?—It must be, because the number of seamen employed is much greater now.

B-2224a. As regards wages, would you be prepared to agree that, taking into account the ration, the wage of a seaman is on the whole higher than can be obtained for the same degree of skill in other occupations in India?—Yes, the very fact that there is such a large number of men clamouring to be seamen proves that the employment is attractive. You can get any number in Calcutta. We have restricted the issue of continuous discharge certificates to recruits. Originally anybody could get such a certificate by going to the office and saying he wanted to go to sea. The number of men who applied was very large. The present position is that no recruit is supplied with a continuous discharge certificate unless he has obtained employment on board a steamer.

B-2225. Therefore your system has reduced unemployment?—It has in that way.

B-2226. As regards the Indian Ports Act of 1922, when we were in Karachi we saw some young children employed in coaling ships. Is that covered by the Act?—I think that is against the Act.

B-2227. How is the Act enforced?—The Act is enforced by the local Government.

B-2228. In practice what is done to ensure that no children under 12 are employed?—I am afraid, I could not say.

B-2229. You did it in Bengal yourself?—That was a matter rather for the labour department of the local Government. I think the Karachi case is an infringement of the law. There is no reason to presume that the word "goods" does not include bunker coal. The employment of children under 12 in loading bunker coal is, I think, prohibited by the Act.

B-2230. *The Chairman*: In the whole of India?—Yes, the provision is in the Indian Ports Act, which is an Act applicable to all ports in British India.

B-2231. *Mr. Chow*: Is there any provision for inspection by any independent authority in regard to the safety and health of the workers in docks?—I believe there is no inspection beyond that by the Port Commissioners: I however cannot speak with certainty.

B-2232. Do you not think it would be desirable to have some such independent authority?—Yes: we wrote some time ago to all the local Governments.

enquiring what regulations are in existence as regards the safety of persons employed in the loading and unloading of ships and working in docks generally and whether they considered that regulations on the lines of the regulations in England known as the Dock Regulations would be suitable in India. We also enquired whether they considered that legislation should be passed to bring such regulations into effect. The opinions we have received are somewhat divided. The regulations in force at present are contained in the bye-laws framed by the Port Commissioners. Bombay, Calcutta and Rangoon have certain bye-laws which cover a considerable portion of the ground that is covered by the Dock Regulations in England.

B-2233. Not Karachi?—No; if I remember rightly only Bombay, Calcutta and Rangoon.

B-2234. I take it that in Karachi and Madras there are no regulations?—I think that is so.

B-2235. In ports the Port Commissioners who are in a sense the employers are responsible for securing safety of the workers?—That is so. I am speaking from memory but I think the Madras Government and the Madras Port Commissioners were generally in favour of legislation. The Bengal Government also favoured legislation, so also the Calcutta Port Commissioners and the Bengal Chamber of Commerce. There is, however, a difference of opinion in Bengal as to whether the legislation should form part of the Factories Act. The Bengal Government favours legislation as part of the Factories Act. The Calcutta Port Commissioners seem to be opposed to that; they want a separate Act. The Indian Chamber of Commerce in Calcutta seems rather doubtful whether any special legislation is necessary. The Bombay Government and the Bombay Port Trust are opposed to legislation. The Burma Government are also not convinced that legislation is necessary or desirable; they think that the bye-laws framed by the Port Commissioners are sufficient.

B-2236. What is likely to be done in the matter?—We have only just received all the opinions and it has been suggested that we should wait for the report of the Commission.

B-2237. Are there any statistics available to show the number of accidents in docks, apart from the Workmen's Compensation Act?—We do not maintain statistics of this character. I think the Bombay Port Commissioners gave figures for 1927-28. The Calcutta Port Commissioners have not, I believe, given any statistics. Burma has given figures for three years; in 1926 in Rangoon there was one death, 11 permanently disabled and 84 temporarily; in 1927 there was no death, 5 permanently disabled and 121 temporarily; in 1928 there were 8 deaths.

B-2238. Did the reference which you made as to the possibility of legislation relate to hours of work?—No, it only referred to safety.

B-2239. There are no regulations at present for hours of work in docks?—No.

B-2240. As regards workmen's compensation you give us particulars in your memorandum. You say that all the shipping companies have consented to the insertion of the article in question. Does that relate both to Bombay and Calcutta?—I think so.

B-2241. Is that obligatory now or is it voluntary?—It is not obligatory. The difficulty is that the majority of the ships are registered in the United Kingdom.

B-2242. You have some means of making it virtually obligatory, exercising compulsion?—I do not think so; it is voluntary.

B-2243. Is not there any method by which Government can virtually make it compulsory on shipowners?—Not as far as I know.

B-2244. The system has been working satisfactorily?—Yes, all the shipping companies agreed to this. If a ship is registered in the United Kingdom and not in India—there are very few ships registered in India—the Indian law, as far as I understand, would not, except for this voluntary arrangement, apply.

B-2245. *Mr. Joshi*: Have the conditions of Indian lascars on ships been investigated by any committee?—The only committee we had was the Clow Committee.

B-2246. The Clow Committee did not investigate the conditions on ships?—No.

B-2247. So for many years no investigation has been made into the conditions of lascars on ships?—You mean as regards crew accommodation?

B-2248. As regards accommodation and other working conditions?—What do you mean by "other working conditions"?

B-2249. Hours of work?—There has been no committee of enquiry as regards hours of work.

B-2250. Did the Government ever consider whether the conditions should be investigated or not?—I do not think so.

B-2251. Has the Government ever considered whether the legislation as regards conditions for seamen laid down in the Indian Merchant Shipping Act is adequate or not?—The Indian legislation follows very closely the English legislation. But there is a difficulty as regards the legislative power of the Government of India; it is limited very considerably.

B-2252. I suppose it is a sort of imperial subject?—Yes; there is the further difficulty that Acts of the Indian Legislature are usually limited to British India and cannot be given an extra-territorial effect.

B-2253. There may be some ships registered in India?—Very few. They are chiefly the ships of the Sindhia Shipping Company and the Bombay Steam Navigation Company.

B-2254. You do not think those companies have investigated this matter?—I do not know.

B-2255. Has the Indian Seamen's Union any complaint against the P. & O. Company?—So far as I am aware we have heard no complaint.

B-2256. You have said that the wages of seamen are a little higher than in other industries. Is this explained by the fact that the wages of a seaman are not really for the period of service but for a much longer period, because he necessarily remains unemployed?—Not always; not on the coasting boats. On the coasting boats the seaman is employed fairly regularly.

B-2257. I have here with me a statement presented by the Secretary of the Bombay Seamen's Union which is a union of the P. & O. Company lines. It says that if they are employed for 12 months they remain unemployed for 18 months, in the P. & O.?—I think the P. & O. has introduced that system because labour and the labour associations wanted some kind of system by which men could get employment in rotation, and the P. & O. Company in order to relieve unemployment has arranged that men who have been out of employment shall be given preference when a steamer requires a crew.

B-2258. *The Chairman*: Does that mean that there are twice as many men?—It is difficult to say how many seamen there are. In India a sailor is often an agriculturist as well; he finishes his voyage and then goes home to his agricultural pursuits, and then he goes back again to sea. The number of men available for employment at Calcutta is probably almost twice as large as the actual number in employment.

B-2259. *Mr. Ahmed*: They go home because they have no provision for housing?—I entirely disagree.

B-2260. *Mr. Joshi*: May I ask whether you have made any census of the wages of seamen in India?—I have, in my memorandum, given the wages paid by the P. & O. Company.

B-2261. You have no figures of other companies?—The wages of other companies, I think, are slightly lower. I gave you the wages in 1915, and also in 1923; there is a considerable increase between 1915 and 1923.

B-2262. As regards the broker system you said that it is not abolished but is being abolished. When do you think it will be abolished?—No new licenses are being issued.

B-2263. *Mr. Clow*: It is proposed that recruitment should be carried out by Government officers advised by a committee. When will that system come into force?—At the present moment we think it will be extraordinarily difficult to recruit through a bureau, giving rotation.

B-2264. What is the difficulty in the rotation system?—One of the difficulties is that you are dealing with such an enormous number of men. They go away to their homes for months at a time; you do not know where they are. Another difficulty is that the serang, particularly in Bombay, brings the crew. I think the rotation system was tried in England and was abandoned.

B-2265. In England they have got a joint committee system?—Yes, they have what is called the joint supply, but it is not a supply by rotation; it is first come first served in England.

B-2266. *Mr. Joshi*: I want to put a few questions as regards the Conventions and Recommendations passed at the Geneva Conference and the action taken by Government as regards these Conventions. The memorandum submitted by the Industries and Labour Department of the Government of India mentions all these Conventions. First of all there is the draft Convention fixing the minimum age for admission of children to employment at sea.—No legislation has yet been undertaken, but the question of introducing a single Bill dealing with all the maritime Conventions, so far as they have been adopted by the Government of India, is under the consideration of the Government of India.

B-2266a. When is this legislation to be undertaken?—We hope it will not be long delayed now.

B-2267. *Mr. Cliff*: May I ask, in respect of that particular matter, whether you are waiting for the Commission?—No, we are not. As regards the Convention referred to by Mr. Joshi, the Indian legislature recommended that the Convention should be ratified subject to two reservations. It has not been ratified because a Convention cannot be ratified subject to reservations.

B-2268. *Mr. Joshi*: That was in 1920. There has been a delay. When you say "without delay", I want to know the approximate period. Will it be within one year?—Yes, I should think it will be within one year.

B-2269. Then there is the draft Convention concerning unemployment indemnity in case of loss or foundering of the ship. When will action be taken on that?—That will be in the same Bill.

B-2270. Then there is the draft Convention fixing the minimum age for admission of young persons. You accepted the principle of that, and ratified it, and yet no legislative action has been taken?—We have carried that into effect by executive action; it will be covered by the same Bill.

B-2271. Then there is the draft Convention concerning the compulsory medical examination. Will that be covered by the same Bill?—Yes.

B-2272. *Mr. Cliff*: Is there a draft of that Bill extant?—No, it has not reached that stage. First of all, we thought of legislating for these matters when we amended the Indian Merchant Shipping Act. That was a very heavy and difficult task, and it did not seem likely that it could be carried through at any early date. We therefore decided to take them in a separate Bill.

B-2273. *Mr. Joshi*: Can you tell me whether any action is going to be taken in that Bill as regards the draft Convention concerning seamen's articles of agreement, Ninth Geneva Session?—We propose to consult the interests concerned as regards that Convention. It will probably be in the same Bill.

B-2274. Will the draft Convention concerning the repatriation of seamen be in the same Bill?—No; the Indian Merchant Shipping Act already provides for the repatriation of Indian seamen, and so far there is no difficulty. There is, however, a legislative difficulty in regard to foreign seamen employed on a ship registered in India but engaged in their own country. It is beyond the power of the Indian legislature to deal with this point. Ratification by His Majesty's Government will require an amendment of the English Merchant Shipping Act. We are waiting for that to be carried out. If the

English Act is amended so as to bring it into line with the Convention we shall probably be able to ratify.

B-2275. So your Department is not responsible for this portion of the memorandum submitted by the Government in the Industries and Labour Department?—I have not seen a copy of the memorandum.

B-2276. I find in that memorandum that they have mentioned what action you propose to take on certain Conventions, but they make no mention about the recommendations passed by the Geneva Conference. Can you give us information on that?—There is a recommendation as regards the limitation of hours of work in the fishing industry. With the concurrence of the Indian legislature we propose to take no action. As regards the limitation of hours of work in Inland Navigation we propose to take no action, also with the concurrence of the Indian legislature. With regard to the recommendations concerning the establishment of seamen's codes the position is the same. Then there is a recommendation as regards repatriation of masters and apprentices. Here again the difficulty is a legislative one. We decided to wait and follow the lead of His Majesty's Government at home. Then there is a recommendation concerning the general principles for inspection of the conditions of work of seamen. We propose to give effect to this; effect was not given earlier because it was considered impossible to do so until the mercantile marine administration had been centralized. It has been centralized from 1st April of this year and we now propose to give effect to the recommendation.

B-2277. In the Indian Merchant Shipping Act there is a racial discrimination made as regards the accommodation to be provided and the rations to be given to lascars and European seamen?—Not as far as I know.

I am referring to Sections 85 to 91 of the Indian Merchant Shipping Act.

*The Chairman:* I think we are fairly convinced on that point. You would not compel the lascars to wear boots, would you?

*Mr. Joshi:* I am not talking about boots; I am talking about rations.

*The Witness.*—I would like to say that the lascar is a popular seaman to-day, which is proved by the increase in the number of lascars taken in ships during recent years. Probably one reason why he is taken is because he is cheaper.

B-2278. You admit that in Section 90 there is also discrimination about the accommodation provided?

*The Chairman:* It is common knowledge that there is differentiation between a European and an Indian.

B-2279. *Mr. Joshi:* 10 feet of space is provided for the European while 6 feet is provided for the Indian lascar?—There is a difference there undoubtedly.

B-2280. I want to know whether this difference can be minimized or not, if it cannot be removed at all?—That is a question for the Government of India.

B-2281. Did the Government of India ever consider this question?—Not to my knowledge.

B-2282. Will it consider it?—I cannot answer for the Government of India.

B-2283. What is your view with regard to setting up machinery to fix a minimum wage for Indian seamen?—We have not considered it.

B-2284. Who can speak on behalf of the Government of India and give us their view on this matter?—So far as I know the Government of India have not considered it. I think our general line with regard to seamen would be to wait and see what was done with regard to other classes of work-people before we touched seamen.

B-2285. *Mr. Cliff:* Would it be possible for you to give us approximately the number of seamen there are in India?—It is very difficult to give the number of seamen because the only figures we have relate to the number of seamen signed on and discharged. I can give you the number of men signed on and discharged.

B-2286. Is that divided as to coasting, deep sea and inland?—In coasting ships, that is home-trade ships, the law does not require the men to be signed on before a shipping master, and we do not compile figures for these ships. We could, however, obtain the figure by reference to the agreements. These agreements are delivered by the master to the shipping office. I cannot get you the number for inland steamers. The Government of India do not deal with the inland steam navigation; that is dealt with by the local Governments.

B-2287. I want to get an idea of the number unemployed?—That is very difficult. Captain Darvell made a guess in Calcutta, and I can give you that guess for what it is worth. The difficulty is that the seamen do not all live in Calcutta. There is a certain percentage living in Calcutta, but the large majority live inland and they may be away from the sea for years.

B-2288. You have mentioned in your memorandum that under the new procedure the number enrolled each year is about 5,000, whereas it used to be 10,000?—Yes. We definitely limited new enrolments to those who had obtained employment, and this number works out at about 5,000.

B-2289. What is the difficulty about a scheme of registration and rotation?—The difficulty lies in the large number who live in their villages and not in Calcutta.

B-2290. You can take the men present?—And is not the system of rotation against the principle of freedom of choice laid down in the draft Geneva Convention of 1920?

B-2291. If you were taking a rotation, could you not take the men present?—Yes. There would be a tremendous mob outside the office. I think the system of rotation is opposed to the principle of freedom of choice for the employee and employer.

B-2292. *The Chairman:* But I understand you are trying to reduce the number of floating seamen, if I may so describe them, in Calcutta, so that there shall not be the same disparity between demand and supply?—All we have done is to decrease the number of recruits who can get a continuous discharge certificate.

B-2293. So that you will not have so many unemployed would-be seamen hanging about Calcutta?—That is so.

B-2294. *Mr. Cliff:* I am trying to see whether they are really effecting a reduction in the number of available seamen?—We are issuing continuous discharge certificates to 5,000 recruits instead of to 10,000, so I suppose the number is being reduced gradually.

B-2295. Is that all you are doing?—As regards the number of seamen available that is all we have done.

B-2296. Then you cannot really say that you are taking effective measures to reduce the number?—A reduction from 10,000 to 5,000 a year is pretty good.

B-2297. It is only a reduction in the new entrants; it is not a reduction in the number of seamen, is it?—I suppose if the body of new men coming in is reduced, it will have the effect of reducing the total number.

B-2298. You are not suggesting that the wastage is equivalent to that, are you?—I do not know; I should think the wastage is pretty heavy. A large number of those who go to sea for the first time in the monsoon never go to sea again; they sign on, obtain a continuous discharge certificate, and are entered in our books, but they may never go to sea again.

B-2299. Has this had any perceptible effect on the numbers waiting for employment?—The actual number employed is certainly larger than it was a few years ago, because the number of steamers visiting India has increased.

B-2300. And the margin above the demand is less?—Yes, I should think it is.

B-2301. Will it go on diminishing?—It is very difficult for me to say, but I presume so.

B-2302. It appears to be impossible to get a clear picture of what is really happening?—Obviously if everybody who, having been to sea, and having

got a continuous discharge certificate, is entitled to call himself a seaman, although he may have been away in his village for years or have been to sea for only a few months, it is very difficult to reduce the numbers rapidly.

B-2303. Have you any authority to test the rations of ships?—Yes, there is a section in the Indian Merchant Shipping Act by which we have power to inspect; the shipping master inspects the rations.

B-2304. Are they frequently tested?—I could not say from personal knowledge, but I believe the instructions are that they should be tested before each voyage.

B-2305. If there were reports, would they come to your Department?—They would not before the 1st April.

B-2306. Have you had any reports this year?—I have not seen any. We had a report from England as regards *ghee*. Some of the *ghee* was tested and found to be vegetable *ghee*.

B-2307. Who is the Minister responsible?—The Honourable Member, Sir George Rainy. The opinions I express here are not the opinions of the Governments of India. I cannot bind the Government of India in any way. The opinions I give are my own opinions.

B-2308. You answered a question put by Mr. Clow as to bunkering coal. When we were at Karachi the Chairman of the Port Trust said there was no regulation or control on the waterside of the ship. Would you say that is correct?—I do not quite understand. I do not think there is any difference between the waterside and the landside of the ship.

B-2309. And so at the moment is there no regulation on the waterside of the ship if they do not make a by-law?—I believe the Section of the Act applies to the waterside of the ship; but beyond the local Government's officers on the spot there is nobody to see that the Section is complied with. The statutory provision is that children under 12 shall not be employed in the loading or unloading of goods from ships.

B-2310. *Sir Alexander Murray*: Is there any differentiation between the streamside and the dock side?—I do not think so.

B-2311. *Sir Victor Sassoon*: But as far as the Port authorities are concerned, they may say: We are only concerned with the dock side of the ship?—I should not have thought so.

B-2312. *Sir Alexander Murray*: In Calcutta, where they load in the stream, the dock authorities would not be responsible?—The Port Commissioners, who are the owners of the docks, have power to make by-laws regulating the loading and unloading of vessels within the Port, whether within the docks or in the stream. The prohibition against the employment of children under 12 years of age is not contained in these regulations, but in the Indian Ports Act, which applies to all ports. Of course, the Port Commissioners are not responsible for seeing that other employers of labour do not infringe the Act.

B-2313. *Mr. Cliff*: I understood you to say that the question of statutory regulation of hours was left for this Commission to make recommendations upon?—No. I said that we had enquired of the local Governments and through them of the Port Commissioners as regards "safety regulations" in docks. In England the loading and unloading of ships has been declared under the Factories Act to be a dangerous process, and regulations have been issued controlling the loading and unloading of ships both as regards work on shore and on the ships. We wrote to the local Governments enquiring what regulations existed in India, and whether they considered that regulations on the lines of the dock regulations in England should be introduced in India. The opinions we got were somewhat divided. The by-laws passed by the Port Commissioners at Calcutta, Bombay and Rangoon cover to some extent the same ground as the dock regulations at home, but not entirely. We only got the replies recently. The 12th International Labour Conference at Geneva in May last considered the question of the loading and unloading of ships from the point of view of the safety of the worker. Doubtless this Commission will examine the subject also. At present we are waiting the result of the Labour Conference at Geneva.

B-2314. *Diwan Chaman Lall*: A statement has been made by the Indian Seamen's Union that there may be about 185,059 men on the registers between 1900 and 1923?—I cannot say whether that figure is correct or not. The registers go back to 1887. The registers will give the figures for new men signed on between 1900 and 1923.

B-2315. That is quite right; they are figures from 1887 to 1923; it is, 1,86,069?—It may be so.

B-2316. They estimate that if you deduct from that number 86,000, that leaves you with 100,000 seamen on the register who must be alive and seeking employment?—Seamen who registered in 1880 may be dead by now.

B-2317. I am presuming that 86,000 are dead; that is what the Union says?—They have no basis for that calculation. I can give you the estimate made by Captain Darvell which, however, is very largely guess work. Speaking from memory I think the estimate was that there were about 140,000 seamen available at Calcutta. I think he said the number actually in employment would be about half that number.

B-2318. The Union say that out of that number no more than 21,490 can be employed?—What do you mean by "can be employed"? A seaman who has been away at sea for 18 months will often go home for six months.

B-2319. The number of seamen available for ships at any given time is no more than 21,490?—I could not say; I do not know where they have got their figures from.

B-2320. *Sir Victor Sassoon*: That is a figure that could be got?—It is a figure we could get by writing to all the shipping companies, including the owners of tramps.

B-2321. *Diwan Chaman Lall*: The statement has been made by the Indian Seamen's Union, Calcutta, that there are somewhere about 80,000 men who have been or who are eligible for work on ships, who are unemployed at the present moment?—Yes, I should think that is about the figure, as near as you can get it.

B-2322. Since 1920 this Union has been agitating for employment bureau on the lines suggested by the Clow Committee?—They have been asking for them at times.

B-2323. What has been your objection to giving them?—We think it extraordinarily difficult to work a bureau on the rotation system.

B-2324. What difficulty do you apprehend in working it?—You get men going home; you have thousands who are not employed. Further there is the difficulty as regards the attachment of the men to a particular serang.

B-2325. But what is the difficulty?—The difficulty is that you have registers containing thousands of names; you have to go through hundreds of names before you get to a man who is there.

B-2326. Do not you know that that sort of system prevails in other countries?—No.

B-2327. What is the system in Great Britain?—It is not that; there is no rotation in Great Britain.

B-2328. There are mercantile marine offices in Great Britain?—Yes, but they have nothing to do with the recruitment of seamen.

B-2329. Is it not a fact that in these offices seamen can sign themselves on for engagement on board ships?—They are signed on after they have been recruited. Recruitment is not done by the mercantile marine officer. He signs on the crew, and always has done so. We do the same and have always done so.

B-2330. In 1918 in Great Britain they adopted a different system, namely, of joint control?—That system is not worked by the mercantile marine office. The system of joint supply is worked by the National Maritime Board formed of the representatives of the shipowners and the employees.

B-2331. And joint control by the shipowners and the men's unions?—Quite true, but the joint supply is not at the mercantile marine office which is a Government office.

B-2332. There was joint control introduced in 1918?—Not completely, because although the Shipping Federation joined with the National Sailors' and Firemen's Union, the Employers' Association of the Port of Liverpool did not join.

B-2333. Is it not a fact that the Mercantile Marine Office kept closely in touch with this method which was introduced?—What do you mean by "closely in touch"?

B-2334. Did they or did they not keep in touch with this office in regard to the recruitment of seamen?—The Mercantile Marine Offices did not take any active part in the actual recruitment of seamen; they I believe helped in disputes, as we do.

B-2335. My information is a little different from yours; I should like you to verify your information and I will verify mine?—I have mine from a note prepared by Mr. Gilchrist who studied the matter while in England.

B-2336. Is it not a fact that Japan has ratified the system, and other countries, such as Spain and Holland, have ratified the Geneva Convention?—I presume you refer to the Convention. Ratification of the Convention does not mean a bureau by rotation, because that would obviously be against the article of the Convention which prescribes freedom of choice.

B-2337. Would you be prepared to ratify the Geneva Convention as regards India?—I cannot say what the opinion of the Government of India would be; I would, however, point out that the Geneva Convention definitely laid down that there must be complete freedom of choice both for employer and employee, and I suggest if you have a system of rotation, you have not got that freedom of choice.

B-2338. Supposing a demand is made on behalf of the seamen here that there should be set up a bureau jointly controlled, with compulsory advisory committees?—A joint bureau and a compulsory advisory committee are entirely different; a joint bureau is a joint bureau organized by the employers and employees.

B-2339. Would you be agreeable to that system?—If the trade unions were representative of all the seamen, then I think there would be no objection; you have got it in England.

B-2340. For a number of years you have had a recommendation to that effect made by the unions?—Yes, but the unions are not as yet fully representative of the seamen.

*The Chairman:* Was it made by all the unions?

*Diwan Chaman Lall:* Yes—According to the figures we possess, the membership of the unions at Calcutta is as follows:—Indian Seamen's Union 8,000, the Indo-Asiatic Union 2,000 and of the Indian Quartermasters' Union 1,500; that is out of a total say of at least 100,000 seamen.

B-2341. *Mr. Cliff:* Is there any other body able to express the opinions of the seamen?—Those are the only bodies we know which are representative of seamen.

B-2342. *Diwan Chaman Lall:* Supposing you took those bodies and said: We shall deal with you, what difficulty do you apprehend in the working of this system?—I think the condition precedent for the establishment of a system of joint supply is that you should have a representative body of shipowners and a representative body or bodies of seamen. You have not got a representative body or bodies of seamen.

B-2343. It does not matter whether the membership of the unions is 8,000, 10,000 or 20,000; it makes no difference; you would not restrict your muster rolls or registers to members of the unions.

B-2344. *Sir Victor Sassoon:* Would it not be rather forcing the men into the unions?—That would be the natural result and it happened in England.

B-2345. *Diwan Chaman Lall*: The alternative system is that of a State bureau; why did you reject that?—We have not rejected it absolutely, but, as I say, the opinion is that the working of a State bureau with a system of rotation offers enormous difficulties, and I express the opinion that a system of rotation is opposed to the Geneva Convention.

B-2346. So you will have neither the Geneva Convention nor the system of State bureau; is that the idea?—No, I have not expressed that opinion.

B-2347. The Government of India will content itself with the appointment of shipping masters?—I have not expressed the opinion that if you had unions which represented the large majority of seamen it would be impossible to work what you call an employment exchange.

B-2348. *The Chairman*: May we leave it at this, that under present conditions you do not see your way?—We do not see our way under present conditions. I should like to make the point clear that joint supply in England is not a supply by rotation.

*Chairman*: We have that quite clear.

B-2349. *Diwan Chaman Lall*: You said there was no promise given by the Government in regard to the setting up of any bureau?—I do not think there was.

B-2350. There was a letter sent by the Deputy Secretary, Marine Department, Government of Bengal, in which he said: "I have the honour to acknowledge the receipt of your letter ... in which you ask to be informed when the recruiting bureau will be started and the name of the officer who is appointed as the head of the bureau. In reply I am directed to state that the Government of Bengal hope to appoint a special officer with a view to starting a new method of recruiting at an early date." That letter is dated the 20th August, 1924?—At that time it was not contemplated to start a bureau.

B-2351. How would you interpret this reply which was given?—We have introduced a new system as I have stated.

B-2352. Did you have any representations made to you in regard to reparations in respect of seamen who were killed during the war?—You mean the payment of war benefits?

B-2353. Yes?—I do not think we have received any representations lately.

B-2354. You do not know that there has been a great deal of correspondence between the Government of India, the India Office and the union on this subject?—There has been no fresh correspondence through the Commerce Department recently.

B-2355. Who could give us this information?—I do not know exactly what you are referring to.

B-2356. I am referring to the question of German reparations and war debts?—I was not clear as to German reparations and war debts. Pensions and gratuities have been given in respect of men who lost their lives or were injured in the war.

B-2357. There were 3,427 Indian seamen killed during the war?—Probably so; I do not know the exact number.

B-2358. The question was raised as to what was to be done in regard to the dependants of these seamen?—Yes.

B-2359. The Government of India were approached and in reply they said that the Government of India and His Majesty's Government were making full provision for the dependants of lascars who died in the war, that if money was obtained from Germany it would be used for that purpose; that it was very unlikely that the full amount would be obtained. The Union approached the India Office, but the position remains the same, namely, that no satisfactory reply has been received from the Government of India in regard to this matter?—What is the question at issue.

B-2360. The question at issue is what sums of money are you obtaining from the German Government and what sums of money are you going to pay

to the dependants of these seamen?—I have not seen any correspondence about that.

B-2361. Will you look into this matter and tell us the latest that the Government of India has to say in regard to this matter?—Yes, I will look and see if there is any correspondence.

B-2362. In regard to the question of racial discrimination, is it a fact that for the same work Indian and European seamen are paid different wages?—Wages are not on the same level.

B-2363. Is it true that a European fireman gets £9-10-0 a month, which is equivalent to Rs. 142-8-0, whereas an Indian fireman gets only Rs. 28 per mensem?—I do not know what the actual wages of British firemen are; you will get that from the standard rates of wages laid down by the National Maritime Board.

B-2364. *Sir. Victor Sassoon*: Does the efficiency differ?—I do not employ lascar seamen or British seamen, and I really could not say.

B-2365. What is the system of recruiting in Liverpool, which you said just now was different?—The system of recruiting at home under the National Maritime Board is this: only one union of seamen is recognized and represented on the Maritime Board; there are other unions, but these have not been recognized by the employers and are not represented on the Board. The union which is represented on the Board is the National Seamen's and Firemen's Union; that is Havelock Wilson's Union. The employers are represented by the Shipping Federation and the Employers' Association of the Port of Liverpool.

B-2366. You said that Liverpool was different?—That was at the time when the Maritime Board and the system of joint supply was first introduced. The Employers' Association of Liverpool did not at that time join with the Shipping Federation in introducing the joint supply with the National Sailors' and Firemen's Union.

B-2367. What did they do?—They kept aloof, but they joined subsequently in 1925.

B-2368. What was their method while they were keeping aloof?—I am not certain. Under the present system of joint supply there are at each main port officers called "Port Consultants"; that is one representing the shipowners and another representing the National Sailors' and Firemen's Union. As a matter of fact, a man who wishes to get employment often goes to the ship first of all and gets a letter from the officers of the ship to the Port Consultant.

B-2369. *Mr. Cliff*: He must go through the Union?—Yes, he must go through the Union.

B-2370. *Sir Victor Sassoon*: The Union, of course, covers a large majority of the seamen?—Yes. There is, however, another union called the Amalgamated Marine Workers' Union; that was organized by Shinwell and Lewis.

B-2371. *Mr. Cliff*: That is dead?—It is dead now, but it was alive a few years ago.

B-2372. The seaman must go to the Union in order to sign on; the officers of the ship will not sign them on unless they present their card from the Union office?—I think that is right; but I think I am correct in saying there is no rotation system.

*Mr. Cliff*: There is no rotation system.

B-2373. *Sir Victor Sassoon*: Do the majority of the seamen belong to the Seamen's Union?—Yes.

B-2374. *Diwan Chaman Lal*: If you did recognize this joint control, would it not help this union to bring in those who are not members?—I think a system of joint supply is impossible till the union has grown and is representative of the large majority of seamen.

(The witness withdrew.)

**Mr. E. E. COOMBS, Controller of Printing and Stationery,  
Government of India, Delhi.**

B-2875. *The Chairman:* Mr. Coombs, we have in front of us a memorandum by Mr. Charles T. Letton. That was written while you were on leave?—Yes.

B-2876. Under your instructions?—No, under the instructions of the Department of Industries and Labour.

B-2877. But you have no doubt since your return from leave read the memorandum?—Yes.

B-2878. And you have come before us to-day in support of that memorandum?—Yes.

B-2879. Dealing with the experience of your Department with regard to Works Committees, the memorandum says "I was Manager of that Press," does that refer to you or not?—No, that is Mr. Letton.

B-2880. That appears to suggest that works committees have had a very varied career?—Rather.

B-2881. Depending greatly on the personality of the Manager of the particular press?—To a certain extent, yes, not totally; for instance at Aligarh Press the Works Committee has hardly ever functioned very well because I consider the employees there are a very poor lot of illiterate men and they really do not understand the benefits of the Works Committee although they have been explained to them.

B-2882. Do you not think that the more ignorant the man may be the more tact it needs on the part of the management?—Yes, it does need a lot of tact in that instance, but we have tried to get them to take a more real interest in it and they do not seem to do so in the Aligarh Press.

B-2883. How does the position stand in Delhi?—I should say it works very well; they meet regularly every month and I get the minutes sent to me regularly every month; they try to help the Manager and the Manager listens and decides nearly every question in committee with them.

B-2884. In that case you have found that it has been beneficial both to the management and to the workers?—Yes, certainly.

B-2885. How long has this Delhi Committee been in existence?—I do not know when the first committee was started; but they were all started more or less at the same time; they have been functioning ever since I have been here, and that is five years.

B-2886. We are told that the one in Calcutta became defunct in 1924-25 while the one in Simla flourished from the very start?—Yes. Mr. Letton was in Simla in 1924-25, and then he went to Calcutta. I was not here then, but I suppose that the Calcutta Committee was not working very well.

B-2887. The memorandum tells us that in Calcutta after Mr. Letton had taken charge he resuscitated the Committee and when he handed over charge in 1927 he found it also substantially advantageous to the management and to the worker?—Yes.

B-2888. So that evidently Mr. Letton had taken a live interest in its success?—He has always.

B-2889. Does not that seem to show that it requires certain qualities in the management as well as in the workmen?—Yes, it does, but if you read further on you see that the manager of this Simla Press had even drafted questions for them and they did not take any interest in it.

B-2890. That is to say the manager of the Simla Press, after Mr. Letton had left it?—Yes.

B-2891. That suggests to me that his successor did not take the same live interest or possibly had not the same personal qualities?—I think they all try to help them as much as possible. But every man is not quite as good as another in these matters.

B-2392. Of course it is recognized in England that it does require certain qualities on both sides to make a real success of organization of that kind and that they vary practically in proportion to the qualities which such men possess?—Yes, that is so.

B-2393. But very often the lack may be just as much on the part of the management as on the part of the workmen?—That may be the case.

B-2394. *Sir Ibrahim Rahimtoola*: The memorandum states: "In order to provide for the training of Indians for supervising posts in the Government of India Presses five apprentices are trained in the Government of India Press, Calcutta. The period of apprenticeship is five years during which an apprentice is paid Rs. 50 per mensem as subsistence allowance." That is to say, it requires five years training in Calcutta before he is considered qualified for appointment. "Facilities are also provided for the higher training of apprentices in England at the rate of one each year".—If he is going to stay out in this country altogether and not be sent to England, we consider that five years is necessary for his training, but if he is going to be sent to England he goes by selection; he is generally selected after two years and then sent to England for three years, so that he has five years in all. Only selected men are sent to England.

B-2395. What are the prospects of the men who are not sent to England, that is to say the men who put in five years in India against those who put in two years in India and three years in England?—The prospects are that if they are capable they can become readers, foremen, section holders, etc.

B-2396. Are the prospects uniform?—No, the prospects are rather better for those men that are sent to England.

B-2397. On what pay would you start these people who are trained in England?—It depends on the vacancies that we have for them.

B-2398. What about those who return from England duly trained?—We have only had one so far; he returned this year.

B-2399. You say that the training of apprentices at the Calcutta Press is not altogether satisfactory. Why?—Because we have not got sufficient staff of the proper kind to train them.

B-2400. Do I understand you to maintain that even with regard to printing there are not in India adequate facilities for full training?—Certainly not; there are not adequate facilities.

B-2401. That is to say there is something special which is required for printing work which can only be learnt in England?—That is my opinion.

B-2402. Can you explain to us briefly what that distinction is?—Yes; to begin with, the printer at home starts work and works with men who know their trade, who have learnt their trade by five or seven years apprenticeship. In India these men start and learn their trade from men who have never learnt their trade properly as they do in England.

B-2403. How long is this process to continue in a trade which I should think is a very ordinary trade required in every country. Must it always depend upon foreign training?—Unless we start proper schools for training these people such as they have in England, I am afraid they will never make any headway.

B-2404. But you know that India has a very large number of printing presses spread over the whole country. Is it your view that those printing presses are not up-to-date?—I will not say that of all of them.

B-2405. In how many of these presses are there English qualified officers?—The Press of the Times of India in Bombay, for instance, is worked pretty well up-to-date, but if you take the number of Europeans in the Press of the Times of India and compare it with the Government of India Press, you will find they have a very much higher percentage than we have.

B-2406. Is the idea of sending the apprentices to England for training to gradually Indianize the services?—That is the idea.

B-2407. Your memorandum shows that under this scheme the first man started training in 1922, but up to 1932, that is ten years, only four men

will have been qualified?—But the scheme for sending them home to India did not start until I came here in 1926; I put it up to Government when I came over from Bombay.

B-2408. But Mr. Sen started apprenticeship in Calcutta in May 1922?—He then went to the Government Security Press, Nasik.

B-2409. He was then sent to England for training in 1926; that is to say, he had four years training instead of five years?—That is a peculiar case because Mr. Sen was originally one of the Government of India apprentices; and he was transferred to the Security Press after a time. When Government gave a scholarship to send a man home to England he was the selected man.

B-2410. If you take all the four cases, the first two drew Rs. 50 a month as a subsistence allowance while the other two were unpaid apprentices?—Because they asked in the beginning to be taken as unpaid apprentices.

B-2411. After getting all this training extending over five to seven years, on what pay will they be started and what prospects have they of rising in their profession?—Mr. Sen who has just come out has been appointed Officiating Overseer in the Government of India Press at Calcutta, on a starting pay of Rs. 250 a month.

B-2412. What are his prospects; how far can he rise in the department?—He can rise to be Controller of Printing and Stationery if he is good enough.

B-2413. In how many years?—That depends on vacancies.

B-2414. I am asking you this question because you say in your memorandum that of recent years the type of man taking up printing as a livelihood has deteriorated, due to the fact that the emoluments available offer insufficient inducement to the type of men you obtained 20 or 25 years ago?—But that is not speaking of apprentices; that is speaking of the ordinary workmen of the press.

B-2415. Then do you get the right class of recruits for apprenticeship?—Yes, because we select them.

B-2416. Is there a great demand for these posts?—I get large numbers of applications for them.

B-2417. As you have pointed out, the prospects after seven years are Rs. 250 to start with?—I get quite a large number when we advertise every year for them; that is because we pay them Rs. 50 a month to start with. They are selected men who are graduates.

B-2418. I take it that in your view it is not possible to provide the necessary training in India and that in order to Indianize the services British training is essential?—I consider so under present conditions.

B-2419. How long do you think that process will continue before some effect is produced in the services?—I am afraid that is a question I cannot answer.

B-2420. *Mr. Clow:* With regard to that statement to which Sir Ibrahim Rahimtoola referred, have you a long experience of printing in India?—Yes, a fair amount.

B-2421. Do you agree with Mr. Letton's statement that the type of man taking up printing has deteriorated?—I do not know; judged by my personal experience at Bombay and here I should think it is about the same; I should think the same class of men is still taking up the work; we are not getting a better class of men.

B-2422. The pay which is given in your press for such workers as linotype and monotype compositors compares very favourably with the pay which an ordinary matriculate can get in any profession?—Yes, I should think it does. If they once become monotype or linotype operators they have not much prospect. I think that would keep away the matriculate and other educated people.

B-2423. There are a good number of unemployed matriculates?—They have to learn the trade first without getting very much, and they do not like that.

B-2424. I take it that your system of recruiting apprentices has some reference to the probable vacancies in the department?—Yes, except that as far as apprenticeships in the Calcutta Press are concerned we take in one every year. As far as sending them home to England is concerned, it would probably depend on the vacancies that are likely to occur. Government might quite possibly stop the scholarship if they found they had sufficient men under training. The Bombay Government have got a scheme, I think Madras also has, and I am not sure about Burma.

B-2425. As regards medical facilities, have you any statistics of sickness in your presses?—No, we have not got any actual statistics. As Mr. Letton has said in his memorandum, on an average 18 per cent. of the men are away because of sickness or other reasons. It is generally sickness because they cannot get away unless they get a medical certificate. But I cannot give you any statistics as to the sickness.

B-2426. Have the recent additional medical facilities which have been provided had any noticeable effect upon absenteeism?—I cannot answer that because I have not had the figures. I should not think so; I think it is just about the same.

B-2427. Have you ever experimented by altering the intervals of rest, substituting a large number of short rests?—I have not done anything like that; they have always had the same intervals, as far as I know.

B-2428. Do you think it would be worthwhile to make such experiments?—Do you mean instead of half an hour?

B-2429. Yes, if it is possible under the Factories Act?—It would be very inconvenient for the presses, to stop more frequently and then go on again. Every time a man stops he generally stops for more than half an hour, and if you stop him for ten minutes he will probably make it 15 minutes.

B-2430. *The Chairman*: But most of your men are on piece-work?—Only the compositors, the binders and the machine minders in Calcutta, and the compositors here in Delhi; the other men are on monthly wages.

B-2431. Were not we told that the linotype men were on piece-work?—The linotype men are on monthly wages, but they have to give a certain out-turn for their pay; they are not actually paid so much per piece.

B-2432. *Mr. Clow*: Is the service pensionable?—In all cases except temporary men, and some of the temporary men are now given pensions after 25 years' service. We have now abolished most of the temporary places.

B-2433. Do you find that there are many vacancies occurring or do men stay with you throughout their service?—Once they get in they never want to leave. They do not want to leave the service of the Government of India because they are paid so much more than in other presses; the pay and conditions are very much better than they can get in the ordinary printing press.

B-2434. Then do you get a better type of men than there is in the private presses?—I cannot say that they are a better type of men. I should not think they were.

B-2435. You ought to get a better type of man?—Yes, but then we have not done any recruiting for a very long time. The reason why we do not get a better type of man is that when they start they have to start on a very low pay; it is only when they have learnt their trade for a number of years that they are able to earn better money.

B-2436. *Sir Alexander Murray*: What is the starting pay?—There are various starting pays.

B-2437. You say the reason you do not get a better class of men is that they have to start on a very low pay?—A compositor would come in as quite a young man and would only get Rs. 15 or 20 a month; it will probably be 7 years before he can earn Rs. 40 or 50.

B-2438. *The Chairman*: He is a learner?—Yes; they do not learn their trade in the way they do in England as an apprentice starting on 6s. a day and going up to £1.

B-2439. *Mr. Cliff*: Why do they not learn their trade?—They pick it up in the best way they can; there is no system of apprenticeship for them.

B-2440. Then why does not the Department go into that problem and set up a proper system of apprenticeship?—It could be done, of course.

B-2441. But the Press has been going on now for a very long time, if you go on like this, a man is never going to learn by working alongside a trained man, is he?—Not unless they are trained first.

B-2442. Is there any reason why the men have not been trained in a proper way?—Yes, because we have not the trained staff to teach the men.

B-2443. But are you not going to make a beginning?—I am perfectly willing to make a beginning if the Government will give me the money and I can secure the men.

B-2444. *Mr. Clow*: If, as you say, you are paying substantially higher than other presses, surely you ought to be able to attract men who have been trained in other presses?—But you see we have not done any recruiting lately.

B-2445. *Mr. Cliff*: I gather you do not recruit journeymen; you only recruit apprentices or learners?—We have not been recruiting for some years at all.

B-2446. I have two documents in my hand and to the best of my knowledge they are printed in the Government Press. Do you say the standard of efficiency in printing amongst certain of your people is not sufficiently high for them to train others?—No, I do not think it is, not to train them in the way they would be in England.

B-2447. Never mind about England for a moment; can you commence to train these men with the men you have already got in the Press?—They will only teach them their own methods; that is all. If the Manager has time to give them personal instruction he would do so, but he has not time.

B-2448. *Mr. Clow*: Normal conditions are restored now; I take it you do not contemplate any substantial reductions in your staff?—No, I do not think so.

B-2449. So that from now onwards you should be able to recruit a better type of man?—Yes, if they are available to be recruited. I do not say they are in Delhi. I should think we have in the Government Presses the best available class of men.

B-2450. There are many presses in Delhi?—Yes, but I do not suppose the men are as efficient as our men are.

B-2451. *Sir Victor Sassoon*: I take it your real difficulty is that you have not recruited since 1922?—We have not.

B-2452. If you were recruiting, I take it you could get one or two trained men from outside who would very quickly get into your ways, and then you could use them as a start to train the journeymen, if not the apprentices. Your trouble is that you have got nobody who can train men into your own ways; your present men have bad habits and they will not get out of those habits; is that it?—Training is rather a difficult problem. The men would have to be put into a section and learn their work in that section. There might be a dozen sections and the man at the head of one section might be quite capable of training while the man at the head of another section might not be capable.

B-2453. What you really want is a series of section trainers to start training the young men when you start recruiting?—Yes.

B-2454. You would thus get a nucleus?—Yes; I should like to get a very much better class of men to train, if it were possible.

B-2455. Would it be difficult to start one section of apprentices, and get ahead in that particular section, and when you are next recruiting get a better class of apprentices at the start?—I think that might be done.

B-2456. Do you think it would involve serious cost?—No, I do not think it would. We should start it in the composing department and teach a number of men in that department.

B-2457. I am assuming that in your composing department you have one man whom you could use as a teacher?—I should have to make enquiries about that before I could give a definite answer. Teaching is quite a different thing from doing the ordinary work.

B-2458. You hope that somewhere in the whole organization there is one man who is suitable to be a section head for teaching?—Yes, I think we could find one in each press who could probably give them a fair training.

B-2459. Then that would be the man to choose to train your better class apprentices?—Yes. He would have to devote an enormous amount of his time to that work.

B-2460. I suggest he would be almost a specialist in that work?—I agree. In other words, I should have to ask Government to sanction a special post for the purpose. If Government can give me the men and the staff, we can do the rest.

B-2461. Could you find such a man to put into this position in your existing staff?—He would not be a man trained in the way an Englishman is trained; that is the only trouble.

B-2462. What you really want is one of these apprentices who go to England?—Yes. Your suggestion is that these apprentices trained at home should be used in the first place not in an executive capacity but in a tutorial capacity. They could use their latest knowledge from home to train these other people.

B-2463. And you would be able to get a better class of apprentice to put under them?—If it would attract the right kind of man. I do not think the educated man likes manual labour very much in that way, and it does not attract him.

B-2464. But surely that type of man would rise quicker than your present men?—He should rise quicker, but we do not get applications from that type of man at all.

B-2465. But is not the point that if you had the system, you might then get applications when they could see a future?—Yes, but are you prepared to pay these people for learning?

B-2466. You would pay them for learning?—A very small amount.

B-2467. If I remember aright, on the railways they pay them Rs. 20 a month while they are learning in their railway school, and they are getting a good class of men?—If Government would sanction that.

B-2468. I think they pay them Rs. 22 and arrange to mess them if they want it?—That is a scheme one would have to work out; I would have to get Government sanction for it.

B-2469. I take it if the increase in cost was infinitesimal Government would be more likely to be sympathetic than otherwise?—It depends what you call infinitesimal.

B-2470. Rs. 22?—But you would have to pay the overseer as well.

B-2471. At the present time you are paying these newcomers Rs. 18 or 20, are you not?—No, they get what they earn as compositors. They may only earn Rs. 15 or 20 a month or what they actually pick up by piece-work. There is no system of training them at present. Nearly all the new hands are pieceworkers as far as the compositors are concerned. In the bindery they are salaried hands in Delhi; they are on piece work in Calcutta.

B-2472. What would you give an untrained man coming into the binding department in Delhi?—They start here on Rs. 18.

B-2473. So that if the railway system were put into force you would only be giving them about Rs. 4 a month more?—Yes, and if we had really good men it would be worth it.

B-2474. *Sir Alexander Murray*: What apprenticeship does a printer or a linotype man do in the printing trade at home?—Five or seven years. I served seven years.

B-2475. Do all apprentices still serve seven years?—I think it is five now.

B-2476. What is their pay?—I started on 6 shillings a week.

B-2477. What do they start on now?—I cannot tell you.

B-2478. *Sir Victor Sassoon*: What did you get at the end of your apprenticeship?—£1 a week after seven years.

B-2479. *Sir Alexander Murray*: Is it the experience at home that boys can break away in the fourth year of their apprenticeship and seek a job as workmen elsewhere?—No, I do not think so.

B-2480. Have you had any experience of apprenticeship in this country?—Only those I have got in the Calcutta Press.

B-2481. Do you find them going away and seeking jobs elsewhere?—No.

B-2482. You have not come across cases such as I have in some of the Government workshops where a boy serves an apprenticeship on a salary for two or three years of his apprenticeship and becomes a comparatively skilled worker and then leaves before the end of his apprenticeship?—I have not come across cases like that.

B-2483. How do you meet that difficulty here? There are a great many printing establishments outside your establishment. How would you be sure that the boy would stay on and serve his full time?—I really cannot tell you whether we have any particular rule on that subject—whether we take a certain amount of their pay and keep it back for that; I cannot answer straightaway.

B-2484. You say that over-time work at Delhi is excessive?—During the cold weather season.

B-2485. Are the men paid piece-work during that time chiefly?—The compositors are paid piece-work or time wages.

B-2486. Do you find that longer hours have an effect on their health?—It must have an effect on their health when they are working such long hours without any recreation. I cannot say individually that I know of particular cases where it does affect their health, but it is obvious that where a man works for three months at high pressure it must affect his health to a certain extent.

B-2487. Mr. Letton in his memorandum stated: "I am afraid the only conclusion to be arrived at is that the health of the employees is indeed in a bad state if their general health can be judged by the number of medical certificates received." What do you mean by that?—Mr. Letton evidently means that a man gets a medical certificate on every possible occasion in order to get leave; it does not follow that he is really ill. Lots of people have colds and stop at work while other people who have colds stay at home.

B-2488. Do you mean to say that if a certificate is brought to you signed by a properly qualified medical practitioner you accept it?—We have to accept it.

B-2489. Even if a medical certificate is brought to you no matter from whom, or whatever your personal opinion may be?—We have got to accept it.

B-2490. You have no medical officer attached?—There is a sub-assistant surgeon attached to the Calcutta Press who gives medical certificates there.

B-2491. A Calcutta man can come with a certificate from any medical officer?—Supposing he is ill at home, unless we send the medical officer down to find out whether he is really ill we have to accept a private medical practitioner's certificate.

B-2492. Naturally he would go home and get a certificate from his private practitioner and send it on to you?—Yes.

B-2493. Do you find that instances of sickness and medical certificates are equally bad in Calcutta as in Delhi and Simla?—I have always found that a tremendous number of medical certificates are being submitted; if a man wants leave he invariably sends in a medical certificate.

B-2494. *The Chairman*: He does not receive pay for his absence?—Yes, if it is casual leave. If he is a piece-work compositor he gets 18 days in the year up to 10 years service and 23 days over 10 years up to 20 years service, 31 days above 25 years service.

B-2495. *Sir Alexander Murray*: How long does the time-worker get?—He gets casual leave—a month's privilege leave every year, and leave on half-pay for sickness beyond that, and all Government holidays.

B-2496. Are these leaves to which a man is entitled taken full advantage of?—Yes, in 75 per cent. of the cases.

B-2497. *The Chairman*: Has not the system been long in operation?—Yes.

B-2498. *Sir Alexander Murray*: Does it mean that if a man can get a certificate from anybody he can take his maximum leave?—There are only a few who do not do so.

B-2499. You say "In the Delhi Press it is noted that the physique of the workers appointed locally appears to be somewhat better than that of the Bengalee employees who were transferred from Calcutta." Do you mean to tell us that the type of men that we saw working in your press are better than the average Bengalee?—That is Mr. Letton's opinion. I cannot say.

B-2500. They probably are. Dealing with trade unions you say that the Press Employees Association "has not received recognition by the Government of India as it does not conform to the requirements under which such organizations are to be recognized". What is that?—That I am afraid I must refer you to the Government of India. (Mr. Clow): Speaking from memory, the Government instituted that, as a general rule, unions of servants shall be confined to Government servants and should not embrace other employees.

B-2501. Is there any objection to your workers having a union?—None whatever, as far as I know.

B-2502. *The Chairman*: This point is dealt with by the Industries and Labour Department in their memorandum.

B-2503. *Mr. Cliff*: In Mr. Letton's memorandum it is stated: "In the the Calcutta Press, they could not be much worse. Here a large number of the workers perform their allotted task daily with the aid of artificial light as the workrooms in places are dark and badly ventilated. They are overcrowded." Do you concur in that opinion?—I think it is a very unsuitable building for a press.

B-2504. Can you tell me which is the body that one can speak to about it?—Industries and Labour Department.

B-2505. Again, it is said in the memorandum "The possibility of a reduction in the working hours of the Presses is a question which has periodically arisen during the last 20 years." Do you deal with that or does the Industries and Labour Department deal with it?—The Industries and Labour Department have fixed the number of hours, but they cannot control the number of hours of over-time altogether; that depends upon the work that is sent in to the press.

B-2506. It is said that this emergency has arisen during the last 20 years. Would it be up to you as Manager of this Press to put up a solution or is it the Department of Industries?—I should have to put it up if anybody did have to put it up. I have already asked for more staff for the Delhi Press. If that is sanctioned the over-time will be reduced to a certain extent.

B-2507. Does it mean more machines or more shifts?—Neither; it means more staff.

B-2508. Can you cope with the work with the machines that you have at present?—With over-time we do it somehow or other.

B-2509. If you were going to have the same machines would you not have shifts if you were going to reduce over-time?—It is only at certain times of the year that this over-time occurs, when the budget is on and the Legislative Assembly is in session.

B-2510. It seems to take about five months?—Yes; it is from the middle of November to the end of March.

B-2511. Have you made an application for more staff?—We have got a floating grant by which we can employ, and do employ, more staff during that time. But we never know what work is coming in; we cannot say whether we are going to get 5 pages or 500 pages.

B-2512. *Miss Power*: What is the average number of hours of work done during that pressure?—I should think it is 10 to 12.

B-2518. *Mr. Joshi*: How do you get over the Factories Act during that period?—We get exemption.

B-2514. Who gives you the exemption?—The Chief Commissioner of Delhi.

B-2515. *Mr. Cliff*: Does the Chief Commissioner of Delhi go on giving you exemptions without seeing that you are really facing this problem and endeavouring to find a solution?—The exemption has been given every year so far; in fact, we have a general exemption.

B-2516. What is your solution of this problem?—Less work.

B-2517. With the work that is confronting you, what is your solution?—I do not know that I could suggest any particular solution at the moment. It would want careful thinking out.

B-2518. It is being under consideration for 20 years?—The over-time, not the work.

B-2519. Over-time, according to Mr. Letton's memorandum, has been under consideration for 20 years. Am I reading the document wrongly?—The question has cropped up periodically for 20 years.

B-2520. This matter has been in front of you as a department for a very considerable number of years, and I am anxious to know what is the solution you have put up, or which you can put up, to do away with it. Can you farm out some of your regular work?—That would not make any difference to this particular over-time work.

B-2521. In 1922 there was a considerable reduction in the number of staff. Recruitments which have taken place have been taken from that staff. That indicates that there are still a considerable number of unemployed printers in Delhi. Is it not possible to have a reserve staff out of that unemployed list for these five months in the year?

*The Chairman*: I take it your point is that there ought to be a sufficient number of men and machines to do this special five months work without unreasonable over-time and to regard the work as average for the whole year.

B-2522. *Mr. Cliff*: I think so. If you want additional staff do you have to make application to some other department?—Always.

B-2523. Is that the Industries Department?—Yes.

B-2524. With regard to the fixing of wages, you say that these rates are sanctioned by the Government of India. Is that the Department of Industries and Labour?—Yes, and the Finance Department.

B-2525. Does that same department determine the cost of living figures?—No, it does not.

B-2526. Is it your department that fixes these cost of living figures?—No, I do not think that any department fixes the cost of living figures.

B-2527. How do you fix the wages without knowing the cost of living?—This question I could not possibly answer.

B-2528. What I do not understand is this. Here is a department outside yourself. They fix the wages. Do they not fix the wages on your recommendation?—They listen to me sometimes, but not always. Generally they cut them down.

*Mr. Cliff:* I will not press it any further as the department responsible is not here.

B-2529. *Mrs. Chatterjee:* You mentioned that applications for leave on account of sickness are not general. Is it not a fact that the workers generally work in an unhealthy area?—I am afraid I cannot say whether it is a very unhealthy area or not. The Health officer will be able to say that.

B-2530. Are you not aware of the fact that a number of employees when attacked by malaria go on attending work till they are absolutely compelled to stop?—They do it of their own will. They can always get leave if they are ill. We do not compel any man to work if he is ill.

B-2531. *Col. Russell:* Most of the members of the Commission were impressed by the fact that the general body of the workers in the Press were of very poor physique compared with other workers outside. Can you give us an idea why it is so?—I cannot tell. I have not seen any other workers to compare them with.

B-2532. You do not admit that they were of a lower physique than others?—I do not think they are any worse than other press-men in the city.

B-2533. *Mr. Joshi:* With regard to the recognition of the union can you tell us which condition the union does not fulfil?—I cannot tell you.

B-2534. You told us that you did not get the type of men you used to get?—It was Mr. Letton who said that. I said that I did not think there was much difference between them.

B-2535. With regard to works committees have you ever thought that such committees could be made compulsory by legislation?—It has never entered by mind.

B-2536. The memorandum says that the committee considered certain questions which were beyond their purview. Can you mention some of these questions which were considered to be beyond the purview of the committee?—They probably questioned the rulings of Government which have been settled and then they wanted to discuss them in committee. Really they should not discuss them. They should put them up through their manager to the Controller who would go up to the Government about them.

B-2537. With regard to quarters for inferior servants, are they all single room tenements?—I think they are all one room tenements. However they are moving out of these as soon as new buildings are put up.

B-2538. With reference to the remarks contained in the memorandum on industrial disease, why is not a thorough medical examination made in order to find out whether there is industrial disease or not?—They are not examined to find out whether they have industrial disease in them.

B-2539. Is not printing one of the trades which is liable to lead poisoning?—Yes.

B-2540. Therefore from time to time should you not see by medical examination whether there is industrial disease or not?—That will mean an examination of the men about every six months. There has been nothing arranged for such an examination.

B-2541. *Miss Power:* Is there any system of ascertaining whether employees who are absent for longer than ten days are entitled to workmen's compensation if they are suffering from compensatable diseases? Does the Government take no responsibility for seeing whether an employee gets compensation when he is entitled to it?—If he is away on medical leave he gets pay.

B-2542. *Mr. Joshi:* With regard to temporary men, they get ten days' leave?—Yes.

B-2542a. Do these temporary men serve only for a few months or for a long period?—It used to be like that. We have lately made a great number of temporary men permanent. So it only applies to a very much fewer number.

B-2548. The table given in the memorandum shows a much larger number?—I have now got that matter under consideration. I have asked for reports as to the number of permanent and temporary posts, and I am going up to Government to make as many as possible permanent.

B-2544. Do you interpret regular employment by an attendance of 90 per cent. hours of work?—That was when the old rule was in force, but the rules have been altered. They now get 16 days leave in a year.

B-2545. Without those conditions?—Yes, without those conditions.

(The witness withdrew.)

**DELHI**  
**ELEVENTH MEETING**  
**Tuesday, 5th November, 1929.**

**PRESENT:**

The Rt. Hon. J. H. WHITLEY (*Chairman*).

Sir VICTOR SASSOON, BART.

Sir IBRAHIM RAHIMTOOLA, Kt.,  
K.C.S.I., C.I.E.

Sir ALEXANDER MURRAY, Kt.,  
C.B.E.

Mr. A. G. CLOW, C.I.E., I.C.S.

Mr. KABIR-UD-DIN AHMED, M.L.A.

Mr. G. D. BIRLA, M.L.A.

Mr. JOHN CLIFF.

Mr. N. M. JOSHI, M.L.A.

DIWAN CHAMAN LALL, M.L.A.

Miss B. M. LE POER POWER.

Lt.-Col. A. J. H. RUSSELL (*Medical Assessor*).

Mrs. J. C. CHATTERJEE (*Lady Assessor*).

Mr. S. LALL, I.C.S. } (*Joint Secretaries*.)

Mr. A. DIBDIN.

**Mr. J. A. SHILLIDY, I.C.S., Secretary to the Government of India in the Department of Industries and Labour, and Mr. A. M. ROUSE, C.I.E., Chief Engineer, Public Works Department, New Delhi, called and examined.**

B-2546. *The Chairman:* Mr. Shillidy, will you tell the Commission how long you have held your present post?—About a fortnight.

B-2547. Your previous office?—Home Department of the Government of India.

B-2548. I understand that your immediate predecessor in your present office was our Secretary Mr. Lall?—No; Mr. Lall was the Deputy Secretary.

B-2549. And before that our colleague Mr. Clow?—Yes.

B-2550. So we have the benefit of a good deal of knowledge on the subject of your Department at our table?—A good deal more than I have.

B-2551. May I first thank you and your Department for the memorandum that you have given to us on the subject of our inquiry. I propose myself to confine my examination, in the first instance, to two points. The first is some remarks that are made with regard to the question of recruitment. In your memorandum it is stated: "Owing to the illiteracy of the workers and the variety of languages spoken by them, employers in India find it almost impossible to maintain any direct touch with their workpeople. This accounts for the presence of intermediaries, who are largely responsible for the abuses which have sprung up in connection with recruitment." Further on it is stated: "It would appear therefore that education and organization are the only means by which Indian workers can escape from the clutches of intermediaries who like harpies are ever ready to prey on them." Arising from those two statements I want to ask you whether you have any knowledge of cases where an endeavour has been made to overcome those difficulties by the appointment within the works of labour officers who form a direct contact between the illiterate workers and the heads of the firm?—The only instance I can think of on the spot is the garden sardars at the Assam tea gardens.

B-2552. The garden sardars in the tea gardens are not the kind that I am referring to. I mean a labour officer whose duty it is to be in touch with the humblest workers in a large industry and at the other side to have contact with the directing heads of the firm?—I am told—but I should like to verify it further—that in some of the Burma oil mills they have their own labour officer in that way.

B-2553. Do you not think that what you say in your memorandum emphasizes the need for some such labour officer to deal with the two points that you have raised, namely, the contact between the employer and his workers and also to bring some organisation into the system of recruitment of labour?—That would be a matter, I think, for each industry and each business to decide. I do not know how we could lay down any general precise rule that this must be so.

B-2554. No, I was not suggesting either legislation or administrative action. It would be a question of course, as you say, for each industry, but it seems to me to follow from what you have said that there is a need at present unfilled by the majority of industries?—I think it would be rather difficult to make a general reply without reference to the detailed conditions of each industry and each business.

B-2555. If there was such a labour officer within an industry then welfare work in its broad sense would be based from the beginning on the co-operation of the workers themselves, not imposed from the top, but there would be an opportunity at any rate of letting them feel that all kinds of welfare work, including provident funds, were partly their own work?—It would depend a good deal on the relations established between a particular labour officer and the workmen in general.

B-2556. Of course it would; it would call for a man of high quality to fill such a post. My second question is with regard to the proposals that have been made from time to time, which are set out in your memorandum, for such social services as sickness insurance and unemployment benefit. You have given us in the memorandum a very complete picture of how these proposals have been examined by the Government of India and by the Provincial Governments up-to-date. There is one thing I find lacking in the memorandum, perhaps because it does not exist, but I wish to ask you whether any actuarial estimate has been made on these subjects of the cost to the worker, to the employer and to the State?—You mean of a sickness insurance scheme?

B-2557. Yes.—Not so far as I am aware.

B-2558. Is there any machinery in the Government for making such an estimate?—The Director of Commercial Intelligence might be able to help us and probably would be brought in.

B-2559. So far as you are aware no work has been done on those lines?—No definite detailed work has been done on that line.

B-2560. The only references that I find in your memorandum are two: One to the case of Japan where the labour circumstances are very different from those in India, and the other is to a small estimate made by Professor Jevons in Burma and probably covering only a very small number, I think 80,000 workers?—I think the reason why no actuarial statistics have been carefully gone into is that we have decided not to proceed at the present moment with the legislation and that we are awaiting the recommendations of this Commission.

B-2561. But do you not think that any recommendations wherever they come from must be based on an actuarial estimate?—Yes, they must when they come or when they are to be put into force, but there is a certain amount of doubt as to whether it is practicable in the conditions of the country to introduce this scheme.

B-2562. In considering the question of practicability surely an actuarial estimate lies at the basis of the whole thing?—It does, but it was quite evident that the cost would be large; I do not think that would be denied

and that sickness insurance, at all events, was a bill which the local Governments would have to face and the local Governments simply stated that they were not in a position to face it.

B-2563. You are aware no doubt that the English scheme was based on the cumulative experience of the friendly societies and the trade unions, and to some extent on the experience in Germany with a somewhat similar population?—Yes, I have no doubt that if we took it up, and of course that will depend upon the recommendations of this Commission, all that inquiry will be made, but so far we have not got to that stage. I think it is evident that it will cost a good deal, and as the burden will fall on the local Governments, and they have stated that they are not in a position owing to their finances to contemplate such a scheme at the present moment, further detailed actuarial calculations hardly seem necessary at this stage.

B-2564. I should have thought they were the basis of proper consideration of the problem?—I think for a full consideration of the problem, certainly.

B-2565. But there is nothing existing even in the form of a provisional actuarial estimate?—No, there have been certain rough estimates; somebody said that so many workers will require so much on a certain average; nothing beyond that.

B-2566. Based on the sickness rate, for instance?—No.

B-2567. No estimate of the incomings and outgoings of the fund?—No; I am not aware of that.

B-2568. Then you could not say in the least, I take it, if there is to be a proper insurance fund, whether it would mean two annas a month, four annas a month or eight annas a month contribution from the workers and employers?—No; I am not prepared to say that.

B-2569. Nor as to the period which would have to elapse before benefits accrued in order to put the fund on a sound basis?—No, we have not gone into details of that kind.

B-2570. *Sir Alexander Murray*: May I follow up these questions of the Chairman regarding sickness insurance and other things for the benefit of the workers? Can you tell us actually what the relations are between the Central Government and the Provincial Governments in that respect at the present moment? Let me explain. In your memorandum, taking the question of sickness benefits as an instance, you explain how you wrote to the provinces and how you got replies stating which local Governments were of the opinion that any system of sickness insurance would be practicable or impracticable under present conditions, and you go on further and say that the main difficulty with the local Governments was the question of finance. Let us take these points. What is the position? Supposing you were to introduce a system of sickness insurance, what would be the procedure; who would pass the legislation and who would be responsible for its administration and for finding the money?—Under the Devolution Rules, industrial matters included under provident funds, industrial insurance, general health, accident and housing, are provincial reserved subjects.

B-2571. Does that mean that for sickness insurance it is not the Minister but the Member who would be responsible?—Yes.

B-2572. We have a very interesting book in front of us called "*The State and Industry*", by A. G. Clow. On page 24 of that book it is stated: "The development of industries became a transferred subject in all provinces, and with the introduction of the Reforms at the end of 1920, the main responsibility for the development of industries by official agency passed to the newly appointed ministers." Now, is it the Ministers or the Members in the reserved departments that are responsible?—The development of industries is with a Minister, but industrial matters included under the head, welfare of labour, including provident funds, industrial insurance, general health, accident and housing is a reserved subject.

B-2578. You pass a law to bring into effect sickness insurance—that could be done in Bengal or Bombay as the case may be with the previous sanction of the Government of India?—It is subject to legislation by the Indian Legislature, *vide* Item 26 in Part II of Schedule I to the Devolution Rules. All reserved subjects are under the superintendence, direction and control of the Government of India.

B-2574. But take maternity benefit; it has been passed into law by the Government of Bombay. Would sickness benefit be equally passed by the Government of Bombay?—It can be passed.

B-2575. Assuming that the Bombay Government decides to pass a sickness benefit scheme, where would the money come from?—From the provincial revenues. The general constitutional rule is that all expenditure on provincial subjects must be from the provincial revenues and expenditure on central subjects from central revenues.

B-2576. Therefore, if a scheme for sickness benefit is to be brought into effect by the Bombay Government, the finding of the money shall be the responsibility of the Provincial Government?—Yes.

B-2577. And the Central Government will practically have no control over it?—It is generally recognized that following on the division of powers, central revenues must not be spent on provincial subjects and provincial revenues should not be spent on central subjects.

B-2578. The welfare of labour generally is a provincial subject?—Yes.

B-2579. The Central Government retains control of customs and income-tax and other central forms of revenue?—Yes.

B-2580. Would it be by means of taxation, or, how would that provincial Government find the money necessary for introducing such a scheme?—It will be by taxation.

B-2581. Fresh taxation presumably?—If they could not provide it from their present revenues, fresh taxation of course.

B-2582. Take housing as well as sickness benefit. The Holland Commission in 1918, that is ten years ago, recommended that something ought to be done to give facilities to employers of labour and to workmen generally to acquire land for houses especially in towns and other crowded areas. I know that you circularised the local Governments and other public bodies regarding the advisability of giving effect to the recommendation. Can you tell me whether anything has been actually done?—I cannot say about all the local Governments. In Bombay, of course, you know of the Bombay development scheme.

B-2583. Yes, that is one; is there anything else?—I cannot tell at the present moment. I may point out that the present constitution came into force after the Holland Committee made that recommendation.

B-2584. And this is also a subject in the hands of the Member of a Provincial Government?—It is a provincial reserved subject.

B-2585. In Bombay we saw that an arrangement was made with the Government whereby these charges were borne, but apart from Bombay I cannot see any reference to legislation having been introduced by any Provincial Government authorising the compulsory acquisition of land for the benefit of either the employers or the workers for housing purposes?—I am afraid I cannot say straightaway what the Provincial Governments have done in the matter. If you are very anxious to know I can make inquiries. Mr. Clow can say whether anything has been done.

In my home town in Bengal, near the mill areas, we have found it necessary frequently to acquire land for workmen's houses and we have found it impossible to acquire land in the immediate vicinity of the mills. Even where the surroundings are very insanitary, it is almost impossible under the existing legislation to do anything for the improvement of these areas.

B-2586. The Chairman: The point is that the present law only applies to public purpose?

*Sir Alexander Murray:* That is so. The Holland Commission recommended that there should be an amendment of the law to the effect that where Government was satisfied that the acquisition of land would be for public good or for housing accommodation, the land could be acquired.

*The Chairman:* Yes; but nothing has been done?—*The witness:* Nothing.

*Sir Ibrahim Rahimtoola:* I know there is a judicial decision that if Government declares any land to be required for public purposes, the land can be acquired for it, and there can be no question as regards the decision of the Government.

B-2587. *Mr. Ahmed:* You have stated in your memorandum that the work-people are very badly treated and are the prey of the money lender. Has Government taken any steps to remedy this evil?—That is rather a broad question; I should be glad to know in what particular direction your question is put?

B-2588. With regard to indebtedness?—We have a Usury Act, if that is what you are referring to.

B-2589. Has your Government taken any steps with a view to a limitation of the rate of interest?—I am not aware of any definite limiting of the rate of interest as such.

B-2590. Do you think that the condition of the people could be greatly relieved by the introduction of a weekly system of payment of wages instead of monthly or fortnightly?—I think all these provisions of an arbitrary or a hard and fast kind can be evaded. The chief provision in which some persons were lately interested was the definite limitation of interest. But it was found that they were attempting too much; that so far as the benefit to the debtors was concerned it was a very simple matter to evade the provisions of the law. We prefer to deal with it in the way we have under the Usury Act, which empowers a court to re-open proceedings and to examine the history of the case.

B-2591. Do you think co-operative societies would be helpful in this direction?—Co-operation is a very large question which hardly comes within my particular purview at the moment. Co-operative societies are also a provincial subject and they are primarily the concern and interest of the local Governments.

B-2592. *The Chairman:* We of course know about the village co-operative movement, but how far have co-operative societies been established in industrial areas?—If you make your enquiries in Bombay I think you will find that co-operative societies in industrial matters have been very largely taken in hand and there are a large number of them.

B-2593. *Mr. Abel,* the Inspector of Factories, told us he was in favour of increasing the number of inspectors. Are you of the same opinion?—The inspection of factories is a reserved subject.

B-2594. Would your answer be the same?—Not necessarily.

B-2595. Will you agree with what *Mr. Abel* has said?—I am not prepared to agree to anything until I have seen the full statement of the case. I do not think we can necessarily take the opinion of one officer as conclusive.

B-2596. *Sir Alexander Murray:* But factory inspection still remains a central subject in the hands of the Government of India?—No, factory inspection is a provincial reserved subject.

B-2597. *Mr. Cliff:* Has your department any power to intervene in a dispute between employers and workpeople?—We would intervene in our own Department.

B-2598. Would you intervene in industry generally?—There again it is primarily the concern of the local Government.

B-2599. When you say you would intervene in your own department, do you mean that you would intervene as an employer?—No, I do not think so.

B-2600. Would you intervene in a dispute between railway workers and the Railway Board?—Yes, we would intervene.

B-2601. Under what power?—The ordinary administrative power.

B-2602. Can you spell that out for me so that I may know how far you can wield power?—I am not quite sure in what way you mean.

B-2603. Take the Bombay trouble; there has been the Fawcett enquiry; was that committee of enquiry set up under the provincial Government?—Yes.

B-2604. Assuming there is a dispute between railway workers and the Railway Board; are you distinct and separate from the Railway Board?—Yes, I should say so in that matter.

B-2605. Could you intervene in a dispute?—We could set up a similar board of enquiry.

B-2606. After a strike has occurred?—Or if a strike is anticipated.

B-2607. Will you tell me of any case where a dispute has been apprehended and has not yet reached the stage of a strike when your Department has in fact intervened?—No; I cannot say that straight off.

B-2608. Do you think it is likely that there is a case on record?—

B-2609. *Mr. Clow*: I think Mr. Shillidy has misunderstood the question; no Department can intervene between a Department and its own employees; only the Government of India can do that?—I am referring to the Government of India. Did you refer to a Department?

B-2610. *Mr. Cliff*: I am referring to the Department which you represent?—No.

B-2611. Will you tell me the exact scope of your Department in relation to labour; is it only as far as labour legislation is concerned?—Yes. It is under our supervision, direction and control, and that is all. I think it is understood that our position really with regard to all labour questions is that it is primarily the concern of the local Government, but is, like all reserved subjects, under the superintendence, direction and control of the Government of India.

B-2612. That is with regard to legislation and enforcement of legislation?—No, the actual administration of the subject is provincial.

B-2613. Under the normal operation of industry, is there any intervention by your Department where a dispute is apprehended; have you power in order to enable you to try and effect a settlement?—No, not as a Department.

B-2614. Have you at any time endeavoured to establish a satisfactory cost of living index in your Department?—Not in our Department.

B-2615. Can you tell me about the Government of India?—The Director of Commercial Intelligence may have one, but he is not under our Department, and I am not quite sure to what extent he has carried out his enquiries.

B-2616. May we know whether it is under consideration to obtain a proper cost of living index figure by your Department?—It is not under consideration.

B-2617. Would it be within your scope?—I do not think so as the constitution stands.

B-2618. *Sir Victor Sassoon*: That is within the scope of the Government of India?—As the constitution stands, yes.

B-2619. *Mr. Clow*: I do not think that is correct, because we made an attempt in 1922?—I am well aware of that. But the Act had only just come in and when that particular Department was abolished one of the main reasons for not opposing it at all was the fact that all questions with regard to labour are provincial subjects.

B-2620. *Mr. Cliff*: All subjects with regard to the welfare of labour are provincial subjects?—Yes.

B-2621. Is this the position that the compilation of a cost of living index is regarded as welfare and is therefore a provincial subject?—I should regard it as such.

B-2622. *The Chairman:* From your memorandum it is clear that you do take steps with regard to legislation?—Yes.

B-2623. *Mr. Cliff:* I want to get, if I can, a clear distinction with regard to welfare?—The welfare of labour is a provincial reserved subject; it is therefore primarily a concern of the local Government, subject to the superintendence, direction and control of the Government of India.

B-2624. When you come to interpret welfare, your present interpretation is that the compilation of a cost of living index figure is welfare?—Yes.

B-2625. Apply that if you will for a moment to the Railway Board and the railway system in India. Would the establishment of a wage fixing machinery under that system be interpreted by you as being a matter of welfare?—Yes.

B-2626. And would it be impossible for you to take steps to recommend legislation for the purpose?—Where a subject is Central, the Government of India take the position of the local Government.

B-2627. *The Chairman:* And Railways?—As a rule, yes.

B-2628. *Mr. Cliff:* So that as far as railways are concerned, you would be able to move if it were considered desirable?—Yes.

B-2629. *Sir Victor Sassoon:* As a Department or as the Government of India?—Always as the Government of India.

B-2630. *Mr. Cliff:* I am a little confused as to the distinction between the Department and the Government of India?—All work done and all orders issued by the Department are issued in the name of the Governor General in Council.

B-2631. You are the Department?—We are the Department issuing orders but they are the orders of the Governor General in Council.

B-2632. *Mr. Cliff:* Yesterday we had before us an officer from the printing works, and he said that wages were fixed with the sanction of the Government of India?—Yes.

B-2633. When we pressed that a little further we found that subject to consideration by the Finance Department you settle the wages?—No.

B-2634. Will you make that clear?—We deal with that question, but the orders issued are the orders of the Governor General in Council. The Department as a Department does not issue an order.

B-2635. Do you practically settle these wage rates?—We consider them and the whole examination is carried out in our Department, subject to the approval of the Finance Department.

B-2636. *The Chairman:* The actual executive act is in the name of the Governor General in Council?—Yes.

B-2637. *Mr. Cliff:* We were told yesterday that the wages were fixed first in relation to the cost of living and that your Department had very largely settled these rates. Can you tell us on what basis you proceed to settle the wages in your Department?—I cannot say now; I imagine that is fairly old history, is it not?

B-2638. I think some of these have been settled as lately as 1927?—We certainly examine them in connection with the cost of living and on the figures and facts as they are reported to us.

B-2639. As I understand from the Printing Department, you exercise the responsibility of rejecting their recommendations or modifying them?—Yes.

B-2640. I was trying to ascertain on what basis you do that?—We should consider on the facts and figures as they were presented to us, whether the recommendations of the Controller of Printing were supported by the facts and figures that he put up.

B-2641. Is there no settled basis on which you determine these things?—I am not quite sure that I know what you mean by a settled basis.

B-2642. First of all the Printing Department tells me you do it in relation to the cost of living?—That is one of the factors.

B-2643. *Sir Victor Sassoon*: Is it in relation to the cost of living or in relation to the rise of the cost of living?—Well I take it that it is mainly cost of living.

B-2644. *Mr. Cliff*: I take it you have no satisfactory index of cost of living?—We may not have a satisfactory cost of living index, but we have figures which must be put up to us on these occasions showing how prices have risen, and these will be taken into consideration.

B-2645. Do you determine the rates for any scale that there may be in any particular grade?—Yes, I suppose so.

B-2646. I am wondering about the competency of the Department really to determine these wages?—I cannot say anything about the competency of the Department.

B-2647. If labour commissioners were desirable, they would have to be appointed by the provincial Governments?—Yes. Will you tell me what were the precise powers of the commissioners of labour that you had in mind?

B-2648. *Mr. Lall* says to me that there is nothing to prevent the Central Government passing legislation?—Yes.

B-2649. Would legislation to appoint a labour commissioner be desirable?—I want to know exactly what the powers would be and what powers you propose to give; it is a question whether it could be done by executive powers.

B-2650. There is a Commissioner appointed for the depressed classes?—Yes.

B-2651. Who acts really to serve depressed classes as I understand it?—That is only in Madras; there was no legislation there.

B-2652. There was no need for legislation?—I said there was no legislation.

B-2653. *The Chairman*: It was an administrative act?—Yes.

B-2654. *Mr. Cliff*: If commissioners were desirable to assist labour and to be an aid to labour, would you require Central legislation or could that be done administratively?—It would depend on the powers which you propose to give to them.

B-2655. How far could the powers go?—I am afraid I cannot say that.

B-2656. *Diwan Chawan Lall*: With regard to sickness insurance you said that no actuarial estimates have been made. In your memorandum there is some sort of an estimate which is not an actuarial estimate. The gentleman who writes those words contemplates that the Government of India working on a basis on which Japan works, would require about 90 lakhs if they had accepted the amendment moved by *Mr. Joshi*. Would there be much difficulty if a scheme like this were to be brought into force, costing, roughly, say a crore of rupees?—The first thing I should want to know is whether it would cost a crore of rupees.

B-2657. Supposing it did?—That I imagine is a matter for the local Government to decide, whether their revenues can stand it; I cannot give an answer to that.

B-2658. Supposing you were to centralize it, the Government of India I take it is quite capable of passing legislation with regard to sickness insurance?—Yes.

B-2659. And centralizing the whole subject?—We are not capable of doing that unless the Devolution Rules are changed.

B-2660. What is there in the Devolution Rules which would prevent the Government of India undertaking legislation with regard to sickness insurance applicable to the whole of India?—There is nothing to prevent them

undertaking legislation, but on the other hand when the cost of any such scheme would fall on local Government and local Governments in reply say that they are not in a position to meet the cost, it would be absurd to pass legislation which the local Government cannot give effect to.

B-2661. Is there anything to prevent the Government of India from making a contribution up to a crore of rupees towards this scheme?—The general rule is that central revenues shall not be spent on provincial subjects and provincial revenues shall not be spent on central subjects.

B-2662. Does that apply to the Road Board which has recently been set up. Is it not a fact that so far as the Road Board is concerned, central revenues are being spent for provincial purposes?—That point at the present moment is under process of discussion and some of the provincial Governments have objected.

B-2663. That is an objection in regard to administration. The point is, is it not a fact that the Government of India are not prevented by any Devolution Rule from spending the money which they receive from the excise on petrol for road development purposes in the provinces?—

*The Chairman:* We have been told Mr. Shillidy, that there has been a proposal with regard to roads, to divide expenditure between Central and Provincial Governments.—I have not the papers here, but I think in that particular matter some change was made.

B-2664. *Diwan Chaman Lall:* You may take it from me. I was a member of the Road Committee and also a member of the new committee. The position is as I am putting it. Central revenues are being applied and are intended to be applied to the provinces. Is there anything in the Devolution Rules preventing a contribution of a crore of rupees to be made to the provinces for the purpose?—I do not accept the analogy between the two. I am not fully acquainted with the Road Board cases at the present moment. I have an impression that some change was made in that regard. The general rule and the one which we have always followed is, with the division of provincial and central revenues, and with the division of provincial and central subjects, central revenues cannot be applied to provincial subjects, and provincial revenues to central subjects.

B-2665. *The Chairman:* Is not the position this? The Central Government could give a subsidy if they pleased in aid of certain provincial subjects.—No, it goes beyond that. It has been held that they ought not, in the spirit of the constitution, spend central revenues on provincial subjects.

B-2666. *Mr. Clow:* They cannot, on Transferred Subjects.—I am giving the general rule.

B-2667. *Diwan Chaman Lall:* I want to be perfectly clear about the position put to you by the chairman, and it is a very pertinent question. Is there anything to prevent the Government of India from making a contribution to the provincial Governments in the way of a subsidy?—I should say, yes.

B-2668. *The Chairman:* But by practice rather than by law?—The general rule is that it is contrary to the spirit of the constitution, in view of the division of central and provincial subjects, to allot funds from one to the other.

*The Chairman:* I think it is for us to consider whether the present system is right or not.

B-2669. *Diwan Chaman Lall:* In your memorandum, dealing with unemployment you say that "unemployment, as it is understood in the West, does not exist". What enquiries have been instituted in order to find out whether unemployment as understood in the West does or does not exist?—We did make enquiries about the establishment of unemployment agencies, and the general reports were as we have put it down here.

B-2670. The general reports were from the local Governments, I understand?—Yes.

B-2671. Have you any information as to whether the local Governments themselves instituted any enquiries?—They made enquiries and reported to us.

B-2672. What sort of enquiries?—They appointed enquiry committees, I understand, in the provinces.

B-2673. Have you read the Unemployment Committee Report of the Punjab?—I am afraid, not.

B-2674. Is it similar to the reports which other provinces have furnished?—I cannot say.

B-2675. Apart from this you have no information as to the existence or non-existence of unemployment in India?—No.

B-2676. In their despatch to the Secretary of State regarding unemployment, the Government of India say: "We have under consideration the desirability of creating regular public employment agencies in such cases." Do I take it that they did not proceed with this matter, because there happened to have been a series of reports in 1921 that unemployment did not exist, because there was an excess of supply over demand of industrial labour?—It was because we made these enquiries and received these replies that we did not go on.

B-2677. But you say further on in the same despatch: "We are undertaking an examination of the possibility of collecting further information regarding unemployment." Would it not have been the proper method, particularly after a resolution had been passed by the Legislative Assembly, to have set up a committee of enquiry to find out whether there did or did not exist unemployment in India?—That I think, is a matter of opinion.

B-2678. What further examination, apart from the reports you received from the local Governments, did you undertake, having made this promise in this statement of yours?—We have made further enquiries from the local Governments.

B-2679. Apart from further referring the matter to the local Governments, what further examination have you undertaken since 1921 in order to find out whether the situation has changed since then or not?

*The Chairman:* As far as the Central Government is concerned, enquiries consisted of writing round.

B-2680. *Diwan Chaman Lal:* In almost every page of your memorandum there is a statement about the migratory character of Indian labour. What enquiries have you instituted in order to find out whether the statement is or is not correct?—I do not think it was necessary to institute any enquiries.

B-2681. Is it a matter of pure intuition on the part of the Government of India?—No, not in the least. It is a matter of very close observation.

B-2682. What observation?—We find it in individual places and we find it generally.

B-2683. Is it a question of individual observation or of definite enquiries instituted by you?—In Delhi, in 1914-15, April, there were 22,000 labourers employed. In October, they sank to 6,000. They went to their fields. The other day we were told by a contractor that he had recruited 1,000 people at one time and 800 at another and taken them to the Punjab. They are constantly fluctuating and migrating.

B-2684. Have you seen the statement of the Inspector of Factories, Punjab, Mr. Abel, to the effect that 80 per cent. of skilled labourers in Delhi are permanent?—I have not seen it.

B-2685. Apart from these individual observations, observations which go back to 1914.....—No, we have charts which show the seasonal fluctuations.

B-2686. *Mr. Cliff:* Does that apply to Bombay?—Yes, it applies to Bombay too.

B-2687. I would like to see these charts—I have not the figures for Bombay, but speaking as a District Officer in Bombay it came to my

information that people are constantly coming from the districts to the mills in the off-seasons and returning for the harvest to their fields.

B-2688. *The Chairman*: Is that not common knowledge?—Diwan Chaman Lall will not admit it is. The question is as to the proportion; its existence is common knowledge. I understood that Diwan Chaman Lall denied the correctness of the statement that it was migratory.

B-2689. *Diwan Chaman Lall*: What I am driving at is this. Does the Government of India take this statement more or less on trust as it has taken the statement about absenteeism: "The only recent figures of absence from work are those given in the Bombay Labour Gazette for the textile mills in Bombay Presidency....." Do you not know that the Bombay Government memorandum says that these figures are incorrect? Yet you take them as being correct?—They may be incorrect in odd calculations, but these figures are worked out for very many years. Possibly the method of calculation in giving the average may have been wrong.

B-2690. The Bombay Government memorandum says: "As is pointed out in the section dealing with insurance, the monthly absenteeism statistics may not be strictly accurate owing to possible variations in the falling off of returns, because all mills do not follow a uniform practice with regard to marking absentees."—That was a matter of difference of opinion as to the correct method at which to arrive at statistical averages.

B-2691. *Col. Russell*: In your memorandum, dealing with industrial diseases you say that "little information is available about the prevalence of industrial diseases in India". Is there any source at present from which you could get reliable statistics of the incidence of disease and ill-health among workers?—I do not know of any.

B-2692. In the same connection you say that "the Government of India did not consider it necessary to establish a special medical service for the purpose, but they pointed out to Local Government the desirability of strengthening the medical services of the country in areas where many unhealthy industries are situated". Did the Local Governments take any action in this respect?—I could not say; I am not aware of any.

B-2693. Apart from the question of industrial diseases, there are such questions as the effect of fatigue and long hours and the result of introducing rest periods with regard to the efficiency of the worker. You have no department or individual who would investigate such questions?—We have none.

B-2694. Do you not think that it would be a good plan to institute some agency by which such information could be collected?—I am sorry I must go back again to the question of provincial and central subjects.

B-2695. Apart from it being provincial or central, do you yourself who have been associated with labour questions for some considerable time, think it would be a good idea to have some agency for the collection of these important matters?

*The Chairman*: Do you mean a central agency?

B-2696. *Col. Russell*: Either central or provincial?—I do not think I am free here to express what I personally think.

B-2697. In Great Britain, during the last fifteen years they have had a board called the Industrial Health Research Board for the investigation of such matters. Do you think that an institution similar to that board in India would be useful or not?—We shall be very glad if the Commission in the course of enquiries will go into this matter and let us have their recommendation on it, when, I can assure them, it will be dealt with carefully.

B-2698. You yourself are not prepared to express an opinion?—No, I am not free to express an opinion.

B-2699. *Miss Power*: With regard to the abolition of the Central Labour Bureau referred to in your memorandum, do you not think that there is great necessity for an All India Bureau for industrial research as well as for the collection of industrial statistics?—I am sorry I have to be obstinate.

I have to get back to the division. Development of industries including industrial research and technical education is a provincial transferred subject.

B-2700. Would that necessarily preclude a research section?—I am afraid it would.

B-2701. If it does so, without such machinery, what exists to enable the different provinces to learn by each other's experience in the industrial field; that is to say, to pool experience such as is done for the different Departments of Industry in America by the Federal Department of Labour?—I am not aware of any. There is none at present.

B-2702. Is not that a great lack, if the constitution is such that no machinery can be instituted?—That, I think, might be a defect in the constitution. But the Labour Commission might give us the benefit of their investigations and recommendations in this regard.

B-2703. *The Chairman*: On this point of the Labour Bureau which had a brief existence of three years, is there in existence any report of its activities during that period? It would be interesting to the Commission if we might have a statement of its initiation, its relation, its work during that period and its abolition.—The abolition was on the recommendation of the Inchope Committee. If you would like, I can let you have a note on the matter.

B-2704. *Miss Power*: In your memorandum you say that between 1921 and 1928 the number of registered factories has increased by 85 per cent. Apparently there has been nothing like a corresponding increase in the inspection staffs of the different provinces; and I am anxious to know whether the Central Government in pressing for increased inspection gives any guidance to the local Governments as to the standard of industrial inspection which it considers necessary?—Yes, it does under its powers of superintendence, direction and control.

B-2705. Exactly what sort of guidance does it give?—It considers whether in any particular province there is a lack of inspectors and suggests to the local Government that the number should be increased where they find it necessary.

B-2706. It simply says, "increase them", but does not actually set a standard of industrial inspection?—I am not aware of any hard and fast standard of the kind having been laid down.

B-2707. In your memorandum you say that "the number of women employed in factories in 1927 was 35 per cent. higher than in 1921". Later on you say: "In 1921 the Government of India drew the attention of local Governments to the desirability of appointing medical women as lady inspectors, but, so far, only one such appointment has been made." Has the Central Government taken any further steps since 1921, to bring this matter to the attention of local Governments in view of this big increase in the number of women employed?—I am not aware of any.

B-2708. Does the Central Government admit the distinction between medical and industrial inspection and the necessity for appointing women inspectors other than medical for the purely industrial side of inspection?—I should think there would be a natural distinction. I am not aware if it has insisted on any such distinction. I shall look up that particular point.

B-2709. In your memorandum dealing with carpet factories you say: "An enquiry has been addressed to the Government of the United Provinces regarding the conditions under which children are employed in the carpet factories situated within the province and the reply of the local Government is awaited...." Has any reply been received?—We have received replies, not official replies. We made enquiries and found that the Governments of the Punjab and the U. P. were of the opinion that it was not necessary to bring these carpet factories under the Factories Act.

B-2710. Were the conditions similar to those in Amritsar?—I cannot say, but I understand that children were employed in the United Provinces and in Amritsar.

B-2711. That brings me to the question of unregulated factories and work-shops. Is the Central Government making any enquiries as to the numbers employed in those of the larger places where no power is installed, with a view to considering the necessity of bringing them under the Factories Act?—I am not aware that any enquiries are being made.

B-2712. With regard to minimum wages what sort of investigation is meant by a "thorough enquiry"? Does that imply a circular letter to the local Governments, or does it imply a central investigation, or does it apply to the investigations of the Royal Commission?—I think you have hit it correctly there. If an investigation was started, I think we should write to local Governments. We would then see the amount of information we have got. If the information was not sufficient and if we considered it necessary to arrive at a more satisfactory solution, I have no doubt we would appoint a committee; but I cannot commit myself till I know what amount of information we shall get from local Governments on the subject.

B-2713. When requests are made by the Central Government for investigation by the Provinces, what steps are taken to see that Provincial Governments look all round the question and do not merely apply to employers and employers' associations; in fact that they include the workers' point of view?—When a local Government reports, it also sends up with its report the letters it has received from various associations, and we can see for ourselves from the letters that we have received both from employers' associations and labourers' associations, whether the conclusions of the local Government are such as to appeal to us.

B-2714. Suppose there are no associations of labourers?—I am afraid we cannot distrust the local Governments.

B-2715. Suppose there is no arrangement made by a local Government to try to get the point of view of the workers?—I can only speak for one local Government, the Government of Bombay, and I know that the Bombay Government invariably goes out of its way to try and find out the views of labourers.

B-2716. That is one province?—I cannot speak of other provinces. We cannot of course issue definite instructions distrusting local Governments to the extent of supposing that when we ask them to make full enquiries, they are only going to make one-sided enquiries. I think it is reasonable to believe that local Governments will exercise their responsibility wisely and impartially.

B-2717. *Mr. Joshi:* In your memorandum there is a reference made to an *interim* injunction issued against the branch of a registered trade union at Sholapur in spite of the passing of the Trade Unions Act. Has the Government of India taken any steps in this matter?—I am not quite sure to what *Mr. Joshi* refers. We could not take any action with regard to an *interim* injunction which was issued by a civil court. I think it is an unregistered trade union.

B-2718. My point is that they have defeated the object of the legislation by asking for an injunction saying that the union is not a registered union?—I think that is a legal question.

B-2719. Has the Government of India considered whether the law is defective in that respect?—No. That is assuming that the law is defective.

B-2720. Has the Government of India not considered the matter even after seeing that such a prosecution has taken place in spite of the law?—We could not any way consider the point until the prosecution, or the *interim* injunction or whatever it is, had been disposed of by the court.

B-2721. *The Chairman:* And that is not the case at present?—Not that I am aware of.

B-2722. *Mr. Joshi:* The object of the employers is not to get a conviction because their object is served by the *interim* injunction which may last for ten years.

*The Chairman:* Surely an *interim* injunction cannot last for ten years.

*Mr. Joshi:* The employers are not anxious to go on with the case because their purpose is served. However, I will leave the point at that.

B-2728. We were told at Lahore that the Government issued a circular to the Registrar of Trade Unions in Lahore stating that the unions of Government servants should not be registered. Is that a fact?—I am not aware that we issued any instructions.

B-2724. The statement was made by the Director of Industries, Punjab, who is the Registrar of Trade Unions there?—The whole question of the association of Government servants and the conditions under which they can form associations are at the present moment under the consideration of Government.

B-2725. My question was whether such a circular was issued?—No, not by the Government of India.

B-2726. *Diwan Chaman Lall:* Was it not issued by the Home Department?—When instructions were being issued on the subject I was in the Home Department, and I know that no such circular was issued.

B-2727. I can assure you that it has been issued?—The Home Department has issued no such instructions.

B-2728. *The Chairman:* Then the Registrar at Lahore was misinformed?—He may have been.

B-2729. *Mr. Joshi:* May I ask you, as your opinion, whether such instructions will not be against the very law itself because the decisions of the Registrar are subject to appeal to the High Court?—That is a matter of the interpretation of the law.

B-2730. You have given in your memorandum the activities which are permitted by the Act, but forbidden by the Government Servants' Conduct Rules. Take item (iii)—the maintenance of a member of a legislative body. Will you explain the reason why this should not be done by a union of Government servants?—I think it is on the whole desirable that Government servants should not as a rule be implicated in politics.

B-2731. When Government servants are given votes, they are certainly given the power to elect any one they like and even to pay for him?—No, not to pay for him.

B-2732. You think they should not elect a man and pay for him?—No.

B-2733. In spite of the fact that the law gives them the vote?—The maintenance of a member of a legislative body is a thing that is forbidden by the Government Servants' Conduct Rules.

B-2734. *The Chairman:* Following the question just raised, of the rules applicable to Government servants restraining them from taking part in certain political activities, which to some extent follows the English system, I notice a remark in your memorandum which I do not understand: "Pending the consideration of this difficult question. Government have relaxed the provision contained in the existing Rules for the recognition of associations consisting of its employees which requires them to register under the Act." Can you elucidate that sentence?—There are two sets of rules: one is the Government Servants' Conduct Rules, and the other is the Recognition Rules. In the Recognition Rules it is stated "In the event of legislation being passed which will permit of the registration of the association, the association shall be duly registered." Legislation was passed, and when this question came up, of the conditions on which Government servants should be allowed to form associations, it required very considerable examination and, in order not to put these people in a wrong position, it was decided to relax this rule which said that in the event of legislation being passed which will permit of the registration of the association, the association shall be duly registered.

B-2735. That is to say that associations of Government servants have a right to claim registration; at least the Government agrees to their registration, but they are still subject to the rules relating to the Government Servants' Conduct?—Under the rules, the individual servant should abide by the Government Servants' Conduct Rules.

B-2736. *Mr. Joshi:* Do you apply the same rules of Recognition to the industrial employees of the Government as well as to the other employees of the Government who receive pensions and are entitled to leave?—An inquiry at the present moment is going on as to the distinction that may be drawn between permanent salaried employees and what are called artisans, associations of Government employees.

B-2737. Is there any central department which looks after the welfare of the employees of the Government of India?—Do you refer to the centrally administered areas?

B-2738. I want to know which department is responsible for labour welfare in the central territories managed by the Government of India themselves?—The local administration is, in the first instance, responsible.

B-2739. And the Government of India is not?—Not in the first instance; but they are under our control.

B-2740. You do not look after the welfare of labour?—We do watch it.

B-2741. The administrations which are responsible for labour welfare in the territories managed by the Government of India directly have no legislatures to help them?—No.

B-2742. Is there any central department which looks after the welfare of the employees of the Government of India themselves?—I am not quite sure in what way you want it to be done. There are various departments and the department concerned will do that.

B-2743. But the Government of India as a whole does not concern itself about the welfare of the workers employed by themselves?—I am not quite sure what you mean by "the Government of India as a whole".

B-2744. *The Chairman:* Except in so far as your department exercises supervision and control?—The general question of welfare naturally comes to our Department and we consider the general lines and principles under which it is to be administered.

B-2745. *Mr. Joshi:* For instance, there are employees in Government railways, Ordnances and other Government factories. I want to know whether the Government of India have certain policies of labour welfare for their own employees, corresponding to the appointment of a labour member on the Railway Board?—No.

B-2746. *Sir Victor Sassoon:* There are territories which are directly administered by the Government of India. Do not the Chief Commissioners in charge of the administrations administer them in the same way as the head of a provincial government does?—Quite so.

B-2747. *Sir Alexander Murray:* Can they pass legislation?—No; they are subject to all-India legislation.

B-2748. *Mr. Joshi:* As regards the labour bureau which was abolished, I want to ask you whether such a bureau or such a machinery is not necessary for considering labour legislation?—I have already said that we should be very glad to have recommendations of the Labour Commission on this point.

B-2749. As regards the migratory character of the labour, has the Government of India considered whether it cannot be changed so long as the housing conditions are as they exist in Bombay and so long as there is no provision for old age?—I do not think the Government of India have to take up any special policy to change the migratory character of the labour.

B-2750. *The Chairman:* You have in your memorandum referred to the desirability of improving the position of migratory labour?—Yes, but not necessarily doing away with the character of it.

B-2751. *Mr. Joshi:* As regards Assam, you have under consideration a Bill dealing with recruitment. Does that Bill provide for repatriation of workers? If it does not, has the Government of India considered that repatriation should also form part of the Bill?—The Bill relates to recruit-

ment only and not, to the conditions of employment in the fields and tea gardens.

B-2752. *The Chairman*: Repatriation therefore is not considered part of recruitment?—Not of the worker who is already employed, but of the worker who goes for employment in the tea gardens.

B-2753. *Mr. Clow*: Does it contain provision for repatriation of recruits who go there?—This is the relevant section of the Bill: "Subject to any orders which the local Government (that is the Assam Government) may make in this behalf, the District Magistrate (or any other magistrate empowered by the local Government in this behalf) may, if he thinks fit, detain and send back to his native district or to the place of his recruitment, in spite of the fact whether this Act applies or not, any person found within the jurisdiction of the said magistrate, together with his dependants (if any), on the ground that that person was recruited for manual labour on the estate by any coercion, undue influence, fraud or misrepresentation, or of any irregularity in connection with his recruitment, or on the ground that that person is unfit for work on the estate."

B-2754. *The Chairman*: The actual repatriation after a period of service is a matter of good-will on the part of the employer?—The question will then come whether it is on the ground of irregularity or on the ground that that person is unfit for work on the estate.

B-2755. *Sir Victor Sassoon*: After the man works for some time, unless it is for any of the causes just now mentioned by you, the employer is not bound to repatriate him?—As I said, this Bill deals with recruitment. But if the District Magistrate finds that a man is unfit for work on the estate he may order for his repatriation.

B-2756. *The Chairman*: The Bill has no reference to the repatriation of a man after a period of satisfactory service?—No; this is a recruiting Bill. There is another section in the Bill to which I might draw the attention of the Commission; it is Clause 10 of the Bill; the Bill appears as Appendix I in the memorandum that we have submitted.

B-2757. Is that the existing law or the draft Bill?—It is the draft Bill.

B-2758. *Mr. Joshi*: Is there going to be separate legislation providing for inspection of plantations and regulating the sanitary and health conditions on plantations?—It is not under contemplation.

B-2759. How is that to be done in that case?—The Assam Government will have to do that.

B-2760. Is the Assam Government going to do that?—Not that I am aware of.

*Sir Alexander Murray*: They have an Act already.

*Mr. Joshi*: That Act applies to workers recruited under a certain Act; that Act is not applied to workers who are recruited under this Act.

*The Chairman*: That is one of the points we will look into.

*Sir Alexander Murray*: Clause 16 of the Bill empowers the local Government to frame rules to carry out various things, and I think inspection of tea gardens is included in that.

B-2761. *Mr. Birla*: As regards the question of housing, the difficulty so far as the employer is concerned has been twofold: one is about the land to which you have already replied to *Sir Alexander Murray* and the other is the question of money. Would you approve of a scheme under which the Government may advance loans to the employers to the extent of 50 per cent. at a reasonable rate of interest for building houses for their workers?—I do not think this question has been discussed by the Government of India; at least I have not seen any discussions and am not aware of any conclusions they arrived at; I am not aware that this subject has been discussed, but I would point out, harping back again, that this is a provincial subject and therefore the money should come from provincial governments.

B-2762. I am not concerned at present where the money should come from—whether from the provincial Government or from the Central Government. What I am trying to find out is whether such a scheme would be a feasible one?—That I think you could only tell after enquiry from local Governments. I do not think you can make it applicable to all places in India.

B-2763. For instance, if such a scheme was approved of by the Government of India, do you think the Government of India would be prepared to recommend the same to the provincial Governments?—I am sorry, I cannot answer that question.

B-2764. To what extent do you think the Trade Disputes Act has been useful? It has already been on the Statute Book for seven months?—I think it is rather early to express an opinion on a very important Act like that after only seven months' working.

B-2765. After this Act was passed how many strikes in all had we in different industrial centres?—We can let you have the figures if you like, but I cannot quote them straight off; I have not got that information.

B-2766. In how many cases was the Act utilized?—Only in the Bombay strike, as far as I know.

B-2767. *The Chairman:* It set up an enquiry?—Yes.

B-2768. Is there any case other than the Bombay strike?—I am not aware of any.

B-2769. *Mr. Birla:* You know there have been strikes at other centres; at one centre a strike has been in existence for the last five or six months; so far as I know an enquiry was demanded not only by the workers, but also by the Provincial Council and by the Legislative Assembly. Why in the face of such public pressure was not an enquiry set up? I am referring to the tin plate workers strike.—I cannot deal with any particular instances now straight off, but it is a matter for the local Government to decide whether the matter should be referred to a court of enquiry or not.

B-2770. *Mr. Joshi:* You have the power of supervision, direction and control?—The Act says the local Government may do so.

B-2771. *Mr. Birla:* That does not solve the difficulty as far as a layman is concerned; the strike is there; an enquiry has been demanded by the Provincial Council; by the workers and by the Legislative Assembly; and in spite of all that an enquiry has not been brought into existence?—Without looking at the papers and committing myself too far as to the actual facts, I should say it is a matter for the local Government to decide.

B-2772. *The Chairman:* Presumably the local Government in spite of what the Legislative Assembly said, decided in the negative?—I do not know; I presume so.

B-2773. *Mr. Birla:* Can you suggest any solution of such a difficulty if it should arise in the future? It is very easy for the Government of India to say it is a matter which concerns the local Government; but that does not help the situation. Is the law defective?—I do not think the law is at all defective. It gives the power to the local Government; it is for the local Government to decide; it may disagree with the representations of the Legislative Assembly.

B-2774. Is it in the power of the Central Government to make recommendations to the local Government in such circumstances?—It would be within our power to make recommendations.

B-2775. And do you mean to say that in spite of your recommendations the Provincial Government has refused to set up an enquiry?—I did not say we made recommendations.

B-2776. *The Chairman:* But evidently you are very chary about treading on the toes of local Governments, as happens in other countries?—We must be.

B-2777. Where you have given responsibility you destroy that responsibility if you are always interfering?—Exactly.

B-2778. *Mr. Birla*: I am trying to find a solution for future difficulties of that nature, and I am afraid Mr. Shillidy has not been able to suggest any solution for such a difficulty?—I could only suggest a solution which has received the approval of the Government of India.

B-2779. I think your Department is the only Department which can suggest a solution for such a difficulty?—I could only suggest solutions which have received the approval of the Government of India.

B-2780. *Mr. Clow*: I take it that when the Central Legislature has definitely entrusted certain responsibilities to the provincial Government, it would not be correct for the Government of India to issue directions?—It would not.

B-2781. Unless the Act contains the words "subject to the control of the Governor General in Council", as it does occasionally?—Yes.

B-2782. So that on this occasion it would not be a correct procedure for the Government of India to say "This responsibility which has been given you should be exercised in a particular fashion"?—It would not be correct.

B-2783. I understand both the local Governments and Central Legislature are competent to legislate on labour subjects?—Yes.

B-2784. In the case of the local Legislature sanction is required; is that the sanction of the Governor General or Governor General in Council.

*Mr. Cliff*: In the memorandum it says "Governor General".

*The Chairman*: Section 80A of the Act definitely says "Governor General". In the early part of your memorandum you say "with the previous sanction of the Governor General". That is right, is it not?—Yes.

B-2785. Then later on there are several references to the "Governor General in Council"?—Those are different things.

B-2786. Therefore there are two categories?—Yes, there is a distinct difference between the "Governor General" and the "Governor General in Council".

B-2787. *Mr. Clow*: With the exception of the Industrial Disputes Bill in Bombay, do you know of any occasion on which sanction was withheld to the introduction of a labour measure?—No.

B-2788. As regards a cost of living index number I think you suggested (1) that it was not competent for the Government of India to do it, and (2) that they abandoned the proposals because of the views of the Inchaape Committee?—I am afraid I do not know what happened; I can look it up and give you the details.

B-2789. Is Statistics a Central subject?—Yes.

B-2790. You publish or did publish statistics for some time as to prices?—Yes.

B-2791. And a wholesale index figure?—You must know; I do not.

B-2792. It would be perfectly competent for the Government of India to publish figures showing the cost of living of the working classes and to incur expenditure on that account?—I think it then at once becomes a question of what is the purpose of these statistics.

B-2793. *The Chairman*: Apparently there is some question as to whether it comes within your sphere?—Personally I have no doubt about it at all.

B-2794. *Mr. Clow*: The whole of Statistics is a Central subject?—Yes.

B-2795. And statistics published by the Central Government may be on a large number of provincial subjects?—They are sometimes, I think.

B-2796. For example, statistics as to factories?—We call these "returns" under the Act.

B-2797. I take it that the Labour Bureau during the period of its existence was mainly concerned with legislation?—Yes.

B-2798. And though it was abolished in name, efforts were made to carry on most of its work?—Yes, in the ordinary Department.

B-2799. You do publish statistics as to strikes?—Yes, quarterly.

B-2800. Do you regard that as falling outside the province of the Government of India?—No.

B-2801. But it is a provincial subject?—I do not think so; under our Factories Act we must do it.

B-2802. You publish statistics as to strikes in concerns which are not factories?—We may do so.

B-2803. I was putting it to you that the publication of certain central intelligence in this matter is not regarded as a function lying outside the functions of the Government of India.

*The Chairman:* General information of industrial importance covering all British India?—I am not willing to bind myself to any general statement.

B-2804. *Mr. Clow:* I am only asking because earlier you made some general statements?—I still maintain my previous statements.

B-2805. As regards superintendence, direction and control, I take it the general attitude is that whatever may be your view as to what a local Government is doing, you do not interfere unless the matter is one of substantial importance?—Yes.

B-2806. You have issued instructions from time to time relating to the inspection of factories?—Yes.

B-2807. In fact I think you suggested to one province that they must appoint a wholtime inspector?—Yes.

B-2808. You have also issued instructions regarding the granting of exemptions?—Yes; we have reviewed exemptions proposed to be given by local Governments from time to time.

B-2809. And issued general instructions?—I have not been long enough in the Department to have seen those, but I have seen cases where we have actually written to local Governments about the exemptions which they proposed to give under the Factories Act. In these cases the Act definitely specifies that exemptions are to be granted subject to the control of the Government of India.

B-2810. The Department of which you are the head is a Department subordinate to the Governor General in Council?—Yes.

B-2811. The Railway Board is in the same position?—Yes.

B-2812. If therefore it was desired to interfere between the Railway Board and the employees in a particular dispute, that could not be done by your Department, but could only be done by an authority superior to the Railway Board?—The Department as a Department does not issue orders; it issues orders as orders of the Governor General in Council. If therefore it desires to issue orders affecting any Department the matter must be referred to that Department and the views of that Department must be obtained. If an agreement cannot be obtained, the matter must go to the Governor General in Council who will issue orders which in fact control all Departments.

B-2813. The responsibility for the welfare of railway employees is a matter for the Governor General in Council and not for your Department?—Yes.

B-2814. *Mr. Cliff:* But if the Department initiated a movement to try to effect a settlement on the Railways, it would go to the Governor General in Council.

*Mr. Clow:* I think it would be outside their province to do so under the distribution of work made by the Governor General?—We certainly should not interfere in the matter of a railway strike under the Railway Board.

*The Chairman:* I take it the point is this that the Railway Board is parallel to the Department of Industries and Labour.

B-2815. *Sir Victor Sassoon*: Is it under Commerce?—No, it is not actually under Commerce.

B-2816. *The Chairman*: Its relations are direct with the Governor General in Council?—The Railway Board is directly under the Member for Commerce; who is of course a Member of the Governor General's Council; the papers go direct from the Railway Board to the Member; there is no other Department intervening in those discussions, except so far, of course, as they might affect other Departments. If they affect any other Department the views of that Department must be obtained. But there is no other Department intervening between the Railway Board and the Member.

B-2817. *Sir Ibrahim Rahimtoola*: In the first part of your memorandum you say that more than 70 per cent. of the adult male population derive their livelihood from the land. For many years I have heard that percentage stated. Has the Government of India any statistics showing the total population dependent upon agriculture; I mean in numbers?—Those figures have been obtained from our census statistics.

B-2818. Is there no information now available with you showing what has been the increase in population? If the population increased or decreased it would alter the percentage engaged in agriculture. I do not think this memorandum contains anything more than what was the position at the last census in 1921. My point is this: I propose to deal with unemployment; it is therefore essential that the extent of dependence upon agriculture by the population should be known, not in percentages, but in numbers, so that we may be able to judge what population the land can support by agriculture?—These figures can no doubt be got from the census statistics; I have no figures other than those.

B-2819. You will admit that if population increases by a few millions every decade, the percentage would be altered?—I think it decreased last time.

B-2820. The general impression is that the population of India is steadily increasing. If that was so, it would mean that the land would throw out of work the additional population and they would drift to other occupations?—I presume so.

B-2821. Therefore if other occupations are not available, there would be increased unemployment?—It would depend on the extent to which there has been intensive cultivation and how much more population the land would hold for the purposes of agriculture.

B-2822. *The Chairman*: Is not that dealt with in the Report of the Linlithgow Commission?—It may be.

B-2823. *Sir Ibrahim Rahimtoola*: If occupation is required for more people in this land, it becomes very important to consider how to provide it in order to enable it to live. I now draw your attention to the statement in your memorandum: "The latter half of the 19th century, however, saw the rapid decline of the indigenous handicraft industry. It is not necessary here to examine the causes which produced this result, but the point which it is important to bear in mind is that this decay had set in before modern industrialism had been established to any appreciable extent, with the result that the population of the country was to an increasing extent thrown back on the land." Do you think one of the causes of the decay of these handicrafts was the development of the railway system and the import of cheaper goods carried to the local markets in competition with the hand-made goods produced there?—I am sorry, but I cannot answer that question straight away.

*The Chairman*: That is a large historical question.

B-2824. *Sir Ibrahim Rahimtoola*: It is of material importance to the Labour Commission because what we wish to investigate is not only the conditions of labour but the question of unemployment and the causes which have led to that unemployment. It was because of these factors that industrialism by machinery became necessary. It did not occur till the latter half of the 19th century as you say; but subsequently as the old handicraft

occupations of the people gradually disappeared from these causes, people had to seek employment in other directions and to start manufacture by machinery in competition with goods which were being supplied to India from abroad at cheaper rates. Lower down you say: "Over 20,000,000 workers in industry, including cottage industries, mines and transport; railway mileage in excess of that in every country except the United States." I take it that your estimate of 20 million workers includes different industries, such as mines and transport. Have you separate figures as to manufacturing industries, mines and transport?—I understand these figures are derived from the Census Report.

B-2825. The Census Report is of 1921, but we are now in 1929. These are industrial statistics. Am I to take it that the Government of India have not kept themselves up to date in regard to these statistics of employment, but have depended simply on the census?—We have certain figures.

B-2826. In your memorandum you say: "The vast majority of the industrial labourers belong to the poorer classes of peasants who have been driven by adverse circumstances from the fields in their native villages to seek employment in a factory." Do you think increase of population has anything to do with these statistics?—Very probably it has some bearing. I do not know that it is due to population; I have not gone into the question of agricultural economics.

B-2827. Then I take it that you mean that these people are driven out from these villages to industrial occupation through want?—Yes.

B-2828. Through inadequacy of the means of livelihood?—Yes.

Then you say "The true explanation of the scarcity of labour is to be found chiefly in the unattractive conditions of employment and also partly in the conservatism of the labourer who is always reluctant to wrench himself away from his fixtures". What do you mean by "unattractive conditions of employment"?—Housing is I think one of the factors.

B-2829. That brings me to your reply to Mr. Joshi. You know as a matter of fact that the Bombay Government decided to supply this want and decided to build 50,000 one-room tenements to meet sanitary requirements for the housing of industrial labour in Bombay city. You further know that the Government of Bombay had to stop short after constructing 16,000 one-room tenements. You further know that a large portion, more than 50 per cent. of the 16,000 rooms remain unoccupied. Then how can it be said that housing is one of the causes of the unattractive conditions of labour? Here the Government of Bombay has, at public expense, provided sanitary accommodation for these people. They only built about 30 per cent. of the estimated requirements, but still more than 50 per cent. of that accommodation is not utilized by labour. Can you give me any explanation of that? Surely very attractive conditions of housing are present?—Attractive from our point of view but not necessarily from the labourer's point of view.

B-2830. *Sir Victor Sassoon*: Supposing this Commission decided to recommend that certain all-India statistics should be prepared, would not the Governor General in Council through you issue a direction to the provinces to get certain statistics to enable it to prepare all-India statistics?—I cannot say straight away, but I think it would be something on those lines.

B-2831. Apparently you cannot force a province to collect statistics in the form you desire? Have you any control over the provinces on this question: if you are trying to get all-India statistics naturally all those statistics would have to be in the same form. The direction therefore to each province would be to get out these statistics in a certain definite form?—I do not think there would be any difficulty about that. Statistics is a Central subject.

B-2832. Then the Central Government is in a position to instruct the provinces to get statistical results for them so that they can make up all-

India statistics?—Subject to a closer examination by the experts of the constitutional position I should say "yes".

B-2833. I am now talking of statistics *qua* statistics. Will the Government of India be in a position to say: We want statistics as to cost of living in your province so as to make out an all-India average cost of living figure. Would that be considered as welfare and would the position be that you would not be allowed to ask for them?—I prefer not to say straight away. I think I should like to examine that question before I give my opinion.

B-2834. It seems that this is a matter which it is necessary for the Commission to know; I feel it would be very helpful if we are going to make recommendations to know the powers of the Government of India, because naturally we should only get all-India figures by having the provincial figures collated?—If the Commission would like to have a note on that subject I would have the question examined and put before you; I can get legal opinion on the point as to what the exact constitutional position would be in that respect. I am not willing to commit myself at the moment because these constitutional questions are sometimes very difficult.

B-2835. *The Chairman*: Perhaps you will see that we have a note on that?—We did consider at one stage the question of a Central Statistical Bureau. I do not want to commit myself to any statement, but we did find a considerable amount of opposition from local Governments on the point. For example, one local Government wrote and said: "As for the centralisation of statistics this Government are not in a position to agree to hand over to the Central Government the control of compilations for the publication of which they have to find the funds and for which they are answerable to the Council."

B-2836. *Sir Victor Sassoon*: There might be costs?—Yes. I am not prepared to say straight away how these particular costs would be met, whether from the Local Government or the Central Government.

B-2837. Will you therefore consider whether, if the Central Government decides to defray these costs, that would be in accordance with the Devolution Rules on the point?—Yes. Another Local Government said: "If the Committee's proposals"—that was the Indian Economic Enquiry Committee—"involves the exercise by the Central Bureau of any measure of control over the collection and compilation of provincial statistics, then the Local Government must take strong exception to it. The functions of the Central Bureau should, in the opinion of the Local Government, be advisory only, and the provincial Administrative Department should be free to accept or reject the advice tendered." It is not a simple question; it is a very thorny one.

B-2838. *The Chairman*: That puts very clearly the difficulties you find yourself in?—Yes, it is a very difficult question, and that is why I am diffident in expressing any opinion at all.

B-2839. *Sir Victor Sassoon*: If you are correct in your last opinion it would not be possible for you to bring the census figures up to date?—I do not know that that follows.

B-2840. Could not the local Government take the view that it need not follow your advice and supply you with census figures under the headings of agricultural workers?—Surely "Census" is a Central Government subject.

B-2841. You might get powers as to statistics?—I cannot say; it is a very difficult question. I am merely quoting these two Governments to show how difficult the question is and how impossible it is for me to give anything in the way of a definite final opinion at the present moment.

B-2842. In the note which you are going to supply it would be most useful to the Commission if you would consider the point of view of the Commission considering the advisability of getting statistics for All-India?—You want information on two points: whether we can get statistics for All-India and the method of getting them, and the question of cost.

B-2843. Yes, how we could recommend getting these statistics which could either in the first instance be All-India or eventually collected and collated

so as to become All-India. Would it be necessary to have legislation or an alteration of Devolution Rules or what?—You want to know whether under the constitution as it stands the Central Government could give orders, in detail if necessary, for the collection of statistics in a particular form, and in addition to that, how the burden of the cost of preparing these statistics would have to be borne?

*Sir Victor Sassoon:* That is right.

B-2844. *The Chairman:* In your memorandum, you say that in 1922 there were "over 20,000,000 workers in industries, including cottage industries, mines and transport". Could you bring that up-to-date and also sub-divide that under the various heads—textile, jute, coal mines, and so on—so that we might know the number of workers in various industries?—I will make a note of that and do my best.

Q. Pushing a little further the point with regard to migratory labour, I take it from what you have said, that your department views the migratory system as it exists as not an evil?—No, I did not say that. It has not been decided that it is not an evil. I understood Mr. Joshi to ask me whether we were going to take steps to do away with the migratory system. I replied that it has not been decided that the migratory character of Indian labour was a necessary evil.

B-2845. No doubt we shall report our views on that; but assuming that it is not an evil, and a thing which has grown out of Indian life and custom, a good thing in itself, there still remains the problem of how far it can be improved. You suggest in your memorandum that "Education and organization are the only means by which Indian workers can escape from the clutches of intermediaries....." What had you in mind when you used the word "organization"?—I could not say; I was not the author of the memorandum.

B-2846. There are two possibilities: one is trade union organization which obviously might be considered to be in an elementary stage and capable of improvement; and the other, what I may describe as stabilization of migratory labour, by which the migratory worker could be encouraged by employers to go again and again to the same work, so that they might accumulate certain amount of skill and thereby be of more value to their employers?—It may be so. But I have not examined that point, and I am not aware that Government have come to any definite and final decision that it would be good thing to introduce stabilization.

B-2847. *Sir Alexander Murray:* Mr. Clow mentioned the Trade Disputes Bill which the Government of Bombay had drafted. They were told to wait by the Government of India, who then proceeded to put through an All-India Trade Disputes Bill.—Yes.

B-2848. What were the special circumstances that caused the Government of India to do that in this case? If they could do that with the Trade Disputes Bill, why cannot they do that with all factory legislation?—They can do it with all factory legislation. They do not always consider it necessary or desirable. Local Governments also can legislate for themselves.

B-2849. Quite true, but you told us that "Trade Disputes" was a transferred subject?—No.

B-2850. A provincial subject?—Yes.

B-2851. Here the Trade Disputes Bill was drafted in Bombay and the Government of India said: "Wait, and we will make an All-India Bill." What is there to prevent them dealing with All-India labour questions in the same way as they dealt with the Trade Disputes Bill?—Anything which comes under this heading is subject to legislation by the Indian Legislature: "factories, settlement of labour disputes, electricity, boilers, welfare of labour including provident fund, industrial insurance, general health, accidents and housing".

B-2852. When you tell us that that is a provincial matter, as a matter of fact, the Government of India can initiate legislation dealing with welfare?—Yes, we can legislate.

B-2853. That gives me an entirely different impression from what I had two hours ago. I was under the impression that all these things were provincial subjects not capable of being dealt with on your initiative by the Central Government?—We can legislate. There are two separate things; one is administration and the other is legislation.

B-2854. Is there anything to prevent your putting through any Act dealing with welfare work and various other things of that description throughout the whole of India?—But we must carry Local Governments with us so far as we can.

B-2855. You say you can put through legislation for the whole of India, but money may be necessary to administer it?—Yes.

B-2856. That is where the local Governments come in?—Yes.

B-2857. Have you no means of devoting a certain amount to encourage local Governments to come in with you?—That is how it has always been expounded to me on authority: that we cannot spend money from central revenues on provincial subjects.

B-2858. Although you can legislate for the spending of money by the Provincial Governments?—Yes.

B-2859. *Sir Victor Sassoon*: Can you legislate so as to cause the provincial Governments to spend their money?—Yes. For instance, we might provide in the Factories Act for certain staff of factory inspectors, or something of the kind.

B-2860. *Sir Alexander Murray*: You told us that factory inspection under the Factories Act was not a central subject in any way. But in your memorandum you say: "When the revision of the Indian Factories Act was under consideration, the Government of India impressed on local Governments the necessity of strengthening the whole-time inspecting staff in the provinces..." Presumably you have the power to make that recommendation?—We have the power of superintendence, direction and control.

B-2861. *Sir Victor Sassoon*: It is difficult to know where it ends?—I quite agree it is a very wide term. You will find in the Standing Orders of the Legislative Assembly and the Provincial Councils that any provincial subject is primarily the concern of the local Government.

B-2862. *Sir Alexander Murray*: In your memorandum you say: "A complaint which is often repeated in the factory reports is the inadequacy of the fines inflicted by magistrates for deliberate violations of the factory law". Is it not within your province to send a circular to anybody suggesting that adequate fines must be imposed?—I think it would be most improper.

B-2863. There is a difference between instructing a factory inspector and instructing a magistrate?—Yes, we cannot possibly instruct a magistrate as to what he should do in the exercise of his magisterial duties.

B-2864. One is instructing an executive officer and the other a judicial officer; there is a clear difference between the two?—Yes.

B-2865. *Mr. Cliff*: Are those functions sometimes combined in one person?—Yes. But I do not know of a factory inspector who is a magistrate.

B-2866. You could not tell a magistrate as you can an executive officer, to do something?—I am quite certain, if we did anything of the kind the High Courts would take exception to that.

B-2867. You cannot tell the executive side to do something which would react on the judicial side?—No, certainly not.

B-2868. Why is it then that you have retained "Mines" with the Central Government and not transferred it to provincial Governments?—I am afraid I cannot go back to the original division of subjects.

B-2869. But "Mines" is a big industry like the "Factories". In the one case the Central Government transfers them to the local Governments;

in the other case it retains them with themselves.—I do not remember exactly what reasons were given for this division. If you are very anxious to know why "Mines" were placed in the one and "Factories" in the other, I will look it up. I can only get it from the definite reports and decisions. I do not remember exactly why this distinction was made.

B-2870. *Sir Alexander Murray*: There is a movement among the people to transfer everything to Provincial Governments. If you do that, how would you deal with International Conventions in a case of that description?—If the Provinces were entirely autonomous with regard to Industries, I do not know where they would rank. It is a very difficult constitutional question, on which I should not wish to give an opinion. I imagine constitutional lawyers would argue many an hour upon that particular point.

B-2871. I notice that in the Montagu-Chelmsford Report when the Reforms were introduced, they were very strongly of the opinion that if the resources of the country were to be developed, Government must take action. They proceeded to say that the Government must shoulder its responsibility for the industrial development of the country. Is that the Government of India or the Provincial Governments?—I could not say without looking at the sections.

B-2872. *Mr. Ahmed*: If registered unions correspond with your department do you generally send them a reply?—I think we do.

B-2873. Do you reply to their resolutions and recommendations when they are sent to you?—Yes, we do.

B-2874. Generally speaking, if unions put their house in order and satisfy the rules of recognition, you have no objection to recognizing them?—I presume we recognize ordinary trade unions if they are registered.

B-2875. I am referring to industrial workers' unions generally?—Do you mean ordinary private labour?—Yes. We generally recognize them.

B-2876. *Mr. Rouse*, the contractors recruit labour and thereby make a profit. Instead of that if you recruit them direct and pay them direct the contractor will not make a profit. Is that not advisable from the point of view of labour?—It may be advisable from the point of view of labour, but I am not sure.

B-2877. Are you in favour of such a system?—No, I am not in favour of employing labour direct.

B-2878. Will not the labourers get more wages if they are recruited direct instead of through contractors who make a profit?—That is a matter of opinion.

B-2879. Is it not an admitted fact that the contractor makes a profit out of his recruitment?—He makes a profit out of his contract.

B-2880. Therefore if you paid the labourers direct instead of through contractors, they would get more?—(Mr. Shillidy) The contractor takes up a piece of work and he has to employ labour.

B-2881. And out of that he makes a profit?—Out of the price he charges for the work, not out of the labour.

B-2882. What protection do you secure to the labourer to see that he is not swindled by the contractor?—(Mr. Rouse) I have no legal or official standing to give any such protection. But whenever I hear a complaint that a contractor is not paying his labour properly, I make it a point to enquire into the matter. If it happens that the contractor's bill has not been paid and that he has not sufficient money to pay his men, I direct my Executive Engineer to put the contractor in funds and see that he pays his men. Beyond doing this unofficially I have no legal or official powers.

B-2883. Do you see that the contractor supplies pure drinking water to the men under him?—The supply of pure drinking water is under the control of the Health Officer. The labourers get the same pure water supply that we drink here.

B-2884. But you are only confining yourself to the city of Delhi?—I am working in Delhi; I carry on also a certain amount of Central Government works in Dehra Dun and in the United Provinces.

B-2885. So that you are answering questions from the point of view of these three places?—Yes.

B-2886. Not on behalf of the Central Government or Public Works Department?—No.

B-2887. Is there any provision made in the contracts for the supply of pure drinking water to the workmen?—No, there is none.

B-2888. Are you in favour of inserting a provision to that effect?—(Mr. Shillidy) I could not express an opinion as to whether such a condition should be inserted or not. It is a provincial transferred and not a provincial reserved subject.

B-2889. *The Chairman:* If the P. W. D. is carrying out a piece of work in the United Provinces, have you no right to stipulate with the contractor as to the conditions of labour?—I do not say we have no right. I say we cannot express an opinion here as to whether such should or should not be done in the provinces, because in this matter they are not under our control. (Mr. Rouse) The work I do in the United Provinces is work done for the Central Government. It is under my control and I am referring to that and not to works done by provincial Governments in their control.

B-2890. I am speaking only of works done by your department whether here in Delhi or in another province. You told us that at present there was no clause in your contract dealing with supply of pure drinking water to the workers?—Yes.

B-2891. Mr. Ahmed is asking you whether you would be in favour of the insertion of such a clause?—I think the contract might be made more specific.

B-2892. Your opinion would be the same with regard to housing and conservancy arrangements?—Yes, but that is my personal opinion. In this connection I should like you to refer to paragraph 277 of the P. W. D. Code which lays down sanitary rules on extensive works. As regards the works I do in the United Provinces, they are mostly small works, possibly up to three or four lakhs of rupees. They are all in towns where you have the necessary accommodation. You get your labourers who live in the towns. It is only in such big works like the building of the new capital at Delhi, and the building of the Forest Research Institute and the Railway Transportation School at Dehra Dun, where you have to employ a very large mass of labour, at a site which is far away from the towns, and where the accommodation already existing is not sufficient for all, that you have to establish camps for the temporary accommodation of labour. But the works in the United Provinces to which I have just referred are not big enough to necessitate the establishment of temporary camps.

B-2893. Would you approve of a provision being made saying that where more than 200 workers are to be employed for a longer period than six months, necessitating importation of labour for which there is not adequate housing accommodation within a reasonable distance, suitable arrangements must be made to provide temporary accommodation for the workers?—Yes, I would.

B-2894. *Mr. Ahmed:* You would not allow child labour below 12 years of age on your works? In England, I think it is not allowed below 14?—I would get that information for you.

B-2895. I say this, because yesterday we went out to inspect and we found two boys one 10 years of age and the other 11 years. One boy was emaciated, weak and appeared to have had nothing to eat. He had no clothing and was perfectly naked, a skeleton, getting 2 annas per day. There was another boy 10 years old, getting 1 anna 6 pies per day. One comes to this place coming from the Western Hostel on the way to the station. They are building the new printing press. It is only about 500 yards from here, I may tell you.

*The Chairman:* Is that building being done by your department?—Yes. The work is being done by our department through a contractor.

B-2896. *Mr. Ahmed:* The boy 10 years old is getting 1 anna 6 pies per day and the boy 11 years old is getting 2 annas a day.—I shall make an enquiry into that; such cases have never been brought to my notice.

B-2897. *The Chairman:* I suppose you have a rule as to the age at which labour can be employed.—In factories. This is not a factory. There is no legislation that I know of with regard to labour on this sort of building.

B-2898. Then the only question that arises is as to whether you could make conditions with your contractor or not as to the conditions of labour?—We could put it in the contract.

B-2899. *Mr. Cliff:* Have you any effective control over the hours of labour worked at the site of the new printing press?—No.

B-2900. Do you know anything about the hours of labour at all?—I know as a matter of practice that you will not find much work going on in the cold weather before 8 o'clock in the morning, and the works begin to shut down about 5 o'clock.

B-2901. We were told that there was no interval for meals in winter, and there is an interval in summer?—In practice there are many intervals. I dare say it is true that officially there is no interval in the winter, but in the summer there certainly is. You will not see anyone at work then for probably about two hours in the middle of the day.

B-2902. Is there any suitable housing accommodation available for the labour working on that site?—That labour nearly all lives in the camps which you saw, which are less than a mile from there.

B-2903. Some of the people do not live in those camps?—There are some who live in the city.

B-2904. Is this frequent leaving of work, and many intervals, caused by the fact that labour is so cheap that the proprietor allows it?—I should say it is simply because you cannot control it entirely. They are controlled more by their output than by the hours of work.

B-2905. You remember there was a man approached us who was entitled to workmen's compensation but the contractor had gone bankrupt. Did you ascertain, with regard to that question, as to whether a man having workmen's compensation was entitled to have first claim on the assets?—I have been making such enquiries as I could, but I have not yet got a definite answer. I am asking the Government Pleader whether he can give me an opinion.

*The Chairman:* The Act provides that here in India the first claim on the assets, if there are any, is the workman's compensation.

B-2906. *Mr. Cliff:* Has the Department ever taken a wage census in any industries?—(Mr. Shillidy) No.

B-2907. Do you exercise any control over ticket-of-leave labour or convict labour in prisons?—No.

B-2908. Do you take any account of their conditions at all?—We have not so far.

B-2909. You refer to absenteeism. Would you give me your definition of absenteeism?—I am afraid I am not prepared to give a definition at the moment.

B-2910. *The Chairman:* Perhaps you can answer the question to this extent. Does "absenteeism" as used in your memorandum, and as used generally in India, cover absence from sickness; and does it also cover return to the village?—It covers all kinds of absence.

B-2911. *Mr. Cliff:* Does it cover absence through lock-outs or strikes?—No, I do not think it covers that.

*Sir Victor Sassoon:* It does not as far as the textile mills in Bombay are concerned.

B-2912. *Mr. Cliff*: Does it cover those people who go back to their villages for 2 or 3 months?—No.

B-2913. *The Chairman*: I thought you told me it did?—No, it does not cover those people. It refers to the absence of people who are working in the factory at the time.

*Sir Victor Sassoon*: In the case of textile mills, when a workman goes home he provides someone to take his place, and then he does not get marked as absent.

*Mr. Cliff*: So that if a worker provides a substitute when he goes home for a month or a week from the mills he is not regarded as absent?

*Sir Victor Sassoon*: No.

B-2914. *Mr. Cliff*: But absenteeism does include sickness?—So far as I know.

B-2915. If the Central Government desired to initiate social legislation, and that cost money, could the Central Government make financial provision from its own revenue in order to meet that cost?—Not if it is a provincial subject.

B-2916. That is to say, a provincial reserved subject?—A provincial subject.

B-2917. Of any character?—In regard to a provincial subject, if it is social legislation, the Central Government cannot make financial provision, but it can impose legislation?

*Sir Victor Sassoon*: Only if it is reserved.

*The Witness*: Yes, if it is reserved.

B-2918. *Mr. Cliff*: Therefore the Central Government can initiate legislation and impose on the provincial Governments, according to the Constitution, certain financial liabilities?—It can, but it does not do so without consulting local Governments.

B-2919. In regard to work which is undertaken by the Central Government, in which they engage contractors, does your Department ever make any provision in the contract for the protection of the labour employed on those contracts?—(Mr. Rouse) No.

B-2920. That can be taken for all over India as far as Central Government is concerned?—Yes.

B-2921. The Trade Disputes Act says that if any trade dispute exists or is apprehended between an employer and any of his workmen, the local Government, or where the employer is the head of a Department under the control of the Governor-General in Council, or is a Railway Company, the Governor-General in Council may by order in writing do certain things, and have a Court of Enquiry or a Board of Conciliation. Assume a dispute in one of the Departments which goes direct to the Governor-General (and you are in a Department, as I understand, which goes direct to the Governor-General), who initiates the movement for effecting the steps which are provided under this particular clause?—(Mr. Shillidy): I do not think it would necessarily mean that it would always be one and the same person. It may be an application from one of the parties, or we might do it on our own initiative possibly if we saw a dispute was proceeding and we thought it necessary to bring it to a head.

B-2922. If both parties apply then it says there "shall be". You said this morning in the case of disputes on the railways, your Department would not move. It seems to me under this clause that you can move, and I am wondering where the drive comes from in order to get any attention paid to a dispute that has either actually occurred or is apprehended?—I do not know how you can read from this that it would be our Department who would deal with it.

B-2923. I am wondering whose business it is. The reason I ask you is that you are the Department of Industries and Labour. It would be the Ministry of Labour in England who would commence to move. I am wondering whether your Department would really initiate any steps?—They could.

B-2924. But would you?—If we received an application we could, yes.

B-2925. *The Chairman*: That is to say, the Minister at the head of your Department would be the person who would advise the Governor-General in Council. That is the position?—Yes.

B-2926. *Sir Victor Sassoon*: Is not the position this that in the case of Railways the Railway Board or the Member in charge takes the place of the employer?—Yes.

B-2927. So if he agrees and the other agrees it goes through automatically. But supposing he does not agree and the men ask for it, would it be the Department of Industries and Labour who would take the position of the Government?—We would issue the orders of the Governor-General in Council.

B-2928. In that way you would initiate it?—Yes.

B-2929. *Mr. Cliff*: The Fawcett Committee say that unclaimed wages should be paid. Is legislation necessary to secure that payment?—I am sorry I cannot give an answer on that. It would be a matter of an ordinary civil contract between labour and its employer.

B-2930. I understand at the moment that there are certain rules in operation in these factories whereby the worker forfeits his right to the unclaimed wages; but the Fawcett Committee recommended that they should be paid in any event. Am I right in saying that with that rule there, legislation would be necessary?—I do not know of any legislation whereby we have the power to make the employer and the worker enter into a contract.

B-2931. That is the rule in the factory. Would it require legislation to upset that rule? Will that rule stand in the civil court?—It seems to me it would. It depends on the nature of the contract and the agreement between the two parties.

B-2932. The Fawcett Committee Report dealt with that. I am wondering whether your Department considered that question and whether legislation was contemplated?—So far we have not.

B-2933. *Divan Chaman Lall*: Mr. Shillidy, in your memorandum you have made certain statements on the strength of the report of three Committees, the Indian Industrial Commission, the Assam Labour Enquiry Committee, 1921-22, and the Indian Coal Committee, 1925, in which certain allegations are made against the worker regarding drink and increase in wages leading to greater idleness and so on. Can you tell me whether a single labour organization gave evidence before the Indian Industrial Commission?—I am afraid I cannot answer that question.

B-2934. Can you tell me whether it is not a fact that the Assam Labour Enquiry Committee themselves stated that they did not examine a single worker in Assam, believing in the testimony of their own eyes rather than the testimony of any witnesses, who could come before them to give evidence?—If they have stated so, I am prepared to accept it.

B-2935. Can you tell me whether it is true that the Indian Coal Committee never examined a single workmen's representative?—I do not know; I can only say by referring to the proceedings of that Committee.

B-2936. In your memorandum you say that the question of a compulsory scheme of maternity benefits is premature. Why do you say it is premature?—Such enquiries as have been made seem to show that a compulsory scheme which meant contributions from the workers would meet with very considerable opposition from the workers themselves.

B-2937. What do you mean by "compulsory"?—Compulsory and contributory.

B-2938. What is the opinion of the Government of India in regard to a scheme like the one which is introduced in Bombay?—It came up for the Governor General's approval and there was no objection raised at all.

B-2939. Could you tell me why it was that the Government of India opposed Mr. Joshi's Maternity Bill?—I will have to look up the speeches.

B-2940. Then I will leave that question. Could you tell me something about the correspondence that has passed between the Indian States and Lord Birkenhead when he was Secretary of State for India in regard to bringing the Indian States on to line with British India in the matter of factory legislation?—I am afraid I cannot give you any information on that.

B-2941. If it is not confidential, could you make the correspondence available to us?—I could not possibly undertake to produce it.

B-2942. Could you tell me who could produce it?—I will make enquiries as to whether I can produce it or not.

B-2943. Then one question about the Trade Disputes Act. Are you aware when questions were put to you by Mr. Birla as to how you would get over the difficulty that has arisen at Golmuri, of a suggestion that was made while the Trade Disputes Bill was being discussed, that the right should be given to either party to demand a court of enquiry or a board of conciliation?—It may have been so.

B-2944. Are you aware that it was the Government who opposed that suggestion and insisted upon both parties coming with a joint demand?—I was not in the Department at that time and I cannot say.

B-2945. Would this have materially solved the difficulty that has arisen at Golmuri—an amendment of the Trade Disputes Act on those lines?—I cannot say. I should have to get the facts of the Golmuri case before I could express an opinion on that.

*The Chairman:* You are aware of the discussions which have been going on in England on this particular point—that it would really detract from the collective bargaining between parties if it were possible for one or other party to be always saying "Well, I will have recourse either to conciliation or arbitration".

B-2946. *Colonel Russell:* I raised the question this morning of the collection of statistics by some organisations, such as the Industrial Health Research Board, and I would like you to refer to the Devolution Rule under Schedule I on page 209 of the Government of India Act. No. 33 says that the Central Government retains control over central agencies, institutions for research, etc., or for the promotion of special studies. It seems to me that under that section the Central Government has complete power to institute boards such as the Industrial and Health Research Board?—I understand you were referring almost entirely to industrial research. If I may refer you to Part 2 of Provincial Subjects, you will find "Development of industries, including industrial research and technical education".

B-2947. But that is subject to Devolution Rule 33?—No. 33 is not a Devolution Rule. No. 33 is No. 33 in the list of Central subjects and No. 25 is No. 25 in the list of Provincial subjects.

B-2948. But under 26 it says: "Subject to legislation by the Indian Legislature"?—26, yes; but not No. 25.

B-2949. Under this section the Central Government has no power to form such a body as the Industrial Health Research Board although it says distinctly here "for the promotion of special studies"?—It would be a very difficult matter to know whether any single proposal of that kind would fall under No. 33, or under No. 25 of the Provincial subjects. You would have to explain what precise duties were going to be allotted to your Industrial Research Board.

B-2950. Similar duties to those carried out by the Industrial Research Board in England?—I am afraid I do not know what those are.

B-2951. *Mr. Clow:* Diwan Chaman Lal suggested that it might solve the difficulty present to his mind if any employee or group of employees could have a court of enquiry or a conciliation board on application. Do you not think that would give rise to an impossible position if Government were compelled to appoint a court for every group of employees who alleged a dispute with their employers?

*Diwan Chaman Lall*: It does not say "group"; it says "majority".

*The Witness*: I think we should have a great many courts of enquiry going on.

B-2952. *Mr. Clow*: As regards consultation with local Governments, has not your Department on many occasions expressly asked local Governments to consult the associations both of employees and employers?—That is always the rule. They always do ask local Governments to consult both sides.

B-2953. In practice, do you think the local Governments do what they can to consult both sides?—Judging by the letters and reports that we get there is always a strong attempt made. We get a large volume of labour opinion, and I know that in the local Government of Bombay there was a large list drawn up of unions and associations which had to be consulted on all matters relating to labour. I cannot say what the practice is in different Governments. I think if one looks at the replies which are received from Governments on any questions which have been referred to them, one will find that there are a great many replies coming from labour associations.

B-2954. What is the ordinary procedure in labour legislation? After a start has been made by a suggestion in the Assembly or on the initiative of the Department, what happens then?—We examine it, and consider whether we can put before a local Government certain general principles, on which we ask for their criticisms. When we get their replies we go on to a further detailed consideration in order to see whether we can draw up a Bill or not at that stage. It is possible that we may be in a position to draw up a Bill at that stage and introduce it. On the other hand it is quite possible that we may bring in certain details which are mentioned by one Government and which have apparently not come to the consideration of other Governments. This may mean administrative measures, or it may mean matters of finance. If we are going to adopt those, and they mean any expenditure, or any difficulties in administration, it is quite obvious that we must get the opinions of local Governments generally on those points before we proceed to the definite drafting of a detail Bill. In some of these respects local Governments have at times been rather critical of our action in proceeding with legislation, or in proceeding with the drafting of Bills or proposals which subject them to financial expenditure or to difficulties in administration, when they have not been consulted before hand. Once we have got to the stage of introducing a Bill into the House, it is not possible definitely to say whether we shall always move for circulation or go on. It will depend on what has happened up to that date as to whether we move for circulation. It very often happens that the House itself prefers that the Bill should be circulated, and we may have to yield to that. It is not possible to say definitely whether Government will, as a general rule, move to proceed to the first, second and third readings, or to a reference to a Select Committee, or will agree to a motion for circulation. It will depend on what the developments up to that stage have been and whether we consider the Bill, as drafted, is sufficiently well known to local Governments and that we have been fully apprised of their opinions to permit us to go on without further consultation.

B-2955. It is possible for the Government of India to legislate in respect of all provincial subjects—for the Province of Delhi, for example?—Yes.

B-2956. *Sir Ibrahim Bahimtoola*: Several questions have been put in regard to the Trade Disputes Bill. That is a piece of central legislation relative to Provincial subjects. Is it the position of the Government of India that once the Trade Disputes Act is passed it will be administered by Provincial Governments and that they will have nothing to do with it thereafter?—Where the Legislative Assembly has definitely put a duty upon the local Government, and upon the local Government alone, that duty can be performed only by the local Government.

B-2957. My question is the operation of that central legislation, the Trade Disputes Act being in charge of local Governments. Is it your posi-

tion that once that piece of legislation has passed through the central Legislature the Government of India has nothing further to do with it?—No.

B-2958. Then what is your position? Would you interest yourself further in it?—We might.

B-2959. Would you consider that you have a right to interfere, or interest yourself, in the manner in which that Act was being worked?—Yes.

B-2960. Take the case of the Bombay strike. You know that the Government of Bombay appointed a Committee of Enquiry. That Committee made a report and, apart from the relations between the work-people and the employers, certain aspects have been brought to the notice of the Government of Bombay as the result of that enquiry. The report was submitted several months ago. The public are not aware of any action having been taken by the Government of Bombay in connection with that Report. Would it be one of the duties and functions of central Government to ask the Provincial Government why they have taken no action with regard to it?—We could do it, but I do not know that you could call it one of our functions.

B-2961. You have the power to do so? Interpellations in the Legislative Assembly would be relevant on the subject?—I am not quite sure about that, because the rule runs "Matters which are primarily the concern of the Local Government."

B-2962. But this is an Act passed by the central Government and the central Legislature?—Labour disputes are primarily the concern of the local Government."

B-2963. That is to say, then, that there is no authority which could influence the Government of India to interest themselves?—I do not definitely say no, for the simple reason that if a question of this kind is put it has to be decided whether it does relate to a matter which is primarily the concern of the Governor General in Council.

B-2964. *The Chairman*: The President would have to decide that point in the Assembly?—Yes.

B-2965. *Sir Ibrahim Rahimtoola*: Apart from that, can you suggest any way by which any representative member of the public can bring the matter officially to the notice of the Government of India?—I do not like to give an opinion definitely one way or the other. It would depend on each particular question. I do not think I can commit myself to a general statement. Some of the questions might well be within the limits, and other questions might well be ruled out.

B-2966. In your memorandum about recruitment at the mill-gate it is stated "The employer does not recruit himself the men required for his establishment, but holds the overseer, jobber or mukadam responsible for the adequate supply of labour in the department. The latter takes the place of the contractor, and exacts bribes from the new recruits. He also acts as a money-lender and thereby reaps a double harvest from the needy labourer. It would appear therefore that education and organization are the only means by which the Indian workers can escape from the clutches of intermediaries who, like harpies, are ever ready to prey on them". That is a very fine sentiment, but I should like to ask whether it is not the actual financial condition and needs of the people wanting employment which lends itself to this state of things. I will put it in another way. You say that this man is acting as a contractor and is also acting as money-lender. Could it be, as we have been told in other places, that this man gets labour by advancing money to the labourers, and thus gets complete control over the earnings of those labourers?—That sometimes happens, I understand.

B-2967. Only sometimes? We are told it is frequently the case. If that is so, how could education and organization cure that evil, arising as it does out of the immediate want of the man seeking employment?—I think, quite easily. It would be the normal way.

B-2968. Will you explain what you mean by education? Perhaps it will take a long time. What form of "organization" did you contemplate when you used that word?—Organization of unions.

B-2969. Do you mean a union of men who have not been in any employment till then?—Any union.

B-2970. Unions of people who have had no employment whatsoever?—No, I did not mean that at all.

B-2971. To my mind this is a very serious problem which this Commission has to investigate. Large number of people do not find sufficient means of livelihood through agriculture in their villages. They are anxious to engage themselves to do hard work elsewhere. They cannot do it because of these middlemen. Their want is so great that they cannot wait. They go and borrow money from these middlemen. Thereafter they are completely at their mercy.—I think unions or friendly societies could solve this problem.

B-2972. *The Chairman*: I suggested to you a labour officer engaging labour for a firm and responsible only to the head of the firm?—I have heard that that is working in one or two places.

*Sir Victor Sassoon*: Are we now dealing with labour employed in towns? I thought we were dealing with labour in up-country parts.

*Sir Ibrahim Rahimtoola*: I am dealing with people driven by want to industrial towns.

*Sir Victor Sassoon*: Are you talking of them before they arrive and get employed in industrial towns?

*Sir Ibrahim Rahimtoola*: They arrive and seek employment. But before they get employment they fall into the clutches of these middlemen. I do not refer to people who go out to the village to recruit.

*The Chairman*: That is undoubtedly one of the most important points? I think the sentence is perfectly clear.

B-2973. *Sir Ibrahim Rahimtoola*: What has been done with this important question of unemployment after the following resolution was passed by the Legislative Assembly:

“ This Assembly recommends to the Governor General in Council that he may be pleased to appoint a Committee with a non-official majority to investigate into the problem of unemployment in general, and among the educated classes in particular, and devise suitable remedies, whether by a system of industrial and technical education, or by a revision of the existing system of education, or by offering encouragement to the starting of new industries, or by opening new avenues of employment, or by the establishment of employment bureaux, or by all these or any other means; and that the said Committee do make a report on the latter problem as early as possible.”

Why did not the Government accept the resolution and give effect to it?—It was because Government thought that no useful purpose would be served by appointing a committee. Moreover what was required was an All-India Committee; and if we took any such action we should be trenching on the domain of the provinces.

B-2974. Have the Government of India given any consideration to this problem?—Yes, they have.

B-2975. Have they examined the various suggestions contained in the resolution in order to find an effective remedy for this evil? Have they come to any definite or tentative conclusions in regard to each one of these suggestions?—I have said already that if we appointed an All-India Committee we should be trenching on provincial subjects.

B-2976. But has the Labour Department of the Government of India which admits the existence of the evil, examined the suggestions contained in the resolution; has it come to any definite or tentative conclusion on each one of those suggestions?—We have referred the matter to local Governments, who themselves have appointed committees.

B-2977. Only in one case?—No.

B-2978. Do I take it that the net result is that nothing is done?—It is best to ask local Governments. We sent the matter down to the local Governments as the matter lay within their province. Four Provincial Governments have appointed Committees, and if the Commission wants to know what has been done, it would be best to ask local Governments themselves.

B-2979. And the Government of India does not know whether anything has been done?—We know that some of the recommendations have been followed by local Governments. But as this is a matter more or less concerning the conduct of local Governments, I think it would be better to get an account of their proceedings from the local Governments themselves.

B-2979. *The Chairman:* Mr. Rouse, Has your department any reasons against direct employment of labour without the intermediary contractor? Has it ever been considered?—There is nothing against it in the codes. We can employ labour direct, but it is a matter of practice to give the work on contract. It is a very difficult matter and would require a large amount of experienced staff to employ labour direct. We tried direct labour in building the Western Hostel in Delhi, the reason being that we thought that the contractor's rates were extremely high. It was my predecessor who tried that. And from the point of view of expense the results were disastrous.

B-2980. Was this the reason: that apart from the contractors, there was a scarcity of men with experience in handling this kind of labour?—The contractors have men under them who are accustomed to do this work, but the Government have not.

B-2981. Is the Western Hostel the only experiment which has been made?—That is the only large one. Besides that we do occasionally employ direct labour on small works. We have a considerable amount of permanent labour engaged on maintenance.

B-2982. Is that direct?—Yes, that is direct.

(The witnesses withdrew.)

### Dr. RUTH YOUNG of the Countess of Dufferin's Fund.

B-2983. *The Chairman:* Dr. Young, you speak in connection with the Countess of Dufferin's Fund?—Yes.

B-2984. Exactly which office do you hold?—I am personal assistant to the Secretary.

B-2985. Will you in the first instance give us a little history of the Fund and its purpose?—The Fund was founded by the Countess of Dufferin when Lord Dufferin was Viceroy. She wanted to see more medical aid given to women in India by medical women. At that time there were very few medical women in India. She raised a fund for that purpose, the income from which is still used in our office. After a few years there was a good deal of dissatisfaction in connection with the working of the Fund, because medical women thought that their status was not sufficiently good and high. After that some medical women wanted a service to be founded and run by the Central Government. But that was not conceded and the Government now gives a grant of Rs. 3½ lakhs to be administered by the Countess of Dufferin's Fund Council, instead of running it themselves. In addition, in our office there are two other funds which were founded by successive Viceroys' wives; one, the Lady Chelmsford League, founded by Lady Chelmsford to look after child welfare work, and the other founded by Lady Curzon for promoting the work of training indigenous midwives—*dais*—in India. The Office where I am working administers all these funds.

B-2986. *The Chairman:* Are all these All-India funds?—Yes, they are.

B-2987. Administered from what centre?—From Delhi and Simla.

B-2988. *Col. Russell:* In her memorandum, dealing with infant mortality, Dr. Scott says that "the figures for infant mortality in industrial areas compare unfavourably with those in other towns and in rural areas." Thereby implying that the death rate is higher among industrial workers than among the general population? Is it not a fact that infant mortality is very high throughout the whole of India? Have you any information to support the implication of Dr. Scott?—We can only go on the figures published in the annual reports.

B-2989. In the annual reports there is no differentiation made between infant mortality amongst industrial workers and among the general population?—I admit that. But the inference is that as infant mortality in industrial towns is very high, the cause is industry. However I am afraid I cannot make a definite statement about it. And that is the very reason we give for an enquiry into the question of infant mortality.

B-2990. Dr. Scott rather makes an implication that there is higher death rate amongst children of industrial workers than among the general population?—Yes.

B-3000. Have you any figures to support that view?—Only the figures that we get for urban areas as compared with the figures for rural areas.

B-3001. Dr. Scott says: "Investigation on this point is urgently required." What kind of investigation do you desire?—I would like to see investigation in selected places, both rural and urban, undertaken by medical women with people like nurses and health visitors working under them for a definite period of time. That would at any rate give us some facts to go on.

B-3002. You consider that such an investigation is "a *sine qua non* for the formation of proper child welfare schemes." Surely, it is already universally admitted that proper child welfare schemes are essential. Do you mean to suggest that until such an investigation is carried out, child welfare schemes should not be properly developed?—I do not suggest that. If I did, I would not be working where I am, I am at present working at the development of child welfare schemes. What is meant there is that until we know what are the real causes of infant mortality, we cannot tackle them in the proper way.

B-3003. With regard to unregistered births referred to in your memorandum do you think that sanitary inspectors would be able to investigate and register them?—Yes, I think they would, to a certain extent; but I think women workers would be able to do it more effectively in North India.

B-3004. How could health visitors check the causes of death?—I have guarded myself by saying, "to a certain extent"; because I quite admit that they would not be able to pronounce what the actual cause of death was. At any rate they would get a better idea than either the parent or the sweeprass of the House who at present reports the death.

B-3005. In her memorandum Dr. Scott says that there are no women medical officers employed in the Public Health Department. Do you think that such women are available in India?—I do not think they are available in large numbers at present. I think, if the demand is made for their services, they would become available.

B-3006. Where would they come from?—I think they would come from both Great Britain and from India.

B-3007. Should they be wholly Indian?—Not necessarily.

B-3008. Do you not think that Indian women will be more kindly received among the women workers than English ladies?—It depends on the previous experience and the gifts of the European woman. The fact that we are working shows that that is possible.

B-3009. In what directions would you use their services in public health?—Their services could be used for developing child welfare work, controlling maternity services and if possible for helping women industrial workers.

B-3010. In her memorandum she says: "These suggestions, which could well form the basis of schemes at the present day, have hardly been acted upon and no first class medical women have been asked for, for this work." What does Dr. Scott mean by "first class medical women"?—I think she means, women belonging to the cadre of the Women's Medical Service.

B-3011. Are there any second class medical women?—No, we have only one cadre, no second cadre.

B-3012. I presume Dr. Scott suggests that some second class medical women are working in this field?—Medical women are working in some industrial areas in Bombay and Nagpur.

B-3013. But they are not first class?—They may have excellent qualifications, but they do not belong to the Women's Medical Service.

B-3014. Dr. Scott suggests that crèches should be increased. Have you any experience in working crèches?—I am sorry, that is not the intention. I disapprove of crèches.

B-3015. The Commission has been more than once told that these crèches have proved unsatisfactory?—I wholly agree with that view. The intention of the paragraph in the memorandum is simply to show that some provision is made, not that we approve of the provision.

B-3016. The Chairman: In what respect do you consider a crèche undesirable?—It is undesirable, because it means getting labour cheap on the part of the employers.

B-3017. Would you prefer the exclusion of married women?—The married women with children.

B-3018. Assuming the continuance of married women with children in these works, do you think that the crèche is worse than taking the child into the actual factory?—Perhaps not. But I can assure you that I do not think that leaving children under a tree in the fresh air is any worse than taking them into a crèche.

B-3019. Sir Victor Sassoon: But you do not get fresh air under trees in Bombay?—No, I was thinking of a place like this.

B-3020. *Col. Russell*: But the babies should be looked after by some women who have got certain qualifications for looking after children?—I do not think many of them are very well run.

B-3021. I quite agree. But that is no reason why they should not be well run?—I do not believe in the principle of crèches. These women ought to be looking after their own children.

B-3022. It is stated in the memorandum that difficulty has been experienced in securing suitable medical women. Would not the same difficulty arise in the case of health visitors as in the case of medical women?—It arose in the case of health visitors, certainly.

B-3023. Can you tell us why?—The reason is this: there are very few women available to take up professional work of any kind. Of those that do take up and reach the matriculation stage, the majority prefer to enter the medical profession or the teaching profession; because they consider that these are more honourable occupations and also more profitable financially.

B-3024. Would you not anticipate the same difficulty with regard to recruitment of medical women?—No.

B-3025. I have been told that in the Punjab there has been difficulty both in recruiting medical women and recruiting public health visitors.—I think the number of medical women is increasing faster than the number of health visitors.

B-3026. In her memorandum Dr. Scott speaks of "a complete scheme of medical women with health visitors and midwives working under their control....." and so on. Does she suggest that these medical women should form a separate unit independent of the Public Health Department or should they be working under the man at the head of the Medical cadre?—They would form part of the present Public Health Department. I do not think you can have two heads in the province.

B-3027. Can you explain what Dr. Scott means when she says in her memorandum that "the earning power of all professional women in India is greater than that of men, so that their work is relatively expensive"?—Because it is a fact. If you enquire into the salaries, you will find that the salary of a B.A., B.T. woman teacher is higher than that of a B.A., B.T. man teacher.

B-3028. What about medical women?—In the case of sub-assistant surgeons, on the whole their earnings are more than those of men.

B-3029. Even according to your argument you would find more difficulty in recruiting women sub-assistant surgeons for extension of public health work than recruiting men sub-assistant surgeons.—Yes.

B-3030. That is because they would be able to make a larger income out of private practice?—Yes, they are able to make more.

B-3031. *The Chairman*: In their case the demand exceeds the supply.—Yes, it is so in the case of medical women.

B-3032. *Col. Russell*: With regard to the sex ratio in industrial areas, the number of women per 1,000 males in Calcutta and Suburbs is 500, Bombay 524 and in Delhi 672. Do you agree with the importance attached to this question in the Government of India's memorandum?—Yes, I would.

B-3033. Have you any actual experience of the evils alleged to be associated with disparity in the numbers of the sexes in industrial areas?—I have no personal experience because I have not worked in Calcutta or Bombay.

B-3034. Dr. Scott says that if the sex ratio were made more level no one can doubt that both these factors would help to stabilize labour. Have you got anything more to say in support of that statement?—I think it is a statement supported by common-sense.

B-3035. Is there a larger amount of venereal disease amongst female industrial workers than among the general female population?—I cannot quote any figures to support that.

B-3036. What is your impression?—My impression is that it is greater

B-3037. There are no actual figures to support it?—No.

B-3038. Because these figures which are mentioned so often would be a direct proof of irregular family life?—Yes.

B-3039. But you still maintain that these evils do exist?—It is a general notion that the amount of venereal disease in places like Calcutta and Bombay is larger than in rural areas.

B-3040. And you would support the statement that that increase of venereal disease was due to the disparity in sex ratio?—Yes, I would.

B-3041. What importance do you attach to maternity benefit schemes? Are such schemes so important as to be dealt with by the Central Government or by the provinces and/or by the employers? Which would you prefer?—As a general principle one would prefer it to be done by legislation, but I think it would be administratively very difficult for the Central Government to undertake legislation on this question.

B-3042. You prefer it to be done by the provinces?—I think that would be more feasible.

B-3043. This question has been raised before the Commission already. Do you think if maternity benefit schemes were introduced they would lead to the discharge by employers of women workers and their replacement by boys for instance?—I think that is a thing that could only be proved by working the schemes; I think it is a possible result.

B-3044. Do you think that would be a natural attitude taken up by the employers?—Yes, I do.

B-3045. Would it be of advantage to appoint women factory inspectors? By that I mean both medical and lay inspectors, especially as you say that women take very little advantage of the provisions made by mill and factory authorities for medical health?—Yes, it would.

B-3046. If you were increasing the staff of factory inspectors, would you appoint female inspectors?—Yes.

B-3047. Can you tell us anything of the conditions of women workers in unregulated workshops?—I know very little about it personally.

B-3048. Does the health level, that is the physique and general appearance, of the female industrial worker, in your experience, indicate that the average wage is sufficient to maintain the worker in health and efficiency?—That is a very complicated question because it is bound up with the question of family wage, not merely individual wage.

B-3049. Arising out of your answer, "Wise dieting is not necessarily more expensive than unwise dieting",—it should be possible to secure a balanced diet at a price not larger than is paid for an unbalanced diet?—I doubt it.

B-3050. You will be surprised to hear that that is a quotation from a paper read by Mr. McCarrison three days ago?—I bow to his authority.

B-3051. *Miss Power*: In 1921 the Government of India drew the attention of the local Governments to the desirability of appointing a medical woman as factory inspector. Does your Association think it wise that the functions of a factory inspector and those of a medical officer should be combined, or do they feel that the work of medical attendance and that of industrial inspection are entirely separate and require a different type of training?—I do not think they have made any pronouncement on this subject, but I myself feel that they require different training.

B-3052. You do not feel that the appointment of medical women to the factory inspection service disposes of the question of industrial inspection as regards women and children?—I should not think so. At any rate if they were to be used in that way they would need to have some special training.

B-3053. You said in answer to Col. Russell that if the demand were made, suitable women would be forthcoming for new branches of medical and social work. We are sometimes told, in both written and spoken evidence, that it is doubtful if women would be able to cope with such work as that of factory inspection. Is it your opinion that such women would be forthcoming if the

demand were made for suitable women for both types, that is, women industrial inspectors and women medical officers in the industrial field?—Yes, I think that they would be forthcoming; I do not say there would be a rush into these professions in a year or two years, but I think that there would be a steady increase in the number if the posts were opened.

B-3054. Would you suggest that if a demand was made for women in this work it should be an Indian Women service?—Do you mean a service of Indian women only?

B-3055. Yes—Not necessarily.

B-3056. You would have both European and Indian?—Yes.

B-3057. You were asked a question in connection with unregulated workshops. We have come up several times against the question of the child who is rejected by the certifying surgeon as medically unfit for factory labour. Under present conditions there is nothing to prevent that child from going into the worst types of industrial employment in unregulated workshops or on construction work and so on?—Yes.

B-3058. Has your Association any views as to the necessity for bringing such places under industrial regulation?—It has not any formulated views that have appeared in print, but it would certainly support the demand for regulating them.

B-3059. We are also told very frequently in both written and spoken evidence that women industrial workers are less ready to avail themselves of the medical facilities provided than in the case of men. Is it the experience of your Association that this is entirely a question as to whether these facilities are available to women through the medium of men or women doctors?—I think almost entirely.

B-3060. Do you think that were these facilities available through women doctors they would be used by the women as extensively as they are in the case of men?—At any rate they would be used as extensively as they are used by women in an ordinary town where there is a Women's hospital, and that I suppose is almost as much as men in an ordinary town.

B-3061. Col. Russell was asking you about the sex ratio. Has your Association had any views as to how far this disturbance is due to the recruitment of the industrial worker from agricultural sources and how far it is due to the conditions under which the worker when recruited is obliged to live, making it impossible for him to settle down into a stabilized industrial unit?—I should say certainly the latter because other things being equal there is no reason why women should not want to come if the housing conditions and so on were suitable.

B-3062. You think if the social conditions of the worker when he first comes to the town to seek industrial work were better, he would bring his family with him and settle down and become a permanent industrial unit?—They would certainly bring them in much larger proportion than they do at present.

B-3063. *Mrs. Chatterjee*: You say that medical women in India have repeatedly pressed for an inquiry into the causes of infantile mortality. What are the reasons which have delayed the holding of such an inquiry?—Lack of money. No grant has ever been made towards it. When the request was first made—I think it was in 1919—it was for quite a modest sum—a few thousand rupees—and it was rejected by the then Education Member who was reported to have said that it did not matter if a few more children died.

B-3064. Then I understand also that you are opposed to a woman who has a baby working. Do you know what the average wage of an unskilled labourer in industry is? Take for instance Delhi: Are you aware that the average wage of an unskilled labourer is As. 10?—Yes.

B-3065. What do you think is more essential, that the baby should be looked after or that they should be sufficiently fed?—I made the statement

that women should look after the babies as a matter of principle. I did not then enter into the question whether the man was getting a living wage or not, but I do feel that in industrial areas the fact that women go to work makes it possible for the employers to pay lower wages and the man has no chance of earning a wage which would support the whole family. It is not that I think women do not need to work; I know that they do need to work and I admit that it must ordinarily be more necessary for them to work than stay at home and look after the child; but as a general principle I think it is wrong.

B-3066. But taking things as they exist to-day, do you not think that crèches are necessary?—Yes, they may be but I always object to this sort of thing which is a kind of red herring making people think that children are being looked after very nicely and everything is very nice and indefinitely postponing the proper state of affairs.

B-3067. *The Chairman*: I think you have experience of Indian life, both in villages and in industrial areas?—When I first came to India I worked in a town in the Punjab having about 50,000 inhabitants and I visited villages from there in connection with medical work. Then I have been in Delhi since; I have visited industrial areas in connection with medical work.

B-3068. Then you have some experience of what is called the migratory labourer, that is to say, the labourer who preserves his attachment to his village and his land; he comes into the city to work for certain periods, returning at harvest time and so on?—I know about it, but I have not had much personal experience of it.

B-3069. Taking that system as it exists on the one hand and the other system of a permanently settled industrial labour living round the factory, do you consider that the Indian system has virtues which would commend its maintenance, or would you prefer to see the factory labourer separated from the land?—I do not feel I am quite in a position to answer. From the point of view of the capitalists I suppose they would prefer the labourer to be always there.

B-3070. But I am not looking at it from that point of view; I am looking at it from the point of view of the nation?—I do not feel I have a right to give an opinion.

B-3071. But supposing the custom persists you would think that anything that could be done to stabilize in the sense of helping and directing the flow of labour and making it acquire skill by repeated returns to the same place of work would be an addition to the national efficiency?—Yes, certainly.

B-3072. And that in itself would assist schemes of welfare work because the ebb and flow instead of being haphazard would at least have some guidance and some motive for stabilization?—Yes, I think that is the case.

B-3073. *Mr. Cliff*: I see that the Government of India when faced with the Draft Convention for sickness insurance made enquiries of local Governments and other bodies. Can you tell me whether they made an inquiry of your Association in respect of sickness insurance in 1927?—No; I am sure they did not.

B-3074. In 1919 the Draft Convention for maternity benefits was before them and they made similar enquiries?—Enquiries were made then.

B-3075. Did you put in a report then?—I do not know if we went to the length of a formal report, but there were conversations of which we have got files and reports in our office.

B-3076. I was just concerned to see whether the Government really enquire of Associations like yours in connection with sickness schemes, health and so on?—They certainly did about maternity benefit I know, but I am practically certain that they did not about sickness benefits.

B-3077. Have you had any close personal observation of the diet of women and children?—Yes, fairly close.

B-3078. Can you tell the Commission whether it is a satisfactory diet from a physiological point of view as our Medical Assessor puts it?—You mean the labour classes?

I am speaking at the moment of the industrial population?—No, I think it is very unsatisfactory on the whole.

B-3079. Is it insufficient?—It is probably not so much a case of insufficiency as of wrong balance as Col. Russell says.

*Colonel Russell:* Now you admit what you did not admit before.

B-3080. *Mr. Cliff:* In your view it is not insufficiency but a wrong balance?—Yes. I do not mean to contradict Col. Russell, but if you correct the balance you do not necessarily get the same amount of things for the same price because a diet like milk is much more expensive than, say, rice.

B-3081. In your opinion is it necessary for women and children to have milk?—Yes, at any rate for children.

B-3082. I am told that on the wages they earn they cannot buy milk even if it were available?—No, they cannot.

B-3083. Then is their diet insufficient?—Children's diet certainly is.

B-3084. The question is: Is the woman's diet insufficient?—I think the woman's diet is often insufficient too. I think milk is the lacking factor.

B-3085. Is the diet sufficiently varied to be appetizing?—It would not be appetizing to us.

B-3086. I mean to the Indian women and children. I have looked at it and wondered, and I am asking your opinion?—It can be quite appetizing if it is properly cooked. But if it is *roti*, that is, bread made of unleavened flour, with a little *dal* or perhaps not even that, I do not think it is very appetizing; but of course hunger makes them eat it.

B-3087. *Sir Victor Sassoon:* Could you say whether the diet of the woman industrial worker in Delhi differs largely from that of the woman worker in rural districts?—I do not think that it differs a great deal, but in the rural districts the women have a chance of getting a certain amount of green stuff which is not easy to get in the towns.

B-3088. Would the women in the rural districts get better diet from the point of view of quantity than she would in Delhi?—No, I do not think she will get more in quantity, but probably she will get a better quality.

B-3089. It is really a question of difference in their diet. They differ in that in the rural districts they would get more green food?—They have more chance of getting green food because at certain times of the year they can eat unripe gram and sugarcane.

B-3090. *Mr. Clow:* And there is more chance of getting milk?—Yes, because they can keep cows, goats or buffaloes.

B-3091. *Sir Victor Sassoon:* Would you say from your observation that the women in rural districts looked healthier than in industrial districts?—I think that requires investigation also.

B-3092. I am not asking you to say anything that you do not know yourself. From your personal experience you can speak because you have visited villages?—The women mill workers in Delhi, I do not think, are specially unhealthy, but I have never compared them scientifically with the women in villages.

B-3093. Without comparing them scientifically; what is your general impression? From looking at them would you say that the women here are better off than in the rural areas?—Not better off.

B-3094. About the same?—Yes.

B-3095. You would not say that those in the rural districts obviously looked a great deal healthier and of better physique than the women here?—

think the Punjabee woman would be, but I do not think the ones near Delhi are. I am trying to compare the woman industrial worker with the rural worker.

B-3096. *Mr. Cliff*: Would you compare the area of 50,000 inhabitants in the Punjab where you worked with the villages to which you went?—I think the Punjab women of the villages are better physically than the town-dwellers. But the country surrounding Delhi is very poverty stricken; it is a very poor area.

B-3097. *Sir Victor Sassoon*: It really comes to this: in the Punjab you find that women in the rural districts are better than in the district of 50,000 inhabitants in which you were working?—I think so.

B-3098. You would not consider that the women in the rural districts round Delhi were better off than the women engaged in industrial pursuits in Delhi?—No.

(The witness withdrew and the Commission adjourned.)

# DELHI

## THIRTEENTH MEETING

Thursday, 7th November, 1929.

PRESENT :

The Rt. Hon. J. H. WHITLEY (*Chairman*).

<p>The Rt. Hon. V.S. SRINIVASA SASTRI, P.C.</p> <p>Sir VICTOR SASSOON, BART.</p> <p>Sir IBRAHIM RAHIMTOOLA, Kt., K.C.S.I., C.I.E.</p> <p>Sir ALEXANDER MURRAY, Kt., C.B.E.</p> <p>Mr. A. G. Clow, C.I.E., I.C.S.</p>	<p>Mr. KABIR-UD-DIN AHMED, M.L.A.</p> <p>Mr. G. D. BIRLA, M.L.A.</p> <p>Mr. JOHN CLIFF.</p> <p>Mr. N. M. JOSHI, M.L.A.</p> <p>DIWAN CHAMAN LALL, M.L.A.</p> <p>MISS B. M. LE POER POWER.</p>
<p>Lt.-Col. A. J. H. RUSSELL, C.B.E., I.M.S. (<i>Medical Assessor</i>).</p> <p>Mrs. J. C. CHATTERJEE (<i>Lady Assessor</i>).</p> <p>Mr. S. LALL, I.C.S.      }</p> <p>Mr. A. DIBDIN.            } (<i>Joint Secretaries</i>.)</p>	

**Lt. GENERAL Sir EDWIN H. de V. ATKINSON, K.C.B., K.B.E.,  
C.M.G., C.I.E., Master-General of the Ordnance in India.**

B-3099. *The Chairman* : Will you tell us, in the first place, the position you hold, how long you have held it and what Departments are under your control?—Previous to holding my present appointment I was 3 years Engineer-in-Chief of the Military Engineer Services. Before the war I was Principal of the Thomason Engineering College for 12 years. In that appointment I had a great deal to do with the training of Indians in the engineering line, and a great deal to do with labour in various ways. Six years ago there were three principal Staff Officers to the Commander-in-Chief: the Chief of the General Staff, the Quartermaster General and the Adjutant General. It was found that certain services, such as the ordnance, were inadequately represented to the Commander-in-Chief, and it was decided to create a fourth principal Staff Officer. He was called the Master General of Supply; he corresponds to the fourth principal Staff Officer in England who is called the Master General of Ordnance. My duties as Master General of Supply were to take over the purchase, manufacture and provision of everything for the Army from ghee to 6-ins. guns; that includes clothing, saddlery, harness and everything the army uses. For this purpose we have 9 Factories in India, as we have not got general manufacturers running in India in the same way, as you are well aware, as they have in the United Kingdom. We manufacture everything we possibly can in India. My principle has been that we will manufacture in our own factories nothing that can be got otherwise from Indian sources of supply, but these articles must of course, be up to our standard. Further, I made it one of my guiding principles that we should endeavour to foster Indian industries whenever we could, not only from the point of view of the Government of India or the good of India, but from the point of view of the Army, because in the event of war the less we have to bring overseas and the more we can get from indigenous supplies in this country, the more efficient and self-supporting will the Army in India be. After

holding my post for four years, I was given an extension of two years, and that extension is now coming to an end. In the meantime, two years ago, the home authorities began considering the re-allocation of duties between the various staff officers. I may tell you that as far as possible we try in India to follow the home organization, because in the event of having to fight side by side, it makes very much for efficiency if we are organized on the same lines. The home authorities finally decided to transfer the whole of the ordnance services as to retail supply, or what we call the Services of the Director of Ordnance, who is in charge of arsenals, from the Quartermaster General to the Master General of Ordnance at home. We undertook to follow the home organization as far as local conditions would allow, and last June the orders came out to make the change and so last June I took over the arsenals. The Quartermaster General up to that time had made what was called "provision"; that is to say, he calculated from the stocks he held in arsenals and from the wants of the troops, what quantities of various articles he required. I had to provide the goods at "Priced Vocabulary" rates, I handed them over to the Quartermaster General and he stored them in his arsenals and issued them to troops. I now carry out these duties.

In the factories which I have controlled for 6 years I have apprenticeship schemes, welfare schemes, labour bureaux, trade testing, co-operative stores, co-operative societies and so on. The arsenals have few of these schemes, but I would advocate introducing them by degrees when I think they will increase efficiency and welfare. You must also remember that in the factories I deal with a large number of skilled workmen. The arsenals deal chiefly with unskilled workmen; except in their repair shops which require skilled workmen.

B-3100. We have had submitted to us five statements, but we have no consolidated memorandum from you with regard to the points with which we are concerned, that is to say, industrial labour under your control. Would it be possible for you to give us a consolidated memorandum covering the whole of the work that is under your control so far as it is relevant to our enquiry?—Certainly, if you will tell me the lines on which you want information. I have seen some of the statements submitted; they are very detailed and technical, and the conditions vary in different places very much.

B-3101. *Sir Alexander Murray*: I think the General might expedite the delivery of these other statements to us and in addition give some remarks on the whole of them giving reasons for the differences.—The Calcutta statements were to be sent to you on some future date when you will be approaching Calcutta. The difficulty for me will be to consolidate all these statements in time. Two or three years ago I got out what I called a note on vocational training in the ordnance factories, which dealt with all my suggestions. It is not so much for workmen as for my different forms of apprenticeship and education. It shows how I was training Indians to hold the various posts of chargemen, foremen, assistant works manager and so on, and my proposals for sending people to England. It gives my own ideas of how it ought to be done.

B-3102. *The Chairman*: That would be useful. Have you anything similar which sums up your experience with regard to joint councils?—Joint councils have practically been started this year. I could give you our experience so far. It has taken some time to form the Whitley councils; but they are formed for my factories. We have a main Whitley council for all the factories and a subsidiary council for each factory. These latter refer their questions to the main council, not for decision, but for putting them forward in the manner they wish. I could give you the details as to how our Whitley councils are formed and what work they have done up to date.

B-3103. That also would be most interesting to us. I do not see that we have so far any statement of the total number of workmen employed under

your direction.—I do not think you have. I have no idea myself. It is very big. I could give you details.

B-3104. *The Chairman* : I suggest that it would be of great value to us to have a memorandum giving a consolidated view of all the factories and arsenals under your control as obviously you yourself have been taking great interest in the kind of questions with which we are concerned. Though some of your methods may be new and not have had long trial, they are none the less valuable to us as an indication of what you have thought possible in the direction of improved organization and improved consultation with the workers under your control.

Would you wish to say anything more at this stage?—Yes, I should. I have had a workmen's union in my cordite factory at Aruvankadu, 8 miles from Ootacamund on the Nilgiris. About three or four years ago they formed a workmen's council. There was no method of recognizing them at that time; they are recognized now. As a matter of fact I told them: "You cannot be recognized at present. I do not like your having a European agitator in your councils, but I shall be very pleased to see you all the same and I would be glad to meet you informally." I met them several times before they were recognized, and far from being annoying or detrimental they were of great help to me. They produced several good ideas which I got through for them and which I had not thought of. There were other minor details. For instance, the Assistant Medical Surgeon only looked after the workmen who were living within a mile of the factory. Some of them lived three or four miles away and they had some difficulty in getting medical assistance. I had to get Government to agree to an additional allowance to the Assistant Surgeon, because he would not go more than a mile on his present allowance. There were little things like that, but very useful.

Then I have a European Foremen's Association. My European foremen have practically all to come from England at present; because my work is of such a technical nature in the way of production of lethal weapons, ammunition and so on, that there are no Indians who could possibly have had a chance of being trained to occupy the position of foremen. As a really first class foreman makes all the difference they have practically all come out from home. I have experienced some difficulty in that direction. We have done a great deal for them. We have got them educational allowances for their children and other things. I have also an All-India Clerks' Association. I have been trying to help them with regard to their grievances, but the file has now reached its fourth year and is very voluminous. They have a genuine grievance, but it is very difficult to put it right owing to departmental delays and "All-India repercussions".

When you go to Calcutta, I hope you will go to Ishapur. There I have two factories, a rifle factory and a metal and steel factory. The rifle factory is my best factory as regards workmanship. You will see some of the best Indian skilled workers there. You will also see all that we have done with regard to housing accommodation and welfare schemes. In every factory we have our boy apprentices, who are as a rule children of our workmen. They work so many hours in the factory and so many hours in the school. We have a school for quite small children. We have an ordinary school for children and boy apprentices and a technical school to fill up the gap in between the time they can go into factories. We have night classes for the workmen. We have a Labour Bureau and a Co-operative Stores; we have a co-operative society which in addition to acting as a co-operative society, pays family allowances to men's families in the villages if they wish it to be done, so that there shall be no trouble over the post office and that sort of thing.

B-3105. *The Chairman* : How many men are there at Ishapur?—I should say about 5,000 in the two factories, the rifle factory and the metal factory. You will see everything on the spot.

B-3106. *Diwan Chaman Lall*: Was the Cordite Workers' Association in the cordite factory at one time affiliated to the Trade Union Congress?—I think it was.

B-3107. Why did Government call upon them to disaffiliate from the Trade Union Congress?—I should like to do what they do in Parliament when such questions are put: I want notice of this question. My rough idea is that it was because they had outsiders in their Union. There is a rule with regard to these trade unions that they must all be Government employees.

B-3108. *Mr. Clow*: I do not think that that is a general rule in Government departments.—At any rate that has nothing to do with me if the union was not recognized. It disappears from my ken and goes to the Home Department.

B-3109. *Diwan Chaman Lall*: You have kindly offered to furnish us some information. Would you kindly keep this in view also?—Yes, I will.

B-3110. *Sir Alexander Murray*: In that statement will you tell us what happened to the Kirkee union?—That actually happened before I took over; the arsenal was not under me at that time. I understand that on the introduction of trade tests, certain propagandists some of whom were Europeans, worked up this case, got the men to strike on this point and formed a union.

B-3111. They objected to trade tests?—Yes, just to make trouble. There was no real trouble among the men; they did not really want to strike and they all came back again. I had the same thing at Shajahanpur in the clothing factory. All my tailors were worked up, probably by the gangers, because I was introducing piece work rates and wished to get rid of gangers for the good of the workmen. I said; "If you will only try piece work rates you will find that it means a great deal more money." However they went on strike. About a section of them remained in. The gates were closed and they were told that if anybody liked to come back they could do so. In ten days they all came back, as the sections that remained at work were concrete examples of the advantages to be gained.

B-3112. *Mr. Ahmed*: Will the General kindly give us information with regard to the men engaged in the Royal Indian Marine at Fort William, Calcutta.—I have nothing to do with the Royal Indian Marine beyond repairing their guns.

B-3113. *The Chairman*: Is there anything else you wish to put before us?—In my factories, naturally I have to have the maximum number of people on daily wages. My work is such that I can only do what I get money for. Orders that come from the Army vary very much according to what is required. The result is that I have to keep on taking men and discharging them. I dislike that intensely especially as regards the skilled workers. I have to discharge the men, because I have no work for them to do. I do my best and my Labour Bureau keeps on record all their antecedents and the places where they live so that I can try and get my men back again. If I have to engage new men, it means that I have to train them. I have to waste materials, damage machines and all that sort of thing. So that one would like to keep and one does try to keep the nucleus as constant as possible. I found that a man who is only a daily worker and has served in my factories faithfully for say, 25 years, when he goes sick, under the rules gets nothing. He may serve me till he is an old man; and when he goes he gets nothing. The only thing that I can do for him is to give a bonus of so many months' pay out of the fine fund. I pointed out that that was an unsatisfactory state of affairs and that these men ought to be paid by the Government of India instead of from the fine fund. I have now succeeded in getting through a provident fund for daily paid men, but of course the men do not come into the benefits of the provident fund unless they have served for so many years continuously. So that all my really old and faithful men cannot get any advantage from the new Provident Fund. In addition to this provident fund I should also

have very much liked to have a system by which the men could have so many months' pay when they go, just as they have it on the Railways. Up to date I have succeeded in getting a provident fund in which Government pay 50 per cent. of what the men pay. If the man pays Rs. 10 Government pay only Rs. 5, whereas I understand on the Railways Government pays 75 or 100 per cent. and give also a bonus. I have given orders so that at present bonuses will be paid all right, though it is going to be paid from the fines fund. I am hoping that the thing will be put right some day.

B-3114. *Diwan Chaman Lall*: Did I understand you to mean that the provident fund would be made applicable to the daily rated staff?—Yes, they have got to serve for so many years before they could come into it.

B-3115. Will you also give us a note explaining why although the majority of the workers are daily rated and remain on the works for a continuous number of years, they are not put on a monthly basis, and why the privileges regarding leave are not given to the daily rated staff?—I put as many people as I can on monthly basis. I can tell you why they are not all on a monthly basis. Owing to the continuous change of the load on my factories, I cannot keep a complete continuous staff, because I may not have sufficient funds to pay them all. I have to keep them on daily wages so that I can discharge them if I am forced to do so. In many cases I give them a month's leave without pay. That does not sound very generous, but it just enables them to go on a holiday, when I tell them that probably in a month I will take them back again. I want to ask you to remember that my budget is in the Army budget, and as you know, the Army budget is very limited. At the present moment it is difficult to get the equipment of the Army into an efficient state, so that it is also difficult to get the chiefs of the Army who are trying to introduce modern mechanized units and so forth, into India, to recognize that welfare is of great importance. They naturally point out that there are many other people as well as my staff who want welfare measures. However we have got a great deal and I am thankful for what I have got. With regard to housing I considered that it was the duty of Government as the largest employers to set an example to the other employers in India. When I worked out what it would cost me to build workmen's lines for everybody—my general staff, my clerks, superior artisans and so on,—it came to quite a large sum (66 lakhs). It was no good asking for that large amount. But the Secretary of State accepted the principle, which is a good thing. I then asked for two lakhs a year and I have been getting that amount for six years. I am building my workmen's lines in positions like Ishapur. Where my factory is in a city like Cawnpore, there is not so much difficulty in housing the people and does not so much matter. Ishapur is surrounded by bastis and tanks of water. It is 23 miles from Calcutta. Some of the men have to come to the factory at 7 o'clock in the morning. They have to come by train from Calcutta. It is a very hard day, especially if they are going to do overtime in the evening. Naturally I have done my best to spend the money in those kinds of places. That has meant buying of land to start with and that was not easy. We have to drain the land of the water which is within a foot of the surface. These are the lines on which I have spent most of the money so far.

B-3116. *The Chairman*: In addition to Ishapur which other places would you wish us to visit?—Jubbulpore and Cawnpore. At Cawnpore there is the Harness and Saddlery Factory. I am beginning workmen's lines there, though they are not so necessary there as at Ishapur. Cawnpore is a huge town and the factory is quite close to it, but I think that probably workmen have great difficulty in finding houses, as there must be an enormous mass of workmen in Cawnpore with all the mills and factories.

B-3117. *Col. Russell*: Would you refer to have your lines outside the town of Cawnpore?—Yes, we have got our site and we are starting the work.

B-3118. *Diwan Chaman Lall*: How are they at Jubbulpore?—We have got a workman's village there; they are I think happy and contented. There

is a big gun carriage factory. Perhaps you might also visit the cordite factory at Aruvankadu in the Nilgiris.

B-3119. *Mr. Clow*: We are not going to visit Rawalpindi. The Colonel there has sent us a short memorandum in which he says: Efforts are being made to restore over-time and holidays as seasonally the arsenal is unproductive for 100 days yearly. Will you explain that to a layman?—Does that mean that the arsenal does not work for hundred days in the year?—I imagine probably it would be so. They probably have every holiday.

B-3120. Is not that an unsatisfactory system from your point of view as well as from the point of view of the men?—I think very unsatisfactory.

B-3121. You have to pay overhead charges all the time.—That is one of the things I can say to Diwan Chaman Lall who asked, why not put these people on monthly wages. The moment I put them on monthly rates of pay they want the factory closed on every holiday; if they are on daily rates of pay they want the factory open on every holiday.

B-3122. The officer in charge of the Allahabad Arsenal complains of the responsibility thrown on him by the Factories Act; the Factory Inspector comes round and orders him to do certain things; and then there are files of correspondence, and the Financial Advisers prevent him from carrying out what he is ordered to carry out?—I do not agree with that statement. My factories are much more mixed up with the Factories Act and the Inspectors, but we have no complaints to make.

B-3123. *Sir Alexander Murray*: I see an Arsenal suggesting that in fixing wages they ought to take into account the poverty line. Will you say on what basis you fix wages?—We fix wages according to the man's skill but based on a minimum living wage. He goes into the Labour Bureau, there he is tested with certain tests and according to the result of those tests he is credited with so many rupees a day. If he comes forward and passes a higher test, up he goes. It was the introduction of this system into the Arsenals that has caused the trouble. They have a number of workmen who are highly paid but whose skill was not up to standard of their pay, and when they are put to test, naturally their pay goes down. I will explain wage fixing in more detail in my memorandum.

B-3124. How do you get at the basis; do you pay a little more than the surrounding industries pay their labour?—I should think that we probably pay a little higher pay because if we do not, the railways or somebody else would pinch them. It is not very much more, it is really a fair rate of pay at which they are anxious to serve.

B-3125. The railways, for instance, in addition to giving pay, give provident fund, gratuity fund, clothing and other amenities that you do not give. Therefore I take it that as far as the money wage is concerned, which is chiefly what you pay, you have got to pay a comparatively higher rate in order to attract workers?—I cannot answer the question straightaway; I do not think we pay them very much higher rates of pay.

B-3126. *Sir Victor Sassoon*: If it is not going to be regular work, would you not have to pay more than the railways which give them steady work?—I suppose we would have to. I really cannot answer on the spot; it is a matter of detail.

B-3127. *Sir Alexander Murray*: I know about the apprenticeship scheme in Ishapur. How many years has a boy to serve as apprentice?—Five years.

B-3128. Will you tell us your experience whether the boys after working as apprentices for three or four years and having acquired a certain amount of skill leave to seek employment elsewhere as full-time workers, or do they stick on and get into your higher grades?—You will find that information in the note that I have promised to send. At Ishapur over and above the "boy apprentices", I have got two sorts of apprenticeships—one of a high standard and the other of a moderate standard; I think even in the moderate standard they are mostly B.A.'s. and B.Sc.'s.; they are a well-educated

lot of Bengali. After they complete their five years of apprenticeship, I say to them "Now you are not fit to be a chargeman; you have got to go now and do a couple of years work in factories as an improver." Even though in the beginning they say that the railways or somebody else will take them they do not invariably leave us because they know they cannot be taken on the railways as chargeman. Thus they work for a couple of years more. I have now got a scheme for sending some boys out of those that we turn out to Europe as improvers—I think we turn out about 200 a year altogether—I want them to go into the workshops at home and work in competition with British workmen. Five of my apprentices from Jubbulpore have gone there; of these five, four went at their own cost and one is a scholarship holder of the Central Provinces Government. Those men are all in firms at home; they are working as improvers and against British workmen, earning £5 to £7 a month; they are doing very well. These men when they come out have a chance of rising up to the post of a foreman.

B-3129. How long were these five boys in your workshop altogether before they went home?—Five years.

B-3130. How long did they work in factories at home before they were taken as regular workmen?—They were taken straightaway as workmen.

B-3131. Were they started on the same pay as they are getting now?—They started on a smaller pay and they have gone up. I know one of them is drawing £7. He could earn more but he wanted all-round experience so that when he finishes one job of work he takes up another job of work; naturally he did not go up but went down in pay when he got into a new job.

B-3132. I recollect from personal experience the instance of a boy who after serving as an apprentice for two or three years and acquiring a certain amount of knowledge preferred to go to a shop at Calcutta where he got more money rather than to stay on and complete his apprenticeship. What is the real inducement you give to the boys to stay for the full period of five years?—In the beginning he starts at a certain amount a day and gets more every year—I will give you detailed information in my note—and in his fifth year he will be drawing about a rupee a day (this refers to boy apprentices. The higher class apprentices in their 5th years can draw Rs. 80 per mensem). From this we deduct a few annas which go to meet his railway expenses when he wants to go home on leave.

B-3133. If you pay him one rupee a day after five years of apprenticeship there is no wonder that he wants to go away?—But they are very young.

B-3134. You spoke of building houses for your workmen. At present when you shut down or dispense with a certain number of men owing to want of employment these men go back to their homes in the country round about wherever that happens to be. But if you build houses and the workmen bring their families what will happen to them if they are cut away from land and you shut down?—My building programme is a drop in the ocean. Out of a large number of workmen at Iahapur I have not got accommodation for more than a few hundreds. Everybody is after the houses and they are given only to those people who are likely to stay on.

B-3135. With regard to a statement that there is indebtedness pretty generally amongst workers, and a suggestion that the fact of their being indebted makes them unfit for positions of responsibility, can you draw a distinction between your particular type of service and the ordinary civil employment?—I should say that that is a very true statement, but it is not confined to us only; it exists throughout India. Most Indian workmen get into debt and there is no doubt that it is a most fatal thing if they do. That is the reason why I have started a co-operative society from which a man can borrow money. He subscribes so much a year and when he is in need of money, say, when he has to get one of his daughters married, he can borrow from the fund instead of going to the *bania*.

B-3136. *Sir Victor Sassoon*: Who put up the capital?—They put it themselves.

B-3137. They got no help from outside?—No.

B-3138. *Sir Alexander Murray*: In your long experience, can you recall any instance where while promoting a man to a position of responsibility you took into account his indebtedness factors?—No, unless he was so heavily indebted that I would know about it.

B-3139. *Mr. Ahmed*: Do you think that the wage of 8 as. a day that you give to an unskilled boy is sufficient for him to live on?—No. Probably he is the son of one of the workmen there; he is not supposed to live on 8 as.; he is only brought in there to be of help to his father, and to give him education and training.

B-3140. How old will the boy be?—I cannot say.

B-3141. Below 12 years?—I do not know. Mostly they are the sons of workmen in factories; we have them as boy artisans. I have forgotten the factory rules, but I think they have to work for 4 hours in the factory daily and have got to put in ten hours per week in the school as well. These details will all appear in my memorandum.

*Sir Victor Sassoon*: These boys will be under 12 years?—Yes.

B-3142. *Mr. Ahmed*: May be 7, 8 or 9 years?—I think a minimum age has been laid down.

*Mr. Cliff*: It is 12.

B-3143. *The Chairman*: They are under the Factories Act?—Yes.

B-3144. *Mr. Cliff*: In the memoranda from the Arsenals it is stated that a welfare scheme is under the consideration of the Army Headquarters. Do I take it that that really means that you are applying to the Arsenals what you have been putting into operation in your factories?—What they really refer to is the Provident Fund scheme which I got for my factories. The Arsenals will want it but they have not got it yet. Whether it will come in time will depend upon my successor. I should certainly be very anxious to introduce it but the question of finance stands in the way.

B-3145. *The Chairman*: I gather from what you have told us that you introduced it in the factories and you found that it produced increased efficiency?—We have not yet introduced it. The discussion has been going on for the last four years, and I think the Secretary of State has agreed to give effect to it from the 1st April 1930. I had no money in my budget to pay for it this year; I do not think it is going to cost more than Rs. 50,000 to start with.

(The witness withdrew.)

**Messrs. ABDUS SUBHAN and ABDUR RAHMAN, representatives of the workers in the Government of India Press, Delhi.**

B-3146. *The Chairman*: You come before us as representatives of the workers in the Government of India Press?—(Mr. Abdur Rahman) Yes.

B-3147. Will you tell us what your position is? Are you a worker in the press?—I am a piece-worker.

B-3148. On what machine?—I am a compositor.

B-3149. Mr. Abdus Subhan, you are a worker in the press?—Yes.

B-3150. Are you also a compositor?—I am an Assistant Section Holder.

B-3151. We have before us three papers: one is by the Press Union affiliated to the Calcutta Press Workers' Union. Are you members of that body?—Yes.

B-3152. And you appear in support of that memorandum?—Yes.

B-3153. We have also a paper submitted by Mr. Shanker Lall on behalf of the Section Holders of the Government of India Press, Delhi. And we have a paper submitted by the Secretary, Government Press, Delhi, Reading Branch, and signed by Mr. Shanker Lall and Mr. Joshi. Will you tell the Commission how long this Branch has been in existence?—(Mr. Abdur Rahman) for about two years.

B-3154. Can you tell us how many members it has?—About 300.

B-3155. Is it a registered union?—It is a branch of the union which is registered in Calcutta.

B-3156. Can you tell me how it was that this memorandum of yours reached us only yesterday? When was it prepared?—On the 5th of November.

B-3157. I see the name of one of our colleagues here, Mr. Joshi, as being its President?—Yes, he is the President of the Delhi Branch.

B-3158. *Sir Alexander Murray*: When was he appointed as President?—About two years ago.

B-3159. *The Chairman*: I rather gather that Mr. Joshi was not aware of this memorandum. Did Mr. Joshi attend the meeting at which this memorandum was drawn up?—No, he was not present.

B-3160. Therefore, his name is attached only because he became the President of the branch two years ago?—Yes.

B-3161. These three papers deal with a number of detailed questions, like claims for increased wages and conditions of service with which we are not dealing. We are enquiring into the general conditions of labour both in Government undertakings and elsewhere, so that, I think, we should confine ourselves to the points in your memoranda which deal with more general questions. From what you have told us, I understand that many of you have been brought to Delhi from Calcutta?—Yes, many of us have come from Calcutta.

B-3162. Were you also in Calcutta before you came here?—(Mr. Abdus Subhan) I came from Simla. (Mr. Abdur Rahman) I came from Calcutta.

B-3163. You complain that your conditions in Delhi are not as good as they were in Calcutta?—The piece-work rates are the same in both places, but the pay of salaried hands in Calcutta is higher than that in Delhi.

B-3164. Is the cost of living less in Delhi than in Calcutta?—It is about the same. During the malarial season the expenses go up because Delhi is very malarial as compared with Calcutta.

B-3165. I see that is included in your statement, but the general impression is that there is more malaria in Bengal than in Delhi and also the cost of living is higher there?—You can find out from the health officers whether it is not a fact that in Delhi there is more malaria than in Calcutta.

B-3166. You have stated that the recent alteration in the leave rules has been to the disadvantage of the workers?—That is so. They have made three kinds of rules, fundamental rules, industrial rules and supplementary rules, which have not been to our advantage owing to discrimination between salaried employees.

B-3167. In what respect are they to your disadvantage?—Under fundamental rules we were getting two months' leave after 11 months' service, but now under the industrial rules we get only one month; under the former we were entitled to medical leave with full pay but under the latter rules we are entitled only to half pay; under the new rules for the temporary staff we get only 16 days leave while under the fundamental rules we were getting more leave.

B-3168. Do you claim that the rules are special to Delhi or they have been introduced in Government Presses everywhere?—All Government Presses, Delhi, Simla, Aligarh and Calcutta.

B-3169. *The Chairman*: We understand that during five months of the year, when the Legislative Assembly is sitting, there is a great deal of overtime at Delhi?—Yes, we have to put in an excessive amount of overtime during those five months.

B-3170. Is it anticipated when the Press is moved to its new premises in New Delhi that that overtime will continue, or will it diminish?—The overtime will still continue; it is because of the urgency of the work.

B-3171. Is not the overtime during the five months compensated for by short time during the remaining seven months of the year?—No, it is not compensated for. We have to work not less than normal hours, that is, 6 hours on Saturdays and 9½ hours on the remaining days of the week.

B-3172. There is no holiday to make up for the pressure of work during the five months?—No.

B-3173. I suppose this overtime is to your advantage in the matter of pay, but your complaint is that it is too much strain on your health?—That is so. We have to work from 12 to 13 hours sometimes. In Winter when we leave the Press very late we are liable to exposure and get pneumonia and various other diseases.

B-3174. Then the remedy for that would be a larger number of machines and men which would diminish the overtime during the busy five months; but that would also mean that you would have shorter hours or fewer days of work during the remaining seven months?—If the total wages that are paid to us are reduced we would not like it; we would like to have a living wage so that we can make two ends meet. If the working time is reduced we will get less and our children will starve.

B-3175. In your statement you say something about the difficulty of obtaining proper medical attention for yourselves and your families?—Yes; there is that man Mr. Durand, sitting over there; he was asked to produce a medical certificate, and because he had not the means of doing so he was dismissed from service. He had put in about 14 years' service.

B-3176. You tell us that those who come from outside Delhi have to maintain double establishments?—That is so.

B-3177. When the new Press quarters are built at New Delhi will those men still propose to keep their wives and children in Calcutta or Simla?—What we mean is this: we bring our wives and children with us, but the other members of the family, e.g., the brothers and sisters have to remain behind, and we have to go to our homes occasionally for marriage and other ceremonies.

B-3178. But you do regard yourselves as being settled in Delhi?—That is so, but we cannot leave our homes, our brothers and sisters or parents entirely; nor can we ask them to come here and live with us.

B-3179. That hardly amounts to maintaining two establishments?—That is so; we do not spend any money on maintaining an establishment there.

All we say is that twice or thrice every year we have to go there and that means expense to us. Moreover, whoever has got his own house there cannot give that up.

B-3180. Then you say: "We may kindly be provided with quarters bearing sufficient accommodation so that we may not have to undergo hardship and difficulty to reside with our families"?—The accommodation provided at the present time is such that we cannot keep our families with us. It is impossible for us to live in those rooms. Although they are permanent quarters they are not convenient.

B-3181. You say the Government affords no special facilities for the education of the children of the Press employees, and has not established any school for their free education. I take it that they send their children to the ordinary primary schools?—The city is about three miles away; and we cannot send our children so far as that.

B-3182. Do you mean to say the nearest school is three miles away?—There is a middle school there; but if after the middle course we want to send our children for higher education we cannot afford to do so as all those schools are located in the city.

B-3183. What you really ask for is facilities for higher education for the children of press employees?—Yes, after the primary school course, for secondary education.

B-3184. Do your own children go to school?—(Abdur Rahman) I send them to the primary school near our place. (Abdus Subhan) I have a daughter; she does not go to school.

B-3185. Do they have to pay fees in primary schools?—Yes, they have to pay fees. The school belongs to the Notified Area Committee.

B-3186. I thought that in Delhi they had adopted the system of compulsory free primary education?—Only in certain wards of the Municipality. Primary education is free in the Municipal area but not in the Notified Area.

B-3187. *Mr. Clow*: When did you come from Calcutta?—In 1912.

B-3188. Have you ever been to Calcutta since 1912?—No. Those whose home is in Calcutta they go to Calcutta. Our home is in Allahabad.

B-3189. How did you happen to go to Calcutta?—In search of a job.

B-3190. How did you get the job?—I put in an application and I got it.

B-3191. Did you give any *bakshish* to any boy?—No.

B-3192. You find Delhi is more convenient than Calcutta?—It is just about the same.

B-3193. Is it not a fact that when the new rules were introduced all salaried permanent employees were allowed to retain the benefit of the Fundamental Rules?—Not those who had been confirmed before the introduction of the new rules.

B-3194. As far as piece-workers are concerned, when the change was made the result was an increase in the amount of the leave admissible to all the older men. Piece-workers with 10 years' service who formerly got 16 days' leave, received, after the new rules were introduced, an increase in the amount of leave?—Yes.

B-3195. *Sir Victor Sassoon*: I take it that you would prefer to have no overtime for the whole 12 months?—We are not willing to do overtime, provided our wages are not reduced.

B-3196. In other words, you want more pay for the same amount of work?—That is so.

B-3197. Supposing the Government say: "We cannot offer to pay more;" would you prefer to continue with overtime or would you prefer to have no overtime and so earn less?—We cannot carry on now as it is; if you stop our overtime remuneration we will not be able to carry on.

B-3198. So I take it that if there is to be no more pay for the work turned out you would prefer to continue to do overtime?—If we do not agree to that our children will starve.

B-3199. Are the wages that are paid in the Government Press higher or lower than those paid in private presses in Delhi?—The private presses cannot compete with the Government Press.

B-3200. The private presses do not give as good wages?—No.

B-3201. Do private presses have as long overtime as Government presses?—They work only for 8 hours, with an interval.

B-3202. With no overtime?—No.

B-3203. Therefore if you find that you cannot manage on your pay without overtime, the position of a man in a private press must be much worse?—Their condition is worse than ours.

B-3204. Do the Government Press employees get leave on full pay or on half pay?—Up to one month on full pay, rest on half pay, according to their leave account.

B-3205. Do private presses get any leave on full pay?—The private presses are a contractor's business, while the Government Press is a Royal Press.

B-3206. Therefore you consider that the cost of the work should be more in a Royal Press than in a private Press?—If you compare the two you will find that the Government Press work is done more expeditiously than work done by any private press, and further it is confidential and secret work.

B-3207. In regard to the quarters, is it your present quarters or the quarters that you are going to get that are considered to be inconvenient?—The quarters that we are going to get.

B-3208. What do you mean by "they are not convenient"?—There should be more rooms and a courtyard.

B-3209. Therefore the new quarters are inferior to the present quarters?—Yes.

B-3210. Have you put this point before the authorities?—Yes, we have sent in petitions.

B-3211. Was that before the lines were actually built?—No, we gave them details and said that this was the type we wanted.

B-3212. Was there a big difference in cost?—No.

B-3213. *Mr. Ahmed*: On account of the transfer of the Capital from Calcutta to Delhi, the men originally employed in Calcutta have suffered great loss since 1912?—They have neither lost nor gained.

B-3214. Is it not inconvenient for these people to live here?—Yes.

B-3215. You asked for warm colthing, because the winter here is 10 to 20 degrees cooler than in Calcutta?—Yes.

B-3216. With regard to medical assistance in case of malaria or typhoid do you expect any help from Government?—Yes, we do.

B-3217. Do you also want facilities for the education of your children?—Yes, we expect assistance from Government.

B-3218. Some of you were originally appointed in Calcutta and transferred here later on. Do you want free passage to and from Calcutta once a year during festivals and so on?—Yes, not only for Calcutta but also for other places from which many of us have come.

B-3219. We found also some of you submitted applications before the Commission with regard to wrongful dismissal on the part of Government officials who did not give any explanation of their decision for dismissing you. Do you know the names of those people who were dismissed?—Yes, we can give the names of those we remember at the moment. There is one instance of this man, Shivdhar, standing there, who was asked some questions by Mrs. Chatterjee and from that very day he is being threatened with dismissal by the management.

B-3220. *The Chairman*: Not dismissed?—No, not actually dismissed. It was because some questions were put to him by Mrs. Chatterjee and he gave replies. From that very day he is being bullied by the management and threatened with dismissal.

B-3221. *By whom?*—Both the Manager and the Assistant Manager, and we also are afraid that we might be victimised.

B-3222. What is the name of the Manager?—Mr. T. Carter.

B-3223. And of the Assistant Manager?—Mr. Saroda Chandra Chunder.

*The Chairman*: We have listened to the statement from their side; we do not, of course, necessarily accept it but it will be my duty as Chairman of the Commission to make proper enquiries.

The witness: The man is here now and you can ask him yourself if you like.

*The Chairman*: We have the statement; what I wish to hear is the statement of the other side. Any one who is called to appear before us may be quite sure that no such action will be taken against him.

The witness: We are afraid because a similar thing has happened to one of us. I was actually dismissed and then taken back. We have got to think of our children.

*Mr. Clow*: It was not for that reason, I can tell you.

*The Chairman*: That is, of course, my reason for not accepting an *ex parte* statement. I am accustomed to find there are generally two sides to a question.

B-3224. *Mr. Cliff*: With regard to these works committees, how often did they meet during the current year?—Once a month.

B-3225. The officer of the place says that the works committee has been functioning satisfactorily. Has there been an application put before the works committee asking for reduction of hours of work, by the people on the works committee?—No, we did not put in any application because such questions are not allowed to be discussed.

B-3226. With regard to the new lines that are built for the workpeople, were representations in respect of them put before the works committee?—We put it up once before the works committee.

B-3227. There are three different memoranda submitted to the Commission. Are the complaints stated in them being put before the works committee?—There are certain rules which govern the working of the works committee. Under that we can bring only some matters before the works committee.

B-3228. Can you bring the question of increased rates of pay?—No, not generally.

B-3229. Such questions like leave or payment for sickness and so on?—No, we cannot. These are all referred to the Department.

*The Chairman*: These are rules governing other places.

B-3230. *Mr. Cliff*: Is the works committee elected by the workpeople?—Yes, that is elected from among the workpeople.

B-3231. What concessions have been obtained as a result of representations made at the works committee?—No concessions have been obtained.

B-3232. Are you both members of the works committee?—I am still on the works committee whereas my friend here has ceased to be one.

B-3233. May I ask the gentleman who has left whether he agrees with the controller that the works committees are working satisfactorily?—No, we do not agree at all. We tell them what we want and they do what they like.

B-3234. *Sir Victor Sassoon*: Have they never granted anything that the works committee recommended?—They grant such minor requests like putting up a light in one place for instance.

B-3235. *Mr. Cliff*: Are there any general standard rates in the presses in the city?—They have standard rates in the *Hindustan Times* Press and the *Chronicle* Press.

B-3236. Are the men engaged on any maximum and minimum rates?—There is no piece rate; they are all salaried.

B-3237. Do they commence with minimum rates and go up to the maximum rates? Are they incremental?—Yes, it is the same system in all presses.

B-3238. Taking two grades, say compositor and foreman, what is the commencing rate for a compositor in the Government Press and for a compositor in private presses?—In the Government Press he starts on Rs. 40; in private presses he begins with Rs. 35 to 40 and sometimes really more.

B-3239. What is the maximum rate in both cases?—We cannot compare both.

B-3240. The piece work is the trouble. Now take a reader. In a private press he gets Rs. 300. What does he get in the Government Press?—The head reader gets Rs. 300 in the Government Press. That is the maximum.

B-3241. Take the Controller's memorandum. There are four grades of readers and I shall take the middle grade which starts from Rs. 160 and goes up to Rs. 200 by annual increments of Rs. 10. How does that compare with the rates obtaining in private presses?—It is practically the same in the private presses also. It depends on the seniority and efficiency of the man.

B-3242. Take warehousemen. There are men getting different rates, Rs. 16, Rs. 18, and Rs. 25. How does that compare with the rates in private presses?—In private presses also, similar rates are paid.

B-3243. Do all the employees in the Delhi Press, from the lowest paid to the highest paid, get payment for sickness?—The monthly rated staff and the salaried hands get one month's leave with pay for every 11 months' service. Those who are governed by industrial rules get half a month every 11 months.

*Mr. Clow*: I do not think that is the correct position. If you refer to the Controller's memorandum, you will find that they get one month for every 11 months and another half a month with medical certificate.

B-3244. *The Chairman*: From what we have heard it appears that there is not much difference in rates between the Government Press and the private presses in Delhi.—There is a difference in this way. While in private presses lino. operators and mono. operators get about Rs. 200, here in the Government Press they stick at Rs. 100.

*Diwan Chaman Lal*: In my experience the average for lino. operators is about Rs. 145.

B-3245. *The Chairman*: Do men from the Government Press leave to join private presses?—Sometimes they do. One Charan Dass, mono. operator from the Government Press, Simla, left it and joined a private press.

*The Chairman*: So that I do not think these men would favour nationalisation.

B-3246. *Mr. Clow*: Was that man permanent or temporary?—He was temporary, but one permanent man by name Dhiren Chatterji went from the Delhi Press to join a private press at Calcutta.

*The Chairman*: I should take it as it happens elsewhere that private service is less stereotyped than Government service.

B-3247. *Mr. Cliff*: I want to follow that question about sick leave. Do the temporary people get any leave and if so, how much?—Under the supplementary rules they get 16 days' casual leave.

B-3248. In the document submitted by the Press Union they deal with the reduction of staff which took place in 1922 and ask that those who have been reinstated should not be regarded as having had a break in service. Have any representations been made in respect of them?—We made several representations on several occasions in the matter.

B-3249. Are any members of the staff who were reduced in 1922 still unemployed?—There are a number of them who have not been taken back.

B-3250. Can you give me any idea when the last man was reinstated?—Within two days after the reduction a few hands were taken back and some after one month.

B-3251. What is the maximum fine imposed on workpeople?—The maximum is Rs. 5; it depends upon the whim of the man fining.

B-3252. But the maximum is Rs. 5?—Yes.

B-3253. For what class of offence is a man fined Rs. 5?—It depends on the whim of the Manager; it may be for a trivial offence or a serious offence.

B-3254. There are no rules on the matter?—There are no rules.

B-3255. *Mr. Clow*: Do you remember the accident in Delhi Press when two men were killed and three were injured?—Yes, we remember that.

B-3256. Rs. 1,500 was given to Sarash Chandra Bose?—I think he was given Rs. 1,575.

B-3257. What did he do with the money?—He took the money and went to Calcutta.

B-3258. Harchandrasingh who is here got Rs. 1,750. What did he do with the money?—He has opened a little shop.

B-3259. The third was Muhammad Yakub. Is he here?—He is still working in the press.

B-3260. He got Rs. 800; what did he do with it?—He had some debt which he cleared off and spent a portion on wedding.

B-3261. *The Chairman*: Have you anything more to say?—As regards the hours of work, instead of 9½ hours work we should have only 8 hours, including over-time, with interval. With regard to gazetted holidays, we get only 16 days, including the six days communal holidays, while in the Calcutta Press they are given 42 days and in Aligarh 40 days. Instead of pension, we want the system of provident fund to be introduced in the press.

B-3262. Why do you prefer provident fund to the pension?—The real reason is this: because of the hard work and the low physique men die probably within six months after becoming eligible for pension and then the pension stops. But if we got the provident fund we could, after retirement, hand it over to our heirs.

(The witnesses withdrew, and the Commission adjourned.)

## AJMER

## SIXTEENTH MEETING

Tuesday, 12th November, 1929.

## PRESENT:

The Rt. Hon. J. H. WHITLEY (*Chairman*).The Rt. Hon. V. S. SRINIVASA  
SASTRI, P.O.

Sir VICTOR SASSOON, BART.

Sir IBRAHIM RAHIMTOOLA, Kt.,  
K.O.S.I., O.I.E.Sir ALEXANDER MURRAY, Kt.,  
C.B.E.

Mr. A. G. CLOW, C.I.E., I.C.S.

Sir ERNEST JACKSON, Kt., O.I.E., Agent,  
B., B. & C. I. Railway Company,  
Limited.

Lt.-Col. H. A. J. GIDNEY.

Mr. M. S. GREGORY, M.C.

Mr. GOVIND PRASAD.

Mrs. TARA MARTIN (*Lady Assessor*).Mr. S. LALL, I.C.S. } (*Joint Secretaries*)  
Mr. A. DIBDIN.

Mr. KABIR-UD-DIN AHMED, M.L.A.

Mr. JOHN CLIFF.

Mr. N. M. JOSHI, M.L.A.

Miss B. M. LE POER POWER.

Lt.-Col. A. J. H. RUSSELL, C.B.E.,  
I.M.S. (*Medical Assessor*).} (*Assistant  
Commissioners.*)**Mr. W. H. ABEL, Inspector of Factories, Punjab, Delhi, North-West  
Frontier Province and Ajmer.**

*Witness:* May I be allowed to make two corrections to my memorandum before you start. On page 3, the whole paragraph (43) under "Safety" relates to all factories including Railways, so that the word "Railways" is really superfluous. Secondly, on page 7, paragraph (139) where it is stated that "the number of factories in this province at present is 40 and the staff is adequate", the word "adequate" should be corrected to read "inadequate".

B-3263. *The Chairman:* You told us on a previous occasion of a fear that legislation, particularly factory legislation and workmen's compensation legislation, had a tendency to drive industries out of British India into Indian States, where there is no such legislation. Is that particularly the case in regard to Ajmer?—It is particularly the case in this district.

B-3264. Have you any actual instances here?—I have no absolute information beyond what I can collect from the factory owners themselves, but in the case of Bewar, an industrial town about 40 miles from Ajmer, which is surrounded by Indian States, I find that ten or twelve years ago the cotton ginning industry was so very flourishing that possibly two or three hundred carts of raw cotton came in daily for ginning; to-day there are probably not more than 20, and the industry has practically gone. This, factory owners tell me, is due to the fact that factory legislation is applicable to these factories within British India—that is, the hours of work and other regulations, whereas they are not applied to Indian States; they also tell me that in addition to that, a tax is put on the raw cotton going out of a State into British India, so that the tendency is rather for factories to be built within the States than in British India.

B-3265. Not the actual moving of existing factories, but a tendency towards an increase in the number of factories outside British India?—Yes.

B-3266. Is there any move at all with a view to improving the conditions there?—Not that I know of.

B-3267. The second question arises from what you have stated under the heading "Health" in your memorandum. You tell us: "Health of workers in all factories appears to be generally good, but in the absence of statistics it is not possible to say what percentage stay away from work owing to sickness." Do you think that employers might be called upon to keep better registers which would separate sick leave from other kinds of leave?—It would be helpful, but I doubt if you would get really useful figures. The worker, particularly the unskilled worker, turns up for his work when he feels disposed to work and the fact of his being absent would not show the employer whether he was really sick or merely absent on leave.

B-3268. But you see that many of the projects which have been under discussion depend on the accuracy of the sickness return. You would get something like useful statistics taken in well recognized factories, but I do not think you would in seasonal factories?—No, I do not think in seasonal factories. In the bigger mills and railway workshops it is not difficult to tell whether a man is ill because there the doctor has to certify him before he is put on sick leave. In the seasonal factories it is very unusual to report to the mill at all unless a man is actually found to be ill in the factory itself.

B-3269. You think in the more organized industries it would be possible to separate sickness and leave?—Yes.

B-3270. Would that require legislation?—It would, to enforce it.

B-3271. But you do not see any difficulty in carrying it out in perennial factories?—There would be no great difficulty.

B-3272. The third question relates to what you speak of "efficiency" in your memorandum. You tell us there that in your opinion health is one of the chief factors governing the efficiency of the workers and that unless the labouring classes are well fed by an increase in their wages, it is not possible to effect any improvement in this behalf. Do you think any increase in wages under present conditions would be spent on increased food and thus tend to produce more efficiency?—To some extent it would.

B-3273. We have been told that it is not so much the quantity as the kind of food which is deficient?—Exactly. The illiterate and the unskilled worker frequently buys a much cheaper class of food than is good for him, not necessarily because he has not the money to buy better food—that is no doubt one of the factors—but because he is so much in debt to the bania; and also the unskilled worker spends a great deal of money which he cannot afford on holidays and festivals and thus becomes indebted to his bania, and as a result he has to live on bad food which is not good for his health.

B-3274. He has to take what the bania gives him?—Yes; he is very much in the hands of the bania.

B-3275. Would an increase of wages benefit him if there is sufficient spread of education?—Not at this moment, but it would be an improvement in that direction.

B-3276. He would have more money to spend on food even though he were in the hands of the bania?—He would have a little over; not a lot. At present he has very little indeed.

B-3277. *Mr. Clow*: In the memorandum which he has sent to us the Commissioner has suggested that the minima for workmen's compensation are too low, and that the compensation for more poorly paid worker should be increased. Do you agree with that view?—No, I do not think I do.

B-3278. He gives us a case where a factory worker lost the use of one hand and was given only Rs. 126. That appears to be due to the fact that his pay was Rs. 12 a month. Is that the common scale of pay here? It is a very low scale of pay. What sort of a man would he be?—It is an unusual

case. He might be a cotton opener, but he would be working on a pay of Rs. 18 to 25 a month.

B-3279. Is Rs. 12 a month a regular pay?—I do not think a workman who would be in a position to lose a hand through machinery would be engaged on a pay of Rs. 12 a month.

B-3280. What are the hours of work in cotton ginning factories?—60 hours a week, that is, 10 hours' a day for a six-day week.

B-3281. Do they get any exemption for an exceptional pressure of work?—Not for the last four or five years. After the Act was amended in 1922 we gave exemptions; but they have been gradually decreased, and during the last three years no exemption has been given.

B-3282. Do you know anything about the hours of work in the States?—I only know that they are very much longer. I have no authority to go there, and I cannot definitely say for how many hours a workman would be employed. In Gwalior where there is a big mill the hours are definitely from 70 to 72 per week. It is a spinning mill.

B-3283. I suppose in cotton ginning mills the length of the hours practically determines the production?—Exactly.

B-3284. In referring to the factory inspection staff in your memorandum, the Civil Surgeon is omitted?—That is so.

B-3285. His inspection is confined to the medical side only?—Yes.

B-3286. *Miss Power*: Mr. Abel, you have told us a certain amount about the welfare work undertaken by factories. Do you suggest that it would be a good thing if the Factories Act here could operate as regards welfare very much on the lines of what is done in England, where we have Statutory orders covering the welfare work to be undertaken in a particular industry?—I think it would be the only way of getting any real welfare work done; if there was a law it would be applicable not only to the employer, but also to all others who took any steps in that direction, and it would be the best way of getting welfare work done.

B-3287. Do you think that is the best method?—I must say it would be a very important and a very useful thing.

B-3288. You mention as one of the causes of the increase in the number of accidents, that "underpaid and unskilled workers are put on jobs of which they have no experience." Do you suggest that it would be a good thing to adopt some safety measures on the lines of what is done among illiterate workers in part of America. There they have a very successful method of propaganda entirely by means of posters?—The average unskilled worker that is put on such job as cotton opening would not be able to understand posters. We have posters now very similar to those in America, showing the kind of clothes a worker must wear, the way he should tackle a machine, and so on, and when possible we go round and make a demonstration; but the trouble is that the average worker will again do things almost exactly the same way as he did before. He is not sufficiently educated to appreciate the instructions that are given to him.

B-3289. I take it that it is a question of time?—It is a question of time.

B-3290. I was told in Lahore that the system of training uneducated *dais* by means of picture posters has been very successful. Do you suggest the same thing for the more complicated machinery in the factories?—It would be helpful, but it would be necessary to launch a very vigorous propaganda. The worker would need to have a very full description; and you would have to do it continually day after day and do it very clearly, otherwise the worker would not take notice until you came round again.

B-3291. We have a paper circulated to us by the Government in regard to industrial labour in this Province. It shows that roughly half of the industrial establishments and three-fifths of the employed workers in the Province are covered by the Factory Act. Would you be in favour of extending the Act to cover the remaining half of the places of employment and two-fifths of employed persons?—It is a job which would be perfectly

possible to begin if you have the right quality and quantity of inspection. It is not quite an impossible job if we were to get the inspecting staff. But it is unfortunately somewhat difficult to undertake the inspection and controlling of these smaller factories which are situated in bazaars, it is more difficult than with the bigger ones.

B-3292. If you are going to increase your number of factories by 50 per cent. including all the at present unregistered factories, you would then need to double your staff?—I certainly think all these small factories should be brought under the operation of the Factories Act; it would be a very good thing, but we would want a very big staff to administer the Act in such cases.

B-3293. How much would it mean?—We would need to double the present staff.

B-3294. The present staff is unable to deal with it?—That is true.

B-3295. Are you likely to get additional staff?—There is at present little likelihood of persuading Government to give us the staff, and it would take a long time to secure sufficient staff. It would be an ideal to work up to and it is very necessary.

B-3296. Would three trained men be able to do it?—Yes.

B-3297. You do not think that is an excessive number?—I do not; Government might.

B-3298. *Mr. Clow*: Suppose you were given a full-time Inspector for Delhi and Ajmer, would that be adequate?—No.

B-3299. *Mrs. Martin*: In your memorandum you say "The present regulations with regard to the employment of women in factories are quite suitable". Is it in the regulation that women can be put to work side by side with men?—There is no regulation against it.

B-3300. But they work side by side?—They do in many factories where possibly no room can be set aside in which women can do their work apart from men and in which there is no machinery so as to enable them to have their children with them if they wanted. But there is no actual regulation against women working in a room along with men, and I do not think women object. I have never found such objection.

B-3301. They do not object?—Ordinarily they do not.

B-3302. You do not think it is necessary to make it possible to put women separately from men?—In many cases it would be impossible because they work machines on which men are also employed.

B-3303. *Mr. Cliff*: With regard to the adequacy of factory inspection you told Miss Power that for the whole area which you cover, three full-time inspectors would be sufficient. Is that so?—Inspection is a work that you can expand enormously; you can make work for 30 men if you want to. But, firstly, we would never get that quantity of inspectors, and secondly, we have not taken up all the work that an inspector could find under the present law. Three, at this moment, would be very much better and would be very useful; if we could get more we would certainly find ample work for them.

B-3304. Assuming that the Factories Act was extended to the places not now covered, would three inspectors be, in your opinion, adequate to cover the whole area?—It depends to what extent you would apply the Act. If it were to cover all the unregulated factories employing 10 persons, whether power was used or not, then certainly three inspectors would not be sufficient.

B-3305. How many would be sufficient in that event?—Unless one investigated the number of factories which would come under the Act, it is impossible to say. But presuming that there would be twice as many factories brought within the purview of the Act if it were extended to both the types of factories, it would mean that we should then have three times as many factories as we have at present, and under the new regulation they would require far more attention than under the old one so that we would

need more than six or seven inspectors for carrying on the inspection work as we are having now.

B-3306. In answer to Mr. Clow you said that one inspector is not adequate for Delhi and Ajmer. Did that relate to the present scope of the Act?—Yes.

B-3307. Your answer with regard to three inspectors for the whole of your area was also related to the present scope of the Act?—Yes.

B-3308. Mr. Clow asked you a question about compensation. I believe you answered that, in your opinion, compensation paid in accordance with the present rate of pay was adequate. Just take these two cases that were given by Mr. Gibson, the Commissioner. I will take them separately. The case given is of an employee who was receiving wages at the rate of Rs. 12 per month. As a result of an accident he had four fingers amputated and he received Rs. 126. Will you apply the present scales to this particular case and tell me whether they are adequate?—I cannot imagine a man working on a machine on a pay of Rs. 12; I do not think that is correct. It is possible it may have been the pay that was allotted to him in the register. If he were earning his proper pay and he was paid according to the schedule, his compensation in that case would be somewhere near Rs. 200 or 300 which would enable him to buy cattle, goats or take some interest in land which would provide him with a living.

B-3309. But this is a case registered by the Commissioner; it may be that the accident did not occur through machinery?—In that case I certainly say that the compensation is not sufficient. I was going on the schedule of compensation as compared with the wages which I find reported to me at the end of the year by employers.

B-3310. Then he quotes what might happen: a workman drawing Rs. 10 if he loses any other finger than the index finger, he is, in accordance with the provisions of the Act, entitled to receive compensation amounting to Rs. 21?—Yes, that is true.

B-3311. Is that, in your opinion, adequate?—There again I say I do not know of any person who is working on that pay per month.

B-3312. With regard to housing, you say in your memorandum, "The bulk of the labouring classes in Beawar and Ajmer employed in the cotton ginning and pressing factories live in quarters provided by the private landlords". Is it also true that the bulk of the labouring classes that are employed on the railways live under private landlords?—Yes.

B-3313. Has it ever been a part of your duty to inspect the housing condition?—No, never; houses outside the factory premises are not my concern officially.

B-3314. Have you ever seen them unofficially?—I have.

B-3315. How would you describe them?—Undesirable. I think they might be improved.

B-3316. Is that the strongest word?—Possibly not. In many cases certainly they should be improved very much.

B-3317. Again you say, "Medical facilities for the workers and their families are provided in the case of bigger mills and factories". I take it you also include the railways to which you later on make a reference?—Yes.

B-3318. Is it practicable for an ordinary workman living three miles away from the hospital to avail himself of the facilities?—No, certainly not; I am alluding to the worker within the factory. When he is a mill employee and during the course of his work he falls ill, he receives medical treatment.

B-3319. Suppose a workman meets with an accident in railway workshop; he is treated, but he is not detained in the hospital and goes home. Is any provision made for visits at his home?—I am afraid I do not know; that would be outside my province.

B-3320. Your observations here do not go further than the facilities provided in the mills or factories?—No; I have no authority and also no time to go beyond that.

B-3321. *Mr. Ahmed:* In your memorandum you say, "Two of the textile mills in Mewar and the Bombay, Baroda and Central India Railway Workshops, Ajmer, have, however, made a provision on a restricted scale for the accommodation of their operatives at a reasonable rent". What do you mean by this?—I am referring to the housing accommodation provided within the workshop premises or close to them for such people as chowkidars, gatekeepers and other employees who must essentially remain on their job. Those houses, to my mind, are fairly good. I take it you are alluding specially to the railways. In this case they are provided by the railway authorities.

B-3322. Has no provision been made for accommodation of the labourers?—Only in the case of those I have mentioned, within the factory premises; I am not sure what arrangements they have made outside the factory premises.

B-3323. You say, "The housing conditions of the Bombay, Baroda and Central India Railway Workshops, Ajmer, in so far as the accommodation is provided are on the whole satisfactory in relation to drainage, water supply and sanitation". Do you mean to say that provision has been made for quarters to the permanent staff like managers, clerks and others?—No. I am alluding to those houses and dwellings which are provided for the staff which must remain on their job most of the time. That is in the case of probably less than 5 per cent. of the entire railway workshop staff.

B-3324. You have already said that the efficiency of the workers will be increased if they are given higher wages?—Yes.

B-3325. And indebtedness to the bania is their real grievance?—Yes.

B-3326. Do you not think that if payments are made weekly, it would relieve their indebtedness to the bania?—I do not think it would.

B-3327. If you pay them four times a month they can pay their debts earlier?—They can but it does not follow that they would. I doubt very much if it would be an advantage to the monthly worker to get his pay weekly.

B-3328. Why not?—He usually gets his food in bulk for the month. He is always indebted, whether you pay him by the week or by the month. I do not think he would really be better off by merely getting a small amount of money at the end of the week instead of a good amount at the end of the month. It is the habit of the worker, on pay day, to want the rest of the day as a holiday, and he would not want to forego that holiday if payments are made weekly. The result would be that he would get three extra holidays in a month.

B-3329. *Sir Victor Sassoon:* We have been told by the representatives of the railway workers that outside the railways the usual rate of pay to the lowest class is Re. 1 to Rs. 1-4-0 in the industries at Ajmer and in the agricultural districts Re. 1 per day. I have here the evidence of the General Manager of the Court of Wards who states that in industries the wages are from 6 annas to 10 annas and in agriculture 4 annas to 6 annas. Which of these statements is, in your opinion, correct?—I should say the latter one; my experience shows that the latter is more correct.

B-3330. You do not consider that in industries outside the railways the usual rate of pay for coolies is from Re. 1 to Rs. 1-4-0?—I am sure it is not.

B-3331. What do you think would be the rate of pay in industries outside the railways?—It would be nearer to 8 or 9 annas—that is for the unskilled work. I collect statistics regarding that at the end of the year, and covering the entire area it works out at about 11 annas for a man and 5 or 5½ annas for a woman; that includes the railways, and it is generally recognised that the railways pay slightly more if anything.

B-3332. That is recognized?—I have always presumed so.

B-3333. In this district?—Yes, slightly more.

B-3334. Have you any experience of the rates paid in the agricultural districts surrounding Ajmer?—No, I am afraid I have not.

(The witness withdrew.)

### Rai Sahib CHANDRIKA PRASAD.

B-3335. *The Chairman*: Rai Sahib, the questions that I shall put to you on your present memorandum will really deal with the questions which you have been good enough to discuss. I may take it that the sum of your claim is as stated in your memorandum where you say: "It shows the necessity for Indianisation of Railway services from the top instead of from the bottom as has been done to some extent so far." Now there are one or two other interesting points in your memorandum. You claim that vocational schools are altogether inadequate?—Exactly.

B-3336. And that they ought to be greatly increased to give the opportunity of training Indians for the higher posts in the railway service?—Yes, both for higher and subordinate posts.

B-3337. Dealing with the question of workmen's compensation you say: "The Workmen's Compensation Act has in some cases curtailed the allowances of full pay to railway workmen for absence due to injury caused by accidents in the performance of their duties." By that do you mean that the provisions of the Act are less liberal than what was being given in some cases by the Company before the Act was passed?—Exactly. The previous practice was to allow full pay for the period of sickness under medical certificate. Now the Act limits it to something like 10 days or so. But I am glad to notice that the Railway Board is allowing the former practice still to continue.

B-3338. I was going to deal with that question. My recollection is that we were informed by the Railway Board that where their own rules were more favourable than the Act, they would allow their own rules to operate?—Yes, I find that is so from the Railway Board's memorandum.

B-3339. That is satisfactory?—Yes.

B-3340. In your memorandum you tell us the purpose of these unions of railway employees. We were told here in Ajmer yesterday that a new union has been recently established?—Yes.

B-3341. Is that union recognized by the All-India Railwaymen's Federation?—It is not at present affiliated, as far as I know, to the All-India Federation.

B-3342. Has it applied to be affiliated to it?—I am not certain; I have nothing to do with this union.

B-3343. Therefore you do not speak to-day in the capacity of a representative of the men engaged on your Railway?—I am speaking in my personal capacity, because the All-India Railwaymen's Federation has not yet decided the question whether they should co-operate with this Commission.

*The Chairman*: I understand.

B-3344. We had under consideration here, and have had under consideration elsewhere, the question of the relation of staff committees or works' committees to trade unions. Are you aware that in England it has been found possible to work the staff committees or works' committees, by whatever name they may be called, with the perfect goodwill of the trade unions?—I am not aware of that, but here I know the staff committees are proteges of the Railway officials, while the railway men's unions are independent bodies who represent the views and wishes of railway employees. That is the position in India.

B-3345. That is an early stage of organization. There is nothing to prevent the staff committees or works' committees being worked with the assistance and approval of the trade unions? That does not come within your experience?—No, it does not. I have no experience in regard to that.

B-3346. *Sir Ibrahim Rahimtoola*: In your memorandum, you give a statement showing the maximum and minimum wages per month of different classes of labour in different countries, and you say that it was worked

out for the Acworth Committee in 1920. Have you any statistics to show what the present position is?—I have not got the statistics since then; but I think these figures are very recent; they were only collected after the war.

B-3347. Is your position the same as it was then? Has there been no real variation in the proportions shown in the statement during the last nine years?—I do not think there is any material difference now. The statement holds good to-day very materially so far as India is concerned.

B-3348. Then you go on to say: "True remedy lies in laying down a scale of salaries for the staff of the Indian Railways on the same scale as is in force on the Japanese State Railways, thus bringing down the high salaries of the higher officials, and raising the salaries and wages of the low-paid staff and work people, without serious rise in the operative ratio." Can you tell us what you mean by a system prevailing in Japanese State railways?—I mean that the maximum salary of a Railway official in Japan is about Rs. 1,000 a month. Here in India the maximum salary of an Agent goes up to Rs. 4,500: I have given it in the statement as only Rs. 3,500. I consider that the salaries of higher officials on Indian railways are very much higher than the salaries paid in Japan. Japan being an Asiatic country has very much the same conditions as we have in India, and that is an ideal for us to follow.

B-3349. That is to say you would work up to that level in future?—No, I will work up to it now.

B-3350. Do you think it is a matter of practical politics to suddenly introduce that system, and would sufficiently qualified men with technical knowledge be available in India on the salaries you advocate?—I do not mean to drive out the present officials; I would keep them on their present salaries, but I would have a new scale for all those that will come into the service henceforward on the basis of Japan.

B-3351. Does Japan train its own railway officials?—Yes, certainly: they have a very nice college there for the training of railway officials.

B-3352. Then your scheme, in essence, is that steps should be taken to provide educational facilities to supply the demand for higher officials employed on the Railways?—Exactly; all higher officials should be trained in India. We have available in India a sufficient quantity of educated material which could be trained.

B-3353. Further in your memorandum you say: "The arbitrary powers exercised by the Supervising Officer or subordinate, without impartial check, often leads to favouritism, racial discrimination or corrupt practices, which affect the efficiency of staff and lead to waste of public money." What kind of impartial check would you advocate?—At another place I have suggested that we want Indians in the higher places. At present the European mind is biased against the Indians, more or less.

B-3354. The point is this. You say there should be impartial check. What kind of check would you exercise to prevent what you call "favouritism, racial discrimination and corrupt practices"?—I would have a Railway officer of a Department that is not concerned in the matter: for instance, I would have an officer of the Audit or Accounts, or even of the Agents Department—an impartial officer to check these things. I have been proposing a Staff Committee of three instead of leaving these matters in the hands of a single individual. Let all establishment matters, that is, matters relating to staff, their appointment, promotion, and so on, be settled by a Committee of three.

B-3355. How would you constitute that Committee of three?—I would take one officer from the executive staff of the Department concerned say, from the Carriage and Wagon or the Loco. workshops, or the Engineers' Branch, or the Traffic Branch; I would take another officer from the Audit and Accounts Department; and the third member would be a representative of the Railwaymen's union.

B-3356. You think that under that system racial discrimination, favouritism and corrupt practices would disappear?—Yes.

B-3357. You do not think that by multiplying the authority of employment there will be much more nepotism?—No, I think a Committee of three will not be influenced by any undue consideration.

B-3358. That is your opinion. You do not think there is a danger of larger favouritism resulting from your scheme?—Single individuals have exercised autocratic powers; these will be toned down by a Committee of three. That is my opinion.

B-3359. By larger distribution of favouritism?—That is not my opinion.

B-3360. I do not say it is your opinion: there is a likelihood of it?—I do not see any likelihood of it. I see an improvement.

B-3361. *Mr. Clow*: In your memorandum you say: "No facilities are allowed by the Railway administrations for insurance against accidents." What do you mean by that?—What I mean is that there ought to be some institution by which the lives or bodies of railwaymen should be insured against accidents; there is nothing done by the railways to insure their lives; they ought to encourage the railwaymen to form an institution or fund by which lives of men could be insured.

B-3362. Do not the compensation rules provide something of that kind?—That is not enough.

B-3363. You mean the men should be compelled to subscribe?—No, the railway ought to do it.

B-3364. The railway provides compensation?—Compensation they give on death or injury. But I say an institution should be formed beforehand from which the men should get money. At present the B., B. and C. I. Railwaymen's Union at Parel (Bombay) does something in that direction; it provides grants within its limited means in the case of accidents, sickness or unemployment.

B-3365. *Mr. Sastri*: In the nature of an insurance scheme?—They give an allowance when a man is injured or is sick.

B-3366. *Mr. Clow*: But you are talking of accidents and not of sickness?—I should say the same principle should apply in the case of accidents too; when a man is disabled they ought to do something; some institution ought to be established.

B-3367. But they do something at present?—That is not enough. They pay a lump sum which is spent in a few years; then the man is left without any means.

B-3368. Then would it not be preferable to give a pension instead of a lump sum?—Certainly that would be preferable.

B-3369. Is that what you mean by your statement?—Yes. In England you have National insurance.

B-3370. That is health insurance?—Yes, but in accidents, instead of giving a lump sum I would prefer a pension.

B-3371. You do not want the workman to pay a premium?—No, he is not able to pay it.

B-3372. You say, "Effect has not been given by the Government of India to the Washington and Geneva Conventions . . . the hours of attendance should not exceed 144 hours for clerical staff.....". How did you reach that figure?—144 hours a month or 36 hours a week. That is the demand of the railwaymen put through the All-India Railwaymen's Federation; they passed a resolution to that effect. Under the present P. W. D. Code no man should work for more than 6 hours a day.

B-3373. You think that the clerical staff should work for much shorter hours than the other staff?—Yes, because it is brain work; in the Indian climate they cannot work continuously for more than 6 hours.

B-3374. Is the climate felt more in the open air or inside the room? The workmen work for 12-14 hours?—I still work for 12 to 14 hours.

B-3375. With your hand?—With my hand and with my brain.

B-3376. That is more akin to clerical work?—I do out-door work also.

B-3377. Only about two months ago there was no union here, is not that so?—The union has been more or less here for the last seven years.

B-3378. What do you mean by more or less?—By more or less I mean, very many obstacles were thrown by the railway officials in the way of the formation of a union. The Trade Union Congress gave a grant specially to organize a railwaymen's union at Ajmer but all our efforts failed because of the attitude of the railway officials.

B-3379. But has the formation of unions elsewhere been dependent on the attitude of the employers?—But Ajmer is an autocratic province and the men are at the sweet will of the authorities; they are afraid of them. Do you see a single Indian railwayman here? They are afraid to come before my friend Sir Ernest Jackson; they would not come here—I am speaking plainly—the poor people have not the courage to come.

B-3380. You are an ex-President of the Trade Union Congress?—Yes.

B-3381. It does not seem that much progress has been made with trade unionism in the long time that you are here, Rai Sahib?—A prophet is never honoured in his own country.

B-3382. *Mr. Joshi*: You stated that some men here were also discharged because the officials thought the men were organizers of railway employees union or leaders of strikes. Can you give us any definite information on this?—I might give you the instance of the Bengal-Nagpur Railway—I am speaking here for All-India and not for the B., B. and C. I. Railway only. On the Bengal-Nagpur Railway a number of men were victimized simply because they were leaders or workers of railway unions. This came to my personal notice in my capacity as President of the All-India Railwaymen's Federation.

*The Chairman*: We can hardly deal with that here.

B-3383. *Mr. Joshi*: In your memorandum you say, "Employment in the railways is generally permanent in cases of men on monthly pay as well as those paid on the daily rates of wages . . ." Why are these people kept on daily rates of wages although their employment is permanent?—I cannot offer any explanation because this has been the system for many years; but I think it is wrong. The men claim to be brought on monthly pay, and I am glad to say that the Railway Board have given us an assurance that they will be brought on monthly pay.

B-3384. You also say, "The practice of raising debits against the station staff for errors in booking or collecting charges from the public leads to corrupt practices". Can you explain this?—Suppose a consignment is booked, say, from Ajmer to Bombay, Bombay is responsible to recover the correct charges. Either through over-sight or through the complex nature of the goods tariff, if the goods clerk at Bombay fails to realise the correct freight, the audit department will raise a debit against him, without regard to his pay—it may be for Rs. 100 or it may be for Rs. 500. He is called upon to realise it from the party concerned; if he fails, the debit stands against him and is recovered from his pay. This, I maintain, leads to corruption. When you levy such heavy debits on a poor man where is he to bring the money from?

B-3385. Are the officers in the railways made to pay any debits for their mistakes?—Certainly not; officers go scot free always.

B-3386. I will ask you a question on a subject on which we had had some information, but I think it is necessary to ask that question. Will you explain how in practice racial discrimination is maintained inspite of the fact that the railway authorities state that they have done away with it in theory?—It will be in your recollection, *Mr. Joshi*, that *Mr. Samarth* put certain questions in the Legislative Assembly, and the Railway

Board assured the assembly that racial distinctions would be abolished. That was something like 10 years ago. But what do we find to-day? The railway memorandum submitted by the B., B. and C. I. Railway Co. clearly shows instances of racial discrimination.

B-3387. Will you explain the methods by which, in practice, this is maintained?—For instance, the different scales that have been laid down—A, B, C, D and E. There are two scales which are extremely low where no European or Anglo-Indian would come to work.

B-3388. Are the Europeans employed on the lowest scales for guards or drivers?—No, they are employed only in the upper grades. So long as you keep these low grades you are maintaining racial distinction.

B-3389. You state that Anglo-Indians and Europeans are not recruited on the lower grades but are directly recruited on the higher grades?—Yes, and they keep ahead of Indians.

B-3390. Is there any method by which Europeans and Anglo-Indians get ahead of Indians?—By rapid promotion too; they are favoured always.

B-3391. *Miss Power*: In your memorandum you suggest that a minimum of Rs. 35 per month with varying allowances for towns and big cities be paid for unskilled employees. I take it you mean that figure as a minimum for railway employees in the more rural areas?—Yes.

B-3392. Further on you say, "The rates of wages in the surrounding agricultural areas should not be considered in fixing the wages and salaries of railway employees? What I want to arrive at is on what basis you fixed Rs. 35 as the minimum?—It is considered to be the lowest with which a man could maintain himself and his family.

B-3393. Even in the more rural areas?—Rs. 35 is the minimum; that has been decided by the All-India Railwaymen's Federation.

B-3394. What difference in the method of living is there between a railway employee in the more rural areas and an agricultural worker?—In the villages an agricultural worker gets fine vegetable and many articles free of charge either from his neighbour or from his own produce. Here a labourer has to pay for every bit he requires for his consumption; there he has his own cottage where he lives, here he has to pay house rent; so the difference is very great in rural areas and in towns.

B-3395. I was not referring to the labourer in towns but to the railway employee in the more rural areas. You suggest a minimum of Rs. 35 with allowances for towns and cities?—Yes; Rs. 35 is the minimum for an unskilled labourer and a higher amount for others.

B-3396. *Colonel Gidney*: I believe you are an advocate of levelling up of wages of the subordinate staff?—Certainly; I do not mean to cut down any salaries of subordinate staff.

You are also an advocate of levelling down the salaries of officials?—Yes.

B-3397. I believe you were present when I asked the Railway Board in their evidence, for figures, to establish a comparison between the total salaries of subordinates as compared with officials in various railways. If it is found that there is a great discrepancy in favour of the officials, would you advocate levelling down the salaries of officials?—Yes.

B-3398. You just now complained of a great distinction between the Anglo-Indians and Indians. You would not complain if the Indian is levelled up to the Anglo-Indian standard of wages?—No.

B-3399. Do you think the railways would function if this were done?—Why not?

B-3400. Why is it that no Indian witness from the railway workshops has appeared before this Commission?—They have not the courage; they are afraid of their superiors.

B-3401. Do you think they would be victimised?—Yes.

B-3402. Have you any real reason to think so?—I have already cited one instance on the Bengal-Nagpur Railway. Here a few months ago the

men were thinking of organizing a union and one of the officials called the leaders and told them not to join or form any union.

B-3403. I have no reason to doubt your statement, on the other hand I may have reason to support it. The Commission is out here to examine the grievances of the railwaymen and if there is such a thing as victimization of any witnesses the Commission would not be in a position to examine those witnesses and they would be placed at a very great disadvantage?—They cannot come forward; they have not the courage.

B-3404. I think you were at Delhi when I asked a question of the Railway Board as to how long it takes for a fireman to become a loco foreman or a ticket collector to become a station superintendent?—Yes, I heard the question as well as the answer.

B-3405. It was said that the average service necessary for this promotion was between 20 and 25 years. Will you agree with me if I say that the reason why Anglo-Indians and Europeans occupy a large number of such superior posts to-day is because they have been continuously in service and at a time when the educated Indian did not seek Railway employment?—Indians have been more continuously in service. Look at the percentage; over 97 per cent. are Indians.

B-3406. I am not talking of the percentage, I am talking of these appointments and the length of service necessary to attain such ranks?—I put in 37½ years' service.

B-3407. Will you agree with me that till a few years ago the educated Indian did not seek employment on the railways?—Why? He has always been after railway service.

B-3408. Will you agree with me that 15 years ago the Indian was not keen on working on railways?—No, certainly not; I joined the railway in 1877.

B-3409. I am not taking you as an example; you are an exception. I am taking the class as a whole?—I am speaking of the Indians generally.

B-3410. Is it a fact that 15 to 20 years ago drivers and guards did not know how to sign their names?—Yes, because you did not take any educated men; you promoted *khalasis* to the rank of a driver.

B-3411. You made a statement about the appointments committee; I think there was a lot in what you said; it impressed me very much. My friend Sir Ibrahim Rahimtoola suggested to you that there would be more nepotism if you had such a committee?—If I were to be on that committee I would serve honestly.

B-3412. *Cólnel Gidney*: Do you think that much of the trouble on railways is really due to the ignorance amongst the staff of leave rules, over-time claims, service bonds and other privileges to which they are entitled?—Yes.

B-3413. Would you advocate the issue to all employees of a condensed pamphlet of these rules?—The B., B. and C. I. Railway have done that; they were good enough to send me a copy of it.

B-3414. I do not know whether it is the general practice on all the railways?—I think that is very necessary.

B-3415. Mr. Clow asked you a few questions about compensation. Do you think that if the B., B. and C. I. Railway accepts the system of insuring the lives of their employees that I recommended to the Railway Board and which they agreed to consider, that is, that every employee of the railway be allowed to insure his life and pay the premiums from his accumulated Provident Fund, it would help the Indian employee?—I should think so.

B-3416. You talked just now of long hours of duty. A general statement is one thing; can you substantiate what you said to the Commission by giving concrete cases of men doing 15, 18 or 20 hours duty a day?—I never said 18 hours; I said 12 hours.

B-3417. Well, let it be 12 hours?—Here is a statement which shows that the station staff do 12 hours work.

B-3418. Can you give it to the Commission?—I will show it. It gives the hours from 7 a.m. to 7 p.m. Assistant booking clerks, head booking clerks and so forth work 12 hours during the day; I am speaking of Ajmer station which has pretty good work during the day.

B-3419. *The Chairman*: Without any interval for meals?—It is what they call intermittent work; but still the men have to remain longer hours; they cannot leave the station where they are kept for 12 hours. But there is an admission in the Railway Board's memorandum that some of the staff have only 8 hours rest in 24 hours.

B-3420. *Colonel Gidney*: In your memorandum you say that you favour a time scale promotion. Do you mean by that that a ticket collector can, by increments, automatically rise up to the post of station superintendent?—Yes, automatically as they have done in the postal department.

B-3421. I know a time scale promotion exists in the postal and telegraphs departments, also in various other Government departments but do you think this is practicable in the railway department?—Why not? What is practicable in the postal and telegraphs departments is equally practicable in the railway department.

B-3422. What will be the greatest benefit if such a system were introduced? Do you think it would remedy the present hardship of blockage of 80 per cent. of the staff in the upper grades?—If there is blockage in the postal department there may be blockage here as well.

B-3423. I know such a blockage does exist in the telegraph department and that is their chief complaint?—I cannot foresee; I have made no calculation.

B-3424. You have just given the history of Unions on the B., B. and C. I. Railway. Is it your experience, in your long and distinguished service in various grades that the railway official on this Railway looks askance on railway unions or any such bodies, and look upon such bodies, from a hostile point of view?—Yes.

B-3425. Is it your experience that the officials put their hostility into practice?—Yes.

B-3426. Could you give instances in which this has happened?—Yes.

B-3427. And therefore you think this is the chief reason why unions have not succeeded on this railway?—Exactly.

B-3428. Do you think this is a correct attitude?—No, that is not a correct attitude.

B-3429. Do you think that if the railway administration had frequent consultations with unions and other organized bodies of workmen as associations, etc., in matters concerning their own interests, there would be less mistrust, unrest and more satisfaction?—Certainly; but you should abolish these sham staff committees.

B-3430. What would you put in in their place?—The Railwaymen's unions. If the railway officials will favourably receive these railwaymen's unions, I assure you that railwaymen will be very reasonable.

B-3431. Would you accept a grievances committee; I mean a separate department to be created in the Railway in which the men would have a big representation and a big voice?—Certainly, if there are representatives of the railwaymen's union.

B-3432. *Mr. Gregory*: In your memorandum you say ".....except in the case of train running staff some of these are discharged for three or four months of the rainy season which is treated as the slack season on some of the railways". Do you include the B., B. and C. I. Railway in that?—I do.

B-3433. Can you let us know what you refer to in your statement?—In the rainy season when traffic is slack some of the men are given leave for three months—what is called compulsory leave during the slack season.

B-3434. *Sir Ibrahim Rahimtoola* : Without pay?—Yes, certainly.

B-3435. *Sir Victor Sassoon* : For how long?—Four months will be the longest period; it is during the slack season when there is little traffic; that has been the practice.

B-3436. *Mr. Gregory* : You have used the expression "compulsory leave". Which class of staff do you refer to?—I am referring to the running staff, drivers and guards.

B-3437. In reply to the Chairman you said that you considered the provision of vocational institutions inadequate. Having seen the policy in the Railway Board memorandum, do you still adhere to that?—Certainly. Shall I give a full account of my views on that?

*Mr. Gregory* : No thank you.

B-3438. *Sir Ernest Jackson* : You speak of the want of special schools and liberal grants-in-aid to the children of Railway workers. When you wrote that were you aware that the policy both of grants-in-aid and of the education of children has been under the consideration of the Government of India for about 18 months, and that a revised policy under these two heads is about to be issued and in fact has been agreed to, I understand, by the Standing Committee of the Legislative Assembly?—I had no means of knowing that, but since then I have seen something in the Railway Board memorandum.

B-3439. You also state that Rs. 35 should be the minimum pay for all rural districts?—Yes.

B-3440. But you also suggest that in addition to that minimum pay it will be necessary to give the employees an additional allowance?—For cities like Bombay; that is what I mean.

B-3441. Whatever the minimum pay may be which may be decided upon, whether it is Rs. 20, or Rs. 35 or Rs. 50? You are doubtless aware that the conditions throughout India vary considerably, and that what may be an adequate pay in one province or district may be quite inadequate, or, on the other hand, too much in another district?—I do not think there is such a marked difference in the minimum living conditions. Knowing India as I do from Madras to Kashmir I think Rs. 35 is absolutely necessary for a man to keep in good health, whether he is a coolie or whatever he is, Rs. 35 is the minimum to give him food, clothing, house accommodation, medical aid, education of children, and provision for sickness, old age, etc.

B-3442. Quite apart from the question of the amount of minimum wages, do you not think that if the minimum were fixed, further complications would immediately arise as to the amount of the additional allowances to be given according to the city or the Province in which that employee is stationed?—I am suggesting at another place staff and wages boards. If you have wages boards in different localities they will settle all these questions.

B-3443. You think there will be no further clamour for additional allowances to meet the extra cost in some particular place or district?—If you adopt the same machinery as they have in England under the English Railways Act, 1921, Part IV, which I think are known as Whitley Committees or Whitley Councils, there should be no difficulty whatever.

B-3444. In your memorandum you speak of the abuse of the fines fund; you state that it is mostly used for the benefit and enjoyment of Anglo-Indians and Europeans. At another place you recommend that unclaimed wages should be used for the benefit of the workmen in just the same way as the fines fund. Is not that a contradiction?—I do not mean that the fines funds should continue to be abused; it should be properly used in consultation with the Railwaymen's unions' representative; that is what I mean. The fines fund should not be used, as at present it is used in the absolute power of the Agent.

B-3445. Colonel Gidney suggested, and you agreed with him, that as far as unions are concerned it would be of immense benefit to the staff if the

Agents and officials met the unions and discussed things with them to try to come to cordial arrangements. Are you aware that in Bombay very great efforts have been made to that end? Are you also aware that so much were we and the Bombay union coming together to discuss these that it was too much for the union, and their Secretary who was meeting us was immediately discharged on the report, as I understand, that he was a spy of the Agent?—I was President of the B., B. and C. I. Railway Union at Parel up to about March or April last, and as far as I know I had no invitation from the authorities to consult with them. I do not know what they are doing now because the union is not under my direction.

B-3446. You have stated that the fines fund is abused. From whom mainly is it collected?—From the Railway staff.

B-3447. From the lowest staff?—Yes.

B-3448. Do they get much benefit from it?—The lowest staff get the least benefit from it.

B-3449. In your memorandum you say that Indians claim equal pay for equal work?—Yes.

B-3450. Will you kindly explain that?—What I have been maintaining is that everybody should get the value of his work; that is to say, if I do the same work as another man is doing, I should not get more pay than that man. Equal pay for equal work is a saying which is very fully understood.

B-3451. What is the particular application of it here? Do you think Indians are not paid equally for their work?—Certainly not.

B-3452. And others are paid disproportionately for the work they are doing?—They are paid unduly high wages as compared with the Indians. The Indians do not get a living wage while others may be getting a living wage. So far as subordinates are concerned, I do not think any subordinate is getting more than he actually earns.

B-3453. With regard to education do you think the Railway Company has taken sufficient care of the children of the Indian labourers?—No, they take very little interest or care of the children of Indians.

B-3454. Are there any night schools for teaching labourers?—While I was in the service I started one, but that was abolished directly, I left Ajmer.

B-3455. Do you think the wages that are being paid to the Indian labourers here are sufficient and living wages?—Certainly not; any wage below Rs. 35 is not a living wage.

B-3456. You have travelled on the Continent?—Yes.

B-3457. You must have seen how the skilled and unskilled labourers lived there?—Yes.

B-3458. Do you think they live there in such a lordly way as some of the so-called skilled labourers and unskilled labourers here who belong to the European and Anglo-Indian classes?—They do not live in that lordly way in England; they live like workmen.

B-3459. Do you know anything about the working of the staff committees?—I do not know anything about their working, but I know they are trying to get in the way of railway employees' unions.

B-3460. To what would you ascribe the indebtedness of the labourers here?—Low wages. What Mr. Kaboor-ud-din Ahmed called "eternal indebtedness" is due to these low wages; the men cannot get out of it though you may form a thousand credit societies.

B-3461. You live very near the Railway hospital?—Yes.

B-3462. Do you think that sufficient attention is paid to the labourers and other persons who attend the hospital?—People go to private practitioners.

B-3463. Why?—For treatment because they do not get proper treatment at the hospital.

B-3464. In its memorandum the Railway Board says that in Ajmer and in Bombay there is sufficient accommodation for the artisan class, and that it is not necessary to provide any housing accommodation or land for them. Do you think there is sufficient housing accommodation in Ajmer?—No; the Indians have been totally neglected in the matter of housing accommodation in Ajmer.

B-3465. But do they get sufficient accommodation anywhere; in the city, and other places?—I would not live in the city for a day under such conditions; the accommodation is not at all healthy. One of the Members of the Commission has remarked about tuberculosis; that disease is extending in Ajmer on account of insufficient air.

B-3466. I think you have seen that portion of Nagra where many people live?—Yes.

B-3467. What sort of huts are there?—In 1908 as Municipal Commissioner of Ajmer I went round and I found men who once get on the ground never rose.

B-3468. *The Chairman*: Did the Municipality do anything to cure that?—It was not within their province.

B-3469. *Sir Ernest Jackson*: You have been on the Municipality?—I was on the Municipality.

B-3470. Do the Railway assist the municipality in any way in cleaning the streets?—They pay only for the work the Municipality does for them.

B-3471. The majority of the inhabitants of Ajmer are Railway people?—Half the population of Ajmer is connected with railway employees.

B-3472. *Colonel Russell*: You say that the medical aid provided by the Railway administration is neither adequate nor acceptable. Will you let us know in which direction medical aid is neither adequate nor acceptable?—There is no provision for the families of Indian railways employees. That is one inadequacy. The other is that the men themselves have to go to private practitioners.

B-3473. Is that the only reason?—That is the reason, and that is sufficient reason; the men cannot get treatment and so they go elsewhere.

B-3474. You say they cannot get treatment at the Railway hospitals?—They do not get proper treatment. The men complain; of course I would not like to repeat their complaint, but they bitterly complain.

B-3475. Of what?—They complain that they are not attended to; they are being driven away.

B-3476. The registers show there is an attendance of about 600 per day?—There may be, but this is what I hear from the men; I never go there myself.

B-3477. *Mr. Cliff*: Have you any knowledge of the Agent of this Railway proceeding in a general way to establish a minimum wage?—No.

B-3478. Therefore if the Railway Board suggested that he was, they would not be speaking the truth?—I cannot say, he may have made proposals, but not to my knowledge.

B-3479. Do you agree with the Agent of this Railway that there were two trade unions formed in 1920?—Yes.

B-3480. Do you agree with the Agent of this Railway that neither of these unions was recognised till 1926?—I had experience of that. They refused repeatedly. The men wanted the union to be recognised, but the Agent refused to recognize it until 1926.

B-3481. And do you agree that they were not recognised till that date?—Yes.

B-3482. Can you tell me whether in the formation of these staff committees the trade unions were ever consulted?—No.

B-3483. Can you tell me the reason why guards on mail and passenger trains work shorter hours than the drivers?—No, I cannot give you information on that point.

B-3484. Is it within your knowledge that the drivers of mail and passenger trains work 70 hours a week?—I cannot say.

B-3485. There were some questions on the minimum wage. Would you be prepared for the purpose of establishing minimum living rates of wages to agree to a series of wages boards being set up in order to determine these wages rates?—Certainly; local boards in each local centre.

B-3486. I understand you are prepared to speak to us on behalf of the trade union to set up similar committees to what are in existence in England?—Exactly.

B-3487. Is it your view that the representatives of the Railway trade unions and the Railway workpeople themselves are competent to put their own business before such bodies?—Some of them are if the railway restrictions are withdrawn. If the men are allowed to form their unions freely, I should say a number of educated men will join the unions and guide the unions on very sound lines.

B-3488. And you believe they will be capable of transacting their own business?—Certainly.

B-3489. Will you kindly tell us the kind of restriction you refer to?—I might in a general way say that the Presidential addresses at the Indian Railway Conference Association from 1920 had been generally against the formation of unions by railwaymen.

B-3490. Reference has been made to grades of labour enumerated A, B, C, D and E. Might a man on the E grade be doing exactly the same work as a man on the D grade?—Exactly.

B-3491. Might he be doing the same work as a man on the C grade?—Yes, very nearly the same work.

B-3492. Did the two separate unions of this railway represent the same class of labour that is employed here in Ajmer?—No. The B., B. & C. I. Railway Employees' Union represents the workshops staff at Parel. The B., B. & C. I. Ry. Men's Association represents the running and station staff and some other staff also of which I am not aware.

B-3493. So that one of the unions represents the men working in a similar shop to the one at Ajmer?—Yes. This Ajmer union should have been a branch of the Bombay union but for the obstacles thrown in their way.

B-3494. You are in favour of paying wages weekly?—Yes.

B-3495. What is your reason?—The wages are low, although the railway authorities will not admit, but charge the men with extravagance. Weekly payment of wages will enable the men to pay the shop-keepers more quickly and clear off their liabilities.

B-3496. If wages were paid weekly, in your opinion there would be less indebtedness, because the workers would be able to clear their liabilities to the shop-keepers more quickly?—Yes, that is so.

B-3497. Do any of the railway men who are paid wages monthly go to the banias for advances?—A good many go. But then there is also the co-operative stores which gives credit to members of the society.

B-3498. Is that a co-operative society which sells food and clothing?—I do not know if they sell clothing. They sell food grains on credit during the month.

B-3499. Is the credit given free or have they to pay interest?—No, that is free to the members of the Society.

B-3500. Instead of paying weekly, they pay monthly?—Yes.

B-3501. Some of the workers go to the banias. Have you any experience of that?—I have not myself gone to a bania, but I know from others who have gone that the bania charges more for his goods because he gives credit. Buying with cash is always cheaper than buying on credit.

B-3502. So that the bania charges more for your food?—Certainly.

B-3503. *Mr. Ahmed*: What do you think is a living wage for a labourer with a wife and two children?—Rs. 35 is the minimum to cover the cost of food, clothing, housing, medical aid and education for children, and a little saving against the rainy day.

B-3504. But some people told us here yesterday that they got only 9 to 11 annas. Is that a sufficient wage?—No, that is not.

B-3505. So you are in favour of increasing that?—Yes.

B-3506. The employers generally say that workshop labour is paid more than agricultural labour in the villages; and make out a case for not increasing their wages. Do you not think that agricultural labourers in the villages get some facilities from the headmen of the village, and that living is much cheaper in a village than in a town?—Yes.

B-3507. To live in Ajmer it costs as much as living in Bombay or Calcutta?—Yes. I am an agriculturist myself and I engage men. Besides paying them their wages I give them many other things such as food, clothing and surplus produce if any.

Is that the case with other agriculturists here also?—Yes.

B-3508. So that you cannot compare factory labour with agricultural labour?—No.

B-3509. *The Chairman*: Do these happy people get Rs. 35 a month?—Without Rs. 35 they get all the necessaries of life to keep them normally healthy and strong besides keeping them out of debt.

B-3510. That is equivalent to Rs. 35 a month?—Yes.

B-3511. *Mr. Ahmed*: Do you not give your labourers half a seer of milk free every day and sweets and things of that sort on festive occasions?—Yes.

B-3512. Have you ever heard of an Agent of the Railway or an officer of the Railway giving feasts to the labourers on any occasion?—No, never.

B-3513. Do they pay wages to the workmen if they do not go to the workshops on account of illness?—No, they do not.

B-3514. They give some holidays such as the Puja holidays and so on. Do they pay them their wages for those holidays?—For some holidays such as King's birthday altogether 15 for the whole year, they pay. For the rest they do not.

B-3515. With regard to housing do you not think that these workers should be given adequate accommodation in the towns?—Yes, preferably in the suburbs.

B-3516. With regard to construction of wagons, are not all the necessary materials available here in India except probably wheels and axles?—Yes, even they can be cast in the foundries. Ajmer has taken a lead in the matter; they have been manufacturing rolling stock such as engines since 1897.

B-3517. Are you in favour of manufacturing them here instead of importing them from foreign countries at enormous cost?—Yes. I am for the manufacture of these articles not only here, but throughout India.

B-3518. The Railways are not running their business on a commercial basis if under the circumstances they get their requirements from foreign countries?—No.

B-3519. What is the reason for it?—Only a disinclination to deprive European countries of this work. On the other hand if the work were done in India there would be less unemployment, and more technical skill and experience would be accumulated in the country. That would indirectly benefit agriculture also.

B-3520. *Sir Alexander Murray*: You say that Rs. 35 is the minimum living wage?—Yes.

B-3521. For how many days' work in the month?—26 days, with the usual allowance for leave.

B-3522. How many days' leave would you have? We have had evidence from the workers yesterday that they should have 30 days' privilege leave?—Yes, that is allowed under the Government leave rules.

B-3523. In addition they suggest 10 days' casual leave?—Yes.

B-3524. There are 52 Sundays in a year?—Sundays are universal holidays.

B-3525. They have many other holidays such as Bakrid, New Year's Day and so on which come to 26 a year. You will give these public holidays also?—Yes. What does the total come to?

B-3526. The total comes to 118 holidays including privilege leave, casual leave, Sundays and Gasetted holidays. That leaves 247 working days in a year of 365 days, or eight months in a year. Do you approve of a man working only eight months a year?—The Government have done it and I would not alter the Government code. I think whatever Government have done is right.

B-3527. I am very glad to hear you say a good word about Government. Do you think it a reasonable proposition that an ordinary menial labourer should be required to work only for 8 months a year?—Yes. Every man is an equal servant. The menial labourer is also a man like everybody else.

B-3528. I am sorry I said that. Do you think that an ordinary working man on the railway should work only eight months a year?—If the higher officials do only eight months a year, why should not the poor men also have the same privilege. Every man must have the same privileges. As an employer myself I treat my workmen just like myself.

B-3529. I am glad to hear that from you. But do you think it reasonable that they should get 12 months' pay at Rs. 35 a month and work only for 8 months a year?—How much per day would that work out to?—Holidays must not be counted at all; they are intended for rest and recuperation, just the same as you have.

B-3530. What do you think is a reasonable pay for a working day?—You will have to divide Rs. 35 by 30 to get that. That is a simple question in arithmetic.

B-3531. You divide Rs. 35 by the number of days in a month. I want you to divide the total of Rs. 35 per month for 12 months by 247 days, because he is only working for so many days?—Non-working days go towards the rest of the worker. He deserved the same rest as others.

B-3532. Sir Victor Sassoon : I was most interested in that remark of yours. But do you actually give 118 holidays in the year to your workmen?—My workers have very easy work.

B-3533. But have they 118 holidays a year?—They get as many as they require. I do not deduct from their monthly pay anything for absence through sickness.

B-3534. But would the number of holidays go up to 118?—It may even exceed that. I give them easy work to do. I do not exact the pound of flesh.

B-3535. Besides so many concessions your agriculturists get an equivalent of Rs. 35 a month. You also say that they get 118 holidays in the year and even more, for rest. Do you maintain that this is not peculiar to you and that this is usual among employers of agricultural labour round about the country here?—The economic conditions in India are very bad. There is unemployment and poverty. So much so, the poor workers are driven to accept whatever you give. That does not mean that the low wages they get are the prevailing wages everywhere or that they are sufficient for their living.

B-3536. I want you to be quite clear on this. This living wage of Rs. 35 a month the equivalent of which you give your agricultural workers, is this

not only what you are giving and therefore exceptional, but the usual rate in this part of the country?—The majority of agriculturists do their work themselves; only a few like myself employ labour.

B-3537. Would you say that those who are working for themselves are getting an equivalent of the standard of living of a railway man getting Rs. 35 a month?—Yes, otherwise they would not live; they would not continue their agricultural pursuits.

B-3538. Do you admit that the agriculturists form the large majority of the population in India?—Yes.

B-3539. In that case the large majority of the population of this country is living on an equivalent of Rs. 35 a month?—Certainly they have the same comforts.

B-3540. In your memorandum you have stated that the condition of agriculturists in India is more miserable than that of an average factory worker?—How do you reconcile the two?—They should adopt methods of co-operation such as are in vogue in Denmark. You would find them advocated in my book, "Agricultural Co-operation in Denmark" which I wrote after visiting that country two summers. If our agriculturists suffer here now, it is because they do not adopt those methods.

B-3541. So that what you maintain is not that the agriculturists are at present actually earning Rs. 35 a month, but that is what they might earn if they followed the methods of co-operation of the Danes?—It is difficult for me to answer that. A rural survey will have to be made in order to understand the real situation. I can only speak for the agricultural labourers whom I employ.

B-3542. Would you say, not only for yourself but also generally for the people round about Ajmer,—I am not asking you to go to Madras or to Kashmir to let us have these details—that the agricultural labourer whether working for himself or working for a good employer like you, gets the equivalent of Rs. 35 a month?—If that were so, that would have a great deal of influence on our work?—I must draw a line between agricultural labourers and railway employees. Take a pointman. If he puts a train on the wrong line he is liable to be criminally prosecuted and sent to jail. The agricultural labourer has no such liability.

B-3543. Would you put a money value on that?—Why not? The man takes such risk.

(The witness withdrew.)

**Miss J. E. COPELAND, M.A., Church of Scotland Mission House, Ajmer, accompanied by Mr. Kanhaiyalal Gargiya.**

B-3544. *Miss Power*: In your memorandum you say: "There should be some organized system of recruiting labour. The need is specially urgent in the matter of getting boys into suitable employment when they leave school and in the matter of securing a better system of apprenticeship and training, either within the area or beyond."

You are dealing here with the comparatively small percentage of literate children, or rather boys?—Yes.

B-3545. How do they now find employment?—This does not refer to railway employment only, but to all kinds of employment. It seems to me that there is a wastage when boys leave school and do not immediately get into suitable employment. If there were some means by which the boys might learn the type of work most suitable to their capabilities, if they could learn what might be required of them for their vocation in life, they might stay a little longer at school or be drafted into vocational training classes. In this way the wastage might be avoided.

B-3546. But what is open to these literate boys now except the railways?—There are various forms of work in which they could be engaged: printing presses, carpenters' shops in the city and several other kinds of skilled work. There are various factories, where employment can be had. The only thing is that they should know the conditions of work in each place, the amount of education that is required, the terms of apprenticeship and so on, so that they may be drafted into some suitable occupation immediately on leaving school and the present waste avoided, with profit to the boys and to industries generally.

B-3547. Are there in fact many false starts? Does a boy drift from one occupation to another before he finds a suitable one for himself?—My experience is that a boy generally wastes a couple of years after leaving school. He works casually, sometimes here and sometimes there before he gets into a suitable occupation. It does not seem to me as if most of the boys go on a steady march towards some higher post.

B-3548. Would you like some sort of vocational guidance?—Something similar to what the After-care Committees do at home.

B-3549. Who should start such committees? Would you have them done by Government or by voluntary organisations?—The After-care Committee for boys might be a voluntary one, run very definitely in connection with schools to begin with. That would open the field for investigation into what is necessary. People like headmasters and teachers would know that an enquiry along these lines into the boys' capabilities might be made and help given to them to get into suitable occupations.

B-3550. Has that sort of thing ever been attempted anywhere?—I am not aware of anything in this district.

B-3551. Not even by missionary societies or other such bodies?—In practice Missionary societies help those boys who are known to them. My proposal was about boys who were not in touch with the missionaries or with people who knew about the conditions of labour who could give them any help. We are able to give for example in our mission some help to the boys we know.

B-3552. In your memorandum you say:

"There is considerable unemployment. The B., B. & C. I. Rly. which is the largest employer of labour in the area, is reducing its staff of workmen." I expect you probably heard this morning that that statement was challenged?—Yes.

B-3553. What is your experience with regard to unemployment?—I do not put this down as the only reason for unemployment. That is merely one reason which strikes the eye of an ordinary observer, that men are

seeking work and that work is not available in the largest concern in the district.

B-3554. What sort of men are seeking work?—Some are of the coolie class, some are semi-skilled labourers. There are also some fitters and carpenters, etc., etc.

B-3555. Where do they come from?—Ajmer.

B-3556. They are residents of the town?—Mostly.

B-3557. You say there is a shortage of houses for working people in Ajmer. The Railway authorities say that they do not provide accommodation for workers of the grade of artisans as there is ample to be obtained in the town. What is your experience?—My experience is that the housing accommodation is neither sufficient nor healthy. Ajmer city is very crowded and the sanitary conditions are not good. It would be a great benefit if houses could be provided on the outskirts.

B-3558. Do you mean municipal houses, or houses supplied by the Railway?—Either.

B-3559. Are there houses available beyond the means of those seeking them?—I daresay there are.

B-3560. You say that the working conditions are on the whole satisfactory in the bigger concerns. I take it you mean by that those places which come under the Factory Act?—Yes.

B-3561. Speaking of work done in the home, you say that the conditions are not good because of the low rates of pay, bad sanitary arrangements and the small size and bad ventilation of most of the workers' houses?—I would like this Commission to make some enquiry into these home industries. Either the work is brought to the women's homes or else they go and get it and bring it back.

B-3562. Have you any idea as to what a woman earns on that kind of work?—About six annas a day if they work for about 10 hours.

B-3563. You refer to crèches at particular mills. Is your complaint there that the crèche is simply a space allocated for the children, without any convenience or supervision, and that therefore very little use is made of it?—Yes. There are two sheds available but no one is in charge. There is no furnishing, and no other arrangements are provided.

B-3564. How much are these sheds used in practice as the result of there being no supervision?—As a matter of fact the children just play around the yard. They do not go into the building provided for them. If there was some one in charge, who could look after the children, give them treatment, such as a daily bath, and so on, it would not only benefit the children, but it would be an object lesson to the mothers. So far as I know the mill authorities would be quite willing to undertake such a responsibility.

B-3565. How many women are employed in the three mills to which you refer?—About 150, but very many more are employed in the ginning factories during the season.

B-3566. You say that the mills contribute to the schools in the city but that these schools are not attended by the workers' children who are almost entirely illiterate. Is that because the children are themselves at work?—No. The reason is that the parents are not alive to the necessity of sending their children to school.

B-3567. You say the working hours in the mills should be reduced from 10 to 9 or 8 per day. Is it your contention that if the hours were reduced to, say, 8 per day, the same volume of output would be achieved?—I do not think that that result would be achieved immediately, but my feeling is that if the women (and I only refer here to women) worked only 8 hours per day,

there would then be time for them to attend to their other interests. Welfare work could be done amongst them. If they work ten hours a day, for part of the year at any rate, they have no time to look after any other interest. I think it is in the interests of better work that the working woman should be made more intelligent, her outlook broadened and her standard of living raised. I do not see how we are going to raise her standard of living unless she has some time in which to give attention to matters of hygiene, better living, and so on. I think if the women only worked 8 hours a day, thus giving time for some uplift work to be done amongst them, it would result in more concentrated effort.

B-3568. If there were a shorter legal working day for women than for men, do you not think that might have the effect of penalising the employment of women?—It would probably have that effect.

B-3569. If there is any lowering of the hours of work, do you not think it should apply both to men and to women?—Yes, I think it should.

B-3570. Colonel Russell : Can you give us any idea of the death rate and infant mortality rate in Ajmer?—I have not the figures.

B-3571. I understand you are associated to some extent at least with the Mission hospital here. You will no doubt be able to give us some information as regards the incidence of various diseases here. Is it your experience that tuberculosis exists to a high degree in Ajmer?—Yes. In a recent classification of cities, Ajmer was put down as a C. 3 city, as far as tuberculosis was concerned. That means the highest death rate from tuberculosis.

B-3572. Has that anything to do with the question of the shortage of houses and overcrowding?—Yes. One factor is the overcrowding of houses. There are other factors also.

B-3573. You say the conditions are not good because of the low rates of pay. Can you give the Commission some family budgets of the lowest grade of worker? Yes. I have one or two budgets here which have been given to me by coolies and workmen. Here is one earning one rupee a day, of eight hours. He may, by doing overtime, earn Rs. 1/2 or Rs. 1/4. He spends on food alone Rs. 22/12; on house rent Rs. 4/4. His monthly earnings average Rs. 26.

B-3574. How does he make his both ends meet?—He is in debt, but he ekes out his earnings by doing odd jobs out of work hours and on holidays.

B-3575. Does the wife add to the income?—Not in this case. Here is another budget of a workman earning 12 annas a day; average monthly earnings Rs. 19 or 20. He pays Rs. 18/4 for food alone—husband, wife and child. He pays Rs. 3 for rent, making a total of Rs. 21/4, and his average earnings are Rs. 20. He also works overtime. Here is another one. The man earns Rs. 15, and his food bill only comes to Rs. 12/15, but I think his food items miss out certain vital and necessary things, for instance, ghee.

B-3576. What about vegetables?—Vegetables are very scant.

B-3577. The previous witness, I think, said that the minimum wage ought to be Rs. 35. What is your opinion on that figure?—Personally I think that is perhaps rather high; I think the average food necessary is about Rs. 6 per adult.

B-3578. That would be Rs. 12 for a man and his wife?—Yes.

B-3579. And supposing there were three children varying in ages from 10 to 2 years?—You could count them as two adults.

B-3580. That would be Rs. 24 on food alone. What about clothing?—I think that could be done—of course we are speaking of the minimum—within Rs. 2 per month.

B-3581. Then he would get medical treatment free, I suppose?—Yes.

B-3582. Do you add anything else to that budget?—Probably he has to pay rent.

B-3583. How much?—On an average Rs. 3.

B-3584. Anything else?—There would be some incidental expenses; he will probably have to contribute to his community life in some way, like church collections, etc.

B-3585. That comes to over Rs. 30?—Yes.

B-3586. *Miss Power*: What do you say would be the living minimum wage for a family of five in Ajmer?—I think about Rs. 30 would be a very good sum. A great many people manage on less. I have a budget, for example, of a man who has his wife and four children; he has kept out of debt on Rs. 15, but, of course, as I said, that omits certain necessary items from his diet.

B-3587. When you say he can manage on Rs. 30 it presupposes that his wife is not working?—Yes, taking the family income as Rs. 30.

B-3588. *Colonel Russell*: Would you tell us who compiled these budgets?—I collected them.

B-3589. From the individuals themselves?—Yes.

B-3590. You are satisfied that these figures are reasonably correct?—Yes, because I have a basis for comparison. You take the budget for food, for example, in our hospitals or schools as a criterion. Of course, you can do things very much more cheaply in large quantities but still that gives you a basis for comparison.

B-3591. What would be the average monthly cost for a pupil in your school? I think you have girls there upto 15 years of age?—Yes, up to 18. The average is Rs. 5-4-0 per head.

B-3592. You can feed them on that?—Yes.

B-3593. Does that include articles like ghee and vegetables which would give them vitamins that are so necessary for a good diet?—Yes; and meat twice a week.

B-3594. With regard to the question of welfare work, you would like to have additional trained midwives to look after the wives of workers and children of men and women workers?—That only refers to the Beawar Mills, Yes.

B-3595. Are trained midwives available?—Yes; I think they would be available.

B-3596. You could get a sufficient number of recruits for that class of work?—Yes, they would be available.

B-3597. In your memorandum you say "Apart from this (that is, a Christmas tree and sports day I take it) no definite welfare work is being done among the Railway Indian employees."

On what lines do you think such definite welfare work should be done?—I would like to see either a welfare worker appointed by the Railway, or facilities granted in the way of a house, and perhaps a hall, which would become a community centre for the lowest paid Indian workmen. If the Railway could not appoint an officer, perhaps the Y. M. C. A. might be approached to send a man, if they could be guaranteed suitable accommodation.

B-3598. You think it might be possible for the Railway to appoint a welfare officer of its own?—I think that would be best, if they could see their way to do it.

B-3599. Should that welfare officer be a male or a female?—In Ajmer certainly a man, because there are not many women workers here, and none in the Railway.

B-3600. You say "This attempt at welfare should be resumed". Why was it stopped?—It was stopped, because that particular social worker went home.

B-3601. It was dependent on a voluntary worker?—Yes—this particular effort to which I refer here.

B-3602. You refer to the question of crèches. You approve of the principles of having crèches for the accommodation of children of women workers?—Yes, because I think they are a valuable means of training a woman how to look after her children, and of training the children in good habits.

B-3603. Have you any experience of the working of crèches in India?—No, not for any lengthy period.

B-3604. Would you be surprised to know that in several instances we have learnt that they have been failures?—I know there are difficulties, especially if the crèches are outside the mill premises. In the case of the particular mills mentioned, I think if the existing sheds were improved, and if it were made possible for the children to be near their mothers who could go and see them at any time they wanted to, some of the difficulties might be met. My idea is that a well-qualified woman should be in charge of every crèche.

B-3605. *The Chairman* : Have the employers been asked to provide these crèches?—The matter has been brought to their attention, and is at present engaging their attention.

B-3606. It is not that they decline to provide them?—Not at all; I think they will favourably consider the matter.

B-3607. *Colonel Russell* : Again you say "Beawar separate latrine and bathing arrangements should be provided." Does it imply that there are no separate latrines or bathing arrangements?—There are separate latrines in one sense, but the compound is so big that it seems to me that the women's arrangement might be put in one corner and the men's in another. I was told that women did not use the bathing arrangements, which were excellent, and I thought that if the authorities provided them in another corner they would probably be utilized.

B-3608. Certain complaints have been made to the Royal Commission that the medical treatment and advice given to the workers in Ajmer is inadequate. Do you consider that there are any grounds for any complaints or have you heard of such complaints?—My experience would lead me to suppose that there were no grounds.

B-3609. Would you prefer to say anything more?—So far as I know, they get very good treatment in this hospital. I have visited the railway hospital where the patients are really very happy and contented and my own experience would lead me to suppose that there were no grounds for complaint.

B-3610. You are closely connected with the mission hospital. Is any large proportion of their patients drawn from railway workers communities?—I have not gone into the lists of patients to know that; but in the case of *parda* women certainly, because there is no *parda* ward in the railway hospital. A great many *parda* women come to the mission hospital, but I do not know whether they belong to the railway workers communities.

B-3611. But do you think it would be a reasonable demand if the workers should ask for *parda* wards in the railway hospital?—It would be quite reasonable. The railway hospital is in one part of the city while the mission hospital is in another, and if the railway hospital provides *parda* wards it will meet the needs of those who are nearer to that end.

B-3612. *Mrs. Martin* : You said that medical facilities are provided for females in the railway hospital. Can you tell us how many women go there as in-patients?—I have no idea.

B-3613. How many Indian women nurses or midwives are there?—I do not know the number of staff.

B-3614. Do you know what provision is made in the hospital for women in-patients?—We learnt this morning that two wards have been set apart for Indian women.

B-3615. Is there any Indian woman doctor who attends on them?—I think the sister looks after them.

B-3616. Is there a lady doctor?—No.

Are there Indian nurses?—There are Anglo-Indian nurses.

B-3617. It does not matter whether there are Indian nurses or Anglo-Indian nurses, but are the nurses in sufficient number?—I think so, as far as my knowledge goes.

(The witness withdrew.)

## INDEX

### Diseases.—contd.

#### Cholera :

- Death rate during epidemics, *Gill*, II, 734.
- Prevalence, *Punjab Chamber of Commerce*, I, p. 77; *Millar*, I, p. 394.
- Prevalence, and preventive measures, *Webb*, I, pp. 124, 140, 142, II, 2019.
- in Salt mines, *Hoyle*, I, pp. 31, 34.

Chronic bronchitis, extent, *Chief Commissioner, Delhi*, I, p. 120.

Conjunctivitis, in Salt mines, *Hoyle*, I, p. 35.

#### Diarrhoea :

- Deaths from, *Punjab Government*, I, p. 8; *Delhi Municipal Committee*, I, p. 166.
- Prevalence, *Gill*, I, p. 65.

#### Dysentery :

- Death rate greater in towns than in rural districts, *Punjab Government*, I, p. 8.
- Prevalence, *Gill*, I, p. 65; *Millar*, I, p. 394.

Epidemics, control, method of, and extension advocated, *Webb*, II, 2017-8, 2025-7.

Goitre, in salt works, *Hoyle*, I, p. 35.

Granular lids, in salt works, *Hoyle*, I, p. 35.

#### Hookworm :

- None, *Webb*, I, p. 142.
- in Salt mines, no evidence of, *Hoyle*, I, pp. 32, 34.
- Uncommon, *Millar*, I, p. 394.

#### Industrial :

##### Anthrax :

- no Evidence of, *Abel*, I, p. 45.
- Wood disinfection, power to frame rules re, *Dept. of Industries*, I, p. 190.
- no Evidence of, *Mahtab Singh*, II, 1614-5.

Lead manufacturing processes, legislation not necessary, *Dept. of Industries*, I, p. 190.

##### Lead poisoning :

- Extent, *Letton*, I, pp. 341, 344; *Millar*, I, p. 394.
- Measures re, *Chief Commissioner, Delhi*, I, p. 120; *Dept. of Industries*, I, p. 190; *Letton*, I, p. 341.
- in Printing presses, no evidence of, *Abel*, I, pp. 45, 126, II, 1420-1.

Medical services, strengthening of, in areas where many unhealthy industries, need for, pointed out to local Governments, *Dept. of Industries*, I, p. 190, (*Shillidy*), II, 2602.

None, *Punjab Chamber of Commerce*, I, p. 77.

Prevalence, lack of information re, *Dept. of Industries*, I, p. 190, (*Shillidy*), II, 2691.

Printing presses, no medical examination for, *Coombs*, II, 2538-40.

no Special inquiry into, *Abel*, II, 1062.

Special medical service not considered necessary, *Dept. of Industries*, I, p. 190.

Washington Conference recommendations, position of India re, *Dept. of Industries*, I, p. 190.

#### Leprosy :

Investigation re. in progress, *Webb*, I, p. 142.

Uncommon, *Millar*, I, p. 394.

#### Malaria :

Absence caused by, extent, *Punjab Chamber of Commerce*, I, p. 76.

Death rate from, *Delhi Municipal Committee*, I, p. 166.

Improvement of physique and general health conditions needed for prevention of, *Webb*, II, 1965-9.

Prevalence, *Gill*, I, p. 65, II, 735; *Punjab Chamber of Commerce*, I, p. 77, (*Mukerjee*), II, 1736, 1738; *Daymar Curjel Wilson*, I, p. 111; *Govt. of India Press Union*, I, p. 145, (*Abdus Subhan*), II, 3164-5; *Millar*, I, p. 394.

Prevalence and effect on national health, *Webb*, I, pp. 124, 140, 141-2, II, 1829-30.

in Salt works, *Hoyle*, I, pp. 31, 34.

#### Mal-nutritional :

Absence of, *Gill*, I, p. 71, II, 664.

Extent and causes, *Webb*, II, 1914-7.

Osteomalacia, prevalence, *Daymar Curjel Wilson*, I, p. 111; *Gill*, II, 664-8.

Phtisia, death rate from, *Delhi Municipal Committee*, I, p. 166.

## INDEX.

### Diseases—*concl'd.*

#### Plague :

Death rate during epidemic, *Gill*, II, 734.

None, *Webb*, I, pp. 124, 140, 142.

Pneumonia, death rate from, *Delhi Municipal Committee*, I, p. 156.

#### Respiratory :

Prevalence, *Gill*, I, p. 65.

among Seamen, *Deptt. of Commerce*, I, p. 329.

#### Small pox :

Death rate from, *Delhi Municipal Committee*, I, p. 156.

practically Extinguished by vaccination, *Webb*, I, pp. 124, 140, 142, II, 2019.

Trachoma of the eyes, extent, *Webb*, I, p. 142.

Tubercular, extent, *Gill*, I, p. 65, II, 638, 733.

#### Tuberculosis :

Absence of ghee, effect on, *Webb*, II, 1943-5.

Housing conditions, effect on, *Ahmad Shah*, I, p. 87 ; *Mukerjee*, II, 1754 ; *Copeland*, II, 3571-2.

Prevalence of, *Punjab Government*, I, p. 8 ; *Gill*, I, p. 65, II, 637a (p. 272) ;

*Dagmar Curjel Wilson*, I, p. 111 ; *Webb*, I, p. 124 ; *Millar*, I, p. 394 ; *Copeland*, II, 3571-2.

Typhoid fever, death rate from, *Delhi Municipal Committee*, I, p. 156.

#### Venereal :

Prevalence, *Webb*, I, p. 141.

among Seamen, *Deptt. of Commerce*, I, p. 329.

among Women industrial workers, *Ruth Young*, II, 3035-40.

### Dismissals :

Causes, *Abdus Subhan*, II, 3219-23.

no Written agreement on recruitment, *Mehtab Singh*, II, 1595-7.

**DODD, R. J. S.**, Registrar of Co-operative Societies, Punjab : I, p. 75, II, 749-88, (p. 273).

Hours, industries : *Abel*, I, pp. 48, 53, 127, 389 ; *Punjab Chamber of Commerce*, I, p. 79 ; *Ghani*, I, p. 101 ; *Dept. of Industries*, I, p. 209.

Carpet Factories : *Abel*, I, p. 49 ; *Rawley* I, p. 61, II, 971-6, 976 a-c (pp. 274-5), 977, 1023 a (p. 276) ; *Ghani*, I, p. 101 ; *East India Carpet Company*, I, p. 116, (*Stevens*), II, 1123-4, 1199, 1254-5, 1279-81.

Fixed, employers not opposed to, *Stevens* II, 1235-6.

no Fixed limits, *East India Carpet Company*, I, p. 116.

Intervals, *Davies*, II, 1251-3 ; *Stevens* II, 1253.

Preparing warps, time lost by, *Stevens*, II, 1128-31.

Reduction of, dispersal of work to cottages as result of, unlikely, *Rawley*, II, 986-9, 1025c-d (p. 276).

#### Children :

Carpet factories, see that title.

under Multiple shift system, working of, *Dept. of Industries*, I, p. 218.

Particulars of, *Dept. of Industries*, I, p. 209.

Provisions of Factories Act, *Dept. of Industries*, I, p. 208.

Reduction advocated and proposals re., *Ghani*, I, p. 102.

Regulations suitable, *Abel*, I, pp. 50, 127, 390.

## INDEX.

### Hours, Industries—*contd.*

#### Daily limit :

- Effect good, *Abel*, I, p. 48 ; *Punjab Chamber of Commerce*, I, p. 79. (*Mukerjee*) I 1735a-c (p. 278).
- Provisions of Factories Act, *Deptt. of Industries*, I, p. 208.
- Days of rest, *Punjab Government*, I, p. 16 ; *Abel*, I, pp. 49, 53, 127, 390 ; *Department of Industries*, I, p. 209 ; *Copeland*, I, p. 393.
- Exemptions, conditions of, *Abel*, II, 872-6.
- International Convention,—position of India, *re.*, *Department of Industries*, I, p. 234.
- Provisions of Factories Act, *Department of Industries*, I, p. 208.
- Effect on health, collection of statistics *re.*, suggestions, *Gill*, II, 683-6.
- Eight-hour day advocated, *Ghani*, I, p. 101.
- Exempting provisions of Factories Act, *Department of Industries*, I, pp. 209-10.
- Exemptions, *Abel*, I, p. 49, II, 1441-2 ; particulars of, *Deptt. of Industries*, I, p. 211.
- Fleur and oil mills, intervals for rest under shift system, regulations *re.*, *Abel*, I 1081-4.

#### Forty-eight hour week :

- Advocated, *Ghani*, I, p. 101 ; *Provincial Trades Union Congress*, I, p. 115.
- Establishment of, not yet possible in seasonal factories, *Punjab Government*, I, p. 16.
- Ginning factories, *Punjab Government*, I, p. 17 ; *Dagmar Curjel Wilson*, I, p. 111, I 830, 965-6 ; *Abel*, II, 832, 3280-1 ; *Shri Ram*, II, 1723-5.
- Production dependent on length of, *Abel*, II, 3283.
- Indian States' Factories, *Abel*, II, 3282.
- Intervals, *Punjab Government*, I, p. 16 ; *Abel*, I, pp. 49, 127, 390, II, 1439-40
- Punjab Chamber of Commerce*, I, p. 79 ; *Ghani*, I, p. 101 ; *Mehtab Singh*, I, p. 134
- Deptt. of Industries*, I, p. 209.
- Exemptions, conditions of, *Abel*, II, 871.
- Provisions of Factories Act, *Deptt. of Industries*, I, p. 208.

#### Night work :

- in Bakeries, International Convention, position of India *re.*, *Deptt. of Industries* I, p. 235.
- Day preferred, *Shri Ram*, II, 1688-9.
- Preferred in hot season, *Abel*, II, 1411-2.
- Reduction of hours not necessary, *Abel*, II, 1408-10, 1499.
- Women, children and young persons :
  - None, *Punjab Chamber of Commerce*, I, p. 79. Position *re.* and difficulty in connection with Convention, *Deptt. of Industries*, I, p. 216.

#### Overtime :

- in Establishments not under Factory Act, *Punjab Government*, I, p. 16.
- Provisions, *Deptt. of Industries*, I, p. 212.
- Piece workers, *Deptt. of Industries*, I, p. 209.
- Reduction, effect on efficiency, *see under* Industrial efficiency.
- Reduction in maximum :
  - not Advisable owing to time wasted by unpunctuality, and absence of clocking system, *Abel*, I, pp. 49, 127, 389-90, II, 1459-63, 1519.
  - Advocated, *Rawley*, I, p. 60, II, 624-8.
  - Advocated, if full time worked, *Abel*, II, 1456-64.
  - not Desirable, *Punjab Chamber of Commerce*, I, p. 79.
  - Experiment *re.*, *Rawley*, II, 629-32.
  - not Possible, *M Ashb Singh*, I, p. 134, II, 1618-20.
  - Proposals, *Ghani*, I, p. 101.
- Regulation of, necessary in factories not under Factories Act, but rules difficult to enforce, *Punjab Government*, I, p. 16.
- Regulations :
  - Breaches of, *Ghani*, I, p. 100.
  - Evasion methods, *Abel*, I, p. 48, II, 589.
- Rest period, utilisation, *Abel*, I, p. 48.
- Shift system :
  - Control over, proposals of Government of Bengal, *Deptt. of Industries*, I, pp. 217-218.
  - Multiple, working of, *Deptt. of Industries*, I, p. 209.
  - Single, working of, *Deptt. of Industries*, I, p. 209.
- Sixty-hour restriction, good, *Abel*, I, pp. 48, 127, 389, *Punjab Chamber of Commerce* I, p. 79, (*Mukerjee*) II, 1735 a-c (p. 278) ; *Ghani*, I, p. 101.
- Ten-hour day essential, *Didwania*, I, p. 153.

- Trial periods, system, *Chief Commissioner, Ajmer-Merwara*, I, p. 384.
- Unskilled labour, no improvement practicable, *Abel*, I, pp. 44, 125, 368.
- by Women contractors, *Abel*, II, 264-6, 266a (p. 274).

## INDEX.

### Recruitment, miscellaneous :

Agriculture, *Punjab Government*, I, pp. 3-4.  
for Assam, *see under Assam*.

#### Building and construction work :

Casual employment, *Punjab Government*, I, p. 4.

by Contractors, *Mehtab Singh*, I, p. 129.

Control of conditions of labour, extent of, *Rouse*, II, 2882-7, 2889-90 *Shillidy*, II, 2889.

Decrease in, *Punjab Chamber of Commerce*, I, p. 75.

Direct advantage of employment through contractors over, *Rouse*, II, 2979-82.

Duration of employment, *Punjab Government*, I, p. 6.

Origin of labour, *Mehtab Singh*, I, p. 120.

#### Canals :

by Contractors, system satisfactory, *Ashton*, I, p. 82.

Origin of labour, *Punjab Government*, I, p. 4 : *Ashton*, I, p. 81.

Statistics of employment, *Punjab Government*, I, p. 4 : *Ashton*, I, pp. 81-2.

Forest department, *Punjab Government*, I, p. 5.

Government works, *Webb*, I, p. 140.

#### Mines :

Classes of workers, *Deptt. of Industries*, I, p. 180.

at Surface, system, *Deptt. of Industries*, I, pp. 163-4.

#### Ordnance factories :

Casual labour, *Routh*, I, p. 117.

Labour turnover ; position re. unsatisfactory, *Atkinson*, I, pp. 255, 375-7, II, 3113, 3115.

by Mates and Mistris, *Routh*, I, p. 117.

Permanent labour force, *Atkinson*, I, p. 374.

Temporary labour, extent, *Atkinson*, I, p. 374.

Plantations, *Sardari* system, *Deptt. of Industries*, I, p. 163.

#### Printing presses :

Direct, *Abdus Subhan*, II, 3189-91.

Low type of labour due to low starting pay, *Coombs*, II, 2435.

None necessary recently, *Coombs*, II, 2435, 2444-5.

Origin of labour, *Abdur Rahman*, II, 3161-2, *Abdus Subhan*, II, 3162.

Railways, *see that title*.

#### Salt works :

Contact with villages, *Hoyle*, I, p. 33.

through Contractors, cessation of, would be considered, *Hoyle*, II, 394a (p. 271).

Convicted, discharged, or acquitted men refused work, in, *Khehra Miners*, I, p. 42.

Duration of employment, *Hoyle*, I, pp. 31, 33.

Family method, interference with, resented, *Hoyle*, II, 125.

by Mates employed on commission, *Hoyle*, I, p. 30.

Permanent labour force, *Hoyle*, II, 116-7, 312-23 ; *Pitt*, II, 311.

Semi-permanent labour, *Hoyle*, II, 318 340-1.

Workshops, no excess of labour, *Hoyle*, II, 324-7.

#### Seamen :

Articles of Agreement, draft Convention re. legislation under consideration, *Woodhead*, II, 2273.

##### by Brokers :

Abolition, measures for, *Deptt. of Commerce*, I, p. 328, (*Woodhead*), II, 2179, 2182-3, 2218.

Extent, *Woodhead*, II, 2166-9.

no new Licenses issued, *Woodhead*, II, 2262.

Clow Committee recommendations, *Woodhead*, II, 2149, 2165-75, 2184.

Employment agencies, success doubtful, *Deptt. of Commerce*, I, p. 329.

First voyage certificates, revised system re. effect on unemployment, *Deptt. of Commerce*, I, p. 329, (*Woodhead*), II, 2224a-2225, 2292-7.

Government promises re. extent of fulfilment, *Woodhead*, II, 2176-8, 2349-51.

##### Joint Employment Bureaux :

Advocated by Trade Unions, *Woodhead*, II, 2322, 2340-1.

Government attitude re. *Woodhead*, II, 2338, 2342-4, 2374.

System in other countries, *Woodhead*, II, 2265, 2328-37.

Licenses, regulations re. *Deptt. of Commerce*, I, p. 328.

Liverpool system, *Woodhead*, II, 2365-73.

Lower ratings, methods approved by Government for, *Deptt. of Commerce*, I, p. 328, (*Woodhead*), II, 2147-9.

## INDEX

### Recruitment, miscellaneous—*concl.*

#### Seamen—*concl.*

Number enrolled per annum, *Woodhead*, II, 2288.  
 Quartermasters, system, *Dept. of Commerce*, I, p. 329.  
 Registration, number on registers, *Woodhead*, II, 2314-20.  
 Roster system :

Opposed to Geneva convention, *Woodhead*, II, 2290, 2326-7, 2345.  
 Success doubtful, *Woodhead*, II, 2181, 2263-5, 2289-91, 2324-7.

#### by Serangs :

Abuses, extent, no information *re. Woodhead*, II, 2219-20.  
 System, *Woodhead*, II, 2168-75.  
 Serangs and butlers, methods approved by Government for, *Dept. of Commerce*, I, p. 324, (*Woodhead*), II, 2147-9.  
 Wastage, extent, *Woodhead*, II, 2298-9.

REORA, Chamar, Builders' Labourer, II, 3673-85 (p. 282).

Road Board, financing of, *Shillidy*, II, 2662-4.

ROUSE, A.M., C.I.E., Chief Engineer, Public Works Department, New Delhi : II, 2546-2982.

Children, employment of, II, 2694-8.  
 Recruitment, II, 2876-9, 2882-7, 2889-98, 2909-20, 2979-82.

ROUTE, LIEUT.-COL. G. M., C.B.E., D.S.O., I.A.O.C., Chief Ordnance Officer, Rawalpindi Arsenal, Off. Deputy Director of Ordnance Services, Northern Command, Rawalpindi Arsenal : I, pp. 116-7.

Bonus and profit sharing, I, p. 117.  
 Industrial efficiency, I, p. 117.  
 Rawalpindi Arsenal, general conditions in, I, pp. 116-7.  
 Recruitment, I, p. 117.

### Safety, Industries :

#### Accidents :

Causes of : *Punjab Government*, I, p. 13 ; *Abel*, I, pp. 45-6, 47-127, 369, II, 1056 ;

## INDEX

### Sanitary arrangements and water supply, general, and Industrial workers:

#### Bathing and washing facilities:

Extent and nature of provision, *Delhi Municipal Committee*, I, p. 157; *Davies*, II, 1230-1, 1303; *Stevens*, II, 1308.

Improvement needed, *Webb*, I, p. 144.

Proposals re. *Delhi Municipal Committee*, I, p. 157.

Separate accommodation for women needed, *Copeland*, I, p. 392, II, 3607.

no Special provision made for, *Abel*, I, pp. 45, 388; *Punjab Chamber of Commerce*, I, p. 77.

General position re. *Dept. of Industries*, I, pp. 182-3.

#### Inspection:

Extent, *Punjab Chamber of Commerce*, I, p. 77; *Stevens*, II, 1313-5.

Insufficient, *Delhi Municipal Committee*, I, pp. 157-8.

#### Latrine:

Conditions, *Ghani*, I, p. 95; *Chief Commissioner, Delhi*, I, p. 120; *Chief Commissioner, Ajmer-Merwara*, I, p. 386.

Extent and nature of provision, *Punjab Chamber of Commerce*, I, p. 77; *Chief Commissioner, Delhi*, I, p. 120; *Webb*, I, pp. 124, 140, 141; *Mehtab Singh*, I, p. 131; *Didwani*, I, p. 151; *Delhi Municipal Committee*, I, p. 157; *Stevens*, II, 1264-7.

Provided according to Factory Rules, *Abel*, I, p. 53.

Separate accommodation for women needed, *Copeland*, I, p. 392, II, 3607.

not Utilised, *Abel*, I, pp. 45, 388.

Regulations under Factories Act, and extent of compliance with, *Dept. of Industries*, I, pp. 182-3.

in Small Factories, improvement needed, *Chief Commissioner, Ajmer-Merwara*, I, p. 386.

Sanitary arrangements, supervision of plans and lay-outs advocated, *Gill*, II, 643-5.

in Unregulated factories, improvement advocated, *Delhi Municipal Committee*, I, p. 157.

#### Water supply:

##### Drinking water:

Arrangements good, *Copeland*, I, p. 392.

Extent and nature of provision, *Abel*, I, pp. 45, 53, 388; *Punjab Chamber of Commerce*, I, p. 77; *Webb*, I, pp. 124, 140, 141; *Stevens*, II, 1234.

Regulations re. keeping cool, extent of enforcement, *Abel*, II, 888-9.

Extent and nature of provision, *Didwani*, I, p. 151.

#### Sanitary arrangements and water supply, miscellaneous:

Canals, latrines, extent of provision, *Ashton*, I, p. 83.

Drinking water, for contractors' labour, not a matter for Central Government, *Rouse*, II, 2883-7; *Skilidy*, II, 2888.

#### Mines:

Bathing and washing facilities, *Hoyle*, I, p. 35.

Latrines, extent and nature of provision, *Hoyle*, I, pp. 31, 34, 35, II, 273.

Regulations re. *Dept. of Industries*, I, p. 188.

Supervision of, appointment of sanitary inspector advocated, *Hoyle*, II, 364-9, 371.

##### Water supply:

Drinking water, *Hoyle*, I, pp. 31, 34, 35, II, 279; *Pitt*, II, 380-2.

Increase not possible, *Pitt*, II, 238-40, 372-9.

Insufficient, improvement advocated, *Khewra Miners*, I, p. 41, (*Ali Haider*), II, 59 (b) (p. 269), 60.

Restrictions necessary, *Pitt*, II, 274-8.

Plantations conditions and regulations, *Dept. of Industries*, I, pp. 189-90.

#### Seamen:

see also subject headings.

General conditions, on ships, no recent inquiry held re. *Woodhead*, II, 2245-50.

International Conventions, position of India re. *Dept. of Industries*, I, pp. 232, 235.

Legislation for, draft Convention re. Government action, *Woodhead*, II, 2266-76.

New York, employment in, *Woodhead*, II, 2217 (c) (p. 279).

Repatriation, draft Convention, difficulties re. *Woodhead*, II, 2274-8.

War benefits, no action taken re. *Woodhead*, II, 2352-61.

## INDEX.

### Seasonal factories :

*see also subject headings.*

Pools system, *Punjab Government*, I, p. 22 ; *Abel*, II, 831, 833, 833a (p. 273).

Rules prescribed by Director of Agriculture for, *Punjab Government*, I, pp. 29-30.

Working conditions, *Ghani*, I, p. 98 ; *W. R. Wilson*, II, 513 a (p. 271) ; *Abel*, II, 962-3.

Security Printing, Master, letter re. fining, I, p. 296.

SHILLIDY, J. A., I.C.S., Secretary to the Government of India in the Department of Industries and Labour : II, 2546-2982, pp. 279-80.

Absenteeism, II, 2689-90, 2910-4.

Advantage as regards indebtedness doubted, *Abel*, II, 3325-8.

Advocated, *Delhi Municipal Committee*, I, p. 158 ; *Rawley*, II, 856-9.

Advocated where possible, *W. R. Wilson*, II, 553.

Workers opposed to, *Mukerjee*, II, 1656 ; *Shri Ram*, II, 1657-8.

Weekly Payments Bill, *Deptt. of Industries*, I, p. 224.

in Punjab, higher than in surrounding Provinces, *W. R. Wilson*, II, 569.

Piece-work basis rates, and system, *East India Carpet Company*, I, p. 116, (*Stevens*), II, 1126, 1210-2.

Quinquennial surveys of, carried out since 1912, and classes of workers dealt with, *Punjab Government*, I, pp. 17-8.

#### Rates :

*Punjab Government*, I, p. 20 ; *Didwani*, I, p. 153 ; *Chief Commissioner, Ajmer-Merwara*, I, pp. 385-6 ; *Abel*, II, 834-5, 1436-8, 1455 ; *Stevens*, II, 1219, 1226, 1341-3 ; *Ram an, Rajbas*, II, 1353-7 ; *Workers*, II, 3620-2 (p. 281).

Alterations in, *Stevens and Indian Assistant*, II, 1220-5.

Amendment advocated, *Didwani*, I, p. 153.

Increases : *Abel*, I, pp. 50, 54, 390, II, 1047-50, 1050a, (p. 277). 1912 to 1928, *Punjab Government*, I, pp. 26-7.

Advocated, *Provincial Trades Union Congress*, I, p. 116.

not Consistent with rise in cost of living, *Webb*, I, p. 141, II, 1979-90.

Fifty per cent. necessary, *Ghani*, I, pp. 102, 103.

Increase and decreases in, *Rawley*, I, pp. 61, 64, II, 816-9.

Remittances to villages, extent, *Rawley*, I, pp. 61-2.

## INDEX.

### Wages Industrial—concl'd.

#### Rural areas :

##### Payment :

Delay in, no hardship caused by, *Punjab Government*, I, p. 20.  
in kind, *Punjab Government*, I, p. 20.  
Periods, *Punjab Government*, I, p. 20.

Regulation of, by contract, *Punjab Government*, I, p. 19.

Whole and part time workers, *Punjab Government*, I, p. 18.

##### Standardisation :

Absence of, *Rawley*, I, p. 62 ; *Punjab Chamber of Commerce*, I, p. 79 ; *Dept. of Industries*, I, p. 222.

Bombay Millowners' Association, scheme to be introduced, *Dept. of Industries*, I, pp. 222-3.

Consideration of question, *Dept. of Industries*, I, p. 222.

##### Statistics :

Accurate, lack of, *Dept. of Industries*, I, p. 219.

History of proceedings re., *Dept. of Industries*, I, p. 219.

##### Unclaimed :

Payment of, legislation question, *Shillidy*, II, 2929-32.

Treatment of : *Abal*, I, p. 50 ; *Dept. of Industries*, I, p. 224.

Legislation re. advocated, *Ghani*, I, p. 105.

for Welfare work advocated, *Rawley*, I, p. 63.

##### Unskilled workers :

Amount spent on food, *Gill*, II, 662-3, 672-3.

Saving and remittances to villages, not sufficient for, *Rawley*, I, pp. 61-2.

Variation in, since 1909, table showing, *Punjab Government*, I, pp. 18, 27.

Urban, *Punjab Government*, I, pp. 18, 19.

Urban and industrial, competition increasing with consequent rise in, *Punjab Government*, I, p. 19.

##### Variations in :

Effect on labour supply, *Rawley*, I, p. 62 ; *Ghani*, I, p. 106 ; *Mehrab Singh*, I, p. 135.

Seasonal and local, *Punjab Government*, I, p. 19.

Statistics, *Mehrab Singh*, I, pp. 134, 139.

### Wages, Miscellaneous :

Agricultural workers, payment in kind, *Punjab Government*, I, p. 20.

Building industry, *Webb*, I, pp. 123, 140-1, II, 1918 ; *Workers*, II, 2056, 2059, 2085-104, 2102, 2113-5, 3618-9, (p. 281), 3666, 3674, (p. 282).

Payment : delay in, *Worker*, II, 2102.

##### Weekly :

Advantages of, *Worker*, II, 2087-104.

Advocated, *Worker*, II, 2085-6.

Canal Works : *Punjab Government*, I, p. 19 ; *Ashton*, I, pp. 84, 85.

Fines, practically non-existent, *Ashton*, I, p. 85.

Fixing, method of, *Ashton*, I, p. 84.

##### Payment :

Delay in, extent, and reasons for, *Ashton*, I, p. 85.

Period, *Punjab Government*, I, p. 19 ; *Ashton*, I, p. 85.

Standardization, none, *Ashton*, I, p. 84.

Unclaimed, treatment of, *Ashton*, I, p. 85.

##### Coalmines :

Payment, delay in, extent, *Punjab Government*, I, p. 20.

Rates, *Punjab Government*, I, p. 20.

Mines, system, *Dept. of Industries*, I, p. 222.

##### Ordnance factories :

Bonuses, in Government arsenals, *Roush*, I, p. 117.

Fixing, method of, *Atkinson*, I, pp. 361-2, II, 3123-7.

Irregularity of employment, no effect on rates, *Atkinson*, I, p. 362.

Payment, monthly v. daily, *Atkinson*, I, p. 363, II, 3115, 3121.

Piece-work rates, *Atkinson*, I, p. 362.

##### Printing presses :

Calcutta and Delhi, comparison, *Abdus Subhan*, II, 3763.

Earnings, *Letton*, I, pp. 346-7.

##### Fines :

Extent *Letton*, I, pp. 347, 348 ; *Abdus Subhan*, II, 3251-4.

Utilisation, *Letton*, I, pp. 347, 348.

## INDEX.

### Wages, Miscellaneous—*contd.*

#### Printing Presses—*concl'd.*

- Fixing, method of, *Letton*, I, p. 347, (*Coombs*), II, 2524-8; *Shillidy*, II, 2682-46.
- Government and private, comparison, *Abdus Subhan*, II, 3199-3206, 3245-6.
- Overtime rates, *Coombs*, II, 2485.
- Piece work, extent, *Coombs*, II, 2430-31.
- Rates, *Coombs*, II, 2436-8, 2471-2; *Abdus Subhan*, II, 3232-42, 3244.
- Return to time scale advocated, *Government of India Press Union*, I, p. 147.
- Sunday rates, *Letton*, I, p. 345.

#### Railways, *see that title.*

#### Salt works :

- Agricultural, comparison with, *Hoyle*, I, pp. 32, 37.
- no Bonus or profit sharing schemes, *Hoyle*, I, pp. 32, 37.

- Cost of living, comparison, *Hoyle*, I, p. 37, (*Pitt*), II, 346-7; *Kheura Miners*, I, pp. 39-40, (*Ali Haider*), II, 49-50.

#### Deductions :

- Fines, extent, *Hoyle*, I, pp. 32, 37.
- for Materials and hire of machines, *Hoyle*, I, p. 37.
- Protests *re.*, *Kheura Miners*, I, p. 41, (*Lambardar representative*), II, 85d (p. 269).
- for Repairs, alteration of system *re.*, opening workahops requested, *Kheura Miners*, I, p. 41.
- for Voluntary contribution fund, *Hoyle*, I, p. 37.
- Weighing of trucks before deductions advocated, *Kheura Miners*, I, p. 41.
- Fixing, method of, *Hoyle*, I, pp. 32, 37, II, 106a.
- Free housing, amount of concession, *Hoyle*, I, p. 37.
- Hasiyat Tax, removal advocated, *Kheura Labourers*, I, p. 43; *Lambardar representative*, II, 85d (p. 269).
- Inadequate, proposals *re.* increase, *Kheura Miners*, I, pp. 39-40, (*Ali Haider*), II, 72-3, (*Lambardar representative*), II, 85d (p. 269).

#### Increases : *Hoyle*, I, pp. 32, 37.

Effect on production, *Hoyle*, I, p. 37.

#### Minimum :

Advocated, *Ali Haider*, II, 68.

Minimum not desirable, *Hoyle*, I, p. 37.

Overtime rates, *Hoyle*, I, pp. 32, 37.

#### Payment :

through Contractors :

Disadvantages of, *Kheura Miners*, I, p. 41.

generally Satisfactory, *Hoyle*, I, pp. 32, 37.

Delay in :

Extent, *Hoyle*, I, pp. 32, 37, II, 257-8.

Legislation *re.*, not necessary, *Hoyle*, I, pp. 32, 37, II, 259.

Direct, advocated, *Ali Haider*, II, 64.

Fortnightly and monthly, *Hoyle*, I, p. 37.

Monthly advocated, *Kheura Labourers*, I, p. 42, (*Workshop representative*), II, 96.

Method of, *Hoyle*, I, pp. 31, 34, II, 310, (*Pitt*), II, 303-4, 306-9, 311.

per Truck, system *re.* weighing, *Hoyle*, II, 190.

Weekly, *Hoyle*, I, pp. 32, 37, II, 306.

Workahop staff, daily, *Hoyle*, I, p. 31.

Rates, *Hoyle*, I, pp. 32, 36-7, II, 106a, 134, (*Pitt*), II, 134-7; *Ali Haider*, II, 10-14, 31-44.

Return to old system *re.* advocated, *Ali Haider*, II, 2.

no Standardization, *Hoyle*, I, p. 32.

System, alteration in, particulars of, *Kheura Miners*, I, p. 39, (*Ali Haider*), II, 31-44.

new System, generally preferred by workers and fully discussed with before establishment, *Hoyle*, II, 106a-107, 293, 293c-d (p. 270), 388f (p. 271), (*Pitt*), II, 187-9, 294-8, 388d, e, g, h (pp. 270-1).

#### Unclaimed :

Cases rare, *Hoyle*, I, p. 32.

Treatment of, *Hoyle*, I, p. 37.

Scavengers, *Provincial Trades Union Congress*, I, p. 115.

#### Seamen :

Advances, *Deptt. of Commerce*, I, p. 332.

## INDEX.

### Wages: Miscellaneous—concl'd.

#### Seamen—concl'd.

##### Allotments to families :

Allowed for in Act, but no evidence of practical use, *Woodhead*, II, 2157-8.

Question never considered, *Woodhead*, II, 2158-60.

Comparison with other nationalities, *Woodhead*, II, 2192-b-s (p. 279), 2201-2, 2262-3.

Entered in Articles of Agreement, *Deptt. of Commerce*, I, p. 331.

Fines, extent and utilisation, *Deptt. of Commerce*, I, p. 332.

##### Minimum :

not Necessary, *Deptt. of Commerce*, I, p. 331.

Question not considered, *Woodhead*, II, 2283-4.

Paid on termination of voyage, *Deptt. of Commerce*, I, p. 332.

Rangoon, higher than Calcutta, *Deptt. of Commerce*, I, p. 331.

Rates variable in different companies, *Deptt. of Commerce*, I, p. 331, (*Woodhead*), II, 2261.
